Ecclesiastically the parish is in the presbytery of Olnafirth, synod of Shetland, and in the patronage of the Earl of Zetland. The stipend is £150, of which about a third is received from the exchequer; with a manse, built in 1751, and thoroughly repaired and enlarged about the year 1820, at an expense of £500; and also a glebe valued at £10 per annum. The minister is likewise entitled to the vicarage title of certain quantities of butter and oil, which is appropriated for the communion elements. There are two churches, that of the south district, which was erected in 1714, and is reckoned the principal, and the north-district church, built in 1811; the number of sittings in each is about 560. The parochial schoolmaster receives a salary of £25. 13. 3., and about £3 fees. There are two other schools, of which the masters are allowed, one £25, and the other £20, by the General Assembly. Near Yell Sound is a Pictish castle called Brough; at Burravoe are the remains of an ancient harbour, and at Busta a block of granite between ten and eleven feet in height, called the Standing Stone of Busta. There are also two caves, one at Culsterness, containing two apartments, and supposed to have been originally used as a hiding-place, and the other in the vicinity of the loch of Trondavoe, said to have been used in times past as a depository for stolen sheep.

DENHOLM, a village, in the parish of CAVERS, HAWICK district of the county of ROXBURGH, 5 miles (W. by S.) from Jedburgh; containing 696 inhabitants. This place is beautifully situated in the northern part of the parish, on the road from Jedburgh to Hawick, and equidistant from both towns. The population are employed in stocking-weaving, the work being given out to them by the manufacturers of Hawick. A sub-post-office has been established, and the village has lately been much improved. There are places of worship for members of the Free Church and Congregational Unionists, and one of the parochial schools is in the village, in which is also a subscription library containing about 900 volumes. Dr. John Leyden, author of the *Scenes of Infancy*, and famous as an oriental scholar, was born at Denholm.

DENINO, county of FIFE.—See DUNINO.

DENNY, a manufacturing town and parish, in the county of STIRLING, 7 miles (S.) from Stirling, and 5 (W. N. W.) from Falkirk; containing, with the former quoad sacra parish of Hags, and the villages of Fankerton and Loanhead, 4916 inhabitants, of whom 1881 are in the town. This place, whose name, derived from the Gaelic *Dun*, is descriptive of its situation on an eminence, originally formed part of the parish of Falkirk, from which it was separated about the year 1618. A considerable portion of the parish appears to have belonged to an establishment of Knights Templars that probably existed here or in the immediate vicinity, and the land is still known by the appellation of Temple-Denny. The town, which is situated on the south bank of the river Carron, and on the high road from Glasgow to Stirling, consists partly of a street extending from the church northward to the bridge over the Carron: a second runs eastward from the church, and in a direction parallel to this another spacious street has been more recently built, which, in compliment to the principal landed proprietor, is called Herbertshire-street. The houses are generally well built, and roofed with slate, and have a handsome appearance. A public library, containing nearly 1200

volumes on general literature, is supported by subscription; and there is also a theological library of 400 volumes. Several efforts for the establishment of reading-rooms have been made, but without success. A club for the practice of archery was established in 1828, and the members, who were elected by ballot, held annual meetings in October, when prizes of medals and silver arrows, and other honorary distinctions, were awarded; but this club was dissolved about six years ago. There is still a curling club.

The woollen manufacture is carried on to a considerable extent, for the Glasgow houses; the principal articles are tartans, linsey-woolsey stuffs, and fancy shawls. The machinery of the mills is driven by the Carron, and the softness and purity of the water render it peculiarly appropriate for cleaning and dyeing the various articles produced in the works, in which about 160,000 pounds of wool are annually consumed, affording occupation to 200 persons. A mill for the manufacture of different kinds of coarse paper and milled-boards, at Carron-Grove, employs about twenty persons: the materials are chiefly old tarred rope, of which about a ton is used daily; and the mill is lighted with gas. The manufacture of writing-paper is also extensively carried on, in the Herbertshire mills, by Messrs. Duncan and Sons, employing twenty men and fifty women, who reside principally in Denny and Fankerton; the machinery is driven by two water-wheels, one of which is twenty-four, and the other twenty-two feet in diameter. A mill for crushing dye-woods, on the bank of the Carron, and with which are connected works in Castle-Rankine glen, affords employment to more than twenty persons, in the production of dyeing materials and of pyroligneous acid and the several liquors requisite for the various colours; and on the lands of Knowhead is an extensive forge for the making of spades. A large distillery is in operation, which produces about 50,000 gallons of whisky annually; and a brick and tile work has been established: many of the inhabitants of this place, also, are employed in the print-works in the adjoining parish of Dunipace. There are likewise numerous corn and meal mills on the river, for the better supply of which with water-power, a reservoir of sixty acres has been constructed on Earl's burn, about nine miles above Denny, at an expense of £2000. The town contains well-stored shops for the sale of different kinds of merchandise, and all the various handicraft trades requisite for the supply of the district are carried on at Denny, which also derives a considerable degree of traffic from its situation on a public thoroughfare. The post-office has a good delivery; facility of communication is afforded by excellent roads and bridges, and in 1846 an act of parliament was passed for the construction of a branch railway to Denny from the Scottish Central line near Larbert. A baron-bailie presides over the town, with power to hold a court for the recovery of debts not exceeding £2; and fairs are held annually, for cows, on the Wednesday before the 12th of May and the Wednesday after the 11th of November; but there is no market.

The PARISH is bounded on the north by the river Carron, on the south by the river Bonny, and on the west by the hill of Darrach. It is nearly six miles in length and four in breadth, comprising a little less than 9000 acres, of which 2000 are permanent pasture, and the remainder chiefly arable. The surface, which de-

clines gradually from the hill of Darrach towards the east, is divided nearly in the centre by an elevated ridge throughout its whole length, whence the ground slopes towards the north and south; the only other hill of any note is that of Myothill, on the lands of Temple-Denny. The scenery is richly diversified, commanding a view of Herbertshire House, the seat of the Dowager Lady Forbes of Callendar, and of the beautifully undulated and tastefully embellished grounds wherein it is situated, on the opposite bank of the Carron. There are numerous springs, and, besides the two streams above mentioned, several small rivulets: of the latter, Castle-Rankine burn, which has its source near the base of Darrach Hill, and falls into the river Carron near Denny Bridge, is the largest. The river Carron, rising in the Muckle Bin, to the west of Darrach Hill, and flowing in an eastern course, forms a strikingly picturesque cascade called Auchinlilly-lin-spout, near the bridge on the road to Fintry: a cottage commanding a fine view of the fall was built by Mr. Hill, of Edinburgh, but it is now a ruin, having been destroyed by the overflowing of the Carron. The Bonny flows into the Carron about two miles eastward of the town.

The SOIL on the banks of the Carron and the Bonny is a fertile loam, in the central districts it is gravelly, and in the higher lands are considerable tracts of marshy ground; the crops are oats, barley, wheat, beans, peas, potatoes, and turnips. Though greatly improved, the system of husbandry is still defective from the want of draining and inclosures; and with some exceptions the farm-buildings are of very inferior order. There are a few sheep reared on the lands, and these are chiefly of the Cheviot and Leicestershire breeds; the cattle are generally the Ayrshire, and the horses of the Clydesdale breed, to the improvement of which great attention is now paid. The annual value of real property in the parish is £6293. The natural woods are mostly oak and birch, which are carefully preserved; and the plantations are ash, elm, birch, lime, oak, plane, and larch, Scotch and spruce firs, all of which are properly managed and in a thriving state. In this parish the substrata are principally whinstone and freestone, and ironstone and coal are also found in abundance. The coal on the north of the ridge, though nearest to the manufactories, is only wrought occasionally, from the difficulty of drawing off the water; the mines on the south, at Banknock, are in full operation. There are three seams of the coal, of which the upper is three feet six inches, the middle twenty-two inches, and the lowest five feet in thickness; and the produce, after supplying the wants of the locality, is sent by the canal to Greenock and Edinburgh. The parish contains Myothill House, beautifully situated near the base of Darrach Hill, in grounds embellished with plantations.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Stirling, synod of Perth and Stirling. The minister's stipend is £250, with a manse, and a glebe valued at £10 per annum; patron, the Crown. Denny church, erected in 1813, was internally beautified in 1838, and lighted with gas; it is a neat structure in the Grecian style, and contains 767 sittings. There are places of worship for members of the United Presbyterian Church and the Free Church. The parochial school is well conducted; the master has a salary of £34, with a house and garden, and the fees average

£24 : a handsome building has been erected for the school. The only antiquities are some remains of a Roman station at Castle-Carie, near the southern confines of the parish. A rude stone coffin was discovered in digging the foundation for Headswood Cottage, at Woodgate, and found to contain the ashes of an adult supposed to have been killed near the spot, at the time of the wars with Edward I. of England. A circular hollow now under cultivation, in the south of the parish, near the river Bonny, is said to have been the site of a Caledonian encampment during the occupation of Castle-Carie by the Romans.

DENOVAN, a village, in the parish of DUNIPACE, county of STIRLING, 5 miles (W. N. W.) from Falkirk; containing 104 inhabitants. This village is chiefly inhabited by persons employed in calico-printing works. It is situated on the north bank of the river Carron, amidst scenery of pleasingly picturesque character, the effect of which is heightened by the graceful tower of the parish church rising above the surrounding foliage, and the handsome residence of the proprietor. The works were established by Mr. Adam, in 1800, and afford employment to about 400 persons, the greater number of whom are resident in the town of Denny, on the opposite side of the Carron. In addition to these persons, engaged in the regular printing departments, are nearly 200 children, chiefly girls, of whom some are occupied in attendance on the printers, and others in sewing and fringing shawls.

DESKFORD, a parish, in the county of BANFF, 4 miles (S. by E.) from Cullen, on the road to Keith; containing 860 inhabitants. This parish derives its name, signifying a cold place to the south, from the comparative temperature of its climate, and its situation with respect to Cullen. It is rather more than five miles in length, and about three miles in its average breadth, comprising a quadrilateral area of 8500 acres, of which 2800 are arable land in good cultivation, 4850 waste or partly in pasture, and 850 woodland. The surface is hilly, and between the high grounds is a beautiful valley watered by a stream called the burn of Deskford, which rises in the adjoining parish of Grange, and receives in its course many tributary streams, descending from the heights on both sides. In the valley and lower lands the soil is a rich black loam, and in an improved state of cultivation. The high land on the east side of the valley is called the Green Hill, and in several places is planted with larch and common fir; that on the west side is chiefly covered with heath, with the exception of a small portion that is cultivated. Considerable improvement has been made in draining, and there is a quarry of excellent limestone, extensively worked both for building and for agricultural purposes. A large tract of moss supplies the inhabitants with peat and turf, which are also sent to Cullen and several villages on the coast. The substratum of the parish is mostly mica-slate, in which fragments of quartz are frequently found, and, beneath the surface of the higher grounds, gravel, or clay and gravel mixed. The principal manure is lime; but bone-manure is also used with considerable benefit, and in the upper part of the parish fish manure is applied. The annual value of real property in the parish is £2154.

The scenery, especially in the valley, is pleasing and picturesque. The burn affords much variety in its pro-

gress through the parish; and the numerous streams that fall into it from the high grounds on both sides, issue from narrow glens whose sides are fringed with wood, and in their descent form cascades of singular beauty. Of these the most interesting is one called the Linn; the stream rushes with great impetuosity from a deep cleft in the rock, which it has worn into fanciful cavities, and after repeated obstructions precipitates itself from a height of thirty feet. A tract of hilly and moorish ground, called the Cotton Hill, comprising about 250 acres, has within the last few years been inclosed for plantations: the drains made for preparing the ground for the purpose, extend nineteen miles, and the dykes for its inclosure nearly six miles. The woodlands of the parish now comprise 850 acres. There was formerly a bleachfield, and during the prevalence of the linen manufacture the female population were engaged in spinning; since the discontinuance of that trade the bleachfield has been converted into arable land, and there are now only two meal-mills (to one of which is attached a kiln) and a barley-mill. The most important improvement that has lately taken place is the construction of a line of turnpike-road through the parish, opening a communication between Keith and Cullen, and which, from the formation of a harbour at the latter town, affords a facility of forwarding the agricultural produce. Ecclesiastically the parish is in the presbytery of Fordyce, synod of Aberdeen, and in the patronage of the Earl of Seafield; the minister's stipend is about £193, with a manse, and a glebe valued at £8 per annum. Deskford church, built before the Reformation, is in good repair, and capable of receiving a congregation of 357 persons. The members of the Free Church have a place of worship. The parochial school affords instruction to about forty boys; the master's salary is £32, with £2 in lieu of a garden, £12 fees, and about £30 from the bequest of Mr. Dick. There is the interest of a sum of money, amounting to £10. 12. a year, distributed among the poor.

On the borders of a farm called Liechestown there was found within the last twenty or thirty years, at the depth of six feet, in a mossy piece of ground, the head of a swine in brass, of the ordinary size, with a tongue of wood moveable by means of springs: it is now in the museum of the Banff Institution. Upon an adjoining farm, called Inalterie, supposed to signify the place of "the altar", are the remains of an ancient massive building, in one part of which is a deep circular hole of the size of a well, inclosed with a stone wall rising to a considerable height. The origin and purpose of the building are equally obscure. Close to it is a vault, on exploring which a staircase was found leading down to the interior; but the search was interrupted by continued heavy rains, and has not been resumed. It is supposed to be the remains of some baronial castle or ecclesiastical building. In the immediate vicinity was formerly an artificial mount of stones, called the Law Hillock, thought to have been a place for administering justice, for which it was well adapted; but it has been removed for the purpose of employing the materials in building. On the other side of the burn of Deskford, and within view of the former, is another mount, rising to an elevation of twenty feet, and sloping gradually on the sides. It is level on the summit, which is of elliptical form; and is surrounded at the base by a

ditch, part of which forms the bed of a stream called the Ha' burn. This mount is termed the Ha' Hillock, and is supposed to have been also an ancient tribunal. Adjoining the church are the ruins of a tower formerly belonging to a castle, the residence of the chief proprietor of the parish. It is said that there was originally a communication from this tower to the church, the walls of which are contiguous: and the latter is thought to have been originally the domestic chapel of the castle. The tower formed a very conspicuous object, rising considerably above the roof of the church; but being in a very ruinous state, it was taken down some years since, from an apprehension of danger. Close to the church is St. John's well, supplied by a spring that appears to issue from beneath the church, which was originally dedicated to St. John; and near it is a small fragment of a very stately tree dedicated to the same patron.

DEVONSIDE, a village, in the parish of **TILlicouLTAY**, county of **CLACKMANNAN**, $\frac{3}{4}$ of a mile (S.) from **Tillicoultry**; containing 170 inhabitants. This village, situated on the banks of the **Devon**, has sprung up within these few years. Coal, which is abundant in the parish, is wrought in its vicinity; and brick and tile works have been erected. The place is suitably circumstanced for manufactures, the **Devon** supplying water for steam-engines and other purposes.

DEWARTOWN, a village, in the parish of **BORTHWICK**, county of **EDINBURGH**, 1 mile (S.) from **Ford**; containing 193 inhabitants. It is one of the most considerable villages in the parish, is of pleasing appearance, and consists principally of small holdings on the estate of **Vogrie**, the property of the **Dewar** family. The dwellings are ranged on one side of the road, and in front is a plantation, with a small stream flowing near: the scenery in the neighbourhood is very picturesque.

DINGWALL, a royal burgh, a sea-port, and a parish, the capital of the county of **Ross**, 20 miles (S. W.) from **Cromarty**, and 174 miles (N. N. W.) from **Edinburgh**; containing 2100 inhabitants, of whom 1739 are in the burgh. This place, the name of which is of Scandinavian origin, is supposed to have been originally a Danish settlement, and subsequently

Burgh Seal.

the seat of one of the numerous royal fortresses erected along the coast, to repel the frequent incursions of that warlike people. It is of considerable antiquity, and, from the discovery of foundations of houses and pavements within and beyond the limits of the present town, is supposed to have been anciently of greater extent and importance. It was erected into a royal burgh by **Alexander II.**, who, in 1226, bestowed upon the inhabitants a charter investing them with all the privileges and immunities enjoyed by the burgesses of **Inverness**. **Dingwall Castle** became the principal seat of the powerful **Earls of Ross**, who were proprietors of the greater portion of the lands in the surrounding district, several estates of which are still held under charters granted to the owners by the earls, and dated from **Dingwall**. The castle and the lands remained in the possession of the **Earls of Ross** till 1476, when, on the attainder of the

last earl, the proprietor of the estate of **Tulloch** was appointed hereditary constable of the castle, and the earldom was vested in the crown. The only remains of the castle are a small shapeless fragment of the walls, from which a tolerable idea may be obtained of the massive solidity of the structure; the fosse by which it was surrounded may still be traced, and part of its site is now occupied by a castellated building recently erected by the proprietor of the laud.

The town is situated at the entrance of the picturesque and beautiful vale of **Strathpeffer**, which opens into the **Firth of Cromarty**. It comprises one chief street about half a mile in length from east to west, from which several smaller streets diverge at right angles; the houses in the main street are shaded by rows of tall poplar-trees in front, and those of the older class are generally well built and two stories high. From its vicinity to the mineral springs of **Strathpeffer** the town has been much extended within the last few years, and many handsome houses have been built. The streets are paved, and lighted with gas, and the inhabitants are supplied with water conveyed into the town from springs in the vicinity. There are no manufactures carried on; the principal trade arises from **Dingwall** being the general mart for the rich and populous district of which it is the centre, for which it has numerous shops, amply stored with wares of all kinds. The trade of the port, employing much shipping, consists chiefly in the exportation of grain, timber, bark, and agricultural produce; and in the importation of merchandise for the supply of the district, and of coal, lime, and other commodities. There are several vessels belonging to the port, which were built here, and are employed in the coasting-trade. The harbour, close to the town, was constructed in 1817, at a cost of £4365, and is under the superintendence of commissioners appointed by act of parliament in 1824.

Under the charter of **Alexander II.**, confirmed by **James IV.**, and ratified by **James VI.**, the government of the burgh is vested in a provost, two bailies, a dean of guild, treasurer, and ten councillors, chosen under the regulations of the **Burgh Reform act**. There are no incorporated guilds; persons dealing in merchandise within the burgh must become burgesses, the fee for which varies from £5 to £15. 15., but neither the sons nor apprentices of burgesses pay any fee, and craftsmen may exercise their trades without becoming burgesses. The jurisdiction of the magistrates extends over the whole of the royalty, and comprehends both civil and criminal causes; for which the sheriff also, who has a substitute residing here, holds the usual courts. **Dingwall** is associated with **Cromarty**, **Dornoch**, **Kirkwall**, **Tain**, and **Wick**, in returning a member to the imperial parliament. The town-house, nearly in the centre of the town, is an ancient structure with a spire. Within the last few years, an extensive new prison, on the most approved principles, has been built; in front of which are the county buildings, an elegant structure containing accommodation for the gentlemen of the county when assembled on business, and also for the sheriff and other law courts. The market, on Friday, is well supplied with grain and provisions of all kinds; and fairs, chiefly for cattle and agricultural produce, are held on the third Wednesdays in January and February, the first Wednesdays in June, September, and November, the first Tuesday in July, and the Tuesday before Christmas-day. There are regular

posts to Poolewe, Stornoway, Ullapool, Lochcarron, Lochalsh, Kintail, Glenelg, and the Isle of Skye; and a branch of the National Bank of Scotland in very handsome premises, and more lately a branch of the Caledonian Bank, have been established in the town. Facility of communication is afforded by good roads in all directions, kept in excellent repair; and by steam-boats to Edinburgh weekly, and every alternate week to London, which call at Invergordon, in the Firth of Cromarty.

The PARISH, which is situated at the western extremity of the Firth, is about three miles in length, of nearly equal breadth, and is bounded on the north by the lofty Ben-Wyvis, a mountain that attains an elevation of nearly 4000 feet; on the south by the river Conan; and on the south and south-east by the sea. It comprises about 5600 acres, of which 2380 are arable, 1380 woodland and plantations, and the remainder meadow, pasture, and waste. The surface is beautifully diversified with hills and valleys, and with wood and water. To the north, the hill of Tulloch, a continuation of the ridge of Strathpeffer, rises to a height of 800 feet; it is crowned with timber of stately growth, and enriched on the acclivities with lands in the highest state of cultivation, and the tastefully embellished pleasure-grounds of Tulloch Castle. The Conan, which flows by a winding course into the Firth, adds much to the beauty of the scenery, and abounds with salmon and trout of various kinds, and also with pike and eels. At flood-tide the Firth forms a magnificent expanse, but at ebb-tide recedes for nearly three miles from the shore, leaving a flat strand of slime. The SOIL is generally of a clayey nature; in the lower lands near the town there is a deep black vegetable mould, of great fertility, and in dry seasons producing luxuriant crops. Throughout the parish, the soil of the lands under cultivation is fertile, and well adapted to the growth of wheat, oats, barley, potatoes, and turnips, which are the principal crops. The system of husbandry is in the most improved state; the lands are inclosed with hedges, in which are rows of timber, and the farm-houses and offices are substantial and well arranged. Few live stock are reared, but considerable numbers of sheep and cattle are pastured; the sheep are chiefly of the Cheviot breed, and the cattle of the Highland breed, with some Ayrshire cows on the dairy-farms. The woods abound in game of all kinds, which, from the sheltered situation of the place, resort in great variety; the principal are partridges, hares, grouse, black game, and pheasants, which last, though but of recent introduction, have rapidly increased in number. The plantations are fir, larch, beech, elm, oak, ash, sycamore, and various other trees, all in a very thriving state, and under careful management. In this parish the chief substrata are sandstone and conglomerate, and there are three sandstone-quarries, extensively wrought; the stone of one is of a grey colour, and of hard quality, and that of the others of light blue, of softer kind, but well adapted for building, and susceptible of a fine polish. The annual value of real property in the parish is £4576.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Dingwall and synod of Ross; the minister's stipend is £244, with a manse, and a glebe valued at £30 per annum; patron, the Crown. Dingwall church is a neat plain structure in good repair, and contains 800 sittings. Service is performed both in the

English and in the Gaelic language, and a catechist is employed who is paid £15 per annum. There is an episcopal chapel, and the members of the Free Church have a place of worship here. The parochial school is well attended; the master has a salary of £34, with a house and garden, and the fees average £40. The poor have the interest of some legacies, of which £700 was a bequest by one of the Tulloch family, and £100 by the late Bailie Mackenzie. Near the church is an obelisk rising from a base six feet square to the height of fifty-seven feet, erected by George, the first Earl of Cromarty, and secretary of state for Scotland to Queen Anne, to point out the family sepulchre. Towards the northern extremity of the parish are the remains of a Druidical circle; and at the east end of the town are those of the cross supposed to have been in the centre of the ancient town. This place gave the title of baron to Sir Richard Preston, who was created Lord Dingwall by James VI., with whom he was a great favourite; he married the only daughter of the Earl of Ormond, and left a daughter who conveyed the title to another family, by whom it was forfeited by attainder in 1716.

DINWOODIE, an ancient chapelry, in the parish of APPLGARTH, county of DUMFRIES, 5 miles (N. by W.) from Lockerbie. It is situated on the road from Lockerbie to Moffat, and a little east of the river Annan, which bounds the parish on the west. On Dinwoodie Green is an inn, which served as a stage to the mail between London and Glasgow, prior to the introduction of railways. The Caledonian railway passes here, and has a station called the Nethercleuch station. Dinwoodie hill, in the neighbourhood of the village, is 736 feet high.

DIRLETON, a parish, in the county of HADDING-^{TON}, including the villages of Fenton and Gulane, and containing 1497 inhabitants, of whom 353 are in the village of Dirleton, $2\frac{1}{2}$ miles (W. S. W.) from North Berwick. This place, anciently called *Golyn*, a Gaelic term signifying a small lake, derived that appellation from a sheet of water near the village of Gulane, which has long been drained. The ancient manors of Golyn and Dirleton, which latter gives to the parish its present name, belonged, together with the lands of Fenton, in the early part of the twelfth century, to the family of Vaux or De Vallibus; and in 1340 passed, by marriage with the daughter and heiress of William De Vallibus, to Sir John Halyburton, whose grandson, Sir Walter, lord high treasurer of Scotland, was created Lord Halyburton in 1448. On the decease of the sixth Lord Halyburton, the lands were conveyed by his daughter and heiress Janet, in marriage, to William, second Lord Ruthven, by whose descendant, John, Earl of Gowrie, they were forfeited to the crown in 1600. They were afterwards granted to Sir Thomas Erskine, who killed the Earl of Gowrie while making an attempt on the life of James VI.; and Sir Thomas was created Lord Dirleton in 1603, Viscount Fenton in 1606, and Earl of Kellie in 1619. In 1663 the lands were purchased by Sir John Nisbet, afterwards lord of session and king's advocate, from whose descendant they passed by marriage to the present proprietor. Sir John Nisbet was born here in 1610, and died in 1688; he published a work entitled *Doubts and Questions in the Law, especially of Scotland*, which was highly esteemed, and of which Lord Chancellor Hardwicke was accustomed to say that "Dirleton's doubts were better than most people's cer-

tainties". The ancient castle of Dirleton, erected by the family of Vaux in the twelfth century, was a fortress of great strength, and opposed the most formidable resistance to Edward I., on his invasion of Scotland in 1298. The English forces by whom it was besieged were, during the long period of its defence, reduced to the greatest extremities; it was at length surrendered to Anthony Beck, Bishop of Durham. The fortress remained in the hands of the English till the year 1306, and subsequently, on the invasion of Scotland by Cromwell in 1650, was besieged and taken by General Lambert, by whose orders it was dismantled and almost entirely demolished.

The PARISH is about five miles and a half in length, and four in breadth, and is bounded on the north by the Firth of Forth, and on the south by the small river Peffer, which divides it from the parish of Athelstaneford. It comprises an area of about 9450 acres, of which 6680 are arable and in a state of good cultivation, 380 woodland and plantations, and the remainder pasture and heath. The surface is generally flat, being varied only by two nearly parallel ridges of moderate elevation, which divide it into three almost equal portions. The scenery is greatly enlivened by the Firth, and its several islands, of which those of Fetheray, Eyebrochy or Ibris, and the Lamb form part of the parish. Fetheray is situated directly opposite to the village, about a mile from the shore, with which it is connected by a narrow isthmus rising on the west into an elevation, called from its appearance the Castle of Tarbet. The coast towards the east is level sand, and towards the west rocky, having crags of considerable height. The rivers are the Millburn and the Peffer: the latter divides into two shallow and inconsiderable streams, one forming the boundary of the parish, and, after a course of nearly eight miles, falling into the sea at Aberlady, and the other flowing in an eastern direction into the sea near Tynninghame.

On the southern side of the parish the soil is partly wet and marshy, and on the northern side light and sandy; the remainder is generally a good loam, resting on a tilly substratum, and by a highly improved course of agriculture rendered extremely fertile. The crops are wheat, barley, oats, beans, peas, potatoes, and turnips. Bone-dust and rape manures have been extensively introduced; tile-draining is practised to a large extent, and much unprofitable land has been reclaimed. Great attention is paid to the improvement of live stock; about 2000 sheep are annually pastured, of the Cheviot, Leicester, and black-faced breeds, and about 500 head of cattle are fed yearly, besides about 120 milch-cows. The plantations are mostly on the sandy soils, and are well managed; the thinnings supply abundant materials for palings and other purposes. In this parish the substrata are sandstone, whinstone, and limestone: the sandstone is quarried at Gulane, and the whinstone at Burnside; the limestone has not been worked. Basalt is found near the coast, and on the farm of West Fenton it assumes the columnar formation, appearing in pentagonal columns, of which more than thirty were some years since discovered. The annual value of real property in the parish is £13,885. Archerfield is a handsome mansion-house, in a park, commanding an extensive view of the Firth. The village of Dirleton is beautifully situated on an eminence, about a mile and a half from the sea, and consists of neatly-built cottages, with gardens attached to them, richly ornamented with

flowers and shrubs. From its elevated site it commands interesting prospects over the surrounding country, embracing, towards the east, the Bass rock, the island of May, and North Berwick Law; and with the ivy-clad ruins of its ancient castle, seated on a lofty rock at its eastern extremity, it forms itself a conspicuous object in the landscape. In the village are, a parochial library consisting of 160 volumes purchased by collections at the church; a subscription library; and a library of 180 volumes for the use of the school. It has a post-office under Haddington, and the North Berwick branch of the North-British railway passes through the parish. There are also good roads.

Ecclesiastically the parish is in the presbytery of Haddington, synod of Lothian and Tweeddale, and in the patronage of Mrs. Ferguson. The minister's stipend is £293. 18., with a manse, and a glebe of thirteen or fourteen acres. Dirleton church is a substantial and handsome edifice, erected in 1612, and repaired within the last few years; it is well situated for the accommodation of the parishioners, and adapted for a congregation of 600 persons. The members of the Free Church have a place of worship. The parochial school, in the village of Dirleton, affords instruction to about eighty children; the master has a salary of £34, with £33. 16. fees, and a house and garden. There were anciently several chapels in the parish, all subordinate to the church of Golyn: one of these, dedicated to St. Nicholas, was situated on the isle of Fetheray, and there are still some portions of it remaining. On the lands of Archerfield was formerly a convent of nuns of the Cistercian order, a cell to the monastery founded by David I. at Berwick-upon-Tweed; and the remains of the old church of Golyn are still in good preservation. Numerous coffins have been found near the villages of Dirleton and Fenton, formed of a peculiar kind of stone, and containing bones embedded in dark-coloured earth. Near West Fenton, a stone hammer of very great antiquity has been dug up; and not far from this there have been discovered by the plough the foundations of several houses, supposed to have been destroyed by an encroachment of the sea, which formerly reached the spot, though now some miles distant. In the parish are also remains of the old mansion of Saltcoats, belonging to the ancient family of Levington, whose ancestor received a grant of the lands of Saltcoats as a recompense for having killed a destructive boar that infested the neighbourhood.

DOLLAR, a town and parish, in the county of CLACKMANNAN; containing 1562 inhabitants, of whom 1131 are in the town, 7 miles (N. E.) from Alloa. This place, the name of which, in the Gaelic language, is descriptive either of a vale at the base of a hill, or of a secluded plain, belonged as early as the fifteenth century to the Campbell family, of whose baronial residence, Castle-Campbell, there are still considerable remains. By whom or at what period this ancient fortress, which is of formidable strength, was first erected, is not distinctly known; the style of the building indicates different dates, and evidently shows that the original structure received various subsequent additions. The later portions are in a state of ruin; but the keep, the oldest part, is in rather good preservation: it is a tower of quadrilateral form; the walls are of vast thickness, and the spiral staircase forming an ascent to the roof is still tolerably entire. To the south of the keep are ex-

tensive vaults, continued far beyond the walls of the castle. From the rugged and precipitous acclivities of the height whereon it is built, Castle-Campbell is almost inaccessible. In the year 1556, Archibald, the fourth Earl of Argyll, resided in the castle, where he was frequently visited by the reformer, John Knox, who administered the sacrament of the Lord's Supper here previously to his departure for Geneva. The castle was burnt in 1644, by the Marquess of Montrose (after his victories at Auldearn and Alford), on his route to the south, on which occasion his troops burnt every house in the parishes of Dollar and Muckart belonging to the vassals of the Earl of Argyll. The lands are at present divided among various proprietors, of whom the principal are the Globe Insurance Company.

The PARISH is bounded on the north by the Ochil range, and is about three miles in length from north to south, and about a mile and a half in breadth, comprising nearly 4500 acres, of which 1740 are arable, 250 woodland and plantations, 2500 hill-pasture, and the remainder moss and waste. The surface, sloping gradually from the base of the hills towards the south, forms a gently inclined plain to the river Devon, by which the parish is intersected from east to west, and beyond which the ground rises by degrees to a ridge of table land of considerable breadth. The principal of the Ochils connected with Dollar parish are King's Seat, Dollar Hill, and the Wisp, none of which, however, exceed 1900 feet in elevation. At the western extremity of the range is Damiett, commanding an interesting view of the surrounding country, including Stirling, Alloa, Linlithgow, and Falkirk, and reaching to the centre of Lanarkshire, with the range of mountains from Perth on the east to Loch Katrine and Loch Lomond on the west. The river Devon flows through the vale of Dollar, in a beautifully winding stream, between banks richly wooded, and, after a course in which it forms many picturesque cascades, falls into the Forth at Cambus; it abounds with trout and par, and trout are also found in the numerous burns that flow into it from the Ochils. The bridge connecting this parish with that of Fossoway was built by Thomas Forrest, Vicar of Dollar, who suffered martyrdom in 1538, and hence it is called Vicar's Bridge. Though various, the soil is generally fertile; the crops are oats, wheat, barley, turnips, and potatoes. The system of agriculture is advancing, and the lands have been greatly improved by draining; the farm-buildings are substantial and commodious, and most of the fences are kept in good order. The hills afford excellent pasture for sheep, of which considerable numbers are reared. The plantations, which are interspersed throughout the parish, are oak, ash, elm, beech, plane, and the various kinds of fir; birch and alder appear to be indigenous, and recently American oak, chesnut, and walnut, with various other trees, have been introduced, which appear to thrive. The annual value of real property in the parish is £4313. The rocks are chiefly of two classes, namely, trap rocks and coal formation rocks; and some veins of copper and lead have been found: there are sandstone of various colours, ironstone, limestone, and coal. Some unsuccessful attempts to work the copper were made a few years since. There is a quarry in operation, producing excellent stone for building; and the coal has been extensively wrought at Dollar, near the Ochils; and at Sheardale, on the

table land to the south of the Devon. In both these coalfields are found splint and main coal, in seams of three and five feet in thickness, at depths respectively of nine and eleven fathoms from the surface. The works at Dollar have been discontinued; but those at Sheardale are in full operation, producing annually about 6000 tons for the supply of the neighbourhood.

The VILLAGE or town, which has greatly increased since the establishment of the Dollar Institution, is pleasantly situated on the sloping plain in the centre of the parish, and contains several handsome houses, the residences of families connected with that establishment, in addition to those inhabited by persons employed in the works in the neighbourhood. There is a bleachfield here, belonging to Mr. Haig: in 1787 it comprised only about four acres; but the concern has been much extended, and at present not less than thirty acres are appropriated to the bleaching of linen goods, and more than sixty persons are employed, of whom nearly one-half are women. The woollen manufacture, for which a mill has been erected, is carried on to a small extent; and a manufactory of bricks and tiles has been established, in which about twenty persons are engaged. A branch office under the post-office at Alloa has been established here; and fairs, chiefly for cattle, are held annually in May and October. Facility of communication is afforded by the turnpike-road from Kinross to Stirling, which passes through the parish. For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Stirling, synod of Perth and Stirling. The minister's stipend is about £160, of which a small part is paid from the exchequer; with a manse, and a glebe valued at £18 per annum: patrons, the Globe Insurance Company. Dollar church, built in 1775, being insufficient for the increased population, and also in a dilapidated condition, a new church was erected in 1842, at a cost exceeding £2500, defrayed by heritors and feuars; it is a handsome structure in the later English style, with a square embattled tower, after a design by Mr. Tite, of London, and contains 600 sittings. There is a place of worship for members of the United Original Secession. The parochial schoolmaster has a salary of £25. 17., with a house and garden, and the fees average about £12 annually.

The Dollar Institution was founded in 1825, from the proceeds of a legacy by Mr. John Macnab, a merchant of London, who in 1802 bequeathed £90,000 three per cents. for the erection and endowment of a school, or some other charitable institution, for the benefit of the poor of his native parish. The trustees, originally consisting of the minister and elders of the parish, appropriated the funds to the establishment of a general seminary of instruction in all the various branches of learning, and have appointed six masters, to each of whom they give a minimum salary of £140 per annum, with a large house and garden, and the privilege of taking boarders. There is also a female teacher, who receives a salary of about £50, and has a house and garden. The branches taught by the masters are, the English language, writing and arithmetic, the Latin, Greek, and Oriental languages, the modern languages, mathematics, drawing, and geography. The number of scholars is about 300; and the school fees, averaging £120 per annum, are paid to the treasurer of the funds, which produce about £2000 per annum. The buildings of the institution were erected

after a design by Mr. Playfair, of Edinburgh, at an expense of about £10,000, and form a spacious structure in the Grecian style, 186 feet in length and 63 feet in breadth. In the centre of the principal front is a stately portico of six columns, supporting a cornice and pediment; and the upper portion of the walls is crowned with a handsome parapet. The building contains a hall and library forty-five feet square, lighted by a cupola forty-five feet in height, sustained on fluted columns; a museum, spacious class-rooms for the different masters, and other apartments. It has a large lawn, and the grounds on the north of the academy park, consisting of several acres, have been formed into gardens and nurseries, for the instruction of the pupils in horticulture and botany. Connected with the institution is also an extensive infant school, the teacher of which has a salary of about £50, with a house and garden. Thus, altogether, there are eight teachers in the establishment. An act was passed in 1847 for increasing the number of trustees, and for incorporating them. The poor of Dollar have, besides, the interest of other charitable bequests amounting in the aggregate to £319.

DOLPHINGSTON, a village, in the parish of **PRESTONPANS**, county of **HADDINGTON**, 1 mile (S. by W.) from Prestonpans; containing 63 inhabitants. This place is on the road from Musselburgh to Tranent, from which latter village it is distant, westward, about two miles. Here are the ruins of an ancient building supposed to have been a residence of monks, and there are also some ruins of a family seat of the Earls of Hyndford.

DOLPHINTON, a parish, in the Upper ward of the county of **LANARK**, 6 miles (S. W.) from Biggar; containing 305 inhabitants. This place, anciently *Dolphinstown*, derived its name from Dolfine, elder brother of Cospatrick, first Earl of Dunbar; who in the reign of Alexander I. acquired possession of the manor, which, after passing through numerous families, several of whom were eminently distinguished, was divided among various proprietors. The parish is about three miles in length, from east to west, and two miles and a half in breadth; and its surface, which has a gentle acclivity, is tolerably level, with the exception of the hills of Dolphinton and Keir, the former 1550, and the latter 900, feet above the level of the sea. The principal stream is the Medwin, which near Garveld House divides into two channels, one flowing eastward into the Tweed, and the other westward into the river Clyde. There is also a small rivulet which, after receiving several tributary rills, falls into the Lyne. The scenery is generally pleasing, but the want of wood renders it less picturesque; great numbers of young plantations, however, have latterly been formed, which will soon contribute much to its embellishment.

The **SOIL** is generally a dry friable loam, intermixed with sand; in some parts, a kind of clay with portions of moss. The number of acres is estimated at 3668, whereof 2221 are arable, 444 in woods and plantations, and the remainder, of which probably 300 acres might be rendered arable, are rough pasture and waste. In this parish the chief crops are oats and turnips, and barley, wheat, and potatoes are also grown. The system of agriculture is improved; considerable progress has been made in draining, and much land heretofore totally unproductive has been converted into excellent meadow,

producing luxuriant crops of hay. Attention is paid to the management of the dairy; about 200 milch-cows, chiefly of the Ayrshire breed, are kept in the several farms, and about 100 head of young cattle are annually reared. About 1000 sheep, also, are annually fed, the greater number of which are of the black-faced, and a few of the Cheviot breed. The annual value of real property in the parish is £1988. The substrata are whinstone, sandstone, and freestone. Some indications of lead-ore induced an attempt in search of that mineral, but it was not attended with success; fire-clay is obtained, and in the southern extremity of the parish is found a kind of stone well adapted for ovens. Dolphinton House and Newholm are handsome mansions of modern erection. The road from Edinburgh to Biggar intersects the parish.

For **ECCLESIASTICAL** purposes the parish is within the bounds of the presbytery of Biggar, synod of Lothian and Tweeddale. The stipend of the incumbent is £158, of which above two-thirds are received from the exchequer: the manse was put into thorough repair and enlarged in 1828, and the glebe comprises about fourteen acres, valued at £27. 10. per annum: patron, Lord Douglas. Dolphinton church is a substantial edifice, but altogether inadequate to the wants of the population; it appears to have been built about two centuries since. The parochial school is well conducted; the master has a salary of £26, with a house and garden, and the fees average about £15. He receives, also, the rent of four acres of land bequeathed by William Brown about 1658, and now producing £8 per annum; the interest of 1000 merks by the same benefactor, for the gratuitous instruction of poor children; and the annual sum of 100 merks for instructing twenty children, bequeathed by Mr. Bowie in 1759. Mr. Bowie also bequeathed 100 merks a year for the education of any youth of promising genius, or, in failure of such, to be appropriated to the apprenticing of children; fifty merks a year, either to the poor, or for the purchase of school books for children; and fifty merks a year to the minister for managing the property, which consists of lands at Stonypath, purchased by the testator for 8000 merks, and given in trust to the minister and Kirk Session for the above purposes. The poor have the interest of 200 merks left by William Brown about 1658. On the summit of Keir hill are some remains of an ancient camp in good preservation; and there are similar remains at other places in the parish. Within less than a mile south-west of the manse, is a tumulus of stones, about four feet in height, surrounded by a circle of upright stones inclosing an area twenty paces in diameter. Near this spot was found an ornament of fine gold, resembling part of a horse's bit, with about forty gold beads. Stone coffins are frequently found in various parts of the parish, of rude and ancient construction; and numerous sepulchral remains.

DORE HOLM, an isle, in the parish of **NORTHMAVINE**, county of **SHETLAND**. It is situated in the bay of St. Magnus, south of the mainland of the parish, and derives its name from a remarkable arch which passes through its centre, of lofty and capacious dimensions, and admitting boatmen to fish in the waters beneath, being lighted by an opening at the top. The islet is one of the smallest of the Shetland group.

DORES, a parish, in the county of **INVERNESS**, $7\frac{1}{2}$ miles (S. S. W.) from Inverness; containing 1745 inha-

Dore

bitants, of whom 80 are in the village. Its ancient name was *Durris*, a word derived from the Gaelic term *tur-ri-ish*, signifying rising ground near water. The parish is situated nearly at the northern extremity, and on the eastern shore, of Loch Ness, by which an elevated portion of the lands is washed. It is between twenty and twenty-five miles in length, and upwards of four miles in breadth, comprising about 24,000 acres, of which 4000 are arable, the same number wood and plantation, and the remainder moorland pasture. A small part of the parish, containing twenty inhabitants, is locally in the parish of Bole-skine. The surface is mountainous, with the exception of a narrow valley which runs throughout the district; and on the high grounds are several lochs: the village is of small extent, situated near the church, and from it is obtained a prospect comprehending the whole of Loch Ness, stretching for twenty-four miles. In the elevated parts the soil is very superior, and, in seasons free from frost and rain, produces excellent crops; but the low grounds are so hot in summer that the corn and grass are much injured, and in dry weather would be parched up were it not for the copious dews falling in the night. The chief mansions are those of Aldourie, Eregie, and Gortleg. There is a salmon-fishery in Loch Ness and the river Ness, and fine trout, pike, and char are found in the other lochs. The post-road from Inverness to Fort Augustus intersects the parish; and Loch Ness, which is part of the line of the great Caledonian canal, affords every facility for the importation of coal and lime, and the exportation of timber and wool. The produce is usually sent for sale to Inverness; but salmon, sheep, and fat-cattle are conveyed to the London market. The annual value of real property in the parish is £3165.

Dores is ecclesiastically in the presbytery of Inverness, synod of Moray, and in the patronage of Earl Cawdor; the minister's stipend is £142, with a manse, and a glebe valued at £8 per annum. The church is a neat edifice, built in 1827, and there is a preaching-station in the south-western part of the parish. The parochial school affords instruction in the ordinary branches; the master has a salary of £30, with a house and garden, and £10 fees. There is also an Assembly's school, and a school is supported by the Society for Propagating Christian Knowledge. The relics of antiquity comprise the remains of a vitrified fort called *Castle-dun-Richuan*, or the Castle of the King of the Ocean; and a little to the east of this is an eminence called *Drum-Ashi*, or Ashi's Hill, where, according to tradition, Fingal fought with and killed Ashi, the son of the Norwegian king. The distinguished statesman, Sir James Mackintosh, author of *Vindicia Gallicæ*, and recorder of Bombay, was born in the parish in 1765.

Page. DORNIE and BUNDALOCII, a village, in the parish of KINTAIL, county of Ross and CROMARTY, 7 miles (N. N. W.) from Sheilhouse; containing 510 inhabitants. This is a fishing-village on the banks of a branch of Loch Duich, from which the sea is entered by Loch Alsh. There is a small bay, and Dornie and Bundaloch immediately adjoin each other, and form one village, in which are some houses of respectable appearance; the scenery around is very romantic, and above the village are to be seen the mountains of Skye. In the vicinity are the ruins of Ellandonan Castle, the ancient seat of the Mackenzies of Seaford, occupying a rocky islet surrounded by the sea at flood-tide. This castle is said to

have been built by Alexander II., to overawe the Danes and Norwegians; and in the reign of James V. the Macdonalds of Sleat in vain attempted to besiege it. Directly opposite, on the coast of Letterfairn, are the remains of the ancient circular castle of Gruagach. On the landward part of the islet is a fresh-water spring.

DORNOCH, a royal burgh, the county town, and a parish, in the county of SUTHERLAND, 201 miles (N. N. W.) from the city of Edinburgh; containing 2714 inhabitants, of whom 451 are in the burgh. This place is supposed to have derived its name, *Dor-Neich* or *Dor-Nach*, signifying in the Celtic language a horse's hoof, from the slaughter of a Danish

Burgh Seal.

general, who made a descent upon this part of the coast in 1259, and was encountered by William, Thane of Sutherland, who, having lost his sword in the battle, seized the leg of a horse lying on the ground, with which he killed his adversary, and put his followers to flight. It is of considerable antiquity, and in 1150 was an episcopal city, the residence of the bishops of Caithness, within whose province the county of Sutherland was included, and of whom Andrew is supposed to have erected the cathedral. His successor, Gilbert Murray, who was consecrated in 1222, greatly enlarged and beautified the church, in which, upon his decease in 1245 at Caithness, where the bishops had also a residence, a statue was erected to his memory, under the designation of St. Gilbert. All the glass used in the erection of the cathedral is said to have been made at Sydderay, about two miles from Dornoch. After the death of John, Earl of Sutherland, and his countess, who in 1567 were both poisoned at Helmsdale at the instigation of the Earl of Caithness, Mc Kay of Far, taking advantage of the minority of the young earl, then only fifteen years of age, invaded the county of Sutherland, set fire to the town of Dornoch, and laid waste the barony of Skibo. The young earl, who then resided in the castle of Skibo, was, through the persuasion of the bishop, given up to the Earl of Caithness, by whom he was carried off, and, although but fifteen years of age, married to his daughter, aged thirty-two; "an unfit match indeed", says Sir Robert Gordon in his history of the Earls of Sutherland. In 1570, the town and castle were besieged by the Laird of Duffus and his adherents; but being obstinately defended, they set fire to the cathedral, which, with the exception only of the tower, was completely destroyed. In 1614, the Earl of Sutherland commenced rebuilding the cathedral, which for many years served for a place of worship; but subsequently falling into decay, it was restored by the late Duchess-Countess of Sutherland, during the years 1835, 6, 7, 8, and 9, at a great expense; and though its restoration, unfortunately, was not entrusted to competent hands, it still forms one of the most interesting religious edifices in the kingdom. The lower portion of the structure contains the tombs of the ancient earls, and those of the late Duke and Duchess of Sutherland.

The TOWN is situated on the western shore of Dornoch Firth, at the south-eastern extremity of the parish, and

consists of several spacious well-formed streets; the houses are of a very inferior order, little better than humble cottages, and though the county town, the place has only the appearance of an insignificant hamlet. It has been much improved within the last few years by the removal of some ruinous and unsightly buildings. There is a respectable inn, of late years handsomely enlarged, at which the mail stops daily in its passage to and from the north; a post-office is established, and there are also a branch bank, a savings' bank, and a friendly society. Near the town are perhaps the finest *links* in Scotland, and admirably adapted for games and exercises: the shore, too, is excellent for sea-bathing. No trade or manufacture is carried on: even the market has been long declining, and is now but little frequented. Fairs are held on the first Wednesdays in February, July, November, and December, for cattle; and also on the third Wednesday in March, and on the 20th of July (O. S.), if on Wednesday, or if not, on the first Wednesday after. The town was erected into a royal burgh in 1628, by charter of Charles I., under which the government is vested in a provost, four bailies, a dean of guild, a treasurer, and eight councillors. It is also the residence of the sheriff-substitute, sheriff-clerk, and procurator-fiscal. There are no incorporated trades or companies, nor have the burgesses any exclusive privileges; the jurisdiction of the magistrates, though equal in extent to that of other royal burghs, is little more than nominal, and few if any causes either civil or criminal are brought for their decision. The tower of the ancient episcopal castle is appropriated as a court-house, and for the public offices and public records of the county; and a new county prison has been erected, possessing every requisite for the classification and employment of the prisoners. Dornoch is associated with Cromarty, Dingwall, Kirkwall, Tain, and Wick, in returning a member to the imperial parliament; the number of qualified voters is thirty-eight. It also sends for itself a commissioner to the General Assembly of the Church of Scotland. As already observed, Dornoch is the county town; but its very uncentral locality and other disadvantages render it far from convenient to the inhabitants of the shire generally, as the seat of the administration of the law, and of the public affairs of the county.

The PARISH is bounded on the east and south by Dornoch Firth, and on the north-east by Loch Fleet, and is about fifteen miles in length and nine in breadth. Its surface towards the sea is generally flat, and in other parts diversified with hills of no very considerable height. The principal rivers are, the Carnaig, which rises to the south of Torboll, and flows through a strath into Loch Fleet, near the sands of Torboll; and the Evelix, whose source is near the head of the valley through which it flows, between richly-wooded banks, into Dornoch Firth near the Muckle ferry. The coast, with the exception of a few small rocks at Embo, to the north of the town, is flat and sandy. At the south extremity is the Muckle ferry, connecting the parish with the county of Ross, and which the north mail crosses daily: it is a most inconvenient and dangerous impediment to travellers, and apparently the passage and landings might be much improved. Along the northern boundary is Loch Fleet, forming an excellent harbour at Little Ferry, about three miles east of which an earthen mound nearly 1000 feet in length has been constructed by the parliamentary

commissioners, at a cost of £12,000, affording communication between the parishes of Golspie and Dornoch. The rivers contain trout, which are also found in several small lakes among the hills. Though generally light, the soil varies from a sandy moss to clay alternated with sand; the crops are oats, barley, wheat, potatoes, and turnips. The system of agriculture has been greatly improved within the last few years; extensive tracts of waste have been reclaimed and rendered profitable, and more than 6000 acres are now arable and in good cultivation. The farm-buildings are mostly substantial and comfortable; and attached to several of the farms are threshing-mills, some of which are driven by water. The cattle pastured are of the Highland black breed; and the sheep chiefly of the Cheviot, lately introduced. The annual value of real property in the parish is £3336.

There are many thousand acres of woodland on the Sutherland estate, consisting of Scotch fir, larch, birch, alder, and various hard-wood trees, all in a thriving state. Large additional tracts of moor ground, formerly bearing nothing but heather, and almost valueless, are also being annually planted. Coal has been found at Clashmore, and freestone of good quality for building occurs in various places; near the town is a large quarry, and at Embo and in other parts of the parish are quarries on a less extensive scale. Skibo Castle, a modern structure, erected on the site of the ancient castle of that name, is a handsome family residence: in its vicinity is some very rich alluvial land. The chief villages are, the fishing-village of Embo, situated on the coast between the town of Dornoch and the Little ferry; and the pleasant village of Clashmore, in which is a commodious inn, about three miles to the north of the Muckle ferry, and the same distance from Dornoch. For ecclesiastical purposes the parish is within the bounds of the presbytery of Dornoch, synod of Sutherland and Caithness. The minister's stipend is £266. 13., with a manse, and a glebe valued at £10 per annum; patron, the Duke of Sutherland. Dornoch church, formerly the cathedral, is a venerable structure containing 1100 sittings. A place of worship has been erected for the members of the Free Church. The parochial school is held in a portion of the episcopal palace; the master has a salary of £34, with a house and garden, and the fees average £6. Another school is held in a handsome school-house erected by the Duke of Sutherland within the last few years. There are still some remains of the ancient castle of Skelbo, on an eminence rising from the sea near the Little ferry; and the cross erected in commemoration of the exploit from which the burgh is supposed to have taken its name, and to which the common seal has an allusion, is, though much defaced, still remaining. In the parish are also two singular standing stones or pillars, about eight or nine feet high, and in a line with a similar stone in the adjoining parish of Criech: they are evidently of ancient date, but no tradition is now extant as to what their purpose was.

DORNOCK, a parish, in the county of DUMFRIES; including the village of Lowthertown, and containing 847 inhabitants, of whom 203 are in the village of Dornock, 2 miles (E. by S.) from Annan. The name of this place is usually derived from the Celtic words *tor* or *dor*, signifying an oak or wood, and *nock*, a knove or hill, and is said to have been applied in consequence of forests of oak once growing here. According to a prevailing tra-

dition, a battle was fought upon a moor in the neighbourhood, between a party of English under Sir Marmaduke Langdale and Lord Crosby, and a body of Scots under Sir William Brown of Coalston, in which the English were defeated, and both their commanders slain. The supposed graves of the two leaders are still shown in the churchyard, and a spring near the spot where the battle was fought bears the name of the Sword Well. At Stapleton is a strong square tower with battlements on the top, built by a person of the name of Irvine, it is supposed as a place of safety against the depredations of the English borderers.

The PARISH reaches from east to west about two miles and a half, and from the Solway Firth on the south to the river Kirtle on the north measures five miles, comprising an area of about 5000 acres. It contains some beautiful scenery, and is much frequented for its sea air and bathing. The small river Kirtle and the expanse of the Solway comprehend the chief of its waters; in the former eels and pike are found, and salmon-fishings are carried on in the Solway to a considerable extent by means of stake-nets. The greater part of the land is under tillage, and large tracts in the parish are appropriated to grazing; the mosses, which alone are uncultivated, amount to about 300 acres, and 150 acres are plantation. Oats and barley are the only grain sown, while potatoes and turnips, with large quantities of hay, are the chief green crops; the soil is of a loamy nature, with a hard tilly bottom, and is in general productive. The cattle are of the Galloway breed, and about 200 cows are kept for the dairy; a considerable number of swine are fattened, and the hams sent to England. The best system of husbandry is adopted; the manure used is farm-yard dung, and lime; draining has been carried on to a good extent, and improvements are still in progress. The annual value of real property in the parish is £3503. Robgill Tower, an old border fortress, modernised, and now the residence of the Smail family, is beautifully seated on the banks of the Kirtle. The village of Dornock is pleasantly situated upon a gentle eminence about a mile from the coast, and commands a fine view of the Firth; a third of the inhabitants are engaged in hand-loom weaving and the manufacture of checks and gingham. The Glasgow, Dumfries, and Carlisle railway, and the turnpike-road from Carlisle to Portpatrick, run through the centre of the parish from east to west, the former passing by the village, and the latter through it: the railway has a station here.

Ecclesiastically the parish is in the presbytery of Annan and synod of Dumfries; patron, the Duke of Buccleuch. The stipend is £208, and there is a manse, built in 1845, with a glebe valued at £25 per annum. Dornock church, built in 1797, is a plain unadorned structure, containing 300 sittings: in the churchyard are some ancient and rather curious tombstones. There is a parochial school, in which all the usual branches of education, and sometimes Greek and Latin, and also mathematics, are taught; the master has a salary of £34, about £20 fees, and the allowance of a house and garden, with an acre of land. The remains of a Druidical temple are still to be seen in the eastern part of the parish, on the farm of Eastriggs: at the distance of 200 yards west of it, is a large cairn; and at the same distance eastward is another, of smaller dimensions. Old British coins and pieces of armour have been found.

DOUGLAS, a market-town and parish, in the Upper ward of the county of LANARK; including the village of Uddington, and containing 2467 inhabitants, of whom 1313 are in the town of Douglas, 5 miles (S. S. E.) from Crawfordjohn, and 40½ (S. W. by S.) from Edinburgh. This place derives its name from the ancient and renowned family of Douglas, to whose ancestor Theobald, by birth a Fleming, Arnold, abbot of Kelso, gave a large tract of land about the middle of the twelfth century. William, son of Theobald, appears as a witness to various charters granted towards the close of the same century; and in 1289 his descendant, William Douglas, was one of the Scottish barons who signed an address to Edward I. of England, on behalf of their countrymen. During the protracted warfare between England and Scotland in the reign of that monarch, Douglas Castle, which was strongly fortified, and commanded the entrance to the western counties, was an object of continual dispute between the contending parties. It frequently fell into the hands of the English, from whom it was as frequently retaken by its original proprietors. On one occasion it was taken from Sir John De Walton, its occupier for the English, by Sir James Douglas, who, having assembled a strong retinue of his friends, entered the town on Palm-Sunday, while part of the garrison were at church, and attacking them as they came out, put them to the sword, and immediately advancing to the castle, made himself master of the place. The castle, exposed to repeated assaults, was of very precarious tenure, and, from the difficulty of maintaining possession, was distinguished by the appellation of the Castle of Danger. It was often destroyed, and more than once by fire; but it was always restored in greater splendour. On the death of the Duke of Douglas without issue in the year 1760, arose the famous law plea known by the name of the Douglas Cause, which was at length decided by the house of peers in favour of Archibald, son of Sir John Stewart of Grandtully, by Lady Jane Douglas, the duke's sister. Thus the estates of the family were vested in the duke's nephew; and in 1790 the title was revived by the elevation of that gentleman to the peerage, by the title of Baron Douglas of Douglas.

The PARISH is situated near the south-western extremity of the county, and is about twelve miles in length, and from four to seven miles in breadth, comprising 35,318 acres, of which about 5000 are arable, 28,000 pasture, 2000 wood, and 400 waste land and moss. The Douglas river intersects the parish, flowing through a valley that increases in breadth as it approaches the river Clyde, into which the Douglas discharges itself, after receiving in its course numerous tributary streams. On both sides of the valley the ground rises to a considerable elevation, forming in some parts a succession of hills that terminate towards the west in the Cairntable mountain, whose summit is 1650 feet above the level of the sea, and at the base of which the Douglas has its source. The heights on each side of the river are embellished with ornamental plantations; and in various parts of the parish are extensive woods of ancient and luxuriant growth, especially near Douglas Castle, in the grounds of which are some ash and plane trees of large dimensions. The soil is generally fertile in the vale; in other parts lighter and gravelly, and in some a stiff clay: the moors afford fine sheep-walks, and in many places consist of rich black loam. The grain crops are

oats, barley, and bear, with occasionally wheat, the cultivation of which has been introduced with success, but on a very small scale; and turnips and potatoes, for which the soil is favourable, are raised in large quantities. The pastures are extensive and rich, and numbers of sheep are reared, to the improvement of which much attention is paid; the average number exceeds 25,000, chiefly of the black-faced breed, which has been brought to great perfection. There are numerous dairy-farms, producing cheese and butter of superior quality; the cows are the Ayrshire, numbering about 500, and about the same number of black-cattle are fed. In this parish are some quarries of freestone of excellent quality for building; it is of a fine white colour, and is much admired. Limestone is also prevalent, and is quarried for agricultural and other purposes; coal is very abundant, and numerous mines have been opened, affording supplies of fuel to the places situated to the south and east, and giving employment to a great number of the population. Ironstone is found in several parts of the parish, though not worked; and in others its prevalence may be inferred from the property of many of the springs, which are strongly impregnated with iron. Great advances have been made in draining and inclosing the lands, and the annual value of real property in the parish is now £11,013.

Douglas Castle, the seat of Lord Douglas, is beautifully situated in grounds that were very much improved by a late proprietor. The castle, which was partly rebuilt after being destroyed by an accidental fire, has not, though a splendid seat in its present state, been completed according to the original plan designed by Mr. Adam. One wing only has been finished; and from the dimensions of this, which contains more than fifty apartments, some of them magnificent, the whole would have formed one of the most extensive residences in the kingdom. The scene of *Castle-Dangerous*, the last novel of Sir Walter Scott, was laid here. The other gentlemen's seats in the parish are Carnacoup, Spring Hill, and Crossburn House, an elegant villa, the grounds of which are tastefully disposed. The town or village is of great antiquity, and at one time was of some importance. As the head of the barony, it had a charter of incorporation giving to its magistrates many privileges, among which was the power of jurisdiction in capital offences; and to the east of the town is an eminence called Gallow Hill, formerly the place for the execution of criminals. The streets are narrow, and most of the houses are of ancient date, and apparently built for defence against the frequent incursions of an enemy; the walls are massive, and the windows few and small, presenting a forbidding and gloomy appearance. Several houses of a more airy construction have of late years been built. There is a subscription library, which at present contains more than 1000 volumes, and is rapidly increasing. A cotton-factory was established here in 1792 by a company from Glasgow, which after a few years declined; but many of the inhabitants are still employed in weaving cotton for the manufacturers of that city, with handlooms in their own dwellings. The market is held on Friday, and there are seven fairs, which are well attended. In 1847 an act of parliament was passed, authorizing the Caledonian railway company to make a branch from their Clydesdale junction line to the Douglas mineral field. The road from Edinburgh to Ayr, and that from Glas-

gow to London, both pass through the parish, and the former through the town. In respect of trade, the town is at present little more than a village for the residence of persons employed in weaving, and other mechanical occupations.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Lanark, synod of Glasgow and Ayr: patron, Lord Douglas. The stipend of the incumbent is about £250; the manse is a handsome residence, built in 1828, and pleasantly situated in grounds well laid out, and the glebe, which is extensive, comprises some valuable land. Of the ancient church, which appears to have been a very stately and elegant structure, little more remains than the sepulchral chapel of the Douglas family, with a small spire. The chapel contains many monuments, which, though much mutilated and defaced by Cromwell's soldiers, still display features of exquisite sculpture. Among them is the monument of Sir James Douglas, the firm adherent and friend of Robert Bruce, who fell in combat in Spain, and whose remains were conveyed by his companions in arms for interment in the church of his native place. It is of dark-coloured stone, and bears the recumbent figure of a knight armed cap-à-pie, with the legs crossed, in reference to his having been on a crusade to the Holy Land. There is also a monument to Archibald Douglas, Duke of Touraine, which appears to have been of elaborate workmanship; and in a niche is a table-monument to James Douglas, Duke of Touraine, with two recumbent figures, and ornamented with ten figures in basso-relievo beneath. The present church, a comparatively modern building, is not sufficiently spacious for the accommodation of the parishioners: underneath it is a vault in which are deposited the remains of numerous members of the Douglas family, for which the ancient sepulchral chapel afforded no room. The parochial school is well attended; the master has the maximum salary, with an excellent dwelling-house and garden, and the fees amount to about £60. Near the base of Cairntable mountain are the remains of a fortified post, probably occupied by the Douglases during their repeated attempts to surprise the English garrisons that so frequently held possession of Douglas Castle; and within a mile of the castle are the remains of a stronghold called Tothorl Castle, supposed to have been thrown up by Sir Richard de Thirlwall, who was lieutenant-governor of Douglas under Sir Robert de Clifford. Within the castle-grounds is a mound designated Boncastle, near which has been found an urn, with a great number of human bones, a ring of pure gold of great weight, the head of a spear, and various other relics of antiquity. There are also several cairns in the parish. Among the natives of this place most distinguished for literary attainments, was Dr. John Black, author of the *Life of Tasso* and other works.

DOUGLAS, CASTLE, in the county of KIRKCUDBRIGHT.—See CASTLE-DOUGLAS.

DOUGLASTON, a manufacturing village, in the parish of KINNETTLES, county of FORFAR, 3 miles (S. W.) from Forfar; containing 81 inhabitants. This place derives its name from the late Robert Douglas, Esq., by whom it was erected in 1792, for the accommodation of the persons employed in his extensive works. A spinning-mill, of stone, roofed with blue slate from the quarries of the parish, and four stories in height, was completed here towards the close of the last century; and

the introduction of the spinning of yarn, which furnished employment to a considerable number of hands, was followed up by the erection of looms for weaving the yarn into various fabrics, the principal of which were Osnaburghs, Hessians, and brown and bleached sheetings. The machinery is of the most improved kind, and is propelled partly by a steam-engine of seven-horse power, and partly by water power equal to that of five horses. The village is pleasantly situated on the banks of the Kerbit rivulet, over which is a very handsome stone bridge of three arches, erected in the year 1770. A branch post between Forfar and Glamis delivers letters here; and the road from Dundee to Forfar, and also the Strathmore road, pass through the village.

DOUNE, a town, in the parish of KILMADOCK, county of PERTH, 8 miles (N. W.) from Stirling, and 44 (N. W. by W.) from Edinburgh; containing 1559 inhabitants. This place, which is situated on the banks of the river Teith, near its confluence with the Ardoch, owes its origin to a castle founded here, according to some (but disputed) accounts, by Murdoch, grandson of Robert II., and who in 1370 was created Earl of Monteith, and in 1398 Duke of Albany. Murdoch was taken prisoner by the English at the battle of Homelden in 1401, and detained in captivity till the year 1411, when he was exchanged for Percy, Earl of Northumberland, from which time he continued to live in retirement till the death of his father in 1420, when he succeeded to the regency, which, however, after a disastrous government of four years, he resigned. Subsequently a charge of high treason was preferred against him, his two sons Walter and Alexander, and his father-in-law Duncan, Earl of Lennox, who were all seized and carried prisoners to Stirling, where, being brought to trial and found guilty, they were beheaded. Isabella, the wife of Murdoch, was taken from the castle of Doune, and conveyed to that of Tantallan in Lothian, to which place, upon their decapitation, the heads of her father, husband, and children were sent to her in her prison, with a view to extort a revelation of the alleged treason; but she heroically replied, that "if the crime alleged against the parties were true, the king had done justly and according to law".

The castle of Doune was seized by James I., and annexed to the crown, of which it continued to form an appendage till the year 1502, when Margaret, daughter of Henry VII. of England, on her marriage to James IV., obtained it as part of her settlement. After the death of James IV., Margaret married, in 1528, Henry, Lord Methven, a descendant of Murdoch, Duke of Albany; and, with the consent of her husband, granted to James Stuart, a younger brother of Lord Methven, the constablership of the castle for life. This grant was confirmed to him and to his heirs for ever by James V., and the office is still held by his descendant, the present Earl of Moray. Mary, Queen of Scots, and her husband Lord Darnley, frequently made the castle their resort as a hunting-seat; and in 1745 it was garrisoned by Me Gregor of Glengyle, nephew of Rob Roy, who held it for Prince Charles Edward. A party of royalist volunteers from the university of Edinburgh, among whom was Home, the author of *Douglas*, having in one of their excursions ventured as far as the Teith, were all captured by Glengyle, and confined in the castle, from which they ultimately effected their escape by climbing over the walls, as related by Mr. Home in his *History of the*

Rebellion of 1745. The remains, situated on a peninsular eminence, at the confluence of the Teith and the Ardoch, convey a tolerably adequate idea of the ancient magnificence of the castle; the walls, though roofless, are still entire, forty feet in height and ten feet in thickness, inclosing a quadrilateral area ninety-six feet in length and of equal breadth. In the north-east angle is a massive tower eighty feet in height, and at the opposite angle is another tower, forty feet high. The great hall is sixty-three feet in length, by twenty-five feet wide; and the kitchen, and many of the family apartments, are spacious and in tolerable preservation. In the lower portions of the building are several cells and dungeons of frightful appearance. The whole of the ruins have a stately and imposing aspect, and, from their situation, form a strikingly romantic feature in the scenery.

The town has been much improved since the establishment of the cotton-works in the adjacent village of Deanston. It consists principally of three streets diverging from the market cross, which is situated on the spot where the roads from Bridge of Teith and Callander meet; the houses are generally of neat appearance, and several of the more modern are of handsome character. The manufacture of Highland pistols was formerly carried on here to a great extent, and the town was in high reputation for them; the pistols made varied in price from two to twenty-four guineas per pair, and were supplied to most of the nobility of Europe. The manufacture of Highland purses was also extensive, but these have totally disappeared, and the population is at present employed chiefly in agriculture or in the adjacent manufactory. A post-office is established here, and there is a savings' bank. Fairs are held on the second Wednesday in February, for the sale of grain and for general business; the second Wednesday in May, for milch-cows and cattle; the last Wednesday in July, for horses and cattle, the biring of shearers, and other business; the first Tuesday and Wednesday in November, for sheep and black-cattle (a very large fair, called the Latter fair); the last Wednesday in that month, for horses and cattle; and the last Wednesday in December, for fat-cattle, grain, and general business. Facility of communication is afforded by parish and turnpike roads, as well as by the Scottish Central railway, to which there are regular conveyances. In 1846 an act was passed for the construction of a line from the Scottish Central railway, to Doune and Callander. Here is the parish church with its handsome tower, and the members of the Free Church have two places of worship, one of them formerly belonging to the Old Light body. There are also a place of worship for Wesleyans, and a congregation of Independents. Doune gives the title of Baron to the Earl of Moray.—See KILMADOCK.

DOURA, a village, in the parish of KILWINNING, district of CUNNINGHAME, county of AYR, $3\frac{1}{2}$ miles (N. E. by E.) from Irvine; containing 320 inhabitants. This place is situated on the road from Irvine to Dunlop, and between the Annock water on the south-east and the Lugton river on the west. The population is chiefly employed in the coal-mines in the vicinity. A branch of the Glasgow and Ayr railway, proceeding from the collieries here, supplies Ardrossan and various other places with coal, which is very abundant in the parish. Large school premises have lately been erected at the expense of the Earl of Eglinton.

DOVECOTLAND, a village, in the EAST parish of the city and county of PERTH; containing 502 inhabitants.—See PERTH.

DOVEHILL, a village, in the ABBEY parish of the town of PAISLEY, Upper ward of the county of RENFREW; forming part of the late quoad sacra parish of Levern, and containing 131 inhabitants.

DOWALLY, county of PERTH.—See DUNKELD.

DOWNIES, a village, in the parish of BANCHORY-DEVENICK, county of KINCARDINE, 8 miles (S.) from Aberdeen; containing 122 inhabitants. It is a small fishing-village, on the coast, and lying in the extreme south point of the parish. There is a very convenient cove here for fishing-boats, several of which belong to the place, each manned with four or five hands, employed in white-fishing, and sometimes visiting the Moray Firth in the herring season. The Aberdeen railway passes at a short distance.

DRAINIE, a parish, in the county of ELGIN; including the villages of Lossiemouth and Stotfield, and containing 1515 inhabitants, of whom 16 are in the hamlet of Drainie, 4 miles (N.) from Elgin. This parish consists of the ancient parishes of Kinnedar, a parsonage, and Ogston, a mensal church; of which latter the Bishop of Moray received the great teinds. Ogston was disjoined from St. Andrew's, and annexed to Kinnedar, in 1642. The name of Drainie, belonging to an estate on which a new church was built about the year 1666, was after that event applied to the whole parish. The parish is partly a peninsula, as the ancient name Kinnedar implies, and is bounded on the north by the Moray Firth, on the east by the river Lossie, and on the south by the lake of Spynie, a piece of fresh water three miles in length and one in breadth, well stocked with eels and pike, and the resort of numerous aquatic birds. Drainie is about four miles long and two broad, and comprises 4480 acres, of which 3385 are in tillage, 365 under wood, and the remainder uncultivated. The coast is bold and rocky; and at the distance of a mile from the shore, opposite to the Coulard and Causea hills, is a dangerous reef, the dread of mariners, the centre of which, however, being always above water, serves as a beacon for avoiding the lower branches, stretching along unseen to a considerable distance on each side. There are two harbours, one at Stotfield, the other at the mouth of the river Lossie; and the numerous caves and fissures near the hamlet of Causea or Cove-sea, constitute a distinct and interesting feature in the scenery. The whole of the rock in this latter direction is a continuous mass of freestone, the softer parts of which, by the action of the winds and waves, have been wrought into a great variety of arches and pillars. A little to the west is a cave, once the cell of a hermit, and used by Sir Robert Gordon in the rebellion of 1745, for concealing his horses, when the followers of Prince Charles were ravaging this district; and farther in the same direction are many other caverns, but the coast is too rugged and dangerous to allow them to be explored.

All the low lands in the parish were formerly covered by the sea, which, when it receded, left a beach of stones, from about eight to twenty feet in height above the level of the lands under tillage, and which is beneficial as a protection against storms from the north. The interior is flat, and the soil of great diversity of quality, good and bad alternating with each other in rapid succession

throughout. The low drained grounds consist of a rich loam or clayey marl, and produce fine crops; the higher lands have a lighter soil, resting upon a gravelly bed or on white sand, and a portion in the centre is of the worst description, having been denuded of its surface for the purpose of fuel. The usual white and green crops are raised, in some parts of superior quality, and the six-shift course is followed; but husbandry is in a comparatively low state, very little land having undergone the process of draining, and some of the modern improvements being only partially in operation. The annual value of real property in the parish is £5208. The Causea quarries supply abundance of freestone, which has been extensively used for ornamental work in the mansions of this and several adjacent counties; and in the fluor-spar rocks of the Coulard hill, lead of superior quality has been discovered, near which is a bed of limestone. A vein of lead was found and worked about the close of the last century, but the operation was discontinued, the return being inadequate to the expense. The plantations, of limited extent, consist of firs or pine irregularly scattered about the waste tract in the middle of the parish, and one or two clumps of firs in the south-east. The mansion of Gordonstown, on the estate of that name, is a large structure in the Dutch style, repaired and enlarged in 1730; it is now the seat of the Cummings, and was for several centuries the residence of the Gordons of Gordonstown.

Ecclesiastically the parish is in the presbytery of Elgin, synod of Moray, and in the patronage of Sir William Gordon Gordon Cumming, of Altyre and Gordonstown, Bart.; the minister's stipend is £242, with a manse, and a glebe of six acres. The present church was built in 1823, nearly in the centre of the parish, but somewhat inconveniently for the villages, where the bulk of the population, which is rapidly increasing, is located. Drainie parochial school, in the western portion of the parish, affords instruction in the usual branches; the master has a salary of £36, with £6 fees, and also participates in the benefit of the Dick bequest. A charitable fund, raised by subscription in 1806, for the benefit of the families of twenty-one seamen who lost their lives in a storm, afforded relief to the objects for whom the collection was made, by an annual distribution of the proceeds; but this fund is now exhausted. There is a burying-ground at the west end of the parish, covered with grave-stones; it contains a stone cross eight feet high, and at one time formed the site of the ancient church of Ogston: here now stands the splendid mausoleum of the Gordon family. About half a mile to the east is the ruin of the church built in 1666. A mile farther eastward is the burying-ground of Kinnedar, where stood the church of that name, the foundations of which are now scarcely discernible: adjoining are the remains of the castle of Kinnedar, a very strong and extensive fortification, called also the episcopal palace, where Archibald, the tenth bishop of Moray, and other bishops, resided before the cathedral was fixed at Spynie. On the summit of the Causea hills is a range of artificial conical mounds of earth styled the "warlike hills", at nearly equal distances, and from twenty to thirty feet in height, constructed for signal stations, and used at different periods by the possessors of the lands for communicating important information, and various other purposes.

DREGHORN, a parish, in the district of CUNNINGHAME, county of Ayr, 2 miles (E. by S.) from Irvine; containing 1222 inhabitants. This place anciently formed part of the property of the De Morvilles, constables of Scotland, whose ancestor appears to have obtained large possessions here in the reign of Alexander I., and from whose family it passed, with the heiress of William de Morville, to Ronald, Lord of Galloway. Ronald's granddaughter, Helen, early in the thirteenth century married Roger de Quincy, Earl of Winchester, who, in her right, became Constable of Scotland, and proprietor of the De Morville estates; and the lands were subsequently conveyed, by marriage with his daughters, co-heiresses, to William de Ferrars and Allan de la Zouch, ancestors of the present Marquess Townshend, and the Lords Ashby-de-la-Zouch in the county of Leicester. The estates, however, were soon after forfeited to the crown, from the adherence of those two noblemen to the interests of John Baliol; and the barony of Dreghorn was granted by Robert Bruce to Sir Alan Stewart, who was killed in the battle of Hallidown Hill, and whose descendants, afterwards Earls of Darnley and Lennox, retained possession of it till the year 1520. It then became the property of Hugh, first Earl of Eglinton, and his descendant is the present proprietor.

The PARISH is about eight miles in length, and varies from three-quarters of a mile to two miles in breadth. It is bounded on the west and north by the Annock water, on the east by the Gawreer burn, and on the south by the Irvine river. Dreghorn comprises 4477 acres, of which 1500 are arable, 2750 meadow and pasture, and about 120 woodland and plantations. The surface is level towards the sea, and rises in gentle undulations inland; the scenery throughout is pleasingly picturesque, and the banks of the Annock abound with natural beauty, heightened by several handsome villas and seats embosomed in thriving plantations. The soil is for the greater part a deep rich loam, and in other places intermixed with gravel; the chief crops are barley and wheat, with potatoes and turnips. The system of agriculture is in an advanced state, and the rotation plan of husbandry generally adopted; much of the land has been improved by draining. Great attention is bestowed on the management of dairy-farms; butter and Dunlop cheese are sent to the adjacent markets, and all due regard is paid to the improvement of the breed of live stock. The cows on the dairy-farms are the Ayrshire, and the sheep are mostly of the black-faced and Cheviot kinds, with a few of the South Down breed recently introduced. Coal abounds in the neighbourhood, and is extensively worked, and freestone of excellent quality is found; limestone, also, is quarried in the north-east part of the parish. The annual value of real property in Dreghorn is £10,130. Annock Lodge is a handsome residence situated on the south bank of the Annock, in a tastefully ornamented demesne, enriched with thriving plantations; and Piercetou, Righouse, Cunningham Head, and Warrickhill are also good houses. The village is on the road from Kilmarnock to Irvine, and is irregularly built upon a gentle acclivity commanding a view of the sea; most of the houses are of ancient appearance, and the general aspect, from the number of old trees with which the buildings are interspersed, is cheerful and extremely pleasing. Great facility of intercourse is afforded by

the lines of the Glasgow and Ayrshire railway company. Ecclesiastically the parish is in the presbytery of Irvine, synod of Glasgow and Ayr, and in the patronage of Lady Montgomerie. The minister's stipend is about £250, with a manse, and a glebe of four acres and a half, valued at £3 an acre per annum. The church, situated in the village, is a substantial edifice, erected within the last seventy or eighty years, and adapted for a congregation of 430 persons. Dreghorn parochial school affords education to about 100 scholars; the master has a salary of £29. 18., with £50 fees, and a house and garden. There is also a school which has a small endowment in addition to the fees.

DRON, a parish, in the county of PERTH, $1\frac{1}{2}$ mile (S. S. E.) from Bridge of Earn; containing 441 inhabitants. The name of this place is in the Gaelic tongue said to signify a ridge or projection, which is descriptive of the locality where the church and manse are placed. The parish lies a mile south of the river Earn, and, including a tongue of land that belongs to Dunbarny parish and intersects the parish of Dron, measures between three and four miles in length from east to west. It extends about three miles in breadth, comprising 4100 acres, of which 2600 are under cultivation, 400 in wood, and the remainder hill pasture. Dron consists principally of a tract sloping towards the north from the Ochil hills, which form the southern boundary of the beautiful vale of Strathearn; and exhibits a series of well-cultivated and inclosed fields, seen to great advantage by travellers passing along the high road. Some of the hills on the southern extremity of the parish are ornamented with extensive plantations of fir, birch, ash, and other trees, disposed in belts and clumps; and the remaining high grounds in this direction present in general a smooth and verdant surface. Several rivulets run down from the hilly parts; and the Farg, which abounds with fine trout, after flowing, from its source in the Ochil range five or six miles distant, through a deep, narrow, and well-wooded glen of great beauty, forms a boundary line between this parish and that of Abernethy, and falls into the Earn at Culfargie.

The SOIL varies in quality according to its proximity to the hills. The lands verging towards the north are clayey and loamy, with some till, and produce rich crops of wheat, barley, oats, potatoes, turnips, clover, peas, and beans. On the higher grounds, however, the earth is more shallow and mixed with rock: the best crops in this division, consisting of barley, oats, turnips, and potatoes, are produced chiefly in the flats and hollows, the other parts being too much exposed to high winds for successful farming; large tracts are wholly unfit for cultivation, and afford only indifferent pasture for sheep and cattle. The husbandry in general is of a superior character, and still in progress of improvement, especially in regard to tile-draining, which is extensively practised, and is particularly required by the soil, it being for the most part retentive and clayey. The substratum is freestone, which is occasionally quarried; and indications of the existence of coal are so prominent that many attempts to find it have been made since the year 1758, though without success. The annual value of real property in the parish is £4300. The chief residence is Balmanno Castle, once the seat of the Murrays, baronets of Balmanno, and now the property of the nephew of the last baronet, who was killed at the age of

twenty-two at Long Island, in the American war: this edifice, part of which is very ancient, is still in excellent preservation, and is considered a fine specimen of an old castle and mansion-house. There is also a neat modern mansion called Glenearn. The high road from Edinburgh to Perth runs through the parish. Farming produce is sent for sale to Perth, Newburgh, and Kinross, and large shipments of potatoes are made to London.

Dron is ecclesiastically in the presbytery of Perth, synod of Perth and Stirling, and in the patronage of the Crown; the minister's stipend is about £180, with a manse, offices, glebe, and garden, valued at £45 or £50 per annum. The church was built about the year 1816, and is a plain neat edifice, beautifully situated on an eminence at the base of the Ochils, commanding extensive views of the picturesque scenery of part of Strathearn, the Carse of Gowrie, and the Ochil range. The parochial school affords instruction in the ordinary branches, and the master receives a salary of £34: the school-house and premises were rebuilt in the year 1839, at a cost of about £560. In the churchyard is the grave-stone of John Welwood, a celebrated minister in the time of Charles II., who died at Perth in 1679, and was buried here during the night. An old chapel (with a burying ground), at the entrance of Glenfarg, has been pulled down to give place to the new Edinburgh road; and the ruin of another chapel yet remains in the west end of the parish. On the southern declivity of a hill opposite the church, is a large mass of whinstone, about ten feet long and seven broad, and deviating from the perpendicular, called the rocking-stone of Dron.

Ugo
DRONLEY, a village, in the parish of AUCHTERHOUSE, county of FORFAR, 2 miles (N. by E.) from Liff; containing 103 inhabitants. This is a neat and pleasing village, situated a little east of the road between Dundee and Meikle. A fine rivulet issuing from the lake of Lundie, and running along the southern border of the parish, is here joined by another small stream, and both uniting form the Dighty water, which empties itself into the Tay four miles east of Dundee.

DRUMBLADE, a parish, in the district of STRATHBOGIE, county of ABERDEEN; adjacent to the town of Huntly, and containing 945 inhabitants. The ancient name of this parish, *Drumblait*, which is Gaelic, signifies "covered hills or braes". King Robert Bruce is said to have lain encamped here during a time of severe sickness, and to have kept in check Cumyn, Earl of Buchan, one of the most powerful of the Scottish barons, who had pursued him hither, just before the battle of Barra, which was fought between them in the year 1307. The spot where the king intrenched himself was a height upon Sliach, still called "Robin's height". Some years ago, vestiges were visible of an encampment supposed to have been a part of the works of Bruce's station; and some tumuli, as well as immense masses of stone yet remaining in the vicinity, are said to have been connected with the same fortifications. A hill called "the battle hill" is thought to have been the scene of a conflict, at a later period, between the Cummings and the Gordons. The PARISH is about six miles in its greatest length, and between four and five miles in its greatest breadth, and contains above 7600 acres. Its surface is diversified by small hills, mostly cultivated, and by gently sloping valleys, with an extensive plain

on the north, called the Knightland Moss, so level that, from the want of a proper fall for the water, the draining of it was long incomplete, though the whole of the tract is now under the plough or in pasture. There are several streams, but the only one of consequence is the Bogie, which divides the parish on the west from the town of Huntly.

The soil presents numerous varieties, of which the principal is a deep rich loam, producing, if well cultivated, and favoured by the season, very fine crops. A large part of the land, however, is stiff and heavy, with a cold crusty subsoil, which greatly impedes agricultural operations; and in some places the soil is light and sharp, resting upon loose sand or gravel. About 6000 acres are arable, 1100 unimproved, and 500 acres planted with larch and Scotch fir, and a little spruce and beech; all kinds of crops are raised, and of the grain produced oats most prevail, wheat being but little cultivated in the parish. The cattle are numerous, and form a principal object of attention here; they are chiefly the Aberdeenshire mixed with the Highland breed, but crosses with the short-horned have of late become common, and seem likely soon to supplant the native breed. The best system of husbandry is practised, and the improvements effected by draining, by reclaiming waste ground, and planting, have been so considerable within the last thirty or forty years, that the aspect of the parish has been almost entirely changed: the farm-houses and offices and the inclosures, however, are still in a somewhat inferior condition. The substrata afford granite, whinstone, and limestone, the first of which is excellent. In the parish is the mansion-house of Lessendrum, partly an old and partly a modern building. Most of the inhabitants are engaged in agricultural pursuits, but a few are employed in a distillery, a bleach-field, and two potato-flour manufactories, in a meal-mill, a lint-mill, and two wool-mills: at the distillery 40,000 gallons of superior malt spirits are annually produced, yielding to government about £10,000 a year duty. The great Aberdeen and Inverness post-road, and the Huntly and Banff turnpike-road, run through the parish; the one two miles south, and the other a mile and a half north-west, of the church. The annual value of real property in Drumblade is £5520. Ecclesiastically the parish is within the bounds of the presbytery of Turriff and synod of Aberdeen; patron, the Earl of Kintore. The stipend is £159, of which £51 are paid by the exchequer; and there is a good manse, with a glebe of ten arable acres, valued at £16 per annum. Drumblade church, a plain edifice, was built in 1773, and improved in 1829, and contains 500 sittings. The members of the Free Church have a place of worship. The parochial schoolmaster receives £30 a year, and about £24 fees, with an allowance for a house, and a portion of the Dick bequest: Latin, mathematics, mensuration, and all the ordinary branches are taught. There is also a good parochial library. The Rev. George Abel, minister of the parish, left £100 in 1793, and his widow a similar sum several years afterwards, for the poor. Dr. William Bisset, late Bishop of Raphoe in Ireland, was proprietor of Lessendrum, and was interred here in 1834.

DRUMELDRIE-MUIR, a village, in the parish of NEWBURN, district of ST. ANDREW'S, county of FIFE, $1\frac{1}{4}$ mile (E.) from Largo; containing 82 inhabitants. The name of the parish was anciently Drumeldrie,

changed to Newburn from the circumstance, it is said, of a small rivulet in the parish having altered its course. The village is situated about half a mile distant from the shore of Largo bay, and on the high road from Largo to Elie : a little to the north-east is the moor.

DRUMGLAY, a village, in the parish of **GLANMIS**, county of **FORFAR**, 2 miles (W.) from Forfar ; containing 66 inhabitants. It is situated in the extreme north-east point of the parish, a short distance from the Dean river and the loch of Forfar, the former on the south, and the latter eastward, of the village.

village
DRUMLANRIG, a village, in the parish of **DURISDEER**, county of **DUMFRIES**, $3\frac{1}{2}$ miles (N. N. W.) from Thornhill. This place is distinguished for its magnificent palace of Drumlanrig, the seat of the Duke of Buccleuch, and formerly that of the Dukes of Queensberry. It is a large square pile, standing on a rising ground, and looking down with its almost innumerable windows on the plain beneath, the river Nith flowing at a short distance from the building : the walls are covered with a profusion of hearts and stars, and the arms of Douglas, and crowned by twelve fine turrets. The palace was built in the seventeenth century, by the first Duke of Queensberry, from the designs of Inigo Jones, and its erection occupied ten years : around it are old-fashioned gardens, which are kept in good order ; and in its vicinity, a line of yew-trees, overspread by creeping plants, presents a peculiarly venerable appearance. Formerly, there was preserved in one of the parks a herd of the original wild cattle of Scotland, animals of a milk-white, except their noses, ears, and the orbits of their eyes, these being of a dark brown colour. In the churchyard of Durisdeer is a curious monument to " James Lukup, master of the works of Drumlanrig," bearing the date 1685.

DRUMLEMBLE, a village, in the parish of **CAMPBELLTOWN**, district of **CANTYRE**, county of **ARGYLL** ; containing 462 inhabitants. It is in the immediate vicinity of a large colliery, in which its male population is for the most part engaged.

village
DRUMLITHIE, a village, in the parish of **GLENHERVIE**, county of **KINCARDINE**, 6 miles (W. S. W.) from Stonehaven ; containing 397 inhabitants. It lies in the southern part of the parish, a short distance west of the high road from Stonehaven to Laurencekirk, and about a mile east-north-east of the church. The Aberdeen railway has a station here. The inhabitants are principally weavers and shoemakers. Here are an episcopal chapel, a place of worship for members of the Free Church, and a small school.

(D)
DRUMMELZIER, a parish, in the county of **PEEBLES** ; containing 228 inhabitants, of whom 63 are in the village, 2 miles (E.) from Rachau-Mill. This parish, in ancient documents *Drumellar* and *Drumeler*, anciently formed part of the parish of Tweedsmuir, from which it was separated in 1643 ; and in 1742 it was augmented by the annexation of part of the parish of Dawick, the remainder of which was added to Stobo. It appears to have been from a very remote period the property of the family of Tweedie, of whom Sir James Tweedie, to whose memory there is an inscription, dated 1617, over the entrance of a cemetery attached to the church, was the last member. The parish is about fourteen miles in length, and from three to four in average breadth, and is bounded on the north for about eight miles by the

river Tweed, which, also, in the upper portion divides it into two parts. It comprises 17,386 acres, of which 1030 acres are arable, 189 meadow and low pasture, 520 woodland and plantations, and 16,647 acres hilly moor, affording tolerable pasture for sheep and cattle. The surface is generally mountainous, but between the hills and the river are some fine tracts of level pasture ; the hills are clothed with grass and heath, and the scenery is enlivened by some stately timber, and thriving plantations of modern growth.

The **SOIL** is sharp, and the crops are oats and barley, with a few acres of wheat, also peas, potatoes, and turnips : the system of agriculture is in an improved state ; the lands are well drained, and inclosed chiefly with fences of stone. Considerable attention is paid to the management of the dairy-farms, and to the rearing and pasture of sheep and cattle ; about 200 milch-cows are kept, and 7000 sheep, chiefly of the black-faced breed, are fed in the pastures. The annual value of real property in the parish is £2993. The woods are oak, chestnut, sycamore, and larch, and on the older lands are many trees of luxuriant growth ; the plantations are Scotch fir and larch, intermixed with various forest-trees. In this parish the substrata are mostly whinstone (with veins of quartz), white and very compact limestone, and slate ; but no quarries have yet been opened. Dawick, a seat lately rebuilt, is a handsome mansion in the antique style of architecture, situated in a well-planted demesne, containing a fine collection of pine-trees from the Himalaya mountains and California. The village, which is irregularly built, is pleasant, and chiefly inhabited by persons employed in agriculture. The river Tweed and its tributaries abound with trout, and salmon are also found in the former from September till March.

The parish is **ECCLESIASTICALLY** in the presbytery of Peebles, synod of Lothian and Tweeddale, and in the patronage of the family of Trotter ; the minister's stipend is £192, with a manse, and a glebe valued at £10 per annum. Drummelzier church, situated nearly in the centre of the parish, and at an elevation of 800 feet above the sea, is an ancient structure in good repair, adapted for a congregation of 200 persons. The parochial school affords instruction to about thirty children ; the master has a salary of £32, with £10 fees, and a house and garden. At Kingledoors, in the upper part of the parish, was an ancient chapel dedicated to St. Cuthbert, the early evangelist of Tweeddale. There are remains of two castles : that called Tinnes or Thaness Castle, of which there is no authentic record, was of quadrilateral form, with circular towers at the angles, and walls six feet in thickness ; the other, called Drummelzier Place, is supposed to have been the baronial seat of the Tweedie family. On the summit of one of the mountains, are vestiges of a road thought to have been part of the Roman road communicating with the line from Falkirk to Carlisle. Near the junction of the Powsail rivulet with the Tweed, is a spot said to have been the grave of Merlin.

village
DRUMMETERMONT, a village, in the parish of **DUNNICHEN**, county of **FORFAR** ; containing 117 inhabitants. It is situated in the north-eastern part of the parish, and nearly adjoins the village of Letham on the north side. The village is long and straggling, and is chiefly inhabited by farmers and small weavers.

DRUMMOND, a village, in the parish of KILTEARN, county of ROSS and CROMARTY, 6 miles (N. N. E.) from Dingwall; containing 72 inhabitants. This place is seated in a level field near the Skiack rivulet, on the road from Dingwall to Novar Inn: the parochial church stands a short distance from it.

DRUMOAK, a parish, chiefly in the district and county of ABERDEEN, and partly in the county of KINCARDINE, 11 miles (W. S. W.) from Aberdeen; containing 811 inhabitants. Its original name was Dalmaik, by which it is still generally called by the inhabitants, though the denomination of Drumoak has also been used for more than 300 years. The latter appellation is said to be derived from the Gaelic word *drum*, signifying the ridge of a hill, and from *Moloch*, corrupted into *Moak*, the name of a celebrated saint to whose honour a monastery was erected in St. Servanus' isle, on the water of Leven. *Dalmaik* is compounded of the Gaelic *dal*, a haugh or valley, and *St. Moloch*, corrupted into *Maik*; and signifies the valley of St. Moloch, a description applicable to the district containing the ruins of the old church, near which is a well called St. Maik's Well. The lands in the parish belong to four proprietors. The estate of Drum comprehends one-half of the whole, and is possessed by the Irvine family, the first of whom, William de Irvin, was armour-bearer to Robert Bruce, and was rewarded by him for his zeal and fidelity with a grant of the forest of Drum, one of the hunting-seats of the kings of Scotland, conveyed to Irvin by charter under the great seal in 1323. Part of the lands of Leys is also comprised in the parish: it is situated in Kincardineshire, and has been held for more than 500 years by the ancestors of the present proprietor, Sir Thomas Burnet, Bart. The lands of Park formed part of the chase attached to the royal forest of Drum, and having been reserved by Robert when he made the grant of the forest, were given by David Bruce to Walter Moigne, since which they have passed through different families. The lands of Culter formerly belonged to the family of Drum; and almost the whole of that portion of them which lies within this parish, has lately been purchased by Mr. Irvine, and reunited to the Drum estate.

The PARISH approaches in figure to a triangle, but the outline is very irregular. It measures six miles in length, and averages two in breadth, comprising 7190 acres, of which 1797 are in the county of Kincardine. Of the Aberdeenshire portion 3467 acres are under cultivation, 485 are waste or continual pasture (including 80 acres capable of improvement), and 1441 are occupied by wood; of the Kincardineshire portion 798 acres are under cultivation, 793 waste or continual pasture (300 being capable of improvement), and 206 are in wood. The surface is agreeably varied by gentle undulations, rising from the boundaries on all sides but the east to the Drum hill in the centre, which is 500 feet above the level of the sea. In the eastern part the Ord hill attains an abrupt elevation of 430 feet, and its ridge stretches to the boundary of the parish in that direction. The most extensive and beautiful prospect in the neighbourhood is obtained from the southern peak of Drum hill, comprehending a tract stretching almost from the German Ocean on the east along the valley of the Dee, which river forms the southern boundary of the parish, and closed on the south by the Grampian range, and on the

west by lofty mountains often topped with snow. The Dee has long been celebrated for its fine salmon: the fisheries were once much more profitable than they are at present in this locality, a diminution in the number of fish having been caused by stake and bag nets being thickly planted along the coast, and at the river's mouth. The loch of Drum, a fine sheet of water, of oblong form, covers nearly eighty-five acres, and is highly ornamental, its margin being beautifully fringed with alders, and three of its sides dressed with thriving plantations of larch, birch, and Scotch fir. Excellent pike, numerous eels, and a few perch are found in the loch, and common trout are taken by angling in the burns of Gormac and Culter, which separate this parish on the north from those of Echt and Peterculter. These fish also are all found in the pellucid stream of the Dee, with par, sea-trout, white trout, and flounders.

The SOIL is mostly of inferior quality, and on account of its general dryness, occasioned partly by a gravelly and porous subsoil, the farmers have much to contend with. The lands near the river are light and sandy, incumbent on gravel, and when penetrated by the heat of the sun in scorching summers, are dried up; the parts, however, which have been the longest under cultivation and most manured, are rich and loamy, bearing good crops. In the other portions of the parish the land is either thin and moorish, resting on till or some retentive subsoil, or consists of beds of peat, in which many fragments of trees are found, and from which, though to a great extent exhausted, fuel is still partly obtained for the supply of the parish. All kinds of grain are raised, with turnips, potatoes, and hay. The number of sheep has been greatly reduced in consequence of the conversion of large tracts of pasture into arable ground; the black-cattle are the Aberdeenshire polled breed, variously crossed, and lately much improved, and many swine are reared both for domestic use and for the pork-ersers at Aberdeen. The prevailing system of husbandry is the seven-shift course, and large quantities of bone-dust are applied as manure. A considerable portion of marshy land has been reclaimed, and embankments have been raised at a great cost on the estate of Park. The annual value of real property in Drumoak is £2532. The rocks in the parish are of little interest, consisting chiefly of gneiss and granite, boulders of which are abundant, and are used for the erection of fences and farm-steadings. The wood principally comprises larch and Scotch fir, intermixed with birch and other trees; and very fine specimens of old oak, ash, plane, and elm adorn the grounds belonging to the mansion of Drum. This mansion is a spacious edifice in the Elizabethan style, built in 1619, with a venerable tower adjoining, supposed to have been erected in the twelfth century. The mansion of Park is also a handsome structure, in the Grecian style of architecture, built in 1822, and surrounded with extensive and well laid-out pleasure-grounds. The turnpike-road from Aberdeen to Braemar passes through the whole length of the parish. Fairs for the sale of cattle are held at Park Inn on the first Monday in January, the first Monday in April, the Monday after the second Tuesday in May, the second Tuesday in July (O. S.), and the Tuesday before the 22nd of November. They are of recent institution, and are badly attended.

Ecclesiastically the parish is in the presbytery and synod of Aberdeen, and in the patronage of Alexander

Irvine, Esq. : the minister's stipend is £158, of which upwards of a third is received from the exchequer ; with a manse, and a glebe valued at £22 per annum. Drumoak old church, removed in 1835, is supposed to have stood about 300 years, and was inconveniently situated on a strip of land stretching into the parish of Peterculter. The present structure, placed on nearly a central spot, is a neat and comfortable place of worship, raised at an expense of about £1000, and contains 630 sittings. A parochial subscription library was instituted in 1827, and comprises upwards of 300 volumes. The parochial school affords instruction in Latin and mathematics, in addition to the ordinary branches ; the master has a salary of £30, with about £22 fees, and receives £10 in meal, for teaching twelve poor children, left by the family of Drum. James Gregory, the inventor of the reflecting-telescope, was a native of the parish. On Her Majesty's visit to Scotland in September 1848, the royal party passed through this parish on their way from Aberdeen to Balmoral.

village DRUMOCHY, a village, in the parish of LARGO, district of ST. ANDREW'S, county of FIFE, 2 miles (E. N. E.) from Leven ; containing 156 inhabitants. This place is separated from Nether Largo by the mouth of the Keel rivulet, which forms the harbour, opening into Largo bay. The population are chiefly fishermen. The trade in salt, for which there were formerly many works here, has altogether disappeared.

village DRUMORE, a village, in the parish of KIRKMAIDEN, county of WIGTOWN, $\frac{2}{3}$ of a mile (S. E.) from Kirkmaiden ; containing 279 inhabitants. This village is seated on the eastern shore of the peninsula called the Rhinns of Galloway, and has a good harbour and quay, with safe anchorage for shipping. Four vessels, of between sixteen and thirty-seven tons' burthen, belong to the port, whence farm produce is shipped to various places ; and in Luce bay some fishing is carried on. There is a daily post from Stranraer, distant south-south-east about twenty miles. Above the village are the ruins of Drumore Castle, which from its position and magnitude must have been of great strength and importance.

DRUMS, a hamlet, in the parish of ERROL, county of PERTH ; containing 73 inhabitants.

village DRUMSTURDY-MUIR, a village, in the parish of MONIFIETH, county of FORFAR, $6\frac{1}{2}$ miles (N. E.) from Dundee ; containing 176 inhabitants. It is situated on both sides of the old road from Dundee to Arbroath, and is long and straggling. In its immediate vicinity is the Hill of Laws, on which are the remains of a fortification, the stones bearing the marks of vitrification or fusion. A considerable quantity of gold coins was found a few years since near this spot.

DRUMVAICH, a hamlet, in the parish of KILMADOCK with DOUNE, county of PERTH ; containing 49 inhabitants.

village DRYBURGH, a village, in the parish of MERTOUN, county of BERWICK, $1\frac{1}{2}$ mile (W.) from Mertoun. It is beautifully situated on the river Tweed, which forms the southern boundary of the parish ; and was formerly a market-town of some importance, but is now chiefly remarkable for the much-admired remains of its ancient abbey. So early as the year 522, St. Modan, one of the first Christian missionaries in Britain, was abbot of Dryburgh ; but from the circumstance of this original institution being unnoticed by historians subsequently

to this period, it is supposed that the abbot and monks were shortly afterwards transferred to Melrose, and some centuries elapsed before the formation of a second establishment here. Hugh de Morville, constable of Scotland, about the middle of the twelfth century, with the concurrence of his wife Beatrix de Bello Campo, founded a new abbey, to which David I. granted a charter of confirmation ; and the establishment was afterwards enriched by numerous benefactions from illustrious personages. In 1544, the whole of the town was burnt down, except the church, by the English army under Sir George Bowes ; and in the year following, the monastery was plundered and burnt by the Earl of Hertford. About the year 1556, David Erskine, a natural son of Lord Erskine, and one of the sub-preceptors to James VI., became abbot. That monarch, however, soon after dissolved the abbey, and bestowed it as a temporal lordship, under the title of Cardross, on John, Earl of Mar, lord high treasurer of Scotland, with the privilege annexed of assigning that title of peerage, which the earl conveyed to Henry, his third son, ancestor of the present Earl of Buchan, by a deed dated 13th of March, 1617, and confirmed by the king and parliament. In 1786, the abbey was purchased by the Earl of Buchan from the heirs of Colonel Tod, who had bought it from the family of Haliburton of Newmains. Though not extensive, the remains are of very considerable interest ; they are romantically overgrown with ivy, and consist chiefly of the chapter-house, north transept, and St. Modan's chapel : some parts of the ruins are of very early date, there being vestiges of the Saxon and Norman styles as well as of the early English. The environs are famed for their delightful scenery, and are ornamented with various pleasing objects, among which is a temple erected to the Muses, and surmounted by a bust of Thomson, the author of *The Seasons*. A colossal statue of Sir William Wallace crowns the brow of an adjoining hill ; and near the ruins of the abbey is a remarkably light and elegant bridge for foot passengers and led horses, consisting of a platform of wood, elevated eighteen feet above the surface of the water, and fixed to pillars on each side of the river by chains. Sir Walter Scott was buried at Dryburgh.

DRYFESDALE, a parish, in the county of DUMFRIES, 14 miles (N. N. W.) from Annan ; containing, with the town of Lockerbie, on the Glasgow and Carlisle road, 2093 inhabitants. This parish, which derives its name from the Dryfe, a small rivulet running through the north-west part of it, contains several memorials of its ancient inhabitants, and of their domestic feuds or military operations. There are vestiges of eight camps, some square or Roman, others circular or British, the most remarkable of which are two, the one British and the other Roman, facing each other, and separated by a narrow morass. They are on two hills east of the village of Bengall, a term perhaps implying "the hill of the Gauls", but which is often pronounced by the people of the district as Berngaw. Old pieces of armour and warlike weapons have frequently been found in them ; and not many years ago the skeleton of a man was discovered in a cairn in the morass, with sandals which were sent as a great curiosity to the museum at Oxford. There are also the remains of what is supposed to have been a Roman station, or outwork, situate upon an eminence in the centre of the extensive holm

of Dryfe and Annan, and called *Gallaberry*, or "the station of the Gauls". The most perfect relic of this kind, however, is the British fort at Dryfesdale-gate, occupying two acres of ground, and the counterpart of which is a large Roman work, about half a mile due east: the two works are separated only by a moor, on which a bloody battle was fought between the army of Julius Agricola and the forces of Corbredus Galdus, the Scottish king. There are plain traces of the great Roman road that extended from the borders of England to the vast encampments on the neighbouring hill of Burnswark, and thence crossed the parish at Lockerbie to Dryfesdale-gate, and to Gallaberry, where it divided, one branch leading through Annandale, by Moffat, to Tweeddale and Clydesdale, and the other crossing the Annan, and passing through Nithsdale to the west country. On the holm of Dryfe, half a mile below the former churchyard, is an old thorn-tree pointing out the place where Lord Maxwell was killed in the celebrated fight on Dryfe-sands, between the Maxwells of Nithsdale and the Johnstones of Annandale: this engagement occurred on the 7th December, 1593, and the Maxwells were defeated with great slaughter. The highland part of the parish, which is divided from the lowland by a range of green hills, was once a parish of itself, called Little Hutton, and the church and burying-ground were at Hall-dykes: the time of annexation to Dryfesdale is uncertain. Besides this church there were two other places of worship within the limits of the present parish, viz., the chapel of Beckton, supposed to have belonged to the Knights Templars, and the chapel at Quaas, about a quarter of a mile west from Lockerbie.

The PARISH is seven miles in its greatest length, from north to south, and varies in breadth from one mile to three miles and a half, comprising about 11,000 acres. It is situated in the middle of the beautiful valley called the How of Annandale, and is bounded on the south and west by the river Annan, which separates it from the parish of Lochmaben. In the southern and western parts, the surface is tolerably level, but towards the north there are lofty hills, most of which, once clothed with pasture, are now productive of grain, potatoes, and other crops. The highest and most beautiful hill, and one from which the prospects are unusually interesting and extensive, is that called sometimes Qubyte-Woolen, but usually White-Ween, from its having formerly been a place for the pasturage of very white sheep. It rises about 700 feet above the level of the sea, and is covered with waving corn. Beacon-fires are supposed to have been lighted on it, to warn the inhabitants of the approach of English borderers. The only stream in the parish is the Dryfe, but the Annan, the Corrie, and the Milk all touch it on their passage to the Solway, and are well stocked with various kinds of fish. In dry weather the Dryfe is a small rivulet, but in a rainy season it pursues its course with great impetuosity, overflowing its banks. The Caledonian line of railway passes through part of the town of Lockerbie, and crosses the Dryfe about four or five hundred yards above the bridge on the road from Glasgow to Carlisle. The viaduct by which the line crosses the vale of the stream, forms a picturesque bridge of white freestone, consisting of five arches, of thirty feet span each. The whole of the parish is culti-

vated, with the exception of 600 acres, 250 of which are wood, and the rest moss and moor; and all kinds of grain and green crops are grown, the annual value of which is very considerable. The chief rock is whinstone or greywacke, which is very abundant; some soft freestone is also found, and limestone of a conglomerate character is wrought in a regular quarry, for sale, at Daltonhook. The annual value of real property in the parish is returned at £7670. Ecclesiastically, Dryfesdale is within the bounds of the presbytery of Lochmaben and synod of Dumfries; patron, the Crown. The minister's stipend is about £190, and there is a good manse, delightfully situated, with a glebe valued at £25 per annum. The church, built in 1796, altered in 1811, and enlarged in 1837, stands on a small eminence on the west side of the main street of Lockerbie, a little north from the centre of the town; it is handsomely fitted up, and seats upwards of 900 people. There is also an Antiburgher meeting-house at Lockerbie. The parochial school affords instruction in Latin, Greek, French, and practical geometry, with the usual branches; the master has a salary of £34, with a house and garden, and £33 fees. There is a subscription library.

DRYMEN, a parish, in the county of STIRLING, including part of the late quoad sacra district of Buckleyvie, and containing 1515 inhabitants, of whom 344 are in the village of Drymen, 55 miles (W. by N.) from Edinburgh. The name of this place was originally written Drumen, which is derived from the Celtic word *Druim*, signifying a knoll or rise in the ground, and is strikingly descriptive of the locality, the surface being marked in many places by such eminences. The parish is situated in the western part of the county, and is very irregular in its outline, but approaching to a triangular form, and measuring in extreme length fifteen miles, and ten in breadth. It comprises 32,200 acres, of which about 7000 are cultivated, 556 in wood, a considerable portion moss, and the remainder moorland, traversed by large numbers of native sheep and black-cattle. The moorland consists principally of two tracts, one of which, stretching from the east to the north-west, divides the parish into two parts, and the other, situated in the southern portion of the parish, is part of Stockie-muir. The former of these tracts, near its western extremity, has a lofty ridge separating the parish from that of Buchanan, and distinguished by the elevated points of Benvraick, 1600 feet, and Guallan, about 1300 feet, above the level of the sea: a little to the north of the ridge the river Duchray, a tributary of the Forth, forms the boundary of Drymen for several miles. The lands north of this extensive mountainous moor are contained within the general basin of the Forth, and the southern lands within that of the Clyde. Between the two moors is the picturesque vale of the Endrick, which comprehends most of the arable land in the parish, and is remarkable for its beautiful scenery, heightened by the eccentric windings of the stream: after running for a short distance through the parish, the river forms about two miles of its boundary on the south, and then loses itself in Loch Lomond. On the north-eastern limit of the parish flows the river Forth, winding slowly along, and exhibiting, in the colour of its water, the effect of the mossy land through which it passes, and which is a continuous tract called Flanders Moss. This moss, commencing here, and extending to

Stirling, a distance of sixteen miles, is supposed to have been the site of an extensive forest, forming part of the *horrida sylva Caledoniæ* cut down by the Romans to facilitate the conquest of the natives, who had their strong places in it: the remains of gigantic trees still bear the mark of the axe by which they were felled.

The prevailing soil is poor and shallow, with a cold impervious subsoil; but in some favoured spots, such as the vale of the Endrick, there is a fine hazel mould, inclining to loam. Towards the north the land is light and sandy, and about the Forth a deep rich clay is found under the moss. The husbandry practised here is of a very mixed character, the old system being still retained in some parts, to the neglect of the rotation of crops and many great improvements, which have been introduced into others. Of late years, a great change for the better has taken place. The sheep pastured on the moorlands are chiefly the black-faced, and the cattle are the native black. For the improvement of the former, Linton and Lammermoor rams are sometimes purchased; and on the farms in the southern and western parts some fine Leicesters may be seen, and many good specimens of Ayrshire cattle. The live stock have been much improved by the encouragement given by the Strath-Endrick Club, instituted in 1816, which meets here annually in August, and of which the Duke of Montrose is patron. The annual value of real property in the parish is £10,032. The natural wood is mostly coppice; it covers about 180 acres, and among it may be noticed some lofty oaks and beeches. There is a very fine ash-tree at the gate of the churchyard, which is upwards of 200 years old, and measures sixteen feet seven inches in girth at the height of one foot from the ground. The vale of Endrick is well wooded, and the plantations consist of 376 acres, belonging principally to the duke. The mansions are those of Park, Finnich, and Endrick-Bank. The village is situated a little north of the Endrick, and its inhabitants are chiefly engaged in agriculture. There is a manufactory at Gartness for weaving woollen goods, where, also, the preparation of the raw material and the dyeing are carried on. The turnpike-road from Glasgow and Dumbarton to Stirling passes through the parish, and to the first place the produce of the lands is generally sent.

Drymen is ECCLESIASTICALLY in the presbytery of Dumbarton, synod of Glasgow and Ayr, and in the patronage of the Crown; the minister's stipend is £272, with a manse, and a glebe of seven acres, valued at £19 per annum. The church, built in 1771, and rescued in 1810, is a substantial edifice in good repair, and contains about 400 sittings. The United Presbyterian Synod have a place of worship. The parochial school is about half a mile from the village; the master receives a salary of £31, with £25 fees. A parish library, now containing 400 volumes, was instituted in 1829, and a savings' bank in the same year. The northern portion of the parish, called the barony of Drummond, gives name to the Drummond family, the founder of which was a Hungarian named Maurice, who came over with Margaret, queen of Malcolm Canmore, and obtained lands here. One of his descendants, Anabella, daughter of Sir John Drummond, was united in marriage to Robert, Earl of Carrick, who succeeded to the throne as Robert III. In this barony, on the farm of Garfarran, are the remains of a fort said to have been erected by the Romans. Na-

pier, the inventor of logarithms, resided at Gartness for a considerable period, during which he prosecuted his mathematical speculations.

DUBBIESIDE, or INVERLEVEN, a village, in the late quoad sacra parish of METHILL, parish of MARKINCH, county of FIFE, 6 miles (S. E.) from Markinch; containing 348 inhabitants. This village is pleasantly situated on the western bank of the river Leven, near its influx into the Firth of Forth, and is neatly and regularly built, consisting of one principal street intersected at right angles by two smaller streets. The inhabitants are generally employed at their own houses in weaving sheetings, dowlas, and towellings, for the manufacturers in the neighbouring districts. The surrounding scenery is of pleasing character, and the village is connected with the town of Leven, on the opposite shore, by a handsome suspension-bridge across the river. It contains a meeting-house in connexion with the United Presbyterian Synod.

DUDDINGSTON, a parish, in the county of EDINBURGH; including the villages of Joppa and Easter and Wester Duddingston, and the late quoad sacra parish of Portobello; and containing 4366 inhabitants, of whom 156 are in Easter and 200 in Wester Duddingston, the former $3\frac{1}{2}$ miles (E. by S.) and the latter $1\frac{1}{2}$ mile (E. S. E.) from Edinburgh. This place derived its name, anciently *Dodinestun*, from the family of Dodin, to whom it belonged in the reign of David I., and of whom *Hugo, filius Dodini de Dodinestun*, appears as witness to a grant of lands to the canons of Holyrood. The manor was subsequently the property of the Thompson family, of whom Sir Thomas was created a baronet by Charles I. in 1637. It afterwards formed part of the possessions of the Duke of Landerdale, who gave it with his daughter in marriage to the first Duke of Argyll, from whose successor, the fifth duke, it was purchased in 1745 by the Earl of Abercorn, whose descendant, the Marquess of Abercorn, is the present proprietor. The site on which the town of Portobello has been built, formerly that portion of the forest of Duddingston called the Figget Whins, afforded shelter to Sir William Wallace and his troops on their march to attack the town of Berwick; and during the parliamentary war, the Scottish leaders held a conference with Cromwell within this parish, previously to the battle of Dunbar. In 1745, the forces of the Pretender lay encamped on a plain near the village of Wester Duddingston, now within the demesnes of Duddingston House, for nearly a month before and after their defeat of General Cope at Preston; and the house in which Prince Charles Edward slept on the night previous to the battle is still remaining.

The PARISH is bounded on the west and north-west by the parishes of St. Cuthbert, the Canongate, and South Leith; on the north-east by the Firth of Forth; and on the south by the parishes of Inveresk and Libberton. It extends from the eastern base of Arthur's Seat to the Firth, for nearly four miles in length, and increases gradually towards the east from less than one mile to about two miles in breadth, comprising 1812 acres, of which, with the exception of a few acres of woodland and pasture, the whole is arable. The surface is generally a level plain, sloping by degrees from the base of Arthur's Seat to the Firth of Forth. The streams of the Powburn and the Braid intersect the parish, flowing through the pleasure-grounds of Duddingston House to

the hamlet of Duddingston-Mills, whence, pursuing their course through a narrow and romantic dell, they fall into the Firth to the west of Portobello. There is also a stream called Brunstane, which separates the parish from Libberton, and joins the Firth near Magdalene Bridge. Duddingston loch, a fine sheet of water about a mile in circumference, at the base of Arthur's Seat, adds much to the beauty of the scenery, and, by means of a small canal, supplies the rivulets that flow through the park. The greater portion of the parish was for a long time a barren moor, overgrown with furze, and partly covered with sand. From this unprofitable state, the lands of Prestonfield were first recovered and brought into cultivation by their proprietor Mr. Dick, at that time lord provost of Edinburgh, who, removing at his own expense the accumulated refuse of the streets of the city, employed it as manure for the improvement of his land. Not long afterwards, the whole of the moorlands in the parish were reclaimed, and brought into profitable cultivation.

The soil is generally clay, alternated with sand, and by judicious management has been rendered extremely fertile; the arable lands produce abundant crops of all kinds of grain, turnips, and potatoes, and the grass in the parks is luxuriantly rich. The system of agriculture is in the highest state of advancement, and all the more recent improvements in husbandry, and in the construction of implements, have been fully adopted. One or two cows of the Ayrshire or the Teeswater breed are kept on each farm for the use of the family; but scarcely any live stock is reared in the parish. The annual value of real property in Duddingston is £21,896. The principal substrata are coal, sandstone, and freestone. The coal, which is very abundant, was formerly wrought, but from the difficulty of clearing the mines from water, the working was discontinued; the mines, however, have been lately leased to an English gentleman, who has erected a powerful steam-engine, and there is every prospect of their being wrought with success. There are some extensive quarries of good freestone, from which materials have been raised for the erection of the houses of Portobello and Joppa; and in the bed of one of the burns is a stratum of black-coloured stone, of smooth and unctuous appearance, which, from its susceptibility of a high polish, is well adapted for mantel-pieces and other ornamental purposes. Strata of limestone and ironstone have been also found on some of the lands. *Duddingston House*, the seat of the Marquess of Abercorn, is a spacious and elegant mansion in the Grecian style, erected in 1768, after a design by Sir William Chambers, at an expense of £30,000. It is beautifully situated in an extensive park abounding with stately timber, and is surrounded with pleasure-grounds tastefully laid out in lawns, shrubberies, and walks; there are some temples and other ornamental buildings, and the demesne is enlivened by the windings of the rivulets, in which are artificial islands of picturesque appearance. *Prestonfield House*, the seat of Sir William Hammer Dick Cunyngnam, Bart., is a handsome mansion situated near the loch, in an ample demesne well laid out, and enriched with plantations: it commands a fine view of the city of Edinburgh, to the southern confines of which the park nearly extends.

The village of *Wester Duddingston*, where the parish church is situated, was formerly a large and populous

place, the inhabitants of which were chiefly employed in weaving. It is at present a small but agreeable village, and consists mostly of detached villas, surrounded with gardens and pleasure-grounds, occupied as summer residences by families of Edinburgh, and some neat cottages inhabited by persons engaged in the works that are carried on in the vicinity. Many of the females are employed in washing linen, for which the situation of the village near the loch and its convenience for bleaching render it peculiarly adapted. The vicinity abounds with beautiful scenery, and commands extensive and interesting prospects, embracing Craig-Millar Castle, the Moorfoot, Lammermoor, and Pentland hills, the city of Edinburgh, and the Firth of Forth in the distance. *Easter Duddingston* is situated on an eminence near the sea; it consists only of small cottages inhabited chiefly by labourers, and is apparently falling into decay. The hamlet of *Duddingston-Mills*, near the junction of the Duddingston and Portobello roads, has a pleasingly rural aspect. Extensive mills for flour and barley were erected here a few years since, at an expense of £6000; they are driven by water and by steam, according to circumstances, and contain machinery of the most improved construction. In this hamlet are also situated the parochial school, and the handsome buildings of Cauvin's Hospital. Facility of communication is afforded by excellent roads, by the main line of the North-British railway, and by its Leith and Hawick branches.

For ECCLESIASTICAL purposes the parish is within the bounds of the synod of Lothian and Tweeddale and presbytery of Edinburgh. The minister's stipend, including £10 for communion elements, is £300, with a manse, and a glebe valued at £15 per annum; patron, the Marquess of Abercorn. Duddingston church is a very ancient structure in the Norman style, of which it contains some interesting details, particularly a fine arch separating the chancel from the nave. In 1631 an aisle was added by the presbytery for the Hamilton family and their tenants; the church was enlarged and repaired in 1840, and now contains 400 sittings. In the churchyard are some handsome monuments, and an obelisk of marble to the memory of Patrick Haldane, Esq., of Gleneagles. There are places of worship for the United Presbyterian Synod and Independents, an episcopal, and a Roman Catholic chapel. The parochial school is attended by about ninety children; the master has a salary of £34, with a house and garden, and the fees average £40. There is a subscription library in *Wester Duddingston*, containing about 400 volumes. *Cauvin's Hospital* was founded by Mr. Louis Cauvin, a French teacher in Edinburgh, and afterwards a farmer in this parish, who in 1825 bequeathed the greater portion of his estates to the lord provost, the principal of the university, the rector of the high school, and the ministers of Duddingston, Libberton, and Newton, in trust for the erection and endowment of an hospital for the maintenance and education of boys of not less than six, nor more than eight, years of age. The scholars enjoying the benefit of this institution are to be "the sons of respectable but poor teachers", and "of poor but honest farmers"; these failing, "the sons of respectable master-printers or booksellers", and "of respectable servants in the agricultural line." The buildings were erected in the villa style, in 1833, and contain the requisite accommodations for twenty-five boys, who are maintained in the

hospital for six years, and instructed in the French, Latin, and Greek languages, the mathematics, and the ordinary branches of a commercial education, by masters appointed by the trustees, who were incorporated by charter in 1837. The poor have a bequest of £100 left by Mr. Kay, of Edinburgh, architect.

village
DUFFTOWN, a village, in the parish of MORTLACH, county of BANFF, $\frac{1}{2}$ a mile (N.) from Mortlach; containing 770 inhabitants. This village, which is situated a short distance from the junction of the rivers Fiddich and Dullan, is of recent growth, having arisen since the year 1817, when the first of its present buildings was commenced. A kind of market for grain is held here, which is occasionally resorted to by the dealers in the neighbourhood, but not on any particular day; and fairs for the sale of cattle are held five times during the year. There is a daily post; and a small prison has been built in the village, for the temporary confinement of delinquents previously to their committal.

village
DUFFUS, a parish, in the county of ELGIN; including the villages of Burgh-Head, Cummington, New Duffus, and Hopeman; and containing 2529 inhabitants. The name of Duffus is supposed to be derived from the Gaelic word *Dubuist*, signifying the black lake, in reference to the lake of Spynie, now drained, or to some other lake of which there is no trace left. The parish was formerly remarkable for its castle, and as the scene of military operations; and there are several monuments of antiquity still remaining, with which its ancient history is closely interwoven. The most interesting relics are those of fortifications at Burgh-Head, by some thought to be Roman, and by others considered Danish, but most probably originally constructed by the Romans, and afterwards occupied by the Danes. The works were divided into two parts, a higher and a lower, and presented four strong ramparts, built with oaken logs, directed towards the small isthmus upon which the village of Burgh-Head now stands. A few years ago an obelisk was standing nearly in the centre of the parish, thought to have been erected by Malcolm II., in memory of a victory over the Danes under Camus; and not far from it there was once a village called Kaim, supposed to be the same as that mentioned by the historian Buchanan as retaining the memorable name of Camns. The village is now removed, but the place nevertheless retains the appellation of Kaim. Duffus Castle, the picturesque ruins of which are still visible, was the ancient seat of the lords of that name, a branch of the noble family of Sutherland, and who yet bear the title, recently restored from attander, though they now possess no property in the district.

The PARISH is nearly six miles long and three broad, containing about 10,000 acres, and lying along the Moray Firth, by which it is bounded on the north. The coast at the east end is rocky and very bold, and contains some large and remarkable caverns; in the western part it consists of a level sandy beach. Along the shore, and for half a mile inland, the surface is mostly meagre pasture, supposed to have been once richly-cultivated land, and to have been reduced to its present condition by the blowing of sand from the western beach. The remaining part of the parish, with the exception of two slight acclivities, is a continuous plain of good ground in a high state of tillage. With respect to climate, the parish is highly favoured: the finest stone fruits ripen on the

open wall, and the more rare and delicate flowers and shrubs attain a luxuriant growth, and prolong their blossoming until December. In the western district the soil is a black fertile earth, mixed in some places with sand; in the eastern quarter it is a deep rich clay, similar in many respects to the fine soil of the well-known Carse of Gowrie. The number of arable acres is 5381, in pasture 2962, and 310 are in wood: grain is produced of excellent quality, and to a considerable extent, greatly predominating in amount over the green crops, the annual value of the former being four times that of the latter. The cattle are of the Morayshire breed, which is very similar to the Highland, but more bulky: they have been recently crossed and varied with the Teeswater and other esteemed breeds. The best method of cultivation prevails, and many improvements in every department of husbandry have taken place; the farm-buildings are generally thatched with straw, but are substantial, and of suitable extent. The rocks consist of sandstone and limestone, of each of which there are quarries. The annual value of real property in the parish is £7902. Among the residences is Duffus House, a commodious and handsome mansion in the old English manorial style. The village of Duffus is regularly built, and is a neat, clean, and interesting place. The chief communication of the people is with the town of Elgin, to which there is a good turnpike-road; and a light post curriole brings the mail. Burgh-Head has an excellent harbour, and regular steam communication with Leith and London. There are three fisheries carried on, namely, a salmon, a herring, and a white fishery, which generally prove very profitable. Ecclesiastically the parish is in the presbytery of Elgin and synod of Moray; patron, Sir Archibald Dunbar, of Northfield, Bart. The minister's stipend is about £250, with an excellent manse, built in 1830, and a glebe of the annual value of £18. Duffus church, situated in the eastern extremity of the parish, at a very inconvenient distance from the bulk of the population, is an old and ill-constructed edifice of unsightly appearance, with a very picturesque and ancient porch; it was repaired in the year 1782, and is in good condition. There is a chapel of ease at Burgh-Head, where are also two dissenters' meeting-houses; and near Kaim is an episcopal chapel. A parochial school is supported, in which the classics and mathematics are taught, with the usual branches of education; the master has a salary of £36, a portion of Dick's bequest, about £12 fees, and a house and garden. There are several other excellent schools in the parish.

village
DUIRINISH, a parish, in the ISLE of SKYE, county of INVERNESS; containing, with the former quoad sacra parish of Waternish, 4983 inhabitants. This place, early in the tenth century, became the property of the Mc Leods, by marriage of the first Tormoid, or Norman of the name, with the daughter and heiress of Mc Railt, the original possessor of the lands. Frequent feuds between the Mc Leods and the Mc Donalds of Uist, in which the latter made attempts to render themselves masters of the property, subsisted for a long period; but with the exception of certain portions of land voluntarily alienated by the Mc Leods, the whole is still in the possession of their descendants. On one occasion, while a number of the Mc Leods were met for public worship in the church, a party of the Mc Donalds, having landed at Ardmore, in the district of Waternish, set fire to the

building; and, except one individual, the whole assembly perished in the flames. The inhabitants, however, whom the burning of the church had collected in great numbers, amply retaliated this barbarous outrage, for, attacking the invaders before they could regain their ships, they stripped them of their booty, and left the entire party dead upon the shore.

THE PARISH is bounded on the north and north-east by Lochs Snizort and Grieshernish, on the south and south-east by Lochs Bracadale and Carroy, and on the west by the channel of the Minch. It is about nineteen miles in extreme length, and nearly sixteen miles in extreme breadth, comprising more than 60,000 acres, of which 2400 are arable, 3800 meadow and pasture, 130 woodland and plantations, and the remainder waste. The surface is boldly varied, rising in some parts into hills of considerable height, and in others into mountains. The most conspicuous mountains are the Greater and Less Helvels; they have an elevation of 1700 feet above the sea, and are clothed with verdure to their summits, which form a level plain. On account of their near resemblance in shape, they constitute an infallible landmark to mariners, by whom they are called Mc Leod's Tables. From the larger of the two a range of hills extends northward, terminating at the entrance of the bay of Dunvegan in Galtrigil Head, a bold and precipitous headland 300 feet in height; while from the smaller of the Helvels a similar chain of hills stretches to the south, terminating in the cliffs of Idrigil and Waterstein, the former of which have an elevation of 400, and the latter of 600 feet. Near the point of Idrigil are three basaltic pillars, rising perpendicularly from the sea, one of them 200 feet in height, and the two others 100 feet each; they have obtained the appellation of Mc Leod's Maidens, and there was formerly a fourth pillar, which has disappeared. The coast, from its numerous indentations, has a range of more than seventy miles in extent, and is generally precipitous and rocky; but within the many bays and lochs the shore has a moderate declivity, forming commodious beaches for landing. The lochs of Dunvegan and Grieshernish are safe roadsteads for large vessels during all winds; and Lochs Bay, Poltiel, and Carroy, though more exposed, afford good anchorage for ships in ordinary weather. Pol-Roag, a branch of Loch Carroy, is also a secure shelter, but from the narrowness of its entrance is accessible only to vessels of small burthen.

THE SOIL is various, generally peat-moss, with some tracts of clay and gravel; the chief crops are oats and potatoes. On the larger farms, the system of agriculture has been improved within the last few years, the farm-houses are mostly commodious, and the fences well kept up; but on the smaller tenements, which are held by cottars without leases, husbandry is still in a very backward state. There are scarcely any black-cattle kept, the stock having been almost entirely superseded by sheep, which are numerous. The few sheep remaining of the native Highland breed are of diminutive size, but afford mutton of very delicate flavour, and are remarkable for the fine texture of their fleeces: within the last fifty years the black-faced breed has been introduced, but it is now giving place to the Cheviot. The annual value of real property in the parish is £4999. The plantations are of modern date, and are almost confined to the grounds of the principal landowners; they consist of

oak, ash, plane, beech, alder, birch, and larch, with Scotch fir, which last, however, has not succeeded. In this parish the substrata are chiefly of the trapstone formation, intersected with veins of basalt; limestone, containing numerous fossil shells; coal, which is not workable; and veins of sandstone. Besides the fine castle of Dunvegan, the principal mansions in the parish are Orbost, Grieshernish, and Waternish, all of them handsome residences pleasantly situated. Considerable quantities of shell-fish are taken on the beach, and several persons are employed in the fisheries off the coast; the fish generally are cod and ling, which, after being cured, are sent to the markets. The manufacture of kelp is also carried on, to a moderate extent. About three boats, averaging ten tons' burthen each, belong to the parish; but no other vessels visit it for the purpose of trade. A post-office has been established at Dunvegan; and facility of communication is maintained by good roads, about thirty-five miles of turnpike-road passing through the parish.

FOR ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Skye and synod of Glenelg. The minister's stipend is £158, of which one-third part is paid from the exchequer; with an allowance of £57 in lieu of a manse, and a glebe valued at £22. 10. per annum: patron, Mc Leod of Mc Leod. Duirinish church, erected in 1824, is a substantial and handsome structure in the centre of the parish, and contains 550 sittings. Two extension churches, each containing 330 sittings, were erected some years ago, one of them in the district of Arnizort, about twelve miles from the parish church, and the other at Sloosabost, on the west side of Loch Dunvegan. In each of these the parish minister preaches once in five weeks. There is a government church in the district of Waternish. The parochial schoolmaster has a salary of £30, with a house and garden, and the fees average about £8. Four schools are supported by the General Assembly, and three by the Gaelic Society. Among the antiquities is the castle of Dunvegan, the ancient baronial residence of the Mc Leods, of which the oldest portion was erected in the ninth century; a portion was added to it in the thirteenth, and the two parts, consisting of lofty towers, were connected by a range of low building, erected by Rory Mor in the reign of James VI. Recently the castle has undergone very extensive and costly repairs, adding much to its grandeur as an object in the scenery, and to its comfort as a residence. The whole is situated on the summit of a lofty rock, rising precipitously from the sea; and an easier line of approach was opened some years ago, by throwing a bridge across the chasm which separates it from a neighbouring rock. In this castle are preserved, the celebrated banner called the "Fairy flag", taken by the Mc Leods from the Saracens during the crusades; an ancient drinking-cup of hard dark wood, supported on four silver feet, and striped with ribs of highly-wrought silver having numerous sockets for the reception of precious stones, some of which are still remaining; and Rory Mor's horn, a drinking-cup of much larger dimensions, containing five English pints, noticed by Sir Walter Scott. There are numerous caverns in the rocks along the coast, one of which is 120 feet in length, forty feet in height, and ten feet wide; and the cave of Idrigil is resorted to by the fishermen for drying their nets, curing fish, and dressing their victuals. The parish likewise contains many bar-

rows, circular forts, and subterraneous dwellings: on the farm of Vatten, a long narrow passage leads into a central room arched with stone, from which branch off several galleries conducting to other subterraneous apartments, that have not been explored. Some rude sepulchral urns of reddish clay have been dug up; one of these is in the possession of Mc Leod of Mc Leod, and another has been deposited in the Glasgow Hunterian Museum.

DULL, a parish, in the county of PERTH, 4 miles (W. by N.) from Aberfeldy; containing, with part of the village of Aberfeldy, 3811 inhabitants, of whom 145 are in the village of Dull. This place, the name of which is derived from the Celtic *dail*, signifying "a plain", appears to have been celebrated for a monastery founded here at a very early period, and which formed one of the only three Abthaneries existing in the kingdom. These peculiar establishments, the superiors of which had the title of Abthane, were at Dull, Kirkmichael, and Madderdy; and Edgar, King of Scotland, conferred all of them upon his younger brother Ethelred, then abbot of Dunkeld, whose successor Hugh granted the monastery of Dull to the priory of St. Andrew's. The parish, which comprises the districts of Appin, Grandtully, Amulrie, Foss, and Fincastle, is about thirty miles in length, and, from its intersection by other parishes, is of very irregular form. It is from four to twelve miles in breadth, and consists of about 135,000 acres, of which 19,000 are arable, pasture, and meadow, 3000 woodland and plantations, and the remainder moor and waste. The surface is divided throughout its whole length by several parallel ranges of hills, forming part of the Grampians; they gradually diminish in height towards the north-east, and between them are the beautiful vales of Glenquaich, Appin, Foss, and Fincastle. Of these ranges the highest is the central range, dividing the vale of Appin from that of Foss, and containing a portion of the mountain *Schiehallion*, which has an elevation of 3564 feet, and is partly in the parish of Fortingal, and the hill of *Farragon*, which is wholly in this parish, and is 2535 feet above the level of the sea. In this range also is the *Craig of Dull*, a lofty rock commanding from its summit an extensive and diversified prospect, embracing the richly-cultivated vales of Appin and Fortingal, Loch Tay, the bridge of Kenmore, the noble mansion and wooded grounds of Taymouth, and a great variety of picturesque Highland scenery.

The principal river is the *Tay*, which, after flowing through the grounds of Taymouth, in the parish of Kenmore, enters this parish, and pursuing its course along the vale of Appin, which it sometimes partially inundates, runs to the north of the village of Aberfeldy into the parish of Logierait. The river *Lyon*, which has its source in Loch Lyon, in the parish of Fortingal, enters this parish at Coshievile, and taking a south-eastern direction, separates Dull from Weem, and flows into the Tay at the eastern base of the hill of Drummond. The *Quaich*, rising among the hills in Kenmore, expands, after a course of nearly eight miles, into the Loch Fraochy, in the valley of Glenquaich, on the southern border of the parish. The river *Tummel*, issuing from Loch Rannoch, flows in an eastern course into Loch Tummel, forming the northern boundary of the parish; and the *Garry*, which has its source in Loch Garry, in the parish of Blair-Atholl, intersects the north-eastern

portion of the lands. These rivers form several interesting and highly picturesque cascades, the chief being the falls of Keltie, Camserney, Tummel, and Moness; and in the Lyon and the Tummel are found pearl-muscles, some of them containing pearls of large size and of brilliant lustre. There are likewise numerous lakes in the parish. One of the principal of these is *Loch Tummel*, described under the head of Blair-Atholl, on the boundary of which it is situated. *Loch Fraochy* is about two miles and a half in length, and half a mile in breadth: on the south bank is a shooting-seat, the property of the Marquess of Breadalbane, the demesne attached to which is embellished with plantations. Trout of small size, but of excellent flavour, afford sport to the angler, for whose accommodation there is an excellent inn about half a mile distant. *Loch Ceannard*, situated in the hills of Grandtully, is nearly a mile in length, a quarter of a mile wide, and is encircled with bleak and barren mountains. Nearly in its centre is a small islet, on which are the ruins of an ancient shooting-lodge, almost surrounded with plantations of larch, affording shelter to flocks of black-game; and on the north bank of the loch is a neat modern villa in the cottage style. There are many small lakes in the immediate vicinity, all of which abound with trout, pike, and perch.

The SOIL in several parts is a rich loam alternated with clay, and in others light and gravelly; in some of the districts is found a thin brownish loam mixed with sand, and in others a wet moss. The chief crops are oats, barley, potatoes, and turnips; the system of husbandry in the vale of Appin is in a highly advanced state, and elsewhere has been much improved under the auspices of the Highland Society. Great attention is paid to the improvement of live stock, and to dairy-farming. The cattle, of which about 5000 are kept, are generally of the West Highland breed, with a few of the Ayrshire on the dairy-farms; and the sheep, of which more than 18,000 are fed, are of the black-faced breed, with some of the Cheviot and Leicestershire on the lower grounds. The annual value of real property in the parish is £11,649. There are considerable remains of natural wood, consisting of birch interspersed with oak, ash, hazel, willow, alder, and mountain-ash; and very extensive plantations of beech, ash, plane, elm, oak, Scotch and spruce firs, and larch, which last is predominant, are under careful management, and in a thriving state. The rocks are chiefly of mica-slate, together with quartz, granite, hornblende-slate, &c. By far the most important rock in the parish, for economical purposes, is limestone, of which a bed traverses the district in a south-western direction, and appears at intervals in different places of the adjacent districts. A stratum of the same kind of rock as that of which Taymouth Castle is built, occurs upon the Aird of Appin; and there are indications of slate at the base of Schiehallion, but its quality has not been ascertained.

Grandtully Castle, the baronial seat for many generations of a branch of the ancient Stewart family, and now the residence of Sir William D. Stewart, Bart., is a venerable turreted mansion on the south bank of the river Tay; and Cluny, Derculich, Foss, and Moness are all handsome houses, finely situated. In the village of Aberfeldy (*which see*) the woollen manufacture is carried on to a moderate extent, there being a dye-mill, with machinery for carding and spinning; and at the hamlet

of Camserney a carpet manufactory was established by Sir Niel Menzies, Bart., which affords employment to about thirty persons. There are likewise a saw-mill and a wheelwright's establishment, in which latter bobbins are also made, for the Dundee market. Fairs are held at Aberfeldy for cattle, sheep, horses, &c., on the first Thursday in January, the Tuesday before Kenmore fair in March, the last Thursday in May, the last Friday in July, the last Thursday in October, and the first Thursday in November (mostly O. S.). Fairs for cattle and sheep are also held at Amulrie on the first Tuesday and Wednesday in May, and the Friday before the first Wednesday in November; at Coshieville on the last Thursday in October, and the day before Fortingal fair in Dec.; at Tummel-Bridge on the last Friday in Oct. (O. S.); and for horses and general business at Foss on the first Tuesday in March (O. S.). A sheriff's court for small debts, which has jurisdiction also over the parishes of Kenmore, Killin, Fortingal, Weem, and part of the parishes of Logierait and Little Dunkeld, is held quarterly at Aberfeldy, and has nearly superseded the justice-of-peace courts at Weem, within which district Dull is comprehended. There is a post-office at Aberfeldy, and a branch office has been opened at Amulrie. Facility of communication is maintained by good turnpike-roads.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Weem, synod of Perth and Stirling. The minister's stipend is about £250, with a manse, and a glebe valued at £40 per annum; patron, the Crown. The church, situated in the village of Dull, is an ancient structure, repaired and reseated in 1840, and contains 600 sittings. A church has been erected at Foss by parliamentary grant. There are also chapels in connexion with the Established Church at Amulrie and Grandtully, under the patronage of the General Assembly; the minister of the former has a stipend of £65, wholly from the Royal Bounty, and the minister of the latter has £90, of which £40 are paid by Sir William D. Stewart, and the remainder from the Royal Bounty; each minister has also a manse, and about five acres of arable land rent free from the proprietors. At Tummel-Bridge is an episcopal chapel. The parochial school is well attended; the master has a salary of £34, with a house and garden, and the fees average £14. Of the monastery no vestiges now remain, with the exception of a heap of shapeless rubbish near the village of Dull, supposed to be the ruins of the abbey church. The ancient cross, around which was a sanctuary, whose limits were marked out by three crosses of similar form, recently removed, is still remaining; and there are numerous barrows and tumuli, one of which, at the bridge of Keltnie, now covered with plantations, has every appearance of an artificial intrenchment, and is supposed to have been the site of a battle between the Fingalians and the Picts. In 1836, on removing a large barrow of stones between the inn at Coshieville and the river Lyon, Mr. Menzies discovered about twelve stone coffins, rudely formed of slabs, in some of which were found urns containing ashes, and in others ashes and human bones only. In the lands of Croftmoraig are the remains of a Druidical circle, nearly complete; and in the vale of Appin are several upright stones, some of them in groups, and others standing alone.

DUMBARNEY, in the county of PERTH.—See DUNBARNEY.

DUMBARTON, a royal burgh, the county town, and a parish, in the county of DUMBARTON, 15 miles (N. W.) from Glasgow, and 58 (W. by S.) from Edinburgh; containing 3828 inhabitants, of whom 3782 are in the burgh. This place derives its name, formerly *Dunbriton*, from an ancient fortress which, though its founders are unknown, became the

Burgh Seal.

principal seat of the Strathelyde Britons, who at a very remote period established themselves in this part of the kingdom. The Romans, however, during their invasions of Britain, are supposed to have made themselves masters of this fortress and the territories adjacent; and on the western peak of the rock on which the castle is built, are still some vestiges remaining of a lighthouse said to have been erected for the accommodation of their galleys stationed in the Clyde, which flows round its base. After the departure of the Romans, the Britons of Strathelyde quickly repossessed themselves of their previous settlements, which they maintained against the assaults of the Piets and Scots. In 756, the fortress is recorded to have been taken by Egbert, King of Northumbria. The name of the place, while in the hands of the Britons, was *Alcluyd*, supposed to be the *Balclutha* celebrated in the poems of Ossian. "I have seen the walls of *Balclutha*, but they were desolate. The fire had resounded in the halls: and the voice of the people is heard no more. The stream of *Clutha* was removed from its place, by the fall of the walls. The thistle shook there its lonely head: the moss whistled to the wind. The fox looked out from the windows, the rank grass of the wall waved round its head. Desolate is the dwelling of *Moina*, silence is in the house of her fathers."

The CASTLE was made a royal fortress at a very early date, and the town which had arisen under its protection was in 1222 erected into a royal burgh by *Alexander II.*, who in 1238 granted a charter to the Earl of Lennox, confirming to him the earldom and its possessions, with the exception of the castle and some lands adjoining. During the disputed succession to the Scottish throne on the death of *Alexander III.*, the castle, which had been surrendered with many others to the custody of *Edward I.* of England, was in 1298 delivered by that monarch to *John Baliol*, whom he declared to be the rightful heir to the crown. After various captures and recaptures, the castle again fell into the hands of *Edward*, who in 1305 placed it under the government of *Sir John Monteith*, during whose occupation the heroic *Wallace*, being treacherously made prisoner, was delivered into the power of his inveterate enemy, and sent to England for trial. The castle was taken by *Robert the Bruce* in 1300; and during the siege of *Dumbarton* by the English fleet in 1481, it was bravely defended by its governor, *Andrew Wood*, to whom, for his services on that occasion, *James III.* granted the lands of *Largo*, in the county of *Fife*. In the beginning of the reign of *James IV.*, the castle had been placed under the custody of the Earl of *Lennox*, on whose attainder for rebellion his estates and title became forfeited to the crown, and the castle was besieged by the Earl of *Argyll*,

chancellor of Scotland; but its strength resisted all his efforts, and it was not till after a protracted siege by a numerous force, headed by the king in person, that the garrison surrendered. After the disastrous battle of Pinkie in 1547, *Mary*, the young *Queen of Scots*, was conveyed for safety to the castle of Dumbarton, where she remained till her embarkation for France; and after her return, she visited the town while on an excursion into Argyllshire. During the hostilities consequent on the deposition of the queen, the castle was held for her by Lord Fleming for a considerable time; but in 1571 it was surprised and taken for the regent by Captain Crawford, who, having learned by bribery the easiest mode of access, succeeded by scaling the walls; and Hamilton, Archbishop of St. Andrew's, was made prisoner, and afterwards hanged at Stirling.

At the commencement of the war in the reign of Charles I., the castle, which was garrisoned by the royalists, was taken by the parliamentarians in 1639, but was soon recovered by the king's forces. It again, however, fell into the hands of the republicans, and the Scottish parliament ordered the fortifications to be destroyed. This order was not carried into effect; in 1652 it was garrisoned by Oliver Cromwell, and at the time of the union of the two kingdoms, the ancient castle was one of the forts ordered to be kept in repair. The present garrison consists of a governor, lieutenant-governor, barrack-master, storekeeper, and surgeon, with thirty rank and file, and twelve artillery of the royal corps. The buildings are situated on a stupendous rock rising precipitously from the Clyde to a height of 350 feet, and dividing into two conical peaks of nearly equal elevation. The entrance, which is far below the point where the rock divides, is defended by a rampart containing the guard-house and apartments for the officers, whence a long flight of steps leads to the interval between the summits. Here are the barracks for the garrison, a battery, and a well of excellent water, behind which is the governor's house. Above these, on the lower summit of the rock, are several batteries, strongly mounted, commanding an extensive range of the Clyde; and at high water the rock is nearly insulated by the river Leven. The higher summit of the rock, the ascent to which is precipitously steep, still retains the name of Wallace's Seat, and that portion of the castle in which the brave Wallace was confined is called Wallace's Tower. Among other relics of antiquity is a large two-handed sword, said to have belonged to that hero. In 1847, when visiting Scotland, Her Majesty the Queen landed at Dumbarton, where she stayed for about three-quarters of an hour, and inspected the ramparts.

The town is situated on the west bank of the river Leven, near its influx into the Clyde, and consists principally of a street in the form of a crescent, from which several smaller streets diverge. It is connected with a suburb on the west side of the Leven by a handsome stone bridge of five arches, nearly 300 feet in length. The houses are well built; the streets are paved, and lighted with gas, and the inhabitants are amply supplied with water. There is a public subscription library with a collection of more than 2000 volumes, and two reading and news rooms are supported by subscription. The chief manufacture is that of glass, which was formerly carried on to a very great extent, paying duties to government amounting in one particular year to £119,000;

it is still very considerable, and the principal articles produced are crown and bottle glass. There are tanneries, rope-walks, and brick and tile works, and various handicraft trades are pursued for the supply of the neighbourhood; ship-building is also carried on extensively in three commodious yards belonging to the town, and another yard in the adjoining parish of Cardross. In the rivers Clyde and Leven are some good salmon-fisheries. The Leven is navigable at high water for vessels of large burthen to the quay of Dumbarton; but at low tides, a bar and some sand-banks at the mouth of the river, though partly removed, allow access only to steamers and small vessels. The number of vessels employed in the trade of the port is about forty, of 1220 tons' aggregate burthen.

The market, which is on Tuesday, is amply supplied with grain and with provisions of all kinds. Fairs are held on the third Tuesday in March and May, the Thursday before Easter, the first Wednesday in June, which is a large cattle-mart, and the second Tuesday in August and November. The post-office has two deliveries daily; and branches of the Commercial and Western Banks of Scotland, and several insurance agencies, have been established in the town. Facility of communication is afforded by steam-boats, which ply thrice a day to Greenock and Glasgow; and in summer there is a daily conveyance for passengers to the Loch Lomond steamers, which touch at Balloch. In 1846 an act was passed for the construction of a railway from Glasgow to Dumbarton and Loch Lomond, with branches to Helensburgh and other places. By charter of Alexander II., extended by several of his successors, and confirmed by charter of James VI., who added a grant of land, the town possesses all the privileges of a ROYAL BURGH, and the burgesses, and their vessels and cargoes, enjoy exemption from river-dues on the Clyde and harbour of Glasgow. Under the Municipal Reform act, the government is vested in a provost, two bailies, a dean of guild, treasurer, and ten councillors. There are five incorporated guilds, viz., the hammermen, tailors, shoemakers, coopers, and weavers, for admission into which the fees are inconsiderable, the highest not exceeding £1.2. The magistrates have civil and criminal jurisdiction within the royalty, for which they hold courts as occasion requires, assisted by the town-clerk, who acts as assessor; but owing to the facilities secured to sheriff-court procedure by recent statutory forms, the business is now chiefly brought before the sheriff of the county, who holds sheriff and commissary courts every Thursday during the session, and small-debt courts every alternate Thursday. Dumbarton is associated with Kilmarnock, Renfrew, Rutherglen, and Port-Glasgow, in returning a member to the imperial parliament; the number of qualified voters is 158. The county gaol and court-house are at the end of the main street.

The PARISH is bounded on the south by the river Clyde, and on the west by the river Leven, which separates it from Cardross. It is from seven to eight miles in extreme length, from three to four miles in breadth, and comprises 6529 acres. The surface in the south is level for nearly two miles from the Clyde, but afterwards rises abruptly towards the north, becoming chiefly moorland diversified with small hills of moderate height. In many parts the scenery is beautifully picturesque. The soil, though in some places shallow, is generally

fertile, partly clay alternated with gravel, and the lands are in a good state of cultivation; the crops are wheat, oats, barley, bear, peas, and beans, with the usual grasses. The system of husbandry is improved; the lands are inclosed, principally with fences of thorn, which are well kept, and the farm-houses and offices are substantial and commodiously arranged. The substrata are chiefly limestone and sandstone; of the former there is an extensive supply at Murroch glen, and on Dumbarton moor are quarries of red freestone. The annual value of real property in the parish is £10,810. For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Dumbarton, synod of Glasgow and Ayr. The minister's stipend is £233, with a manse, and an allowance of £16 in lieu of glebe; patrons, the Town Council. The church, built about 1810, and situated in the town, is a spacious structure containing 1500 sittings. A missionary is established here, who receives a stipend of £52, raised by subscription; there are places of worship for members of the Free Church and the United Presbyterian Synod, and a Roman Catholic chapel. The parochial school is attended by nearly 200 children; the master has a salary of £40, with a school-house, and the fees, though very moderate, are considerable from the number of scholars: the school is under the patronage of the council. Dr. Smollett, the novelist, received the rudiments of his education in this town; and Dr. Colquhoun, author of a treatise on the *Wealth, Power, and Resources of the British Empire*, was born here. It is said that George Buchanan the historian received part of his education at the place. Dumbarton conferred the title of Earl on a branch of the Douglas family, but it became extinct on the demise of the second earl without issue, about the middle of the last century.

DUMBARTONSHIRE, a county, in the west of SCOTLAND, bounded on the north by Perthshire, on the east by the counties of Perth and Stirling, on the south by the Firth of Clyde, and on the west by Argyllshire. It lies between 55° 53' 30" and 56° 19' 40" (N. Lat.) and 3° 54' 50" and 4° 53' (W. Long.), and, including the detached parishes of Kirkintilloch and Cumbernauld, which extend towards the east for 12 miles between the counties of Stirling and Lanark, is about 57 miles in length. It varies from 24 to 2 miles in breadth, and contains an area of 261 square miles, or 167,040 acres; 8369 houses, of which 7985 are inhabited; and a population of 44,296, of whom 22,542 are males and 21,754 females. This district was originally inhabited by the British tribe of the *Attacotti*, whose descendants retained their possessions long after the British kingdom of Strathclyde had been subdued by Kenneth McAlpine, and subsisted as a distinct race till the middle of the twelfth century. That part of the county bordering on the river Leven obtained the appellation of Levenach, afterwards corrupted into Lennox, and in the reign of William the Lion belonged to a powerful Saxon family, of whom Alwyn was by that monarch created Earl of Lennox. The earldom was subsequently raised to a dukedom; and on the demise of the sixth duke without issue, the title and estates were conferred upon Charles Lennox, whom Charles II. created Duke of Richmond. During the disputes relating to the succession to the throne after the death of Alexander III., the county was frequently the seat of war; and the castle of Dumbarton was alternately in the possession of the contending par-

ties. In times of episcopacy the county was included in the diocese of Glasgow; at present it is in the synod of Glasgow and Ayr, and comprises a large part of the presbytery of Dumbarton, and a portion of that of Glasgow, the number of parishes being twelve. The various courts are held at Dumbarton, which is the county town, and the only royal burgh; there are four burghs of barony, and several villages. Under the act of the 2nd of William IV., the county returns one member to the imperial parliament.

The SURFACE is strikingly diversified with mountains and lakes, and displays an interesting combination of the most beautiful features of Highland scenery, embracing straths of rich fertility and pleasing appearance. The northern part of the county abounds with mountains of majestic elevation, and throughout the whole of that district, which comprises an area of nearly fifty square miles, not more than 400 acres have been subjected to the plough. In the less elevated southern district are two ridges of hills of considerable height reaching from east to west, between which is the picturesque vale of Glenfruin, more than five miles in length. The highest of the mountains are, Ben-Voirlich, near the north-western extremity of Loch Lomond, rising 3300 feet above the level of the sea; Ben-Cruachanstea, Corafuar, Shantron, Beneich, and Doune, some of which attain an elevation of 3000 feet; and Ben-Finnart, 2500 feet in height. The Kilpatrick braes, in the south of the county, are a beautiful range of hills intersecting an extensive tract of lowland in high cultivation, and have an elevation of 1200 feet, commanding from their summits richly-varied prospects over a most interesting district of the country. Loch Lomond, after intersecting a small portion of the county on the north, forms part of its eastern boundary, separating it from the county of Stirling. This noble expanse of water is about twenty-four miles in length from north to south, and seven miles broad in the widest part, and is studded with numerous picturesque islands, the chief of which are Inch-Murin, Inch-Lonaig, Inch-Tavanach, Inch-Moan, Inch-Conachan, and Inch-Galbraith, exclusively of other islands in that part of it included within Stirlingshire. The river Leven issues from the loch at its southern extremity, and after a course of about seven miles, flows into the Firth of Clyde. Of the other lakes in the county, Loch Sloy, in the parish of Arrochar, was the rendezvous of the clan McFarlane; it is about a mile in length, and half a mile broad. In the parishes of Old Kilpatrick and Cumbernauld are several of considerable extent. There are also two salt-water lochs, Loch Gareloch and Loch Long, between which the parish of Roseneath forms a peninsula; they both extend northward from the Firth of Clyde, the former intersecting the county for about six miles, and the latter forming its boundary on the west.

About one-third of the land is in cultivation, and the remainder is mountain pasture, wood, and lakes. Along the borders of the Firth and the river Leven the soil is a deep black loam; in some parts of the county there is a gravelly loam, and in others clay, resting on a tilly bottom. On the best farms the system of agriculture is equal to any in the west of Scotland: the land is well drained and inclosed; much waste has been brought into cultivation; the farm-buildings are substantial and commodious, and considerable improvement has been

gradually taking place. The mountains afford good pasture: the cattle are chiefly of the Highland breed, and the cows pastured on the lowlands for the dairy are the pure Ayrshire, with a mixture of that breed and the Highland breed; the sheep are generally the black-faced on the hill pastures, and the Cheviot on the lowlands. In this county the substrata are mostly mica-slate, limestone, and coal; the mica-slate is wrought at the quarries of Luss and Camstradden, and the streams are frequently traversed by veins of quartz, and abound with pyrites of iron. The limestone is of a deep-blue or almost black colour, and is extensively wrought, as is the coal, which is found in seams nearly five feet in thickness. Sandstone and trap are also abundant, and columnar basalt occurs in several parts. The woods and plantations are in a thriving condition; the soil appears well adapted to the growth of timber, and the extensive tracts of wood add greatly to the appearance of the scenery. The seats are Cumbernauld House, Rosenath, Rossthù, Comes-Eskan, Garscube, Balloch Castle, Tilliechewen, Strath-Leven, Broomly, Woodbank, Cameron, Ardenconnell, Auchintorlie, and Ardincaple Castle. There are extensive cotton-mills, calico-printing works, and bleachfields, a large manufacture of glass, and other works. Facility of intercourse is afforded by good roads, which have been greatly extended and improved within the last few years; by railways; by steam-boats on the Clyde, &c.; and by the Forth and Clyde Canal. The annual value of real property in the county is £140,753, of which £72,041 are returned for lands, £61,321 for houses, £5500 for mines, £1677 for quarries, and £214 for fisheries.

Burgh Seal.

DUMFRIES, a royal burgh, the county town, a port, and the seat of a presbytery and synod, in the county of DUMFRIES; comprising the parishes of St. Michael and New-Church, with the villages of George-town, Locharbriggs, Lochthorn, and part of Kelton; and containing 11,409 inhabitants, of whom 10,069 are in the burgh, 71½ miles (S. by W.) from Edinburgh. This place is supposed to have derived its name from its situation on an eminence rising from a tract of sterile soil abounding in brushwood or furze. Little is recorded of its early history, but from numerous relics of antiquity, it would appear to have been of some importance prior to the eighth century. The ancient castle of the Comyn family, the site of which, overlooking the river Nith, still retains the name of Castle-dykes, has long since disappeared; nor is the date of its erection known, though it is noticed as a place of formidable strength before the reign of Edward I. A monastery for Franciscan friars was founded by Dervorgilla, daughter of Allan, Lord of Galloway, and mother of John Baliol, King of Scotland, about the beginning of the thirteenth century, on an eminence that is washed by the Nith river on the north and west; and a noble bridge, originally of thirteen arches, was erected by the founder over the stream for the accommodation of the brethren. In 1305, *Robert Bruce*, attended by Roger de Kirkpatrick and James Lindsay, held a con-

ference in the chapel of this monastery with John Comyn, surnamed the Red, and in a dispute with that nobleman, whom Robert charged with treacherously revealing to Edward I. the designs he had formed for the emancipation of his country from the English yoke, stabbed him with his dagger. Upon this he hastily rejoined his attendants; but Kirkpatrick, resolving to make sure of Comyn's death, returned into the church, despatched the wounded chieftain, and also killed his brother who interposed for his defence. The church was soon afterwards deserted, and the friars removed their establishment to the chapel of St. Michael, south-east of the town; the cause of the desertion and removal being, as is said, the pollution of the monastery by the slaughter of the Red Comyn before the high altar. There are no remains of the monastery, and the only memorial of it preserved is the name of the narrow street leading to it from the bridge, and which is still called the Friars' Vennel.

In 1307, Edward II. of England, after his coronation, advanced to Dumfries to receive the homage of several of the Scottish nobility. The town was afterwards repeatedly attacked by the English, by whom it was burnt in 1488, and also in 1536. In retaliation of the latter injury, Lord Maxwell of Terregles, a powerful nobleman, crossed the border with a body of his retainers, and penetrating into England, assaulted the town of Penrith, which he reduced to ashes. The Maxwells, who had an ancient castle near the site of the monastery, supposed to have been built in the twelfth century, erected a more spacious and magnificent structure, partly out of the ruins, and almost on the site of the deserted friary; and this castle, in 1563, was visited by *Mary, Queen of Scots*, who, attended by her privy council, came to Dumfries to ratify a treaty of peace with England. In 1565, the disaffected Lords Argyll, Murray, Rothes, and others having assembled a hostile force in the neighbourhood, the queen advanced to the town with an army of 18,000 men; the discontented nobles, on her approach, fled into England, and Lord Maxwell, having incurred her displeasure, conciliated her favour by surrendering his castle, of which, however, he was permitted to retain the government. In 1570 this castle was taken and plundered by the English forces under the command of the Earl of Essex and Lord Scrope, who also laid waste the town.

In 1617, *James VI.*, after his accession to the crown of England, visited his ancient dominions, and passing through Dumfries, remained for one night in the town. He was received with every demonstration of affectionate loyalty, and presented to the corporation a silver gun, to be periodically contested for as a prize for the successful competitor, among the several crafts, in shooting at a target. The house in which the king lodged was built by a poor labourer who, having found a large treasure while digging peat in the Lochar moss, took a journey to London, where, in a personal interview with the monarch, he was allowed to retain possession of it, and advised to build a house, in which the king promised to lodge when he visited his Scottish dominions. The inhabitants displayed a marked opposition to the union of the two kingdoms in 1706, and to testify their aversion to that measure, burnt a paper containing the articles of union and the names of the commissioners, at the market-cross. At the time of the rebellion in 1715, however,

they zealously asserted their allegiance to the reigning monarch; and on being apprised of the design of Lord Kenmuir to visit the town with a large body of insurgents, they so completely fortified it where it was most exposed to any attack, that the party were induced to abandon their intention. In 1745 the Pretender, on his return from England, advanced to Dumfries with a body too powerful to be resisted, and took up his quarters in the town. In resentment of the opposition which his troops had experienced on their march into England, he levied a fine of £2000 in money, and a supply of 1000 pairs of shoes; but being intimidated by a report that the Duke of Cumberland was rapidly marching to attack him, he hastily withdrew, taking £1000 of the fine, and the provost and one of the bailies as hostages for payment of the remainder.

The town is pleasantly situated on the east bank of the river Nith, and is about a mile in length, and a quarter of a mile in breadth. Its streets are regular and well formed, intersecting each other at right angles. The houses are uniformly built of red freestone, generally painted of a colour resembling Portland stone; those that are of ancient date are substantial and of handsome appearance, and those of more modern erection are conspicuous for elegance. Queensberry-square is embellished in the centre with a stately Doric column, erected in 1780 to the memory of Charles, Duke of Queensberry. An elegant and commodious bridge was built over the Nith in 1794, a little above the ancient bridge of thirteen arches, reduced by frequent alterations to seven arches, and now solely appropriated to foot passengers. The streets are all well paved, and lighted with gas from works established in 1828; gas has also been introduced into the shops and most of the public buildings, and the inhabitants are amply supplied with excellent water from springs in the neighbourhood. A public subscription library was founded in 1792, and forms a valuable collection on general literature; there are also several circulating libraries, a public newsroom, and four reading-rooms, all supplied with daily journals and periodical publications, besides a mechanics' institution which has a good collection of books. Card and dancing assemblies are held in a handsome suite of rooms erected for the purpose in George-street; and a theatre, a commodious and well-arranged building, in which Kean made his first appearance, is open for two or three months during the season. Races take place annually on the Tinwald Downs, and are well attended; a regatta is celebrated by a club established here, and the members of the Caledonian hunt hold their meetings by rotation in the town. The Dumfries and Galloway Horticultural Society, instituted in 1812 for the promotion of improvements in horticulture, also meet here periodically.

The cotton manufacture, consisting chiefly of checked cottons, formerly carried on to a very considerable extent, has been for some time nearly discontinued, and the few spinners of the town who remain are mostly employed by the Carlisle and Glasgow manufacturers. Among the principal manufactures now are those of hats and stockings; of the former there are three establishments, affording employment to about 200 persons in the aggregate, and in the latter 279 looms are constantly in operation. The tanning of leather is also pursued, and the hides are sent to Glasgow, London, and other parts of the United Kingdom, in large quantities. The

manufacture of shoes is very extensive, giving occupation to about 300 persons; and a considerable number are engaged in the making of clogs, or shoes with wooden soles, a trade not now, as formerly, confined to the supply of the south of Scotland, and which has been introduced with great profit. There are several public breweries, and a large basket-making establishment.

A very lucrative trade is carried on in the sale of pork, of which, during the season, commencing about the close of December, and ending about the beginning of April, many thousand carcasses are sent to the south to be cured; not less than 700 are upon an average sold weekly for this purpose, and frequently sales to the amount of £4000 or £5000 have been effected in one day. The foreign trade of the port consists chiefly in the importation of timber from America, in which several large vessels are engaged; the traffic in tobacco, formerly extensive, has been for many years discontinued. The coasting-trade is mainly with Liverpool, Whitehaven, Maryport, and other parts of the English coast, and with Ireland. The imports are, timber to the amount of nearly £10,000 per annum, coal, slate, iron, tallow, hemp, and wine; and the exports, cattle, sheep, wool, freestone, oats, barley, wheat, and other agricultural produce. In 1843 the number of vessels registered was 220, of the aggregate burthen of 12,380 tons. The jurisdiction of the port, which includes the creek of Annan, extends from Sark foot at the head of the Solway Firth to Glenluce on the Galloway coast; and the amount of duties paid at the custom-house in the year 1843 was £8764. Since the channel of the river has been made deeper, vessels of considerable burthen can approach the town, by which means the inhabitants obtain with great facility a supply of coal from Whitehaven. There are also a commodious quay near Castle-dykes, another for vessels of larger burthen about a mile below it, and one at the mouth of the river for vessels engaged in the foreign trade. The various improvements connected with the harbour were completed at a cost of £18,530. A steam-vessel plies weekly during the summer months between Dumfries and Whitehaven, and large quantities of live stock, especially sheep, are thus sent to the English markets. The post-office has a good delivery; and great facility of intercourse is afforded by the Glasgow, Dumfries, and Carlisle railway. Branches of the Bank of Scotland, the National Bank, Commercial Bank, and the British Linen Company, are established.

The market, which is abundantly supplied and numerously attended, is on Wednesday, when a great amount of business is transacted by cattle-dealers, on an open area near the river, called the Sands. Fairs chiefly for cattle are held at Whitsuntide and Martinmas, and for horses in February and October, at all of which extensive sales are made. At the fair in February, large numbers of hare-skins are sold, averaging generally about 30,000. A cattle-market is also held in September, about the time of the Broughill-fair in Cumberland, when, upon an average, about 4500 head are exposed for sale, mostly three-year-old Galloways, and others of the Highland breed; and on some occasions business to the amount of £30,000 has been transacted. The market for meal is still held in a building appropriated to that purpose; but the shambles for butchers' meat have been long deserted, the butchers finding it more profitable to open shops in different parts of the town.

The town was made a ROYAL BURGH by William the Lion prior to the year 1214. In 1396 Robert III. conferred upon the inhabitants various valuable immunities, which were confirmed by James I., who by charter in 1415 granted additional privileges; and in 1469 James III. gave to the corporation all the lands and revenues which belonged to the monastery of the Grey friars. The corporation consists of a provost, three bailies, a dean of guild, treasurer, and twelve merchant and seven trade councillors, the seven being the convener and six other deacons of the incorporated trades. All the officers are elected under the provisions of the Municipal Reform act. The incorporated trades are the hammermen, masons, weavers, tailors, shoemakers, skimmers, and butchers; the fee for admission as a member is, for a stranger £10, and for the son or son-in-law of a freeman £1. 1. The jurisdiction of the burgh extends over the whole of the royalty; and the magistrates hold courts for the determination of civil pleas and the trial of petty offences, in which they are assisted by the town-clerk, who acts as assessor. The police is under the direction of a body of commissioners chosen by the £10 householders, and of whom the provost, the bailies, and the convener are members *ex officio*; the number of commissioners is twelve, and the superintendence of the six wards into which the burgh is divided is allotted to them, one ward being assigned to every two commissioners. As the county town, the courts of assize and quarter-sessions, the sheriff's courts, and those of the commissary are regularly held at Dumfries, and the public business of the county transacted. In the centre of the High-street stands what is called the *Mid Steeple*, a handsome building erected by the celebrated Inigo Jones, and comprising a hall and other apartments for the meetings of the town-council; and opposite to it is the *Trades'-hall*, a neat structure erected in 1804. The *County hall*, or court-house, is a spacious and elegant edifice, comprising an ample hall for the county meetings, rooms for holding the several courts, with apartments for the judges, and accommodation for witnesses and others connected with the business of the sessions. A building originally intended for a bridewell has been appropriated as a depôt for the county militia, and that which was at first designed for the court-house has been arranged as a bridewell; it is, however, small and ill adapted for classification. Behind the bridewell is the *County gaol*, erected in 1807, and inclosed with a high wall, in the area between which and the building prisoners for debt have the privilege of exercise: a subterranean passage leads from the prison to the courtroom, and by this prisoners are led to trial. Dumfries is associated with Annan, Kirkcudbright, Lochmaben, and Sanquhar, in returning a representative to the house of commons. The parliamentary boundary includes the whole of the royalty, with the exception of some lands to the south and east of the town, and also includes the suburb of Maxwelltown, a burgh of barony on the west side of the river. The right of election under the Reform act is vested in the £10 householders; the sheriff is the returning officer.

The PARISH is nearly seven miles in length, and from two to three in breadth, comprising about 9280 acres. Of this area 7930 acres are arable, 320 pasture, and the remainder, of which the far greater portion will probably be brought under profitable cultivation, moss and waste

land. The surface, though generally level, is diversified by the elevated site of the town, and by a ridge of hills near the southern extremity, of no great height, sloping gradually towards the river on the south-west, and rising abruptly on the north-east. On this latter side, about a mile below the town, there is a singular cavity in the face of the rock, named the Maiden Bower; and towards the south-east of the parish is an eminence called Trohaughton, supposed to have been the site of a Roman camp. The river Lochar, which rises in the adjoining parish of Tinwald, and falls into the Solway Firth, bounds Dumfries on the east, forming in the south an extensive tract of marsh called Lochar Moss, partly in this parish, and partly in Torthorwald, Mouswald, and Caerlaverock. There are several lakes, of which the principal are Black loch and Sand loch, both of them abounding with trout and perch. The soil in the north and north-east is generally a light reddish sandy loam, resting on a substratum of free-stone; and in other parts, and especially near the river, a retentive clay, with a substratum of gravel. The crops are oats, barley, wheat, turnips, and potatoes; the rotation system of husbandry is practised, and the state of agriculture is much improved. Considerable attention is paid to live stock: with the exception of Ayrshire cows on the dairy-farms, the cattle are usually of the pure Galloway breed. The farm-buildings, though inferior to many others, are still commodious; the lands are well inclosed, and portions of the Lochar moss were some years ago brought into cultivation, yielding abundant crops of oats, potatoes, and rye-grass. Upon this moss, ploughing by steam was first attempted in Scotland, in 1837, and has proved quite successful; but although many thousands of pounds have been spent in thus reclaiming the moss by the plough, it is the opinion of those practically acquainted with the subject, that sand, clay, or some other solid earthy substance must be laid upon it so as to consolidate it. Some notion of the bulk of the ploughing machinery may be formed from the fact, that the expense of carting it from Glen-caple-Quay, only three miles distant, was as much as £15: it weighs, in fact, upwards of 25 tons. There are several quarries of red sandstone in the parish, four of which are extensively wrought; and also some salmon and trout fisheries, the rents of which yield about £500 per annum. The annual value of real property in the parish is £24,743.

For ECCLESIASTICAL purposes the parish was divided in 1727, by authority of the presbytery, with the concurrence of the magistrates of the burgh, into two districts; and an additional church was erected, which still retains the appellation of the New Church, and has a minister appointed by the Crown as patron of both. The minister of the old parish, now the district of *St. Michael*, has a stipend of £332, with a manse, and a glebe valued at £25 per annum. The church, situated at the south-east end of the town, was built on the site of the ancient structure in 1745; it is a neat edifice with a lofty graceful spire, and contains 1250 sittings. The churchyard, which is spacious, contains a large number of monuments, including many of deeply interesting character. The remains of the poet Burns were originally interred in the northern angle of the burying-ground, under a plain slab placed by his widow; but in 1815 his ashes were removed into a

handsome mausoleum, erected by his countrymen at an expense of £1450, and above the entrance of which is a representation of the Genius of Scotland throwing her mantle over the poet while at the plough, finely sculptured in marble by Turnerelli. It has been calculated that the value of the monuments in this churchyard, now in a state of preservation, is little short of £100,000. The minister of the *New Church* district has a stipend of £281. 13., of which £151. 13., including an allowance of £50 in lieu of manse and glebe, are paid by the exchequer. The church, situated at the north-west end of the town, was erected on the site, and partly with the materials, of the ancient castle, at the expense of the town-council, in 1727; it is a neat structure containing 1185 sittings. The subordinate church of *St. Mary*, fronting the road to England, was erected in 1838, at a cost of £3000, by subscription; it is an elegant structure after a design by Mr. Henderson, of Edinburgh, in the later English style of architecture, with an embattled tower surmounted by a lofty spire strengthened with flying buttresses. An episcopal chapel was erected in 1817, at a cost of £2200; and there are places of worship for members of the Free Church, the United Presbyterian Church, Reformed Presbyterians, Independents, and Wesleyans, and a Roman Catholic chapel.

The *Dumfries Academy*, for which a spacious building was erected by subscription in 1800, is under the superintendence of a rector and four masters, appointed by the corporation. The rector, in addition to the fees, which are moderate, has the interest of £660. 6. 3., and each of the four masters the interest of £204. 8. 10., arising from endowments. There are also a French and a drawing master, who are paid exclusively by the fees. The course of instruction comprises the Greek, Latin, French, and English languages, the mathematics, geography, arithmetic, book-keeping, writing, and drawing. Two schools, one for the instruction of children of both sexes in reading, writing, arithmetic, and the principles of religion, and the other for teaching girls to sew, and to read the Bible, are supported by the Highland Education Society and some benevolent societies established in the parish; the teachers have each a salary, the former of £60, and the latter of £20 per annum, with a house each rent-free. There are two schools for adults, supported by contributions; and an infant school. The *Crichton Royal Institution* or *Lunatic Asylum* originated with Mrs. Elizabeth Crichton, widow of the late Dr. Crichton, of Friars' Carse, who bequeathed £100,000, at her sole disposal, for such charitable purposes in Scotland as a majority of his trustees should approve of. From the funds thus left, Mrs. Crichton founded and endowed this establishment, which enjoys the reputation of being the best lunatic asylum in Scotland. It is situated on an eminence about three-quarters of a mile from the south-eastern extremity of the town: the building was erected in 1839, after a design by Mr. Burn of Edinburgh, in the Grecian style, and is of handsome appearance, and surrounded by ample grounds tastefully laid out. A house for poor orphans and aged persons was erected in 1733, with funds bequeathed for that purpose by *William Muirhead*, merchant, of Carlisle, and his cousin *James Muirhead*, of Castle-dykes. This establishment, which is further supported by annual subscriptions and by donations, is under the direction of a committee chosen from the Kirk Session, the town-

council, and others, who meet weekly. It contains accommodation for twenty children and thirty aged persons, under the care of a master and mistress, who reside in the house: the children are taught writing, reading, arithmetic, and the principles of religion, and when of proper age are apprenticed to trades, or placed out to service. Connected with the establishment are also forty-two widows, who receive pensions at their own dwellings. The expenses average about £500 per annum. The *Dumfries and Galloway Royal Infirmary*, with which a lunatic asylum was formerly connected, was founded in 1776. The building of the institution, situate at the south-eastern extremity of the town, is a long, narrow, gloomy structure, but has been very comfortable since the erection of the Crichton Asylum enabled the governors to do away with the old lunatic asylum. The establishment is superintended by a committee of subscribers: the medical department is under the inspection of two visiting physicians and surgeons, and a resident house surgeon; and a licentiate of the Established Church officiates as chaplain. On an average, the daily number of patients in the house is rather more than forty; and from 500 to 1000 receive advice and medicines at the institution annually. The expenditure is about £1300 per annum, defrayed by bequests, donations, and subscriptions, and liberal contributions from the counties of Dumfries and Wigtown and the stewartry of Kirkcudbright, to all of which it is open. The *Dispensary*, situated at the western extremity of the town, is supported by public subscription, and administers extensive relief to the indigent poor.

Upon an eminence near the entrance into the town from the English road, where *St. Mary's* chapel now stands, might formerly be traced the foundations of *St. Christopher's chapel*, erected by Robert the Bruce in memory of his father-in-law, Sir Christopher Seton, who was hanged on that spot by order of Edward I. On the left bank of the river, just above the town, is *Moat Brae*, supposed to have been a place for administering justice during the Saxon era. A Roman sandal was found in the eastern part of the parish many years since, and in the river a gold coin, about the size of a sixpenny piece, but much thicker, bearing a Roman head, with the inscription *Augustus*. Among some scraps of old iron, also, was lately found an ancient seal about two inches in diameter, bearing a lion rampant in a shield bordered with fleurs de lis, with the legend *Jacobus Dei. Gra. Rex. Scotorum* in characters reversed; it is supposed to have been the privy seal of one of the Scottish kings. A canoe, similar to the canoes used by the North American savages, was found in Lochar moss some years ago.

DUMFRIES-SHIRE, a county, in the south of Scotland, bounded on the north by the counties of Lanark, Peebles, and Selkirk, on the east by Roxburghshire and part of the English county of Cumberland, on the south by the Solway Firth, and on the west by the county of Ayr and the stewartry of Kirkcudbright. It lies between 55° 2' and 55° 31' (N. Lat.) and 2° 39' and 3° 53' (W. Long.), and is about fifty miles in length and thirty miles in breadth, comprising 1016 square miles, or 650,240 acres; 14,356 inhabited houses, and 733 uninhabited; and containing a population of 72,830, of whom 34,137 are males and 38,693 females. The county was originally inhabited by the *Selgova*, and after the

invasion of the Romans formed part of the province of Valentia; upon the departure of the Romans it was occupied by the Northumbrian Saxons, and subsequently by numerous emigrants from Ireland, who had settled first on the peninsula of Cantyre. In the reign of David I. many of the Norman barons obtained possessions here, among whom was Robert de Brus, who procured a grant of the lands of Annandale, and was ancestor of Robert Bruce, King of Scotland. Previously to the reign of James VI., the county was often the scene of sanguinary conflicts between hostile clans, and, from its situation near the border, was subject to repeated predatory incursions of the English. It was anciently included in the diocese of Glasgow, and comprised the deaneries of Nithsdale and Annandale; at present it constitutes the greater part of the synod of Dumfries, and contains several presbyteries, and forty-two parishes. It includes the royal burghs of Dumfries (which is the county town), Annan, Lochmaben, and Sanquhar; and the towns of Moffat, Lockerbie, Langholm, Ecclesfechan, Thornhill, and Minniehive, which are all burghs of barony. Under the act of the 2nd of William IV., the county returns one member to the imperial parliament.

The SURFACE near the sea-coast is level, rising towards the middle portion into ridges of hills of moderate elevation, intersected with fertile vales, and becoming mountainous in the north. The whole is separated into three principal districts, each deriving its name from the river which flows through it; of these, Eskdale forms the eastern, Annandale the middle, and Nithsdale the western part of the county. In Eskdale the chief mountains are the Langholm, the Wisp, the Tinnis, and Etterick-Penn, varying from 1200 to 2220 feet in height; in Annandale, Errickstane-Brae, Loch-Skene, and the Hartfell, from 1118 to 2629 feet; and in Nithsdale, Cairn-Kinnow, Queensberry, Black-Larg, and the Lowthers, which have elevations ranging from 2080 to 3150 feet above the level of the sea. From each of the three dales diverge smaller valleys, watered by their several streams, and the principal of which are Moffatdale, Dryfesdale, and Eskdale. The river Esk has its source in the vale to which it gives name, and, receiving in its course the White Esk, which rises on the borders of Selkirk, flows into the Solway Firth. The Annan rises on the borders of Peeblesshire, and, after being augmented by numerous tributary streams, also falls into the Firth; while the Nith, rising in Ayrshire, and pursuing a south-east course, joins the Solway Firth about three miles below the town of Dumfries. The rivers and their tributaries abound with excellent trout. There are numerous lakes, of which not less than nine are in the parish of Lochmaben; and in the mountain of Loch Skene is one that forms the picturesque cascade called the Grey-mare's-tail. The Solway Firth, into which the waters of the rivers discharge themselves, differs very materially from other estuaries receiving in Scotland the appellation of firths. Its depth is inconsiderable; and at the ebbing of the tide, long sandy reaches are left. The flows and ebbs of the Solway are proverbial for the rapidity of their action, and this is particularly the case during spring-tides, and the prevalence of gales from the south-west: persons have repeatedly been overwhelmed and drowned when crossing the bed of the estuary to Cumberland, being overtaken by the waters. The Firth

abounds in salmon and other fish. Not much timber of ancient growth is to be seen in the county: the parish of Tinwald was formerly one extensive forest, but this has long since disappeared; and the woods and plantations are now chiefly those around the houses of the landowners.

The SOIL varies from a rich loam to a light sand; the system of agriculture is in an improved state, and considerable attention is paid to the rearing of live stock. The cattle are chiefly of the Galloway breed, and the cows on the dairy-farms of the Ayrshire; the sheep are generally of the Cheviot and black-faced breeds: vast numbers of pigs are kept, and great quantities of bacon and hams are sent to the Liverpool, Newcastle, and London markets. The minerals are mostly lead, antimony, iron, and gypsum. The lead is very abundant, and mines are in operation at Leadhills and Wanlockhead, from which 48,000 tons have been annually extracted; in the mines at Wanlock the ore contains a considerable proportion of silver, varying from six to twelve ounces in the ton. Among these mountains, gold has been found in veins of quartz and in the sand of the streams at their base; and in the reign of James V. 300 men were employed for several summers in collecting gold, which they obtained to the value of £100,000. The search was renewed under the superintendance of Sir Bevis Bulmer, master of the mint to Queen Elizabeth, with the concurrence of James VI.; and particles of gold adhering to pieces of quartz have been since found, the largest of which, weighing nearly five ounces, is in the British Museum. The antimony was discovered in 1760, but was not wrought till 1793, when a mine was opened at Glendinning, from which 100 tons of the regulus were taken annually, valued at £84 per ton. The ironstone occurs chiefly in masses, and the gypsum in thin veins. Coal is found in abundance, but of a very inferior kind, and is wrought only at Sanquhar and Canonbie. Sandstone of various colours and of good quality for building is extensively quarried, as is limestone, of which the principal quarries are in Nithsdale and Annandale; there are also veins of slate and marble. The annual value of the real property in the county is £319,751, of which £266,547 are returned for lands, £46,132 for houses, £4360 for mines, £1624 for quarries, and £1088 for fisheries. The seats are Drumlanrig Castle, Kinmount, Comlongan Castle, Raehills, Springkell, Jardine Hall, Maxwelltown, Amisfield, Closeburn Hall, Craigdarroch, Wester Hall, Drumerieff, Hoddam Castle, Dalswinton, Murraythwaite, Blackwood House, Langholm Lodge, Terregles, Mossknow, and various others. In this county the manufactures are neither numerous nor extensive. Facilities of communication are afforded by good roads, and by the Caledonian railway, and the Glasgow, Dumfries, and Carlisle railway: steamers, also, navigate the Solway Firth, affording an easy mode of conveying agricultural produce to England. There are various remains of antiquity, consisting of Druidical circles, British forts, Roman roads, ancient castles, cairns, mounds, and other relics. In the county are some mineral springs, the chief of which are chalybeate; near Closeburn House is a sulphureous spring issuing from the marshy lands, and in the vicinity of Moffat are springs of both kinds, the waters of which are extensively used. The county gives the title of Earl to the Marquess of Bute.

DUN, a parish, in the county of FORFAR, 4 miles (N. W. by W.) from Montrose; containing 581 inhabitants. This place is supposed by some antiquaries to have derived its name from the family of Dun, who were its ancient proprietors; and by others, with apparently greater probability, from its elevation above the level of the river South Esk, which forms its boundary on the south. The parish is about four miles in length, and of nearly equal breadth, comprising 3480 acres, of which 2600 are arable, 300 meadow and pasture, 550 woodland and plantations, and about 100 uncultivated moor. A small part of the lands, called Fort Hill, is divided from the rest by the estuary or basin of Montrose. The surface is very irregular; near the river and the basin it is level, but towards the north rises gradually to a considerable elevation. Within the limits of the parish is a lake called Dun's Dish, covering about forty acres; it is supplied from numerous springs in the adjacent grounds, and forms a reservoir for the use of various mills. The scenery is enriched by luxuriant woods and thriving plantations on the demesnes of Dun House and Langley Park.

The SOIL in the vicinity of the basin of Montrose, from the encroachment of which the lands are defended by an embankment, is a loamy clay of great fertility. In the rising grounds it is a deep rich loam, and in other places light and sandy. The crops are oats, barley, wheat, peas, beans, potatoes, and turnips; the system of agriculture is improved, and the five and six shift courses of husbandry are generally practised, the former in the upper and the latter in the lower districts. The lands are well drained and inclosed; the farm-buildings are mostly substantial and commodious. The cattle reared in the parish are mainly of the black Angus breed, resembling the Galloway; they thrive well, and grow to a great weight. A fishery in the South Esk, in which salmon and trout are plentiful, produces about £100 annually; and there is a fishery in the sands of the basin of Montrose, chiefly for muscles, and of nearly equal value. Facility of communication is afforded by the Aberdeen railway, the Brechin branch of which commences here. There are also good roads, of which that from Brechin to Montrose passes through the parish. Dun House, a substantial mansion, built in 1730, is now the property of the Marquess of Ailsa, in right of the marchioness, who is daughter of the late John Erskine, Esq.; it is finely situated on rising ground, is surrounded with old wood, and, having a southern aspect, presents a beautiful object from the opposite side of the South Esk. East of Dun House is Langley Park, the handsome seat of the Cruickshank family. The annual value of real property in the parish is £6818. Dun is ecclesiastically in the presbytery of Brechin, synod of Angus and Mearns, and in the patronage of the Marchioness of Ailsa; the minister's stipend is £159, with a manse, and a glebe valued at £15 per annum. The chapel formerly attached to the old mansion-house of the family of Dun having fallen into a dilapidated state, a church was erected in lieu of it, on a site a short way off, in 1834. The parochial school is well attended; the master has a salary of £34, with £13 fees, and a house and garden. A savings' bank has been established; and the poor have the benefit of some money placed in the hands of three of the heritors, who pay interest for it to the kirk-session.

DUNBAR, a royal burgh, a market-town, and parish, in the county of HADDINGTON; containing, with the two villages of Eastbarns and Westbarns, 4471 inhabitants, of whom 3013 are in the burgh, 11 miles (E. by N.) from Haddington, and 29 (E. by N.) from Edinburgh. This place is of remote antiquity, and appears to have derived its name

Burgh Seal.

from the situation of its castle on a high and rugged rock, forming a conspicuous landmark. The castle was given by Kenneth I., King of Scotland, to an eminent warrior named Bar, to which circumstance some writers erroneously refer the origin of the name; and in 1072, the castle and lands were conferred by Malcolm upon Cospatrick, Earl of Northumberland, and afterwards Earl of Dunbar, who had taken refuge at his court from the tyranny of William the Conqueror, and whose descendants for many generations made this their chief baronial residence. In 1296, the eighth Earl of Dunbar and March having formed an alliance with England, Edward I. sent Earl Warren to besiege the castle, which had been surrendered by the Countess of Dunbar to the Scots, whose army, assembled at this place, was totally routed by the English at the battle of Dunbar, with great slaughter. After the defeat of his forces at Bannockburn in 1314, Edward II., previously to his embarkation for Berwick, took shelter in the castle of Dunbar, which, from its great strength and the importance of its situation, was regarded as the key of Scotland, and was consequently exposed to continual assaults during the wars with England. The ninth Earl of Dunbar, to prevent its falling into the hands of the English, levelled the castle to the ground, and was compelled by Edward III. to rebuild it at his own expense. In 1337 it was besieged by the Earl of Salisbury, and most resolutely defended by Agnes, Countess of Dunbar, who obliged the English forces to raise the siege. In the year 1435, the castle and the seigniories of Dunbar and March became forfeited to the crown, on the attainder of the tenth earl, and were bestowed by King James I. on the Duke of Albany; and in 1446, the queen dowager of that monarch died in the castle, and was interred at Perth. In 1475 the Duke of Albany, on his escape from Edinburgh, landed at this place, and afterwards embarked for France: he soon returned, however, and regained possession of his castle; but in 1483 was again compelled to abandon it to the English, by whom it was a few years subsequently given up to James III. In 1488 an act of the Scottish parliament was passed for the demolition of this ancient fortress, but the measure was not carried into execution.

Mary, Queen of Scots, took refuge in the castle after the murder of David Rizzio, in 1565, and subsequently appointed the Earl of Bothwell its governor. She also passed six days here, together with her court, in a tour along the coast in the following year; and upon the murder of Darnley in 1567, Bothwell, attended by 1000 horsemen, arrested the queen on her progress to Stirling, and carried her and her retinue by force to Dunbar, where he detained her prisoner for twelve days. Soon

after her marriage with Bothwell, she remained here for some time, while levying forces from Lothian and the Merse against the people who had taken arms to oppose the earl; and marching with these to Carberry Hill, she there joined the hostile party, and, abandoning Bothwell, the castle was given up by his dependents to the Earl of Murray, who had been appointed regent of Scotland, and was soon demolished. The site of the castle now belongs to the Earl of Lauderdale, who is a descendant of the Earls of March. In 1650, Dunbar was the scene of a battle in which Leslie was defeated by Oliver Cromwell with great slaughter, at Downhill; and in 1745, Sir John Cope landed his forces at this place, whence, being joined by two regiments of dragoons, he marched towards Edinburgh, and was totally routed at the battle of Prestonpans. In 1779, the inhabitants were kept in a state of alarm by the appearance of the notorious Paul Jones with a fleet of five ships, which lay off the port for several days; and in 1781, Captain Fall, an American pirate, attempted to carry off a vessel which was in the mouth of the harbour, but he was beaten off after the exchange of a few shots by the inhabitants, and abandoned his enterprise. To defend the town from similar attacks, a battery of sixteen guns was erected in the same year; and during the apprehension of an invasion by the French, who were expected to make a descent at Belhaven bay, an encampment was formed on the common of Westbarns, under the command of General Don. Soon after, barracks were erected to the west of the castle for 1200 infantry, and at Belhaven for 300 cavalry; and a volunteer corps and a troop of yeomanry were raised in the neighbourhood.

The town owes its origin to the castle, round which it arose at a very early period: it is advantageously situated on the southern shore of the Firth of Forth, and the houses are neatly built, but the place is not distinguished by any architectural features of importance. Belhaven, a village and watering-place, is a kind of suburb. A library is supported by subscription, forming an extensive collection, and a reading-room is well provided with periodicals; there is also a mechanics' institution, with a good library attached. Assembly-rooms have been built by subscription, but they are not eligibly situated. The chief trade of the port is in herrings, which are taken off the coast, and generally not less than 300 boats are employed at this station. White-fish of all kinds, and lobsters in abundance, are caught: great quantities of cod are cured and forwarded to the London market, and haddocks are smoked principally for Glasgow and Edinburgh; the lobsters are preserved in pits and sent chiefly to London. A very considerable trade is carried on in grain, which is raised in the parish and adjacent district to a great extent, and of very superior quality; and there is a good foreign trade. Flax-mills were established at Westbarns in 1792, and a cotton-factory at Belhaven in 1815, but neither concern has been attended with success; a distillery also, and some extensive soap-works, were carried on, but have been some years discontinued. There are two foundries for the manufacture of machinery of all kinds, one of which is celebrated for its steam-engines. The number of vessels engaged in the foreign trade that entered inwards in 1834 was twenty-three, of the aggregate burthen of 2310 tons, and having 134 men; and the amount of duties paid at the custom-house was £2942. 15. The

coasting-trade is also considerable: the number of vessels that entered inwards in the same year was 244, of the aggregate burthen of 11,919 tons, with 762 men; and of vessels which cleared outwards, 140, of 7081 tons, and 478 men. Of foreign grain imported into Dunbar in the year the quantity was 203½ quarters of wheat, and 3346 quarters of barley; of wheat imported coastwise 342 quarters, and of barley 2007 quarters. The wheat exported coastwise was 3608 quarters, of barley 3936 quarters, of oats 6067 quarters, of peas and beans 1981 quarters, of malt 359 bushels, and of wheaten flour 231 sacks. The quantity of coal imported at Dunbar and its several creeks during the same year was 9490 tons of Scotch coal, of English 763 tons, and of English cinders 31 tons; the whisky amounted to 91,000 gallons. In the year 1849 the number of registered vessels was sixteen, having a tonnage of 1018. An extensive and excellent harbour has been lately opened, which, with the old harbour, is safe and commodious, and accessible to vessels of above 300 tons; it has nine feet depth of water at neap, and eighteen feet at spring tides. The entrance to the old harbour is in some degree obstructed by rugged rocks. Its eastern pier was built or repaired in the time of Cromwell by a parliamentary grant of £300, and in 1785 the convention of royal burghs voted £600 for its further improvement. An act of parliament was passed in 1848 for the amendment and continuance of the burgh customs, and water, shore, and harbour rates of the burgh, and for other purposes, including the supply of water to the town and harbour. The post has a good delivery; the North-British railway passes close by the town, and facility of intercourse with the neighbouring towns is likewise afforded by excellent roads, of which the London road passes for more than seven miles through the parish, parallel with the railway. Packets, also, sail regularly for Leith and London. The market, on Tuesday, is amply supplied with grain from the surrounding country, and from the highlands of the county of Berwick. Fairs for cattle and all sorts of ware are held at Whitsuntide and Martinmas (O. S.).

Dunbar was created a free burgh by David II., with limits co-extensive with the earldom of March; and its various privileges and immunities were confirmed by succeeding sovereigns, especially by charters of Mary, Queen of Scots, in 1555 and 1557, and of James VI., dated 1603 and 1618. By these charters the government was vested in a provost, three bailies, a treasurer, and council of fifteen burgesses; four of the burgesses went out annually, but were capable of re-election, and by the new council then formed the magistrates were appointed. The corporation, however, is now chosen under the authority of the act of the 3rd and 4th of William IV., and consists of a provost, three bailies, a treasurer, and fifteen councillors. The magistrates' jurisdiction extends over the whole of the royalty, and they have the appointment of a town-clerk, chamberlain, procurator-fiscal, superintendent of police, and two burgh schoolmasters. They hold civil and criminal courts; in the former the causes are of very trifling amount, and in the latter the charges extend only to petty misdemeanors. A sheriff's court for the recovery of small debts has in a great measure superseded the bailies' civil court. The elective franchise clearly appears to have been exercised in 1469, and most probably was possessed at a much earlier period. Dunbar returned a member to the Scot-

tish parliament till the Union, since which period it has united with Haddington, North Berwick, Jedburgh, and Lauder, in returning one representative to the imperial parliament. The right of election is, under the Reform act, vested in the resident £10 householders; the number of registered electors is about 145. The gaol is an inconvenient edifice containing two rooms, and only fit for temporary confinement for petty misdemeanors; all persons charged with more serious offences are committed to the county gaol at Haddington.

The PARISH is situated in a richly-cultivated district, regarded as the finest for corn in the whole country. It is nearly eight miles in length from east to west, extending along the shores of the Firth of Forth, and something more than a mile and a half in breadth. The surface is varied with hills and dales, the ground rising gently from the sea to the Lammermoor heights; the chief eminences are, Brunt hill, which has an elevation of 700, and Downhill, which rises to the height of 500 feet above the level of the sea, and is memorable as the site of Leslie's encampment previous to the defeat of his forces by Cromwell. The scenery is pleasingly varied, but destitute of wood, with the exception of some plantations on the demesnes of the principal seats. From the summit of the hills are obtained extensive and interesting views of numerous prominent objects, among which St. Abb's Head, Traprain law, the Bass rock, the isle of May, and in good weather the coast of Fife, are conspicuous, and to which the beautiful woods of Tynninghame form a fine contrast. The Belton water, taking its name from the ancient parish in which it rises, joins the sea a little below Belhaven; the Broxburn falls into the sea at Broxmouth Park, and the Dryburn skirts the parish for some distance on the east. In general the soil is a rich brown loam; the system of agriculture is highly improved, and the whole of the parish, estimated at 7197 acres, is in the best state of cultivation, producing grain of every sort, beans, peas, and turnips, in the cultivation of which last all kinds of foreign manure are applied with success. The annual value of real property in the parish is £27,701. The geology is highly interesting, and stone is largely quarried. *Dunbar House*, the seat of the Earl of Lauderdale, is within the park of the old castle; it is a spacious mansion with a front towards the sea, from which it is a commanding object. *Broxmouth Park*, the seat of the Dowager Duchess of Roxburghe, is a handsome residence of modern style, beautifully situated in a demesne enriched with stately timber and thriving plantations, and comprehending much varied scenery. *Lochend House* is an elegant mansion in the later English style, containing several fine apartments, and pleasantly seated in a tastefully-disposed and well-cultivated demesne. *Belton House* is romantically situated in a deep and winding glen, watered by a gently flowing stream, and is embosomed in woods: near it are some noble silver-firs more than two centuries old, and a beech-tree of remarkably luxuriant growth, measuring nearly nineteen feet in girth at a height of three feet from the ground. *Ninewar House* is also beautifully situated, on a gentle eminence richly wooded, and commanding an extensive view of the circumjacent country, Belhaven bay, and the Tynninghame woods.

The parish was anciently included within the diocese of Lindisfarne, and, together with the other portions of Lothian, was given up to the king of Scotland in 1020,

and annexed to the bishopric of St. Andrew's. At that time it was more extensive than at present, and, in addition to the mother church, comprehended the chapelries of Pinkerton, Heatherwic, Whittingham, Penshiel, Stenton, and Spott. Patrick, the tenth Earl of Dunbar, in 1342 made the parochial church collegiate for a dean, an arch-priest, and eighteen canons, for whose support he assigned the income of the chapelries, which were subsequently converted into churches dependent on that of Dunbar as prebends in the college. The parish is now in the presbytery of Dunbar, synod of Lothian and Tweeddale: patron, the Duke of Roxburghe. The stipend of the incumbent is £331, exclusively of the manse and glebe. Dunbar collegiate church, a handsome cruciform structure partly in the Norman and early English styles, was taken down in 1819, and the present church was built, and opened for divine service on the 20th of April, 1821; it is conveniently situated, and contains 1800 sittings. There is a costly monument of composition from Italy erected to the memory of George Home of Manderston, lord high treasurer of Scotland, whom James VI. in 1605 created Earl of Dunbar, and who died at Whitehall in 1611, and was interred in the old church, on the site of which the present church was built. He is represented in a kneeling posture, with a book open before him, and on each side are two armed knights finely sculptured, with various emblematical devices. There are places of worship for the United Presbyterian Synod and Wesleyans, and at Belhaven one for members of the Free Church. Two schools have been founded by the corporation; the master of the grammar school has a salary of £42, with a house and garden, and the master of the mathematical school has £20, with a house, both sums paid by the corporation. There are also two parochial schools, one at Westbarns, the master of which has a salary of £34, with a house and garden, and one at Eastbarns, the master of which receives only a single chaldar, and the interest of £100 bequeathed by William Hume, Esq., and of £50 by the Rev. George Bruce, minister of the parish.

The ruins of the ancient castle, which was built upon a lofty rock, and connected with a battery on the adjoining land, are scarcely sufficient to give any idea of its former grandeur. A monastery for Red Friars was founded in 1218 by Patrick, sixth Earl of Dunbar and March, of which some slight vestiges are still remaining in a spot called the Friars' Croft: a monastery of Carmelites, or White Friars, was founded in 1263, by the seventh earl; and there was a Maison Dieu at the east end of the town, of which the founder and the history are alike unknown. In digging the site of the reservoir from which the town is supplied with water, some Roman medals were found, inscribed with the legend *Judea Captiva*. On a sequestered spot in the grounds of Broxmouth House is a tombstone with the name of Sir William Douglas, a colonel in the royalist army, in rude characters; and in the park is an elevated mound on which Cromwell is said to have reconnoitred the forces of Leslie previously to the battle of Downhill, and from which he saw the enemy descending from their stronghold, a movement that caused his well-known exclamation, "The Lord has delivered them into our hands". *Columba Dunbar*, who was dean of the collegiate church, and subsequently translated to the see of Moray in 1411; *Thomas Hay*, also dean of Dunbar, and in 1532 appointed

a senator of the College of Justice; and *Dr. Andrew Wood*, rector of Dunbar, in 1676 promoted to the bishopric of the Isles, and afterwards to the see of Caithness, which he held till the Revolution, are among the distinguished characters connected with the place.

DUNBARNY, a parish, in the county of PERTH, $3\frac{1}{2}$ miles (S.) from Perth; containing, with the villages of Bridge-of-Earn and Kintillo, 1104 inhabitants. The name of this place is variously written in old records, but generally *Dunberny*. It is supposed to be a compound of two Celtic terms, *dun*, a hill, and *berny*, a breach or fissure, and to have been applied to the parish in consequence of the church being situate on the estate of Dunbarny, which is marked by a fissure in a ridge of hills. The church then stood a mile westward of the bridge of Earn; but this site, which was near the extremity of the parish, being found very inconvenient, it became necessary to build a new church on another site in 1684, though the ancient burying-ground is still used. Kirk-Pottie church, about three miles south from the bridge, and the chapel of Moncrieffe, about 200 or 300 yards south-east from the present mansion of the name, were both appendages to the church of Dunbarny; but the lands of the former place, with some others, were in the year 1652 annexed ecclesiastically, and afterwards civilly, to the parish of Dron, on account of their contiguity; and the ruins of the church have been swept away within the last few years. The area comprehended within the walls of Moncrieffe chapel, which are still standing embosomed in thick wood, has long been used as the burying-place of the ancient family of Moncrieffe. The forest of Black Earnside, formerly extending along the banks of the river Earn, was celebrated for the adventures of Sir William Wallace, especially in a sanguinary encounter there maintained with the English. At Kilgraston, in the parish, the Covenanters are said to have pitched their camp in 1645, before the battle of Kilsyth.

The PARISH is situated in the most beautiful part of Strathearn, and bounded on the north partly by the parish of Perth. It is about four miles in extreme length from east to west, and one mile and a quarter in average breadth, comprising 3236 acres, of which 2640 are under culture, 419 wood, and the remainder water, roads, and waste. The river Earn passes through it in a winding course from west to east, and the surface is generally level, the chief exception being the lofty and striking elevation called Moncrieffe or Moredun hill, which rises 756 feet above the sea, and commands from its summit one of the most magnificent views in Scotland. The prospect comprehends the Carse of Gowrie; the Firth of Tay, with the town of Dundee; the beautifully rich and well-wooded vale of Strathearn, ornamented with the meanderings of the river Earn, and with many superior mansions; the picturesque forms of the Ochils; and the fine eminences of Monteith. On the north and west, the mountains of Ben-Voirlich, Benmore, and others, are finely contrasted with the nearer scenery of Perth, the river Tay, Kinnoull hill, and Kinfauns Castle; and beyond Crieff appears the obelisk raised to the memory of Sir David Baird on the hill of Tom-a-chastel, in the parish of Monivaird, with that of Lord Melville, near Comrie. The scenery is much indebted for its general beauty to the Earn, though the stream is here far less clear than in many other parts, chiefly on ac-

count of the mossy soil through which it passes. It affords trout, whiting (a small species of sea-trout), pike, and salmon, the last, however, in smaller quantities than formerly.

The SOIL is exceedingly various, and comprises almost every description, from the richest loam to the poorest clay. On the south side of the river the lands are very flat, and consist of strong wet clay; on the north they are loamy; and towards the western district a red, tilly, impervious earth is prevalent. Near Bridge-of-Earn, at some depth beneath the surface, is a stratum of moss of considerable thickness, extending for several hundred yards, and which so impregnates all the water near the village as to render it unfit for culinary purposes: in this mossy bed large pieces of timber are found, many of which present curious specimens of petrification. Wheat, oats, barley, and the usual green crops are raised; the cultivation of potatoes, especially the Perthshire red kind, occupies a large proportion of the ground, and about 6000 holls are yearly sent to London and Newcastle. The rocks are mostly whinstone and sandstone of various kinds, of which several quarries are in operation, and the strata exhibit specimens of barytes, jasper, agate, chlorite, and a variety of other minerals. The district has made important advances in agriculture, and is also especially worthy of notice for the rapid increase of its plantations, comprehending all kinds of trees, which now cover the hill of Moncrieffe, formerly overgrown with heath and furze, and enrich the vale of Strathearn in every direction. The annual value of real property in the parish is £7605.

The house of Moncrieffe, built in 1679, is the residence of the ancient family of that name, descended from Ramerus de Moncrieffe, who was keeper of the wardrobe to Alexander I. Its grounds are thickly planted with the usual trees, interspersed with horse-chestnut, silver and spruce firs, lime, plane, and walnut; and among many other rare plants, the garden contains several from the Cape of Good Hope and New South Wales. Other mansions are, Pitkeathly, in the grounds of which is a tulip-tree above a century old, which still regularly flowers; and Kilgraston, a spacious structure in the Grecian style, standing in a large well-wooded park, and containing a valuable collection of pictures, among which is one of the finest pieces of Guercino, representing Louis IX. renouncing the crown for a monastic life. There is also the house of Ballendrick, a convenient residence with excellent out-buildings. A village named Dunbarny formerly existed on the road leading from the property of that name to Bridge-of-Earn; but the only villages now comprehended in the parish are those of Bridge-of-Earn and Kintillo, with a cluster of houses on the Pitkeathly property, and a number of elegant cottages lately erected at Craighend, on the Edinburgh road, by the Moncrieffe family. Near Bridge-of-Earn and Kintillo is a station of the Perth section of the Edinburgh, Perth, and Dundee railway.

With regard to its ecclesiastical affairs, the parish is within the bounds of the presbytery of Perth, synod of Perth and Stirling, and in the patronage of Sir Thomas Moncrieffe, Bart. The minister's stipend is £179, with a manse, a vicarage tithe of forty-four and a-third loads of coal, and a glebe valued at £19 per annum. The church erected in 1684 stood a few yards west of the present structure, which was built in the year 1787: the

churchyard, partly formed in 1821, and finished some years afterwards, is altogether artificial, being composed of 2000 cart-loads of sand brought from the banks of the river. The members of the Free Church have a place of worship and a school. The parochial school affords instruction in the ordinary branches; the master has a salary of £34, with about £25 fees, and also receives, for teaching poor children, the interest of 500 merks left in 1677 by the Rev. Robert Young, of £5 left in 1743 by John Craigie, Esq., and of £108 left in 1820 by the Rev. James Beatson. The late Sir David Moncrieffe bequeathed a sum, as a prize, to the best classical scholar; and there are two bursaries in the patronage of the family, one for St. Mary's and the other for St. Salvator's College, St. Andrew's. Here is a public library comprising about 300 volumes. At a small distance from Moncrieffe House are the remains of a Druidical temple, and on the summit of the hill of that name is a circular fosse, sixteen yards in diameter, in the centre of which stood Carnac fort, formerly belonging to the Piets. Near Old Kilgraston is a bulky Spanish-chestnut tree, of thick foliage, said to have been planted on the day when Perth capitulated to Oliver Cromwell.

DUNBEATH, a hamlet, in the parish of LATHERON, county of CAITHNESS, 20 miles (S. W.) from Wick; containing 40 inhabitants. It is situated on the banks of the river Dunbeath, which here discharges itself into the North Sea; and is an excellent fishing-station. An ancient eastle stands on a narrow neck of land, impending on one side over the sea, and on the other over a deep chasm into which the tide flows. Near the hamlet is an entire Piets' house, called the Bourg of Dunbeath.

Burgh Seal.

DUNBLANE, an ancient episcopal town, a parish, and the seat of a presbytery, in the county of PERTH; containing, with the village of Kinbuck, 3361 inhabitants, of whom 1911 are in the town, 5 miles (N.) from Stirling, 28 (S. W.) from Perth, and 41½ (W. N. W.) from Edinburgh. This place derives its name from an eminence on which was an

ancient convent of Culdees founded by St. Blaas in the reign of Kenneth III., and subsequently erected into a bishopric by David I., who built the cathedral church about the year 1142. The diocese comprised part of the counties of Perth and Stirling, and continued to flourish under a succession of twenty-five prelates till the Reformation, when its revenues were valued at £315 in money, exclusively of certain payments in wheat and other grain. Among the Protestant bishops who presided over the see after that period, was the meek and pious Leighton, who was consecrated in 1662, and in 1669 was translated to the archiepiscopal see of Glasgow, in which he continued till 1675. At his death he bequeathed his valuable library for the use of the clergy of the diocese of Dunblane; and he has left behind him a series of works which display the sound learning he possessed, the fervour of his piety, and the persuasive eloquence of his style. In 1715, a sanguinary battle took place on the plains of Sheriff Muir, to the north-east of the town,

between the forces under the command of the Duke of Argyll and those of the Pretender led by the Earl of Mar, in which both parties claimed the victory.

The town is pleasantly situated on the road from Stirling to Perth, and on the east bank of the river Allan, over which is an old narrow bridge. It has a station of the Scottish Central railway. There are still some slight remains of the episcopal palace to the south of the cathedral, on the margin of the river, and that part of the town yet retains some faint resemblance to its ancient character. The building erected for the library of Archbishop Leighton was endowed under his will with £300 for keeping it in repair and as a salary for the librarian, and has been lately fitted up by subscription as a public reading-room; the library has at various times received additions by bequests and donations, and the annual subscription to it is very moderate. There are two other libraries, chiefly of religious books, supported by subscription. Close to the town is a neat lodge, to which a supply of mineral water is brought during the summer months from a spring called the Well of Dunblane, or Cromlix, about two miles distant. It was proposed to bring the water into the town by pipes from the spring; but this purpose not being carried into effect, a village has been built near the spot, called Bridge-of-Allan, which is described under its own head. The inhabitants are principally engaged in the woollen manufacture, of which there are three establishments in the parish; one of them in the town, in which 215 persons are employed; one in the small village of Kinbuck, and the third at the mill of Keir, each of the two latter affording occupation to about forty persons. A considerable number in the town, likewise, are employed in hand-loom weaving. There is a general post-office. Fairs are held on the first Wednesday in March, the first Tuesday after the 26th of May, on the 21st of August, and the first Tuesday in November. The town, being within the barony of Cromlix, was formerly governed by a bailie, appointed by the Earl of Kinnoull as superior, and who held courts in a house a little eastward of the cathedral. The old gaol has been taken down; and a new prison, containing eight cells and a house for the gaoler, has been erected for the western district of the county, upon the site once occupied by the residence of Viscount Strathallan.

The PARISH, which is situated at the western extremity of the Ochil range, is about nine miles in length, and nearly six in breadth. A considerable part consists of arable land, but the greater portion is moor, heath, and pasture. The surface is much diversified with hills of various elevation, whose declivities slope gradually towards Strathallan, a fertile vale through which the river Allan flows with a rapid current, between banks in some parts steep and richly wooded, and pursues a winding course till it falls into the Forth near Stirling bridge. The rivulet Ardoch intersects the western part of the parish, and in both streams are found trout of good quality. The soil is various; in some parts fertile, in others affording only indifferent pasture for sheep and black-cattle: the farms are generally of small extent, the buildings substantial and commodious, and a considerable portion of waste land has been brought into cultivation. The annual value of real property in the parish is £14,300. The substratum is mostly red sandstone; there are pits of shell marl, and lime is obtained with facility at the distance of a few miles, by the river

Forth, and has been plentifully applied to the improvement of the land. Kilbryde Castle, the seat of Sir James Campbell, of Aberuchill, Bart., is an ancient structure finely situated; and Kippendavie a handsome building of modern erection.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Dunblane, synod of Perth and Stirling. The minister's stipend is £289, with a manse, and a glebe valued at £15 per annum; patron, the Crown. Dunblane church is the choir of the ancient cathedral, the remainder of which is in ruins. The whole was originally a venerable structure combining elegant details of the Norman, and early and decorated English styles, and measures 216 feet in length and fifty-eight feet in breadth within the walls, which rise to the height of fifty feet, and are crowned with battlements. The tower, 128 feet in height, appears to be of later date than the rest of the cathedral in the two uppermost stories; but the three lower of the five stories of which the tower consists seem to be older than the cathedral, and to have been erected by the ancient Culdees. The choir is almost entire; the lofty vaulted roof is in good preservation, and the windows, which were of beautiful design, were restored in 1819, and the whole of the interior repaired. The prebendal stalls, several of which are elaborately carved, are preserved in the avenues leading into the choir, which contains about 500 sittings. The Episcopalians, the members of the Free Church, and the United Presbyterian Synod have places of worship. The parochial school is conducted by a master who has a salary of £34, with £10. 10. per annum granted by the crown from the church lands; also a house and garden, and fees averaging about £50, out of which he pays an assistant. There are several other schools in the parish, including two partly supported by subscription. Archbishop Leighton is the most remarkable name connected with Dunblane: he bequeathed a sum of money to the poor of the parish; and a sequestered walk near the town, to which the prelate frequently resorted, is still called the Bishop's Walk. Dunblane gives the title of Viscount to the Duke of Leeds.

DUNBOG, a parish, in the district of CUPAR, county of FIFE, 4 miles (E. by S.) from Newburgh; containing 219 inhabitants. This place derives its name, of Celtic origin, and signifying "the bog of the hill", from the former marshy nature of the grounds at the base of the hill of Dunmore, which extends into the parish. A portion of the lands anciently formed part of the barony of Balinbriech, the property of the Rothés family, from whom it passed into the possession of Lord Home, whose descendant, in the reign of James IV., sold the lands of Dunbog to David Bethune, of Creich, in whose family they remained till the middle of the seventeenth century. In 1694 the estate was sold to Major Balfour of Starr, by whom it was forfeited in the rebellion of 1715; it was, however, restored to his son, from whom it was purchased in 1766 by the ancestor of the Earl of Zetland, its present proprietor. The parish is about four miles in length, and varies from half a mile to one mile and a half in breadth; comprising 2130 acres, of which 1800 are arable, 300 hill-pasture, and thirty woodland and plantations. Its surface is broken by two continuous chains of hills, extending in a nearly parallel direction, and inclosing between them a beautiful vale of luxuriant fertility; the greatest elevation of the hills, however,

does not exceed 500 feet above the sea. The northern chain, which is a continuation of the hill of Dunmore, now called Norman's Law, is cultivated from the base to the summit, and commands an extensive and diversified view of the surrounding country, embracing the windings of the river Tay till it disappears behind the projection of the hill of Kinnoull, the rich valley of the Earn, the Carse of Gowrie, and, to the east, the town of Dundee, and the estuary of the Tay at its influx into the German Ocean. Towards the north appears the range of the Sidlaw hills, with the Grampians in the distance towering above them in majestic grandeur. The southern chain of hills is barren and uncultivated; some few spots have by great perseverance been rendered productive, and are in tillage, but from the want of wood and plantations, the general appearance is dreary and unpromising. The scenery of the lower lands of the parish has been much improved by the joint exertions of the proprietors in reclaiming the large tracts of bog and marsh which formerly abounded, and which are now in a state of high cultivation, and produce abundant crops. The river Tay washes a small portion of the parish.

In the valley the soil is a rich black loam; in other parts it is more of a clay, and towards the east light and dry. The system of agriculture is in a greatly improved state, and the six-shift rotation plan of husbandry is generally practised; the crops are barley, oats, wheat, potatoes, and turnips. Little attention is paid to the rearing of cattle or sheep; of the latter the few that are fed in the parish are of the Cheviot breed, and the cattle are mostly of a mixed sort. Great advances have been made in draining, but the lands are not inclosed, and the want of fences is seriously felt. The substratum is principally whinstone, and on the summits of the hills are found boulders of granite; in some parts of the valley the whinstone occasionally rises to the surface, and in the best cultivated and richest land are spots comparatively barren. The annual value of real property in the parish is £2944. The mansion of Dunbog, the property of Lord Zetland, and formerly a residence of Cardinal Beaton, by whom it is supposed to have been built, stands on the site of a religious house called the Preceptory of Gadvan: this was occupied as a cell to the abbey of Balmerino by a few monks of that establishment, who employed themselves in the cultivation of the adjoining lands, which, with the exception of a small portion now included in the glebe, are laid out in garden and pleasure-grounds. Collairney, for many centuries the property of the Barclay family, was purchased by the late Dr. Balfour of Fernie: the castle, formerly the baronial residence of the Barclays, is now a ruin consisting only of one of the towers, containing some small apartments with roofs divided into compartments, and emblazoned with the arms of various members of that family. Ecclesiastically the parish is in the presbytery of Cupar, synod of Fife, and in the gift of the Crown; the minister's stipend is £204, with a manse, and a glebe valued at £8. 15. per annum. Dunbog church, situated nearly in the centre of the parish, was erected in 1803, and is a neat and well-arranged edifice adapted for a congregation of 200 persons. The parochial school affords a liberal course of instruction; the master has a salary of £34, with £15 fees, and a house and garden.

DUNCANSBAY, a township, in the parish of CANISBAY, county of CAITHNESS, 9 miles (N. by E.) from Keiss; containing 302 inhabitants. This place, said to be the *Berubium* of Ptolemy, is a beautiful promontory, forming the north-east corner of the island of Great Britain, of a circular shape, and about two miles in circumference. Towards the sea, which encompasses two-thirds of the Head, it is one continued precipice; and on the land side is a deep glen or ravine, over which a small bridge is thrown. The Stacks of Duncansbay are pyramidal pillars of naked freestone rock, rearing their fantastic summits to a considerable altitude, like huge spires of an old cathedral; and are frequented by innumerable sea-fowl. On the highest part of the Head are the remains of an ancient watch-tower, whence is a prospect the most noble and extensive that can be imagined, embracing the whole Pentland Firth, the Orkney islands, the North Sea, the Moray Firth, and the mountains of Banff, Aberdeen, and Elgin. The promontory is covered with excellent pasturage for sheep, intermixed with short heath. Here was formerly a chapel dedicated to the Virgin Mary; the site is still known by the name of Lady-Kirk.

DUNCOW, a village, in the parish of KIRKMAHOE, county of DUMFRIES, $1\frac{1}{4}$ mile (N.) from Kirkmahoe; containing 121 inhabitants. It is seated between the Nith and Lochar rivers, and on a small stream, bearing its own name, that falls into the former a short distance from the village of Kirkmahoe. The barony of Duncow once belonged to the family of Cumin, but was forfeited by them on the accession of Bruce, and bestowed upon the Boyds; it subsequently passed to the Maxwell family of Nithsdale, and remained with the Maxwells until about fifty or sixty years ago, when it was divided among various purchasers. The village is one of five, and the largest, in the parish. At Duncow there has lately been erected a manufactory for coarse woollen-cloth, worked both by water and steam. One of the parochial schools is situated here; the master has a free-rent dwelling, and besides his salary and fees, an annual payment of £5, arising from a bequest by the late Mr. Allen, of Newlands, for teaching fatherless children.

DUNCRIVIE, a village, in the parish of ARNGASK, county of KINROSS, 1 mile (S. W.) from Arngask; containing 106 inhabitants. This village is pleasantly situated on the road from Kinross to Perth, upon rising ground, near the southern extremity of the parish. It contains a school.

Seal and Arms.

DUNDEE, a royal burgh, a sea-port town, and parish, in the county of FORFAR; containing, with part of the village of Loehee, 62,794 inhabitants, of whom 60,553 are within the burgh, 14 miles (S. by W.) from Forfar, and 47 (N. by E.) from Edinburgh. This place appears to have derived its name, in ancient records written *Don-die*, and in a charter of Queen

safety after a severe storm, on his return from the Holy Land, whither, with 500 of his countrymen, he had accompanied Richard Cœur de Lion, King of England, in his third crusade. In fulfilment of his vow to grant to him the first ground on which he should land on his return, the Scottish monarch gave his brother the site now occupied by Dundee; and the earl, in gratitude for his preservation from shipwreck, erected a spacious church, around which subsequently arose the present town. There seems to have been a castle or fortress on the summit of a rock rising precipitously from the river, the origin of which is altogether unknown, and which, after the erection of the church, became a royal residence; but from the shelter it afforded to the enemy in the wars with England during the reign of Edward I., it was ultimately demolished by the Scots. In the war consequent on the disputed succession to the Scottish throne, the town was twice taken by the army of Edward I., by whom it was plundered and burnt; and in 1385 it was again nearly reduced to ashes by the English forces under the Duke of Lancaster. It suffered a similar devastation from the English army commanded by the protector, Somerset, in an attempt to compel the regency of Scotland to negotiate a contract of marriage between the infant princess Mary, afterwards Queen of Scots, and the son of Henry VIII., Edward VI. of England. At the time of the Reformation, the inhabitants, who were zealous for the cause, proceeded to Edinburgh to assist in besieging the French troops stationed in Leith; but they were repulsed with considerable loss, and many of them were killed in endeavouring to effect their retreat into Edinburgh.

In 1645, the Marquess of Montrose, at the head of 150 cavalry and 600 infantry, sent a summons to the town to surrender, and on the imprisonment of his messenger by the inhabitants, attacked it simultaneously in three different quarters, and after plundering and setting fire to it on the east and north sides, abandoned the people to military execution. In 1651, after the battle of Worcester, the town was besieged by General Monk, to whom it was compelled to yield, though not without a valiant resistance. The governor, Lumsden, retired with part of the garrison to the tower of the church, which for some time he maintained to the annoyance of the enemy; but being at length obliged to submit, he was inhumanly murdered in the churchyard, together with all his companions, and his head placed on a spike on the battlements of the tower. On this occasion, the town was plundered of every thing of value, and sixty ships in the harbour were laden with the spoils, valued at £200,000 sterling, and sent off to England; but in passing the bar near the mouth of the river, every vessel was lost. The inhabitants were slaughtered without regard either to age or sex; and in the general carnage, which continued for three days, it is estimated that more than one-sixth of the inhabitants were put to death. In 1669, the town was so greatly reduced that an act of parliament was passed, recommending it to the benevolent consideration of the whole kingdom; and contributions were made for its assistance by all the principal burghs in the country. The various calamities which the town had experienced were, moreover, subsequently aggravated by a dearth that lasted for seven years; and it was not till after the rebellion in 1745 that it began to recover its former importance, since which time few

Mary *Donum Dei*, from the erection of the church in the twelfth century by David, Earl of Huntingdon, brother of King William the Lion, on his landing here in

events of historical interest have taken place. In 1841, three of the churches were destroyed by an accidental fire which originated from a stove in the passage between the South and the Steeple churches, on the morning of the 3rd of January. The flames extended to the cathedral and the Cross church, but the firemen prevented their communication to the Steeple church, which was saved: the other three, however, about half-past six o'clock, were one mass of fire; the cathedral was completely destroyed, and the South and Cross churches were almost reduced to ruins. In 1844, Her Majesty Queen Victoria, attended by Prince Albert, arrived in the bay of Dundee on Wednesday, the 11th of September, on a visit to Lord Glenlyon, and landed under a triumphal arch erected on the occasion. After remaining a short time in the town, the royal visitors proceeded to Blair-Atholl, where they remained till Tuesday, the 1st of October, when they returned to Dundee, and embarked for London.

The town is advantageously situated on the north bank of the Tay, and consists of numerous streets, several of which retain the names of the ancient gates in the old walls, which have been long since removed. The principal street, called High-street, in which is the market-place, is about 120 yards in length, and 100 feet wide; the houses are neatly built of stone, and four stories in height. To the east of this is the Seagate, one of the oldest streets of the town, a long narrow thoroughfare leading to the road to Broughty-Ferry. The Murraygate, containing many well-built houses, and the Cowgate, adjoining, are connected with the Seagate by numerous cross streets or lanes. King-street, of modern erection, contains handsome houses, and the Nethergate, in the most improved part of the town, is a spacious street of considerable length, containing many elegant detached houses. Castle-street, leading from the south-east angle of the High-street to the harbour, and Union-street, opening a direct communication between Craig Pier and the Nethergate, and in the formation of which many unsightly houses have been rebuilt in an excellent style, are each spacious and handsome. Among the various improvements that have been effected of recent years, is the construction of the splendid Reform-street. The streets are well paved, and the roads macadamized; the town is lighted with gas, from works established by a company, about a mile eastward of High-street, and the inhabitants are amply supplied with water. One of the most remarkable features of the town is the lofty tower, 156 feet in height, at the west end of the imposing mass of buildings comprising the Old, South, Cross, and Steeple churches: its design is foreign in its character, and, as has been remarked, it is "more like the tower of a *hôtel de ville* than of a church". The public subscription library contains a collection of more than 6000 volumes; there are also district libraries connected with the several churches, each of which has nearly 1000 volumes. A spacious and elegant reading and news room has been opened near the harbour, called the Exchange Coffee-Room, which is supported by above 400 subscribers; and an artisans' reading-room, well supplied with daily journals, has been founded by members of the Watt Institution, and has 200 subscribers. The Watt Institution was established in 1826 for the delivery of lectures on scientific subjects, and now possesses an extensive library, consisting chiefly

of works of art. A reading-room has also been provided by Messrs. Brown, proprietors of spinning-mills, for the use of their workmen. There is a theatre in Castle-street, a handsome and well-arranged edifice; and card and dancing assemblies are held in the town-hall, and other public buildings. A horticultural society was established in 1824, under the patronage of the neighbouring nobility and gentry; and a florists' society has also been formed. The old gardens of Chapelshade, in the vicinity of the town, have been converted into a cemetery, and tastefully laid out in walks, parterres, and shrubberies, with appropriate embellishments; and to the north, a public bleach-green, four acres in extent, and containing the requisite apparatus for family washing, has been inclosed, and planted with ornamental shrubs. An act for a better supply of water to the town was passed in the year 1845, and an act for a better supply of gas in 1846.

The principal TRADE pursued is the linen manufacture, which was introduced at an early period, and, till within the last forty or fifty years, was carried on entirely by hand, both in spinning the yarn and weaving the cloth, to a very considerable extent for the supply of the neighbourhood, and also for exportation. Since the introduction of machinery and the application of steam, however, it has increased to an amazing amount. In 1811 four spinning-mills had been erected, driven by steam-engines of the aggregate power of sixty-one horses, consuming 468 tons of flax annually, and producing 224,600 spindles of yarn; and the whole of the capital invested in machinery amounted to £22,000. At present there are more than thirty-six spinning-mills in Dundee and the immediate neighbourhood, driven by steam-engines of the aggregate power of 600 horses, consuming a vast quantity of flax, and producing annually 7,500,000 spindles of yarn; and the capital invested in machinery is about £240,000. In these mills above 3000 persons are regularly employed, of whom a large proportion are women and children. The number of mills for weaving is still larger. The total number of families employed in the different departments of the linen trade is 7000, and the amount of wages annually paid is £160,000. The flax is chiefly imported from Russia, Brabant, Holland, and Prussia; and in 1846 the quantity of flax, hemp, and kindred substances that was landed at Dundee was about 40,000 tons. The goods manufactured are, Osnaburghs, sheetings, sailcloth, sacking, and bagging, and various other articles, of which large quantities are exported to the West Indies, North and South America, and to various ports on the continent. Nearly 800,000 pieces of cloth of various sorts were exported in 1846. The tanning of leather, which was formerly carried on to a very considerable extent, has for some years been rapidly diminishing, and is now almost extinct; but the manufacture of ropes and cordage is in a thriving state. There are also several machine-factories, candle-factories, and sugar-refineries.

The trade of the PORT consists chiefly in the exportation of grain and agricultural produce, and the different articles of the linen manufacture; and in the importation of flax, hemp, lime, coal, ashes, timber, iron, tar, whale-blubber, tallow, and other merchandise. The number of vessels registered as belonging to the port in 1844 was 326, of the aggregate burthen of 50,901 tons; the amount of duties paid at the custom-house was £42,737. The number of vessels that entered inwards

from foreign ports in a late year was 307, of which 253 were British and 54 foreign; the coasting-trade is very extensive, and it appears that in one year 1858 vessels entered inwards, and 1017 cleared outwards. The HARBOUR, previously to the year 1815, was small, and insufficient to accommodate the trade of the port; but in that year, an act for its improvement and for placing it under the management of commissioners was obtained, and before 1833 the sum of £242,000 was expended in the construction of two capacious wet-docks, nearly eleven acres in extent, and commencing a third of much more ample dimensions. A large tide-harbour was also formed, with extensive quays, as well as a graving-dock, capable of receiving three of the largest class of merchant-ships, with commodious yards for building and repairing vessels. A substantial low-water pier has since been erected on the Craig, the usual landing-place from Newport in Fifeshire, between which place and Dundee regular intercourse by steamers is maintained. A stationary light has been placed on the Craig pier, on the western side of the harbour, and also on the pier at Newport; there is likewise a light exhibited on the east pier, and another on the middle pier, at the entrance of the docks. A grant of £8000 was lately made by government for the erection of a new custom-house at the north-east angle of King William's dock; it is a handsome building in the Grecian style, and contains also accommodation for transacting the business of the harbour commissioners and of the excise-office. Prior to 1834, the Dundee, Perth, and London Shipping Company employed eight smacks in the London trade, having an aggregate burthen of 991 tons; also three vessels in the Glasgow trade, four in the Liverpool, and four in the Perth, the tonnage of these eleven amounting to 673. In that year, however, the company built two powerful steamers, the *Dundee* and the *Perth*, of 300-horse power each; and subsequently added a third, the *London*, of 350-horse power. Besides these steamers, they employ four schooners in the London trade, seven sloops in the Glasgow, four in the Leith, and three lighters and a steam-tug in the Perth trade; and the entire tonnage of the steamers and sailing-vessels belonging to the company now amounts to 2686. Two steamers, also, are employed by other parties, in the Dundee and Leith trade. There are several joint-stock whale-fishing companies, employing five ships, averaging 325 tons' burthen each.

The town was originally erected into a ROYAL BURGH by charter of William the Lion, and its privileges as such were confirmed by charter of Robert Bruce, and by one of Charles I. in 1641. In consequence of a dispute in the election of a dean of guild, the burgh was disfranchised in 1830, and seven members were appointed by the court of session to manage the interests of the town; but in 1831 the king, in answer to a petition, confirmed an election of the magistrates and council made by the burgesses and heritors; and in the 2nd of William IV. an act was passed, extending the royalty of the burgh and the jurisdiction of the magistrates. Under these regulations, the government is vested in a provost, four bailies, a dean of guild, a treasurer, and fourteen other councillors, elected according to the provisions of the general Municipal act, with the exception of the dean of guild, who is chosen by the guild brethren. Seven of the councillors retire from office annually. There are

nine incorporated guilds, the bakers, shoemakers, gloves, tailors, bonnet-makers, butchers, hammermen, weavers, and dyers; and three united trades, the masons, wrights, and slaters. The magistrates have jurisdiction over the whole of the extended royalty, which is co-extensive with the parliamentary boundary, and hold courts weekly on Wednesday for the recovery of debts to any amount, in which the bailies preside for one month each in rotation; the more important criminal cases are tried by the sheriff-substitute, who is resident in the town, and those of less importance are disposed of in the police court. The sheriff-substitute also holds a court weekly, during the session, for the recovery of debts not exceeding £8. 6. 8.; and a court for the recovery of small debts is held by the magistrates every alternate week. There is a dean-of-guild court as occasion requires, in which the clerk of the guildry acts as assessor. Under the Police act the town is divided into eleven wards, to each of which are appointed two general and two resident commissioners; and there is also a harbour police. Previously to the Reform act the burgh was associated with Perth, Cupar of Fife, St. Andrew's, and Forfar, in returning a member to the imperial parliament; since that time it has elected a member of its own, and the number of qualified voters is 2827.

The old *Town-hall*, erected in 1734, on the site of the ancient church of St. Clement, after a design by Mr. Adam, is a spacious and handsome structure with a tower and spire rising to the height of 100 feet. In front is a piazza, behind which are shops and public offices. On the first-floor are two spacious halls, in one of which, embellished with a portrait of Lord Panmure, the corporation hold meetings for the transaction of public business, and in the other the several courts of the magistrates and sheriff are held, and the meetings of the guildry. There are also four arched rooms for the accommodation of the town-clerks and others connected with the courts, and for the preservation of the public records; and above these is the old town gaol, consisting of five apartments, each twenty-four feet in length and twelve feet wide, of which those in front were used for debtors, and the others for criminals. New public buildings, however, of very handsome construction, have been erected by the burgh, at a considerable expense, and containing ample accommodation for the confinement of prisoners. *The Trades' Hall*, situated at the east end of the market-place, an elegant building of the Ionic order, with a lantern and eupola rising from the centre of the roof, was erected by the nine incorporated trades in 1770, and contains on the first-floor a handsome hall, fifty feet in length and twenty-five feet wide, for holding the general meetings, and nine apartments for the private meetings of each particular trade. The building appropriated as an *Exchange* is a handsome structure in the Grecian style, erected by a company of subscribers, at an expense of £10,000, and having on the ground-floor a range of offices and shops, and on the first-floor an elegant hall, now used as a reading and news room, to which reference has been already made. There are various banking establishments, namely, the Dundee, the Union, and the Eastern Banks, and four branches of Edinburgh banks: the Forfarshire and Perthshire Insurance Company, the Marine Insurance Company, the Forfarshire Chamber of Commerce, and two associations of underwriters have been also esta-

blished in the town. The markets are on Tuesday and Friday, and Dundee being the mart of a large surrounding district, they are numerously attended. On Tuesday, manufactured goods and various kinds of merchandise and provisions are exposed to sale in great profusion; and on Friday, in addition to these, there is an abundant supply of grain.

Facilities of communication, besides those by sea, are afforded by excellent roads, of which the coast road to Aberdeen passes through the town: there are turnpike-roads to Cupar-Angus, Forfar, Brechin, and Glasgow, and, by branch roads through Fifeshire, to Edinburgh. *The Dundee and Newtyle railway* was commenced in 1826, and completed in 1832, at a cost of about £50,000; it is about eleven miles in length, and at Newtyle is connected with the Scottish Midland Junction railway from Forfar to Perth. An act was obtained in 1847 for the improvement of the line. *The Dundee and Arbroath railway* was begun in 1836, and completed in 1840; it is about seventeen miles in length, passes close to the shore, and is nearly level throughout. At Arbroath it is connected with a line to Forfar and to Aberdeen. *The Dundee and Perth railway*, for which an act was obtained in 1845, was opened to Barnhill, not far from Perth, in May 1847, and was subsequently completed to Prince's-street, Perth, a distance of above 20 miles from this town. Acts of parliament were passed in 1848, authorizing the formation of a junction line of the two preceding railways, the Arbroath and the Perth, in Dundee; and enabling the Dundee and Perth railway company to take a lease of the Arbroath railway. The whole line, from the city of Perth to the town of Arbroath, is now called the Dundee, Perth, and Aberdeen Railway Junction. On the south shore of the Firth of Tay commences the Dundee section of the *Edinburgh, Perth, and Dundee railway*.

The PARISH is nearly six miles in length from east to west, and varies greatly in breadth, comprising an area of about 4200 acres, of which 254 are woodland and plantations, 135 waste, and the remainder arable and pasture. Its surface is diversified, rising into hills of considerable elevation, of which the Law, and the hill of Balgay, are the most conspicuous. To the west of the town the soil is light and shallow, to the north and east of richer quality, and along the bank of the Tay luxuriantly fertile. The crops are oats, barley, wheat, turnips, and potatoes, with the various grasses; the system of husbandry is advanced, and the lands are in a high state of cultivation. In general the farm-houses are of stone, and roofed with slate; the lands are inclosed partly with stone dykes, and partly with hedges of thorn. The only cattle pastured are milch-cows on the several farms. The soil is well adapted for fruit of every kind, and considerable portions of the land near the town are laid down in gardens, and also in nursery-grounds: the plantations are ash, plane, beech, a few elms, and larch and Scotch fir, which are in a thriving state, but are rather ornamental than profitable. In this parish the principal substrata are sandstone, amygdaloid alternated with trap, and red porphyry. The annual value of real property in the parish is £118,326.

For ECCLESIASTICAL purposes Dundee is within the bounds of the presbytery of Dundee, synod of Angus and Mearns. The parish was in 1834 separated, by act of the presbytery, into the districts of St. Mary, St. Paul, the Grey Friars, St. John, St. Clement, St. David, St.

Andrew, and Chapelshade, each of which was erected into a quoad sacra parish; and in 1836, by the same authority, part of the districts of St. John and St. David was formed into the additional quoad sacra parish of St. Peter. These arrangements, however, in common with similar arrangements in other parts of the country, were afterwards abrogated. The parish of *St. Mary* comprised, according to the plans just referred to, the rural district of the parish of Dundee, and part of the suburbs of the town: the minister's stipend is £313. 6., with a manse, and a glebe valued at £25 per annum; patrons, the Town Council. The Old and South churches, partly used by the inhabitants of St. Mary's, have since the great fire been restored, and contain together about 2450 sittings, of which 1350 are in the latter. *St. Paul's* parish, wholly within the town, comprised an extent of about half a mile square: the stipend is £274. 17.; patrons, the Town Council. The congregation assemble alternately in the Old and South churches. The parish of the *Grey Friars* comprised about one-eighth part of the town and suburbs: the minister's stipend was £275. 2.; patrons, the Town Council. Divine service is performed in the Old and South churches. Connected with the Established Church is a Gaelic chapel, erected within the last few years, at a cost of £2400, and containing 100 sittings: the minister has a stipend of £110, of which £10 are granted by the Society for Propagating Christian Knowledge, and the remainder derived from seat-rents; patrons, the male communicants. *St. John's* parish was about half a mile in length, and of nearly equal breadth: the stipend is £275; patrons, the Town Council. The church, called the Cross church, containing about 1037 sittings, was destroyed in 1841 by the fire, but has been restored. *St. Clement's* parish was three-quarters of a mile in length, and one-quarter of a mile in breadth: the minister's stipend is £300; patrons, the Council. The church, called the Steeple church, was rebuilt in 1782, and contains 1463 sittings. *St. David's* was about two miles in length, and three-quarters of a mile in breadth: the stipend is £275; patrons, the Council. The church was built in 1800, at a cost of £2220, and has 1608 sittings. *St. Andrew's* was one mile and three-quarters in length, and three-quarters of a mile in breadth: the stipend is £180; patrons, the male communicants. The church was built in 1774, at a cost of £3000, by subscription, and contains 1486 sittings. An additional church has been lately erected by subscription, at an expense of nearly £2000, for 1100 persons. The parish of *Chapelshade* comprised nearly two square miles: the stipend is £150, derived from seat-rents; patrons, the male communicants. The church, built originally as a Relief chapel in 1789, was united to the Established Church in 1791; it was enlarged in 1830, at an expense of £880, and contains 1280 sittings. *St. Peter's* parish, comprising a portion of the parishes of St. John and St. David, separated by the presbytery in 1836, was about a mile and a half in length, and one-quarter of a mile in breadth: the minister's stipend was £220, with an allowance of £12 for communion elements; patrons, the male communicants. The church, containing 1120 sittings, was erected in 1836, at a cost of £2400, of which £250 were granted by the General Assembly, and the remainder raised by subscription. There are places of worship in Dundee for members of the Free Church,

the United Presbyterian Synod, the United Original Seceders, Baptists, Baptist-Bereans, and Pædobaptist-Bereans, Episcopalians, the Society of Friends, Glassites, Independents, Primitive and United Methodists, Reformed Presbyterians, Wesleyans, Roman Catholics, Unitarians, and others.

The grammar school is under the care of two classical masters, who have each a salary of £50, and the fees annually produce to each about £60; it is well conducted and numerously attended. The English school has also two masters, one for reading and English grammar, who has a salary of £30, and one for writing and arithmetic, with a salary of £20, in addition to which each master derives about £70 from fees. A school called the Sessional school, lately established, is attended by about 500 children, and conducted by a master who has a salary of £80 per annum; the building was erected on a site given by the town council. *The Dundee Academy*, for which a spacious and handsome building has been erected in the centre of the town, at a cost of £8000, raised chiefly by subscription, is under the patronage of fifteen directors, of whom five are appointed by the town council and ten by the subscribers. This institution is endowed with £6000, bequeathed by Messrs. Webster, of the city of London, who were natives of the town. The course of studies is very complete, and is superintended by two classical masters; a master for the modern languages; one for moral philosophy, nautical astronomy, and logic; a master for natural philosophy, mathematics, and chemistry; one for drawing and painting; one for English reading, grammar, and geography, and a master for writing and arithmetic. There are numerous other schools in the town and neighbourhood, in which it is calculated that about 4000 children receive instruction. The industrial school for vagrant children was established in 1847. Among the many charitable institutions of the town are, the ancient Hospital, from the revenues of which £500 are annually distributed among poor citizens; the Royal Infirmary, established in 1798, and supported by subscription, which receives more than thirty in-patients, and affords medical attendance and medicines to the poor at their own dwellings; the Royal Lunatic Asylum, erected in 1812, and supported by subscription for the reception of 120 patients; the Royal Orphan Institution, established in 1815; the Indigent-Sick Society, distributing annually £160; the Medical and Surgical Dispensary; the Institutions for the Lame and Blind; the Seamen's Friend Society, dispensing yearly £1500; the Female Society, £190; and the Clothing Society, distributing about £40. These and various other benevolent institutions collectively dispense, in aid of the distressed and indigent, nearly £4000 annually; exclusively of numerous bequests by charitable individuals for similar purposes.

There are still some remains of the ancient palace called *Whitehall*, the occasional residence of the Scottish monarchs previously to the reign of James VI., and subsequently of Charles II., who lodged in it for some time before the battle of Worcester. The site of the *Franciscan convent* founded by Devorgilla, mother of John Baliol, and which was destroyed at the Reformation, was granted together with the adjacent lands by Mary, Queen of Scots, to the town for a burying-place. In clearing some ground for the formation of a new

street in 1831, the vestiges of an ancient mint, supposed to have been erected by Robert Bruce, were discovered; the smelting furnace was found nearly entire. At the western extremity of High-street is an ancient house in which Anne, Duchess of Buccleuch and Monmouth, was born, during the residence of her parents here, who had been driven from the castle of Dalkeith by the commissioners of Cromwell; it was also inhabited by General Monk after he had reduced the town. The castle of *Dudhope*, once the seat of the Scrimgeours, hereditary constables of Dundee, has been converted into barracks for infantry. There are no remains of the castle of Dundee, which occupied the summit of a steep rock still called Castle Hill. Among the distinguished characters connected with the town, have been, *Alexander Scrimgeour*, one of the valiant companions of Wallace, by whom he was made constable of Dundee Castle; *Sir John Scrimgeour*, afterwards *Viscount Dudhope*, a zealous adherent of Charles I., who fell in the battle of Marston-Moor, and whose son was created *Earl of Dundee*; the celebrated historian, *Hector Boece*; the distinguished *Admiral Duncan*, who obtained the victory over the Dutch fleet off Camperdown in 1797, upon which he was created *Viscount Camperdown*; also *Major-General Andrew Burn*, author of several religious publications, who was born at Dundee in 1742, and died at Gillingham, in Kent, in 1814; the late *Rev. Dr. Small*, for many years minister of the parish, and author of a work called *Kepler's Discoveries*; and the late *James Ivory, F.R.S.*, distinguished for his mathematical attainments.

DUNDONALD, a parish, in the district of KYLE, county of AYR, 5 miles (S. W.) from Kilmarnock; containing, with the former quoad sacra parishes of Fullarton and Troon, 6716 inhabitants, of whom 345 are in the village of Dundonald. This place derives its name from the situation of its ancient castle on the summit of a hill near the village. Here Robert II., King of Scotland, and the first of the Stuarts, occasionally resided till his decease in 1390, and the castle was frequently the residence also of many of his successors, but was, with the lands attached to it, granted by James V. to a descendant of the Wallace family, by whom it was sold in 1638 to Sir William Cochrane, ancestor of the present Earl of Dundonald. In 1726 the lands passed to the Montgomerie family, who are still proprietors; but the site and the remains of the ancient castle, from which his lordship takes his title, are reserved by the earl. The PARISH is bounded on the north by the river Irvine, and on the west by the Firth of Clyde. It is about eight miles in length, and from five to six in breadth, comprising 11,000 acres, of which about 2500 are waste, and the greater portion of the rest under cultivation. The surface along the sea-coast and the banks of the river is nearly level, with some gentle undulations towards the centre, where it rises into hills of moderate elevation, the highest of which, called the Clavin hills, do not exceed 400 feet in height, commanding, however, from their summits a prospect embracing fourteen different counties. With the exception of the Irvine, there are no rivers of any importance in the parish, but springs of excellent water are found in great profusion.

The soil embraces almost every variety, and the arable lands are under excellent cultivation; the crops include oats, barley, potatoes, and turnips. Wheat, for the

growth of which the soil is well adapted, was formerly raised in large quantities; but from the moisture of the climate, and the consequent lateness of the harvest, its cultivation was for some years almost abandoned: of late, however, owing to the improved state of husbandry, its growth has been resumed. Considerable tracts of waste land have been reclaimed by tile-draining, first introduced into the parish by the Duke of Portland. In general the farm-buildings are commodious and substantial; the lands are well inclosed, partly with hedge rows and partly with stone dykes, and the more recent improvements in the construction of agricultural implements have been adopted. Much attention is paid to the management of the dairy-farms, and large quantities of the produce are sent to Ayr and Glasgow; the cattle are all of the Ayrshire breed. The annual value of real property in the parish is £23,496. There are still some remains of natural wood, consisting of birch, hazel, and mountain-ash, but none of the trees are remarkable for size: the plantations, though not extensive, are generally in a thriving state. In this parish the principal substrata are freestone and coal. The freestone is quarried at Craiksland and Collennan: that at the former place, which is of fine texture and durable quality, and may be raised in masses of any size, is sent chiefly to Ireland, and a steam-engine for sawing it into slabs has been erected at the quarry. The coal is wrought for the supply of the neighbourhood, and for exportation, at Shewalton, and also at Old Rome, on the lands of Fairlie. At the former it occurs in two seams, of which the lower, at a depth of thirty-five fathoms, is thirty-four inches, and the upper forty-three inches, thick; and at the latter place are four different seams, varying from two feet eight inches to six feet in thickness. The mansion-houses in the parish are, Auchan House, built by the Earl of Dundonald, and now nearly in ruins, the property of Lady Mary Montgomerie, by whose servants it is chiefly inhabited; and Fullarton, Fairlie, Shewalton, Newfield, Hillhouse, and Curreath, which are all handsome and comparatively modern buildings. The village of Dundonald is beautifully situated near the remains of the ancient castle, and has a pleasingly rural aspect. Letters were formerly delivered here by a runner from the Troon office, who passed daily through the village; but Dundonald has now a post of its own. Facility of communication is afforded by the lines of the Glasgow and Ayrshire railway company, by the turnpike-road to Dalmellington, and by several other roads which branch off in various directions. A cattle-show is held in May. The village of Shewalton, on the bank of the river Irvine, contains 219; and that of Old Rome, on the same river, to the east, contains 257 inhabitants.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Ayr, synod of Glasgow and Ayr. The minister's stipend is about £260, with a manse and glebe, rated at £40 per annum; patron, Lady Mary Montgomerie. Dundonald church, erected in 1803, is a neat structure situated in the village, and containing 630 sittings. Churches have been erected at Fullarton and Troon; and there are places of worship for members of the Free Church at Dundonald and Troon. The parochial school is attended by about eighty children; the master has a salary of £28. 18. 9., with a house and garden, and the fees average £40. There are

schools also at Fullarton and Troon, and various Sabbath schools; and a parochial library, established in 1836, and now containing 150 volumes, is supported by subscription. Dr. James McAdam, a native of the parish, bequeathed £1000, of which he appropriated the interest to be distributed in blankets and coal to the poor; and the Misses Campbell of Curreath left £90, to be distributed annually to six persons not receiving parochial relief. The remains of the ancient castle of Dundonald consist of a quadrangular range of buildings, two stories in height, 113 feet in length and forty feet in breadth, and in a greatly dilapidated condition: on the western wall are the arms of the Stuarts, much obliterated. Previously to the Reformation it contained a chapel dedicated to St. Ninian, of which no vestiges are now to be traced. On the farm of Barassie has been found an urn containing calcined bones, and which appeared to be rather of British than Roman character. Upon the heights above the farm of Harpercroft are two ancient camps, the larger of them defended by a circular embankment of earth and stones, inclosing an area of ten acres, having in the centre a similar inclosure of one acre in extent. The construction of these camps is popularly ascribed to the Romans; but it is not with certainty ascertained by whom they were formed.

DUNDRENNAN, a village, in the parish of RERRICK, stewartry of KIRKCUDBRIGHT, 4 miles (E. S. E.) from Kirkeudbright; containing 202 inhabitants. It is situated in a beautiful valley, about a mile and a half from the north-western shore of Solway Firth, and is celebrated for its ancient abbey, founded in 1142 by Fergus, lord of Galloway, for monks of the Cistercian order whom he brought from Rivaulx, in the county of York. This establishment, of which Sylvanus was the first abbot, continued to flourish under his successors till the Reformation; and after its dissolution in 1561 its revenues, amounting to £500, were, upon the death of the last abbot, annexed by James VI. to his royal chapel of Stirling. During the incumbency of the last abbot (Edward Maxwell, son of Lord John Herries), Mary, Queen of Scots, arrived at this place on her flight from the disastrous battle of Langside, and here spent the night previous to her embarkation for England, for which she sailed from a small creek surrounded by precipitous cliffs, and since called Port-Mary in commemoration of the event. The village has a pleasingly rural appearance; the houses are neatly built, and ornamented with trees of ancient growth, and there are two comfortable inns for the reception of visitors. One of two parochial schools in Rerrick is held here. In the vicinity is the elegant mansion of Dundrennan, the seat of the Maitland family; and the place derives much interest from the venerable ruins of the abbey, and the beauty and variety of the surrounding scenery.

The ruins are situated on a gentle acclivity rising from a narrow vale, through which flows the streamlet called Abbey Burn. They consist chiefly of parts of the conventual church, originally a stately cruciform structure in the early English style, with a central tower 200 feet in height. Several of the monuments are still remaining, but in a greatly dilapidated condition. Among these is the tomb of Alan, lord of Galloway, who was interred in the church in 1233, and whose recumbent effigy in armour, and cross-legged, is sculptured in high relief, but much mutilated; and the tomb of one of the abbots

in his canonicals is in tolerable preservation, though the inscription is totally obliterated. For the preservation of the remains, Mr. Maitland some years since presented a memorial to the commissioners of woods and forests, proposing to relinquish all his right of property in the abbey, on condition of its receiving from the crown protection from further dilapidation. In accordance with this proposal, the remains have been secured from decay, and, with the surrounding burying-ground, inclosed with a high fence of stone. The pavements of the church have been cleared from all accumulations of rubbish, and reduced to their ancient level; and many of the monuments, and of the beautifully clustered columnos and gracefully pointed arches, have been restored. The whole, therefore, is now one of the best preserved and most interesting relics of monastic architecture in the kingdom.

DUNDYVAN and NEW DUNDYVAN, villages, in the parish of OLD MONKLAND, Middle ward of the county of LANARK, $1\frac{1}{2}$ mile (W. S. W.) from Airdrie; containing, the one 1298, and the other 2202 inhabitants. These are two among numerous villages which have lately and rapidly sprung up in connexion with the extensive coal-mines and iron and other works of this district, so distinguished for its mineral wealth and manufacturing importance. They lie on the high road from Airdrie to Glasgow, and are the seat of considerable iron-works, which employ nearly the whole of the male population. The ironstone wrought for the furnaces here is very valuable, some of it yielding from thirty to forty per cent. of iron; it is of the sort usually denominated "black band", and chiefly produced from the lands of Rochsilloch, the property of Sir William Alexander. About a mile south-east of Dundyvian are the celebrated Calder iron-works; at the same distance westward are the Drumpellier coal-mines; and all around there are pits and quarries in full operation.

Burgh Seal.

DUNFERMLINE, a royal burgh, and a parish, in the district of DUNFERMLINE, county of FIFE; including the villages of Charlestown, Crossford, Halbeath, Limekilns, Mastertown, Patiemoir, North Queensferry, and part of Crossgates; and containing 20,217 inhabitants, of whom 7865 are within the burgh, 12 miles (W. by S.) from Kirkcaldy, and 16 (N. W.) from Edinburgh. This place, which is of great antiquity, is supposed to have derived its name, signifying in the Gaelic language "the watch-tower upon the stream", or "the castle on the winding stream", from the erection of a CASTLE on the summit of a peninsulated eminence in the glen of Pittencreeff, by Malcolm Canmore, about the year 1056. Of this castle only some small fragments are now remaining; but from the traces of foundations it appears to have been a quadrilateral structure, about sixty feet in length and fifty feet in breadth, of great strength, and having an elevation of seventy feet above the level of the rivulet flowing through the glen. Malcolm, on the murder of his father Duncan by the usurper Macbeth, took refuge in England, where he was favourably received at the court of Edward the Confessor, till, on the death of Macbeth, slain by Macduff

at the battle of Dunsinane, he ascended the throne of his ancestors. Upon the conquest of England by the Duke of Normandy in 1066, Edgar Atheling, heir to the crown of England, with his mother, and sisters Margaret and Catherine, attended by a numerous retinue of Saxon nobles, were, on their voyage to Hungary, driven by tempestuous weather into a bay in the north of the Firth of Forth, which has since retained the appellation of St. Margaret's Hope. On hearing of their landing, Malcolm visited the party, and conducted them in person to his castle, where they were hospitably entertained; and soon after, Margaret, with whom, during his residence in England, he had been acquainted, and even, as some think, had formed a contract of marriage, became Queen of Scotland. At a short distance to the south-east of Malcolm's castle, a palace was subsequently erected, though the exact date is unknown; but of this once magnificent structure, the residence for many generations of the Scottish kings, and the birthplace of several of them, only a portion of the eastern end, and the south-west wall, remain: the chimney-place of the apartment where Charles I. was born is still to be seen. Adjoining the palace was the Queen's House, erected for her private residence by Anne of Denmark, queen of James VI., to whom the king had granted the lordship of Dunfermline on the morning after his marriage. This mansion was in good repair for many years after the palace was in ruins, but falling into neglect, was for some time occupied as a school, subsequently as a woollen factory, and in 1797, having become ruinous, was removed.

A MONASTERY either for Culdean or Benedictine monks was founded by Malcolm, dedicated to the Holy Trinity, and of which his queen, whose numerous virtues obtained for her the distinction of canonization, became patroness. Being left by him in an unfinished state, at his death at the siege of Alnwick in Northumberland, it was completed by his son Alexander I. The institution was governed by a prior till the reign of David I., who raised it to the dignity of a mitred abbey, and in 1124 placed in it thirteen additional monks of the Benedictine order from Canterbury, greatly extended the buildings, and endowed it with ample possessions in various parts of the kingdom. It continued to flourish, and became one of the most important and richest establishments in Scotland, its fame being particularly high about the middle of the thirteenth century, when a new and more stately choir was raised, in the early pointed style. In 1291, Edward I. of England visited Dunfermline, where he summoned the Scottish nobility to do homage for their lands as vassals to his crown: in 1296, he made a tour for twenty-one weeks through different parts of Scotland, in which he came to this town; and on his return to England, he took with him the inauguration stone from the abbey of Scone, which he deposited in the church of Westminster, in London. In 1303, Edward again visited Dunfermline on his route from Kiross, and took up his residence in the abbey, where he was joined by his queen and a party of nobility, and remained from December till March. While here he was employed in receiving the submission of such of the Scottish nobles as had not on his former visit done him homage for their possessions; and on his departure for England his soldiers set fire to the abbey, which was reduced to little more than a heap of ruins, the church only, and a few cells of the monks, being spared from the flames. In this abbey,

the buildings of which were so extensive, the Scottish nobility were accustomed to hold their meetings, during the wars of Bruce and Baliol, for rescuing their country from the English yoke; and to this circumstance is attributed its desolation by the forces of Edward.

David II., son of Robert Bruce, was born at the palace of Dunfermline on the 4th of March, 1323; and during that prince's long minority, Edward Baliol, when contending for the crown of Scotland, after having landed his army at Kinghorn, in 1332, came to this place, where he found a seasonable supply of arms and provisions laid up by order of Randolph, regent of Scotland. In 1335 a parliament was held here, at which Sir Andrew Murray was made regent of the kingdom in place of Randolph, deceased; but having gone to visit his estates in the north, in 1338, he died while on his journey, and after being interred in the chapel of Rosemarkie, his remains were removed to this town, and deposited with those of Bruce and Randolph. In 1385, part of a large body of French auxiliaries who, on the invitation of Robert II., had come to that monarch's assistance against the English, were quartered at this place, which was visited soon afterwards by Richard II. of England, who, having burnt Edinburgh, advanced to Dunfermline, and lodged in the abbey, which, upon his departure, was burnt by the English army, together with the town. In 1441, James, son of Sir Robert Bruce of Clackmannan, was consecrated Bishop of Dunkeld in the abbey church here, and in the same year became also chancellor of Scotland. The queen of James IV. made a short stay at Dunfermline in 1512; and in 1515 the abbot of Kelso and other friends of Lord Home were imprisoned in the town by order of the Duke of Albany, then regent. Mary, Queen of Scots, visited Dunfermline in her route to Dysart and St. Andrew's, in 1561; and in the year 1581 King James VI. subscribed the Covenant at this place. Charles I., King of England, was born in the palace on the 19th of November, 1600; and in 1633, in his progress through Scotland, he passed a short time at Dunfermline, on which occasion he created Sir Robert Ker earl of Ancrum, and conferred the honour of five knight-hoods. In the year 1624, the town was nearly destroyed by an accidental fire. In 1650 Charles II. visited the town, where he subscribed the confession of faith called the "Dunfermline Declaration"; and in the following year a battle was fought near Pitreavie House between the forces of Cromwell and the royalist army, in which the latter sustained considerable loss. In 1715, about a month before the battle of Sheriffmuir, a detachment of the Pretender's army, consisting of about 300 Highlanders and eighty horse, under the Marquess of Huntly, was surprised and defeated, with the loss of several killed and many taken prisoners, by the forces under Colonel, afterwards Lord, Cathcart.

Ⓞ The town is pleasantly situated on an eminence stretching from east to west, and gradually rising from the south to an elevation of 356 feet above the level of the sea. It consists of one principal street, intersected at right angles by several smaller streets from north to south, of which those in the latter direction have a considerable declivity. In 1770 the principal street was extended towards the west by the erection of a bridge across the glen of Pittencrieff, above and on either side of which the proprietor, George Chalmers, Esq., raised a mound whercon there has been built, in a line with

the High-street, a handsome range of houses with gardens attached to them, called Bridge-street. An adjoining street, running northward, has been named after him Chalmers-street. The houses in the chief streets are all substantial and well built. In several parts of the town are numerous villas and many private mansions surrounded with pleasure-grounds, which give to the place a somewhat rural appearance; and the tower and spires of the ancient abbey and public buildings, combining with other features, have a strikingly interesting aspect. Great additions to the town, and considerable improvements, have been lately made; the abbey park has been thrown open for building, and many handsome houses with extensive gardens have been completed. The streets are paved, and lighted with gas by a company established in 1828, who erected works in the lower part of the town at an expense of nearly £12,000; and the inhabitants are supplied with water brought from springs in the town moor into a capacious reservoir, from which it is distributed by pipes. An act for a better supply of water was passed in 1847. The Dunfermline library, supported by a proprietary of shareholders, has a collection of about 3000 volumes, and the Tradesmen's and Mechanics' libraries, united in 1832, contain about 2000; a circulating library has been established, and in the town-hall is a public newsroom supplied with the daily journals and periodical publications. The Mechanics' institution, founded in 1825, still retains its apparatus, though the lectures have been discontinued. A scientific association was established in 1834. The Western District of Fife Agricultural Society hold their meetings here in July, for the distribution of premiums, and the Horticultural Society and Pittencrieff Horticultural Society also meet annually. There is likewise an Ornithological Society.

The staple trade is the TABLE-LINEN manufacture, which, by a regular and progressive series of improvements, has been brought to the highest state of perfection. The principal articles made are diapers, damasks, and coloured table-covers, all of every variety of pattern, and remarkable for the beauty of their texture. Toilet napkins, with the royal arms in the centre, were made here for his late Majesty William IV.; and in 1840, toilet cloths, executed according to a sketch by the officers of the Queen's household, and having the royal arms, with the initials V. R., and a border of oak and laurel, were woven by the same manufacturer for her present Majesty. An order was subsequently received from the lord steward by another manufacturer, for damask table-linen of the finest quality, decorated in a suitable manner. The rapid advance in this manufacture was much promoted by premiums offered by the board of trade, and though these are now discontinued, rewards are still sometimes granted for specimens of superior elegance. One firm in the town obtained, in the course of eighteen years previous to 1837, premiums amounting to £516. The finer yarns are procured chiefly from Leeds and Preston, in England, and from Belfast, in Ireland; but there are large establishments in the town and other places of Scotland for the spinning of yarn of a coarser quality. Above 3000 persons are employed in the various looms here, and the value of the goods manufactured annually exceeds £350,000. There are two iron-foundries in the town, and a third at Charlestown in the parish, in which, in addition to

the usual castings of iron, are produced some of brass. The manufacture of tobacco, for which there are two establishments, is considerable. There are two tanneries and currying-works, three roperies, a soap-work, and a candle manufactory; five breweries, three of which are in the town; four dye-works, a saw-mill, two tile and brick works, and various other establishments connected with the trade of the town. Branches of the Bank of Scotland, the British Linen Company, the Commercial Bank, and the Edinburgh and Leith Bank have been opened here. The market-days are Tuesday and Friday, the former, which is numerously attended, being for corn, and the latter for eggs, poultry, butter, and provisions. Fairs are held for horses, cattle, and general merchandise, on the third Tuesday in January, March, April, June, July, September, October, and November. The post-office has a good delivery; and facility of conveyance is afforded by excellent turnpike-roads, of which more than thirty miles traverse the parish, and by railroads from the collieries and lime-works to Charlestown. A railway, also, has been constructed from the lower end of the town, and communicates with the Elgin railroad. But the chief means of intercourse are afforded by the Dunfermline and Stirling railway, and the Dunfermline branch of the Edinburgh, Perth, and Dundee railway; both of them lately opened. Steam-boats ply in the Firth of Forth, for which there is a good stone pier at Charlestown, and a wooden one at the North Ferry. There are likewise harbours at Limekilns and Brucehaven. The annual value of real property in the entire parish is £53,515, of which £17,532 are returned for the burgh.

The BURGH appears to have arisen gradually under the abbots of the monastery, from whom it derived certain privileges and immunities, which it continued to hold for nearly two centuries, till it was erected into a royal burgh by charter of James VI. in 1588, ratifying all former grants. Under this charter, the government is vested in a provost, two bailies, a dean of guild, treasurer, chamberlain, and a council of sixteen, by whom all the other officers of the burgh are appointed. The jurisdiction of the magistrates extends over the whole of the royalty, and the provost is *ex-officio* a justice of the peace for the county of Fife; the magistrates hold the ordinary baillie-court for the disposal of police cases, and the nine-merks' court for the recovery of debts not exceeding the sum of ten shillings. Actions for small debts before the justices of the peace have almost ceased, since the institution of the sheriff's court for small debts. The police is under the direction of commissioners appointed by act of parliament in 1811. There are eight incorporated trades, viz., the smiths, weavers, wrights, tailors, shoemakers, bakers, masons, and butchers, all of whom, except the weavers, have exclusive privileges. The fraternity of guildry is very ancient, and possesses property of the yearly value of about £300. Dunfermline is associated with Stirling, Culross, Inverkeithing, and Queensferry, in returning a member to the imperial parliament. The number of £10 householders within the burgh proper is 397, and of those under that rent, but above £5, 432. The tolbooth, or *Town House*, was built in 1771, and two upper stories were added to it in 1792: it is a neat plain edifice, with a square tower 100 feet in height; and several carved stones which formed part of the ancient cross, now removed, have been in-

serted in the front wall of the building. The first-floor contains the council-room; and above is the town-hall, used also as an exchange reading-room, in which are portraits of Vice-Admiral Sir Andrew Mitchell, George Chalmers, Esq., and Provost Adam Low, with busts of the late William Pitt and Lord Melville. The third story was used as the gaol previously to the erection of a more commodious building on the town-green. The *Guildhall*, or Spire hotel, was erected by the fraternity of guildry for holding their general meetings, and also those of the county, but was never completed for that purpose, and in 1820 it became the property of a few individuals who converted it into an hotel. It is a handsome building with a spire 132 feet high, from which it takes its name; and, in addition to its arrangements as an hotel, contains a spacious hall fifty-two feet long, thirty-five feet wide, and twenty-one feet high, which is appropriated to various public purposes. The new *Gaol* was built at an expense of £2070; it is three stories high, and has eighteen cells, two apartments for debtors, and accommodation for the gaoler. In 1847 an act was passed for providing a court-house at Dunfermline, to accommodate the courts of the sheriff and justices of the peace in the western district of Fife.

The PARISH is of irregular form, about eight miles in average length and five in average breadth, comprising 23,040 acres, of which 19,296 are "landward". Of this latter number, 13,391 acres are arable, about 3740 not arable, 1135 woodland and plantations, and the remainder sites of buildings, water, and waste. The surface is greatly diversified with bold undulations, rising in some parts into hills of considerable elevation, the principal of which are *Beath* and *Craiglusecar*, the former clothed with verdure to its summit, and commanding an extensive prospect. The coast, reaching for about a mile and a half along the Forth, is partly flat and partly high and rocky. The chief streams that intersect the parish are the *Tower* burn and the *Baldridge* burn, both tributaries of the *Lyne*, which, after these accessions, becomes of considerable size, and falls into the Firth at Charlestown. In the northern part of the parish are several lakes, of which the principal are, the *Town loch*, about a mile to the north-east of the burgh, and one mile in circumference; *Loch End*, two miles north of the town, formerly of equal extent, but now much diminished; *Dun-duff*, a small sheet of water, three miles north of the town, and abounding with trout, perch, and pike; and *Loch Fitty*, two miles north-east of the town, one mile in length and half a mile in breadth, containing pike, perch, and eels. *Loch Gloe*, or the White loch, in the Cleish hills, two miles in circumference, and *Black loch*, a little to the north-west of Loch Gloe, are partly in the parish of Cleish, and both abound with pike, perch, and trout. The SOIL is generally fertile, and the system of agriculture in a highly improved state: the crops are oats, barley, wheat, potatoes, and turnips, peas and beans, with the various grasses; and a considerable portion of land is cultivated as orchards and gardens. The farm-buildings are substantial and commodiously arranged; the lands are well inclosed, and much waste has been improved by draining, and brought into profitable cultivation. The cattle are chiefly of the Fifeshire black breed, with some of the Teeswater on the dairy-farms, of the former about 1500, and of the latter 500. Few sheep are reared, but nearly 1400 are fed upon the

pastures; and there is a moderate number of swine. The remains of old timber are not very extensive; the plantations consist of oak, beech, elm, plane, ash, willow, larch, and Scotch fir.

In this parish the SUBSTRATA comprise coal and limestone, which are extensively raised, whinstone, and sandstone: some, also, of the rocks are of the trap formation, and in one place display fine specimens of columnar basalt. The coalfields are very extensive, and have been wrought from a remote period, first by the abbot of Dunfermline, to whom William de Oberwill, proprietor of Pittencrief, in 1291 granted the privilege of working a pit on any part of his lands except what was arable. It is, however, chiefly since the year 1771 that they have been wrought to any great extent; and it is calculated that there are still 3000 acres unwrought in the several fields in the parish. The coal, which is of the usual varieties, and generally of good quality, occurs in seams from a few inches to eight feet in thickness, at depths of from fifteen to 105 fathoms below the surface. The average quantity raised annually is 120,000 tons, and the produce is conveyed by railroads from the pits to the harbour of Charlestown, in this parish, and the harbour of Inverkeithing, a parish adjoining, for exportation. Seventeen steam-engines are employed, varying from twelve to 120 horse power; and 2910 persons, of whom 1180 are engaged in working the mines. The most extensive quarries of limestone are those on the lands of Broomhall; the stone occurs within a quarter of a mile from the shore, in beds from twenty to fifty feet in thickness, containing a great variety of fossil remains, and the quantity annually raised is about 15,000 tons of stone, and about 400,000 bushels of shells. The stone is conveyed from the quarries by a railroad to Charlestown, where it is burnt into lime; the rough stone is sent principally to Stirling, and the shells to Dundee and the north. There are also quarries at Roscobie and Lathalmond, the produce of which is chiefly sold in the upper lands of the parish; and others on a smaller scale are worked at Sunnybank and Craigluscar. The parish likewise contains several quarries of freestone and trap; ironstone occurs in the Elgin coalfield, and was formerly wrought, and pyrites of iron and of copper have been found.

Broomhall House, the pleasant and retired seat of the Earl of Elgin, is a handsome mansion, beautifully situated on an eminence overlooking the village of Limekilns, and surrounded by undulated grounds richly wooded. The house contains a valuable collection of paintings; and here are preserved the sword and helmet of King Robert Bruce, given to the late earl by Mrs. Bruce of Clackmannan; also the nuptial bed of Anne of Denmark, queen of James VI., which was for some years in the possession of an innkeeper in the town, who, a short time before her death, presented it to the earl. *Pitliver House*, *Keavil*, and *Pitfirrane* are in the vicinity, but they are undistinguished by any peculiarity of features. *Pittencrief House* was built in 1610, by Sir Alexander Clerk, lord provost of Edinburgh, whose armorial bearings are over the doorway. *Logie* is a modern house, in which is preserved a cabinet of richly-carved walnut, formerly belonging to Anne of Denmark. *Pitreavie House* was the ancient mansion of the Wardlaw family, and *Balmule* also belonged to them. The mansion of *The Hill* is now occupied in several tenements.

FOR ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Dunfermline, synod of Fife; patron, the Crown. There are two ministers, each having an average stipend of £280; the minister of the first charge has also a manse, and an arable glebe, with allowance for pasture, but to the second charge there is attached neither manse nor glebe. The principal of the two incumbencies is filled by the Rev. Peter Chalmers, A. M., author of the highly valuable *Historical and Statistical Account of Dunfermline*, published in 1844, and whose accurate description of the Dunfermline coalfield, reprinted in that work, was honoured with one of the premiums of the Highland and Agricultural Society of Scotland. Dunfermline church, once a portion of the ancient abbey, and but ill adapted to its purpose, was rebuilt in 1821 to the east of the former nave, which is now its western approach. It is an elegant cruciform structure in the later English style, with a square embattled tower rising from the centre of the transepts to the height of 100 feet, and ornamented with pinnacles: the parapet is surmounted with crowns, and pierced with openings representing the letters of the legend "King Robert the Bruce", whose tomb lies immediately beneath. The interior is finely arranged; the nave is separated from the aisles by handsome clustered columns with decorated capitals, surmounted by gracefully-pointed arches supporting the groined roof, which is ornamented with shields at the intersections of the ribs. This part of the church is lighted by a range of elegant clerestory windows, enriched with tracery; the east window is of large dimensions and of beautiful design, and the aisles and transepts are lighted by windows of corresponding character. Immediately under the tower is the pulpit, in front of the slabs covering the tomb of Bruce, and behind an open space reserved for an appropriate monument. The church contains 1400 available sittings, and was completed at an expense of £11,000.

A church dedicated to *St. Andrew* was built in 1833, to replace an old chapel of ease which had become dilapidated; and in 1835 a district of the parish, about half a mile in length and a quarter of a mile in breadth, containing a population of 3000, was assigned to it by the General Assembly, and for a short time formed a "quoad sacra" parish. It is a neat edifice containing 797 sittings, and was erected at a cost of £1560, partly by subscription. The minister's stipend is £120, derived from the seat-rents and collections, with a house and garden. An extension church, also, was erected at the east end of Goldrum in 1840, at an expense of £1673, of which £1002 were raised by subscription; and a "quoad sacra" district in the neighbourhood, with a population of about 3000, was attached to it: the edifice contains 800 sittings, and the minister has a guaranteed stipend of £80, but rising with the increase of seat-rents and collections. There was till 1843 a "quoad sacra" church in Canmore-street; but on the induction of its minister to the parish of Thurso, the congregation dispersed, and a Free church was built on its site in 1844. The parish likewise contains several places of worship for the United Presbyterian Synod, one of which was the first Relief meeting-house in Scotland; one each for Baptists and Independents; and an Episcopalian chapel.

The burgh grammar school is of uncertain foundation, though said to have been originally dependent on the monastery: Anne of Denmark, queen of James VI.,

granted to the town council £2000 Scots for its support in 1610. The buildings consist of two class-rooms, and a good dwelling-house for the rector, who has a small salary in addition to the fees; there is also a small bequest for an usher, but none is now appointed, the rector preferring to select and pay his own assistant. The commercial school under the patronage of the Fraternity of Guildry, and for which an appropriate building was erected in 1816 at their expense, contains two rooms, one for English reading, grammar, and geography, and the other for writing, arithmetic, mathematics, and the classics; it is superintended by two masters, each of whom has a dwelling-house and garden rent free, in addition to the fees. About 200 children attend a school at Priory Lane, in which formerly fifty children were taught gratuitously from the proceeds of £1000 bequeathed by Adam Rolland, Esq., of Gask, and now lost; it is supported chiefly by very moderate fees. There is also a school at Golfdrum, opened in 1842, in which about forty children are instructed from the proceeds of a bequest by the Rev. Allan Mc Lean, minister of the parish: it is named the Mc Lean school, and has four class-rooms and a good dwelling-house for the teacher. The total number of schools, including infant and female schools, is about thirty-two, and of scholars 2700; besides many Sunday schools. There are numerous friendly societies, and institutions for humane and charitable purposes, with a flourishing savings' bank.

The ancient MONASTERY continued till the Reformation, when its revenue was estimated at £2513 Scots; the last abbot was George Dury, who died in 1561 or 1564, and was succeeded, as commendator, by Robert Pitcairn, secretary of state to James VI., who died in 1584. In 1593, the abbacy was erected into a temporal lordship, and perpetually annexed to the crown, by act of parliament. Of this once magnificent structure the principal remains are, the western portion of the abbey church, which is still entire, and presents a noble specimen of the later Norman style, with lofty massive columns and circular arches, and a timber-frame roof; the south wall of the roofless refectory, in which is a range of nine lofty windows; the western gable of the refectory, with a handsome large window of seven lights, enriched with flowing tracery; and the two towers at the entrance, one of which, north of the gable, and crowned with a low pyramidal spire, is entire, while the other, south-west of the gable, and under which is a spacious gateway, is partly in ruins. The great western doorway of the church, of receding arches enriched with zigzag mouldings, resting on a series of massive columns with flowered capitals, is a beautiful specimen of the later Norman style; and the north porch, though externally of plainer character, combines in the interior numerous minutely elegant details. In the abbey of Dunfermline were interred the remains of Malcolm Canmore and his queen, Margaret; his sons, Edward, Edgar, and Alexander I.; David I.; Malcolm IV.; Alexander III. and his queen, Margaret; ROBERT the BRUCE and his queen, Elizabeth; the queen of Robert III.; and many of the ancient nobility of Scotland. Before the erection of the present new church, six very large slabs were to be seen, supposed to indicate the royal sepulchres; and on digging the foundations of this church, in 1819, there was discovered to the south

of the slabs, a vault containing the skeleton of Robert Bruce, encased in two coverings of thin sheet lead, round which was wrapped a shroud of cloth of gold, the whole inclosed in a strong coffin of oak which had mouldered into dust. After due examination, and a careful and scrutinizing investigation of the minutest circumstances, which fully proved the identity of the body, the bones were replaced in their natural position, and, being wrapped in the original covering of lead, and deposited in a leaden coffin into which melted pitch was poured, were then reinterred in the very spot in which they had been found, in the choir of the ancient abbey, and immediately under the tower of the present church. On the lid of the coffin is the inscription, in raised letters, *King Robert Bruce*, under which are the dates 1329 and 1819. Upon the south-east side of the ravine, and north from the mound crossing it, on which part the town stands, is the cave of *St. Margaret*, to which that queen was in the habit of retiring for private devotions; it is an excavation in the rock, about twelve feet long and eight feet wide, and though of natural formation appears to have been adapted by art for that purpose. There are still some remains of the ancient *Palace*, consisting chiefly of the south-west wall and part of the eastern end of the building. The wall, which overlooks the glen, is 205 feet in length, sixty feet in height, and supported by buttresses; and in the ceiling of an oriel window near the south-eastern extremity, is a sculpture in bass-relief of the Annunciation, which was discovered during some repairs in 1812. At the south-eastern angle of the wall, a flight of steps leads down to a vaulted apartment called the *Magazine* from its having been used by the military, in the rebellion of 1745, as a store-room for their ammunition. There are remains of numerous chapels in the parish; and traces of the ancient walls surrounding the town, and vestiges of the gates, may also still be discovered. Dunfermline gives the title of Baron to the family of Abercromby.

DUNINO, a parish, in the district of ST. ANDREW'S, county of FIFE, 4 miles (S. E.) from St. Andrew's; containing, with the district of Kingsmuir, 471 inhabitants. Dunino obviously derives its name from the Gaelic appellation of a nunnery which was situated on the highest eminence in the parish, 300 feet above the level of the sea; and the foundation stones of which were removed in 1815. The parish is about three miles long and as many broad, comprising nearly 3275 acres, whereof 2880 are arable, 270 woodland, and the remainder waste that might be cultivated. Its surface approaches to level, and is intersected by three streamlets, in which are excellent trout, and which, after their junction, form the burn of Kenly, and surrender their waters to the German Ocean. The soil is mostly fertile, producing good crops of wheat, oats, barley, peas, beans, potatoes, and turnips, with the various grasses; and the pastures are luxuriantly rich. The system of husbandry is advanced: the lands have been drained, and inclosed with fences of stone; the farm-houses are well built, and roofed with slate, and on many of the farms are threshing-mills of the most approved construction. In general the cattle are of the Fifeshire black breed, with a few of the Ayrshire; the sheep are the Linton or Northumberland, and considerable numbers of swine are also fed on the several farms. The annual value of real property in

the parish is £2965. The plantations on the banks of one of the rivulets contain a great variety of hard-wood trees, and those in other parts of the parish consist of larch and Scotch fir, all in a very flourishing state. Though Dunino is situated on the great coal basin of Scotland, it has been found more profitable to obtain that fuel from St. Andrew's or Anstruther than to work it. The rocks in the parish comprise white sandstone, of fine texture, and admirable quality for building; red sandstone is found in regular strata, and limestone forms the bed of one of the streamlets; disintegrated trap, intersected with veins of felspar, occurs in one place, and ironstone has been found in considerable quantities. Fairs are held at Kingsmuir in May and October. There are several post-offices within less than five miles of the church, and facilities of communication with St. Andrew's, Anstruther, Cupar, and other towns, are afforded by good turnpike-roads.

Ecclesiastically the parish is within the bounds of the presbytery of St. Andrew's, synod of Fife. The minister's stipend is £198. 16., with a manse, and a glebe valued at £28 per annum; patrons, the Principal and Professors of the United College of St. Andrew's. Dunino church is a handsome structure erected in 1826, and contains 224 sittings. The parochial school affords instruction to about forty children; the master's salary is £34, with a house and garden, and the fees average £16. Until within the last few years there were some ruins of the ancient castle of Draffan, supposed to be of Danish origin, and also of that of Stravithy. There are still remains of the castle of Pittairthy, in the south of the parish, commanding an extensive view of the sea; the eastern, or more modern, portion of this building has the date 1653, and is supposed to have been built by Sir William Bruce of Kinross: though unroofed, the walls are in good preservation. Near the garden of the manse are some remains of a Druidical circle; and about a mile to the west is a farm called Pittan-Druidh, or the grave of the Druids. Some copper coins of Charles I., Charles II., and William and Mary, were lately found in a grave in the churchyard: two coins of Philip II. of Spain were also dug up in the parish, one of gold and the other of silver, supposed to have been originally found in the wreck of a vessel belonging to the Spanish armada; and in 1836, an urn containing ashes was ploughed up in a field on the lands of Balcaithly. Among the most distinguished characters connected with the parish, were, John Fordun, author of the *Scoto-chronicon*; John Winram, sub-prior of St. Andrew's; and the Rev. James Wood, who was one of the commissioners that brought Charles II. from the continent at the Restoration. Sir Robert Aytoun, author of the celebrated poems, and secretary to the queens of James VI. and Charles I., was a native of Dunino: an improved edition of the poems was lately published by the Rev. Charles Roger, also a native of the parish.

DUNIPACE, a parish, ecclesiastically united to the parish of LARNERT, in the county of STIRLING, 4 miles (W. by N.) from Falkirk; containing, with the villages of Herbertshire, Denovan, and Torwood, 1578 inhabitants, of whom 562 are in the rural districts. The name, of Celtic origin, is derived from two mounds, by some writers supposed to signify "the Hills of Peace", and by others "the Hills of Death". Dunipace is of remote

antiquity, and has been the scene of numerous important events, the last of which was the signature, on one of these hills, of a treaty of peace by Edward I. of England in 1301. The place is bounded on the south by the river Carron, and is of triangular form, comprising about 5800 acres, of which 4800 are arable, 630 woodland and plantations, and the remainder moor, moss, and waste. Its surface towards the west rises to an elevation of 600 feet above the Forth; towards the east it terminates in the Carse of Stirling; and in addition to the artificial mounds from which the parish takes its name, and which are about sixty feet in height, there was formerly another, about two miles to the west, having an elevation of forty feet, but which has been entirely removed within the last few years. The SOIL is generally light and dry, with some tracts of clay: the crops are, wheat, which has been lately introduced and grows well, barley, oats, turnips, and potatoes; and a large proportion of the surface is in pasture. The cattle are mostly of small size, as best adapted to the land, whether for feeding or for the dairy; the farms are of moderate extent, and under good management. A farmers' society was established in 1839, for the encouragement of agriculture and the improvement of the breed of cattle; and a ploughing-match and a cattle-show are held yearly, when prizes are awarded to the successful competitors. The annual value of real property in the parish is £7594.

The plantations are generally thriving; and there are considerable remains of the ancient forest of Torwood, where, till within the last thirty or forty years, was a stately oak, in the hollow trunk of which, twelve feet in diameter, the celebrated Wallace and his companions occasionally held meetings, to concert measures for rescuing their country from the tyranny of Edward I. of England. Herbertshire Castle, a very ancient structure of unknown date, supposed to have been originally a royal hunting-seat, is beautifully situated on the north bank of the Carron, in an extensive demesne, richly wooded, and tastefully laid out in walks commanding much picturesque scenery. Dunipace House, a handsome modern mansion, is finely situated near the site of the old church; and Quarter House, also a good residence, is sheltered by thriving plantations. Carbrook House is romantically situated within a short distance of Torwood Castle, from the woods of which it derives much additional beauty to its scenery. Facility of communication with Falkirk and other towns in the vicinity is afforded by excellent roads. A bridge of three arches was erected in 1828, to replace one of inconvenient construction which had become insecure from its antiquity; and there is a handsome bridge leading to Dunipace House, built over the river Carron, a little below the ancient ford, in the year 1824. The Scottish Central railway also presents facility of intercourse. For ecclesiastical purposes the parish, which about the year 1620 was united to that of Larbert, is within the bounds of the presbytery of Stirling, synod of Perth and Stirling. The minister, who officiates in both places, has a total stipend of £272, with a good manse in Larbert, and a glebe, the common property of the two parishes, valued at £26. 10. per annum; patron, the Crown. Dunipace old church was taken down from apprehension of insecurity, and the present church erected on a site about a mile and a half to the west, in 1834, at a cost of £2500;

it is a handsome structure in the later English style, with a square embattled tower, and contains 604 sittings. The members of the Free Church have a place of worship. The parochial school is attended by about sixty children; the master has a salary of £34, with a house and garden, and the fees average £15. William Simpson, Esq., of Plean, bequeathed £500 to the Kirk Session for the benefit of the poor. There are some remains of Torwood Castle to the west of the turnpike-road leading from Falkirk to Stirling. The history of this structure, which is surrounded by the remains of the ancient Caledonian forest, is involved in much obscurity: the lands attached to it were purchased from one of the Lords Forrester by the late Thomas Dundas, Esq., grandfather of Colonel Dundas, of Carron Hall, the present proprietor.

DUNKELD and DOWALLY, a parish, in the county of PERTH, 15 miles (N. by W.) from Perth, and 55 (N. N. W.) from Edinburgh; comprising the ancient city of Dunkeld, partly within the parish of Caputh; for many years the seat of the primacy of the kingdom prior to its removal to St. Andrew's, and now the seat of a presbytery; and containing in the parish 1752 inhabitants, of whom 1096 are in the town. This place, which is of very remote origin, and is supposed to have been the capital of the ancient *Caledonia*, appears to have derived its name from the erection of a CASTLE or stronghold, towards the close of the fifth century, on an eminence commanding the passes of the vale of Atholl, and still called the King's Seat, from its having been the resort of some of the earlier monarchs when partaking in the diversion of the chase. There are yet remains of this ancient fortress; and near the site, Mary, Queen of Scots, narrowly escaped a serious injury from one of the herd, while witnessing a chase, for the celebration of which the Earl of Atholl had employed 2000 of his Highlanders to collect the deer of the central Highlands. A MONASTERY was founded here about the year 570 for brethren of the order of St. Columba, subordinate to the abbey of Iona, over which that saint at the time presided; and Kentigern and Columba remained for some months at this place, for the instruction of the people of the surrounding district, who assembled in great numbers to hear them. The establishment was placed under the superintendence of an abbot, many of whose successors held the most distinguished offices in the state; and the brethren, who are identified with the ancient Culdees, employed themselves chiefly in teaching and transcribing the sacred Scriptures, and had no communion with the Church of Rome. Originally of rude construction, the monastery was rebuilt with stone about

the year 729, and continued to advance in importance. Numerous dwellings gradually arose in the immediate vicinity; and in 834 the town had so much increased in extent, that Brudus, King of the Picts, with a numerous army, after crossing the Tay, found sufficient accommodation in the town and castle preparatory to his battle with Alpinus, King of the Scots, at Angus.

In 845, the Danes, on their march to plunder the monastery, were encountered near Dunkeld by Kenneth Mc Alpine, who defeated them with considerable loss; but in 905, again advancing for the same purpose, they succeeded in plundering the monastery and laying waste the town. In the reign of Kenneth III., a numerous army of Danes, in a third attempt to commit the same depredations, were intercepted on their march by that monarch, who, in a severe conflict near Luncarty, a few miles from Perth, defeated them with great slaughter. The buildings connected with the monastery still increased; and the relics of St. Columba were removed from Iona, and deposited in a church erected here and dedicated to his memory by Kenneth Mc Alpine, after he had united the Scots and Picts into one kingdom. St. Columba thus became the patron saint of Dunkeld and its church. The Culdees continued their establishment under a superior of their own nomination, and in the parish of Dowally and other places in the district had various smaller institutions, till they were superseded by canons regular. David I., in 1127, converted the monastery into a cathedral establishment, and made Dunkeld the seat of a diocese, which retained the primacy of the kingdom until the distinction was transferred to the see of St. Andrew's in the reign of James III. It has been thought that David expelled the Culdees in 1127 to make room for a bishop, but it appears that he guaranteed to them during life the rights and possessions which belonged to their ancient abbey: in a short time, however, they lost the nomination of their superior, that privilege passing over to the canons regular. The prelates of Dunkeld were much exposed to the aggressions of the heads of the Highland clans in the vicinity of the diocese, with whom a constant state of warfare was maintained. The revenues of the see were frequently intercepted by armed bands who waylaid the bishops' officers, and carried them off by violence; and such of the lands belonging to the bishops as were contiguous to the estates of the Highland chiefs were either seized and appropriated to their own use, or plundered and laid waste. The bishops were assaulted even while officiating in the cathedral; and those who ventured to resist, or bring to punishment, the leaders by whom these outrages were perpetrated, were beset by parties against whose hostile attacks they were compelled to defend themselves by a numerous retinue of armed attendants.

In the reign of James II., the Earl of Atholl, nephew of that monarch, assembled the canons of the abbey, and requested them to appoint his brother, Andrew Stuart, though not in full orders, successor to the see, which had become vacant by the death of Bishop Brown. With this request they thought proper, through intimidation, to comply; but the election was afterwards abrogated by Pope Leo X., and Gavin Douglas, uncle of the Earl of Angus, was appointed, whose arrival to take possession of the see caused the servants of Stuart to fly to arms, and seize upon the palace and the tower of the

cathedral, whence they discharged a volley of shot against the house of the dean, to which Douglas had retired to receive the homage of the clergy. On the following day, the city was filled with the armed adherents of both parties, and a dreadful scene of violence ensued. At length, Stuart, finding it impossible to relieve his men in the palace, was compelled to abandon it; and having no hope of retaining the prelacy, he retired on condition of being allowed to hold that portion of the bishop's rents which he had already received, and also the churches of Alyth and Cargill, on payment annually of a trifling acknowledgment. From this time the see remained undisturbed till the Reformation.

The church erected by Kenneth Mc Alpine in 845 continued to be the cathedral till 1318, when the choir of a more spacious and elegant structure was completed by Bishop Sinclair, and appropriated to that purpose. In 1406 a nave was added to the building by Bishop Cardney, and the remainder of the church was completed in 1464 by Bishop Lauder, who also erected the lofty tower of the cathedral, and built the chapter-house, in 1469. The episcopal palace, to the south-west of the cathedral church, was formerly defended by a castle, erected in 1408, of which at present nothing remains; in 1508, a wing was added to the palace, and a handsome chapel built immediately adjoining it. The bishops had palaces also at Cluny, Perth, and Edinburgh, with ample revenues; and at the time of the Reformation, the church of Dunkeld was valued at £1600 per annum. In 1560, a commission was issued by the Lords of Congregation for purifying the church, by removing the altars, images, and other idolatrous ornaments, and burning them in the churchyard; and in their zeal to fulfil this commission, the mob destroyed the whole of the interior of that beautiful and venerable structure of which the ruins display the stately magnificence, and left nothing entire but the walls. These, too, were subsequently stripped of their roof, and have since remained in a state of dreary ruin, with the exception only of the choir, which in 1600 was roofed with slate at the expense of the family of Stuart of Ladywell, and has been appropriated as the parish church. By acts of the General Assembly in 1586 and 1593, the city was made the seat of a presbytery. There is still a bishop, though of course unconnected with the Established Church of Scotland, who presides over the episcopal churches in the diocese of St. Andrew's, Dunkeld, and Dunblane.

After the battle of Killiecrankie, in 1689, the Highland troops of Viscount Dundee, who had been killed in that conflict, advanced to the city, then garrisoned by the newly-raised Cameronian regiment; and after a severe struggle, the Highlanders obtained possession of many of the houses, from which they made frequent discharges of musketry upon the Cameronian soldiers, who, in order to dislodge them, set fire to the buildings. The whole of the town, with the exception of the cathedral and three houses, was burnt; and the inhabitants were compelled to take refuge in the church. On the Highlanders retiring, preparations were made to meet a second attack, but none was attempted. In 1703, the Marquess of Atholl was elevated to the rank of duke by Queen Anne, who is said to have subsequently paid a visit to that nobleman, first at Blair-Atholl, and then at Dunkeld House, to confer with him on matters connected with the union of the two kingdoms; and in corroboration

of the event a state room in the castle at the former place is still called Queen Anne's bedchamber. On the breaking out of the rebellion of 1745, the Marquess of Tullibardine, accompanied by the Pretender, whose cause he had embraced, took temporary possession of Blair Castle, in the absence of his younger brother, the Duke of Atholl, and sent the Lords Nairn and Lochiel to proclaim the prince at the market-cross at Dunkeld. Early in the following year, the Duke of Cumberland stationed part of his forces at Blair-Atholl and in the city, which posts, after his departure, were occupied by bodies of Hessian troops, between whom and the Atholl Highlanders frequent skirmishes took place in the neighbourhood.

In September, 1842, Her Majesty the Queen, while visiting her Scottish dominions, made an excursion to Dunkeld House, attended by Prince Albert, and was met on the boundary of the estate by a numerous guard of the Atholl Highlanders, who escorted the royal visitors to the park. Here Lord Glenlyon (now Duke of Atholl), at the head of his Highland regiment, received the Queen, and then conducted her to the tent which had been erected for her reception on the lawn to the north-west of the cathedral, a spot commanding a splendid view of the wildly romantic and beautifully picturesque scenery for which the place is so highly celebrated. Her Majesty reviewed the regiment, and passing along the line formed by the various local societies that had been assembled in the park, retired into the tent, where a sumptuous collation was served; after which the officers of the Atholl clan were severally introduced to the Queen, and had the honour of kissing hands. Having remained for a few hours at Dunkeld, Her Majesty took her departure for Breadalbane, escorted by the Hon. Capt. Murray, who rode by the side of the royal carriage to the boundary of the Atholl estate, a distance of thirteen miles, pointing out by name to the Queen the various objects of interest. In 1844, Her Majesty, on her second trip to Scotland, to visit Lord Glenlyon (the present duke) at Blair Castle, passed again through the ancient city of Dunkeld.

The town is beautifully situated on the north bank of the river Tay, over which is a noble bridge of five open arches (the central arch having a span of ninety feet, and the two on each side of eighty-four and seventy-four feet) with two dry arches of twenty-five feet span; the whole erected in 1809, by the fourth Duke of Atholl, at an expense of £30,000, of which £5000 were granted by government. From the centre of the bridge is a fine view of the city. Dunkeld comprises a spacious street of handsome modern houses, extending from the bridge along the line of the great north road from Perth to Inverness; and a street of more ancient but still well-built houses crosses the former at right angles, in the market-place, from which the old cross was removed about the commencement of the present century. Near the cathedral is the deanery, the only house now remaining of the three saved from the conflagration in 1689. There is a public library, called the Mackintosh library, which originated in a gift to the town by the Rev. Donald Mackintosh, in 1811; it is under the direction of a committee of curators, and the collection at present consists of more than 2000 volumes. The manufacture of linen and the tanning of leather, formerly carried on to a considerable extent, have been discontinued, and

the chief trade at present is the making of shoes. Many of the poorer classes are employed during the spring and summer months in the peeling of oak, and at other times in agriculture and in the slate-quarries; there are also a distillery, a public brewery, several malting establishments, and a saw mill, affording occupation to a moderate number of persons. Three banks have agencies here. Since the erection of the bridge a very great increase has taken place in the general traffic of the town and neighbourhood. There are now two spacious hotels with posting establishments, for the reception of visitors whom the beauty of the scenery and the numerous objects of deep interest in the vicinity attract; and several lodging-houses are occupied by families and individuals who during the summer months make this their residence. The post-office has a good delivery. In 1846 an act of parliament was passed authorizing the construction of a branch to Dunkeld of the Perth and Forfar railway. The market, which is amply supplied with provisions of every kind, is on Saturday; and fairs for cattle and horses, and for hiring farm-servants, are held on February 14th, March 25th, April 5th, June 9th, and the second Tuesday in November. The police is under the management of an officer appointed by the Duke of Atholl as hereditary lord of the barony. A court for the recovery of small debts is held quarterly under the sheriff, and the county magistrates for the district hold their courts here, in the Masons' lodge, in which also public meetings are held, and the general business of the town is transacted. The old prison was taken down in 1743, and one of the dry arches of the bridge was subsequently inclosed and fitted up for the temporary confinement of offenders.

The PARISH is situated on the north side of the vale of Atholl, and extends for more than six miles along the bank of the Tay, varying in breadth, and comprising about 12,000 acres, of which 1200 are arable, 300 pasture, 10,000 woodland and plantations, and the remainder covered with water. Its surface is strikingly diversified with hills of precipitous elevation and fantastic form, the steep acclivities of which are indented with deep ravines, and which vary in height from 1000 to 2000 feet above the level of the sea, rising abruptly from a narrow tract of shelving low land apparently gained by embankment from the river. These hills were planted with larch-trees by the fourth Duke of Atholl, and form an extensive forest, nearly fourteen miles in length from Craig-y-barns, opposite the King's Seat, which has an elevation of 1000 feet above the sea; and varying from three to six miles in breadth. On the summit of the hill of Duchray, which rises to a height of 1900 feet, is a lake about half a mile in circumference, abounding with perch. Upon the hill of Ordie, at an elevation of 700 feet, is another, several miles in circumference, in which are trout of excellent quality. In the barony of Dulcapon is Loch Broom, also containing trout; and at Rotmel are two lakes, in which perch are found. The SOIL in the lower lands is thin and light, but on the acclivities of the hills richer, and slightly intermixed with clay; producing good crops of oats and barley, with turnips and potatoes. The state of husbandry has been greatly improved, and an agricultural society for the district established; the lands have been drained and inclosed; the farm-buildings and offices are of stone, roofed with slate, and are comfortable and well arranged. The annual value of real property in the parish is £6073. The substratum is principally clay-

slate, of which the rocks are composed, and which is remarkable chiefly for the irregularity of its formation. On the eastern base of the hill of Craig-y-barns, a small vein of copper-ore was discovered, but it has not been wrought; and in a bank of sand about twenty feet above the level of the river Tay, in the lands of Dowally, some grains of gold were found, of which ornaments were made; but the quantity obtained was so small, in comparison with the expense of extracting it, that all attempts have been abandoned. Pearls of good colour and form, though coarse, are found in the muscles of the Tay, and occasionally some of finer quality and of great value.

The present *Dunkeld House*, one of the seats of the Murray family, now in an unfinished state, was commenced by the fourth Duke of Atholl not long before his death in 1830, after which event the building was discontinued. The mansion had been raised to the second story; an elegant family chapel, the grand staircase, and a gallery ninety-six feet in length had been nearly completed; and in this state, with a temporary roof to protect the walls from injury, the structure, which is in the later English style of architecture, was suffered to remain. It is situated in a park of no great extent, but pre-eminent for the unrivalled beauty of its scenery, and for the extensive views it commands over the rich vale of Atholl and the river Tay on the one side, and the majestic forest and wildly mountainous district on the other. Within the park are the stately remains of the venerable abbey of Dunkeld, with which the style of the mansion is in pleasing harmony. The grounds of Dunkeld House are laid out with great taste and effect, and combine every possible variety of deeply-interesting features. Near the remains of the cathedral are two fine larch-trees, the first that were introduced into Britain, having been brought from the Tyrol by Mr. Menzies, of Culdares, in the year 1738: they were reared in the greenhouse, and planted not far from the old mansion about the same time as those in the Monzie gardens, near Crieff; they have attained a height of about ninety feet, with proportionate girth, and are apparently in a state of progressive increase. The village of Dowally, which is five miles north from the town, consists of a few houses near the church of that name, with one good inn. There is also the small village of Kindallachan.

The parish of Dowally and the ancient city of Dunkeld both formed originally part of the extensive parish of Caputh, from which they were separated in 1500, and erected into a distinct parish. The minister's stipend is £166, with an allowance of £63 in lieu of manse and glebe; patron, the Duke of Atholl. The CHoir of the CATHEDRAL was repaired, and fitted up for public worship, at the expense of the Murray family, about the year 1691; and in 1820 it was thoroughly repaired, and, with some trifling exceptions, restored to its original state by the fourth duke, at a cost of £5400, towards which £1000 were granted by government. The interior contains 655 sittings. On each side of the cathedral is a range of seven arches, supported on low massive Norman columns, above which are a triforium of similar character, and a range of clerestory windows of the early English style. In the choir was formerly a recumbent figure of Alister More Mac an Righ, son of King Robert II., and known as the Wolf of Badenoch; it is now placed in the vestibule, in which also is a tablet to the memory of the Rev. John Robb, minister of Dunkeld,

who was wrecked in the Forfarshire steamer in 1838. In the north wall of the choir is a tablet to Thomas Bisset, commissary of Dunkeld; and in the south aisle of the cathedral is the monument of Bishop Cardney, on which is his effigy in a recumbent posture, under a crocketed canopy. The statue of Bishop Sinclair, of which the head has been broken off, is in one of the aisles; and within the walls of the cathedral are also tombstones of the dean of Dunkeld in 1476, and the rector of Monedie in 1548. The portions of the cathedral not comprised in the modern parish church are roofless, and falling into decay; the walls of the aisles are strengthened with buttresses between the windows, terminating in crocketed pinnacles above the parapet, and at the west end of the nave is the lofty tower, ninety-six feet high, with an octagonal turret of great beauty. The *Chapter-house*, which has been appropriated as a sepulchral chapel for the Murray family, contains a marble statue of John, fourth Duke of Atholl, attired in his parliamentary robes, erected by his duchess in 1833; a monument to the Marquess of Atholl, on which the several quarterings of his connexions are emblazoned; and a tablet inscribed to the memory of Lord Charles Murray, who died in Greece. There are places of worship for Episcopalians, members of the Free Church, and Independents. The church of *Dowally* was erected in 1820, on the site of the old church, founded by Bishop Brown; it is a neat structure containing 250 sittings, to which eighty might be added, and on the east wall of the building are the armorial bearings of Bishop Brown. Divine service is performed at Dowally every Sunday by the assistant minister of Dunkeld.

The *Royal Grammar School* was founded in 1567, by James VI., who granted funds for its support, from which the rector derives a salary of £5. 13. 4., in addition to the scholars' fees and a house rent free. The presentation is vested in the Murray family, subject to the approval of the synod of Perth and Stirling, who have power of removal on sufficient cause. The buildings are maintained by the family; the course of study is similar to that of the High School of Edinburgh, and the number of scholars averages about eighty. A parochial school was established at Dowally in 1833, by the trustees of the Atholl estates, who erected a school-house, and pay the master a salary of £34, in addition to which he receives about £14 fees from the children. A school for the instruction of girls in sewing, tambouring, and other branches of female industry, was instituted by Jane, Duchess of Atholl, in 1788, and is maintained by the present Duchess of Atholl: the duchess also instituted a Sunday school in 1789. An hospital was erected in 1510, by Bishop Brown, for the maintenance of seven aged men, each of whom was to have a free house, with five holls of meal, and an allowance of five merks annually. The building was destroyed in the conflagration of the city in 1689, and some good houses were erected on the site, several of which were afterwards sold; the rent of the remainder is distributed in meal among the bedesmen, under the patronage of the commissary. A chapel dedicated to *St. Ninian* was founded in 1420 by Bishop Cardney, who endowed it with the lands of Mucklarie, the rents of which are now paid to the rector of the royal school; there are no remains of the building, and the site is occupied by the houses in Atholl-street. On the summit of an eminence to the east of the town, not far

from *St. Ninian's*, was a chapel dedicated to *St. Jerome*, and called the Red Chapel; the site is inclosed by a stone wall, but there are no remains of the edifice. The ruins of the ancient castle of *Rotmel* were removed about the beginning of the present century, when numerous coins were found in digging up the foundation. To the east of the city is an extensive tract called the *Craigwood*, in the centre of which is an eminence commanding a fine view of the town and the several passes of the vale of Atholl. On the side of *Craig-y-barns* are two caves overlooking the King's Pass, one of which was an ancient hermitage, and the other the abode of a noted robber who was shot on his return from the well of *St. Columba*: on the east side of *Craig-y-barns* is another, called the *Duchess' Cave*, which till lately was neatly fitted up. There are also several caves on the back hills of Dowally, which were inhabited for many months after the battle of Culloden.

DUNKELD, LITTLE, a parish, in the county of PERTH, adjoining Dunkeld, which is on the north; and containing, with the village of Inver, 2718 inhabitants. This parish includes the ancient parish of Laganallachy. It is bounded on the north and east by the river Tay, and is about sixteen miles in length and from five to six in extreme breadth, comprising 23,200 acres, of which about 7500 are under cultivation, 3204 woodland and plantations, and the remainder waste. The lands are divided into three districts, namely, Murthly, Strathbran, and the Bishopric, the last so called from having belonged to the ancient see of Dunkeld. Murthly extends from the parish of Kinclaven on the east to the village of Inver, and includes the hill of Birnam. The district of Strathbran extends from Inver to Amulrie on the west for nearly nine miles, and is watered by the river Bran, from which it takes its name; while the Bishopric stretches from Inver for almost ten miles along the Tay. The surface is strikingly diversified with ranges of hills, of which that of Birnam, on the south, rises in stately grandeur to a considerable elevation, embracing an extensive view of the adjacent country; the hill of Craigvinian, on the western bank of the Tay, also commands some finely-varied prospects. The river Bran has its source in Loch Freuchy, on the southern border of the parish, and in its precipitous and romantic course forms several picturesque cascades; it flows into the Tay nearly opposite the town of Dunkeld. There are also a few lakes, chiefly in the mountain district; they all abound with excellent trout, and in Loch Skiack are found pike of considerable size.

The SOIL varies extremely in different parts of this extensive parish; in the eastern portions it is generally a rich black loam, and in other districts partly sand and partly gravel. The crops are barley, bear, and oats, with turnips and potatoes, of which last great quantities are raised, and sent to the London market, where, from the excellence of their quality, they obtain a decided preference. Considerable numbers of black-cattle are reared in the Highland districts of the parish, and sent to the southern markets; and many sheep, usually of the black-faced breed, are fed by the various tenants. There are extensive woods and plantations in Murthly and the Bishopric; the prevailing trees are oak, ash, Scotch fir, larch, and plane, with birch and hazel. The coppices of oak are cut down as they successively attain the growth of twenty years, and produce a valuable

return by the sale of the bark, in the preparation of which many of the population are employed during the summer months. A considerable quantity of Scotch fir and larch, of large girth, is sent to England for ship-building; and at Inver is a powerful saw-mill, where much timber is prepared and exported to England for railroads and other purposes. Near Murthly is a quarry of fine freestone, from which was raised the stone for the cathedral of Dunkeld, and more recently for the erection of the bridge at that place across the Tay. There is likewise a quarry of excellent slate at Birnam hill, which is extensively wrought. The annual value of real property in the parish is £8960.

Murthly Castle is beautifully situated on the south bank of the river, in a finely-wooded and ample demesne rising in bold undulations, and comprehending much picturesque scenery: various improvements have been made in the grounds. *Dalguise* is an ancient mansion with modern additions, pleasantly situated on the road to Taymouth. *Kinnaird House* stands on an eminence overlooking the Tay, in grounds tastefully laid out, and abounding with romantic scenery. *Birnam Lodge* and *Birnam Cottage* are both pleasant houses nearly opposite to Dunkeld; and a handsome seat in the cottage style, beautifully situated on the western acclivity of Torwood, has been built by Mr. Wallace, of Perth. There are numerous hamlets in the parish, few of which can be regarded as villages, with the exception of Inver, itself a small village, situated at the influx of the river Bran into the Tay, and, previously to the erection of the bridge, the station of a ferry across that river. This village is much frequented by parties visiting the romantic scenery in its vicinity. Among its principal attractions are, the *Rumbling Bridge*, thrown over a deep chasm in which the Bran, rushing with impetuous violence among the rocks, forms a romantic cascade; and *Ossian's Seat*, or the Hermitage, situated on the north bank of the Bran, in the woods of the Duke of Atholl, and close to which is a natural cascade of less romantic, but more picturesque, appearance. Near the village is the saw-mill above mentioned, driven by water equivalent to twenty-four horse power, where a considerable number of persons are employed. There are several fishing-stations on the Tay, in which river salmon and salmon-trout were formerly taken in abundance; but the quantity for some years has been rapidly decreasing, and the fisheries at present yield but a very inconsiderable rent to the proprietors. Facility of communication is afforded by excellent turnpike-roads, of which those in the districts of Strathbran and the Bishopric pass for ten miles, and that in the eastern district for four miles, through the parish; and about half-way between Dunkeld and Amulrie, a new bridge has been built over the river Bran. Dunkeld bridge is a noble structure.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Dunkeld, synod of Perth and Stirling; patron, the Crown. The minister's stipend is £157. 10., with a manse, and the glebes of this place and Laganallachy together are valued at £18 per annum. The parish church, situated near the south bank of the Tay, was built in 1798, and is a neat plain structure containing 820 sittings. Laganallachy church, in the district of Strathbran, has about 450 sittings; and divine service is performed there one Sunday in the

month, wholly in the Gaelic language. There is an old Roman Catholic chapel attached to Murthly Castle, used by the family as a burying-place, and of late years fitted up for service by the proprietor, who belongs to the Romish church. Two parochial schools are supported; the master of one has a salary of £29. 18., with about £10 arising from fees, and the master of the other a salary of £10, with £10 fees, and both have houses and gardens rent-free. There are also three schools connected with the Society for Propagating Christian Knowledge, the masters of which have salaries of £15 each, partly paid by the heritors of the parish; and, the schools being situated in populous districts, the amount of fees is considerable. A small parochial library is supported by subscription. John Stewart, Esq., of Grandtully, about the commencement of the last century, bequeathed 20,000 merks Scotch for the maintenance of twelve poor men of the Episcopalian Church, and in 1740 a building for their reception was erected on the lands of Murthly; but the original purpose of the testator was not carried into effect, and the property consequently accumulated to the sum of £2609 sterling, the interest of which is divided among poor persons of this and the neighbouring parishes. There are several Druidical remains; and on the farm of Balinloan is a remarkable stone called Clach-a-mhoid, where it is said a baron in the vicinity held his court. Two very large trees are still standing near the church, said to be the only remains of Birnam Forest, and on a plain near the bank of the Bran are the ruins of the castle of Trochery, an ancient residence of the Gowrie family.

DUNLICHTY, county INVERNESS.—See DAVIOT.

DUNLOP, a parish, chiefly in the district of CUNNINGHAME, county of AYR, and partly in the Upper ward of the county of RENFREW, $2\frac{1}{2}$ miles (N. N. W.) from Stewarton; containing 1150 inhabitants. This place derives its name, signifying in the Gaelic language a "winding hill", from the situation of its ancient castle on the summit of a hill, whose base was surrounded by a small river. The parish is about seven miles in length, and two in average breadth, comprising 6554 acres, of which 5834 are arable, 120 woodland and plantations, and the remainder hill pasture, moss, and waste. Its surface is gently undulated, and though rather elevated, in no part attains a height of more than 150 feet above the level of the sea. The highest hills are those of Craignaught and Knockmead, towards the north-east, which command some pleasing and richly varied prospects over the adjacent country. From Bruckenheugh, about a mile to the south of the church, the view embraces the wooded district between this parish and the sea, the shores of the Firth of Clyde and their numerous bays and promontories, the lofty mountains of Arran, with Ailsa Craig and the hills of Ireland in the distance. There are many springs of excellent water, and the lands are intersected with various streams, the principal of which is the Lugton; it has its source in Loch Libo, in Renfrewshire, and after a course of about fifteen miles, in which it forms a boundary between this parish and that of Beith, flows into the river Garnock near Kilwinning. The Glassert burn runs through the centre of the parish (dividing it into two equal parts), and, receiving several streamlets in its course, falls into the Annack. Corsehill burn is also a small stream, separating the parish from that of Stewarton. The Lugton

abounds with trout and pike; trout are also found in the other streams, and in the Glassert char used formerly to be taken in abundance, but they have now totally disappeared. Halket loch, covering about ten acres, has been drained within the last few years, and is now a luxuriant meadow.

The SOIL is generally of a clayey retentive quality, but fertile, and under proper management very productive; in the southern parts of the parish a rich loam is prevalent, and in the higher lands are some patches of moss. The principal crop is oats; barley and bear are raised for home consumption, with a few acres of wheat, and also small quantities of potatoes and turnips, for which, however, the soil is not well adapted. The system of agriculture is improving; the rotation plan of husbandry is adopted, and the draining of the lands, hitherto much neglected, is now becoming general. The dairy-farms are the chief objects of attention with the farmers, and the cheese produced has long been distinguished for its quality. It differs from other kinds mainly in its being made of unskimmed milk, a practice originally introduced here by Barbara Gilmour, from which circumstance all cheese made in a similar manner has obtained the distinctive appellation of Dunlop cheese. About 25,000 stone are annually produced in the parish, and find a ready sale in the various markets. Great attention is paid to the rearing of live-stock; the cattle are all of the Ayrshire or Cunninghame breed, and the sheep generally the Leicestershire: about 900 milch-cows are kept for the dairy. The annual value of real property in the parish is £8493. There are no natural woods; the plantations consist of larch, Scotch fir, ash, elm, beech, and plane, and on the larger properties they are well attended to, and are in a flourishing state. In this parish the substrata are, claystone passing into porphyry and amygdaloid, with occasional masses of greenstone and basalt; limestone, sandstone, and coal. The limestone, which abounds with petrified shells, has long been quarried at Laigh-Gameshill; it occurs in seams about sixteen feet in thickness, and being of excellent quality about 5000 bolls are annually raised, part of which is burnt on the spot. Limestone is also wrought in other parts of the parish, but to a comparatively small extent. The coal, of which a few cart-loads were removed, was found to be of so inferior a quality that it was not thought advisable to continue the working of it. The greenstone and freestone have been quarried in several places for building purposes, for making dykes for inclosing the lands, and also to furnish materials for the furrow-drains.

Dunlop House, a spacious and elegant mansion in the early English style, is beautifully situated on the bank of the Corsehill burn, in a deeply-sequestered spot, and embosomed in a richly-planted demesne. The village, which is pleasant, consists principally of one street, neatly built; a subscription library has been established, and there is also a library in connexion with a Sabbath school, which contains about 250 volumes. Part of the inhabitants of the village are employed in the various trades requisite for the supply of the parish, and many of them are engaged as cheese-factors for the neighbouring districts, which they supply not only with the produce of Dunlop, but with that of other places in the county of Ayr. Fairs for the sale of dairy stock and agricultural produce are held on the second Friday in

May (O. S.) and the 12th of November, at both of which a considerable quantity of business is transacted. Ecclesiastically the parish is in the presbytery of Irvine, synod of Glasgow and Ayr, and in the patronage of the Earl of Eglinton: the minister's stipend is £215, with a manse, and a glebe valued at £20 per annum. Dunlop church, erected in 1836 to replace the ancient building, which had become too small for the increased population, is a neat and substantial edifice adapted for a congregation of about 830 persons. A new parochial school-house was built in 1840, consisting of a large and commodious schoolroom below, and a dwelling-house for the master above: the old school-house, which is yet standing beside the kirk gate, was built in 1641 by James, Viscount Clandeboyes, by whom, according to the inscription in front, it would appear to have been endowed; but nothing is known of the funds appropriated to that purpose.

At Chapel House, about half a mile from the village, were the ruins of an ancient chapel dedicated to the Virgin Mary, which have been removed within the last few years. The castle of Dunlop, which was taken down to make room for the present modern mansion, was of great antiquity; but both the date and the original founder are unknown. Aiket Castle, about a mile southward of the church, was for many centuries prior to the year 1700 inhabited by a branch of the Cunninghame family: the original tower, which was four stories in height, and of which the ground-floor has a vaulted roof of stone, has been lowered to make it correspond with the additional buildings requisite for converting it into a dwelling-house. The learned John Major, the tutor of John Knox, and professor of theology in the university of Glasgow, was vicar of Dunlop; and James Hamilton, Viscount Clandeboyes, was born in the parish, of which his father was vicar. Lieutenant-General James Dunlop of Dunlop, father of the present proprietor, was eminently distinguished in his profession; the general's mother was the early friend and correspondent of the poet Burns.

DUNMORE, a village, in the parish of AIRTH, county of STIRLING, 8 miles (E. by S.) from Stirling; containing 154 inhabitants. It is situated on the southwest side of the Firth of Forth, on the road from Airth to Stirling, and has a harbour, now a calling-place for the Stirling steamers. The village is small and of rather mean appearance, but the scenery around it is peculiarly beautiful, and the high grounds in the vicinity finely contrast with the almost level plain of the rest of the parish. Formerly an extensive coal-mine was in operation, but the works were relinquished about the year 1810, when more than thirty families removed from the neighbourhood. Dunmore Park is the handsome seat of the Earl of Dunmore, the head of a branch of the noble family of Murray, Dukes of Atholl; Lord Charles Murray, second son of John, first Marquess of Atholl, having been created in 1686 Earl of Dunmore, Viscount Fin-castle, and Lord Murray of Blair, Moulin, and Tillemot. The present mansion was erected about twenty-five years since; it is a large building in the Elizabethan style, and stands on an extensive lawn, surrounded by grounds richly planted with timber of various kinds and growth. Here is an ancient tower, one of three in the parish. On the summit of Dunmore hill, which is of considerable height, are the remains of a strong fortification; and in digging a few years since, an anchor was found em-

bedded in the soil, at least half a mile from the present course of the river.

DUNNET, a sea-port and parish, in the county of CAITHNESS, 9 miles (E. N. E.) from Thurso; containing 1880 inhabitants. This parish, the origin of the name of which is involved in obscurity, is one of the most northern in Scotland; it is about ten miles in length, and varies in breadth from two to four miles. Dunnet is bounded on the south by the parish of Bower, on the south-west by that of Olig, on the east by Cannisbay, and on the north and north-west by the Pentland Firth, into which projects the extensive promontory of Dunnet Head. This Head consists of numerous hills and valleys, covered with fine pasture for cattle and sheep, and throughout its whole extent of coast, which is about nine miles, presents to the sea a front of broken rocks from 100 to 400 feet high. An isthmus of low land, about two miles broad, connects it with the rest of the parish; but with the exception of the keepers of the lighthouse, it is entirely uninhabited. A large number of sea-fowl, especially the layer or puffin, visit it during the season of incubation. The shore to the east of Dunnet Head is low and rocky, and the current of the Firth during spring tides is so strong that no vessel can stem it, from which circumstance, and the velocity of contiguous currents in opposite directions, the navigation here is dangerous to strangers. Of the several good havens for small craft, Brough and Ham or Holm havens are considered capable of great improvement. In the interior the parish is of level surface, there being scarcely an eminence deserving the name of a hill. The larger portion consists of moss and moor, and the soil in the cultivated parts is in general of a light nature, with little clay or loam; in some places it is sandy, and in others a light black earth, and rich clay. Adjoining the shore, east of Dunnet bay, is a barren tract nearly two miles in breadth, which is said to have been formerly arable ground. The rock formation at Dunnet Head is freestone, and throughout the rest of the parish grey slate: at Inkstack are some quarries of flagstone, supplying materials for pavements, of which considerable quantities are shipped for the south. The annual value of real property in Dunnet is £4268.

The parish contains the three villages of Dunnet, Brough, and Scarfskerry. Part of the population is engaged in salmon-fishing, which has been carried on, particularly in Dunnet bay, with great success for the last few years: there is also a lobster-fishery, and cod, haddock, flounders, halibut, and skate are obtained. Four fairs are held, of which the principal is Marymas, on the Tuesday after August 15th (O. S.); it continues two days, and is almost exclusively a cattle and horse fair: the others are on the first and third Tuesdays in October (O. S.) and first Tuesday in April, for cattle, horses, &c. Cattle are also conveyed by steamers to the Leith and Edinburgh markets; the grain is generally shipped to the same quarter, and meal is sent to the weekly markets of Wick and Thurso. For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Caithness, synod of Sutherland and Caithness; patron, Sir James Colquhoun, Bart. The stipend of the minister is £191, with a manse, and a glebe of the annual value of £12. Dunnet church, which is very ancient, is a plain oblong building, with a tower at the west end; in 1836-7 it underwent a thorough repair, being

re-roofed, and enlarged by a capacious aisle, and it is now a commodious and comfortable place of worship. The parochial school affords instruction in the ordinary branches of education; the master has the maximum salary, with about £10 from fees, and a house and garden. Another school is supported by the General Assembly, and a third partly by Mr. Traill, on whose property it is built, and partly by fees. There are also two female schools, aided by the respective heritors and the Kirk Session. In 1764 William Sinclair, Esq., of Freswick, bequeathed an annuity of £5. 11. for the poor of the parish; and the late Messrs. Oswald, of Glasgow, left £600, now vested in land, for the same purpose. The lighthouse on Dunnet Head was first lighted on the 1st October, 1831; it stands on a precipice, about 300 feet above the level of the sea, and from the ground is sixty-one feet in height: the erection has proved of great service in preventing shipwreck and guiding vessels through the Firth. Timothy Pont, who did much to illustrate the geography of his country, was minister of Dunnet in the beginning of the seventeenth century.

DUNNICHEN, a parish, in the county of FORFAR; including the villages of Bowriefauld, Cotton of Lownie, Craichie, Drummertmont, and Letham; and containing 1625 inhabitants, of whom 54 are in the village of Dunnichen, 3½ miles (E. S. E.) from Forfar. This place, which is of considerable antiquity, derives its name, signifying in the Gaelic language "the hill or fort of the valley", from a prominent hill overlooking the vale of Lunan, and on which are still some remains of an ancient fort of loose stones, though the greater part has been removed to furnish materials for inclosing the lands. A battle is supposed to have been fought here at some remote period, which tradition refers to the time of Arthur, King of the Britons; but no authentic account of it has been recorded. Numerous graves, evidently of warriors, have at various times been discovered by the plough, filled with human bones, and some of them containing urns of red clay rudely ornamented and holding ashes. The parish comprises an area of more than 5000 acres. Its surface is gently undulated, rising in some places into hills, the two highest of which are Dunnichen hill, having an elevation of about 800, and Dunbarrow, an elevation of 700, feet above the level of the sea. Dunnichen hill, which is cultivated from its base to the summit, and interspersed with thriving plantations, forms a pleasing feature in the landscape, and commands a richly-varied and extensive prospect over the whole vale of Lunan to the east, and Forfar and Strathmore to the west, the view terminating in the distance in the Grampian range. The Vinney water, which has its source in the parish of Forfar, collects various inconsiderable tributaries in its course through this parish, and falls into the Lunan in the parish of Kirkden. A loch formerly covered an area of fifty acres, but it has been partially drained, and converted into pasture land; on the north side of it is a small chalybeate spring, strongly impregnated, and near the base of Dunbarrow is a much more copious spring, of similar quality but less power.

The SOIL in the higher grounds is a shallow friable loam intermixed with sand, which becomes deeper and richer towards the lower lands, where there is generally a clayey loam. Of the whole number of acres about 4000 are cultivated or occasionally in tillage, upwards of 500 in wood, and the remainder, much of which might be

reclaimed and brought into cultivation, is rough pasture and waste. The crops are, grain of all kinds, potatoes, and turnips; the system of agriculture is in an advanced state. Bone-dust has been introduced for manure on turnip land, and shell-marl, by which the soil in many parts has been much improved, is procured in abundance from the lake of Restenneth, in the parish of Forfar. Considerable attention is paid to the improvement of live stock, and the dairy-farms are well managed; the cattle are chiefly the Galloway, with a few of the Fife and Teeswater breeds. No sheep are reared, but great numbers are sent hither from the Grampians to be fed on turnips during the winter, and many cattle of all breeds, bought at the neighbouring fairs, are pastured here. The plantations, being duly thinned, are in a flourishing state. The substrata of the parish are chiefly sandstone or freestone, with portions of greenstone occurring occasionally, and in detached situations; the sandstone frequently contains rounded pebbles of jasper, quartz, and agate. In the trap rocks of Dunbarrow is often found a siliceous incrustation, in which rock crystals are embedded; and in and near the summit of Dunnichen are several masses of granite and mica-slate. The sandstone, which is generally of a greyish white, and sometimes inclining to blue, is extensively quarried at Dunnichen; it produces excellent millstones and other blocks of very large dimensions, which may be easily cut, and are susceptible of a high polish, but, if suffered to remain long after being taken from the quarry, acquire a degree of hardness that bids defiance to any tool. The annual value of real property in the parish is £4600.

Dunnichen House is pleasantly situated on the southern slope of the hill, near its base, and commands an extensive and pleasingly-varied view; the demesne is richly planted, and is rapidly improving under the spirited management of its proprietor. The principal manufacture carried on in the parish is the weaving of coarse linen-cloth called Osnaburghs, and linens of finer texture for sheeting and shirting. Fairs are held at Letham twice in the year, for cattle, and the hiring of farm-servants; and a fair is also held in the Kirkton on the third Wednesday in March, O. S. The roads formerly afforded very few facilities of communication with the neighbouring places; but a new road from Dundee to Brechin has been completed, greatly tending to increase the intercourse with the larger towns. For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Forfar, and synod of Angus and Mearns; patron, the Crown. The stipend of the incumbent is £158, of which £38 are received from government: the manse was built in 1815, in a very superficial manner; the glebe land is valued at £11 per annum. Dunnichen church, seated on an eminence in the small hamlet of Kirkton, was erected in 1802, but from the dampness of the situation, and the bad construction of the roof, which was covered with flags of sandstone, it was found necessary in 1817 to cover it with a new roof of slate: it is a plain edifice adapted for a congregation of 456 persons. There are places of worship for members of the Free Church, Congregationalists, and the United Presbyterian Synod. The parochial school, situated in the hamlet of Craichie, affords a liberal course of instruction; the master has a salary of £34, with a house and garden, and the fees average about £6 per annum. On the area of the ancient fort was found, after the removal

of the stones of the building, a thick bed of ashes mixed with numerous human bones, and in one part was discovered a number of small golden balls, thought to have been the current coin of the realm at the period of its erection. The late George Dempster, Esq., for many years representative of the county, was a native of this parish.

DUNNING, a parish, in the county of PERTH; including the village of Newtown of Pitcairns, and containing 2128 inhabitants, of whom 1068 are in the village of Dunning, 9 miles (W. S. W.) from Perth. This parish is supposed to take its name from the Gaelic term *dun*, signifying a hill or fort. It contains the remains of three military stations called Ardargie, Rossie Law, and Ternavie, which are thought to have belonged to a line of forts constructed by Agricola along the northern base of the Ochil hills, where the parish lies, and stretching to Ardoch, and thence to the wall of Antoninus. This supposition is corroborated by the circumstance of Roman armour and numerous human bones having been dug up in the locality: and the proximity of the Pietish station Forteviot, and the traces of many fortifications, lead to the conclusion that this was subsequently the arena of several sanguinary conflicts. The family of Rollo, descended from Eric de Rollo, who came over with William the Conqueror as secretary, were first located in this place, where they have since remained, in the time of David I., who gave considerable possessions to Richard de Rollo, a son or grandson of Eric. In 1512 the estate was erected into a free barony, and in 1651 Sir Andrew Rollo, Knt., was created by Charles II. Baron Rollo, of Dunneruib, the name of the property belonging to this ancient family. The village of Dunning was burnt to the ground, with many others, by the Earl of Mar, in the rebellion of 1715 and 1716, in order to arrest the progress of the royal troops; and to perpetuate the remembrance of this a thorn-tree was planted, which is still in a flourishing condition, and an object of curiosity and veneration.

The PARISH extends in length about seven miles from north to south, and four miles in breadth, comprehending an extensive tract of cultivated land, and 200 acres of plantations. One-third of the whole lies among the Ochil hills, in which range rises the Dunning, a lively stream that pursues a somewhat rapid course over a gravelly bed, and falls into the river Earn. A lake called the White Moss, situated in the western portion, containing a variety of small fish, and frequented by large flocks of wild ducks, covers about eleven acres of ground, and forms a pleasing and interesting object in the scenery; while the lofty Ochils, depastured by numerous flocks of sheep, and stretching along the south-eastern boundary of the county, exhibit a bold and striking outline, and are replete with romantic features which can scarcely fail to captivate the admirer of the beauties of nature. The SOIL along the banks of the Earn is light and sandy, but in the other parts generally clayey or gravelly, and the crops are raised under the rotation system. The farm-houses are commodious, and roofed with slate. Among the various improvements carried on, the draining of marshy grounds has been extensively practised; and several tracts, especially one called the White Bog, have been converted into good arable land. The annual value of real property in the parish is £9000. Quarries of common stone of firm texture are open in several parts, and a bed of white

freestone has been lately discovered; whinstone is abundant in the Ochils, and fragments of quartz are carried along the streams. The plantations are detached and of small extent, and consist of oak, fir, ash, elm, and poplar: the garden belonging to the mansion of Duncruib, the seat of Lord Rollo, is ornamented with a fine spruce-tree, planted in 1707, of great bulk, elevation, and beauty. The modern residences are the houses of Pitcairns and Garvoek. The village of Dunning is held in feu from Lord Rollo, and is governed by a baron-bailie; it has many good houses, a public reading-room, a post-office, and, in place of a gaol, an instrument of punishment called the *jougs*. There is also a gas-work. A large proportion of the population of the parish are cotton-weavers, and obtain work from Glasgow; a wool-mill employs many hands, and there are three corn-mills, a flour-mill, a saw-mill, two malt-mills, a distillery, and a brewery. Three fairs are annually held. To the north-west of the village is a station of the Scottish Central railway. Ecclesiastically the parish is in the presbytery of Auchterarder, synod of Perth and Stirling, and in the patronage of the Earl of Kinnoull; the minister's stipend is about £240, with a manse, and a glebe of eight acres and a quarter, valued at £20 per annum. Dunning church, which was rebuilt in 1810, is conveniently situated in the village, and contains 1000 sittings. The members of the Free Church have a place of worship, and there are meeting-houses belonging to the United Presbyterian Synod and Original Seceders. The parochial school affords instruction in Latin and the ordinary branches; the master has the maximum salary, with about £50 fees.

DUNNOTTAR, a parish, in the county of KINCARDINE; containing, with the village of Crawton, and a portion of the town of Stonehaven, 1873 inhabitants. This place, the name of which is said to refer to the situation of its ancient castle on a peninsular promontory, appears to have been distinguished as the scene of some important events connected with the history of the country. The castle is by some writers supposed to have been originally founded by the Picts, to whom the great tower, which is evidently the most ancient part of the structure, is traditionally attributed; but the earliest authentic notice of it occurs during the contest between Bruce and Baliol, when Wallace, who had assumed the regency, wrested it from the English, by whom it was garrisoned. Some records in the possession of the Marischal family assign the erection of the castle to Sir William Keith, an ancestor of that family, who in the fourteenth century obtained permission to construct a fortress on the site, on condition of building a church in a more convenient situation, in lieu of the ancient parish church, which stood within the precincts of the present ruins. The fortress was one of the strongest in the country, and remained for many ages in possession of the family of Keith, the first of whom, says tradition, was a soldier who, in the reign of Malcolm II., having killed in battle the Danish general Comus, was rewarded with a grant of lands in Lothian, and invested with the title of Great Marischal of Scotland. During the parliamentary war, the regalia of Scotland, consisting of the crown, the sword, and sceptre, and now kept in Edinburgh Castle, were for security deposited in the castle here, by order of the privy council; and a garrison was appointed for the defence of the place. George Ogilvy, of Barras in this

parish, having been appointed lieutenant-governor in the absence of the earl-marischal, who was then with the king's forces in England, gallantly defended the fortress for six months against Cromwell's troops under General Lambert, until, severely pressed by famine, and a consequent mutiny in the garrison, he was reduced to the necessity of capitulating. The regalia had been previously conveyed in safety through the besieging army to Kinneff by a stratagem of his lady in conjunction with Mrs. Grainger, the wife of the minister of that parish, who had them carefully concealed under the pulpit of the church until the Restoration. Ogilvy and his lady suffered a long imprisonment for refusing to tell what became of these highly prized relics; but on the return of Charles II., he was created a baronet, and a new charter of his lands was conferred upon him for his important services. John Keith, also, second son of the earl-marischal, obtained the earldom of Kintore, and the post of knight-marischal with £400 a year, as if he had been in truth the preserver of the regalia; whilst Mrs. Grainger, the real instrument of the preservation, received nothing for her share in the transaction, but the promise of a reward which was never given. George, the last earl-marischal, having joined in the rebellion of 1715, the title and estates of the family were forfeited to the crown; and the castle, which had been previously purchased by government, was dismantled, and has since been a ruin.

The PARISH is situated on the road from Aberdeen to Edinburgh, and bounded on the north by the parish of Fetteresso, from which it is separated by the Carron rivulet; on the east by the German Ocean, on the south by the parish of Kinneff, and on the west by that of Glenbervie. Its surface is boldly diversified with hills, of which Carmount, at the extremity of an extensive heath of that name, has an elevation of more than 800 feet; and with successive ridges for nearly three miles towards the north-west. The coast is abruptly precipitous, consisting of a range of cliffs in detached masses, rising from 150 to 300 feet in height. In these cliffs are numerous caverns worn by the action of the waves, one of which, called the Long Gallery, under a lofty promontory, extends more than 150 yards in length, and affords a channel through which a boat may pass from the bay at its entrance to another at its outlet. To the south of this cavern is Fowlsheugh, the highest of the rocks on this part of the coast, and the haunt of aquatic birds of every description, that build their nests and hatch their young in these almost inaccessible heights. Of late years, the birds have greatly diminished in number.

The area of the parish is 8156 acres, of which 4860 are arable, 690 woodland and plantations, and 2606 natural pasture and uncultivated waste. Its soil is various, consisting in different parts of clay, loam, sand, and gravel, and being frequently found in all these varieties on the same farm. The system of agriculture has been much improved, and the rotation plan of husbandry is in use; much unprofitable land has been brought into cultivation; the farm-buildings are in general substantial and commodious, and great attention is paid to live stock. There are few sheep reared; the cattle are usually of the black kind, and are mostly sold when two years old. The annual value of real property in the parish is £8768. The woods are of oak, ash, and beech, of which there are many fine specimens on the lands of Anquharie; the plantations, the most extensive

of which are on the estate of General Forbes, are of pine, larch, and Scotch and spruce firs, intermixed with various kinds of hardwood, and all the trees, with the exception of the Scotch fir, thrive well. The moorlands abound with every kind of game; there are partridges in great numbers, some few pheasants, and snipes, wild duck, and teal are plentiful. The rocks on the coast are for the greater part of the pudding-stone formation, with portions of trap and porphyritic granite, and occasionally of columnar basalt; sandstone is extensively quarried, and a species of flag, formerly in use for roofing, is also wrought. Dunnottar House, the seat of General Forbes, is a spacious mansion surrounded with rich and flourishing plantations; the gardens attached to the house were formed at an expense of £10,000. Bar-ras, the ancient seat of the Ogilvys, is now a farm-house. The weaving of linen is carried on to a small extent, and many of the inhabitants are engaged in the fisheries and other branches of trade in the town of Stonehaven: Crawton, in the south-eastern portion of the parish, is chiefly inhabited by persons employed in the white-fishery, which is extensively carried on off this part of the coast. Facility of communication with the neighbouring markets is afforded by good roads in every direction; along the sea-coast is the high road to Edinburgh, and the Strathmore turnpike-road passes through the interior of the parish. Ready intercourse is also afforded by the Aberdeen railway. Ecclesiastically the parish is within the bounds of the presbytery of Fourdoun, synod of Angus and Mearns: the minister's stipend is £233, with a manse, and a glebe valued at £8 per annum; patron, the Crown. Dunnottar church, erected on the site of the former building in 1782, is a neat and commodious structure pleasingly situated. The parochial school is in Stonehaven, and is well attended; the master has a salary of £34, with a house and garden, and the fees average £46. The remains of Dunnottar Castle are very extensive, occupying an area of five acres on the summit of an abrupt and precipitous cliff, boldly projecting from the mainland, with which it is connected by an isthmus nearly covered by the sea at high water: the great tower is still almost entire; and the various ranges of building, which, though roofless, are in tolerable preservation, convey an impressive idea of former grandeur and importance. In the churchyard is a gravestone to the memory of some Covenanters who were confined in the castle; and here Sir Walter Scott, then on a visit to the minister of the parish, is said to have had his first interview with the individual whom, in his *Antiquary*, he describes under the appellation of "Old Mortality".

② DUNOON and KILMUN, a parish, in the district of COWAL, county of ARGYLL, $7\frac{1}{2}$ miles (W. by S.) from Greenock; containing 4211 inhabitants. The early history of this parish is involved in great obscurity, and rests chiefly on tradition. Its castle, of which neither the date nor the founder is distinctly known, anciently belonged to the hereditary high stewards of Scotland, to whom Malcolm gave a grant of lands in the district in the eleventh century. During the contested succession to the throne, the castle was besieged by Baliol, to whom it surrendered, in 1333; but in the following year it was re-captured by Robert Bruce, and placed under the custody of the Campbells, ancestors of the Argyll family, who were appointed hereditary constables, and also lords of Cowal. The Earl of Len-

nox, while seeking to become regent of the kingdom, appeared in the Clyde with a fleet, in 1554, and having made himself master of Rothesay, proceeded to this place, and laid siege to the castle, which was held by his powerful opponent Archibald, Earl of Argyll, whom he compelled to retreat with severe loss. In 1563, Mary, Queen of Scots, paid a visit to the Countess of Argyll, in her progress through the west, and, during her residence here, granted several charters to the inhabitants of the district, which are still extant. The castle continued in the possession of the Earls of Argyll till the end of the seventeenth century, since which time it has been suffered to fall into ruin: the remains consist only of part of one of the towers, in a dilapidated state, affording but a very inadequate idea of the original buildings, which appear to have covered an acre of ground. Kilmun, formerly a separate parish, is supposed to have derived its name from the erection of a church dedicated to St. Mun near the shore of the Holy loch, upon the spot where a stranded vessel from the Holy Land, laden with consecrated earth for the foundation of the cathedral of Glasgow, deposited what portion of her cargo could be saved from the wreck. A collegiate church was subsequently founded here, and endowed for a provost and six prebendaries in 1442, by Sir Duncan Campbell of Lochawe, first lord of Argyll, and grandfather of Colin Campbell, the first earl; the only portion now entire is the square tower, about forty feet in height.

Dunoon is bounded on the south and east by the Firth of Clyde; and Kilmun by Loch Long on the east, and partly by the Holy loch, an inlet from the Firth, which on the south separates a portion of it from Dunoon. The districts were united about the year 1660, and are together twenty-four miles in length and from two to nine miles in breadth, comprising about 144 square miles. The surface towards the shores of the Clyde, along the greater part of it, slopes gently to a level plain; the interior is intersected in various directions with several mountainous ridges, of which that forming part of the range of hills in the vicinity of Benmore is the most elevated. These ranges are the boundaries of some extensive valleys which they inclose between their steep acclivities, and of which the principal are, Strath-Echaig, about two miles in breadth, and extending for nearly four miles to Loch Eck, which thence forms its continuation for about seven miles; Glenfinart, three miles in length, and, like the former, richly wooded; and Glenmassan; all abounding with romantic scenery. Numerous mountain streams, many of them having pleasing cascades, traverse the parish; but the only one that can be called a river is the Echaig: it issues from Loch Eck, and after a course of about four miles through the vale of Echaig, in which it receives the Massan and another stream, falls into the Holy loch. Loch Eck, about one-half of which is within the parish, is nearly seven miles in length, and half a mile broad; the banks are precipitous and well wooded, and the scenery around beautifully diversified. The soil is generally a light sandy loam of no great depth, and in some parts of the valleys deeper and of richer quality. The crops are oats, a very little barley, potatoes, and turnips; wheat was formerly raised, but has been abandoned: the pastures are good, and great attention is paid to live stock. The system of agricul-

ture is improved; the lands in cultivation are well drained, and considerable tracts of waste have been reclaimed and rendered productive. The cattle are of the West Highland breed, with the exception of some of the Ayrshire on the dairy-farms; and the sheep of the black-faced kind, with a few of the Leicestershire and Cheviot breeds. The substrata are chiefly mica and clay slate, sandstone of the old red formation, and in some parts limestone, but of very inferior quality; there are quarries of slate and freestone, but they are not extensively wrought. The annual value of real property in the parish is £15,754.

The principal seat is Castle Toward, a handsome mansion in the later English style of architecture, erected by the late Kirkman Finlay, Esq., and situated in an ample and richly-wooded demesne, commanding extensive and varied prospects. Hafton House is in the Elizabethan style, and beautifully seated on the western shore of the Holy loch, in an extensive park embracing fine views of the Firth. Glenfinart House is a spacious modern building in the old English style, erected on the site of a mansion occupied by the late Earl of Dunmore, on the shore of Loch Long, at the opening of the valley of Glenfinart. Benmore House, Bernice, and the Castle House near the ancient castle of Dunoon, are also handsome mansions beautifully situated. The village of Dunoon stands on the margin of the Clyde, and is much frequented during the summer months by parties on excursions of pleasure; the houses are neatly built, and numerous pleasing villas have been erected. The small village of Kilmun, on the northern shore of the Holy loch, is also a place of favourite resort. Though not recognised as a port, a pier or jetty has been constructed at Dunoon for the accommodation of passengers by the steam-packets which touch at the place; and a substantial quay has also been erected at Kilmun. The only trade is the shipping of cattle, sheep, and agricultural produce, for Liverpool and other English markets; a schooner of eighty tons' burthen was lately built here, and is now employed in the foreign trade. There are post-offices at Dunoon, Kilmun, and Ardentinny, the first having two deliveries daily in winter and three in summer, and the others one delivery each. Facility of communication is afforded by good roads, and by the steamers from Glasgow, Greenock, and other ports on the Clyde. Fairs are held on the second Wednesday in January, February, August, and October, and the third Tuesday in November (all O. S.).

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Dunoon, synod of Argyll. The minister's stipend is £275, with a manse, and a glebe valued at £36. 17. per annum; patron, the Duke of Argyll. The church at Dunoon was erected in 1816; it is a handsome structure in the later English style, with a square embattled tower, and since its enlargement in 1834 contains 793 sittings. The present church at Kilmun was erected in 1841; it is also a handsome building, with a tower of loftier elevation than that of the ancient church, which is still remaining. Chapels of ease have been built at Toward and Ardentinny, partly by subscription, aided by grants from the Church Extension fund; they are under the charge of missionaries, who receive from £70 to £90 each from funds subscribed for that purpose. A third missionary has a similar stipend for assisting the minister of the parish,

who officiates alternately in each of the two churches. There are places of worship for members of the Free Church and the United Presbyterian Synod. Parochial schools are supported at Dunoon, Kilmun, and Toward; the master of Dunoon has a salary of £30, of Kilmun £25, and of Toward £22, with a house and garden each, in addition to the fees. Two schools are maintained by the General Assembly, the masters of which have salaries of £25 each, one at Dalilongard, and the other at Ardentinny; and a female school of industry, the mistress of which has a salary of £30, with a house and garden, is supported by an association of ladies. There is also a school in connexion with dissenters. Some vestiges remain of what is supposed to have been a Roman camp, on the farm of Ardinslat; Druidical remains still exist, and various stone coffins of rude formation, containing skeletons in a perfect state, have been found. There are also ruins of the castle of Toward, the ancient baronial residence of the Lamonts.

DUNREGGAN, a village, in the parish of GLEN-CAIRN, county of DUMFRIES, $5\frac{1}{2}$ miles (W. S. W.) from Penpont; containing 277 inhabitants. It is a well-built and thriving place, situated on the banks of the Dalwhat stream, over which is a stone bridge, forming a communication with the village of Minnyhive. The road from Dumfries to Glasgow passes in the vicinity. The population has latterly considerably increased.

DUNROSSNESS, a parish, in the county of SHETLAND; including Fair Isle, the island of Mousa, and the quoad sacra district of Sandwick and Cunningsburgh; and containing 4494 inhabitants. This parish is situated on the southern extremity of the Mainland, and forms the principal part of a peninsula, washed on the east, south, and west by the sea. The shore, though not so deeply indented with inlets as that of most other parts of the Shetland Isles, is still very irregular in its outline, and contains several voes, the chief of them being Grutness and West voe: both these, with Quendale bay, are near Sumburgh head, the most southern point of the Mainland, rendered classical by Sir Walter Scott's *Pirate*, and on which an excellent lighthouse was erected a few years since, at an expense of about £40,000. Among the islands in the parish are those of Colsay, Mousa, St. Ninian's, and Fair Isle; they are used chiefly for the pasturage of sheep and cattle, and, with the exception of the last, are inconsiderable. The exposure of Dunrossness is remarkably bleak and stormy; farms have been destroyed by the drifting of sand, and there is an inlet now filling up which before was used as a creek or harbour: on the whole, however, the district yields to very few, if any, in Shetland, in the fertility of its soil and the quality of the crops. The lochs of Braw and Spiggie are the resort in winter of wild swans; and eagles, ravens, and hawks, with a great variety of wild-fowl, frequent the shores. At this time of the year, the stormy seas, and the dreary tracts of peat-moss, invest the locality with a wild and uninviting appearance; but at other periods the scene is greatly altered, and especially during the operations of harvest and fishing every thing wears a pleasing aspect.

The SOIL of the lands under cultivation is various, comprehending sand, loam, and clay; the crops consist principally of bear, black oats, potatoes, and turnips. Ploughs, drawn by horses, are used in some parts; but most of the small farms are turned by the spade, and

husbandry, as in all other districts of Shetland, is made entirely subordinate to the occupation of fishing. The annual value of real property in the parish is £1665. At a place called Fitfill, copper-ore was wrought some years since; and shafts were also sunk at Sand Lodge, in Sandwick, but the operations, proving unsuccessful, were shortly abandoned. The inhabitants are engaged in the ordinary kinds of fishing, and three or four vessels come annually to Levenwick bay, from Rothesay, to receive the herrings immediately after they are taken. In addition to the trade in fish, considerable quantities of potatoes of very good quality, as well as of oats and bear, are sent to Lerwick for sale; and a small profit is derived from the manufacture of kelp. Ecclesiastically the parish is in the presbytery of Lerwick, synod of Shetland, and in the patronage of the Earl of Zetland. The minister's stipend is £208, exclusive of a vicarage-tithe on a certain number of lambs and quantities of butter and wool; the manse and glebe are valued at £20 per annum. The church was built in 1790, and contains 858 sittings. On Fair Isle is another church, a substantial edifice, erected many years ago by the then proprietor of the island; it affords accommodation to about 150 persons. There are meeting-houses for Baptists and Methodists. The parochial school is situated in the Sandwick district; and in Dunrossness, and also at Cunningsburgh, is a school supported by the Society for Propagating Christian Knowledge: in each of the three places a library has likewise been instituted.

○ DUNSCORE, a parish, in the county of DUMFRIES, 9 miles (N. W.) from Dumfries; containing, with the village of Cottack, 1517 inhabitants. This place is not remarkable for any events of historical importance, but it was formerly the seat of some families of considerable antiquity, the chief of whom were the Griersons of Lag, of Chapel, and of Dalgoner, the Kirks or Kirkhoes of Bogrie and Sundaywell, and the Kirkpatrickes of Elliesland and Friars' Carse. The Griersons possessed the Tower of Lag, now a ruin, for many generations, Gilbert M'Gregor or Grierson having migrated from the Highlands about the year 1408, and obtained the lands from John McWrath: in the conveyance deed Gilbert is described as armour-bearer to Archibald, Earl of Douglas. A descendant of this family joined the Maxwells of Nithsdale against the Johnstones of Annandale, and fought at the famous battle of Dryfe-Sands in 1593. There is still a lineal representative of the family remaining in the parish. Considerable estates at Dunscore were given to the monks of Melrose by Africa, daughter of Edgar, son of Dunevald and grandson of Dunegal of *Stranith*, a term implying "the strath or valley of Nith": Edgar had possessed the lands under William the Lion, and been succeeded in them by his daughter, who assigned so large a portion to the monks. The benefice of Dunscore, however, belonged to the monastery of Holywood, and the cure was served by a vicar. In the parish are some lands called the Friars' Carse, formerly a monkish residence dependent on the establishment of Melrose; a small loch on the property, containing an artificial island, is said to have been the ancient fishpond, and the island the place where the monks hid their valuables when the English invaded *Stranith*.

The PARISH is twelve miles long, and varies in breadth from half a mile to three miles and a half, containing

12,500 acres. It is bounded on the north by the parishes of Glencairn and Keir; on the south by the parish of Holywood and the stewartry of Kirkcudbright; on the east by the river Nith, which separates it from the parish of Kirkmahoe; and on the west by the loch and water of Urr, dividing it from the stewartry. In the neighbourhood of the Nith the surface is flat, but in other parts it is greatly diversified with hills and valleys; the upper district is mountainous and rocky, and Bogrie, the most elevated hill, rises more than 1200 feet above the level of the Solway Firth. The Nith runs for two miles along the boundary; and the Cairn, a much more rapid stream, over which is a bridge eighty feet in span, divides the parish into two parts, and after receiving the Clouden, falls into the Nith a little below Irongray. In the lower district the soil is in general a light gravelly or sandy earth; the holm land on the banks of the Nith and the Cairn is alluvial, and much richer and deeper: in the upper parts the soil is mostly a kind of loam, on a tilly subsoil, and very stony. There are considerable tracts of peat-moss. Full three-fourths of the land are under cultivation; 500 acres are meadow, 250 plantation, chiefly consisting of larch and fir, and sixty natural wood, consisting of birch and oak. All kinds of grain are raised, as well as green crops; agriculture has been gradually advancing for some time past, and improvements have been effected in every department. On the estates of Allanton, Dalgoner, Friars' Carse, and Stroquhan are good and substantial mansion-houses. The inhabitants are chiefly employed in husbandry, but weaving is also carried on, to an inconsiderable extent. The Glasgow and Dumfries turnpike-road passes through the parish, from which a branch strikes off at the lodge of Friars' Carse, leading westward through Balmaclellan to New Galloway; there is also a road intersecting the parish from Dumfries to Ayr. The annual value of real property in Dunscore is £8900.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery and synod of Dumfries; patron, the Crown. The stipend of the minister is the minimum, with an addition of £12. 12. voluntarily given by the heritors since 1793: there is a good manse, with a glebe of fifty-one acres. The church, standing in the village of Cottack, in the centre of the parish, is a well-built structure, surmounted with an elegant square tower at the west end; it was erected in 1823, and contains 850 persons. The members of the Free Church have a place of worship, and there is a meeting-house belonging to the United Presbyterian Synod. Three parochial schools are supported, in which the classics, with all the usual branches of education, are taught: about £51 per annum are portioned equally among the masters, who also receive the interest of £300 bequeathed about a century ago, by Mr. Grierson of Edinburgh. The master of the central school has, in addition, the interest of £50 bequeathed in 1807 by Mrs. Janet Dobie, and of £50 left in 1829 by Robert M'Kinnel, Esq., of McMurdston, who also at the same time left £200 for the school in the lower district. Among the relics of antiquity are those on Springfield hill, a considerable eminence; consisting of traces of a military station, supposed to be Roman, of an oblong form, and covering two acres of ground: there appears to have been an entrance on the east side. Burns the poet resided for several years in the parish, at the farm of Elliesland.

DUNSE, a market-town, burgh, and parish, in the county of BERWICK, 15 miles (W.) from Berwick, and 42 (S. E.) from Edinburgh; containing, with the former quoad sacra district of Boston, 3162 inhabitants. This place derived its name from the situation of the ancient town on the north-western acclivity of the hill on the south side of which, after the old town was burnt by the English, the present was erected near the base of the eminence, towards the close of the sixteenth century. It is neatly built; the houses are chiefly modern, and of good, and in some instances handsome, appearance: the streets are spacious, well paved, and lighted, and the inhabitants are amply supplied with water by a committee of the feuars, at the expense of the common property of the town. There are neither any manufactures, nor much business carried on here, except such handicraft trades as are requisite for the supply of the inhabitants and the immediate neighbourhood; but the town is thriving, and is one of the most important in this part of Scotland. A public library, forming a very fair collection, is maintained by subscription; and there are also a reading-room furnished with newspapers and periodical publications, and two circulating libraries that are liberally supported. The post has a good delivery. The market is on Wednesday, and fairs for cattle and horses are held in June, August, and November, and are well attended; there are also markets in March, May, July, and September, for sheep, of which a great number are sold. Facility of communication with Berwick, Edinburgh, and other places, is afforded by the Dunse branch of the North-British railway, and by excellent roads.

A charter was granted in 1489, by James IV., constituting the town a BURGH OF BARONY, with power to choose magistrates, and to exercise all the privileges usually enjoyed by burghs of barony; and these rights appear to have been exercised for nearly two centuries, during which the bailies and burgesses had municipal jurisdiction within the limits of the burgh. In 1670, a charter was granted by Charles II. to Sir James Cockburn, who had purchased the lands of Dunse from the Homes of Ayton, confirming all the previous immunities, which were afterwards vested in the family of Hay of Drummelzier, whose descendant William Hay, Esq., of Dunse Castle, is the present superior of the barony. Under the superior the government of the burgh is administered by a baron-bailie, who exercises the ordinary jurisdiction in cases of petty offences against the peace, and in pleas of debt and trespass to a limited amount. The town-hall, erected in 1816 at an expense of £2688, of which £1488 were raised by the sale of the common belonging to the burgh, and the remainder by subscription, is a handsome edifice in the ancient style of English architecture, the upper part containing a spacious hall or court-room for the transaction of business relating to the burgh, and for the holding of public meetings, under which are some shops. The police is under the direction of commissioners under the general burgh police act, who represent the ancient burgesses, and unite with the baron-bailie in the general management of the town. There are within the burgh 148 houses of the annual value of £10 and upwards, and eighty-four of more than £5 and under £10.

The PARISH is about six miles in length from south-east to north-west, and three miles and a half in average breadth, and of very irregular form. It is bounded on

the north and east for a considerable space by the river Whitadder, and comprises 12,000 acres, of which nearly 6000 are arable, 1000 in woods and plantations, and the remainder hill-pasture. The surface is exceedingly diversified: in the north it forms part of the Lammermoor range of hills, including Cockburn Law, which is about 900 feet above the level of the sea, and a conspicuous landmark for vessels navigating the coast; and in the eastern and southern portions, also, it rises in gentle undulations to a considerable height, attaining at Dunse Law an elevation of 630 feet above the sea. Besides the Whitadder, there is a small rivulet called Langton burn, which has its source in the parish of that name, and after forming a part of its southern boundary, falls into the Blackadder near Wedderburn. There are springs of water fit for domestic use in the town, and a supply was formerly obtained from a spring on Dunse Law; but by the appropriation to that purpose of a considerable sum of money bequeathed by Alexander Christie, Esq., of Grueldykes, an abundant supply of excellent soft water has, with the permission of Mr. Hay, been conveyed in pipes from a spring near the site of the old town. There is a lake of artificial construction, formed in the grounds of Dunse Castle for the embellishment of the demesne. Salmon and grilse are found in abundance in the Whitadder, during the months of September and October; and in the month of May, trout of a delicate flavour are plentiful in the Langton burn. The scenery is richly diversified, displaying in some parts a considerable boldness of feature, and in others much picturesque beauty; and from the higher grounds are extensive and finely-varied prospects.

In the northern district of the parish the soil is of a dry gravelly quality, in the south a rich deep loam, and in those parts in the more immediate vicinity of the town a dark sandy loam. The crops are, grain of all kinds, potatoes, and turnips. The system of agriculture is in a very advanced state, and the five-shift course generally practised; the lands are well drained and inclosed, and all the improvements in husbandry and in agricultural implements have been adopted. A due degree of attention is paid to live stock; the sheep are of the Leicester and Cheviot breeds, and the cattle of the short-horned or Teeswater, with the exception of some Kyloes or Highland oxen fattened for home consumption, the others being chiefly reared for the English markets. The annual value of real property in the parish is £15,922. The woods and plantations are under good management, and in a very thriving condition. The chief substrata are greywacke and greywacke-slate, with alternations of greenstone and of red sandstone both of the old and new formation: granite and porphyry are found in some of the hills. The sandstone is quarried in the southern part of the parish, and abounds with vegetable impressions. *Dunse Castle* is an elegant and spacious mansion in the ancient English style, mostly of modern erection, and including the old tower built by Randolph, Earl of Moray, which is incorporated with the present structure; it is beautifully situated in a demesne tastefully laid out, and embellished with the lake already referred to, abounding with tench and perch. *Wedderburn Castle* is a stately mansion in the Grecian style, finely seated in richly-planted grounds; and *Manderston* is also a handsome house, the grounds of which are embellished with a sheet of water, and flourishing plantations.

Ecclesiastically the parish is in the presbytery of Dunse, synod of Merse and Teviotdale, and in the patronage of William Hay, Esq.; the minister's stipend is of the average value of £300, with a manse, and a glebe valued at £25 per annum. Dunse church, erected in 1790 to replace the ancient building, of Norman character, which had fallen into decay, is a plain neat edifice adapted for a congregation of 900 persons. There are places of worship for the United Presbyterian Synod and members of the Free Church. The parochial school affords education to about 120 children; the master has a salary of £34, with £70 fees, and a house and garden. The poor have the proceeds of a legacy of £100 by General Dickson, and of one of £1000 by Alexander Christie, Esq. There are also two friendly societies and a savings' bank, which have contributed to diminish the number of applications for parochial relief. The foundations are still remaining of Edinshall Castle, situated on the slope of Cockburn Law, and one of the earliest of the fortresses erected by the Saxons on their invasion of Britain. It was of circular form, about eighty-six feet in diameter, and the walls were nearly sixteen feet in thickness, and perforated in the interior with numerous cells, extending round the whole, and apparently vaulted; but the materials have been almost entirely removed for various purposes, and little more than the foundations are remaining. On the east and south of the circular tower, are the foundations of several quadrangular buildings; and the whole was defended by ramparts of stone and earth, between which were trenches of considerable depth. From the situation of the building, it appears to have been rather intended for a residence than a military post. On the summit of Dunse Law are vestiges of the intrenched camp occupied by General Leslie and 20,000 Covenanters in the year 1639. Boston, author of the *Fourfold State*, a well-known religious work; Abraham Robertson, LL.D., Savilian professor of astronomy in the university of Oxford; the Rev. Thomas Mc Crie, D.D., author of the *Life of John Knox* and other works; and the Rev. James Gray, who, officiating in his ministerial capacity at Cutch, in the East Indies, and superintending the education of the prince of that country, died there in 1830, were natives of the place. It is said that the celebrated Duns Scotus was likewise born at Dunse, in the year 1274, and the place where his house is supposed to have stood is still pointed out.

(cup) DUNSHELT, or DANESHALT, a village, in the parish of AUCHTERMUCHTY, district of CUPAR, county of FIFE, 1 mile (S. E.) of Auchtermuchty; containing 646 inhabitants. This place takes its name from its having been the retreat of the Danes, who, in one of their invasions, being defeated in the battle of Falkland Muir, retired from the field, and took refuge from the pursuit of the conquerors in the lower part of the parish. The village is pleasantly situated on the river Eden, and on the road to Falkland. It is chiefly inhabited by persons employed in the weaving of linen and cotton goods for the manufactures of Glasgow, Aberdeen, and Dundee. There is a place of worship for dissenters, and also a school in the village.

(o) DUNSYRE, a parish, in the Upper ward of the county of LANARK, $1\frac{1}{2}$ mile (W. N. W.) from Robertson, and 5 miles (S. W.) from Linton; containing 288 inhabitants, of whom 68 are in the village. This place, the name of which, of Celtic origin, is supposed to signify

the "hill of the seer", appears to have formed part of the possessions of various families of distinction in the earlier periods of Scottish history, and is now, with the exception of a small portion, the property of Sir Norman Macdonald Lockhart, Bart. The parish is more than four miles in length from north to south, and from three to four miles in breadth, and is bounded on the east and south by the South Medwin, and on the north by the North Medwin and Dryburn. It comprises an area of 11,000 acres, of which about one-eighth are arable, and the remainder pasture and waste, with about forty acres of woodland and plantations. The surface is generally elevated, and rises into hills of considerable height, of which that of Dunsyre forms the termination of the Pentland hills, a range extending nearly twenty miles from the immediate vicinity of Edinburgh. This hill has an elevation of 500 feet above the general surface of the lands, and of 1230 feet above the sea; and a small range of gradually diminishing hills branches off from it towards the west, stretching to the parish of Carnwath. Between the Dunsyre and Walston ranges is the level valley of the South Medwin, about three miles in length and a mile broad. The scenery of the parish is enlivened with plantations and with numerous streams, of which the only one that may be called a river is the South Medwin, having its source in the north-eastern extremity of the parish, near the base of Cragingar, and which, flowing through the valley, is, after a course of two or three miles further, diverted towards the west, where it receives a stream called the West water, issuing from the hills to the north. Craneloch is about a mile in circumference, but being situated in the moorland, its scenery is destitute of beauty, presenting nothing but marshy lands skirted with heath; it abounds with pike and perch, and trout are also found in the Medwins. The lands abound with springs of excellent water, and there are some which have a petrifying quality, and others strongly impregnated with iron.

The SOIL is generally light and sandy, in some parts intermixed with clay, and in others almost a barren heath; the crops are oats, barley, potatoes, and turnips. The system of agriculture is advanced, and the rotation plan of husbandry universally adopted; the lauds have been drained to a considerable extent, and the channel of the South Medwin straightened to afford greater facilities for draining the marshy grounds in its vicinity. Attention is paid to the management of the dairy, and to the improvement of stock; the milch-cows on the dairy-farms are all of the Ayrshire breed, and a cross-breed of cattle of a heavier stock is reared for agricultural purposes and for the market. More than 3000 sheep, chiefly of the black-faced breed, are pastured. Considerable quantities of cheese and butter are sent to the neighbouring markets; and the dairy produce generally is esteemed equal in quality to that of any part of the county of Ayr. The annual value of real property in the parish is £2624. The substrata are mainly whinstone of a bluish colour, freestone, and an indifferent kind of limestone, with partial seams of a much purer kind resembling grey marble, and varying from eight to sixteen feet in depth. Traces of iron-ore are found in several places, and copper-ore is supposed to exist. Coal is also thought to prevail in some parts, but no efficient attempt to procure it has yet been made. The woods and plantations are chiefly Scotch fir and

larch, but they are rather diminishing than increasing in extent. The village is pleasantly situated in the vale of the North Medwin: at Medwin Bank are a carding-mill and a dyeing establishment. Ecclesiastically the parish is in the presbytery of Biggar, synod of Lothian and Tweeddale, and in the patronage of the Crown; the minister's stipend is £156. 15., with a manse, and a glebe valued at £28 per annum. Dunsyre church, situated on an eminence on the bank of the river South Medwin, is an ancient edifice, with a tower in the later English style, which was added to it in 1820, when it underwent a complete repair; it is adapted for a congregation of about 250 persons. The parochial school is well attended; the master has a salary of £25, with £5 fees, and a house and garden. There were formerly numerous castles in the vale of Dunsyre, in one of which the baron-bailie held his courts. Several relics of Roman antiquity still remain, and the ancient Roman road through the lands to the camp at Cleghorn may be traced. The entrance to the glen in which the hill of Dunsyre is situated, and which is called the Garvaid, forms a communication between the east and west portions of the parish; the route of the army of Agricola through this rugged defile is pointed out by a dyke of earth, and some cairns are yet remaining, in which sepulchral urns of burnt clay, rudely carved, have been discovered.

village
 DUNTOCHER, for a time a quoad sacra parish, in the parish of OLD KILPATRICK, county of DUMBARTON; containing 3309 inhabitants, of whom 2749 are in the village, 8 miles (N. W. by W.) from Glasgow. This very thriving place, which, less than forty or fifty years since, had only a few scattered houses, owes its prosperity to the enterprising spirit of a resident, Mr. William Dunn, who about that period purchased the Duntocher mill and extended the works for spinning cotton-yarn. In the neighbourhood are now several vast establishments for this branch of manufacture, and for weaving, all of them aided by powerful steam machinery. Many of the inhabitants also are employed in coal, lime, and iron works, in brick-making, and various other pursuits, chiefly on the property of Mr. Dunn here; and all around presents a scene of remarkable and successful industry: the iron-works are principally for making spades, shovels, and other implements, and those parts of iron used in building sailing-vessels. The village is situated about two miles distant northward from the river Clyde, on the road from Kirkintilloch to Dumbarton; and in the immediate vicinity are the villages of Fairley and Hardgate. A sub post-office has been established under Glasgow. At Duntocher is a bridge supposed by some to be a Roman structure, and near which is a modern engraved stone stating that it was erected in the reign of Adrian; but it is probable that the materials whereof it is built were obtained at a more recent date from a contiguous Roman fort, the lines of which can with difficulty be traced: the bridge was repaired in 1772 by the then Lord Blantyre. Ecclesiastically, Duntocher is in the presbytery of Dumbarton, synod of Glasgow and Ayr; the stipend of the minister is £114, produced by seat-rents and collections, and the patronage is vested in the male communicants. The church was erected in 1836, at the cost of about £1660, contributed by the General Assembly and by opulent individuals in the neighbourhood, and is a very chaste

and handsome edifice, containing accommodation for 876 persons. The members of the Free Church have a place of worship, and there are two other meeting-houses and a Roman Catholic chapel; besides schools. A sepulchral stone of Roman origin, and of elegant design and workmanship, was discovered some time since. In the front of the house next the bridge is placed a square stone with figures carved upon each side of it, found in the vicinity some time ago: it is supposed to have been the principal part of an altar to Jupiter Olympus, and the owner has several times been offered a considerable sum for it. Not far from the other end of the bridge, a few years since, there was discovered the mouth of a vault that entered the hill in a south-east direction; and when examined by some of the inhabitants, a number of small rooms were found not far from the entrance, in some of which the ashes where fires had been kindled were still to be seen. The interior was wholly of brick-work, a part of which has since been removed for other purposes.

DUPPLIN, county of PERTH.—See ABERDALGIE.

DURINISH, ISLE of SKYE.—See DUIRINISH.

DURISDEER, a parish, in the county of DUMFRIES; containing, with part of the village of Carron-bridge, 1445 inhabitants, of whom 107 are in the village of Durisdeer, 6 miles (N. by E.) from Thornhill. This district, which in ancient times was covered with wood, is supposed to derive its name from *duris*, signifying a door, and *deer*, a forest. Several great families have been connected with it, the chief of which are those of Douglas, Stuart, the Menzies of Enock, and the Hunters of Balagan. Its castle, with the fortresses of Dumfries, Dalswinton, and Morton, by an agreement between the English and the Scots, was demolished, as troublesome to the former, at the restoration of King David Bruce, who, after being captured at the battle of Durham, had been kept eleven years prisoner in England. The parish is eight miles long and six broad, and contains nearly 20,000 acres. It is almost surrounded by hills, covered with grass, heath, or bent, and the highest of which are the Lowthers, on its north-eastern side, which rise 3130 feet above the level of the sea: the climate is bleak, but dry and healthy. The river Nith runs through the lands, in a direction from north-west to south-east, and besides this important stream, there are five considerable burns, viz., the Enterkin, the Carron, the Hapland, the Maarburn, and the burn at Crarie-Knoll.

The soil in general is loamy, deep, and fertile, in many places inclining to a reddish colour; in some parts it is gravelly and sandy, and occasionally wet and heavy. About 7896 acres are cultivated, 9554 are hill-pasture, and 2000 are occupied by wood, including 500 acres that are of natural growth: the plantations chiefly consist of hard-woods, in the thinning of which every tree is in course of time removed, except the oak. The usual kinds of grain and various green crops are raised, of good quality; the cattle are of the Galloway breed, and the sheep the black-faced: the improved system of husbandry is followed, and considerable advances have been made in fencing, the construction of farm-buildings, and the formation of roads. The annual value of real property in the parish is £7901. The rocks in the hills are whinstone or greywacke, and on the low grounds chiefly sandstone of a red colour, and very soft,

though in some places white, and of a much firmer texture: quarries have been opened for stone adapted for farm-buildings and dykes. Drumlanrig Castle, in the parish, a seat of the Duke of Buccleuch and Queensberry, whose property extends over a very large district in this part of the country, is described under its own head. The village is situated near the eastern boundary of the parish, on the road from Dumfries to Edinburgh. Ecclesiastically the parish is within the bounds of the presbytery of Penpont, synod of Dumfries; patron, the Duke of Buccleuch. The stipend of the minister is £221, and there is a manse, with a glebe valued at £25 per annum. Durisdeer church, erected in 1720, contains a handsome marble monument, representing James, second Duke of Queensberry, weeping over the form of his deceased duchess: a vault attached to the church is the burying-place of the family. There are two parochial schools, in which the classics and the usual branches of education are taught; the salaries of the masters are respectively £30 and £24, with about £10 fees each, and the accommodation of a house each. A third school is carried on in the parish, at Enterkinford; the master receives £10 per annum from the Duke of Buccleuch. About a mile above the church are vestiges of a Roman camp which appears to have been a summer station connected with the camp at Tibbers.

DURNNESS, a parish, in the county of SUTHERLAND, 20 miles (N. W. by W.) from Tongue, and 76 (N. W.) from Golspie, containing 1109 inhabitants. This parish probably derives its name, which is of doubtful origin, from *Durin*, the principal township, and *ness*, a headland or promontory. It anciently comprised the whole of the lands called "Lord Reay's Country", a district 800 square miles in extent, from which, since the year 1724, have been separated the parishes of Tongue on the east, and Eddrachillis on the south-west. The parish is bounded on the north by the North Sea, and on the west by the Atlantic Ocean, and is about twenty-five miles in length and twelve in average breadth, comprising, with its several inlets, an area of 300 square miles, of which scarcely one-hundredth part is under cultivation. Its surface, which is boldly diversified, and abounds with magnificent scenery, is naturally divided into three mountainous districts, separated from each other by spacious inlets from the North Sea. Of these the district of *Parf*, extending from the Atlantic Ocean on the west to the Kyle of Durness, occupies an area of more than seventy square miles; the district of *Durness*, reaching from the Kyle to the western shore of Loch Eriboll, has an area of about eighty square miles; and the district of *Westmoin*, extending from the eastern shore of Loch Eriboll to the morass east of Loch Hope, contains nearly 100 square miles. The principal *Mountains* in the parish are, Scribhisbheinn, Faisbheinn, Fairemheall, Creigriabhach, and Bendearg, all in the *Parf* district, varying in height from 1500 to 2500 feet; Ceanuabinn, Meallmeadhonach, Cranstackie, and Ben-Spionnadh, in the Durness district, of which Ben-Spionnadh has an elevation of 2566 feet; and Ben-Hope, 3150 feet in height, in the district of *Westmoin*, which contains also several ranges of lofty and precipitous hills. The valleys are, *Strath-Dinard*, extending from the Kyle of Durness along the river Grudy for about fourteen miles; *Strath-Beg*, a narrow fertile vale about two miles in length; and *Strathmore*, extending

from the north base of Ben-Hope, for about six miles, along the banks of the river to which it gives name. Among the rivers are the *Strathmore Water*, which has its source in Glen-gollie, and having run for ten miles, flows into Loch Hope; the *Hope*, which is merely a continuation of the *Strathmore Water*; and the *Dinard*, which rises in Loch Dinard, and after a course of ten miles falls into the Kyle of Durness. These rivers are impetuous, especially when swollen after heavy rains, and afford good fishing. There are numerous inland lakes, of which the most extensive is *Loch Hope*, six miles in length, and about half a mile broad. *Loch Borley* is one mile in length, abounding with char, and in its centre is a beautiful green island. *Loch Crospul* is about half a mile in length, and has abundance of trout. *Loch Dinard* and various others are of still less extent.

The COAST is generally bold and elevated, and in most parts defended by a chain of rocks, rising precipitously from the sea to heights varying from 200 to 700 feet; in some places the shore is low and sandy, and at the bay of *Balnakiel* are hills of shifting sand. The headlands are, *Cape Wrath*, *Farout Head*, and *Whiten Head*. A lighthouse has been erected on the first-named, at an elevation of 350 feet above the level of the sea: the building, which is of granite found near the spot, was commenced under the direction of the lords commissioners in 1827, and is about fifty feet in height, displaying a revolving light alternately red and white, and visible at a distance of twelve nautical miles. Since its completion, wrecks, which were previously frequent, have seldom occurred. Of the inlets that intersect the parish, the principal are, the *Kyle of Durness*, about six miles in length, and one mile in average breadth; and, to the east of this, *Loch Eriboll*, ten miles long, and varying from one mile to four miles in breadth. The chief bays are, *Durness*, between the district of *Parf* and the long promontory of *Farout Head*; the small bay of *Balnakiel*, to the east; and the bay of *Camisendun*, in Loch Eriboll, affording excellent anchorage, and resorted to by vessels unable to double *Cape Wrath* or enter the *Pentland Firth*. There are several islands off the coast, of which *Garvellan*, to the east of the *Cape*, and about a mile from the shore, is 100 yards long, nearly of equal breadth, and sixty feet high, and is frequented by various species of sea-fowl. *Hoan*, near the entrance of Loch Eriboll, is one mile in length, and half a mile in breadth, covered with verdure; and *Choaric*, within the loch, is of equal dimensions and fertility: in both there are places of sepulture, said to have been originally selected for security from the depredation of wolves which infested the parish. Numerous caverns have been formed in the rocks along the coast by the action of the waves; the most remarkable is *Smo*, two miles eastward of the church, having natural arches of great height, in some parts 100 feet wide, and abounding with features of romantic character. About a mile from the eastern part of the coast, towards the north, are the rocks called the *Stags*, whose summits only are above water; and at some distance from *Cape Wrath* are others, visible only at neap tides; all of which, previously to the erection of the lighthouse, were frequently fatal to vessels making for the *Cape*.

Of the small portion of land under cultivation, the soil is generally clay or moss, resting on a substratum of limestone and clay, and the crops are grain of various kinds and potatoes; but the parish is principally pas-

toral, and dependent in a great measure on its fisheries. Owing to the smallness and quality of the lots, there is an annual importation of from 300 to 500 bolls of oatmeal. The cattle are of the Highland breed, and the sheep, with the exception of a few of the black-faced, are chiefly of the Cheviot breed. Several tracts of waste have been reclaimed and laid down in pasture, and comfortable cottages have been built on most of the small holdings. The annual value of real property in the parish is £1745. The herring-fishery commences in June, and continues till September; a small kind of herring of superior flavour is found in Loch Eriboll, but it is used only for home consumption. In this fishery are engaged ten boats, manned with four men and a boy each, for which the harbour of Rispond affords good accommodation. The lobster-fishery commences in May, and continues till August, employing six boats, with two men each; when taken the lobsters are kept in a perforated floating-chest, whence they are forwarded weekly in smacks to the London market. Cod and ling are abundant off the coast, but they are taken only for domestic use. Salmon are found in the river Dinard and in Loch Hope, and the number caught annually, including grilse, averages about 11,000. The cattle and sheep of the parish are sent to Falkirk, and the wool to Liverpool and Hull. The harbours are, Loch Eriboll, affording safe anchorage and ample shelter for vessels of any burthen; Rispond, where a substantial pier has been constructed; and Port Our, near the bay of Balnakiel, which is adapted only for boats. A boat-slip, also, has been constructed at Clascarnach, two miles to the east of the Cape. There are considerable remains of ancient wood, consisting principally of birch, growing in sheltered situations; but no plantations have been formed. At Balnakiel is an ancient mansion-house, formerly the residence of Lord Reay, but now occupied by a sheepfarmer. There is no village properly so called, but in various parts are clusters of small houses consisting of from ten to thirty each. Good roads have been constructed, among which are those from the Kyle of Durness to Cape Wrath, from Loch Eriboll to Tongue, and a line from the west to the east of that parish, thirty-four miles in length round the loch, or crossing the ferry of Loch Eriboll twenty-four miles. A post-office has been established, which has communication with Tongue twice every week.

Ecclesiastically the parish is within the bounds of the presbytery of Tongue, synod of Sutherland and Caithness. The minister's stipend is £158. 6. 8., of which more than two-thirds are paid from the exchequer; with a manse, and a glebe valued at £20 per annum: the patronage is in the Crown. Durness church, situated within a few yards of the sea-shore, is a plain structure erected in 1619, and containing 300 sittings. In the Eriboll district, about ten miles from the parish church, is a small church in connexion with the Establishment, built in 1804, and containing 100 sittings. There is a place of worship for members of the Free Church, containing 400 sittings. The parochial school is not well attended; the master has a salary of £30, with a house and garden, and the fees average £11. A school, also, is maintained by the General Assembly, and another in connexion with the Free Church. There are remains of several Picts' houses, of which the most entire is Dornadilla's Tower, at Strathmore, consisting of circular con-

centric walls, about 150 feet in circumference, and nearly twenty feet in height. Robert Donn, the "Burns" of the Highlands, author of some Gaelic poems, lies interred in the churchyard; and a substantial monument of granite has been erected to his memory.

DUROR, a quoad sacra district, in the parish of LISMORE and APPIN, district of LORN, county of ARGYLL, 6 miles (N. N. E.) from Appin House; containing 1692 inhabitants. This quoad sacra parish is situated on an arm of the sea, called the Linnhe loch, into which a portion of the land projects in a kind of promontory; on the north is Loch Leven, and on the south Loch Creran. It includes the district of Glencoe, is about twenty-eight miles in length, and averages about seven in breadth; but of this extensive area scarcely a twentieth part is under cultivation, the rest being chiefly pasturage for sheep and black-cattle, and very thinly inhabited, by shepherds. The greater number of the population are in Glencoe, where, and near the village, are considerable slate works and quarries; the material is of a blue colour, and much esteemed, and is exported in large quantities to Leith, England, and even America. The surface around Glencoe is in many places wild, mountainous, and romantic; and the vale is celebrated as the birthplace of Ossian, and for the cruel massacre of its unsuspecting inhabitants in 1691. At Ballichulish and Ardsheal are good mansions, the former rather modern, and the latter somewhat ancient. The district is in the presbytery of Lorn, synod of Argyll; the stipend of the minister is £120, with a manse, and a glebe of upwards of two acres: patron, the Crown. The church, built about 1826 by the parliamentary commissioners, and repaired in 1834, is a plain edifice containing accommodation for 323 persons. In Glencoe are a mission church, a place of worship for members of the Free Church, an episcopal chapel, and a Roman Catholic chapel. Two parochial schools are supported, in which English and Gaelic, and the first elements of education, are taught; the salaries of the masters respectively are £18 and £8, with about £22 and £10 in fees. A mineral spring here was used for medicinal purposes for some time, but it lately fell into disrepute, and is now quite neglected.—See LISMORE and APPIN, and GLENCOE.

DURRIS, a parish, in the county of KINCARDINE, 5 miles (E.) from Banchory-Ternan, and 13 (W. S. W.) from Aberdeen; containing 1109 inhabitants. It is supposed to derive its name, often pronounced *Dores*, from a Gaelic word signifying a mouth or entrance, which is descriptive of this part as affording a principal entrance into the Highlands. The parish was once a chapelry belonging, as is generally thought, to the ancient order of Knights Templars; but its primitive history is involved in considerable obscurity. The estate of Durris, which extends into the neighbouring parish of Banchory-Ternan, was formerly in the possession of Lord Peterborough, who let it upon lease to the late John Innes, Esq., of Leuchars, near Elgin. On the reduction of this lease by the supreme court, the property came into the hands of Alexander, fourth Duke of Gordon, as next heir of entail; and by authority of an act of parliament transferring the entail to other lands, the estate was purchased from the fifth and last duke in 1834 by Anthony Mactier, Esq., late of Calcutta, by whom it is at present held. The PARISH is five and a half miles long, about three and three-quarters broad,

and contains about 17,000 acres. It is bounded on the north by the river Dee, which separates it from the parish of Banchory-Ternau, and from Drumoak in Aberdeenshire; and on the south by the Grampian mountains. The surface is marked by great irregularities, consisting of considerable tracts of flat ground, alternated with abrupt acclivities and the lofty hills of Mindernal, Mountgower, Craigberg, and Cairnmonearn, the last of which rises about 1200 feet above the level of the sea. There are several rivulets, but the only one worth notice is the Shiach burn, which, after a rapid course of twelve miles, falls into the Dee at the church.

The SOIL on the haugh lands by the river side is in some parts a rich and fertile loam, and in others light and sandy; in a few places the soil has a mixture of clay and gravel to a considerable extent, and rests upon a stiff tenacious subsoil. In almost every direction throughout the parish, and even in the cultivated fields, occur enormous masses of gneiss. The hills are usually covered with two or three feet of moss and heath, but the naked rocks often protrude; in the hollows at the base is a greater depth of moss, supplying peat in large quantities and of the best description. Upwards of 4000 acres are under tillage, about 1500 in plantations, and the rest in pasture, moss, and moor, 1000 acres of which are capable of improvement at a moderate expense; oats and barley are the grain raised, and of the green crops turnips and potatoes are the chief. The sheep are the black-faced, and the cattle the black-dodded kind, to which the Ayrshire breed has lately been added. The five and the six years' rotations of crops are generally followed; the farm-buildings are in good repair, and all belong to the proprietor. Draining on the plan of Mr. Smith of Deanston has been carried on to a great extent; large tracts have been reclaimed, and the appearance of the estate has been entirely changed, since it came into the hands of Mr. Mactier. The rocks consist principally of granite, whinstone, and gneiss, the last of which is most abundant, and appears to be inexhaustible; there is limestone in several places, but it has never been quarried, and its precise quality is not known. The annual value of real property within the parish is £3778. The chief house is that of Durris, comprising a modern structure connected with a more ancient mansion by an extensive colonnade: both have lately been subject to considerable additions and alterations. There is no village. A turnpike-road runs through the parish for about four miles, leading from Stonehaven to Banchory; a new road from Aberdeen to Banchory, completed in 1840, passes through from east to west, and several cross roads are well adapted to local convenience. Fairs are held in May, June, and September, for the sale of cattle and sheep. There are two or three salmon-fisheries in the river, but they have for some time past been decreasing, and are now in a very low condition.

Ecclesiastically the parish is within the bounds of the presbytery and synod of Aberdeen; patron, Mr. Mactier. The stipend of the minister is £158, of which £81 are received from the exchequer; and there is a manse, with a glebe of fifteen acres, valued at as many pounds per annum. Durris church, a very plain edifice, was built in the year 1822 by the late proprietor, and accommodates 550 persons with sittings: part of the old church still remains, bearing the date 1537. There is a paro-

chial school, at which Latin is taught, with the usual branches of a plain education; the master has a salary of £29, with £20 fees. Another school, commonly called Hogg's Charity School, was instituted by Mr. Hogg, a native of the parish, who left £5 per annum to a teacher, who was required to educate gratuitously ten poor children recommended by the Kirk Session. The master has also £4 per annum, the interest of money left for the support of the school; a small plot of land, given by the late proprietor; and the fees, making in the whole an income of about £30 a year. The same branches are taught in this school as in the parochial school, Latin excepted. There are some Druidical remains, and tumuli, and several chalybeate springs in the parish: one of the last, called Red-Beard's Well, from a robber of that name, who is said to have lived in a neighbouring cave, is in considerable repute, and in many respects resembles the Harrogate chalybeate water.

DUTHIL, a parish, partly in the county of ELGIN, and partly in the county of INVERNESS; comprising the district of Rothiemurchus, and containing in the whole parish 1769 inhabitants: the church is distant 2 miles (N. E.) from Carr-Bridge, and $7\frac{1}{2}$ (W.) from the village of Grantown. Duthil proper is situated on the north side of the river Spey, in the county of Elgin, and Rothiemurchus on the south of the river, in the county of Inverness. They were united in 1630, but still had distinct places of worship, and a glebe in each parish. In 1830 Rothiemurchus was erected into a parliamentary parish, with a manse and glebe to the minister, and a stipend of £120 per annum: it is more fully described under its own head. In ancient times Duthil was called *Gleann-chearnach*, that is, "the glen of heroes". Its present name was given to it after the year 1400, when Matilda Cumming, called *Bigla beg* because she was of small stature, the heiress of Gilbert Cumming of Gleann-chearnach, and proprietrix of these lands, residing in the castle of Dunmuilzie, on the banks of the Spey, near the church, then situated on the Deiser, fixed on another site for public worship, and built a new church, which was at length thrown down in 1826 in order to erect the present building. The new site was chosen, that she might have the pleasure of a longer ride on Sunday to hear mass and attend worship; and in order to distinguish it from the old place, which is on the south side of the ridge of hills between the Spey and the Dulnan, still called Deiser or *Deasail*, in Gaelic signifying "southward or southerly", the new church, being on the north side of the ridge and of the Dulman, was called *Tuathail*, signifying "northward or northerly". Hence the modern name of the parish.

Duthil proper is wholly situated in the southern part of the county of Elgin, on the north-eastern bank of the Spey, and in a mountainous and thickly-wooded tract, in ancient times an almost impenetrable forest; it was the scene of many deadly feuds between rival chieftains in past ages, and the residence of the powerful Cummings or Cumyns. This family possessed the principal part of the estates, and for many generations maintained hostilities with the Grants; but the enmity between the clans was ended by the marriage of the before-mentioned Matilda, heiress of one of the Cumyns, to Sir John Grant of Freuchy, the great rival, thereby fixing the property in the family of Grant, with whom it has remained to the present time. Duthil proper measures

about sixteen miles in length and thirteen in breadth, and comprises a large proportion of uncultivated ground, and of natural wood, consisting chiefly of fir; the part under tillage being of small extent. The surface presents a hilly, bleak, and dreary aspect, the scenery taking its principal character from the extensive moors and mountains, the latter covered with heather, and the whole only occasionally interspersed with patches of grass or corn land. A lofty range traverses the entire northern side, and terminates in the Monadhliia, an imposing chain of mountains common to the districts of Badenoch, Strathdearn, and Stratherrick. Parallel with this, but not of equal height, a ridge passes along the southern portion, bleak and barren like the other. These two ranges skirt the intermediate valley of the Dulnan stream, which takes its rise in the Badenoch hills, and flowing through the vale from west to east, loses itself in the Spey at Belentomb of Inverallen, five miles below the church of Duthil. Though generally small, it overflows its banks when swollen after rain or snow, and carries desolation among the neighbouring lands. Hence its name, *Dulnan*, or *Tuilnean*, in Gaelic signifying "floods". The forest of Duthil or Dulnanside was destroyed by fire at the beginning of the last century, an event which was the occasion of the final extirpation of the wolves, so long before the terror of the neighbourhood. There is still, however, a large forest of natural Scotch fir in the northern district, where two saw-mills, of two saws each, have been erected for cutting the timber felled in the locality, the mills being turned by the waters of the Dulnan. The lochs are of small extent, but some of them contain fine trout, especially Loch Bhruch, situated on the northern hills; in others are pike; and salmon and trout are taken in the rivers.

The soil near the Dulnan and the Spey is chiefly alluvial, upon a deep clayey subsoil, producing in favourable seasons heavy crops of oats. Some of the higher grounds, also, though the soil is thin and gravelly, and intermixed with stones, yield notwithstanding, through the recent improvements in cultivation, and when aided by genial seasons, an ample return in oats, bear, barley, turnips, and potatoes. The system of husbandry has been greatly improved within the last twenty or thirty years: the five-shift course is usually followed; much waste ground has been reclaimed, and the former huts of the farmers, raised with turf, have been replaced by well-built stone dwellings, neatly thatched with straw. Birch, alder, and fir thrive well here, and the first, which grows naturally to a considerable extent, greatly relieves the generally uninteresting scenery: an extensive tract of barren moor along the northern bank of the Spey was planted by the late Sir James Grant upwards of half a century since, and the trees are now in a flourishing condition. The annual value of real property in Duthil and Rothiemurchus is £2674. The Highland road between Perth and Inverness passes through the parish for about fourteen miles; and from the hamlet of Carrbridge, where a post-office was established in 1836, a road branches off to Grantown. Besides the bridge at the hamlet, there is one at Sluggan, built shortly after the year 1745, on the line of road formed under the direction of General Wade; but it has been almost impassable since the flood of 1829. The cattle of the district are sold at neighbouring markets to the south-country dealers: the timber cut in the forest is sent

partly down the Spey, but chiefly by land-carriage to Inverness. Ecclesiastically the parish is in the presbytery of Abernethy, synod of Moray, and in the patronage of the Earl of Seafield: the minister's stipend is about £200, with a manse, and a glebe valued at £5 per annum. Duthil church is a commodious edifice, built in 1826, and accommodating between 800 and 900 persons with sittings: a handsome mausoleum of grey granite has lately been erected over the burial-ground of the Grant family, Earls of Seafield. Rothiemurchus church is thirteen miles distant from the parish church. The parochial school affords instruction in the usual branches; the master has a salary of £25. 13., with about £12 or £15 fees, and £32 from the Dick bequest, besides a house, and a quarter of an acre of ground for a garden. There is a school endowed by the Society for Propagating Christian Knowledge, and another is supported by the education scheme of the General Assembly: there is also a female school endowed by the above society and the Rev. William Grant, minister of the parish.

DYCE, a parish, in the district and county of ABERDEEN, 7 miles (N. N. W.) from Aberdeen; containing 472 inhabitants. This parish was in remote times called the chapelry of St. Fergus, to whom the present church was dedicated; and it is supposed that, with several adjacent parishes, it was anciently connected with the cathedral of Old Machar. It is about six miles in extreme length, and between three and four in breadth, and contains 4667 acres. Dyce is bounded by the parish of Fintray on the north, by that of Newhills on the south and south-west, by Kinellar on the north-west, and by Old and New Machar on the east. The surface is not marked by any very striking peculiarities, being in general tolerably level, with the exception of the land in the north-west, whence the broad hill of Tyrebagger slopes towards the south-east for a distance of about three miles, and then loses itself in the plain below. The river Don runs along the northern and eastern boundaries of the parish, and after a further course of a few miles in a south-eastern direction, falls into the German Ocean two miles north of Aberdeen: the trout-fishing during the months of March and April is very superior.

The finest soil is that of the low grounds along the banks of the river, consisting of alluvial deposit, and producing rich and heavy crops; in the other parts the soil is indifferent, and on the summit of the hill of Tyrebagger poor and thin. The number of acres under cultivation is 2910, in wood 1176, and in waste 581 acres, out of which 237 are considered capable of profitable cultivation. The system of agriculture here followed is a rotation of five, six, or seven years: the five years' consists of grain; turnips; bear, and sometimes oats, with clover and rye-grass; hay or pasture; and pasture. Large flocks of sheep were formerly to be seen, but they have been greatly diminished since the inclosures and the plantations in the parish were made, and there are now but a small number kept for home consumption: the cattle are mostly the native Aberdeen, frequently crossed with the short-horned breed, and in some grounds these latter are preferred unmixed. The farm-houses are in general good and substantial dwellings, and some of them very superior; the steadings are complete sets of buildings of a quadrangular form, slated, and usually supplied with threshing-mills. On the smaller farms,

however, the houses and inclosures are of an inferior description, though in a state of progressive improvement. Great changes have been effected within the last twenty or thirty years on the inferior soils, six or seven hundred acres of which have been successfully treated; and a large embankment has been raised as a protection against the destructive inundations of the river Don, the floods of which have recently been much augmented through the multiplication of drains. The annual value of real property in the parish now amounts to £3570.

The prevailing rock in the district is granite; a large supply of it is obtained from quarries in the hill of Tyrebagger, and stone has at various times been cut for the Bell-rock lighthouse, Sheerness quay, Deptford quay, the West India docks, the Custom-house of London, St. Katherine's docks, and new London bridge. Very extensive plantations of Scotch fir and larch have been made on the hill, which are the resort of roe-deer, black-cock, and wood-cock; but the grouse that were so numerous before the formation of plantations have almost entirely disappeared. On the lower grounds are found partridges, snipe, wild-duck, hares, and rabbits. The inhabitants of the parish are employed chiefly in agriculture, and in working in the quarries. The great turnpike-road from Aberdeen to Inverness, *via* Huntly, runs along the western boundary for about two miles; and the turnpike-road from Aberdeen to Banff crosses the eastern quarter. The centre is intersected by the canal from Aberdeen to Inverury, by which coal, lime, and manure are brought up, and grain and other farm produce sent back, passage-boats plying on it twice a day during summer. Among the mansions are, Caskieben, the seat of Dr. Alexander Henderson, author of a work on wines, and Pitmedden, both modern buildings.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery and synod of Aberdeen. The stipend of the minister is £160, of which nearly a third is drawn from the exchequer; there is a manse, with good offices, built some few years since, and the glebe is valued at £7. 10. per annum: patron, John Gordon Cumming Skene, Esq. Dyce church is an old edifice of uncertain date, small and uncomfortable. It stands at the northern extremity of the parish, upon a rocky point formed by a winding of the river Don, and commands a fine view, extending to twenty miles, of the scenery with which the course of that stream is ornamented. There is a parochial school, in which Latin is taught, with the usual branches of education; the master has the maximum salary, fees amounting to about £8, and an allowance from the fund of the late Mr. Dick. The chief relic of antiquity is a Druidical temple situated on the southern slope of Tyrebagger hill, and commanding an extensive view of the sea-coast and the lower grounds; it is formed of ten large pieces of granite, disposed about eight feet distant from each other, in the form of a circle, and rising to the height of from five to ten feet above the ground. In the churchyard is one of the oblong monumental stones commonly supposed to be of Runic origin, but justly traced to more recent times; among a great variety of other sculpture, it is marked by a cross, forming a prominent object in the graving. About a mile above the bridge of Dyce (where the Banff road crosses the river), and half a mile south from the river, is a round deep hollow, in the middle of an arable field, called The Lady's Jointure: the tradition respect-

ing it is, that, long ago, a lady of Dyce, having teased her lord for a certain portion of the estate to be set apart as her jointure, was taken to the bottom of this hollow, and told that she should receive as much of the property as she could then see; which was only about an acre. Urns have sometimes been discovered in the parish. Arthur Johnston, a celebrated Latin scholar, was connected with this place.

DYKE and MOY, a parish, in the county of ELGIN, 3 miles (W.) from Forres; containing, with the villages of Kintessack and Whitemyre, 1366 inhabitants, of whom 166 are resident in the village of Dyke. These two ancient parishes, whose names are descriptive of the former as a channel for waters, and of the latter as a level and fertile plain, were united in the year 1618. The whole is bounded on the north by the Moray Firth, and on the west by the county of Nairn, and comprises about 17,300 acres, of which 3220 are arable, 2800 woodland and plantations, 1300 meadow and pasture, and the remainder waste. The surface is generally undulated within the district of Dyke, which contains the forest of Darnaway towards the south, and the woods of Dalvy and Brodie towards the north. In the district of Moy is a fine extent of level plain, stretching northward to Kincoth, on the western shore of Findhorn loch, towards the lands of Culbin, which at a very early period were overwhelmed with drifts of sand, and are now covered with sand-hills, some of them having an elevation of 100 feet. The river Findhorn, which, in its course to the sea at the village of Findhorn, forms the eastern boundary of the parish, in 1829 rose to an unusual height, and carried into the bay an immense quantity of sand, which for three square miles diminished its depth by nearly two feet. Several rivulets intersect the parish, and flow into the Findhorn, of which the largest is the Muckleburn; they all abound with trout, affording good sport to the angler, and the salmon-fishery in the Findhorn is of considerable value. The coast, throughout the entire extent of the parish for about six miles, is shallow and sandy: there are numerous beds of cockles, which not only afford an abundant supply of sustenance to the poor, but are sold by the women through the adjoining district, making an average return of more than £100 per annum.

On the level lands the soil is a rich brown and black loam, generally light and easily cultivated: in other parts of the parish are alternations of sand and gravel. The crops are wheat, barley, oats, turnips, and potatoes, with the usual grasses. The system of agriculture is in an improved state, and furrow-draining has been tried with success upon one or more of the farms: lime, marl, and bone-dust have been extensively used. The farm-buildings, though more commodious than formerly, are susceptible of still further improvement. There are sixteen threshing-mills, the greater number of them worked by horses. The annual value of real property in the parish is £5942. The wood consists of oak, ash, beech, elm, Scotch fir, larch, spruce, birch, horse-chestnut, sycamore, and alder; and timber is regularly sold for ship-building and other purposes. In this parish the strata are principally old red sandstone, with gneiss and granite: there is coarse limestone, containing schist and pyrites of iron; and occasionally some lead-ore is found, but not in sufficient quantity to encourage the working of it. *Darnaway Castle*, one of the seats of the Earl of

Moray, situated on a gentle eminence, and surrounded by an extensive and richly-wooded park, has been lately enlarged and improved. One of the wings, forming the more ancient part of the building, consists of a noble hall eighty-nine feet in length, and thirty-five feet wide, with a lofty roof of timber frame-work, built by Thomas Randolph, Earl of Moray, regent of Scotland during the minority of David Bruce, and in which are still preserved his hospitable table and chair of old carved oak. In this splendid hall the then earl gave a sumptuous entertainment to his tenantry in 1839. *Brodie House* is an ancient castellated mansion, to which extensive additions in a corresponding style of architecture have been made by the present proprietor, and is situated in grounds that have been tastefully embellished; the ceiling of the drawing-room is laid out in compartments ornamented with grotesque figures of stucco in high relief, and in the various rooms is a valuable collection of paintings. *Dalvey House*, situated on a knoll overlooking the Muckleburn, and nearly occupying the site of the castle of Dalvey, is a handsome modern mansion; the gardens are extensive, and kept in fine order. The houses of *Moy* and *Kincorth* are also good residences.

The village of Dyke is beautifully situated in a secluded spot embosomed in trees. Facility of communication is afforded by the great post-road from Aberdeen to Inverness, which passes through the parish, and by other good roads that intersect it in all directions; by bridges over the several burns, and by an elegant suspension-bridge over the Findhorn, which connects the parish with Forres, the nearest post-town. Ecclesiastically the parish is within the bounds of the presbytery of Forres, synod of Moray. The minister's stipend is £244. 11., with a manse, and a glebe valued at £16. 13.; patrons, the Crown, and James M. Grant, Esq., of Moy. The church, conveniently situated in the village, is a neat structure erected in 1781, in good repair, and containing 900 sittings. The members of the Free Church have a place of worship. The parochial school is well attended; the master has a salary of £34, with a house and garden, and the fees average £30 per annum, besides which he receives £44 from the Dick bequest. There is also a female school in the village, under a teacher who has a house and garden, with a small endowment in money. In the park of Brodie House is a stone on one side of which is sculptured a cross, and on the other several fabulous animals; it was discovered in digging the foundation for the church, and was erected in the village in commemoration of Rodney's victory, and thence called Rodney's Cross, but was removed to its present situation within the last few years. In sinking the same foundations, a labourer, who contrived to keep the discovery a secret from his companions, found in an earthen pot a large number of silver coins of the reign of William the Lion of Scotland, many of which had been struck at Stirling, and some of Henry II. of England, all which he sold by weight for £46. About the year 1822 there was dug out of a steep bank on the Findhorn a large stone coffin containing a human skeleton. Among the eminent persons connected with the parish may be mentioned James Stewart, known as the Good Regent, who was Earl of Moray in the reign of his sister, the unfortunate Mary, Queen of Scots. Alexander Brodie of Brodie, who lived in the time of Cromwell, was twice chosen a lord of session.

DYSART, a burgh, sea-port town, and parish, in the district of KIRKCALDY, county of FIFE; including the villages of Boreland and Gallatown, the former quoad sacra parish of Pathhead, and part of that of Thornton; and containing 7591 inhabitants, of whom 1885 are in the town, 2 miles (E.) from Kirkcaldy, and 14 (N. by E.) from Edinburgh. This

Burgh Seal.

place appears to have retained its original Gaelic name, signifying the "Temple of the Most High", from its rise to the present time. The earliest event upon record connected with it is the invasion of Fife by the Danes, towards the close of the ninth century, when, bringing their fleet to anchor in the Firth of Forth, they landed on the coast of this parish, and marching into the interior, were opposed by the natives, who, assembling to obstruct their progress, gave them battle in a field about a mile northward of the town. To commemorate this occurrence, a large stone was erected in the centre of the field of battle, which still points out the spot. Few particulars of historical importance have been preserved to throw any light upon the origin and progress of the town; the records of the burgh, and other ancient documents in the possession of the Sinclair family, were burnt in 1715, when the mansion of Lord Sinclair was destroyed by an accidental fire. The castle of Ravenscraig, a little to the west of the town, was granted with the adjoining lands by James III. to William Sinclair or St. Clair, Earl of Orkney, on his resignation of that title, and has ever since been in the possession of the family: here Lord Sinclair used to hold his baronial court, and the castle continued to be a residence till the Restoration, after which it was suffered to fall into decay, being now a ruin of romantic appearance, seated on a steep rock overlooking the sea.

The town, which is of great antiquity, and was once the principal trading port on this part of the coast, comprises three narrow streets diverging from an open area in the centre, where the town-hall stands. It still retains much of its original character; the high street consists of substantial houses of antique appearance, and several of them till lately had piazzas in front, under which the merchants and dealers formerly sold their wares. Extensive salt-works appear to have been established here at a very early period, from which, about the middle of the fifteenth century, not only the chief towns in Scotland were supplied, but also great quantities were exported to Holland. From that period the trade of the town continued to flourish for two or three centuries. Malting and brewing were carried on to a considerable extent; large quantities of merchandise of every description were regularly exposed for sale, and the high street and the square were thronged with merchants. Its port was crowded with shipping, and its foreign and domestic commerce advanced beyond that of any other town in this part. This state of prosperity lasted till the Union, after which it began to decline; its port was almost deserted, its trade with foreign coasts nearly annihilated, and its manufactures greatly diminished. From this depression, however, it in some degree reco-

vered, though it has not yet regained its former importance. A manufactory of nails was established in the town, in which, till within the last fifty years, about 100 persons were constantly employed, and the quantity of nails annually made was valued at £2000: many of them, used in ship-building, were sent to Edinburgh, Glasgow, and the principal towns in the north; but for some years this branch of trade has been declining, and it is at present only carried on to a very limited extent. The manufacture of linen-cloth has also greatly diminished; but one branch of it still continues to flourish. The chief trade now pursued is the manufacture of checks and ticking, which was established about a century since, and has been uniformly increasing: 2000 looms are constantly in use; the number of yards annually produced is more than 31,000,000, and the value above £150,000. This trade affords employment to about 5000 persons; the articles are sent to London, Manchester, Liverpool, Nottingham, Leeds, and other places, and likewise to the Cape of Good Hope and the East and West Indies. A mill for spinning flax was erected some years since, in which about 100 persons are engaged; and there is a pottery of stone-ware, affording employment to a nearly equal number; also a small rope-walk. Great facilities of intercourse are afforded by the Edinburgh, Perth, and Dundee railway, which has a station here.

The business of the PORT consists chiefly in the exportation of coal and ironstone from the pits in the parish, and in the importation of flax and other goods from Holland and the Baltic. There are eight vessels of the aggregate burthen of 638 tons belonging to the port; and the number of vessels that entered during a recent year, to deliver or receive cargoes, was eighty-seven, of the aggregate burthen of 5296 tons. Formerly the harbour, from the ill construction of the eastern pier, was exceedingly dangerous, and the swell so great as to subject the vessels sheltering in it to occasional damage. It was proposed to take down that pier, and to rebuild it in a new direction, which, according to the opinion of several engineers, would not only have remedied the evil, but have rendered this one of the most commodious harbours on the coast; but as the expense of the improvement would have been beyond the means possessed by the town, it was resolved merely to convert a quarry adjoining it into a wet-dock, which has been carried into effect, and has answered the purpose admirably. The depth of water in the new dock, which adjoins the western pier, is eighteen feet at spring-tides; and it is capacious enough to hold seventeen or eighteen vessels of moderate tonnage, which may ride in perfect safety, in addition to what the harbour would formerly accommodate. A patent-slip has likewise been constructed, at a considerable expense, for repairing ships; and ship-building, particularly the repairing of vessels, is carried on upon a large scale. A sailing-packet leaves the port every day for Leith, and another for Dundee occasionally. Fairs are held six times in the year, for the sale of wool, white cloth, linseed, and black-cattle; they were formerly attended by numerous merchants from Glasgow, Edinburgh, and Stirling, but have of late altogether declined. Two subscription libraries have been established; and there are also a mechanics' library, a library exclusively of religious publications, and two public reading-rooms, which are well attended.

The town was made a burgh of barony by Lord Sinclair, and there is still extant the copy of a summons issued from Ravenscraig Castle to the bailies, and commanding their appearance at his baronial court. It was afterwards erected into a royal burgh by charter of Charles II., and the government was vested in two bailies, a treasurer, and a council of twenty-one burgesses; but in consequence of an error in the election of the council in 1831, the burgh was disfranchised by judgment of the court of session, who appointed three managers to take charge of its affairs, by whom, from the impossibility of electing a council subsequently, the concerns of the town are still administered. The jurisdiction of the magistrates extends to the bounds of the royalty. The treasurer, the town-clerk, who acts also as assessor, and the other officers are at present appointed by the managers; the bailies act as justices of the peace for the royalty, and hold a court for the determination of civil actions, but in 1831 only four civil cases were brought before it for decision, and there is no record of any criminal cases whatever. Burgesses and freemen residing within the burgh are exempt from one-third of the dues paid by strangers on the landing of goods at the quay. Dysart, by the act of the 2nd and 3rd of William IV., unites with Kirkcaldy, Kinghorn, and Burntisland, in returning a member to the imperial parliament; the right of election being vested in the resident householders of the annual value of £10 and upwards, the number of whom within the limits of the municipal burgh is thirty-two. The number of £10 householders resident without the municipal, but within the parliamentary limits, is 124; and the whole number of voters at a late general election was 106. The town-hall is a plain substantial building of stone, with a tower surmounted by a spire; it was originally erected in 1617, and contains a spacious hall for the transaction of municipal affairs, a guard-house, weigh-house, and prison. During the civil war in the reign of Charles I. the former building was converted into a barrack by Cromwell's soldiers, one of whom entering the magazine with a lighted match, the powder exploded, and reduced the whole building to ruins, in which state it remained for some years, till it was rebuilt.

The PARISH is situated on the Firth of Forth, is about four miles in length and three in breadth, and comprises an area of 3850 acres, of which about 500 are natural wood and plantations, and the remainder arable land in good cultivation. Its coast, which extends for about two miles, is abrupt and rugged, and marked in several parts with rocks of considerable elevation. The surface rises gradually towards the north, and in the more level tracts is enlivened by two small rivers, the Oar and the Lochty, the former of which has its source in the parish of Dunfermline, and receiving in its course two streams issuing respectively from the lochs of Fittie and Gellie, flows in an eastern direction into the river Leven in the parish of Markinch. The Lochty rises in the parish of Kinglassie, and falls into the Oar at a short distance from the influx of that stream into the Leven. In general the soil is fertile, and the substratum abounds in mineral wealth; the most improved system of husbandry is adopted, and much waste land has been reclaimed, and brought into cultivation. The crops are wheat, barley, oats, potatoes, and turnips, of which large quantities are raised for the supply of the neighbouring markets. Great attention is

paid to live stock; the cattle are generally of the Fifeshire, Ayrshire, and Teeswater breeds, and the rearing of horses is an object of particular solicitude: there are very few sheep. The plantations, of which more than 380 acres are on the property of the Earl of Rosslyn, are chiefly fir, oak, and elm, which are well managed and very thriving. The lands are inclosed, and the fences kept in good order; the farm-buildings and offices, also, are very superior. The annual value of real property in the parish is £10,775.

The SUBSTRATA are, limestone, which is extensively quarried for agricultural and other purposes; sandstone, which, though inferior in appearance, is notwithstanding of good quality; claystone, worked on a large scale for pavements, hearths, and other uses; coal, of which there are not less than fourteen beds on the estate of the Earl of Rosslyn; and ironstone, which is found below the coal, of excellent quality, producing about twelve hundred-weight of iron from every ton. Most of the beds of coal are thin; but three of them, lying one above another, are now being worked, of which the uppermost is five, the next eight, and the lowest five feet in thickness. The pits are sunk to a depth of seventy fathoms, and produce an abundant supply: the coal is slow in burning, but throws out an intense heat; it was among the first wrought in Scotland, and there are the remains of some exhausted mines that are supposed to have been in operation more than three centuries since. Five beds of ironstone are worked a little westward of the coal-mines, where it lies nearer to the surface; it is wrought on an extensive scale, and the produce is shipped to Carron, for the supply of the foundries of that place. The landed proprietors of the parish, by the encouragement they have given to improvements of every kind, have contributed greatly to its prosperity. Lord Rosslyn occasionally resides here, in a mansion situated not far distant from the town, commanding an extensive view of the Firth and the richly-varied scenery of the adjacent country. The house is spacious, and of handsome appearance; the grounds also are extensive, and finely planted with ornamental timber and forest trees, many of which are of stately growth.

Dysart is ECCLESIASTICALLY in the presbytery of Kirkcaldy and synod of Fife; patron, the Earl of Rosslyn. The church is collegiate, there being two incumbents: the stipend of the first minister is £265. 10., with a manse, and a glebe valued at £21. 8. per annum; the stipend of the second is £207. 11., without either manse or glebe. The church, erected in 1802, is a neat and substantial edifice, situated at one extremity of the town, and adapted for a congregation of 1600 persons. A church was erected by subscription in the village of Pathhead within the last twenty or thirty years, at an expense of £3000; and the parish has for ecclesiastical purposes been divided by the presbytery, and one division allotted to each of the parochial ministers. There are places of worship for members of the Free Church, the United Presbyterian Synod, and Antiburghers. The Burgh school, which is also the parochial school, affords a liberal course of instruction, but from its situation is accessible only to residents in the town; the master is elected by the town-council, and has a salary of £43 per annum, arising partly from the funds of the burgh, and partly from the interest of money bequeathed for that purpose, with £50 school-fees, and an allowance in lieu

of a house and garden. In addition to this school is a subscription school, erected within the last few years, and which forms a great ornament to the town from the elegance of its architectural design. There is an endowed school at Pathhead, the master of which has a good salary for teaching 150 children reading, writing, and arithmetic; also a school in Boreland, the master of which has £8 per annum, with a school-room and dwelling-house rent free, and a supply of coal. Several religious societies are established, among which are, a Bible and missionary association which gives part of its income to the Gaelic and Hibernian Societies; a Sabbath-evening school society; and a society for the education of children, which pays one-half of the school fees for the children of such parents as are willing to pay the other half. There is also a society for the support of indigent and aged females, which appropriates about £40 annually to that purpose. Three friendly societies, belonging respectively to maltmen, bakers, and sailors, have been established in the town more than two centuries; and their funds, which are ample, are exclusively appropriated to the relief of poor members.

In the south part of the town are the remains of a chapel dedicated to *St. Dennis*; parts of the ancient walls are standing, but the building itself has been converted into a forge. Near the site of this chapel are the remains of the old church, which appears to have been a venerable structure, the porch and tower bearing evidence of great antiquity; the former has a groined roof of stone, and above the door are two sculptured stones, one of which seems to have been a pedestal for a statue, probably of the tutelar saint. Nearly in the centre of the harbour is a high rock called the *Fort*, supposed to have been fortified by the troops of Cromwell during the parliamentary war; but no traces of any military works are visible. On the lands of *Carberry* farm the Romans are said to have had a camp, though no vestiges are at present discernible; and about a mile west of the town are the *Red rocks*, concerning which many traditional stories are current. Robert Beatson, who obtained an ensigny in 1756, and was present at the taking of Martinique and Guadaloupe, was born in this parish; he was distinguished as the author of a *Political Index to the History of Great Britain and Ireland*, a *Chronological Register of both Houses of Parliament*, and other works. Dysart gives the title of Earl to the family of Tollemache; the first earl was son of the Rev. William Murray, incumbent of the parish, and acted a conspicuous part in the reign of Charles I.

E

EAGLESFIELD, a village, in the parish of MIDDLEBIE, county of DUMFRIES; containing 456 inhabitants. This is the principal of three flourishing villages in the parish, erected within the last twenty or thirty years, and the inhabitants of which are to a considerable extent engaged in weaving.—See KIRTLE.

EAGLESHAM, a parish, in the county of RENFREW, 9 miles (S.) from Glasgow; containing 2428 inhabitants, of whom 1801 are in the village. This place, which is of considerable antiquity, is supposed to have

derived its name, of Celtic origin, from the crection of its ancient church. It formed part of the district of Mearns, and, together with other lands, was granted by David I., King of Scotland, to Walter, son of Alan, the first of the Stuarts, from whom Robert de Montgomerie, of Oswestry in England, procured the manor of Eaglesham about the middle of the twelfth century. After the accession of the Stuarts to the Scottish throne, it was held by Robert's descendants, John de Montgomerie, who also obtained the baronies of Eglinton and Ardrossan, by marriage with Elizabeth, daughter of Sir Hugh Eglinton by Egidia, sister of Robert II.; and this John de Montgomerie, with the ransom of Harry Percy, surnamed Hotspur, whom he had taken prisoner at the battle of Otterburn in 1388, erected here the castle of Polnoon, of which there are still some vestiges remaining. The parish was almost exclusively the property of the Montgomerie family, and is now in the possession of Allan and James Gilmour, Esqrs. It is situated in the south-east angle of the county, and measures about six miles from north to south, and five and a half from east to west. Eaglesham is bounded on the north by the river Earn, which separates it from the parish of Mearns; on the south by the parish of Loudon; on the east by the river White Cart, which divides it from the parishes of East Kilbride and Carmunnock; and on the west by the parish of Fenwick. Its surface is generally elevated, and is intersected from east to west by a ridge of hills, the highest of which vary from 1000 to 1200 feet above the level of the sea, and, with the exception of one or two hills in Lochwinnoch, are the loftiest in the county. The sources of the river Cart and its numerous tributaries are within the parish: this river, which flows in a northern course to Cathcart and Langside, then takes a western direction towards Paisley, whence it deviates towards the north, and receives the waters of the Black Cart at Inchinnan Bridge previously to its influx into the Clyde. The surface is also diversified with lakes, and certain reservoirs for the supply of different mills cover nearly 240 acres of ground, and are frequented by various species of aquatic fowl.

The whole number of acres is estimated at 15,500, of which about 6100 are arable, nearly 4000 meadow and pasture, about sixty woodland and plantations, and the remainder moorland, pasture, and moss. On the banks of the Cart, and towards the west, the soil, though light, is very fertile, and produces excellent crops of oats, barley, and potatoes; but the inhabitants of the high lands rely more on the pasturage of sheep and the rearing of cattle than on the cultivation of the ground. The system of agriculture has been greatly improved; much progress has been made in draining, and considerable quantities of waste land have been reclaimed. Many of the farm-houses and offices have been rebuilt on a more commodious plan, and all the recent improvements in husbandry have been adopted; the dairy-farms are in general well managed, and the produce finds a ready sale in the market of Glasgow. The cattle are chiefly of the Ayrshire breed, of which about 1000 cows are pastured on the farms; and about 5000 sheep are maintained on the moorland pastures: few horses are reared, the greater number being purchased in the spring for agricultural purposes, and sold again in autumn. The annual value of real property in the parish is £11,800. The moors abound with grouse and other species of game,

and afford a fine field of "sport" to the members of the Clydesdale Coursing Club, the hares being numerous and swift, and requiring greater energy and perseverance in the chase than those in the more lowland countries. Trout and various other kinds of fish abound in the lakes, and a peculiar species found in the Clyde and the Avon was originally introduced by Lady Anne Hamilton from this vicinity. In this parish the plantations are chiefly the common Scotch fir, which thrives admirably, and larch, for which the soil is better adapted than for many other sorts; hard-woods of different kinds are to be seen in the lower grounds and more sheltered situations. The rocks in the higher lands are generally of the trap species, intermixed in some places with porphyritic claystone, and abounding in others with jasper, chalcedony, blue quartz, calcareous spar, and felspar containing crystals.

Alexander, the eighth Earl of Eglinton, obtained for the inhabitants a charter for a weekly market and an annual fair, in 1672; both these have been discontinued, but there is still a fair held on the last Thursday in August, when horse-races take place. The village, which was laid out on a new plan by the tenth earl, is about one-third of a mile in length, and consists of two ranges of houses, between which is a spacious green, varying from 100 to 250 yards in breadth, disposed in lawns, interspersed with trees, and divided in the centre by a streamlet of clear water. Behind each of the houses is a rood of garden; and the inhabitants have also seventy acres of ground rent free, which are laid out in meadows and plantations. The village is lighted with gas. The manufacture of silk was formerly considerable, employing sixty-three looms in the village; but that branch of trade has been superseded by cotton-weaving, for which materials are provided by the manufacturers of Glasgow and Paisley, who thus afford employment to nearly 400 persons, resident in the village. At the higher extremity of the rivulet that flows through the green is an extensive cotton-mill, the property of Messrs. Mc Lean and Brodie, of Glasgow, in which are 15,312 spindles, set in motion by a water-wheel of cast-iron, forty-five feet in diameter, and equivalent to the power of fifty horses. It gives occupation to 200 persons, of whom more than one-half are females. There is also a mill at Mill-hall, employing 620 spindles, and nearly seventy persons, of whom about one-third are females; this establishment is chiefly engaged in spinning shuttle-cord for power-looms, and wicks for candles, and the machinery is impelled by a water-wheel of twenty-four horse power. In the parish is likewise a corn-mill in which about 3000 bolls of grain are ground annually. A bank is established, and there is a post-office with a good delivery. Facility of intercourse with Glasgow, Paisley, Hamilton, and other towns is maintained by excellent roads, of which seven miles of turnpike pass through the parish. Ecclesiastically the parish is within the bounds of the presbytery of Glasgow, synod of Glasgow and Ayr: the minister's stipend is £278. 14., with a manse, and a glebe valued at £25 per annum; patron, Allan Gilmour, Esq., of Eaglesham. The church, erected in 1788, is a neat structure of octagonal form, containing 550 sittings. There are places of worship for the United Presbyterian Synod and Reformed Presbyterians. The parochial school is attended by about 120 scholars; the master has a salary of £30, with a house and garden, and the fees average £50 per annum. There is another school, in which sixty children

are taught. Robert Pollok, author of the *Course of Time*, and equally remarkable for depth of piety and the beauty of his poetry, was a native of the parish.

EAGLESHAY, an isle, included in the parish of ROUSAY and **EAGLESHAY**, county of ORKNEY; containing 190 inhabitants. It lies on the east side of the island of Rousay, from which it is separated by Howa Sound, and is about two miles and a half long and one mile broad, and entirely composed of sandstone and sandstone flag: in some parts the strata are very much elevated. The soil is good, but is indifferently cultivated. This island, from its beauty, has been chosen as a place of residence by several distinguished persons: the families of Douglas and Monteith, its former proprietors, resided here, and even the bishops preferred it for their habitation. St. Magnus was murdered on the isle, and the church here, dedicated to him as the tutelar saint of the Orkneys, is said to have been erected on the very spot where the deed was perpetrated by his ambitious relative. In the month of October, the *spongia palmata* and *oculatu* are cast on the shore in great abundance; and a considerable quantity of kelp is produced annually.

EAGLESHAY, an isle, in the parish of NORTHMAVINE, county of SHETLAND. It is one of the smallest of the Shetland group, and is situated in St. Magnus' bay, a short distance westward of Islesburgh on the Mainland: there is some good pasturage; and rabbits are very numerous.

EALAN-NA-COOMB, an isle, in the parish of TONGUE, county of SUTHERLAND. This isle, also called *Ealan na Naomh*, or "Island of Saints", lies off the northern coast of Sutherland, and a little eastward of the mouth of the Kyle of Tongue; it is of very small extent, and of nearly circular form. Here were formerly a chapel and burying-place, the remains of which are still visible.—See TONGUE.

EALAN-NA-ROAN, an isle, in the parish of TONGUE, county of SUTHERLAND; containing 42 inhabitants. This place, the name of which signifies the "Island of Seals", is situated at the entrance to the Kyle of Tongue. It is about two miles in circumference, and is formed of a mixture of sand and a reddish kind of pebble, which appear as if baked together. The isle contains a large quantity of peat-moss, and has plenty of fresh water. Some years since, part of the land near the middle sank without any visible cause, occasioning a vast chasm.—See TONGUE.

Burgh Seal.

EARLSFERRY, a burgh of regality, in the parish of KILCONQUHAR, district of ST. ANDREW'S, and county of FIFE, $\frac{1}{2}$ a mile (W.) from Elie, and 2 miles (S.) from Colinsburgh; containing 496 inhabitants. This place, which is of great antiquity, and was originally an inconsiderable fishing-village, derived its name, and, according to some, its erection into

conveyed across the Firth of Forth, to Dunbar, by the fishermen of the village; and in return for the kindness he had experienced, he is said to have obtained from Malcolm III. a charter of incorporation for the inhabitants, erecting the village into a royal burgh, to which, in memory of his escape, he gave the appellation of Earl's Ferry. Among the privileges conferred was that of sanctuary to all who should sail hence across the Firth; it was ordained that their persons should be inviolable while here, and that, after their embarkation, no boat should be allowed to go in pursuit of them till they were half way across. After it became a burgh, the place appears to have carried on a large trade; two weekly markets and two annual fairs were held, and the provost and bailies levied dues and customs. But the want of a convenient harbour prevented its attaining much consideration as a port: its trade, which had for many years been declining, was, from the construction of a harbour and the erection of a pier at Elie, in its immediate neighbourhood, at length wholly transferred to that place; and both its fairs and markets were consequently discontinued. The inhabitants are chiefly employed in the coal-works in the vicinity of the town, and in weaving for the manufacturers of Dundee, Kirkcaldy, and other places; the articles woven are sheetings, dowlas, and checks, which are wrought in hand-loom by the people at their own dwellings. There are about seventy seamen engaged in the harbour and at the ferry; and during the months of July and August, a few of them are employed in the herring-fishery on the north-east coast. Many of the weavers who have been brought up as seamen occupy themselves in summer in the whale-fisheries on the coast of Greenland, from which pursuit they return to their looms in the winter.

The original charter of Malcolm, bestowed in the eleventh century, was destroyed by fire; and a new charter, confirming all the privileges it had conferred, was in 1589 granted by James VI., by which the government is vested in three bailies, a treasurer, and a council of sixteen burgesses, assisted by a town-clerk and other officers. The bailies and treasurer are elected annually by the council for the time being, and on their appointment nominate the council for the following year; the chief magistrate is *ex officio* a justice of the peace. There is power to hold courts for the determination of civil and criminal causes; but since 1820, only five civil cases and one criminal case have been decided. At one period the burgh enjoyed the privilege of sending a member to the Scottish parliament; but it was relieved on its own petition, some time prior to the Union in 1707. The prison is in a state of dilapidation: it was latterly seldom used, and only for the temporary confinement of persons found guilty of misdemeanors; and after the passing of the Prisons' act for Scotland about ten years ago, it was abolished as a place of confinement.

EARLSTOUN, a parish, in the county of BERWICK; including the villages of Fans, Mellerstain, and Redpath, and containing 1756 inhabitants, of whom 927 are in the village of Earlstoun, 4 miles (N. by E.) from Melrose. The name of this parish, anciently *Ersildun* or *Ersildon*, which appears to have been gradually changed into *Earlstoun*, is traced by some antiquaries to the Cambo-British word *Arcul-dun*, signifying "the prospect hill", from a commanding eminence on the south of the village and church. It is, however, perhaps more correctly derived

from the name *Earl*, with the common termination of *don, ton, or town*; on account of its having belonged to the Earls of March, who were seated here from the twelfth century till 1453, when they incurred a forfeiture. David I. occasionally resided in this part, and James IV., in the year 1506, granted the barony to Mungo Home, whose family had previously established their residence at Cowdenknows, on the Leader, about three-quarters of a mile below the village of Earlstoun. This village, on the 1st of February, 1590-1, was made a burgh of barony by James VI., in favour of John Home of Cowdenknows, the great grandson of Mungo; and the grant was confirmed in 1592. In 1636, Sir James Home, the lineal descendant of this family, succeeded to the earldom of Home, Earl James having died without issue. The PARISH lies in the south-western extremity of the county, and is about six miles in length from east to west, and about four and a half in breadth. It is bounded on the north by the parishes of Gordon and Legerwood, on the south by Mertoun, on the east by Smailholm in Roxburghshire, and Nenthorn, and on the west by Melrose in Roxburghshire. The surface in the vicinity of most of the streams is tolerably even, but in the western quarter it is more hilly, though there is no remarkable eminence, except in one place, about a mile south of the village, where the ground attains an elevation of 1000 feet above the level of the sea. There are two considerable rivers, the Eden on the east, and the Leader on the west, both of which rise in Lammermoor, and flow into the Tweed, and are celebrated for their fine trout. The scenery of the latter is in some parts extremely beautiful; and its windings between the hills of Carolside, and through the classic grounds of Cowdenknows, have been the inspiring theme of Scottish song.

The SOIL is of different varieties; that of the arable land is generally dry, and in some parts a rich fertile loam. In the eastern quarter is a considerable extent of marshy ground; barren heath is to be met with in many places, and in the northern district there is a moss consisting of several hundreds of acres. About 5600 acres are cultivated or occasionally in tillage, and 2118 are waste or in pasture; the wood covers 915 acres, and on the Mellerstain estate, where timber is regularly cut for sale, a large extent of waste land has been planted with Scotch fir. Grain of all kinds is raised, but the quantity, especially of wheat, has been small, the soil being chiefly suited to turnips, large crops of which are produced. The five years' rotation system is usually followed, consisting of two years' grass; of oats; turnips; and, lastly, oats or barley, with grass seeds. The sheep mostly bred are the Leicesters, and the cattle are the short-horned, to the rearing of which much attention is paid. Many improvements have been effected in the culture of the lands; and although great losses have been sustained in some cases by the reclaiming of waste, yet considerable progress has been made in this respect, and the extensive tract of moss before named, having been redeemed at an expense of from £1200 to £1400, now affords tolerable pasture for cattle. On the estate of Cowdenknows much benefit has been derived from laying out plantations, which greatly ornament the vicinity of the Leader as well as the village of Earlstoun. The annual value of real property in the parish is £8533. At Mellerstain, the seat of the ancient family of Baillie, is a large and elegant mansion, built by

the grandfather of the present owner, George Baillie, Esq.; it is embosomed in a forest of noble trees, which cover and adorn a wide extent of country. Cowdenknows, now the property of James Gilfillan, Esq., stands on the Leader, amid scenery which has for hundreds of years been celebrated for its beauty; and Carolside, belonging to Alexander Mitchel, Esq., is also seated on the banks of the river, in a delightfully secluded vale surrounded by hills, and is remarkable for the variety of the attractions in its vicinity.

The village of Earlstoun is situated on the Leader, near the new line of road from Jedburgh to Edinburgh; and the road from Kelso passes through it. There are two manufactures carried on in the parish; one being a manufacture of ginghams, merinos, shawls, muslins, shirtings, and furniture stripes; and the other of plaidings, blankets, flannels, and other woollens: in the former about eighty persons are employed, and in the latter the number of hands is about forty. Two fairs of considerable importance are held yearly at Earlstoun, principally for horses and cattle, one on the 29th of June, the other on the third Thursday in October. Ecclesiastically the parish is within the bounds of the presbytery of Lauder, synod of Merse and Teviotdale; patron, the Crown. The stipend of the minister is £218, and there is a manse, erected in 1814, and repaired in 1824, with a glebe valued at £37 per annum. Earlstoun church, built in 1736, and enlarged and thoroughly repaired in 1832, is situated in the village, nearly at one extremity of the parish; it formerly accommodated only 450 persons, but on account of its recent enlargement is now capable of holding nearly 200 more. The members of the Free Church have a place of worship, and there are also meeting-houses for the United Presbyterian Synod and Antiburghers. The parochial school affords instruction in the classics, French, mathematics, and all the usual branches of education; the salary of the master is £28, with £32 from fees, and the interest of £550 bequeathed partly by the Rev. Robert Young, and partly by the late Dr. James Wilson, who was educated in the school, and long resident in India. A school at Mellerstain is partly supported by the Baillie family of that place; and at Fans and Redpath are held other schools.

At Cowdenknows is an ancient tower in a state of good preservation, bearing on its walls the date 1573. But the chief relic of antiquity is part of a tower standing at the west end of the village, called Rhymer's Tower, the ancient residence of Sir Thomas Learmont, or Thomas of Ercildoune, commonly called Thomas the Rhymer, the earliest, and in some respects the most remarkable, poet of Scotland. His predictions respecting many families of importance, and with regard to the ruin of his own family, and the union of the British dominions under one monarch, are all particularly noticed by Sir Walter Scott in the *Minstrelsy of the Scottish Border*. He lived about the end of the thirteenth century, and held a considerable portion of the lands in the parish. On the summit of Blackhill is a vitrified fort, and in various parts of the parish are circular encampments of the primitive inhabitants. Near the western extremity of the village there existed some years ago an ancient thorn-tree, to which the older people attached the magic power of sustaining the fortunes of the place, so long as it remained untouched.

EARN, BRIDGE OF, a village, in the parish of **DUNBARNY**, county of **PERTH**, 3 miles (S. by E.) from Perth; containing 369 inhabitants. This place, which takes its name from its situation near a bridge across the river Earn, consists of two portions. One of these was commenced about 1769, by Mr. John Gilloch, who had obtained from Sir William Moncrieffe a ninety-nine years' lease of a tract of land between the old bridge of Earn and Seale's bridge. The other was erected in 1832, and forms a street of regularly-disposed houses, intended chiefly for the accommodation of persons visiting the celebrated mineral wells of Pitkeithly, at a short distance from this spot, and within the confines of the parish. These waters belong to the saline class, as distinguished from the acidulous, chalybeate, and sulphureous, and contain carbonate of lime, sulphate of soda, chloride of calcium, and chloride of sodium, the two last being the principal ingredients; there are also portions of carbonic acid and nitrogen. They have long been in repute for their efficacy in hepatic, scrofulous, and many other complaints, and are visited by numerous invalids. The water is used both internally and externally, and both warm and cold. There is an inn near the wells, fitted up for the accommodation of strangers, and at one time forming the mansion-house occupied by the proprietor of Pitkeithly; but the chief inn is the Moncrieffe Arms, at the village. Apartments of every kind may also be obtained at the several lodging-houses; and a regular post-office is established here for the surrounding district. One of the most picturesque and interesting objects in the scenery is the new and elegant bridge of three elliptical arches, erected over the river in 1821 by the city of Perth, at a cost of £16,000, in place of the old bridge, built about 500 years since, and of which two of the five arches still remain, overgrown with ivy. Moncrieffe hill, to the north of Bridge-of-Earn, commands one of the most magnificent prospects in Britain. The road between Edinburgh and Perth passes through the village, and the Perth line of the Edinburgh, Perth, and Dundee railway company has a station in the vicinity. The parish church and manse are situated here.

EASDALE, an island of the Hebrides, annexed to the parish of **KILBRANDON**, in the district of **LORN**, county of **ARGYLL**; containing 531 inhabitants. This island is situated a little westward of that of Seil, belonging to the same parish, and from which it is separated by a narrow channel called Easdale Sound; it is washed by the Atlantic on the south, and the Sound of Mull on the west and north-west, and is less than a square mile in extent. The village of Easdale is built on both sides of the sound, that portion of it situated in Seil being called Eilean-na-beithe, "isle of birch". It is chiefly inhabited by persons employed in the slate-quarries, whose tenements are one story high, with good slate roofs, and of neat and comfortable appearance. Though slate of the same kind is obtained in the islands of Seil and Luing, Easdale is the chief seat of the operations for raising the fine blue durable material for which it has been so long and justly celebrated; the whole island consists of it, and there is one quarry 120 feet below the level of the sea. The quarries have been wrought for nearly two centuries; and the four now open in the islands employ about 200 men, and produce from four to five millions of slates annually. Much of the labour

formerly done by horses, carts, &c., is now effected by the aid of steam-engines and by tramroads. The steamers running between Glasgow and the northern ports pass along the Sound of Easdale, and a post communicates daily with Oban. There is a school supported by the Society for Propagating Christian Knowledge.

EASSIE and **NEVAY**, a parish, in the county of **FORFAR**, 3 miles distant (E.) from Meikle; containing 732 inhabitants. These two districts, formerly separate parishes, are together about four miles in length and three in average breadth, comprising an area of 5000 acres, of which, with the exception of a small proportion of pasture and woodland, the whole is arable. The surface is varied; in Eassie it is partly level, but the greater portion is included in the Sidlaw hills, whose northern declivity occupies nearly one-half of the parish. The river Dean is the northern boundary of the district of Eassie, where it winds along with a scarcely perceptible current, though, from the great depth of its channel, and the numerous and sudden changes in its course, it frequently overflows its banks, and inundates the adjacent lands. In the lower grounds the soil is a fine black mould, but towards the hills becomes less fertile, and near the summits affords only tolerable pasturage; in Nevay it is partly marshy, with moss, and in Eassie is a tract of strong rich clay, well adapted for grain. The arable lands are in the highest state of cultivation, producing oats and barley, of which, from the great attention paid to them, considerable quantities are sent to various parts of the country for seed. Much care has been bestowed on the improvement of live stock: the cattle are principally the Angus and the short-horned; numerous flocks of sheep, chiefly of a mixed breed between the Highland and the Leicestershire, are fed on the pastures, and in autumn many are fed on turnips and fattened for the market. The farms average about 200 acres in extent, and the farm-buildings are in general substantially built, on the most improved plan, and well arranged. The plantations, which are mostly of recent growth, consist mainly of larch and Scotch fir, and are in a thriving state. The annual value of the real property in the parish is £4019.

There are several small scattered hamlets, but no regular village; the population is chiefly agricultural, and a small number of persons are employed in the manufacture of coarse linen, chiefly for domestic use. Freestone of good quality is quarried to a considerable extent. The river Dean abounds with trout, and is much frequented by anglers. The high road from Aberdeen to Edinburgh, and the Scottish Midland Junction railway, pass through the parish. Ecclesiastically it is within the bounds of the presbytery of Meikle, synod of Angus and Mearns: the minister's stipend is £161, with a manse, and a glebe valued at £15 per annum; patron, Lord Wharnclyffe. The church is a handsome structure, erected in 1833 on a site convenient for both districts. The parochial school is well conducted; the master has a salary of £34, with a house and garden, and the fees average about £18 per annum. There is a parochial library containing a good collection of works, chiefly on religious subjects. The poor are partly supported by the proceeds of a fund of £120: a bequest of £100 by Miss Ogilvie, of West Hall, for such as are not on the parish list, has been entirely expended. About a mile from the old church of Eassie is a large circular mound, on which stands the

farm-house of Castle-Nairn; part of the broad moat that surrounded it is still remaining. It is supposed to have been an intrenchment occupied by the army of Edward of England during his invasion of the country. There is also a large stone obelisk in the parish, curiously sculptured with hieroglyphic characters.

EAST COALTOWN.—See **COALTOWN, EAST.**—*And all places having a similar distinguishing prefix will be found under the proper name.*

EASTBARNES, a village, in the parish of **DUNBAR**, county of **HADDINGTON**, 3 miles (S. E. by E.) from the town of Dunbar, on the road to Berwick; containing 125 inhabitants. It is situated near the coast of the German Ocean, in the eastern extremity of the parish, and is distant from Westbarnes, a more populous village on the other side of Dunbar, about five miles. There was a Burgher meeting-house here till the year 1820, when the congregation removed to the town; and one of the parochial schools is still fixed at this place. The North-British railway passes by.

EASTHOUSES, a village, in the parish of **NEW-BATTLE**, county of **EDINBURGH**, 1 mile (E.) from Newbattle; containing, in 1841, 420 inhabitants. This was a considerable colliery-village, the population being chiefly employed in the neighbouring mines of the Marquess of Lothian, which are very extensive. It is now gradually falling into decay, the colliers having mostly removed to a new village in the parish.

EASTWOOD, or **POLLOCK**, a parish, in the Upper ward of the county of **RENFREW**, $2\frac{1}{2}$ miles (S. W.) from Glasgow; containing, with the incorporated town of Pollockshaws, the village of Thornliebank, and part of the late quoad sacra district of Lovern, 7970 inhabitants. This parish derives the former of its names from the relative situation of an extensive wood which was a part of it, but which has long been converted into arable land; and the latter name from the circumstance of the chief lands being designated Pollock. It is about four miles in length from north to south, and three miles in breadth, forming an irregular area of 5000 acres, and bounded on the west by the parish of Paisley, of which a considerable portion is circumscribed by the lands of Eastwood. The surface is pleasingly undulated, intersected with tracts of level ground, and rising towards the south into a range of hills, the highest of which has an elevation of 300 feet above the level of the sea. In many parts the scenery is embellished with flourishing plantations, and watered by winding streams, which give to it an interesting and picturesque appearance. The river White Cart, rising in the moors of Eaglesham, flows for several miles through the parish in its course to the Clyde, receiving at Pollockshaws the waters of the Auldhouse burn, which issues from a lake in the adjoining parish of Mearns. The Brock burn, which also rises in Mearns, winds through Eastwood, and falls into the Lovern, which skirts the western extremity of the parish, and joins the Cart near Cruickston Castle. In the hilly parts towards the south the soil is thin and light, but on the banks of the river and rivulets extremely rich and fertile; about one-half of the lands is arable and in profitable cultivation, and the remainder, with the exception of about 250 acres of natural wood and 100 of plantation, is good pasture land. The rotation system of husbandry is prevalent; the crops are oats, barley, and wheat, with potatoes and turnips.

Some attention is paid to the rearing of cattle, which are generally of the Ayrshire breed; but the management of live stock forms only a secondary object with the farmer, and consequently few fine specimens are produced. Considerable progress has been made in reclaiming the waste, of which large portions have been brought into a state of cultivation, and great improvements have been effected in draining and fencing; the farm-houses and offices are substantial and commodious, and mostly roofed with slate. The plantations are of oak, elm, ash, sycamore, beech, larch, and Scotch, spruce, and silver firs. The annual value of real property in the parish is £21,061.

The substrata comprise sandstone and limestone, with occasional belts of ironstone. There are some valuable quarries of stone of excellent quality for building and various other purposes. The stone of one of the quarries is peculiarly adapted for pavements, hearths, and staircases, and, as it may be cut to any required size, is also employed for cisterns. Another of these quarries produces a very superior kind which is in great demand for the finer sorts of masonry, and is much admired for the uses of the sculptor and the statuary. Limestone is still worked at Arden, and was formerly wrought at Darnley and Cowglen; but it is of very inferior quality, unfit for burning into lime, and consequently applied chiefly to road-making, and for roughcasting the walls of houses, for which purpose it is well adapted from the hardness it acquires from exposure to the air. Coal abounds in the parish, and is wrought at Cowglen. There are several seams, varying in thickness, but none exceed three feet. Five of these have been worked with success: they are of good quality, and yield an ample supply of fuel; the pits vary from ten to forty fathoms, in depth, and the annual produce is estimated at nearly £4000. A considerable number of the inhabitants are employed in cotton spinning, weaving, bleaching, and calico-printing, for which large factories have been established in the town of Pollockshaws, the village of Thornliebank, and Auldhouse. In the bleachfields of the last, more than 200 persons are employed; the particulars of the two first will be found in the notices of those places under their respective heads. Pollock, the seat of Sir John Maxwell, Bart., is a handsome modern mansion pleasantly situated. Great facility of intercourse is afforded by the Glasgow and Barrhead railway, which intersects the parish.

Ecclesiastically the parish is in the presbytery of Paisley, synod of Glasgow and Ayr, and in the gift of Sir John Maxwell; the minister's stipend is about £140, with a manse, and a glebe valued at £35 per annum. The old church was taken down, and a new edifice erected in 1781 near the western extremity of Pollockshaws; it is a neat building in good repair, and affords accommodation to 760 persons. A second church connected with the Establishment has been erected in Pollockshaws; and there are places of worship for members of the Free Church, the United Presbyterian Synod, and the Synod of Original Seceders: the Roman Catholics, who are numerous in the parish, attend the chapel at Glasgow. Eastwood parochial school affords instruction to about 100 scholars; the master has a salary of £34, with £36 fees, and a house and garden. There are no monuments of antiquity: the only memorials of olden times are some documents in the possession of the

Maxwell family, comprising, among others, a precept from the lords of council of James V. to meet his queen when she came first to Scotland, dated 1527; a letter from the Regent-Queen Mary, 1559; a letter from Queen Mary before the battle of Langside; two letters from James VI.; and the original, with the subscriptions, of the first National Covenant, signed by the king and council, 1581. Among the ministers of Eastwood have been Wodrow, author of some writings on the antiquities of Scotland, of some lives of the most learned men who have flourished in the country, and of a history of the Scottish Church; and the Rev. Mr. Crawford, author of an unpublished history of the Church from the introduction of Christianity into Scotland till the year 1680. Walter Stewart, of Pardovan, author of the *Collections*, died here, while on a visit to the Maxwells, and was interred in the aisle of the church appropriated as a place of sepulture for the members of that family, and in which a marble monument was erected to his memory.

ECCLES, a parish, in the county of BERWICK, 6 miles (W. by N.) from Coldstream; containing 1946 inhabitants. The name is derived from the classical word signifying a church, supposed to have been applied on account of the number of churches or chapels at one time situated here. In this parish is the ancient village of Birgham, celebrated for the meeting, in 1188, between Hugh, Bishop of Durham, and William the Lion, at the instance of Henry II. of England, for the purpose of laying a tax upon the Scots towards the support of the war in the Holy Land. At that place, also, was convened, in March 1290, an august assembly for the settlement of the intended marriage of Prince Edward, son of Edward I., with Margaret of Scotland, a union afterwards prevented by the death of the young princess in one of the Orkneys. Another meeting was held at Birgham in July 1290, at which the Bishop of Durham and five others solemnly assented, in their master's name, to every important regulation made by the Scots for securing the independence of their kingdom. The parish was anciently a seat of Bernardine or Cistercian nuns, for whom a convent was founded by Cospatrick, Earl of Dunbar; but the building has entirely disappeared, with the exception of two vaults, now converted into cellars for the mansion-house of one of the landed proprietors. There is much obscurity in ancient documents respecting the date of this religious house, Hoveden and the *Melrose Chronicle* representing it as founded a second time by the earl in 1154, and Cowpar fixing the event in 1155, while the *Scoto-Chronicon* annexed to Fordun asserts it to have been established by his countess. In 1296, during the interregnum in Scotland, Ada de Fraser, the prioress, obtained a letter of restitution, in consequence of the fealty sworn to Edward I. by the Scots; and in the year 1333 Edward III., after taking Berwick, received the homage of the convent. It was visited in 1523, on the 13th of November, by the Duke of Albany when retreating from Wark Castle; he stayed till midnight, and then marched to Lauder. In 1545, the abbey and town, with the tower of Mersington, were destroyed by the Earl of Hertford on his memorable inroad into Merse and Teviotdale, when he ravaged and burned the whole country without opposition. In 1569, Marieta Hamilton, then prioress of the establishment, granted the village and lands of Eccles, by charter, to Sir Alexander Hamilton of In-

nerwick: and the charter was confirmed by Queen Mary at Edinburgh, on the 11th of May in the same year. In the 17th century the village was erected into a burgh of barony in favour of George Home, Earl of Dunbar.

The PARISH is nearly seven miles long, and five and a half broad, and contains 11,000 acres. With the exception of the slight elevations of Cotchet Ridge, Brae-Dunstan, Bartlehill, Hardacres, and Eccles Hill, the surface is level throughout. It consists entirely of cultivated land, well farmed and fenced, and studded with numerous plantations. The climate, however, is somewhat damp, and to a slight extent unhealthy, arising from the prevalence of a rainy atmosphere. The scenery is much enlivened by the course of the Tweed, which runs on the southern boundary of the parish, and separates Eccles from Northumberland; its banks rise about fifty feet above the water, and harbour large numbers of foxes, weasels, and rabbits. Near the river the soil is in general light; in the middle and northern parts of the parish clay and loam predominate, and in the south-east quarter is a portion of moor. It produces excellent crops of all kinds of grain, and turnips and potatoes: the rotation here followed is the four or the five years' shift, which are considered well suited to the district. Sheep are kept on most of the larger farms, consisting mainly of the Cheviot and Leicestershire breeds, the former of which, on account of its being more hardy, is preferred for the clayey lands. Rapid advances have been made in agricultural improvement, and the annual value of real property in the parish now amounts to as large a sum as £19,441. The prevailing rock is the red sandstone, which exists in a great variety of forms and admixtures. At Birgham Haugh, magnesian limestone, with red hornstone and crystals of calcareous spar, is found; and on the southern bank of the river, in addition to the above, are considerable quantities of claystone porphyry. Near Kennetside head, the large proportion of siliceous material gives the sandstone almost the appearance of a quartz rock; and in the marly sandstone on the banks of the small river Leet are thin beds of gypsum. Among the houses in the parish are Kames, Antonshill, Belchester, Stoneridge, Purves Hall, and Eccles House, and in the plantations of the last-mentioned are several fine old trees, chiefly elm and ash. There are four villages, Eccles, Leitholm, Birgham, and Hassington; Leitholm is the largest, and has a bye-post to Coldstream. The London and Edinburgh road, by Greenlaw, traverses the parish from south-east to north-west; and that by Kelso, and the road from Kelso to Berwick, also cross it.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Dunse, synod of Merse and Teviotdale; patron, the Crown. The stipend of the minister is about £250, and there is a manse, with a glebe of twenty acres of good land. The first church was dedicated to St. Cuthbert, but the next, built about the year 1250, was in honour of St. Andrew. The present church was erected in 1774, at an expense of £1000, after the model of St. Cuthbert's chapel-of-ease at Edinburgh, and is an elegant building seventy-eight feet long and thirty-four feet broad, ornamented with a handsome spire; it is situated about a mile from the western boundary of the parish, and contains 1000 sittings. There is a place of worship in connexion with the United Presbyterian Synod. The parochial school affords in-

struction in the classics, mathematics, and all the usual branches of education; the salary of the master is £34, with the fees, and a house. A friendly society for the relief of the sick and superannuated has been established. The chief relic of antiquity is a monument of white sandstone, in the form of a cross, without any inscription, situated at Crosshall, about a mile northward of the village of Eccles. The pedestal is a solid block of stone, two feet and a half high, three feet square on its upper surface, and raised a little above the ground; the column is ten feet high, one foot and a half broad on the east and west sides, and one foot on the north and south, at the bottom. On the north face of the column is sculptured a Calvary cross, surmounted by a shield; and at the summit of the west side is a cross, with an escutcheon below having chevrons in the dexter and sinister chiefs and the base, and a St. John's cross: the south side has an escutcheon like that on the west, and, beneath, an ancient double-handed sword; the east has a cross, and, below, the naked figure of a man, and a greyhound. Many conjectures have been made respecting the origin and design of this monument: the most probable is that it was erected after the second crusade, in 1114, in honour of the father of Sir John De Soules, lieutenant or viceroy to John Baliol. On Hardacres Hill, about a mile to the west of the monument, are traces of intrenchment. Eccles was the birthplace of Henry Home, Lord Kames, born in 1696; it was here that he entertained Dr Franklin and his son in 1759, and here he composed many of his works.

ECCLESCRAIG, in the county of KINCARDINE.—
See **St. CYRUS**.

ECCLESFECHAN, a village, in the parish of **HODDAM**, county of **DUMFRIES**, 6 miles (N.) from Annan; containing 768 inhabitants. It is very centrally situated, in the south-eastern part of the parish, on the road between Carlisle and Glasgow, and is an important and thriving market-village, with many respectable shops in various branches of trade. A large part of the population is engaged in the manufacture of gingham, which is the chief product of the place. It has a noted cattle fair or market, to which its prosperity has been principally owing, and also a flourishing pork-market; the former is held monthly, but the great sales are in June and October, and the pork-market is held during the winter. In the vicinity are five cross-roads, and there are great facilities of intercourse afforded to the inhabitants by the Caledonian railway, which has a station at Ecclesfechan. A post-office has for some time been established. The parochial church stands about a mile south of the village; and the members of the Free Church have a place of worship.

ECCLESMACHAN, a parish, in the county of **LINLITHGOW**; containing, with the villages of Three-Mile-town and Waterston, 303 inhabitants, of whom 97 are in the village of Ecclesmachan, 1 mile (N.) from Uphall. This place derives its name from the dedication of its ancient church to St. Machan, who flourished in the ninth century. It is separated into two detached portions by the intervention of a part of the parish of Linlithgow, and comprises altogether an area of 2458 acres; about 2300 acres are arable and pasture, 130 woodland and plantations, and the remainder roads and waste. The surface rises into two ridges, of which that in the western portion of the

parish attains an elevation of 600 feet, and is intersected by several shallow ravines; the eastern ridge, of less height, is precipitously steep, rising on the south into an abrupt eminence called Tar or Tor Hill. The lower grounds are watered by several small streams that flow into the river Almond; and the prevailing scenery is softened by the thriving plantations that have been formed on the lands of Blackcraig. In general the soil is fertile; the lands, which are divided into farms of moderate extent, are under good cultivation, and the best system of husbandry has been adopted. The crops are wheat, barley, oats, beans, and turnips. The grounds are well inclosed with hedges of thorn and ditches, and draining has been practised to some extent, but there is still great room for improvement. The rearing of live stock is confined chiefly to the Ayrshire breed of cattle, with a cross of the short-horned; oxen of the Angus or the Highland breed, and black-faced sheep, are fattened on the pastures. Coal is plentiful, and was formerly wrought in several parts: sandstone is found on most of the lands; and in the vicinity of the most prominent rocks, which are of trap, are found large beds of indurated clay, interspersed occasionally with seams of ironstone. The annual value of real property in the parish is £2718. The village consists of a few houses near the church, and facility of communication is afforded by roads kept in excellent repair by statute labour, and by the road from Edinburgh to Falkirk, which passes through the northern extremity of the parish. Ecclesmachan is within the bounds of the presbytery of Linlithgow, synod of Lothian and Tweeddale; patron, the Earl of Hopetoun: the minister's stipend is £256. 12., with a manse, and a glebe valued at £15 per annum. The church, which was nearly rebuilt in the beginning of the last century, and thoroughly repaired in 1822, is a plain structure containing 153 sittings. The parochial school is attended by about fifty children; the master has a salary of £34, with a house and garden, and the fees average about £20 per annum. A school was erected on the border of the parish by the late Robert Warden, Esq.; the master is solely dependent on the fees, having only the house rent free, which in summer is used as a preaching-station on the Sabbath evenings. On the Tar hill is a spring called the Bullion Well, the water of which is slightly impregnated with sulphuretted hydrogen. William Hamilton, a poet of eminence in the early part of the 18th century, was either born, or resided in the parish.

ECHT, a parish, in the district of **KINCARDINE O'NEIL**, county of **ABERDEEN**, 12 miles distant (W.) from Aberdeen; containing 1078 inhabitants. This parish is nearly a square in figure, each side measuring about four miles and a half; and comprises between 15,000 and 16,000 acres, of which 7000 are in tillage, 2000 in plantations, and the remainder uncultivated. It consists chiefly of a valley lying between two hills of unequal height, the more elevated of which, called the Hill of Fare, is situated about one mile south-west from the church, and is but partly in the parish. The base of this hill is nearly eighteen miles in circumference, and its height 1794 feet above the level of the sea; it has some thriving plantations of fir, abundance of the usual kinds of game, and several chalybeate springs, said to be beneficial in scorbutic and nephritic complaints. On the outskirts of the parish are other rising grounds,

cultivated to the summit; and in the north-western portion is a hill of conical form, called the Barmekin, about two-thirds of the height of the Hill of Fare, entirely shrouded in wood, and contributing by its sylvan beauties to enhance the effect of the varied and pleasing scenery of the locality. The lower grounds are mossy; the soil in some places is light and sandy, and that of the best lands is in general a light loam, on a clayey subsoil. The climate is mild; and the crops, comprising bear, potatoes, hay, turnips, and oats, are early and of good quality. The system of farming has been greatly improved within the present century, and some of the estates exhibit the skill and perseverance of the most successful husbandry; lime is extensively used, and bone-dust has of late years been applied with much advantage. Among the large tracts of waste land which have been reclaimed, that on the estate of Echt, amounting to 1860 acres, is the chief. Inclosures and drains have been formed on all the principal farms; the late and present proprietors of Echt have formed upwards of 150,000 ells of stone dykes, and upwards of 40,000 ells of drains: there are many substantial and convenient farm-houses and offices, and above forty mills have been erected for threshing grain. The few sheep kept are the Cheviot and the black-faced; the cattle are mostly of the Aberdeenshire, with a few of the Teeswater. Granite is occasionally quarried. The annual value of real property in the parish is £5690.

Between 1500 and 2000 acres have been planted in the last half century on the estate of Echt, and the proprietor has transplanted about 150 large trees to ornament the grounds of his elegant and commodious mansion: the house was built in the year 1820, and has a very extensive garden, with a park of eighty acres. A branch post has been established. The parish is intersected by the high road from Aberdeen to Tarland, and a road from the former place to Alford runs along a small part of the northern extremity of Echt; a third road, to Kincardine O'Neil, strikes off from the Tarland road at the eastern boundary, and traverses a considerable portion of the parish in a south-western direction. Several fairs are held annually, chiefly for sheep, cattle, horses, and corn. Ecclesiastically the parish is in the presbytery of Kincardine O'Neil, synod of Aberdeen, and in the patronage of the Earl of Fife; the minister's stipend is £183, with a manse, and a glebe of about four and a half acres, valued at £10 per annum. Echt church, built in the year 1804, is capable of affording accommodation to 600 persons; it is a neat structure, comfortably fitted up, and being centrally situated, is convenient for the bulk of the population. The parochial school affords instruction in the usual branches; the master has a salary of £29, with a house, and £20 fees, and also participates in the benefit of the Dick bequest. The remains of a Danish camp are still visible on the hill of Barmekin, comprehending five intrenchments; the inner inclosure, which is almost circular, measures 300 feet in diameter, and covers about one acre of ground. In the vicinity are several cairns and tumuli, and in another part of the parish is a Pictish work in the form of a horse-shoe. On the 28th of October, 1562, the district was the scene of the battle of Corrichie, fought between the forces of the Earl of Huntly and those of the Earl of Murray; the former were defeated, their commander slain, and his son, Sir John Gordou, afterwards beheaded at Aberdeen.

ECKFORD, a parish, in the district of KELSO, county of ROXBURGH; containing, with the villages of Caverton and Cessford, 1069 inhabitants, of whom 98 are in the village of Eckford, 5 miles (S. by W.) from Kelso, and 48 in that of Eckfordmoss, adjoining. This parish appears to have derived its name from a ford across the river Teviot near the village, and from the number of oak-trees with which the immediate neighbourhood anciently abounded. On account of its situation only a few miles from the border, the parish was frequently the scene of violence and devastation, and within its limits were several strongholds, such as Moss Tower, Ormiston Tower, and Eckford Tower, for defence against the incursions of the English, and as places of security for cattle and other property. Of these, Moss Tower was the most important, both for its strength and for its position in a marsh near the village, and also from its being the residence of Hepburn, Earl of Bothwell. This castle was assaulted in 1523 by a party of English led by Thomas, Lord Dacre, who, on the same day, demolished Ormiston Tower and numerous other places in the vicinity; and in 1544 it was burnt, together with the tower and church of Eckford, by a body of the English under Sir Ralph Eure, who put to death nearly fifty of the inhabitants. It appears to have been rebuilt, but was again destroyed by the Earl of Sussex, who, in 1570, laid waste a large portion of the surrounding district. But the most famous fortress in the parish was Cessford Castle, the ancient manorial residence of Sir Robert Ker, ancestor of the Duke of Roxburghe's family, and warden of the Scottish middle marches. This fortress was of considerable importance, and in 1523 the Earl of Surrey in vain attempted to reduce it, but after a protracted siege obtained possession by capitulation. The ruins still in a great measure remain, and show it to have been of no ordinary strength. The chief building is a quadrangular pile sixty-seven feet long, sixty feet broad, and sixty-five feet high, with walls nearly thirteen feet in thickness; it was once surrounded by an inner and outer wall, part of the latter of which is still remaining, and the interval between them is supposed to have been appropriated to the keeping of cattle and other valuable property placed there for security in times of danger. Some traces of the moat by which the whole was inclosed may also be perceived. In 1553, the village of Eckford, which had been a town of no little importance, was burnt by the Marquess of Dorset.

The PARISH, which is of triangular form, is about six miles in extreme length, and four and a half in extreme breadth, and comprises 9695 acres, whereof 7728 are arable, 813 woodland and plantations, and the remainder rough pasture, common, and waste. Its surface is generally undulated, rising towards the south into moderate elevations, the principal of which are Wooden hill and Caverton hill, commanding extensive and pleasingly-varied prospects, embracing on the west the fertile vale of Teviot, with the beautiful scenery along the banks of that river; and the valley of the river Kale, with its picturesque ranges of hills. The Teviot has its source among the hills that separate the counties of Roxburgh and Dumfries, and, after flowing through the parish, falls into the Tweed near Kelso. The Kale, which rises in the Cheviot hills, in the county of Northumberland, after an impetuous course of about eighteen miles, falls into the Teviot to the north of the church; its banks in va-

rious parts are richly wooded. There is a lake situated near the village, at the base of Wooden hill; it occupies the bed of an extensive marl-pit which was formerly wrought, and in some places the waters are thirty feet in depth. In the slimy bottom of this lake, medicinal leeches of excellent quality used to be found in considerable numbers; but no traces of such are now to be found, probably from the quantity of water it contains. The scenery throughout Eckford is of pleasing character, and the prospects are enriched with the flourishing plantations that prevail in most parts of the parish.

The SOIL is various; in the lower grounds, and more especially on the banks of the Teviot, a light friable loam; on the higher grounds, partaking more of the nature of clay. It is generally fertile, and by good management rendered highly productive: the crops are oats, barley, wheat, potatoes, turnips, peas, and beans. The system of agriculture is in a very improved state, and the five-shift rotation of husbandry usually practised; the lands are well drained, and inclosed chiefly with hedges of thorn. Much waste has been reclaimed and brought into profitable cultivation. Attention is paid to the improvement of live stock; the sheep are mostly of the Leicestershire breed, and the cattle pastured in the parish of the short-horned breed. The annual value of real property in Eckford is £8837. The woods comprise all the varieties of forest-trees, and flourish greatly; the plantations are chiefly of Scotch, spruce, and silver firs, of which there is a tract of nearly 360 acres at Caverton-Edge, where formerly the Kelso races were held, and which, from one of the titles of its proprietor, the Duke of Roxburghe, is called Beaumont Forest. There are many specimens of ancient timber of stately growth in various parts of the parish. The principal substrata are whinstone and sandstone, which are both occasionally quarried for building and other purposes. A small seam of coal was discovered many years since at Caverton-Edge, but it was not wrought with sufficient spirit to produce any beneficial result. The manufacture of agricultural implements is carried on at Kalemouth; and there are mills for grinding corn at Ormiston, Eckford, and Caverton.

Marlefield House, the property of the Marquess of Tweeddale, is a spacious mansion pleasantly situated in a demesne richly planted, and tastefully laid out; in front of the house is an extensive lawn, and the grounds are in some parts embellished with avenues of lime-trees. It was the birthplace of Sir William Bennet, the intimate friend of Ramsay, whose pastoral of the *Gentle Shepherd* was first represented in the presence of the families of Marlefield and Clifton, at the residence of the latter, in the neighbouring parish of Linton: the scenery of the pastoral is thought to have been descriptive of the vicinity of Marlefield. The poet Thomson, also, spent much of his time with Sir William Bennet at this place, and he is supposed to have composed the "Winter" of his *Seasons* within four miles of Marlefield, on a hill in the adjoining parish of Morebattle, to which he frequently resorted. Sir William lived during the greater period of his life in the parish; and in an aisle adjoining the church, which was the place of sepulture of the family, his remains were interred. The ancient mansion-house of Haughhead is on the south bank of the river Kale, near Eckford mill, and is still in a tolerable state of repair. At a short distance from it is an artificial

mound of earth and stones intermixed, surrounded with clumps of old fir-trees; on the summit is a stone commemorating the result of a dispute between Hall, the original proprietor of Haughhead, and his neighbour, Ker of Cessford, whom he defeated in an attempt to take possession of his estate. The villages have facility of intercourse with Kelso and other towns in the district by good roads, and by two bridges over the Teviot and Kale, both of one arch, and neatly built of stone. An elegant chain-bridge, also, was thrown across the Teviot, near its confluence with the Kale, by the late William Mein, Esq., of Ormiston; it is 180 feet in length, and sixteen feet in breadth, and forms an interesting feature in the landscape. The Hawick and Kelso turnpike-road passes through the parish in its western portion.

Eckford is ecclesiastically in the presbytery of Jedburgh, synod of Merse and Teviotdale, and in the patronage of the Crown; the minister's stipend is about £220, with a manse, and glebe valued at £12. 5. per annum. The church, which was dependent on the abbey of Jedburgh, is a substantial edifice finely situated on the south bank of the river Teviot, and is adapted for a congregation of 300 persons. There are two parochial schools, affording together instruction to about 120 scholars. Of that in the village of Eckford the master has a salary of £34, with a house and garden, and fees averaging about £21 per annum; the master of the parochial school at Caverton mill has a salary of £17, a house and garden, and fees averaging £17, with the interest of a bequest of £40. There is also a school at Cessford, attended by about forty scholars; the master has a schoolroom rent-free, in addition to the fees, which amount to £20. A little to the north of the castle, and near Cessford burn, is a cavern of considerable size, called Hobbie Ker's Cave; and about three miles further to the north, on the farm of Grahamslaw, are several other caves of artificial construction, which in perilous times formed places of refuge for the Covenanters, who had one of their two great conventicles in this quarter, the other being at Maybole, in Ayrshire. Stone coffins have been frequently met with; and in one, discovered on the farm of Eckford-Eastmains in 1831, were found a few human bones, and a small Roman jar filled with black dust. To the west of Caverton hill are the remains of a tumulus, called the Black dyke, now nearly on a level with the contiguous field. On the farm of Moss Tower, a coin or medal of the Empress Faustina has been found in the peat-moss, of which the inscription was quite legible. Near Caverton was an ancient chapel founded by Walter Ker of Cessford; but there are no vestiges of it: close to it is a well, for many years called Priest's well, but now almost undistinguished.

EDAY, in the county of ORKNEY.—See STRONSAY and EDAY.

EDDERTON, a parish, in the county of Ross and CROMARTY, 5 miles distant (S.W.) from the town of Tain; containing 975 inhabitants. This place, which derives its name from its situation among hills that surround it on all sides except the north, was noted in the reign of William the Lion for its castle near the shore of the Firth of Dornoch, erected by that monarch to command the ferry between the counties of Ross and Sutherland. In 1227, Ferquhard or Farquhar, Earl of Ross, having accompanied Alexander II. into England, challenged a renowned French champion whom

he met at the court of Henry III. to single combat, and, in gratitude for his victory, founded here on his return the abbey of Fearn, which he amply endowed for Augustine monks. From the frequent annoyances, however, to which the brethren were exposed in this situation, the founder, at the request of the abbot, removed the establishment, about the year 1246, to a more secluded spot about twelve miles distant, in the parish of Fearn, where it continued to flourish till the Reformation, when one-half of its revenues was granted to the bishopric of Ross, and the remainder to the Ross family of Balnagown. The PARISH is bounded on the north by Dornoch Firth and the Firth of Tain, and is about ten miles in length, and nearly eight miles in extreme breadth, comprising an area of 41,760 acres, of which 1630 are arable, 710 woodland and plantation, and the remainder meadow, pasture, and moor. Its surface is partly level, consisting of three successive ledges of table-land, and in other portions diversified with numerous hills, the most conspicuous of which are, Cam-buseurry to the east, having an elevation of 600 feet above the level of the sea, and the hill of Struie to the west, rising to the height of 1000 feet: both these are wholly within the parish. Cnoc-an-t-Sabhal, on the southern boundary, is about 1000 feet in height; and Muidhe-Bhlarie, on the south-west border, has an elevation of 1300 feet above the sea. There are four small rivers, which have their source in the parish, the Edderton burn, the Daan, the Easter Fearn, and the Grugaig: during the dry season they are very inconsiderable streams, but after rains they become swollen and impetuous in their course, and have sometimes been known to sweep away the bridges built over them.

The SOIL in the higher lands near the sea is gravelly, in the lower a deep alluvial loam alternated with sand, and in other places a mixture of clay, gravel, and moss; the arable lands are in good cultivation, and the system of husbandry has been improved under the encouragement given to his tenants by the principal landholder, Sir Charles Ross. The annual value of real property in the parish is £1794. The plantations, some of which are of early date, are oak, birch, and Scotch fir: of the last there are about 100 acres on the lands of Balnagown in a very flourishing condition, and chiefly of long growth. In the deeper mosses are found the trunks and roots of fir, oak, hazel, and birch, some of them of great dimensions. The substrata are principally old red sandstone, conglomerate, and limestone; and in the hill of Struie are found gneiss, quartz, granite, and whinstone. The chief residences are, Ardmore House, beautifully situated; Balblair; and Upper Edderton. There is no village in the parish: at Ardmore, on the Firth of Tain, is a good harbour accessible to vessels of 100 tons, and during the summer several vessels arrive with supplies of coal, lime, and other merchandise. At Balblair is a distillery, commenced about fifty years since; it consumes 120 bushels of malt weekly, producing 240 gallons of whisky, in very high repute. Facility of communication with Tain, from the markets of which the inhabitants are supplied with provisions, is afforded by the turnpike-road to Bonar-Bridge.

For ECCLESIASTICAL purposes Edderton is within the bounds of the presbytery of Tain, synod of Ross. The minister's stipend is £203. 14., with a manse, and a glebe valued at £16 per annum; patron, the Marchi-

ness of Stafford. The former church, erected in 1743 and efficiently repaired in 1794, a neat plain structure containing 350 sittings, being inconveniently situated, a new church was built in 1841 in a more central part of the parish. It is a fine, well-built edifice, with a handsome belfry and spire; the interior is of elegant appearance, and will accommodate 800 persons. The members of the Free Church have taken possession of the old edifice. The parochial schoolmaster has a salary of £34, with a house and garden, and the fees average about £5 per annum. A female school, supported by the Society for Propagating Christian Knowledge, was established in 1837, and a Gaelic school in 1840 by the Gaelic Society of Edinburgh. Behind the parochial school-house is an obelisk of rough whinstone, ten feet in height, on which is sculptured the figure of a fish, probably a salmon, with two concentric circles below it; and surrounding the pillar, at a distance of three yards from its base, is an intrenchment about two feet in height, inclosing an area within which a fight took place between some of the inhabitants and a party of Norwegian pirates, when Carius, the leader of the latter, was killed. The name of the place is from that event called Carry-Blair. In the churchyard is a sculptured stone, on which is a warrior on horseback, with a large cross above, and on the other side various concentric circles and hieroglyphics. A complete chain of circular forts formerly surrounded the parish, but few of them at present are in any tolerable state of preservation: one, called Dune Alliscaig, about fourteen feet in height, and having a spiral staircase within the walls, was demolished in the year 1818 for the sake of the materials which it afforded.

EDDLESTONE, a parish, in the county of PEEBLES; containing 742 inhabitants, of whom 139 are in the village, 4 miles (N.) from Peebles. This parish is undistinguished by any events of historical importance. It is about ten miles in length from north to south, and seven miles in breadth, and comprises 21,250 acres, of which 4370 are arable, 1050 woodland and plantations, and 15,830 permanent pasture and meadow. The surface is diversified by hills covered with verdure to their summits. Dundroich, or Druid's hill, the highest eminence, has an elevation of 2100 feet above the level of the sea, and commands an extensive and finely-varied prospect, embracing the Cheviot hills, part of the pleasing vales of Teviot, Annan, and Clyde, with portions of the counties of Perth and Fife, the river Forth, and the city of Edinburgh. The chief river is the South Esk, which issues from a lake about two miles in circumference, at the base of Dundroich, and flows into the sea at Musselburgh; the lake abounds with pike, eels, and perch, and forms an interesting feature in the scenery, which is also enriched with extensive plantations of modern growth. The SOIL is various, and on some of the farms might be rendered much more fertile than it is, by the adoption of a more extensive system of draining: the crops are oats, barley, wheat, peas, potatoes, and turnips. The system of agriculture is in an improved state, and the farm buildings are generally substantial and commodious; the lands in many parts are well inclosed, and the fences mostly kept in good order. About 5500 sheep are fed on the hills, nearly one-half of them being of the Cheviot, and the rest of the black-faced breed; on the dairy-farms about 280 milch-cows are pastured, chiefly of the Ayrshire and Teeswater breeds,

and there are 500 head of young cattle in the parish. The woods and plantations are well managed, and for the most part in a thriving condition. The annual value of real property in the parish, as returned for the Income tax, is £6694. The village is pleasantly situated, neatly built, and well inhabited; a post-office has been established, and has a daily delivery from Edinburgh and Peebles, with which and other places there is facility of communication. A fair used to be held in the village on the 25th of September; it was formerly a considerable mart for cattle, and the hiring of farm servants, but of late has fallen into desuetude.

Ecclesiastically the parish is in the presbytery of Peebles, synod of Lothian and Tweeddale, and in the patronage of Lord Elibank; the minister's stipend is about £250, with a manse, and a glebe valued at £24 per annum. Eddlestone church, rebuilt in 1829, is a neat and substantial edifice adapted for a congregation of 420 persons. The parochial school affords education to about 120 children: the master's salary is £34, with £42 fees, a good house, and an allowance of two bolls of meal in lieu of a garden; he has also the privilege of taking boarders. There are remains of three circular camps, evidently Danish: one of these, on the lands of Norshield, has been preserved nearly in its original state of perfection, and surrounded with a plantation; the others are almost obliterated. On the lands of King-side, a vessel has been dug up containing a large number of gold and silver coins, the former in good preservation, but the latter much defaced: upon some was legible the inscription *Jacobus S. Scotorum Rex*. Near the northern extremity of this farm was a tumulus, inclosed with three circular walls, and which, being opened by the tenant, was found to contain a rudely-formed stone coffin, in which were human bones in a partly calcined state, and close to it a variety of brazen weapons, in form resembling axes: two of the weapons were sent to the museum of the Antiquarian Society of Edinburgh. Kingside farm was a hunting-seat belonging to James VI. The Rev. Patrick Robertson, the present incumbent, is the great-grandson of the Rev. James Robertson, who was ordained to the parish in 1697, and, after a ministration of fifty years, was succeeded by his son Alexander, who in 1772 was followed by his son Dr. Patrick Robertson, who held the living for fifty years, and died in 1822.

EDDRACHILLIS, a parish, in the county of SUTHERLAND, 15 miles (N. N. W.) from Assynt; including the islands of Handa and Scourie, and the late quoad sacra district of Keanlochbervic; and containing 1699 inhabitants. The Celtic name of this place, *Eadar-da-chaolas*, signifies "between two kyles or arms of the sea", and is descriptive of the situation of the main part of the parish between the kyle of Scow, which separates Eddrachillis from Assynt on the south, and the kyle of Laxford. The parish was anciently part of the barony of Skelbo, and was granted by Hugo Freskyn de Moravia, ancestor of the Duke of Sutherland, in the twelfth century, to his brother, Bishop Gilbert Moray, by whom, in 1235, it was transferred to a third brother, Richard Moray, of Culbyn. About the year 1440, it came to the family of Kinnaird of Kinnaird, by an heiress, Egidia Moray; and in 1515, Andrew Kinnaird disposed of it to John Mackay of Eddrachillis, son of Mackay of Strathnaver, the superiority remaining with

the Earls of Sutherland. In 1829, it was restored to the Sutherland family by purchase. So early as 1550, another branch of the Mackays seized the territory of Scourie by displacing the Mc Leods, and located themselves here under the title of Mackays of Scourie. From this family sprang Lieutenant-General Hugh Mackay, the famous commander-in-chief in the time of William and Mary, eminent for his skill and bravery, and who fell in the year 1692, shortly after the siege of Namur, where he commanded the British division of the grand army.

The PARISH was formerly included in Durness, but was separated in 1726. Its extreme length from north to south is twenty-five miles, its mean breadth seven miles, and it contains an area of about 112,000 acres. It is situated in the angle of the county formed by the Atlantic and Northern Seas, and in its general features, like other Highland districts, is exceedingly wild, rugged, and mountainous, but in some parts highly romantic, and interesting to the tourist. The outline is altogether irregular, being indented by numerous fissures and arms of the sea, and the parish is naturally formed into three parts, namely, the *Scourie* division, between Loch Glendhu and Loch Laxford; *Ceathramh-garbh*, between Loch Laxford and Loch Inchard; and *Ashare*. The derivation of the first of these three names is unknown; the second signifies "a rough section of country", and the third "arable land". The principal mountains are, Beinne-Leothaid, Beinne-Stac, Beinne-Stroim, Arkle, and the south-west range of the Reay forest to the summit of Toinne-Beinne, Meal-Horn, Sabhal-mhoir, and Mille-Rinidh, with part of Beinne-Shith: several of these rise 3000 feet above the level of the sea. The Reay forest, or *Diru-moir*, claims particular notice, having always been reckoned one of the principal forests in Scotland. Considerable tracts of it had been allotted for sheep at the commencement of the present century, but upon the expiration of the leases, the proprietor restored the whole to its ancient character of a deer forest, and the extent of land set apart for this purpose is estimated at 60,000 acres, half in this parish and half in Durness. Thousands of red-deer roam in this territory, under the management of regularly appointed foresters. Almost every description of game visits the parish, and the black eagle occupies the highest rocks. The harbours are numerous and excellent, and are said to be capable of affording safe anchorage to the whole naval and mercantile shipping of Great Britain; those most celebrated are Lochs Laxford, Inchard, Badcall, Calva, Glendhu, and the Sound of Handa. Besides the island of Handa, there is a cluster of isles consisting of about twenty, lying between Eddrachillis and Assynt, which are uninhabited, but afford good pasturage for lambs and cattle. The most remarkable inland lakes are Loch Moir and Loch Stac, which are well stocked with different kinds of trout; the most considerable rivers are the Laxford and the Inchard, which, with numerous minor streams, discharge themselves into the Atlantic Ocean. The different districts of the parish are well supplied with water, principally from perennial springs.

Though the principal occupation, besides fishing, is the rearing and pasturing of sheep, yet some part of the land is under tillage. The soil is generally a mixture of gravel and moss, considerably improved by the application of sea-weed for manure; the lauds of Ashare are

superior to the rest, and like the island of Handa consist of dark loam mixed with sand. The crops raised are potatoes, bear, and oats, the ground for which is prepared by the common garden spade and the Highland implement called the cas-chrom. On the large farms the sheep are the pure Cheviots; those of the smaller tenants are a cross between the Cheviot and the native black-faced: the cattle are of an inferior kind. The annual value of real property in the parish is £3027. The rocks comprise gneiss, hornblende, veins of granite, and quartz; limestone, also, is met with on the sides of some of the lochs. Handa is composed chiefly of the best sort of red sandstone; its rocks lie horizontally, and are considered by geologists as possessing an almost equal interest, though of another kind, with the celebrated basaltic columns in the island of Staffa.

The people are principally located on the sea-coast, in townships or hamlets, each family possessing a certain portion of land; and their occupation consists partly of tilling the ground and partly of fishing, the latter comprehending the herring, salmon, white, and lobster fisheries. Those who have commodious boats go for herrings to the Caithness coast, but large quantities are taken at home in the lochs, especially in Loch Glendhu. The salmon-fishing is good, and of the swarms of almost every description of white-fish on these shores very considerable numbers are taken; all kinds of shell-fish are abundant, and lobsters are conveyed from this place in smacks, by a London company, to the market at Billingsgate. Whales, porpoises, and seals likewise frequent the coast; but the first of these are never captured. The chief approach to the parish from the south is through a part of Assynt to the kyle of Scow, where is a ferry 380 yards broad. There is a post-office at Scourie, which communicates twice a week with the office at Golspie; and three inns have been erected at the expense of the Duke of Sutherland, by whose liberality and exertions the aspect of the district has been entirely changed. Ecclesiastically the parish is within the bounds of the presbytery of Tongue, synod of Sutherland and Caithness; patron, the Crown. The stipend is £158, of which £103 are paid by the exchequer; with a glebe valued at £20 per annum, and a manse at Badcall, lately erected. Eddrachillis church is a plain edifice, built upwards of a century ago, and thoroughly repaired about twelve years since; it is a commodious edifice in very excellent condition, and contains 275 sittings. There is also a good church at Keanlochbervie, to which a quoad sacra district was annexed: it was erected in 1828-9, at the expense of government; contains 350 sittings, and is of sufficient height to be enlarged by galleries. The stipend of the minister at Keanlochbervie is £120, paid from the exchequer; and there is a manse, with a glebe of some acres. The members of the Free Church have two places of worship. There is a parochial school at Scourie; the master has the maximum salary, a house, and allowance for a garden. A school was erected and endowed for the Keanlochbervie district in 1845, and another is supported at Ashare by the Society for Propagating Christian Knowledge.

EDENKILLIE, or EDENKEILLIE, in the county of MORAY.—See EDINKILLIE.

EDENTON, a village, in the parish of COLLESSIE, district of CUPAR, county of FIFE; containing 45 inhabitants.

EDINBURGH, a

city, the seat of a university, and the metropolis of the kingdom of Scotland, situated in longitude 3° 10' 30" (W.), and latitude 55° 57' 29" (N.), about a mile (S. by W.) from Leith, 47 miles (S. S. W.) from Dundee, 47 (E. by N.) from Glasgow, 45 (S. by E.) from Perth, 58 (W. by N.) from Berwick-upon-Tweed, 100 (N. by W.) from Carlisle, 109 (S. W. by S.) from Aberdeen, 156 (S. by E.) from Inverness, 270 (N. E.) from Dublin, and 402 (N. N. W.) from London; containing 56,330, and, including the suburban parishes of St. Cuthbert and Canongate, 138,182 inhabitants. The following is a list of the subjects comprised in the article, with the page in which each head or division occurs:—

HISTORICAL ACCOUNT.

This city takes its name, in ancient records *Dun Edin*, signifying "the hill of Edin or Edwin", from its castle, which was either founded or rebuilt by Edwin, King of Northumbria, who, having greatly increased his power and extended his dominions, in 626 erected a strong fortress for the protection of his newly-acquired territories from the frequent incursions of the Scots and Picts. The original fortress is supposed to have existed prior to the year 452, at which time it was captured by the Saxons, and Edinburgh remained in their possession till 685, when it was recovered by the Scots; but it was soon afterwards again taken by the Saxons, and continued to form part of the kingdom of Northumbria until 936. In that year it was granted, together with all the lands reaching to the Firth of Forth, by Athelstan to his sister on her marriage with Sictrich of Sihtric; but about 956 it was ultimately regained by the Scots, since which it has been included in their kingdom. The very tardy increase of the town, which did not attain to any considerable importance prior to the fourteenth century, is attributed to its situation on the south side of the Firth, and its consequent exposure to the depredations of the English, by whom it was often pillaged and burnt in their hostile incursions. From the frequency of these devastations, moreover, not only was the progress of the town, which from its castle was called "Edwin's burgh", materially retarded, but the public

records (if any) were destroyed; and the city archives throw light on no transactions of authenticity prior to the year 1329, when Robert I. granted the inhabitants a charter. Indeed, even from that period till the year 1581 there occur only a few unconnected and unimportant events.

It is not known by which of the Scottish monarchs Edinburgh was first constituted a royal burgh; but that it was such in the reign of DAVID I. is evident from reference made to it in charters granted by him to other towns, and which have been preserved; and it is more than probable that the lands called the Borough-Moor and Borough-Myre were bestowed by that sovereign, in his charter to the city, now lost. In 1385, John, Earl of Carrick, son of Robert II., and lord high steward of Scotland, conferred upon the inhabitants, by charter of the 4th of July, power to erect houses in the precincts of the castle, with the privilege of free ingress and egress to their servants; and in 1388, ROBERT II., by charter of the 15th of July, gave them a tract of land on the north side of the Market-street, for the improvement of the town. In 1437, Walter, Earl of Atholl, his grandson Robert, and kinsman Robert Graham, were publicly executed in Edinburgh for the murder of JAMES I. in the monastery of the Black Friars at Perth. JAMES II., by charter dated the 4th of November, 1447, allowed the citizens the liberty of holding an annual fair on the festival of the Holy Trinity. In 1461, Henry VI. of England, with his queen Margaret, and his son Edward, Prince of Wales, after the defeat of his army at the battle of Towton, fled for refuge into Scotland, and was hospitably entertained in Edinburgh Castle. The honourable reception he received from the citizens induced him on his return to the south, to issue letters-patent granting to the citizens of Edinburgh full permission to trade with England, paying no more duties on merchandise than his own subjects; but his subsequent exclusion from the throne rendered this privilege unavailing.

In 1477, JAMES III. gave the citizens a charter enabling them to appropriate certain parts of the town for holding the markets, which previously had not been fixed to any precise spot, or limited to any particular days. In 1481, this monarch having excited the dissatisfaction of his brother, Alexander, Duke of Albany, and others of the nobility, by his inauspicious entertainment of favourites, they entered into a confederacy for the removal of those persons by whom he was influenced to the prejudice of the country; and the king being intimidated by these proceedings, took refuge in the castle of Edinburgh, in which he was detained a prisoner for nearly nine months, while the confederates were appointed regents of the kingdom. But the Duke of Albany, discontented with the conduct of the other regents, and yielding to the importunities of the queen for the liberation of her husband, appointed a meeting of certain of his friends at Edinburgh, who, assisted by a body of the citizens, assaulted the castle, and restored the king to liberty. James, thus replaced in the government, in grateful testimony of the loyalty of the citizens, bestowed upon them two charters in 1482, conferring many valuable privileges, among which was the appointment of sheriffs having power to hold courts for the trial of criminals, with fines and escheats belonging to their office. The inhabitants were also invested with liberty to make

laws for the due government of the city, were exempted from payment of the duties on salt, and received a grant of customs and dues on the several articles of merchandise in their port of Leith; and as a perpetual memorial of their loyalty and services, the king removed the seat of government and the royal residence, previously at Perth, to the city of Edinburgh, which he thus made the METROPOLIS of his kingdom. Among other marks of his favour bestowed upon the citizens at this time, was the gift of a standard or banner, to which the craftsmen, not only of Edinburgh, but of all other cities within the realm, were bound to repair for the assistance of the magistrates in defence of their king and of their own rights. This flag is still preserved by the convener of the trades, and on its being displayed in times of emergency, all the artisans of the city and surrounding districts are compelled to assemble, and place themselves at his disposal.

EVENTS OF THE SIXTEENTH CENTURY.

In 1508, JAMES IV. granted the citizens a charter enabling them to let the common lands designated the Borough-Moor, and the marsh called the Common-Myre, at fee-farm rents. The citizens, on this, immediately proceeded to clear the grounds, and cut down the trees with which they were thickly covered; and having in this manner procured a vast quantity of timber, the town council, for promoting the sale of it, allowed to all purchasers of a sufficient quantity to new-front their houses the privilege of extending them seven feet into the High-street beyond their former boundaries, on each side. Thus not only was the principal street reduced fourteen feet in width, but the houses previously fronted with stone were now entirely constructed of wood, to the great prejudice of the general appearance of the city. In 1513, James, who by the intrigues of France was led into a war with England, in opposition to the counsel of his nobles, mustered an army on the Borough-Moor, and being joined by the citizens under their provost the Earl of Angus, marched into England, and was defeated in the disastrous battle of Flodden-Field, in which the king and most of the Scottish nobility were slain. The royal body, being found after the battle, was carried to Berwick-on-Tweed, embalmed, and sent, inclosed in lead, to London, whence it was conveyed to the monastery of Sheen at Richmond for interment. On the news of this calamitous defeat, the town council of Edinburgh issued a proclamation enjoining all the citizens capable of bearing arms to assemble at the Cross, and join the lord provost for the defence of the town against any attempts of the victorious enemy. A guard was raised; £500 were voted for purchasing arms and ammunition, and such of the inhabitants as had gardens attached to their houses were required, for greater security, to fortify them by the erection of walls. The consternation of the people was aggravated by the prevalence of the plague, which was making dreadful havoc among them. The council, in consideration of the arduous duties devolving upon the provost during this period of war and pestilence, ordered one hundred merks to be added to his annual income; and to prevent the further ravages of the plague, they directed that all the houses on the Borough-Moor, at that time crowded with infected persons, should be unroofed, and the walls taken down.

In 1524, Francis Bothwell, lord provost of Edinburgh, having resigned that office according to the king's command, obtained permission to enter a protest that his resignation should in no wise be drawn into a precedent derogatory or prejudicial to the rights and privileges of the corporation. In 1544, Henry VIII. of England, disappointed in his efforts to negotiate a marriage between his son, Prince Edward, and the Princess Mary, daughter of James V., sent an army into Scotland under the Earl of Hertford in order to compel the Scots to the proposed alliance; and the English forces, having landed at Leith, and taken possession of that town unopposed, advanced to Edinburgh, which they pillaged and set fire to, without attempting to reduce the castle. The earl returned with his army to Leith, burnt the place, and afterwards retreated into England; but the same nobleman (now Duke of Somerset) again entering Scotland, with a more numerous army, in 1547, to force the Scots to acquiesce in the projected union, achieved a victory at the battle of Pinkie, and again plundered Edinburgh.

ERA OF THE REFORMATION.

At the commencement of the REFORMATION in Scotland, in 1556, the citizens destroyed the statues of the Virgin Mary and other saints in the church of St. Giles, which produced a mandate from the queen dowager, regent of the kingdom, to the lord provost and council to discover the offenders, and deliver them to the Archbishop of St. Andrew's, to be dealt with according to the statutes of the Church. In 1558, under apprehension of an invasion from England, the citizens displayed the utmost zeal in support of the government. The merchants raised a body of 700 men, well armed and accoutred, and the craftsmen of the various incorporations, at a meeting in the Tolbooth, resolved to furnish an equal number for the defence of the city; the town council, also, voted considerable supplies for the assistance of the queen. On the celebration this year of the festival of St. Giles, the tutelary patron of Edinburgh, according to custom, the popish priests and monks, in order to prevent any obstruction from the friends of the Reformation, requested the presence of the queen regent at the procession; but on repairing to the church to place the statue of the saint on the carriage prepared for its reception, they had the mortification to find that it had been removed during the preceding night. To obviate the failure of their purpose, however, a smaller image of the saint was borrowed from the church of the Grey Friars; but, the queen retiring from the ceremony before the procession had concluded, the populace seized the statue, which they demolished in their rage: the attendants then betook themselves to flight, and through the prudent conduct of the magistrates, no further excesses were committed.

In 1559, the people of Perth having destroyed many of the monasteries in that town and neighbourhood, the queen regent, fearful of similar outrages in Edinburgh, issued a proclamation to the provost and magistrates for the preservation of the sacred edifices and religious houses from violence, to which they paid so much attention that she addressed to them a letter of thanks for their diligent observance of her mandate. To prevent any attempts of the populace, the magistrates ordered all the gates of the city to be closed, with the exception of the Nether-

bow and West-port, at which they placed sufficient guards; and to obviate all danger from the lords of congregation, they sent commissioners to Linlithgow, to negotiate with them for the safety of the churches and monasteries, promising to reserve the former for worship according to the Protestant doctrines, and the latter for seminaries on the principles of the Reformation. In the interim, they posted a guard over the church of St. Giles, and removed the stalls of the choir into the Tolbooth for greater security. On the 29th of June, the lords of congregation arrived at Edinburgh, and appointed two commissioners to attend the council, where it was resolved that as the change was still in progress, the citizens should without molestation exercise which form of religion they might prefer till the 10th of January following. Upon this, the queen regent sent an order to the council to summon the citizens, and make a return of their choice between the two forms of faith. Against such a course the citizens remonstrated by petition to the lords commissioners, and they in answer declared that they would compel no man to act against the dictates of his conscience. The queen, assisted by a body of French troops, now made every effort for the maintenance of the corrupt religion; and the lords of congregation resolved to collect a body of troops for their defence, in which they were assisted by the council, who raised for them a considerable force, with which they marched to Leith, and summoned the garrison to surrender. On the first show of resistance, however, they fled with precipitation; several were slain in the pursuit, and so great was the panic after their return that they abandoned the city. But having received a supply of English troops from Queen Elizabeth, and being reinforced with a body of 400 of the citizens, they again assaulted the town of Leith, were completely successful in their object, and compelled the French auxiliaries to quit the country.

OCCURRENCES CONNECTED WITH MARY, QUEEN OF SCOTS.

Upon the death of the queen regent in 1560, the lords of congregation became masters of the kingdom; and in a treaty between them and the ambassadors of Francis and Mary, it was stipulated that a parliament should be held in Edinburgh, which event took place in the following August: at this parliament it was enacted that the jurisdiction of the pope in Scotland should be abolished, and the confession of faith drawn up by the General Assembly established. The result of this meeting excited the strongest feelings of indignation in the mind of Mary, who refused to ratify the proceedings, and on the 19th of August, 1561, arrived at Leith from France to take possession of the throne. On the 1st of September she made her public entry into Edinburgh, and was received with the most enthusiastic acclamations of the citizens, who testified their loyalty and attachment by every demonstration of joy; but on the Sunday after her arrival, the populace raised a tumult, and were with difficulty restrained by the magistrates from interrupting the performance of divine service at the chapel of Holyrood House, and offering violence to the priest, who was officiating according to the Romish ritual. The magistrates issued a proclamation against papists, and the queen addressed to them a letter complaining of the insult thus offered to her religion; but this produced on their part

only a republication of the edict in severer terms, enjoining all Roman Catholics to leave the town under heavy penalties, which so exasperated the queen that she issued a mandate to the lord provost and council to divest the magistrates of their office, and elect others in their place, with which the council complied.

The marriage of the queen with LORD DARNLEY, who had the day previously been proclaimed king at the market-cross, was solemnized in the chapel of the palace of Holyrood House, on the 27th of July, 1565; and in the following year the queen was delivered of a son, afterwards James VI. of Scotland, who, on the demise of Elizabeth, succeeded to the crown of England by the title of James I. The assassination of David Rizzio, secretary to the queen, which had taken place in the palace not long before this birth of an heir, under the personal superintendence of Lord Darnley, had tended greatly to alienate the affections of the queen; and the earl soon after left the court, and retired to Glasgow. Labouring under severe indisposition, however, he was here visited by the queen, who tended him during his illness, and brought him back with her to Edinburgh; and that he might not be disturbed by the inevitable tumult of the palace, she fitted up a house for his reception at a place in the vicinity, called the Kirk of Field, where for several nights she slept in an apartment underneath his chamber. On the 9th of February, 1567, the queen, having to preside at the marriage of one of her household, passed the night in the palace; and about two o'clock on the following morning, the house in which Lord Darnley lay was blown up by gunpowder, and his body was found at some distance in an adjoining field, without any apparent marks of contusion or violence. The EARL OF BOTHWELL, who was strongly suspected of the murder of Darnley, was publicly charged with that crime by the Earl of Lennox, who wrote to the queen imploring speedy justice on the murderer of his son; but in a court soon afterwards held, he was acquitted. On the return of the queen from Stirling, where she had been visiting her infant son, she was waylaid by Bothwell at the head of a body of 800 horse, and forcibly conveyed to Dunbar, at which place she was detained for some time by the earl. Bothwell, however, subsequently obtained a pardon for this act of violence and for all other crimes, and, having procured a divorce from his wife, sister of the Earl of Huntly, was married to the queen, in Holyrood House, on the 15th of May.

This fatal alliance excited the indignation of the chief nobility, who formed an association for the protection of the prince, and the punishment of his father's murderers. Bothwell and the queen, alarmed at the insurrection, fled from Holyrood, and took refuge in the castle of Borthwick, on the investment of which by Lord Hume they effected their escape to Dunbar. The confederate lords, with a force of 3000 men, took possession of Edinburgh; and Bothwell hearing that they had sustained some disasters, quitted the fortress of Dunbar, and advanced to encounter them in the field. The armies met at Carberry Hill, about six miles from the city; but Mary, mistrusting the fidelity of her own troops, whom she knew to be unfavourable to her cause, and having no other resource, held a conference with KIRKALDY of Grange, and on receiving some general promises of protection, placed herself in the hands of the confederates, by whom she was conducted to Edinburgh amidst the insults of the popu-

lace. During the queen's conference with Kirkaldy, Bothwell fled unattended to Dunbar, and fitting out a few small vessels, sailed for the Orkneys, where for a time he subsisted by piracy; but being pursued by Kirkaldy, he effected his escape in an open boat, and obtained a passage to Denmark, where he was thrown into prison, and died miserably about ten years after. Several of his servants were made prisoners, and having revealed all the circumstances of the murder of Darnley, were punished for the crime. The queen was detained as a prisoner in the house of the lord provost, and subjected to every reproach from the populace, who on her appearance at the window displayed a banner bearing the effigy of her murdered husband, with that of the infant prince by his side, and the legend "Judge, and revenge my cause, O Lord." But, the queen appealing to the compassion of the citizens, it is said they unfurled the standard given to them by James III., and, raising a sufficient force, compelled her persecutors to restore her to the palace of Holyrood; from which, however, she was on the following day conveyed to Lochleven Castle. A council of regency was now appointed, and a deputation waited upon the captive queen in the castle, requiring her to sign an abdication in favour of the infant prince, who was proclaimed king, and soon after crowned at Stirling, the Earl of Morton taking the coronation oath in his name. She also agreed to make the Earl of Murray regent, and to nominate a council to administer the government till he should arrive from the continent, the council to consist of the Earls of Lennox, Argyll, Atholl, and Morton, with others, and to have power to continue regents in the event of Murray's refusal.

The EARL OF MURRAY, who had been thus appointed regent, shortly returned from France, and paid a visit to the queen at Lochleven. He obtained possession of the castle of Edinburgh, at that time held by a partisan of Bothwell's, and of which he created Sir William Kirkaldy governor; but Sir William, in 1570, finding to what severities the queen was subjected, embraced her cause, and the city, alternately held by both parties, became for some time the scene of confusion and civil war. The lords of the regency applied for aid to Elizabeth of England, and that queen sent to their assistance 1000 infantry and 300 cavalry, under the command of Sir William Drury. This commander, on his arrival at Leith, where the Scottish army was encamped, summoned the governor to surrender the castle of Edinburgh; but a party who had been driven from the city, assembling in a hostile manner, put an end to the treaty, and the war was carried on with the most ferocious barbarity. To prevent the city from being taken by surprise, a strong barrier was erected by the queen's troops at the Netherbow, and every precaution was adopted for its security; the war continued to rage with inveterate fury, and such was the rancour that those who were made prisoners, on either side, were led to immediate execution. A truce was at length proposed and agreed upon by the leaders; but Kirkaldy refusing to concur, Sir William Drury, who had retreated into England, returned with a more formidable force, and ultimately compelled the castle to surrender. During this period the city suffered greatly, being exposed on the one hand to the destructive firing from the battery of the castle, and on the other to the devastations of the contending parties.

OCCURRENCES CONNECTED WITH JAMES VI.

On the conclusion of the war, the EARL OF MORTON was established in the regency; but becoming odious from the unpopularity of his conduct, he resigned the office to the young king, JAMES VI., and the castle, which for some time held out under his brother, eventually capitulated. Morton, however, afterwards resuming his authority, repaired to Stirling, and obtained the government of the castle there, and the custody of the royal person. On this, the citizens of Edinburgh, anxious for the king's safety, raised an armed force, and drew out the trained bands, for the service of the privy council; James applied to the council of Edinburgh for a guard of 100 men to protect his person, and for some troops to convey the Earl of Morton to Dunbar Castle, and they not only complied with this, but gave an additional 100 men to guard the palace of Holyrood House. The king held a parliament at Edinburgh in 1579; and on his removal subsequently from Stirling, the citizens received him with joyful acclamations, and escorted him to Holyrood with a guard of 2000 horsemen; after which he convened a parliament in the Tolbooth: the Earl of Morton, late regent, was accused of being privy to the murder of Lord Darnley, and on being brought to trial in 1580, he was found guilty, and put to death. In 1587, the king, with a view to reconcile the nobles of the realm, whom civil war had rent into adverse factions, gave a royal banquet at Holyrood House, and thence conducted his hostile guests to the Cross, where they were entertained by the magistrates of the city, and pledged each other in goblets of wine.

The magistrates, on the approach of the Spanish Armada towards the coast, armed the citizens to prevent the landing of its troops, and raised a body of 300 men for the defence of Edinburgh; and just before the marriage of James with the Princess Anne of Denmark, they fitted out a well-equipped vessel to Denmark, to bring home the king and his royal bride, on whose arrival at Leith they escorted the princess to her palace, and afterwards to the church of St. Giles, and, on the solemnization of her marriage, presented her with a very valuable jewel. In 1591, Stuart, Earl of Bothwell, made an attempt to seize the person of the king; but his design was frustrated by the vigilance and loyalty of the magistrates, and the earl and eight of his confederates were publicly executed. On the birth of the prince Henry, the citizens sent to the king, at Stirling, a gift of ten tuns of wine, and a deputation of 100 of the chief inhabitants to assist at the baptism. An attempt of James in 1596 to control the language of the pulpits exasperated both the clergy and the citizens; a tumult arose, in which the person of the king was insulted; and on his subsequent introduction of theatrical performances, a meeting of the presbytery was convened, and a decree passed against the toleration of them, which, however, on the presbytery being called before the privy council, they were compelled to retract.

On the return of the popish lords who had been pardoned by the crown, the clergy held a convocation of their most influential ministers at Edinburgh, to which they gave the title of STANDING COUNCIL OF THE CHURCH; and being cited before the privy council of the state for a contemptuous disregard of the royal

authority, the minister of St. Andrew's disavowed all allegiance to the government, and called upon the people to support the clergy in their opposition. The king issued a proclamation enjoining the new council to leave Edinburgh within twenty-four hours; but they refused to obey it, and in their sermons and prayers invited the nobles of the land to countenance their resistance to the royal decree. They drew up a petition, couched in the most opprobrious language, which the king declined to receive; and the populace rushed in a body to assault the Tolbooth, in which the king, the judges, and the chief officers of state were assembled. This attempt, however, was frustrated by the loyalty and firmness of one of the deacons, who, attended by his corporation, intercepted their purpose; and the mob, in some degree appeased by the assurances of the lord provost that the king would accept any petition respectfully worded, and peaceably presented, at length dispersed, and James returned unmolested to the palace. On the following day, the king and the privy council left for Linlithgow, and a proclamation was published stating that, in consequence of the late treasonable outrage, in which many citizens, instigated by the ministers, had taken part, the crown deemed the city of Edinburgh unworthy to continue as the seat of government, unfit for the residence of the court, and for the administration of justice. The state therefore required the College of Justice, the inferior judges, and the barons to retire from Edinburgh, and not to return without the king's special licence. The citizens would gladly have conciliated the royal favour, but the ministers were resolved to persevere. These proclaimed a fast, and assailed the king from their pulpits with the most virulent reproaches, declaring that the people might lawfully take the sword out of his hands; they also addressed a letter to Lord Hamilton, intreating him to repair to Edinburgh, place himself at their head, and be the leader of those who had armed themselves in support of the Church. Hamilton, however, instead of complying with their request, showed the letter to the king, who issued his mandate to the magistrates of Edinburgh, for the incarceration of the ministers; but having intimation of the intended proceedings, they contrived to effect their escape.

A deputation of the citizens now waited upon James at Linlithgow, to endeavour to appease his resentment; but in vain. The king went the following day to Leith, and thence to Edinburgh, the keys of which were tendered to him by one of his officers of state, and the charge of the city was committed to the Earl of Mar and the Lords Seaton and Ochiltree; the citizens were ordered to keep within their houses; the streets were lined with files of the royal guards, between which the king passed to the Tolbooth, and a convention of the states was held. Before this assembly the magistrates of the city humbled themselves with submissive reverence. They made the most solemn protestations of loyalty, and offered a guarantee that none of the ministers should be permitted to resume their charges, nor any others be admitted to the pastoral office, without the royal approbation. They also proposed to present to the king, and to the lords of the council, a list of all the officers of the corporation for their approval before they were appointed; and gave every assurance of their freedom from any participation in the tumult, and of their resolution to discover and bring to justice its

authors and abettors. But all these proffers were vain : the convention of the states pronounced the insurrection to be high treason, and that the city should be subjected to all the penalties ; it was even proposed that the place should be rased to its foundations, and that a pillar should be erected on the site as a lasting monument of its disgrace. The interposition of Elizabeth obtained from the king a mitigation of the sentence, but the town council were notwithstanding ordered, as representatives of the city, to enter themselves in ward in the town of Perth ; the trial commenced on the 1st of March, when, one of the council neglecting to appear, the cause was decided, the community declared rebels, and their revenues escheated to the crown. Edinburgh continued for some time in a state of anarchy, but at length the citizens submitted themselves entirely to the king's mercy, and on the supplication of the magistrates and council, they were to a certain extent relieved from the forfeiture, and restored to their wonted privileges. In 1599, the convention of the states assembled at Edinburgh on the 10th of December, and ordained that the first day of the year, which had previously been reckoned the 25th of March, should be thenceforth the 1st of January.

EVENTS OF THE SEVENTEENTH CENTURY.

In 1603, James VI., being on the death of Elizabeth successor to the crown of England, took leave of the citizens in the church of St. Giles, and addressing them after the sermon, assured them of his future remembrance and protection ; and on the 5th of April he departed for London, whither he was followed on the 1st June by the queen and royal family. In 1609, he granted to the town council of Edinburgh a duty of £4 Scotch on every tun of wine sold within the city, and ordered that a sword should be borne before the lord provost, and that the magistrates should in public wear gowns of state. The king, who on his departure had promised to visit his native dominions every three years, found no opportunity of doing so till the year 1617, when, on the 16th of May, he arrived at Edinburgh, and was received with every demonstration of joyful welcome by the provost and magistrates, who entertained him with a sumptuous banquet, and presented him with 10,000 merks in a silver basin. After the death of this monarch, his son and successor, CHARLES, paid a visit to Edinburgh in 1633, for the purpose of being crowned King of Scotland, which ceremony was performed on the 18th June in the chapel royal of Holyrood, with unusual splendour. Two days afterwards, the king convened his first parliament in the Tolbooth, and confirmed the authority of the College of Justice, the privileges of the royal burghs, and the rights of the citizens ; and on the 18th of July he left the city on his return to England, halting for a night at Dalkeith, at Seaton, and at Innerwick, on his route. Charles was accompanied in this visit by Archbishop Laud, who was sworn a privy councillor of Scotland at Holyrood House, and preached several times in the chapel royal ; and while here the king erected the bishopric of Edinburgh.

During the time that he was in Scotland, the people testified the most loyal attachment to their sovereign ; but great discontents broke out soon after his departure, and the subsequent introduction of the English liturgy

into the Church of Scotland, in 1637, exasperated these discontents into open rebellion. On the attempt to read the liturgy in St. Giles's church, the utmost confusion was excited ; missiles were thrown at the head of the dean while performing the service, and at Dr. Lindsay, Bishop of Edinburgh, who had ascended the pulpit in the hope of appeasing the tumultuous uproar ; a mob collected in the streets, and hurled stones at the bishop while proceeding home in his carriage with the lord privy seal, and next day the Earl of Traquair and the Bishop of Galloway escaped with difficulty from the populace. The National Covenant was renewed and subscribed the following year by great numbers of the nobility and gentry, and by the inhabitants generally ; while copies of it were circulated throughout the country. The king, alarmed at these proceedings, commissioned the Marquess of Hamilton to negotiate with the Scots, many of whom were already in arms for the support of the Covenant ; and when the Marquess arrived in Scotland he found it in a state of rebellion. The town council of Edinburgh took part with the Covenanters, and raised a body of 500 men as a reinforcement of their army, commanded by GENERAL LESLIE, who assaulted the castle, at that time garrisoned by a body of troops under General Ruthven, and which ultimately surrendered to the Covenanters. The forces under Leslie afterwards made themselves masters of Dalkeith House, in which were considerable supplies of military stores ; and, removing these into the castle, they erected some fortifications at Leith, sent emissaries to England to enlist the nonconformists in their cause, also applied to Cardinal Richelieu for immediate aid, and levied large contributions, by loan, for carrying on the war. Charles sent the Duke of Hamilton with a fleet of twenty ships and 5000 land forces, to reduce Edinburgh and Leith to obedience ; but on the arrival of this force in the Firth of Forth, a treaty took place, according to the terms of which, the castle and other garrisons being delivered to Hamilton, the troops were withdrawn.

In 1641, the king made a second visit to Edinburgh, where he assembled a parliament, in which a great number of the nobility were excluded from their privilege of voting, because they refused to subscribe the Covenant. The Earl of Argyll, the head of the Covenanters, was created a marquess ; Leslie, who had commanded the Covenanting army, was made Earl of Leven, and appointed governor of the castle, and all the tried and faithful friends of the king were neglected, or superseded in their offices by the most inveterate of his enemies, in the hope of conciliation, though the Covenanters, notwithstanding all these concessions, still remained in arms, and added daily to the number of their troops. Charles left Edinburgh on the 16th of November, and soon after his return to England, which he found embroiled in civil war, gained some advantages over the parliamentarian leaders. These, in 1643, applied to the Scots for assistance ; the Scottish parliament voted a supply of 18,000 foot, 2000 horse, and 1000 dragoons, and the magistrates, notwithstanding they had received a letter from the king reminding them of his former favours, raised a regiment of 1200 foot for the service of his enemies. After the defeat of the Covenanters' army in 1645 by the MARQUESS of MONTROSE, the city was in great danger ; the plague was raging within its walls, and so much had its popu-

lation been reduced by the ravages of war and pestilence, that, in case of assault, scarcely a hundred men could have been mustered in its defence. Montrose was prevented from entering by the plague alone, and addressed a letter to the magistrates requiring them to liberate such of the royalists as they held prisoners. With this, in their present situation, they thought it prudent to comply; but the king having at that time arrived at Newcastle-upon-Tyne with the Scottish army, to whose protection he had resigned himself, a treaty was opened with the English parliament, to which the citizens of Edinburgh sent a deputation, and Charles was eventually given up to the English commissioners, in 1647.

FROM 1650 TO 1700.

The Marquess of Montrose, who, after the execution of the king in 1649, was appointed by Charles II. his captain-general in Scotland, landed in 1650 with a force of 500 foreigners, chiefly Germans, hoping to obtain from the Covenanters more reasonable terms for restoring the king to the throne; but being defeated by the army of GEN. DAVID LESLIE, he assumed the disguise of a peasant, and intrusting his person to the protection of a perfidious friend, was betrayed to his enemies, and conveyed to Edinburgh amidst the most degrading and opprobrious insults. He was brought before the parliament for trial, and being condemned, was publicly executed in pursuance of his sentence with every demonstration of wanton barbarity; the execution took place at the Cross on the 21st May, and this distinguished nobleman exhibited on the occasion his customary fortitude. The English parliament, fearing an accommodation between Charles II., who had for that purpose landed from Holland, and the Scottish commissioners, who were then treating with him for his restoration, now sent CROMWELL with an army of 16,000 men into Scotland, in order to check the negotiation. Cromwell encamped his troops on the Pentland hills, within a few miles of Edinburgh; the Scots, commanded by Gen. Leslie, were drawn up at Corstorphine. After some skirmishing, Cromwell withdrew to Dunbar, where in a little time he was so straitened for want of provisions that he purposed sending his infantry and artillery by sea into England, and effecting his retreat by forcing his way with his cavalry through the forces of Leslie, which had taken post between Dunbar and Berwick. Leslie, however, being induced to descend into the plain, and give battle to the parliamentarians, an engagement took place in which his army was totally routed; and Cromwell, pursuing his advantage, took possession of Edinburgh and Leith, and completed the fortifications which the Scots had begun and left unfinished. The lord provost and magistrates, on the news of the defeat, left the city, and fled to Stirling. The principal inhabitants, however, chose thirty of their number to preserve the peace, and to treat with Cromwell; and upon the arrival of the English commissioners at Dalkeith, for settling disputes, they sent a deputation, soliciting the restitution of their magistracy, which was granted, accompanied by an order to elect two representatives to meet the commissioners, and assist in the arrangement of public affairs.

On the restoration of CHARLES II., the citizens presented the king with the sum of £1000 as a testimony

of their loyalty, which he acknowledged by granting them the privilege of levying one-third of a penny on every pint of ale, and two-pence on every pint of wine consumed in the city. But the subsequent efforts of that monarch to re-establish episcopacy, and introduce the English liturgy, exasperated their feelings; and the suppression of conventicles by military force excited in their minds the most determined opposition. The western counties rose in arms, surprised a party of the royal forces at Dumfries, and marched thence to Edinburgh, professing allegiance to the crown, but demanding the re-establishment of the Presbyterian form of worship, and the restoration of their former ministers. On this insurrection, the city was put into a state of defence: the gates were closed; the magistrates ordered all the citizens who had horses to assemble, and hold themselves in readiness to act for the preservation of order; the College of Justice formed themselves into a company, and were supplied with arms for the security of the government. By these means the insurgents were soon subdued; about fifty were killed, and 150 taken prisoners. But the more vigorous were the measures adopted for the support of episcopacy, the more the Covenanters increased: the preachers openly called upon the people to throw off their allegiance; the Archbishop of St. Andrew's was assassinated near St. Andrew's in his carriage, and every prospect of conciliation was hopeless. In this state of excitement, the magistrates of the city took still further precautions for its safety; the trained bands joined the forces of the crown, and despatches were forwarded to London for assistance. The Duke of Monmouth was sent to Scotland with some troops of cavalry, being invested with the chief command; and a battle took place at Bothwell-Bridge, in which 700 of the Covenanters were killed, and several were made prisoners and sent to Edinburgh, where two of the most seditious preachers were hanged.

JAMES, afterwards James II. of England and VII. of Scotland, while he was Duke of York visited Edinburgh, where he was received with great pomp by the lord provost and town council, who entertained him with a banquet in the parliament-house. During his residence here he sought to promote the trade of the city, and, by his conciliating behaviour and fashionable entertainments, to render himself popular in Scotland; and though his partiality to the Church of Rome, and his encouragement of the drama and other amusements, had made him odious to the citizens generally, yet on his accession to the throne, the magistrates presented to him a loyal address. A parliament was shortly after held in Edinburgh, which acknowledged his supreme authority, and declared that the whole force of the country, from the age of sixteen to sixty, should be at his disposal; but the open encouragement given to the celebration of the mass soon excited a tumult, in the quelling of which the king's guards were brought from the castle, and, firing upon the mob, killed two men and a woman. Several of the most active of the insurgents were afterwards hanged at the Cross; and so great was the zeal of the dominant party for the re-establishment of the Roman Catholic faith, that a Popish college in the palace of Holyrood House printed and circulated hand-bills inviting all persons to send their children to be educated in the principles of that religion gratuitously.

On intelligence arriving, however, of the landing of the PRINCE OF ORANGE, the regular troops were withdrawn for the reinforcement of the king's army, and the Presbyterians flocked to Edinburgh in great numbers. The greatest severities were exercised against the Papists, Episcopalians, and the adherents of the exiled monarch; the Earl of Perth, who was chancellor, abandoned the country, and the government fell entirely into the hands of the friends of the Revolution. A mob assembled in the city; the drums beat to arms, and the inhabitants proceeded to demolish the royal chapel in Holyrood House, but were opposed by a party of 100 men, who still adhered to James, and who, by firing upon them, put the party to flight. The people soon returned, however, in greater numbers, headed by the magistrates, who had obtained a warrant from the privy council, and accompanied by the trained bands and herald-at-arms. They forthwith summoned the followers of James to surrender, and after having defeated their opponents with considerable loss, proceeded to the royal chapel and the private chapel, which they stripped of all their ornaments; nearly demolished the college of the Jesuits; and plundered the houses of many of the Roman Catholics. The town council tendered their services to the Prince of Orange; and the Marquess of Atholl, who, after the flight of the chancellor, had assumed the reins of government, held a convention of estates at Edinburgh. This body gave its allegiance to the government of WILLIAM and MARY; appointed a new election of the city magistrates and council, by poll of the burgesses, in St. Giles' church; ejected several ministers who refused to pray for the new sovereigns, and finally re-established the Presbyterian form of worship. The Duke of Hamilton and other friends of the Revolution quartered several companies of infantry in the city; but the castle was still retained for James by its governor the Duke of Gordon, and the Lords Balcarras and Dundee also stood firm to the interests of the exiled monarch. The castle, however, being but ill supplied with provisions, was soon compelled to surrender; and the adherents of the Roman Catholic party were confined in the Tolbooth, where several of them were detained for two or three years, and subjected to the severest privations.

In 1695, a company for trading to Africa and the East Indies was incorporated by act of parliament, with very considerable privileges; a capital of £400,000 was quickly raised, and in the following year six ships of large burthen sailed from the Firth of Forth. The intelligence of their having effected a settlement on the Isthmus of Darien arrived on the 25th of March, 1699, and the event was celebrated by public rejoicings, and by thanksgivings in the several churches of the city; but the sanguine hopes thus excited were not of long continuance. The colonists, after one or two fruitless attempts by the Spaniards, were ultimately driven from the settlement; and on the news of this arriving, the citizens were so much excited by rage and disappointment that they broke out into the most wanton excesses, and, imputing their failure to the jealousy of the English merchants, proceeded to such acts of tumult and outrage that the commissioners and officers of state found it prudent to retire from the city lest they should fall victims to the popular fury. These disturbances occurred in the course of the year 1700.

EVENTS OF THE EIGHTEENTH CENTURY.

On the accession of QUEEN ANNE, the citizens were still more exasperated by the seizure of one of the ships belonging to the African Company, which had been taken in the river Thames; and upon their solicitation to the English ministry for its restoration being disregarded, they seized, by way of reprisal, a ship belonging to the English East India Company, which had anchored in the Forth. Captain Green the commander, and part of the crew, were accused of piracy; and being, upon slight evidence, convicted of having plundered a Scottish vessel in the Indies, they were sentenced to be hanged. On the day fixed for their execution, the populace surrounded the prison and the parliament-house, in which latter the privy council, assisted by the magistrates, were deliberating about the expediency of extending the royal mercy to the captain and his men. The lord chancellor, on his way from the council to his house, was dragged from his carriage by the populace, and only rescued by the timely interposition of his friends; and so highly were the people incensed at the idea of a reprieve, that an order was given to execute the prisoners without delay. On the promulgation of the Articles of the UNION of the two kingdoms in 1707, the mob attacked the parliament-house, insulted the Duke of Queensberry, the chief commissioner, and gave vent to the most violent indignation. They beset the house of the lord provost, Sir Patrick Johnston, a friend to the Union, who narrowly escaped their fury; and so greatly did the numbers of the mob increase, that, before night, they made themselves entire masters of the city. Their first purpose was to blockade the gates, to prevent which the commissioners ordered a body of soldiers to take possession of the Netherbow, and afterwards, with the concurrence of the provost, stationed a battalion of guards in the Parliament-square. Such, indeed, was the opposition to the Union that all the military of the surrounding districts were concentrated at Edinburgh, and three regiments of infantry were constantly on duty in the city; but the Articles were at length agreed upon, and ultimately signed by the contracting parties, in an obscure cellar under a house in the High-street, opposite the Tron church, long after occupied as a tavern and coach-office. The Duke of Queensberry returned, with the document thus reluctantly obtained, to London; and several of its chief supporters quitted the city, deeming it unsafe to remain. The ancient regalia of the kingdom were, on the completion of the act of Union, deposited in the crown-room in the castle, on the 26th of March, 1707; but it was for a long time generally supposed that they had been conveyed to London, and deposited in the Tower; and this opinion was the more confirmed by the exhibition there of a crown which the keeper of the jewel-office invariably described as the royal crown of Scotland.

The discontents of the people induced the PRETENDER to make an effort to regain the throne, and a French fleet soon after appeared in the Firth of Forth for the invasion of Scotland. The Earl of Leven, at that time commander of the forces, conveyed information of the event to the provost of Edinburgh, who, with the magistrates and the several incorporations, manifested their loyalty to the existing dynasty by raising a body of

1200 men to serve under the earl. But their services were rendered unnecessary by the vigilance and activity of Sir George Byng, who, pursuing the fleet, drove them from the coast, and freed the country from the danger with which it had been threatened; and the magistrates testified their gratitude for this important service by presenting Sir George and the principal officers with the freedom of the city. On the breaking out of the rebellion in 1715, the council provided for the security of Edinburgh by repairing and fortifying the walls and gates, augmenting the town-guard, arming the trained bands, raising a body of 400 men, well equipped, to be maintained at the city's expense, and by fitting out several vessels to assist the king's ships. The forces of the Earl of Mar made an attempt to surprise the castle, in which they were frustrated by the vigilance of the garrison. About 1500 also of the rebel army, under Brigadier Mc Intosh, contrived to cross the Forth, and land in East Lothian, whence they marched to Edinburgh; but the city was too well guarded to afford them any hope of entering it, and they therefore removed to Leith, and took possession of the Citadel, which they fortified. The Duke of Argyll advanced with his forces to dislodge them, but, being unprovided with artillery, withdrew, threatening to return with a reinforcement: during his absence, however, they evacuated Leith; and, 6000 troops arriving from Holland to the assistance of the government, the rebellion languished, and tranquillity was soon restored. In 1725, a destructive fire occurred in the Lawnmarket, which burned with so much rapidity that many houses in the city, with all their effects, were destroyed; a subscription was opened for the relief of the sufferers, and nearly £1000 were obtained. About this time, in consideration of the arduous duties devolving on the provost, an addition of £300 per annum was voted for defraying his expenses.

In 1736, the execution of a smuggler in the Grassmarket excited a tumult, on which occasion PORTEOUS, captain of the guard, ordered his men to fire on the populace, when six men were killed, and eleven wounded. For this act, Porteous was prosecuted, and convicted of murder by the unanimous verdict of the jury; but Queen Caroline, acting as regent in the absence of George I. in Hanover, with much reason granted him a reprieve. This so exasperated the people that they assembled in great numbers on the night previous to the day originally fixed for the execution, surprised and disarmed the town-guard, blockaded the gates of the city to prevent the entrance of troops quartered in the suburbs, and proceeded to the prison, liberating all the prisoners with the exception of Porteous. Him they led to the Grassmarket by torch-light; and after allowing an acquaintance to receive what property he had, they conducted him to the spot where the six men had been killed, reproached him with his inhuman conduct, hanged him, and then dispersed without committing any further outrage. To punish this insult to the government, the lord provost was committed to prison, and, after three weeks' confinement, admitted to bail, and ordered to appear, with four of the bailies, at the bar of the house of lords, in London, where three of the lords justiciary were also commanded to attend. A bill was brought in for disqualifying the provost from holding any office of magistracy in the city of Edinburgh or any other part of

Great Britain, and for confining him in close custody for one year; for abolishing the town-guard, and taking down the gates of the Netherbow. All these enactments, however, were afterwards commuted for a fine of £2000 to be paid by the city to the widow of Captain Porteous. In the year 1740, there was a great dearth of provisions in Edinburgh and the vicinity, and the magistrates had recourse to every expedient for the relief of the prevailing distress: large public and private contributions were raised; the banks volunteered loans of money without interest to the magistrates, for supplying food at moderate prices to the poor, and by these means the calamity was greatly alleviated.

EVENTS OF 1745.

In 1745, the council, apprised by letter from one of the secretaries of state, that the eldest son of the Pretender meditated an invasion of the kingdom, took every precaution to meet the threatened danger, and provide for the security of the city. The town-guard was augmented to 126 men, the trained bands kept in constant readiness to act, and a body of 1000 men was raised to serve under the lord provost and council; the walls were repaired, the fortifications put into a proper state of defence, and the banks and public offices sent their cash and valuable property to the castle. Notwithstanding these preparations, however, the king's forces, who, with the town-guard, were posted at Corstorphine, fled precipitately on the approach of the Young Pretender's army, which had crossed the Forth a little above Stirling. The town-guard retreated into Edinburgh, and the citizens assembled in the New Church to deliberate upon the expediency of holding out, when it was resolved to capitulate on the best terms that could be obtained. But while appointing deputies to treat for this purpose, a letter was handed to the lord provost and magistrates, signed "Charles, Prince of Wales," setting forth that "the prince was now ready to enter with his army into the metropolis of his ancient kingdom;" and upon this the meeting broke up in the greatest confusion. Early the next morning, a coach was seen driving through the town towards the Netherbow gate, which the sentinel, suspecting no danger, opened to let it pass; but no sooner was the gate opened than a party of Highlanders that had reached it undiscovered rushed into the town, made themselves masters of the gates, took the soldiers on duty prisoners, secured the town-guard, and seized the arms and ammunition. About noon, the Highland army, headed by the Young Pretender, arrived in the King's park, and encamped at Duddingston; the prince and his suite took possession of the palace of Holyrood House, and compelled the heralds of the town to publish at the Cross a declaration proclaiming a regency, and a manifesto promising to the citizens the free exercise of the Protestant religion, and the unrestrained enjoyment of all their rights and privileges. The inhabitants were ordered to deliver up their arms at the palace; the soldiers and others of the Highland army were strictly prohibited from molesting the citizens, or pillaging their property, on pain of summary execution. A message was sent to the magistrates, requiring them to furnish a supply of stores, for which payment was promised on the restoration and settlement of the public affairs; and an assessment of two

shillings and sixpence in the pound was made for that purpose on the rents of the citizens.

On the 20th of September, the Young Pretender and his army marched from their camp at Duddingston, in pursuit of the royal troops, which consisted of 3000 infantry, with some dragoons and artillery, encamped near Prestonpans; and early on the following morning, an engagement took place, which ended in the total defeat of the royal army, and the loss of their artillery, baggage, and military chest, with which the prince returned triumphantly to Edinburgh. The conquerors conducted themselves with the greatest moderation; their prisoners were liberated on parole, and the clergy ordered to continue their sacred functions as formerly, but they all declined, with the exception of the minister of the West, and the lecturer of the Tron, kirk, who continued to pray for the king by name without molestation. The military abstained from plunder, and during their stay in the city conducted themselves with order and regularity. The castle was still unassailed, and the garrison had hitherto avoided all interference with the invaders; but on some alarm, a few shots were discharged on the Highlanders who defended the west gate of the city, and on the following day orders were issued to the guard to cut off all intercourse between the city and the castle. Upon this the governor, fearing a want of provisions, sent a letter to the lord provost, stating that, unless free intercourse were permitted, he should be compelled to dislodge the Highland guard; and the magistrates thereupon sending a deputation to the Young Pretender, a truce for a short time was concluded. A few days afterwards, the sentinels of the West fort firing upon a party who were carrying provisions to the castle, the garrison commenced a severe cannonade on the city. Many of the houses were greatly damaged, and some set on fire; the streets were scoured with cartridge-shot discharged from the cannon on the lower hill, and several of the inhabitants were killed. But on the next day, the Young Pretender issued a proclamation withdrawing the blockade of the castle, and all further hostilities ceased.

Upon the 31st of October, the prince marched for England with 6000 men, and besieged Carlisle, which he took by storm; but meeting with little support from his adherents in England, and impeded by the vigilance of the royal army, he retreated to Scotland, and having gained some advantage at Falkirk, returned to Edinburgh, and made an attempt to reduce the castle, in which he failed. The force under the Duke of Cumberland being now in pursuit of the rebels, they retreated with precipitation towards the north; but the duke having secured the passes at Perth and Stirling, and intercepted a vessel from France, which had been sent with supplies, the Young Pretender's army was overtaken on the plains of Culloden. Here, after a severe battle, in which above 2000 were left dead on the field, the rebellion was totally extinguished; and the prince, after numerous adventures, in which his life was in the power of numbers, whom the reward of £30,000 for his apprehension could not prompt to betray him, escaped in safety to the continent. Fourteen of the standards borne by the rebel army were conveyed to Edinburgh, and burnt at the Cross with every mark of ignominious contempt; and Archibald Stewart, Esq., the lord provost, was now brought to trial in London for neglect in

not taking due precautions for the defence of Edinburgh, but, after a long investigation, was acquitted. The city was for some time without any settled government, and the citizens petitioned the king for a restitution of their rights, which he granted by issuing an order for the election of their magistrates according to their wonted usage. The new magistrates and council presented an address of congratulation to the king on the suppression of the rebellion, and ordered the freedom of Edinburgh to be presented to the Duke of Cumberland in a box of gold; they offered to raise a body of 1000 men for the support of the government, and after the restoration of tranquillity paid great attention to the extension and improvement of the city, by commencing the erection of the New Town.

During the reign of GEORGE III., the peace was frequently interrupted. In 1779, a violent tumult was excited by the enemies of popery; the houses of many of the Roman Catholics were destroyed, and numerous outrages committed. For some years, the magistrates maintained a force of five regiments of cavalry, two companies of volunteer artillery, and a company of spearmen, for preserving order. In the progress of the French Revolution, a numerous party of republicans calling themselves Friends of the People, and a body styled the National Convention, assembled in the city, and held regular meetings, though occasionally dispersed by the government authorities; and on the 31st of December, 1811, a large concourse of the most notorious and lawless characters, armed with bludgeons, during the whole of that night committed the most desperate outrages. Several of the police were wounded, and one man killed; but the riot was ultimately quelled, and three of the rioters were hanged on a gallows raised in the High-street. Almost all those concerned in this outbreak were young men, chiefly under twenty years of age; and the alarm created by their proceedings led to several beneficial plans for the better education of the young. In 1815, the victory of Waterloo was celebrated here with the most triumphant rejoicings, and a resolution was passed for the erection of a monument on the Calton hill in commemoration of the event.

VISITS OF GEORGE IV. AND HER PRESENT MAJESTY.

In 1822, His Majesty George IV. paid a visit to the city, on which occasion the influx of strangers from all quarters of the country, and of all ranks, was immense. In addition to the several regiments of the Scots Greys, the dragoon guards, and other troops of the line; yeomanry cavalry and many parties of Highlanders in their costume were sent by the chiefs of the various clans, among which that of Sutherland was the most conspicuous, to grace the triumphal entry of the sovereign. The slopes of Salisbury Crags, in the King's Park, and the north acclivities of the Castle hill, were covered with military tents and marquees for their temporary accommodation; and on the front of the Crags were planted several pieces of cannon. The king, who arrived in the Leith roads on the 14th of August, landed on the following day, and made his entrance into Edinburgh, escorted by a splendid retinue. He advanced from the harbour, along Leith-walk and the Terrace-road on Calton hill, to the palace of Holyrood House, to which a new and more commodious approach

had been opened for the occasion ; and during the procession His Majesty frequently expressed his admiration of the noble streets and buildings of the city, and the romantic scenery in the vicinity. After remaining for some time at Holyrood House, the king proceeded to the palace of Dalkeith, the seat of the Duke of Buccleuch, where he resided during the rest of his stay in Scotland. In the evening the city was brilliantly illuminated, and salutes from the castle, from Salisbury Crags, the numerous shipping in the roads, the fort of Leith, and the various regiments, were fired in honour of the royal visit ; bonfires were lighted on Arthur's Seat and other eminences, and every demonstration of an ardent and joyful welcome was testified.

Upon the 17th of August, the king held a levee in Holyrood House, which was attended by a numerous assemblage of the nobility and gentry, naval and military officers, and the public functionaries. On the 19th there was another levee, at which he received the addresses of the General Assembly, the Scottish Episcopal Church, the Universities, and the Highland Society ; and on the 20th the king held a drawing-room, which was graced by the presence of five hundred ladies of the first rank in the country. His Majesty, on the 22nd, went in state from the palace, through the Canongate and High-street, to the castle, and on the next day reviewed about 3000 of the yeomanry cavalry on the Portobello sands, after which he was present at a grand ball in the assembly-rooms in George-street, given by the peers of Scotland. A banquet was given by the civic authorities in the parliament-house, on Saturday the 24th, on which occasion the king conferred upon William Arbuthnot, Esq., the lord provost, the honour of a baronetcy ; and on the morning of Sunday he attended divine service in the High Church, when the sermon was preached by Dr. Lamont, moderator of the General Assembly. On Monday, the 26th, His Majesty appeared at a ball given in the assembly-rooms by the members of the Caledonian Hunt. Upon the following day he authorised the laying of the first stone of the National Monument by the Duke of Hamilton, grand master mason of Scotland ; and in the evening visited the theatre. On the same evening there was a ball in honour of the royal visit, under the patronage of the Duchesses of Atholl and Montrose and other ladies of high rank. On Wednesday, the king paid a visit to the Marquess of Lothian at Newbattle Abbey ; and on Thursday, the 29th of August, after a short visit to the Earl of Hope-toun at his seat, Hopetoun House, he embarked at Port-Edgar, on his return to England, impressed with a deep sense of the loyalty of his Scottish subjects.

In the year 1824, a destructive fire broke out in the city, which continued to rage with unabated fury, threatening the neighbourhood with desolation, and filling the inhabitants with consternation and dismay ; but after doing very considerable damage, it was subdued.

In 1842, the city was visited by Her present Majesty, accompanied by Prince Albert and a distinguished suite. The royal party arrived in the Firth of Forth on the night of Wednesday, the 31st of August, and the course of the vessels bearing the royal visitors was facilitated by the streams of light issuing from the numerous bonfires on the adjacent hills, the effect of which was magnificent in the extreme. On the following morning Her Majesty landed, and proceeded to Dalkeith, the splendid

seat of the Duke of Buccleuch : on Friday night, the city was illuminated in honour of the royal visit ; and on Saturday morning, September the 3rd, Her Majesty made her formal entry into Edinburgh, amid the enthusiastic acclamations of an immense multitude. The various public bodies of the city were arranged in suitable order on the occasion, to do honour to the Queen ; and in front of the Royal Exchange, the lord provost, attended by the magistrates and other authorities, presented the keys of the city to Her Majesty, who immediately returned them, and proceeded to the castle, where the royal party remained for a short time. Her Majesty then passed down Princess-street, and shortly afterwards quitted the city for Dalmeny, the seat of the Earl of Rosebery, from which she returned in the afternoon, through Leith, to Dalkeith. On Monday, the 5th, the Queen held her court at Dalkeith ; and on the following day set out for the Highlands, where she continued upon a tour till Tuesday, the 13th, on the afternoon of which she reached Dalkeith : on Thursday morning, September 15th, Her Majesty, Prince Albert, and suite, left for England, by sea.

In the year 1850 the royal family again visited the city, taking up their residence at Holyrood Palace. The distinguished visitors arrived by the North-British railway on Thursday evening, the 29th of August : the royal train, gliding round the base of Arthur's Seat, stopped at a private station close to the Queen's Park, expressly erected for Her Majesty's accommodation ; and the Queen, accompanied by Prince Albert and the remainder of the royal party, here alighted, and was received by the Royal Scottish Archers with the Duke of Buccleuch at their head. The royal carriages proceeded slowly along the approach to Holyrood in this direction, the 93rd regiment keeping the line of the procession, and the countless thousands that crowded the side and base of Arthur's Seat greeting their sovereign with the most enthusiastic loyalty. On the following morning, at an early hour, the Queen and the prince consort ascended to the summit of Arthur's Seat ; and at one o'clock, in the presence of a distinguished circle and of an immense concourse of spectators, His Royal Highness the prince laid the foundation stone of a building devoted to the fine arts, the proposed National Gallery, on the Mound : the royal children witnessed the proceedings with evident interest from the Argyll Battery of the castle. In the course of the same afternoon, Her Majesty and Prince Albert, with the royal children, rode through the town and round Arthur's Seat, paying a private visit to Donaldson's Hospital ; and on Saturday morning, the 31st of August, the royal party left Holyrood Palace for the north, arriving at Her Majesty's Highland residence of Balmoral in the course of the same day. On the return of the court from Balmoral in October, Her Majesty passed a night at Holyrood, and the following morning proceeded to the south.

DESCRIPTION OF THE CITY.

Edinburgh is built on a series of hills rising abruptly from a level tract of land in the northern portion of the county, about two miles from the Firth of Forth. The ground ascends gradually from the Firth for nearly a mile towards the south, attaining at the plain whereon the palace of Holyrood House is situated, an elevation

of about ninety-four feet above the level of high-water mark. From this plain, the hill on which the Old Town is built, and which, with reference to the others, may be called the central hill, rises in the form of a flat ridge, increasing by degrees in width for almost a mile and a quarter, and terminating on the west in a precipitous rock on whose summit stands the castle, elevated about 180 feet above the plain of Holyrood on the east, and 274 feet above the level of the Firth.

The OLD TOWN, which owed its origin to the castle, formerly extended but a short distance from that fortress, and ended at the Netherbow port, one of the gates of the ancient city, now taken down. It consisted only of the main street on the summit of the ridge, and of several wynds and closes stretching down the steep declivities on both sides. The buildings, however, were subsequently continued towards the east; and the High-street at present forms a continuous line more than a mile in length, including the Castle-walk (leading from the Castle hill), the Lawn-market, and the Canongate; the whole extending from the castle on the west to the palace of Holyrood on the east, and forming a remarkable thoroughfare with numerous lofty and well-built houses, many of which are still of ancient character. "There are thousands of streets in the civilized world (says the late Sir Thomas Dick Lauder) to which the High-street of Edinburgh can bear no comparison, either as to elegance of architecture or magnificence of design; but the antiquated, unpretending, and smoke-discoloured fronts of its houses, of some ten stories, occasionally topped by curious gables and huge square chimneys, so high in the heavens that, notwithstanding its great breadth from side to side, it is painful to look directly up to them from below, give to it a peculiar species of venerable grandeur which is to be found no where else". Nearly parallel with the High-street, on the north, is the street called the North-Back of the Canongate, communicating by the Calton, formerly styled St. Ninian's row, with the road to Leith; and on the south is a line of nearly equal length with the High-street, reaching from the suburb of Portsburgh on the west, and including the Grassmarket, the Cowgate, and the South-Back of the Canongate. These streets are intersected by the Pleasance, continued through St. Mary's wynd and Leith-wynd; Bridge-street, leading along the North and South bridges, and uniting the southern districts with the Old and New Town; and St. John's street. To the west of Bridge-street are, the site of the ancient Cross now removed, and the Parliament-square, containing the Parliament-house and other stately edifices. The southern declivities of the ridge occupied by the main street terminate in a level tract of inconsiderable breadth, on which the Cowgate is situated; and beyond this the ground rises gradually, and expands into a wide open plain. The northern declivities of the ridge are much more abrupt, and terminate in some flat ground of moderate breadth, which, being formerly covered with water, was called the North Loch, but which was afterwards laid out in shrubberies and plantations, and is now partly occupied as a site for the termini of three great railways. Beyond this the surface rises, by a gradual ascent, to the flat hill on which the New Town is built.

The extension of the town on the north side of the Loch was projected in the reign of Charles II.; but no

efforts were made to that effect till the year 1751, when the fall of an old house, and the dangerous condition of many others in the town, led to the draining of the lake and the foundation of a BRIDGE, the first stone of which was laid by Provost Drummond on the 21st of October, 1763. The bridge was erected under the superintendence of Mr. Wm. Mylne, brother of the architect of Blackfriars bridge, London, and was scarcely completed, in 1769, when the southern arch and side walls gave way, and several persons were killed. It was, however, finished in 1772, at an expense of £18,000, and is a handsome structure of three noble arches, each seventy-two feet in span and sixty-eight feet high, with two smaller arches of about twenty feet span, one at either end, and numerous others that are inclosed and occupied as warehouses and vaults. In the year 1767, while this important work was proceeding, an act of parliament for extending the royalty was obtained, during the provostship of Gilbert Laurie, Esq., and a plan for the New Town was formed by James Craig, architect, nephew of the poet Thomson.

The NEW TOWN is connected with the Old Town by the bridge just described, called the North bridge, and also by an immense mound of earth to the west, formed across the valley, and the declivities of which are embellished with plantations. It consists principally of three spacious parallel streets. Of these, Princes-street, on the south, forms a magnificent terrace of fine houses with pleasure-grounds in front, nearly a mile in length, and communicates with the new London road on the east. George-street, to the north, extends from Charlotte-square on the west, a splendid range of noble houses, to St. Andrew's square on the east, also an elegant area, surrounded by handsome buildings; while Queen-street, still further to the north, the third of these spacious streets, reaches from Albyn-place on the west to York-place on the east. Between Princes-street and George-street, and between George-street and Queen-street, are two parallel ranges of narrower streets, of which the former includes West, Middle, and East Rose streets, and the latter Young-street and East and West Thistle streets; and intersecting these at right angles are numerous good streets from north to south, the principal of which are Charlotte, Castle, Frederick, Hanover, St. David's, and St. Andrew's streets. To the north of Queen-street, but separated from it to the west by a wide valley agreeably disposed in pleasure-grounds and public walks, are Heriot-row, Abercromby-place, Albany-street, and Forth-street, the last directly communicating with Union-street leading to Leith-walk. Parallel with these, northward, are Jamaica-street, Northumberland-street, and Broughton-place: beyond are Great King-street, Drummond-place, and London-street; and parallel with these, and still further to the north, are Cumberland-street and Fettes-row. To the west of this part of the New Town is the Royal Circus, a spacious area tastefully laid out, and surrounded with elegant houses: to the east are the Royal-crescent and Bellevue-crescent, with Claremont street and crescent beyond the latter; and intersecting the ranges of parallel streets mentioned in the two preceding sentences, at right angles, are India-street, St. Vincent and Howe streets, Pitt and Dundas streets, and Nelson and Duncan streets. To the east of the two last-named are Scotland, Dublin, and Duke streets, all containing well-built houses.

During the delay that occurred in the formation of the New Town, a very considerable district on the south of the Old was erected on ground which, the magistrates having neglected to purchase it, was bought by Mr. Brown, an enterprising builder, who raised some handsome houses called Brown-square. The circumstance of these being soon occupied by respectable families led to the erection of George-square, on a more extensive scale, and in a superior elegance of style: several fine streets were afterwards built, and also additional squares, of which Argyll, Adam's, and Nicholson squares are the principal; many new lines of approach were opened, and the buildings of the university erected. This important district was subsequently extended westward, beyond Heriot's and Watson's hospitals, to Lauriston, and southward to Newington; and a large suburb of handsome streets and elegant villas reaches towards the south-east, almost to the base of Salisbury Crags, a remarkable hill, forming an exceedingly romantic feature in the scenery of Edinburgh, and separated from the yet loftier Arthur's Seat by a deep valley called the Hunter's Bog. The want of a more direct line of communication with the Old Town was soon strongly felt, and for this purpose the South bridge, in a line with the North bridge, was commenced in 1785, and completed in 1789. It is a substantial structure of twenty-two arches of various dimensions, all of which are concealed by houses, except one over the Cowgate, which is thirty feet in span and thirty-six feet in height, defended on each side by an iron palisade, affording a view of the Cowgate beneath. The houses on this bridge are all uniformly built.

Since the formation of the New Town, very extensive additions have been made to the city in all directions. On the north-west, between Charlotte-square and the Leith water, some splendid ranges of building were erected in 1823 and subsequent years on the grounds of Drumseugh, the property of the Earl of Moray, consisting of Moray-place, a spacious octagon, communicating with an oval of smaller dimensions on the west, and in which are mansions in the first style of elegance; and several squares, streets, and places, among which are Ainslie-place, Randolph-crescent, and numerous other stately piles. This is the quarter of the city most celebrated for the architectural magnificence of its streets, squares, and crescents, which are all in accordance with a uniform plan designed by Mr. Gillespie Graham, architect. In the immediate vicinity, on the great north road, is a handsome structure called the Dean Bridge, erected over the ravine through which the Leith water flows, and connecting the western extremity of the New Town with the parks on the north side of that river. This bridge, a massive edifice of four arches, the two central of which are of stupendous height, was completed in 1832.

A very considerable addition to the New Town was made about the same time, to the west of Princes-street, on the lands of Coates, the property of Sir Patrick Walker. Some fine ranges of streets were formed in the park here, previously the seat of the Byres family; and of these Melville-street, almost in a line with George-street, contains some very stately buildings: close to Melville-street, on the Glasgow road, are Atholl and Coates crescents, facing each other, with shrubberies in front, and both remarkable for the beauty of their

architecture; also Rutland-street and Rutland-square, to the south of which are handsome streets leading to Port-Hopetoun, built since the Union canal was formed.

To the east of the New Town, also, many important additions have been made. Picardy-place, an elegant pile of buildings, has been erected; to the north-east of which are Gayfield-square and Greenside-place; and a noble line of approach has been opened from the Calton hill by the removal of the houses of Shakspeare-square, at the eastern extremity of Princes-street, and by the construction of the Regent's bridge. This is a handsome structure of one arch, fifty feet in span and fifty feet high, completed in 1819, connecting Princes-street with the hill, and communicating with the new London road. The parapets of the bridge are ornamented with niches and well-formed pillars connected with the houses in Waterloo-place, a fine range four stories in height, on the south side of which are the post-office and stamp-office, both handsome buildings; and an elegant hotel has been built by a proprietary of shareholders, at an expense of £30,000. From Waterloo-place the new London road sweeps round the face of Calton hill, in which direction, also, numerous additions to the city have been made. The Leith-walk, more than a mile in length, has been wholly paved, and forms a grand line of approach, having on both sides numerous detached patches and rows of buildings, with nurseries and plantations in the intervals; and on the east of Calton hill, and encircling it at a considerable height from its base, are Carlton-terrace, the Royal-terrace, and Regent-terrace, superb lines of houses commanding a fine view of the Firth of Forth, the coasts of Fife and Haddington, and the bay of Musselburgh. To the north-west of Leith-walk, are several new lines of streets, the most elegant and conspicuous of them being Claremont street and crescent, in front of the latter of which are the Zoological gardens: to the east of Leith-walk, several ranges of handsome streets have been projected and partly built on the lands of Hillside, and the slope of the Calton hill.

Additional facilities of communication with the Old Town were afforded by the erection of George IV.'s bridge over the Cowgate from the Lawnmarket to Bristo-street, a well-built structure of numerous arches, of which three only are left open; and also by the construction of a bridge on the south side of the castle, by the commissioners for the improvement of the city.

The Victoria Road, or Queen's Drive, which has been mostly constructed since Her Majesty's visit to Edinburgh in 1842, and, we believe, at the royal expense, proceeds by Arthur's Seat, Salisbury Crags, &c., and forms a splendid carriage-drive, surpassed perhaps by nothing of the kind in the kingdom. Commencing beneath the west point of Salisbury Crag, it passes round the entire hilly group in an irregular oval course, nearly three miles and a half in extent. At every step a changing view meets the eye; the road throughout is higher than the surrounding country, and a complete panorama is therefore presented to those who make the circuit. Much of the road was formed by blasting the solid rock. At the south-eastern part of the course, this blasting has taken place at a considerable elevation; Duddingston Loch and Dunsapie Loch here lie spread out beneath, and the country for miles constitutes a rich landscape. The road was opened in 1848.

In conclusion : the long avenues of noble streets intersecting each other at right angles, and containing uniform ranges of handsome houses ; the numerous terraces, places, crescents, and squares of splendid mansions, enlivened with gardens, shrubberies, and pleasure-grounds in the very centre of the town ; the spacious walks, the stateliness of the public buildings, the imposing aspect of the ancient castle, the palace, with the venerable ruins of the abbey of Holyrood, and parks adjoining ; the Botanic, Horticultural, and Zoological gardens ; the monuments on the Calton hill, with the beautiful line of approach from the town ; the romantic scenery in the immediate vicinity, Arthur's Seat, Salisbury Crags, the avenue of Leith-walk, and other lines of communication with the different suburbs, and a vast variety of other interesting features ; all these contribute to impart to the city an air of impressive grandeur and magnificence.

The environs in every direction abound with picturesque and richly-diversified scenery, and command extensive prospects over a wide extent of country embellished with features of romantic beauty and objects of intense interest. Among the more prominent of these are, the palace and grounds of Dalkeith, the seat of the Duke of Buccleuch ; Duddingston House, the seat of the Marquess of Abercorn ; Hawthornden, remarkable for its situation on a precipitous rock overhanging the North Esk ; Roslin Castle, the ancient seat of the St. Clairs, Earls of Orkney, with the beautiful ruins of the ancient chapel, one of the richest specimens of ecclesiastical architecture extant ; Corstorphine, adorned by its luxuriant woods and numerous picturesque villas ; with the towns of Newhaven and Portobello, favourite resorts for sea-bathing.

THE CASTLE.

Edinburgh Castle is most romantically situated at the western extremity of the ridge on which the Old Town is built, and, with its several buildings, occupies an irregular area of about seven acres, on the summit of a rugged rock rising almost perpendicularly from its base to a height of more than 300 feet, and inaccessible on all sides except the east. The approach from the town is by an esplanade, 350 feet in length and 300 feet in breadth, inclosed on both sides by iron palisades, and forming a favourite promenade : on the north side is a handsome bronze statue of the Duke of York in the robes of the order of the garter, placed on a pedestal, and holding in his hand a field-marshal's baton. At the west end of the esplanade, a draw-bridge over a wide and deep fosse, flanked on each side by a battery, leads to the guard-house, to the left of which is a well for supplying the garrison with water. Beyond this, the path conducts round the north side of the rock, under two gateways, one of which, formerly used as a state prison, is defended by a portcullis, whence a long flight of steps forms an ascent to the Half-moon battery and the more ancient parts of the fortress. The Half-moon battery is mounted with fourteen eighteen pounders, commanding the town, and is a massive circular tower, above the battlements of which the royal standard is displayed on public occasions. The Argyll battery, mounting ten guns of twelve and eighteen pounders, from which salutes are generally fired, over-

looks the New Town ; and on the acclivity of the hill are the houses of the governor, fort-major, and store-master, the ordnance office, the powder-magazine, which is bomb-proof, the grand store-room, and the arsenal, which is capable of containing 30,000 stand of arms. The new barracks, a spacious range of buildings four stories in height, are adapted for the accommodation of 1000 men ; and near them is the chapel of the garrison, above which is the bomb-battery, on the highest point of the rock, having near it the ancient piece of ordnance called "Mons Meg," mounted on an elegant carriage bearing the following inscriptions : "Believed to have been forged at Mons, A.D. 1486" ; "At the siege of Norham Castle, A.D. 1497" ; "Sent to the Tower of London, A.D. 1754" ; "Restored to Scotland by his Majesty George IV., A.D. 1829" .

The more ancient part of the castle comprises a quadrangular court of considerable extent, of which the south side is occupied by the buildings formerly the parliament-house, and now appropriated to the use of the district military and regimental hospital : the north side is formed by the barracks, and the west by various apartments for the garrison. The east side contains the principal range, surmounted by an octagonal turret of considerable elevation, and was anciently the royal residence. Here is the apartment in which James VI. was born ; over the door is the letter M, with the date 1566, and on the north gable are a rose and a thistle, with the date 1615. Mary of Guise is said to have died in this apartment ; but in its present state it displays no appearance to warrant that opinion. In this part of the quadrangle is the crown room, in which, upon the Union, were deposited the ancient REGALIA of Scotland. They were generally supposed to have been sent to the Tower of London ; but on a search under a commission issued in 1818 by George IV., then regent, to several noblemen, the judges of the Supreme Court, the lord provost, and other gentlemen, among whom was Sir Walter Scott, they were found inclosed here in an oak chest, together with a deed of deposition, dated the 26th of March, 1707. These regalia, which are open for public inspection daily from twelve to three o'clock, on producing a ticket, obtainable at the City Chambers, consist of the royal crown of Scotland, the sceptre, the sword of state, and a silver rod of office supposed to be that of the lord treasurer. In the same room are preserved the ruby ring, set round with diamonds, which was worn by Charles I. at his coronation ; the golden collar and badge of the order of the garter, sent by Queen Elizabeth to James VI. ; and the badge of the order of the thistle, bequeathed by Cardinal York to George IV., and deposited here in 1830. This ancient and venerable castle, though much disfigured in its appearance by an admixture of modern alterations of incongruous character, forms, from its elevated and commanding situation, a strikingly impressive feature in the view of the town.

THE ABBEY AND PALACE OF HOLYROOD.

At the eastern extremity of the town are the remains of the ancient ABBEY of HOLYROOD, founded by David I. for monks of the order of St. Augustine, in gratitude for his deliverance from danger while hunting. This monastery, which was liberally endowed by the king and

by many of his successors, was one of the richest establishments of the kind in the kingdom; but it was destroyed by the English under the Earl of Hertford in 1545, and little of the building remains except the nave of the ancient church, which was an elegant cruciform structure, and a portion of which was used as the parish church of Canongate, after the Reformation, and was also appropriated as the chapel royal. The chapel was repaired in the year 1633, on the visit of Charles I. to Scotland for his coronation, which took place in the building. At the time of the Revolution it was plundered by a mob, who stripped it of the roof, destroyed the monuments, took away the coffins of the kings and nobles who had been interred within its walls, and scattered their bones in the wildest disorder. When opened a few years previously, in 1683, the royal vault had been found to contain the coffins of James V. and his queen, Magdalene; their son Prince Arthur, and Arthur, son of James IV., who both died in infancy; Lord Darnley; and Lady Jane Stuart, Countess of Argyll. The chapel remained roofless till 1758, when it was covered with a ponderous roof of flag stones, beneath the weight of which the walls ten years afterwards gave way, and the building has from that time been a ruin. The remains consist chiefly of the west front and a portion of the side walls and piers: the entrance is by a richly-decorated arch, flanked on each side by a lofty square embattled tower; above the arch is a noble window of elegant design, and those parts of the interior which are yet entire display great beauty and costly magnificence of style. In the north-west tower is a handsome marble monument to Lord Belhaven, of the Douglas family, who died in 1639; but though the chapel is still used as a burial-place by distinguished families, it contains no other monuments of importance. In the aisles are numerous gravestones, one of which is pointed out as the grave of David Rizzio; and there is a tablet to the memory of Adam Bothwell, Bishop of Orkney.

The PALACE OF HOLYROOD HOUSE, originally built by James IV., and enlarged by James V., and which was a very spacious structure consisting of five separate quadrangles, was burnt by Cromwell's soldiers during the parliamentary war, and rebuilt, with the exception of the north-west towers, after the Restoration. The present palace, erected from a design by Sir William Bruce, is a stately quadrangular structure in the Palladian style of architecture, inclosing an area about 100 feet square, the principal entrance to which is on the north-west, by a handsome gateway in the centre of the front, which at each of the angles is flanked by two lofty circular towers, embattled, and crowned with a pyramidal roof terminating in a point surmounted by a vane. The quadrangle is surrounded with a piazza, in the south-west angle of which is the entrance to Her Majesty's apartments, by a grand staircase leading to the throne room, in which is a portrait of George IV. in Highland costume, by Wilkie. On the north side of the quadrangle is the picture gallery, 150 feet in length and twenty-eight feet wide, the walls of which are painted by De Wit with more than a hundred full-length portraits and heads of the Scottish kings, which were mutilated and defaced by the soldiers under General Hawley, after their defeat at the battle of Falkirk. In this gallery the election of the representative peers of Scotland takes place on the summoning of every new parliament.

The north-west portion of the palace contains the apartments of Queen Mary, and those of the Duke of Hamilton, hereditary keeper; the latter occupy the first floor under the unhappy queen's, and in one of them the marriage with Bothwell is supposed to have been celebrated. The apartment in the western front of the tower called Queen Mary's bed-chamber is hung with tapestry, and contains a portrait of Queen Elizabeth, the hands of which are stained with blood; and various articles of furniture said to have been used by Mary. Attached to it is the queen's dressing-room, in the south-west turret; and to the right of it is the closet in which the queen, with the Countess of Argyll and a few other ladies of the court, was at supper when Lord Darnley, the Lord Ruthven, and others, entering by a staircase from the chapel royal, seized Rizzio, who was sitting at a side table, and, dragging him to the head of the staircase, despatched him with their daggers. In Mary's presence-chamber are numerous paintings, comparatively of recent date; and in the apartments of the duke are also many paintings and portraits. From 1795 to 1799 the palace afforded an asylum to Charles X. of France, then Comte D'Artois, who, with his suite, occupied the more modern part of it; and subsequently, from 1830 to 1833, the same monarch, with his family, consisting of the Duke and Duchess of Angouleme, the Duchess of Berri, and her son, the Duke of Bordeaux, resided here. Her present Majesty's occupation of Holyrood Palace has been referred to in a former part of the article.

In the grounds on the north and east of the palace and the chapel royal, and which were inclosed by a handsome iron palisade on the visit of George IV., the foundations of the church of the ancient abbey of Holyrood may be still distinctly traced. In the royal gardens is preserved Queen Mary's sun-dial; and in the avenue from the park to the Abbey hill is an ancient building which has obtained the name of the Queen's Bath; while in the Canongate is a large edifice that was the residence of the Earl of Moray, regent, to whom it had been given by the queen, and in the gardens attached to which is a tree said to have been planted by her. The sanctuary of Holyrood House still affords security for twenty-four hours to persons flying from their creditors, and to whom a bailie appointed by the Duke of Hamilton afterwards grants protection, on application in that time. Within its limits are the parks of St. Anne's Yards, the Duke's-walk, and Arthur's Seat, on which last are the remains of the chapel and hermitage of St. Anthony, with a spring of fine water, called St. Anthony's well; and also within the precincts of the sanctuary are Salisbury Crag and the south parks, extending to Duddingston loch. In August, 1843, an act of parliament was passed authorising the transfer of the keepership of the royal park of Holyrood House from the Earl of Haddington, the hereditary keeper, to the Commissioners of Woods and Forests.

There are still some remains of the ancient palace and oratory of Mary of Guise, queen of James V., and mother of Mary, Queen of Scots, situated in Blyth's-close. Over the door of the former is the cipher of that queen, with the inscription *Laus et Honor Deo*. The situation of the building, which has long been divided into small tenements, and occupied by the humblest class, is exceedingly inappropriate for a royal residence; and but for the cipher of Mary of Guise over the door, it could not be supposed to have had any claims to that distinction.

THE PARLIAMENT HOUSE, AND SQUARE.

The parliament-house, situated in Parliament-square, was built in 1640, at an expense of £11,000. The hall, in which the parliaments were held, is a noble apartment 122 feet in length and nearly fifty feet wide, with a lofty roof of old timber frame-work, richly carved, and ornamented with gilding, supported by arches resting on corbels on the walls. It is lighted by a range of four spacious windows on the west side; and at the south end is a handsome window of large dimensions and of elegant design, though not quite in character with the hall itself, embellished with stained glass, in which is a well-painted figure of Justice, with the appropriate emblems. Near the north end is a statue of the first Lord Melville, finely executed in marble by Chantrey; on the east side of the hall is one of the Lord President Forbes by Roubilliac, erected at the expense of the Faculty of Advocates; and on the opposite sides, towards the south end, are two other statues by Chantrey, of Lord President Blair, and Robert Dundas, lord chief baron of Scotland. The walls of the parliament-house were formerly hung with portraits of William III., Queen Mary, and Queen Anne, by Sir Godfrey Kneller, of George I., and of John and Archibald, Dukes of Argyll, all of which have been removed. Before the erection of this edifice, the parliaments used to meet in the Tolbooth.

Connected with the parliament-house are the buildings appropriated to the LIBRARY of the Faculty of ADVOCATES, which was founded by Sir George Mackenzie, lord advocate of Scotland in the reign of Charles II., and at present contains about 150,000 volumes. The department of Scottish poetry is exceedingly rare and curious; and the manuscripts form an interesting collection, the most valuable of them relating to the civil and ecclesiastical history of Scotland. The library is under the management of a chief librarian, and of five curators, one of whom retires annually, and is succeeded by a member of the faculty, elected by the body. A considerable number of the books are kept in apartments underneath the hall of the parliament-house, and the remainder in a handsome building adjoining it, containing two spacious rooms, the upper of which is elegantly decorated, and has a richly-carved ceiling, ornamented with gilding. In this room are, a well sculptured bust of Baron Hume, of the Scottish exchequer, nephew of the historian, and portraits of Sir George Mackenzie, the founder; Archbishop Spottiswoode, lord high chancellor of Scotland; the Lords Presidents Forbes and Lockhart, and other judges of the Supreme Court; and a portrait of Andrew Crosbie, Esq., advocate, the prototype of Sir Walter Scott's "Counsellor Pleydell" in *Guy Mannering*. The Advocates' Library is one of the five libraries that receive from Stationers' Hall a copy of every new work published in Great Britain or Ireland.

Attached also to the buildings of the parliament-house, is the LIBRARY of the WRITERS to the SIGNET, a collection of 50,000 volumes, under the direction of a principal librarian and a body of curators. It is peculiarly rich in the department of history, more especially in British and Irish history. The building comprises two large apartments, connected with a handsome staircase. The upper room, which was originally fitted up for the Advocates' Library, is 130 feet in length and forty feet wide; the lofty roof is elaborately enriched, and sup-

ported by a noble range of twelve stately columns on each side, behind which a gallery extends throughout the whole length. This apartment is lighted by a cupola in the centre of the ceiling, the interior of which was painted by T. Stothard, R.A., in 1822, with arabesque ornaments and figures of Apollo and the Nine Muses, and three groups with portraits of eminent poets, historians, and philosophers, respectively; Homer, Virgil, Shakspeare, Milton, and Burns, among the poets; Herodotus, Livy, Hume, Robertson, and Gibbon; and Demosthenes, Cicero, Lord Bacon, Napier of Merchiston, Sir Isaac Newton, and Adam Smith. On the grand staircase leading to this splendid room, is a full-length portrait of Lord President Hope in his robes as lord justice-general, painted by Watson Gordon; and on the landing-place, portraits of several eminent lawyers, including Lord President Blair, painted by Sir Henry Raeburn, also marble busts of Sir James Gibson Craig, Bart., and Colin Mackenzie, and a fine cast in terracotta of the famous Warwick vase.

In the centre of the Parliament-square is an equestrian statue of Charles II. in lead painted in imitation of bronze, erected by the corporation in 1685, at an expense of £1000, and representing the king in the Roman costume, with a truncheon in the right hand. The buildings around the area form a semicircular range of handsome elevation, with a piazza in front, comprising (in addition to the parliament-house) the exchequer, the justiciary courts, the courts of session, various other offices, and the Union Bank of Scotland.

COLLEGE OF PHYSICIANS, AND OF SURGEONS, AND THE MEDICAL SOCIETY'S BUILDINGS.

The old hall of the College of Physicians, situated on the south side of George-street, nearly opposite to St. Andrew's church, and of which the first stone was laid by Dr. Cullen, in 1775, has been removed to make way for the handsome new buildings of the Commercial Bank of Scotland, to which establishment the Physicians sold their hall. It was a structure in the Grecian style, having in the centre of the principal front a boldly projecting portico of four stately Corinthian columns, supporting an enriched entablature and cornice, and surmounted by a triangular pediment. The whole of this elegant edifice was crowned with a parapet and open balustrade, and the interior comprised a spacious and chastely decorated hall for the meetings of the members of the college, with various other apartments; a museum; and a library fifty feet in length, thirty feet wide, and twenty feet high, lighted by two ranges of five windows, and surrounded on three sides by a gallery. The building was erected after a design by James Craig, nephew of the author of *The Seasons*, and architect of the New Town. The new hall of the College of Physicians, situated in Queen-street, is a building of much plainer appearance. Its façade presents three figures, the two lower ones representing Æsculapius and Hippocrates, and the upper one Hygeia, the goddess of health: they were all sculptured by Mr. Alexander Ritchie, a pupil of Thorwaldsen's. The library is enriched with a series of works on natural history, presented by Dr. Wright, of Kersey. *Surgeons' Hall*, belonging to the Royal College of Surgeons, incorporated by charter in 1788, is situated in Nicholson-street, and forms an elegant structure,

erected after a design by Mr. Playfair, at a cost of £20,000. The front is embellished with a noble portico, under which is the chief entrance; and the interior comprises numerous splendid halls for the accommodation of the members, a pathological museum including collections by Dr. Barclay and other eminent professors, and a valuable repository of preparations for the illustration of the science. The *Royal Medical Society* appears to have originated about the time that the medical school of Edinburgh was first established in the university, and the celebrated Dr. Cullen and Dr. Fothergill were among its earliest and most active members. It was erected into a corporate body by royal charter in 1778. The buildings are situated in Surgeons'-square, to the east of the Royal Infirmary, and comprise three large rooms, one of which contains a library of medical works, another a museum of natural curiosities and anatomical preparations; and a laboratory for chemical experiments. The *Extra-Academical Medical School* may also be mentioned.

THE ROYAL EXCHANGE, AND BANK.

The Royal Exchange in High-street, nearly fronting the Parliament-square, and the first stone of which was laid by George Drummond, Esq., grand master of the masonic order, in 1753, was completed in 1761, at a cost of £30,000. It is a handsome quadrangular structure, of which the south front has a boldly projecting piazza rising to the height of the first story, and crowned with a balustrade: above this the slightly projecting centre of the front is adorned with four pilasters of the Corinthian order, supporting an enriched cornice with an attic, surmounted by a triangular pediment ornamented at the angles and on the apex with vases, and having in the tympanum the city arms, finely sculptured. An archway leads from the piazza into the quadrangular area, ninety-six feet in length and eighty-six feet in width, three sides of which are wholly appropriated as shops and offices, and the other constitutes what is properly the Exchange buildings. These form a handsome range 111 feet in length, and fifty-seven feet in depth, comprising about twenty spacious apartments, now occupied as the city chambers, for the accommodation of the town council, the town-clerks, and other civic functionaries.

The BANK OF SCOTLAND, situated in Bank-street, nearly opposite to George the Fourth's bridge, was first established by a company incorporated by act of parliament in 1695, with a joint-stock of £100,000 sterling, which has been since increased to £2,000,000. It is under the direction of a governor, deputy governor, and a body of twenty-four directors. The building, erected at an expense of £75,000, is a fine structure of stone, of the Corinthian order, having in the centre of the front two projecting porticos of two columns each, rising from a rusticated basement, and supporting an entablature and cornice surmounted with an open balustrade that extends along the whole of the building, at each end of which are corresponding projections of duplicated Corinthian pilasters. Over the entrance is a Venetian window of three lights, divided by Corinthian columns sustaining an enriched entablature, above which are the arms of Scotland, having on one side a figure of Plenty, with an inverted cornucopia, and on the other a figure of Justice, with the motto *Tanto uberior*. Behind these, a cupola and dome rise from the centre of the building.

The *Royal Bank of Scotland*, situated in a recess to the east of St. Andrew's square, is a very handsome building originally erected by Sir Laurence Dundas as a family residence, but sold by his son to the Board of Excise, by whom it was occupied for many years. Eventually it was purchased from the board by the Royal Bank for its present use. It was designed by Sir William Chambers, and is in the Roman or Italian style, with a slight projection in the centre of the front, embellished with four engaged Corinthian columns springing from a rusticated basement, in which is the entrance, and supporting an entablature and cornice, and a triangular pediment having in the tympanum the royal arms.

Some of the other banks in Edinburgh (the Commercial Bank, the Western Bank, &c.) form also handsome structures.

THE REGISTER OFFICE.

THE REGISTER OFFICE, situated in Princes-street, opposite the north end of Bridge-street, was commenced in 1774, by a grant of £12,000 obtained by the Earl of Morton in the reign of George III., and completed in 1822, at an expense of £40,000. This elegant structure, erected after a design by Mr. Robert Adam, has a principal front 200 feet in length, from which projects a central portico of four Corinthian columns, rising from a rusticated piazza of three arches forming the entrance, and supporting an enriched entablature and cornice, with a triangular pediment, in the tympanum of which are the arms of Great Britain. At each of the extremities of the front is a projecting wing of similar character, with two columns, between which is a Venetian window, surmounted by a turret and dome rising to a considerable elevation above the balustrade. Behind the central portico are seen the stately cupola and dome that spring from the interior of the quadrangle. The quadrangle is surrounded with handsome ranges of building comprising ninety-seven vaulted apartments, among which are, an elegant room thirty-five feet long, twenty-four feet wide, and twenty-three feet in height, for the use of the lord registrar, and various rooms for different officers of the establishment, and for the accommodation of the clerks of, and attached to or connected with, the courts of session and judiciary. Within the quadrangle is a circular saloon, fifty feet in diameter, rising from the centre of the inclosure to the height of eighty feet, extending to the sides of the quadrangle, and leaving at the angles sufficient space for the admission of light. The walls are divided into compartments by recesses for the reception of the public documents, to which facility of access is afforded by a gallery round the interior; and there is a circular window, fifteen feet in diameter, in the centre of the dome, which is richly ornamented in stucco. From the saloon two grand staircases lead to the numerous other apartments where the national records are deposited.

LITERARY AND SCIENTIFIC INSTITUTIONS.

THE ROYAL INSTITUTION, situated at the north end of the Earthen Mound, in Princes-street, is a spacious structure erected in 1823, from a design by Mr. Playfair, upon a foundation of wooden piles which the nature of the ground rendered necessary for its security. It was afterwards enlarged by rebuilding the south end, and extending the range of columns. The buildings are embel-

lished in front and at the end with columns of the Doric order, and are surmounted by a magnificent colossal statue of Queen Victoria, executed by Mr. Steel, and erected in 1844. They comprise a spacious gallery for the exhibitions of the Royal Scottish Academy of painting, sculpture, and architecture, founded in 1826, and incorporated by royal charter in 1838; and apartments for the Royal Society of Edinburgh, instituted in 1783; the Royal Institution for the encouragement of the fine arts in Scotland, established in 1819, and incorporated by royal charter in 1827; and the Board of Trustees appointed by letters-patent in 1727, for the encouragement of manufactures, &c., in Scotland. It was out of the public funds under the management of this Board of Trustees that the buildings were raised. The *Royal Scottish Society of Arts* was founded in the year 1821, and incorporated by royal charter in 1841. The *Royal Association for the Promotion of the Fine Arts in Scotland* was established in 1833, and incorporated by royal charter in 1847.

The *Society of Antiquaries*, established by royal charter in the year 1780, has now its hall in George-street, containing a museum of ancient armour, utensils, charters, coins, &c.: it had formerly accommodation allotted to it in the Royal Institution. The *Astronomical Institution* was formed in 1812, in consequence of an eloquent address then issued by the late Professor Playfair on the importance of an astronomical observatory for Edinburgh. In 1818 the new Observatory was founded, contiguous to the old one, on the Calton hill; it is based on the solid rock, and forms an elegant Doric structure, after the model of the Grecian Temple of the Winds. The professor of practical astronomy in the university has apartments in the building, for his convenience in making observations. Connected with the university are the five following literary and scientific societies: the *Dialectic Society*, for the prosecution of literary and philosophical composition, criticism, and debate, which has existed since 1787, and probably was founded before that period; the *Scots Law Society*, established in 1815; the *Diagnostic Society*, established in 1816; the *Hunterian Medical Society*, in 1824; and the *Metaphysical Society*, in 1838. The *Royal Physical Society* was instituted in 1771, and chartered in 1788. There are, the *Royal Medical Society*, noticed on a preceding page; the *Harveian Society*, founded in 1782; the *Medico-Chirurgical Society*, in 1821; the *Obstetrical Society*, and the *Phrenological Society*. The *Philosophical Institution* is intended to afford the means not only of acquiring the fullest and most authentic information on all topics of immediate or passing interest, but of cultivating and extending the growing taste for science, art, and literature. For these ends there are at present provided, a reading-room and library, a newsroom, and the delivery of popular lectures. Other institutions that may be mentioned are, the *Speculative Society*, established in 1764; the *Juridical Society*, in 1773; the *Theological Society*, in 1776; and the *School of Arts*, for the instruction of mechanics and tradesmen in the elements of scientific knowledge, 1821.

The *Royal Botanic Garden*, on the Inverleith road, is laid out with great taste, and at the same time with scientific precision, embracing an area of fourteen acres and a half, and presenting every facility for prosecuting the study of botany. This noble garden is surrounded by trees on the west, south, and east; and on the right-

hand side of the entrance are the class-room of the professor of botany in the university, and the house of the superintendent. Before the purchase of the present ground about twenty-five years ago, there was a botanic garden on the west side of the road to Leith, formed in 1767; and at a still earlier period, in the latter part of the seventeenth century, a garden had been laid out near the then Trinity Hospital, under the auspices of Sir Andrew Balfour, and Sir Robert Sibbald, two zealous naturalists. Sir Andrew Balfour, returning from abroad, and settling in his native city in 1670, immediately began the formation of a garden for his own private amusement; and a few years afterwards, his friend Mr. Patrick Murray of Livingstone dying, and leaving a collection of a thousand species of plants, a piece of ground about forty feet square, in the north yards of the Abbey, was procured, and the plants were removed to that spot. The collection still increasing, some ground was obtained from the city magistrates near the Trinity Hospital, and laid out, as above mentioned, under the care of Sir Andrew Balfour and Sir Robert Sibbald, the original founders. From this early commencement has gradually grown the present interesting collection of plants. An annual grant is received from government.

Adjoining the Botanic Garden is the *Caledonian Horticultural Society's Garden*, a beautiful and interesting piece of ground, comprising an area of ten acres. The society was established in the year 1809, since which period large sums have been annually expended in promoting the production of new fruits, flowers, and vegetables, and encouraging the improvement and bringing to maturity of those already introduced. In 1824 ground was purchased by government for an experimental garden, and consigned to the society on a long and renewable lease. An annual grant of £200 a year was also bestowed towards the support of the garden, to be continued so long as the members contribute £300 a year for the same purpose. The gardens are furnished with the necessary appliances for experiments in horticulture; the various collections are arranged with care, and in the centre of the grounds stands a spacious hall for the society's meetings, in front of which is a fine lawn, where several exhibitions of exotic plants annually take place. A marble bust, by Steel, of the secretary, Dr. Neill, adorns the hall.

The *Royal Zoological Gardens*, Broughton Park, are pleasantly situated, and laid out with good taste. In 1838, a few individuals began a collection of living animals, which gradually increasing, an association was formed, and a piece of ground procured; the collection is already considerable, and is constantly receiving additions.

On one side of George IV. Bridge is the *Museum of the Highland and Agricultural Society of Scotland*, containing an extensive collection of agricultural implements and produce, drawings of the various breeds of domestic animals, a greenhouse, and, in short, every thing calculated to advance information in husbandry, and improve the culture of the soil. The society was founded in 1785, at first with the object of promoting agricultural improvements in the Highlands, but subsequently its plan was enlarged so as to comprehend the whole of Scotland. A lectureship on agricultural chemistry has been established in connexion with the society. The *Wernerian Natural-History Society* was instituted in 1808,

by Professor Jameson and a few gentlemen devoted to the study of natural history. There are also in Edinburgh, the *Botanical Society*, founded in 1836; and the *Geological Society*.

The College Theological Library was instituted in 1698; the Edinburgh Subscription Library, in 1794; the Select Subscription, in 1800; and the Architectural Subscription Library, in 1832. There are, besides, the New Town Subscription, and Mechanics' libraries; and public subscription reading-rooms. The libraries of the Faculty of Advocates and the Writers to the Signet have been described in a previous page.

The Assembly Rooms, in George-street, form an elegant structure in the Roman style of architecture, having in the principal front a projecting portico of four columns, rising from a rusticated basement (forming a piazza, under which are the entrances) to the whole height of the building, and supporting a triangular pediment. The ball-room, which is ninety-two feet long, forty-two feet wide, and forty feet high, is tastefully decorated, and is approached by two large staircases, which meet in a lofty saloon in the middle of the building, which also gives access to a spacious and very handsome Music Hall lately erected at the back of, and immediately in connexion with, the Assembly Rooms. This Hall was completed at an expense, including the organ, of more than £10,000; it is fitted up in a style of great splendour, and measures 108 feet in length, by ninety-one feet in breadth. *The Theatre Royal*, situated near the end of the North bridge, was first opened in 1769.

MONUMENTS.

On the summit of the highest eminence on the Calton hill, is the ill-designed monument to the memory of LORD NELSON, completed in 1815, and forming a conspicuous object in the view of the city both by sea and land. The structure consists of a lofty cylindrical tower of several stages, rising from the centre of a heptagonal building flanked at the angles with projecting embattled turrets, to the height of 100 feet, and surmounted by an embattled circular turret, from which springs a flag-staff. Above the entrance is the bust of Lord Nelson, with the stern of the *San Josef*, in basso-relievo, beneath which is a tablet with an appropriate inscription. The building around the base is occupied as a tavern. From the summit of the tower is obtained a truly magnificent view, reaching to the German Ocean, and comprehending the extensive and interesting tract of country to the west. The NATIONAL MONUMENT, of which the first stone was laid by the Duke of Hamilton in 1822, under the patronage of King George IV., and which occupies a commanding eminence on the same hill, was commenced by subscription in commemoration of the Scottish naval and military officers who fell in the battles consequent on the French revolution. The design was furnished by Mr. Playfair, and was intended to be a perfect model of the Parthenon at Athens; but, the amount of the subscriptions having been all expended in the erection of twelve magnificent columns, the works were abandoned, and the memorial left in an unfinished state. In 1848, however, an act of parliament was passed, to amend the act which in the reign of George IV. had incorporated the contributors. Powers were given by this measure to raise new subscriptions for carrying on the work, and

the act declared that the monument should no longer be restricted to the objects specified in the former act, but should be devoted "to the purpose of a receptacle or gallery for monumental busts and statues, or other memorials of great and distinguished persons of all nations and periods". The architecture and decorations were to be those already approved, but liberty was allowed by the act to the directors and association to alter them as might seem expedient. On Calton hill are also the monuments of Professor PLAYFAIR, near the Observatory, and of Professor DUGALD STEWART, overlooking the Regent's bridge; both structures of elegant appearance, designed by Mr. Playfair. Upon the edge of another part of the hill, opposite the High School buildings, is the monument recently erected in honour of the poet BURNS. This is a handsome circular structure, rising from an octagonal base with numerous appropriate inscriptions, and surrounded by Corinthian columns supporting a highly-enriched entablature and cornice, surmounted by an attic and a pedestal and figure. Within was for some time to be seen a beautifully-sculptured statue of the poet by Flaxman, but this now adorns the university library. The whole of the monument is elaborately embellished with emblematical sculpture, in which the lyre is predominant. The monument of the historian DAVID HUME, a massive circular tower, is likewise situated on the Calton hill, in the cemetery overlooking the Old Town. Within a few yards of this monument, and also in the Calton burying-ground, is the obelisk called the Martyrs' Monument, erected by subscription, to commemorate the political opinions and the fate of Muir, Palmer, Gerrald, Skirving, and Margatot, who figured at the close of the last century. The first stone was laid by Mr. Joseph Hume, M.P., on the 21st of August, 1844, and the inelegant erection was finished in the course of the year 1845.

The monument erected in 1828 to the memory of LORD MELVILLE, in the centre of St. Andrew's square, is a fluted column 136 feet in height, above the capital of which is a colossal statue of his lordship, the whole raised chiefly by subscription of gentlemen connected with the navy as a tribute of respect to his memory. To the east of the square, in a recess in front of the Royal Bank of Scotland, is a bronze statue of GENERAL the EARL of HOPETOUN by T. Campbell, leaning on a charger, and placed on a pedestal, erected in 1835 in grateful remembrance of his military services. At the intersection of George-street and Hanover-street is a colossal statue, in bronze, of GEORGE IV., by Chantrey, raised in 1832, in commemoration of His Majesty's visit; and at the intersection of George-street and Frederick-street, in a line with the former, is a similar bronze statue of WILLIAM PITT, by the same artist. In the centre of the Parliament-square is the equestrian statue of CHARLES II., referred to in a previous page, and which is deserving of notice for its vigour of design, and general effect.

Opposite to the extremity of St. David street, in Princes-terrace, and finely situated in the gardens of the North Loch, is the superb monument to SIR WALTER SCOTT, erected from the designs of the late Mr. George M. Kemp. This truly splendid and elaborately-enriched structure rises to the height of 200 feet, from a base fifty-five feet square, in a series of gradually diminishing towers in the decorated English style. These towers

are strengthened by panelled buttresses, terminating in crocketed pinnacles with flowered finials; the buttresses are connected by flying buttresses of scroll-work, and have angular turrets adorned with canopied shrines, and springing from pierced parapets. From the angles of the principal or lowest tower, in which is enshrined a fine statue of the poet by Steel, are boldly projecting turrets, of similar character but very much larger, connected with the main building by lofty and sharply-pointed arches, richly moulded, and crowned with ogee canopies of feather-work. The roof of the tower is delicately groined, and is supported by four piers of slender clustered columns with flowered capitals, between which are four spacious and graceful arches affording access to the interior, to which is an ascent by flights of steps from the base between the turrets that project from the angles of the monument. A staircase of 287 steps conducts to the gallery at the top. In each front of the monument, above the principal arch, are six small niches, making a total of twenty-four in the main structure, besides thirty-two others in the piers and abutment towers. These niches are to be occupied by sculptural impersonations of the characters, historical and fanciful, portrayed in the writings of Sir Walter. The following statues fill the four principal niches which crown the four lowest arches. In the northern niche, facing Princes-street, is the statue of Prince Charles (from *Waverley*) drawing his sword; in the eastern niche, on the side next the Calton hill, Meg Merrilies (from *Guy Mannering*) breaking the sapling over the head of Lucy Bertram. Both these were modelled and sculptured by Mr. A. H. Ritchie. The southern niche, next the Old Town, contains the statue of the *Lady of the Lake* stepping from a boat to the shore: this was modelled by Mr. Peter Slater, and sculptured by his relative of the same name. In the western niche is the *Last Minstrel* playing on his harp, a work modelled and sculptured by Mr. James Ritchie. The foundation of the Scott Monument was laid on August 15th, 1840, being the anniversary of Sir Walter's birthday, and the building was finished in 1844: the four statues were raised in the following year, and the fine marble statue of the novelist, underneath the centre of the tower, was placed there on August 15th, 1846.

In the ravine of the Water of Leith, below Dean bridge, is a handsome Doric temple, consisting of columns supporting a circular dome, and in which is placed a statue of Hygeia, of colossal dimensions, on a pedestal. The structure is erected over St. Bernard's well, a mineral spring near the margin of the river, and forms an interesting and pleasing feature in the scenery.

LIGHTING, &c.

The streets of the city are well lighted with gas from extensive works in the North-Back of the Canongate, erected by a company of shareholders incorporated under an act of parliament in 1818, with a capital of £100,000, subscribed in £25 shares. In 1839 a new gas company was formed, the subscribers to which purchased the Leith gas-works: they were incorporated by act of parliament; and pipes being laid down by the company throughout the streets of Edinburgh, while the works are carried on at Leith, they thus afford a supply to both towns. A water-company was incorporated in 1819, with a capital of £253,000, also in shares of £25 each.

Previously to the establishment of this company, the water was brought from Comiston; but, the supply being very inadequate to the increased extent of the town, it is now conveyed from more copious springs at Crawley and Glencross, about eight miles distant, into capacious reservoirs, at the Castle hill for the northern, and near Heriot's hospital for the southern, districts; whence it is distributed by pipes to the houses. The various works for this purpose were completed at a cost of more than £200,000; and a large compensation reservoir has also been constructed in the valley of the Logan water, between two ranges of the Pentland hills, for the supply of the different mills and factories in that district. The quantity of water, however, being still insufficient, and its quality inferior, the company are now engaged in bringing an additional supply from the west side of the hills; and an act of parliament has been passed for a better supply of water to the city. The markets, which are spacious and well adapted for their object, are abundantly furnished with all kinds of provisions, and every variety of luxuries; and from the vicinity of the Forth, fish of all sorts is plentiful, and of moderate price. The new Corn Exchange was opened on the 5th December, 1849. Coal of excellent quality is obtained in the surrounding districts, and the Union canal and the railways afford every facility for its conveyance.

RAILWAYS, AND CANAL.

The *Edinburgh and Glasgow Railway* was commenced under the authority of an act of parliament which received the royal assent on the 4th of July, 1838. The work was begun at the Almond valley in October 1838, and the line was opened to the public, from the Haymarket, at the western extremity of Edinburgh, to Glasgow, on the 21st of February, 1842. In 1844 an act was passed empowering the company to bring the line into the heart of the city, and make a terminus at the North Bridge, in the immense hollow that separates the Old and New Towns. This station was completed in May 1847, and contributes to form one of the most remarkable features in the metropolis. On the west side of the North Bridge are the stations of the Edinburgh and Glasgow and the Edinburgh, Perth, and Dundee railway companies, while on the east side is the station of the North-British railway company, the whole presenting one grand, connected centre of railway communication. The Glasgow line proceeds from the terminus, in a direction parallel with Princes-street, along the bottom of the romantic hollow forming the Princes-street gardens. Almost immediately on emerging from under the bridge over the Waverley road, the line enters a tunnel under the huge mass of earth called the Earthen Mound, and then arrives at the West gardens, where the railway train passes close to the stupendous and abrupt ridge of rock on which stands the Castle of Edinburgh, at an altitude of nearly 300 feet above the line. After this peculiarly striking course along an urban valley among the trees, beneath an ancient fortress, the railway train suddenly plunges into the tunnel which conducts to the first station on the line, at the Haymarket, the original terminus, which is a mile and a half distant from the present terminus. Here there are various buildings connected with the line; after passing which, a delightful country is opened up.

The *North-British Railway* was sanctioned by an act which received the royal assent in July 1844, and the works were commenced in September of the same year. The main line, with a branch to Haddington, was opened on the 18th of June 1846. Whilst the railway above described proceeds westward from the Edinburgh central station, a distance of forty-seven miles and a half, to Glasgow, the *North-British railway*, starting from the same point, passes in an eastern direction and then southwards, for nearly fifty-eight miles, to Berwick-upon-Tweed. Proceeding from the North Bridge, the line is carried across the North-Back of the Canongate by a very remarkable iron skew-bridge, of seventy feet span, rising eighteen feet above the level of the street. This bridge crosses the line of street at an angle of only twenty degrees and a half, thus exceeding in obliquity, by one-fifth, the celebrated skew-bridge over Fairfield-street, Manchester, on the Manchester and Birmingham railway, which has an angle of twenty-four degrees and a half. Immediately afterwards, the railway forms a tunnel of 420 yards, commencing at the southern spur of the Calton hill, in front of the High School, and terminating at the east gate of the gaol. On quitting this tunnel, the line runs along an embankment towards the Abbey hill, and is conveyed over the road by a viaduct of iron beams, supported by a stone pier erected in the middle of the street. At some distance further on, are the engine-sheds, shops, and warehouses of the company; and behind the Piershill cavalry barracks is a wall screen not less than forty-six feet in height, raised to protect the powder magazine in the barracks from ignition by the sparks of the passing engine; this screen forms perhaps the highest wall of the kind in Britain. At Portobello, three miles distant from the terminus, the important branch to Hawick, Kelso, and other towns, diverges from the railway. This and other branches were formed under special acts of parliament, and opened subsequently to the main line.

The *Edinburgh, Perth, and Dundee Railway*, the first act for which was passed in July 1845, has its terminus, as already observed, on the west side of the North Bridge. The line incorporates the Edinburgh, Leith, and Granton railway; which was opened as the New-haven railway, from Scotland-street to Trinity pier on the Firth of Forth, in 1843; and as the Leith and Granton railway, from the North Bridge to Leith and to Granton pier, in 1847. Commencing at the grand terminus, the Granton line proceeds northward by a tunnel under St. Andrew's street, Duke-street, Dublin-street, Drummond-place, and Scotland-street; the tunnel is 1000 yards in length, twenty-four feet wide, and seventeen feet high, and at its northern extremity is a station. Soon afterwards the line enters another tunnel, a very short one, under the turnpike-roads, &c., immediately east of Canonmills, emerging near Heriothill. Hence proceeding in the same direction, the railway crosses the Water of Leith, after which the branch to Leith diverges eastward, the Granton line continuing its course northward, by the cemetery at Warriston, to the station at Newbank, Trinity, where it curves to the west for Granton pier, on the Firth of Forth. The Edinburgh, Leith, and Granton railway is fully amalgamated with the Edinburgh, Perth, and Dundee; and from the noble pier at Granton the company's passengers for the north are conveyed across the Firth to Burntisland.

The *Caledonian Railway*, whose terminus in Edinburgh is in the Lothian-road, not far from the castle, was authorized by an act of parliament passed in July 1845. The first sod was turned on the Beatock summit in the following month of August; the foundation stone of the Edinburgh station was laid with masonic honours in April 1847; the line was opened from Beatock to Carlisle in the September following, and the remaining portions in February 1848. This great national undertaking, besides minor branches, comprises two main lines, one from Edinburgh, the other from Glasgow, which meet near Lanark, and thence form a grand trunk line to Carlisle. Thus, the Scottish metropolis is connected with the western counties of England by the Caledonian railway, as it is with the eastern counties by the North-British railway. An act was passed in 1847 authorizing the Caledonian company to extend their station in Edinburgh, to make a branch of four miles to Granton, and three very short branches to the Edinburgh and Glasgow railway.

The *Union Canal* was projected in 1817, and, after considerable opposition, was begun in 1818 by a joint-stock company, and finished in 1822, at an expense amounting to nearly £400,000. In 1849 an act was passed vesting it in the Edinburgh and Glasgow Railway Company. It commences at Port-Hopetoun Basin, at the south end of the Lothian-road, Edinburgh, and is carried through the parishes of St. Cuthbert, Colinton, Currie, Ratho, and part of Kirkliston, in this county; those of Uphall, part of Kirkliston, Dalmeny, Abercorn, and Linlithgow, in the county of Linlithgow; and Muiravonside, Polmont, and Falkirk, in the county of Stirling. It terminates in junction with the Forth and Clyde (or Glasgow) canal at Port-Downie, near Falkirk, a distance of thirty-one and a half miles from its commencement. In its course it is carried by extensive aqueducts over the Water of Leith, the Almond, and the Avon, and passes through Prospect-hill tunnel, cut out of the solid rock for 696 yards; preserving its level to within a mile of its junction with the Forth and Clyde canal, whence it falls 110 feet by a series of eleven locks. The width of the canal at the surface is forty feet; at the bottom, twenty feet; and its depth is five feet. The aqueduct over the Leith at Slateford consists of eight arches; its height is sixty-five feet, and its length 500: that over the Avon is still more extensive. On the banks along the line are numerous villages, and it approaches close to the royal burgh of Linlithgow.

MUNICIPAL AFFAIRS.

From a charter of David I. bestowing on the monks of Holyrood Abbey certain endowments payable out of "his burgh of Edwinesburg", the town appears to have been constituted a royal burgh at least as early as the reign of that monarch; and at a very remote period the city was one of the four principal burghs, whose commissioners, with the chamberlain of Scotland, constituted the "court of the four burghs", for superintending the affairs of the royal burghs. Under charters granted by the successors of David, confirming to the inhabitants his grant of a large portion of the forest lands in the immediate vicinity of the castle, the citizens had various privileges, including a license to trade, and to exact tolls and customs of all merchandise and traffic within the

burgh; to which James III. by charter added the liberty of appointing a sheriff with extensive jurisdiction. Numerous additional immunities were conferred on the burgesses by other kings, and ratified and enlarged by succeeding monarchs, especially by James VI., who by charter granted to the provost, bailies, and council the site of the city and all its appendages, and the hereditary offices of sheriff and coroner, with ample civil and criminal jurisdiction within this burgh, Leith, and Newhaven. The provost was declared high-sheriff and coroner, and the bailies conjointly and severally were his deputy sheriffs and coroners; and the whole of the escheats, fines, and amercements in their jurisdiction were constituted part of the common property of the city. King James's charter, which was called the "Golden charter", was confirmed by Charles I.; but many of the privileges, being thought to derogate unreasonably from the prerogative of the crown, were voluntarily surrendered by the corporation in 1630, and a new charter, differing but slightly from that of James VI., except in those instances thought objectionable, was granted in 1636, and continued to be the governing charter till the reign of William IV.

The management of the municipal affairs is vested in four public bodies, namely, the town council, the police board, the road trustees, and the county prison board. The town council consists of thirty-three members, of whom thirty-one are chosen by the parliamentary voters qualified within the royalty; the remaining two, being the dean of guild and the convener of the trades, are elected respectively by the guild-brethren of the city and the deacons of the incorporated trades. Out of their own number, the whole council appoint a lord provost, four bailies, and a treasurer; and these officers, with the dean of guild, constitute the magistracy. The provost is dignified with the title of the Right Honourable, and in the city takes precedence, on public occasions, of all the great officers of state and of the nobility, walking on the right hand of the king or his commissioner, and having a sword of state and a mace borne before him. He is also admiral, and the bailies are admirals-depute, over the city and liberties, and the town, harbour, and road (anchorage) of Leith. The council are superiors of the burgh-of-regality of Canongate, and of the burghs-of-barony of Easter and Wester Portsburgh; over which they appoint certain of their number as baron-bailies, and also two burgesses of Canongate, and two inhabitants of Portsburgh, as resident bailies. The bailies of Canongate exercise the same legal jurisdiction within the limits of their district as magistrates of royal burghs; but the bailies of Portsburgh perform only the petty duties to which the bailies of all burghs of barony are now restricted. Formerly the council used to appoint the magistrates of Leith; but since 1833 these have been elected by a town council in that place, and the council of Edinburgh delegate to them annually their jurisdiction of admiralty over the town and road of Leith. The Merchant Company was incorporated by royal charter in 1681, and ratified by act of parliament in 1793; each of the members pays on admission a fee of £63, besides contributing to a widows' fund, established in 1828. It has, however, never been acknowledged by the town council as one of the city corporations; and its members, as such, have never enjoyed any municipal privileges. The acknow-

ledged corporations, possessed of municipal privileges, are fourteen in number, the surgeons, goldsmiths, skinners, furriers, hammermen, wrights, masons, tailors, bakers, fleshers, cordiners, websters, waulkers, and bonnet-makers. The members of these incorporations possess the exclusive right of exercising their respective professions and trades within the ancient royalty of the city; and formerly their presidents, bearing the title of deacons, were members of the town council. Their privileges, however, are of little value, as the New Town is entirely free from municipal restrictions of that kind; the incorporations are dwindling away, and most of them will probably be soon extinct. The late *Police Board* of the city consisted of thirty-two commissioners elected annually by the ratpayers, and of seventeen public officers, including the provost, the magistrates of the city and Canongate, and the sheriff of the county and his substitutes. In 1848, however, an act was passed for more effectually watching, cleansing, and lighting the streets of Edinburgh and the adjoining districts. By this act, matters of police are assigned to the management of a new board or commission, consisting of the provost and bailies, the sheriff and one substitute, and thirty-two general commissioners annually elected, one being chosen by each of the thirty-two wards formed by the act. There are two resident commissioners in each ward, also annually elected, who, with the general commissioner, have the powers of constables; the general commissioners, and in their absence the resident, being head constables, intrusted with the carrying out of the provisions of the statute, and with the preservation of the peace. The act confers the requisite authority for levying assessments, the appointment of officers, &c. The *County Prison Board* consists of eighteen members chosen by the town councils of Edinburgh, Leith, Musselburgh, and Portobello, and the magistrates of the shire; and has the care of all the prisons, bridewells, and other places of confinement within the city and county of Edinburgh, under the control of the general board of directors of prisons in Scotland, who are appointed by the crown. The lord provost of the city and the sheriff of the county are members *ex-officio* of the board.

The magistrates, with the powers of sheriff, preside weekly in a bailie court, the jurisdiction of which comprises the ancient and extended royalty, and the barony of Portsburgh. They also sit in the police court, chiefly for the trial of petty offences, the more serious causes being remitted for trial to the sheriff or high court of judicary. There is a court called the Ten Merks court, for the determination of civil actions not exceeding ten merks, in which a summary process is observed; and a court for the recovery of debts not exceeding £3. 6. 8. is also held by the magistrates, under the provisions of an act of the 40th of George III. A dean-of-guild court is held weekly before the dean, assisted by a council annually nominated by the town council. The jurisdiction of the court of admiralty extends over the whole of the county of the city, which includes the ancient and extended royalty, Leith, Canongate, and Portsburgh, and that part of the Firth of Forth lying between a line drawn from Wardie Brow to the Mickrie Stone on the west, a line drawn from the shore to the east of Inchkeith on the east, and the middle of the Firth of Forth on the north.

The *County Hall*, situated in the Lawnmarket, is an elegant structure in the Grecian style of architecture. It has a stately portico of four fluted Ionic columns rising to the roof of the building, and supporting a triangular pediment; and on each side of the portico, to which is an ascent by a flight of steps, the front is embellished with pilasters of the same order. From its ill-chosen site, the building loses much of its architectural interest. The interior comprises a spacious hall for the county meetings, fifty-six feet long, twenty-six feet wide, and twenty-six feet high; a court-room forty-three feet in length, and twenty-nine feet wide, with a gallery at the south end; apartments for the accommodation of the judges, magistrates, witnesses, and others attending the sessions; and various offices. The *Old Tolbooth*, in which sessions of parliament, the meetings of the College of Justice, and the various courts were formerly held; in which the public business of the corporation was transacted, and the civic banquets and other festivities took place; and in which, also, were the city and county gaols and the debtors' prison, was taken down in 1817, a new *Gaol* having been erected on the Calton hill, at a cost of nearly £30,000. Of this sum, £10,000 were granted by government, £8000 from the city, £5000 from the county, and the remainder raised by assessment. From the period of its erection in 1561 until the year 1640, the Tolbooth served for the accommodation of parliament and the courts of justice, as well as for the confinement of prisoners; but after the erection of the present parliament-house, it was employed only as a prison. Its situation, in the middle of the High-street, at the north-west corner of St. Giles's church, was signally inconvenient. The great entrance-door, with its ponderous padlock and key, was removed to Abbotsford, the seat of Sir Walter Scott, where it is now to be seen, with the other curiosities of the place: "it is not without interest", observes Sir Walter, "that we see the gateway through which so much of the stormy politics of a rude age, and the vice and misery of later times, had found their passage, now occupied in the service of rural economy". The Tolbooth was sometimes called by the inhabitants "The Heart of Mid-Lothian", and under this name has become renowned in the novel of Sir Walter Scott.

The *Bridewell*, which is situated on the Calton hill, nearly behind the gaol, was erected in 1796, after a design by Mr. Robert Adam, at an expense of £11,794, raised by subscription and assessments, aided by a grant from government. The buildings, consisting of a semi-circular range, in front of which is the governor's house, are five stories in height, and comprise fifty-two working-rooms and 144 sleeping-cells, some of which are appropriated to prisoners sentenced to solitary confinement. The new *Debtors' Gaol*, on Calton hill, recently erected, is in what may be called the castellated Norman style, and presents in its general composition an upright group of variously-shaped towers, rising above the external wall of inclosure, and so disposed as to produce much picturesque effect of outline from different points of view. The *Canongate Tolbooth*, an ancient structure, includes a common room, eight sleeping apartments, and rooms for the governor of the prison: the front towards the street has a low tower with angular turrets, between which is a clock, and is surmounted by a small spire.

HISTORY AND GOVERNMENT OF THE UNIVERSITY.

The University was originally founded by the town council, to whom Mary, Queen of Scots, granted for that purpose the sites and remains of the several ancient religious houses within the city, together with the lands and revenues in various parts of the kingdom. This gift was confirmed by James VI., who also bestowed a license to erect schools and houses for the students within the precincts of the monastic demesnes, and to receive benefactions and bequests of land and other property for its endowment, as well as to elect professors, with ample powers to remove them as they might think fit; all which grants, together with others by the same monarch, were subsequently ratified by act of parliament. The town council, having likewise received a bequest of 8000 merks from Robert Reid, Bishop of Orkney, for the purpose of founding a college in the city, began, in 1581, to erect buildings appropriate for an institution of the kind in the southern district of the town, within the precincts of the ancient collegiate Kirk of Field. In 1583, the buildings were so far advanced that the town council chose Robert Rollock, formerly of St. Salvator's college in the university of St. Andrew's, as professor in their college of Edinburgh; and his talents and popularity soon attracted a considerable number of students. After the appointment of other professors, the town council elected Mr. Rollock principal, in 1586: the institution steadily increasing in reputation and importance, additional professorships were created, and the establishment from that time rapidly advanced in prosperity. James VI. subsequently granted certain church lands and tithes in the counties of Lothian and Fife for its further endowment; and for its due regulation the town council founded an annual visitation by a committee of sixteen of their own body, with five of the ministers of Edinburgh, and three advocates, who made their first inspection in 1614. The town council continued these annual visitations till 1640, when they appointed a rector of the university to superintend the management.

During the parliamentary war in the reign of Charles I., the progress of the university met with no interruption; and Cromwell, in his protectorate, endowed it with an annuity of £200. After the Restoration, many of the students were strongly imbued with the principles of the Covenant, and, on the visit of the Duke of York, afterwards James II., to Edinburgh, made preparations for a public procession for the purpose of displaying their inveterate abhorrence of the Roman Catholic religion, by burning an effigy of the pope. To prevent this outrage to the feelings of the Duke of York, the magistrates despatched a party of soldiers, when a violent tumult took place between the military and the students, the latter aided by the populace; seven of the rioters were apprehended and lodged in prison, but after a few days were liberated. With the view of suppressing these feelings, Charles II. appointed a visitation

Arms.

to be held in the university by the Bishop of Edinburgh, the lord provost and magistrates of the city, and others, enjoining them to make their report in 1683; but the result is not known. Not long before the Revolution in 1688, another visitation was held for the same purpose, when a sentence of deprivation was passed upon the principal and one of the professors; but since the accession of William III., the internal policy of the university has been free from all similar interference. In 1768, a memorial was presented for rebuilding the university; but the breaking out of the American war suspended all further proceedings towards that undertaking. After the peace, however, it was again proposed, in 1786; and the magistrates having raised a subscription, a plan was designed by Robert Adam for rebuilding it upon the same site; and the first stone of the present structure was laid with great ceremony by Lord Napier, grand master mason of Scotland, on the 16th of November, 1789.

The affairs of the university are under the superintendence of the town council, by whom the principal and professors are chiefly appointed, and of a *senatus academicus*, assisted by a secretary, librarian, curator of the museum, and other officers. Of the numerous *PROFESSORSHIPS* founded at various periods, that of humanity, established in 1597, is in the patronage of the Lords of Session, the Town Council, the Faculty of Advocates, and the Society of Writers to the Signet. The Town Council alone present to the professorships of Greek, founded in 1708; logic and metaphysics, in the same year; mathematics, in 1674; moral philosophy and political economy, in 1708; natural philosophy, in 1708; divinity, in 1620; oriental languages, in 1642; theory of physic, in 1685; dietetics, *materia medica*, and pharmacy, in 1768; chemistry and chemical pharmacy, in 1713; surgery, in 1831; practice of physic, in 1685; anatomy and physiology, in 1705; general pathology, in 1831; midwifery and diseases of women and children, in 1726; and clinical medicine, in 1741. The professorships of practical astronomy, founded in 1786; rhetoric and belles-lettres, in 1762; divinity and ecclesiastical history, in 1695; public law, in 1707; medical jurisprudence and police, in 1807; clinical surgery, in 1803; military surgery, in 1806; and natural history, in 1767, are all in the gift of the Crown. The professorship of universal history, founded in 1719, is in the patronage of the Faculty of Advocates and the Town Council; that of agriculture, established in 1790, in the patronage of the Lords of Session, the Barons of the Exchequer, the Town Council, and the *Senatus Academicus*. Music, founded in 1839, is presented to by the Principal and Professors. Those of civil law, founded in 1710, and of the law of Scotland, in 1719, are in the gift of the Faculty of Advocates and the Town Council. That of conveyancing, in 1825, is in the patronage of the Town Council, and Deputy Keeper and Society of Writers to the Signet; and that of botany, in 1676, is in the patronage of the Crown and the Town Council. Attached to the university are eighty bursaries, varying in value from £5 to £100 per annum, of which last sum there are three; six are of £30; ten of £20; and their aggregate value is £1172 per annum. The winter session commences on the first Tuesday in November, and closes at the end of April; the summer session begins on the first Monday of May, and terminates at the end

of July. The number who graduated in medicine in the year 1806 was 37; in 1816, 76; in 1826, 118; in 1836, 123; in 1844, 66; and in 1849, 51. The number who graduated in arts, in 1849, was 12.

BUILDINGS OF THE UNIVERSITY.

The rebuilding of the university, already referred to, was greatly retarded by want of adequate funds. Though commenced in 1789, little more than the east front and part of the north-west range was raised till the year 1815, when government granted an annual sum of £10,000; a committee was now appointed for its completion, and the structure was proceeded with, after Mr. Adam's plan above mentioned, with numerous variations, principally in the internal arrangements, by Mr. Playfair. The buildings are in a mixed style of architecture, and of a quadrangular form, measuring 358 feet by 255, with a spacious court in the centre. The east front, the line of which is broken by slight projections in the centre and at each extremity, is embellished with a stately portico of two duplicated Doric columns, formed each of one entire block, rising to the height of twenty-six feet, and supporting an entablature and balustrade, above which is a large tablet with an appropriate inscription. The buildings around the area of the quadrangle are variously ornamented with close rustic arcades, and attached columns and pilasters: flights of steps lead to the hall of the *senatus academicus*, the library, the museum, and the several class-rooms, which are all of spacious dimensions, and many of them elegantly decorated.

The Library is 187 feet in length, and fifty feet in width; the roof, richly embellished in stucco, is sustained by noble ranges of pillars, behind which are the recesses for the reception of the books. The collection, now containing more than 100,000 volumes, originated in a bequest by Mr. Clement Little, advocate, who in 1580 left his library, for the use of the citizens, to the care of the town council, by whom it was deposited in the university. It has been gradually augmented by purchases, and donations; by the presentation, under the copyright act, of a free copy of every work printed in Great Britain; and by the payment of £5 towards its increase by each of the professors on his appointment, and a sovereign by each of the students on his matriculation. The privilege of receiving free copies of works is now commuted for an annual grant. In the library are also some valuable paintings bequeathed to the university by Sir James Erskine, of Torry, Bart., various portraits of continental and other reformers, and an interesting collection of ancient sculptures and other antiquities. *The Museum* occupies a lower and an upper room, each ninety feet long and thirty feet wide. The lower room contains principally specimens of the larger quadrupeds and other animals. The upper room, which is elegantly fitted up, and lighted from the roof, comprises a beautiful collection of more than 3000 British and foreign birds, carefully arranged, including a large number of stuffed birds lately purchased by the university from Mr. Dufresne, of Paris. On the tables are numerous glass-cases containing shells, insects, and other natural curiosities of a small size; and in the galleries and less extensive apartments communicating with the principal room, are various specimens of mi-

nerals, scientifically arranged by Professor Jameson, who, on his appointment to the chair of natural history, presented to the university his own private collection, to which an addition was made by the late Dr. Thompson, of Naples. *The Anatomical Museum* contains a very large collection of valuable specimens and anatomical preparations, the greater number presented by the grandfather and father of the present Dr. Monro. *The Agricultural Museum* has been formed by the present professor of agriculture, Mr. Low, aided by a grant from government; and consists of models of implements of husbandry, specimens of grain and grasses, and drawings of the most approved breeds of cattle and horses.

NEW COLLEGE.

This institution, which is in connexion with the Free Church of Scotland, was formed in 1843, in the same year and at the meeting of the same Assembly that originated that ecclesiastical body. Though chiefly intended for the training of students who hold the principles of the Free Church, it is not exclusively confined to that class, but is open to all who choose to avail themselves of its privileges: nor is it a mere theological seminary, but comprises distinct classes for instruction in the higher branches of Greek and Roman literature, in logic, moral philosophy, and natural science. In theology the curriculum extends over four years, and is conducted by four professors, who each superintend two classes of students at different stages of progress, and deliver a corresponding course of lectures, which embraces two sessions. It is expected that, previous to entering on the study of theology, the students shall complete their literary and philosophical studies, and also acquire a competent knowledge of the elements of Hebrew; after which they pass through a course of natural theology and the evidences of Christianity, systematic theology or the subject-matter of Christianity, pastoral theology, Church history, and exegetical theology. These classes are intended to be so arranged, that, at whatever years' standing a student may enter, he may have his own proper class, and pass from one to another in consecutive order. The funds necessary for the maintenance of the institution are derived from contributions made once a year by the congregations of the Free Church, and from the fees paid by the students in the college, which do not exceed two guineas for each class. One or two sums have also been bequeathed as endowments. The attendance of students at all the classes has been somewhat various, though generally on the increase, and on an average about 300.

The college was opened on the 31st of October, 1843, by the late distinguished Dr. Chalmers, and the several classes have since been taught in a house near the middle of George-street, which was previously a private dwelling. A new building, however, has been erected, of which the foundation stone was laid by Dr. Chalmers on the 3rd of June, 1846, and which is expected to be ready by November 1850. This structure, which is situated at the head of the Earthen Mound, on a space between the Old and New Town, is in the collegiate style, and built according to plans furnished by the eminent architect, Mr. Playfair. As originally designed by that gentleman, the buildings were to embrace three

quadrangles upon different levels, rising one above another from the level of the Mound to that of the Castle hill; but as it has been resolved not to extend the institution beyond a theological faculty, with what are considered its cognate branches, the present erection is confined to the first or lowest quadrangle, which contains seven class-rooms, a library, a museum, and janitor's house, together with a church upon the east side of it. The expense of the buildings has been contributed by twenty individuals, nineteen of whom subscribed £1000 each, and one subscribed £2000. The library consists of about 15,000 volumes, of which about 10,000 have been donations; the names of the Right Hon. Fox Maule, the late Major-General Mac Douall, of Stranraer, and Frederick Sargent, Esq., of London, being recorded among the most munificent contributors in this department. The museum of natural science has also received very rare and valuable contributions.

HIGH SCHOOL, AND ACADEMY.

The High School of Edinburgh was founded as a public grammar school, by the town council, in 1518; and in 1578, being found inadequate to the wants of the city, it was refounded on a more extended scale. From the progressive increase of the number of pupils, the ancient house in which it was primarily established was taken down in 1777, and a more extensive building erected on its site, where it continued to flourish till 1829, when, a more eligible situation having been selected in 1825, the school was removed to the present spacious and elegant structure erected for its use on the Calton hill. It is under the superintendence of a rector and four classical masters, and teachers of the French language, writing, arithmetic, and the mathematics, all of whom are appointed by the magistrates and town council. The fees in the rector's class are £1. 5. per quarter, and in each of the four masters' classes £1; for the French and mathematical classes, 10s. 6d. each; and in the writing and arithmetical classes, 7s. 6d. each. The average number of pupils is about 500, to the most successful of whom prizes are awarded at the public examinations, which take place annually, in August, before the magistrates and council, the clergy of the city, and the professors of the university.

The building was erected after a design by Mr. Hamilton, at a cost of £30,000, of which about £3000 were raised by subscription, £6000 were obtained as the price of the old school, and the remaining sum of £21,000 was contributed by the town council, being just so much added to the city debt. It is a stately structure of freestone, in the Grecian style of architecture, 270 feet in length, and embellished in the centre of the principal front with a small portico of six Doric columns, supporting an entablature and cornice with a triangular pediment, and forming the chief entrance, to which is an ascent by a flight of steps. On each side of the portico is an open corridor of twelve Doric columns, with entablature and cornice of corresponding character, connecting the centre with the wings. The interior comprises a noble entrance-hall, seventy-five feet in length and forty-three feet wide, with the various class-rooms for the rector and the four classical masters, of which the rector's is thirty-eight feet square, and each of the other four thirty-eight feet long and twenty feet wide.

To each of the class-rooms are attached two smaller apartments, and every arrangement for affording ample facility to the purposes of the institution has been studiously provided. At the entrance into the courtyard are two lodges, two stories in height, in one of which are the class-rooms for the writing and mathematical masters, forty-eight and thirty-six feet in length respectively, and both eighteen feet wide; the other lodge is appropriated as a house for the janitor. Attached to the school are about two acres of playground.

The *Edinburgh Academy*, established in 1824, on a plan similar to that of the High School, and situated in Henderson-row, to the north of the New Town, is under the superintendence of a board of fifteen directors, of whom three are annually elected from the body of subscribers. It is conducted by a rector and four classical masters, with other teachers; differing in no material particular from the High School, except in the amount of fees. The building, erected by shareholders at a cost of £14,000, is a spacious and elegant structure in the Grecian style, after a design by Mr. Burn, containing the requisite class-rooms, halls, and other arrangements.

Of the other establishments for education, may be mentioned the *Scottish Naval and Military Academy*, instituted in 1825, and which affords education to pupils destined to serve in the army or navy, or East India Company's service. There are also the *Circus-place School*; the *Edinburgh Institution*, established in 1832; the *Southern Academy*, George-square, founded in 1829; &c.

PARISHES, AND ECCLESIASTICAL ARRANGEMENTS.

The see of Edinburgh, originally founded by Charles I. in 1633, and to which the ancient collegiate church of St. Giles was appropriated as the cathedral, continued till the Revolution, when the city contained six parishes. Edinburgh is now the seat of the General Assembly of the Church of Scotland, and of the presbytery of Edinburgh, and comprises seventeen civil parishes, besides which there recently existed for a time twelve quoad sacra or ecclesiastical parishes. The civil parishes, with the exception only of Canongate and St. Cuthbert's, which are under the patronage of the Crown, are all in the gift of the Town Council, by whom a stipend of £548 is paid to each of the ministers thus appointed by them; the ecclesiastical parishes were in the patronage of various bodies, and the stipends, differing in amount, were derived from seat-rents and other sources.

The parish of the **HIGH CHURCH** is wholly within the city, and contains a population of 2776, under the pastoral care of two ministers. The church is a portion of the cathedral of St. Giles, the interior of which was partitioned, at different times, for four separate congregations, and is now divided into three churches, one of them appropriated to the High Church parish, one to the New North Church parish, and the third to the Old Church parish. There are 1399 sittings for this parish, including arrangements for the lord provost, magistrates, and council of the city, the judges of the High Court of Session, and the members of the Kirk Session. The interior of this once splendid edifice was richly embellished, and contained forty altars to different saints,

numerous relics, sumptuous vestments, and valuable vessels of gold and silver, all of which were removed or destroyed at the Reformation. The church was externally rebuilt or renovated in the year 1830, after a design by Mr. Burn, architect; and with the exception of the beautiful lantern or spire, and the interior of the choir, little or nothing now remains of the ancient church. It is a stately structure in the pointed style of architecture, with a lofty central tower surmounted by a small spire connected with the battlements by flying buttresses, uniting in the form of an imperial crown, and rising to the height of 161 feet from the base. The south aisle was fitted up for the meetings of the General Assembly, but, being found inconvenient for that purpose, the meetings have been discontinued; and it is now occupied as the church of the Old Church parish. There were several ancient monuments, among which were those of the Regent Murray and the Marquess of Montrose, and one erroneously supposed to be that of Napier of Merchiston; but they were destroyed on the rebuilding of the church. John Knox, the intrepid reformer, was buried in the cemetery of St. Giles, which formerly occupied the ground where the buildings of the Parliament-square now stand. The parish contains a preaching station, at which a missionary, who has a salary of £50, raised by subscription, officiates every Sunday; an episcopal chapel, dedicated to St. Paul; a Free church; and a place of worship in Carrubbers Close, for a congregation assuming no particular denomination.

The parish of the **OLD CHURCH** is of very limited extent, and contains a population of 2939. Its church, a portion of the collegiate church of St. Giles, was taken down in 1830, and rebuilt as a hall for the meetings of the General Assembly. The congregation assembled for public worship in the rooms belonging to the High School on Calton hill till 1835, when they removed to a temporary building containing about 600 sittings: the south aisle of St. Giles' is now again appropriated for them, having ceased to be used for the General Assembly's meetings. There is also a preaching station, in which service is performed twice every Sunday, at the expense of the minister of the parish.

The **TOLBOOTH** parish, so called from the proximity of its former church to the ancient Tolbooth, is wholly within the city, and contains a population of 2216. The congregation now assemble in the Victoria Hall, near the Castle hill, recently erected for the meetings of the General Assembly, but which was intended also to serve as one of the city churches, and has been assigned to this parish. It was erected at a cost of upwards of £16,000, jointly defrayed by the government and the town council, and is a large and very elegant building in the pointed style, with a tower and spire of great richness, rising 240 feet in height, and forming one of the most conspicuous objects in Edinburgh. Besides the spacious hall or church, it contains apartments for the officers, committees, and the records of the Assembly. There are places of worship in the parish for Wesleyans and members of the Free Church.

The parish of **TRINITY COLLEGE** is entirely a town parish, containing a population of 2615. The church, originally founded by Mary of Gueldres, queen of James II., for a provost, eight prebendaries, two choristers, and a sacristan, was a handsome structure in the later English style, of which only the choir and transepts

were completed; it underwent considerable alterations in 1820, and contained 797 sittings. In a portion of the building the remains of the queen were interred. This church was removed a few years ago, to make way for the North-British railroad; and during the removal, the remains of Mary of Gueldres were found: they were carried to the crown-office, and, after lying there some time, were formally conveyed in July 1848 to the chapel royal at Holyrood, as their final resting-place. A chapel in connexion with the Established Church, to which a district containing 816 persons was for a short time annexed, was founded in 1785 by *Lady Glenorchy*, who endowed it for two ministers, the first having a stipend of £400, and the second one of £200, paid by the Trustees, the patrons. This chapel, which was taken down by the North-British Railway Company in the early part of the year 1845, was a neat plain structure, containing 1514 sittings, of which 104 were free; and attached to it was a school for 120 poor children, under the direction of the trustees. There is a place of worship for Independents.

The parish of the **NEW NORTH CHURCH**, wholly within the ancient royalty, has a population of 2815. The western portion of the cathedral of St. Giles is appropriated as the church of this parish, containing 1397 sittings. There is also a preaching station in the Lawnmarket, in which divine service is performed every Sunday by a licentiate of the Establishment; and a place of worship has been erected in connexion with the Free Church.

The parish of the **TRON CHURCH** is wholly within the city, and contains a population of 2498, under the care of two ministers. The church, properly Christ church, though, from its proximity to the public weigh-house, called the Tron Church, is a spacious and handsome structure in a mixed style, commenced in 1637, and completed in 1673. It had formerly a spire of wood, which was destroyed by an accidental fire in 1824, and replaced by a lofty square tower crowned with an open balustrade ornamented by pinnacles at the angles, and surmounted with a low turret of smaller dimensions having a pyramidal roof, the whole erected by the town council in 1828. The interior of the church, which contains 832 sittings, is well arranged, and embellished with a high roof of richly-carved oak. There is also a hall in which divine service is performed two or three times during the week by a licentiate of the Establishment; and the parish contains places of worship for members of the Free Church, the United Presbyterian Synod, Scottish Baptists, and the Synod of United Original Seceders.

The parish of the **OLD GREY FRIARS**, formed in 1722, is wholly within the city, and contains a population of 2643. The church, erected by the town council in 1612, on ground which formerly belonged to the ancient monastery of the Grey Friars, and was given by Queen Mary to the magistrates for a cemetery, was, previously to the fire in 1845, a handsome structure in the later English style, containing 1061 sittings. The tower, which had been appropriated as the city magazine, was destroyed in 1718, by an explosion that also greatly damaged the church; and instead of rebuilding the tower, the magistrates erected on its site the church of the New Grey Friars' parish, separated from the former only by a partition wall. In the churchyard are interred

many persons of distinction, including George Buchanan, Sir George Mackenzie of Rosehaugh, Colin Maclaurin, Allan Ramsay, Principal Robertson the historian, who was for many years pastor of the Old Grey Friars; Dr. Black, the distinguished chemist; Dr. Hugh Blair; and Dr. M'Crie, the biographer of Knox. There is a "preaching station" at the Magdalen chapel in the Cowgate, where divine service is performed twice every Sunday by the assistant minister. The parish also comprises places of worship for members of the Free Church, Scottish Baptists, Bereans, and Independents.

The parish of the **NEW GREY FRIARS** has a population of 3207. The church, erected in 1721, adjoining that of the Old Grey Friars, and repaired and re-seated in 1818, at an expense of £1518, by the town council, was a neat structure containing 1302 sittings. It was, however, together with the church of the Old Grey Friars, accidentally destroyed by fire on Sunday morning, January 19th, 1845. The flames were first discovered at about half-past nine o'clock: by half-past ten the Old Grey Friars' church had almost wholly fallen a prey to the devouring element, and shortly afterwards the flames seized upon the roof of the New Grey Friars, which edifice, notwithstanding the greatest exertions of the firemen, shared the fate of the other church. This fire was one of the most appalling that have happened in Edinburgh since the year 1824: the walls were almost the only parts of the churches left standing; the scene presented after the fire was one of the utmost desolation, and had the building not been detached, the result would have been still more lamentable. Service is performed at the Old Gaelic chapel, twice every Sunday, by a missionary appointed by the Kirk Session; and there is a place of worship for a congregation of the United Christian churches.

The parish of **ST. ANDREW**, separated from that of St. Cuthbert, by act of parliament, in 1785, contains a population of 4974, under the pastoral superintendence of two ministers. The church, situated on the north side of George-street, was erected in 1785, at a cost of £7000, by the town council. It is a handsome structure in the Grecian style, with a stately portico of four Corinthian columns, and a lofty and graceful spire rising to the height of 168 feet from the base; the interior is well arranged, and contains 1053 sittings. The episcopal chapel dedicated to *St. George* was erected in 1794, at an expense of £3000, after a design by Mr. Robert Adam, and contains 642 sittings, of which fifty are free. There are places of worship for members of the Free Church, the United Presbyterian Synod, Baptists, Independent Baptists, Wesleyans, and the followers of Mr. Mc Lean, who assume no distinctive denomination; and a Roman Catholic chapel.

The parish of **ST. GEORGE** was separated from that of St. Andrew by the town council and presbytery, under an act of parliament in 1814. It is partly a rural parish, and is about a mile and a half in length, and half a mile in breadth, containing a population of 8075. The church, which is situated on the west side of Charlotte-square, was erected by the town council in 1814, at an expense of £33,000, and is a spacious structure in the Roman style, with a central portico, and a square tower crowned with a lofty dome surmounted by a cupola and cross at an elevation of 160 feet from the base. The interior is chastely decorated, and contains 1687 sittings.

There are places of worship for Baptists and members of the Free Church.

The parish of *LADY YESTER'S* church is wholly a town parish, comprising about one-fourth of a square mile, and containing a population of 2223. The church was originally built in 1647, and rebuilt in 1805 by the town council, to whom Margaret Kerr, Lady Yester, gave 10,000 merks for its erection, and 5000 merks towards its endowment. It is a neat structure with circular gables and projecting turrets resting on corbels, and terminating in slender spires. The building is situated nearly in the centre of the parish, and contains 1212 sittings, including 160 appropriated to the members of the university, which is within the parish. There is a place of worship for Original Seceders.

The parish of *ST. MARY* was separated from that of *St. Andrew* by authority of the town council and the presbytery of Edinburgh in 1824. It is wholly a town parish, containing a population of 6724. The church, situated in the centre of Bellevue-crescent, on the eastern boundary of the parish, was erected by the council in 1824, at an expense of £13,000; it has a portico of Corinthian columns, and a square tower surmounted by a circular cupola crowned with a dome, and contains 1646 sittings. The episcopal chapel dedicated to *St. Paul*, at the eastern extremity of York-place, was erected in 1818, at a cost of £13,533, raised by subscription. It is a handsome structure after a design by Mr. Archibald Elliott, in the later English style of architecture, 123 feet in length, and seventy-three feet in breadth, with lofty embattled turrets at each extremity. The walls of the aisles are strengthened with enriched buttresses between the windows, terminating in crocketed pinnacles, and a similar range is continued in the clerestory of the nave; the east window is of spacious dimensions, and embellished with stained glass and with delicate tracery, and above the west entrance is a large window of the same character. Two ministers are attached to the chapel, each of whom has a stipend of £300. There are places of worship for members of the Free Church, Independents, and Glassites.

The parish of *ST. STEPHEN* was separated from the several adjoining parishes by the presbytery and the town council, under an act of parliament in 1828; it is wholly a town parish, and comprises a population of 6849. The church was erected in 1828, after a design by Mr. Playfair, at an expense of £25,000; it is an elegant structure, with a lofty square embattled tower. There is a place of worship for members of the Free Church.

The parish of the *CANONGATE* is about a mile and a half in length, and nearly four-fifths of a mile in breadth, comprising a considerable rural district, and containing a population of 9944, under the pastoral superintendence of two ministers, of whom each has a stipend of £240. The minister of the first charge is appointed by the Crown, and has a manse; the minister of the second charge is chosen by the Heritors and Kirk Session, and has an allowance of £40 in lieu of a manse. Canongate church was erected in 1688, by the town council, at a cost of £2400, defrayed partly from a bequest by Mr. Thomas Moodie, which had been suffered to accumulate; and was thoroughly repaired and new seated in 1819, at an expense of £2000. It is a plain cruciform structure of irregular style, with a portico of four columns having

an entablature and cornice surmounted by a triangular pediment; the interior is well arranged, and contains 1295 sittings. Before the erection of this building, part of the Abbey of Holyrood was used as the parish church. In the churchyard are the tombs of Provost Drummond and the poet Ferguson: Adam Smith and Dugald Stewart are also interred here. There is a place of worship for a congregation of members of the Free Church.

The parish of *ST. CUTHBERT*, which was recently subdivided into several ecclesiastical districts, afterwards abolished in common with others in Scotland, is of great extent, and originally included the whole of the city, and the burgh of Canongate. It is about five miles in length and three miles and a half in breadth, comprising an extensive rural district, and containing a population of 71,908. *St. Cuthbert's* is under the pastoral superintendence of two ministers appointed by the Crown, who have each a stipend of £402. 14. : one has also a manse, and the other an allowance of £60 in lieu; and the glebe lands, which are equally divided between them, produce to each an income of £245. The church, situated at the west end of Princes-street, was built in 1760 at a cost of £4321, and is a spacious structure, with a lofty square embattled tower surmounted by a spire; it is neatly fitted up, and contains 2400 sittings. In the interior of the porch, under the steeple, are erected monuments to Napier of Merchiston, who was interred in the old church of *St. Cuthbert*, and Sir Henry Moncreiff, one of the ministers of the parish; while on the exterior is a monument to Sir Henry's colleague, Dr. Dickson, by Mr. Ritchie. There is a handsome church at Morningside; and other churches have been erected in the parish of *St. Cuthbert*, as noticed in a succeeding column. The episcopal chapel dedicated to *St. James* is situated at the west end of Broughton-place, in connexion with the houses of that street, and scarcely to be distinguished from them. It was built in 1820, at an expense of £4000, raised by subscription; is a handsome edifice, and contains 850 sittings, of which 100 are free. The minister derives a stipend of £500, chiefly from the seat-rents. The episcopal chapel dedicated to *St. John*, situated at the west end of Princes-street, on the north side of *St. Cuthbert's* churchyard, was erected in 1817, at a cost of £16,000, also raised by subscription and donations. It is in the later English style of architecture, with a square embattled tower crowned by minarets that terminate in crocketed finials, and having in the faces double belfry windows, enriched with canopies. The walls of the aisles are strengthened by panelled buttresses, surmounted with a pierced parapet, and a similar arrangement is continued in the clerestory of the nave; the west entrance is under a deeply recessed archway, above which is a spacious window of elegant design. The nave is separated from the aisles by fine clustered columns, which support the roof; and is lighted by a noble range of clerestory windows, and at the east end by a window of six lights, thirty feet high, divided by transoms into three compartments, the upper of which is embellished with a rich Catherine wheel, and the others with stained glass. The roof of the nave and aisles is delicately groined, and the whole of the interior of the edifice is beautifully arranged. There is however no chancel. The minister has a stipend of £550, arising from seat-rents, out of which he pays a curate; and the chapel contains 821 sittings. In the

parish are also places of worship for members of the Free Church, the United Presbyterian Synod, Reformed Presbyterians, Original Seceders, the Society of Friends, Baptists, Wesleyans, Independents, Jews, and Unitarians; an Episcopal chapel dedicated to St. Peter, containing 420 sittings; two Roman Catholic chapels, and a convent established at Whitehouse in 1836, and dedicated to St. Margaret.

The parish of GREENSIDE was recently divided from St. Andrew's, and erected into an independent parish; it is in the northern part of the city, in the direction of Leith Walk, and contains 3636 persons. The parish of ST. JOHN is also of very recent formation, and consists of part of the old parishes of the New Grey Friars, Old Grey Friars, and New North Church; it has a population of 2140, and is in the immediate vicinity of the castle. Besides the churches of these two parishes, there is a place of worship called St. John's for members of the Free Church.

FORMER QUOAD SACRA PARISHES.

The parish of *New Street*, which in 1841 contained a population of 1932, was separated from the parish of the Canongate, under act of the General Assembly in 1834; it was of small extent, and wholly within the burgh. The church was originally erected as a chapel of ease, at a cost, including the site, of £2900; it is a neat structure, and has 1150 sittings. *Leith Wynd* parish, containing a population of 1868, was separated also from Canon-gate, under act of the Assembly in 1834: the church, originally built as a chapel of ease, in 1792, is ill adapted to the use of a congregation; it contains 1094 sittings. *Buccleuch*, separated from the parish of St. Cuthbert, was one mile and a half in length and about half a mile in breadth, and contained 3168 persons: the church, built in 1755 and repaired in 1809, is a neat structure, with accommodation for 1374 persons. *St. Bernard's* was about a mile and a half in length and three-quarters of a mile in breadth, and had a population of 4768: the church, erected in 1822, at a cost of £4200, contains 1309 sittings. The parish of *Roxburgh* was wholly a town parish, and comprised an area of about one-fourth of a square mile, having a population of 3683: the church was built in 1809, at an expense of £2960, as a place of worship for a Relief congregation, and was purchased in 1832 as a chapel of ease; it contains accommodation for 830 persons. *Newington* parish, separated, like the three preceding, from the parish of St. Cuthbert, was about three-quarters of a mile in length and one-quarter of a mile in breadth, and contained 3310 persons: the church, erected by the Kirk Session of St. Cuthbert's in 1823, at an expense of £6372, contains 1623 sittings. The *Gaelic* church in the parish of the Old Grey Friars was appropriated, under act of the General Assembly in 1834, to the whole of the Highland population of Edinburgh, Leith, and suburbs, over whom the minister was invested with the pastoral superintendence. The edifice, originally built in 1809, by subscription, was purchased from the subscribers by the Society for the Propagation of Christian Knowledge, in 1815, at a cost of £3000; it is a neat structure, and contains 1166 sittings. The parishes of *St. David*, *Dean*, *Morningside*, and *St. Paul* were separated from the parish of St. Cuthbert, and contained respectively 2913, 2262 (namely, 2154 in St. Cuthbert's,

and 108 in Corstorphine parish), 1795, and 2874 inhabitants. *St. David's* church, in Gardner's-crescent, was purchased by the Kirk Session of St. Cuthbert's as a chapel of ease, in 1831, the cost, with the ground attached, being £2500: it contains 1302 sittings. The churches of *Dean* and *Morningside* are noticed under their own heads. The parish of *St. Luke* was separated from that of *St. George*, and had a population of 2546: its church is situated in Young-street, and will accommodate a congregation of 1000 persons.

HOSPITALS.

Heriot's Hospital was founded in 1624 by George Heriot, a native of Edinburgh, who, being appointed goldsmith and jeweller to James VI., accompanied that monarch to London on his accession to the throne of England. He died in 1624, and bequeathed the residue of his property, which realized £23,625, to the city ministers, magistrates, and town council, in trust for the erection and endowment of an hospital for the maintenance and education of as many poor boys, sons of freemen, as the funds would allow. The first stone of the building was laid in 1628, but from the frequent interruption arising from intestine commotions, the edifice was not finished till 1650, when it was seized by Cromwell after the sanguinary battle of Dunbar: it was, however, restored by General Monk, on his being provided with other accommodation for his soldiers, he having kept possession of it for eight years; and in 1659 was opened for the reception of thirty boys. Since that period, the annual revenue of the hospital has increased from £1966 to £15,412; and there are at present 180 boys in the establishment, who are maintained, and instructed in the English, French, Latin, and Greek languages, writing, arithmetic, mathematics, book-keeping, geography, practical mechanics, drawing, and the elements of music. Boys are eligible at seven years of age, and under ten years of age. The scholars are kept in the hospital till they are fourteen; and on leaving the institution, such as are placed out as apprentices to trades are liberally supplied with clothes and books, and receive £10 annually for five years during their apprenticeship, and a present of £5 on the completion of the indentures. Those who discover any talents or desire for the learned professions are sent to the university, with an allowance of £30 per annum, for four years; and there are also ten bursaries of £20 per annum for four years, founded in the university by the trustees of the hospital, and open to the competition of young men not connected with the institution.

The buildings, which are pleasantly situated on an eminence south-eastward of the castle, form a handsome quadrangular range 162 feet in length, with embattled turrets at the angles. The design is attributed to Inigo Jones, and is in that mixed style which dates its origin from the reign of Elizabeth, and examples of which are afforded by Drumlanrig Castle in Dumfriesshire, Northumberland House, London, and many other edifices throughout the kingdom. In the centre of the principal front is a square projecting tower, embattled, and surmounted by an octagonal turret and dome, above which is a cupola of similar design, with a vane; over the entrance are the armorial bearings of the founder, and in a niche above the gateway within the quadrangle is

placed his statue, in the costume of the day. On the south side of the quadrangle, which is ninety-four feet square, with a piazza on the north and east sides, is the chapel, projecting beyond the line of the buildings within the area and also in a noble oriel window in the rear: the chapel is sixty-one feet in length, and twenty-two feet wide; its floor is laid with black and white marble, and the whole of its interior has been recently fitted up with great elegance. On the west side of the quadrangle is the large hall, or dining-room; and adjoining it is the council chamber, a handsome and spacious room, in which are portraits of the founder and several of the trustees. The remainder of the building, which is three stories in height, and four stories at the angles, contains apartments for the governor, class-rooms, dormitories, and other requisite offices; and the park and grounds attached are extensive, well planted with shrubberies, and inclosed by a low wall.

Connected with the hospital, and maintained from the same funds, are the Heriot Foundation schools, established under the act 6th and 7th William IV., cap. 25. By this act the governors of the hospital were empowered to found and erect, from the surplus revenues, elementary schools within the city for educating, free of expense, 1st, the children, in poor circumstances, of deceased burgesses and freemen; 2nd, the children of burgesses and freemen who are unable to provide for their support; and 3rd, the children of poor citizens and inhabitants of Edinburgh, whilst residing within the royalty. They were also empowered "to allow to any of the boys, in the course of their education at such schools, being sons of burgesses and freemen, such uniform fixed sum of money in lieu and place of maintenance, and such uniform fixed sum for apprentice fee after their education at the said schools is completed, as shall be determined." There are already ten Heriot schools, namely, seven juvenile and three infants' schools, attended by about 3000 boys and girls. In the seven juvenile schools are Sabbath-evening classes.

George Watson's Hospital, situated to the west of Teviot-row, and south of Heriot's hospital, was founded in 1723, by Mr. George Watson, for the maintenance and education of sons and grandsons of decayed merchants of Edinburgh, for which purpose he bequeathed £12,000. This sum, being suffered to accumulate, amounted to £20,000 in 1738, when an appropriate building was erected by the trustees, at a cost of £5000, on a site of land comprising seven acres, purchased from Heriot's trustees; and in the year 1741 twelve boys were admitted. The number increased in three years to thirty; and there are at present about eighty boys on the foundation, who are maintained and clothed, and instructed in the English, Latin, Greek, and French languages, writing, arithmetic, book-keeping, the mathematics, drawing, dancing, and music. Boys are eligible for admission at from seven to ten years of age. On leaving the school, each scholar receives a present of £7 for clothing, and £10 annually for five years as an apprentice fee, and if, after having faithfully fulfilled his indentures, he remains for three years unmarried, a further sum of £50 towards establishing himself in business. Such as display a taste and sufficient degree of talent for literary pursuits are allowed £20 per annum, for four years, for their support at the university, and, after leaving it, £17 per annum for two years. The

hospital is under the superintendence of a body of governors, consisting of the master, assistants, and treasurer of the Merchants' Company, the bailies, and dean of guild, of the corporation, and the two ministers of the Old Church parish. The buildings form a neat and substantial pile, comprising a centre and two projecting wings. The central range, which rises above the roof of the main edifice, is embellished with a low tower crowned by a dome, from which springs a turret with a conical roof surmounted by a vane, representing a ship in full sail, as the emblem of commerce. Over the entrance is a tablet having the armorial bearings of the founder, and in front of the building is an extensive piece of ground inclosed as a place of exercise for the pupils. The interior, which is well arranged, comprises spacious class-rooms, and the various offices for the purposes of the institution.

John Watson's Hospital was founded by Mr. John Watson, writer to the signet, who in 1759 bequeathed the residue of his estate to Lord Milton, Mr. John Mackenzie, and others, in trust for such pious and charitable use within the city of Edinburgh as they should think fit. From those trustees the patronage devolved upon the keeper and deputy-keeper of the signet, who in 1822 obtained an act of parliament for the erection and endowment of an hospital for the maintenance and education of destitute children, and for bringing them up, and assisting their establishment in trade. The proceeds of the bequest, which in 1781 amounted to £4721. 9. 6., have since that time greatly accumulated, and at present exceed £132,000. There are 126 children in the institution, who are admitted at from five to eight, and stay till they are fourteen, years of age. They are maintained and clothed, and instructed in reading, writing, and arithmetic, the girls also in needle-work and housewifery; and on leaving the school the boys are placed out to trades, and the girls as servants in respectable families. The building, which is situated on the Dean land, was commenced in 1825, and completed in 1828; it is a spacious and handsome structure in the Grecian style of architecture, with a stately portico in the centre of the principal front, and contains every requisite arrangement for its purpose.

The Merchants' Maiden Hospital, near Heriot's hospital, was founded in 1695, by the Merchants' Company, in conjunction with Mrs. Mary Erskine, for the maintenance and education of daughters or grand-daughters of merchant-burgesses or ministers of Edinburgh, who are eligible for admission from the age of seven to eleven, and are maintained till they are seventeen years of age. There are at present ninety-six girls in the hospital, who are instructed in the English and French languages, writing, arithmetic, geography, history, drawing, dancing, music, and needle-work; and on leaving the institution, each receives a present of £9. 6. 8. The hospital is under the superintendence of a body of governors consisting of five members of the town council, the master and three assistants of the Merchants' Company, the Earl of Mar, and three of the ministers of the city. The buildings, originally in Bristo-street, having become inadequate for the purpose, the present edifice was erected in 1818, at an expense of £12,250; it is a handsome structure in the Grecian style after a design by Mr. Burn, 180 feet in length and sixty feet in depth, with a portico of four columns in the principal front.

The Trades' Maiden Hospital was founded in 1704, by the freemen of the incorporated trades, in conjunction with Mrs. Mary Erskine, and is under the superintendence of a body of governors consisting of the deacons of the trades, two trades' councillors, and others, incorporated by act of parliament in 1707. There are about fifty girls, the daughters or grand-daughters of freemen of the trades, who are maintained, and instructed in the English and French languages, writing, arithmetic, geography, history, music, sewing, and laundry-work. They are eligible for admission at from seven to eleven years of age, and remain in the hospital till they are seventeen: on leaving, each girl receives a present of £5. 11. and a Bible. The building, which is a plain neat structure, is well adapted to the purpose, and contains all the requisite accommodations.

The Orphan Hospital was first projected by Mr. Andrew Gardiner, merchant, in 1727; and in 1733 a house was hired for the purpose, into which thirty destitute children were received. A building was erected in 1735, near the Trinity College church, by the directors, who were incorporated by act of George II. in 1742; and in 1812 considerable additions were made to the hospital: but the situation being originally low, and the contiguous buildings still further obstructing free ventilation, a new site was fixed upon in the Dean grounds, north of the Water of Leith, and a very handsome and commodious edifice was erected there in 1832 at an expense of about £16,000. A large number of orphan children of both sexes are maintained, and instructed in reading, writing, arithmetic, and geography. The children are eligible for admission from seven to ten years of age, and the hospital is open without distinction to all parts of Scotland.

Gillespie's Hospital was founded by Mr. James Gillespie, a wealthy tobacco and snuff merchant, who in 1797 bequeathed to the master, treasurer, and assistants of the Merchants' Company, to five members of the town council, and the two ministers of the Tolbooth church, in trust, the whole of his landed property and £12,000 in money, for the erection and endowment of an hospital for forty-two aged men and women in indigent circumstances, and of good reputation, and for the establishment and support of a school for the maintenance and education of 100 boys. The trustees were incorporated as governors in 1801, and in 1802 they purchased an ancient building called Wrights Houses, near Bruntfield Links, with the land adjoining it, on the site of which they erected the present structure. The aged persons are eligible when fifty-five years old, and, in addition to their maintenance and lodging, have an annual allowance in money for clothing; the boys are received at from six to twelve years of age, and are instructed in the English language, writing, and arithmetic. The hospital is a handsome castellated structure of stone, consisting of a centre and two projecting wings. In the centre of the front is a massive square embattled tower, with circular turrets at the angles, resting on corbels; and the wings, which are of less elevation than the centre, are embattled, and embellished with angular turrets of similar design. The buildings contain the various accommodations for the inmates, house-keepers, and servants, and a chapel in which divine service is performed twice daily by the chaplain, who also preaches a sermon on Sunday. Attached to the hospital is a

spacious garden, and to the school sufficient ground for exercise. There are at present fifty aged persons in the house, and 150 boys in the school.

Donaldson's Hospital was founded by Mr. James Donaldson, printer of the *Edinburgh Advertiser*, who died in 1830, bequeathing the greater part of his property, amounting to about £200,000, for the endowment and erection of an hospital for the maintenance of poor boys and girls, after the plan of the Orphan Hospital and John Watson's Institution. The imposing buildings for this important charity, which were completed in 1850, are situated at the west end of the city, on the high bank of the Water of Leith, a mile west of Princes-street. They constitute a spacious quadrangular structure in the Elizabethan style, from an admirable design by Mr. Playfair, and form, next to the college, the largest public building in Edinburgh, comprising accommodation for 300 children, namely 150 boys and 150 girls. Provision has also been made in the plans for such an addition as will admit fifty more boys and fifty girls, an increase which it is calculated the funds of the hospital may in course of time be sufficient to maintain. Those eligible for admission are declared to be, first, poor children of the name of Donaldson or Marshall, as directed by Mr. Donaldson himself in his will, if they appear to the governors to be deserving; and second, such poor children as shall appear to be in the most destitute circumstances, and the most deserving of admission. The children are to be clothed and maintained, and taught such useful branches of education as may be considered suitable to their age, sex, and station. The age of admission is from six to nine years, and that of leaving the hospital not later than fourteen years: they are then to receive such sum of money, or other assistance during apprenticeship or otherwise, as may seem advisable to the governors.

Stewart's Hospital was founded by the late Mr. D. Stewart, of the Exchequer, who died in the year 1814. After the payment of certain legacies, and the erection and endowment of a free school in his native parish of Logierait, he left the residue of his fortune, amounting to about £13,000, and some house property in the Old Town of Edinburgh, to accumulate for the purpose of building and endowing an hospital for the maintenance and education of boys, the children of honest and industrious parents whose circumstances in life do not enable them suitably to support and educate their children at other schools. Poor boys of the names of Stewart and Macfarlane, residing in the city of Edinburgh or its suburbs, are to have a preference; and, failing them, any other poor boys living within the same district may be received. The buildings are now in course of erection, from designs furnished by Mr. David Rhind.

Cauvin's Hospital, pleasantly situated at Duddingston, a village about a mile and a half to the east of Edinburgh, is noticed under the head of Duddingston.

Trinity Hospital is the oldest charitable institution in Edinburgh. It was originally founded by Mary of Gueldres, queen of James II., in 1462, in connexion with Trinity collegiate church, and was subsequently given by Mary, Queen of Scots, to the corporation, who took down the ancient bedehouse, then in a ruinous state, and fitted up the buildings occupied by the provost and prebendaries of the collegiate church, for the reception of the poor inmates, consisting of decayed

burghesses, their wives, and children. The revenues have been greatly increased by good management, and there are at present forty-two aged persons who are maintained and clothed, and about 100 out-pensioners who receive each an allowance of £6 per annum. The building contained the requisite apartments for the purpose, and a long gallery of small dormitories; but was demolished a short time since, as being in the line of the North-British railway: the inmates now occupy other premises.

Chalmers' Hospital, of which the management is vested in the dean and faculty of advocates, owes its institution to Mr. George Chalmers, plumber, of the city, who died in March 1836, bequeathing the chief part of his property, estimated at about £30,000, for the relief of sick and hurt persons.

MISCELLANEOUS CHARITABLE INSTITUTIONS.

The Royal Infirmary, situated to the east of the university, was founded by subscription, and placed under the superintendence of a committee of subscribers, who were incorporated by act of parliament in 1736. Its medical department is under the care of the most eminent physicans and surgeons of the city, and the institution affords relief to a very extended number of patients. The building, erected in 1738, at a cost of £5000, and subsequently enlarged by a grant of £8000 from the lords of the treasury, for the appropriation of sixty beds for sick soldiers, is a handsome and spacious structure four stories high, consisting of a central range 240 feet long, and two projecting wings seventy feet in length. In the centre of the principal range is a portal of four Ionic columns with two antæ, supporting an entablature and cornice surmounted by an attic; and in a niche over the entrance is a statue of George II. in the Roman costume, behind which, rising from the centre of the building, is an octagonal turret crowned with a dome. The interior contains a spacious hall, in which is a bust of Provost Drummond by Nollekens, manager's rooms, consulting rooms for the physicians and surgeons, waiting-rooms, rooms for students, and fifteen different wards for patients. In the fourth story is an operation room, in the form of a theatre, lighted from the roof, and arranged for 100 spectators.

The Royal Edinburgh Lunatic Asylum, at Morningside, on the south-western outskirts of the city, forms a very extensive range of building. A public hospital for the insane being greatly needed, an effort was made by Dr. Duncan in 1792 to raise subscriptions; but a sufficient sum could not be procured, till, in 1807, through the exertions of Sir John Sinclair and the Hon. H. Erskine, a government grant of £2000 was obtained. In 1810, the asylum at Morningside was accordingly commenced, and in 1813 opened for the reception of patients who were able to pay the sum required for their support; the lowest annual charge was £50, and the poor were therefore excluded. Of late years, additional buildings have been raised, at an expense of above £45,000, for the accommodation of more than 400 patients of the poorer class; the asylum has received the patronage of the Queen, and the title of the Royal Edinburgh Asylum has been adopted. In the *original* establishment, adapted for the higher class of patients, the ordinary rate of board is £60 per annum, and the rate for privileged patients

£55; but the managers exercise a discretionary power of admitting patients who are in straitened circumstances, even to the original establishment, at a lower rate. Where additional accommodation is required, or other exclusive appliances are desired, a special arrangement is made. In the *new* establishment, privileged patients are admitted at £20 per annum: any individual or collective body that contributes £10 or upwards to the institution may present one privileged patient in respect of each £10 contributed. A perpetual right of this nature is also conferred at the rate of £50. For other patients in the new establishment the rate of maintenance is £25 per annum.

The Asylum for the Blind, in Nicolson-street, was opened in 1793, through the exertions of the Rev. Dr. David Johnston, minister of North Leith, and other charitable gentlemen of Edinburgh, and is supported by subscriptions and donations. It is under the superintendence of a president, vice-presidents, and a committee, and affords relief to about ninety or a hundred inmates, who are maintained, and instructed in the principles of religion and in various branches of useful learning. They are also taught such trades as are best adapted to their peculiar circumstances, in which several of them have been made so efficient, as, on leaving the asylum, to maintain themselves and families in independence. The buildings, which are plain and substantial, consist of two houses that were purchased for the purpose, one in 1806, and the other in 1822; the males occupy the asylum No. 58, and the females the asylum No. 38, Nicolson-street. The premises originally occupied for the charity were a house in Shakspeare-square. Besides the provision made for those who live in the asylum, opportunities of work and of instruction are afforded to about as many more blind people out of the house. The foundation of this benevolent institution was first suggested by Dr. Blacklock and Mr. David Miller, both sufferers from blindness; and was actively carried out, as already stated, by Dr. Johnston and others.

The Institution for Deaf and Dumb Children was founded in 1810, and is under a president, vice-presidents, and committee. The children are maintained, and, in addition to religious instruction, taught those branches of learning of which they may be susceptible. They are trained to habits of industry, and are instructed in useful trades, the proceeds of which are added to the funds of the institution.

Fettes' Endowment arises from a bequest by Sir William Fettes, Bart., of Comely Bank, who died in May 1836, leaving the greater portion of his large fortune for the maintenance, education, and outfit of young persons whose parents have fallen into adverse circumstances.

The Normal Institution of the Church of Scotland is a seminary established on a large scale, a few years ago, by the General Assembly's education committee. It is intended for the instruction of young persons devoting themselves to the profession of teaching in the parochial and other schools, and occupies a commodious structure on the Castle hill, erected at an expense of upwards of £8000, one-half granted by the education committee of the privy council, and one-half raised by subscription. The privy council committee also grants £500 per annum towards the support of the seminary, on condition of the Assembly committee contributing an equal amount for the same purpose. Domestic accommodation

is provided in this building for male students; and in Young-street is a boarding-house, under the charge of a clergyman's widow, for female students. The *Normal School* of the Free Church, another institution for the preparation of teachers, is held in Moray House, in Canongate.

Among the numerous other institutions may be mentioned, the *Royal Maternity Hospital*, and the *Magdalen Asylum*, both under the patronage of Her Majesty; the *House of Refuge*, *Queensberry House*; various religious societies, societies for the relief of the poor, dispensaries, schools, &c.

EMINENT NATIVES.

Among the natives of the city of Edinburgh may be enumerated the following: *Alexander Alesius*, a celebrated theologian of the sixteenth century, born in 1500; *James VI.*, born in the castle in 1566; *Dr. Walter Balcanquel*, an eminent divine of the seventeenth century, born about 1580; the pious and eloquent *Robert Leighton*, Bishop of Dunblane, and afterwards Archbishop of Glasgow, born in 1610; *Gilbert Burnet*, Bishop of Salisbury, author of the *History of the Reformation*, born 1643; Sir John Lauder, *Lord Fountainhall*, lawyer and statesman, 1646; *Dr. Archibald Pitcairne*, eminent physician, 1652; *John Keill*, celebrated mathematician and natural philosopher, 1671; the accomplished statesman, John Dalrymple, second *Earl of Stair*, 1673; *Dr. Alexander Webster*, an eminent divine and statistical inquirer, about 1707; *John Campbell, LL.D.*, a distinguished miscellaneous writer, 1708; the accomplished Hugh Campbell Hume, third and last *Earl of Marchmont*, same year; *Alexander Russell*, author of the *History of Aleppo*, about 1710; *James Short*, optician, and improver of reflecting-telescopes, 1710; *William Tytler*, of Woodhouselee, antiquarian writer, 1711; *David Hume*, the historian, 1711; John Stuart, third *Earl of Bute*, prime minister of Great Britain, 1713; *Allan Ramsay*, portrait painter, son of the author of *The Gentle Shepherd*, same year; *William Strahan*, the eminent printer to the king, and a patron of literature, 1715; *Dr. Hugh Blair*, author of the celebrated *Sermons*, 1718; Francis Garden, a distinguished judge under the designation of *Lord Gardenstone*, 1721; *James Elphinstone*, a miscellaneous writer, same year; Sir David Dalrymple, a celebrated judge and antiquary, commonly called *Lord Hailes*, his law title, 1726; *Dr. James Hutton*, an eminent philosophical character, same year; *Robert Adam*, the architect, 1728; *William Falconer*, author of the well-known poem of *The Shipwreck*, about 1730; *Dr. Alexander Monro*, celebrated as a teacher of medicine, 1733; *Robert Mylne*, architect, from whose plans Blackfriars-bridge, London, was built, 1734; *Alexander Runciman*, a painter of considerable note, 1736; *John Donaldson*, also an eminent painter, son of a glover in the city, 1737; *Sir William Forbes*, of Pitsligo, a distinguished banker and citizen, 1739; *Dr. William Lothian*, author of a *History of the United Provinces of the Netherlands*, 1740; *James Boswell*, the friend and biographer of Dr. Johnson, same year; *William Smellie*, a naturalist, and useful miscellaneous writer, born about the same time; *Dr. Gilbert Stuart*, historical essayist, 1742; *Henry Mackenzie*, one of the most illustrious names connected with polite literature in Scotland, 1745; *William Cruickshanks, F.R.S.*, an eminent surgeon in London, partner

and successor of Dr. William Hunter of the Windmill-street anatomical school, London, likewise in 1745; the *Hon. Henry Erskine*, a great pleader, third son of the tenth Earl of Buchan, 1746; the accomplished writer and judge, Alexander Fraser Tytler, styled *Lord Woodhouselee*, 1747; *Hugo Arnot*, author of the *History of Edinburgh*, 1749; and *Robert Fergusson*, a poet of considerable celebrity, 1750.

Within the compass also of the last hundred years, Edinburgh has rivalled most cities of the empire in the number and eminence of its gifted men; and we select the following from a long record of natives: *John Brown*, an ingenious artist, born 1752; *Lieut.-Col. John Campbell*, known for his gallant defence of the fortress of Mangalore, in India, 1753; *Dugald Stewart*, the highly-distinguished metaphysical writer, son of Dr. Matthew Stewart, professor of mathematics in the university, 1753; *Sir Henry Raeburn*, celebrated portrait-painter, 1756; *John Pinkerton*, the voluminous historian and critic, 1758; *Sir Walter Scott, Bart.*, the illustrious poet and novelist, 1771; *Francis Jeffrey*, one of the judges of the court of session, and distinguished for his ability as a critic, 1773; *Dr. Andrew Duncan*, entitled to a prominent place among those who have distinguished themselves in the history of medicine, and whose father, of the same name, was professor in the university, 1773; *William Blackwood*, the publisher, originator of the magazine which bears his name, 1776; *Lord Brougham*, formerly lord high chancellor of Great Britain, 1778; *Francis Horner*, whose virtues, talents, and eloquence raised him, while yet a young man, to so high a rank in public life, 1778; *Patrick Gibson*, an eminent artist, and writer upon art, 1782; and *Alexander Gordon Laing*, whose name is so mournfully connected with the history of African discovery, 1793.

EDINBURGHSHIRE, or MID LoTHIAN, the metropolitan county of the kingdom of Scotland, bounded on the north by the Firth of Forth, along the shore of which it extends for about twelve miles; on the east, by Haddingtonshire and small portions of the counties of Berwick and Roxburgh; on the south, by the counties of Lanark, Peebles, and Selkirk; and on the west, by Linlithgowshire. It lies between 55° 39' and 55° 59' (N. Lat.) and 2° 36' and 3° 33' (W. Long.), and is about thirty-six miles in length from east to west, and eighteen miles in extreme breadth, comprising an area of 360 square miles, or 230,400 acres; 41,779 houses, of which 38,927 are inhabited; and containing a population of 225,454, of whom 102,666 are males and 122,788 females. The county originally occupied the central portion of the ancient and extensive province of Lothian, or Loudon, and from this circumstance it obtained the appellation of Mid Lothian, by which it is still often designated. It appears to have been inhabited at a very early period by the *Ottadini* and *Gadeni*, two of the British tribes descended from the Celts, who first made themselves masters of this part of Britain, and who maintained their independence till the time of the Roman invasion, when, to secure his conquests, Agricola constructed a chain of forts extending from the Forth to the Clyde. Though frequently assailed by incursions of the Caledonians and Britons, the Romans, notwithstanding occasional reverses, retained possession of the territories they had acquired, which under their sway formed part of the province of *Valentia*. After their departure from Britain, this dis-

trict very soon fell into the power of the Saxons, who established themselves under their chieftain Ida in the surrounding countries, which they continued to govern with absolute authority. In the reign of Malcolm II., Uchtred, Earl of Northumberland, against whom that monarch marched an army for the recovery of his rightful dominions, after a long contested battle on the banks of the Tweed, gained the victory; but, Uchtred being soon afterwards assassinated, Malcolm, in prosecution of his claims, renewed the war against the earl's successor, Eadulph, whom he compelled to cede the disputed territory for ever; and since that period it has continued to form part of the kingdom of Scotland. Subsequently to this date, the history of the county is so perfectly identified with the history of the capital, and that of Scotland at large, that any fuller detail in this place would be superfluous.

The introduction of Christianity appears to have been, in some small degree, accomplished during the time of the Romans; but, the Saxons being strangers to that faith, it made but little progress till, by the persevering efforts of the pious Baldred and St. Cuthbert, it was more generally diffused. Prior to the cession of Lothian in the reign of Malcolm II., this district was comprised in the ancient diocese of Lindisfarn; it was subsequently included in that of St. Andrew's, and continued to be part thereof until the erection of the diocese of Edinburgh, in which it remained till the Revolution. Since that period the county has formed a portion of the synod of Lothian and Tweeddale, and it now comprises the presbytery of Edinburgh, and thirty parishes, besides those in the city of Edinburgh. For civil purposes, it was first erected into a sheriffdom in the reign of David I., and is under the jurisdiction of a sheriff, by whom two sheriffs-substitute are appointed; the sessions and other courts are held at Edinburgh, the county town, and courts for the recovery of small debts at Edinburgh and Dalkeith. Edinburgh is the only royal burgh; Musselburgh and Canongate are burghs of regality, and the county also contains Dalkeith and Portsburgh, burghs of barony, the town and port of Leith, and the flourishing villages of Inveresk, Joppa, Portobello, Newhaven, Corstorphine, Currie, Mid Calder, West Calder, Gilmerton, Loanhead, Roslin, Penicuik, Lasswade, Ratho, Bonnyrig, Cramond, and Pathhead, with numerous pleasant hamlets. By the act of the 2nd of William IV., the county returns one member to the imperial parliament.

Of the lands, about 100,000 acres are arable, 80,000 meadow and pasture, and the remainder moorland and waste. The surface is diversified with hills, of which the two principal ranges are the Pentland and the Moorfoot. The *Pentland* range, a continuation from the county of Peebles on the south-west, extends to within six miles of the sea and four miles of the city, occupying a district of about forty square miles, and varying considerably in elevation. Rising from a more level tract of country, these hills appear loftier than the Moorfoot, and they have generally a more bleak and barren aspect; the highest hills in the range within the county are, the Caerketton, which has an elevation of 1555 feet, and the Spittal, of 1360. The *Moorfoot* hills, in the south-eastern part of the county, occupy an area of nearly fifty square miles, and range from 1400 to 1850 feet in height. They are interspersed with fertile dales and tracts of arable land, and a large part of their acclivities is under

cultivation, producing excellent crops. This district is watered by the Heriot and the Gala. Between the Pentland range and the Firth of Forth are the Braid and Blackford hills, Craig-Lockhart, Craigmillar, Arthur's Seat, Salisbury Crags, the ridge on which the castle and the Old Town of Edinburgh are built, the Calton hill, and Corstorphine hill.

Even the principal streams, not being of sufficient importance to obtain the appellation of rivers, are generally designated Waters, with the exception of the Esk. This river originates in the confluence of the *North* and *South Esk*, of which the former rises in the Pentland, and the latter in the Moorfoot hills, and both, after a separate course of twelve or fifteen miles, unite in the pleasure-grounds of Dalkeith, and thence, flowing for about five miles as the Esk, fall into the Forth at the bay of Musselburgh. In its way to Dalkeith the North Esk runs in a rocky channel, through a beautifully romantic tract of country comprising Roslin, Hawthornden, Lasswade, and Melville. The *Almond Water*, forming for a considerable distance the western boundary of the county, rises in the high grounds in Lanarkshire, and taking a north-eastern course, passes through a level district, frequently overflowing its banks, and joins the Firth of Forth at Cramond. In its progress along the picturesque valley to which it gives name, it is crossed by many bridges, by an aqueduct of the Union canal, and a viaduct of the Glasgow railway. The *Leith Water* has its source in some springs in the parish of Currie, and after a course of fourteen miles, in which it turns more than 100 mills, and flows under viaducts of the Glasgow and Granton railways, and an aqueduct of the Union canal, falls into the Firth at the harbour of Leith. The *Gala* has its source at the base of the Moorfoot hills, and after a southern course for about ten miles through the vale of Gala, enters the county of Selkirk, and ultimately falls into the Tweed near Galashiels. There are no lakes of any importance.

The soil is greatly varied: the most prevalent kind is clayey loam, alternated with sand and gravel; and not unfrequently all the different varieties are found on one farm. In this county the lands are generally fertile, but the richest are in the lower part of the county, towards the Forth, where there are not less than 70,000 acres of arable ground, producing the most luxuriant crops. The farms are of moderate extent, few less than 100, and few more than 300 acres; the system of agriculture is in the highest state of improvement. The chief crops are wheat, barley, oats, beans, peas, potatoes, and turnips; vegetables and fruits of all kinds are raised in abundance for the supply of the city, and the amount paid for strawberries alone is calculated at £6000 per annum. The farm-buildings are substantial and well-arranged, generally of stone; the dwelling-houses roofed with slate, and the offices with tiles: the lands are drained and inclosed. From the abundance of manure collected in the city, little of any other kind is employed in its vicinity; but in the uplands, and on the distant farms, lime is applied as a stimulant to the soil. The cattle are chiefly of the Highland breed, and the horses for husbandry mostly of the Lanarkshire, with a few of the Clydesdale breed; the milch-cows are usually of the Ayrshire and Teviotdale breeds. Considerable attention is paid to the management of the dairy-farms, of which the main produce is milk and butter for the supply of

the city and other towns. The sheep, large numbers of which are pastured on the moorlands, are mostly of the Cheviot breed. Swine are also reared in considerable numbers, and large quantities of poultry and geese. There are still some remains of the ancient Caledonian forest which formerly spread over the greater portion of the county, though, about the commencement of the sixteenth century, the Borough Muir and other lands being leased by grant of James V. to the corporation of Edinburgh, such quantities of timber were felled, that, in order to procure purchasers, the magistrates bestowed on every citizen who bought sufficient to new-front his house, the privilege of extending it seven feet further into the street. Numerous oaks of stately growth still adorn the lands around the chief mansions; and extensive plantations have been formed in various parts, and on all the principal hills, many of which are richly wooded to their summit.

The substrata comprise limestone, freestone, and whinstone, all of which are quarried. Coal is very abundant throughout the greater portion of the county; and towards Dalkeith, in the eastern district, is a very extensive coalfield, reaching from the coast of Musselburgh, for nearly fifteen miles, to the confines of Tweeddale. The Dalkeith basin contains as much coal as the fields of Stirling, Clackmannan, or Glasgow, and is remarkable for a comparatively small development of hydrogen, an advantage counterbalanced, however, by a great quantity of carbonic acid. Mr. Bald has calculated that this field alone would supply the consumption of Edinburgh for 500 years, at the rate of 350,000 tons per annum; but he includes in this estimate the deeper coal, of which none has been yet wrought. Coal appears to have been first raised here for fuel by the monks of Newbattle Abbey, in the latter part of the twelfth century. Many of the seams are of very fine quality, and there are at present about twenty mines in constant operation: the progress of mining, however, is much impeded by the quantity of water accumulating in the pits, which can be drawn off only by engines of extraordinary power. Lead was formerly wrought on the south side of the Pentland hills, and was found to contain a considerable proportion of silver. Copper-ore, also, was discovered on the confines of Peeblesshire, but not in sufficient quantity to remunerate the working of it.

The principal manufacture is that of linen, for which there are several extensive bleaching and print fields in the neighbourhood of the city, and on the banks of the Esk. A considerable business is also carried on in the manufacture of gunpowder, glass, soap, salt, candles, bricks, tiles, and pottery of various kinds, and paper; and the manufacture of silk has been introduced, for which some mills have been erected on the banks of the Union canal. There are large iron-works at Cramond, works for chemical preparations, tanneries, distilleries, breweries, and numerous other manufacturing establishments, in all of which, though the county is not distinguished for the extent of its produce in this respect, the greatest improvement has been made in the quality of the articles. Every facility of intercourse with the neighbouring districts is afforded by roads kept in excellent repair, by the Union canal, the Firth of Forth, and the Edinburgh and Glasgow, the North-British, the Caledonian, and the Edinburgh, Perth, and Dundee railways. The maritime commerce of the county is very important,

and, together with that of Peeblesshire and Selkirkshire, and much of that of the East and West Lothians, is concentrated at the port of Leith. The shores of the Firth are low and sandy, and for a considerable breadth covered at high water; the Firth abounds with herrings and other fish, and the beach with shell-fish of every kind: there are some valuable beds of oysters. The annual value of real property in the county, some years ago, was £1,074,992, of which £239,189 were for lands, £781,236 for houses, £15,511 for mines, £3747 for quarries, £8923 for canal navigation, £5607 for railways, and the rest for other kinds of real property. The principal remains of antiquity are of Roman origin, and chiefly in the vicinity of the capital: numerous camps are found in various places, one of which, near Crichton Castle, is in a very perfect state. Circular camps, supposed to be of Danish formation, are also numerous, some consisting of three, and others of more, concentric intrenchments of earth and stones. In the parish of Heriot are the remains of a Druidical circle; and in Kirkliston are two upright stones, commemorating a victory obtained by Kenneth, commander of the forces under Malcolm II., over the usurper Constantine. The county contains many cairns, barrows, and tumuli, near which stone coffins have been found; the remains of ancient castles, some of which were hunting-seats of the kings; the ruins of various religious houses; and other relics of antiquity, all of which, with the gentlemen's seats, are described in the articles on their several localities.

EDINKILLIE, or EDENKEILLIE, a parish, in the county of ELGIN, $8\frac{1}{2}$ miles (S.) from Forres; containing 1237 inhabitants. This place derives its name, signifying in the Gaelic language "the face of the wood", from the ancient forests of Darnaway and Drummine, of which the greater part of the former and the whole of the latter were once within the limits of the parish. A charter granted by David Bruce is still extant, appointing Richard Comyne, ancestor of the present proprietor of Altyre, keeper of the king's forest of Darnaway; and in 1478, a similar charter was bestowed by James III., upon Thomas Cummyne, of the same place, investing him with the office of warden of the forest of Drummine. The parish is frequently called Brae-Moray. It is about thirteen miles in extreme length, and seven miles at the greatest breadth, varying considerably in form, and comprising an area of nearly 34,000 acres, of which 3400 are arable, 4700 woodland and plantations, and the remainder meadow, pasture, and waste. The surface is diversified with numerous hills, the highest of which, named Knock-Moray, has an elevation of about 1000 feet above the level of the sea, commanding from its summit an extensive and richly-varied prospect over the surrounding country. The river Findhorn, which has its source in the county of Inverness, flows for nearly seven miles in a winding course through the parish, and falls into the Moray Firth two miles below Forres: the Divie rises in the hills in the southern boundary of the parish, and after a north-east course of almost nine miles, runs into the Findhorn; and the Dorback, issuing from the lake of Lochindorb, falls into the Divie near the church. On the banks of the Findhorn, which passes through a tract of country remarkable for the picturesque beauty of its scenery, is an extensive heronry. At Sluie, on that river, is a valuable salmon-fishery, the property of the Earl of Moray, which, previously to the im-

provement of the fisheries nearer the sea, was amazingly productive; it is now let at an annual rent of £50, to a company who employ four men with drag-nets, taking on the average not more than 700 fish annually. The river abounds with trout, which are also found in the Divie and the Dorback.

The lake of Lochindorb, partly in this parish, is celebrated for the remains of a castle situated on an island within its limits, of which Edward I. of England took possession, on his route to Inverness, in 1303, and in which he resided for some time on his return, and received the submission of the northern estates of the kingdom. This castle, in 1336, became the abode of Catherine de Beaumont, widow of David Hastings, Earl of Atholl, and was besieged by Sir Andrew Moray, who had succeeded Douglas in the regency of Scotland during the captivity of David Bruce; but on the approach of Edward III. of England, Sir Andrew retreated with his forces to his castle of Darnaway. Edward placed a garrison of English in the castle; and the fortress afterwards passed from the Earl of Moray to the Campbells of Cawdor. It is now the property of the Earl of Seafield.

In some parts the soil of the arable lands is a brown loam alternated with a rich black mould, and in others light, dry, and gravelly; with large tracts of moss. The crops are oats, barley, wheat, peas, potatoes, and turnips, with the usual grasses. Of late years the system of husbandry has been greatly improved; much waste has been reclaimed and brought into profitable cultivation; the lands have been well drained, and inclosed chiefly with sunk fences, faced with stone, and planted with hedge-rows of thorn intermixed with forest-trees. The black-cattle reared in the pastures are principally of the Highland breed, with a few of larger size bought in autumn, and, when fattened, sold to dealers for the southern markets; the sheep, of which about 2500 are reared, are the black-faced, and about 250 of the Cheviot breed are annually purchased in September, and fed on turnips, either for the butcher, or to be sold with their lambs in the following year. The natural woods consist of oak, ash, beech, elm, sycamore, Spanish-chesnut, mountain-ash, poplar, birch, holly, alder, larch, and spruce and Scotch firs. A large quantity of wood which had arrived at maturity in the forest has been cut down of late years, and replaced with young plants, chiefly oaks, of which about 100,000 are planted every year. The plantations are still more extensive than the natural woods, and were principally formed by a late Earl of Moray, who, between the years 1767 and 1791, planted 10,591,000 trees, of which 9,687,000 were Scotch firs, 596,000 oaks, and the remainder various kinds of forest-trees. The annual value of real property in the parish is £2774.

Dunphail House is an elegant mansion built after a design by Mr. Playfair in 1829, and situated on a terrace on the bank of the Divie, in a demesne tastefully laid out in parterres and shrubberies, and richly embellished with plantations. The scenery is beautifully picturesque, and heightened by the ruins of an ancient castle, which are seen from the house rising above the trees that surround the base. Relugas House is a handsome mansion seated in a demesne between the rivers Findhorn and Dorback; it has been enlarged by an addition of a noble suite of apartments, ninety-six

feet in length, within the last twenty years, and the grounds are finely planted. Logic House stands on the east bank of the Findhorn; and a handsome shooting-lodge has been erected by the Hon. John Stuart, and is occupied during the season by various members of the Moray family. The only village in the parish is a cluster of houses at Conicaval, near the northern extremity. There are two small inns in the parish. Facility of communication with Forres and the adjacent towns is afforded by the road from Forres to Perth, by excellent roads formed by Sir William G. G. Cumming, of Altyre, Bart., and others by Charles L. Cumming Bruce, Esq., of Dunphail: there are substantial bridges over the Divie and the Dorback, replacing those destroyed by floods in 1829.

Ecclesiastically the parish is within the bounds of the presbytery of Forres, synod of Moray. The minister's stipend is about £180, with a manse, and a glebe valued at £12 a year; patron, the Earl of Moray. Edinkillie church, situated on the east bank of the river Divie, is a plain structure built in 1741, and repaired in 1813, and contains 500 sittings. The parochial school is well conducted: the master has a salary of £34, with a house and garden, and the fees average £16; he has also an allowance from the trustees of Dick's bequest. There are schools at Conicaval and Tullydivie, both supported by the Society for Propagating Christian Knowledge; and at Halldavoch is a female school, to the mistress of which Sir William G. G. Cumming pays £5 per annum. Some remains still exist, as already noticed, of the ancient castle of Dunphail, of the foundation of which there is no authentic record: after the battle of the Standard, the fortress was besieged by Randolph, Earl of Moray, and gallantly defended by Cumming, its proprietor. The Doune hill of Relugas is of very great antiquity, and is supposed to have been a stronghold to which the inhabitants of the district retired with their cattle, on the frequent irruption of the Danes. It is a conical hill of very precipitous ascent, nearly surrounded at the base by the Divie, and, where undefended by the river, strongly intrenched with ramparts of stone. By some antiquaries it is connected with a chain of signal-posts used in times of danger, and is said to have been at one time occupied by the Romans, who are thought to have had a chain of similar forts extending from Forres to Brae-Mar, and thence to Perth.

EDINVILLE, a hamlet, in the parish of DALLAS, county of ELGIN; containing 17 inhabitants.

EDMONSTONE, a village, in the parish of NEWTON, county of EDINBURGH, $3\frac{1}{2}$ miles (S. E. by E.) from Edinburgh; containing 143 inhabitants. It lies in the western part of the parish, and is one of several small villages within its limits, some of which consist of long rows of red-tiled houses, chiefly inhabited by colliers. The road from Edinburgh to Dalkeith passes at a short distance on the south; and a little westward of the village is Edmonstone House, an elegant residence finely situated amidst beautiful plantations. The chapel at Edmonstone is a handsome building in the later English style, now used only as a mausoleum for the Wauchop family, of Edmonstone House.

EDNAM, a parish, in the district of KELSO, county of ROXBURGH; containing 615 inhabitants, of whom 146 are in the village, $2\frac{1}{4}$ miles (N. by E.) from Kelso. The name of this parish, which is a contraction of the

word Edenham, signifies a hamlet on the Eden, and is descriptive of the situation of the village near that river. Various facts are recorded in connexion with the early history of the place; they relate to its ecclesiastical affairs, and reach back to the beginning of the twelfth century. About this period, the waste of Aednam was peopled, and a church built in honour of St. Cuthbert, by Thor the Long, to whom the lands had been given by the crown. The church had two chapels attached to it, one situated at a place called Newton or New-town to distinguish it from the old village of Ednam, and the other situated at Naithan's-thorn or Nanthorn. Robert, Bishop of St. Andrew's, who died in 1158, ratified the connexion between the parochial church and the chapel of Newton; and Bishop Arnold, who died in 1162, confirmed to the monks of Coldingham the possession of all the three places of worship. There was also a hospital dedicated to St. Lawrence, supposed to have been founded by the Edmonstons of Ednam, who were its patrons; it is referred to in 1348 in a writ of Edward III., who therein directs that the establishment, with the hospital of St. Mary of Berwick, should be restored to Robert de Burton.

The PARISH is nearly square in form, its length being three miles and a quarter, and its breadth three miles, and it contains 5500 acres. The surface is pleasantly varied by undulations and gently-rising hills, well cultivated, or covered with rich verdure and flourishing plantations; and the parish being only about a mile and a half distant from the English border, the scenery partakes very much of the general character of that on each side of the Tweed. Ednam hill, on the east of the village, forms an interesting object in the picture; it is arable to the summit, and commands an extensive view of the surrounding country. The river Eden constitutes another striking feature in the parish, flowing through a district ornamented with hedge-rows and with numerous clumps of trees standing in the midst of cultivated fields. On the south-east runs the Tweed. In some parts the soil consists of loam resting upon a gravelly subsoil, and in others it is clay, with a less retentive subsoil than is usually found in such situations; upon the same subsoil there is light gravelly earth, and in some places the soil is moorish. These four different descriptions are found in nearly equal portions. The cultivated land consists of about 3700 acres, two-fifths of which are in grain, two in pasture and hay, and one in turnips and fallow; seventy acres are in pasture along the banks of the rivers, forty in pleasure-grounds, and about seventy in plantations. Grain of all kinds is produced, with good crops of potatoes, turnips, and hay. The cattle are those usually termed the short-horned, and the sheep are of the Leicester breed, of which kind a flock was lately reared by one of the farmers of so superior a description that it excited the attention of agriculturists in distant parts of the kingdom. The lands are highly cultivated, and husbandry is thoroughly understood; the soil is well drained, and embankments have been constructed to a considerable extent. Nearly the whole of the substratum is calcareous: there is a very thin bed of freestone. The annual value of real property in the parish is £8329.

There is a mansion-house named Hendersyde, a handsome modern building, the residence of one of the heritors. The village is neat in its appearance, the

houses being regularly built, and covered with tiles or slate; the woollen manufacture was carried on till about twenty years ago, and there is still a brewery. The river Eden, which rises in the parish of Gordon, and divides that of Ednam into two parts, flows close to the village, and has two stone and two wooden bridges in the parish, all in the best state of repair: three turnpike-roads, one of them between Berwick and Kelso, intersect the parish, and there are several other roads. Ecclesiastically the parish is within the bounds of the presbytery of Kelso, synod of Merse and Teviotdale; patron, the Crown. The stipend, with an allowance for communion elements, is £158. 6. S., of which £111 are payable from the land, and the rest from the exchequer; an excellent manse was finished in 1834, and there is a glebe of the annual value of £15. Ednam church stands near the village, and accommodates about 260 persons; it was built in 1800, and is in good repair. There is a parochial school, in which mathematics and French are taught, with all the ordinary branches of education; the master has the maximum salary, with about £36 fees, and a house and garden. Thomson, author of the *Seasons*, was born in the manse, his father, the Rev. Thomas Thomson, being minister of Ednam; and in 1820 an obelisk, fifty-two feet in height, was erected to his memory on some rising ground about a mile from the village, at the expense of the Eduam Club, an association of gentlemen who annually celebrated the poet's birthday here. There is evidence to prove that the father of Cook the circumnavigator was a native of Ednam. Mr. William Dawson, the distinguished agriculturist, who introduced turnip husbandry into Scotland, was also a native of the parish.

EDROM, a parish, in the county of BERWICK, 3 miles (N. E. by E.) from Duns; containing, with the village of Allanton, 1415 inhabitants. This place is said to derive its name, anciently *Aderham*, from the situation of its village near the river Whitadder. *Ader* is deduced from the Cambro-British word *Awedur*, signifying "running water"; and *ham* is Anglo-Saxon, signifying "a village": hence *Aderham*, the village on the bank of the *ader*, or river. The river is called Whitadder in reference to the colour of the water; another river, the Blackadder, being so called on account of the dark colour of its water. The parish is distinguished as the scene of the death of Sir Anthony D'Arcy, a native of France, who in 1517 was appointed warden of the marches and governor of Dunbar Castle, in the room of Lord Home, by the Duke of Albany, regent of Scotland during the minority of James V. D'Arcy is supposed to have inveigled his predecessor to Edinburgh, where, with his brother, Home was treacherously put to death; and in retaliation of this, David Home, laird of Wedderburn, attacked D'Arcy and his party at Langton, and put them to flight, and D'Arcy's horse being engulfed in a bog, he was compelled to flee on foot, and was overtaken at Broomhouse, in this parish, by the laird of Wedderburn, who killed him on the spot, and carrying his head in triumph through Duns moor, fixed it on the battlements of Home Castle. In 1674, a very large meeting of Covenanters assembled at East Nisbet for the purpose of celebrating the sacrament, more than 3000 communicating on the occasion. The PARISH is about five miles and a half in average length, and two miles and a half in average breadth, and comprises 8400 acres, of

which 7500 are arable, 600 woodland and plantations, and the remainder rough pasture and waste. Its surface is generally flat, with a slight degree of acclivity; and the scenery, which is enlivened by the windings of rivers, and enriched with woods and plantations, is in many parts exceedingly picturesque. The Whitadder forms the northern boundary of the parish for nearly six miles, and after embellishing much beautiful scenery, falls into the Tweed within two miles of Berwick. The Blackadder, a stream about fifty feet in breadth, intersects the parish, dividing it into two almost equal portions, and, after a course of about six miles within its limits, flowing into the Whitadder at the village of Allanton.

In some parts the soil is shallow and poor, in others a rich and fertile clay, with some tracts of barren moorland; the crops are, grain of all kinds, with potatoes and turnips. The system of agriculture is in an advanced state, and the five-shift course of husbandry is generally prevalent; the lands are well drained and inclosed, the farm-houses and offices substantially built, and all the more recent improvements in agricultural implements have been adopted. Great numbers of sheep of various breeds, with a cross between the Leicestershire and the Cheviot, are reared; and also many cattle are pastured here. The annual value of real property in the parish is £15,020. The woods and plantations are in a thriving condition; the former consist of the usual varieties of hard-woods, and the plantations, of fir, intermixed with different kinds of forest-trees: on one estate the thinning of the wood produces a return of £300 per annum. The substrata are chiefly clay, marl, and sandstone. There is an extensive tract of shell-marl bog on the lands of Kimmerghame, from which great quantities of marl have been obtained, and of which one cubic yard is considered to be equal in efficacy to a boll of lime. In draining this bog and removing the marl, several beavers' heads and deer's horns were discovered. The sandstone is of a whitish colour, occurs in beds varying from twenty to thirty feet in thickness, and is quarried in several parts. Red sandstone, resting on conglomerate, is also found.

Broom House, one of the seats in the parish, is a spacious and handsome mansion erected in 1813, on the site of an ancient baronial castle. In excavating for the foundation, several human skeletons were found; and some years ago one was found, inclosed in a stone coffin. Within the grounds is the grave of Sir Anthony D'Arey. Nisbet House is a fine castellated mansion, beautifully situated: Kimmerghame is an ancient mansion on the Blackadder; and Kelloe, Allanbank, and Blackadder House are all handsome residences, likewise seated on the banks of the Blackadder. In the grounds of the last is a beautiful conservatory in the early English style of architecture; the frame is of cast iron, and the windows, enriched with elegant tracery, are embellished with stained glass, the whole raised by the late Thomas Boswall, Esq., at an expense of several thousand pounds. Edrom House is beautifully situated, commanding some very rich scenery, with distant views of the hills of Dunse and Cockburn, and the Lammermoor and Cheviot hills. There are three corn-mills on the Blackadder, to two of which is added machinery for sawing timber; and on the Whitadder is a paper-mill, chiefly for the manufacture of printing and writing papers, and which is conducted on a very extensive scale, giving occupation to eighty per-

sons. Great facility of intercourse is afforded by the Dunse branch of the North-British railway. Ecclesiastically the parish is in the presbytery of Chirnside, synod of Merse and Teviotdale, and in the patronage of the Crown; the minister's stipend is £242. 16., with a manse, and a glebe valued at £15 per annum. The present church, erected in 1732, and subsequently repaired is a spacious and neat edifice, adapted for a congregation of 450 persons: from several inscriptions with ancient dates, it would appear that portions of the old church have been incorporated with the building. Edrom parochial school is well attended; the master has a salary of £34, with £15 fees, a house, and an allowance in money in lieu of garden. There are three libraries in the parish for the use of young persons, supported by subscription and donations.

EDWARD, KING, in the county of ABERDEEN.—See KING-EDWARD.

EDZELL, a parish, partly in the county of KINCARDINE, but chiefly in that of FORFAR, 6 miles (N.) from Brechin; containing 1064 inhabitants, of whom 290 are in the village. This place, in ancient documents designated *Edziel*, perhaps derives its name from a Gaelic term signifying "the left", or "dividing of the waters". In the old records of the presbytery the name is written *Edgehill*, a term which is quite applicable to the parish, as all the arable ground, with the exception of that in the southern or peninsular part, stretches along the edge or foot of the hills. It is doubtful which of these two derivations is correct. The most ancient proprietors of land are said to have been a family of the name of Stirling, from whom considerable property came by marriage to the Lindsays of Glenesk, who possessed nearly the whole of the parish, and have left a memorial of their connexion with the place in the exemption, remaining to this day, of the lands of Edzell from the payment of custom at the great June fair of Brechin. About the year 1714 the estates were purchased by the Earl of Panmure, who was wounded at Sheriffmuir, and the property, with the earl's other estates, afterwards escheated to the crown. It came subsequently into the hands of the York Buildings' Company, and eventually passed by purchase to William, Earl of Panmure in the peerage of Ireland, a near branch of the family, from whom it has descended to the present owner. Edzell Castle, now an extensive ruin, consists of two towers, formerly connected by a splendid range of apartments; the southern portion, called Stirling's tower, is much older than the other, and is supposed to have been built and inhabited by the Stirlings. The fortress was occupied by a garrison of Cromwell's in 1651; and though it ceased to be a residence in 1715, it was held in March or April 1746 by Colonel John Campbell, afterwards Duke of Argyll, who commanded the Argyll Highlanders, the Duke of Cumberland then marching through the country.

THE PARISH lies on the north-east border of Forfarshire. Its southern part is a peninsula about three miles long and two wide, formed by the two branches of the North Esk, called the North and West waters; and at the northern extremity of this peninsular portion, where the West water, entering the parish from Lethnot, takes a southern direction, nearly at right angles with its former course, the parish expands in width to about four miles. The lands in the north lie for six miles on the east and about nine on the west side of the North water, or prin-

cipal branch of the North Esk. About 4270 acres in the parish are arable; 200 are occupied by wood, of which about ninety acres, chiefly larch, were planted at the beginning of the present century; and 1060 acres are waste, affording only a little pasture, though one-third of the extent is considered capable of improvement. Besides these lands, there is a hilly surface of about forty-six square miles, covered with brown heath, with here and there verdant patches, produced by the moisture of neighbouring springs, or the fertility of a superior soil. The crops consist chiefly of oats, barley, potatoes, turnips, and hay; the farms in general are of moderate size, and in many instances the obstructions presented by moors, moss, and high grounds forbid enlargement. This parish is wholly the property of Lord Panmure, with the exception of the Kincardineshire portion, which is one-seventh of the whole, and was formerly a separate parish, called New Dorsk, the old burying-ground still remaining. The substrata consist partly of red sandstone, exhibiting several varieties; and granite, with some other rocks, is found. The annual value of real property in the parish is £2991, of which £486 are for Kincardineshire.

The village of Edzell, formerly called Slateford, has recently been much enlarged and improved, Lord Panmure having in 1839 granted building-leases for ninety-nine years. Many good houses have accordingly been erected according to a regular plan, and much benefit has resulted from the conditions requiring every tenement to be raised with stone and lime, and covered with slate, and to have a small allotment in front for flowers, inclosed by a low wall. The proprietor has lately erected in the centre a handsome building for a post-office and reading-room; there is an excellent and convenient inn, and many visitors take lodgings here in summer, attracted by the salubrity of the locality, and the beautiful scenery on the North Esk. A mill for the carding and spinning of wool, and the manufacture of blankets, has been in operation for some years in the southern extremity of the parish, employing between thirty and forty hands, men and women; and about twenty-seven looms are engaged in the manufacture of coarse linen for an establishment at Montrose. On the North Esk is a salmon-fishery, of inconsiderable value. The dairy produce is generally carried for sale to the market at Brechin, and the grain is shipped at Montrose. There is a long-established fair, now on the decline, in August; and three fairs of more recent date, originated by Lord Panmure, for sheep and cattle, and which are on the increase, are regularly held in the months of May, July, and October, respectively. Ecclesiastically the parish is in the presbytery of Brechin, synod of Angus and Mearns, and in the patronage of the Crown: the minister has a stipend of £158, with a manse, and a glebe of about twenty acres, ten of which are moorland. The old church stood near the West water, and the churchyard is still used as the common place of burial: the present church, built in 1818, is situated at the north end of the village. The members of the Free Church have a place of worship. Edzell parochial school, situated in the village, affords instruction in the ordinary branches; the master has a salary of £34, with a house and garden, and £24 fees. A school has also been established, and premises built, in the Kincardineshire district, by the proprietor of that portion, Sir John Gladstone, Bart., of Fasque; it has an

endowment of £10 per annum, making an income for the teacher, together with the school fees, of about £24. At Colmellie are two Druidical circles; and the ancient place of execution for the district still retains the name of Gallow Hill.

EIGG, an island, in the parish of SMALL ISLES, and county of INVERNESS; containing 546 inhabitants. This highly interesting island is one of a cluster of isles which constitute the parish; it is about three miles and a half in length and two and a half in breadth, and lies ten miles westward of Arisaig on the main land. The whole shore is rocky, with the exception of Lagg bay, on the west side; the surface is uneven, and diversified by hills covered with heath, which in some places is mixed with coarse grass. The low grounds are tolerably productive where there is a sufficiency of soil, and about a third part of the island is arable and pasture land, the rest being moor and moss, applied to the rearing of cattle, which is the chief occupation of the inhabitants. The highest elevation is towards the south, where a singularly-formed hill, called the Scur of Eigg, terminates in a lofty peak, said to be 1340 feet in height, and surrounded by perpendicular precipices. Through the middle of the island runs a hollow, called in Gaelic *Eagg*; and hence is derived its name: on the south-eastern side are several caves. There are various Danish forts; and a barrow here is said to be the burial-place of Donnan, the tutelary saint of the island.

EILDON, a hamlet, in the parish and district of MELROSE, county of ROXBURGH, $1\frac{1}{2}$ mile (E. S. E.) from Melrose; containing 56 inhabitants. It is situated in the south-eastern part of the parish, and on the road from Melrose to Jedburgh. In the vicinity is the elegant mansion of Eildon Hall, surrounded by fine plantations; and about a mile westward are the Eildon hills, which are partly in Bowden parish. They are three in number, and are of conical form, rising from one broad base; the elevation of two of them is about 1400 feet above the sea, and the north-east hill is chiefly remarkable for the vestiges of a regularly-formed Roman camp, communicating with military stations on the two other hills. The views that are obtained from the summits are magnificent, and embrace a great part of the south-eastern district of Scotland.

EILEAN-NAN-NAOMH, county of SUTHERLAND.—See TONGUE.

EILEAN-NAN-RON, an island, in the parish of TONGUE, county of SUTHERLAND; containing 42 inhabitants. This island, situated to the west of Eilean-nan-Naomh, has at high water the appearance of two islands, and is partly under cultivation by a few tenants who, from a hollow in the form of a basin, containing land of much fertility, raise some fine crops of grain. The rocks rise precipitously to a great height, and on the north side are divided by numerous fissures, through which the wind rushes with force, carrying with it quantities of spray.—See TONGUE.

ELAN A BHRIU, an isle, in the parish of EDDRACHILLIS, county of SUTHERLAND. It lies off the western coast, and derives its name, signifying "the Island of the Judge", from the circumstance of the bowels of Judge Morrison of Lewis having been interred here, after his murder by Little John Mac Dhoil Mhich Huishdan. The isle is about four acres in extent, and furnishes good pasture for lands. It is always held by the

minister of Eddrachillis, as the gift of the noble family of Mac Kay, Lords Reay.

ELAN A GHARIN, an isle, in the parish of ASSYNT, county of SUTHERLAND. It is a small islet off the western coast, attached to the farm of Unapool, and appropriated to pasturage.

ELAN AN DU, isles, in the parish of ASSYNT, county of SUTHERLAND. They are a small cluster, the name of which signifies "the black islands", lying, like the preceding isle, off the western coast of the county. They are appropriated to pasturage, but are of little value.

ELAN MHUIN, an isle, in the parishes of APPIN, county of ARGYLL, and KILMALIE, county of INVERNESS. It is situated in Loch Leven, and is of small extent, with two rocky islets adjoining. The island is the joint property of the proprietors of Calart in Inverness-shire, and Glencoe in Argyllshire, to whom the rent of the land is paid alternately; and it is therefore generally considered as alternately in the county of Inverness and in Argyll.

ELDERSLIE, for a time an ecclesiastical district, in the ABBEY parish of the town of PAISLEY, Upper ward of the county of RENFREW, $2\frac{1}{2}$ miles (W. by S.) from Paisley; containing 1086 inhabitants. The village, which is on the road from Paisley to Beith, is distinguished as the birthplace of the celebrated Sir William Wallace, who was born in an ancient house near its western extremity. In the garden of the house, close to the foundation of the wall, a stone was dug up, bearing the inscription W. W. W., with the legend "Christ is only my Redeemer", and which is preserved in the cabinet of Alexander Speirs, Esq., of Elderslie. On the opposite side of the road is an old tree called Wallace's tree, in which that hero concealed himself when pursued by his enemies. The village is pleasantly situated, and abundantly supplied with water from numerous fine springs, one of which, discovered while boring for coal, is called the Bore. The inhabitants are chiefly engaged in weaving, and also in the spinning of cotton, for which two extensive mills have been erected, affording employment to about 400 persons. The Glasgow, Paisley, and Johnstone canal, and the Glasgow, Paisley, and Ayr railway, which pass in the vicinity, afford ample facilities of communication. Elderslie ecclesiastical district included also the villages of Quarrelton and Thorn, and was about three miles in length and one mile in average breadth: the church is a neat structure in the later English style of architecture, erected by subscription, and containing about 800 sittings.

ELDRIG, a village, in the parish of MOCHRUM, county of WIGTOWN, 3 miles (N. by W.) from Port-William; containing 217 inhabitants. It is situated in the south-west part of the parish, and in the vicinity of a stream which flows from Loch Eldrig into Luce bay.

ELGAR, an isle, in the parish of SHAPINSHAY, county of ORKNEY. This place, also called Eller-Holm, lies a little southward of the island of Shapinshay, from which it is separated by a reef of rocks that are almost dry at low water. It furnishes pasture for a number of sheep and young cattle in summer, and by its favourable situation gives the utmost security to the fine harbour of Elwick. There are evident marks of its having been formerly inhabited, though at present no one resides upon it.

ELGIN, a burgh, market-town, and parish, in the county of ELGIN, of which it is the capital, $63\frac{1}{2}$ miles (N. W.) from Aberdeen, and 174 (N.) from Edinburgh; containing 5216 inhabitants, of whom 4325 are in the town. This place appears to have derived its name and foundation from Elgin, or Helgyn, general of the army of Sigurd, the Norwegian Earl of Orkney; who about the year 930 made himself

Burgh Seal.

master of Caithness, Sutherland, Ross, and Moray, in the southern part of which last district he built a town, supposed to be the origin of the present, a few miles from the small harbour of Burgh-Head, where the Norwegians kept their shipping. A castle seems to have been erected at an early period, either for the defence of the town, or as a residence for its founder; and on some rising ground called Lady hill are still to be seen traces of an ancient fortress which, in the reigns of William the Lion, Alexander I., and Alexander II., is said to have been a favourite resort and an occasional residence of those monarchs. There is a charter of William's yet extant, in which the king grants to the Bishop of Moray an annual payment out of the fee-farm rent of "his burgh of Elgin"; and in 1224, Alexander II. sanctioned the removal of the seat of the diocese to Elgin, where a cathedral was erected, and also an episcopal palace. The town thus became distinguished, and in ecclesiastical affairs obtained a degree of importance inferior to the cities of St. Andrew's and Glasgow alone. In 1269, Alexander III. bestowed upon the inhabitants all the liberties and privileges of a royal burgh; and Robert I., in his charter granting the earldom of Moray to Thomas Ranulf, expressly stipulates that the burgesses of Elgin, in holding under the earl, should retain all their accustomed rights as fully as when they held them immediately under the charter of Alexander III. The town appears to have suffered severely at various times, and to have been frequently destroyed by fire. In 1390, the Earl of Moray conferred upon the burgesses an exemption from certain sums paid to his castle, in consequence of the various calamities to which they had been exposed; and his successor soon afterwards remitted to them the customary dues on wool, cloth, and all other merchandise exported from the harbour of Spey, in consideration of the same or similar disasters. Archibald Douglas, Earl of Moray, in 1451 bestowed a charter reciting and confirming that of Alexander III.; and Charles I., in 1633, ratified all previous grants by his predecessors in favour of the burgh, of which the form of government was finally settled by an act of the convention of burghs in the year 1706.

The town is pleasantly situated on the south bank of the river Lossie, which forms the boundary of the parish for some distance; and is sheltered in the rear by a richly-wooded and gently-sloping height, in the form of a crescent, protecting it from the severer winds. It is irregularly built, but contains several good houses and handsome villas of late erection; the streets are paved, and lighted with gas by a voluntary assessment, and a contribution of £30 annually from the funds of the

burgh. The inhabitants were until lately only supplied with water from the river, and from wells sunk in different parts of the town; but pipes are now laid for supplying the town with water from a spring in the hills, four miles distant to the south of Elgin. There is an extensive circulating library, containing many well-selected volumes of history and general literature; and a literary association, established in 1818, is supported by subscription, and has a well-assorted library of more than 700 volumes, with a reading-room lately added to it, supplied with newspapers and periodical works. The Morayshire Farmers' Club, established in 1799, holds its annual meetings here for the encouragement of husbandry, and, by the distribution of prizes to all successful competitors within the surrounding district, has greatly tended to the interest and improvement of this part of the country: an extensive and valuable library has been formed by the club, which contains a numerous collection of standard works on agriculture. There are no manufactures pursued to any extent; the traffic is principally in grain, which is sent to different markets, and, among others, to Leith, Liverpool, and London. A very extensive trade in flour is carried on with Aberdeen, and other towns in that county and the county of Banff. In the town are a tannery and breweries, and near it two distilleries; the shops are well supplied, and there are various handicraft trades.

A considerable degree of foreign trade appears to have been once carried on, and in 1698 a harbour was constructed at the mouth of the river Lossie, in the parish of Drainie, about five miles from Elgin, by the town council, who received the anchorage and shore dues. These dues, however, were by no means adequate to keep the harbour in an efficient state of repair, and until the recent construction of Stotfield harbour the retail dealers in the town consequently obtained their principal London goods by smacks trading to Inverness, which sometimes landed them at Burgh-Head; articles of lighter weight were generally brought by steam-boats to Aberdeen, and forwarded thence by land-carriage. A joint-stock company was at length formed for constructing a harbour at Stotfield point, at a very inconsiderable distance from Lossiemouth; and this important work has opened a direct communication with the London and other markets for agricultural produce at less expense, and to a much greater extent, than was formerly practicable. Considerable quantities of grain are still shipped, and coal is landed, at the harbour of Lossiemouth, where there is a small village for the residence of persons connected with that port; but from the want of sufficient depth of water, only vessels of very small burthen can enter. The rent obtained for the old harbour was only £80, whilst that of the new harbour is £1023 yearly. Elgin market, which is on Tuesday and Friday, is abundantly supplied with grain, poultry, butter, and provisions of all kinds. Fairs are held in the town on the Fridays preceding Martinmas and Whitsuntide, for the hiring of farm-servants and the sale of various wares; and ten fairs are annually held in the vicinity for cattle and horses. Facility of communication is afforded by excellent turnpike-roads branching off from the town in every direction; the great north road passes through it. In 1846 an act was obtained for the construction of a railway from Stotfield and Lossiemouth to Elgin, Rothes, and Craigellachie.

The BURGH, under its charter, was governed by a provost, four bailies, a treasurer, dean of guild, and ten others, who formed the town council; but since the passing of the Municipal act, the control has been vested in seventeen councillors, together with a provost, town-clerk, and other officers, elected under the authority, and subject to the regulations, of that act. There are six incorporated guilds, the shoemakers, tailors, hammermen, glovers, wrights, and weavers, all of which, except the weavers, claim the privilege of exclusively carrying on their trades within the burgh. The freedom is obtained by birth, by servitude to a freeman of the incorporated guilds, or by purchase for the sum of £16, which has been fixed by the town council for all indiscriminately, though previously the payment varied according to the practice of the different guilds. The magistrates exercise both civil and criminal jurisdiction within the limits of the burgh, and over all lands held under burgage tenure; but since the establishment of the sheriff's court few civil actions have been tried; and in their criminal jurisdiction the magistrates confine themselves to the adjudication of petty offences. Elgin is the head of an elective district, and, with the burghs of Cullen, Banff, Peterhead, Kintore, and Inverury, returns one member to the imperial parliament. The right of election is vested by the Reform act in the resident £10 householders. The number of voters within the municipal boundaries is 213, of whom ninety-five are burgesses; and of similar residents beyond the municipal, but within the parliamentary limits, fifty, of whom six are burgesses. Of £5 householders within the burgh the number is 110, of whom forty are burgesses. The election of the member takes place here, and the assizes and sessions for the county are also held in the town. The old county hall and gaol, both indifferent buildings, have been superseded by a new and elegant edifice.

The PARISH, which is of very irregular form, comprises an area of 11,500 acres; about 7000 acres are arable, 1500 woodland and plantations, and the remainder rough pasture and waste. The surface is varied: from the town it has a gentle acclivity towards the base of the Blackhills; and to the west of the river Lossie it is divided, by a precipitous ridge of considerable elevation, into the vales of Pluseardine and Mosstowie. In general the scenery is of a pleasing character, and in many parts beautifully picturesque and romantic. The river Lossie, which rises in the hills of Dallas, winds through the parish with a silent course, and skirts it on the north, frequently overflowing, and doing considerable damage to the adjoining fields: it falls into the Moray Firth at the village of Lossiemouth. There is a variety of soil: most of the arable land is of a light and sandy quality; in some parts inclining to clay; and in others, especially near the river, a deep rich loam. The crops are wheat, oats, barley of the Chevalier kind, which, from its adaptation to the soil, is raised in great quantities, potatoes, and turnips. The system of agriculture is improved: lime and bone-dust are extensively used; the lands are well drained and inclosed; the farm-houses and offices are substantial and commodious, and those of the larger farms are built of stone, and roofed with slate. Threshing-mills have been erected, several of which are driven by water; there are numerous mills for grain, a mill for carding wool, and one for sawing timber. Great atten-

tion is paid to the breeds of cattle and horses; the prevailing breed of cattle is a black kind resembling the Aberdeenshire, but inferior in size, with an occasional cross of the short-horned: very few sheep are reared. The annual value of real property in the parish is £15,592. The plantations consist of Scotch and spruce firs, and larch, intermixed with every variety of forest-trees; they are under careful management, and in a very flourishing state. The principal substratum is sandstone, of which the ridge separating the valleys of Pluscardine and Mosstowie is chiefly composed. Limestone, also, is found near the town, of a dark colour, in some parts alternated with sand and clay; it is quarried for building and other purposes, and burnt into lime for agricultural use, and for making mortar for buildings. Westerton, the seat of Lieut.-Col. Alexander Hay, is a handsome modern mansion beautifully situated in the romantic vale of Pluscardine, commanding a view of the ruins of the abbey and the richly-wooded grounds of the Earl of Fife.

Elgin is the seat of a presbytery, in the synod of Moray; patron, the Crown. There are two ministers, each of whom has a stipend of £241: one minister has a manse, but the other has neither manse nor allowance in lieu; the glebe is equally divided. A home mission for the remoter parts of the parish has been maintained for more than a century, from the funds of the Royal Bounty and the interest of some legacies bequeathed for the purpose, and the minister dispenses the ordinances of religion to more than 600 persons. The parish church, situated in the centre of the town, was erected on the site of the old church of St. Giles, which had become dilapidated. It is an elegant structure of freestone, in the Grecian style of architecture, with a noble portico at the west end of six columns of the Doric order, having an entablature and cornice surmounted with a triangular pediment. At the east end rises a square tower supporting a circular campanile turret, surrounded with columns. The interior of the edifice is well arranged, and adapted for a congregation of 1800 persons. This church was completed at an expense of £8300, and was opened for divine service in October 1828. There are places of worship for members of the United Presbyterian Church, members of the Free Church, Original Seceders, Baptists, and Independents, an episcopal, and a Roman Catholic chapel. The Elgin academy, partly supported by endowment, and partly from the common funds of the burgh, comprises three schools, each under the direction of a master; the classical master has a salary of £50 per annum, and the mathematical and English masters a salary of £45 each. The late James McAndrew, Esq., of Elgin, bequeathed £200, the interest to be distributed in prizes to three boys in the classical school. An institution for the support of old age and the instruction of young persons, established and endowed by Lieut.-Gen. Andrew Anderson, E.I.C.S., affords accommodation for ten aged and infirm persons, and for sixty children who are maintained and educated in a school of industry; and connected with the building is a free school for 230 children, with apartments for a master and mistress, who have a joint salary of £75 per annum. The teacher of the school of industry has a salary of £55, with lodging and maintenance. The buildings of the institution occupy a spacious quadrangular area, and are handsomely erected of freestone.

In the central range is a Doric portico supporting an entablature and pediment, on which latter are three sculptured figures representing the founder and the objects of the institution, the whole surmounted by a circular cupola and dome; and the wings are embellished with porticos of the same order. The interior is well adapted to the purposes of the establishment, and contains a neat chapel, schoolrooms, with refectories and dormitories for the children, and apartments for the aged persons. The gardens are well laid out, and the whole is inclosed with a stone wall and iron palisade. The expense of the buildings, which were completed in 1833, was about £12,000. An infants' school is supported by subscription, the master of which has a salary of £25 per annum, with a house and the school fees; and there is a trades' school, with an endowment of £5 per annum from the common fund of the burgh.

The poor have the interest of lands and money vested in the corporation, amounting to £23. 7. 6., and of property in the hands of the Kirk Session, amounting to £54. 15., per annum. James VI., by charter in 1620, granted to the provost, bailies, and community of the burgh, the site and revenues of the hospital of Maison Dieu, under which grant an almshouse was erected for four bedesmen, who receive annually four bolls of barley, paid out of the rents of the hospital lands. Four bedesmen are also supported by the proceeds of money and land bequeathed by William Cumming of Auchray in 1693, and producing annually £71. 18., which sum is equally divided among them. Mr. Duff of Braco, in 1729, left lands for the support of a decayed burghess, which yield £23 per annum, paid to persons nominated by the Earl of Fife. A bequest by Mr. Petrie, in 1777, for the education of six poor orphans or children of the town of Elgin, is in the hands of the Kirk Session; and from the proceeds each of the children receives £4 per annum for three years. The Guildry charitable fund was established in 1814, by the guild brethren, for the relief of the widows and children of decayed members; and by good management, the funds have accumulated sufficiently to enable them to divide £250 annually among the objects of the institution. *Grey's Hospital* for the sick poor of the town and county was founded in 1819, by Dr. Alexander Grey, of Calcutta, who endowed it with funds for its maintenance; and Dr. Dougal bequeathed £15 per annum for the purchase of medicines for the poor, which was given to the trustees of the hospital. The number of patients admitted annually is about 250, and the number in the house at one time about twenty-five; and since the addition of Dr. Dougal's bequest, medicines and advice have been gratuitously dispensed to 300 out-patients every year. The building is in the Grecian style of architecture, with a handsome portico of four Doric columns, supporting an entablature and cornice; a stately dome rises from the centre of the edifice, and the interior is well arranged. On the grounds belonging to it, and nearly adjoining, a county lunatic asylum for paupers has been built. Dr. Grey likewise bequeathed £2000 (which, on the decease of his widow, will be augmented with an additional sum of £1000) for the assistance of unmarried daughters of respectable but decayed burghesses; the interest of this sum is divided among them by the ministers and physicians of the parish, who are permanent

trustees. A portion of land was bequeathed by Mr. Laing for the assistance of a decayed merchant and guild brother; it produces £5. 10. per annum, which are paid to the nominee of the nearest surviving relative of the testator. The six incorporated trades distribute considerable sums among their poor members and widows and children; and a savings' bank was established in 1815, in which the amount of deposits is above £23,000.

There are some beautiful REMAINS of the ancient CATHEDRAL. The structure was founded by Andrew, Bishop of Moray, in 1224, and was subsequently burnt by Alexander Stewart, generally called the Wolf of Badenoch, whom one of the bishop's successors had excommunicated for the unjust seizure and detention of his lands. It was, however, by degrees restored, and continued in all its original magnificence till the year 1568, when the Regent Morton directed the lead to be stripped off its roof, in order to pay his troops. From its exposure to the weather, it now began to decay: the magnificent rood-loft, still retaining its pristine beauty, was demolished in 1640, and the spoils were used in the erection of a gallery in a neighbouring parish church; the wood-work of the great tower in time perished, and the foundation sinking, it fell in 1711. When entire the cathedral had five towers, two at the west end, two at the east, and one stately tower rising from the centre; it was a splendid cruciform structure in the decorated style of English architecture, 264 feet in length and of proportionate breadth, and the central tower was 198 feet high. The remains consist partly of the walls and turrets of the choir; and the western towers, with the grand western entrance, are yet tolerably entire; but only a few fragments of the walls of the nave and transepts are standing. The chapter-house, an octangular building nearly forty feet in diameter, with a richly-groined roof supported on one central column, is still in good preservation. Of the college, which was an appendage of the cathedral, only the eastern gateway, with part of the wall that inclosed it, is now remaining; the episcopal palace and conventual buildings have all disappeared, and though enough is left to afford an idea of the style of this once stately structure, the ruins convey but a very imperfect memorial of its ancient grandeur and magnificence. By the laudable exertions of the barons of the exchequer of Scotland, and the commissioners of woods and forests of England, much of the accumulated rubbish has been removed, and many interesting details that were long concealed have been brought to light. There are still some ruins of the church of a convent of *Grey Friars*, founded here by Alexander II.; and the site of the hospital of *Maison Dieu* may be traced in a field near the town. About six miles to the west of Elgin are the ruins of the abbey of *Pluscardine*, situated in the valley of that name. A considerable portion of the stone wall that inclosed it is yet remaining; and the dormitory, which has been roofed and restored in the original style, is fitted up as a place of worship for the inhabitants of the district. The remains are carefully preserved from further decay by the proprietor, the Earl of Fife; and the plantations which his lordship has formed in the immediate vicinity add greatly to the beauty of their appearance. On Lady hill is a monument erected by subscription to the memory of George, last Duke of Gordon, who died

in 1836. Elgin gives the title of Earl to the family of Bruce.

ELGINSHIRE, or MORAYSHIRE, a county in the north-east of Scotland, bounded on the north by the Moray Firth, on the east and south-east by Banffshire, on the south by a detached portion of the county of Inverness, and on the west by Nairnshire. It lies between 57° 11' and 57° 43' (N. Lat.) and 3° 2' and 3° 58' (W. Long.), and is about 40 miles in length, and 23 miles in extreme breadth; comprising an area of 840 square miles, or 537,600 acres; 8526 houses, of which 8154 are inhabited; and containing a population of 35,012, of whom 16,090 are males and 18,922 females. This county constituted a portion of the ancient province of Moray, which contained the shires of Nairn and Elgin, with a large part of the county of Banff, and which was for many ages distinguished as the "granary of Scotland". At a very early period Moray had an establishment of Culdees, and it subsequently became the seat of various religious societies, that emigrated from Italy, and settled here about the commencement of the tenth century. In the year 1100 it was made a diocese, and in 1150 an abbey for Cistercian monks was founded at Kinloss by David I. The priories of Urquhart, Pluscardine, and Kingussie were soon afterwards established; and in the year 1224 Andrew, Bishop of Moray, erected a cathedral for his diocese at Elgin, the remains of which form one of the most interesting ecclesiastical relics in the country. During later times the county has been included in the synod of Moray; it comprises parts of several presbyteries, and consists of about twenty parishes. For civil purposes it is joined with the shire of Nairn, under the jurisdiction of one sheriff, who appoints a sheriff-substitute for each. It contains the royal burghs of Elgin and Forres, the former of which is the county town; the towns of Garmouth and Lossiemouth, and a few villages. Under the act of the 2nd of William IV., the two counties return one member to the imperial parliament.

The SURFACE of Morayshire, which rises gradually from the shores of the Firth towards the Grampian range, is beautifully diversified with parallel ranges of hills of moderate elevation, intersecting the county from east to west, and between which are fertile valleys of pleasing appearance. The chief rivers are the Spey, the Lossie, and the Findhorn, the first of which enters the county from that of Inverness at Aviemore, and pursuing a north-eastern course, and receiving the waters of the Dulnan and the Avon, falls into the Moray Firth at Garmouth. It is scarcely navigable, from the extreme rapidity of its current, except for the floating of timber from the forests of Strathspey; but abounds with salmon, the fisheries of which produce a rental of £7000 per annum. The Lossie has its source in a loch of that name, within the county, and, taking a direction nearly parallel with the Spey, flows by the town of Elgin into the Firth at Lossiemouth. The river Findhorn rises in the county of Inverness, and soon after entering the county receives the streams of the Dorbac and the Divie, and runs northward into Findhorn bay in the Moray Firth. In Elginshire the chief lakes are, Lochnaboe, covering about sixty acres, and surrounded with a forest of ancient firs; Inchstellie, of very small dimensions; Loch Spynie, which has been almost wholly drained; and Lochindorb, on the boundary between Elgin and

the detached portion of the county of Inverness. Of these the last is four miles in length, and about one mile broad: on an island within its limits are some remains of a castle, which was occupied for a time by Edward I. of England.

About one-fifth of the land is arable and in cultivation, and of the remainder less than one-half is in pasture, woodlands, and plantations. The soil in the lower districts is sand, alternated with clay and loam, which last is the most predominant; the system of agriculture, though inferior to that of some other counties, is still greatly improved, and the farm-buildings and offices are generally substantial and commodious. Considerable attention is paid to the rearing of live stock: the cattle are mostly a mixture of the Shetland and Lancashire breeds, and the sheep of the black-faced breed; the horses are the Clydesdale and the Lanark, with a few of the Suffolk and the Yorkshire. The natural wood with which the county formerly abounded has been greatly diminished, and only some remains of it are found on the banks of the rivers: plantations have been formed of late years. The minerals are not very important. Iron-ore was wrought, but the works have long been discontinued; and there are indications of lead-ore and coal. Limestone is found in several parts near the coast, and there are quarries of excellent free-stone; slate is also wrought in some places. In this county the principal seats are Innes House, Duffus House, Darnaway Castle, Brodie House, the Grange, Burgie Castle, Ortown House, and Elchies House. The chief manufactures are the woollen and cotton, the former of which has been long established; there are likewise some bleaching-grounds, and the spinning of flax affords employment to a considerable number of persons. There are some tanneries, and also distilleries on an extensive scale, the latter paying collectively duties to government amounting to £50,000 a year. The annual value of real property in Elginshire is £98,115, of which £84,082 are returned for lands, £7350 for houses, £5439 for fisheries, and the remainder for other kinds of real property. In the county are numerous remains of antiquity, of which the chief are the ruins of Elgin cathedral, the episcopal palace at Spynie, the priory of Pluscardine, and the castles of Lochindorb, Dunphail, and Relugas: there are also many memorials of the frequent battles that occurred between the inhabitants and the Danes, by whose incursions this part of the county was much infested.

ELIE, a parish, and a burgh of barony, in the district of ST. ANDREW'S, county of FIFE, 3 miles (S. S. E.) from Colinsburgh; containing 907 inhabitants, of whom 829 are in the village. This place is supposed to have derived its name from the marshy nature of the soil previously to the modern improvements in agriculture, and a portion of land bordering on the loch of Kilconquhar still retains that character. The manor has been for many generations in the family of Anstruther, of whom the first baronet, Sir William Anstruther, represented the county of Fife from the year 1681 to 1709, and was made a lord of session in the reign of Queen Anne: he strenuously exerted himself for the establishment and maintenance of the Protestant religion. A small harbour on the coast here seems to have been formerly very much resorted to as a place of safety, in stress of weather, by ships navigating the Firth of

Forth, as, if they missed this haven, there was no other till they were driven on the coast of Norway. It was easy of access, and perfectly secure; and in a petition presented to the privy council for its repair, it is stated that it had afforded protection to more than 300 troops that must otherwise have perished in a storm. Elie harbour is now in a very ruinous and dilapidated condition, but, from a survey lately made, it appears that it might be completely repaired, and rendered one of the best harbours on the coast of Fife.

The parish of Elie, separated from that of Kilconquhar about the year 1639, is two miles in length from east to west, and one mile in breadth, and is bounded on the south by the sea. It comprises 1570 acres, of which 1464 are arable, fifty woodland and plantations, and the remainder pasture and waste. The surface is generally flat, and the sands along the shore are peculiarly convenient for bathing. A small rivulet, issuing from the loch of Kilconquhar, traverses the parish, and falls into the harbour; but there is no river. The soil is mostly dry and sandy, and the crops are wheat, barley, oats, and beans, with potatoes and turnips: the system of agriculture is in a highly improved state; the farm-buildings are substantial and commodious, and the lands are chiefly inclosed with fences of thorn, to which considerable attention is now paid. The plantations consist of beech and Scotch fir. The substratum is principally whinstone, limestone, sandstone, shale, and clay, interspersed with ironstone; the limestone is of inferior quality, and not quarried to any extent. Coal is thought to abound in this parish, which forms a section of the great independent coal formation; but it is not worked at present, though formerly several pits were open. The strata of coal are traversed by several dykes of trapstone, one of which, consisting of basalt, projects into the sea, and is very compact. The shale in many places has impressions of various plants, and stems and branches of trees are found embedded in the sandstone. Sauchur Point, a bold headland, consists of basalt, greenstone, clinkstone, and trap tuffa, and abounds with a beautiful red gem called the Elie ruby, which is of a brilliant colour, varying in size from a garden-pea downwards, and is found only on this part of the coast. The annual value of real property in the parish is £3661.

Elie House, the property of Sir W. C. Anstruther, is a noble ancient mansion, situated in grounds which have been tastefully disposed and richly ornamented; but as the proprietor is not resident here, it is not kept up, and is rapidly falling into dilapidation. The village, which is much resorted to during the summer months for sea-bathing, is well built, and has a remarkably neat and cheerful aspect. A subscription library has been established, which forms a tolerably extensive collection of interesting volumes. The post is daily, and is a branch from the office at Colinsburgh; a packet sails weekly to Leith, and the Aberdeen, Anstruther, Montrose, and Dundee steam-vessels touch at this port twice or three times daily, both going and returning. A small fishery is carried on by a few of the inhabitants, for the supply of the village. Ecclesiastically the parish is in the presbytery of St. Andrew's, synod of Fife, and in the patronage of Sir W. C. Anstruther; the minister's stipend is £150, with a manse, and a glebe valued at £50 per annum. Elie church, which was substantially repaired in 1831, is a neat and well-arranged edifice, adapted for a con-

gregation of 600 persons, and situated in the centre of the village. The parochial school affords a good education; the master has a salary of about £40, and his fees and other emoluments may amount to about £60 more, besides a house with a small garden, for the deficiency of which he has an allowance of £2 per annum. There are rents of land and other revenues, vested in the minister and elders for the use of the poor, amounting to £78. 10. per annum. A friendly society called the Sea Box, consisting of masters of vessels and seamen, associated for their mutual benefit, obtained from George III. a charter of incorporation; the funds, which are ample, are derived from land, houses, and other property, and as the demands are comparatively small, the society is rapidly increasing its capital.

ELLENABAICH, a village, in the parish of KILBRANDON and KILCHATTAN, district of LORN, county of ARGYLL; containing 311 inhabitants. This is a small place, situated in the Kilbrandon portion of the parish.

ELLENERTON, a village, in the parish of KIRRIEMUIR, county of FORFAR; containing 108 inhabitants. It is chiefly inhabited by persons employed in agriculture and in the manufactures connected with the trade of the town of Forfar.

ELLIM, county BERWICK.—See LONGFORMACUS.

ELLON, a village and parish, in the district of ELLON, county of ABERDEEN, 16 miles (N. by E.) from Aberdeen; containing 2941 inhabitants. The name of this place is supposed to be derived from a Gaelic term signifying an island, and to have been applied on account of the situation of a small island in the river Ythan, near the village, and contiguous to the ferry formerly used on the principal line of road leading from Aberdeen to the north-eastern district of the county. The probability of this derivation is increased by the circumstance of the word *Elleann* being inscribed on some old communion cups presented to the Kirk Session by the family of Forbes of Watertown. Ellon was from a very remote period the seat of the jurisdiction of the earldom of Buchan, and the court was held in the open air, on an eminence rising from the bank of the Ythan, and called originally the "Moot hill of Ellon", but in later times the "Earl's hill". The lands formerly belonged to the Cistercian abbey of Kinloss in Moray, and in the thirteenth century Robert I. confirmed to the abbot the possession of the church of Ellon. At one period, also, this was a prebendal church of Aberdeen, and the bishop of that see had considerable lands here.

The PARISH is mostly situated on the northern bank of the river Ythan. It measures ten miles in its greatest length, and seven miles in its greatest breadth, and comprises nearly 20,000 acres, of which about 15,000 or 16,000 are arable and the remainder moor, with the exception of 200 acres of plantations. Though there are no remarkable eminences, the surface is agreeably diversified with rising grounds, on a clear day commanding prospects which comprehend the north-eastern range of the Grampians, Benochie, the Foudland hills, the summits of some of the Spey-side mountains, and an expanse of the German Ocean reaching from the Girdleness lighthouse on the south nearly to Rattray point on the north. The valley of the Ythan, bisecting the parish from east to west, is joined on the north by the small valley of Ebrie, extending in that direction for several miles, and on the south by that of Brony, which reaches

about the same distance towards the south-west. Rising in the parish of Forgue, the river falls into the German Ocean at the sands of Forvie; it expands into a broad shallow basin just before it joins the sea, and is navigable for lighters to the meadow of Watertown, about a quarter of a mile below the village, where there is a landing-place. The salmon-fishing on the river was formerly worth several hundreds of pounds per annum; but since the increase of stake-nets along the coast, it has been almost annihilated. The burns of Ebrie and Brony, tributaries of the Ythan, are well stocked with salmon-trout, common burn-trout, and finnock, affording excellent sport; and parties from Aberdeen frequently visit the district in the summer months to enjoy the recreation of angling.

The SOIL is in part dry, resting on a gravelly bed; clay is found in some places, and there is a very considerable extent of fertile diluvial earth. In the northern portion, where the higher grounds are, the soil is mossy and exceedingly poor, much mixed with white sand, encumbered with loose stones above and worthless diluvial deposits below, and totally incapable of profitable cultivation. The grain chiefly depended on is oats; bear and turnips form a considerable portion of the produce, especially the latter, and the crops are raised under the rotation system. Most of the modern improvements being understood, agriculture is on a respectable footing: the chief impediment to more extensive advances is the want of encouragement for the outlay of capital. Threshing-mills are numerous, and the farm-houses and offices are in general convenient and well built. Sheep-farming is unknown: the cattle, formerly the Aberdeenshire horned and Angus polled breeds, have been latterly much mixed with the Teeswater, which prevails to a considerable extent. Great encouragement has been afforded in the improvement of stock by the Formartine Agricultural Association, of which the Earl of Aberdeen is patron, and most of the farmers here members. The rocks are all of the primitive formation, and comprise granite, gneiss, quartz, &c. From the impervious nature of the subsoil, and the proximity of a stormy sea-coast, the parish is an unfavourable site for the growth of wood; and the trees, consisting chiefly of Scotch fir and larch, are all of inferior size, with the exception of a few scattered specimens in the neighbourhood of the village. The annual value of real property in the parish is £9678. The mansion-house of *Arnage*, seated in the valley of the Ebrie, on the bank of the stream, is an ancient structure commanding a pleasing view of the scenery in the immediate locality. *Turner Hall*, about two miles north of the village, embraces extensive prospects of the German Ocean, the high grounds of Aberdeen, and several of the mountains in the districts of the Don, the Dee, and the Spcy. There is a mansion-house on the estate of *Eslemont*, surrounded by fifty or sixty acres of plantation, ornamentally disposed; and a fourth residence, named *Dudwick*, a plain old house, occupies a cold marshy situation in the upland district. *Ellon Castle*, now deserted and almost ruinous, was erected principally about the year 1780, by the late Earl of Aberdeen, who made it his residence, and enriched the surrounding grounds with a variety of plantations, which have since been to a great extent cut down.

The village contains nearly 500 persons, and being the principal market for a large district, and the resi-

dence of several thriving traders, is the scene of considerable traffic. There is a general post-office, and the high road from Aberdeen to Peterhead and Fraserburgh passes through: a turnpike-road leads to the port of Newburgh, about five miles and a half distant, and there are also good commutation roads. A market for grain and black-cattle is held once a fortnight, which is well attended, especially by the Aberdeen butchers, and by dealers in grain, whose purchases are chiefly for exportation at Newburgh: two annual fairs take place in the village, and four in its immediate vicinity. Ecclesiastically the parish is the seat of the presbytery of Ellon, in the synod of Aberdeen, and is in the patronage of the Earl of Aberdeen: the minister's stipend is £219, with a manse, and a glebe valued at £18 per annum. The church, erected in 1777, is a plain commodious building, accommodating 1200 persons: it is lighted at the evening service with gas. There is an episcopal chapel, containing between 300 and 400 sittings; also places of worship for members of the Free Church, Independents, and the United Presbyterian Synod. Ellon parochial school affords instruction in Latin, Greek, French, and mathematics, in addition to the usual branches; the master has a salary of £28, with a house, £25 fees, and a portion of the Dick bequest. There is also a school in the northern district, where instruction is given in the ordinary branches; the master here, also, has a portion of the Dick bequest, besides his salary and fees. A savings' bank and three friendly societies are kept up.

ELLSRICKLE, or ELSRIDGEHILL, a village, in the parish of WALSTON, and Upper ward of the county of LANARK, $1\frac{1}{4}$ mile (S.) from Walston; containing 211 inhabitants. It lies in the southern part of the parish, on the road from Peebles to Lanark. Ellsrickle is a pleasantly situated and picturesque village, whose scattered cottages are sheltered by plantations, and trees of larger growth; and from the advantages it possesses, and the liberality of the proprietor of the soil around it, the place is likely to increase in its extent and attractions. A burn proceeding directly hence unites with several others in the vale of Ellsrickle. Some of the inhabitants are employed in hand-loom weaving for the Glasgow manufacturers. There is a school, supported partly by contributions from the heritors and partly by the school fees.

ELPHINSTONE, a village, in the parish of TRANENT, county of HADDINGTON, 2 miles (S. by W.) from Tranent; containing 236 inhabitants. This village lies in the southern extremity of the parish, on the road from Dalkeith, by Penston, to Haddington; and is chiefly inhabited by colliers. The lands adjacent were formerly embellished with woods, of which nearly the whole have been cut down. The tower of Elphinstone is a square massive pile of building, supposed to have been erected in the early part of the fourteenth century, and in 1600 a dwelling-house was attached to it, which is still inhabited: the stately trees that surrounded it have been removed. A school for the instruction of the children of persons employed in the collieries is supported by subscription.

ENGINE, NEW and OLD, hamlets, in the parish of NEWTON, county of EDINBURGH; containing respectively 51 and 49 inhabitants.

ENHALLOW, an island, in the parish of ROUSAY and EAGLESHAY, county of ORKNEY; containing 26 in-

habitants. It is a low and very small islet, somewhat in the form of a heart, lying westward of the island of Rousay, from which it is separated by a reef of rocks. The Sound of Enhallow is on the south, between this and the island of Pomona: it is narrow; and as the tide is rapid, its passage can only be attempted with a fair wind and in moderate weather, it being otherwise very dangerous.

ENSAY, an island, in the parish of HARRIS, county of INVERNESS; containing 16 inhabitants. This island lies in the Sound of Harris, and is about two miles in length and a mile in breadth; it has a good verdant soil, and is well cultivated.

ENZIE, for a time a quoad sacra parish, formed of part of the parishes of BELLIE and RATHVEN, in the county of BANFF, 4 miles (N. E.) from Fochabers; containing 2103 inhabitants. The district is about six miles in length and from three to four in breadth, and is bounded on the north by the Moray Firth, and on the south by the Aldmore hills and Whiteash. In general the surface presents a very pleasing aspect, considerably heightened by the interspersions of wood; and the views embrace a large extent of the Firth, and of the opposite coast of Ross-shire and Sutherland. The soil is various, in some places rich and fertile, and in others hard and thin; and the crops, which are usually early, consist chiefly of wheat, oats, and barley, the first being most cultivated. The Duke of Richmond is the principal proprietor. On the hill of Parrymont, in the Rathven portion of the district, is a quarry, whence an abundance of blue slate and stone-slabs is obtained; and at Gollachie are a woollen-cloth factory and a carding-mill. White-fishing is prosecuted with advantage; cod and haddock are caught in considerable quantity, and the former fish and ling are cured by the inhabitants, and disposed of in the southern markets. There is a salmon-fishing station at Port-Gordon, the chief village, belonging to a company in the neighbourhood; and here also a pretty extensive trade is carried on in the exportation of grain, and the importation of coal and salt. Eight or ten vessels belong to the place, by which the commerce in these articles is for the most part conducted; and a kind of temporary harbour affords them a safe anchorage. The north coast-road from Banff to Fochabers, and the road from Keith to Port-Gordon, intersect the district.

Ecclesiastically Enzie is within the bounds of the presbytery of Fordyce, synod of Aberdeen, and the patronage is vested in the Committee for managing the Royal Bounty: the stipend of the minister is £62, and there is a glebe of eight acres, valued at about £1 per acre, and for which the minister pays a ground rent of two bolls of barley. The church is a small structure, built in 1785, and enlarged by a gallery at the end in 1815, and by a side gallery in 1822, the whole containing 400 sittings: it is nearly equidistant from Rathven church and the church of Bellie, about four miles from each. The Roman Catholics have a place of worship near Achinhairig, a small hamlet; where, and at Starryhaugh and Curfurrach, are schools supported by the Society for Propagating Christian Knowledge. At Port-Gordon is a school maintained by the Duke of Richmond. The late celebrated Dr. Alexander Geddes, a Roman Catholic divine, translator of Horace's Satires, and of a portion of the Bible, was a native of the district. Enzie confers the title of Earl on the Marquess of Huntly.

ERISKAY, an island, in the parish of SOUTH UIST, county of INVERNESS; containing 80 inhabitants. This is a small isle of the Hebrides, on the south side of South Uist, from which it is separated by a narrow and rocky sound. It is noted as having been the first place upon which the unfortunate Prince Charles Stuart landed, in his wild enterprise to regain the throne of his ancestors in 1745. The island affords some pasturage, and the inhabitants are partly employed in fishing and in the manufacture of kelp. On a detached and high rock, at its southern end, are the ruins of an old square tower.

ERROL, a parish, in the county of PERTH; including the villages of Drums, Grange, Leetown, Mains of Errol, and Westown; and containing 2832 inhabitants, of whom 1147 are in the village of Errol, 10 miles (E.) from Perth, and 12 (S. W. by W.) from Dundee. This place, the name of which is descriptive of its situation as a conspicuous landmark in the Firth of Tay, was, by charter of William the Lion, constituted a barony, and granted to the family of Hay, in the latter part of the twelfth century. A descendant from the elder branch of that family was created Earl of Errol in the time of James II., and this title is still possessed by the Hays, though all their estates here were sold in the reign of Charles I., with the exception of the property of Leys, in the eastern portion of the parish, which, having been conveyed in the thirteenth century by the proprietor to a younger brother, is yet in the hands of his descendants. The PARISH is about six miles in length, and of irregular form, ranging from two miles and a half to three and a half in breadth. It is bounded on the south by the Firth, and comprises 8600 acres, of which nearly the whole is rich arable land in high cultivation, with small portions of pasture and woodland, chiefly around gentlemen's seats. Though generally level, the surface is broken by two lofty ridges of varying breadth, which traverse the western portion of the parish in directions nearly parallel, and by a smaller ridge almost in a similar direction, about half a mile distant from the former. The whole of the coast, which extends for six miles, is flat, and its elevation not more than twenty feet above the level of the river, which is here more than two miles in breadth. From the higher grounds are fine views of diversified scenery, embracing the Lomond hills in the county of Fife, the vale of Strathearn, the hill of Moncrieffe near the confluence of the Earn and the Tay, with the summits of the western Highlands of the county of Perth. The village of Errol, from the beauty of its situation on the slope of an eminence crowned with the rich foliage of stately oaks, is a strikingly picturesque feature in the general landscape as seen from the river at the distance of less than half a mile; and the scenery immediately around it abounds with almost every variety. Beneath the village is one of the largest plains in the country, skirted on one side by the braes of the Carse of Gowrie, an extended range of hills cultivated nearly to the summit, and surmounted by the distant hills of Dunsinnan; and on the other side by the Firth, which, from the majestic breadth of its waters, with numerous vessels constantly passing, forms a fine contrast to the rich luxuriance of the vale. In the north and north-west parts of the parish are several pools, receiving the streams which descend from the higher grounds, and the water collected by the different drains that have been

formed for carrying off the surface water from the farms. From these pools issue various streams, which find their way into the Firth; they are on an average from ten to fifteen feet in width, and from two to three feet deep, except after heavy and continued rains, when they acquire a considerable additional depth. The only springs are those that have been found by sinking wells.

The SOIL in the higher parts of the parish is generally a black loam resting upon clay, and occasionally on gravel; it is of various depths, and more or less wet in different places. On the lower lands the soil is mostly clay, intermixed with sand, and, by long cultivation and the plentiful use of manure, has been rendered extremely fertile. The system of agriculture is good, and the rotation plan of husbandry adopted; the crops are wheat, barley, oats, turnips, and peas, all of which are abundant. The farm-buildings have been much improved, and draining has been carried on to a considerable extent. Embankments have been also constructed for protecting the low lands from the inundations of the Tay. The principal of these was completed by Mr. Allen in 1836, when about 100 acres were reclaimed from the river, now forming some of the richest land on his estate: the embankment is forty feet wide at the base, two feet on the summit, and is eleven feet high; the lower portion of the bank, to the height of four feet, consists of a wall of dry stones, and the upper of earth and reeds intermixed with stones. A second embankment has been more recently constructed under the direction of Captain Allen, R.N., on a similar plan, to the east of Port-Allen, and of greater extent than the former to the west of the port; and in process of time, by continuing these embankments, a very large portion of most valuable land will be added to the farms contiguous to the river. With a view to draining the lands in the district, tile and brick works have been erected on a very extensive scale, by the Messrs. Adams of Glasgow, on Mr. Allen of Errol's property, on the north side of the village. The annual value of real property in the parish is £20,260.

There are some plantations on the banks of the Tay, to resist the incursion of the tide, consisting chiefly of hard-woods: in the grounds of the principal proprietors the trees are chiefly larch; in Errol Park is oak of venerable growth, for which the soil is well adapted, and in some of the poorer lands that are uncultivated Scotch fir is predominant. The substrata in the parish are chiefly limestone of inferior quality, which is used for building, and sandstone, tolerably fine grained, but not very compact; and the minerals hitherto found are calcareous spar, quartz, and chalcedony. The sandstone is wrought at Clashbennie, where an extensive quarry has been opened, from which between 4000 and 5000 tons are annually raised. In this quarry have been met with, at different times, various fossils and organic remains. Impressions of small fish have been frequently discovered, and in 1836 a portion of stratum was found, in which was an entire impression of a fish nearly twenty-seven inches and a half in length, and about thirteen inches in breadth, in form resembling a tortoise. The upper portion of the stratum, containing the entire body of the fish, was soon afterwards found, and purchased by the Rev. Mr. Noble, of St. Madoes. Errol Park is an ancient mansion finely situated; the park contains some fine specimens of stately timber, and the avenue to the house is formed of lofty oaks of venerable growth. The grounds

adjoining the residences of the other proprietors are also well planted.

The village is irregularly built; but its situation on an acclivity, at a moderate distance from the river, gives it a very pleasing aspect, and it is well inhabited. The weaving of linen-cloth is carried on for the manufacturers of the town of Dundee, and affords employment to several families; a considerable number are also engaged in spinning and winding yarn. A kind of soft canvass, made from an inferior sort of hemp, is likewise manufactured here, chiefly for bags and packages for goods. The salmon and sperling fishery is pursued to a considerable extent, producing to the proprietors an annual rental of about £300. The navigation here of the Tay is almost confined to Port-Allen, where there is a small but very commodious harbour; and from the progress which is still being made in the construction of embankments, the channel will be considerably deepened, and greater facilities of entrance afforded for the shipping. The exports are grain, potatoes, and other agricultural produce, and the chief imports are lime and coal; about 5000 bolls of lime and 1000 tons of coal are annually landed. A passage-boat plies daily between this place and Newburgh, and on its return brings timber, iron, and other articles of commerce. The harbour dues are paid to the proprietor; the ferry is also in his possession, and produces a rent of £200 per annum. About a mile and a half from the village of Errol, at a place called Flatfield, is a post-office, which has a branch in the village. Fairs are held in July and October; the latter has been recently revived, and the July fair is numerously attended, though little business is done except in hiring farm-servants. The nearest market-town is Perth, with which and other places in the neighbourhood a facility of communication is maintained by good roads, and by the Perth and Dundee railway.

Errol is for ecclesiastical purposes included in the presbytery of Perth, synod of Perth and Stirling: the minister's stipend is about £270, with a manse, and a glebe valued at £16 per annum; patrons, the Allen family. The church, pleasantly situated on a gentle acclivity at the extremity of the village, is a handsome cruciform structure in the later English style, with a lofty square embattled tower crowned by pinnacles; it was erected in 1632, at an expense of £6000, and is adapted for a congregation of 1434 persons. There are places of worship for the United Presbyterian Synod and members of the Free Church. The parochial school affords a useful education; the salary of the master is £34, with £35 fees, and a house and garden. In addition to a small subscription library in the village, there is an extensive and valuable library connected with the Sunday schools, containing about 400 volumes; a friendly society has been established, and a savings' bank opened. At Clashbennie, and also at Inchmartin, is a solitary upright stone, of large dimensions but rude form, apparently raised as a memorial of some event. At Westown, rather more than three miles from the village of Errol, are the ruins of a small ancient church, which in old documents is styled "the church of the Blessed Virgin, of Inchmartin", and in which, till within the last half century, the ministers of Errol used to preach every alternate Sunday; the building is most romantically situated, and interments were not long since made in the cemetery surrounding it. In the grounds of Murie

is a circular mound called the Law Knoll, about twenty feet in height; the diameter at the base is about forty yards, and at the summit thirty feet. The acclivities are planted with trees, and around the top is a low wall of turf, on the outside of which is a broad walk; the base is inclosed in a triangular area formed by three walls of turf. It is situated at one extremity of an avenue of lofty oaks leading in a right line to a spot anciently called Gallow Knoll, but now Gallow-flat; the mound is supposed to be the spot where the law was once administered, and Gallow-flat was the place of execution.

ERSKINE, a parish, in the Upper ward of the county of RENFREW, 10 miles (N. N. W.) from Glasgow; containing, with the village of Bishopton, 1407 inhabitants. This place, the name of which is of uncertain origin, is of considerable antiquity: according to most historians, the lands were conferred upon the founder of the Erskine family by Malcolm II., in reward of his valour at the battle of Murthill, in which he slew with his own hand Enrique, one of the Danish generals, whose head he presented to that sovereign after the victory. The parish is beautifully situated on the river Clyde, and extends along its south bank for nearly eight miles and a half, increasing in breadth from the western extremity, where it is less than two miles, to the eastern extremity, where it is more than three miles broad. It is bounded on the east by the parish of Inchinnan, on the south by that of Houston and Killallan, and on the west by the parish of Kilmalcolm. Though level near the shore, the surface rises rapidly towards the south; and the higher grounds command diversified prospects over the Firth of Clyde and the opposite coast of Dumbartonshire, embracing the castle of Dumbarton; to the west of the parish appear Port-Glasgow and Greenock, and in the east the park and pleasure-grounds of Erskine House, the splendid seat of Lord Blantyre. The more distant view of Dumbartonshire abounds with objects of romantic beauty and interesting character; the vale of Leven is visible, interspersed with elegant villas, and further off are seen, in clear weather, the waters of Loch Lomond, and the lofty mountain of Ben-Lomond. The river Clyde, near Erskine House, retains its original character, and its banks are conspicuous for picturesque scenery. It is crossed by two ferries within the limits of the parish. Erskine ferry, which communicates with the village of Old Kilpatrick, is under good management, and has an excellent inn, much frequented by parties of pleasure from Glasgow. The Western ferry, about six miles from the former, connects the parish with Dumbarton.

The whole number of acres is 7109, of which 5123 are arable, 554 woodland and plantations, 800 meadow and pasture, and the remainder moss and waste. The soil is various, but in general light; in the north-eastern portion, a dark grey mould mixed with gravel; and in other places, clay alternated with sand. The crops are oats, barley, wheat, potatoes, and turnips, with the usual grasses; the rotation system of husbandry is prevalent, and much improvement in agriculture has been effected under the auspices of Lord Blantyre. Tile-draining has been extensively introduced, and works for the making of tiles, for which clay of excellent quality is found, have been established on their respective lands by Lord Blantyre and Mr. Rodger. The farm-houses are generally substantial and commodious, and most of the lands are

inclosed either with fences of hawthorn, or with walls of stone. The dairy-farms are well managed: the cows are principally the Ayrshire, with some few of a mixed breed between the Ayrshire and Guernsey; the average number on the several farms is about 350, and 450 young cows and black-cattle are pastured on the hills. Few horses are kept except those for agricultural use. The annual value of real property in the parish is £8182. The plantations are chiefly larch, Scotch, spruce, and silver firs; and the prevailing woods, oak, elm, beech, ash, walnut, horse-chesnut, and sycamore, of which there are some remarkably fine trees. The substratum is partly gravel, mixed with clay, and interspersed with large boulders of greywacke and granite; in the south-eastern part of the parish, carboniferous rock; and towards the western extremity the hills are wholly of trap rock of porphyritic quality, containing crystals of felspar, with amygdaloids of calcareous spar. On the West ferry hill, while cutting through it for the formation of the Glasgow and Greenock railway, the workmen discovered some fine basaltic columns. Zeolites have been found in the trap rocks; and in the Bishopton ridge is a new mineral, called "Greenockite" in honour of Lord Greenock, who discovered it, and which has, on analysis, proved to be a protosulphate of cadmium. There are two quarries of freestone on the lands of Lord Blantyre, from which materials were taken for the erection of the church, the mansion-house of Erskine, and other buildings; there is a similar quarry on the lands of Mr. Rodger, and in several parts of the parish whinstone is wrought for the roads.

Erskine House, beautifully situated on a terrace overlooking the Clyde, was erected by the late Lord Blantyre from a design by Sir Robert Smirke, of London. It is a fine structure in the Elizabethan style of architecture, ornamented with richly-crocketed pinnacles, and forming an imposing and highly interesting feature in the scenery of the coast. The principal building is 185 feet in length. The mansion contains upwards of seventy-five rooms, of which seven are public rooms of large size and beautiful proportions, including a picture-gallery 118 feet long. The internal decorations are costly and magnificent. The demesne is richly wooded, and embellished with flourishing plantations; the pleasure-grounds are tastefully laid out, and contain an obelisk erected by the gentry of Renfrewshire as a tribute of respect to the memory of the late Lord Blantyre, lord lieutenant of the county, and major-general in the British army, who was accidentally shot during the revolution at Brussels in 1830. Drums is a mansion-house in good repair, the residence of the Darroch family. Dargavel, built in 1584, is an interesting castellated mansion, in that style of French architecture introduced into Scotland by Mary, Queen of Scots; the lower story is strongly vaulted, and in the flanking towers are loopholes for the discharge of musketry. Bishopton House was once a favourite country residence belonging to the Archbishop of Glasgow.

The population is agricultural; but some of the females are employed in spinning fine yarn for the manufacture of thread, first introduced into Scotland by Miss Shaw of Bargarran, who by repeated efforts succeeded in producing an article of superior quality, which, being carried by Lady Blantyre to Bath, was eagerly purchased by the lace manufacturers of that neighbourhood, and

under the name of Bargarran thread, obtained a high price. The making of this thread is carried on extensively in Paisley, and affords employment to numbers of the female population of the district. A post-office has been established at Bishopton, and facility of intercourse with the neighbouring towns is afforded by the road and railway from Glasgow to Greenock, which both pass through the parish, and by good roads kept in repair by statute labour: boats, also, from Glasgow to Greenock, touch almost every hour at Erskine ferry. The railway passes through Dargavel moss, where the operations were long and formidably retarded by the soft and yielding nature of the ground, which occasioned great difficulty in procuring a solid bed for the rails. Having crossed the moss, the line enters a deep cutting through Barangy hill: at the deepest portion of this cutting, the railway is spanned by a handsome bridge of three arches; and on quitting the cutting, the line traverses a heavy embankment, over a portion of the lands of Rossland. Shortly after passing Rossland House, the line enters a deep excavation through Bishopton hill. This cutting, which extends upwards of a mile in length, and includes a long tunnel, was one of the most difficult undertakings connected with the enterprise, the whole being cut through the whinstone ridge, or trap dyke, which intersects the valley of the Clyde at this point, and of which the rock of Dumbarton Castle forms perhaps a projecting ramification. In its further progress, the line proceeds by the Bishopton station, and approaches the shore of the Firth of Clyde, along which it passes on an embankment of very considerable magnitude. It then arrives at the West ferry station, and continues its course in proximity to the Clyde, crossing the lands of various proprietors, and, after traversing a slight embankment, passing through a deep whinstone cutting. Thus, its course through the parish comprises some unusually difficult and important works. There are fisheries on the Clyde, but they are quite unimportant; the few salmon that are taken here are generally sent to Glasgow.

Ecclesiastically the parish is within the bounds of the presbytery of Greenock, synod of Glasgow and Ayr: the minister's stipend is £279, with a manse, and a glebe valued at £9. 12. 9. per annum; patron, Lord Blantyre. Erskine church, having become ruinous, was taken down in 1813, and a new church erected near its site, on ground given by Lord Blantyre; it is a neat structure in the Elizabethan style of architecture, containing 500 sittings. There is likewise a place of worship for members of the Free Church. A parochial library, containing about 400 volumes, is supported by subscription. The parochial school, for which a handsome and spacious building has been erected, is well attended; the master has a salary of £30, with a house, and the fees average £30 per annum. There is also a subscription school, lately rebuilt.

ESKDALEMUIR, a parish, in the county of DUMFRIES, 13 miles (N. W.) from Langholm; containing 646 inhabitants. This parish, as its name partly imports, consists of the lands lying at the head of Eskdale, which were originally possessed by the clan of Beattieson, but which passed into other hands under the following circumstances. Cardinal Beaton and Robert Lord Maxwell, according to tradition, were sent by James V. as ambassadors to France, in the year 1537, to conclude a marriage between that sovereign and Mary of Guise,

when Lord Maxwell, by commission, as proxy for the king, married the princess, and, having with the cardinal conducted her to Scotland, received as a reward from the crown the lands comprehended under the name of the Five Kirks of Eskdale. Lord Maxwell at once offered the occupiers a title to their several possessions on certain specified conditions; but, indignant at the royal grant, they resolutely objected, and matters ran into such severe altercation that he was obliged to flee to save his life, and shortly afterwards he sold the estate to Scott of Branxholm, ancestor of the ducal family of Buccleuch, leaving him to obtain possession as well as he could. Upon this, Scott, who was warden of the middle marches between Scotland and England, having raised numerous friends, proceeded to Eskdalemuir, and expelled all the clan of Beattieson, except Roland Beattie of Watcarrick, who had saved Lord Maxwell's life by lending him a horse on which to escape from the malcontents, and to whom that nobleman had confirmed a tenant-right in his property. Having thus cleared the domain, Scott gave feu rights of the greater part of it to his relations and dependents.

Eskdalemuir was originally a portion of the parish of Westerkirk, but was erected in 1703 into a separate parish. It is the largest in the county, being about twelve miles long from north to south, and eight miles broad, and containing 42,250 acres. The surface is strongly marked in the north by part of a chain of mountains extending from the sources of the Clyde and the Annan on the west to the source of the Tyne, in Northumberland, in the east: the highest hills are Lochfell, and Eskdale or Ettrick Pen. The White and the Black Esk, so named from the sandy and mossy soils over which they run, take their rise in this parish, and uniting at its southern extremity, form that beautiful river which, after receiving many tributary streams, loses itself in the Solway at Longtown, in Cumberland. There are three celebrated cascades called Goat-linn, Wellsburn Spout, and the Garvald Linns. The SOIL is deep in many parts, but is not fertile, on account of the elevated site of the district: the hills towards the south are green, but the more retired parts are moss, covered with coarse grass and different kinds of water-plants. The number of acres cultivated, or occasionally in tillage, is 482, the rest remaining constantly in pasture: there is very little wood to be seen in any direction. This is chiefly a grazing parish; the sheep, with a few exceptions, are all Cheviots, and the cattle are of the Galloway breed, with some of the Ayrshire and the Dutch: both sheep and cattle are usually taken to the Langholm and Lockerbie markets. Many improvements have been effected by the embankment of the rivers; by mole-catching to a surprising extent; and by surface-draining, there being now more than 400,000 roods of drains in the parish. The ring fences around the inclosed lands of farms are commonly of stone, the subdivisions of thorn, and the march dykes between farms always of stone. In this parish the strata consist of greywacke and other transition rocks: the common fuel is peat, of which there is an abundant supply. The parish roads extend about twenty miles in total length: there is an old bridge over each of the rivers, with a third built about thirty-five years ago across the Black Esk, on the line of the road to Lockerbie, Lochmaben, Dumfries, and Moffat; there are two new bridges over the White Esk, and one

over the Black Esk. The annual value of real property in Eskdalemuir is £6766.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Langholm, synod of Dumfries; patron, the Duke of Buccleuch and Queensberry. The stipend is £221, with a good manse, and a glebe of considerable extent, valued at £20 per annum. Eskdalemuir church stands nearly in the centre of the parish, on the bank of the White Esk; it was built in 1826, and is a commodious and elegant structure, containing sittings for 393 persons. The Reformed Presbyterians have a place of worship. There is a parochial school, in which Latin, Greek, and French are taught, with the usual branches of education; the master has a salary of £34, with about £10 fees, and a house and garden. A library consisting of about 500 volumes has been lately instituted, and is in a prosperous state. The chief relic of antiquity is the camp of Castle-O'er, or Overbie, which is situated on the farm of Yethyre, and though of an oval form, has been generally considered as of Roman origin, and to have communicated with the camps of Middlebie and Netherbie: there is scarcely a hill within sight of it on which some vestige does not exist of an outer encampment. Another camp, however, has more recently been discovered on the farm of Raeburnfoot, and it is supposed that the former is a Saxon work, and the latter the true Roman camp of Overbie. It exhibits all the lineaments, as far as they are visible, of a most complete military station, with the pratorium and every other mark of a Roman work. Were the lines on the west side of the entrances extended as far as those on the eastern side, so as to make it a square, it would cover seven acres. There are two Druidical circles on the farm of Coatt, measuring in circumference ninety feet and 340 feet, respectively. The parish and adjoining district confer the title of Baron Scott and Eskdale on the Duke of Buccleuch.

ESSIE, county of ABERDEEN.—See RHYNIE.

ESSIE, FORFARSHIRE.—See EASSIE.

ETTRICK, or ETTERICK, a parish, in the county of SELKIRK, 18½ miles (S. W.) from Selkirk; containing 525 inhabitants. The name, of uncertain origin, is supposed by some to be in the Gaelic language descriptive of the river on which Ettrick is situated. The parish is about ten miles in length, and nearly of equal breadth in the widest part, and comprises 43,968 acres, of which 217 are arable, 120 meadow, 270 in woods and plantations, 150 water, and the remainder pasture. Its surface is broken by numerous hills, some of which are of mountainous height, and all covered with verdure from their base to their summit, with the exception only of a few whose brows and summits of heath add to the variety and beauty of the landscape. Ettrick or Eskdale Pen, the highest of these mountains, has an elevation of 2200, Wardlaw of 1980, and Old Ettrick hill of 1800 feet above the level of the sea. The chief river is the Ettrick, which rises on the south side of a mountainous ridge, between Loch-fell and Capel-fell, and in its progress through the parish receives numerous streams descending from the heights. It generally flows with an equable and tranquil current, but when swollen by continued rains, it acquires the impetuosity of a torrent, and, frequently bursting its banks, inundates the adjacent lands. After leaving the parish, it pursues a north-eastern direction, and falls into the Tweed near Abbotsford. The Timah, a small

rivulet, has its source in the hills on the confines of the parish of Eskdalemuir, and after a course of about six miles through this parish, falls into the Ettrick near the church. The Rankleburn, also a small rivulet, rises near the source of the Timah, and joins the Ettrick not far from the ruins of the castle of Tushielaw. These streams abound with trout; and in the Ettrick, salmon and sea-trout are found in the ordinary seasons.

The soil is very various; on the summits of the hills, a deep moss; on the slopes, a mossy gravel; on the low lands, a rich alluvial deposit, and in general fertile. The crops are oats and barley, with potatoes and turnips: the system of agriculture is improved; the lands have been drained and partially inclosed, and the farm-buildings are commodious and well built. The principal attention, however, is paid to the rearing and pasture of flocks of sheep; the Cheviot breed of sheep has altogether superseded the old black-faced kind, and the average number at present pastured in the parish may be taken at about 26,000. Recently, Highland Kylee cattle have been introduced on some of the farms; they eat the refuse of the pastures, and render them more fertile: the milch-cows are all of the short-horned and Ayrshire breeds. On the whole, about 400 head of black-cattle are pastured. A due degree of attention to the improvement of live stock has been excited by the Pastoral Society, instituted in 1818, under the patronage of the late William John, Lord Napier, and which holds one of its yearly meetings here. The annual value of real property in Ettrick is £7844. Though formerly part of an extensive forest, there is very little old timber in the parish; the chief trees are the mountain and common ash, birch, alder, willow, and thorn. The plantations, which are of comparatively recent formation, consist of Scotch and spruce firs and larch, intermixed with the various kinds of forest-trees; they are well managed, and in a flourishing condition. The principal substrata are greywacke and clayslate, of which the rocks are mostly formed. A nodule of antimony was once found in the channel of a burn, near the source of the Ettrick; but after diligent search, no further appearance of it could be ascertained. Pyrites of iron has been also discovered occasionally; and near the loch of the Lowes, which borders on the parish, is a black rock of glossy appearance, supposed to consist of aluminous slate.

Thirlstane, the seat of Lord Napier, is a handsome mansion of modern erection, situated in a romantic and deeply-sequestered spot. Facility of communication is afforded by excellent roads, which traverse the parish for an extent of thirty miles, opening up an easy intercourse between its most distant parts and with the neighbouring towns. All of them were constructed, and brought to their present state of perfection, under the persevering efforts of the late Lord Napier, to whom the parish is deeply indebted for its present improved condition, and by whose liberality numerous pleasing and comfortable cottages have been spread over a tract of land previously little better than a dreary desert. Fairs are held at the end of March, for the sale of ewes and the hiring of farm-servants and shepherds; at the end of July, for lambs and wool, and the transaction of general business; at the end of September, for draft ewes, young lambs, and fat sheep; and in November, for fat sheep for the markets. The September fair is the most numerously attended: as many as 9000 head of stock have been

exposed for sale at it. There is a small prison for the temporary confinement of offenders, called the "Round House", near the ground where the fairs are held.

Ettrick is ecclesiastically in the presbytery of Selkirk, synod of Merse and Teviotdale, and in the patronage of Lord Napier; the minister's stipend is about £228, with a manse, and a glebe valued at £28 per annum. The church, situated nearly in the centre of the parish, was rebuilt upon a larger scale in 1824; it is a neat and handsome edifice, adapted for a congregation of about 450 persons. The parochial school affords a liberal course of instruction; the master has a salary of £34. 4. 4. per annum, with £15 fees, and a house and garden. A parochial library, now containing more than 800 volumes, has been maintained by subscription and donations, to which the Napier family have largely contributed; and a Bible and Missionary Society is also supported here, under the patronage of Lord Napier. In the retired valley of the Rankleburn, which is inclosed with lofty and precipitous hills, are two farm-steeds called the *Buccleuchs*, that give the family of Scott their ducal title; and in a deep ravine leading from them to the Hawick road, is the spot where the buck was killed, from which circumstance the name of these lands is said to have been derived. About a mile from the farm, and on the bank of the burn, may still be traced the foundations and part of the walls of the church or chapel of Buccleuch. On the road on the banks of the Ettrick are the ruins of the ancient castle of *Tushielaw*, formerly the stronghold of the Scott family, noted for their predatory excursions in the neighbourhood, and of whom two individuals were convicted in the reign of James V. of exacting black mail, one being hanged on a tree near the gate of his castle, and the other beheaded at Edinburgh, and his head fixed on the Tolbooth. About two miles from this spot are the remains of the ancient baronial castle of *Thirlstane*, surrounded by some ash-trees of very ancient growth; and on the opposite bank of the Ettrick are the ruins of the castle of *Gamescleuch*, the residence of a branch of the family of Scott of Thirlstane. On the farm of *Kirkhope* may be traced the boundaries of a cemetery formerly belonging to some church or chapel of which there are no vestiges remaining; and near the farm of *Chapelhope* are the site and foundations of another church or chapel, with a cemetery attached. An ancient tripod and two stone hatchets were found some years since, and are now in the possession of Lord Napier. About a quarter of a mile from the church till lately stood a house with a gable end, fronting the road, in which James Hogg, the Ettrick Shepherd, was born: his remains rest in the churchyard. Alexander Cunningham, minister to the state of Venice in the reign of George I., and author of a History of Great Britain from the Revolution in 1688 till the Accession of George I., written in Latin, and long after his decease translated into English, and published, in 1787, by Dr. William Thomson, was born here during the incumbency of his father. Boston, author of the *Fourfold State*, was minister of Ettrick from 1707 to 1732.

ETTRICK-BRIDGE, a village, in the parish of YARROW, county of SELKIRK, 7 miles (W. S. W.) from Selkirk; containing 108 inhabitants. It is situated in the eastern part of the parish, on the Ettrick water, and is chiefly inhabited by persons engaged in handicraft trades. One of the parochial schools is in the village; and the

Duke of Buccleuch has lately erected and endowed a chapel in connexion with the Established Church, for the benefit of the people in this district of the parish.

EVANTON, a village, in the parish of KILTEARN, county of Ross and CROMARTY; containing 462 inhabitants. This village had no existence forty years ago; it is built upon a waste piece of land, consists of about a hundred houses, and is of very regular and neat appearance. Two fairs, neither of them well attended, owing to the convenient supply of necessaries from the shops in the village, are held on the first Tuesdays in June and December. The United Presbyterian Synod have a place of worship here; and there is a school.

EVIE and RENDALL, a parish, in the county of ORKNEY; containing, with the island of Gairsay, 1518 inhabitants, of whom 907 are in Evie, 18 miles (N. W. by N.) from Kirkwall. These two ancient parishes, which appear to have been united since the time of the Reformation, are situated on the mainland of the Orkney Isles, and are bounded on the north by the Atlantic Ocean; on the north-east and east by Enhallow Sound or Firth, which separates them from the islands of Rousay and Shapinshay; on the south by the parish of Firth; and on the west by the parish of Birsay and Harray. The coast is not distinguished by any of those prominent features which are so conspicuous on the shores of the other islands. Its chief headland is Costa, at the northern extremity of Evie, a bold hill rising from a wide base to a considerable elevation, and presenting towards the sea a large mass of precipitous rock. On the east, opposite to the deeply-indented bay of Woodwick, is the island of Gairsay, forming a part of Rendall, from the main portion of which it is separated by a narrow sound. This island is of nearly circular form, and about four miles in circumference; the ground rises from the shore, and terminates towards the centre in a beautiful green hill, on the summit of which is a cairn.

The surface of the parish is diversified with hills forming a continuous range, averaging from 300 to 400 feet in elevation above the level of the sea, and dividing the parish from Birsay and Harray; and with several smaller hills, between which are some pleasing and fertile valleys. Towards the sea it has a gentle declivity, varying from half a mile to nearly a mile and a half in breadth. On the boundary between Evie district and Birsay is a beautiful lake, about two miles in length and half a mile broad, in the centre of which is a small island; it abounds with trout of excellent quality, and though of no great depth, is found very serviceable in propelling a corn-mill during the summer, when other mills are useless from want of water. The SOIL is partly a rich black loam, and partly clay alternated with sand, and in Rendall is of lighter quality than in Evie. There is a very considerable deposit of marl on the shores of Woodwick bay, and in the valleys that intersect the hills is an abundance of peat-moss. Peat bogs occur in the lower lands, and in Rendall is a valley of peat-moss, which is almost impracticable from the number of roots and branches of trees embedded in the soil. There is no timber of any kind, and the only trees are some recently planted in the manse garden, the permanent growth of which seems very doubtful. The land in cultivation yields favourable crops, and the pastures are fertile; the natural grasses are thickly interspersed with wild flowers of every description: the cattle and sheep reared in the parish thrive

well. The rocks are all of the secondary formation, and vary from blue slate to white sandstone. There is no village. Fairs for cattle and horses are held in June and October. Cod, ling, haddock, dog-fish, skate, halibut, and the young of coal-fish are found in abundance off the coast, and many of the inhabitants occasionally engage in the herring-fisheries; but though the place is admirably suited for the purpose, no regular fishing establishment has been settled here.

FOR ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Kirkwall, synod of Orkney. The minister's stipend is £154. 6., of which more than half is paid from the exchequer; with a manse, and a glebe valued at £50 per annum: patron, the Earl of Zetland. There was originally a church in each of the united districts, but both the buildings falling into decay towards the close of the last century, one church was erected in a central situation in 1799, by the heritors, in lieu of the two; it is a neat structure containing 498 sittings. There are places of worship for members of the Free Church and Independents. The parochial school is well attended: the master has a salary of £30, out of which he pays £4 to an assistant for teaching a small number of children in the island of Gairsay; he has also a house and garden. A school is supported by the Society for the Propagation of Christian Knowledge. Along the shores of the parish are numerous Picts' houses, and in Evie several tumuli, some of which, on being opened, were found to contain small areas from one to two feet square, inclosed with flat stones, and about eighteen inches in depth, in which there were ashes, charcoal, and fragments of burnt bones. In 1832, on taking down an old farm-building in Rendall, 150 silver coins were found wrapped in coarse woollen-cloth, in a hole in one of the walls, supposed to have been concealed there during the time of Cromwell; they were of the reigns of Elizabeth, James, and Charles I., with a few of Scottish currency.

EWE, an island, in the parish of GAIRLOCH, county of Ross and CROMARTY; containing 34 inhabitants. It is situated in Loch Ewe, on the western coast of the county. The isle is about two miles in length, in some parts nearly a mile in breadth, and is a fertile and well-cultivated tract, upon the improvement of which much care and expense have been bestowed. The loch is between eight and ten miles long, and into its inner part pours the beautiful stream of the Ewe, which is the natural outlet from Loch Maree. This stream is celebrated for the abundance of its salmon.

EWES, a parish, in the county of DUMFRIES, 4 miles (N.) from Langholm; containing 328 inhabitants. Ewes-dale, the former appellation of this place, has been long contracted into Ewes, the name of its chief river, so called from the Celtic *Uisge*, signifying water. The parish is eight miles in length, and about five and a half in breadth, and contains 31,000 acres. On the north and east it is bounded by Roxburghshire, on the south by Langholm parish, and on the west by that of Westerkirk. It is pastoral and mountainous, and the country on both sides of the river Ewes, which runs through the parish for eight miles, is marked by numerous hills, which are nearly all green, with the exception of a few parts overspread with heath, and affording cover and food for various kinds of game. The rivers abound in fish. In the low lands by the Ewes

the soil is light and gravelly, and produces in favourable seasons good crops of oats, barley, potatoes, and turnips; on the higher grounds it approximates to a deep loam. The number of arable acres is 1100, of natural pasture 23,169, and in wood and plantations 200 acres. The cattle are of the Galloway breed, and the sheep, in general amounting to about 18,000, are the Cheviots: the parish consumes the produce of the ground at home, the chief profit consisting in the sale of wool, sheep, and cattle. All the necessary improvements in husbandry have been carried into effect, and the farm-buildings are in the best order. The principal rocks are greywacke and greywacke slate. The means of communication are good; the great road from Edinburgh to Carlisle runs for eight miles within the parish, and there are two other public roads, one of which leads to the east, and the other to Dumfries and Moffat. The annual value of real property in the parish is £4951. Ecclesiastically Ewes is within the limits of the presbytery of Langholm and synod of Dumfries; patron, the Duke of Buccleuch. The stipend is £221, with a good manse and offices, and a glebe of thirty arable acres. The church, an ancient structure, was repaired in 1831, and contains 200 sittings. There is a parochial school, in which the usual branches are taught, with French, Latin, Greek, and mathematics; the master has the maximum salary, about £5 fees, and the legal accommodations. Some almshouses were founded in 1761 by the Rev. Mr. Malcolm, minister of the parish, for the support of four of the poorest families, to whom the Duke of Buccleuch gives half an acre of ground for a garden. On the farm of Unthank, in the parish, are remains of a chapel connected with Melrose Abbey; the burying-ground is still in use. There are also vestiges of two encampments, either Saxon or Pictish.

EYEMOUTH, a sea-port, burgh of barony, and parish, in the county of BERWICK, 3 miles (N. E.) from Ayton, and 8 (N. N. W.) from Berwick; containing 1401 inhabitants. This place, which derives its name from its situation at the influx of the river Eye into the sea, appears to have been indebted for the degree of importance it possessed at a remote period to its connexion with the priory of Coldingham, to which it seems to have been granted by charter in the reign of William the Lion. From its advantageous position, it was probably early made available as a port for the landing and embarking of pilgrims visiting the priory, and for the supply of that establishment with various stores for the use of its numerous fraternity. Few events of historical importance are recorded in relation to the place prior to the erection of a fortress here by the Duke of Somerset in his invasion of the country in the year 1547. This fortress was dismantled on the conclusion of a treaty of peace between England and France in 1550; it was afterwards restored and garrisoned for a time, but was finally demolished at the period of the union of the two kingdoms. The TOWN, which is pleasantly situated at the mouth of the river Eye, is irregularly built, but contains many good houses. It is chiefly inhabited by persons employed in the corn trade, which is carried on to some extent; in the fisheries; and in the various handicraft trades requisite for the neighbourhood. The streets are well paved, and the inhabitants are supplied with water conveyed by iron pipes. The approaches are commodious, and a good bridge has been

built across the Eye, near which the turnpike-road to Ayton branches off in two directions, one leading by the north, and the other by the south, bank of the river. A chain-bridge, also, has recently been thrown over the Eye, by Capt. Sir Samuel Brown, to form a readier communication with his estate of Netherbyres. A parochial library is supported by subscription, and forms a tolerable collection of volumes on divinity and other subjects.

The TRADE in grain, since the establishment of the market, has been rapidly increasing, and is now very extensive: the quantity of grain sold in the first year after the opening of the market was estimated at £20,000. Warehouses have been erected on the quay, and a spacious building formerly used for barracks has been converted into a store-house. On the river is a mill for preparing pearl-barley and oatmeal, of which great quantities are shipped for London. The manufacture of paper has been established at Millbank, just without the borders of the parish, where a spacious mill with the requisite machinery has been erected, in which a considerable number of persons are employed. The post-office, which is a branch of the office at Ayton, possesses a good delivery; and the Commercial Bank has one of its agencies in the town. The market is on Thursday, and is abundantly supplied with grain, and numerously attended: two fairs, also, are annually held here, but very little business is transacted at them. A lucrative fishery is carried on; the fish usually taken are cod, haddock, and herrings. In the cod and haddock fishery about fifteen boats are regularly engaged, each of which is managed by six men, and the yearly produce is estimated at more than £3000. The herring-fishery is also very productive, and in 1820 afforded employment to more than 100 boats, whose cargoes in that year amounted to 10,000 barrels: in 1844 the fleet engaged in the fishery consisted of sixty-one boats. The cod, either dried or pickled, is generally sent to London; the red or smoked herrings to London, Hull, Newcastle, and Glasgow; and the white or pickled herrings to Ireland, and the ports of the Baltic.

The business of the port consists chiefly in the exportation of grain and the produce of the fisheries and distillery; and in the importation of timber, bones for manure, rags for the paper manufacture, coal, slates, bricks and tiles, freestone, and paving stones, with various articles of general merchandise. In the year 1834 the exports were, 850 quarters of wheat, 4300 quarters of barley, 2800 quarters of oats, and 2800 gallons of spirits; the quantity of coal imported was 2367 tons, and the whole number of vessels that entered the port was 198. The harbour, which previously to the year 1770 was exposed to the north-east winds, was then much improved and rendered more secure by the creation of a pier and breakwater under the direction of Mr. Smeaton; and it has been subsequently enlarged and deepened by the removing of shingle and the clearing away of rocks. In 1844 an extensive additional pier was completed to afford security to the shipping. The depth of water at spring tides is sixteen feet, and at neap tides ten feet; and from its situation in the German Ocean, and its facility of access, the harbour is much frequented by vessels detained by contrary winds. The custom-house is superintended by a principal coast-officer, and two tide-waiters also reside on

the spot; the care and management of the port are under the control of a board of trustees appointed by act of parliament. Eyemouth was erected into a burgh of barony by charter granted in 1597, by James VI., in favour of Sir George Home of Wedderburn, with all the usual privileges, and is governed by a baron-bailie appointed by the superior of the barony. With the consent of the superior, the burgesses had power to elect magistrates, to erect a gaol, and hold courts for the trial of all offences not capital, and the determination of civil pleas to an unlimited amount, together with a weekly market and two annual fairs; but the only jurisdiction exercised by the bailie is the occasional holding of a court for the determination of petty causes.

The PARISH is about a mile and a half in length, and nearly of equal breadth, comprising 880 acres, of which, with the exception of about twenty acres in woodland and a few acres of pasture, the whole is arable. Its surface is varied, in some parts rocky, and the scenery is diversified with wood and water. The river Eye has its source at Dodhill, in the parish of Oldhamstocks, and after flowing through Cockburnspath, Coldingham, and Ayton, forms the eastern boundary of this parish for about a mile, and falls into the sea. The Ale, a small rivulet, runs for some miles along a picturesque valley, then constitutes the southern boundary, and joins the Eye at the south-eastern extremity of the parish. Every where the soil is extremely rich and fertile; the system of agriculture is in a very advanced state, and the four and six shift rotations equally prevail: the crops are wheat, barley, oats, potatoes, and turnips. Bone-dust and sea-wrack are amply used for manure; the lands are well drained and inclosed, and all the more recent improvements in implements of husbandry have been adopted. The sheep are of the Leicestershire breed, and the cattle of the short-horned or Teeswater; very few of either are reared in the parish, but a considerable number are bought, and fed for the market on turnips and grass. The chief substrata are greywacke and greywacke slate, with rocks of trap and porphyry. There is also a rock of breccia or coarse conglomerate, forming the promontory that bounds the bay: this stone, of which the breakwater and quays of the harbour were constructed, is of excellent quality; it is quarried for building, and can be raised in masses of any size. The annual value of real property in the parish is £2683. The manor-house of Linthill is an ancient edifice, pleasantly situated on the banks of the Ale, near its influx into the river Eye, and commands a finely-varied prospect, embracing the harbour, with the shipping, and the sea in the distance.

Ecclesiastically the parish is in the presbytery of Chirnside, synod of Merse and Teviotdale, and in the patronage of the Crown. The minister's stipend is £130. 19. 6., exclusively of a composition for tithes of fish, for which each boat pays £1. 13. 4.; with an excellent manse, and a glebe of nine acres and a half. Eyemouth church, situated in the centre of the town, was erected in 1812; it is a neat edifice with a tower, presenting little exterior embellishment, and is adapted for a congregation of 450 persons. There are places of worship for the Free Church, the United Presbyterian Synod, and Primitive Methodists. The parochial school affords a liberal course of instruction; the master has a salary of £34, with £23 fees, and a house and garden.

A branch of the National-Security Savings' Bank is prosperously conducted. There are some remains of the fort erected by the Duke of Somerset, occupying a considerable site on the promontory projecting into the sea, which, from its commanding position, affords an extensive prospect. Little is left except the foundations, now covered with verdure; but it would appear to have been a place of great extent and of massive proportions. The adjacent grounds have been tastefully laid out, and form an interesting and much frequented promenade. Eyemouth gave the title of Baron to the great Duke of Marlborough.

F

FAIFLEY, a village, in that part of the parish of OLD KILPATRICK which formed the quoad sacra parish of DUNTOCHER, county of DUMBARTON, $2\frac{1}{4}$ miles (E. N. E.) from Old Kilpatrick; containing 321 inhabitants. This place is in the vicinity of Duntocher, and is one of several villages within a mile of each other on the northern side of the Clyde, owing their prosperity to the recent introduction of the cotton and woollen manufactures, and the erection of mills, steam-engines, and other machinery and facilities for their production, chiefly through the spirit and enterprise of Mr. William Dunn, a resident proprietor of land here. About the year 1812, Mr. Dunn purchased the mill of the Faifley Spinning Company, by whom this branch of business had been carried on for some time previously, but on a limited scale; and having made large additions to the buildings, and invited the industry of the inhabitants by the most liberal encouragement, the village soon increased in extent and population. Besides the spinning and weaving of cotton, the chief product of the place, there are iron-works, in which spades, shovels, and other articles are made; and some minor manufactures. The principal stream in the parish, which issues from two lochs behind the Kilpatrick braes, passes here, and falls into the Clyde at Dalmuir. There are two small schools.

FAIR, an island, forming part of the parish of DUNROSSNESS, in the county of SHETLAND; containing 232 inhabitants. It lies between the Orkney and Shetland groups, and is about three miles in length and nearly two in breadth, presenting three lofty promontories, and encompassed with precipitous rocks. The island is every where inaccessible, except upon the south-east, where, lowering itself a little, it affords a safe station for small vessels. One of the promontories, the Sheep Craig, is nearly insulated, rising from the sea in a conical shape to an elevation of 480 feet. The soil is moderately fertile, and the hills are clothed with excellent pasture for sheep. Fair Isle is thickly peopled, and the inhabitants are chiefly engaged in the taking of saith, about forty tons of which, when dried, are annually sent to the Leith market: the ling and cod fishing formerly prosecuted has been discontinued on account of its distance from the island. The houses are clustered together on the southern shores in the form of small hamlets, or, as they are here called, towns, which are named respectively Seutter, Taing, Shirva, Leogh, Bousta, and Gelah. A substantial church, capable of accommodating 120

persons, was built by the proprietor of the isle many years ago, at a cost of £150, and is distant from the parish church thirty-five miles. There is also a good school. In 1588, the flag-ship of the Duke de Medina-Sidonia, the admiral of the Spanish Armada, was wrecked on this island, and tradition points out the humble residence of the shipwrecked commander.

FAIRLIE, a village, and for a time a quoad sacra district, in the parish of LARGS, district of CUNNINGHAME, county of AYR, 3 miles (S. by E.) from Largs; containing 521 inhabitants. This district consists of the southern division, and comprehends about one-third, of the parish of Largs. It is bounded on the west by the Firth of Clyde, and the land rises rather abruptly from the shore, and terminates in two distinct chains of hills on each side of the Kelburn. The loftiest of these hills attains an elevation of nearly 2000 feet, and their substrata are red and white freestone to the height of between 300 and 500 feet, and whinstone on the upper range: at the division of the hills pudding-stone abounds. Of 5000 acres, not more than 200 or 250 are under tillage, and about the same quantity in natural wood and plantations; the low parterres of Kelburn, the richest in Ayrshire, let at from five to six pounds per acre. The chief owner of the soil is the Earl of Glasgow, whose seat of Kelburn is a beautiful mansion, of which the more substantial part was built in 1556, and the principal modern additions in 1715.

Fairlie village is seated on the coast of the Clyde, and on the line of the turnpike-road from Greenock to Ayr. It is a very pleasant little place, much frequented during the summer and autumn by visitors who resort hither from the large and populous towns for the benefit of the sea air and for bathing. The climate is remarkably salubrious; and the retired and picturesque character of the vicinity, ornamented with numerous villas and much beautiful scenery, renders it a popular and very favourite spot, preferred by many strangers to the bustling town of Largs, also a well-frequented watering-place. There is much cod, ling, and haddock fishing, and herrings are occasionally caught: at Kelburn is a salmon-fishery. Steam-boats from Glasgow and Greenock call at the village daily in summer. Ecclesiastically, Fairlie is within the bounds of the presbytery of Greenock, synod of Glasgow and Ayr, and the patronage is vested in the Managers and Communicants: the minister's stipend is £75, arising from seat-rents, and from ordinary, and two special, collections. The church was built in 1833-4, at an expense of about £650, and contains 300 sittings. The members of the Free Church have a place of worship. There is an excellent school-house, the master of which has the interest of £300 bequeathed by Lady Jane Boyle, and of £100 added by Glasgow gentlemen who have summer residences around Fairlie: the noble proprietor of Kelburn has also given him a house. Attached to the church is a library, and another to the school. Of Fairlie Castle, a strong square building, said to have belonged to Hardicanute, the walls are still entire; and not far from it, but in West Kilbride parish, are remains of an ancient chapel, round which are some fine old trees. Kelburn confers the title of Viscount on the Earl of Glasgow.

FALA and SOUTRA, a parish, partly in the county of HADDINGTON, but chiefly in that of EDINBURGH; containing, with part of the village of Faladam, 393 in-

habitants, of whom 112 are in the village of Fala, $8\frac{1}{2}$ miles (S. E.) from Dalkeith. The name of Fala is derived from *Fah*, in the Anglo-Saxon, "speckled", and *law*, the description of hill upon which the church stands: *Soutra* signifies "the hamlet with a prospect". In 1164 an hospital for the relief of pilgrims, dedicated to the Holy Trinity, was founded at Soutra by Malcolm IV., who conferred upon it the privilege of sanctuary; and its endowments, which were very extensive, embraced the churches of Soutra, Wemyss in Fife, St. Giles of Comiston, and several others. The revenues were subsequently vested in Trinity College and Hospital, Edinburgh; and afterwards, about 1560, in the town council of that city, who thus became patrons of Soutra church. Of the church of Fala, the history of which is very obscure, the patronage belonged previously to the Reformation to the family of Edmestown. In the year 1618, on the 20th February, the two parishes were united; and the estate of Fala after some time descended to the Hamiltons of Preston, and through their heiress to Sir John Dalrymple of Cousland: the present proprietor of Fala proper is the Earl of Stair. Soutra church, having been abandoned, became a ruin; and the walls of one of its aisles, and some occasional irregularities of surface indicating prostrate dwellings, are now the only vestiges of the former village, once so considerable and populous. The district of Soutra is in the county of Haddington.

The PARISH is about five miles in length, from east to west, and three and a half in breadth, from north to south. Its western division consists of a ridge of the Lammermoor hills, laid out, with the exception of some patches in tillage, for the pasturage of sheep; whilst the eastern division, which is chiefly of a clayey soil and of an undulated surface, is in good cultivation, producing all the crops common to the district of the Lothians. There are considerable tracts of moss and moorland, and a large extent of marsh, whence issues a sheet of water on Fala muir, called the Flow. The prevailing scenery is very beautiful, and includes many objects of interest and admiration. Among these may be mentioned, Soutra hill, which forms the western point of the Lammermoors, and is upwards of 1200 feet above the sea; the mansion and lands of Woodcot; Costerton House, very romantically situated; the rich fields and wooded inclosures around the ancient halls of Hamilton and Fala; the cascade of Lindean, and several intersecting rivulets. The wider prospect from Soutra hill presents numerous handsome residences, the highly-cultivated plains of the Lothians, the Pentland hills, and castle of Edinburgh, with the Firth of Forth and the coasts of Fife in the distance.

Of late years the system of husbandry in the parish has been much improved: the lands have been partly drained, and inclosed, chiefly with hedges of thorn; and material advantage will arise from the drainage of Fala Flow, a measure already in progress. The sheep, of which considerable numbers are reared on the moorland farms, are mostly a cross between the Gala-water and Tweedsmuir breeds, with a few of the Cheviot. A moderate number of black-cattle, and a few horses for the plough, are also reared. The annual value of real property in the Edinburghshire portion of the parish is £1583, and in the Haddingtonshire portion £1298. Fala village is situated on a commanding eminence, and in its immediate vicinity are the commodious inn and hamlet of

Blackshiels, the post-place of the district : a little northward of the latter is Faladam, partly in the parish of Crichton. The great road between Edinburgh and Lauder affords a facility of communication. Ecclesiastically the parish is within the bounds of the presbytery of Dalkeith, synod of Lothian and Tweeddale ; the stipend of the minister is £169, of which more than one-half is received from the exchequer, and there is a manse, with a glebe valued at £25. 10. per annum. The patronage is vested in the Earl of Stair and the Town Council of Edinburgh, who exercise it alternately. The church, which is pleasantly seated on an eminence overlooking the village, is a plain and unpretending edifice, affording accommodation to 250 persons. There is a place of worship in connexion with the United Presbyterian Synod. The parochial school is attended by about eighty children ; the master has the maximum salary, with a house and garden, and the fees average about £25 per annum. A good parish library has been formed by the contributions of the inhabitants. On Soutra hill are some ruins of the hospital ; and the aisle of the ancient church is used as the burial-place of a neighbouring family.

FALADAM, a hamlet, partly in the parish of CRICHTON, and partly in that of FALA, county of EDINBURGH ; containing 64 inhabitants. It lies on the road from Lauder to Edinburgh, and is distant about half a mile north-west from the village of Fala. The population is employed in tending sheep and cultivating the soil.

FALKIRK, a burgh, market-town, and parish, in the county of STIRLING ; the parish including the villages of Barleyside, Bonnybridge, Glen, and Laurieston, the quoad sacra parish of Camelon, and part of the former quoad sacra parish of Grange-mouth ; and containing 15,621 inhabitants, of whom 8209 are in the town, 11 miles (S. E.) from Stirling, and 25 (W. by N.) from Edinburgh. This place, which is situated on the ancient boundary between the Roman territories on the south, and those of the Caledonians on the north, is supposed to have derived its former name, *Eccles-brae*, from the position of its church on the brow of a hill, of which position that appellation is accurately descriptive. According to some writers, the present name arose from the place being near the wall of Antonine, and was originally *Wall-Kirk*, of which the term Falkirk is considered a modification. From its situation, it became at a very early period the scene of numerous sanguinary conflicts, in one of which, between the Roman forces and those of Fergus II., in the year 415, Robert de Graham, the commander of the king's army, was slain, and his remains interred in the churchyard, from which circumstance that portion of the wall within the parish received the appellation of Graham's Dyke. In 1298, a battle took place to the north of the town, near the present village of Grahamston, between the army of Edward I. of England and the Scots under William Wallace, in which Sir John Graham of Dundaff, and Sir John Stewart of Bonkill, who commanded divisions of the Scottish army, were both killed. The Scots, dispirited by the fall of their leaders, and overpowered by

numbers, were compelled to give way ; and after a dreadful carnage on each side, crossing the river Carron, they retreated northwards. Sir John Graham and Sir John Stewart were interred in the churchyard, where their grave-stones are still preserved. In the reign of James III., the town was for some time in the possession of the discontented nobles who had risen in rebellion against their sovereign and assembled a numerous army at this place ; but previously to the arrival of the royal troops, which were on their march to attack them here, the rebel forces advanced to Sauchie-Burn, near Stirling, where a battle with the royal troops took place, which terminated in the defeat and death of the king.

In 1543, a meeting was held at Callendar House, the seat of Lord Livingstone, in this parish, between the Earl of Arran, regent of Scotland, and Cardinal Beaton and the Earl of Moray, when a treaty was concluded, which put an end to the projected union of Mary, Queen of Scots, and Prince Edward, son of Henry VIII. of England. Callendar House was frequently visited by Mary, who, with part of her retinue, halted here on her route to the north in 1562, and in 1565 became sponsor at the baptism of the infant son of William, sixth Lord Livingstone. In 1567, the queen, with her infant son, afterwards James VI., spent a night at Callendar on her route to visit her husband, Lord Darnley, at Glasgow ; and also, on her return, accompanied by Darnley, spent a day here, and on the following morning proceeded to Edinburgh. After the queen's escape from the castle of Lochleven, Lord Livingstone welcomed her arrival at Niddry Castle ; and at the battle of Langside, after distinguishing himself for his fidelity and valour at the head of his vassals, accompanied her in her flight from the field, and, with Lady Livingstone, attended her in the various prisons in which she was afterwards confined by Elizabeth. These faithful adherents of the queen, and companions of her misfortunes, both died in England in 1573, and their remains were conveyed for interment in the church of Falkirk.

During the minority of James VI., the Earl of Morton, who had resigned the regency of Scotland, having seized the person of the king, and obtained possession of Stirling Castle, assembled a considerable army of his friends, and encamped at Falkirk, where, also, the army of his opponents soon arrived to offer him battle ; but just as the engagement was about to take place, a truce was agreed to on both sides, and a treaty was subsequently concluded, which was published at the market-crosses of Stirling and this town in 1578. In the parliamentary war in the reign of Charles I., James, first Earl of Callendar, who was a firm adherent of the king, became a commander in the army which marched to his relief when a prisoner in the Isle of Wight, the earl being attended by a large body of his Falkirk retainers. On the defeat of these forces, the earl retired to Holland ; and the partisans from this place, forcing their way through the ranks of the victorious parliamentarians, returned home. After the battle of Dunbar, in 1650, Cromwell marched to the Torwood, in the vicinity of Falkirk, in pursuit of the royal army, and on his route stormed and took possession of Callendar House, in which a garrison had been placed. The siege was carried on with great obstinacy, and many fell on both sides before the garrison surrendered ; the houses in the town were plundered by the troops of

Burgh Seal.

Cromwell, and the church was occupied by his soldiers as stabling for their horses. On the removal of the old gates of the mansion of Callendar, by the late proprietor, numerous remains of those who fell during the siege were discovered. During the rebellion of 1745, a battle occurred on the moors to the south-west of the town, between the forces under General Hawley and a party of Highlanders in the service of the Young Pretender, in which the numbers engaged on each side have been estimated at 8000. The combat terminated in the total defeat of the royal forces, of whom nearly 300 were left dead on the field; and among those who fell were Sir Robert Munro of Foulis, and his brother, Dr. Munro, to whose memory a monument was raised nearly in the centre of the churchyard.

The titles of Linlithgow and Callendar became united in James, fifth Earl of Linlithgow and fourth Earl of Callendar, on whose joining in the rebellion of 1745 they became extinct; the estates had been sold in 1720 to the York Buildings' Company, and on its dissolution were purchased by the late William Forbes, Esq., father of the present proprietor. The lands of Kerse, in the parish, were bought in 1683 from Sir William Livingstone of Kilsyth, a branch of the Callendar family, by Sir Thomas Hope, king's advocate, from whom they descended to his second son, one of the lords of session, and afterwards lord justice-general. They were subsequently purchased by Lawrence Dundas, Esq., of Edinburgh, whose son, Sir Thomas, was created a peer in 1794 by the title of Lord Dundas; on his demise they passed to his son, Lawrence, created Earl of Zetland in 1838, and they are now the property of Thomas, the second earl.

The town is situated on the road from Linlithgow to Glasgow, and consists of one principal street nearly a mile in length, and of several smaller streets parallel with it, or diverging from it in various directions. The houses, many of which are of modern date, are handsome and well built. In the high street is the town-house, erected in 1813, on the site of an ancient steeple built in 1697 and taken down in 1803; the edifice has an elegant spire 140 feet high, and forms a great ornament to the town. Falkirk is well paved, lighted with gas, and amply supplied with water. Owing to its situation on an eminence, from which is a gentle declivity on both sides, it is always dry and clean; and, admitting a free circulation of air, it is regarded as a healthful place of residence. From the main street, a street called the Kirk Wynd extends for more than an amile to the north, connecting the town with the villages of Grahams-ton and Bainsford, and having handsome ranges of modern houses on each side. About a mile westward of the town is the populous village of Camelon. Nearly at the same distance to the east is Laurieston, and beyond this, close to the junction of the Forth and Clyde canal with the river Carron, is the populous and flourishing town and port of Grangemouth, which, with the various other villages in the parish, is noticed under its own head. There are several libraries in the town, supported by subscription, the principal of which, established in 1792, has a collection of more than 3000 volumes; a circulating library contains 1200, and a United-Presbyterian-Church library 1000 volumes. Public subscription reading and news rooms are also well supported. A school of arts was founded in 1827, and has continued to increase; it possesses a library of 600

volumes, and lectures on natural history and the arts and sciences are delivered weekly by the members. A horticultural society has been some time established in the town, under very extensive patronage; the members hold meetings four times during the season, when exhibitions of fruits and flowers take place.

Many of the inhabitants are employed in the Carron iron-works, a most important concern in the adjoining parish of Larbert. The principal manufactures carried on in Falkirk parish are in the immediate vicinity of the town, and in the several villages. Of the establishments in the vicinity of the town, the most extensive are the Falkirk iron-works, on both sides of the Forth and Clyde canal, about half a mile distant, and in which about 700 persons are occupied in the manufacture of small castings of every description, including pans, kettles, stove-grates, and various other articles for the home trade and for exportation. There are four tanneries near the town, in three of which the currying of leather is also carried on, and in the other the dressing of sheep and lamb skins; they together afford employment to about fifty persons. The weaving of muslin and coarse linen, formerly much more extensive, is carried on by about forty of the inhabitants, chiefly for the Glasgow manufacturers. Here is a large brewery for porter and ale, of which latter considerable quantities are sent to London. Several persons are also employed in building vessels for the trade on the canal, for which there is a yard upon its banks. The making of nails is carried on at Camelon, where is also a distillery: at Castlecary, Bonny-side, and near Bainsford, are extensive saw-mills; and at Grahamston are works for the manufacture of pyroligneous acid.

From its vicinity to the Carron and Falkirk iron-works, from the extensive collieries around, and the great cattle-trysts which are held on Stenhouse Muir, the town of Falkirk derives its chief traffic; and it is generally the resort of the dealers attending those markets, and of numerous persons connected with the works in the vicinity, who make it their head-quarters, and for whose accommodation there are commodious inns, and shops amply supplied with stores and merchandise of every variety. The post-office has a considerable delivery, and there are branch offices at Grangemouth, Camelon, Grahamston, and Laurieston. The old Falkirk Bank has been superseded by a branch of the Bank of Scotland; there are branches of the National Bank and the Clydesdale Banking Company, and the Commercial Banking Company have a concern here, for which a very handsome building has been erected in the High-street. Facilities of communication are afforded by good roads that intersect the parish, by the Forth and Clyde and the Union canals, and by the railways that pass through the parish. *The Forth and Clyde canal* was commenced in 1768, under an act of parliament enabling the company to raise a capital of £150,000 in shares of £100 each, and was completed in 1790 by a grant of £50,000 from government. Its total length is thirty-eight miles and a half, from Grangemouth, in this parish, to the Clyde at Glasgow. The summit level is 141 feet above the sea, and is attained by twenty locks on the eastern, and nineteen on the western side; the breadth of the canal at the surface is fifty-six feet, at the bottom twenty-seven feet, and the average depth is nine feet. It is navigable for vessels of eighty or ninety

tons, and passes through the entire length of the parish. *The Union canal*, extending to Edinburgh, was commenced in 1818, and completed in 1822; the breadth is forty feet at the surface, and twenty feet at the bottom, and its mean depth is five feet. It enters the parish on the east, and runs through it for above three miles to its junction with the Forth and Clyde canal: in its progress through the parish it has a long tunnel. *The Edinburgh and Glasgow railway* enters the parish from Polmont, on the east, and passes in a direction almost parallel with the Union canal. At Callendar is a tunnel 345 yards in length, twenty-six feet in width, and twenty-two feet in height. Near the termination of the Union canal, the railway is carried over it by an arch 130 feet in span; the line then runs in nearly the same direction as the Forth and Clyde canal, and at Redburn has a lofty viaduct of seven arches, soon after which it quits the parish. This railway, which passes south of the town, for eight miles through the parish, was opened in 1842; and the *Scottish Central railway*, which runs through the north-western part of the parish, in 1848. The latter railway, and the *Caledonian railway*, terminate in the western part of the parish, in junction with the Edinburgh and Glasgow line. In 1846 an act was obtained for the construction of a short line from the Edinburgh and Glasgow railway near Polmont, to proceed on the north side of the town of Falkirk, to a junction with the Scottish Central railway near Larbert. The market, which is amply supplied with grain and provisions of all kinds, is on Thursday; and exclusively of the great cattle-trysts on Stenhouse Muir, in the adjoining parish of Larbert, nine fairs are held in the town on the first Thursdays in March, April, and November, the second Thursdays in June and July, the third Thursdays in May and August, and the last Thursdays in January and October. They are chiefly for cattle and horses, and are very numerous attended.

The inhabitants received a charter from James VI., erecting the town into a free burgh of barony; and in the reign of Charles II., the Earl of Callendar obtained a charter constituting it a royal burgh, with liberty to elect magistrates, create free burgesses, to hold courts, and have a prison, and the privilege of two weekly markets and four annual fairs. The control has been for many years vested in two separate bodies, called the stent-masters and the feuars; the stent-masters are twenty-four in number, of whom four are chosen by the merchants, and two by each of the several trades. Both these bodies elect from among themselves a president and treasurer; the former body attend to the lighting of the town and the supply of the inhabitants with water, and the latter principally to the tolls and customs, and the management of the town estates. The burgh exercises no magisterial jurisdiction; courts of justice are held monthly under the superintendence of a sheriff-depute who resides here. By act of William IV., the municipal government of the burgh was formally vested in a provost, three bailies, a treasurer, and seven councillors; but no funds having been assigned for defraying expenses, the corporation do not interfere with the established management. The police is under a constable appointed by the sheriff of the county, and in cases of emergency the town is watched by a body of the inhabitants, called the town guard; the only prison is a small apartment for temporary confinement, in the

town-house. Under the Reform act the town is associated with the burghs of Airdrie, Hamilton, Lanark, and Linlithgow, in sending a member to parliament, Falkirk being the returning burgh.

THE PARISH, which is situated in the eastern division of the county, is bounded on the north by the Carron, except that, from some alteration in the course of that river, a few small portions are now on the northern bank. It is about nine miles in length, and varies from two to five miles in breadth, comprising an area of nearly 15,000 acres, of which 11,000 are arable, 2000 meadow and pasture, 1800 woodland and plantations, and the remainder waste. From the banks of the river to the town the surface is an extended plain of level carse land, in the most luxuriant state of cultivation, with a gentle acclivity towards the town, to the south of which the ground rises gradually to an elevation of 600 feet above the sea, and towards the east and west is pleasingly undulated. The higher parts command extensive and beautifully-diversified prospects over the adjacent country, comprising various towns and villages, with numerous elegant mansions and pleasant villas, encircled by the heights of Kilsyth and Denny, with the Ochil and Saline hills, and, to the north-west, the far distant and lofty mountains of Benledi and Benvoirlich. The river Carron, which flows in a winding course for about fourteen miles past the parish, into the Forth a little below Grangemouth, is navigable for vessels of 200 tons to the village of Carronshore, beyond which it is a limpid stream abounding with trout, perch, and eels. At Castlecary, on the west, a rivulet, dividing the parish from Cumbernauld in the county of Dumbarton, forms in its progress a picturesque cascade of eighty feet; a little to the north of which it joins a stream called the Bonnywater, falling into the Carron near the village of Bonnybridge. The Grange burn separates the parish for nearly two miles from that of Polmont on the east, and afterwards flows into the Carron. Near the village of Camelon, the Lightwater burn, now a small streamlet, runs through the centre of a wide channel which appears to have been once the bed of a very considerable river, the banks, with their several windings, being clearly defined. The adjacent lands have every appearance of a coast indented with bays, and marked by projecting headlands; and in the immediate vicinity is the site of an ancient town, supposed to have been the city of Camelon, which, according to tradition, was a sea-port: indeed, fragments of anchors and boats of antique form have at various times been found embedded in the soil. There are three small lakes in the higher portion of the parish, but they are not distinguished by features of importance.

THE SOIL is generally fertile, and in the lower lands luxuriantly rich. The system of agriculture is in a very advanced state, and has been brought to great perfection under the auspices of the Agricultural Association of the eastern district of the county, which was established here in 1839, and of which the Earl of Dunmore is patron, and Mr. Forbes of Callendar president. The crops are wheat, beans, barley, and oats, with rye-grass and clover; and the breed of cattle has been much improved. The farm houses and offices are substantial and commodiously arranged, and the lands are well inclosed. Lime is extensively used, and considerable quantities of manure are supplied from Grangemouth; tile-draining

is generally practised, and belonging to the Earl of Zetland are three kilns for the manufacture of the tiles. The parish abounds with coal, particularly in the higher districts, where are several collieries, producing not only an abundant supply for the vicinity, but also for exportation. Ironstone, limestone, and sandstone are also plentiful; and veins of silver, copper, lead, and cobalt have been found, but not in any considerable quantity. Freestone is extensively wrought, and there are not less than seven quarries in operation, affording employment to 160 men; a whinstone quarry has also been opened, from which blocks were raised for the Edinburgh and Glasgow railway. The annual value of real property in the parish is £28,748. The woodland at Callendar is supposed to have formed a portion of the ancient Caledonian forest that occupied a considerable tract of this part of the country. The timber is generally oak, beech, ash, hazel, and birch; and the plantations, which are under good management and in a thriving state, are chiefly Scotch fir and larch, adding greatly to the variety and beauty of the general scenery. *Callendar House*, the seat of William Forbes, Esq., is a spacious and ancient mansion with walls of great thickness and turrets of antique character, retaining much of its original baronial magnificence, though in some parts modernised by the late proprietor. It is situated in a park of more than 500 acres, embellished with timber of venerable growth; and within the grounds is the family mausoleum, a handsome circular building of the Grecian-Doric order, in which are the remains of the late Mr. Forbes. *Kerse House*, the seat of the Earl of Zetland, is a very ancient mansion with numerous additions of more modern date, and chiefly in the Elizabethan style, which forms its prevailing character; it is beautifully seated in a well-wooded park forming the chief ornament of the eastern carse lands, and the pleasure-grounds are tastefully laid out. *Bantaskine House* is a handsome modern mansion on an elevated spot about half a mile from the town, and ornamented with thriving plantations: the grounds comprise a pleasing variety of scenery, and command some extensive prospects.

This parish, which was formerly much more extensive, including the parishes of Denny, Slamannan, Muiravonside, and Polmont, separated from it at various times, is ECCLESIASTICALLY in the presbytery of Linlithgow, synod of Lothian and Tweeddale. The minister's stipend is £339, with a manse, and a glebe valued at £20 per annum; patron, the Crown. Falkirk church was originally founded by Malcolm Canmore, in 1057, and was a cruciform structure with a central tower: the present church was built in 1810, with the exception of the ancient tower, the area under which now forms a porch; it is of quadrangular shape, and contains 1300 sittings. Churches have been erected at Camelon and Grangemouth; and a place of worship once belonging to the Old-Light Associate Synod, is now in connexion with the Independent body. There are places of worship for the Free Church, United Presbyterian Church, and Baptists. In the summer of 1843 there was opened a very handsome Roman Catholic chapel, built in the pointed style, and capable of accommodating from 700 to 800 persons with sittings. Attached to it is the residence of the priest, in a corresponding style of architecture. These buildings are delightfully situated, and, in point of appearance, are by far the most attractive in Falkirk.

Two parochial schools are maintained, in one of which are taught the Latin, Greek, and French languages, and in the other only the English language, writing, and arithmetic, with the usual branches of general education. The master of the former has a salary of £17, with a house and garden, and fees averaging £35 per annum; the master of the English school has a salary of £34, with a dwelling-house and garden, and fees amounting to £48. There are numerous other schools in the parish, together affording instruction to more than 1200 children: one of these, at Falkirk, is exclusively for the gratuitous instruction of the poor, of whom about eighty are in attendance, and the master has a salary of £40, arising from an annual collection at the parish church, and private donations.

The remains of several of the forts erected by Agricola may still be seen in the direction of the vallum built afterwards by Antoninus. At Castlecary, at the western extremity of the parish, the site of one of these forts, a field six acres in extent, now covered with grass, may be distinctly traced; part of the vaulted foundations is remaining underneath the surface, and many of the stones belonging to the fort have been used in the inclosure of the field. The old tower of the castle of Castlecary, which is a very ancient structure, and said to be Roman, is still tolerably entire, and is inhabited by the Earl of Zetland's forester. At this hamlet, also, is a landing-place for passengers by the canal boats. Stones with various inscriptions, now preserved in the college of Glasgow, have been dug up in various parts of the ditch which defended the Roman wall, and of which portions are yet discernible in Callendar Park, and in the grounds of Bantaskine House. Vestiges remain of a Roman road that entered the parish at Castlecary, and passed along the south side of the wall, nearly to Roughcastle, then crossed the wall, and led to the fort at Camelon, and thence to the river Carron, where it entered the parish of Larbert; and in excavating the Forth and Clyde canal, at no great distance, a Roman granary has been discovered, in which was wheat of a blackish colour. Part of the vertebræ of a whale has been found embedded in the clay at Grangenmouth, while making excavations there; also in the brick-field of the Earl of Zetland, about three miles from the sea; and in excavating the tunnel for the Edinburgh and Glasgow railway in 1840, the trunk of a petrified tree, about five feet in circumference, was discovered at a depth of 129 feet below the surface.

FALKLAND, a royal burgh and a parish, in the district of CUPAR, county of FIFE, 10 miles (W.) from Cupar, and 24 (N. N. E.) from Edinburgh; containing, with the villages of Balmbrae, Freuchie, and Newton, 2886 inhabitants, of whom 1313 are in the burgh. This place, anciently called *Kilgour*, signifying in the Gaelic language the "Hill of Goats", is situated in a secluded spot at the northern base of the East Lomond hill, and was one of the principal strongholds of the Macduffs, thanes of Fife. In the castle here David, Duke of Rothesay, eldest son of Robert III., was

Burgh Seal.

starved to death by order of his uncle, the Duke of Albany, on whose attainder in the year 1424 it was forfeited to the crown together with the lands attached to it, and, from the forest in the vicinity, became a favourite hunting-seat of the Scottish kings. The present palace was erected on the site of the ancient castle by James V., who made it his occasional residence, and died here in 1542. The queen regent was staying at the palace when she was informed of the destruction of the cathedral of St. Andrew's; and with Mary, Queen of Scots, it was also a place of favourite resort. James VI. passed much of his time here while pursuing the diversion of the chase; and it was from Falkland that the Earl of Bothwell, in 1593, decoyed him to Perth, with the daring attempt to obtain possession of his person. Charles II., while in the power of the Covenanters, resided at the palace for some days: subsequently to his restoration to the throne, the building was considerably damaged by an accidental fire. After the battle of Sheriffmuir in 1715, the palace was seized by Rob Roy Mc Gregor, who, with his party, kept possession of it for a time, and laid the country around under contribution. The buildings at present consist of one side, and portions of some of the angles and other sides, of a quadrangle which in its appearance is similar to those of Holyrood House and Stirling; the original ceiling of the hall, or grand audience-chamber, is still entire, and displays some splendid specimens of elaborate carving and exquisite paintings. Notwithstanding the injuries to which it has been exposed, the palace has been partially restored by the family of Bruce, who purchased the estate, and it is now inhabited by their agent.

The town consists principally of one spacious street, in which are the market-place and town-hall, and from which diverge several narrow and irregularly-formed streets in various directions. In general the houses are of antique appearance, with thatched roofs, intermixed with several houses of modern erection, of white free-stone, which have greatly improved the aspect of the place; and the inhabitants are amply supplied with water. The only important trade carried on is hand-loom weaving, in which most of the people are employed, at their own houses. To the south-east of the town, near the junction of the parishes of Falkland, Kettle, and Markinch, is the Falkland Road station of the Edinburgh, Perth, and Dundee railway. The market is well supplied with provisions of every kind; and fairs, chiefly for cattle and horses, are held on the second Thursday in January, the last in February and April, the third in June, the first after the 12th of August, the fourth in September, and on the Friday before the Edinburgh Hallow fair in November. Falkland was erected into a royal burgh by charter of James II., granted in 1458, and confirmed by James VI. in 1595: the government is vested in three bailies, fifteen councillors, and a clerk, chosen agreeably with the regulations of the Municipal Reform act. The magistrates exercise civil and criminal jurisdiction over the whole extent of the royalty; but very few cases are brought under their decision, except debts to a trifling amount, and petty offences against the police. At one period the burgh enjoyed the privilege of sending a member to the Scottish parliament; but it ceased to exercise the right, before the Union in 1707. The town-hall, in the market-place, contains the requisite courts and an assembly-room.

The PARISH is about four miles in length, and nearly of equal breadth, comprising an area of 10,000 acres, of which about 300 are woodland and plantations, and the remainder arable, meadow, and pasture. Its surface is partly flat, including an extensive tract formerly the Park of Falkland, and partly diversified with hills, the highest of which is the East Lomond, full 1200 feet in height, and fertile to the very summit. The principal river is the Eden, which flows through the parish; and numerous springs of excellent water issue from the hills: a lake eastward of the palace, in which were several islets, has been drained, and the land brought into cultivation. The soil is various, partly a light brown loam, partly sand and gravel covered with heath and furze, and partly a deep black moss: the whole length from east to west between the plain and the Lomond hill is a rich loam, producing abundant crops. The system of husbandry has been greatly improved under the auspices of Mr. Bruce and the other landed proprietors; a large tract of common has been converted into fine arable fields, and most of the other waste has been reclaimed and made profitable. Draining and inclosing are extensively practised, and the various farms under beneficial leases have been carried to the highest state of productiveness. The Lomond hill abounds with limestone, and lead-ore has been discovered in it, but not wrought; coal, marl, and fullers' earth are also found in various parts. The annual value of real property in the parish is £8606. Falkland House (recently erected at Nuthill), the seat of the family of Bruce, is a very elegant mansion beautifully situated, and embellished with thriving plantations. Ecclesiastically the parish is within the bounds of the presbytery of Cupar, synod of Fife: the minister's stipend is £252. 8., with a manse, and a glebe valued at £18 per annum; patrons, the Bruce family. Falkland church, erected in 1620, and repaired in 1770, is a plain structure containing 687 sittings. There are places of worship for members of the Free Church, the United Presbyterian Synod, and Baptists of Free Communion. The parochial school is well attended; the master has a salary of £34, with an annual allowance of £10 for a house and garden, and the fees average about £50. On the Lomond hill are vestiges of an ancient camp supposed to be of Roman origin. The town gives the title of Viscount to the Cary family, a dignity created in the person of Sir Henry Cary, K. B., who was appointed lord lieutenant of Ireland in 1622, and on his death in 1633 was succeeded in the title by his son, Lucius, one of the most learned and accomplished men of his age, slain at the battle of Newbury in 1643.

FANKERTON, a village, in the parish of DENNY, county of STIRLING; containing 68 inhabitants. It lies in the north part of the parish, and on the road from Denny to Fintry, the Carron water running here in nearly a parallel direction. A part of the population is employed in the Herbertshire mill, a considerable paper manufactory, on the opposite bank of the Carron, in the parish of Dunipace.

FANS, a village, in the parish of EARLSTOUN, county of BERWICK, 3 miles (E. N. E.) from Earlstoun; containing 153 inhabitants. The village lies in the northern part of the parish, and a short distance from the river Eden. A school is supported chiefly by George Baillic, Esq., of Mellerstain, by whom the teacher is also allowed a dwelling.

FARAY, an isle, in the parish of WALLS, county of ORKNEY; containing 55 inhabitants. It is of small extent, lying eastward of the large island of Hoy, of which the southern portion, with this and other islands, constitutes the parish of Walls. There is some good pasturage for sheep.

FARNELL, a parish, in the county of FORFAR, 4 miles (S. E.) from Brechin; containing 620 inhabitants. This place probably derives its name from a den here having been anciently the resort of swans. The parish is about three miles in length, and two in breadth; it is bounded on the north by the river South Esk, and comprises 5540 acres, of which 3330 are arable, 560 in woods and plantations, 600 undivided common, and the remainder forest land, called Monteithmont muir. Though generally flat, the surface rises towards the north, and on the south side is marked by a ridge of hills of no great elevation, extending into the parishes of Marytown and Craig. The river, which has its source in the Grampian hills, separates the parish from the town of Brechin, and falls into a small bay of the sea, on the west of Montrose. It abounds with salmon and small trout, and in that part of its course which skirts the parish it runs between banks of great beauty, richly wooded, and along which a road has been constructed, commanding several highly picturesque prospects. A small rivulet that flows near the church, occasionally, after rain or the melting of the snow, swells into a torrent, bursting its banks, and inundating the adjacent meadows; its channel has, however, been deepened, and other means adopted to confine it within due limits. In the higher lands the soil is of rather inferior quality, but in the lower a rich loam intermixed with clay, of great fertility, and well adapted for the growth of wheat. The crops are wheat, oats, barley, peas, beans, turnips, and potatoes. The system of agriculture is in a very advanced state; the lands are drained and inclosed, the farm-houses and offices of very superior character, and all the more recent improvements in husbandry are practised. There are two mills for meal, and two saw-mills, one of which latter is occasionally used for making bone-dust, as manure for turnip land. The ordinary kinds of live stock are reared with great attention, and the farmers of the parish have obtained many of the prizes awarded by the Forfarshire Agricultural Association. A few years ago, the workmen employed at the tile-work at Calcary, in the parish, came to a deposit of fossil fishes, embedded in the clay at a depth of twenty feet from the surface, and not less than sixty or seventy feet above the present level of the South Esk. The annual value of real property in the parish is £5246.

The plantations are chiefly larch and Scotch fir, occasionally intermixed with various kinds of forest-trees, and are judiciously managed and in a flourishing condition. Kinnaird Castle, the seat of Sir James Carnegie, Bart., is a spacious and handsome mansion of quadrangular form, with a square tower at each of the angles, and has an imposing grandeur of effect; the demesne is tastefully laid out and richly wooded, and the lawn in front of the house is embellished with some very stately timber. Facility of communication is afforded by a turnpike-road lately constructed from Forfar to Montrose, which passes for two miles through the parish; by good roads kept in repair by statute labour; and by

the recently-opened Aberdeen railway. Ecclesiastically Farnell is in the presbytery of Brechin, synod of Angus and Mearns, and in the patronage of the Crown; the minister's stipend is £250. 10., with a manse, and a glebe valued at £20 per annum. The church is a handsome edifice in the early English style of architecture, with a finely-vaulted roof, and is adapted for a congregation of about 330 persons. Farnell parochial school is well attended; the master has a salary of £30, with about £20 fees, and a house and garden. The poor have the interest of bequests to the amount of £500, producing £25 a year. Near the church, and within the den from which the parish takes its name, are the remains of the ancient castle of Farnell, the baronial seat of the Ogilvys of Airlie: it is still in good repair, and part of it is appropriated, rent free, as dwellings for infirm and aged persons.

FARR, a parish, in the county of SUTHERLAND, 19 miles (W. by S.) from Thurso; containing, with the former quoad sacra district of Strathy, 2217 inhabitants. The name of Farr, or Far, as it is sometimes written, may be derived from the Gaelic word *Faire*, implying a "watch" or "sentinel". It doubtless arose in reference to the Dun, or circular tower, standing on the coast, about half a mile north of the parish church, and which formed the first and most important of a regular chain of such ancient buildings extending for more than twenty-four miles into the interior. These towers are thought to have been erected by a race called in Gaelic *Cruinnich*, from a word signifying "circular", or one denoting "a gathering together". There are also numerous tumuli in the neighbourhood, which are generally considered to have been the burying-places of invaders, especially Danes, who fell in the fierce and bloody conflicts so frequent with the native inhabitants; the sepulchres of the chieftains are usually at a little distance from the ordinary burying-places, and marked out by some signal and more permanent memorial. In the churchyard of Farr, for example, is a large erect stone, curiously sculptured with pagan devices, and traditionally reported to note the burial-place of some Dane of distinction, by many supposed to be a prince; it is two feet in breadth, six feet above the ground, and as many feet beneath. Several of the tumuli are said to be the depositories of those who fell in the battle between Reginald, King of the Isles, and Harold, Earl of Orkney and Caithness. In times less remote, the ancient clan of the Mackays made a very considerable figure here, their principal residence during the fifteenth, sixteenth, and seventeenth centuries being Strathnaver, of which Farr formed a part. Subsequently, upon the marriage alliance between the Earls of Sutherland and the Gordons, some of the latter came to reside in the district; and about a hundred years ago there were few persons in the parish but Mackays and Gordons, which names, indeed, are still the most numerous among the population. The ancient castle, probably built by the Norwegians, is supposed to have been the seat of the Mackays of Farr before they were created barons under the title of Lords Reay.

The PARISH lies in the northern extremity of Scotland, and is about forty miles long, varying in breadth from eight to twenty miles, and containing 300,000 acres. It is bounded on the north by the Northern Ocean. The general aspect of the parish is mountainous, the surface having in most parts a very thin shallow

soil, and in others exhibiting only bare rock. The principal mountain is Bein Chlibrig, of conical shape, and the loftiest in Sutherland, of which the southern side is partially covered with heath and grass, but the northern is bare and rocky; it is situated in the south-western part of the parish, and attains to 3200 feet above the level of the sea, attracting great numbers of ptarmigan, who locate themselves about the summit. The other hills, nearer the sea-coast, reach different degrees of elevation, but are all inferior in height to the Chlibrig. There are several picturesque valleys, also forming striking features in the scenery; the chief are those called Strathnaver and Strathrathy, which both in extent and beauty far exceed all the rest. Strathnaver extends from the coast in a south-west direction for about twenty-eight miles, including the ground along the river Naver, the loch of Naver, and the water of Mudale, beyond the loch: it is considered, for the richness of its pasture and the variety of its scenery, the most interesting Highland vale in the county. Strathrathy runs immediately south from the sea for twelve miles, and lies about ten miles north-east of Strathnaver, between which and this valley are situated the less commanding but still pleasing straths of Kirktonie, Armdale, Swordly, and Clachan, in the last of which stand the church and manse. There are about thirteen miles of sea-coast, reaching from Naver bay in the west to Baligil burn in the east. The shore is for the most part abrupt and precipitous, and dangerous to mariners, but contains the bays of Naver, Farr, Kirktonie, Armdale, and Strathy, where boats may safely land in moderate weather. The headlands are Airdniskich, Aird of Farr, Aird of Kirktonie, and Strathy head, from the last of which the lights of Cape Wrath and the promontory of Dunnet Head are seen on a clear day. In the parish are, besides, numerous caves, natural arches, and fissures, along the coast as well as in the interior, some of which are visited with considerable interest by the curious; the chief caves by the sea-side are those in the Aird of Kirktonie and Strathy point, and at Farr is a very fine natural arch.

There are many springs of excellent water in the parish, and several fresh-water lakes of considerable extent and beauty, the largest of them being Loch Naver, Loch Coir-na-fearn, and Loch Strathy. Loch Naver, which is seven miles long, about a mile and a half broad, and in some parts thirty fathoms deep, is by far the most important lake: its shore at different parts exhibits all the varieties of rock, pebbles, and sand. The rivers are the Naver, the Borgie, and the Strathy, the first of which, the largest in the county, issuing from the loch of the same name, is joined near Achness by a stream rising in Loch Coir-na-fearn, and after receiving many other waters in its meandering, and sometimes rapid and sometimes apparently quiescent, course through the strath, falls into the sea about eighteen miles from its source. The river Strathy flows from Loch Strathy, and, when augmented by the swellings of its tributaries from the several hills and marshes, becomes a powerful stream. The Borgie which issues from Loch Loyal, in the parish of Tongue, forms a boundary of this parish, and joins the ocean within a mile of the Naver, at Torrisdale. There are salmon-fishings in it, which for a long time past have belonged to the Sutherland family. Indeed, all the larger lakes and rivers contain a plentiful

supply of salmon; and in the smaller, trout are taken in considerable quantities.

The SOIL differs greatly: a very large portion of it in the interior, especially in the vicinity of the lochs, except Loch Naver, is a deep moss; while that on the borders of the rivers Strathy and Naver consists of sand, gravel, and moss. Along the coast it is found to be light and sandy, and in the neighbourhood of the bays, in addition to this, to contain some alluvial deposits. About 800 acres in various parts are occupied by wood, and about 700 on the coast are cultivated by small tenants: with these deductions the whole land is laid out in extensive sheep-walks. The herbage is of many kinds, varying principally according to the elevation of the land: the common red heather, deer-hair, and the long tough grass called flying-bent are commonly found on the mountains, hills, and moors; and in the softer marshes is a profusion of the species known by the name of cotton-grass. The trees growing here are of much variety, and, with some trifling exceptions, are indigenous; the alder attains a considerable size on the grounds watered by the Naver, where, also, the birch is most flourishing and abundant. About 22,000 sheep of the Cheviot breed are annually grazed in the parish. The land occupied by the small tenants is generally of uneven surface, and capable of great improvement by draining, inclosing, and ploughing; the crops consist of oats, bear, and potatoes. The annual value of real property in the parish is £808. The rocks and stone in the district, which are abundant in every direction, are chiefly coarse granite, gneiss, and sandstone. On the coast near Kirktonie is a considerable quantity of red sandstone, mixed with conglomerate, and in the vicinity of Strathy is some superior limestone, from which a material for burning into lime is obtained; also a large quarry of white sandstone, easily convertible to purposes of utility from the readiness with which it is dressed by the chisel. At Strathy the strata of freestone and limestone are horizontal; in the rest of the parish the strata of rock are nearly vertical, or form an angle of from five to thirty degrees with the perpendicular. Cattle-trysts are held at Aultnaharrow on the 14th September, and at Bettyhill on the first Wednesday in November. Salmon are taken in considerable quantities at three stations on the coast, and about eighteen boats are engaged in the herring-fishery during the season, from May till September; the salmon are sold to a company who have a curing establishment here. Turbot, cod, ling, haddock, and other fish are also obtained. There is a post-office in the parish connected with the market-town of Thurso, thirty-two miles distant; and the inhabitants have some facility of communication by means of a mail-diligence carrying four passengers, which runs to and fro, three times a week, between Thurso and the neighbouring parish of Tongue, between which places there is also a weekly carrier. The road from Bonar-Bridge to Tongue passes through the heights, and about sixteen miles of the line from Tongue to Thurso near the coast. On the river Naver is a chain-boat, and over the different parish-roads are two bridges of three arches each, and twelve bridges of one arch.

FOR ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Tongue, synod of Sutherland and Caithness; patron, the Duke of Sutherland.

The stipend of the minister is £167, with a good manse, built in 1818, and a glebe valued at £8 per annum. Farr church, situated near the coast, is convenient for the population, the greater portion of whom reside in its vicinity, the remoter district being peopled only by an inconsiderable number of shepherds in the employ of the great sheep-farmers. It was erected in 1774, and is a plain building with substantial walls, seating about 750 persons. There is a government church at Strathy, ten miles eastward from the parish church, built in 1826, and accommodating about 350 persons. The members of the Free Church have also a place of worship. There is a parochial school, in which instruction may be obtained in the classics, mathematics, and all the ordinary branches of education; the master has the maximum salary, with about £5 fees, a house, and £3 in lieu of a garden. Three other schools are supported respectively at Strathy, Armidale, and Clarkhill, of which that at Clarkhill is under a female teacher. The master of the school at Strathy, a parliamentary one, has a salary of £25, with about £4 in lieu of fees. The Committee of the General Assembly give a salary of similar amount to the teacher of Armidale, the fees being £3; and the mistress of Clarkhill receives £5 from the Society for Propagating Christian Knowledge, and the fees. In the two former of these three schools, the classics and mathematics are taught, in addition to the usual branches of education. The masters have excellent accommodations, including each a house and garden, and a croft of land from the Duke of Sutherland. His grace derives his title of Baron Strathnaver from the vale in this parish: the dignity was conferred upon the duke's ancestor as early, it is supposed, as the beginning of the thirteenth century.

FASKINE, a village, in the parish of OLD MONKLAND, Middle ward of the county of LANARK, $1\frac{1}{2}$ mile (S.) from Airdrie; containing 408 inhabitants. It is situated in the eastern extremity of the parish, and is one of the numerous villages that owe their rise to the minerals or manufactures of the district. Faskine is the seat of an extensive colliery, and it was here that the coal called the Splint, or Lady Anne coal, was first found, the seam deriving its name from Lady Anne Stirling, the wife of A. Stirling, Esq. In the neighbourhood of the village are four ironstone mines.

FEARN, a parish, in the county of FORFAR, 8 miles (W.) from Brechin, and 9 (N.) from Forfar, the county town; containing 404 inhabitants. This parish not long ago had its proportion of laws, cairns, and Druidical remains; but almost the only vestige of ancient times now visible is the castle of the Vane. The name of the structure is doubtless a corruption of the word *Bane*, signifying "white" or "fair", and the castle is said to have been built for the residence of a lady of that name, by Cardinal Beaton, who lived in the former half of the sixteenth century. Tradition reports that the secret cause of Colessie's defection at the battle of Brechin, in the year 1452, proceeded from a refusal on the part of Crawford to put him in possession of the barony of Fearn as a proper reward for his services: the result of the battle was fatal to Crawford and his coalition, and the family of Stuart was again firmly established on the throne. The extreme length of the parish is nearly seven miles, and at several points it is nearly three in breadth. On the east it is bounded by the parishes of

Careston and Menmuir, on the north by the united parish of Lethnot and Navar, and on the south and west by the parish of Tannadice. The surface is rather strongly marked by two ridges, running parallel to each other and to the Grampian range, and the one rising so considerably above the other as to exhibit, at a little distance, the appearance of one continued declivity from the Grampian summits to the valley of Strathmore. There are two small streams, one the Cruach (or Hunchback, a name rather singularly applicable), which winds diagonally through the middle of the parish, and the other the Noran, which, from the point where it comes in contact, forms the south-west boundary of the parish. This latter stream falls into the Southesk; its waters are proverbially crystalline, and the banks generally picturesque and beautiful. Upon a careful examination of topographical landmarks, few would hesitate to conclude, that at some former period the Noran joined the Cruach, first by one channel, and then by another; that, thus united, they both fell into the Northesk; and that the channel by which the Noran enters the Southesk, is one of the most recent instances in the country of a river-channel that has been scooped out of a rocky field. Very little more than a slight embankment would still give the streams one course, and empty both into the Northesk, seven or eight miles to the north of the present junction of the Cruach with the Northesk.

On the southern declivities the soil in general is rich and fertile, and on the northern obdurate and barren. The whole extent of the arable surface is little short of 3100 acres, divided into sixteen farms of unequal size; there may be about 330 acres under plantation, and the remainder is quite in its natural state, open, and overgrown with heath, whins, and broom. At one time, the growth of wheat had its share of attention; but this crop is now altogether superseded by the alternations of green crops with oats and barley. The deep free loam upon which the farmers work gives them plentiful returns of these, followed by a pasturage unsurpassed for richness and abundance by any section of the county. The minerals are such as are common in the neighbourhood, with the exception of a red argillaceous rock which decomposes upon exposure to the atmosphere, and is known by the local name of *kalm*. The annual value of real property in the parish is £4270. Noranside is a respectable modern mansion here, beautifully wooded, and commanding a singularly extensive view of Strathmore from east to west. Fearn parish is within the bounds of the presbytery of Brechin, synod of Angus and Mearns, and in the patronage of the Crown. The minister's stipend is £155, with a manse, and a glebe of ten acres. The church is situated on the summit of a natural mound in the middle of a circular *den*, with the manse and the school and school-house almost contiguous: the site is good, and commodious for the population. The master of the parochial school has a salary of £28. 12. 6., with a house and garden, and the fees.

FEARN, a parish, in the county of ROSS and CROMARTY, 5 miles (S. E.) from Tain; containing, with the villages of Balintore and Hiltown, 1914 inhabitants. The Gaelic name of this parish, *Fearnn*, signifies "the alder-tree", and was applied in consequence of the great number of alders growing at Mid-Fearn, in the parish of Edderton, in the neighbourhood. An abbey was founded there in the reign of Alexander II., by Far-

quhar, first Earl of Ross ; but a bull was afterwards obtained from the pope for removing the establishment to a fertile plain in this parish, on account of the comparative sterility of the lands in Edderton. The abbey was not only a place of worship before the Reformation, but was used as such until October, 1742, when suddenly, during the performance of divine service, the roof fell in, and thirty-six persons were instantly killed, eight others dying soon afterwards. The PARISH, which is about two miles wide, and several miles in length, stretches along the western shore of the Moray Firth, and is bounded on the north by the parish of Tain, on the south by that of Nigg, and on the west by Logie Easter. Its surface is nearly level, with the exception of a few eminences ; about three-fourths of the area are arable, and the rest partly green, and partly covered with heath. The coast for about a mile is flat and sandy, especially where the fishing-village of Balintore lies; but Hiltown, another fishing-station, half a mile from the former, is skirted by a coast altogether bold and rocky. The loch of Eye, the only water of consequence, is about two miles long, and half a mile broad.

In the centre of the parish the soil is a deep loam : the loans of Fearn to the south, and the lands of Allan to the west, are a deep clay ; and in other parts the soil is gravelly or sandy. The greater portion is cultivated, or occasionally in tillage ; 158 acres are occupied by wood, and the remainder is waste or pasture. Many improvements have taken place in agriculture within the last thirty or forty years, by trenching, draining, and levelling ; green crops are extensively raised, and some of the best wheat in Scotland is grown here. The produce is sent to the Leith and London markets ; and a monthly market for swine is held on the hill of Fearn. Fisheries of grey fish and herring are carried on to a considerable extent by the villagers residing on the seashore. The annual value of real property in the parish is £5229. Ecclesiastically the parish is within the bounds of the presbytery of Tain and synod of Ross ; patron, the Crown. The stipend of the minister is £206, with a good manse, and a glebe of five acres, worth about £12. 10. per annum. Fearn church is of early English architecture. There is a parochial school, the master of which has a salary of £36 (including £2 for garden), with a house, and about £10 fees. At Balintore is also a school, in which Gaelic is taught, and of which the teachers are supported by the Society for Propagating Christian Knowledge. The chief antiquities in the parish are the ruins of the old abbey ; the castle of Lochlin, situated on the eastern head of the lake of the same name ; the vestiges of the very ancient castle of Cadboll, and several Druidical temples. Here is buried Sir John Lockhart Ross, of Balnagown, vice-admiral of the Blue, a distinguished naval hero, who died in 1790.

FENTON, a village, in the parish of DIRLETON, county of HADDINGTON, 4 miles (S. W. by W.) from North Berwick ; containing 201 inhabitants. This place consists of East and West Fenton, and lies in the southern part of the parish, a short distance from the Peffer burn, the parish boundary in that direction. A part of the lands in this neighbourhood formerly belonged to the powerful family of De Vallibus, or De Vaux. In 1603, James VI., having given the castle of Dirleton to Sir Thomas Erskine, captain of the English guard, for his valour in preserving him from the traitorous attempt of Gowrie,

created him Baron Dirleton, and afterwards, in 1606, Viscount Fenton, this being the first dignity of viscount created in Scotland : in 1619, he was raised to the title of Earl of Kellie. Some years since, upwards of thirty pentagonal basaltic pillars were laid bare on the farm of West Fenton.

FENWICK, a parish, in the district of CUNNINGHAME, county of AYR ; including the villages of Kirkcaldon and Upper Fenwick, and containing 2018 inhabitants, of whom 355 are in Upper Fenwick, 4 miles (N. N. E.) from Kilmarnock. This place in ancient times formed part of the parish of Kilmarnock, from which it was separated in the year 1642, and called New Kilmarnock, its present appellation being subsequently derived from Fenwick hill, in the vicinity of the church. The parish is nine miles in length and upwards of six in breadth, and is in figure nearly an oblong. Its surface rises gradually from the south to the north, and reaches an elevation of about 700 feet near the part where the parish joins the Mearns moor. The climate is moist, and rain is very frequent, and the soil to a great extent unproductive, several large tracts consisting of deep moss, which, at many seasons in the year, is impassable without risk of life. The lower division contains most of the population, and the land here produces fair average crops : the higher grounds, bordering on Renfrewshire, are chiefly pastoral, and of excellent quality ; the stock grazed upon them is of a good breed, and in superior condition. The process of draining has been for some time attended to, and much land once entirely useless is now under tillage, and affords adequate returns. Limestone is abundant, and is quarried in several places ; coal has recently been discovered in much larger quantities than were formerly obtained, and iron has also been found in the same locality in considerable abundance, one bed measuring five feet in thickness. The parish contains several small hamlets ; the inhabitants generally dispose of their produce at the markets of Glasgow and Kilmarnock. Coal is procured from the neighbourhood of the latter place, and peat is obtained plentifully from the mosses in the district. An act of parliament was passed in 1847, authorizing the construction of a branch of three miles and a half, to Fenwick, by the Glasgow, Kilmarnock, and Ardrossan railway company. The public road from Glasgow to Kilmarnock and Ayr passes through the parish. The annual value of real property in Fenwick is returned at £9366.

Ecclesiastically the parish is within the bounds of the presbytery of Irvine, synod of Glasgow and Ayr, and in the patronage of the Earl of Glasgow. The minister's stipend is £123, of which a part is received from the exchequer ; with a manse, and a glebe of eight acres, valued at £24 per annum. Fenwick church, seated on the right bank of one of the two streams which intersect the parish, is a plain cruciform structure, built in 1643, and containing between 700 and 800 sittings. There is a place of worship for the United Presbyterian Synod. The parochial school affords instruction in the ordinary branches ; the master has a salary of £28, with a good house, built in 1805, a rood of garden, and £20 fees. There is a second school, with an endowment of £10 per annum ; and the parish contains a subscription library. The Earl of Glasgow takes the title of Baron Boyle, of Fenwick, from this place.

FERGUS, ST., a parish, in the county of BANFF, 5 miles (N. N. W.) from Peterhead; containing 1391 inhabitants. This parish, which is locally situated in Aberdeenshire, was formerly called Langley. It took its present name, in honour of its patron saint, in the year 1616, when the church was removed from its ancient site, the downs called the Links of St. Fergus, where it had been erected as a vicarage by the abbot of Aberbrothock. The lands formed part of the great earldom of Buchan till its forfeiture by the Cumyns in 1308; they afterwards came into the possession of the ancient family of Cheyne, who built the castle of Inverugie, and who, being heritable sheriffs of Banff, wished this property to be placed under their own jurisdiction, for which purpose they obtained an act of the legislature. The Carmelite friary in Aberdeen was founded and endowed by one of this family, Reginald le Cheyne, who secured to it, by deed, £2 annually out of the lands of Blackwater, in this parish. His son, Sir Reginald Cheyne, was lord chamberlain of Scotland in 1267; and another son, named Henry, was bishop of Aberdeen in 1281. Sir Reginald was succeeded in his property by a son of the same name, who was made prisoner at the battle of Halidon Hill in 1333, and who died about 1350, leaving two daughters, Mary and Mariot, by the marriage of the latter of whom with John de Keith, of Raven's-Craig, the parish of St. Fergus passed into the family of Keith. John de Keith was second son of Sir Edward Keith, marischal of Scotland; and the issue of his marriage with Mariot Cheyne continued to be a separate branch of the Keiths until, in 1538, the families became united by the marriage of William, fourth earl-marischal, with the heiress of Sir William Keith of Inverugie. The property escheated to the crown in 1715, by the attainder of the then earl, and was sold by the crown to the York Buildings' Company. It was purchased, however, from the trustees of the company by George, son of the attainted earl, in 1761; and in 1764 the family disposed of it to James Ferguson, Esq., one of the senators of the College of Justice, with whose descendants it has since remained.

The PARISH is five and a half miles in extreme length, and its greatest breadth is three and a half miles. It contains 7878 acres, and is bounded on the south by the river Ugie, and on the east by the German Ocean. The shore is marked only by one point of any note, called Scotstown Craig; the beach being generally low and sandy. At a small distance from the coast there are a number of hills, covered with a thick bed of drifted sand overgrown with grass, and which divide the shore from the interior land, and form a natural and efficient rampart against the drifting of the sands into the country by the violence of the east wind. These hills, varying in breadth, form the fine pasture land known as the Links of St. Fergus, and afford, perhaps, the finest grazing for sheep and young cattle of any downs in Scotland. In the lower part of the parish, to the extent of a mile from the shore, the ground is flat and uniform; but afterwards it rises towards the western extremity in a succession of graceful undulations, exhibiting the pleasing aspect of a well-cultivated surface. The only high land approximating to the character of an eminence is the Castle hill, in the vicinity of Inverugie Castle. The climate, on account of the exposure to the sea, is cold, and the impervious character of the subsoil renders it

damp; yet it is not found to be unhealthy. There are some good springs in the lower lands which yield a constant supply of water; but in the upper part a drought sometimes occurs, especially in the hot summer months. Near the shore the SOIL is a sandy loam mixed with moss, requiring but little labour for cultivation; it produces turnips, potatoes, and heavy crops of grain, which, however, is not so fine in quality as that grown on the stronger lands. The middle portion of the parish is a tenacious clay, yielding excellent grain. In the western district the soil is not so good, being chiefly clay and moss, and having not very long ago been a moor. The larger part of the land is arable, scarcely more than a sixth of the parish consisting of pasture, moss, and plantations. The Aberdeenshire and Buchan cattle, which, with their several crosses, formerly prevailed here, have within these few years yielded to a great extent to the Teeswater. The unfitness of the soil generally for the growth of turnips rather discourages the breeding of cattle; but the easy communication lately opened up by steamer with the London market has stimulated the attempts to overcome this natural obstacle, and the number of oxen, cows, and sheep is now very considerable. Many improvements have taken place by the formation of main drains and ditches, the planting of hedges, and the construction of various kinds of fences; the farm-buildings, also, are much better than formerly, and the houses on the best farms are generally slated, and the offices tiled. The annual value of real property in the parish is £6172. The rocks comprise granite, trap, gneiss, greywacke, and quartz, which are to be seen in all kinds of combinations: limestone is also found, frequently mixed with gneiss and granite. There are some tracts of peat-moss, in which remains of oak, hazel, and birch are embedded; the antlers of full-grown stags have been found, and large quantities of marine testacea.

In the parish are three mills, at one of which, called Stone mill, there were produced in a recent year 1508 sacks of meal, of two and a half hundred-weight each, sent to the London market, 314 forwarded to Shetland, and 200 for home consumption; 613 sacks of flour, and 100 sacks of barley, also, were prepared for domestic use. There is a salmon-fishery on the Ugie, but it has been much injured by a sand-bank thrown up by the sea at the mouth of the river, and which prevents the fish from entering, unless the bank happens to be driven back by the force of a land flood. Considerable numbers of black-trout, and the pearl muscle, are found in the river; but the pearls are of no great value, being dingy and opaque. The neighbouring seas, also, abound with fine fish, consisting of turbot, sole, ling, dog-fish, whiting, herring, plaice, flounder, cod, and halibut, the most valuable of which, however, are seldom taken, as the fishermen have no nets suitable for the purpose. There is a small village, independently of the kirktown; but the larger part of the population is scattered throughout the rural districts. The turnpike-road from Fraserburgh to Peterhead intersects the parish from north to south; and over the Ugie is a bridge for it, built in the latter part of the seventeenth century, and connecting St. Fergus with the parish of Peterhead.

Ecclesiastically the parish is within the bounds of the presbytery of Deer, synod of Aberdeen; patron, the Crown: the stipend of the minister is £217, with a manse, and a glebe valued at £18 per annum. St. Fergus

church, erected in 1763, is a convenient structure, tastefully decorated in the interior, and having three galleries; it contains 610 sittings. There is a small meeting-house belonging to the Baptists; and a parochial school is supported, in which Latin, mathematics, and the usual branches of education are taught, the master receiving a salary of £34 per annum, with about £20 fees. A good parish library was founded in 1829, and a savings' bank in 1824. The chief relic of antiquity is the ruin of Inverugie Castle, formerly the residence of the earl-marischal of Scotland, and the birthplace of Field-Marshal Keith, who fell at the battle of Hochkirchen in 1758: one of the towers, of great antiquity, is called *Cheyne's*, but the greater part of the fabric is said to have been erected by the earl who founded Marischal College, Aberdeen. The churchyard, on the coast, is a very ancient cemetery, and of such singular interest, partly on account of the loneliness of its situation, that the late Dr. Beattie often expressed a wish to have his remains deposited here.

FERGUSHILL, a village, in the parish of **KILWINNING**, district of **CUNNINGHAME**, county of **AYR**; containing 279 inhabitants. This village has sprung up within the last few years owing to the extension of coal-mines in its vicinity, the population being principally engaged in the works; and it has already become one of the chief villages of the parish.

FERNIE EASTER, a hamlet, in the parish of **MONIMAIL**, district of **CUPAR**, county of **FIFE**, 3 miles (W. by N.) from Cupar; containing 44 inhabitants. It lies nearly in the centre of the parish; and in its vicinity is Fernie Castle, which is supposed to have been one of Macduff's castles, and was evidently of great strength.

FERNIGAIR, a hamlet, in the parish of **HAMILTON**, Middle ward of the county of **LANARK**, 1 mile (S. E. by E.) from Hamilton; containing 74 inhabitants. It is situated in the eastern part of the parish, and on the turnpike-road from Hamilton to Larkhall: the Clyde flows at a short distance from the village.

FERRYDEN, a village, in the parish of **CRAIG**, county of **FORFAR**; containing 921 inhabitants. This village is situated on the south bank of the South Esk river, immediately opposite the harbour of Montrose, and is a prosperous place, with a rapidly increasing population, chiefly fishermen and their families. Between twenty and thirty boats are engaged in the white-fishery alone, which here consists principally of cod, haddock, and skate, all of them taken in great quantity; and many salmon are also caught at the mouth of the Esk. The various kinds of fish from this quarter largely supply the Edinburgh and London markets. There is a good harbour, with a safe roadstead; and here, previously to the erection of bridges higher up the river, was a ferry to Montrose. In the village is a school, supported by an endowment bequeathed by a benevolent lady, lately deceased.

FERRYPORT-ON-CRAIG, a parish, in the district of **ST. ANDREW'S**, county of **FIFE**, 11 miles (N. E. by N.) from Cupar; containing 1741 inhabitants, of whom 1556 are in the village. This place formed part of the ancient lands of Craig, belonging to Archbishop Sharp of St. Andrew's, who, by authority of the pope, granted them on lease to the Scotts of Balwearie in Fifeshire, from whom, to distinguish them from others in the county, of the same name, they received the appellation of Scots-

craig, which they still retain. The name of the village is obviously derived from the establishment of a ferry over the Tay to the opposite shore at Broughty, to which ferry, previously to the erection of a pier for their better accommodation, passengers had access only by means of a platform of timber extending to the boats from the rugged rocks which girt the coast. The lands are supposed to have been part of the parish of Leuchars previously to the year 1606, when, by act of James VI., they were erected into a distinct parish: one of the fields is still called the Chapel, probably from the existence of a chapel of ease to the mother church prior to the separation. There was a castle at this place, but at what time or by whom it was founded does not appear: from the style of the building, as far as can be ascertained from the small portions of it still remaining, it seems to have been adapted for the use of cannon, and to have been erected to defend this pass of the river, in conjunction with the castle of Broughty in Forfarshire.

The **PARISH** is bounded on the north by the river Tay, which washes its coast for nearly five miles before joining the German Ocean. It differs greatly in breadth, not exceeding in the widest part a mile and a half, and comprises 2600 acres, of which 1400 are arable, 120 woodland and plantations, and the remainder rough pasture and waste. The surface is abruptly varied, being in the eastern parts flat and low, and in others rising into ridges of craggy rock. Its rugged aspect has under recent improvements been considerably softened, and many rocks near the village, which is situated on the shore, have been removed; but to the west the lands are still precipitous, and very irregular. Except the Tay, there is no stream of any consequence; but numerous springs in the higher grounds, descending to the low lands, afford an abundant supply of excellent water. In the lower parts of the parish the soil is a light loam, resting on a bed of sand; and in the higher, a rich black loam, on a substratum of whinstone. The agricultural district is under good cultivation, and extremely productive; the crops are barley, oats, rye, and wheat, with potatoes, of which considerable quantities are raised for the London market, turnips, and the usual green crops. Flax was formerly grown to a good extent, but for many years its culture has been totally discontinued. The pastures maintain large numbers of sheep and cattle, the former chiefly a cross between the Cheviot and Leicestershire breeds, and the latter a mixture of the Fife, Angus, and Ayrshire. There is a small undivided common of about twenty acres, on which all the inhabitants have a right of pasturage. The woods consist mainly of larch and oak, and the latter, though of recent introduction, appears to thrive well. The farm-buildings are in general substantial and commodious, and some, of more modern erection, are of a very superior order; but little progress has hitherto been made in inclosing the lands, which, with the exception of a few fields, are wholly open. The annual value of real property in Ferryport-on-Craig is £3191.

The principal proprietor in the parish is the owner of Scotsraig, whose mansion, erected in 1807, is a spacious structure, beautifully situated in grounds tastefully laid out, and embellished with plantations. Ferryport village consists of more than 300 neatly-built houses, chiefly one story in height, with a few of two stories, and some larger houses of recent erection, which are handsomely built, and roofed with blue slate. The shore has been

greatly improved by the levelling of various eminences that impeded the communication between the village and the river. There are two piers at the ferry, at the larger of which, vessels laden with coal and other necessaries land their cargoes for the supply of the neighbourhood, and grain, potatoes, and other agricultural produce are shipped for the London market. In 1846 the Edinburgh, Perth, and Dundee railway company were empowered to purchase, and in 1847 were empowered to improve, the ferry across the Tay. There is an extensive salmon-fishery belonging to the proprietor of Scotsraig, and extending along the coast for the whole length of the parish; it formerly produced an annual rental of £2000, but since the disuse of stake-nets, which were formerly employed, it yields only about £600. Many of the inhabitants of the village and parish are occupied in handloom weaving for the manufacturers of Dundee, to which they devote their chief attention during the winter months, in the summer resuming their agricultural labours. A fair, at one time very numerously attended, is held in the village on the first Tuesday in June (O. S.), and resorted to by a few dealers in general merchandise. Facility of communication is afforded by the Dundee line of the Edinburgh, Perth, and Dundee railway. A library has been established in the village, and there is a savings' bank, opened in 1836, which has proved very successful. Ecclesiastically the parish is within the bounds of the presbytery of St. Andrew's, synod of Fife; patron, the Crown: the minister's stipend is £159. 13., with a manse, and a glebe valued at £42 per annum. Ferryport church, rebuilt in 1825, is a neat and substantial edifice situated in the village, and adapted for a congregation of 900 persons. There are also places of worship for members of the Free Church and the United Presbyterian Synod. The parochial school affords an extensive course of instruction; the master has a salary of £30, with £19 fees, and a good house and garden. Five free scholars are taught by the master in consideration of a bequest for that purpose by William Dalgleish, Esq.; they are nominated by the proprietor of Scotsraig and the incumbent of the parish, and remain in the school for five years. There are also several Sabbath-evening schools, supported by contributions collected at the church. Some vestiges of the Archbishop of St. Andrew's palace here are yet remaining.

FETLAR and NORTH YELL, a parish, in the county of SHETLAND; containing 1745 inhabitants, of whom 761 are in Fetlar, 36 miles (N. by E.) from Lerwick. This parish, which is situated nearly at the northern extremity of the Shetland Isles, consists of the island of Fetlar and the northern part of that of Yell. The former is bounded on the north by the channel separating it from the islands of Unst and Uyea, on the south by the wide channel which divides it from Whalsey island and the Mainland, on the east by the German Ocean, and on the west by Colgrave Sound, separating it from the island of Yell. North Yell is bounded on the west and north by the Northern Ocean, and on the east by the firth called Blue-Mull Sound, which divides it from the island of Unst. Fetlar measures about seven miles in length and four in breadth, comprising $786\frac{3}{4}$ merks of land under cultivation (a merk being about three-quarters of an acre), and between 10,000 and 12,000 acres which, with the exception of 1200, are undivided common. North Yell is six miles long and five broad,

and contains 634 merks of cultivated, and from 12,000 to 15,000 acres of uncultivated land.

The situation is bleak, and the surface hilly; but there are no lofty elevations, the highest grounds not rising more than 300 feet above the level of the sea, and being, in each district, alternated with tolerably fertile valleys. Both the islands are singularly irregular in figure, and the coast is indented with fissures, creeks, and bays of various extent. Of the last the principal in Fetlar are those of Aith, Tresta, Strand, Mowick, Funzie, Gruting voe, and Urie bay, where a kind of pier has lately been erected; but none of these are considered safe harbours. North Yell, in this respect, has much the advantage: the bays of Basta voe and Cullivoe form excellent retreats and landing-places; besides which, it has the bays of Papal and Gloup voe. Colgrave Sound, encompassing Fetlar from south-west to north-west, is a rapid and dangerous channel, about nine miles across in the widest, and three miles in the narrowest part. Blue-Mull Sound measures in the narrowest part about three-quarters of a mile across, and the sound between the islands of Fetlar and Unst is from four to five miles broad: in both these channels, but especially in that of Blue-Mull, the tide runs with great force, and the passage is often hazardous. The rocks on the coast are frequently covered with sea-fowl; wild pigeons are numerous, and flocks of wild swans often visit the islands. There are many small lakes, abounding with trout, the largest of which is a lake in Fetlar, near the manse, about three-quarters of a mile in length and a quarter in breadth.

The inhabitants are employed in agriculture and fishing, the latter occupation engaging most of their attention: In Fetlar the soil is of various descriptions, sandy, clayey, marly, and all of it shallow, with very little peat: North Yell, except the patches cultivated along the shore, is one great peat-moss. Each district produces good oats and potatoes; barley is cultivated only to a very limited extent, and wheat is rarely to be seen, owing to the want of inclosures to protect these kinds of grain, and of sun duly to ripen them. The ground is generally turned with a spade, the number of ploughs being very small; and the state of agriculture throughout the two districts indicates strongly the want of resources, and of much more attention and skill, to place it on a respectable footing. In North Yell many plots of common ground have recently been brought under cultivation, and a few in Fetlar. Sir Arthur Nicolson lately commenced an improvement farm. The sheep and cattle are mostly of the native breed, small but hardy, and they appear to thrive better than any other kinds: a mixed breed of sheep, introduced some time since by Sir Arthur Nicolson, has not been found well suited to the climate, and a few cows of a larger growth, which have been tried, have in the same manner proved unequal to meet the severity of the district. The ponies bred are of the same size, vigorous spirit, and uttiring strength, as those in the other isles of Shetland. In this parish the rocks comprise mica-slate, quartz, chlorite-slate, gneiss, clay-slate, and serpentine. Chromate of iron, now supposed to be exhausted, used for a long time to be occasionally quarried in the island of Fetlar. With the common stone from the same locality, a mansion-house has been built by Sir Arthur Nicolson, and another by Mr. Smith; and quarries in the island of Yell have sup-

plied a material for the erection of the houses of Gloup, Greenbank, and Midbrake, the dressings, however, being of freestone brought from Lerwick. Sir Arthur has also erected an observatory, on a mound in the immediate neighbourhood of his mansion. The annual value of real property in the parish is £806. The ling-fishery occupies much of the time of the inhabitants; in addition to which, tusk, cod, saith, and other kinds are taken nearly all the year round: the herring-fishery, formerly considerable, has in a great measure failed of late years. The fish caught in winter are salted, and preserved in vats till spring, when they are dried and exported to Leith; those taken in summer are preserved in the same manner, and sent, not only to the market of Leith, but also to Ireland and Spain: the produce of the herring-fishery, which is carried on in August and September, is forwarded, when cured, to Leith and to Ireland. The stations for the ling-fishery are, Funzie, on the eastern side of Fetlar, and Gloup, on the north side of Yell, towards the Northern Ocean. Urie, Strand, and Aith banks, in Fetlar; and Cullivoe and Bayanne, in North Yell, are or were stations for the curing of herrings. A large quantity of skate, halibut, haddock, sillock, piltoek, and whiting, is also taken, furnishing the inhabitants with a considerable portion of their subsistence: there are oysters at Basta voe, and a good supply of several other kinds of shell-fish. The parish is entirely destitute of conveyances and roads; and the intercourse with Lerwick, the only market-town of the Shetlands, is so uncertain and dangerous, that, although the post-office in North Yell communicates twice a week with that place in fair weather, letters are often delayed for a long time on their route.

Ecclesiastically the parish is within the bounds of the presbytery of Burravoe, synod of Shetland, and the patronage is vested in the Earl of Zetland. The minister's stipend is £180, including the sum for communion elements; with a manse, and a glebe valued at £9 per annum. There are two churches, both very near the sea-shore; that in Fetlar was rebuilt in 1790, and accommodates 269 persons, and that in North Yell was built in 1832, and contains sittings for 390. The Wesleyans have a place of worship in Fetlar. The parochial school is in North Yell, and affords instruction in reading, writing, arithmetic, book-keeping, and navigation; the master has the minimum salary, and receives a few pounds in fees. In Fetlar is a school of much longer standing than the parochial school, supported by the Society for Propagating Christian Knowledge; the master teaches the same branches as those taught in the other school, and receives a salary of £15, and a small amount in fees. There is a small subscription library. The antiquities comprehend the remains of several chapels and forts, a Roman camp at Snawburgh, several fonts which have been dug up at Aithness, and a few urns containing ashes and bones.

FETTERANGUS, a village, in the parish of OLD DEER, county of BANFF, $1\frac{1}{2}$ mile (N. N. E.) from Deer; containing 225 inhabitants. This place is locally situated in the shire of Aberdeen, and is a modern village, erected on the estate of Mr. Ferguson of Pitfour: the population is employed chiefly in the linen manufacture. A little east of the village runs the great road from Fraserburgh to Aberdeen, which intersects the parish in a direction north and south.

FETTERCAIRN, a burgh of barony and a parish, in the county of KINCARDINE, $15\frac{1}{2}$ miles (W. S. W.) from Stonehaven; containing 1793 inhabitants, of whom 372 are in the burgh. This place is supposed to have derived its name from several cairns (on the face or ascent of one of the mountains by which it is bounded on the north) raised over the remains of the warriors who fell in battles which, according to tradition, were fought in this pass of the Grampians. The only event of historical importance connected with the parish, is the murder of Kenneth III., King of Scotland, which took place in the castle of Fenella about a mile westward of the village. The details of this occurrence, though variously recorded by historians, ascribe the murder to Fenella, the proprietor of the castle, in resentment of the death of her son, whom that monarch had sentenced to execution for rebellion. Fetterairn was formerly the property of the Middletons, of whom John, the zealous adherent of Charles I. and Charles II., was after the Restoration created Earl of Middleton and Viscount Fettercairn; and the estate continued in the possession of that family till 1777, when it was purchased by Sir John Stuart, Bart., maternal grandfather of the present proprietor.

Though possessing the privileges of a burgh of barony, the village is not distinguished by any features of importance. There are two libraries, one of which, of about 500 volumes, is the property of the Fettercairn Club, and the other, containing nearly an equal number, is parochial, and supported by subscription. At Nethermill, adjoining the village, is a distillery of whisky from malt only; and at Arnhall, on the banks of the North Esk, is a mill for carding and spinning wool, and manufacturing coarse woollen-cloths. The post-office, under that of Montrose, has a regular delivery; and facility of communication is afforded by good roads, kept in repair by statute labour, and which pass through the village, and intersect the parish in various directions. The PARISH, which is situated in the western portion of the county, on the south of the Grampian hills, is bounded on the south-west by the North Esk river for about three miles, and is nearly eight miles in length and four and a half in breadth, comprising an area of 13,000 acres, of which 7500 are arable, 1800 woodland and plantations, and the remainder pasture, moss, and waste. Its surface rises gradually, in gentle undulations, to the base of the Grampian hills, of which the highest within the parish has not an elevation of more than 1600 feet above the level of the sea. There are numerous springs, some of them with a chalybeate property; but the only river is the North Esk, over which is the romantic bridge of Gannachy, connecting the parish with that of Edzell, a structure of one arch thirty feet in height and fifty-two feet span, springing from two precipitous rocks: it was built in 1732 by Mr. Black, of Edzell.

The soil is various, in some parts alluvial, in some a stiff clay, and in others a deep moss alternated with gravel; the crops are wheat, barley, oats, potatoes, and turnips. The system of agriculture has been considerably improved under the auspices of the Fettercairn Club, who hold their meetings in the village: tracts of the waste land have been reclaimed by draining; the farm-buildings are comfortable and substantial, the lands well inclosed, and on most of the farms threshing-mills have been erected. Much attention is paid to the improvement of live stock. The sheep, with the excep-

tion of a few Cheviots, are generally of the black-faced breed; and the black-cattle, of the Angusshire, with some of the Aberdeenshire and Ayrshire. Considerable numbers of swine are also reared, all of the Chinese breed. The annual value of real property in the parish is £9107. The plantations, which are extensive, consist of the usual varieties, the most conspicuous being ash, beech, and fir; they are under careful management, and in a thriving state. The principal substrata are red freestone, whinstone, and limestone; and porcelain clay of fine quality is found on the banks of a small burn, at Balnakettle. *Fettercairn House* is an ancient edifice, to which large additions have been lately made by Sir John Stuart Forbes, Bart., the proprietor. *Fasque* is a spacious house in the castellated style, beautifully situated on an eminence, in diversified grounds, in which is a fine sheet of water twenty acres in extent, which, with the stately approach to the house, was formed by the present owner, Sir John Gladstone, Bart. *The Burn House* is a handsome modern mansion, on the banks of the North Esk, in a richly-planted demesne, tastefully laid out in walks, and commanding much picturesque scenery. *Balbegno Castle* is an ancient and spacious building, on the parapet of which are various sculptures and the date 1509; the interior contains a noble hall, whose lofty roof of stone is richly groined, and divided into sixteen compartments, in which are emblazoned the armorial bearings of the sixteen peers of Scotland.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Fordoun, synod of Angus and Mearns. The minister's stipend is £232, with a manse, and a glebe valued at £20 per annum; patron, the Crown. Fettercairn church, erected in 1804, and enlarged in 1839, is a handsome structure, with a tower, and spire rising to the height of 104 feet; it is beautifully situated, and contains 1000 sittings, a number which may be easily augmented. The members of the Free Church have a place of worship. The parochial school is well conducted; the master has a salary of £34, with a house and garden, and the fees average about £30 per annum, to which may be added £1. 15., the rent of a bequest in land. A female school in the village is supported by Sir John Stuart Forbes, who provides a school-room and house rent-free for the mistress, to whom he pays a salary, in addition to the school fees. An almshouse has been built by Sir John Gladstone for eight people, to each of whom he allows a room and garden. Dr. Ramsay, of Barbadoes, bequeathed the sum of £500; Provost Christie, of Montrose, £50; James Black, the builder of Gannachy bridge, 200 merks; George Cooper, of Slateford, £20; R. Valentine, of Bogindollo, £50; Anthony Glen, of Luthermuir, £20; and James Smith, of Fettercairn, several houses; all for the relief of the poor of the parish. In the village is preserved the ancient cross of Kincardine, an octagonal column to which is an ascent of six circular stone steps: on the capital are the arms of John, Earl of Middleton, with his coronet and initials. Greencairn, the supposed residence of Dame Fenella, is now a heap of shapeless ruins.

FETTERESSO, a parish, in the county of KINCARDINE; containing, with about two-thirds of the town of Stonehaven, 5212 inhabitants. This place, the name of which, in the Celtic language, is perhaps descriptive of the marshy nature of its lands, is of very remote anti-

quity, and is distinguished as the site of a station occupied either by the Caledonians or the Romans. The latter people, having under Agricola subdued the southern portion of the country, advanced with an army of 26,000 men towards the north, and near the Grampian mountains, and probably in this neighbourhood, encountered the Caledonians under Galgacus their king, who, with 30,000 men, defending his country against the invaders, routed their ninth legion, but was finally subdued. The remains of this station, which inclosed an area of seventy-one acres, and was defended by a vallum and fosse, are still nearly entire; and till within the few last years, there were existing some remains of another camp near Stonehaven, about three or four miles distant from the former. The ancient forest of Craigie, and subsequently the whole of the lordship of Cowie, in this parish, together with numerous other lands in the counties of Aberdeen and Kincardine, were granted by Robert Bruce to his steady adherent Sir Alexander Fraser, who signalised himself at Bannockburn, and was killed in the battle of Dupplin in 1332. Upon his death the principal lands descended to his son, whose only daughter and heiress conveyed them by marriage to Sir William de Keith, great marischal of Scotland, and ancestor of the family of the earls-marischal. The chief residence of this noble family in this part of the country was for many ages the castle of Fetteresso, in which the Pretender, after his landing at Peterhead in 1715, was for some time hospitably entertained. On the attainder of the last earl, the estates were forfeited to the Crown; and in the year 1782, the castle and property of Fetteresso were bought by the late Admiral Duff, in whose family they still remain. A portion of the lands, now the barony of Ury, was inherited by Sir William, a second son of Sir Alexander Fraser, who sold it in 1413 to William de Hay, lord of Errol, and constable of Scotland; and it was subsequently purchased by the Marischal family, who in 1647 sold it to Colonel David Barclay, whose descendant is the present proprietor.

The PARISH, which is bounded on the east by the German Ocean, is about ten miles in length and between five and six in breadth, comprising an area of 24,914 acres, whereof about 10,000 are arable, 2000 woodland and plantations, and the remainder meadow, pasture, and waste. Its surface is abruptly varied, though not rising into mountainous elevation; and the scenery embraces much diversity of character, in some parts enriched with thriving plantations and being pleasingly picturesque, in others dreary and barren. The river Carron, which separates the parish from that of Dunnottar, forms its southern boundary for about five miles, and falls into the sea at Stonehaven; whilst the Cowie, which flows through the parish in a direction nearly parallel, falls into the sea at the small bay of Cowie, to the north. There are also two rivulets, the Muchalls and the Elsieck, which, though generally inconsiderable, are sometimes swollen by the accession of numerous streamlets, and inundate the adjacent lands.

The SOIL is extremely various; in the east and south, rich and fertile; in other places, of very inferior quality; and in some parts wholly unprofitable. The system of agriculture was much improved by the late Mr. Barclay, who by great perseverance brought it to its present state of perfection: in some places the lands have been carefully drained. The crops comprise oats and barley, with

some wheat, which is not however in extensive cultivation, and turnips, of which very considerable quantities are grown. Several portions of land are let in small lots annually, for raising potatoes. The pastures are extensive, and there are herds of cattle kept, chiefly of the Angus breed, with some of the Teeswater or short-horned: several hundred head of cattle are fattened annually, and sent to the different markets in the district, and to London and other distant parts by steamers from Aberdeen. In this parish the horses are chiefly reared for agricultural uses, and but little attention has been paid to the improvement of the breed. The sheep are of various kinds, part of them of the Leicestershire breed; they are mostly fed upon turnips on the several farms, but some are pastured on the hills, though not to so great an extent as formerly. Dairy-farming is well managed, and large quantities of butter, cheese, poultry, and eggs are forwarded to Aberdeen and Stonehaven. The farm-buildings have been much improved, and on most of the farms are threshing-mills, many of which are driven by water, and one by steam-power. The woods and plantations are extensive; the former, though in parts unproductive from the nature of the subsoil, still contain a good deal of valuable timber, and the latter, with the exception of the larches on some particular lands, are generally thriving. The annual value of real property in the parish is £19,209. *Fetteresso Castle*, formerly the seat of the Marischal family, beautifully situated on the north bank of the Carron, was partly rebuilt by the late Mr. Duff; it is a spacious mansion, surrounded by an extensive and well-wooded park, in which is some stately timber, and the gardens and pleasure-grounds are tastefully laid out. *Ury*, originally built by the Hay family, is situated on a steep acclivity of the river Cowie; it is of moderate extent, but of great strength, with vaulted roofs of stone. The park is extensive, and contains many trees of venerable growth, and some thriving modern plantations; the grounds are well disposed, and the gardens, formed on terraces, add greatly to the beauty of this seat. *Netherley* and *Muchalls* are handsome mansions: the latter, a fine old edifice, for ages the residence of the Burnet family, stands on an eminence near the sea. *Elsick* is also an ancient mansion, formerly belonging to the Bannermans. *Cowie* is a small but handsome house.

There are several fishing-villages on the coast; namely, Cowie, where eight boats are engaged, each with a crew of five men; Sketteraw, employing seven, and Strathro, having four boats. At these stations are small harbours, well adapted for the purpose. The chief fish taken off the coast are haddock, cod, and ling, of which great quantities, especially of haddock, are dried and smoked, and sent for the supply of the neighbouring towns, and by steamers from Aberdeen to London. The inhabitants of these villages are during the season employed in the herring-fishery, in which about fifteen boats are usually engaged. There are likewise some salmon-fisheries in the parish, let to tenants whose aggregate rents, however, do not exceed £100 per annum; the greater number of the salmon are forwarded to London. Woollen-cloth for domestic use is woven by several families in the parish, and there is a small mill for spinning the yarn; many of the females, also, are employed in knitting woollen-hose for the manufacturers of Aberdeen. Facility of communication is afforded by

good roads, of which the turnpike-road from Aberdeen to the south passes through the parish, and by the Aberdeen and Edinburgh steam-boats, which touch here on their way. Of late, also, there has been the advantage of railway communication, the newly-opened Aberdeen line intersecting the parish. Fairs, chiefly for cattle, are held at Stonehaven and Muchalls frequently.

FOR ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Fordoun, synod of Angus and Mearns. The minister's stipend is about £200, with a manse, and a glebe valued at £16 per annum; patron, the Crown. The present church, erected in 1813, on a site near Stonehaven, is a handsome structure containing 1400 sittings: some remains exist of the ancient church, to which is attached an extensive cemetery, still used. There is a chapel of ease at Cookney, on the lands of Muchalls, a neat building with 700 sittings, the minister of which derives an income from the seat-rents; and on the same property is an episcopal chapel. Two parochial schools are maintained, one in the northern, and one in the southern district of the parish; the master of the former has a salary of £34, with fees amounting to £20 per annum, and a house, and the master of the latter a salary of £17, and £10 fees. A school was established at Cairn Hill by the Rev. Dr. Morison, who endowed it with a house and garden for the master, and the interest of £100. The poor have the proceeds of some charitable bequests, among which is a legacy of property supposed to be worth £500, by two females of the name of Duns. There are Druidical remains in several parts of the parish. Various pieces of ancient armour, chariot wheels, and other relics have been found at Kempstone Hill, the supposed field of battle between the Caledonians under Galgacus, and the Romans; and in the vicinity of the camp near Stonehaven, sepulchral urns were not long since discovered. A tumulus on the lands of R. W. Duff, Esq., is said to have been erected over the remains of Malcolm I.; and at no great distance there were discovered, in 1837, a skeleton, an urn about twenty-eight inches in circumference and six inches in depth, and more than 100 jet beads, all in a tomb about three feet in length and two feet wide. On the summit of a rock near the sea, at Cowie, are some remains of an ancient building thought to have been a castle; there are also some picturesque remains of an old chapel at Cowie, and the place would appear to have been at one time of some importance.

FIARAY ISLE, in the parish of BARRA, county of INVERNESS. It is one of the Hebrides, lies about a mile northward of Barra, and is uninhabited.

FIDREY ISLE, in the parish of DIRLETON, county of HADDINGTON. This is a small and beautiful island, at the mouth of the Firth of Forth, about half a mile distant from the coast, and opposite to Dirleton. On the isle are the ruins of a building, an ancient chapel, or a lazaretto for the sick, which was dedicated to St. Nicholas.

FIFE-KEITH, a village, in the parish of KEITH, county of BANFF; containing 578 inhabitants. This village lies on the banks of the Isla, adjoining to and opposite Old Keith, and is of very recent origin, having been commenced by Lord Fife, from whom it takes its name, about 1817. It is connected by two bridges over the river with Old and New Keith, the three places being now considered as one town.—See KEITH.

FIFESHIRE, a maritime county in the east of Scotland, bounded on the north by the river Tay, on the east by the German Ocean, on the south by the Firth of Forth, and on the west by the counties of Perth, Kinross, and Clackmannan. It lies between $56^{\circ} 3'$ and $56^{\circ} 25'$ (N. Lat.), and $2^{\circ} 35'$ and $3^{\circ} 38'$ (W. Long.), and is about 48 miles in length and 18 in extreme breadth, comprising an area of 504 square miles, or 322,560 acres; 30,548 houses, of which 29,036 are inhabited; and containing a population of 140,140, of whom 65,715 are males and 74,425 females. This county anciently formed part of the extensive district of Ross, which derived its name from its peninsular shape, and included the present counties of Kinross and Clackmannan, with portions of the counties of Perth and Stirling, all under one common jurisdiction. The lands of Clackmannan were first separated from this district and erected into a distinct county; and subsequently, in 1425, that portion forming the head of the peninsula was made a county under the appellation of Kinross. The remainder, including a small part previously belonging to Perthshire, almost entirely constitutes the modern county of Fife, the name of which is of obscure and doubtful origin. Originally inhabited by the ancient Caledonians, the district became subject to the Romans, who penetrated into its most secluded retreats, and subsequently to the Picts; but the particular details of its history during these distant periods are not distinctly recorded.

After the subjugation of the Picts, and the union of the two kingdoms under Kenneth II., that monarch, in acknowledgment of the eminent services rendered to him by Macduff, a powerful chieftain who had contributed greatly to his victory, conferred upon him all the lands he had conquered from the Picts. These extended from Fifeness to Clackmannan, and from the rivers Tay and Erne on the north to the river Forth on the south; and of this territory the king also appointed him hereditary thane. Though occasionally subject to Danish incursions, the district, from its central situation between the northern and southern divisions of the kingdom, enjoyed almost undisturbed tranquillity under its thanes, of whom Duncan Macduff, having aided in the destruction of the usurper Macbeth, and in the restoration of Malcolm Canmore, was created Earl of Fife by that sovereign, and invested with many privileges, which were made hereditary in his family. Among these the most important were, the placing of the Scottish kings in the chair of state at the ceremony of their coronation, the honour of leading the van of the royal army, and the liberty of compromising for manslaughter by the payment of a fine proportioned to the rank of the victim. This last immunity was commemorated by the erection of a stone pillar called Macduff's cross, a certain area around which afforded sanctuary. After the death of Duncan, the twelfth earl, Murdoch, Duke of Albany, by marriage with his only daughter, succeeded to the earldom of Fife, which, on his attainder in 1425, reverted to the crown. It was subsequently revived as an Irish peerage in the person of William Duff of Braco, who was created Baron Braco of Kilbride, and Earl of Fife, in 1759; James, the second earl, was made Baron Fife in the peerage of Great Britain in 1790, and the title is now vested in his descendant, the present earl.

In times of episcopacy the county was included within the archdiocese of St. Andrew's; it is at present in the synod of Fife, and comprises the presbyteries of St. Andrew's, Cupar, Kirkcaldy, and Dunfermline, and about sixty parishes. The shire is divided into the districts of Cupar, Kirkcaldy, St. Andrew's, and Dunfermline; a sheriff's court is held at Cupar for the three first-named, and one at Dunfermline for the last-mentioned district. The justices of the peace hold petty sessions in all the districts, their decisions being subject to revision by the courts of quarter-sessions, which are held at Cupar, the county town. Besides the county town, Fife contains the royal burghs of St. Andrew's, Dunfermline, Inverkeithing, Burntisland, Kirkcaldy, Kinghorn, Pittenweem, East and West Anstruther, Dysart, Kilrenny, Crail, Auchtermuchty, Falkland, and Earlsferry; the towns of Leven, Largo, Limekilns, Pathhead, Ferryport-on-Craig, Newport, Aberdour, Markinch, and Newburgh, with numerous smaller towns and villages. Several of the towns have been royal residences, and many of them are sea-ports with tolerable harbours at high-water; the best harbour is that at Burntisland, where a pier was built in 1844, at which steamers and other vessels may land goods and passengers at all times of the tide. The principal port of the county is Kirkcaldy. At Dysart is a wet-dock, in which vessels are always afloat. Under the act of the 2nd of William IV., Fife returns one member to the imperial parliament; and there are also two districts of burghs within the county, each of which sends a representative; while the burghs of Dunfermline and Inverkeithing join with those of Culross, Stirling, and South Queensferry, in other counties, in sending another representative.

The SURFACE, which is pleasingly diversified with gentle undulations, and in some parts with hills of lofty elevation, is separated by ranges of hills into several beautiful and extensive vales, the principal of which, called the Howe of Fife, is watered by the river Eden, described below. The chief hills are the East and West Lomond, the former having an elevation of 1260, and the latter of 1280 feet above the level of the sea; the Largo Law is 1020 feet in height, and the Kelly Law 800 feet. Most of the hills are covered with verdure almost to the summit. Among the streams are the Leven, the Eden, the Orr, and the Lochty: the river Leven issues from the lake of that name, in the county of Kinross, and flowing through a richly-cultivated strath, falls into the Firth of Forth at the town of Leven. The river Eden has its source in the confluence of several small streams in the parish of Strathmiglo, and taking an eastern direction, runs by the town of Cupar, and joins the German Ocean at St. Andrew's bay. The river Orr rises in a lake now drained, and pursuing a south-eastern course, in which it is joined by streams from Loch Fittie and Loch Gellie, and by the river Lochty, flows into the Leven near Cameron Bridge. The principal lakes are, the loch of Lindores, about a mile in length, and varying in breadth, abounding with pike and perch, and beautifully situated in a richly-wooded spot; Kilconquhar loch, in the parish of that name, about two miles in circumference; Loch Gellie, three miles in circumference; and Kinghorn loch, a natural reservoir situated near that town, which supplies the mills with water.

The SOIL is exceedingly various; along the Firth of Forth, a deep rich loam alternating with clay and gravel; from the mouth of the Eden, along the shore northward, a fine light, dry, and sandy soil; to the south of the Eden, of inferior quality. West of St. Andrew's are tracts of moor and moss, with some intervening portions of fertile land; towards the river Tay, a rich soil, resting on whin rock; and on the slopes of the hills, a productive clay, with loam and gravel. The system of agriculture is in a highly improved state: the extent of the farms varies from fifty or sixty to 400 or 500 acres; the buildings are generally substantial and well arranged, and on most of the farms are threshing-mills, some of which are driven by steam. The lands have been drained thoroughly to a great extent, and are inclosed with stone walls, or hedges of hawthorn. The chief crops are oats, wheat, barley, turnips, and potatoes. Much attention is paid to the rearing of cattle and sheep, and the number of sheep is much greater than formerly. The number of horses employed in agriculture in the year 1844 was 8158, and otherwise, 2466. Occasionally, numbers of pigs are fed for the London market. The plantations are very extensive, but chiefly of modern growth: on the lands of the Earl of Leven is a forest of Scotch firs, several miles in length; but little ancient timber is found except in the grounds of some of the principal mansions. Fifeshire abounds in coal and limestone, both of which are of good quality, and largely wrought. Freestone of different colours, from a dark red to a beautiful white, of compact texture, and susceptible of a high polish, is also abundant; and in the northern districts whinstone is predominant, of excellent quality for the roads. Ironstone is found in various parts; in some places in seams too thin to remunerate the labour of working it; in others in veins of greater extent, and yielding from thirty-three to forty per cent. of ore, wrought for the Carron Iron Company. Lead and copper have been found in several places; the former, principally in the Lomond hills, has been wrought, but not with any profitable result, and the works have been discontinued. The seats are Falkland House, Leslie House, Melville House, Crawford Priory, Donibristle, Balcarras, Broomhall, Dunnikeir House, Raith, Wemyss Castle, Balcaskie, Bethune, Balbirnie, Craigsanquhar, Dysart House, Elie House, Pitmilny, Dunbog, Rankeillor, Lathrisk, Pitferran, Torry, Inchdairny, Strathendry, Mugdrum, Rossie, Pittencrieff, Largo House, Newton-Collessie, Durie, Innergelly, Mount Melville, Kelly House, Cambo, Scotsraig, Fordel, Balgarvie, Lochore, St. Fort, Kemback, Fernie, Kilconquhar, Charlton, Kilmarron, and others. These mansions are for the most part handsomely built, and, with their surrounding grounds, form striking features in the scenery.

The principal manufacture is that of linen, which is carried on throughout the county; the fabrics are damasks, diapers, Osnaburghs, Silesias, and the plainer kinds of brown linens, ticking, checks, and sail-cloth, which are made in most of the villages. Flax-spinning is carried on to a great extent; and at Dunfermline, Kinghorn, Abbotshall, Leven, and other places are large mills for the purpose. The manufacture of paper, soap, candles, and glue is also extensive. There are several iron-foundries, tanneries, potteries, brick and tile works, numerous bleachfields on the Leven, a vitriol-work, breweries, distilleries, malting establishments on a large

scale, and various other works. Ship-building is carried on at the several sea-port towns on the south. The commerce of the county consists chiefly in the export of cattle and sheep by the ferries, and, at the other ports, of grain, potatoes, and other agricultural produce, coal, limestone, and lime; and in the importation of timber, bark, hides, tallow, flax, hemp, tar, iron, slates, groceries, and other articles. Facility of communication is afforded by good roads, and by the great Edinburgh, Perth, and Dundee railway. At Newport is a ferry across the Tay to Dundee, and at Ferryport-on-Craig one across the same river to Broughty. There are two ferries, also, of great importance across the Forth; one connecting Burntisland, in Fife, with Granton; and the other, higher up the Firth, connecting North and South Queensferry. The total annual value of real property in the county, assessed to the Income tax for the year 1842, was £508,923, of which amount £381,572 were for lands, £74,654 for houses, £22,564 for mines, £4797 for quarries, £1159 for fisheries, and the remainder for other kinds of real property not comprised in the foregoing items. There are numerous remains of antiquity, among which are the ruins of the ancient abbey and palace of Dunfermline, the abbey of Lindores, the palace of Falkland, the tower and chapel of St. Regulus, Cardinal Bethune's Castle, the Castle of Macduff, the Castle of Ravensraig, Rosythe Castle, and the Castle of Lochore, with various others, which are noticed in articles on the places where they are situated.

FILLAN'S, ST., a village, in the parish of COMRIE, county of PERTH; containing 172 inhabitants. It is a beautiful and romantic place, situated on the north side of Loch Earn, and consists of a number of well-built houses, rendered of pleasing appearance by shrubberies in front. Here was established some years since the St. Fillan's Society, which holds annual meetings for the encouragement of Highland games and dress. A school is supported by Lord Willoughby de Eresby, who allows the teacher a salary of £20, and a dwelling-house and garden. On the summit of Dun-Fillan hill is a rock known as St. Fillan's Chair, and two small cavities are said to have been made by the saint, the impression of his knees from his constant habit of prayer.

FINAVON, or FINHAVEN, in the county of FORFAR.—See OATHLAW.

FINDHORN, a burgh and sea-port town, in the parish of KINLOSS, county of ELGIN, 4 miles (N. by E.) from Forres; containing 806 inhabitants. This place, the name of which signifies "the mouth of the Erne", stands in the north-western part of the county, near the river Erne or Findhorn, which expands into a capacious bay called Loch Findhorn, on the south-west of the town, and communicates by a narrow strait with the Moray Firth. Findhorn is a burgh of barony, the sea-port of Forres, and the property of H. A. I. Munro, Esq.; it is inhabited chiefly by fishermen, seafaring persons, and a few merchants and tradespeople, and is the seat of a very considerable traffic. This is the third town of the same name; the first, which stood about a mile west of the bar at the mouth of the harbour, and the second, a little to the north of the present town, having both been washed away by the sea. Even now, only a small space, containing a broken bank of sand, intervenes between the tide-mark and the north end of the town: the bank forms the sole rampart against the tre-

mendous swell occasioned by north-easterly winds, and is sometimes so torn and drifted by hurricanes, that the sand covers the streets and gardens to the depth of ten or twelve feet, threatening the town with destruction at no distant period. The river, which affords fine trout-angling, and is famed for its romantic scenery, rises in the mountains near Badenoch, and after a serpentine and impetuous course of about sixty miles from the south-west, through the counties of Inverness, Nairn, and Elgin, expands into the bay already referred to, and joins the Firth.

Findhorn is one of the safest harbours on the coast; it measures three and a half miles in length, from the bar at the north to its southern limit, and the breadth varies from a little more than half a mile to two miles. There are two quays of hewn stone, one of which was recently erected with a breast-work (by which it is joined to the old pier) at an expense of upwards of £1300. Superior accommodation is afforded for shipping, and the depth of water in the channel, where most shallow, is ten feet and a half at the lowest neap tide, and from thirteen to seventeen at high tide. A considerable part of the bay is dry at low water; but the river, in some places half a mile broad, has at the lowest ebb of stream tides from twelve to fifteen feet of water, in which the largest vessels can float in safety. The earth and sand bank at the entrance, called the bar, and by some supposed to be a portion of land encroached upon by the sea, would prove dangerous from its shifting with strong floods or easterly winds; but the pilots understand its nature so well, that an accident is scarcely ever heard of. The fisheries pursued are those of salmon, herrings, and haddock, which are carried on with great spirit, and prove a source of considerable emolument to the proprietors: about sixty men are engaged, who follow their avocation in large boats carrying several persons and from eight to ten tons' weight of fish. The salmon-fishery produces annually, on an average, about six hundred boxes of fish packed in ice, valued at £5 each, and sent to the London market: the herring-fishery, which has been carried on for above twenty or thirty years, has for some time supplied 20,000 barrels every year; and the haddock-fishery is valued at £2000. There are twelve vessels belonging to the port, together registered at 1000 tons, and occupied in an extensive coasting-trade. The imports comprise great quantities of Sunderland and Newcastle coal, and lime from the same places: coal from the Firth of Forth, slates from Ballinchulish, iron from Wales and Staffordshire, salt from Liverpool, and large supplies of bone-dust for manure. The exports for provincial use consist of herrings, grain, eggs, and about 2000 loads of timber every year from the forests of Darnaway and Altyre. Findhorn is also visited by foreign vessels, bringing iron, timber, and tar from the Baltic, and timber from British North America; and there are regular trading smacks from London, Leith, and Liverpool, with cargoes for Forres, Nairn, &c. A very good turnpike-road runs southward from Findhorn to Forres, between which places there is a daily post; and from this road a branch diverges at the bridge of Kinloss, eastward, to Burgh-Head and Elgin. Fairs are held in the town for the sale of sheep, black-cattle, and horses, on the second Wednesday in March, July, and October (O. S.). An Assembly's school was till lately supported, the master of which had a salary of £20, and

about £12 fees, with an allowance of £10 from Mr. Munro, of Novar, in lieu of land and other accommodations: a school-room and a house for the master were built some years since, at a cost of £160, raised by subscription and public collections. This school is now maintained from the funds of the Free Church, and is in connexion with it, the master receiving a salary of £15 from that body. A library is connected with the school; and there is another in the town, for general use.

FINDOCHTY, a village, in the parish of RATHVEN, county of BANFF, $2\frac{1}{2}$ miles (N. E. by E.) from Buckie; containing 414 inhabitants. This is a fishing-village on the coast of the Moray Firth, a short distance from Findochty point, and a mile and a half north-east of Rathven. It was founded in 1716, on the property of the then Earl of Findlater. The fishery here is very extensive, affording employment to nearly the whole of the male population, whose reputation for the superior cure of herrings and other fish has been maintained for upwards of a century. About forty boats, chiefly of the larger size, belong to the place.

FINDOGASK, PERTH.—See GASK, NETHER.

FINDON, or FINNAN, a village, in the parish of BANCHORY-DEVENICK, county of KINCARDINE, $6\frac{1}{2}$ miles (S. by W.) from Aberdeen; containing 190 inhabitants. This is a fishing-village, situated on the coast, a few miles south of Girdleness, and having a small harbour. It is celebrated for the finely-flavoured fish called the "Finnan haddock", which is cured here in a peculiar manner, by the smoke of peat. So delicate is this fish that it can rarely be sold fresh, in an undepreciated condition, at any considerable distance. Several boats, and a large portion of the inhabitants, are engaged in the fishery, and, in the summer season, in that of herrings in the Moray Firth. There are two other fishing-villages in the parish; the three places send to sea about eighteen boats in the aggregate, and are all celebrated for the smoked fish known by the general name of the "Finnan haddock", above mentioned.

FINNIESTON, a village and western suburb, within the jurisdiction of the city of GLASGOW, county of LARNARK; containing 2096 inhabitants. This place, which forms part of Anderston, was commenced by the founder of that district on a plan laid down by his chaplain, the Rev. Mr. Finnie, from whom it derived its name. It consists of several streets, crossing each other at right angles. The houses are well built, with garden-ground attached to each, and stretch northward from the banks of the Clyde, on which are some handsome villas, occupied by the opulent merchants and manufacturers of the city, and which, from their elevated site, command pleasingly interesting views. In the village is a spacious manufactory of cut-glass, in which many articles of the most elegant and brilliant quality are produced. To the east of this place are Grahamston and Brownfield, formerly distinguished as detached suburban villages, but now forming an integral part of the city.

FINNYFOLD, in the county of ABERDEEN.—See WHINNIE-FAULD.

FINTRAY, a parish, in the district and county of ABERDEEN, $2\frac{1}{2}$ miles (E.) from Kintore; containing 1032 inhabitants. This place is said to have derived its name from a Gaelic term signifying "the fair bank or boundary of the river". It was formerly celebrated for its abbey, nothing of which now remains but the foun-

datations; the establishment was called the Northern Abbey of Lindores, and is supposed to have been erected about the year 1386, that date having been found upon a stone which, on account of the place where it was discovered, is thought to have been a part of the ancient building. The parish is in that part of Aberdeenshire called Formartin, and stretches from five to six miles along the bank of the river Don; it is from three to four miles in breadth, and contains 6500 acres. Fintray is bounded on the north and west by the parish of Keith-Hall; on the south by the Don, which separates it from the parishes of Dyce, Kinellar, and Kintore; and on the east by the parish of New Machar. The ground rises gradually towards the north to the height of about 300 feet, after which it forms an easy declivity. The violent and destructive floods of the river, which runs from west to east, and falls into the sea near Old Aberdeen, are among the most remarkable events of modern times connected with the history of the parish. The first flood of which account was taken happened in 1768, at harvest time, and carried away the larger part of the crops from the lower grounds, just as they were ready to be laid up in stacks. Another inundation took place in August 1799, which, in addition to a considerable quantity of hay, swept away much grain then standing uncut. A still more violent flood occurred on Aug. 4, 1829, desolating to a great extent the property of several individuals; the water rose about fourteen feet above its ordinary level, and nearly eighteen inches higher than it had done in any former case within memory. Good embankments, however, have been constructed; and at Fintray and Wester Fintray, about 300 acres of land of very fine quality are now protected.

The soil varies considerably; in the neighbourhood of the river it is a deep, rich, alluvial mould, while at some distance inward the soil is much lighter. On the higher land it is poor, consisting chiefly of peat-moss and moor; but in the northern quarter it improves in quality, and rewards the labour of good cultivation. There are from 5000 to 6000 acres cultivated, or occasionally in tillage; about 800 are pasture or waste, and between 600 and 700 occupied by wood. The produce is oats, peas, hay, potatoes, sometimes a little barley, and large quantities of turnips, to the growth of which the soil is well adapted. The annual value of real property in the parish is £4130. The cattle are of the Aberdeenshire breed, many of which are fed and fattened; and the horses are of a superior description: a few sheep only are reared, and these chiefly for gentlemen's pleasure-grounds. The improvements in draining, inclosing, and embanking have been considerable of late years, and the farm-houses and offices are in a far better condition than formerly. The plantations are in a flourishing state. The prevailing rock is granite, which is found in large quantities, and of superior quality; limestone may also be obtained, but fuel is too scarce to admit of the necessary process of converting it into lime. The chief mansion is Fintray House, a large and excellent edifice lately erected by the chief proprietor of the parish. There is also a good residence, built in the cottage style, upon the lands of Disblair.

The manufacture of fine woollen-cloth is pursued at Cothal mills, established in 1798, and which have been regularly carried on since that period: it produces about 8000 yards per month. The recent introduction

of the manufacture of Tweed plaid has enabled the proprietor to employ a considerably larger number of hands than formerly, to meet the call for an extensive supply of this article, to the production of which his works are particularly adapted. The inhabitants of the parish are, however, chiefly engaged in husbandry. There are good commutation roads in all directions through the parish. Ecclesiastically Fintray is within the bounds of the presbytery and synod of Aberdeen, and the patronage is vested in Sir John Forbes, Bart.: the stipend is £217, with a manse, built in 1804, and a glebe of the annual value of £10. The church, erected in 1821, is a commodious and substantial building, and contains 500 sittings. There is a parochial school, in which Latin and mathematics are taught, with the usual branches of education; the master has a salary of £28, with about £23 fees, a portion of the Dick bequest, a house, and a quarter of an acre of garden-ground. Another school is open, in which the instruction is of the same kind as in the parochial school; the master receives the interest of £200 left by the Rev. Dr. Morison of Disblair, with fees, an allowance from the Dick bequest, and a house and garden. A silver cup is still in the possession of the minister, having the date 1632, and believed to have been cast from a silver head of St. Meddan, who was the tutelary saint of the parish: it is reported to have been carried in procession, on account of its magical virtues in procuring suitable weather for the purposes of agriculture.

FINTRY, a parish, in the county of STIRLING, 17 miles (N.) from Glasgow; containing, with the villages of Gonachan and Newtown, and the Clachan, 884 inhabitants. This parish is said to have derived its name from Gaelic terms signifying "fair land", applied in consequence of the picturesque appearance of parts of the district, in contrast with the dreary moors and barren mountains by which they are surrounded. It is of an irregular form, extending about six miles in length from east to west, and five in breadth; and comprises 13,000 acres, of which 1000 are arable, 100 in wood and plantations, and the remainder hill and moor pasture, chiefly laid out in large sheep-farms. The surface, which embraces some of the highest grounds between the Firths of Clyde and Forth, is considerably diversified, and marked principally by three ranges of hills, and two intermediate, beautifully rural, and fertile valleys. The ranges of hills are, the Fintry hills, on the north; a continuation of the Killearn line, traversing the middle of the parish, and uniting with the Dundaff range, on the west, in St. Ninian's parish; and a southern chain, continued from the Campsie Fells and the Meikle Binn. These elevations are rich in fern, moss, and lichen, and in the various valuable botanical specimens peculiar to such localities; the moors abound with grouse and a variety of wild-fowl. The chief rivers are the Carron and the Endrick, both of which rise in the parish, and, watering the two valleys already referred to, contribute materially to enliven their delightful scenery. Of these streams, the Carron, celebrated in song, runs by the margin of the Campsie hills, and forms the boundary line, for the distance of about two miles, between Fintry and the parish of Campsie, after which, leaving the valley, it enters a new district, and eventually empties itself into the Forth. The Endrick, which receives a considerable accession to its waters by the junction of the Gonachan

burn, is a bold and precipitous stream, passing in some places with great noise along its rocky and rugged channel, and exhibiting a magnificent cascade in its progress over a lofty rock, commonly called the "Loup of Fintry", ninety feet in height: it loses itself at last in Loch Lomond. Both the rivers are well stocked with trout; and in the latter, below the waterfall, a species of trout called par is exceedingly numerous.

The soil is in general productive; and oats and barley, which are the staple crops, are raised of very excellent quality, together with hay, a great quantity of which is obtained from an extensive tract called the Carron bog, situated near the river of the same name. The fine sheep-walks, however, formed of many small farms broken up some years ago, and upon which large numbers of live stock range, confer on the parish its chief character, and are the principal source of wealth to the landowner. About 4000 sheep are usually kept, and nearly 1000 head of cattle, besides a good supply of Ayrshire cows for the dairy, the produce of which is of superior quality, and is disposed of in the neighbouring towns and villages. Open drains are frequently cut along the margin of the hills, to the great advantage of the pastures; and several excellent farm-houses, with suitable offices, have been built in different parts of the parish within these few years. The annual value of real property in Fintry is £4610. The rocks are of several kinds, and in the northern chain of hills become so prominent as to invest the scenery with a character of singular variety and grandeur; they chiefly comprise granite, whinstone, freestone, and redstone, here called firestone. In the north-western portion of the parish is a hill called Doun, formed partly of a perpendicular rock about fifty feet in height, distributed into numerous beautiful basaltic columns. Small quantities of coal are also found in different places. The plantations, some of which are recent, consist chiefly of various sorts of fir, but intermixed with hard-wood, as oak, beech, &c.; and encompassing Culreuch House, an ancient mansion with modern additions, situated in the north-west, is an extensive sweep of fine old timber.

Newtown, the chief village, was built to accommodate the population that sprang up in consequence of the erection of a cotton-factory by the late Mr. Speirs, about fifty years since: it is situated in the western part of the parish. The establishment contains 20,000 spindles, and employs about 260 hands, the machinery being driven by the water of the river Endrick, collected for that purpose in a reservoir of about thirty acres; and by a steam-engine, lately erected. The intercourse kept up with Glasgow by the conveyance of the raw material and the manufactured goods, is said to have been the occasion of a material improvement in the state of the roads, and to have opened a larger market for the sale of the farm produce. This village, the population of which exceeds 500, also contains a distillery, erected in 1816, and producing annually 70,000 gallons of malt whisky. There are likewise two hamlets, one called Clachan, and the other Gonachan, in the former of which are the church and manse, and in the latter the parochial school, and near it a small wool-factory. The numerous lambs bred here are generally sent for sale to Glasgow, with a part of the dairy produce, the other part being disposed of at Campsie and Kirkintilloch; the black-cattle are sold at Falkirk.

Ecclesiastically the parish is in the presbytery of Dumbarton, synod of Glasgow and Ayr, and in the patronage of the Duke of Montrose: the minister's stipend is £155, with a manse, lately rebuilt, and a glebe valued at £22 per annum. Fintry church is a neat structure with a tower at the west end, built in 1823, and containing 500 sittings. The master of the parochial school has a salary of £34, with about £20 fees, and a house and garden. Another school has lately been opened in the village, chiefly for the benefit of the children of those employed in the factory; about 100 attend in the day-time, and fifty or sixty in the evening. The premises, which are spacious, and comprise a house for the master, were erected in consequence of a legacy of £3000 left for that purpose by Mr. John Stewart, a trader in Fintry, who died in 1836. Mr. Stewart also left £500 to form a fund for a savings' bank in the parish. There is a small subscription library, which has been established several years. The only relic of antiquity is the ruin of an ancient castle with a fosse and mound, formerly the residence of the Grahams of Fintry: it stood on the south side of Fintry hill, opposite Sir John de Graham's castle in the parish of St. Ninian's, which was burnt down by Edward I. after the battle of Falkirk. The parish confers the title of Baron on the Duke of Montrose.

FIRTH and STENNESS, a parish, in the county of ORKNEY, the former district 6 miles (W. by N.) and the latter 8 miles (W.) from Kirkwall; containing 1167 inhabitants, of whom 584 are in Firth. These ancient parishes, which appear to have been united soon after the abolition of episcopacy in Scotland, are situated on the Mainland of the Orkney Islands, and are bounded on the north by the parishes of Harray and Rendall, on the east by the parish of Kirkwall, on the south by that of Orphir, and on the west by the parishes of Sandwick and Stromness. The coast, including the small island of Damsay and the holm of Grimbister, detached portions of Firth, lying in the bay of that name, is about ten miles in length, and the shores low and flat, with few or no headlands of importance. Firth bay abounds with fish of various kinds; and oysters of large size, and of excellent quality, are found in considerable numbers. The island of Damsay, more than a mile in circumference, is extremely beautiful; its surface is covered with verdure, and affords luxuriant pasture for sheep, of which a few hundreds of superior breed are kept upon it. On this island was anciently a castle, which was regarded as a place of much strength; and there was subsequently a church dedicated to the Virgin Mary, of which, however, little more than the site remains.

The parish is about nine miles in extreme length, and varies greatly in breadth: the number of acres it contains has not been ascertained, owing to its great irregularity of form. Its surface is broken by numerous ridges of hilly moorland, covered with heath and moss to the very summit. The soil near the shore is a deep mossy loam, and in other parts shallow. There are some portions of arable land in good cultivation, yielding pretty fair crops, and some fields of rich pasture near the borders of the loch of Stenness, and in parts of Firth; but in general little improvement has been made in agriculture. Stenness loch, to the north-west, is a noble sheet of water nearly five miles in length, and divided almost into two separate lakes by the projection

of a strip of land from the north-west to the bridge of Broigar. In that portion of the lake which is bounded by the parish of Harray on the east, are numerous small holms, frequented by great numbers of aquatic fowl of various kinds. The shores of the loch are embellished with fields of natural grass, alternated with others of highly-cultivated land, and are studded with neat houses belonging to the proprietors of small farms that acknowledge no superior landlord. On the peninsula dividing the lake are the celebrated stones of Stenness, one of the most extensive and complete Druidical relics in the county, consisting of a circle, nearly entire, of massive and lofty columns, beyond which are a semicircle, with several single stones irregularly placed, and numerous cairns. Burness, a seat in the parish, is a handsome mansion finely situated on the shore of the bay of Firth. There is but one village, that of Phinstown, seated at the western extremity of the bay. The plating of straw affords employment to part of the females, who work at their own homes for the manufacturers of Kirkwall and Stromness.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Cairston, synod of Orkney. The minister's stipend is £158. 6. s., of which part is paid from the exchequer; with a manse, and two glebes valued together at £27 per annum: patron, the Earl of Zetland. There are two churches, that of Firth, built in 1813, and the church of Stenness, built in 1793, and repaired and reseatd in 1816; they are both neat structures, and contain each about 700 sittings. Divine service is performed in each every Sunday. The whole of the services were until recently performed by the incumbent alone; but he is now assisted by a missionary, for whose support the General Assembly give the annual sum of £30, and one of the proprietors contributes £20. There are also places of worship for members of the Free Church and the United Presbyterian Synod. The parochial school is well attended: the master has a salary of £26, and the interest of £90 laid out on heritable security, together with a house and garden; his fees are very inconsiderable. In each of the districts is a school supported by the Society for Propagating Christian Knowledge, who pay each of the teachers a salary of £15 per annum. In the neighbourhood of Garmiston, in Stenness, is an extensive plain between two hills, on which are numerous tumuli, supposed to cover the graves of the slain in the battle of Summers-dale, or Bigswell. This battle took place in the reign of James V., between the inhabitants under Sir James Sinclair, son of Robert, Earl of Orkney, and a body of men under John, Earl of Caithness, who, pretending to have some claim to the earldom of Orkney, landed at Howton in order to take forcible possession of it.

FISH HOLM, an island, in the parish of DELTING, county of SHETLAND. It is a small island of the Shetland group, situated northward of the Mainland of the parish, and in the southern part of Yell Sound.

FISHERROW, in the county of EDINBURGH.—See NORTHESK.

FLADA, an isle, in the parish of KILMUIR, county of INVERNESS. It is of very small extent, and lies close to the north coast of the Isle of Skye: the soil affords pasturage for sheep.

FLADA-WHEIN, an isle, in the parish of KILMUIR, county of INVERNESS. This is one of the Hebrides,

lying about six miles northward from the nearest point of the Isle of Skye; it is two miles in circumference, and its coasts abound with fish. The quality of the grass here is very good, and the land is wholly appropriated to the pasturage of sheep. Although the isle stands in the midst of a salt, deep, and rapid channel, it contains two or three fresh-water springs. In its vicinity are four smaller islets, each capable of rearing a few sheep.

FLADDA, an island, in the parish of BARRA, county of INVERNESS; containing 7 inhabitants. It is a small islet of the Hebrides, lying between the island of Barra and island of Sanderay.

FLADDA, an isle, in the parish of PORTREE, county of INVERNESS; containing 29 inhabitants. It lies in the Sound of Rona, and westward of the northern point of Raasay island.

FLADDAY ISLE, in the parish of HARRIS, county of INVERNESS. This is a flat islet, situated within the island of Searp, at the entrance of Loch Resort, and on the western side of the mainland of Harris.

FLANNAN ISLES, a group of seven islands, in the parish of LEWIS, county of INVERNESS. They lie seventeen miles north-west of Gallan Head in Lewis, and are supposed to be the *Insula Sacra* of ancient writers, and, from the number of Druidical remains still found upon them, to have been the residence of the Druids. The largest islet has an area of about eighty acres, the second in size perhaps twenty acres, and both are noted for fattening sheep; the rest are of much smaller dimensions, and altogether unoccupied. Various kinds of sea-fowl resort hither; and when, on the arrival of a boat, they come out of their holes, they are described as covering the surface of the islands, and giving them "the appearance of a meadow thickly enamelled with field-flowers". Though this group is much dreaded by mariners, it would seem that the danger of approach is not great.

FLAWCRAIG, a hamlet, in the parish of KINNAIRD, county of PERTH, 1 mile (S. W. by W.) from Kinnaird; containing 44 inhabitants. It lies in the southern part of the parish, and on the road between Kinnaird and Fingask.

FLISK, a parish, in the district of CUPAR, in the county of FIFE, 8 miles (N. W. by N.) from Cupar; containing, with the hamlet of Glenduckie, 270 inhabitants. This place is supposed to have derived its name, descriptive of wetness or moisture, from the situation of the lower grounds, which, stretching along the Tay on one continued level, were formerly subject to occasional inundations. The parish lies on the south bank of the river, and is about four miles in length, and of very irregular form, varying from half a mile to two miles in breadth. It comprises 2500 acres, of which 430 are pasture, 300 woodland and plantations, and the remainder arable land in profitable cultivation. The surface near the river is flat, but rises gradually towards the south till it attains a considerable elevation, forming part of a hilly range, of which the highest points are Lydemus hill, Logie Law, and Glenduckie hill, the first of them about 750 feet above the level of the river. The beach is clayey, and is defended by an accumulation of shingle thrown up by the tide. For the greater portion of the parish, the soil is a loam intermixed with clay; in some parts, especially towards the river, clay

and gravel; and in others, a rich black loam of great fertility. In several places the scenery is enlivened with flourishing plantations, chiefly of larch and Scotch fir; the timber in Flisk wood, of more ancient growth, is mostly oak. There are numerous springs of excellent quality, which afford an ample supply of water. The crops are barley, oats, wheat, potatoes, peas, and turnips. The system of agriculture is improved: draining has been practised to a considerable extent, and some progress made in inclosing the farms; the fences are mainly stone dykes, and are kept in good repair, and bone-dust has been extensively introduced as manure. The cattle are usually of the old Fifeshire breed, crossed occasionally with the Forfarshire and the Teeswater; but the number is very limited, and few, if any, sheep are reared. The farm-buildings are substantial and commodious. The annual value of real property in the parish is £3027.

The substrata are generally secondary trap, of which the upper part of the hills is composed, and red sandstone in the lower districts; greenstone is also found in several places, with agates and other stones. Along the margin of the river Tay are the remains of an ancient forest, covered at full tide with four or five feet of water; the appearance is that of peat-moss, and at low water the stumps of trees, with their roots attached, are to be seen resting on a stratum of clay. The nearest market-towns are Cupar, Dundee, and Newburgh, to which the farmers resort for the sale of produce. There are several stations in the parish for the salmon-fishery, and also two for sperling; the quantity of fish taken is not great, but they are of excellent quality. The manufacture of potato-flour is carried on at the farm of East Flisk, where a mill has been erected for the purpose, which is propelled by a steam-engine of two-horse power. Coal, tiles, slates, and stone are landed on the beach; but as there is no pier, the inhabitants derive little other benefit from the navigation of the river. The road from Newburgh to Woodhaven, maintained by statute labour, runs through the parish. Flisk is in the presbytery of Cupar, synod of Fife, and in the patronage of the Earl of Zetland: the minister's stipend is about £145, with a manse and glebe. The church, erected in 1790, near the site of the old church, then taken down, is a neat plain edifice adapted for a congregation of 150 persons; it is beautifully situated on the bank of the river, and about four miles from Glenduckie, the inhabitants of which hamlet attend the parish church of Dunbog, it being more convenient for them. The parochial school affords a good education; the master has a salary of £34, with £10 fees, and a house and garden.

Near the western extremity of the parish are the ruins of the ancient castle of Ballinbreich, seated on an eminence overlooking the river, and surrounded with a plantation. It was for many ages the residence of the Earls of Rothes, of whom Andrew, the fourth earl, was buried in the old church. Beug, however, deserted by that family, the castle was sold, together with the adjoining lands, and has been suffered to fall into decay. The only remains are, part of the walls, of red sandstone, which appear to have inclosed an area 150 feet in length and seventy feet in width; and some of the ancient timber, of which two remarkably fine chesnut-trees have been preserved. Near the castle, and within the grounds, is a spot called Chapel Hill, said to have been the site

of some religious building, whose foundations may with difficulty be traced. There are also slight remains of another chapel, in Flisk wood, consisting of low walls; but whether this building or the ruin near the castle is referred to in the enumeration of the parishes of Fife, in which this parish is designated "*Flisk cum Capella*", is uncertain. Several stone coffins of rude form, containing urns in which were burnt bones, were a few years since discovered on the farms of East Flisk and Bellhelvie: burnt bones have also been found in a cairn on the summit of a mount, on Fliskmill farm, and on Fliskmill hill are some stones called St. Muggin's Seat. Silver half-crowns, shillings, and sixpences, coined in the reign of Edward III., have been found on the lands of East Flisk. The Rev. John Wemyss, principal of St. Leonard's College, St. Andrew's, in 1592; and the Rev. John Fleming, D.D., author of the *Philosophy of Zoology* and *History of British Animals*, and professor of natural philosophy in King's College, Aberdeen, in 1832, were ministers of this parish.

FLODDA, an island, in the parish of BARRA, county of INVERNESS; containing 53 inhabitants. It lies near the island of Helesay, in the sound of Flodda, and eastward of the mainland of Barra. Flodda Sound opens to the south, and ships of large burthen may ride in it with safety at all seasons.

FLOTTA, in the county of ORKNEY.—See WALLS and FLOTTA.

FOCHABERS, a burgh of barony, in the parish of BELLIE, county of ELGIN, 7 miles (E. S. E.) from Elgin; containing 1135 inhabitants. This place is situated in the vicinity of Gordon Castle, on rising ground near the confluence of a small rivulet with the Spey, over which latter is a fine bridge, originally of four arches, having a water-way of 340 feet: the two arches on the west side were swept away by the flood of August 1829, and have been replaced by one spacious wooden arch. Fochabers is a neat village, built on a regular plan, with a square in the centre, ornamented on each side with trees, and entered by streets at right angles. It is governed by a baron-bailie, appointed by the superior. A village of the same name formerly stood about a mile northward of the present, and still nearer to Gordon Castle; but the site of the village was changed by Alexander, fourth Duke of Gordon. Among the most conspicuous buildings are the parochial church, and a highly-ornamented episcopal chapel on the north side of the village, recently built and endowed by the Duchess of Gordon, and consisting of two stories, surmounted with two spires; the upper story is used for public worship, and the ground-floor is occupied as an infant school, and contains apartments for the teacher. There are also a Roman Catholic chapel, and a subscription library. The great road from Edinburgh to Inverness passes through the village; and annual markets are held, partly for the sale of horses, but especially for black-cattle, on the third Wednesday in January, the fourth in March and May, the second in August, and the fourth in October and December. In the neighbourhood is a spacious mansion for the lessees of a salmon-fishery on the Spey, with a range of apartments in an extensive court, conveniently fitted up, and supplying every facility for the operations connected with this important branch of traffic: the produce, valued at several thousand pounds a year, is sent to London packed in ice, and employs

regularly, during the season, eight smacks in the conveyance.

GORDON CASTLE, until lately the seat of the Dukes of Gordon, whose title has become extinct, and now a possession of their heir of entail and representative, the Duke of Richmond, is considered the most magnificent and princely mansion north of the Firth of Forth. This edifice was originally a gloomy tower, situated in the centre of a morass called the Bog of Gight, and accessible only by a narrow causeway, and a drawbridge. It is now a vast structure, of which the exterior measures 570 feet in length, and the building consists of four lofty stories, with spacious two-storied wings, and connecting galleries or arcades of similar height. From behind the centre rises a ponderous square tower of the eleventh century, nearly ninety feet high, overlooking the stately pile, which is faced on all sides with freestone, and encircled by an embattled coping. The castle is approached by an imposing gateway at the north end of the village, and entered by a grand vestibule embellished with copies of the Apollo Belvidere and the Venus de Medeci, a bust of Homer, busts of Aurelius and Faustina, of Cæsar and Caracalla, one of a vestal virgin, and one of William Pitt, each raised on a handsome pedestal of Sienna marble. At the bottom of the great staircase are busts of Seneca and Cicero, and of a grand-duke of Tuscany, a relative of the Gordon family; while on the first landing-place is a gigantic wooden head of some ancient divinity of the sea, with other objects of striking interest. The state apartments are numerous and splendid, and superbly furnished: the great dining-room is of the most just proportions, and contains many fine paintings and portraits, as do most of the other rooms, including the library, where are several thousand volumes, various ancient and valuable MSS., geographical and astronomical instruments, and antique curiosities. There are also a small theatre and a music-room. Among the finest pictures may be mentioned those of Abraham turning off Hagar and her son; Joseph resisting Potiphar's wife; St. Peter and St. Paul; Dido and St. Cecilia; Ulysses and Calypso; Bacchus and Ariadne; Venus and Adonis; a portrait of the last Duke of Gordon; and one of the second Countess of Huntly, daughter of James I., and the lady through whom Lord Byron boasted of having a share of the royal blood of Scotland in his veins.

The park in which the castle stands is of great extent, and presents every variety of surface, walks, drives, meandering streamlets, groves, arbours, and broad-spreading meadows; while an almost interminable forest extends over the mountain side in the distance. Among the trees are majestic rows of elm and beech, and many of large dimensions, particularly the limes, planes, the walnut, and horse-chestnut; and there are fine plantations of birch, larch, Scotch fir, and other growing timber in a flourishing state. Before the castle is a richly verdant sward, fringed with sweetly-scented shrubs; and the gardens around it occupy a space of twelve acres, and are ornamented by rare plants, and enlivened by a beautiful lake. To the north of the mansion is a military station, called the "Roman camp".

FODDERTY, a parish, in the county of Ross and Cromarty, 2 miles (W.) from Dingwall; containing, with the villages of Auchterneed, Keithtown, and Maryburgh, the island of Balblair, and part of the quoad

sacra districts of Carnoch and Kinloch-Luichart, 2437 inhabitants. The name is probably derived from two words in the Gaelic language, signifying a meadow along the side of a hill, a description characteristic of the celebrated valley of Strathpeffer, which is chiefly comprised in this parish. The ancient history of Fodderty is very imperfectly known, but it appears to be closely connected with that of the famous McKenzies, of whom Roderick McKenzie was knighted by James VI.; George, the grandson of Roderick, was made secretary of state to Queen Anne, with the dignity of Earl of Cromarty, and in 1698 he obtained an act to annex all his lands in Ross-shire to the county whence he derived his title. Fodderty comprehended a large part of these lands; and thus it happens that, though locally situated in Ross, it belongs to the county of Cromarty. The length of the parish, from north to south, is about eleven miles; it is nine miles in breadth from east to west, and is bounded by Dingwall on the east, by Coutin and Kinloch-Luichart on the west, by Kincardine and Kiltarn on the north, and by Urray on the south. Strathpeffer, which is principally in the parish, is nearly six miles long and three-quarters of a mile broad; it is encompassed by lofty hills, and watered by the Peffery rivulet. In every direction the views from the eminences are very fine. The lofty and massive Ben-Wyvis, 3426 feet high, and partly in the parish; Knock-Farril, on which is a strikingly marked vitrified fort; the vale of Strathpeffer, with its venerable castle; the town of Dingwall, the Firth of Cromarty, and the interesting scenery of Tulloch Castle, interspersed in different directions with the round tops of wild and rugged hills, all unite to complete a landscape of considerable interest. Loch Ussie, containing several islands, and encompassed with thriving plantations, is also a pleasing object.

The SOIL slightly varies, but in general it is found to be a dark loamy mould, with a stiff clayey subsoil. A large portion of the land is in a state of high cultivation; about 1000 acres are under fir and larch plantation, and the remainder is hill pasture. The annual value of real property in the parish is £6092. The strata differ considerably, exhibiting gneiss on the higher grounds, and in the lower parts red sandstone and conglomerate; in many places is a slaty rock with black whinstone, and in others a hituminous schist, mixed with pyrites. The noble mansion of Castle-Leod, built by Sir Roderick McKenzie in 1616, was the residence of the Earls of Cromarty (a title now extinct), and is of truly baronial appearance, five stories high, and turreted. It stands at the base of a hill beautifully rounded at the summit, and in the midst of extensive parks adorned with various kinds of trees, many of them of ancient growth and gigantic stature. Among these is a chesnut-tree, measuring at the bottom of its trunk twenty-four feet in circumference; the width of its branches is ninety feet. There is a great variety of mineral springs in the parish, but the most celebrated is the Strathpeffer Spa, which has been brought into great repute within the last thirty or forty years. It has two wells, one much stronger than the other, both impregnated with sulphuretted hydrogen gas, and said to be highly efficacious in nervous and dyspeptic complaints. A considerable number of respectable houses have been built in the vicinity of the spa, the fame of which has drawn many visitors. A large and convenient pump-room was erected in 1819,

which is regularly supplied with the public papers; an hotel has been built at Blar-na-ceann, within about half a mile of the pump-room, and there is an inn also on the east side with comfortable accommodations. An hospital, or infirmary, has been formed, through the exertions of J. E. Gordon, Esq., for the poor who resort to the spa for the benefit of its waters: it can accommodate fifty persons. There is a penny-post in the parish; and between the months of May and October, during the visiting season, a conveyance runs twice a day to Dingwall, where it meets the Inverness coach. On the river Conon is a salmon-fishery; and in the small stream of the Pefery, black trout are frequently taken.

Ecclesiastically the parish is within the bounds of the presbytery of Dingwall, synod of Ross. The stipend of the minister is £255, with a manse, built in 1796, and a glebe and garden of thirteen acres: the patronage belongs to the Marchioness of Stafford, daughter of the late John Hay Mc Kenzie, Esq., of Cromarty. Fodderly parish church, a plain but pleasing structure, built in 1807, and enlarged in 1835, accommodates 600 persons with sittings: the service is alternately performed in English and Gaelic. In the village of Maryburgh is also a church, recently erected, distant from the parish church about five miles. A parochial school is maintained, in which the classics and the ordinary branches of education are taught; the master has a salary of £36, with a house, and £20 fees. Near Fodderly is Temple-croft, or *Croicht-an-Team puil*, in which stone coffins containing skeletons have been found. On the heights of the Hilton estate is a sepulchral cairn, measuring 260 feet in circumference; and in the same neighbourhood are the remains of some Druidical temples. There are two huge stones on either side of the church, vulgarly reported to have been thrown at his enemies by the far-famed Fingal, the hero of Ossian, and to have remained in their present position. Several other relics of antiquity are to be seen in the parish.—See CARNOCH and KINLOCH-LUICHART.

FOGO, a parish, in the county of BERWICK, 4 miles (S. by W.) from Dunse; containing 455 inhabitants, of whom about 35 are in the village. This place, though unconnected with any event of historical importance, has some claim to antiquity: from a confirmatory charter of Malcolm IV. in 1159, it is clear that the church of Fogo had been granted previously to that time to the monastery of Kelso. The parish is five miles in length from east and west, and two miles and a half in average breadth, comprising about 5000 acres, of which 4600 are arable, 300 woodland and plantations, and the remainder meadow and pasture. Its surface is traversed in the north by two parallel ridges of inconsiderable height, between which the river Blackadder flows throughout the whole length of the parish: on the south are some extensive level tracts. The scenery is pleasingly varied, and in parts enriched with timber of stately growth. The Blackadder, rising in some mossy land in the parish of Westruther (from which circumstance it takes its name), runs in a direction from east to west, and falls into the Whitadder in the parish of Edrom: it abounds with eels and trout of a reddish colour, but salmon are never found in its stream. There is a bridge of one arch on the road to Dunse, built in 1664, lately repaired, and which bears the name of the old family of Cockburn of Langton.

On the higher land the soil is exceedingly fertile, consisting principally of a deep black loam; in the lower lands it is thinner, and of inferior quality, resting on a retentive clay. The crops are oats, barley, wheat, and turnips; the system of agriculture is in an advanced state, and the four-shift course of husbandry generally prevalent. Bone-dust and other kinds of manure are used in the cultivation of turnips. The lands have been in great part thoroughly drained, and inclosed with hedges of thorn; the farm-buildings are substantial and well arranged, and all the more recent improvements in the construction of agricultural implements have been introduced. Considerable attention is paid to the rearing of live stock; the cattle are partly of the short-horned, and partly of the Highland breed, and the sheep mostly of the Leicestershire. The plantations are fir, intermixed with various kinds of forest-trees, the chief of which are beech, birch, and lime. The annual value of real property in Fogo is £5851. Caldra House, the principal mansion in the parish, is in the occupation of the proprietor, the Hon. Capt. Cathcart; and Charter Hall, a neat summer seat, built by the late Henry Trotter, Esq., of Morton Hall, is occasionally visited by the present Mr. Trotter, especially during the shooting season. Communication with the neighbouring market-towns and other places is afforded by good roads, of which the turnpike-road to Berwick, and to the suspension-bridge communicating with Northumberland, passes through the parish, and that from Coldstream to Dunse crosses its western extremity. Fogo is ecclesiastically in the presbytery of Dunse, synod of Merse and Teviotdale, and in the patronage of the Crown: the minister's stipend is £219. 5. 10., with a manse, and a glebe valued at £18. 10. per annum. The church, situated on the banks of the Blackadder, which flows past the churchyard, is an ancient structure, repaired in 1755, and re-seated in 1817, and is adapted for a congregation of 200 persons. With its surrounding gravestones, and the few cottages near, the venerable building presents a perfect specimen of sequestered rural beauty. The parochial school is well attended; the master has a salary of £25. 13., with £20 fees, and a house and garden. Among the remains of antiquity in the parish may be mentioned the old house of Ilarcarse, situated on the borders of the parishes of Edrom and Swinton, and formerly belonging to the family of Hogg, now extinct. At the western extremity of the parish, at a place named Chesters, are vestiges of a Roman camp, the stones of which have been nearly all removed. To the south of the parish, in a marshy tract, some remains of a causeway have been discovered.

FORBES, ABERDEENSHIRE.—See TULLYNESSLE.

FORDEL-SQUARE, a village, in the parish of DALGETY, district of DUNFERMLINE, county of FIFE, $2\frac{1}{2}$ miles (N. E.) from Inverkeithing; containing 157 inhabitants. It lies on the western side of the parish, and is connected with the Fordel coal-works, which have been wrought for nearly 250 years, and where nearly 70,000 tons of coal were latterly raised every year: they are now discontinued. In the neighbourhood is a picturesque waterfall; and Fordel House, an elegant mansion surrounded with extensive plantations, is only a short distance from the village.

FORDOUN, a parish, in the county of KINCARDINE, 11 miles (W. S. W.) from Stonehaven; containing, with the village of Auchinblae, 2342 inhabitants, of whom

34 are in the Kirktown. This place, which is of remote antiquity, is supposed to have derived its name, signifying in the Gaelic language the "front hill", from the situation of the church on the brow of the hill of Fenella, in front of the Grampian range. The parish, or part of it, had also the appellation of Paldy, from the dedication of an ancient chapel to St. Palladius, who was sent from Rome in the fifth century to oppose the Pelagian heresy, and who, upon very doubtful authority, is said to have fixed his residence here. Of this chapel, on a pilgrimage to which, to visit the shrine of the saint, Kenneth III. was murdered by Dame Fenella, as related in the article on Fettercairn, some memorials are still preserved in the name of a well in the manse garden, called the well of St. Palladius. A sculptured stone, commemorative of the murder, appears to have been erected in the chapel, but at the Reformation it was removed, and for greater security concealed under the pulpit of the old parish church, where it was afterwards discovered on the rebuilding of that structure.

THE PARISH, which is situated on the south side of the Grampian mountains, is about eight miles in length, and five and a half in average breadth, comprising an area of 27,800 acres, whereof 11,500 are arable, 2160 woodland and plantations, and the remainder moorland pasture and waste. Its surface is strikingly varied, rising from the south-east by bold undulations towards the Grampian range on the north-west, and broken into deep glens and pleasing vales by numerous streams descending from the mountains, and by the prominent hill of Fenella, nearly in the centre of the parish. This hill, which is one mass of sandstone, is about four miles in length and a mile and a quarter in breadth, rising in a gracefully curvilinear form to the height of 1200 feet above the level of the sea, and separated by the picturesque vale of Strath-Fenella from the Grampians, which in this parish do not attain an elevation of more than 1500 feet. The rivers are the Luther and the Bervie. Of these, the Luther has its source in the hills behind Drumtochty, and flowing to the village of Auchinblae, where it receives a stream from Glenfarquhar, takes a south-eastern direction to Fordoun House, beyond which it changes its course to the west, and flows through the parish of Laurencekirk into the North Esk. The Bervie has its source in the hills of Glenfarquhar, and running to the south-east, by Glenbervie House, winds round the base of the hill of Knock, and after a devious course flows through the parish of Bervie into the sea. Among the small streams that descend from the Grampians, the principal are the burn of Craigniston, which for some distance separates the parish from Fettercairn; and the Ferdun, formed by two burns which unite at Clattering Briggs, and, after washing the western base of the hill of Fenella, fall into the Luther. The Luther and the Bervie both abound with small trout, and salmon are occasionally found in the latter.

In the lower grounds the soil is a tenacious clay, of moderate fertility; along the bases of the hills, a deep rich loam; and on the higher grounds, a brown gravelly loam: the crops consist of barley, oats, wheat, beans, peas, potatoes, and turnips, with the various grasses. The system of husbandry has been greatly bettered under the auspices of the Fettercairn Club, which includes also this parish and the parishes of Laurencekirk and Marykirk. The lands have been

drained and partly inclosed; the farm-buildings are substantial and commodious, and all the more recent improvements in the construction and use of agricultural implements have been adopted. Much attention is paid to the management of the dairy-farms, and to live stock. The cattle are of the pure Angus or the Aberdeen polled breed; the best are sent to the London market, where they obtain a high price, and the remainder to Edinburgh and Glasgow. The sheep, which are reared solely on the hills, are of the black-faced or mountain breed, with a few of the Cheviot recently introduced; and the horses, reared chiefly for agriculture, approach very nearly to the Clydesdale breed. In this parish the wood is of modern growth, with the exception of some natural birch and coppice on the lands of Drumtochty Castle; the plantations consist of larch, spruce, and Scotch firs, interspersed with oak, ash, elm, beech, birch, and sycamore. The chief substrata are red sandstone, greenstone, in which occasionally amethysts are embedded, clay-slate, limestone, and freestone, of which there are several quarries. The annual value of real property in the parish is £12,967.

Drumtochty Castle is a spacious castellated mansion in the early English style, erected by George Harley Drummond, Esq., at a cost of £30,000, and seated on an eminence rising from the bank of the Luther, in a richly-wooded demesne, tastefully laid out in walks commanding much picturesque and finely-varied scenery. *Phesdo*, an elegant mansion of Aberdeen granite, in the Grecian style, with a handsome portico of the Doric order, built by the late Alexander Crombie, Esq., of Aberdeen, is beautifully situated in grounds embellished with plantations, and near the base of Fenella hill, embracing a fine view of the vale of Strathmore and the Grampians. *Monboddo*, the birthplace of Lord Monboddo, is an ancient mansion, greatly improved by the late Mrs. Burnett, his daughter. *Fordoun House*, together with the farm, is in the occupation of a tenant; as is also *Castleton*. The *Kirktown* merely contains the church, the manse, and school-house, with a few cottages and an inn. *Kincairdine*, once the county town, and the residence of the sheriff, who held his courts here till the reign of James VI., when they were removed to Stonehaven, has dwindled into an insignificant hamlet: the ancient cross that stood in the market-place has been removed, and placed in the village of Fettercairn. The castle of Kincairdine, the ruins of which are situated on the adjacent lands of Castleton, was a celebrated palace of several of the Scottish monarchs, of whom Kenneth III., while here, was murdered by Dame Fenella; and John Baliol is said to have been residing in this castle when he abdicated the crown in favour of Edward I. of England. From the ruins it appears to have been a spacious quadrangular structure of great solidity, but only the foundations of some of the walls are now remaining. The village of *Auchinblae*, situated to the east of Strath-Fenella, contains several inns: the inhabitants are partly employed in the spinning of flax and the weaving of coarse linen; and the place, which has a thriving appearance, has been erected into a burgh of barony, and is governed by a baron-bailie appointed by the Earl of Kintore. Fairs are annually held in the parish, of which the most considerable is Paldy fair, for horses, sheep, and cattle, which takes place in July on a moor near the foot of the Grampians. Another fair for

horses and cattle is also held in July, at Lammas muir, in the western portion of the parish; and at Auchinblae, besides two annual fairs, are weekly markets during the winter for grain and cattle. Facility of communication is maintained by the Aberdeen railway, by the turnpike-road from Aberdeen to Edinburgh through Strathmore, and by statute roads kept in excellent repair.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Fordoun, which holds its sittings here, and the synod of Angus and Mearns. The minister's stipend is £249, with a manse, and a glebe valued at £12 per annum; patron, the Crown. Fordoun church, erected in 1829 at a cost of £3000, is a handsome structure in the later English style of architecture, with a tower at the west end, ninety-three feet in height; the interior is well arranged, and contains 1230 sittings. The burying-ground is inclosed by a wall of masonry, in which is an elegant gateway. There is a place of worship for members of the Free Church. The parochial school, for which an appropriate building has been erected, is attended by about seventy children; the master has a salary of £35. 12., with a house and garden, and the fees average £15 per annum. A parochial library was established in 1827, which now contains nearly 700 volumes; and there is also a small library belonging to the Sunday school. Alexander Crombie, Esq., bequeathed £100, Mrs. Bogendollo £50, and the late Mrs. Burnett of Monboddoo £50, for the benefit of the poor. Close to Fordoun House are the remains of a Roman camp, of which the prætorium is in a tolerably perfect state; near it have been found urns containing ashes and half-burnt bones, a gold ring, and other relics of Roman antiquity. In a secluded glen, not far from Drumtochty, are some remains of a small friary; and on the hill above Newlands, and near Castleton, are Druidical ruins. John of Fordoun, author of the *Scoto-chronicon*, appears to have been connected with the parish by birth or residence: George Wishart, the martyr, was a younger son of Wishart of Pittarrow in the parish; and Professor Beattie, brother of the author of *The Minstrel*, was a native of the parish, where the poet himself was for several years schoolmaster. Pittarrow House was pulled down in 1802.

FORDYCE, a parish, in the county of BANFF; containing, with the villages of Sandend and New Mills, and the town of Portsoy, 3442 inhabitants, of whom 243 are in the village of Fordyce, $2\frac{1}{2}$ miles (W. S. W.) from Portsoy. The name of this place, which appears to have undergone no variation since the most ancient times, is supposed to be derived from the two Gaelic words *fuar* "cold", and *deas* "south", which, from their original appropriation as descriptive of the southern portion of the parish, were subsequently used as a name for the whole of it. The lands once belonged to the family of Sinclair, but afterwards came into that of Ogilvie, in which they have remained for about 400 years to the present time. Sir Walter Ogilvie, in 1455, obtained permission of James II., to fortify his house of Findlater, situated here; and the castle seems to have been regularly occupied till nearly the end of the reign of James VI., when it was in the possession of John Gordon, son of the Earl of Huntly, who had received the castle and estates from one of the Ogilvie family that had disinherited his own son. After much litigation and many severe feuds, however, it returned to the former possessors,

chiefly through arbitration. During its occupancy by Gordon, it was one of the places that refused to acknowledge Queen Mary when she visited the northern districts, in consequence of which she sent a party of 120 soldiers against it, who were attacked by Gordon at Cullen, and all of them either slain or routed. The district of Findlater gave the title of Earl to its proprietors: the present Earl of Seafield, who holds the estates, is grandson to Sir Ludovic Grant, who married Lady Margaret, eldest daughter of James, fifth Earl of Findlater.

FORDYCE anciently comprehended the parishes of Ordiquhill, Deskford, and Cullen, long since separated. It is bounded on the north by the Moray Firth, and is about seven or eight miles in length and from two to six in breadth, comprising 18,670 acres, of which 9306 are either cultivated or occasionally in tillage, 5960 waste or natural pasture, 1500 undivided common, and 1234 occupied by wood. The surface is diversified with hill and dale, and several lofty elevations give to the scenery a very bold and decided character. The principal of these elevations are, the hills of Durn and Fordyce, nearly in the middle of the parish, which extend in a form almost semicircular from north-east to south-west, the former rising about 700 feet above the level of the sea; and the hill of Knock, near the southern boundary, which, attaining an elevation of between 1200 and 1400 feet, serves at a considerable distance as a land-mark for mariners: on the summit of it is a bed of peat-moss. Though not precipitous, the coast is marked by a strong rocky outline, broken by numerous caves and several headlands and bays. The chief points are, the East and West heads, taking their names from their relative positions with respect to Portsoy; and Logie head, at the western extremity of the parish. The bays are Portsoy and Sandend, the former possessing a secure and convenient harbour, and the latter having about half a mile of sandy beach, in which is Redhyth point, where small vessels find anchorage and shelter. The streams are inconsiderable, comprising only the burn of Boyn, which marks the eastern boundary of the parish; the burn of Durn, which joins the sea at Portsoy; and the burn of Fordyce, falling into the bay of Sandend.

The SOIL, which is incumbent on strata of almost every description, comprehends strong clay and light and clayey loam. It is wet and cold in the southern quarter, but rich and fertile about the coast, producing all kinds of grain, with potatoes, turnips, hay, and flax. The cattle are chiefly a cross between the old Banffshire and the Buchan breeds: their improvement has been greatly promoted by premiums given by the Banffshire Farmers' Club and the Highland Society; and a decided advantage has been obtained by the introduction of the Teeswater bull. The sheep are the Cheviots, with a few of the native black-faced. The horses are in general of the ordinary kind, with the exception of those bred from Clydesdale mares, which are very superior in strength and appearance. Though the fences and farm-buildings are still to a great extent in a defective condition, much has been done within the present century in the way of agricultural improvement, especially by draining. Upwards of 10,000 yards of ditches, and nearly 20,000 yards of drains, have been completed on one farm since 1837, independently of 1600 yards of marsh ditches cut in another part. Bone manure has been introduced, and several threshing-mills erected. The annual value of

real property in Fordyce is £8712. The parish is of considerable importance in a geological point of view. It is celebrated for its extensive strata of serpentine rock, of which there are immense beds, and which, admitting of a very fine polish, has long been a favourite material, not only in Britain, but also in many parts of the continent, for the manufacture of various kinds of ornaments. In the palace of Versailles, where it is known by the name of Scottish marble, it has been employed in the construction of several chimney-pieces. Among the numerous geological varieties are hornblende, syenite, granite, felspar, mica-slate, quartz, and clay-slate; also limestone with veins of granite, and small portions of magnetic iron-ore. The plantations are principally larch and Scotch fir, with some ash, the last of which is found in a thriving condition near the ancient castle of the Boyn. The seats are, Birkenbog, an old plain building, inhabited by the tenant who rents the farm; and Glassaugh, a neat and spacious modern mansion, recently much enlarged and improved. The village of Fordyce was made a burgh of barony in 1499. About fourteen miles of turnpike-road run through the parish, branching off in various directions to Banff, Cullen, Keith, and Huntly; and there are several good substantial bridges. Two fairs are held; one in November, for cattle and for hiring servants, and the other in December, for cattle only.

ECCLESIASTICALLY the parish is in the presbytery of Fordyce, synod of Aberdeen, and in the patronage of the Earl of Seafield. The stipend is £226; and there is a manse, with a glebe of two acres and a half, valued at £5 per annum, and a croft of five acres, called the Vicar's Croft, bequeathed in 1595 for the use of the minister. Fordyce church, built in 1804, contains 1050 sittings. The parochial school affords instruction in Greek, Latin, mathematics, and all the branches of a useful education: the salary of the master is £34; he has also ten acres of land, left by Thomas Menzies of Durn, and receives about £30 in fees. Walter Ogilvie of Redhyth, in 1678, bequeathed land for the establishment of bursaries at the parochial school, and at King's College, Aberdeen; in the former there are seventeen, extending to five years each. George Smith, who was born in the village of Fordyce, established nine bursaries in his native parish, likewise of five years' duration; they commenced in 1801, and are worth £25 per annum each, appropriated to board, clothing, and education: he also left £25 a year to the minister for superintending the youth on the foundation. The Rev. James Stuart, rector of Georgetown and All Saints, in South Carolina, left £1200 for a bursary in the school of Fordyce, for boys bearing the name of Stuart: this endowment commenced in 1810. There are two other small bursaries, founded by James Murray. The chief relic of antiquity is the old castle of Findlater, situated on a rock almost surrounded by the sea, and which appears to have been of considerable strength: the lower apartments, cut out of the solid rock, are strongly arched; and on the south were formerly a fosse and drawbridge, beyond which, at the distance of about one hundred yards, there was an outwork for greater security, consisting of a fosse and rampart. On the hill of Durn are the remains of an encampment, supposed to have been thrown up by the Danes; and some urns, containing ashes and bones, have been occasionally dug up in different places. There are several

chalybeate springs, the most celebrated being that called "John Legg's Well", which is much frequented in summer both by natives and strangers. Sir James Clark, physician to Her Majesty, and Dr. John Forbes, physician extraordinary to Prince Albert, were educated at the parochial school.

FORFAR, a royal burgh, the county town, a parish, and the seat of a presbytery, in the county of FORFAR, 70 miles (N. by E.) from Edinburgh; containing 9620 inhabitants, of whom 8362 are within the burgh. This place, in some ancient documents, is noticed under the designation of Forfar-Resstenneth; while in others Forfar and Restenneth are

Burgh Seal.

separately mentioned as distinct parishes, the union of which, though extremely probable, has not been proved by any authentic evidence. In the latter part of the seventh century, a priory was founded at Restenneth, which became subordinate to the abbey of Jedburgh, and of which there are still some remains on the west side of the loch of Restenneth. In this establishment Alexander I. deposited the public records that had been placed by King Fergus in the abbey of Iona, or Icolmkill, which was difficult of access. In 1296, Robert, then prior, took the oath of fealty to Edward I. of England. The priory appears to have been well endowed, and to have had considerable possessions in the neighbourhood; it flourished till about the year 1652, when the right of patronage of the church was purchased from the prior by the magistrates and council of the burgh.

Forfar seems to have been a royal residence at a very early period of history. Malcolm Canmore is said to have held parliaments in the castle, situated on an eminence to the north of the town, where he resided with his court; and his queen, Margaret, had a palace on a small island in the loch of Forfar, called the Inch, on which, for many years, the inhabitants of the burgh were in the habit of celebrating an annual festival in honour of her memory. In 1307, Robert Bruce, on his route from Aberdeen to Angus, assaulted the castle of Forfar, at that time strongly garrisoned by the English; and, taking it by escalade, put the whole of the garrison to the sword, and ordered the fortifications to be levelled with the ground. In 1647, the burghesses opposed the surrender of the person of Charles I. into the hands of the republican party, and, through their provost, entered a warm protest against that measure in parliament. When the city of Dundee was taken by the army of General Monk, a detachment of English forces was sent to Forfar, who plundered the town, and destroyed all the charters and public records of the burgh. In consideration of the loyalty of the inhabitants, Charles II., in 1665, by charter renewed and confirmed the ancient rights of the burgh. Towards the close of the seventeenth century, frequent trials and executions for witchcraft occurred here, the last of which was in 1682: the place of execution, a small hollow to the north of the town, still retains the name of the "Witches' Howe", and the iron bridle that was fastened round the head of the victims on these occasions is yet preserved.

The town is situated on the road from Aberdeen to Perth. It consists of two principal and several smaller streets, in which are numerous well-built houses, many of them of handsome appearance; and within the last half century very great improvements have taken place. The streets are lighted with gas, and the inhabitants are supplied with water from wells sunk by subscription of individuals, aided by grants for the purpose by the magistrates of the burgh. A subscription library is supported: there are a newsroom and a mechanics' reading-room, both containing a good collection of books; and a horticultural society has been established. The inhabitants are chiefly employed in the linen manufacture, the principal articles being sheetings, Osnaburghs, and dowlas, in the weaving of which about 3000 persons are regularly employed in their own dwellings: the quantity of linen annually woven is about 14,000,000 yards, and the average value £300,000. A great part of this manufacture is exported to the West Indies and South America by the manufacturers themselves, and Lancashire is largely supplied with the sheetings. There are ale and beer breweries, and various shops for the supply of the vicinity with different articles of merchandise. A vast increase of general traffic took place after the opening of the railway between Forfar and Arbroath, for the conveyance of goods and passengers, on the 3rd of January, 1839: the line is fifteen miles in length, with a rise upon the whole distance of about 220 feet. Further facilities of communication were afforded by the opening of the Scottish Midland Junction railway, from Forfar to Perth, in August 1847: the line is thirty-two miles and a half in length. Among the roads is an excellent one from Forfar to Kirriemuir, opening a communication with a large Highland district. The principal market is on Wednesday; and there is a market, well supplied with provisions of all kinds, on Saturday. Fairs are held on the last Wednesday in February, the second in April, and the first in May, for cattle and horses; on the day after Dunsmuir fair, in June, for cattle; on the first Tuesday in July for sheep, on the Wednesday following for cattle, and on Thursday for horses; on the first Wednesday in August, for cattle; the last Wednesday in September, for horses and cattle; and the third Wednesday in October and the first in November, for cattle. Being in the very centre of the county, Forfar is remarkable for the extent of its cattle markets. From the beginning of November until the end of March, the Wednesday weekly market is a large fair; and the other fairs enumerated are frequented by dealers from the southern counties and from England.

The BURGH, by charter of Charles II., is governed by a provost, two bailies, a treasurer, and a town council of fifteen members. There are five incorporated companies, the glovers, shoemakers, tailors, weavers, and hammermen, the terms of admission to which vary considerably. The fee paid on admission as a burgess is, for a stranger £2, and for the son of a freeman, the husband of a freeman's daughter, or an apprentice, £1. The jurisdiction of the burgh extends over the whole royalty, which is about two miles and a half in length and half a mile in breadth, and also over the liberties. The bailies hold a court for the determination of civil pleas to any amount, in which they are assisted by an assessor, and also a criminal court, chiefly for the trial of petty offences (though by charter their jurisdiction extends to capital

crimes); but from the conducting of causes by written pleas, the expenses of process tend greatly to diminish the number of suits in the latter court. As the county town, the sessions are held here, as well as the election of the representative for the shire in parliament. A handsome building has been erected at an expense of £5000, containing a sheriff's court, with offices for the sheriff's clerk, and rooms for the juries and for the records. The town and county hall, situated in the centre of the town, is a neat edifice, comprising halls for the transaction of public business, and courts for holding the sessions. In the same building is the old gaol, now converted into an excellent market-place, as, from its inadequacy as a gaol, ground was lately purchased to the north of the town, on which a more spacious and better arranged prison was erected. Forfar, with Montrose, Arbroath, Brechin, and Bervie, returns one member to the imperial parliament: the elective franchise, under the Reform act, is vested in the resident £10 householders of the burgh; and the number of these is 250.

The PARISH is situated on the south side of the valley of Strathmore, and is about six miles in length from north to south, and five miles in breadth. Its surface, though generally level, is varied by the hill of Balma-shinar, near the town, and by the hill of Lower, at the southern extremity of the parish, the former of which commands an extensive and richly-diversified prospect. The rivers are the Lunan and the Venny, which, though abounding in trout, are in their course through the parish but very inconsiderable streamlets. There were formerly three large lakes, Restenneth, Fithie, and the loch of Forfar; but the two first have been drained for marl, and the last, though still a fine sheet of water, has been much reduced in extent. The soil, with the exception of a tract of wet clay in the south, is generally light and dry, producing excellent crops of oats and barley, turnips, and various other green crops. The lands are in a good state of cultivation; the use of shell-marl found in the lakes has been almost superseded by the use of lime, and the system of husbandry has greatly advanced. The annual value of real property in the parish is £12,015. In the south-west, and also in the eastern parts of the parish, freestone of good quality for building is extensively wrought. From the quarries here, has been taken the stone of which most of the houses in the town, and the steeple of the church, are built; and large quantities of flags for pavement, and of thin sandstone for roofing, are sent by railroad to the ports of Arbroath and Dundee, whence they are shipped to various parts of the kingdom. The only mansion-house is that of Lower, built by a former Earl of Northesk, and still the property of his descendants, the family of Carnegie, Earls of Northesk.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Forfar, synod of Angus and Mearns. The minister's stipend is about £300, with a manse, a handsome modern building, and a glebe valued at £20 per annum; patrons, the Town Council. Forfar church, originally built in 1791, and partly rebuilt, and made more commodious, in 1836, is a plain substantial edifice, with a steeple erected in 1814, in which are three old bells, the gift of Mr. Strang, a native of the town, and a merchant of Stockholm: the interior contains about 1800 sittings. St. James' church

was erected in 1836, at an expense of £1200, raised by subscription; and a portion of the parish, comprising an area about a quarter of a mile long, and of nearly equal breadth, and containing a population of 2236, was assigned to it as an ecclesiastical district. It is a neat structure, containing 1134 sittings; and the stipend of the minister, derived from seat-rents, is £80 per annum, to be advanced to £100 when the funds will permit: patrons, the Male Seat-holders, being Communicants. An episcopal chapel was built in 1824; it has 380 sittings, and is under the superintendence of the Bishop of St. Andrew's, Dunkeld, and Dunblane. There are also places of worship for members of the Free Church, the United Presbyterian Synod, and Independents; and an old house has been purchased, and fitted up as a Roman Catholic chapel, in which service is occasionally performed. The parochial school affords instruction to about eighty children; the master has a salary of £34, with an allowance of £8. 15. in lieu of a house and garden, and the fees average £25 per annum. There are likewise three burgh schools, the master of one of which has a salary of £40; the other masters have each a schoolroom rent free, but are not in receipt of any salary. Within the last few years, the magistrates have built two handsome and commodious schoolrooms, where education for the working classes is afforded at a cheap rate: these schools are numerously attended. A considerable income arises from land purchased with a bequest of Mr. Strang's, in 1650, for distribution among the poor. In the vicinity are the remains of two Roman camps, between which a causeway was continued for some way through this parish; and nearly at an equal distance from each are remains of a Pictish camp of large extent, of which the rampart and fosse, extending from Loch Forfar to Loch Restenneth, are said to have been formed by the Picts under Feredith, to protect their camp from the Scots under Alpin, prior to the battle of Restenneth.

FORFARSHIRE, a maritime county, in the east of Scotland, bounded on the north by the counties of Aberdeen and Kincardine; on the east, by the German Ocean; on the south, by the Firth of Tay; and on the west, by Perthshire. It lies between 56° 27' and 57° (N. Lat.) and 2° 28' and 3° 22' (W. Long.), and is about 38½ miles in length, and 37½ in extreme breadth, comprising an area of 840 square miles, or 537,600 acres; 38,255 houses, of which 36,184 are inhabited; and containing a population of 170,520, of whom 79,375 are males and 91,145 females. This district, which was formerly called Angus, is said to have received that name from Angus, brother of Kenneth II., to whom it was granted by the king, after his victory over the Picts; and it continued for many generations to be governed by a succession of thanes, of whom Macbeth, the associate of Macduff, Thane of Fife, in the murder of Duncan, was the last. The county was subsequently governed by earls, of whom Gilchrist, the first earl, flourished in the reign of Malcolm III., and was succeeded by his son, the second earl, who attended David I. at the battle of the Standard, in 1138. The earldom was conferred by Robert II. on the Douglas family; and at present the shire gives the inferior title of Earl to the Duke of Hamilton. Prior to the abolition of episcopacy, the county was included in the diocese of Brechin; it is now in the synod of Angus and Mearns, comprises

several presbyteries, and about fifty-five parishes. For civil purposes it is divided into the districts of Forfar and Dundee, in each of which towns is a resident sheriff-substitute. It contains the royal burghs of Forfar, which is the county town, Dundee, Arbroath, Montrose, and Brechin, and the market-towns of Kirriemuir and Glammis, with several smaller towns and villages. Under the act of the 2nd of William IV., the county returns one member to the imperial parliament.

The SURFACE is boldly varied. Towards the north it forms part of the Grampian range, here called the Binchennin hills, of which Catlaw, the highest, has an elevation of 2264 feet above the level of the sea: this portion of the county, known as the Braes of Angus, is a wild pastoral district. Nearly parallel with these heights are the Sidlaw hills, apparently a continuation of the Ochil range, and which are of less height than the Binchennin, few of them attaining more than 1400 feet above the sea. Between the two ridges is the beautiful and fertile valley of Strathmore, popularly called the Howe of Angus, extending nearly thirty-three miles in length, and varying from six to eight miles in breadth, diversified with gentle eminences, fruitful fields, pleasing villages, and handsome seats surrounded with flourishing plantations. The district between the Sidlaw hills and the coast is a level tract of great fertility, from three to eight miles in breadth, and in the highest state of cultivation. The principal valleys are Glenisla, Glenprosen, Glensesk, Lethnot, and Clova, all of which are watered by streams descending from the mountains. The chief rivers are the North and South Esk, which have their sources on the northern confines of the county. Of these streams, the former, issuing from Lochlee, receives the waters of the Unich, which in its course forms numerous picturesque cascades; the North Esk then flows through the vale of Glensesk, between banks crowned with trees of birch, into the county of Kincardine, and falls into the sea about three miles to the north of Montrose. Its tributaries are the Luther, the Cruick, the West Water, the Tarf, and the Mark. The South Esk has its rise near that of the North Esk, and running through the centre of the county, receives the Noran, the Lemno, the Carity, and the Prosen, and joins the sea at Montrose. The river Isla rises to the west of the sources of the Esks, and after being fed by the waters of the Meikle, the Dean, the Carbet, and the burn of Glammis, flows westward into the Tay at Kinclaven. The Dighty and the Lunan are of inferior character: the former issues from some small lakes in the parish of Lundie, and runs into the river Tay to the east of Broughty-Ferry; whilst the latter, having its source in the lakes of Rescobie and Balgives, flows into the sea at Lunan bay. Most of the rivers abound with trout and salmon, and the Lunan with eels. There are also numerous lakes in the county, but few of them are more than a mile in circumference; the principal are Lochlee, Loch Brandy, Loch Forfar, Loch Rescobie, and Loch Balgives.

About three-fifths of the land are under cultivation; 20,000 acres are woodland and plantations, and the remainder mountain pasture and waste. On the hills the soil is heathy moor, but in the valleys rich and fertile. The lands have been greatly benefited by draining, and abundant crops of every kind are raised: wheat, which formerly was little cultivated, is now grown in large quantities, and of excellent quality; the various im-

provements in husbandry have been generally adopted, and the system of agriculture is in a very advanced state. Considerable attention is paid to live stock; the Angusshire breed of cattle is well known: numbers of sheep of various breeds are pastured on the Grampian and the Sidlaw hills, and on the former is reared a small breed of horses called Garrons. The plantations consist of oak, beech, birch, and other trees, which have nearly superseded the larch; and the improvement of the soil has adapted it to the growth of all kinds. In this county the principal substrata are limestone, freestone, and sandstone of good quality for flags. The limestone is extensively wrought in several places, but its use in farming has in some degree been diminished by the introduction of bone-dust, of which great quantities are prepared at Arbroath and Dundee, and shell-marl is found in the lakes, some of which have been drained in order to procure it. Lead-ore was formerly obtained in the upper part of the parish of Lochlee, and copper-ore has been found in the Sidlaw range. The seats are Glamis Castle, Cortachy and Airlie Castles, Camperdown House, Lindertis, Isla Bank, Grey, Careston, Balmahoon, Brechin Castle, Panmure House, Kinnaird, Dun, Rossie, Ethie, Guthrie, Dunnichen, Isla, Craigo, Langley Park, and various others. The principal manufactures are, the spinning of flax; the weaving of linen and the coarser fabrics, as huckaback, canvass, dowlas, sheeting, and sacking, of which great quantities are exported; the manufacture of fine coloured thread; and the bleaching of linen, for which there are extensive grounds on the banks of streams. There are large tanneries, breweries, distilleries, and other works; and ship-building is pursued at the ports of Dundee, Arbroath, and Montrose. Valuable fisheries are carried on along the coast, and salmon-fisheries in the Firth of Tay. Facility of communication is afforded by good roads in various directions, and by railways, of which the Dundee and Newtyle railway was the first constructed in the county; the Arbroath and Forfar railway was opened in 1839, and the Dundee and Arbroath railway, nearly one continued level along the coast, in 1840. More recently have been opened the Dundee and Perth line, the Forfar and Perth line, and the Aberdeen line, of each of which there is a part within the county of Forfar. The annual value of real property in the county is £502,841, of which £312,201 are returned for lands, £180,496 for houses, £5408 for railway communication, £2389 for fisheries, £1385 for quarries, and the remainder for other kinds of real property. There are some remains of the cathedral of Brechin, and near them a round tower supposed to be of Pictish origin; the county contains the ruins of numerous ancient castles, of the abbey of Arbroath and similar religious establishments, tumuli, cairns, Druidical altars, and various other remains of antiquity, which are described in the articles on the parishes.

FORGAN, or ST. PHYLLAN'S, a parish, in the district of ST. ANDREW'S, county of FIFE, 9 miles (N. E. by E.) from Cupar; containing, with the villages of East and West Newport, and Woodhaven, 1219 inhabitants. This place is said to have derived its name, anciently written *Forground* or *Forgrund*, and supposed to mean "fore-ground", from the elevated and conspicuous situation which it occupies on the bank of the river Tay. For many generations it was the property of the Nairnes,

who held distinguished offices in the state, and one of whom was elevated to the peerage of Scotland in the time of Charles I. The estate of St. Fort, with other lands in the parish belonging to that ancient family, was sold at the beginning of the last century. The title, which became forfeited during the rebellion of 1745, was restored in the reign of George IV. The St. Fort estate is now in the hands of Henry Stewart, Esq.; and the only portion of the original possessions which is still the property of the Nairne family, is the small estate of Morton. Forgan parish is about six miles in length and two and a half in breadth. It is bounded on the north by the river Tay, and comprises about 5000 acres, of which 4000 are arable and in profitable cultivation, 600 pasture and meadow, and 400 woodland and plantations. The surface is in some parts pleasingly undulated, and in others agreeably diversified with level plains. Of the rising grounds the loftiest are the eminences of St. Fort and Newton, which are about 300 feet above the level of the sea. The scenery is richly varied, and from the higher lands are fine views over the river, which skirts the parish for nearly four miles. The shore is bold and rocky, and indented with several bays, the chief of which are Woodhaven and Newport, where convenient harbours have been constructed, and Wormit bay, which bounds the western extremity of the parish.

The soil is generally fertile, consisting of black loam interspersed with clayey mould, and in some parts of a light gravelly kind, in which are found occasionally large boulders of trapstone. In this parish, as in the county generally, the system of agriculture is in a very advanced condition; the rotation plan of husbandry is practised, and every improvement in the management of the lands is speedily adopted. The crops are barley, oats, wheat, potatoes, and turnips, which are usually favourable and abundant; and the surplus produce of grain finds a ready sale in the markets of St. Andrew's, Cupar, and Dundee. The cattle are principally of the Fifeshire breed, with a slight mixture of the Angus, the Ayrshire, and the Teeswater, which last, however, are by no means suited to the soil; the sheep are of the Cheviot and Leicestershire breeds. Of late years the plantations have been much extended, especially on the lands of St. Fort and Tayfield; they consist chiefly of fir, though the soil is well adapted for oak, ash, chesnut, and beech: there are few trees of remarkable growth, except some yew-trees at Kirkton, which are unrivalled specimens of the kind. The farm-houses and offices are mostly superior; and several of them, of more recent erection, are handsome and exceedingly convenient. Considerable progress has been made in inclosing the lands, but much yet remains to be done in this respect; the fences are principally of stone, with a few of hedges, and are generally well kept. The substrata are sandstone, whinstone, and greenstone, the last of which is extensively quarried for building and for other purposes. There is neither freestone nor limestone in the parish, but lime for agricultural uses is brought by sea from various places, and freestone from the quarries in Angus. The greenstone is fine grained, compact, and of deep colour; and on the banks of the river are rocks of amygdaloidal greenstone, in which are found metals, and quartz resembling agate. The annual value of real property is £7914.

St. Fort, the residence of Mr. Stewart, is a spacious and handsome mansion in the Elizabethan style of

architecture, recently erected, and pleasantly situated in a demesne enriched with flourishing plantations. Tayfield, the seat of Mr. Berry, is also a handsome mansion, lately enlarged and embellished, and beautifully seated on the bank of the Tay, of which it commands an extensive view, with the varied and romantic scenery of the adjacent lands, thickly interspersed with pleasing cottages. A salmon-fishery is still carried on; but since the prohibition of stake-nets, it is neither so abundant nor so profitable as formerly, and at present scarcely returns to the proprietor a rental of £150 per annum: the fish, which are of very superior flavour, and in great demand, are sent to Dundee, where they are packed in ice and forwarded by steam-boats to London. A very large shoal of herrings was formerly found in the Tay, near Newport; but none have appeared within the last fifty years. The weaving of linen is carried on upon a limited scale, affording employment to about twenty or thirty persons, who work at their own homes for the manufacturers of Dundee. Facility of intercourse with the neighbouring market-towns is afforded by the Newport line of the "Edinburgh, Perth, and Dundee railway", and by excellent roads, of which the road to Edinburgh extends for nearly three miles through the parish, commencing, like the railway, at the ferry at Newport, from which place communication with Dundee is maintained by steam-boats. A ferry from Woodhaven to Dundee was also once kept up; but being attended with great inconvenience, an act of parliament was obtained some years since for its discontinuance, and for the establishment of that of Newport as the only ferry.

Ecclesiastically the parish is in the presbytery of St. Andrew's, synod of Fife, and in the patronage of the Crown: the minister's stipend is about £230, with a manse, and a glebe of about nine acres. The old church, situated in a pleasing and sequestered spot, at the southern extremity of the parish, at one time belonged to the priory of St. Andrew's, and is said to have been built on that site for the accommodation of a family residing in the neighbouring mansion-house of Kirkton, and who contributed largely towards the expense of its erection. This edifice is now a ruin, a new church having been erected in 1841 in a more central part of the parish. There is a place of worship near Newport for a congregation of Independents. Forgan parochial school affords instruction to about 120 children; the master has a salary of £34, with the fees, and a good dwelling-house and large garden: an excellent school-house was recently erected in a convenient situation, upon the completion of which the number of scholars considerably increased. There are numerous cairns and tumuli, though none of them have been fully explored; and in forming the road to Newport, several urns of rude workmanship were discovered.

FORGANDENNY, a parish, partly in the county of Kinross, but chiefly in that of Perth, $3\frac{1}{2}$ miles (W.) from Bridge-of-Earn; containing 796 inhabitants, of whom 66 are in the village. This parish is about ten miles in length and two in average breadth, and comprises 12,800 acres, of which 2000 have never been cultivated. It is divided into the upper and lower districts: the former comprehends a part of the Ochils, covering full three-fourths of the surface of the parish; and the latter, stretching from the foot of these hills on the

south to the river Earn on the north, consists of a well-cultivated tract, somewhat similar in character to the Carse of Gowrie. The scenery is good, from the beautiful variations of the surface; the land gradually rises from the river southward, and the acclivities of the Ochils by degrees attain the height of 1000 feet above the level of the sea. Considerable beauty is likewise conferred on the scenery by the course of the picturesque Earn, which is well stocked with salmon, sea-trout, and other varieties, with pike and eels. The May, also, a fine mountain stream rising among the Ochils in Auchterarder, enters the parish from the south, and after winding through it for several miles in a northern direction, and forming some pretty cascades, runs off to the west into the parish of Forteviot, among the beautiful and romantic "Birks of Invermay": it contains a large supply of fine trout.

The higher district is cold, its soil light, and though it bears good crops of other grain, wheat is never sown here; but on the lower grounds all kinds of white and green crops are produced of excellent quality, the soil being rich and strong. Much of the hilly waste, particularly on the estate of Condie, has been recently laid down in excellent sheep pastures: some of the highest grounds have been made to yield fine crops of turnips, and furrow-draining has been much practised in the lower parts of the parish, where, also, the farm-buildings are almost entirely constructed after an improved method. The annual value of real property in the parish is £5879, of which £340 are for the Kinross-shire portion. Trap rocks constitute nearly the whole of the substrata; but they are so soft and friable as to be almost useless, even for the construction of stone fences, or any other purpose except the repair of roads. The old red sandstone lies under this rock, though at too great a depth to admit of quarrying. In the upper district are to be seen beautiful specimens of conglomerate, and numerous blue and purple pebbles appear in the decomposed trap. A thin vein of limestone exists on the estate of Dumbuils, but on account of its sandy character, and the distance of coal, it is not wrought. Copper is said to have been formerly obtained in the wood of Condie, although no traces of it are now visible. The natural wood covers about forty acres, and 400 acres are in plantations, comprising the trees usually grown in the country. Freeland, the property of Lord Ruthven, is a modern residence, having been remodelled about the year 1834; and that of Condie, an ancient structure, has received some recent additions: the other mansions are Rossie and Torrance, the former erected about eighty or ninety years since, and the latter about half a century since. The population are entirely agricultural. Besides the village of Forgardenny, there is a small hamlet in the Ochils, called Path-Struie, or the Path of Condie. The road from Stirling to Bridge-of-Earn passes through the village, and the Scottish Central railway along the banks of the river Earn, affording great facility for the conveyance of the produce, which is disposed of at Perth, Newburgh in Fifeshire, &c.

Ecclesiastically the parish is in the presbytery of Perth, synod of Perth and Stirling, and in the patronage of the Crown: the minister's stipend is £200, with a manse, and a glebe of six acres, valued at £15 per annum. Forgardenny church, a plain edifice of considerable antiquity, was formerly one of the eleven pre-

bendal churches of Dunkeld cathedral; it has lately undergone repair, and accommodates 410 persons. There are places of worship for members of the Free Church and the United Presbyterian Synod. The parochial school, situated in the village of Forgardenny, affords instruction in the usual branches; the master has a salary of £34, with a house and garden, and £10 fees. There is also a school at the Path of Condie, instituted by an act of the presbytery of Perth, dated 1660, and confirmed by the privy council in 1663, empowering the heritors to appropriate the vacant stipend of 1659 to its endowment; the money was placed at interest for the payment of the teacher, and was augmented by the Rev. Mr. Willison, a late incumbent, who made a bequest of a small field, producing £7. 10. annually. A library of religious books, and one of miscellaneous works, are attached to the parochial school. On the north side of the Ochils is a hill called Castle-Law, on which formerly stood an important fortification, supposed by some to have been of the vitrified class, but considered by most as Danish. Its boundary line, once formed by a circular stone wall, circumscribes an area 170 yards in diameter. The hill commands most extensive prospects, embracing the mouth of the Tay, and the German Ocean, on the east; Strathearn, to the Grampian mountains, on the west; a large part of the counties of Perth and Angus, on the north and north-east; and the Lomond hills, on the south.

FORGLEN, a parish, in the county of BANFF, 1 mile (W. by N.) from Turriff, on the road to Banff; containing 771 inhabitants. This place is also called Teunan, from St. Eunon, to whom a chapel, of which there are still some vestiges remaining, is said to have been dedicated. It is bounded on the south and east by the river Doveron, which has its source in the mountains of Aberdeenshire, and after receiving in its course numerous streams from the higher grounds, falls into the Moray Firth at Banff. The parish is five miles and a half in length from south-east to north-west, and about four miles in breadth, containing an area of 7234 acres, of which 3617 are in a state of profitable cultivation, 1433 in plantations, 1055 waste land and pasture, and about 1130 capable of being reclaimed and cultivated at a moderate expense. Its surface is pleasingly undulated, and the soil, though light, is fertile. The system of agriculture is improved; the principal crops are barley and oats, and wheat has recently been raised, but not in sufficient quantities to remunerate the grower. Considerable attention is paid to the rearing of live stock; the cattle are of the Aberdeenshire and Buchan breeds, with some of the Teeswater, Dunrobin, and Galloway; the sheep are generally of the Highland breed, which has been benefited by the introduction of the Cheviot, Merino, and Leicestershire kinds. Much progress has been made in inclosing the lands, but the chief fences are of stone, and the farm-buildings are indifferent. There are quarries of clay-slate in several parts, worked for various purposes. The salmon-fishery on the Doveron was formerly extensive and profitable; but it has greatly diminished within the last few years, and the annual rental for an extent of three miles of the river is at present not more than £5. The annual value of real property in Forglen is £3210. Over the several rivulets that intersect the parish are bridges in good repair; and across the Doveron is a substantial bridge of red sand-

stone, erected in 1826 at an expense of £2503, and connecting this parish with the post-town of Turriff. Peat and wood are the principal fuel, but coal is brought from Banff. There is a parochial library, containing a valuable collection of books on religious and general subjects; and a savings' bank has been established, or rather revived.

The parish is ecclesiastically in the presbytery of Turriff, synod of Aberdeen, and in the patronage of Sir Robert Abercromby; the stipend is £175. 5. 10., with a manse, and a glebe valued at £14 per annum. Forglen church, erected in 1806, and situated on the south-eastern boundary of the parish, is in good repair, and will accommodate a congregation of from 400 to 500 persons. The members of the Free Church have a place of worship. The parochial school is well attended; the salary of the master is £34, with about £30 fees, and a house and garden; also the interest of £100 bequeathed by the Rev. George Bruce, minister of Dunbar, in 1793, and a portion of the Dick bequest, producing about £30 per annum. There is likewise a female school, in which children are taught to sew; the building was erected by subscription. The poor of the parish are eligible for admission into the Aberdeen infirmary, for which a collection is made annually at the church: there is also an annual collection for the Assembly's India Mission and the schools in the Highlands and islands. From some ancient charters preserved by the family of Abercromby, it appears that the lands of this parish and the patronage of the church formerly belonged to the abbey of Aberbrothock; and, as already stated, there are still remains of an old religious house, by tradition assigned to St. Eunon. At a short distance from the church are two barrows, which have not been opened; and in constructing a road in 1827, an urn containing ashes was found. Three similar urns have been found since, and others had been found before. A silver coin of the size of a crown-piece, with the date 1670, was lately discovered in the wall of an old house; it seems to have been current in the electorate of Cologne. The former house of Forglen, supposed to have been originally built about the year 1346, had over the entrance the arms of Scotland, sculptured in stone, with various inscriptions; the present mansion, lately erected near the site of the former, which is removed, is a spacious edifice, beautifully situated on the bank of the Doveron, and adorned with fine old timber. In the parish is also the house of Carnousie.

FORGUE, a parish, in the district of STRATHBROGIE, county of ABERDEEN, from six to seven miles (N. E. by E.) from Huntly; containing 2489 inhabitants. The name of this place was originally written Forrig, and is supposed to be derived from the Gaelic language. The parish is bounded on the north by the river Doveron, which separates it from Rothiemay in Banffshire, and on the south by the Urie. It measures between nine and ten miles in length, and is about six miles and a half at its greatest breadth, from east to west; comprising 9000 or 10,000 acres mostly under tillage, and a considerable extent of plantations, moor, and waste. The surface is diversified with knolls and acclivities, straths and holms; and the scenery is consequently picturesque and interesting: the Foudland hills, however, in the southern quarter, from their barren and dreary aspect, being covered with stunted heath, give to that part of the parish a bleak and uninviting appear-

ance. The Foreman, a hill of conical form with its sides well wooded, rises in the northern district, near the Doveron, to the height of 1000 feet, and commands from its summit extensive and varied prospects. Over this hill is a path still known by the name of the Queen's Road, it being recorded that Queen Mary, when she journeyed north, in the year 1562, instead of going directly forward to Huntly Castle, as she originally intended, here became impressed with fear of treachery, relinquished her intention, and passed along the above path to Rothiemay House, where she took up her quarters. Rivulets flow in every direction, and after enlivening and beautifying the lands, fall into the larger streams: many of them abound with trout.

The SOIL comprehends sand, gravel, loam, clay, and moss, and therefore differs very much in quality in different parts. All kinds of grain and green crops are raised; the rotation system is practised, and most other agricultural improvements have been introduced. Particular attention has also been given to the rearing of cattle, of which crosses between the pure Aberdeenshire and the short-horned have proved very successful. Many of the farms are neatly fenced, and all of them well cultivated; and from the comparatively inland situation of the parish, fourteen miles from the sea, with its ornamental and tastefully-arranged plantations, the appearance of the district is particularly agreeable. The rocks consist of the common stone found in most of the neighbouring parishes, and limestone, the latter of which was some time since extensively quarried. The annual value of real property in Forgue is £8540. In the parish are the mansions of Cobairdy, Haddo, Corse, Drumblair, Templeland, Auchaber, and Boynes-Mill, most of which are well built; but the mansion of Fren draught, formerly the seat of the Crichton family, is the most distinguished residence in point of situation and scenery. There are six mills, and at Glendronach is a distillery. The turnpike-road from Huntly to Banff, and another leading from Huntly to Aberdeen, pass through the parish; the chief communication is with Banff, Portsoy, Macduff, Inverury, and Huntly, and Sunderland coal is occasionally imported for fuel. Fairs are held for the sale of cattle and sheep, and for general traffic, at Hawkhall, on the third Tuesday in April, the last Thursday in May, and the third Tuesday in September, all O. S.

Ecclesiastically the parish is in the presbytery of Turriff, synod of Aberdeen, and in the patronage of Alexander Morison, Esq., of Bognie. The minister's stipend is about £190, with an excellent manse, and a glebe of about twelve acres, valued at £18 per annum. Forgue church, situated upon a gentle eminence, is a neat, commodious, and substantial edifice, built in 1819, and containing 900 sittings. The members of the Free Church have a place of worship, and there is a small episcopal chapel. The parochial school affords instruction in Latin and mathematics, with all the elementary branches; the master has a salary of £34, a house and garden, a portion of the Dick bequest, and £20 fees. There is a savings' bank; and the poor not on the roll enjoy the benefit of a charitable bequest of £20 per annum. The antiquities comprise the remains of several Druidical temples; vestiges of a Roman redoubt, as is supposed; and the ruins of the ancient castle of Fren draught, at the conflagration of the tower of which, in 1630, Viscount Aboyne, eldest son of the Marquess of

Huntly, and four others, perished. The Admirable Crichton, who flourished about the middle of the sixteenth century, is said to have been born at Fren draught, the principal seat of the family, and from which they derived the title of Viscount.

FORRES, a royal burgh and a parish, in the county of ELGIN, 12 miles (W. by S.) from Elgin; containing 3711 inhabitants, of whom 2844 are in the burgh. This place, the name of which, in the Gaelic language, is descriptive of its situation on the river and bay of Findhorn, has by some historians been identified with the *Varis* of Ptolemy, and is celebrated for its ancient castle, in which Duffus, King of Scotland, was treacherously murdered by the governor, in 966. A battle is said to have occurred here about the commencement of the eleventh century, between a party of Danish invaders and Malcolm II.: it terminated in a treaty, in commemoration of which an obelisk was raised, called Sweno's Stone, elaborately sculptured with devices, and which is still remaining in a very perfect state. Not long afterwards, the forces of Duncan, King of Scotland, were encamped on a moor in the vicinity of the town; and on his way to join that monarch, Macbeth, accompanied by Banquo, was met on an adjoining waste by the weird sisters, as described by Shakespeare in his tragedy of *Macbeth*.

The TOWN is situated on a moderately elevated ridge, and comprises one long street called the High-street, from which several smaller streets diverge on both sides: it is intersected throughout its whole length by the road from Elgin to Nairn, forming the High-street. The streets are well paved, and lighted with gas; and the inhabitants are amply supplied with water. A public library is supported by subscription, and has a good collection of volumes: there is also a newsroom, well furnished with journals and periodical publications; and a newspaper called "The Forres Gazette" is published on the first Wednesday in every month. A masonic lodge has been some time established, for which an elegant building has been erected from a design by Mr. Simpson of Aberdeen, containing a handsome ball-room, a supper-room, and apartments for the meetings of the brethren. A horticultural society under the patronage of the Earl of Moray holds annual meetings in June and September, when exhibitions of flowers, fruits, and vegetables attract numbers of visitors from all parts. The environs abound with pleasingly-diversified scenery; and on the highest of the richly-wooded Cloven hills, near the eastern extremity of the town, a lofty octagonal tower of three stages, crowned with an embattled parapet, was erected in 1806, by public subscription, to the memory of Lord Nelson. No manufactures are carried on here, nor any trade except such as is necessary for the supply of the inhabitants of the town and neighbourhood: there are numerous handsome shops, amply supplied with merchandise of every kind. In the immediate vicinity are a brewery and a distillery; and in a powerful saw-mill for timber, great quantities of hexagonal blocks for wood-pavement have been prepared for the London market, and

Burgh Seal.

shipped from the port of Findhorn, about five miles distant from the town. The market, which is amply supplied with grain, is on Tuesday; and markets for butchers' meat and fish are held daily. Fairs for cattle and horses occur on the first Wednesdays in January and July, on the third Wednesdays in February, April, May, and November, on the fourth Wednesdays in August and September; and for hiring servants, on the Saturday before the 22nd of November. Facility of communication is afforded by the high road from Elgin to Nairn; by a turnpike-road to the sea-port village of Findhorn, at the mouth of Findhorn bay, where the London and Leith steamers regularly call; by good district roads in various directions; and by an elegant chain-bridge over the river Findhorn, constructed at an expense of £7000, in 1831, to replace the former bridge of stone, which had been destroyed by flood in 1829.

The more ancient records of the corporation are lost; but there is evidence of the inhabitants having obtained the privileges of a ROYAL BURGH by charter of William the Lion or Alexander II., which was renewed by James IV. The government is vested in a council of seventeen, including a provost, three bailies, a dean of guild, and a treasurer; who are all chosen under the provisions of the Municipal Reform act. There are no incorporated trades; and the necessity for becoming a member of the guildry, in order to qualify as a burgher, and for which the entrance fee rose successively from £2. 10. to £13. 10., is no longer enforced. The magistrates exercise jurisdiction in civil causes to any amount, and in criminal matters for petty offences and breaches of the peace. The town-hall, erected in 1839, on the site of the ancient tolbooth, in the centre of the High-street, is a handsome structure in the later English style, with a square tower, above which rises an octagonal turret surmounted with a dome. It contains a spacious hall for holding the courts, with apartments for the sheriff and justices, a council-chamber, a record-room, offices for the town-clerk, and accommodations for the post-office. The old gaol, attached to the tolbooth, was removed on the erection of the present town-hall; and a small prison, containing two or three cells for the temporary confinement of criminals, has been built. Forres is associated with the burghs of Fortrose, Inverness, and Nairn, in returning a member to the imperial parliament: the number of qualified voters in Forres is 160.

The PARISH, which is bounded on the north by the bay of Findhorn, and on the west by the river of that name, is about four miles in length, and from one to three miles in breadth, comprising an area of 5200 acres, whereof 3300 are arable, 1200 woodland and plantations, and the remainder moorland pasture and waste. Towards the north-west the surface is a perfect plain, only a trifling height above the level of the sea: in the central portion it is diversified with gentle acclivities, terminating in conical hills of moderate height; while on the south-east the land becomes more elevated. The river Findhorn has its source in the mountains of Inverness, and after a course of considerable length, enters this parish, and flowing northward, falls into the bay of Findhorn. Another stream is the burn of Forres; it rises in the adjoining parish of Rafford, and running by the town, near which it receives a small tributary, also joins the bay. On the Findhorn is a lucrative salmon-fishery belonging to the Messrs. Forbes of Aberdeen,

valued at £500 per annum; it was greatly injured by the flood in 1829, but has lately very much improved. Along the margin of the bay and the banks of the river the soil is a rich deep loam, with a slight admixture of clay; in the central parts of the parish, a light sand which, under good management, is richly fertile; and in the higher grounds, a retentive clay, alternated with sand and moss. The crops are wheat, barley, oats, potatoes, and turnips; and considerable portions of the land are cultivated as gardens, in which flowers and fruits of every kind are raised with great success. The system of husbandry is in a highly improved state, and some of the waste ground has been made to yield luxuriant crops of grain; the farm-houses are substantially built of stone, roofed with slate, and generally well arranged, and on most of the farms are threshing-mills, one of which is driven by steam. The cattle are not confined to any particular breed, nor are the sheep, and many of the farmers change their live stock annually. Particular attention is paid to the management of the dairy-farms, for the produce of which there is a large demand. The annual value of real property in the parish is £8481. The plantations consist of oak, ash, elm, plane, and beech, interspersed with larch and Scotch fir, and there are some fine specimens of trees on the lands of various proprietors, particularly a stately avenue of ash-trees on the road to Forres from the west. In this parish the chief substrata are sandstone and limestone, the latter of which is quarried on the farm of Mundole, where kilns have been erected for burning it into lime for the farmers' use. Sanquhar House is a handsome mansion situated on an eminence, about a mile southward of the town, in a richly-wooded demesne enlivened by the windings of the burn of Forres. Invererne, a mile north of the town, is also a handsome modern residence, surrounded by thriving plantations. Forres House, a spacious mansion, is at present in the occupation of a tenant. Drumduan is an elegant villa to the east of Forres, commanding an extensive view of the surrounding country.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Forres, of which this place is the seat, and of the synod of Moray. The minister's stipend is about £274, with a manse, and a glebe valued at £25 per annum; patron, the Earl of Moray. Forres church, a plain structure, was built in 1775, and repaired in 1839; it is lighted with gas, and contains 1000 sittings. There are places of worship for the Free Church, the United Presbyterian Synod, and Independents, and an episcopal chapel. The parochial and burgh schools, which are consolidated under the patronage of the corporation, and held in the buildings of Anderson's academy, are conducted by three masters, to whom collectively are paid salaries amounting to £120 per annum. The academy, for which there is a handsome building in the Grecian style of architecture in the High-street, was founded in 1824, and endowed with property producing £130 per annum, by the late Jonathan Anderson, Esq., of Glasgow, for the education of children of the parishes of Forres, Rafford, and Kinloss. Four schools are held in the building, namely, the three parochial schools above referred to, and the charity school founded by Mr. Anderson. Of the ancient castle of Forres, which was demolished after the murder of Duffus, and subsequently rebuilt, only some slight vestiges are remaining on a hill to the west of the town. When it ceased to be a royal

residence, it became the possession of the Earls of Moray, from whom the castle and the property attached passed to the Dunbars, hereditary sheriffs of Moray, who resided in a building intended to form part of a new structure, which, with the lands belonging to it, was afterwards owned by the Earl of Seafeld, and is now the property of General Sir Lewis Grant. James Dick, Esq., who bequeathed £140,000, the proceeds of which are divided among the parochial schoolmasters of the counties of Elgin, Banff, and Aberdeen, was a native of the town of Forres.

FORT-AUGUSTUS, a village, a post-town, and for a time a quoad sacra district, in the parish of BOLESKINE and ABERTARFF, county of INVERNESS, 131 miles (N. W.) from Edinburgh; containing about 700 inhabitants. This place is situated at the south-western extremity of Loeh Ness, in the middle of the county. It derives its origin from the establishment of a garrison here in 1729, for the purpose of checking the proceedings of some clans that were favourable to the house of Stuart; Fort-Augustus being the central of a chain of three forts, all built with the same design, across the Highlands. The name was given in honour of the then Prince of Wales, father of George III. The fort stands on a peninsula formed by the rivers Tarff and Oich: it is of a square form, with bastions at the corners, on which twelve six-pounders can be mounted; and is defended by a ditch, with a battery, a covert-way, and glacis. The barracks are constructed for one field-officer, four captains, twelve subalterns, and 280 rank and file. In 1745 the fort was taken by the Highlanders, and dismantled, but was soon repaired, and became the focus of some of those severe military operations by which the Highlanders were completely subdued. It is now under the charge of a barrack-master and a few soldiers from Fort-George, whither the guns were removed some years since. The village is seated behind the fort, on the slope of an alluvial terrace; and the scenery in the vicinity is altogether of a wild and mountainous character. Over the Tarff is a bridge, kept in repair by government. Fairs are held on the Monday before the second Wednesday in June, and on the 20th of September, or, if not on that day, on the Monday before the 29th. A mission church, containing 368 sittings, was built about seventy or eighty years ago, partly by subscription, and partly by aid from government: the minister's salary is £74 per annum, chiefly paid by the Committee for managing the Royal Bounty. An ecclesiastical district comprising the whole of the ancient parish of Abertarff was for a time attached to the church. A commodious school-house and dwelling have been built by subscription. On a hill to the north of Oich is a Free church, a substantial and comfortable building, overlooking the village, and forming its chief ornament; it is seated for 444 persons, and under the same roof is an excellent schoolroom, forty-eight feet long, and eighteen feet broad. To the west of the village, and on the road from Inverness to Fort-William, is a Roman Catholic chapel, also a substantial building, seated for 250 persons. Several Roman coins were discovered in 1767.

FORT-GEORGE, in the county of INVERNESS.— See CAMPBELTON.

FORT-WILLIAM, a royal fortress and a village, in the parish of KILMALIE, county of INVERNESS, 30 miles (S. W.) from Fort-Augustus, and 135 (N. W. by W.) from Edinburgh; containing 1091 inhabitants. This

place, called also *Maryburgh* in honour of the queen of William III., in whose reign the fortress was erected, and *Gordonsburgh* from the family of Gordon, on whose lands the village was built, is situated at the eastern extremity of Loeh Eil, near the base of Ben-Nevis, and in the heart of a district abounding with wildly romantic scenery. The fortress stands on the site of an intrenchment thrown up by General Monk, and consists of an irregular triangle, defended by a glacis and fosse, with two bastions, mounted with fifteen twelve-pounders. It has a bomb-proof magazine, and barracks for the reception of two field-officers, two captains, four subalterns, and a garrison of ninety-six non-commissioned officers and privates. Fort-William was besieged by a party of the rebels, under the command of Captain Scott, in 1746; but after a resolute defence of five weeks, during which six men were killed and twenty-four wounded, the assailants raised the siege, and dispersed. A considerable portion of the wall was undermined some few years since, by the impetuous current of the river Nevis, descending from Ben-Nevis; and the structure has since that time been gradually going into decay.

The village consists of a long narrow street, extending along the margin of the lake, and intersected by various smaller streets. Its inhabitants are chiefly supported by the herring-fishery, for which the harbour affords considerable facilities, and a quay has been constructed, partly at the expense of the fishery commissioners, and partly by private contributions. A public library, which forms a tolerable collection of standard works, is supported by subscription; and the village has some good inns: one of the sheriffs-substitute, whose jurisdiction extends over part of Argyllshire, resides in the village; and there are some families of respectability within the fortress. Fairs are held for cattle and horses on the second Wednesdays in June and November, and a fair for sheep and wool on the Tuesday after the second Thursday in July, all of which are well attended. A church was recently erected, to replace a former that had been pronounced unsafe; it is a neat structure containing 350 sittings, and the missionary has a stipend of £100, of which £60 are paid by the Committee of the Royal Bounty, £20 by the heritors, and the remainder by the congregation. There are a place of worship for members of the Free Church, an episcopal, and a Roman Catholic chapel; and the parochial school is situated in the village. During Her Majesty's trip to Scotland in 1847, the royal party landed here on the 21st of August, after their visit to Iona and Staffa, and hence proceeded, amid general rejoicing, to Ardverikie Lodge, in Laggan, whence they returned on the 17th September, and embarked at Fort-William for England.

FORTEVIOT, a parish, in the county of PERTH, 5 miles (W. by S.) from Bridge-of-Earn; containing 638 inhabitants, of whom 69 are in the village. This was the seat of many of the Pictish kings, who had a palace at Haly Hill, near the site of the present church; and this palace, after the extinction of the Pictish monarchy, and the union of the two kingdoms by Kenneth Me Alpine, became the favourite summer residence of several of the Scottish sovereigns. Kenneth resided for many years at the place, where he ended his days; it was afterwards the summer residence of Malcolm Canmore, and several of his successors' charters were dated hence. Previously to the battle of Dupplin,

which occurred on the 31st of July, 1332, Edward Baliol encamped his forces in a field in this parish, called the Miller's Acre; and the ancient mill from which it took its name, and the ford of Coblehaugh, where his army crossed the river, are yet remaining. The eminence of Haly Hill has been considerably undermined by the river May, and many portions of the buildings of the palace have been destroyed; but there are still some vestiges, and in several houses in the parish that were built with the ruins, may be traced numerous stones sculptured with antique figures, which once formed part of the royal residence.

The PARISH, which is about eight miles in length and two in breadth, is divided into three detached and unequal portions by the intervening parishes of Aberdalgie and Forgandenny. Of these portions the central division, in which is the village, is the largest, and is situated on the south of the river Earn: another extends into the Ochils, comprising some of the most conspicuous hills of that range; and the third, lying to the east of Aberdalgie, and the smallest, is bounded on the south by the Earn. The surface is beautifully diversified with hill and dale; and the scenery, enriched with wood, and enlivened by the windings of the rivers, is in many places strikingly picturesque. The Earn crosses the whole breadth of the parish from east to west, and, frequently overflowing its banks, does considerable damage to the lower lands. The May, which rises in the Ochils, after a course of eight miles joins the Earn. In its progress, it forces for itself a passage through a deep fissure in a rock, which, from the rumbling noise of the waters, has obtained the appellation of the "Humble Bumble"; and a little above this is the inn of Muckarsie, where the river is precipitated from a height of thirty feet, and after heavy rains forms a picturesque cascade. The soil is various, and the lands are under excellent cultivation, producing favourable crops: the farms are generally of large extent, and the occupiers men of capital; the farm-buildings are consequently of superior order, and all the recent improvements in husbandry, and in the construction of agricultural implements, have been adopted to their full extent. The annual value of real property in the parish is £6301.

Invermay House, the seat of Alexander II. M. Belshes, Esq., and for many generations the residence of that family, is now a handsome modern mansion: it is beautifully situated on an eminence overhanging the river May, and commanding an extensive view of the vale of Strathearn, with the windings of its river, and the romantically-diversified scenery of the adjacent country. All that remains of the old structure is apparently a ruin, though containing several apartments still entire, and in good preservation, and forming a pleasing contrast with the modern mansion. The grounds are tastefully laid out, and embellished with plantations, and with the graceful course of the river May, which flows through the demesne. About a mile from the house is the sepulchral chapel of Muckarsie, the church of that parish before it was united to Forteviot, and now the burial-place of the family; the approach to the chapel is by a beautiful avenue of lime-trees. The whole of the grounds are kept in the finest order, and are open to the public for one day in the week, affording a favourite excursion to invalids frequenting the neighbouring wells of Pit-

caithly. The village of Forteviot is pleasantly situated on the right bank of the May, a short distance from its influx into the Earn; and has a station of the Scottish Central railway. Ecclesiastically the parish is within the bounds of the presbytery of Perth, synod of Perth and Stirling: the minister's stipend is £244, with a manse, and a glebe valued at £6. 15. per annum. Forteviot church, before the Reformation, was attached to the abbey of Cambuskenneth, and subsequently to the college of St. Andrew's, in which, and in the family of Belshes of Iavermay, the patronage of the living is jointly vested. The present edifice was built about seventy or eighty years since, and is a plain structure in good repair. There is (or was) a place of worship for dissenters in the Ochil district of the parish. The parochial school of Forteviot is attended by about fifty children; the master has a salary of £34, with a house, and an allowance of £2. 2. 9. in lieu of garden, the fees averaging £16 per annum.

FORTH, a village, in the parish of CARNWATH, Upper ward of the county of LANARK, $8\frac{1}{2}$ miles (N. E. by E.) from Lanark; containing 357 inhabitants. This is a modern village, seated on the road from Lanark to Whitburn. It may be almost regarded as an appendage to Wilsontown, being chiefly inhabited by persons employed in the coal and iron mines connected with the extensive iron-works of that place, founded by the Messrs. Wilson of London, about the year 1780.

FORTINGAL, a parish, in the county of PERTH, $8\frac{1}{2}$ miles (W. N. W.) from Aberfeldy; containing, with part of the quoad sacra districts of Foss, Glenlyon, and Rannoch, 2740 inhabitants. This place, the name of which is of very doubtful origin, is historically distinguished chiefly for the conflicts of hostile clans, and for a battle that occurred at Glen-Sassan, between the forces of Robert Bruce and those of Edward of England. The parish is forty miles in length, from east to west, and varies from thirty to thirty-five miles in breadth. It is bounded on the north by the parish of Laggan, in the county of Inverness, and on the north-east by that of Blair-Atholl, Perthshire; on the east, by the parish of Dull; on the south, by the parishes of Kenmore and Killin; on the west, by the parish of Appin, in Argyllshire; and on the south-west, by the parish of Glenorchy, in the same shire. It occupies the north-western district of the county, including a considerable part of what formed the great Caledonian forest, and comprising an area nearly 130 miles in circumference. The surface is strikingly diversified with mountains and valleys, deep sequestered glens, and lakes of various extent, the whole forming one of the boldest and richest combinations of scenery in the country. Exclusively of the lofty mountains that inclose the parish on the north and south sides, one vast and continuous range intersects the whole area, in a direction from east to west, dividing it into two nearly equal portions, of which the northern comprehends the district of Rannoch, and the southern those of Fortingal and Glenlyon. Numerous mountains also of considerable magnitude rise to a great height in detached situations, and from the summits of them most magnificent views are obtained of the amphitheatre spread beneath, abounding with every variety of picturesque and romantic beauty. The chief mountains within or connected with the parish have elevations varying from 3000 to 3800 feet above the level of the sea; the

range that intersects it is not less than seven miles in breadth at the base, and many points of the chain are more than 3000 feet above the sea.

Of the valleys the principal is *Glenlyon*, extending in a western direction for more than thirty miles, and inclosed by mountains on each side, which in some parts obtrude so greatly as scarcely to allow sufficient breadth for the channel of the river that flows between their bases. There were formerly several lakes in this glen, but Loch Lyon, nearly at the head, is the only one now remaining: in this lake the river Lyon has its source. The valley affords excellent pasturage for sheep, and about 20,000 sheep are generally fed; the sides of the mountains, also, are covered with verdure to their very summits. Numerous dells branch off from the glen, some of which are nearly four miles in length, and watered by various streams, forming tributaries to the Lyon river. One of these streams, called Allt-da-ghob from the dell of that name, when viewed from the hill on the opposite side, has a truly grand appearance: on being swollen by rains, it rushes down the side of an abrupt precipice, several hundred feet in height, with tumultuous impetuosity, then is totally lost in a chasm invisible to the spectator from its great depth, and, after successive re-appearances as if issuing from the brow of the mountain, runs violently down a second precipice, of 200 feet, in one continued sheet, to the level of the glen, from which it flows with a tranquil course into the Lyon. The valley of *Glenmore*, situated between Rannoch and Fortingal, anciently formed part of the forest of Sith-Chaillinn, of which the only vestiges now remaining are the roots of trees once existing, which are dug up in great quantities for fuel, and also for affording light, for which purpose the roots of the fir-trees are well adapted. Many trunks of old oaks are also found in this glen, of a black hue, and which, though soft when first found, harden on exposure to the atmosphere; they are split, and sold in the markets for sharpening scythes, for which they answer well. The valley of *Fortingal*, whence the parish takes its name, is a fine level tract about half a mile in breadth, and some miles in length, communicating by defiles with the roads to Loch Tay and Glenlyon, and with the turnpike-road to Crieff and Inverness: with the exception of these passes, it is completely surrounded with mountains. It is ornamented with residences and demesnes tastefully arranged, and enriched with woods and plantations; and from its great diversity of features the valley of Fortingal is one of the most picturesque and interesting in this part of the country. The mountains by which it is inclosed are clothed with verdure to their summits, and contrast finely with the level tracts of luxuriant pasturage, and the expanse of fertile lands in the highest state of cultivation.

Of the rivers, the *Gamhair* rises in the southern part of Glen Etive, and after a course of several miles, in which it forms some smaller lakes, expands into Loch Laoidean, on issuing from which it obtains its name: pursuing its way for about five miles, it enters an extensive tract of meadow land, which in rainy seasons it completely inundates; and after a flow of three or four miles it falls into Loch Rannoch. The *Erochd* issues from the lake of that name, and after a peaceful progress of about two miles, becomes, from the accession of mountain-streams, a rapid and impetuous torrent, till it forces its

way into Loch Rannoch. The *Tummel* has its source in Loch Rannoch, and, while flowing through that district, is called the Water of Rannoch; it is smooth and tranquil for some miles, but becomes an impetuous and rapid current on leaving the glen, and afterwards obtains its general appellation. The river *Lyon* has its source in the loch of that name, and after watering Glenlyon, and receiving in its course of nearly forty miles almost innumerable streams from the mountains, falls into the Tay below Taymouth Castle. There are many smaller rivers in various parts of the parish; and owing to the mountainous character of the lands through which they pass, and the consequent accumulation of their waters from mountain torrents, they are diversified in their appearance, and, from the powerful obstructions to their course, exhibit waterfalls in numerous places. The falls of the *Tummel*, on the confines of the parish; of the *Lyon*, in the glen of that name; of the *Gamhair* and *Duibhe*, at the head of Rannoch; of the *Conait*, and of the *Keltney*, are beautifully picturesque.

Of the lakes in this extensive parish, *Loch Erochd*, to the north-east of the vale of Rannoch, is sixteen miles in length, and about one mile in average breadth. It is inclosed on both sides by lofty and precipitous ranges of rugged mountains, occasionally softened and enlivened by fertile spots in rich cultivation, and by the sporting-boxes of the gentry who resort to this place for shooting the various kinds of game with which the mountains abound. *Loch Laoidean* is about eight miles west of the head of Loch Rannoch. It is six miles in length, and little more than half a mile in breadth, and is studded with several picturesque islands, richly wooded. Its shores are indented with numerous small creeks, and diversified with boldly-projecting promontories; and near the western extremity of the lake is an island of yew-trees, among which the red deer frequently shelter, and the eagle rears its young. *Loch Lyon*, which is romantically situated in the glen of the same name, is about three miles in length, and half a mile broad; its shores abound with agreeable scenery, and though less bold, it is more pleasing in its features, being beautified with luxuriant verdure. *Loch Garry*, on the border of the parish, nearly seven miles north-east from Loch Rannoch, is about four miles in length, and half a mile in breadth; its scenery is bold and varied, but differs little from that of some of the other lakes. In the rocks of the parish, and the sides of the various mountains, are many caves of natural formation, which, in the earlier periods of history, afforded shelter to the chiefs of hostile clans in their frequent conflicts, and in some of which Sir William Wallace and King Robert Bruce, during the war with England, concealed themselves while watching for opportunities of attacking their enemies, or waiting after a defeat to recruit their forces, and concert new enterprises for the deliverance of their country. They also provided a secure asylum for numerous depredators.

The soil varies according to the elevation of the lands. In the lower valleys it is generally dry and gravelly. On the acclivities of the mountains it is thinner, but affords excellent pasturage for cattle and sheep: nearer the summits it is a bleak sterile moor, producing but little grass, and abounding with heath; and the summits of the mountains are covered with moss. The number of acres in the parish is 448,000; but comparatively little is under regular cultivation, the arable lands

bearing only a small proportion to the pastures, and the principal object of the inhabitants being the feeding of cattle and sheep. The sheep are chiefly of the black-faced kind, which are more hardy, and thrive well on the mountain pastures. Particular attention is paid to the improvement of the breed, and also to that of the cattle, which are all the West Highland, and sell for high prices at the sales that occasionally take place. Considerable improvements have been effected in the system of agriculture: the farm-buildings and offices are substantial and commodious; the lands are well inclosed, and the fences kept in good repair. The annual value of real property in the parish is £13,300. The woods are chiefly the remains of the ancient Caledonian forest, which at one time was more than eighty miles in length; they consist mainly of birch and native fir. The plantations, scattered over various parts of the parish, are not, for so large a district, of any very great extent; they comprise native fir, larch, and spruce, with some oak, ash, beech, elm, and birch. With respect to the strata, it may be observed that the remarkable bed of limestone which traverses the range of the Grampians in a south-western direction from Aberdeenshire to Dumbartonshire, passes through this parish towards the east end: the limestone is of superior quality, and is wrought for agricultural purposes and for building. A bed of fine blue stone has been found, and a quarry opened on the lands of Mr. Menzies of Chesthill. Marble of various colours also occurs in several parts; and rock crystals, spars, and agates of great variety and beauty are obtained in the mountains. A vein of lead-ore of considerable richness was discovered in Glenlyon, and formerly wrought with success: near the village of Fortingal, also, lead-ore appears. Slate is supposed to exist in some places, but it has not been yet explored. In the district of Bolfracks, a detached portion of the parish, is an extensive quarry, the stone of which is of superior quality for building; it is very compact and durable, and susceptible of a high polish.

In the vale of Fortingal are several handsome residences, beautifully encompassed by richly-wooded and pleasant demesnes; and in Rannoch are likewise some good seats, one of which is situated in a demesne comprising about 90,000 acres. Communication with the neighbouring towns is afforded by roads kept in repair by statute labour; the market-towns of Crieff and Perth are distant about thirty and forty miles, respectively. A penny-post has been established at Kinloch-Rannoch, which communicates with the office at Pitlochry; and another at Fortingal, which communicates with Aberfeldy. At the west end of Loch Rannoch is a handsome bridge over the river Gamhair, erected by Sir Neil Menzies. Annual fairs are held at Kirkton in the beginning of December, continuing for three days, for the sale of cattle, sheep, and goats, and the transaction of general business; in the end of April, for lint and clover seeds; and in August, for lambs, the first or December fair being the principal market in this part of the country. Fairs are also held at Kinloch-Rannoch, in April, for cattle; in August, for lambs; and in October, for cattle; and at Innerwick or Inverwick, in the district of Glenlyon, annually in November, for sheep. For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Weem, synod of Perth and Stirling. The stipend of the incumbent is about £250; the manse is a

handsome and commodious residence, and the glebe is valued at £10 per annum. Fortingal church, a very ancient and substantial structure, was repaired in 1821, and is adapted for a congregation of 376 persons. There are two government churches, situated respectively in Glenlyon and Rannoch. The parochial school affords a good course of instruction; the master has a salary of £34, with a house, and an allowance in money in lieu of garden, and the fees average about £21 per annum. There are also two schools under the patronage of the General Assembly, and two under that of the Society for Propagating Christian Knowledge: the masters of each of the former have a salary of £20, with a house, and a portion of land; and those of the latter have a salary varying from £15 to £20, with an allowance in money for fuel. Seven other schools, in distant parts of the parish, are supported by general subscription of the inhabitants. The parochial school-house is a very handsome and commodious building, lately erected by the heritors.

To the west of Fortingal are the remains of a Roman camp, in which the site of the general's tent is still (or until lately was) marked out by the fosse with which it was surrounded; the prætorium is in good preservation, and north-west of it is a tumulus sixty feet in length, and about twenty feet wide at the base, raised over the remains of men who fell in battle. A little to the west of the general's tent are two obelisks, one, about six feet in height, yet standing, and the other, eight feet, long since fallen to the ground. This encampment occupies an area of nearly ninety acres. Some remains of Druidical circles are to be seen near the parish church, and in various parts of the parish are others. There are also numerous forts of circular form, the walls of which, built of loose stones, are of great thickness; the diameter within the walls averages about sixty feet, and the area is divided into various halls and smaller apartments. These forts are generally referred to the time of Fingal, and are traditionally said to have been castles belonging to the heroes of that chieftain. There are two ancient castles, of later date, the baronial residences of chiefs in feudal times. One of these is situated on the summit of a rock in the east portion of the parish, and was the seat of the brother of the Earl of Buchan, ancestor of the Stewarts of Atholl. The other, situated in Glenlyon, stands on a lofty and precipitous bank, and was defended by a drawbridge: till the middle of the sixteenth century, it was the residence of Duncan Campbell, of Glenlyon, who was equally renowned for his valour and his hospitality. On the lands of Inverchadain are the remains of a mound of turf and stones, called "Sheomarna-Staing", where Wallace, on his route from Argyll, remained for several days, attended by a few faithful adherents, and where he was joined by the men of Rannoch, who marched with his forces to the battles of Dunkeld and Perth. In the churchyard of Fortingal is a very ancient yew-tree of remarkable growth, whose trunk is divided into two stems, between which is now an interval of some yards: it appears like two distinct trees. Major-General David Stewart of Garth, author of *Sketches of the Highlands and of the Highland Regiments*, was a native and a landed proprietor of the parish of Fortingal: he died in St. Lucia, in the West Indies, in 1829, holding the office of governor of that island.— See RANNOCH, &c.

Burgh Seal.

FORTROSE, or **CHANONRY**, a royal burgh, and a quoad sacra district, in the parish of **ROSEMARKIE**, county of **ROSS** and **CROMARTY**, $10\frac{1}{2}$ miles (N. N. E.) from **Inverness**, and 8 (S. S. W.) from **Cromarty**; containing, with the burgh of **Rosemarkie**, 1082 inhabitants, of whom nearly one-half are in that burgh. This place, anciently the **Chanonry** of **Ross**, and the seat of that diocese, was united by charter of **James II.**, in 1455, with the town of **Rosemarkie**, which had been erected into a royal burgh by **Alexander II.**, and which is distant from it about half a mile to the east. The united burghs, under the common name of **Fortrose**, received a confirmation of all ancient privileges from **James VI.**, in 1592; and by charter of the same monarch, in 1612, these privileges were extended, and the burgesses invested with all the liberties and immunities enjoyed by the burgesses of **Inverness**. There was anciently a castle at **Fortrose**, belonging to the **Earls of Seaforth**, who were also **Viscounts of Fortrose**; but no remains of it exist. Of the cathedral, a splendid structure which, though probably not 120 feet long, formed an architectural gem of the first description, only a roofless aisle is now left. One portion of this aisle, containing the tombs of several of the bishops, is preserved as a burial-place for the **Mackenzies** and other landed proprietors. Eastward of the site of the cathedral, which occupied a spacious square containing the houses of the canons, is a detached building with an arched roof, converted into the town-hall, and having, below, a vaulted apartment. The episcopal palace, and a great part of the cathedral, were destroyed by **Oliver Cromwell**, who sent the materials by sea to **Inverness**, for the erection of his fortress at that place.

The town, which is situated on the north-western bank of the **Moray Firth**, was formerly of considerable importance as a seat of learning. The principal trade now carried on consists of the shipping of cattle, salmon, &c., on board of the **Aberdeen** and other steamers at **Chanonry Point** for the **London** market; the making of shoes; the manufacture of coarse linen, and the employment arising out of annual fish-curing excursions. **Fortrose** has of late cleared itself of debt by a sale of some of its lands, and appears likely to become fashionable as a bathing station, for which its delightful and healthy situation renders it well adapted. It has already been much benefited by an influx of genteel inhabitants; and **Roderick Mackenzie, Esq.**, the principal proprietor in the neighbourhood, has lately made considerable improvements, tending to enhance the beauty of the town. A neat and ornamental water-cistern has been erected at the cross of **Fortrose**, from the funds of the burgh. At **Chanonry Point**, a headland projecting deeply into the **Firth**, is a lighthouse, near the ferry to **Fort-George** on the opposite shore; and a small commodious harbour, erected by the parliamentary commissioners, is frequented by the **Leith**, **Aberdeen**, and **Dundee** traders. **Rosemarkie**, though in point of antiquity it has the precedence, is a town inferior to **Fortrose** in importance; it is chiefly inhabited by persons occupied in salmon-

fishery and agriculture. The post-office has a daily delivery; and fairs are held in **April**, **June**, and **November**. Facility of communication is afforded by good roads to **Inverness** and **Dingwall**, and by the ferry to **Fort-George**: steam-vessels plying in the **Firth**, and fitted up for the conveyance of passengers and goods, land various kinds of merchandise, and convey produce to **Aberdeen**, **Leith**, and **London**.

The government of the burgh is vested in a provost, three bailies, a dean of guild, a treasurer, and nine councillors, chosen under the regulations of the late **Municipal Reform act**. There are no incorporated trades: the fees of admission as burgesses are, for strangers, £3. 3. for ordinary trades and £5. 5. for those of a higher class; and for sons of burgesses half those sums. The magistrates exercise jurisdiction in civil and criminal cases to the usual extent, and a circuit sheriff's court is held here at stated periods. **Fortrose** is associated with **Forres**, **Inverness**, and **Nairn**, in returning a member to the imperial parliament; the number of qualified voters is fifty-two. The quoad sacra parish of **Fortrose** includes the town of **Fortrose**, and a portion of the adjacent lands. Its church, a handsome and substantial structure, lately erected in the town by subscription, affords ample accommodation; and the minister, who is appointed by the male communicants, derives his stipend from the produce of a fund bequeathed for that purpose by **Mr. Thomas Forbes**, and from the seat-rents. There are places of worship for members of the **Free Church** and **Baptists**, and an episcopal chapel in the later English style of architecture. An academy, under the superintendence of a rector and an assistant, is supported by subscription, and is well attended.—See **ROSEMARKIE**.

FORVIE, county of **ABERDEEN**.—See **SLAINS**.

FOSS, a quoad sacra parish, partly in the parish of **FORTINGAL**, but chiefly in that of **DULL**, county of **PERTH**, 8 miles (N.) from **Dull**; containing 450 inhabitants, of whom 11 are in **Fortingal**. This district was separated for ecclesiastical purposes, and annexed to a church previously erected here by parliamentary grant. The church is situated on the south bank of the river **Tummel**, near the western extremity of the lake of that name. The stipend of the minister is £120, with a manse, and a glebe of the annual value of £2. 10.: patron, the **Crown**.

FOSSOWAY, a parish, in the counties of **PERTH** and **KINROSS**, 6 miles (W.) from **Kinross**, and 8 (N. E. by E.) from **Alloa**; containing, with the villages of **Blairingone**, **Crook of Devon**, and **Easter and Wester Gartwhinean**, 1724 inhabitants. This parish includes the ancient parish of **Tulliebole**, united with it in 1614, and which, forming part of the county of **Kinross**, divides **Fossoway** into two separate portions. Of these, the one lying northward of the lands of **Tulliebole**, comprises the barony of **Fossoway**, with a considerable part of the **Ochil hills**; and that lying southward, the barony of **Aldie** on the east, and the lands of **Blairingone** on the west, with the valley between the **Ochils** on the north and the **Cleish** and **Saline hills** on the south. The whole of the united parish is eleven miles in extreme length, and about ten miles in extreme breadth, comprising an area of 18,682 acres, of which nearly 11,000 are arable and pasture, 1125 woodland and plantations, and the remainder waste. Its surface is diversified with hills of

various elevation, the principal of which are from 1000 to 1500 feet in height above the level of the sea. One of these, called Easter Downhill, is of conical form, skirted round its base with natural wood, and covered with verdure to the summit; and the hill of Inmerdownie, which is the highest in the parish, commands an extensive prospect, embracing at one view the rivers Forth and Tay. Most of the hills afford excellent pasturage for sheep and cattle, and the intervening valleys are richly cultivated. The lower grounds are also intersected with ridges, rising more or less precipitously to considerable degrees of eminence. The river Devon, which bounds the parish for nearly nine miles, has its source in the Ochils, and after a long and winding course falls into the river Forth at Cambus. The lands are also watered by the rivulets of North and South Quiech and the East Gairney, which flow into Loch Leven, and the West Gairney, which joins the Devon near the Linn Caldron. In the Devon and in the other streams trout of good quality are taken. The scenery is boldly varied, and in some parts strikingly romantic. The river Devon forms several cascades, one of the principal of which is the Rumbling Bridge, so called from a bridge twenty-two feet in span, below which the river, impeded in its progress by projecting rocks, falls successively from various heights with tumultuous noise. Lower down is the Linn Caldron, where, within a distance of twenty-eight yards, the stream has two falls, one of thirty-four and the other of forty-four feet, of nearly perpendicular descent; and in the interval the rocks are worn into three spacious cavities, in two of which the water, from its violent agitation, has the appearance of boiling. Near the old Rumbling bridge, which is still entire, a new bridge has been lately erected.

In some parts of the parish the soil is mossy, in others a gravel, and in some places clay alternated with loam. The system of agriculture is in an advanced state; much waste land has been brought into profitable cultivation, and the inclosures, partly of stone dykes and partly fences of thorn, are well kept. On the lands of Fosso-way, a fence of wire-work attached to posts of wood has been introduced. The farm-houses and offices, with very few exceptions, are substantial and commodious; and most of the later improvements in husbandry have been adopted. The annual value of real property in the Fosso-way or Perthshire portion of the parish amounts to £3900, and of real property in the Tulliebole or Kinrossshire portion to £4618. The plantations are extensive, and properly managed; they consist principally of spruce and Scotch fir, ash, elm, plane, and beech, all of which grow well in the soil. Larch, which formerly produced considerable profit, has within the last few years appeared to degenerate: oak, which has only lately been planted, seems to thrive. There are quarries of whinstone and freestone in several parts, and in the western districts are found limestone, coal, and ironstone: at Blairingone are three collieries in operation, two of which were but lately opened. The ironstone for many years was extensively wrought, but the working of it has been almost discontinued. In a rock near the Rumbling Bridge is found copper-ore; but the quantity bears so small a proportion to the material in which it is contained, that it cannot be wrought to advantage. Tulliebole Castle, the seat of Sir James W. Monierieff, Bart., one of the judges of the Court of Session, is an

ancient mansion, having been erected in 1608. Devonshaw House and Arndean are both handsome modern mansions, pleasantly situated on the banks of the Devon. The castle of Aldie, once the baronial seat of the Mercers, and now the property of their representative, the Baroness Keith, though uninhabited remains entire. The principal villages are Blairingone and Crook of Devon, both of them burghs of barony: the latter is situated on the river Devon, which here makes a sudden turn in its course, whence the village takes its name; and there is a good inn for the accommodation of the numerous visitors who frequent the place in order to view the interesting scenery in its vicinity. The parish also contains several hamlets, of which the most considerable are Gartwhinean and Carnbo. Fairs are held in May and in October, when cattle and wares are exposed for sale. The turnpike-road from Dunfermline to Crieff passes through the parish from north to south, and that from Kinross to Alloa intersects it from east to west: parallel with the latter, and about two miles to the north of it, is the turnpike-road from Stirling to the east of Fife; and the Dunning road also crosses a portion of the parish. There are six bridges over the Devon, which tend to facilitate the communication with the neighbouring towns.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Auchterarder, synod of Perth and Stirling. The minister's stipend is £164, with a manse, and a glebe valued at £8. 13. 4.; patron, Sir Graham Montgomerie, of Kinross. The church, built in 1806, is a plain edifice in good repair, containing 525 sittings. A church, with which a quoad sacra parish was for a short time connected, was erected on a site a little eastward of the village of Blairingone, given for that purpose by Mark Watt, Esq., who also subscribed liberally towards its erection; it was opened for divine service in 1838, and is a neat structure containing 250 sittings. The parochial school is attended by about seventy children; the master has a salary of £34, with a house and garden, some land worth £12 per annum, and fees averaging £27. Another school is partly supported by private subscription. There is a petrifying spring on the lands of Devonshaw; and on the estate of Blairingone, a mineral spring was discovered about twenty years since, the water of which, according to an analysis made by Dr. Thomson, professor of chemistry in the university of Glasgow, contains in an imperial gallon 5.87 grs. common salt, 170.99 grs. sulphate of soda, 953.18 grs. sulphate of alumine, 1753.10 grs. dipersulphate of iron, 141.55 grs. persulphate of iron, and 58.70 grs. of silica. The water is too strong for internal use, without dilution; but, externally applied, is powerful in healing wounds.—See BLAIRINGONE, &c.

FOULA, an island, in the parish of WALLS and SANDNESS, county of SHETLAND; containing 215 inhabitants. This island lies almost twenty miles distant from any land, and is the most western of the Shetlands. It is about three miles in length, and one and a half in breadth, with bold and steep shores, and formed chiefly of three hills of a nearly conical shape. There is very little level ground; and the isle has only one landing-place, Ham, which is on the east side, and even this cannot be approached in bad weather: the island is resorted to as a fishing-station, and it affords excellent pasturage for sheep. Dense columns of birds of various kinds

hover round it, literally darkening the air at particular seasons; the surface of the hills swarms with plover, crows, and curlews, and the cormorants occupy the lower portions of the cliffs. The rock scenery in this island is supposed to be the grandest in the country. The minister of Walls makes an annual visit to the isle, remaining usually two Sundays; at other times the school-master officiates in the church as a kind of pastor.

FOULDEN, a parish, in the county of BERWICK, 5 miles (N. W. by W.) from Berwick; containing 393 inhabitants, of whom 73 are in the village, and the remainder in the rural districts of the parish. The derivation of the name of this place is uncertain. Foulden is distinguished for a conference held in the church in 1587, between commissioners appointed by James VI. of Scotland, and others sent by Elizabeth of England, to discuss and investigate those circumstances in the conduct of the unfortunate Mary by which Elizabeth endeavoured to vindicate the incarceration and subsequent decapitation of her royal sister. The parish is about two miles and a quarter in length, and very nearly of equal breadth, comprising 3000 acres, of which 2400 are arable, 300 woodland and plantations, and the remainder rough pasture and waste. Its surface is diversified with gentle slopes, and with wood-crowned heights, which shelter it from the colder winds; and the scenery is generally interesting, and in some parts pleasingly picturesque and romantic. The river Whitadder, which is here of considerable depth, skirts the southern side of the parish in its progress to the Tweed, into which it falls near Berwick; its banks are of precipitous height, and on the north side intersected with numerous glens, through which many streams from the higher lands find their way into its channel.

In some parts the soil is a strong clay, in some a sandy loam, and in others a cultivated moor; the crops are wheat, oats, barley, beans, potatoes, and turnips. The system of agriculture is in an advanced state: the lands are well drained and inclosed, the farm-houses and offices substantially built and conveniently arranged; and all the more recent improvements in husbandry are practised. The annual value of real property in the parish is £5002. The woods are partly of great age; the plantations consist of oak, ash, elm, birch, chesnut, and sycamore, with spruce and Scotch firs. Foulden House, the seat of the proprietor of four-fifths of the parish, is a handsome mansion, pleasantly situated in an extensive and richly-wooded demesne, ornamented with much stately timber of ancient growth, and with young and thriving plantations. The village is neatly built, and inhabited by persons employed in agricultural pursuits and in the various handicraft trades requisite for the parish. A fair, chiefly for pleasure, is held annually in the village. The want of easier means of communication with the market-town and other places, which was previously severely felt, was lately supplied by the erection of a good bridge over the Whitadder, for which purpose a grant from the county of £500, and a subscription of £1500 from the gentry of the district, were obtained.

Ecclesiastically the parish is in the presbytery of Chirnside, synod of Merse and Teviotdale, and in the patronage of John Wilkie, Esq.: the minister's stipend is £152. 18., with a manse, and a glebe valued at £24 per annum. The church, situated within the grounds

of Foulden House, was erected in 1786, after the ancient church had become ruinous; it is a neat edifice, well adapted for the parish, and the interior is capable of being seated for the whole population. Foulden parochial school affords a good course of instruction; the master has a salary of £34, with £10 fees, and a house and garden. From the name of an estate in the parish, called Nunlands, it is supposed that a religious establishment once existed here, though no account of it has transpired; and there were formerly remains of an ancient fort called Foulden Castle, probably a place of retreat during the border wars. In the churchyard is an epitaph to the memory of some hero who appears to have distinguished himself in those predatory incursions so frequent in feudal times; it is inscribed to George Ramsay, and dated 4th January, 1592.

FOUNTAINHALL, a hamlet, in the parish of Stow, county of EDINBURGH, 4 miles (N. W. by N.) from Stow; containing 60 inhabitants. It is situated in the centre of the parish, on the western side of the Gala water, and on the road from Borthwick to Stow. Here is a station on the line of the Edinburgh and Hawick railway. There is a good library in the hamlet.

FOVERAN, a parish, in the district of ELLON, county of ABERDEEN, 12 miles (N. by W.) from Aberdeen; containing, with the village of Newburgh and the barony of Knockhall, 1620 inhabitants. This place was formerly remarkable for its castle, called Foveran, as is supposed from a sweet and powerful spring, which still flows with its ancient strength; but every vestige of the fortress is gone. The parish is situated in that part of the county called Formartine. It stretches along the coast of the German Ocean, and is separated from the parish of Logie-Buchan on the north by the burn of Tarty, and from the sands of Forvie on the east by the river Ythan. It is about seven miles in length from east to west, and three in breadth from north to south, and is watered by the beautiful burn of Foveran, which, after forming in its pleasing course the chief ornament in the scenery, falls into the Ythan at Newburgh. Agriculture is steadily pursued, and considerable traffic is carried on at the fishing-village and maritime port of Newburgh, *which see*. The land is generally fertile, and distributed into many good farms, producing fine crops; the farm-houses are mostly built of stone and lime, and are commodious and well finished. Within the last twenty or thirty years large tracts of barren soil have been improved, and drains and fences constructed on an extensive scale. The mail-road from Aberdeen to Peterhead intersects the parish, and has several branches, one of which, called the Fiddes road, joins the Uduy turnpike-road, opening up important facilities of intercourse with that part of the county: there is also a turnpike-road from Aberdeen to Methlick, which passes at the western extremity of the parish; and another has been recently completed, which is found highly beneficial, from Old Meldrum to the village of Newburgh. About twenty head of fat-cattle are shipped every week at the port, for the London market; and lime, coal, timber, bones, &c., are imported. The annual value of real property in the parish is £5713.

Foveran is ecclesiastically in the presbytery of Ellon, synod of Aberdeen, and in the patronage of the Crown: the minister's stipend is £193, with a manse, and a glebe valued at £11 per annum. The church is a plain

substantial edifice, built in 1794, and accommodating 700 persons; it contains two handsome marble monuments to the family of Robertson of Foveran, and another, of very superior character, designed by Bacon, to the Udney family. Excellent walls have been built round the churchyard, with funds left for that purpose by Miss Robertson of Foveran. The parochial school affords instruction in the usual branches; the master has a salary of £28, with about £31 fees. There is also a school at Cultercullen, in the western quarter, with an endowment of £8 per annum, and a free house, and piece of land. Mr. Mather, a native of the parish, left a sum for the establishment of four bursaries at Marischal College, under the patronage of the minister, for boys educated in the parochial school; also funds for clothing and educating twenty poor fishermen's children belonging to Newburgh, and £20 per annum to the minister or schoolmaster for lecturing once a week to the people in the village. About half a mile north of Newburgh are the ruins of the castle of Knockhall, built in the year 1565, and accidentally burnt in 1734: it was the seat of the family of Udney, whose ancient burial-ground, also in the neighbourhood of the village, contains the remains of an old chapel generally called *Road Church*.

FOWLIS, in the county of PERTH.—See LUNDIE and FOWLIS.

FOWLIS WESTER, a parish, in the county of PERTH; including the villages of Buchanty and Gilmerton, and containing 1609 inhabitants, of whom 187 are in the village of Fowlis Wester, 5 miles (E. N. E.) from Crieff. The origin of the name of this place, Fowlis or Foulis, is differently accounted for. A local tradition states that one of the Earls of Strathearn, wishing for a church in the vicinity of his castle here, stood on an eminence where he had a summer seat, and resolved to erect one where the sun first shone, which was on the spot the church now occupies, denominated by him *Fowgnolish*, "under the light". Others derive the name from the ancient family of Fowlis, who are said to have held property here; but they do not appear to have really had any possession in Fowlis Wester, which belonged to the ancient Earls of Strathearn at the time when the Fowlis family came over from France, and settled in this country. The village was once a place of considerable importance, where the steward of Strathearn held his court; and about a mile east of the church, on a part of the estate of Fowlis, was formerly a castle, the seat of the ancient Earls of Strathearn, the site of which now forms a grassy mount. Here resided Mallus, or Malise, the first earl, in the reign of Alexander I.; and his grandson, Gilbert, in the year 1200 founded the monastery of Inchaffray, beyond the southern border of the parish. The seventh earl, also named Malise, opposing Baliol, forfeited the title; and his countess, Joanna, daughter of Sinclair, Earl of Orkney, in 1320 was engaged in a plot against Robert I., for which, according to some accounts, she was condemned to perpetual imprisonment. Mary, sister of the last-mentioned earl, was married to Sir John Moray of Drumsargard, to whom the earl conveyed the lands of Abercainrey in the parish; and Sir Maurice Moray, their son, was restored to the earldom; but accompanying King David to the battle of Durham, in 1346, he lost his life in that action.

The PARISH is six miles in extreme length and four in breadth, and contains 15,600 acres. It is situated on the north side of Strathearn, and is bounded on the north by Glen-Almond, in Monzie parish; on the south lies the parish of Madderty, on the east that of Methven, and on the west that of Monzie. The surface is marked by two mountain ranges, of which the northern is the higher, and forms a part of the Grampian mountains; the southern is three miles in breadth, and consists of large tracts of moss and heath, ornamented with some plantations, and interspersed with a few cottages and cultivated farms. In the south, where the surface is extremely irregular, are a number of braes, which diversify the valley lying in that direction, as well as the southern slopes of the last-named range of hills. The beautiful and meandering stream of the Almond bounds the parish for two miles; and the lands contiguous to it exhibit an assemblage of woods, hills, rocks, and cascades, with cottages, so strikingly grouped as to constitute some of the finest scenery in the county. The river Pow, rising in the mosses below Methven, runs on the south, and joins the Earn near Innerpefferay. In the west is the loch of Luag, situated in a narrow glen, from which may be seen the stupendous amphitheatre of hills around Comrie, with the far-famed Benvoirlich towering to the clouds.

The SOIL has many varieties of gravel, sand, loam, and clay, resting chiefly on rock. Though tolerably fertile, it is in many places thin and dry, and where the subsoil is clay the earth is wet and cold: on the banks of the Pow the soil is alluvial, from the inundations of the river. There are 9400 acres in tillage, 6200 in pasture, and 1000 occupied by wood: all kinds of grain are raised, of average quality; the green crops consist of potatoes, turnips, and cabbages, and are produced to a large extent, with considerable quantities of hay. The cattle are the Fife, the Ayrshire, and the Teeswater; and very superior horses of the Clydesdale breed, the Garron, and the Cleveland bay, are reared in the parish. A highly-improved system of husbandry is followed, and great advances have been made in every branch of agriculture; but though most of the arable land is inclosed with stone dykes and with hedges, much still remains to be done in this respect, and the more effectual embankment of the river Pow is required for protection in the rainy season. The rocks chiefly belong to the transition formation. The hills consist of mica-slate, with occasional beds of quartz and hornblende, and a coarse red conglomerate composed principally of hornblende porphyry, which sometimes has the appearance of common greywacke: the slate dips at the angle of 45° towards the north. In the lower part of the parish are several extensive beds of grey sandstone in thick strata, which, instead of being vertical, like the slate, are nearly horizontal. Trap dykes also occur. The annual value of real property in the parish is £12,700.

In this parish is situated the House of Abercainrey, an elegant modern edifice in the form of an ancient cathedral: the House of Cultoquhey is also a substantial and commodious residence, built from a design by Smirke, in the style of the Elizabethan age. The village of Fowlis is very ancient, and still admits of great improvements, though some have lately taken place in the construction and slating of the houses. The lands of Lacock, adjoining Fowlis, form a burgh of barony, with

the privilege of a weekly market and two annual fairs, none of which, however, are now held. St. Methvan-mas fair is held at Fowlis on the 6th of November, for the sale of black-cattle and for hiring servants; it was anciently the parish festival, instituted in honour of the saint to whom the church was dedicated. The weaving of cotton is carried on to some extent in the parish, the raw material being obtained from Glasgow: the manufacture of sieves, also, has employed several families for some generations, to supply the Perth and Fife markets, where the articles meet with a ready sale at good prices. There is a fishery on the Almond for salmon and white-trout, these being taken at a cascade, below which a basket is suspended to receive the fish, which fall into it in attempting to overleap the cascade in their passage up the river. The turnpike-road from Perth to Crieff passes through the parish, and there are several other roads, all of which are kept in good order. Ecclesiastically the parish is within the limits of the presbytery of Auchterarder, synod of Perth and Stirling; patron, William Moray Stirling, Esq., of Abercairney. The stipend of the minister is £225, with a good manse and offices, and a glebe of seven acres, valued at £20 per annum. Fowlis church, a very ancient edifice, accommodates 800 persons with sittings. There is a parochial school, in which the usual branches of education are taught; the master has the maximum salary, with a house and garden, and about £25 in fees. In the village of Fowlis is an old Calvary cross, on one side of which is a representation of a wolf-chase; and the parish contains several Druidical temples, one of them supposed to have been the temple of an Arch-Druid, and consisting of a double concentric circle of forty stones in its outer precinct.

Burgh Seal.

FRASERBURGH, a burgh of regality and a parish, in the district of BUCHAN, county of ABERDEEN, 42 miles (N. by E.) from Aberdeen, and 149 (N. N. E.) from Edinburgh; containing 3615 inhabitants, of whom 326 are resident in the village of Broadsea. This place, anciently called Faithly, was at one time the property of Sir Alexander Fraser, on whose

lands a town was built, for which he obtained a charter from James VI., erecting it into a burgh of regality, named, in compliment to its superior, Fraserburgh, by which appellation, also, the parish has since been designated. Sir Alexander, by marriage with the daughter of George, the seventh Baron Saltoun, succeeded to the title as tenth baron; and his descendant, the present Lord Saltoun, who is also hereditary provost of the burgh, is principal proprietor of the parish. The town, which is situated on the south side of Kinnaird Head, a bold promontory projecting into the German Ocean, near the entrance of the Moray Firth, consists of several spacious and well-formed streets, intersecting each other at right angles. The houses are substantially built, and generally of handsome appearance, and many of the more modern class are spacious; the streets are well paved, and the inhabitants amply supplied with water. In the centre of the town is the Cross, erected by Sir

Alexander Fraser, an elegant hexagonal structure of nine receding stages, diminishing from an area of 500 feet at the base to twenty-three feet on the platform, from which rises a pillar twelve feet high, ornamented with the bearings of the Frasers, surmounted by the British arms.

The TRADE carried on principally arises from the exportation of grain, other agricultural produce, and fish; and the importation of timber, coal, lime, bricks, tiles, salt, and various kinds of goods for the supply of the shops in the town. The quantity of grain exported averages 20,000 quarters, and of potatoes 15,000 bolls, annually; of fish, about 50,000 barrels of herrings, and dried and pickled cod to the value of £6000; whilst the harbour dues, originally not exceeding £70, have since the improvement of the harbour increased to an average of £1900 per annum. It appears that the number of vessels registered as belonging to the port, which is a creek to that of Banff, is twenty-two, varying from forty-five to 260 tons' burthen; and about 280 boats are engaged in the herring-fishery, which, during its continuance, makes an increase of 2000 persons in the population of the parish. The harbour, situated at the north-eastern extremity of the bay of Fraserburgh, is easy of access, and has a depth of six feet at low water, and of twenty feet at spring tides; it is about eight acres in extent, and affords security to vessels at all times. Great benefit has resulted from the construction of additional piers, and the erection of a lighthouse on Kinnaird Head, the whole at an expense of £50,000, part of which was paid by government, and the remainder by Lord Saltoun, and by subscription of the inhabitants. A new pier on an extensive scale is also about to be built, which when completed will afford shelter to the largest merchantmen frequenting our coasts, and will make Fraserburgh the best wind-bound harbour on the east coast of Scotland. The bay, which is about three miles in length, forms an excellent roadstead, where numerous ships of any burthen may lie at anchor, and is consequently much resorted to by vessels of every description, in adverse weather. The spinning of linen-yarn, the manufacture of rope and sails, and some other works connected with the shipping, are carried on, to a moderate extent. This place was erected into a burgh of regality in 1613, and the government is vested in an hereditary provost, by whom two bailies, a dean of guild, treasurer, and thirteen councillors are appointed. The lessees of lands within the burgh are burgesses, and are bound to maintain the public works of the town, for which purpose they possess the market customs and tolls, and, in lieu of certain privileges over commons, have lands producing a rent of £160 per annum. The bailies hold courts within the burgh for actions of debt, and the trial of petty offences; and the sheriff of the county holds courts four times a year, for the recovery of small debts. The town-hall was built by Sir Alexander Fraser, as also was a small gaol, now in a ruinous state, and unfit for the detention of prisoners. Branches of the Bank of Scotland, the Aberdeen Bank, and the North of Scotland Bank, as well as a savings' bank, have been established; the post-office has a good delivery, and facility of communication with Aberdeen, Peterhead, Banff, Strichen, and other places is maintained by good roads. An act was passed in 1846 for the construction of a railway to Fraserburgh.

THE PARISH, which is bounded on the north by the Moray Firth, and on the east by the bay of Fraserburgh, is about eight miles in length, and three and a half in average breadth, but is divided into two nearly equal parts by an intervening portion of the parish of Rathen, more than a mile in breadth. It contains 11,000 acres, of which, with the exception of about eighty acres, the whole is arable. The surface near the eastern coast is low and sandy, and towards the north flat and rocky, with the exception of the lofty promontory of Kinnaird Head: from the shore the land rises gradually to the interior, and to the south are several hills, of which that of Mormond, covered with moss and heath, has an elevation of 810 feet above the level of the sea. The river Philorth, which has its source in the higher districts, and in its way receives some tributary streams, forms a boundary between this parish and Rathen, and falls into the bay of Fraserburgh. In some parts the soil is sandy and light, and in others clay, and loam alternated with gravel, and interspersed with moorland and moss: the crops are, grain of all kinds, with beans, peas, potatoes, and turnips. The system of husbandry has greatly improved: the farms vary from fifty to 300 acres in extent; the lands are partly inclosed and under good cultivation, and shell-sand, sea-weed, and bone-dust are the chief manures. The cattle are of the native breed, intermixed with various others, and of late years some of the Tees-water have been introduced: large numbers are shipped from the port to the London market, where they obtain a high price. The annual value of real property in the parish is £10,145.

There are some remains of aged natural wood in the grounds of Philorth House; and from numerous trunks of trees buried in the moss, it would appear that the district was anciently well-wooded: plantations have been lately formed around the house of Philorth, and on several lands previously unproductive. The principal substrata are, limestone, which is quarried for building purposes and for farming, and granite, which is found in great quantity in the upper districts of the parish; ironstone, also, occurs among the rocks, and apparently of good quality, but from the scarcity of fuel it is not wrought. Philorth House, the seat of Lord Saltoun, the only mansion of any importance, is pleasantly situated at a short distance from the bay, and on the west bank of the river Philorth, in grounds tastefully laid out. Ecclesiastically the parish is within the bounds of the presbytery of Deer and synod of Aberdeen. The minister's stipend is £219, with a manse, and a glebe valued at £10 per annum; patron, Lord Saltoun. Fraserburgh church, in the centre of the town, is a substantial structure built in 1802, and containing 1000 seats; a tower and spire were afterwards added, at an expense of £300, raised by subscription. There are two places of worship for Independents, and one each for the Free Church and Episcopalians. The parochial school is attended by 100 children, of whom thirty are girls: the master has a salary of £29. 18. 10., with a house and garden, and the fees average about £50 per annum; he receives also a share of Dick's bequest. There are, besides, two public seminaries for the education of boys, and one for the education of girls. Some vestiges exist of ancient religious houses, one of which, called the College, is said to have been connected with the abbey of Deer; and at the west end of the town are the re-

mains of a spacious quadrangular building erected in 1592, by Sir Alexander Fraser, who obtained a charter for the foundation of a college, but which was not carried into effect. On Kinnaird Head are the ruins of a tower called the Wine Tower, under which is a cavern, penetrating more than 100 feet into the rock. There are also some ruins of Danish camps and Piets' houses in the parish.

FRESWICK, a township, in the parish of CANISBAY, county of CAITHNESS; containing 414 inhabitants. This place is situated in the eastern part of the parish, where the coast is washed by the North Sea, and indented by Freswick bay; the beach here is composed of sand and a mixture of sandstone and shells, and at a short distance southward is the promontory of Freswick point. The lands are the property of the Sinclair family, who are proprietors of the greater portion of the parish, and to whom belongs Freswick House, an ancient mansion, not inhabited for many years, and now in an almost ruinous state. Freswick burn pursues an eastern course of a few miles, and discharges itself into the bay. Here are the ruins of an edifice called Bucholie Castle, which appears to be of great antiquity; and there was formerly a chapel dedicated to St. Maddan, of which scarcely a vestige now remains.

FREUCHIE, a village, in the parish of FALKLAND, district of CUPAR, county of FIFE, $1\frac{1}{2}$ mile (E. S. E.) from Falkland; containing 713 inhabitants. It lies near the eastern boundary of the parish, on the road from Falkland to Pitlessie, and has the small hamlet of Little Freuchie on the west. The village is of some antiquity, and is said to have been in former times a place of exile for courtiers who had incurred the royal displeasure: in 1716 it suffered much from the depredations of Rob Roy's garrison at Falkland. It is chiefly inhabited by persons employed in hand-loom weaving. There is a place of worship for members of the United Presbyterian Church; and a small school is supported by subscription.

FRIARTON, a village, in the EAST parish of the city of PERTH, county of PERTH; with 62 inhabitants.

FRIOCKHEIM, for a time a quoad sacra parish, in the parishes of KIRKDEEN and INVERKEILLOR, county of FORFAR; containing 1443 inhabitants, of whom about 900 are in the village of Frioekheim, $3\frac{1}{2}$ miles (E. by N.) from Letham, and $6\frac{1}{4}$ (N. W. by N.) from Arbroath. This district is nearly five miles in extent, comprising about 1694 acres in tillage or pasture, 308 under plantation, and 395 in uncultivated waste; and is skirted on the whole of its northern boundary by the Lunan water, one of the finest trouting-streams in Forfarshire. The village, which stands on the north-eastern limits of the district, has grown up within the last twenty or five-and-twenty years under the auspices of John Andson, Esq., owing chiefly to the feuing of small lots of ground, and the rapid increase of the linen manufacture in the neighbourhood. Upwards of 400 persons are now employed in flax-spinning, and the manufacture of sheetings, Osnaburghs, dowlas, and sail-cloth, which are exported principally to the American markets. The houses are nearly built, and there is a spinning-mill and yarn-washing mill. The turnpike-road from Arbroath to Forfar runs nearly through the centre of the district: the Arbroath and Forfar railway passes within three minutes' walk south of the village, having a station here;

and the Aberdeen railway also affords a frequent and expeditious communication. Ecclesiastically the place is within the limits of the presbytery of Arbroath, synod of Angus and Mearns: the stipend of the minister is £70, derived from seat-rents and collections, with a manse; and the patronage is vested in the male communicants, heads of families. Friockheim church, erected in 1835, and since enlarged, is a neat edifice containing 600 sittings. There is a parochial school, in which the usual branches of education are taught, and which is capable of accommodating 140 scholars; and a parochial library has been instituted by the Kirk Session.

FUDAY, an island, in the parish of BARRA, county of INVERNESS; containing 5 inhabitants. This is a small island, lying about two miles and a half northward of Barra, and affording excellent pasture. It was until lately uninhabited.

FULLARTON, lately a quoad sacra parish, in the parish of DUNDONALD, district of KYLE, county of AYR, $6\frac{1}{2}$ miles (W.) from Kilmarnock, and 11 (N.) from Ayr; containing 3103 inhabitants. This place, which is situated on the south-western bank of the river Irvine, derives its name from its ancient proprietors, the Fullartons, by one of whom a convent was founded in 1240, on the site of the present town, and amply endowed for friars of the Carmelite order. The establishment continued to flourish till the Reformation, when it was suppressed; and while laying out the lands in allotments for the erection of the town, vestiges of the ancient building, consisting of the foundations of its walls, were discovered near the mansion-house of the founder. The town forms a populous suburb to the burgh of Irvine, on the opposite bank of the river. It is well built, and consists chiefly of two streets, one in a line extending at right angles from the main street of Irvine, with which it is connected by a handsome bridge; the other running up at a right angle from the bridge, or parallel with the river, and pointing towards Ayr: several smaller streets diverge in various directions. Its situation on the harbour of the Irvine gives to the place a very interesting appearance, which is much heightened by the beauty of the surrounding scenery, and the numerous pleasing villas in the immediate vicinity.

A public library in connexion with Irvine is supported by subscription. The inhabitants are chiefly seafaring people, or employed in hand-loom weaving for the manufacturers of Ayr and Glasgow, and in the various handicraft trades connected with the wants of the neighbourhood. Great facility of intercourse is afforded by the Glasgow and Ayr railway, which has its Irvine station here. In 1707, William Fullarton, Esq., the superior, obtained for the inhabitants a charter erecting the town into a burgh of barony, with the privilege of two annual fairs; but from the proximity of Irvine, the charter does not appear to have been carried into effect. Fullarton was separated from the parish, under an act of the General Assembly, in 1838, and, with a part of the estate of Shewalton, was formed for ecclesiastical purposes into a distinct parish, since abolished, but now about to be divided from Dundonald for both civil and ecclesiastical purposes. The church, erected in 1838, on a site presented by the Lord Justice General, is a handsome substantial structure containing 900 sittings. The minister, who is chosen by a committee of subscribers, has a stipend of £88. 6. 8., derived from seat-rents and collec-

tions, and guaranteed by bond. A school in connexion with the Established Church is supported by the General Assembly, who allow the master a salary of £15, in addition to the fees: the school-house, capable of containing 300 children, was erected at an expense of £500, obtained from the trustees of Dr. Bell's bequest for educational purposes.

FUNGARTH, a hamlet, in the parish of CAPUTH, county of PERTH; containing 76 inhabitants.

FYVIE, a parish, in the district of TURRIFF, county of ABERDEEN, $7\frac{1}{2}$ miles (S. S. W.) from Cuminestown; containing 3597 inhabitants. This place, the name of which (anciently *Fyryn*) is of doubtful etymology, is chiefly distinguished for its castle, whose original founder is unknown, but which in 1296 was visited by Edward I. of England in his progress through Scotland. The castle appears to have been of considerable strength. It was in 1395 in the possession of Sir James Lindesay, during whose absence it was valiantly defended by his lady against Robert, son of the Earl-Marischal Keith, till the return of Sir James, who compelled the assailants to raise the siege. In 1644, it was held for some time by the Marquess of Montrose against the army of the Earl of Argyll; but the marquess, not thinking it secure from the superior forces of his adversary, retired to an eminence in the vicinity, in which he intrenched himself till his retreat to Strathbogie. From certain records still preserved in the castle, there seems to have been a town at this place, which had the liberties of a burgh under Reginald le Cheyne in the thirteenth century, and in the year 1673 became a burgh of barony under the Fyvie family; but of this town not even the site can now be traced. A charter is extant, granting to Alexander, third Earl of Dunfermline, in 1673, the privilege of a weekly market and three annual fairs in the manor of Fyvie, and conferring upon him and his successors all the rights of a free burgh of barony. Two of these fairs are still held, one on Fastern's Even (Shrove Tuesday), and the other, called Peter fair, on the first Tuesday in July, O. S.; but the market-cross, and every other vestige of the burgh, have disappeared.

The PARISH, which is about thirteen miles in extreme length, and nearly eight miles in extreme breadth, comprises an area of 27,034 acres, whereof 15,950 are arable, 2500 meadow and pasture, 1735 woodland and plantations, and the remainder heathy moorland and moss. Its surface is pleasingly diversified with hills of moderate height, of which the most conspicuous is that of Easter-town, towards the south, forming a continuation of the Bethelnie range in the adjoining parish of Meldrum. The river Ythan, which has its source in the parish of Forgue, about eleven miles to the west, takes its course through this parish, which it divides into two nearly equal parts; and after enlivening the grounds of Fyvie Castle, it runs eastward, and falls into the sea at Newburgh, in the parish of Foveran. Along the banks of the river, and in the plain near the castle, the soil is a rich fertile loam, producing early crops: in the level lands it is generally a loam, resting on a substratum of gravel; and in the northern part are large tracts of moor and moss. The crops are oats, bear, barley, potatoes, and turnips, with a few tares and peas, and a little flax. The system of husbandry is improved; the farm-buildings are substantial, and on the various farms are not less than eighty threshing-mills, of which forty-

five are driven by water, and the remainder by horses. The cattle are generally of the old Aberdeenshire breed, with an increasing number of a cross with the Teeswater; about 4400 head of cattle are at present fed in the pastures, and 1600 sheep. A considerable number of pigs are likewise reared, and sent to the London market; while the produce of the dairy-farms is also very great. The plantations, which are extensive and well managed, consist of fir, interspersed with the most usual forest-trees, all of which are in a thriving condition; the principal ancient woods are on the lands of Fyvie Castle, in which are many trees, oak, elm, ash, &c., of stately growth. The chief substrata are whinstone and sandstone; but from the great dip of the beds, the quarries are difficult to work, and few blocks have been raised. The annual value of real property in the parish is £10,924.

Fyvie Castle is an ancient and venerable structure, built at various periods with a due regard to the preservation of the original style. It is beautifully situated on the east bank of the Ythan, in a park surrounded with richly-wooded heights; and consists of two sides of a quadrangle, of which that on the south-east, called the Preston tower, is supposed to have been erected about the year 1400. In the south wing is the Seton tower, of which the old iron-gate is yet remaining; and over the gateway are the armorial bearings of the Seton family, sculptured on a tablet of freestone. To the south-west is the Meldrum tower; and at the northern extremity of the western wing, is the tower erected by the late Hon. General Gordon, on the site of the ancient chapel, which had fallen into ruin. The whole of the castle and the grounds have been lately much improved. *Rothie House* is a handsome modern mansion, built by the late owner: it is situated on an eminence overlooking a pleasing valley, and surrounded by a demesne which has been laid out with great taste, and embellished with thriving plantations by the present proprietor. *Kinbroom House*, about a mile to the west of Rothie, is also a pleasant residence, commanding a fine view. *Gight Castle*, a beautifully picturesque ruin, on the north bank of the Ythan, and now the property of the Earl of Aberdeen, was anciently the seat of the Gordons, maternal ancestors of the late Lord Byron. There is no village properly so called in the parish; but near the church are a few neat cottages, to which gardens are attached, and about a quarter of a mile distant is a post-office, on the turnpike-road from Aberdeen to Banff.

For ECCLESIASTICAL purposes, the parish is within the bounds of the presbytery of Turriff, synod of Aberdeen. The minister's stipend is about £224, with a manse, and a glebe valued at £17. 10. per annum; patron, William Gordon, Esq., of Fyvie. The church, erected in 1808, is a spacious plain edifice, containing 1114 sittings: in the churchyard is the burying-place of the Gordons of Gight, which was originally within the ancient church. A chapel, where a missionary officiates, has been erected at Millbrex, in the northern district of the parish, about five miles from the church, at a cost of £600, towards which the Earl of Aberdeen gave £100 and the site for the building, the Church-Extension Committee of the General Assembly £70, and the remainder was raised by subscription of the parishioners of Fyvie and Monquhitter, for whose accommodation it was built. It is a neat structure containing 500 sittings; and the minister

has a stipend of £60, of which £20 are paid from the Royal Bounty, and the remainder derived from the seat-rents; with a manse, and a small glebe. There are two episcopal chapels, one at Woodhead, the other at Meiklefolla; and the members of the Free Church have also a place of worship at Woodhead. The parochial school is well attended; the master has a salary of £34, a house and garden, and a portion of the Dick bequest, and the fees and other emoluments may average £30 per annum. A priory was founded here by Fergus, Earl of Buchan, in 1179, and endowed with the lands of Ardlogy and Leuchendy by Reginald le Cheyne, in 1285; it afterwards became subordinate to the abbey of Aberbrothock. The buildings, which were situated on the Ythan, about a mile below the castle, long ago disappeared, with the exception of some faint vestiges of the chapel, which may still be traced in a field near the church. There are also remains of the intrenchments thrown up by the Marquess of Montrose and the Earl of Argyll during the civil war.

G

G'AASKER ISLE, in the parish of HARRIS, county of INVERNESS. This is a large, green, but uninhabited island of the Hebrides, lying about four leagues north-west from Taransay. The name is derived from the Gaelic, signifying "the rock of geese", from the circumstance of its being frequented by countless numbers of wild-geese.

GADGIRTH-HOLM, with BANKFOOT, a hamlet, in the parish of COYLTON, district of KYLE, county of Ayr; containing 77 inhabitants. It is seated on the south side of the river Ayr, and consists simply of a group of cottages. Gadgirth House is a plain modern mansion, of an oblong form, standing on the bank of the Ayr, and forming the centre of a beautiful and interesting landscape.

GAIRLOCH, a parish, in the county of Ross and CROMARTY, 60 miles (W. by N.) from Dingwall; including the islands of Horisdale and Longo, the former quoad sacra district of Poolewe, and part of that of Shieldag; and containing 4880 inhabitants. This place takes its name from a salt-water lake called Gairloch, from the Gaelic word *gearr*, signifying "short". It is not remarkable for any important historical events; but some antiquities in the parish indicate the settlement and military operations of the Danes, and the celebrated Loch Maree has an island in its centre, the tombstones and hieroglyphical figures on which support the current tradition that it was the sepulchre of Danish kings. The parish is forty miles long, and thirty miles broad, at its extreme points. It is bounded on the north by the river Gruinard, which separates it from Lochbroom parish; on the south by an arm of the sea; by a chain of hills on the east; and on the west by the Minch, which divides Lewis from the main land. The general aspect of the surface is hilly; and in some parts the elevations are of unusual height, forming grand and romantic scenery. The beautiful inland water of Loch Maree, eighteen miles long, with its thickly-wooded islands twenty-four in number, is one of the most strik-

ing features in the parish, and has long been the admiration of the traveller, not only for its own attractions, but also on account of the imposing mountain scenery by which it is encompassed. A lofty range, commencing on each side of it, runs to a distance of four miles beyond its extremity, presenting in the group the majestic Slioch, or Sliabhach, towering 3000 feet above the level of the sea. The loch is of the average breadth of one mile and a half; it is about sixty fathoms deep, and was never known to freeze. Among its islands is that of Maree, where St. Maree, one of St. Columba's followers, dwelt, and where is a consecrated well, with a burying-ground supposed by some to be dedicated to the Virgin Mary, and by others, as already stated, to have been the sepulchre of Danish kings. The only river of note is the Ewe, which issues from Loch Maree, and after running a mile north-westward, joins the estuary called Loch Ewe; it abounds with salmon of the finest quality, and during the season its fame draws the lovers of angling from all quarters. There are two salt-water lochs, Gairloch and Loch Ewe, the latter nine or ten miles long. The climate of the parish, though mild, is very rainy, occasioned partly by the prevalence of south-west winds, and partly by the mountainous character of the country.

Arable land lets only at from 10s. to £1 per acre, and there is much room for agricultural improvement: the more respectable families have large sheep-farms, but the lots of ground of the poorer inhabitants do not generally exceed one or two acres. The annual value of real property in the parish is £4810. Towards the sea-coast is a belt of red sandstone of the old formation, forming low barren headlands. To this there succeeds, at the head of Loch Gairloch, micaceous schist; and five miles farther eastward the sandstone again appears, in mountain ridges and eminences, some of them 3000 feet high, characterised by a rude grandeur seldom equalled. At the head of Loch Maree, quartz succeeds the sandstone; and on the estate of Letterewe, a century and a half ago, some veins of iron-ore were wrought for several years; but the wood in the neighbourhood, used for fuel, failing, the adventurers were compelled to give up the work. The ruins of two of the furnaces employed in the operations are still to be seen. A cattle-market is held in July, and cattle are also sent to Beaul; herrings and cod are forwarded to Glasgow, wool to Liverpool and Inverness, and salmon to London. In this parish the houses, generally speaking, are of the humblest description; and the people are employed about equally between agriculture and fishing: they mostly dwell in irregular hamlets, or clusters of cottages; and some of them manufacture a stout woollen-cloth and coarse stockings, but chiefly for domestic wear, a small quantity only of either being sent to market. The mail from Dingwall to Stornoway runs through the parish twice a week, but the roads are in bad condition: indeed, with the exception of ten miles of road in the centre of the parish, and ten miles leading to the eastern extremity of Loch Maree, they are little more than foot-paths. There are four vessels belonging to the several ports, of about thirty-five tons' burthen each. Flowerdale, an old chateau in a vale of great beauty, is a seat of Sir Francis Mackenzie's; around it are some large forest-trees.

Ecclesiastically the parish is within the bounds of the presbytery of Lochcarron, synod of Glenelg; and the

patronage is vested in the Crown. The stipend of the minister is £217, with a manse, erected in 1805 and enlarged in 1823, and a glebe valued at £15 per annum. Gairloch church, built in 1791, and repaired in 1834, accommodates 385 persons with sittings. There is a parochial school, in which English and Gaelic, Greek, Latin, and mathematics are taught, with the usual branches of education; the master's salary is £30, with a house, and about £4 fees. Another school is supported by a society. The ordinary language spoken is Gaelic; and William Ross, a respectable poet, who was born in the parish, and died here about half a century since, wrote in this tongue. The foundations of one or two small forts can be traced near the sea-shore; and at Cairnfield are those of a large building, supposed by some to have been a Culdee religious house.

GAIRNEY-BRIDGE, a hamlet, in the parish of CLEISH, county of KINROSS, $2\frac{1}{2}$ miles (S. by E.) from Kinross; containing 50 inhabitants. This village takes its name from its situation near a bridge over the river Gairney, a stream which rises among the Cleish hills, and discharges itself into Loch Leven, half a mile south of Kinross. There is a Sabbath school, in which are about 130 children. Michael Bruce once taught a school here.

GAIRSAY, an island, in the parish of EVIE and RENDALL, county of ORKNEY; containing 71 inhabitants. This is an isle of the Orkney group, about four miles in circuit, and separated by a strait from Rendall. It consists chiefly of a conical hill of considerable altitude; the whole of the west side is pretty steep, but towards the east it is more level and fertile, and in this quarter, and in the south, the lands are tolerably well cultivated. Here is a small harbour called the Mill-Burn, perfectly secured on all sides by the island itself, and by a holm, which covers the entrance to the south, leaving a passage on each side of it to the anchoring ground.

GALASHIELS, a manufacturing town and a burgh of barony, partly in the parish of GALASHIELS, county of SELKIRK, and partly in the parish of MELROSE, county of ROXBURGH, 4 miles (N. by W.) from Melrose, 6 miles (N. by E.) from Selkirk, and 33 (S. S. E.) from Edinburgh; the whole town containing 4536 inhabitants, of whom 2061 are in Selkirkshire, and 2475 in Roxburghshire. It is of remote antiquity, and derives its name, signifying in the British language "a full stream", from its situation on the river Gala, which flows through part of it, and by which, in former times, it was frequently inundated. This evil is now effectually checked, and the river is spanned by four bridges. In the reign of David II., the Scottish army was quartered in the immediate neighbourhood, after the battle of Crichtondean, in which the English, being taken by surprise, had been defeated, and compelled to cross the Tweed near the town. About a mile distant, on the road to Abbotsford, is a tract formerly a marsh, but now in a state of cultivation, where some of the English forces were slain in a skirmish, and in which, while draining the land, were found several implements of war. In 1599, Galashiels was erected into a burgh of barony; and in 1622, from a report of the lords commissioners, it appears that it had become of some importance, and contained not less than 400 inhabitants. The town is of very pleasing appearance, consisting chiefly of houses built within the

last fifty or sixty years in a neat and handsome manner; the streets are partially lighted with gas, and the inhabitants are amply supplied with water. A public library, supported by subscription, forms a collection of 5000 volumes of general literature. Galashiels also possesses a most respectable circulating library and two reading or news rooms, and libraries are attached to some of the places of worship.

The principal TRADE carried on here, and to which the town owes its importance and rapid increase, is the woollen manufacture, which has been brought to a very high state of perfection. The articles produced are, narrow fancy cloths of various quality known in the market as "tweeds", $\frac{6}{8}$ Saxony-wool tartan, shawls, and plaids. The narrow cloths vary in price from twenty to eighty pence per yard, the $\frac{6}{8}$ tartan cloakings from two to nine shillings per yard, and the shawls from three to thirty shillings each. These articles of dress are in high esteem for their texture and for the richness and variety of their colouring. There are eleven factories in the town, and a twelfth is about to be erected; they are all dependent on water-power, except two which have the aid of steam, and the spindles now number 17,000, and the looms 563, affording together employment to 1400 persons. The quantity of wool annually used is estimated at full 1,000,000 lb., value £80,000, principally from Australasia, Germany, and other foreign countries, the use of wool of home growth being nearly superseded: the yearly value of finished goods is £200,000. The great increase of the trade of Galashiels may be understood from the statement of the fact that, seventy or eighty years ago, only 722 stone of wool were used by the clothiers, and scarcely as much more could be manufactured by private persons. In the year 1790, it appears that 243 packs of wool, each pack containing twelve stone of twenty-four lb., were purchased by the manufacturers; besides which, they received from different quarters wool, yarn, and weaved cloth, to a considerable amount, to be dyed and dressed. At that period, about 250 women were constantly engaged in spinning wool; there were also occasional spinners; and three machines, having each thirty or thirty-six spindles, were employed two or three days in the week: the number of looms was only forty-three. Hosiery goods are made to a small extent; there are likewise a tannery, two skinneries, several forges for the manufacture of machinery required for the factories, and a thriving brewery. Three banks have branches here. The market, held on Monday, was formerly of considerable note, but has now unaccountably fallen into disuse, and the fairs are very indifferently attended. The post-office has two deliveries a day; and facility of communication is afforded by the Edinburgh and Hawick railway, lately opened, and by excellent roads in every direction. The burgh is governed by a bailie, appointed by Hugh Scott, Esq., of Gala, the lord of the manor; but though he has the right of jurisdiction common to burghs of barony, he now holds no courts either civil or criminal, and the police of the town is managed principally by the two counties in which Galashiels is situated.

THE PARISH consists of the old parishes of Galashiels and Lindean, the former situated in Selkirkshire, and the latter in Roxburghshire. No part of the town is in Lindean. The parish is nearly eight miles in length, about three miles in average breadth, and is bounded by

the parishes of Melrose, Bowden, Selkirk, and Stow: the rivers Tweed, Etrick, and Gala either skirt or flow through it, and the banks of the two first are richly clothed with wood, and display much beautiful scenery. It comprises more than 10,000 acres, of which about one-half are arable, 500 woodland and plantations, and the remainder hill-pasture. The surface is diversified with hills and narrow winding glens, and some of the former have a considerable elevation, the highest being the Meigle, anciently Amulet Megs, which commands the town, and is nearly 1500 feet above the level of the sea: the loftier lands embrace interesting views of the mansions and grounds of Abbotsford, Torwoodlee, Yair, and Sunderland, the vale and abbey of Melrose, and the rivers above mentioned. The chief lake is Loch Cauldshiels, which is about a mile and a half in circumference, of great depth, and well stocked with perch and pike; it is greatly adorned on one side by the woods of Abbotsford. The rivers abound with salmon and trout; the fishery on the Tweed has for some years been placed under salutary regulations, and at present does not commence till the 15th of February.

The SOIL of the parish is various; in some places a rich black loam, in others a stiff retentive clay, and on the banks of the rivers of a very sandy quality. The crops are oats, barley, wheat, potatoes, and turnips. Generally the cultivated lands have been well drained and inclosed; and bone-dust, guano, and other foreign manures are much in use: the farm-houses and offices are commodious, and all the more recent improvements in husbandry have been adopted. Great attention is paid to live stock; the breed of cattle has been much improved, and the sheep in the low grounds are the Leicester, and in the high grounds Cheviot and half-bred. The annual value of real property in the parish is £9649, including £2215 for the Roxburghshire portion. The plantations are of Scotch, spruce, and larch firs, intermixed with oak, ash, elm, beech, and sycamore; they are well managed, and in a very thriving condition. In this parish the substrata are greywacke, clay-slate, and ironstone. The seats are, Gala House, a handsome mansion in a well-planted demesne, ornamented with ancient trees of stately growth; and Faldonside, a very neat modern erection. Ecclesiastically the parish is in the presbytery of Selkirk, synod of Merse and Teviotdale, and in the patronage of Hugh Scott, Esq., of Gala: the minister's stipend is £211. 11., with a manse, garden, and glebe, valued at £40 per annum. Galashiels church, erected in 1813, is a good structure in the later English style of architecture, with a square embattled tower. There are places of worship in the parish for the United Presbyterian Synod, members of the Free Church, Baptists, and Independents. The parochial school affords a liberal course of instruction, and is well attended; the master has a salary of £34, with about £70 fees, and a house and garden. There are two schools in the rural districts; the master of one has a salary of £8, and of the other £5, in addition to the fees. Societies of various descriptions exist which afford relief to their members in cases of distress. Vestiges of two encampments, both supposed to be of Roman origin, may be traced on the estates of Faldonside and Fairnilee. Nothing is left of the church of Lindean, which was abandoned, on account of extreme dilapidation, nearly forty years before the two parishes were united.

GALDRY, a village, in the parish of **BALMERINO**, district of **CUPAR**, county of **FIFE**, 4 miles (S. W.) from **Newport**; containing 355 inhabitants. In the parish are two ridges, and nearly in the centre of the southern ridge is a large extent of high table-land, in which this village is placed. **Galdry** stands on the road from **Newburgh** to **Newport**.

GALLATOWN, a village, in the parish of **DYSART**, district of **KIRKCALDY**, county of **FIFE**, 1 mile (N. N. W.) from **Dysart**; containing 1198 inhabitants. This village is supposed to have derived its name from the circumstance of the land on which part of it is built having anciently been a place for the execution of criminals. It stands on the road from **Dysart** to **Falkland**, is of considerable extent, and divided into two portions called **East** and **West Gallatown**. The inhabitants were formerly engaged in the manufacture of nails, which was largely established here: since the decline of that trade, the population have found ample employment in the weaving of checks and ticking, in agriculture, and in the mines and quarries in the neighbourhood. Great facility of intercourse is afforded by the **Edinburgh**, **Perth**, and **Dundee** railway.

Burgh Seal.

GALLOWAY, NEW, a royal burgh, in the parish of **KELLS**, stewartry of **KIRKCUDBRIGHT**, 19 miles (N. by W.) from **Kirkcudbright**, and 25 (W.) from **Dumfries**; containing 403 inhabitants. This place, which is of no very great antiquity, is situated on the west bank of the river **Ken**, about a mile north of **Kenmure Castle**, the ancient seat of the family of

Gordon, **Viscounts Kenmure** and **Lords of Lochinvar**, whose titles were forfeited in 1715, were restored by act of parliament in 1824, and became dormant on the death of **Adam**, ninth viscount, in 1847. Over the river is a handsome bridge of granite, comprising five arches; the central arch has a span of ninety feet. The town consists chiefly of one main street, from which diverge two smaller streets, extending along the roads from **Kirkcudbright** to **Newton-Stewart** and to **Dumfries**. The houses are but of indifferent appearance, and the inhabitants are mostly occupied in the various handicraft trades requisite for the accommodation of the neighbourhood. There are several shops, and three good inns; a branch of the **Edinburgh** and **Glasgow Bank** has been established, and facility of communication is maintained by the turnpike-roads, and other roads which are kept in good repair. Four fairs of some importance were formerly held here, and those in **April**, at **Midsummer**, and at **Hallowtide** are still tolerably attended, but chiefly for hiring servants. The inhabitants received a charter from **Charles I.** dated 15th **January**, 1629, by which all the privileges of a royal burgh were conferred on the town, and the government was vested in a provost, four bailies, a dean of guild, a treasurer, and twelve common-councilmen; but in 1708, by an act of the Convention of Royal Burghs, the corporation was made to consist of a provost, two bailies, a treasurer, and council of fifteen. Courts are held by the sheriff and justices of peace on the first Monday in every month. The town-hall, at-

tached to which is a gaol for debtors and criminals, is situated in the main street, and has a steeple with a clock. **New Galloway** is joined with **Wigtown**, **Stranraer**, and **Whithorn**, in returning a member to the imperial parliament; the constituency, however, does not exceed fourteen.

GALLOWLAW, a hamlet, in the parish of **PANBRIDE**, county of **FORFAR**; containing 79 inhabitants. It is one of several hamlets, or groups of cottages, in the parish.

GALSTON, a parish, in the district of **KYLE**, county of **AYR**, 5 miles (E. by S.) from **Kilmarnock**; containing, with the village of **Greenholme**, 4334 inhabitants. This parish, which is fancifully supposed to have derived its name from the temporary settlement of a number of Gauls, is thirteen miles in length, and from one to five miles broad; comprising 14,577 acres, of which more than one-half are arable, 1000 woodland and plantations, and the remainder pasture and waste. It is bounded on the north by the river **Irvine**; on the east by the river **Avon**, dividing it from the parish of **Avondale**, in **Lanarkshire**; and on the west by the river **Cessnock**, which separates it from the parishes of **Ricccarton** and **Craigie**. The surface is diversified with hills, the chief of which are **Distincthorn** and **Molmont hill**, the former having an elevation of 1100, and the latter of 1000, feet above the level of the sea; the scenery is pleasingly varied, and in some parts enriched with wood and flourishing plantations. There were formerly several lakes in the parish; but in the agricultural improvements that have taken place, they have been all drained and brought into cultivation, with the exception of **Loch Gait**, which, however, is little more than an inconsiderable tract of marsh. The soil is various; in the higher lands, a loam intermixed with sand, and sometimes with moss; and along the banks of the **Irvine**, a rich loam: in other parts, a variety of clay is most prevalent. The crops are, grain of different kinds, potatoes, and turnips. The system of agriculture is advanced, and much previously unproductive land has been rendered fertile by the practice of furrow-draining, which, by the liberal encouragement afforded by the proprietors, has been carried on to a very great extent. The dairy-farms are extensive and well managed, and about 210 tons of cheese are annually produced; the cows are usually of the **Ayrshire** breed. Considerable numbers of black-cattle are reared; the sheep are of the black-faced kind, and much attention is paid to the improvement of live stock generally. The farm-buildings are substantial and commodious, and those of more recent erection are of superior order; the lands are inclosed, and the fences well kept up. The annual value of real property in the parish is £10,448.

In this parish the woods are of oak, elm, ash, and other forest-trees; and the plantations, larch and fir, intermixed with oak, ash, and elm. The substrata are red sandstone, alternated with whinstone, coal, limestone, and ironstone: the general dip of the strata throughout is north-west. In the channel of a small burn running into the **Irvine**, are some beautiful pebbles peculiar to this place, called **Galston pebbles**; and on **Molmont hill** are found numerous nodules of agate and chalcedony. Coal, of which there are three seams six feet in thickness, and one of three feet, and limestone, are both worked, but not to any great extent beyond what is re-

quisite for the neighbourhood; and paving-stone and roofing-slate are quarried. There is a large work for the manufacture of draining tiles on the estate of the Duke of Portland, and another on that of Mr. Brown, for the supply of the different farms; the clay is found in abundance, and is of good quality. Laufine is a handsome mansion surrounded with extensive grounds and thriving plantations; Holms, in the ancient English style, is a modern mansion of elegant design; and Cessnock, an ancient house belonging to the Duke of Portland, is an interesting structure. The village is pleasantly situated; many of the inhabitants are engaged in weaving for the manufacturers of Glasgow and Paisley, and a few have introduced the weaving of fancy silks. There are four corn-mills, a mill for flax, a paper-mill, and a saw-mill. Four fairs are held annually in the village, of which those of any importance are on the third Thursday in April and the first in December. A post has been established here, which has a regular delivery; and facility of communication is afforded with Kilmarnock and the neighbouring towns by roads kept in excellent repair: the turnpike-road from Glasgow to Loudon passes within the limits of the parish. Great facility of intercourse is also afforded by the Glasgow, Dumfries, and Carlisle railway, which has a station called the Galston station.

Ecclesiastically the parish is in the presbytery of Ayr, synod of Glasgow and Ayr, and in the patronage of the Duke of Portland: the minister's stipend is £178. 16., with a manse and glebe, each valued at £15 per annum. Galston church, situated in the centre of the village, is a neat and substantial edifice with a handsome spire, erected in 1808, and adapted for a congregation of 1028 persons. There are places of worship for the Free Church and United Presbyterian Synod. The parochial school is well conducted; the master has a salary of £34, with £55 fees, and a house and garden. There are two other schools, the masters of which receive an annual payment of £5. 12. from the heritors. The late Mr. Charles Blair, of Longhouse, bequeathed £4000 for the foundation and endowment of a free school in the parish, when the bequest, by the accumulation of interest, should produce £200 per annum: this has been accomplished, and the school has been in operation some years. John Brown, Esq., of Waterhaughs, also bequeathed £1000, the interest of which is appropriated to the clothing and education of children of the poor. In the parish are the remains of a very extensive Roman camp, the ramparts of which, though in some places greatly obliterated by the plough, still mark out an area nearly 300 yards in length, and 120 yards in breadth. On this spot was found, in 1831, a silver coin with the legend *Cæsar Augustus Divi F. Pater Patriæ*; and to the east, in the parish of Avondale, several others have been discovered, with the inscription *Divus Antoninus*. Near the site of the camp was the scene of an encounter between William Wallace, who with fifty of his men lay concealed here, and Fenwick, an English officer, with a force of 200, whom the Scottish hero signally defeated. Other coins, bearing the inscriptions Alexander, David, and Edward, have been found. On the bank of the Avon, and nearly surrounded by the river, are the remains of some earthworks called Main Castle, most probably connected with the Roman camp.

GAMRIE, a parish, in the county of BANFF, 6½ miles (E.) from Banff; containing, with the burgh of Macduff

and the villages of Crovie and Gardenstown, 4741 inhabitants, of whom 2001 are in the rural districts. The name of this place, in the Gaelic language, has reference to a memorable victory obtained here over the Danes, by the Thane of Buchan, about the commencement of the eleventh century; in gratitude for which, and in fulfilment of his vow, he erected the ancient church in the year 1004, which date may still be seen over one of its windows. The parish is bounded on the north by the Moray Firth; on the east by the burn of Nethermill, which separates it from the parish of Aberdour; and on the west by the river Doveron, dividing it from the parish of Banff. It is about ten miles in length, varies from three to four miles in breadth, and comprises an area of 21,500 acres, whereof 10,000 are arable, 750 woodland and plantations, and the remainder (of which perhaps 4000 acres might be brought into profitable cultivation) rough pasture and waste. The surface is strikingly diversified with hills, precipitous rocks, and deep glens, most of which are covered with verdure; and is interspersed with fertile valleys and level tracts in good cultivation. The coast, extending more than ten miles, is bold and rugged, and girt with an indented ledge of rocks rising precipitously to a height of 600 feet above the level of the Firth, and perforated with caverns of romantic appearance. Gamrie bay, in the east, is formed by two projecting headlands, one of which is called Gamrie Head, and the other, and the more prominent, is Troup Head, near the eastern extremity of the parish; westward are Melrose Head, and the Coley rock, near the harbour of Macduff, in the bay of Banff. The rocks on the coast are frequented by multitudes of sea-fowl of almost every variety, the most numerous of which are the kittywake, the razor-bill, the guillemot, and the puffin, each selecting its peculiar ledge for the purpose of incubation. Haddock, ling, cod, and herrings, with various kinds of flat and shell fish, are taken in abundance, yielding annually on an average a return of more than £13,000. The river Doveron, which abounds with salmon, and in which and the adjoining bay is a fishery belonging to the Earl of Fife, producing a rent of £2000, flows along the west border of the parish. The burn of Nethermill and the Logie, the former of which joins the sea at Nethermill, and the latter, after a circuitous course, falls into the Doveron, are the only rivulets of importance.

The SOIL, which is extremely various in different parts of the parish, has been greatly improved by the use of lime brought from England, and of bone-dust. The system of husbandry has been gradually advancing, and the chief crops are oats, barley, potatoes, and turnips: bear is raised on some farms, but wheat, beans, and peas are very rarely attempted. Large quantities of grain are sent to the London markets, and barley and bear are sold to the breweries and distilleries in the adjacent districts. The cattle, of which considerable numbers are shipped from the ports in the parish, are generally the Aberdeenshire, with some of the short-horned breed: the sheep pastured, which are comparatively few in number, are partly of the Cheviot, and partly of the Leicestershire breed. The annual value of real property in Gamrie is £8231. There are some luxuriant belts of natural wood in the western portion of the parish; and very extensive plantations have been formed in the Tore of Troup, which, together with those around Troup

House, occupy more than 700 acres of land, consisting chiefly of beech and Scotch fir, with larch, the last now becoming more prevalent. The rocks are principally composed of greywacke, greywacke-slate, and clay-slate: the greywacke is occasionally quarried for building, and the clay-slate was formerly wrought for roofing, but has been superseded by the primary slate obtained in Foudland and Easdale. Troup House is a spacious mansion, built in 1772, and commanding an extensive view of the sea; the demesne is tastefully laid out, and embellished with natural wood and thriving plantations. This seat was suffered to fall into neglect during the minority of the present proprietor, who built a picturesque Norwegian cottage for his residence at Torewood. There is a small hamlet called Longman, the building of which was commenced by the late Earl of Fife, who allotted some wasteland in small portions on the hill of Longman, on the road from Peterhead to Banff. Facility of communication is afforded by the turnpike-road to Banff, and by various other good roads which intersect the parish; a messenger delivers letters on alternate days from Banff and Fraserburgh, and application has been made for establishing an office at Dubford, in the parish, where cross-roads branch off in all directions.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Turriff, synod of Aberdeen. The minister's stipend is £224. 13., with a manse, and a glebe valued at £10 per annum; patron, the Crown. The present church, erected in 1830, and situated in a central part of the parish, is a handsome structure in the later English style, containing 1000 sittings. A chapel of ease in connexion with the Established Church was erected and endowed by the late Earl of Fife at Macduff, to which a district of the parish was attached by the presbytery, towards the close of the last century. The parochial schools of Gamrie and Macduff are both well attended: the master of each has a salary of £25. 13., with a house and garden, and a portion of Dick's bequest; the fees of the former average £25, and of the latter, £50. A school-house, also, has been erected at Longman by the Earl of Fife. The only striking remains of antiquity are the ruins of the old church, built in 1004: in the thick walls of this building were embedded the skulls of three Danes who fell in the battle previously noticed, one of which is preserved in the museum of the literary institution at Banff. Some remains of the Danish camp near Gamrie Head, have, from the slaughter that took place there, obtained the appellation of Bloody Pits; and there is also an ancient ruin on the farm of Pitgair, called Wallace's Castle, of which the history is unknown.

GARDENSTOWN, a fishing-village, in the parish of GAMRIE, county of BANFF, 7 miles (E.) from Banff; containing 348 inhabitants. This place, which is situated on the eastern shore of Gamrie bay, appears to have been originally built about the year 1720, by Alexander Garden, Esq., of Troup, from whom it takes its name, and whose descendant is the present proprietor. It is neatly built at the head of the bay; and the inhabitants are chiefly employed in the fisheries off this part of the coast. The fish caught here are cod, ling, haddock, whiting, and various kinds of shell-fish, in taking which about twenty-five boats are generally engaged; and during the season, thirty-five boats, having crews of four men each, are occupied in the herring-fishery. Though small, the har-

bour is commodious and easy of access, affording secure shelter to the boats engaged in the fisheries: there are also three vessels belonging to the port, of 130 tons' aggregate burthen, employed in the export of grain, cattle, and fish, for the London market, and in the importation of lime, coal, salt, groceries, and other goods. Facility of communication with Aberdeen and Banff is maintained by good roads. Here is a small place of worship for Protestant dissenters of all denominations.

GARELOCH-HEAD, a village, in the parish of Row, county of DUMBARTON, 6 miles (N. N. W.) from Row; containing 217 inhabitants. This is a rising village, situated, as its name imports, at the head of the Gareloch, a beautiful branch of the Firth of Clyde; and consists chiefly of a collection of cottages. The loch extends in a northern direction about twelve miles into Dumbar-tonshire, forming the east side of the peninsula of Rose-neath, on which is a fine seat of the Duke of Argyll; its average breadth is about a mile, and its greatest depth twenty-three fathoms. The banks of the loch are much less precipitous than those of the neighbouring Loch Long, which lies on the western side of the peninsula; and southward they become more level. At the entrance of the Gareloch is the fine village and watering-place of Helensburgh. A chapel in connexion with the Establishment was built by subscription at Gareloch-Head, about 1838; and there is also a school.

GARGUNNOCK, a parish, in the county of STIRLING, 6 miles (W.) from Stirling; containing 803 inhabitants, of whom 319 are in the village. This place, anciently called Gargowno, is supposed to have derived its name from the Celtic words *Caer-guineach*, signifying "a pointed or conical fortress"; a building answering to this description, called the Peel of Gargunnoch, being situated near the north-eastern extremity of the locality. The parish is skirted on the south by the Lennox hills, which form its boundary in that direction, and on the north by the river Forth. It is six miles in length, and four in breadth, comprising 9668 acres, of which 5332 are under cultivation, 3762 in natural pasture, and 574 wood and plantations. The hills rise 1400 feet above the level of the sea, commanding from their summits one of the most extensive, varied, and beautiful views in the country; and from these higher grounds the whole of the lands slope northwards, terminating in the plain reaching to the Forth. The river is here about sixty feet broad and twelve deep, and contains large quantities of pike, eels, perch, trout, and salmon: the two last, however, from the casting of moss into the stream, are not so numerous as formerly. In addition to the Forth with its picturesque meanderings, and besides the many springs in the parish, which afford a constant supply of excellent water, there are several burns running in various directions, of which those of Leckie, Gargunnoch, and Boquhan abound in fine trout, and the vicinity of the last is enriched by a glen of its own name, so beautifully wild and romantic as to produce a very striking effect on the mind of the spectator. Cascades are to be seen in different places, enlivening the mountain ravines; and besides almost every description of wild animals and birds usually found in the country, the district is remarkable for its roe-deer, which breed in the glens in great numbers.

The lands may be portioned into three distinct kinds, moor, dry-field, and carse, the soils of which vary con-

siderably. The first of these tracts, on which sheep and black-cattle are pastured in summer, is a wet gravel and clay; the dry-field for the most part sandy and clayey, with a little loam; and the last-named district a deep rich clayey earth, resting on a subsoil principally of blue clay. Below this blue clay, about ten feet from the surface, is a layer of sea-shells, which is indeed found throughout the whole strath of Monteith, extending twenty miles in length and between three and four in breadth, and is considered a certain indication of this part of the country having originally formed a portion of the bed of the ocean. Afterwards, this extensive tract was overgrown with wood, called, in the time of the Romans, the Caledonian forest, and cut down by that people in the beginning of the third century. On the dry-field portion, oats, barley, hay, and green crops constitute the chief produce; while wheat, beans, oats, barley, and hay are grown on the carse land. The sheep are in general the black-faced, and Ayrshire cattle and Clydesdale horses are reared; many swine, also, are bred, some of which are small, but others very large. Great attention is paid to husbandry, and a rotation of crops is regularly followed: draining has been extensively practised, particularly the improved method by wedge-drains, to the great advantage of the soil; and good farm-houses and offices, with excellent fences, have been raised. Roads have been also constructed in different directions; and these various improvements, with numerous others, have increased the price of land within the last forty or fifty years to double its former amount: the annual value of real property in the parish is now £6856. The rocks in the hills consist of whinstone; and those in the dry-land portion, of red and white sandstone, of each of which there are quarries. Limestone is found in great abundance under the white sandstone; veins of spar exist near the hills, and it is confidently asserted that coal might be obtained on the estate of Gargunnoch. Peat is plentiful on parts of the Lennox range, and is sometimes cut; but the principal fuel in use is coal brought from Bannockburn, nine miles distant. The natural wood comprises oak, ash, birch, and willow; the plantations consist principally of Scotch and silver fir, elm, larch, and plane.

The oldest mansion is that of Gargunnoch; the next in date is the seat of Boquhan, built about the beginning of the present century, and the barony of which name was formerly possessed by the Grahams. Leekie is a still more modern structure, in imitation of the old English baronial residence; it is surrounded by beautiful grounds, and commands a fine view of the strath of Monteith. Meiklewood was erected recently by Colonel Graham, to whom the parish is indebted for a handsome suspension-bridge built over the Forth, at his own cost, about seventeen years since, near the line of the Dumbar-ton road, and also for a new road, two miles long, running from the bridge to the great road from Stirling to Callander; by which, excellent means of communication have been opened through a highly interesting tract of country. The village, which is in the barony of Gargunnoch, stands on a declivity near the church, and commands a richly-diversified prospect of the surrounding district. Ecclesiastically the parish is in the presbytery of Stirling, synod of Perth and Stirling, and in the patronage of Sir Francis Walker Drummond, Bart.

The minister's stipend is £150, of which about a sixth part is received from the exchequer; with a manse, and a glebe of seven acres, valued at £15. 10. per annum. Gargunnoch church was built in 1774, and is a plain building with three galleries, the whole containing 500 sittings. The members of the Free Church have a place of worship. The parochial schoolmaster receives a salary of £25. 13., and £11 fees, with a small glebe. There is a subscription library; and the parish has two charitable bequests, one of £260, and the other of £365. A farmers' club was instituted in 1796 by General Campbell of Boquhan, and in 1807 he enriched it by a bequest of £500, since which time £100 have been left for the same object by Laird Kay: eleven parishes are entitled to the benefit of it, namely, Gargunnoch, Stirling, St. Ninian's, Kippen, Fintry, Balfron, Killearn, Drymen, Port of Monteith, Kincardine, and Kilmadock. At the burn of Boquhan are two chalybeate springs, which are considered of great efficacy, though not much frequented. Keir-hill, the top of which measures about 140 yards in circumference, was a fortified station in the thirteenth century; and the Peel of Gargunnoch, situated on an eminence near the Forth, and surrounded by a rampart and ditch, once gave protection to the English till they were dislodged by Sir William Wallace, who occupied Keir-hill, just mentioned.

GARIOCH, CHAPEL OF, a parish, in the district of GARIOCH, county of ABERDEEN, 5 miles (N. W.) from Inverury; containing 2038 inhabitants. This place was formerly called Logie Durno or Durnock, words signifying "a low or hollow place"; but upon the annexation of the parsonage of Fetternear, situated on the north of the river Don, to the parsonage of this parish, on the north side of the Urie, early in the seventeenth century, the church of Logie Durno was disused, and a new one built on the spot where had once been a chapel called *Capella Beatae Mariae Virginis, de Garryoch*, whence the present name of the parish. The district is celebrated in history for the sanguinary battle of Harlaw, which was fought here on the 24th of July, 1411, between the Earl of Mar, who commanded the royal army, and Donald, Lord of the Isles, and which was fatal to so many of the nobility and gentry, and of the bravest soldiers in the country, that, according to Buchanan the historian, there perished in this conflict more illustrious men than had fallen in foreign warfare during many years. Donald, having ravaged and plundered other parts, had invited his Highland followers to seize and pillage Aberdeen, and was proceeding thither for that purpose, when the Duke of Albany, who was regent, gave the Earl of Mar a commission to collect troops to oppose him. In consequence of this, the Earl of Mar marched from Aberdeen at the head of a noble train, gathered from different quarters, and met Donald with a force nearly ten times as large as his own, at the little village of Harlaw, a short distance from the confluence of the Water of Urie with the Don. Here the earl attacked the army of Donald, 10,000 strong, with such vigour that he quickly penetrated into the midst of it; but the Highlanders, making up by numbers what they wanted in discipline and in armour, returned the attacks of the earl and his veterans with their usual courage and impetuosity, and a succession of conflicts was carried on through the day, which, while they produced the most dreadful carnage on both sides, had given, when night ended the slaugh-

ter, victory to neither. The Highland chief retired from the field; the earl was compelled to remain till the morning, through wounds and exhaustion. In the following century, Queen Mary, in her journey to the north, previously to the battle of Corriehie, passed a day here, at Balquhain Castle, the ancient seat of the Leslies, and is said to have attended mass in the parish church. Many years afterwards, the unfortunate Marquess of Montrose, when the Covenanters had triumphed, arrived at the castle of Pitcaple, in the custody of Generals Leslie and Strachan, who thence conducted their illustrious captive, seated on a Highland pony, and ignominiously attired, to the city of Edinburgh, where he was executed on the 21st of May, 1650. Charles II., upon his return from Holland in the same year, was entertained at this castle in a very sumptuous manner, on which occasion a ball took place on the lawn, under a thorn-tree which is still standing, and which is said to exceed in size all others in this part of Britain.

The PARISH, the figure of which is very irregular, is eleven miles in length from north to south, and varies in breadth from two to five miles. It comprises 11,427 acres, of which 8342 are under tillage, including twelve acres of garden and orchard ground; 1010 waste, including nearly 900 acres capable of profitable cultivation; 110 moss; and 1965 wood and plantations. The surface is diversified by two considerable ridges, one on the north, and the other on the south, side of the Urie or Ury, and stretching nearly in the same direction with the stream, the interjacent vale being well defended by the hilly ground on each side, and watered by the river for about five or six miles. The Ury is celebrated for its fine trout, and, at a small distance from the parish, falls into the Don. The Don forms about three miles of the southern boundary of the parish in its passage to the German Ocean, which it reaches at a mile from Aberdeen: it is well stocked with salmon, eels, trout, and pike. The eminence on which the church stands, south of the Ury, and by which the old turnpike-road from Aberdeen passed, commands in one part an interesting view of both local and distant scenery, especially of the Garioch district, the prospect embracing nine churches.

This parish is entirely agricultural; and the vale, interspersed by beautifully-formed knolls, of which that of Dun-o-deer is the most conspicuous, is under good cultivation. The crops, comprehending grain of various kinds, are indeed so heavy that Garioch is frequently called the Granary of Aberdeenshire; and they are in general more early in appearance even than those in some of the southern parts, on account of the richness of the soil. A fine black loam occurs in many places; a good clay in others, on a tilly subsoil; and near the rivers, a rich vegetable mould, on gravel. Wheat, which formerly was grown in but small quantities, is now more extensively produced; and all the usual green crops are raised in abundance. The cattle are chiefly a cross between the Aberdeenshire and Teeswater, or Buchan and Teeswater, and are fed in numbers, either to be sold to the butcher, or sent by sea to the London market. The rotation system of husbandry is practised; and the application of bone manure has been found of great service to the crops of turnips, and the parish has been improved in various other respects during the present century, especially by the inclosures and extensive drains which have been made, and by the erection of good

farm-houses and offices. Much waste land has been reclaimed; and a far larger number of cattle than formerly are reared for sale, through the advance of turnip husbandry. In the parish are seven corn-mills, connected with which are five barley-mills; another barley-mill, and a lint-mill; two mills for carding and spinning wool, and three saw-mills. The annual value of real property in Chapel of Garioch is £7335. The rocks consist of whinstone and granite, the former of which comprises nearly the whole of the strata to the north of the Ury, and for two miles south of it; the granite runs through the remainder of the district. The hill of Benochie, in the parish of Oyne, supplies a stone for the erection of mansion-houses and farm-steadings; and the granite obtained from this quarter admits of a fine polish, and has been employed for chimney-pieces in some of the best residences. Benochie hill is a common to several parishes, but lies altogether within the parish of Oyne. The wood consists for the most part of larch, spruce, and Scotch firs, and has nearly all been planted within the present century, with the exception of several fine old plane, horse-chesnut, beech, and fir-trees on the lawns of the mansion-houses. In this parish the seats are four in number, and contribute, with their beautiful grounds and plantations, to heighten in no small degree the general effect of the scenery. Logie-Elphinstone is situated upon the north bank of the Ury, and Pitcaple on the other side. The mansion of Pittodrie stands on an acclivity on the eastern side of the hill of Benochie, which rises 1400 feet above the sea, and commands extensive prospects; while the mansion of Fetternear, the ancient summer residence of the bishops of Aberdeen, built in 1329 by Bishop Kininmonth, stands on the north bank of the Don, and, like the others, is pleasantly situated. A new road has been made to Aberdeen, and the marketable produce is generally sent to that city, being conveyed to Port-Elphinstone, six miles distant, and thence transmitted to its destination by the canal.

Chapel of Garioch is the seat of the presbytery of Garioch, in the synod of Aberdeen, and the living is in the patronage of Sir James Elphinstone Dalrymple, Bart. The minister's stipend is £218, with a manse, and a glebe of eighteen acres, valued at £16 per annum. The church is a neat and commodious edifice, built in 1813, and contains 800 sittings. A second church was opened in June 1839, at Blairdaff, in the southern part of the parish, about four miles and a half from the mother church; it contains 500 sittings. This edifice was erected at a cost of about £500, by subscription, aided by a grant from the General Assembly's church extension fund; the ground for the site and burying-ground was given by Robert Grant, Esq., of Tillyfour. The accommodation is shared by parts of the adjacent parishes of Oyne and Monymusk, which subscribed to the building, and, with the portion of this parish attached to the church, constitute an ecclesiastical district comprehending 1000 persons. The members of the Free Church have a place of worship. Garioch parochial school affords instruction in Greek, Latin, practical mathematics, and geography, with the usual elementary branches; the master has a salary of £27, a portion of the Dick bequest, a house, and about £20 fees. There are two other schools, partially supported by the heritors, in which the ordinary branches are taught. The

antiquities in the parish comprise some remains of old tombs and monumental stones of warriors, and a curious stone, half a mile west from the church, called the "Maiden Stone", and marked with several hieroglyphics, supposed by some to be Danish; the stone is about ten feet high above the ground, and reaches, as is thought, six feet below the surface. The ruins of the churches of Logie-Durno and Fetternear, with their cemeteries, are still visible; and half a mile to the south-east of the present church, is the ruin of the castle of Balquhain, the body of which is said to have been burnt down by the Duke of Cumberland in 1746. Near the castle is a Druidical circle in good preservation. Sir Walter Farquhar, physician to George IV. while Prince Regent, was the son of the Rev. Robert Farquhar, for many years minister of the parish. The Earl of Mar takes the title of Baron Erskine and Garioch from this district.

GARLIESTOWN, a village, in the parish of SOBIE, county of WIGTOWN, 7 miles (S. S. E.) from Wigtown; containing 656 inhabitants. This is a considerable modern sea-port village, founded by John, seventh Earl of Galloway, when Lord Garlies. It is built in the form of a crescent, and pleasantly situated along the head of a bay which bears its name and affords safe anchorage for vessels; and is an excellent fishing-station. The shore is flat and sandy; the depth of water in the bay, between twenty and thirty feet; and a large number of vessels may ride at anchor in safety in the harbour, which is open to Liverpool, Whitehaven, and other places on the western coast of England. About fifteen vessels belong to the port, of from fifty to 100 tons' burthen each; and foreign ships occasionally touch here. In the village is a rope and sailcloth manufactory. There are two schools, largely endowed by the Earl and Countess of Galloway, in which a number of children have gratuitous instruction.

GARMOND, a village, in the parish of MONQUHITTER, district of TURRIFF, county of ABERDEEN, half a mile (N.) from Cuminestown; containing 226 inhabitants. It is situated in the north-east part of the parish, on the road from Cuminestown to Banff, and is a modern village.

GARMOUTH, a village, in the parish of SPEYMOUTH, and county of ELGIN, 4 miles (N. by W.) from Fochabers; containing 604 inhabitants. This is a burgh of barony, situated near the mouth of the Spey, on the road to Fochabers, and is now so united to the village of Kingston that the two may be regarded as one place. The houses, generally, are not well built; but the streets are regularly laid out, and the appearance of Garmouth is rather neat and pleasing. The harbour here suffers under some natural disadvantages: since the flood of 1829, it has been far from secure, and it is at present unfit for the entrance of any vessels except those of small burthen. A considerable trade was formerly carried on in timber, but it has very much declined. There is, however, a good traffic in the exportation of corn and the importation of coal, and some excellent vessels are built; the place has, besides, the benefit of a valuable salmon-fishery in the Spey. About twelve vessels belong to the port, of the aggregate burthen of nearly 700 tons. In 1846 an act of parliament was passed authorizing the construction of a railway from Aberdeen to Inverness, with branches to Garmouth and other places. The parochial school is here.—See KINGSTON-PORT.

GARNKIRK, county of LANARK.—See CADDER.

GARTCLOSS, a village, in that part of the parish of OLD MONKLAND which formed the quoad sacra parish of Gartsherrie, Middle ward of the county of LANARK, 2 miles (N. W.) from Coatbridge; containing 206 inhabitants. It lies in the north-eastern part of the parish, near the border of Cadder parish, and in the neighbourhood of the Gartcloss coal-mine, one of the most considerable in the district. The inhabitants are chiefly employed in this mine.

GARTLY, a parish, partly in the county of BANFF, and partly in the district of STRATHBOGIE, county of ABERDEEN, 4 miles (S.) from Huntly; containing 1037 inhabitants. This parish is divided nearly in the centre, by the river Bogie, into two portions, one of which, called the Barony, is within the county of Banff, and is said to have been separated from Aberdeenshire by its proprietor Barclay, one of the fendal barons of the ancient Earls of Huntly, who, being at that time sheriff of Banff, was desirous of having his property under his own immediate jurisdiction. The other portion of the parish, called the Braes, is in the county, and within the control of the sheriff, of Aberdeen. Few events of historical importance have occurred in connexion with this place, which is chiefly distinguished for a visit by Mary, Queen of Scots, who, on her return from an excursion to Inverness and Ross-shire, spent a night at Gartly Castle, the baronial residence of the Gordon family, of which some small portion is still remaining, though in ruins. The PARISH is irregular in form, is about twelve miles in length and four miles and a half in breadth, and comprises about 17,000 acres, of which 5600 are arable, 11,000 pasture, moorland, and moss, and the remainder, with the exception of a few acres of natural wood and plantations, roads and waste. Its surface is diversified with hills and valleys, and with numerous glens of highly picturesque appearance: from the hills many rivulets descend into the Bogie, which rises in Auchindoir, and after winding for fourteen miles through this parish and that of Rhynie, joins the Doveron near Huntly. The eastern and western parts of the parish are especially hilly, and have extensive moors abounding in grouse and other game; the hills are covered with moss, which supplies both Gartly and the town of Huntly with fuel, and in the west the mosses are particularly deep. Tyliminet glen is richly embellished with a fine wood of birch and several young and thriving plantations, and is seen among the surrounding hills with the most romantic effect. The banks of the river, also, are planted with alder; but there is little other wood in the parish. The moors are well adapted to the growth of timber, and if planted it would tend much to the improvement of the parish. A considerable portion, also, of the moors might at a moderate outlay be brought into a profitable state of cultivation.

The SOIL, especially in the valleys and lower grounds, is extremely fertile, producing abundant crops; and the system of agriculture is advanced: the five-shift course of husbandry generally prevails, being found best adapted to the soil and climate. Since the introduction of turnip cultivation, the breed of cattle has been greatly improved; the principal kind is the old Aberdeenshire crossed by the Argyllshire, which is found to answer well. A few sheep, not more than about 1700, which are chiefly the black-faced, are pastured on the hills.

The substratum is mostly gravel. Limestone is found, but in so small a quantity, and at such a depth, as to render the working of it unprofitable to the farmer, who can obtain it in the neighbouring parish of Cairnie at less expense. On several of the hills are quarries of slate of good quality, the working of which affords remunerative employment to many labourers. Much improvement has been made in draining, and considerable portions of waste land have been reclaimed, including some on the farm of Bucharn improved by George Gordon, Esq., who in 1828 received the gold medal from the Highland Society: this gentleman and a few others have also subdivided and inclosed their fields with stone dykes. The farm-buildings are substantial and commodious; and there are tolerable facilities of intercourse with the neighbouring market-towns by the turnpike-road which passes through the parish for nearly four miles. The annual value of real property in Gartly is £4437.

Ecclesiastically the parish is within the bounds of the presbytery of Strathbogie, synod of Moray. The minister's stipend is about £190, with a manse, and a glebe valued at £16 per annum; patron, the Duke of Richmond. Gartly church was erected in 1621; but with the exception of the steeple, little of the original edifice is remaining: it has undergone many alterations within the last twenty or thirty years, and now affords accommodation to nearly 600 persons. The members of the Free Church have a place of worship. The parochial school affords a useful education; the salary of the master is £32. 10., with £20 fees, and a house and garden. There is a parochial library containing more than 200 volumes. Some slight remains exist of Gartly Castle; and till lately there were several tumuli on the farm of Mill Hill, near the church, where, according to tradition, a skirmish took place in 1411. They have almost all been levelled: in one of them were found two ancient dirks, and in another some brass buckles, supposed to have been used to fasten the sword-belts of the warriors. On the farm of Faich hill has been discovered an urn containing bones; and on the lands of Cockston was found an urn of clay, in which were numerous round pieces of stamped leather, thought to have been anciently current for money. A stone coffin was found on the lands of Coldran by Captain Gordon, but nothing is known of its history. In a vault in the church are preserved the ashes of Viscount Aboyne, and of John Gordon, laird of Rothiemay, with some of their followers, who were burned in the old tower of Frendraught, in the parish of Fergie, in 1630. At Muirellis, James I. is reported by tradition to have passed an evening with the tenant of that farm, which he visited incognito, and he is said to have been so much pleased with the hospitality of his host, that he obtained from the Earl of Huntly a grant that the tenant and his descendants should possess the land rent-free. It is also traditionally stated that an infant son of the Baron of Gartly was drowned by an inundation of the Bogie, in returning from the chapel of Brawlinknows, after receiving the rite of baptism.

GARTMORE, for a time a quoad sacra parish, in the parish of PORT OF MONTEITH, county of PERTH, 15 miles (W. by S.) from Doune; containing 347 inhabitants, of whom 253 are in the village. This district is about two miles and a half in length, and one mile and

a half in breadth, and comprises about 1360 acres, of which 760 are in tillage and pasture, 200 under plantation, and 400 uncultivated. Its surface partakes of the general mountainous character of the Highland country of which it forms a part, and the prevailing scenery is beautifully diversified: the substratum is red sandstone. The river Forth flows on the north and north-east, the Kely on the south, and the road from Dumbarton to Stirling passes within four miles. A market or fair takes place on the 16th of June, at which cattle of all descriptions are exposed for sale, and servants for the ensuing year are engaged. Gartinore House, a substantial and very commodious mansion, is of considerable antiquity, and stands in grounds tastefully embellished, and commanding some interesting views. The village is pleasantly situated, and has a rural aspect; the inhabitants are chiefly employed in agriculture, and partly in the handicraft trades requisite for the wants of the district. Ecclesiastically Gartmore is in the presbytery of Dunblane, synod of Perth and Stirling, and the patronage is vested in the communicants: the church, erected in 1790, at an expense of £400, raised by subscription, is a neat plain edifice, containing 415 sittings. The members of the Free Church have a place of worship; and there are two schools, one of which, for sewing and knitting, is taught by a female.

GARTSHERRIE, for a time a quoad sacra parish, in the parish of OLD MONKLAND, county of LANARK; containing, with the villages of Coatbridge, Coatdyke, Gartcross, East Merrystone, and Summerlee, 5906 inhabitants, of whom 1499 are in the village of Gartsherrie, 2 miles (W.) from Airdrie. This is a considerable mining district, in the works connected with which nearly the whole population are employed: the iron-works are of great magnitude, including a considerable number of blast-furnaces for smelting the ore. The coal-mine here is worked on a very extensive scale; there are five strata of coal, between each of which is a stratum of sandstone and shale: the seams of coal vary in thickness from one foot four inches to four feet. Great facility of intercourse is afforded by the Glasgow, Garnkirk, and Coatbridge railway, the Monkland and Kirkintilloch railway, the Caledonian line, the Ballochney line, and the Wishaw and Coltness. Ecclesiastically, Gartsherrie is in the presbytery of Hamilton, synod of Glasgow and Ayr, and the patronage is vested in the subscribers to the church: the stipend of the minister is £150, secured by bond. The church, erected at a cost of £3300, is an elegant structure, with a tower rising to the height of 136 feet, and contains 1500 sittings. Near it is the Academy, erected in 1844, at a cost of £2300; and there is a large Sabbath school, taught by the elders.

GARTWHINEAN, EASTER and WESTER, hamlets, in the parish of FOSSOWAY and TULLIEBOLE, county of PERTH, 2 miles (E.) from Dollar; one containing 96, and the other 49 inhabitants. These places lie on the south side of the river Devon, which here separates the parish from that of Muckart. A rocky pinnacle in the neighbourhood, called Gibson's Crag, was the rendezvous of the chiefs of the Murrays.

GARVALD and BARA, a parish, in the county of HADDINGTON, 5 miles (S. E. by E.) from Haddington; containing 862 inhabitants, of whom 257 are in the village. The district of Garvald derives its name, signifying in the Gaelic language "the rough water", from the

situation of its village on a rapid and impetuous stream, forcing its way through a channel of rugged fragments of rock, and which, after floods or continued rains, in the violence of its course throws out stones of great weight upon the low grounds. Garvald and Bara were united in 1702, and service was alternately performed in the church of each parish till the year 1744, when that of Bara fell into a state of dilapidation. The parish is nearly nine miles in length from east to west, and almost five in breadth from north to south; and is bounded on the north and east by the parish of Whittingham, on the south by that of Lauder in Berwickshire, and on the west by the parishes of Gifford, Haddington, and Morham. Its surface is varied, rising in elevation towards the Lammermoor hills, displaying in some parts an intermixture of heath and grass, and in others being richly cultivated and covered with luxuriant verdure. In several places the soil is a deep loam, resting upon clay, and exceedingly fertile; and in others, of a light gravelly nature, well adapted for the growth of turnips and potatoes, both of which are raised to a very considerable extent. The chief crops are oats and barley, potatoes, turnips, beans, and peas, with some wheat. The system of agriculture is highly improved; the farms are thoroughly drained and well inclosed, and much ground that was formerly barren heath has, by a liberal use of lime, been brought into an excellent state of cultivation. On the higher lands is fine pasturage for sheep, of which more than 7000 are in general kept, chiefly of the black-faced and Cheviot breeds, with an occasional cross of the Leicestershire, which appears to answer well; about 300 black-cattle, also, are annually fed and fattened for the butcher. The farm-houses and offices are substantial, and all the recent improvements in agricultural implements have been generally adopted. The annual value of real property in Garvald and Bara is £7571.

Nunraw, a seat in the parish, was anciently a nunnery, a cell belonging to the priory of Haddington; a great portion of the building has been modernised, but it still displays many indications of antiquity. *Hopes* is an elegant mansion built by the present owner; it is pleasantly situated in a sequestered glen, near the Lammermoor hills, and in a well-disposed demesne, enriched with thriving plantations formed by the proprietor, who has also added greatly to the beauty and interest of the parish by various other plantations on the estate. The village is neatly built, and has facility of communication with neighbouring places by good roads kept in repair by statute labour, and by the turnpike-road from Dunse to Haddington, which passes for six miles through the parish. Most of its inhabitants are employed in weaving, and in the various trades requisite for the supply of a country district; and several are engaged in some freestone-quarries situated near the village. Ecclesiastically the parish is within the bounds of the presbytery of Haddington, synod of Lothian and Tweeddale. The stipend of the incumbent is £189; the manse is a comfortable residence, erected in 1820, and the glebe comprises thirteen acres and a half of land, valued at £25 per annum. The church is an ancient structure, repaired and enlarged in 1829; it is adapted to a congregation of 360 persons, but is inconveniently situated at one extremity of the parish. There is a place of worship for members of the Free Church. The parochial school affords a useful education to about sixty children; the

master has a salary of £34, with a house and garden, and the fees average about £16 per annum. Two friendly societies are kept up. Near the Lammermoor hills are the ruins of Whitecastle, a strong ancient fortress, erected for the defence of a pass from the Merse and from the English frontier. On the lands of Garvald farm are the remains of a circular encampment, about 1500 feet in circumference: there was a similar camp on the lands of Carfrae, the stones of which were used to form an inclosure; and in removing them for that purpose, the brass handle of a sword was discovered. At Newlands are tumuli called respectively the Black and the Green Castle; the spot was planted by the Marquess of Tweeddale, within the last few years, with Scotch firs. There are two other encampments, one on Park farm, and the other on the estate of Hopes.

GARVELLOCH, or HOLY ISLANDS, a cluster of small islands, in the parish of JURA and COLONSAY, district of ISLAY, county of ARGYLL. These islands, which are situated in the Atlantic, to the west of Balnahaigh, obtained their second name from having been the residence of the monks of Iona previously to the foundation of that monastery; and there are still some remains of a chapel and cemetery, and of the ancient conventual buildings. The isles are the property of Colin Campbell, Esq., of Jura, to whom they pay a rental of £150 per annum, derived chiefly from their excellent pasture for sheep and black-cattle. Here is also a marble-quarry, which appears to have been wrought at a very early period, and some of the produce of which is to be seen in the castle of Inverary.

GARVOCK, a parish, in the county of KINCARDINE, 2 miles (E. S. E.) from Laurencekirk; containing 446 inhabitants. This place, the name of which, in the Gaelic language, is descriptive of the general appearance of its surface, formed part of the ample possessions of the Keiths, earls-marischal of Scotland, who occasionally resorted to it for the diversion of hunting; but since 1715, when the estate was forfeited, the lands have been divided among several proprietors, of whom the Earl of Kintore is the principal. Though few traces of its original character are now remaining, it appears to have been one extensive forest; and within its limits, in the reign of James I., was perpetrated the inhuman murder of Melville of Glenbervie, sheriff of Mearns, whom Barclay, laird of Mathers, and others, had treacherously invited to join them on a hunting party. The PARISH is rather more than seven miles in length, and nearly four miles in extreme breadth, comprising an area of 8500 acres, whereof 2900 are arable, 100 woodland and plantations, and the remainder, of which about one-half might be reclaimed, moorland pasture and waste. In the central portion the surface is a hollow plain, surrounded by ascending grounds except on the east. In other parts it is gently undulated, rising, towards the south-west, into the hills of Garvock, which have an elevation of 750 feet above the level of the sea, and command from their summit an unbounded and richly-diversified prospect. There are numerous springs of excellent water in various parts, and at the north-west base of Garvock hill is a spring strongly impregnated with chalybeate properties; but the only river connected with the parish is the water of Bervie, which forms a portion of its north-east boundary, and falls into the sea at Bervie.

The soil is naturally wet, resting on a subsoil of clay; on the higher grounds, light and gravelly; and in the lowlands, chiefly alluvial deposit. The crops are oats, barley, and bear, with potatoes and turnips: wheat has been raised, and also peas, though not with any degree of success; beans, however, have been introduced with every prospect of a fair return. Of late years, the system of husbandry has been greatly advanced, and considerable tracts of waste have been reclaimed and brought into profitable cultivation by draining and the use of lime; but the farm-buildings, with few exceptions, are still of very inferior order, and the lands are only partially inclosed. Great attention is paid to the management of the dairy-farms, and the butter made here obtains a decided preference in the market. The cattle are generally the Angus, with a mixture of the Aberdeenshire breed; much care is bestowed on their improvement, and large numbers are sent to London: few sheep are bred. The annual value of real property in the parish is £3285. There are some small remains of ancient wood; and the plantations, which are chiefly of recent growth, consist of larch, spruce, and Scotch firs, interspersed with ash, beech, and plane, all which, with the exception of the larch and Scotch fir, are in a thriving condition. The rocks are mostly sandstone, conglomerate, and trap. A coarse kind of limestone occurs in the hill of Garvoek, but from the difficulty of access, it is not wrought. Red sandstone, of good quality for building, is occasionally quarried.

There is no village, or even hamlet of any importance, in the parish. A fair was formerly held annually on the hill of Garvoek, on the third Tuesday in July (O. S.), and continued for three following days, for the sale of sheep, cattle, merchandise, and for hiring servants; it was called St. James' fair, but has been removed by the proprietor of the custom. Facility of communication is maintained by good roads. Ecclesiastically the parish is within the bounds of the presbytery of Fordoun, synod of Angus and Mearns. The minister's stipend is £177. 11. 9., with a manse, and a glebe valued at £20 per annum; patron, the Crown. Garvoek church is a neat structure erected in 1778, and contains 300 sittings. The parochial school is attended by about sixty children; the master has a salary of £31, with a house, and an allowance of £2. 2. for garden, and the fees average £15. The present minister, the Rev. John Charles, has assigned the sum of £100, the interest to be paid to the master for the gratuitous instruction of poor children: it is invested in Aberdeen feu-duties, and pays for the education of ten or eleven scholars annually. A parochial library, now containing 490 volumes, was established in 1835; and a juvenile library of 120 volumes was instituted in 1843. There are numerous cairns, and many Druidical remains, in the parish; and on the farm of Nether Tulloch, under three hillocks, have been found three stone coffins, of which two contained only some black earth, and the third an urn and a skeleton.

GASK, NETHER, or FINDOGASK, a parish, in the county of PERTH, 3 miles (N. W. by N.) from Dunning; containing, with the village of Clathy, 436 inhabitants. Its name is supposed by some to be derived from a word in the Gaelic language, signifying "a slope"; but the etymology is extremely doubtful. The length of the parish is about two miles, and the breadth nearly the same; it contains about 2560 acres. The ground slopes

on each side from the Roman causeway which runs through the middle of the parish, on the highest ground: the southern side is a pleasant tract, laid out in cultivated fields; and on the slope towards the north are plantations of fir, oak, and beech, interspersed with corn-fields and pastures. Nether Gask is bounded on the north by Madderty and Methven parishes, on the south by Dunning, on the east by Tibbermore and Forteviot, and on the west by Trinity-Gask. The river Earn runs along the southern boundary, and though not navigable, is a considerable stream, winding in this part for about three miles; it contains salmon, white and yellow trout, perch, flounders, pike, and eels. In this parish the soil is partly clayey and partly loamy: in the northern quarter is an extensive moss, a portion of which has been reclaimed and cultivated, and the rest supplies the people with peat for fuel. Grain of all kinds is produced, as well as green crops, and the whole is of good quality: more than 1200 acres are occupied by wood, consisting mainly of larch, Scotch fir, and oak; and the woods abound with every description of game. The modern system of agriculture has been followed for the last thirty or forty years, and all the land not in wood is cultivated. The cattle are the Teeswater and the Ayrshire; the sheep are the Leicesters, and the common breed of horses is usually reared. The annual value of real property in the parish is £3500. The rocks consist of sandstone and grey slate, both of which are quarried; and marl is found in different places. The mansion of Gask is the residence of the chief proprietor, whose ancestors for many generations have resided on the property; it is a commodious and substantial building, erected in the beginning of the present century, and ornamented with many large and beautiful trees. The turnpike and parish roads have been improved of late years: the road from Perth to Stirling intersects the parish.

Ecclesiastically this place is within the bounds of the presbytery of Auchterarder, synod of Perth and Stirling; patron, the Crown. The stipend of the minister is £155, with a manse, built in 1800, and a glebe of twenty acres, valued at £15 per annum. Nether Gask church was erected also in 1800, and is a plain edifice in good repair, accommodating nearly 400 persons with sittings. There is a parochial school, in which Latin is taught, with all the ordinary branches of education; the master has the maximum salary, a house and garden, and about £12 fees. A parochial library was founded in 1824, and is supported by subscription. The Roman causeway which runs through the parish is twenty feet broad, and has been macadamized within these few years; it leads westward to a camp still visible in the parish of Muthill, and eastward to another camp in the parish of Scone. By its side are stations, capable of containing from twelve to twenty men, and inclosed by ditches, which are very distinct. Within the policy of Gask, vestiges of two other camps may be traced, one on the south, and the other on the north, of the causeway; and the prætorium of the latter is yet discernible, though the ground has been planted with fir. One of these camps seems to have been capable of containing 500 men, and the other, half that number.

GASK, TRINITY, a parish, in the county of PERTH, 2 miles (N.) from Auchterarder, and 4 (S. E.) from Crieff; containing 620 inhabitants. This parish is said to de-

rive its name Gask, of Gaelic origin, from the peculiar nature of its surface, consisting almost entirely of braes and undulated ground: the distinctive prefix, Trinity, arose from the union of *three* districts, which constitute the present parish. Trinity-Gask is chiefly situated on the north bank of the river Earn, in the picturesque strath to which that river gives name; and is about five miles in length, and three in breadth. Its surface is pleasingly varied, containing but few tracts of level land; and the scenery is enlivened by the windings of the Earn, which flows from west to east, displaying much beauty in the natural wood and thriving plantations with which its banks are crowned. The soil, greatly differing in various parts, has in some been much improved by draining, and by the construction of embankments to protect the lower lands from the occasional overflowings of the Earn; and through the improvement that has taken place in the system of agriculture, a considerable portion of barren land has been reclaimed and brought into profitable cultivation. Of the whole number of acres in the parish, nearly 4300 are arable, and 1000 in woods and plantations; the remainder is chiefly moorland and waste, and it is supposed that about 2000 acres may be rendered arable, when the measures at present in contemplation for that purpose shall be carried out. The river abounds with various kinds of fish, the principal of which are salmon, trout, perch, and pike; but the quantity of salmon has greatly diminished since the use of stake-nets was introduced in the Tay. The crops raised in the parish are, grain of all kinds, potatoes, and turnips. Bone-dust and lime are used, but on account of the expense of bringing those articles from a great distance, the quantity is not adequate to the wants of the soil. Great attention is paid to the rearing of cattle; the short-horned breed was introduced by Lord Strathallan, and is found to answer well: the sheep, which are very limited in numbers, are chiefly of the Leicestershire breed. The farm-buildings are substantial, and on all the large farms are threshing-mills, several of which are driven by water. There are also corn-mills in various parts. The annual value of real property in the parish is £4700.

The oldest of the woods are of Scotch fir; and the plantations of more modern date are principally spruce, larch, oak, and beech, all of which, under judicious management, are in a thriving state. In this parish the substrata are chiefly sandstone and whinstone, of which there are several varieties, and occasionally a gray stone, of great compactness, containing a portion of copper, but not sufficient in quantity to repay the cost of working it. Both the sandstone and whinstone are quarried for building purposes, and for the roads; but the stone is of inferior quality. Millearne, a seat in the parish, is a spacious mansion in the later English style, beautifully situated in grounds laid out with great taste, and forming a conspicuous feature in the landscape. Colquhalzie is a handsome mansion finely seated on the south bank of the Earn, and commanding some highly interesting views. Facility of intercourse with the neighbouring towns is afforded by good roads; a ferry-boat plies across the river, and at Kinkell is a bridge of four arches, built by subscription in 1793, and kept in excellent repair. An agricultural society has been established in the parish, for the promotion of husbandry, by the distribution of prizes to the successful candidates in plough-

ing matches. Ecclesiastically the parish is within the bounds of the presbytery of Auchterarder, synod of Perth and Stirling; patron, the Earl of Kinnoull. The stipend of the incumbent varies from £190 to £270; the manse is a commodious residence, and the glebe comprises fourteen acres and a half of profitable land, with about ten acres of wood. Trinity-Gask church is adapted for a congregation of about 350 persons, but is inconveniently situated. There is a place of worship for the United Presbyterian Church. The parochial school affords a useful education; the master has the maximum salary, and the fees average about £12 per annum. The poor receive the interest of a bequest of £80. Some remains exist of an ancient castle called Gascon Hall, of which, however, there are no authentic records; and a considerable portion of the Roman road leading to the camp at Ardoch is within the parish. A kistvaen, containing human bones and ashes, was found on the lands belonging to the Earl of Kinnoull; it consisted of four upright stones, with one lying horizontally on the top.

GASSTOWN, a village, forming part of the former quoad sacra parish of St. Mary, in the burgh and county of Dumfries, and containing 162 inhabitants.

GATEHOUSE OF FLEET, a burgh of barony, manufacturing town, and port, partly in the parish of Anwoth, but chiefly in that of Girthon, stewartry of Kirkcudbright, 7 miles (W.) from Kirkcudbright; containing 1832 inhabitants, of whom 419 are in the parish of Anwoth. This place, which was built on the site of the ancient town of Fleet, about the middle of the last century, takes its name from an old tenement, the only house at that time in existence, which was situated at the *gate* of the avenue leading to Cally. The mansion of Cally was the family seat of the founder, James Murray, Esq., of Broughton, and is now the residence of his descendant, who is lord of the manor and superior of the burgh. Gatehouse is pleasantly seated on the river Fleet, near its influx into Fleet bay, and consists principally of three spacious and well-formed streets, parallel with each other, and of which the eastern leads to a handsome stone bridge of two arches, connecting it with that portion of the burgh lying on the opposite bank of the river. The houses are well built and of good appearance; the inhabitants are amply supplied with water; and the immediate vicinity of the town abounds with pleasingly-diversified and interesting scenery. The chief manufacture is that of cotton, introduced here by James Murray, Esq., who for that purpose induced Messrs. Birtwhistle and Sons, from Yorkshire, to erect two large mills, which for some years have been conducted by their lessees, John Mc Kie and Company, by whom the business is carried on with great success. One of these mills was destroyed by an accidental fire in 1840, but has been rebuilt, and fitted up with machinery of the most improved kind. Both are in full operation, affording employment to 200 persons. The works are driven by two water-wheels of fifty-five horse power, supplied by a tunnel cut from Loch Whinnyan at an expense of £1400; and the average quantity of cloth annually made is 60,000 pieces, twenty-four yards each in length. A brewery has been established upon a moderate scale. There is a tannery on the west bank of the river; green hides are dressed in the town, to the amount of £400 annually; and about 60,000 bricks are made in some works a little to the north.

The trade of the port consists chiefly in the exportation of cotton goods, leather, and agricultural produce; and in the importation of cotton, wool, timber, lime, coal, wine, and groceries. Several vessels belong to the port, averaging eighty tons' burthen: in 1840 the number of vessels that entered inwards was forty-two, of 931 tons' aggregate burthen; and in the same year sixteen cleared outwards, of 395 tons. The harbour, called Boat-green, about 300 yards below the bridge, is accessible for vessels of 160 tons, and has been greatly improved, at a cost of nearly £3000, by the Murray family, who in 1824 constructed a canal 1400 yards in length, into which they diverted the waters of the Fleet, which previously inundated the lands at every tide. By this work, the navigation from Fleet bay to the town has been much facilitated, and a considerable tract of marshy ground reclaimed. From two rocks on opposite sides of the canal, a swivel bridge has been thrown across, which has removed the road from the demesne of Cally, and affords an easier approach to the town. A market is held on Saturday, which is amply supplied with provisions of all kinds: there are large markets for cattle, for eight successive weeks, beginning on the first Friday in November; and a fair is held on the 27th June, or Monday after. Gatehouse was erected into a burgh of barony, by royal charter, in 1795, and is governed by a provost, two bailies, and four councillors, annually elected by the resident proprietors of £2 annually. The magistrates exercise civil and criminal jurisdiction within the burgh, but only to a small extent; and there is a prison for the temporary confinement of petty offenders, but it is seldom used. The post-office has a daily delivery; and a branch of the Western bank of Scotland has been established. Facility of communication is afforded by good parish roads, kept in repair by statute labour; and the turnpike-road from Dumfries to Portpatrick passes through the town.

GATESIDE, a village, in the parish of BEITH, district of CUNNINGHAME, county of AYR, $1\frac{1}{4}$ mile (N. E. by E.) from Beith; containing 270 inhabitants. It lies in the northern part of the parish, on the borders of Renfrewshire, and a little east of the road leading from Beith to Paisley.

GATESIDE, a hamlet, in the parish of KIRKGUNZEON, stewartry of KIRKCUDBRIGHT; containing 23 inhabitants.

GATESIDE, a village, in the parish of NEILSTON, Upper ward of the county of RENFREW, $\frac{3}{4}$ of a mile (N. N. E.) from Neilston; containing 673 inhabitants. This village has arisen from the establishment of the cotton manufacture in this part of the parish, and the consequent erection of a spacious mill for spinning and weaving cotton, in 1786. It is neatly built, and is chiefly inhabited by persons employed in the cotton-works, and in the printing and bleaching establishments connected with them.

GATTONSIDE, a village, in the parish and district of MELROSE, county of ROXBURGH, 1 mile (N. by W.) from Melrose; containing 252 inhabitants. The situation of this village, in the finest part of the vale of Melrose, is romantically beautiful. It is seated on the southern slope of a hill on the north bank of the Tweed, opposite to Melrose, with which town it has been lately connected by a wire-bridge. The houses, which are generally thatched, are situated amidst orchards and

gardens; and a greater quantity of fruit is grown here than in any other portion of the vale. The inhabitants are partly employed in agriculture, and partly in the manufactures of Galashiels.

GAVINTON, a village, in the parish of LANGTON, county of BERWICK, $1\frac{1}{4}$ mile (S. W. by S.) from Dunse; containing 206 inhabitants. This village takes its name from David Gavin, Esq., a former proprietor of the parish, who, finding the ancient village of Langton an impediment to the extensive improvements he was making on his estate, induced the inhabitants, by a very advantageous grant of lands, to abandon their old residence, and build themselves houses on the site of the present village. It is situated on the south side of a stream, a tributary to the Blackadder water, and also south of the high road from Dunse to Lauder. The parochial school is in the village of Gavinton.

GEILSTONE-BRIDGE, a village, in the parish of CARDROSS, county of DUMBARTON, $\frac{1}{2}$ a mile (N. N. W.) from Cardross; containing 133 inhabitants. It is situated on the east side of the coast road from Dumbarton to Helensburgh, and on a stream which shortly falls into the Clyde. In the village is a library of more than 400 volumes.

GELSTON, a village, in the parish of KELTON, stewartry of KIRKCUDBRIGHT, $3\frac{1}{2}$ miles (S. by E.) from Castle-Douglas; containing 146 inhabitants. It lies in the eastern part of the parish of Kelton, in which it is now comprehended; but it was anciently a parish of itself, and here are the ruins of its church, which fell into decay previously to 1689, when the union of the two parishes and that of Kirkcormack took place. A small burn, flowing in a northern direction, passes near the village, and falls into the Carlinwark loch; while two others take a south-eastern course, one on each side of Gelston hill. Gelston Castle was built by the late Sir William Douglas, Bart., and is remarkable for the elegance of its architecture, and the romantic beauty of its situation. In the village is one of three parochial schools. Various antiquities have been discovered in the neighbourhood: on opening a sepulchral tumulus, near Gelston, a stone coffin was found, seven feet long and three wide, which contained human bones of unusual length and thickness.

GEORGETOWN, a village, in the OLD CHURCH parish of DUMFRIES, county of DUMFRIES; containing 154 inhabitants.

GIBBIESTOWN, a hamlet, in the parish of METHVEN, county of PERTH; containing 26 inhabitants.

GIFFORD, a village, in the parish of YESTER, county of HADDINGTON, 4 miles (S.) from Haddington; containing 525 inhabitants. This village, which is beautifully situated on the east bank of the Gifford water, and in the picturesque vale of Yester, is built chiefly on lands leased from the Marquess of Tweeddale, and held by tenure of certain feudal services. In consequence of agreeing to render these services, the inhabitants were exempted by the marquess from various taxes and imposts, and were endowed with a grant of common land, comprising sixty acres, valued at £100 per annum, and the produce of part of which, now under cultivation, is applied to the improvement of the place. The marquess, as lord of the manor, formerly appointed a baron-bailie, and held a Birla or Boorlaw court, to which was attached an officer called a constable. This court, which was

discontinued only within the last fifty or sixty years, exercised jurisdiction in petty misdemeanors, and had a prison and stocks for the confinement and punishment of offenders. The constable continued to retain his office until the appointment of county or district constables. The village consists principally of two streets of regularly-built houses, one of which extends in a line with the avenue leading to Yester House, the property of the marquess, and terminates with the parochial school-house, a handsome building surmounted with a small cupola and town clock: at the extremity of the other street is the parish church. The inhabitants are employed chiefly in the various trades requisite for the supply of the vicinity, and partly in the cultivation of the adjacent lands. The weaving of linen was formerly carried on to some extent, affording occupation to more than twenty persons at their own houses; but since the introduction of improved machinery, it has greatly diminished, and not above three or four persons are little more than half engaged in that pursuit. A sub-post-office has been established, which has a daily delivery; and the East Lothian Agricultural Society hold an annual meeting here, to award premiums for improvements in husbandry, and for the best pens of sheep. Fairs for the sale of sheep, cattle, and horses, are held on the last Tuesday in March, the third in June, and the first in October, which are numerously attended, and at which seldom less than 4000 sheep, 500 head of cattle, and an equal number of horses, are brought for sale. All the poor used to receive soup three times in the week, from the kitchen of the Marquess of Tweeddale, when the family were residing at Yester; and they still derive an ample supply of fuel from his lordship's grounds.

GIFFORDTON, a hamlet, in the parish of COLLESSIE, district of CUPAR, county of FIFE; containing 71 inhabitants. It is a modern hamlet, the houses in which are generally well arranged and of neat appearance.

GIGHA and CARA, a parish, in the district of CANTYRE, county of ARGYLL, $21\frac{1}{2}$ miles (S. by W.) from Tarbert; containing 550 inhabitants. Some persons derive the name of the former of these two districts from the compound Gaelic term *Eilean-Dhia*, signifying "God's island"; others are of opinion that it may be traced to the word *geodha*, "a creek", applied on account of the numerous inlets and bays here. The word Cara is supposed to signify "a monastery". The parish consists of two islands, situated in the Atlantic Ocean, between the southern portion of the island of Islay and the peninsula of Cantyre, and separated from the latter by a channel three miles and a half across, in which the current is often extremely strong, especially at new and full moons. They are both but little elevated above the sea: the highest point in Gigha, called Creag-bhan, or "the white rock", rises only to an elevation of 400 feet; and Cara, situated a mile and a half south of the former island, has in this respect the same general appearance. Gigha measures in length from north to south almost seven miles, and is two miles and a half in extreme breadth; Cara is nearly a mile in length, and half a mile in breadth, and the two isles comprise together about 4000 acres, of which half are arable, ten acres under plantation, and the remainder pasture and waste.

The coast of Gigha is computed at twenty-five miles in extent, being very circuitous in consequence of the

great number of its creeks. On the west side it is bold and rocky, and contains near the middle a cave called the Great Cave, and another named the Pigeons' Cave from the many wild-pigeons frequenting it. Though rugged, however, along the larger part of the western line, there are at the two extremities, and on the eastern side, several bays well adapted for bathing, and containing a fine white sand, formerly exported in large quantities to Dumharton for the manufacture of glass. In about the centre of the eastern coast is the bay of Ardmish, ornamented at its head by the church and manse, and resorted to by vessels that take away produce, or bring to the island coal, lime, and other commodities. A little northward of this is the bay of Drimyeon, a spacious and secure retreat; and firm anchorage is also usually found in all the other bays in the island, especially in that of Tarbert, within a mile of its north-eastern extremity. Between Gigha and Cara is the small uninhabited islet of Gigulum; and between this and Gigha is a sound affording good anchorage for large shipping. This sound is much used by government cutters, and by vessels trading with the northern Highlands, as well as by vessels from England and Ireland, which visit this and the adjacent parish of Killean for the purchase of seed-potatoes. The principal entrance to the sound is from the east; the western entrance is much more dangerous, there being many rocks in it. The most prominent headland in the parish, called Ardmish point, is on the north side of the bay of that name. At the south-west end of Gigha is Sloc-an-leim, or "the springing pit", a subterraneous passage 133 feet long, into which the sea rushes with considerable fury. The shore of the island of Cara is rocky and steep, except towards the north-east; and at its southern extremity is a precipitous rock, 117 feet high, called the Mull of Cara, thronged by sea-fowl, and the resort of hawks. Around this coast also, and that of the other islands, mackerel, sea-perch, lythe, rock-cod, and many other fish are found; and cod, ling, and large haddocks may be obtained on the banks, two or three miles distant. Some rocky portions of the surface of Gigha are covered with various species of lichen, of which *parmelia*, *sticta-ramalina*, and *lecanora* are much esteemed as valuable dyes; and the juniper is abundant and prolific upon the eastern coast. Many tracts are covered with stunted heath; but the surface is in different places pleasingly diversified with knolls and hillocks, profusely ornamented with the wild or musk rose. On the coast are found the *ulva-latissima*, used as a pickle, and the different kinds of Carigeon moss.

The SOIL consists of loam, in some parts containing an admixture of sand, clay, and moss; it is tolerably fertile, and produces good crops of bear, oats, potatoes, and turnips. The land is particularly adapted to the growth of the last, but in consequence of the demand for seed-potatoes, especially for Ireland, more attention is paid to the cultivation of these than of turnip crops. The lands in the parish are held by two families, one having $\frac{2}{3}\frac{5}{7}$ parts, and the other $\frac{6}{3}\frac{1}{7}$ parts. Of these properties, the larger is undergoing rapid improvement: good houses, and fences or dykes, have of late been constructed; much is being done in the way of draining, and it is upon this property that a suitable rotation of crops is best followed. On the other property there are fewer signs of progress visible. In the parish is a corn-

mill, to which a new road was lately formed at a cost of £250; the mill itself has been repaired, and among other improvements that have been found of general advantage is the draining of the Mill-dam loch, affording an opportunity to the people to obtain from it turf for fuel. A few sheep are reared, and many from other places are wintered here; about 1000 hogs, also, are annually brought at the close of autumn from Jura and other contiguous parts, to be tended at the rate of 2s. 6d. each for five months. The strata of the parish comprise mica-slate, felspar-slate, quartz, and hornblende, with chlorite-slate, crossed in many places at right angles by basaltic dykes; and boulders of hornblende are frequently to be seen both on and a little below the surface, measuring two and three feet in diameter. Traces of copper are observable in Gigha, and of iron-ore at the south end of Cara. The plantations, which are but few, consist of oak, ash, larch, plane, Scotch fir, and pineaster, the latter being less affected by the sea air and storms than any of the other kinds. The annual value of real property in Gigha and Cara is £2091.

The population exhibit more of the maritime than of the agricultural character; the young men generally become sailors, and a large proportion of the rest are engaged in fishing for cod and ling for several months, beginning about Candlemas. Upwards of twenty boats, carrying four men each, are engaged in this pursuit; the fishermen proceed to the banks already referred to, north-west and south-west of the parish, and usually take as many fish as enable them, after plentifully supplying their own families, to dispose of about fifty tons. When cured, the fish are sold at Glasgow, Greenock, and Campbelltown, at from £10 to £14 per ton. Besides the fishing-boats, and twenty boats of smaller size, a vessel of thirty tons and another of fourteen are employed in carrying agricultural produce to market; they convey annually, on the average, 800 tons of potatoes, 400 quarters of bear, and 150 quarters of oats, besides black-cattle, horses, sheep, and pigs, and a considerable portion of dairy produce. Coal, lime, and other articles are imported; and vessels of large burthen visit the parish from Ireland, England, and the Clyde, for potatoes, and sometimes for cod and ling. A steam-boat, running between Loch Tarbert and Islay, passes Gigha three times a week in summer, and once a week in winter. There is also a ferry from each of the properties to Tay-inloan, a hamlet on the mainland, where is the receiving-house for letters. Gigha is rather in advance of the Hebrides in general, in point of cultivation of the land, and intelligence of the inhabitants: its advantages for improvement are very considerable at present, and are likely to continue so. Ecclesiastically the parish is in the presbytery of Cantyre, synod of Argyll, and the patronage belongs to the Duke of Argyll: the minister's stipend is £266, with a manse, and a glebe valued at £10 per annum. The church was built about the year 1780, and is in tolerable repair. The parochial school affords instruction in English and Gaelic, with all the usual branches; Latin is also taught: the master has a salary of £25. 13., and about £14 fees. In 1844 a good parochial school-house and master's house were built. At the distance of a mile from the present church may be seen the walls of the former edifice, with a stone font, standing in the midst of the burying-ground. About the centre of Gigha is *Dun-Chifie*, formerly, as is traditionally

reported, a strong fortification occupied by Keefe, the King of Lochlin's son, who is said to have been killed here by Diarmid, one of the heroes of Fingal.

GIGHA ISLE, in the parish of BARRA, county of INVERNESS. It is one of the Hebrides, and lies north-east of Barra island, having Ottervore bay on the west: the isle is of small extent, and is inhabited.

GIGULUM ISLE, in the parish of GIGHA and CARA, district of CANTYRE, county of ARGYLL. This is a small uninhabited islet, situated between the islands of Gigha and Cara; and in the sound between Gigulum and Gigha is good anchorage ground for large vessels, as is more particularly noticed in the article on the parish.

GILCOMSTON, a district, and for a time an ecclesiastical parish, in the parish of OLD MACHAR, city and county of ABERDEEN; containing 5194 inhabitants. This place, which forms part of the northern suburbs of the city, is pleasantly situated on a gentle acclivity, and near a rivulet which in its course turns some mills. The streets are irregularly formed, apparently without any regard to uniformity of plan; and the houses are in general indifferently built, of mean appearance, and chiefly inhabited by labourers employed in agriculture and in the several manufactories in the neighbourhood. A distillery of whisky was established in 1750, by a joint-stock company, at the mill of Gilcomston; but for want of sufficient encouragement, it was in a few years discontinued, and a public brewery was subsequently established on the premises. To the west of the town is the celebrated chalybeate called the Well of Spaw; and the environs abound with picturesque scenery. The district was separated from the parish of Old Machar under act of the General Assembly in 1834, and was for a short time, for ecclesiastical purposes, a parish of itself; it comprised about 600 acres of tolerably fertile land in good cultivation. Gilcomston church, originally a chapel of ease, was erected in 1771, and enlarged by galleries in 1796; it is a neat structure, conveniently situated, and contains 1522 sittings. The minister's stipend is £230, derived solely from the seat-rents: patrons, the Subscribers. There are also an episcopal chapel, erected by subscription in 1812, and containing 386 sittings, and places of worship for members of the Free Church and United Original Seceders. Several Sabbath schools collectively contain nearly 300 children; and connected with them is a library of 400 volumes.

GILLS, a township, in the parish of CANISBAY, county of CAITHNESS, 15 miles (N. by W.) from Wick; containing 164 inhabitants. It is situated on the shore of the Pentland Firth, nearly opposite the island of Stroma, and at the head of Gills bay, into which a small stream runs, after passing through the village. The bay is tolerably safe for vessels in moderate weather, and in this respect is preferable to Duncansbay and Freswick bay, both in the parish; but it cannot be regarded as an eligible place of anchorage at other times.

GILMERTON, for a time a quoad sacra parish, in the parish of LIBERTON, county of EDINBURGH; containing 942 inhabitants, of whom 548 are in the village of Gilmerton, 4 miles (S. E. by S.) from Edinburgh. This district comprises about 1100 acres of land, the whole in tillage or pasture, with the exception of some small plantations around the seats of the principal heritors. It contains several coal-mines, of which those of

Gilmerton, Drum, and Somerside, are the principal: the Gilmerton mine ceased to be wrought in 1838, but was subsequently brought again into operation. Iron-ore is known to exist in considerable quantity, some of it of the best black-band kind; and the lime-works here are perhaps among the oldest in the kingdom. In 1843 Sir David Baird, Bart., the proprietor, erected a steam-engine to take the water off the lime rock, and to draw the stone to the surface on an inclined plane: also, a draw-kiln was built for burning the limestone. Drum House, a fine mansion, was erected in 1698 by Lord James Somerville, but has since passed through the hands of various families: Gilmerton House, the property of Sir David Baird, Bart., is also an ancient structure; and an elegant residence in the Elizabethan style has lately been built at Fernieside. The village is situated on the road from Edinburgh to Carlisle, and colliers and carters form a large part of its population. In the district are the two smaller villages of Edgehead and Todhills. Ecclesiastically the place is within the bounds of the presbytery of Edinburgh, synod of Lothian and Tweeddale; it is now a preaching-station, and the stipend of the preacher is £80 per annum, which is raised by subscriptions, and collections in the parish church of Liberton. Gilmerton church, opened for divine service in April 1837, is a neat structure seated for 300 persons, built at a cost of about £600, by subscription aided by a grant from the General Assembly. The members of the Free Church also have a place of worship. There is a school, the teacher of which has a salary contributed by Sir David Baird and others, and a house and garden. To the teacher of another school David Anderson, Esq., of Moredun, pays a salary of £10; and a sewing-school is supported by the Misses Anderson. A small library was founded by the late Rev. James Grant, minister of Liberton. The poor in the village and district, amongst whom are a great number consisting of the residue of the operatives of the late extensive coal and lime works, have their sufferings much alleviated by the kind liberality of Mr. Anderson and his family, who, besides their donations to the schools, and other private charities, distribute oatmeal and coal to the amount of upwards of £50 annually. Gilmerton Cave, or, as it is usually termed, "the Cove", is a curious and extensive subterraneous passage, consisting of several apartments, dug out of the solid rock, with forms and tables, similarly wrought, for the convenience of visitors. It was the result of five years' hard labour of an eccentric individual, a blacksmith, named Paterson, by whom it was completed in 1724; and it has since continued to attract the attention of all strangers. In the cave is also a well.

GILMERTON, a village, in the parish of FOWLS WESTER, county of PERTH; containing 203 inhabitants. This is a modern village of neat appearance, well built, and pleasantly situated on the high road from Perth to Crieff.

GILSTON, NEW, a village, in the parish of LARGO, district of ST. ANDREW'S, county of FIFE, 4 miles (N. by E.) from Largo; containing 229 inhabitants. It lies in the northern part of the parish, and near its eastern boundary. In the vicinity of the village is a singular mass of rum-coal, said to be eighty feet in thickness, and wrought in open quarry. In this quarter of the parish, also, are considerable plantations, consisting of oak, ash, beech, elm, and other trees.

GIRTHON, a parish, in the stewartry of KIRKCUDBRIGHT, 6 miles (N. W.) from Kirkcudbright; containing, with the larger part of the burgh of Gatehouse of Fleet, 1874 inhabitants. This place, which is of great antiquity, is supposed to have derived its name, signifying in the Celtic language "an inclosure" or "sanctuary", from some religious establishment having the privilege of sanctuary, and which existed at a very early period, at the passage of the river Fleet. In 1300, Edward I. of England, during the contested succession to the Scottish throne, resided for several days at the old town of Fleet, now Gatehouse, and presented an oblation at the altar of Girthon: after levying some fines from the town, for the misconduct of the inhabitants, who had attempted to oppose his progress, he retired without further molestation. The lands anciently belonged to a branch of the family of Stewart, from whom they passed by marriage to Donald de Levenax or Lennox, son of the Earl of Lennox; and on the death of the seventh lord of Girthon, the estate, together with the family seat of Cally, was conveyed by his daughter, in marriage, to Richard Murray of Broughton, whose descendant is the present proprietor.

The PARISH, which is bounded on the south and west by the bay and river of Fleet, is about sixteen miles in length and from two to five miles in breadth, comprising 15,480 acres, whereof 4000 are arable, 1000 woodland and plantations, and the remainder heath and waste land, affording tolerable pasture for flocks of sheep. The surface towards the north and east is mountainous and bleak; towards the south, with the exception of some gentle undulations, pretty level. In the mountainous district are several lakes, the principal of which are Loch Greanoch, about three miles in length and half a mile in breadth; Loch Skerrock, nearly half a mile square; Loch Fleet; and Loch Whinnyan, on the eastern border of the parish. From Loch Fleet flows the little Water of Fleet; and this, after a few miles, is joined by the great Water of the same name, together making the river Fleet, which after a winding course, dividing the parish from that of Anwoth, runs into Fleet bay. In Loch Greanoch are found char in abundance, and pike and large trout in Loch Skerrock. A few salmon are taken in the river Fleet, and founders in great plenty; and near the mouth of the river are two small islands, called the Isles of Fleet, where excellent oysters are obtained. These isles are uninhabited, affording only pasturage for sheep. The SOIL is various: the arable lands, which are under good cultivation, produce favourable crops, and the grass-lands are luxuriant. The farm-houses, most of which have been rebuilt, are substantial and commodious; and all the more recent improvements in husbandry have been adopted. The cattle, of which about 1200 are grazed, are of the Galloway breed; and the sheep, of which 5000 are fed in the mountain pastures, are of the small native kind. The annual value of real property in the parish is £5698.

There are considerable remains of ancient woods at Castramont and a few other places; and the plantations are in a thriving condition. The substrata are chiefly clay-slate and granite, of which latter the rocks are principally composed. A slate-quarry was some years since in operation, but it has been superseded by the importation of slate from England and Wales, at a cheaper rate; and a vein of copper-ore, which was formerly

wrought by a company from Wales, has been also discontinued. Cally, the seat of Mr. Murray of Broughton, is a spacious and elegant structure of granite, erected in 1763, and since much improved; it contains a noble hall of marble, in which are some handsome pieces of sculpture, and has many stately apartments, with valuable paintings. The pleasure-grounds and gardens are extensive and tastefully embellished, and in the park are numerous deer, and some fine specimens of the ancient Caledonian breed of cattle. For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Kirkcudbright, synod of Galloway. The minister's stipend is £158. 6. 8., with a manse, and a glebe valued at £20 per annum; patron, the Crown. Girthon church, situated at Gatehouse, is a neat substantial structure, erected in 1818, and contains 714 sittings. The members of the Free Church have a place of worship. The parochial school is attended by ninety children: the master has a salary of £45, increased to that amount by Mr. Murray, with a house and garden; and the fees average about £40 per annum. A charity school is supported by Lady Anne Murray, in which the children are gratuitously clothed and instructed. The site of the palace of the bishops of Galloway is still pointed out here, though there are no vestiges of the building; and in the pleasure-grounds of Cally are the remains of the ancient family seat. There are several small moats, called "Doons", and also an ancient camp, forming one of a line which traverses the stewardry.

Burgh Seal.

GIRVAN, a busy sea-port, a market-town, and parish, in the district of CARRICK, county of Ayr, 29 miles (N. N. E.) from Stranraer, and 97 (S. W. by W.) from Edinburgh; containing, in 1841, 7424 inhabitants. Girvan derives its name from the river on which it is situated, and which is supposed to have obtained its name of Girvan from the British term

Garev-avan, or *Garv-avan*, signifying "the rough river". There are few circumstances of historical importance connected with the place, and its origin and early history are not distinctly recorded. The town is beautifully seated at the mouth of the river, which here discharges its waters into a spacious bay; and commands an extensive and interesting view of the sea, the rock of Ailsa, the Mull and promontory of Cantyre, the islands of Sanda, Arran, and Little Cumbray, part of the Isle of Bute, and the coast of Ireland in the distance. It appears to have risen into note from the grant of a charter to Thomas Boyd of Ballochoul, which was recited and confirmed to Sir Archibald Muir of Thornton, provost of Edinburgh, in 1696 by William III., who bestowed on it all the privileges of a burgh of barony; and from the advantage of its situation on the coast, it gradually increased in population and extent, and ultimately became the seat of trade. The number of inhabitants was much augmented by the introduction of cotton-weaving, and the settlement of numerous families from Ireland, for whom many small houses were built in the town and suburbs. Since the opening of the Glasgow and Ayr railway in 1840, the trade has greatly increased; the

population of the town and parish exceeds 8000, and is rapidly augmenting. A public library is maintained by subscription, and two circulating libraries have been established, which are well supported; there is also a library in Girvan belonging to the agricultural society of the district.

Not less than 2000 looms are employed in weaving cotton for the Glasgow and Paisley manufacturers, who have agents settled here for conducting that business; and many of the inhabitants are engaged in the several trades connected with the port, and requisite for the supply of the neighbourhood with various articles of merchandise. Shipping is carried on to a very considerable extent. There are about twenty vessels belonging to the port, of from 100 to 300 tons' burthen, chiefly engaged in the export of coal from the adjoining parish of Dailly, and of farm produce. About 1200 bolls of wheat are sent off quarterly, on the average; from 3000 to 4000 tons of potatoes are annually shipped, and the yearly export of coal amounts to 12,000 tons. The harbour is one of the safest to enter, and one of the most secure when within it, in the west of Scotland. Until lately it was in a totally unimproved condition, admitting only vessels of inconsiderable burthen; but a small quay has been constructed, which has much facilitated the exportation of grain and coal: an increased improvement, however, of the harbour, is still greatly to be desired, and the trade of the town would also be promoted by the extension of the Ayr railway southward to Girvan. Branch banks have been established, and there is a post-office. The market, which is amply supplied with provisions of all kinds, is regularly held, once a week; and fairs, to which black-cattle are brought for sale, are held on the last Mondays in April and October, chiefly for the hiring of servants. Facility of intercourse with all places of importance in the district is afforded by excellent roads, of which that from Glasgow to Portpatrick passes along the west side of the parish for nearly nine miles; and there are good inland roads traversing the parish in all directions. Previous to the opening of the Glasgow and Ayr railway, there was but one coach running between Girvan and Ayr, while at present there are not less than three coaches, and two steam-boats plying daily: communication has also lately been opened by coaches between Girvan and Wigtownshire, and steam navigation is maintained with Glasgow for conveying agricultural produce to that city. The Girvan is frequented by salmon, and a considerable fishery was formerly carried on, under the protection of the charter, by the proprietors on both sides of the river; but it has been greatly diminished by the laying down of stake-nets. The bay abounds with fish of various kinds, the chief of which are cod, haddock, whiting, mackerel, soles, flounders, turbot, and lobsters; but, notwithstanding, very little attention was paid to this valuable fishery till of late, when some steps were taken to render it more available to the trade of the place.

Within the last few years, the attention of those interested in the welfare of the town has been directed to the obtaining of a local railway communication. In the month of December 1844, the magistrates and town council brought the subject formally under the consideration of the landed proprietors in the district of Carrick, urging the importance of an extension of the Glasgow and Ayr railway to the port of Girvan, and the great benefits that would result from an increased improvement

of the harbour. In the address then issued, the authorities adverted to the favourable position of the place for purposes of traffic with Ireland, Liverpool, and other parts; to the agricultural richness of the country to be traversed, and, towards Girvan, its abundance of valuable minerals, particularly coal and limestone. The town itself, also, with its large population extensively engaged in manufactures and shipping, was stated to present a powerful claim for the desired extension; and the inhabitants of the town of Maybole, and the villages of Kirkmichael, Crosshill, &c., were likewise referred to as being largely engaged in the cotton manufacture, and likely to augment the traffic of the proposed line very considerably. Accordingly, in the parliamentary session of 1846, an act was passed for the construction of a railway of twenty-one miles and a half, from the Ayr railway near the manse of Newton to the town of Girvan, with a branch of nearly a mile to Maybole; to be called the Glasgow and Belfast Union Railway. In the following year, an act was passed authorizing, among other things, a deviation of about four miles in the proposed line, and a new branch of one mile and a quarter to Maybole in lieu of that sanctioned by the act of 1846. Should this extension of the Ayr line be carried out, and a good harbour formed, there is reason to believe that a great increase of trade would spring up, and that Girvan would soon become one of the most flourishing towns in the west of Scotland. The trade in coal alone, is capable of almost indefinite expansion; the coal fields, which lie in the parish of Dailly, are supposed to be almost inexhaustible, and even at present there are four extensive collieries along the proposed line capable of producing 100,000 tons a year.

The BURGH, under its charter, is governed by two bailies and a council of twelve burgesses, assisted by a town-clerk, treasurer, and other officers. Four of the council retire annually, but they are capable of re-election by the majority of the burgesses; and the bailies are annually elected by the council: the other officers of the corporation are appointed by the magistrates. The senior bailie is, by virtue of his office, a member of the council, and the junior bailie takes the office of senior magistrate for the ensuing year. The jurisdiction extends over the whole of the burgh, and the barony of Balloch-toul. A bailie's court is held weekly on Wednesday, in the town-hall, for the determination of civil pleas to the amount of £2, and for the trial of petty offences, which are generally punished by the imposition of fines not exceeding £1, and with imprisonment for non-payment. The average number of civil cases appears for some years to have been gradually diminishing, and at present is under fifty a year. This is attributable to the introduction of small-debt sheriff courts, which are held by the sheriff of the county once every four months, for sums not exceeding £8. 6. 8.; and justice-of-peace courts, which are held every month, for sums not exceeding £5. All persons wishing to carry on trade must enter as freemen, for which a fee of £2 on admission is paid to the common fund. The police is under the management of the magistrates; and sixty of the inhabitants are annually appointed constables for the preservation of the peace. Attached to the town-hall is a prison for petty offenders in default of payment of their fines, and for the temporary confinement of others previously to their being sent to the gaol of Ayr.

The PARISH is nine miles in length, and extends about four miles in mean breadth, though of very irregular form, varying in breadth from two to seven miles. It is bounded on the west for nearly the whole of its length, by the sea, and comprises about 19,000 acres, of which the greater part is arable land and moorland pasture, and the remainder waste, with a small portion of woodland and plantation. The surface, which in no part is very level, is diagonally intersected by a boldly elevated ridge, whose highest point is 1200, and the mean height 900, feet above the level of the sea. The lands are watered by three rivers, of which the Girvan is the principal; the Lendal, a comparatively small stream, falls into the sea at Carleton bay, and the Assel, after flowing through the parish, falls into the Stinchar in the parish of Colmonell. There are also two lakes; but though of great depth, they cover a very inconsiderable portion of ground. The soil is generally fertile, and in the lower parts well adapted for the growth of wheat; in the higher parts the lands are coarse, and comparatively unproductive. Near the town the land is of the very best quality, and lets at from £6 to £8 an acre. The crops are wheat, oats, barley, and bear, potatoes in large quantities, beans, peas, and a considerable breadth of turnips for the sheep; the system of husbandry is improved, and draining has been practised to a great extent on the lands requiring it. In fact, better cultivated land is not to be found within the county of Ayr. Seaweed, obtainable in abundance on the shore, is used as manure, but not altogether to the exclusion of lime. The farm-houses and offices in the parish have been almost all rebuilt within the last fifty or sixty years, and are in general substantial and commodious; some of them, of more recent erection, are inferior to none in this part of the country. Great attention is paid to live stock, though from a greater quantity of land having been improved and rendered arable, the number of cattle pastured has proportionally diminished. The dairy-farms are well managed; the cows are of the Ayrshire breed, and about 500 are kept on the several farms. About 300 head of young cattle are pastured in the parish. The sheep are chiefly of the larger black-faced breed, with a few of the Cheviot; upwards of 2000 are kept, and about 400 bought in and fed on turnips for the markets. The annual value of real property in the parish is £12,845. There is very little natural wood, and the plantations are on a limited scale.

The substrata are mostly limestone, red freestone, whinstone of a bluish colour, and graystone in detached masses; the limestone has been extensively quarried for the supply of the neighbouring district. Copper has been found on some of the lands; and it is thought there are abundant veins of the ore at Ardmillan. Indeed, attempts have been made to ascertain the fact, but upon too inefficient a scale to warrant any just conclusion: what ore was obtained was found to be of rich quality, and in searching for it several beautiful specimens of asbestos were discovered. Along the coast, the rocks are chiefly of the conglomerate kind; and huge masses are to be seen, piled upon each other, and in some instances so nicely poised on the slender props which sustain their prodigious weight as to fill the beholder with fearful apprehensions.

Ecclesiastically the parish is in the presbytery of Ayr, synod of Glasgow and Ayr; patron, the Crown. The

minister's stipend is £269. 12., with a manse, and a glebe valued at £12 per annum. Girvan church, situated in the centre of the town, and close to the Glasgow and Portpatrick road, was erected about the year 1780, and is adapted for a congregation of 850 persons; it is in bad repair, uncomfortable, and very awkwardly situated. There are places of worship for the United Presbyterian Church, Wesleyan Methodists, the Free Church, and the First Reforming Protestant Congregation of Girvan, a body that separated from the Free Church. The parochial school is well conducted; the master has a salary of £34, with £50 fees, and an allowance of £20 in lieu of a house and garden. He also receives the interest of £1000 bequeathed by Mrs. Crauford, of Ardmillan, for the education of forty children without fees, of whom ten are taught church music by the precentor of the church, to whom she left £12 per annum for that purpose. Another school is supported by subscription, for teaching children to read the Scriptures, and for instructing them in the Catechism. A savings' bank has been established, and some benevolent societies have contributed to diminish the number of applications for parochial aid. Vestiges remain of numerous small circular camps; and there were formerly many cairns, but most of them have been destroyed to furnish materials for fences: on removing one of these, a stone coffin of thin slabs was found, and an urn of earthenware, rudely ornamented, containing ashes.

GLACK, a hamlet, in the parish of METHVEN, county of PERTH; containing 36 inhabitants.

GLADSMUIR, a parish, in the county of HADDINGTON, $3\frac{1}{2}$ miles (E. by N.) from Tranent; containing 1699 inhabitants. This place, which was a wide uncultivated moor, is supposed to have derived its name from its being the resort of vast numbers of kites, or *gleds*, as they were commonly called. Part of the lands belonged to William Baliol, who appears to have sworn fealty to Edward I. of England in 1296; he was proprietor of Hoprig and Penston, in the present parish, and acquired the lands of Lamington in the county of Lanark by marriage with a daughter, it is said, of William Wallace. The family took the designation of Lamington, altering their name to Baillie; and their lineal descendant is the present proprietor of Lamington, Hoprig, and Penston. Gladsmuir parish is five miles in length, extending from the Firth of Forth on the north to the river Tyne on the south; it is four miles in breadth, and comprises 6731 acres, of which 6386 are arable and in good cultivation, 302 woodland and plantations, thirty-four occupied with homesteads, and seven and a half with roads. The surface rises gradually from the northern and southern extremities, forming an elevated ridge nearly in the centre of the parish, on the highest point of which the church is situated, and along which passes the great London road. The shore of the Firth, which bounds the parish for about a mile, is rugged, and interspersed with large masses of detached rocks. The Tyne, which forms a boundary for something more than a mile and a half, is here but an inconsiderable stream, scarcely sufficient for turning some mills in its course. In the lower lands are several copious springs, affording an abundant supply of water. The scenery is generally pleasing, and in some parts embellished with rich and flourishing plantations: from the higher grounds are obtained extensive and interesting views.

In this parish the soil is various; in some parts a rich loam, in others loam intermixed with clay, in some light and sandy, and in others a deep moss: the crops are barley, oats, wheat, beans, peas, potatoes, and turnips. The system of agriculture is in a very advanced condition: the lands have been greatly improved by draining, and by the introduction of bone-dust, rape, and guano as manures; much waste has been reclaimed, and many tracts of sterile marsh brought into a highly-cultivated state. The farm-houses are substantial and well built, and on many of the farms are threshing-mills driven by steam; the lands are inclosed with hedges of thorn, and ditches, which are kept in good order. Great attention is paid to the rearing of live stock: the sheep, of which from 2000 to 3000 are pastured, are chiefly of the Cheviot breed, with a cross between that and the Leicestershire; and the cattle, of which 500 are annually fattened for the markets, and the milch-cows, are many of them of the Ayrshire breed. The woods consist of oak, beech, lime, birch, elm, chesnut, and hazel; and the plantations of Scotch fir, spruce, and larch. The lands are rich in mineral wealth, and the inhabitants, in addition to their agricultural pursuits, are extensively employed in mining. The substrata are principally coal, limestone, and ironstone. Coal is very abundant, particularly in the district of Penston, where it has been worked for some centuries; the old mines being almost exhausted, new ones have been opened in the same field, and every where coal is found in abundance. The seams vary in thickness from thirty-two inches to three feet; steam-engines have been erected in the new pits, to drain off the water, and the workings are successfully carried on. In 1835, a blacksmith at the village of Mc Merry, on the property of St. Germain, in sinking a well behind his house, discovered a vein of parrot-coal, which was profitably wrought for some time, but afterwards failed. Between Gladsmuir and the village of Samuelston, the magistrates of Haddington attempted to form a colliery on a portion of land that belonged to the burgh; but after an outlay of more than £2000, they abandoned the proceedings. Limestone is worked in several parts, and near Longniddry is a kiln for burning it into lime; there are also kilns in other places, but the works are not carried on to any great extent. Iron-ore is frequently found, and was wrought for some time on the lands belonging to the Earl of Wemyss. The annual value of real property in Gladsmuir is £11,103. Elvingston House, a seat in the parish, is a handsome mansion, completed in 1840, and pleasantly situated in a tastefully laid-out demesne, approached on the east by an avenue of trees about 300 yards in length. Southfield, the property of the Earl of Wemyss, is also a handsome house, surrounded with plantations, and now in the occupation of a tenant. At Greendykes are some farm-buildings of very superior character. The nearest market-town is Haddington, which is the principal mart for the agricultural produce, and with which, and the neighbouring towns, facilities of communication are afforded by excellent roads: the London road passes for nearly three miles through the parish, and the numerous cross roads are kept in good repair by statute labour. Great facility of intercourse is also afforded by the North-British railway, and its Haddington branch.

The parish consists of the lands of Samuelston, Penston, Elvingston, and others, which in the year 1650

were severed from the parishes of Haddington and Aberlady, and a church erected at Thrieplaw, which continued to be the parochial church till 1695, when another edifice was built, and the original one was suffered to fall into decay. Gladsmuir is in the presbytery of Haddington, synod of Lothian and Tweeddale; alternate patrons, the Crown and the Earl of Hopetoun. The minister's stipend is £316. 17., with a manse, and a glebe valued at £8 per annum. Gladsmuir church, situated nearly in the centre of the parish, is a handsome structure, built within the last few years, and adapted for a congregation of about 750 persons. The eminence on which it is built commands a magnificent prospect embracing the Firth of Forth with the county of Fife, the North Berwick and the Traprain hills, the vale of Tyne and the Lammermoor hills, the distant heights of Dumbarton and the county of Perth, and a vast variety of other interesting objects. The parochial school affords education to nearly 100 children; the master has a salary of £34, with £32 fees, and a house and garden. There are also schools at Samuelston and Longniddry, the master of the former of which has a salary of £15, paid by the Earl of Haddington, and of the latter one of £9, paid by the Marquess of Lorne and the Earl of Wemyss; in addition to the fees, and a house and garden rent-free each.

In various parts are the foundations of old houses, leading to an opinion that the parish was once more populous. There are also remains of several ancient mansions, namely, the mansion of Longniddry, the seat of a branch of the Douglas family; the houses of East and West Adniston, of which scarcely any vestiges are remaining; and the old mansion-house of Penston, once of great strength, with arched roofs, but which has been long a ruin, and its remains converted into farm-buildings. Some stone coffins have been discovered at Seaton hill, containing human bones; they were generally of red flagstone, about five feet long and two feet wide, and near them was found an urn filled with burnt bones. On the lands of Southfield, some labourers, while making drains, dug up a considerable number of small British coins of silver; and several similar coins have been found at Greendykes. John Knox, when compelled to leave St. Andrew's, took refuge at Longniddry, where he acted as tutor to the sons of Mr. Douglas; and during his stay there, he preached the reformed doctrines in a chapel near the mansion-house, which still, though in ruins, retains the name of "Knox's Kirk". On the property of Lady Ruthven are slight vestiges of the church that was situated at Thrieplaw; upon the establishment of the coal-works at that place, the remaining walls were incorporated into the dwellings of the miners. In the same vicinity, near the village of Penston, are the ruins of an old windmill, which, in the earlier working of the collieries in the neighbourhood, was erected for the purpose of drawing off the water from the pits, which is now much more effectually done by steam-engines. Dr. Robertson, the historian, principal of the university of Edinburgh, was at one time incumbent of this parish, where he succeeded his uncle, Andrew Robertson, in 1744; and during his residence here, he composed the greater portion of his *History of Scotland*.

GLAIDNEY, or GLAIDNEY-COTTON, a village, in the parish and district of CUPAR, county of FIFE; containing 195 inhabitants. This village is situated near the

southern extremity of the parish, and is connected with the northern portion by a handsome bridge over the river Eden. It is chiefly inhabited by persons employed in the various manufactures of the town and parish.

GLAMMIS, a parish, in the county of FORFAR; containing, with the villages of Arnyfoul, Charleston, Drumglay, Grasshouses of Thornton, Milton, Newton, and Thornton, 2167 inhabitants, of whom 556 are in the village of Glamis, 52 miles (N.) from Edinburgh. This place, the name of which is of uncertain derivation, is identified with the murder of Malcolm II., which, according to some writers, is said to have occurred in the castle of Glamis, at that time a royal residence, and, according to others, to have happened in a skirmish with his assailants in the immediate vicinity, in which he was mortally wounded. The castle and the lands belonging to it were granted by Robert II. to Sir John Lyon, ancestor of the Strathmore family; upon whom, also, he conferred his second daughter in marriage, and the barony of Kinghorn. On the conviction of Lady Glamis, who was executed in 1537, for an alleged conspiracy against the life of James V., the castle was forfeited to the crown, and again became a royal residence; but on a subsequent discovery of her innocence, the honours and the estate were restored to her son, Lord Glamis, whose descendant, the Earl of Strathmore, is the present proprietor. The PARISH, which lies in the southern portion of the vale of Strathmore, is situated near the base of the Grampian hills, and is about ten miles in length, varying from one mile to five miles in breadth, and comprising an area of 15,000 acres, of which 8000 are arable, 4500 meadow and pasture, 1600 woodland and plantations, and the remainder roads and waste. Towards the north the surface is generally level, with an elevation of about 260 feet above the sea; towards the south it rises by gentle undulations to the Sidlaw hills, which are from 1000 to 1500 feet in height. The principal river is the Dean, which, issuing from Loch Forfar, at the north-eastern extremity of the parish, flows in a western direction, receiving in its course the Ballandarg burn, the Kerbet water, and the Glamis burn, and falling into the river Isla. Loch Forfar, the western extremity of which is within the parish, was formerly 200 acres in extent, but has been reduced to nearly one-half by draining. There are several springs in the parish, some of which are slightly chalybeate.

Though much diversified, the soil is generally fertile: on the north side of the river Dean it is a light loam, alternated with gravel and sand, and in the hollows are some tracts of moss; on the south side is a deep brown loam of great richness, with other kinds. The system of agriculture is advanced, and the lands have been improved by large quantities of marl, procured by the draining of the lake. The cattle, of which great numbers are reared in the pastures, were chiefly of the native Angus breed, but this has been giving way of late years to the short-horned: they are sent by the Dundee steamers to the London market, where they obtain a high price. The annual value of real property in the parish is £7801. The plantations, which are extensive, consist of larch, spruce, and Scotch firs, ash, elm, oak, and birch; they are under careful management, and in a thriving state. In this parish the chief substrata are of the old red sandstone formation, whinstone, and trap; and near the Sidlaw hills are some beds of slate, which

have been extensively worked : the sandstone is quarried for building, and the whinstone for the roads. A kind of grit is found, of which mill-stones are made for exportation ; and there are veins of lead-ore, of which those near the village were formerly wrought. Glammis Castle, the seat of the Earl of Strathmore, is a venerable and very ancient structure, consisting of two quadrangular ranges of great strength, crowned with turrets and lofty towers, the principal of which, 100 feet in height, constitutes the central portion of the mansion. The buildings were repaired, and partly modernised, under the superintendence of Inigo Jones ; and other restorations and additions have been subsequently made. In front of the mansion is a massive pedestal, on which are four lions rampant of gigantic size, each holding a dial, facing one of the cardinal points. The mansion contains a splendid collection of paintings, an extensive assortment of ancient armour, and a valuable museum of natural curiosities and antiques. The park in which it is situated abounds with ornamental timber, and with stately avenues of ancient growth leading to the castle, one of which is more than a mile in length.

The village of Glammis is nearly in the centre of the parish, on the great road from Aberdeen to Edinburgh. A public library, containing about 700 volumes, is supported by subscription ; and a handsome building, containing two spacious halls, has been erected by the friendly societies of masons and gardeners. The manufacture of brown linen, chiefly Osnaburghs and sheetings, is carried on to a considerable extent, for which purpose a mill for spinning flax was erected on the Glammis burn in 1806 ; the machinery is driven by a water-wheel of twenty-four horse power. The yarn spun at this mill is woven, in several of the villages in the parish, into brown linen, of which about 4000 pieces are annually made for the Dundee market ; and 7500 pieces are woven by private individuals in different parts of the parish, in addition to what is made from the yarn spun at the mill. A circulating library, containing 300 volumes, has been opened for the use of the persons employed by the mill-owner. The railway from Forfar to Perth intersects the parish ; and facility of communication is also maintained by the roads from Aberdeen to Edinburgh and from Kirriemuir to Dundee, which intersect each other in the village, and by good roads in various other directions through the parish. Fairs for cattle and sheep are held five times a year ; the older in May and November, and those of more recent date in April, July, and October.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Forfar, synod of Angus and Mearns. The minister's stipend is £255. 15., with a manse, and a glebe valued at £16. 10. per annum ; patron, the Earl of Strathmore. Glammis church, erected in 1793, is a neat plain structure with a spire, and contains 950 sittings. The parochial school is attended by about seventy children ; the master has a salary of £34, with a house, an allowance of £2. 2. in lieu of garden, and fees averaging £25 per annum. There were three ancient castles ; one at Cossius, the property of the Strathmore family ; one in the glen of Ogilvie, and one in the glen of Denoon ; but they have all been totally destroyed. Within a short distance of the church is an obelisk of rude design, raised to commemorate the murder of Malcolm : on one side are sculptured the

figures of two men, above which are a lion and a centaur ; and on the other are several sorts of fishes, supposed to have allusion to the loch of Forfar, in which the assassins were drowned while making their retreat from the castle. In a wood not far from the village of Thornton is a large cairn, on which is also an obelisk, similar to the former, and named King Malcolm's Gravestone. Near Cossius is a third obelisk, called St. Orland's Stone, on one side of which is a cross *fleuri*, and on the other the figures of four men on horseback, in full speed, one of whom is trampling under his horse's feet a wild boar ; and near the base of the obelisk is the figure of a dragon. This place gives the title of Baron Glammis to the Earl of Strathmore, that dignity having been conferred on Patrick Lyon in 1445.

GLASFORD, county of LANARK.—See GLASSFORD.

GLASGOW, a city, the seat of a university, and a sea-port, having separate jurisdiction, locally in the Lower ward of the county of LANARK, and situated in longitude 4° 15' 51" (W.), and latitude 55° 52' 10" (N.), 23 miles (E. by S.) from Greenock, 29 (S. W. by S.) from Stirling, 40 (N. E. by N.) from Ayr, 47 (W. by S.) from Edinburgh, 79 (N. N. W.)

Seal and Arms.

from Dumfries, 144 (S. W.) from Aberdeen, 196 (N. N. E.) from Dublin, 226 (N. W. by N.) from Manchester, and 407 (N. W. by N.) from London ; containing, in the year 1841, 120,183, and, with the suburbs of Barony and Gorbals, 274,533 inhabitants. The following is a list of the subjects comprised in the article, with the page in which each head or division occurs :—

GLASGOW is the largest and by far the most populous city in Scotland. Its history first claims notice :—

HISTORICAL ACCOUNT.

This place, which appears to have been a Roman station within the wall of Antoninus, and to have formed part of the province of *Valentia*, is conjectured by some authorities to derive its name, originally *Glas-Achadh*, said by them to denote in the Gaelic language "a green field"; from a verdant piece of ground on the bank of the Clyde, by which it is bounded on the south-east. According to others, the term signifies "a dark glen", and arose from a secluded retreat occupied by ST. KENTIGERN, son of Themetes, daughter of Loth, King of the Picts, who was born at Culross about the year 516. St. Kentigern was educated under the care of St. Servanus, Bishop of Orkney, by whom he was generally addressed in the Norwegian term, *Mon Gha*, an epithet of affectionate endearment, from which appellation he has been also designated as St. Mungo. On the death of Servanus, Kentigern, who had become celebrated for his sanctity, retired into Wales, where he founded a monastery which he afterwards resigned to St. Asaph; and returning into Scotland, he fixed his abode in a narrow glen near the site of the present cathedral. Here, after living for some time in a solitary cell, he in 560 laid the foundation of a stately church, which was amply endowed by Ryderick, or Roderick, King of the Scots, who founded the see of Glasgow, of which he made Kentigern the first bishop. St. Kentigern died in 610, and was buried in the church he had founded, where his monument is still preserved. He was succeeded in the diocese by his disciple BALDRED, who had instituted a religious house at Inchinnan; and after Baldred's decease, the see became successively a prey to the Picts, Scots, Saxons, Britons, and Danes, by whom it was eventually so reduced that little is known of its subsequent history for a period of nearly 500 years. In 1115, the establishment was refunded by David, Prince or Earl of Cumberland, who appointed his tutor and chaplain, JOHN ACHAIUS, bishop of the diocese; and on his accession to the throne of Scotland by the title of David I., he richly endowed the see, and made the bishop chancellor of the kingdom. This office, however, the bishop soon afterwards resigned, devoting his attention solely to the duties of his diocese; he rebuilt part of the cathedral in 1136, and the edifice was consecrated in the presence of the king, who, on the occasion, assigned to it the lands now called Partick. In 1180, JOSCELINE, who had succeeded John Achaius, materially enlarged and beautified the cathedral, and obtained from William the Lion a charter, erecting the town which had risen up under the auspices of the prelates into a free burgh, and granting an annual fair for eight days. Consequently, the place appears to have been, in 1268, governed by a provost and bailie, appointed by the bishop, and who had the power to hold courts of justice, and enjoyed various other privileges.

In 1300, Edward I. of England, having possessed himself of all the fortresses in the country, appointed Anthony Beck to the see of Glasgow; and his general, Earl Percy, who had usurped the military government of the western district of Scotland, seized on the episcopal palace. Upon this, the town became the scene of a sanguinary conflict between the troops of Edward and the Scots under SIR WILLIAM WALLACE, who, assisted by his relative, Adam Wallace of Richardtown, the laird

of Auchinleck, and a few of his trusty adherents, marched from Ayr during the night, and arriving the following morning at the bridge of Glasgow, crossed the river, and drew up his forces on the spot where Bridgegate now stands. Forming his men into two divisions, one, led by himself, marched directly up the High-street to meet Percy's troops, consisting of 1000 men, and the other division, led by the laird of Auchinleck, took a circuitous route by Drygate. The action commenced between Wallace's party and the earl, near the site of the present college, and was continued for a time with resolute valour on both sides; but while the victory was still doubtful, the division under Auchinleck, attacking the English in the rear, put them completely to the rout. Percy was killed by Wallace, who, not thinking his victory decisive, or deeming it unsafe to remain in his present situation, advanced to Bothwell, and, assailing a large body of Northumbrians, gained a second victory over superior numbers. In the years 1350, 1380, and 1381 the plague committed great ravages in the town; and in 1387, during the prelacy of Bishop Glendoning, the spire of the cathedral was destroyed by lightning. A mint was established in Drygate-street in the time of Stuart, Earl of Carrick, afterwards Robert III.; and coins were struck, having on the obverse the king's crest and crown, without the sceptre, with the legend "*Robertus, Dei Gratia Rex Scotorum*", and on the reverse, "*Dominus Protector*" around the outer circle, and in an inner circle "*Villa de Glasgow*". In 1431, Isabella, cousin to James I., devised the lands of Ballagan to the convent of the Grey Friars at Glasgow, for the salvation of her soul, and the souls of her husband, the Duke of Albany; her father; and three sons.

FROM 1450 TO 1600.

In 1450, Bishop Turnbull obtained from JAMES II. a charter erecting Glasgow into a regality, and from Pope Nicholas V. a bull for the foundation of a university, which he amply endowed. This establishment tended greatly to the increase and prosperity of the town, which, prior to that event, had scarcely a population of 1500 persons; but the privileges granted to the new institution deprived the citizens, to a considerable extent, of their political independence. The bishops, also, a long time exercised the right of appointing the provost and bailies of the regality; but it eventually became vested in the Lennox family, who ultimately resigned their power to the crown, and after 1621 the election was vested in the magistrates and council of the town. Before the middle of the fifteenth century, the inhabitants resided chiefly in the vicinity of the cathedral, and in that part of the High-street which was bounded by the episcopal palace. After the establishment of the university and the foundation of St. Nicholas' hospital, however, the city began gradually to extend to the present Cross, and eastward in the direction of the Gallowgate. In 1484, the citizens erected a collegiate church dedicated to the Blessed Virgin, in a right line westward from the Gallowgate, and the buildings consequently stretched towards that edifice, now the Tron church: the inhabitants being then chiefly employed in the fishery of the Clyde, a street was also formed, leading to the river, and which was called Fishergate, and is now Bridgegate-street. By act of parlia-

ment, in 1488, the diocese of Glasgow was erected into a metropolitan see, of which Robert Blackadder the bishop became archbishop; and the temporalities and privileges of the archdiocese were confirmed by charter of James VI. After the martyrdom of Hamilton, abbot of Fearn, who had imbibed the doctrines of the reformed religion, and who was burnt at St. Andrew's in 1538, it was thought expedient, for the suppression of heresy, to make a public example in the city of Glasgow; and as the then archbishop, Dunbar, was a man of extreme benevolence and an enemy to persecution, some friars were sent from St. Andrew's for the purpose. On this occasion, Jeremiah Russell, of the Grey Friars, at Glasgow, and a young gentleman of Ayr, not more than eighteen years of age, were condemned to be burnt at the stake; and the sentence, notwithstanding the remonstrances of the bishop, was soon afterwards executed.

On the death of James V., his infant daughter, MARY, QUEEN OF SCOTS, was sent to France; and Cardinal Beaton, Archbishop of St. Andrew's, being appointed regent, subsequently resigned that post to the Earl of Arran, afterwards Duke of Chatelherault; but the earl became so unpopular that the queen dowager and the cardinal invited the Earl of Lennox, then in France, to come over, and take upon himself the important office. Arran, however, compromising his difference with the queen and Beaton, was allowed nominally to retain the regency, leaving the chief administration to the cardinal. Lennox, exasperated by this insult, raised an army of 10,000 men, and marching from Glasgow to Leith, offered the cardinal battle; but the latter, unprepared to encounter so formidable a force, negotiated for a truce, and the earl returned to Glasgow, and placing a garrison in the bishop's castle, proceeded to Dumbarton to hold a conference. The regent, having mustered an army in the mean time, stormed the castle, and after compelling the garrison to surrender upon terms, put every man to the sword. Upon this, Lennox, resolved on making a desperate effort to displace Arran, and obtain the regency, in which he was assisted by the Earl of Glencairn, attempted to march to Clydesdale to give his opponents battle; and the regent, to prevent this movement, endeavoured to take possession of Glasgow; but Glencairn, with about 800 of his vassals, aided by the citizens, attacked the troops of the regent at a place called the Butts, and achieved a partial success, becoming master of the artillery of his adversaries. Just on the eve of victory, however, a small party of horse under Robert Boyd coming to the succour of the regent, Glencairn, apprehending that a greater force was in reserve, fled with the utmost precipitation; and Arran, entering the city, abandoned it to the mercy of his soldiers, by whom it was plundered and nearly destroyed. In this engagement two gallant sons of the Earl of Glencairn were slain.

Henry, Lord Darnley, the husband of Mary, Queen of Scots, after the celebration of the birth of a son, in 1566, arrived from Stirling on a visit to his father, who resided at Limmerfield, near the Barony church, Glasgow, where being taken ill, the queen came from Stirling, and remained with him till he was sufficiently recovered to be removed to Edinburgh. In 1568, the queen, who had been kept prisoner in the castle of Lochleven, effecting her escape, was joined by the Earls of Argyll, Eglington, Cassillis, and Rothes, and others, who assembled

an army to displace the Regent MURRAY, and raise her to the throne. The regent, at that time employed in holding a court in Glasgow, was taken by surprise; but hastily raising what forces he could, and being joined by the Earls of Montrose, Mar, and Monteith, the Lords Temple, Home, and Lindsay, and a number of the citizens, he advanced to intercept the queen's party on their march to Dumbarton Castle, and crossing the bridge, took up a position on a hill near the village of Langside, about two miles from Glasgow. A battle ensued, in which the regent's forces were completely victorious, leaving 300 of the queen's army dead on the field, and taking 400 prisoners. The queen, during the whole of the engagement, stood on a hill; and when she saw her troops defeated, mounted her horse, and fled to the abbey of Dundrennan, in Galloway, a distance of sixty miles, without taking any rest. Murray returned to Glasgow, where he offered a public thanksgiving for his victory, and was sumptuously entertained by the magistrates and council, through whom he expressed his obligation to the citizens for their bravery and fidelity; and on a representation being made to him by the dean of guild, that undue exactions were practised at the Mill of Partick, then the property of the crown, he granted it to the corporation, with the lands appertaining to it. In 1570, the castle of Glasgow was assaulted by the Hamiltons and their party; but, though the governor was at that time absent, and the garrison consisted of only twenty-four men, they defended themselves with such resolution that the assailants were repulsed with considerable loss; and two days after the siege, Sir William Drury, arriving with a party of English, advanced to Hamilton, took the castle there by storm, and in retaliation of the aggression of its proprietors, demolished it entirely.

When the doctrines of the REFORMATION had made considerable progress, Archbishop James Beaton, nephew of Cardinal Beaton, and the last of the Roman Catholic prelates of Glasgow, finding it hopeless to try to regain his influence, removed the relics, plate, and ancient records, with every thing of value, from the cathedral church into his castle; and subsequently retired, in 1560, to France, taking with him the treasures he had accumulated. After his departure, the Earl of Lennox appointed a nominal archbishop, while he himself wielded all the powers and appropriated all the revenues of the see; and the people, having cast off the yoke of papal tyranny, vented their fury on those sacred edifices which they had previously regarded with so much veneration. The cathedral was stripped of its leaden roof in 1573; and in 1579, under the sanction of the legislature, the magistrates, at the solicitation of Melville, principal of the college, issued a warrant for its final destruction. It was, however, preserved by the resolute conduct of the incorporated trades, who, when the workmen, to the number of several hundreds, were summoned by beat of drum to commence the task of demolition, formed themselves into a body, and threatened instant death to the first man that should attempt to displace a single stone. So highly, indeed, were the citizens incensed at this attempt to destroy the proudest ornament of the city, that, had not the magistrates restrained them, they would have wreaked their vengeance upon Melville and all his adherents. For this insurrection, the citizens were summoned by the ministers to appear before the

council at Edinburgh, where, however, the king, at that time not more than thirteen years of age, expressed his approbation of their conduct, and commanded the ministers to proceed no further in the affair, observing that too many churches had already been destroyed, and that he would not suffer any more abuses of the kind. Some doubt, however, has been thrown upon this legendary story of Melville's conduct with respect to the cathedral, and of the exertions made by the honest craftsmen of the city for its preservation. It is said that Melville may have urged that the large sums in which the citizens taxed themselves for repairing their High Church, might be better applied in building new churches on the Genevan model; but it is not believed that he carried the matter so far as has been pretended. In the year 1581, the First National Covenant, which was subscribed by James VI. and his household, and afterwards by all ranks in the kingdom, was subscribed by 2250 persons in Glasgow.

FROM 1600 TO 1725.

In 1603, the pestilence made great ravages in the city. The prison of the Tolbooth was erected the same year; and in the year following, some regulations respecting precedency among the several trades were laid down, which were confirmed by the king and parliament in 1612, under the designation of the letter of guildry. In 1613, regular bills of mortality were first ordered to be kept. In 1622, the church of the Black Friars was erected on ground given by the college, who assigned their right of patronage to the magistrates and council; and in 1636, the town-hall (adjoining the Tolbooth) and the meal-market were built. A royal charter was obtained this year for the appointment of a water-bailie, with jurisdiction extending from Glasgow to the mouth of the Clyde, about twenty-six miles below the town. In 1638 assembled the famous synod which declared episcopacy null and void. In 1649, Glasgow was visited with pestilence and famine; and in 1652, a destructive fire broke out on the east side of the High-street, which, communicating with the Saltmarket, spread to the opposite side of the street, and extending to the Trongate, Gallowgate, and Bridgegate streets, destroyed nearly one-third of the city, the loss being estimated at £100,000.

In 1650, OLIVER CROMWELL, having gained possession of Edinburgh, advanced to Glasgow, and took up his abode at Silver-Craigs House, on the east side of the Saltmarket, where he held his levees. Understanding that Patrick Gillespie, minister of the Outer High church, had the chief influence in ecclesiastical affairs, he invited him to a conference; and on the following Sunday, he went in state to the cathedral, when Mr. James Durham, or, as some allege, the well-known Zachary Boyd, being appointed to preach, took occasion in his sermon to inveigh against the conduct of Cromwell as an enemy to the true faith. In the same year the presbytery of Glasgow issued an edict, requiring every minister to appropriate a certain portion of his stipend towards the raising and maintenance of a regiment of horse, for the protection of the Church, and the defence of the country from the invasion of the sectarians. The regiment was well appointed, but was so governed as to promote only the interests of Cromwell, who in 1658 addressed a letter to the provost, requesting that the

election of the magistrates might be deferred. In 1660, the restoration of CHARLES II. was celebrated, agreeably to the order of the session, by a public thanksgiving; but on the attempt, soon afterwards, to introduce episcopacy into Scotland, the citizens strenuously opposed the king's mandate. On the refusal both of the clergy and laity to comply, the Earl of Middleton, with a committee of the privy council, came to Glasgow, and having assembled in the college, the earl informed the committee that the archbishop desired the royal order to be enforced, to which the whole meeting acquiesced, with the exception of Lord Lee, who declared that such a course would desolate the country. It was, nevertheless, carried into effect, and in one day 400 ministers were expelled from their churches: the citizens of Glasgow, who were chiefly Covenanters, suffered great persecution; and in 1666 several of them were hanged in the streets for refusing to embrace episcopacy. In 1677, a second conflagration broke out, and destroyed 130 houses, upon which occasion the citizens burst open the gaol, and, on the alleged plea of preserving life, liberated the prisoners, most of whom were confined on a charge of nonconformity. Notwithstanding these severe calamities, the city appears to have made a steady progress in importance, and in 1695, under an act of general assessment, was returned as the second place in Scotland in point of wealth and prosperity. The election of the magistrates, however, seems to have been completely under the control of the government: in 1681, it was deferred because the Duke of York had not decided with respect to the individuals to be selected; and after he had left the town, and an election had taken place which was not conformable to his wishes, the privy council ordered a new choice to be made, and many of the town councillors were removed from office. In 1689, the magistrates and council were appointed by the concurrent votes of all the burgesses; and in 1690, Glasgow was created a free burgh by charter of William and Mary, and invested with privileges equal to those of Edinburgh, or any royal burgh within the kingdom, and which they have ever since retained.

Towards the middle of the seventeenth century, the inhabitants began to display a spirit of active enterprise in trade and commerce; and having a very insufficient depth of water in their old port of Broomielaw, which was accessible only to small craft, they took measures for the construction of a new harbour, nearer the mouth of the Clyde. For this purpose they proposed to form a port at Dumbarton; but being opposed in their design by the magistrates of that place, they fixed upon a site on the opposite bank of the river, and in 1662 purchased thirteen acres of land from Sir Robert Maxwell, near the village of Newark, about nineteen miles below Glasgow. Here, having laid out the plan of a town, they constructed the first dry-dock in Scotland; and in 1714, having obtained from the presbytery a separation of the lands from the parish of Kilmalcolm, they erected them into the present parish of Port-Glasgow, of which the patronage was vested in the City. On the union of the two kingdoms in 1707, the people of Glasgow showed such hostility to the measure, and manifested such a disposition to break out into open violence, that the magistrates found it necessary to prohibit the meeting of more than three persons together in the streets, after sunset. The population at that time was about

14,000; trade and commerce were but in their infancy; and so little affluence prevailed, even among the higher classes of the citizens, that the members of parliament received payment for attending the sessions. In 1712, an inundation of the Clyde, during which the water rose eighteen feet six inches above its ordinary level, did much damage in the lower parts of the town. In 1715, when the rebellion under the Earl of Mar broke out, the citizens, at their own expense, raised a regiment of 600 men, which, led by the provost, marched to Stirling, and joined the king's forces; and in order to protect themselves from the depredations of the rebels, the inhabitants intrenched the town with a ditch, twelve feet broad and six feet deep. An imposition of two pence Scotch upon each pint of ale sold within the burgh was granted to the magistrates by act of parliament, in 1722, to enable them to improve and beautify the city; and in 1724, the town was so much enlarged that an additional place of worship was found necessary, and the Ramshorn church was consequently erected in the north-west.

FROM 1725 TO 1775.

In 1725, on the extension of the malt-tax to Scotland, for which measure MR. CAMPBELL of Shawfield, member for the city, had given his vote, the inhabitants were highly exasperated; and on the 23rd June, the day on which the act was to come into operation, a tumultuous assembly collected in the streets, and violently obstructed the excisemen in the discharge of their duty. To quell this insurrection, two companies of Lord Deloraine's regiment of foot, commanded by Captain Bushell, were sent into the town, for whose accommodation the magistrates ordered the guard-house to be prepared; but the populace took forcible possession of it, and locking the doors, and carrying off the keys, proceeded to Mr. Campbell's house at Shawfield, and demolished it entirely. On their return, the rioters broke open the town magazine, and distributing the arms, formed themselves into a body, and attacked the military, who, by the advice of the provost, were leaving the city. After patiently sustaining the assault of the rioters for some time, Captain Bushell ordered his party to fire, when nine of the citizens were killed, and seventeen wounded; and the military, without further molestation, retired to Dumbarton Castle. When this affair was reported to the secretary of state, General Wade was despatched to Glasgow with the remaining companies of Lord Deloraine's regiment, six troops of dragoons, a troop of Lord Stair's cavalry, and a company of Highlanders under the command of Captain Campbell of Lochnell. These having taken possession of the town, the lord advocate investigated the matter, and committed nineteen of the rioters to prison, to be conveyed on the following day to Edinburgh by Captain Bushell, who had returned with his two companies of foot from Dumbarton. It appearing also, in the course of the inquiry, that the magistrates had countenanced the rioters in the destruction of Mr. Campbell's house, as well as in their attack on the military, the provost and others were committed to the Tolbooth; and the lord advocate refusing to accept of bail, they were placed under a guard of the Royal Scotch dragoons, and sent as prisoners to Edinburgh Castle. Application, however, being made

to the lords justiciary to accept of bail, the provost and the other magistrates were liberated on the 29th of July, and, on their return to Glasgow, were met on the road by 200 of the inhabitants on horseback, and brought into the city in triumph. Captain Bushell was tried for the "murder" of the nine citizens upon whom he ordered his party to fire, and found guilty, but was afterwards pardoned.

In the rebellion of 1745, the citizens showed their attachment to the reigning family by raising two battalions, of 600 men each, for the service of government, one of which was engaged in the battle of Falkirk, and signalized itself for its intrepidity. The rebels, exasperated by this display of loyalty, resolved to retaliate upon the citizens, by plundering and setting fire to the town, from which they were diverted only by the influence of Cameron of Lochiel, who threatened, if they persisted in that determination, to withdraw his clan from their party. On the 14th of September, the magistrates received a letter from the Young Pretender, demanding from the corporation the payment of £15,000 sterling, with all arrears of taxes that might be then due to government, and a supply of arms and ammunition; but expecting to be relieved by the forces of Sir John Cope, then on their march to the north, the magistrates refused compliance. After the unfavourable result of Cope's expedition, however, they deemed it prudent to comply with a second demand made by a Mr. John Hay (attended by a company of horse and the chief of the McGregor clan), who, having authority to mitigate the sum if he judged it expedient, effected a compromise by receiving £5000 in money and £500 in goods. On the return of the rebel army from England, another claim was made for 12,000 linen shirts, 6000 cloth coats, 6000 pairs of shoes, 6000 pairs of hose, and 6000 bonnets, to which the magistrates were compelled to yield. These supplies, together with the previous payments, and the expense of maintaining the two battalions they had raised, cost the city £14,000, of which, on application to the government, they received £10,000 in 1749.

In the course of the year 1749 the first local bank was established in the city, under the title of the Ship Banking Company; and in 1752, the first theatre was built, in Castle-street. In 1755, the merchants of Glasgow, with a view of extending their commerce, and opening a more direct communication with the continent of Europe, projected the construction of a canal from the river Clyde to the river Forth, which was afterwards carried into effect upon an enlarged scale, under an act of parliament, by John Smeaton, the skilful engineer. A collateral branch from the same to the city of Glasgow, and also a cut from the port of Borrowstounness to join the canal near the Firth of Forth, were proposed about the same time; but the latter of these was never completed. An elegant bridge was erected over the Clyde, near the old bridge built by Bishop Raye, which, since the introduction of wheel-carriages, had been found inconveniently narrow; and in 1770 an act of parliament was obtained for deepening the river from Dumbuck ford to Glasgow, by which an additional depth of seven feet was gained at the quay of Broomielaw. A navigable canal, also, was cut from the high ground above the cathedral to the parish of Monkland, in order to reduce the price of coal.

FROM 1775 TO THE PRESENT TIME.

The trade of the port, from the time of the Union, had been making gradual but steady progress, and in 1775 employed more than 60,000 tons of shipping in the importation of merchandise, chiefly from America: in the single article of tobacco, the annual import averaged 57,143 hogsheads. Upon the breaking out of the American war, however, the trade of Glasgow received a very severe check. On this occasion, the city raised a corps of 1000 men, well appointed, for the service of government; and the merchants at the same time fitted out fourteen privateers, of twelve and twenty-two guns and 1000 men, which, in the course of the war, were of great service in driving off the privateers of the enemy, and protecting the trade of the coast. In 1779, on a motion being made for bringing into parliament a bill to repeal the penal statutes against Roman Catholics, about 12,000 of the inhabitants formed themselves into societies for opposing the contemplated measure. The minds of the populace were so inflamed, indeed, that on the 22nd of October, a mob assembled during divine service, and proceeding to a Roman Catholic chapel in High-street, scattered the congregation, destroyed the paintings and ornaments round the altar, and were only restrained from the entire demolition of the building by the arrival of the magistrates, with a competent force, to disperse them. Meeting a second time, they pulled down the warehouse of a Roman Catholic in King-street, and on being compelled by the magistrates and a party of the military to retire, they hastened to his dwelling-house, which they burnt, with all the furniture. The introduction of a bill into parliament, soon afterwards, for taking the duty off French cambric, also excited great discontent; and a large body of weavers in the town, and from the adjacent villages, paraded the streets on horseback, with an effigy of the minister who proposed the bill, which effigy they first hanged, and afterwards burnt in the market-place: the bill was subsequently withdrawn. From the commencement of the war with America, the attention of the citizens had been more particularly directed to the increase of manufactures; and the population having been consequently augmented, the first stone of a new church, St. Enoch's, was laid on the 12th of April, 1780. In the following year, the Tontine Buildings and Coffee-rooms were erected, to the great ornament of the city.

In 1782, another inundation of the Clyde took place on the 11th and 12th of March, after an almost uninterrupted fall of snow and rain for several days. The waters, on the 11th, spread over the Green, stopped all communication by the bridges, and flooded the Bridge-gate-street to the depth of several feet: during the night, the flood increased, and after extinguishing the fires on the ground floors of the houses, ascended to the bedrooms of the inhabitants. On the following morning, however, the waters began to decrease; and intercourse with the houses was maintained by boats, which supplied the inmates with food and other necessaries. Upon the 13th, the river assumed the ordinary level. So extensive was the inundation in the town and neighbourhood, that the village of Gorbals appeared as an island in the midst of the sea; and the rapidity of the current was so great that apprehensions were entertained

for the safety of the bridges. This calamity was followed, during the same year, by a general failure of the crops, and a consequent dearth of provisions, under which the sufferings of the inhabitants were alleviated by the exertions of the magistrates, who offered a bounty upon all provisions brought into the town; while various wealthy individuals combined together, and purchasing large quantities of supplies of every kind, sold them at a very considerable rate below the prime cost. In 1787, a spirit of discontent, which had for some time prevailed among the journeymen weavers, broke out into open violence; and a mob, assembling, and demanding an increase of wages, which was not granted, proceeded to cut down the webs from the looms of such as were willing to work at the previous prices; destroyed the property of the master weavers, cleared out the goods from their warehouses, and burnt them in the streets. To quell these outrages, the magistrates, with a party of peace-officers, advanced to Calton; but they were overpowered, and compelled to retire; and it was not till they had obtained a detachment of the 39th regiment, commanded by Lieut.-Col. Kellet, that they were enabled to disperse the rioters. On approaching them for this purpose, the military were assailed with stones, brickbats, and other missiles; but after the magistrates had read the Riot act, and strenuously exhorted the people to desist, the soldiers were ordered to fire, three of the ringleaders were killed, and several of the rioters wounded, upon which the mob thought proper to return to their homes.

After the conclusion of the American war in 1783, the merchants made every exertion to revive their trade, and established a chamber of commerce and manufactures, which was afterwards incorporated by royal charter. Encouraged by the increasing prosperity, the magistrates let out the Ramshorn lands, to the north of the town, on building leases, binding the lessees to erect their buildings according to an improved plan, laying out the ground in regularly-formed streets and squares; and consequently, upon a site of considerable extent, formerly occupied as orchards and gardens, stately ranges of buildings have been raised, which, in beauty and magnificence of appearance, are almost unrivalled by those of any city in the kingdom. In the year 1790, the canal joining the Forth and Clyde, which had been commenced in 1768, was completed; and on the 29th of June, the communication was opened by Archibald Speirs, Esq., of Elderslie, chairman of the committee of management, who, with the assistance of the principal engineer, poured a hogshead of water, brought from the river Forth by the canal, into the Clyde, in commemoration of the union of the eastern and western seas. In 1793, the Laigh or Tron church was destroyed by an accidental fire, which broke out in the session-house adjoining; and the records of the general session were all burnt. In the following year, a scheme was projected for letting the lands appertaining to Hutcheson's hospital on building leases, and the plan of a village, to be called Hutchesonton, was prepared: the foundation stone of a new bridge was laid by the lord provost and magistrates; and the Glasgow infirmary, the foundation of which had been laid two years before, was opened for the reception of patients. In 1795, the citizens, to counteract the menaced attempts of the abettors of the French revolution, enrolled themselves into two corps of

volunteers for the protection of the city, and the defence of their coast, under the sanction of parliament. On the 18th of November, 1795, a third inundation of the Clyde did much damage to the lower parts of the town: about the middle of the day, the current was so impetuous that it shook the piers of the newly-erected bridge, causing two of the arches to fall into the river; and in the course of the afternoon, the three remaining arches also fell. In 1797, the Royal Glasgow volunteers increased their numbers to ten companies; and a second battalion of 500 men was formed, whose services were accepted by government, and who were placed under the command of officers appointed by the lord lieutenant of the county: two troops of volunteer cavalry were also raised, for additional security. In August 1822, when George IV. visited Scotland, the lord provost and magistrates, with the corporation and deputations from the merchants' and trades' houses, went in public procession to Edinburgh, and presented loyal addresses to His Majesty. In 1832, the cholera raged in the city, with great violence, from the 12th of February till the 11th of November, during which period there were 6208 patients, of whom 3005 died.

One of the most interesting events of recent date, in connexion with the city, was, the visit of Her present Majesty to Glasgow, in 1849. After the Queen's visit to her Irish dominions, the royal squadron crossed over to the Scottish coast on the 12th of August, and anchored for the night in Loch Ryan: the next day the squadron proceeded to the Clyde, and on Tuesday morning, August 14th, Her Majesty arrived at Glasgow a little before noon, having been greeted in her passage up the Clyde with the warmest demonstrations of hearty and delighted loyalty. On the Queen's arrival, the lord provost presented an address from the corporation, and received on board the honour of knighthood. Deputations from the county magistrates and other bodies were severally introduced, for the purpose of presenting addresses; and immediately afterwards Her Majesty, in company with Prince Albert and the royal children, proceeded to visit the cathedral and the college, receiving in her progress through the vast and orderly assemblage the most enthusiastic plaudits. Shortly after two o'clock, the royal party arrived at the terminus of the Edinburgh and Glasgow railway, where refreshments had been provided for the distinguished visitors. A special train then conveyed Her Majesty, the prince, and suite, to Perth, where the royal party passed the night; and on Wednesday, the 15th of August, Her Majesty arrived at her Highland residence of Balmoral, in Aberdeenshire.

DESCRIPTION OF THE CITY.

Glasgow is built on the north bank of the river Clyde, which in this part of its course flows nearly from east to west, through a level tract of fertile land abounding with mineral wealth. At some distance from the shore, the ground has a gradual ascent for nearly half a mile, terminating in a ridge of considerable elevation, on the summit and declivities of which, towards the north-east, the more ancient part of the town is chiefly situated. Two extensive and spacious lines of street pass through the whole of the city, intersecting each other at the Cross. Of these, the principal line, consisting of the

Gallowgate, Trongate, and Argyll streets, reaches more than a mile and a half in a direction from east to west, and is about eighty-three feet in average breadth; while the other, intersecting the city from north to south, and comprising the High-street and the Saltmarket-street, is above three-quarters of a mile in length and about fifty-four feet wide. Parallel with the former of the two great lines are Bell, Wilson, Ingram, Cochrane, George, Duke, and Clyde streets; and parallel with the latter of the two lines are King, Candleriggs, Brunswick, Hutcheson, Stockwell, Glassford, Dunlop, Miller, Queen, Buchanan, Maxwell, and Jamaica streets, the last of which is the great thoroughfare to the quays at the Broomielaw. Near the southern extremity of the Saltmarket-street is Bridgegate-street, diverging obliquely to the south-west, and once forming the principal avenue from the old bridge into the city. To the north-east of George and Duke streets, and almost in a line with each other, are Rotten-row and Drygate-street, the latter of which was the chief street of the ancient town. North of High-street, on a triangular plot of ground formerly the site of the episcopal palace, is the Royal Infirmary, nearly opposite to which, on the west, was the hospital of St. Nicholas; and on the banks of the Molendinar rivulet, to the east, stands the venerable cathedral. Eastward of the Saltmarket-street is St. Andrew's street, conducting into St. Andrew's square, a handsome range of buildings, in the centre of which is the church dedicated to that saint; and further to the north and east are London and Great Hamilton streets. South of Argyll-street is St. Enoch's square, on the south side of which is the church of St. Enoch, and on the east Surgeons' Hall; and to the north-west of the same street is St. George's, the most spacious square of the city, and in which the houses are large and of elegant appearance. In the last-named square are, a bronze statue of Lieutenant-General Sir John Moore, who was a native of Glasgow, erected at a cost of £4000; a statue, by Chantrey, of the great improver of the steam-engine, James Watt; and a Doric column to the memory of Sir Walter Scott. There are some remains of ancient mansions identified with events of importance in Scottish history, and of those which are still entire the principal is the house near the northern extremity of High-street, where Lord Darnley, the husband of Mary, Queen of Scots, resided during his illness. Opposite the east end of Bridgegate-street, in Saltmarket, till lately stood Silver-Craigs House, where Oliver Cromwell took up his abode, and held his levees, after the battle of Dunbar.

As viewed from the Cross, the city has a striking character of magnificence and grandeur, combining views of the Trongate, Argyll, and Gallowgate streets; the Tontine-buildings, in front of which is an equestrian statue, in bronze, of King William III., presented by James Macrae, Esq., in 1735; and part of the High-street, on the east side of which are the stately edifice of the university, and the elegant structure of the Hunterian Museum. The houses are spacious and handsome, built of freestone, and roofed with slate; and those in the streets diverging from the Cross were once, for some length, embellished with piazzas of the Doric order. Many of the houses consist of tenements under the same roof, called flats, each of which is inhabited by a separate family; those built on the lands of Blythswood, to the west of the city, are mostly constructed

upon a plan adapted for one family only. The streets are all well paved, the carriage-ways with whinstone, and the foot-paths with flags. The city is lighted with GAS, partly from works erected by a company incorporated by act of parliament in 1817, and whose capital, originally £40,000, has been augmented to £150,000. The company's works, which are upon a very extensive scale, occupy an area 125 yards in length and nearly of equal breadth; and connected with them are several subsidiary establishments in different parts of the town. The gas is purified with lime, and afterwards with a solution of sulphate of iron. It is conducted to the houses of the inhabitants by cast-iron pipes, laid under the foot-paths on both sides of the street: the aggregate length of the pipes is 110 miles; and in the production of the gas requisite, not less than 9000 tons of coal are annually consumed. In 1843 a new company was established, called the City and Suburban Gas Company, for the purpose of affording an additional supply of gas, for the greatly extended and rapidly increasing population and manufactures of the city. The works are situated in the eastern district of the town; they occupy five acres of ground, and contain 250 retorts, twelve dry lime purifiers, and three large telescope gas-holders, capable of storing 800,000 cubic feet of gas. Upwards of 110 miles of pipes, varying from one to twenty-four inches in diameter, were laid down within the city and suburbs, in the course of the two first years of the company's existence. The capital of the company is £150,000, divided into shares of £10 each. The inhabitants are furnished with WATER by the united Glasgow and Cranston-Hill Water Companies, of which the former was incorporated in 1806, and the latter in 1808: the works were originally constructed at an expense of £320,000, and have been since considerably enlarged. Previously to its distribution to the houses, the water is made to pass through a natural filter of sand; and it is thence conveyed by pipes, laid under the carriage-way of the streets. In 1846 an act was passed to enable the company to introduce an additional supply of water.

The public GREEN, a beautiful and important appendage to the city, to which it is conjectured to have imparted its name, is situated to the south-east, on the north bank of the Clyde, and comprises about 136 acres. It has been greatly improved, at a cost of more than £50,000, and laid out as a park, with pleasure-grounds, and serpentine gravel-walks amidst shrubberies and plantations embellished with stately timber. The whole forms a delightful promenade for the inhabitants; and there is a carriage drive, two miles and a half in extent, through a rich variety of beautiful scenery, commanding extensive and interesting views of the river, the city with its cathedral and lofty spires, the suburbs, the adjacent hills, and many other pleasing features. At the western end of the High-green is a handsome obelisk, erected by subscription of the citizens, at an expense of £2075, in honour of Lord Nelson; the first stone was laid on the 1st of August, 1806, the anniversary of the battle of the Nile. On the margin of the river, at the southern extremity of the Green, is a lodge belonging to the Royal Humane Society, replete with all the requisite apparatus for the restoration of suspended animation from drowning, and where officers are in constant attendance. The SUBURNS are extensive: the ancient

Gorbals, now much enlarged, is situated upon the south of the Clyde, communicating with the city by the old bridge. On the same side of the river, to the west, are Hutchesontown and Tradeston; the former connected with the city by a stone bridge of five arches, erected in 1834, at an expense of £22,440; and the latter by the Glasgow bridge, a handsome structure of granite, of seven arches, 500 feet long and fifty feet wide within the parapets, forming the chief entrance to the city from the south: this bridge was completed by the late Mr. Telford, in 1836, at a cost of £34,427. In 1845 an act was passed for consolidating the management of the bridges over the Clyde at Glasgow; for rebuilding the old bridge; and for erecting an iron bridge for foot passengers, on the wooden bridge opposite to Portland-street of Laurieston being taken down. In 1848 an act was obtained by the Caledonian railway company, for the extension of their line across the river. North of the Clyde are Bridgeton, Calton, Grahamston, Andersontown, and Finnieston, all of which are described under their respective heads, as are also Gorbals, Hutchesontown, Laurieston, &c. Near the east end of the Gallowgate-street are the *Infantry Barracks*, erected in 1795, and inclosing a quadrangular area of about four acres, of which three sides are occupied with buildings, and the fourth by an iron palisade. The central range comprises the officers' apartments and mess-room, and the wings seventy-two apartments, each adapted for fourteen men. The area affords an extensive ground for parade, and contains a guard house, magazine, infirmary, and other offices.

LITERARY AND SCIENTIFIC INSTITUTIONS, AND PLACES OF AMUSEMENT.

The first circulating library was established by Mr. John Smith, in 1753, and at present contains about 20,000 volumes. Another, founded in 1807, and purchased in 1811 by Messrs. Potter and Company, has a collection of nearly 18,000 volumes. The Public Subscription Library was instituted in 1791, by Walter Stirling, Esq., who bequeathed his mansion in Miller-street, with the whole of his library, his share in the Tontine Buildings, and £1000 in money, in trust to the lord provost, and others chosen from the town council, the merchants' house, the presbytery of Glasgow, and the faculty of surgeons and physicians, for its establishment. Though originally intended for the gratuitous use of the citizens, it is supported, and has been greatly extended, by subscriptions gradually augmented from three to ten guineas, paid by each member on admission, and which entitles him to the benefit of it for life. It contains 10,000 volumes, which are kept in the hall of Hutcheson's hospital. The Glasgow Public Library was established in 1804, by a society of gentlemen, who placed it under the management of a committee, nine curators, a treasurer, secretary, and librarian; it has a collection of 4000 volumes, and is supported by an annual subscription of ten shillings, and a payment of twelve shillings on entrance.

Surgeons' Hall, on the east side of St. Enoch's square, is a good building of the Ionic order, erected in 1791, for the use of the faculty of surgeons and physicians: the front is decorated with a range of Ionic pilasters, supporting an entablature and cornice, surmounted with

an attic and open balustrade. The interior contains the hall for the faculty, which is a spacious room, adorned with a painting of Hygeia the goddess of health, and other allegorical devices; a library; committee-rooms; and various offices. In the lobby are several old portraits, among which are those of Galen, Hippocrates, and other fathers of medicine; and on the right hand is the entrance into the library. Two societies hold their meetings here, namely, the *Glasgow Medical Society* and the *Medico-Chirurgical Society*, the former of which meets on the first and third Tuesdays of every month from October to May inclusive, when essays are read, confined to medicine or one of the sciences immediately connected with it. The object of the latter society is, to receive communications on medicine and surgery, and the collateral sciences, to converse on medical topics, and to promote professional improvement. The *Philosophical Society*, established in 1802, for the diffusion of knowledge by reading essays on philosophical subjects, and exhibiting models for the improvement of machinery, is under the control of a president, vice-president, and council of twelve, with a treasurer, secretary, and librarian; and is supported by subscriptions of fifteen shillings annually, and a payment of one guinea on admission. The *Mechanics' Institution* was founded in 1823, for the promotion of the arts and sciences, by the delivery of lectures in natural philosophy, chemistry, and other subjects; and in 1831 a commodious building was erected for that purpose in Hanover-street, on the pediment of which is a colossal statue of James Watt. The edifice contains apartments for the models and apparatus, a theatre for the lectures, and a library consisting of more than 3000 volumes. The funds arise from annual subscriptions of the students, the average number of whom is about 500. The *Athenaeum* was recently established, on the plan of that of Manchester. The *Literary and Commercial Society* met in the college as early as 1795, and is believed to have been founded by Dr. Adam Smith: its meetings are now held in the Black Bull hotel. The *Maitland Club*, similar in its design to the Bannatyne Club of Edinburgh and the Roxburghe Club of London, has been established within the last few years, for reprinting scarce and valuable books, and printing curious and important manuscripts, illustrative of the history, literature, and antiquities of Scotland. There are also one or two statistical societies.

The *Assembly Rooms*, in Ingram-street, were erected in 1796, after a design by Messrs. Adam, by Tontine subscription, in shares of £20 each. The building is an elegant specimen of the Ionic order, rising from a rusticated basement. It is divided in front, into three compartments, by two boldly-projecting central portions, between which is the central window, and two less prominent projections at the extremities; and is embellished with pillars supporting an entablature and cornice, surmounted by an open balustrade. The interior contains the assembly room, eighty feet long, thirty-five feet wide, and twenty-seven feet high, elegantly fitted up, and brilliantly lighted; a card room; retiring and supper rooms of similar character; and various other apartments. *Theatrical performances*, previously to the erection of a theatre, took place, under the Edinburgh company, in a temporary booth near the bishop's palace: in 1764, a regular theatre was built, and opened by Mr. Bellamy, on the west side and near the south end of

Alston-street; but on the first night, some disorderly persons set fire to the scenery and machinery. The stage was refitted; but the subsequent performances never received any adequate patronage, and in 1782 the structure ceased to be used as a theatre. In that year, a theatre which had been erected in Dunlop-street was opened by Mrs. Siddons, Mrs. Jordan, and others; and the taste for the drama began to increase, which, in 1805, led to the erection of a splendid building in Queen-street, at an expense of £18,500 raised by subscription. This edifice, however, was burnt down in 1829; and the former building in Dunlop-street was consequently enlarged and embellished by Mr. Alexander, and continued to be used until 1839, when it was pulled down, and a larger and more elegant structure erected in its stead, which was burnt down in November 1845. The Adelphi theatre, on the Green, was built in 1844, and destroyed by fire in November 1848: it was the first erected in Scotland after the passing of the new licensing act, and accommodated nearly 2000 persons. The *(old) Botanic Gardens* originated in the want of such an appendage to the university, and were formed in 1830, by a proprietary of £10 shareholders, incorporated under the designation of the Botanic Garden Institution, who purchased for that purpose eight acres of ground near the reservoir of the Cranston-hill water-works. In consideration of the university having bought shares to the amount of £2000, their professor of botany was invested with the exclusive privilege of delivering lectures in the hall of the institution. This land near the reservoir, however, has been sold, and a *new garden* of twenty-one acres formed on the banks of the Kelvin, two miles off. It occupies a fine elevated situation, sloping down on the north to the waters of the Kelvin, whilst, on the south, the New Observatory stands out a conspicuous object, on a green swelling elevation of considerable height. The stock of the society exceeds £10,000; and the gardens, which contain a very extensive assortment of rare and valuable plants from almost every part of the world, are under the direction of a president, vice-president, and a committee of nine of the proprietors. The *Public Baths* were erected in 1800, by Mr. William Harley, in Bath-street, at the eastern extremity of Nile-street; they comprise hot and cold baths, with dressing-rooms and every requisite. The *Victoria Baths*, in West Nile-street, are of recent erection, and well conducted by a joint-stock company.

TRADE AND COMMERCE.

The first branch of trade pursued by the inhabitants was the curing of salmon taken in the Clyde, of which they exported great quantities to France and Holland, receiving thence in return brandy, wines, and salt; and towards the commencement of the seventeenth century, they embarked largely in the herring-fisheries, in which they carried on a very extensive trade, in vessels of their own, and for the protection of which, in the reign of Charles II., they fitted out a privateer of considerable force. About this time, likewise, they imported much iron from the Baltic; and after the union of the two kingdoms, which opened to them the markets of America and the West Indies, they appear to have imbibed such a spirit of commercial enterprize as laid the foundation of their future wealth. They exported, in English ves-

sels, various goods for the supply of those colonies, from which they obtained in return large quantities of tobacco. The increasing success with which this traffic was carried on, soon enabled them to build and maintain vessels of their own; and in 1718, the first of these ships left Glasgow for America. So very great, indeed, was the prosperity attending their colonial relations, that it at length excited the jealousy of the English merchants; and after numerous vexatious obstructions opposed by Bristol, London, Whitehaven, and other rival ports, the trade gradually diminished, and in 1735 almost declined. It, however, revived soon after, though not to its former extent, and continued by degrees, and slowly, to augment, till the breaking out of the American war, which involved many of the principal merchants in ruinous losses. But the spirit of enterprise which had been so powerfully excited, though damped by these disasters, was not extinguished; the people of Glasgow found other sources of trade in the West Indies, and on the continent of Europe; and in 1790, there were 476 ships, of the aggregate burthen of 46,581 tons, employed in the business of the port. Owing to the shallowness of water in the Clyde, however, these ships sailed from Port-Glasgow and Greenock, the goods being transmitted to and from Glasgow by small craft.

The introduction of MANUFACTURES has afforded to the inhabitants of Glasgow a permanent source of increasing prosperity. Of these, the earliest appear to have been those of plaiding, soap, ropes, and the refining of sugar, of which, however, the first only was carried on to any considerable extent: the tanning of leather has been pursued from an early date; and the Glasgow Tan-work Company, founded soon after the Union, had very extensive premises at the head of the Gallowgate. Breweries, too, on a large scale, were established by several companies at a distant period. The manufacture of linen, lawns, cambrics, and similar articles, was begun about 1725, and continued for some time to be the staple trade of the city and neighbourhood; and though almost superseded by the cotton manufacture, it is still pursued to a tolerable extent. The weaving of inkle was established in 1732, by Mr. Alexander Harvie, of Glasgow, who, at imminent risk, brought over the first loom for that purpose from Haerlem, together with some workmen, and opened a factory here: this branch of manufacture was subsequently introduced into Manchester and other towns in England, but it is yet carried on here upon a large scale. The manufacture of delft-ware in imitation of the Dutch, in which many improvements have been made, and of the various kinds of pottery and earthenware, is also considerable; and the snuff manufacture, which, while the tobacco trade with America lasted, was very extensive, is still successfully prosecuted. The founding of types, and the art of printing, have been brought to great perfection; and handsome editions of the Greek and Roman classics, and other standard works, have issued from the press of Glasgow. The manufacture of green and flint glass ware has made considerable progress; and large ale and porter breweries have been established.

The COTTON manufacture, which is the staple trade of the town and its vicinity, was introduced at no distant period, and has been extremely rapid in its advance. Several large factories, bleaching-grounds, and printfields, for which the situation of Glasgow, the purity

of the water of the Clyde, and the abundant supply of coal in the immediate neighbourhood, rendered the place highly favourable, were soon established; and in 1791, not less than 15,000 looms, each employing nine persons, were in active operation. The introduction of this manufacture and the several trades connected with it, gave rise to the invention of machinery of all kinds; and the improvements in the construction of the steam-engine, which appear to have been carried to their height under the direction of the celebrated Mr. Watt, of this place, and subsequently of the Soho works, near Birmingham, have increased this important branch of trade to an extent almost incredible. There are at present in Glasgow and its suburbs as many as fifty cotton-mills, in which are more than 500,000 spindles; two of these mills are fire-proof, and the cost of their erection and machinery exceeded £32,000 each. The number of looms is 47,127, of which 15,127 are steam-looms, 18,537 hand-looms in the city and suburbs, and the rest hand-looms in other parts for the Glasgow manufacturers. If the whole cotton-factories in the immediate neighbourhood of Glasgow are included, the number of spindles now at work amounts to 784,756; the estimated value of the factories is £784,756, the number of workers employed 7847, and taking the wages at from eight to nine shillings a week, which is the average, the sum paid to these workers weekly amounts to from £3138 to £3531. Within the same limits, the number of steam-looms amounts to 17,620; the estimated value of the factories, to 264,300; and the number of persons employed, to 11,200: the average wages being from eight to nine shillings per week, the amount paid to these steam-loom workers weekly is from £4480 to £5040. The steam-engines employed for working the foregoing machinery are nominally equal to 3705-horse power, but their real working power is considerably greater. Besides the spinning and weaving of cotton, the staple manufactures of Glasgow, silk has also become an extensive article of commerce and manufacture: this material, and various rich foreign wools, are now woven into cotton fabrics with the most complete success.

The printing of calico, in which considerable improvement has been made by the use of the cylinder, is carried on very extensively; and the art of dyeing Turkey red, which was introduced about the beginning of the present century by M. Papillon, in conjunction with Mr. George Macintosh, who first erected works for that object, has been practised with increased advantage. The printing of Bandana handkerchiefs, begun by Messrs. Monteith and Company, has been also brought to great perfection. The weaving of Cashmere shawls has been much improved by Messrs. Houldsworth and Sons, of this place, who, having purchased from Captain Cochrane his patent for the spinning of Cashmere wool, the secret of which had been discovered in France, established a factory here for that purpose with the greatest success. This firm likewise directed its attention to the art of spinning Merino yarn, also discovered by Captain Cochrane, and for which the Board of Arts awarded him a premium of £300; and the merinos produced in the factory of Messrs. Houldsworth are equal in softness and quality to those of France. The woollen manufacture is almost confined to the coarser kinds of cloth, and carpets and blankets, made from native wool, which is not adapted for articles of finer

texture. The manufacture of steam-engines, and of the various kinds of machinery, is carried on to a very great extent: there are not less than fourteen establishments, in one of which, alone, about 1000 persons are constantly employed. Another great source of employment is the coal trade, which is carried on to an enormous extent in the neighbourhood of Glasgow, chiefly for home consumption, though a considerable exportation takes place: in 1831, about 560,000 tons passed into and through the city, whereof 124,000 were exported, principally coastwise; since which there has been a very large increase. The number of steam-engines in the different factories of the city and suburbs is estimated at more than 350, including those in the collieries and similar works.

From the peculiarly advantageous situation of Glasgow on the Clyde, and in a spacious district abounding with coal and ironstone of rich quality, the iron manufacture has naturally become an important source of wealth. In the works for this purpose, material improvement has been affected, both in the quality of the iron and in the facility of obtaining it, by the use of the patent "hot blast", invented by Mr. Neilson in 1824, and which, by conveying a stream of hot air to the blast furnaces, has been found to increase the intensity of heat in the fires to an extraordinary degree. And not merely is a greater quantity of iron of better quality thus produced, in less time; but also, by allowing of the substitution of coal in the place of coke, previously used, the amount of fuel has been reduced to three-sevenths of what was necessary by the cold blast process. Nor is it only in the making of iron that this invention has proved profitable: in the foundry and in the forge, the advantage of its adoption is likewise strikingly apparent. There are now nine iron-foundries in the city and suburbs. In the Clyde works, which consist of four furnaces, about 20,000 tons of iron are produced annually, on an average. In the Govan works, to the south and in the immediate neighbourhood of Glasgow, are five furnaces in blast, producing rather more than 26,000 tons of pig-iron annually.

Extensive chemical-works were established in the district of St. Rollox, in 1800, by Messrs. Tennant, Knox, and Company, for the manufacture of sulphuric acid, chloride of lime, soda, and other articles. The buildings of this concern occupy an area of nearly 28,000 square yards, and contain more than 100 furnaces, retorts, and other apparatus; the vessels of platina alone are valued at £7000, and in the various processes 600 tons of coal are consumed weekly. Among the numerous chimneys of the establishment is one 500 feet in height from its base. The manufacture of acetate of lead, previously imported from Holland, and of which large quantities are used in calico-printing, was established at Glasgow in 1786, by Mr. Charles Macintosh, and carried on to such an extent that great quantities of it were exported to the very place from which the mode of preparing it had been originally obtained. Mr. Macintosh also effected improvements in the dyeing of fancy muslins, and the preparation of chloride of lime, in powder, for the purpose of bleaching. In 1808, he established extensive alum-works at Hurler and Campsie; commenced the manufacture of Prussian blue, and the triple prussiate of potash as a substitute for indigo; and introduced the process of rendering silk and woollen stuffs waterproof by the

insertion, between two surfaces, of a layer of caoutchouc, made liquid by solution in naphtha. The same gentleman invented a process for converting iron into steel, by inclosing it in air-tight vessels, and subjecting it to the action of carburetted hydrogen gas. For these inventions and discoveries he was, in 1823, elected a fellow of the Royal Society of London. The distilling of whisky is comparatively of recent introduction; the first establishment of any magnitude was in the year 1786, and since that period no very great increase seems to have taken place.

The trade of the port is principally with America, the West Indies, and the continent of Europe; also to the East Indies, and China, the Mediterranean, Australia, and, in short, to all places of any consequence in the known world. In the year 1814, the quantity of sugar imported into the ports of the Clyde from the West Indies, was 540,198 cwt., of rum 1,251,092 gallons, and of cotton wool 6,530,177 lb.; exclusively of large quantities of grain, hemp, tallow, and timber from the Baltic. The exports, chiefly manufactured goods, during the same year, amounted to £4,016,181. The number of ships that entered inwards was 448, of the aggregate burthen of 72,219 tons; and the number that cleared outwards, during that year, was 592, of 94,350 tons. Since this time, the Clyde trustees have been most successful in improving the navigation of the river; and instead of the coal gabberts of from 20 to 50 tons' burthen, the largest vessels that could visit Glasgow at the beginning of the present century, vessels of above 700 tons are now at the harbour, drawing seventeen feet water, besides many more of from 300 to 500 tons. Among the numerous steam-vessels which regularly visit the harbour, may be mentioned the *Admiral* steamship, built at Port-Glasgow in 1840, of 930 tons (total tonnage), drawing 11 feet water; and the *Achilles*, of 992 tons, the length of this latter vessel over all being 220 feet. There are 61 steam-vessels belonging to capitalists in Glasgow, registering 11,016 tons, exclusive of space occupied by the engines, and propelled by 8704-horse power. Several of these vessels register above 600 tons, use engines of above 400-horse power, and are capable of being armed with one long gun of the longest calibre, and fourteen 24-pound carronades. A very considerable trade is carried on at Glasgow in timber; the firm of Messrs. Pollock, Gilmour, and Company hold thirty-nine ships, registering 26,980 tons, navigated by 1300 seamen, and chiefly employed in importing wood. The first ship engaged in the China free trade was consigned to Mr. William Mathieson, of this city; and her cargo of teas was disposed of in the sale-room of the Royal Exchange, at a remunerating price, on the 14th of November, 1834.

In 1840 the number of vessels that entered the port of Glasgow was 16,486, of the aggregate burthen of 1,166,329 tons: the vessels employed in foreign trade, direct to Glasgow, amounted in the year 1844 to 316, registering 58,816 tons; while the vessels that cleared out for foreign ports amounted to 442, registering 83,621 tons. The number of registered vessels belonging to the port, in 1847, was 519, of 137,533 aggregate tonnage. In 1812, the customs yielded only £3124; in 1814, £7420; in 1817, £8290; in 1820, £11,000; in 1822, £16,148; in 1824, £29,926; in 1825, £41,154; in 1828, £74,255; in 1833, £97,042; in 1834, £166,913; in

1835, £270,667; in 1837, £389,702; in 1844, £551,851; in 1847, £659,835; and in 1850, £640,568. From this statement, some notion may be gained as to the great and progressive advances of the commerce of this city; but it must be observed that the increase is not solely to be attributed to an augmented trade, but partly to the circumstance of numbers of ships now being able, from a greater depth of water, to proceed to the Broomielaw at Glasgow and pay duties there, instead of at Greenock on the Firth of Clyde. The tonnage and harbour dues have also progressively increased: in 1771, they amounted to £1071; in 1791, to £2145; in 1804, to £4760; in 1825, to £8480; in 1826, to £16,200; in 1835, to £31,900; in 1841, to about £48,000; and in 1850, to £64,243.

The HARBOUR, as already stated, has been greatly improved and extended, and, by the deepening of the river, been rendered accessible to vessels of more than 700 tons: the quay reaches for upwards of 3000 yards in length on the north, and upwards of 2000 yards on the south, side of the river; while the width of the harbour, at Glasgow bridge, is 440 feet. There are spacious warehouses for the reception of merchandise, with every requisite for facilitating the trade of the port. Six dredging-machines, with powerful steam apparatus and two diving-bells, are kept for clearing the river from obstructions; and six powerful cranes have been erected, one of which, constructed by Messrs. Claud Girwood and Company, is capable of raising a weight of thirty-two tons, while another, on the south side of the river, made by Mr. Caird of Greenock, can raise forty-five tons at a time. In 1846 an act was passed authorizing the construction of a wet-dock or tidal basin, with additional wharfs and other works. Since the deepening of the Clyde, ship-building has been introduced, and is now carried on with success; yards for that purpose have been constructed, and vessels of 1000 tons' measurement are now built here, both for the royal navy and for the merchants' service.

The art of propelling VESSELS by STEAM appears to have been first brought into actual use at this place, by Mr. Henry Bell, who, having constructed a steam-engine of three-horse power, employed Messrs. Wood and Company, of Port-Glasgow, to build a boat for him, which was the first steamer that sailed on any navigable river in Europe. This vessel, which was called the *Comet*, began to ply on the 18th of January, 1812, between Glasgow and Greenock, performing the voyage at the rate of five miles per hour, which was subsequently increased, the vessel being altered and enlarged. Since that time, steam navigation has of course been much encouraged. The number of steamers employed at the port, in a late year, was sixty-seven, of which eighteen plied between this place and the ports of Liverpool, Belfast, Dublin, and Londonderry, and eleven between Stranraer and the Western Highlands, for goods and passengers; twenty-six for passengers only, in the river and Firth of Clyde; eight for luggage; and four for towing vessels. At the present time the number of steamers is still larger. The boats of more recent construction are elegantly fitted up for passengers, and their speed is greatly increased. A fine iron-built screw steam-ship, called the *City of Glasgow*, and intended to ply between Glasgow and New York, was launched in the year 1850.

CANALS AND RAILWAYS.

The *Forth and Clyde Canal*, already referred to, and which, for want of funds, had been suspended in 1775, was resumed in 1784, when government granted £50,000 from the forfeited estates, towards its completion, which was effected in 1790. This important work is nearly thirty-five miles in length, of which sixteen miles are on the summit level, having an elevation of 156 feet above the sea: the ascent to this level, from the eastern sea, is obtained by twenty, and from the western sea by nineteen, locks. The average width of the canal is fifty-six feet on the surface, and twenty-eight at the bed; and the average depth ten feet. By the opening of this line of navigation, the distance by water is diminished 800 or 1000 nautical miles, and the passage rendered vastly more safe. In its progress the canal crosses the rivers Luggie and Kelvin, and is conveyed over the latter, and the valley in which the river flows, by a bridge of four lofty arches, erected at an expense of £8509. It is supplied by eight capacious reservoirs, covering more than 720 acres of ground. Several iron steam tug boats, and swift passage boats drawn by horses, leave Port-Dundas at Glasgow, and return, daily; the concern is in a very flourishing state, and in 1844 as many as 598,333 tons of goods were carried. During the suspension of this undertaking, the city completed a collateral cut to Hamilton hill, about a mile to the north of Glasgow, which was subsequently extended to Port-Dundas, and which, affording a more ready communication than was previously possessed, greatly increased the facilities of commerce. In 1845 an act was passed for forming a junction between the Forth and Clyde navigation and the Edinburgh and Glasgow Union Canal. The *Monkland Canal*, begun in 1770, and connecting the town with the collieries in the parishes of Old and New Monkland, is about twelve miles in length, thirty-five feet wide at the surface and twenty-four at its bed, and about five feet in average depth. It attains its summit level at Blackhill, and is thence continued to Sheepford, where are two locks, by means of which it communicates with the river Calder. An act was passed in 1846 authorizing the sale of this canal to the proprietors of the Forth and Clyde navigation. The *Glasgow, Paisley, and Ardrossan Canal* was commenced in 1807, and the part between Glasgow and Johnstone was opened in 1811. The projected line, from Port-Eglington to the harbour at Ardrossan, was thirty-five miles and three-quarters; but nothing has been done since the completion of the Johnstone portion, and the distance does not, therefore, exceed eleven miles. The canal is thirty feet wide at the surface and eighteen feet at the bed, and the average depth four feet six inches; near Johnstone it has eight locks, and there are numerous boats employed in carrying heavy goods, but now no passage boats.

Great facility of intercourse in every direction is afforded by the lines of the Caledonian, the Edinburgh and Glasgow, and the Glasgow and Ayrshire railway companies, which are three of the six principal railway companies in Scotland. The acts of parliament, however, that have been obtained by these companies are so numerous, and the arrangements successively made are now of so little general interest, that it may suffice to

state in few words the means of communication which each company affords, in respect to Glasgow. *The Caledonian Railway* connects the city with the counties of Lanark and Dumfries, through which it passes to Carlisle in England; being a means of uniting the two countries, like the North-British railway from Edinburgh to Berwick-upon-Tweed, which runs along the east coast. With the Caledonian railway are amalgamated the Glasgow, Paisley, and Greenock railway, and other lines. *The Edinburgh and Glasgow Railway* connects the two cities from which it takes its name. It passes through the counties of Lanark, Dumbarton, Stirling, Linlithgow, and Edinburgh; and at Castlecary, fifteen miles and a half distant from Glasgow, forms a junction with the Scottish Central railway to Perth, from which city there is railway communication to Dundee, Arbroath, Montrose, and Aberdeen. By the *Glasgow and Ayrshire Railway*, facility of intercourse is maintained with Paisley, Kilmarnock, Ayr, and other places; and at Kilmarnock commences the Glasgow, Dumfries, and Carlisle line of railway, now in progress in connexion with the Glasgow and Ayrshire railway company, and part of which is already opened. To each of these three great railways there belong various subordinate lines, either by purchase or lease. The railway stations in the city form one of the most remarkable features of recent date in Glasgow.

PUBLIC BUILDINGS CONNECTED WITH TRADE, &c.

The Town-hall and old Royal Exchange, in Trongate-street, erected in 1636, and greatly improved in 1740, for the accommodation of the merchants of the city, is an elegant structure, with a piazza of the Doric order facing Trongate, having the keystones of the arches ornamented with grotesque heads well sculptured. Above the piazza rises the chief story, embellished with pillars of the Ionic order, supporting a handsome entablature and cornice surmounted by an open balustrade enriched with pilasters crowned by vases. The principal, or Town, hall, which is used for public meetings of the inhabitants under the sanction of the magistrates, is fifty-four feet in length and twenty-seven feet wide, with a coved ceiling twenty-four feet high. Its walls are decorated with trophies, and full-length portraits of James VI., Charles I. and II., James II., William III. and his queen Mary, Queen Anne, George I., II., and III., and of Archibald, Duke of Argyll, in his robes as lord justice-general; over the mantel-piece is a bust, in bronze, of George III.; and at the east end of the hall, a statue, in marble, of William Pitt, by Flaxman. To the west of the old Exchange, in the same building, were the old assembly-rooms, a handsome suite, elegantly fitted up. The chief room is forty-seven feet long, twenty-four feet wide, and twenty-four feet high; and its walls are adorned with fluted Corinthian columns, sustaining an enriched ceiling, from which are suspended three brilliant chandeliers of cut glass. This room is now the principal hall of the Tontine hotel.

The New Exchange, a spacious edifice at the west end of the old part of the city, was erected about twenty years ago, and for the beauty of its design is not surpassed by any structure in the kingdom: on each side, also, lofty and handsome buildings have been raised to form a suitable square. This superb pile, which cost £60,000, is wholly in the Grecian style of architecture,

and is entered by a noble portico, surmounted by a lantern tower. The great room measures 130 feet in length, sixty feet in breadth, and thirty feet in height in the centre, and is supported on each side by pillars of the Corinthian order. Close to the New Exchange, and in the eastern part of the square, is an equestrian statue of the Duke of Wellington, the inauguration of which took place on October 8th, 1844; it was raised by the munificence of the inhabitants, and forms a noble monument of the skill of Marochetti the sculptor. On one side of the pedestal is represented, in bas-relief, the victory of Assaye; on the opposite side is depicted that of Waterloo; and the two remaining sides are occupied by representations of the Soldier's Return and the peaceful pursuits of Agriculture. *The Custom-House*, formerly in St. Enoch's square, is now at the west end of Great Clyde-street, in the immediate neighbourhood of the harbour: the building was erected by the crown in 1839, at an expense of about £13,000, and is in the Grecian-Doric style of architecture.

The TONTINE Coffee-rooms and Hotel form a handsome edifice, erected in 1781. Of these buildings, the coffee-room is seventy-four feet long, and of proportionate width and height: at the north end, which is circular, is a spacious window, divided by Doric columns into compartments, within which are seats for the subscribers; and the room, which is amply supplied with Scotch, English, and Irish newspapers, and periodical publications of every kind, is lighted by richly-cut glass chandeliers. The principal entrance, which is from the piazza, leads into a vestibule whose lofty roof is sustained by pillars of the Doric order, with corresponding pilasters in the walls. The reading-room is supported by an annual subscription of £1. 12., but is open to strangers gratuitously for a limited time. In the hotel are numerous suites of apartments, elegantly furnished, and replete with every accommodation. There are various banking establishments, of which the principal are, branches of the Bank of Scotland, the British Linen Company, and the Commercial, National, and Royal Banks of Scotland; the City of Glasgow Bank; and the Clydesdale, Glasgow Joint-Stock, and Glasgow Union Companies. Some of the buildings for these banks are of very handsome design. *The Post-office* is in Glassford-street, where a building formerly occupied as warehouses is fitted up for the accommodation of the public.

The market, which is abundantly supplied with provisions of all kinds, is on Wednesday. Fairs are held annually on the second Wednesday in January, the Thursday before Easter, the 26th of May or on the Monday following, the first Monday after Whitsunday, the second Monday in July, and on the Wednesday after Martinmas. The CORN EXCHANGE, in Hope-street, was completed and opened for the use of the corn merchants in November 1842. It is a handsome quadrangular structure of stone, erected under the superintendence of Messrs. Brown and Carrick, by a proprietary of £50 shareholders. The exterior is relieved by a range of circular-headed windows: in the centre of the principal front, at the entrance from Hope-street, is a beautiful portico of Corinthian columns, twenty-five feet high, supporting an entablature and pediment; and the walls all round are crowned with an open balustrade. The interior contains a hall for the meeting of the merchants, eighty feet in length and fifty-

seven wide, lighted by cupolas formed in the compartments of the ceiling, which is twenty-two feet high, and by a magnificent lantern in the centre, fifty feet long and thirty feet wide, sustained on eight fluted columns of the Corinthian order. Around the hall are ranged thirty-six stalls, let to tenants at a rent of £10 per annum, and so contrived as to afford every facility of carrying on the business of the market: underneath the hall is a store, capable of containing 800 tons of grain.

There are markets for butchers' meat and fish in King-street, the former 112 feet long and fifty-seven feet wide, and the latter 173 feet by forty-six: the area, which is inclosed with walls, and has several handsome entrance-gateways, is subdivided into stalls, and paved with freestone; the benches for the fish are covered with lead, and each stall has a separate water-pipe. The market for beef, in Bell-street, is of plainer character. Although these markets are still continued, butchers' meat and fish are chiefly sold in shops in various parts of the town. The vegetable and green market formerly occupied the site of the ancient Wynd church; the butter, cheese, poultry, and egg market, once in Montrose-street, has been removed to the Bowling-green (now the Bazaar) in Candleriggs-street, covering 2411 square yards. To the south of Bridgegate-street is the slaughter-house, a large building, erected in 1810, and occupying 4736 square yards; it contains seventy-seven separate killing-rooms, two cattle-yards, and two alleys leading to the killing-rooms, along the whole of which are placed pipes for conveying water, with copious sewers to carry off the offensive matter. The cattle-market, erected in 1818, between the roads leading to Edinburgh by the Gallowgate and Duke streets, is a spacious area containing 29,560 square yards, paved with stone, and inclosed with walls. It has a good inn, with stabling, and affords accommodation for the display of 120 oxen and nearly 10,000 sheep; the market is well attended by dealers from distant places, and occasionally cattle and pigs are sent from Ireland for sale. At the east end of Ingram-street is the Tron or weigh house, a large building which is also used as a storehouse. An act of parliament entitled "Glasgow markets and slaughter-houses" was passed in the session of 1850.

MUNICIPAL AFFAIRS.

The city of Glasgow, though declared to be a free burgh by charter of William the Lion, still exercised the privileges conferred upon it solely under the influence and control of the bishops and archbishops of the see, in favour of whom, indeed, the charter was especially granted. Even after it was erected into a burgh of regality by James II., the citizens continued to be governed by bailies appointed by the bishops, who generally selected the most powerful among the nobility of the kingdom to fill that office, which eventually became hereditary in the family of the Dukes of Lennox. After the resignation of this power by one of the dukes, the choice of the magistrates was regularly made by the crown till the year 1611, when, by an ample charter bestowed by James VI., confirming all former gifts, the burgesses were vested with the liberty of electing their own magistrates. This charter was ratified and extended by Charles I., and afterwards confirmed by charter of Charles II.; and in 1690, by charter of William III., the citizens received all

the privileges of a ROYAL BURGH, with rights and immunities as full and free as those of Edinburgh. Under this charter, as subsequently explained by usage since the Union, and as lately modified by the Municipal Reform act, the government of the city is vested in a lord provost, five bailies, a bailie of the river Clyde, a treasurer, a dean of guild elected by the Merchants' House, a deacon-convener elected by the Trades' House, and twenty-two other councillors; assisted by assessors and town-clerks, a chamberlain and superintendent of works, and other officers. The council consists altogether of thirty-two members. It was formerly chosen by the corporation, but, since the passing of the Municipal act, has been chosen by the £10 householders within the burgh. Both the provost and treasurer continue in office for three years, and the third of the council who have been longest in office retire annually, in November: the chamberlain is appointed by the magistrates and council during pleasure, but is generally continued for life; the town-clerks, also, hold their office *ad vitam aut culpam*. The corporation are patrons of all the parish churches within the royalty, except the Inner High church; they have also the patronage of the Grammar or High School, and the right of presentation to several bursaries, or scholarships, in the university. The jurisdiction of the magistrates extends over the ancient royalty, the lands of Ramshorn, with other parts of the Barony parish, and the lands of Blythswood; they are also superiors of Gorbals.

The city is divided into five wards, each of which chooses six of the town-councillors; and the inhabitants have the power, on certain payments, of joining either of two classes, the merchants and the tradesmen. Each of these has a separate House, and their interests are respectively under the superintendence of a dean of guild and a deacon-convener, who, as has been already stated, are both members of the town council. There are fourteen minor incorporations of trades, which, as settled by the letter of guildry, take precedence as follows: the hammermen, tailors, cordiners, maltmen, weavers, baxters, skimmers, wrights, coopers, fleshers, masons, gardeners, barbers, and bonnet-makers. These minor incorporations constitute the Trades' House. The origin of the Merchants' House is involved in some obscurity: it appears, prior to 1747, to have consisted wholly of the burgesses who followed the occupation of merchants; but by an act of the House in that year, the corporation was thrown open to all traders within the city, whether natives or foreigners, wholesale or retail dealers, of fair character, who should pay a subscription of four shillings annually, and a fine of five shillings on admission, which latter sum has been subsequently raised to ten guineas. This House is under the superintendence of the dean of guild, who has power to compel such of the inhabitants as are not freemen, and exercise the privileges of the city, to enter themselves as burgesses, and to pay the fine or entrance money. Most of the minor incorporations are possessed of property to a considerable amount, and contribute largely to the support of charitable institutions. The town-corporation revenue, in 1848-9, was £20,247.

The magistrates exercise both civil and criminal jurisdiction within the burgh, the former to an unlimited amount in personal actions, and the latter extending to all offences not capital, or punishable by transportation.

A court is held every other Thursday before the dean of guild and his council, consisting of eight members, four from the Merchants' and four from the Trades' House. It grants warrants for the erection or repair of buildings in the public thoroughfares, which cannot be commenced without its order; also for the removal of obstructions and nuisances; and in this court, prosecutions are instituted against such as trade in the city without having obtained their freedom. The business is conducted by the town-clerks, who act as assessors. The Water-Bailie's court is held on stated days, for civil and criminal business; and in all cases above the amount of ten shillings, the proceedings are in writing: the causes are decided by the town-clerks, as assessors; and the jurisdiction of the court extends from the port to the Cloch lighthouse, about twenty-five miles below Glasgow, for all offences committed on the river or in the harbour. The Police establishment is managed, in a very effective manner, by a board elected from the wards into which the city is divided, the magistrates being members of the board *ex officio*.

Among the edifices connected with municipal affairs, one of the most prominent is that designated the *City and County Buildings*, a structure in the Ionic style, erected in 1843, in Wilson-street, extending a considerable way up Brunswick-street on the east, and Hutcheson-street on the west. An elegant hall is fitted up in that portion of the building fronting Wilson-street, for the meetings of the town-council; and fronting Hutcheson-street is the burgh court hall, in which the dean-of-guild court and the small-debt court are held: the offices of the city chamberlain and town-clerks are also on this side of the building, and that portion of it fronting Brunswick-street is occupied by the sheriff's chambers, and various offices connected with the county.

The old *Merchants' House*, on the south side of Bridge-gate-street, was erected in 1659. Its lofty tower, of three stages rising from each other in diminished proportions, terminates in a pyramidal spire, surmounted by a vane representing a ship in full sail, and having an elevation of 164 feet from the base. The interior of the building contained a spacious hall, eighty feet in length and thirty wide, the walls of which were hung with well-painted portraits of the most munificent benefactors to the poor members of the company: there were also various other apartments. This Hall, from its situation and want of proper accommodation, having become unfit for the business of the institution, was sold, and a commodious building erected in Hutcheson-street, to the north of and in connexion with the City and County Buildings. Six columns and four pilasters in the Grecian style of architecture adorn the front, extending two stories above the first or basement story, and surmounted by a sculptured frieze and a parapet with vases. The edifice was completed in 1843, and contains an elegant hall seventy-five feet by thirty-five feet, with a coved ceiling twenty-seven feet in height, embellished with Grecian ornamental work: there is also a room for the directors, and other apartments are occupied by persons engaged in the general business of the Merchants' House. The *Trades' House*, on the west side of Glassford-street, was erected on the site of a former building, after a design by Messrs. Robert and James Adam. It is a handsome structure of stone, consisting of a central range and two slightly-projecting wings, rising from a rusticated base-

ment. Over the entrance, in the centre of the edifice, is a boldly-projecting portico of two duplicated columns of the Ionic order, supporting an enriched entablature and cornice, surmounted by a triangular pediment, above which is an attic, with an open balustrade, having in the centre a shield bearing the city arms, supported by two female figures in a reclining attitude, well sculptured. The whole is crowned by a spacious dome, rising from the roof, and terminating in a cupola and lantern. The hall, which is seventy feet in length, thirty-five feet wide, and twenty-four feet high, is lighted in front by three large Venetian windows, between which are other windows of smaller dimensions, and by the lantern of the dome, the interior of which is richly embellished. Its walls are ornamented with pilasters of the Doric order, supporting an entablature and cornice, and are hung with portraits of the principal benefactors, and the armorial bearings of the fourteen companies.

The old *Tolbooth*, to the east of the town-hall, an ancient building containing the courts of justice for the city and county, and also the prison for debtors and malefactors, was five stories in height. It had square turrets at the angles, and on the south side a boldly-projecting and embattled porch, forming the principal entrance, with a square tower surmounted by a spire, rising from the battlements, and strengthened by flying buttresses resembling an imperial crown, together 126 feet in height. In the tower, which is still preserved, is an excellent clock, whereby the other clocks in the town are regulated; also a remarkably fine set of musical chimes. This prison, situated in the centre of the city, without court-yards, chapel, or infirmary, not containing sufficient accommodation for holding the courts, and having only thirty-two apartments for prisoners of every description, was abandoned by the corporation, and, with the exception of the tower, sold to Mr. Cleland for £8000, in 1807.

The *Jail and Court-Houses*, erected instead of the Tolbooth, in 1811, at the west end of the public green, form a spacious building in the Grecian-Doric style of architecture, with a magnificent portico. At the time the edifice was raised, the hall and other apartments in its western division were considered amply sufficient for the civil and criminal establishments. From the rapid increase of population, however, it was found that the business of the justiciary circuit courts was much obstructed for want of proper space, and the whole of this portion of the building is now fitted up in a superior manner for their better accommodation. There are 122 apartments for prisoners; the prison admits of efficient classification, and is furnished with water and every requisite for cleanliness and health. Two cells, parted from the rest of the jail, and so constructed as to dispense with the use of irons, are reserved for prisoners under sentence of death. The governor's house commands a view of the several airing-yards; the chapel is seated for 200 persons, and there is an infirmary, well ventilated, for the reception of the sick. The old *Bridewell*, in Duke-street, opened in 1798, though ill adapted for classification, answered the purpose for which it was erected till, from the great increase of population, it became too small, when the authorities resolved to erect a bridewell capacious enough to receive the prisoners both of the city and the county, for which purpose, having procured an act of parliament, they erected the present

structure, which was opened in 1824. This building, adjoining the former, is not only sufficiently ample and spacious, but combines all the advantages of complete classification, seclusion, and security. *The Police Buildings*, erected at an expense of £14,000, and finished in January 1826, are of a superior kind, and embrace every requisite accommodation, including a court-room, numerous cells, &c. *The House of Refuge*, for the reclamation of juvenile offenders, was erected by subscriptions exceeding £10,000, on a site comprising four acres of ground on the lands of White Hill; the institution is also opened to the reception of orphan boys and others whose parents abandon them to vagrancy, and is conducted on a plan combining every thing requisite for the restoration of the depraved to habits of order and virtuous industry. A similar institution, for the reception of destitute young females, has also been recently erected.

Previously to the Reform act, Glasgow was united with the burghs of Rutherglen, Renfrew, and Dumbar-ton, in returning one member to the imperial parliament, who was elected by the burgesses; but, since the passing of that act, the city of itself has returned two members, and the right of election has been in the £10 householders.

THE UNIVERSITY.

Seal.

The University was originally founded in 1451, by Bishop Turnbull, who, under the sanction of James II., procured for that purpose a bull from Pope Nicholas V., and was appointed the first regent or chancellor. With the assistance of his chapter, the bishop prepared a body of statutes for the government of the institution, which was placed under the

superintendence of a chancellor, rector, doctors, and masters of the four faculties of theology, canon law, civil law, and the arts, as enumerated in the papal bull, and the several professors of which had taken their degrees in other universities. To encourage the professors, in 1453, the bishop obtained for every beneficed clergyman belonging to the college, exemption from all taxes and public burdens, and from residence in their respective cures, provided they took care to have the religious duties regularly performed. The rector was sole judge in all civil and criminal causes in which any member of the university was a party; and the whole of the privileges and exemptions were confirmed by an act of James II., and renewed by succeeding sovereigns. The institution, however, had no endowment; it was supported solely by the small perquisites and fees paid into the common fund on the conferring of degrees, and the patronage of two or three small chaptries. Moreover, there was at first no building appropriated for its use, and the officers held their meetings either in the chapter-house of the Black Friars', or in the cathedral, till the year 1459, when James, first Lord Hamilton, gave to the principal and the regent of the college of arts a spacious mansion in the High-street, and four acres of land on Dow Hill.

On the Reformation, Archbishop James Beaton, who was then chancellor, withdrew to France, taking with

him the plate of the cathedral, and the bulls, charters and other records, both of the see and of the university which he deposited partly in the convent of the Carthusian monks, and partly in the Scotch college, at Paris, to be preserved till the restoration of papacy. At this period, with the exception of the college of arts, which was still maintained by the contributions of the students, the university appears to have fallen to decay. In this depressed state of its finances, Mary, Queen of Scots, in 1560 granted to the college of arts the kirk and manse of the Friars "Prædicatores", with thirteen acres of land, and the rents and annuities belonging to that fraternity, for the foundation of five bursaries for poor students; and in 1572, the corporation of Glasgow gave for the support of the university all the lands, tenements, and other profits and emoluments of the several chapels, altars, and prebends in the churches of the city. In 1577, James VI., a minor, with consent of the Earl of Morton, then regent, granted the rectory and vicarage of the kirk of Govan; and conferred also upon the university a new charter of foundation, which in its most essential points is still in force. From that time the institution has continued to flourish. Charles I. bestowed upon it all the temporalities of the bishopric of Galloway; and William III. granted £300 from the exchequer, payable annually, for its support. In 1702 the number of students amounted to 402. Queen Anne, in 1708, assigned £210 per annum towards the maintenance of a professor of anatomy and botany; and succeeding sovereigns have been liberal benefactors. Alexander Macfarlane, of Jamaica, who had built an observatory there, at his death bequeathed the whole of his astronomical apparatus to the college, on condition that they should erect an observatory; and in 1760, a royal grant of £50 per annum was made in aid of the support of a professor of astronomy. The university has been also patronised by many distinguished individuals, among whom was the late Dr. William Hunter of London, who bequeathed to it the whole of his valuable collection of specimens illustrative of natural history, medals, anatomical preparations, books, and manuscripts, with £8000 to erect a museum for their reception.

The affairs of the university, as at present constituted, are conducted by three distinct bodies, the senate, the comitia, and the faculty. The members of the senate are the rector, the dean of faculties, and the professors, of whom the rector is president, or, in affairs for which he is competent, the dean. They hold their meetings for the election and admission of the chancellor, and dean of faculty, the vice-chancellor, and vice-rector; for the election of a representative in the General Assembly; for the conferring of degrees, the management of the library, and other matters belonging to the university. The comitia consists of the rector, the dean, the principal, the professors, and the matriculated students, of whom the rector, or the vice-rector, is president. They meet for the election and admission of the rector; for hearing public disputations in the several faculties, previously to the conferring of degrees; for hearing the inaugural discourses of the principal and professors, before admission to their respective offices; and for the promulgation of the laws of the university, and other acts of the university and college courts. The faculty consists of the principal, and the thirteen professors of divinity, church history, the oriental languages, natural philosophy, moral

philosophy, the mathematics, logic, Greek, humanity, civil law, medicine, anatomy, and practical astronomy, being those of the old foundation: the principal is president, and has a casting, but not a deliberative, vote. The members of faculty have the administration of the college revenues, with the exception of a few particular bequests in which the rector or other officers are expressly named; also the patronage of eight professorships, of several bursaries, and of the parish church of Govan.

Of the officers of the university the principal are the chancellor, vice-chancellor, rector, dean of faculties, principal, the keeper of the museum, librarian, and sub-librarian. The chancellor, who holds office for life, has the sole privilege of conferring degrees on persons found qualified by the *senatus academicus*. The rector is elected annually, and exercises academical jurisdiction among the students, and also magisterial jurisdiction in matters between the students and the citizens. The dean of faculty, who holds office for two years, regulates the course of studies in the several faculties, and, together with the rector, principal, and professors, decides upon the qualification of the candidates for degrees. The principal is appointed by the crown; he is *primarius professor* of divinity, and superintends the department of the members of the college. There are twenty-two professors in the four faculties of arts, theology, law, and medicine. In the first of these are the professorships of humanity, Greek, logic, moral philosophy, natural philosophy, mathematics, practical astronomy, civil-engineering, and natural history: in theology are the professorships of divinity, church history, and the oriental languages; in law, the single professorship of civil law; and in the faculty of medicine, the professorships of anatomy, the theory and practice of medicine, surgery, midwifery, chemistry, botany, *materia medica*, the institutes of medicine, and forensic medicine. The chairs of divinity, natural philosophy, moral philosophy, logic, Greek, humanity, mathematics, and oriental languages are in the gift of the faculty, rector, and dean; the rest are presented to by the crown. There is also the Waltonian lectureship of the structure, functions, and diseases of the eye. Attached to the college are sixty-nine bursaries, varying from £5 to £40 per annum, tenable for from four to six years; and some valuable exhibitions. Of the latter the chief were founded in 1688, by Mr. John Snell, for the support of episcopacy in Scotland, for which purpose he devised an estate near Leamington in the county of Warwick, now producing a rental of £1300 per annum, which is appropriated to the education of ten students from Glasgow at Baliol College, Oxford. The other exhibitions were founded by John Warner, Bishop of Rochester, who assigned £20 per annum to be paid to each of four Scotch students at the same college; and this endowment is received by four of the above exhibitioners, who have an income of £150 each, instead of £130, tenable, like the other six exhibitions, which remain at £130, for ten years.

The library of the university was founded in the fifteenth century, and forms a very extensive collection, in which are many beautiful editions of the classics. Altogether it numbers about 58,000 volumes. The collection is increased by donations, and by the purchase of works with a sum granted in lieu of the privilege of receiving a copy of every book published in the kingdom,

and with fees from the students, who are entitled to admission to the library. The botanic garden, adjoining the college, was prepared for the use of the botanical professor, in 1753; but being from various causes inadequate, the botanic gardens opened of late, as previously noticed, were rendered available to the purposes of the university. The Hunterian Museum, consisting of books, coins, paintings, anatomical preparations, &c., was founded by the celebrated William Hunter, in the year 1781. It is placed in an elegant structure of stone, erected from a design by Mr. William Stark, after the model of a Roman temple of the Doric order, and so contrived that from every point of view the edifice presents an appearance of simple magnificence. The whole collection is valued at above £100,000; the number of volumes in the library is about 12,000. In the building is a fine statue of the distinguished James Watt, in marble, by Chantrey.

The BUILDINGS of the university are situated on the east side of High-street, towards which is the principal front, 305 feet in length; and they extend 282 feet in depth, inclosing an area of 9556 square yards, divided into four courts, of which three are quadrangular ranges three stories in height, and relieved with turrets and other ornaments: on the east side of the western quadrangle is a lofty tower. The erections in the eastern division, which had stood for more than two centuries, and had become dilapidated, were partially taken down and rebuilt in 1811. In the principal front are three entrances, the central of which is adorned with rusticated masonry; and the gateway, over which are the royal arms in basso-relievo, gilt, is surmounted by a balcony supported on corbels. The east front is divided into three compartments, of which the central projects, and is embellished with a lofty portico of four massive columns of the Doric order, sustaining an entablature and cornice, with a triangular pediment; the receding compartments have corresponding pilasters, with entablature and cornice, crowned with an open balustrade. This range contains the common hall, the anatomical theatre, and the halls of the professors of humanity, Greek, logic, chemistry, mathematics, and medicine. At the southern extremity is the college library, a handsome building, the front of which is enriched with Corinthian pilasters, supporting an angular pediment, with niches on each side: the new library, to the south of the anatomical theatre, is a building of plainer character. The great hall, and the halls for the several faculties, fronting the High-street, are spacious; the walls are decorated with pilasters, sustaining an enriched entablature and cornice, and are hung with portraits of eminent professors and other literary characters. There is a chapel, in which the professors and students attend divine service, fitted up with great taste, and containing 990 sittings. The college gardens, inclosed with a high stone wall, are laid out in gravel-walks, parterres, and shrubberies; and at the extremity is Macfarlane's observatory. An act was passed in 1846, enabling the college to effect an exchange of the lands and buildings occupied by it, for other lands and buildings more advantageously situated.

THE ANDERSONIAN UNIVERSITY.

This institution was founded in 1795, by Mr. John Anderson, professor of natural philosophy in the univer-

sity of Glasgow, who endowed it with a valuable library, museum, and philosophical apparatus. It is placed under the direction of eighty-one trustees, elected by ballot from the several classes of tradesmen, agriculturists, manufacturers, artists, physicians and surgeons, lawyers, and divines; and nine managers are annually chosen, with a president, treasurer, and secretary. The trustees appointed Dr. Garnet, professor of natural philosophy and chemistry in the Royal Institution of London, as principal lecturer; and he was succeeded in 1799, by the late Dr. Birkbeck, who introduced a familiar course of instruction, demonstrated by experiments. In 1828, the trustees purchased the buildings of the old city grammar school, fronting George-street, for the permanent use of the institution, and these were enlarged and adapted to the purpose. They contain various classrooms, a library, museum, and a hall for the delivery of lectures on the different branches of popular science, natural philosophy, logic, ethics, rhetoric, mathematics, modern and oriental languages, painting, drawing, medicine, chemistry, anatomy, surgery, and midwifery, which are well attended by the respective classes.

ECCLESIASTICAL ARRANGEMENTS, CHURCHES, &c.

The ancient see of Glasgow, after the abdication of Archbishop Beaton in 1560, was governed by prelates appointed, at first by the Earl of Lennox, in whose family the temporalities were vested, and subsequently by the crown; and from the time of the Reformation to the Revolution, it was under the superintendence of fourteen Protestant archbishops, of whom the last, John Paterson, was consecrated in 1687. There were anciently thirty-nine prebendaries belonging to the cathedral, all of whom had residences in its immediate vicinity; but their houses were given to various noblemen and gentlemen who had influence at court, and the venerable cathedral itself is said to have been preserved from destruction only by the spirited resistance of the citizens, already referred to. The CATHEDRAL, thus preserved at the Reformation as one of the proudest ornaments of the city, is a stately cruciform structure in the early English style of architecture, 319 feet in length, and sixty-three feet in width, with a square tower rising from the intersection of the nave and transepts, surmounted by a lofty spire, and with a tower also at the west end of the north aisle. The nave, part of which was till lately appropriated as the Outer High church, is ninety feet in height, and is divided from the aisles by noble ranges of clustered columns that support the roof: the choir, which has been appropriated as the Inner High church, is eighty-five feet in height, and of richer detail than the nave, the columns that sustain the roof being embellished with flowered capitals. The entrance into the choir is through a fine screen of the later English style; and the west doorway into the nave, which until recently was stopped up, is adorned with canopied niches. Indeed, all the details of this interesting structure are in the best character of the pointed style. In the south aisle of the nave is a sepulchral brass, the only example of that kind of memorial hitherto noticed in Scotland: on the stone to which the plate is attached, is inscribed the date 1605. The crypt, which was for more than two centuries used as the church of the Barony parish, is unrivalled in elegance of design by

that of any other cathedral in the kingdom; it is well lighted, from the abrupt slope of the ground, and is perhaps one of the richest specimens of the early English style in existence. The piers are of beautiful character, and the groinings, which are elaborately intricate, are enriched with bosses and other ornaments; the capitals of the piers are embellished with flowers, and the doors with foliage. This portion of the ancient structure has been carefully cleared from the rubbish that had been suffered to accumulate; and since the completion of a new church in High John-street, by the corporation, in lieu of the Outer High church in the cathedral, which had been pronounced to be deeply infected with the dry rot, and consequently unsafe, the whole of the nave, containing many interesting monuments and other valuable details in a ruinous state from neglect, and other parts of the edifice, have, under the superintendence of an architect appointed by government, been renovated and restored to their pristine beauty.

The city is the seat of a presbytery, including the ten parishes in Glasgow, and the twelve surrounding parishes of Barony, Gorbals, Rutherglen, Cumbernauld, Carmunnock, Cadder, Campsie, Govan, Kirkintilloch, Kilsyth, Cathcart, and Eaglesham. The parish of the *Inner High church*, originally the parish of Glasgow, but now only about 1000 acres in extent, is principally occupied by buildings, the rural districts not containing more than 100 persons out of a population of 15,444. The minister's stipend is about £350, with a glebe which is let for building, and produces a net rental of £138. 5. per annum; patron, the Crown. The church, as already stated, is the choir of the cathedral; it was repaired in 1805, and contains 1143 sittings. A room was fitted up in the Caledonian pottery for divine service, which was regularly performed by a minister of the Establishment from 1835 until 1838; and a missionary also officiated at two preaching stations within the parish. The parish of the *Outer High church*, or the parish of *St. Paul*, containing a population of 9583, was erected in 1648, out of the original parish of Glasgow. Its minister is appointed by the corporation, who are the patrons also of the parishes of Blackfriars, Tron, St. David, St. George, St. Andrew, St. Enoch, St. John, and St. James, to the minister of each of which, as well as to the minister of St. Paul's, they pay a stipend of £425. The present church was erected by the corporation, and dedicated to St. Paul, in 1836; it is a handsome structure, and contains 1198 sittings. There are places of worship for members of the Free Church, Glassites, Old Scotch Independents, Baptists, Scottish Baptists, the Society of Friends, and most other denominations. The parish of the *College*, or *Blackfriars*, is a town parish, within which the buildings of the university are situated; and is densely populous, numbering 10,574 persons. The church, nearly in the centre of the parish, was built in 1699, by private subscription, and has been occasionally repaired, and lately re-seated; it is a plain edifice containing 1307 sittings. There are places of worship for members of the United Presbyterian Church and others. The parish of the *Tron* church was formed out of the old parish of Glasgow in 1602, and includes a portion of the city, containing 9990 persons. Its church, situated near the north-eastern extremity of the parish, was erected in 1794, and within the last twenty or thirty years has undergone some internal alterations and repairs; it cou-

tains 1366 sittings. Dr. Chalmers, the late distinguished preacher, was minister of this parish before his presentation to St. John's. The members of the Free Church have a place of worship. *St. David's* parish, which contains a population of 9764, was divided from the older city parishes in 1720, by the presbytery and the court of Teinds: the church, erected in 1825, from designs by Mr. Rickman, is a handsome structure containing 1148 sittings. There are places of worship for members of the Free Church, the United Presbyterian Church, Independents, Swedenborgians, Hebrews, Bereans, Wesleyans, and a congregation simply calling themselves Christians. *St. George's* parish, the population of which is 20,370, was disjoined from the Old Wynd parish by the court of Teinds, in 1687, and consists of three separate districts which are intersected by parts of the Barony parish. The church was built in 1807, from the city funds, and has not been altered since its erection; it is a handsome edifice containing 1317 sittings. A church, dedicated to St. Peter, was erected by the Church-Building Society, at an expense of about £3200, including the site; and a portion of the parish, comprising 4366 persons, was for a time annexed to it as an ecclesiastical district. There are also places of worship for members of the Free Church, Baptists, Independents, and Original Seceders. *St. Andrew's* parish, which is entirely a town parish, and has a population of 7317, was founded in 1765, and is about half a mile in length, and of nearly equal breadth. The church was finished in 1756, out of the funds of the city, and was re-seated in 1833: it has a lofty tower surmounted by a spire, and a noble portico of six Corinthian columns, supporting an entablature and cornice, with a triangular pediment; it is situated in the centre of St. Andrew's square, and contains 1210 sittings. There are places of worship for members of the Free Church, Church Presbyterians, and an episcopal chapel. *St. Enoch's* parish was formed by the court of Teinds, in 1782, and is about half a mile in length and a quarter of a mile in breadth, containing 8877 persons. The church, originally erected from the city funds in 1782, and rebuilt, with the exception of the steeple, in 1828, is a stately structure with a lofty tower of several stages, terminating in a pyramidal spire surmounted by a vane; it is finely situated on the south side of St. Enoch's square, and contains 1224 sittings. There is a place of worship for members of the Free Church; and the Roman Catholics have two chapels, one a spacious edifice in the later English style, erected in 1816, at an expense, including the residence for the priest, of £17,000, and the other a smaller building, purchased in 1824, at a cost of £500. *St. John's* parish, formed out of three contiguous parishes by the court of Teinds in 1819, is about three-quarters of a mile in length, and one-quarter of a mile in breadth, and contains a population of 16,228: the church, which is situated near the western extremity of the parish, was built in 1819, from the city funds, and has undergone no alteration; it has a prominent tower, and contains 1636 sittings. The late distinguished Dr. Chalmers was for several years incumbent of this parish. There are places of worship for members of the Free Church, the United Presbyterian Church, and United Original Seceders, with an episcopal chapel. *St. James's* parish was erected by the court of Teinds in 1819, and is about one mile in length and half a mile in breadth: it comprehends nearly the whole of the Green, and

comprises about 115 acres, and 11,216 persons. The church was built in 1812 as a meeting-house by the Wesleyans, from whom it was purchased by the corporation in 1819, and erected into a parish church; it is a neat structure, and contains 1371 sittings. There are places of worship for members of the Free Church, the United Presbyterian Church, and the Reformed Presbyterians. The parish of *Gorbals* is described under its own head.

Among the quoad sacra parishes which were created out of the ten parishes just noticed, and for a time existed in the city, was that of *Albion*, formed in 1834 out of the parishes of the Outer High church and St. David, and having a population of 4792: the church had been built in 1768, and enlarged in 1823, and is a handsome structure, containing 1800 sittings. *St. George's in the Fields* quoad sacra parish was separated from the parish of St. George, and was about half a mile in length and less than a quarter of a mile in breadth, containing 4745 persons. The church was built in 1824, as a chapel of ease, partly by donations, and partly by funds borrowed for the purpose, at an expense of £2350; it is a neat edifice, and has 1226 sittings. *St. Thomas's* parish was formed from St. John's; it was wholly a town parish, about half a mile in length and a quarter of a mile in breadth, with a population of 3762. The church was erected in 1823, as a chapel of ease, chiefly under the auspices of the late Rev. Dr. Chalmers, at a cost of £3320, raised by donations, and by subscription of twenty-one shareholders of £100 each; it contains 1398 sittings. *St. Ann's* was formed from the parishes of St. Andrew and St. James, and was of moderate extent: the church, originally built by the Wesleyans in 1819, was bought for the use of the Establishment in 1831, at a cost, including repairs, of £1500; it has accommodation for 776 persons. *Bridgegate*, having a population of 5396, was formed from the parish of St. James: this church, also, was recently purchased from the Wesleyans, at a cost, including repairs, of £2300; it is a neat building, and contains 890 sittings. All these quoad sacra parishes, formed in, or subsequently to, the year 1834, were afterwards abolished.

The BARONY civil and ecclesiastical parish was separated in 1595 from the burgh of Glasgow, which previously formed the only parish, including both the royalty and the barony. It contains a great portion of the suburbs and parliamentary borough, with a wide rural district, and is eight miles and a half in length and four and a half in breadth, comprising nearly 14,000 acres, and having a population of 106,075. The minister of the parish receives a stipend of about £310, with an allowance for a manse, and a glebe of considerable value. Previously to 1800, the crypt of the cathedral was appropriated as the place of worship of this parish, but in that year the present church was erected, and in 1830 it was repaired and enlarged; it is situated about a mile from the nearest, and five miles from the farthest, boundary of the parish, and contains 1403 sittings. There are numerous places of worship for dissenters, comprising members of the Free Church, the United Presbyterian Church, Episcopalians, Baptists, Burghers, Independents, Reformed Presbyterians, and Unitarians. The quoad sacra parish of *St. Mark*, separated from the parish in 1835, was wholly a town parish, about 400 yards in length, and 200 yards in breadth, having a population of

3315: the church was originally built by dissenters, from whom it was purchased in 1835, by the Church-Building Society, at a cost, including repairs, of £1260; it contains 1032 sittings. The quoad sacra parish of *St. Stephen*, containing 3975 persons, was formed in 1836: the church had been built in 1835, at an expense of nearly £3000, and is a handsome edifice with 1156 sittings. From the Barony parish were also separated, for ecclesiastical purposes, the parishes of Anderston, Middle Calton, Camlachie, Maryhill, Shettleston, Bridgeton, St. Luke, St. Matthew, Renfield, &c., most of which are fully described under their own heads. But all these quoad sacra divisions, like those referred to in the preceding paragraph, were afterwards abrogated.

Within the royalty and barony are likewise the churches or chapels of Duke-street, St. Columba, and Hope-street, established for the accommodation of the Gaelic population of the city and suburbs. Of these, the *Duke-street* place of worship, then a chapel of ease, was erected into a parish church under act of the General Assembly in 1834, and so continued for a short time, though, from the scattered dwellings of the congregation, it was impossible to assign to it any particular district. The church was built in 1798, at an expense of £2400, raised by subscription, and was repaired in 1814 and 1820, at a cost of £600; it is a neat structure, and contains 1277 sittings. The church of *St. Columba*, formerly in Ingram-street, but at present situated in Hope-street, was also for a time a parochial church; it is in connexion with the Established Church, and the minister is appointed by the Gaelic Society. The *West Gaelic* chapel of Hope-street was likewise made a parish church, in 1835, under act of the General Assembly, and continued such for some years: it was built in 1824, at an expense of £4826, of which £300 were raised by subscriptions and donations, and the remainder by loan; the church is a handsome structure, and contains 1435 sittings.

The various burying-grounds in the city and suburbs have, from the great increase of building, been almost surrounded with houses; and several that were originally in retired situations are now inclosed in the very heart of the city. To remedy this inconvenience, a spacious public cemetery has been formed by the Merchants' House, who in 1830 appropriated a portion of their park, adjoining the cathedral, to the purpose. This ground, which is called the *Necropolis*, is laid out with much taste, and the requisite buildings are of a character harmonizing with the solemnity of the use to which they are applied. The situation of the cemetery is highly picturesque, overlooking the venerable cathedral and the old surrounding burying-ground; the several walks and drives are beautiful and varied; and the plants and shrubberies, with the various ornaments in a diversity of styles, render the whole exceedingly interesting and attractive. In the cemetery are, a lofty pillar surmounted with a statue, by Forrest, of John Knox, and a handsome monument with a statue, by the same artist, of William Mc Gavin; besides many other memorials: the monument of the Reformer is seen for many miles eastward of the city.

SCHOOLS AND BENEVOLENT INSTITUTIONS.

The GRAMMAR or HIGH SCHOOL is of great antiquity, and appears to have been originally founded as an appendage to the cathedral, and under the immediate

superintendence of the chancellor of the diocese, by whom the masters were appointed. After the foundation of the university it continued as a distinct establishment, though the masters were frequently among the number of those who elected the regents of the university, and examined the candidates for degrees. In 1595, John Blackburn, who was master of the grammar school, was also lord rector of the university: at that period, the scholars commenced their studies at five o'clock in the morning; and this practice appears to have lasted during the government of Blackburn, who, on his appointment to the ministry of the Barony church, in 1615, resigned the mastership. From 1700, the school was occasionally under the control of a rector. This office was abolished in 1830; and from that time there were four masters, each of whom had the entire charge of his own class for the whole period of its continuance in the school, which was generally for the term of four years. In 1834, a material change was made in the condition of the seminary. Two of the four masterships for Greek and Latin were suppressed, and in their place were substituted teachers of English grammar, the French, Italian, and German languages, writing, geography, and the mathematics. Its designation was altered to that of the High School, and its affairs placed under the superintendence of a committee of the town-council, assisted by the clergy of the city, and the professors of the university. The classical masters, who are appointed by the town-council, have each a salary of £50, paid from the funds of the corporation; and they receive, in addition, a fee of 13s. 6d. quarterly from each of the scholars, who number about 300 on the average. The buildings of the school, situated in Grey Friars' Wynd, becoming insufficient for the purpose, were abandoned in the year 1788, and a handsome structure erected for its use on the north side of George-street; but this edifice was disposed of in 1828 to the Andersonian Institution, and new schoolrooms were raised in John-street.

A school is supported by the Fleshers' Company, who pay the master a salary of £80 per annum, for the gratuitous education of the children attending it. There are also schools for the clothing and instruction of children, in connexion with some of the charitable foundations of the city; and in the several parishes are parochial and other schools, affording education, either gratuitously or on very moderate terms, to nearly 9000 children of both sexes; more than 100 Sabbath schools, in which 5000 children receive religious instruction; and ten or twelve infant schools, one of them a model school, all of which are well attended. The salaries of the parochial schoolmasters vary from £25 to £35, and the amount of fees from £30 to £80 per annum, the quarterly payments of the scholars being from two to fifteen shillings each. A Normal seminary was erected in 1837, by the Glasgow Education Society, for preparing teachers to practise the system of moral, intellectual, and physical training pursued by the society.

The ROYAL INFIRMARY was established in 1792, and is supported by voluntary subscriptions, and the fees of students attending it as a school of medicine and surgery. It has a permanent fund of about £16,000 from accumulated donations and bequests, and is under the superintendence of twenty-five directors, consisting of the lord provost, the members of parliament for the

city, the dean of guild and the convener, the professors of medicine and anatomy in the university, and members of the town-council, the Merchants' and Trades' Houses, and the faculty of physicians and surgeons, with ten others chosen by ballot at the general meeting. The internal arrangements are under the management of two physicians, four surgeons, an apothecary, chaplain, matron, and other officers. Its general disbursements are about £3600 per annum. The buildings, erected in 1792, partly on the site of the archbishop's palace, form a handsome structure designed by Messrs. Robert and James Adam, of quadrangular form, consisting of a centre and two boldly-projecting wings. In the centre is a stately portico of Corinthian columns, supporting an enriched entablature and cornice, surmounted by a triangular pediment, in the tympanum of which are the royal arms in alto-relievo. The building is four stories high, and is crowned in the middle with a spacious dome, and a lantern which gives light to the hall of operations. It originally contained only eight wards, affording accommodation to 136 in-patients; but being found inadequate to the wants of the increased population, it was enlarged by the addition of four wards, erected in the rear of the building, at an expense of £4000; and it is now adapted for the reception of 220 patients.

The LUNATIC ASYLUM was established in 1810, and is under a committee of management, of which the lord provost is president. It is supported partly by subscription and donations, but chiefly by the payments for the several patients, which vary from eight shillings to half a guinea per week for paupers, according to the contribution towards its erection made by the parishes from which they are sent; and from that amount to three guineas, weekly, for other patients, according to their rank. The internal arrangements are superintended by a physician and other medical officers, a housekeeper, and requisite attendants. The original buildings, lately sold to the directors of the Town's hospital, were erected in 1810, at an expense, including the site, of £18,359, after a design by Mr. William Stark; they were not sufficiently private, and new buildings were therefore erected a few years ago, about three miles west of Glasgow. The dining-rooms, parlours, and bed-rooms for patients of a higher class are spacious and well furnished; and the institution is conducted with minute regard to the health, comfort, and recreation of all the inmates.

The *Magdalene Asylum* was originally projected by a society of gentlemen who purchased a site for its erection behind the cathedral; but some difficulties arising, the design was not carried into effect till 1812, when a more commodious site was obtained, and the asylum erected. This benevolent institution is supported by subscription, and the annual disbursements average £600; the inmates are employed in tambouring, knitting, sewing, making clothes for the establishment, and in other useful works suited to their capacity. The building, situated eastward of the old lunatic asylum, is of neat appearance, consisting of a centre with projecting wings; it is three stories in height, and comprises a handsome committee-room, apartments for the matron and for thirty-four inmates, and a chapel containing 150 sittings. The whole is surrounded with a high wall, inclosing an area of about an acre, laid

down in grass for the purpose of bleaching linen, in which some of the inmates are employed. The *Lock Hospital* was founded in 1805, and is maintained by subscription: the buildings, on the south side of Rotten-row, comprise a committee-room, with rooms for the housekeeper and surgeon, and apartments for the patients. The *Deaf and Dumb Institution*, and the *Asylum for the Blind*, may also be mentioned. *St. Nicholas' Hospital* was founded in the reign of James III., by Bishop Muirhead, who amply endowed it for a priest and twelve aged laymen. From causes not known, the endowment has been greatly diminished, and at present produces only about £30 per annum, which sum is distributed, in pensions of £3 each, to ten aged men by the magistrates and town-council. The buildings, which had become a ruin, were removed to make room for a street.

HUTCHESON'S HOSPITAL was founded in the year 1641, by George and Thomas Hutcheson, brothers, who bequeathed certain lands and money for its endowment. The money was invested by the corporation, in conjunction with the other trustees, in the purchase of land in the barony of Gorbals, on which the suburb of Hutchesontown was built; and the original endowment has been augmented by benefactions, the principal of which have been 10,000 merks by Mr. James Blair, £2700 by Mr. Daniel Baxter, and the half of his heritable and personal property by Mr. John Snow. The income now amounts to about £3000 per annum. Part of it is distributed in life pensions to decayed burgesses of three years' standing, and fifty years of age; and the widows and daughters of burgesses are also admitted as pensioners. The Hospital is under the control of the magistrates and council, and the ministers of the city churches. Connected with the institution, and supported from its funds, is a school of eighty boys, sons of burgesses, who have been previously for six months in an English school, and are above seven years of age; they are clothed, instructed, and placed out as apprentices with premiums. The buildings of the Hospital are situated in Ingram-street, and consist of a handsome range, rising from a rusticated basement, and ornamented with Corinthian columns, supporting an entablature and cornice, and surmounted by an enriched attic. On the sides of the central entrance are niches containing statues of the founders; and from the rear of the edifice rises a tower, 156 feet in height, crowned by a pyramidal spire. The great hall and committee-rooms are elegantly fitted up, for the accommodation of the patrons and managers. In 1778, Mr. George Wilson, merchant of London, a native of this city, bequeathed to the magistrates and council, in trust, £3000 for the clothing and education of poor boys, to which have been added subsequent donations; and from these funds, forty-eight boys are clothed and instructed in the school established for that purpose. A bequest of lands by Sir John Scott, for the apprenticing of boys, has, since the improved state of trade rendered the payment of premiums unnecessary, been appropriated by the magistrates and council to the placing of twelve additional scholars in the school founded by Mr. Wilson, and also in the school of Hutcheson's Hospital.

The *Highland Society* was established by a few gentlemen of the Highlands, for clothing, educating, and apprenticing indigent sons of Highlanders; and is sup-

ported by the payment of £2. 2. by each member on admission, and by annual subscriptions and donations. There are about sixty boys on the funds, who are clothed, instructed, and apprenticed, and to each of whom, on the expiration of his indentures with credit, is given a silver medal. *The Marine Society*, for the encouragement of mariners, and the support of the widows and children of seamen, was founded in 1758, and maintained by a payment of fourpence on each ton of merchandise shipped from the Clyde, a contribution of fourpence per month from the wages of each seaman, and occasional donations and bequests. It distributed about £150 annually, in pensions of £3 to the widow of a master, £2 to the widow of a mate, and £1. 10. to the widow of a common seaman. This society is now discontinued, and the funds are transferred to the Merchants' Seamen's fund for the united ports of Glasgow, Greenock, and Port-Glasgow. *The Society of the Sons of the Clergy* was instituted in 1790, by several ministers of the Established Church, for the relief of the widows and children of clergymen in indigent circumstances; and is supported by payment of £5. 5. by each of the members on admission, by annual collections in the churches, and by donations and bequests: the society distributes annually about £200. *Buchanan's Society* was established in 1725, for the relief of indigent persons of that name, or of others descended from or connected with the clan. It is supported by payments of £5 by members on admission, the produce of some land and houses, and by donations and bequests. The society in 1815 founded a bursary of £25 per annum, tenable for four years, in the university of Glasgow, and which was first held by a youth of the name, a descendant of the founder. *Mr. William Mitchel* in 1729 bequeathed £3000, the interest to be divided among decayed burghesses and their families; and in 1741 *Mr. Robert Tennent* bequeathed 21,000 merks, of which he appropriated 5000 to the support of two schools, 6000 to the maintenance of three widows, and 10,000 to be lent in small sums to poor tradesmen, for five years, without interest. In 1788, *Mr. James Coulter* bequeathed £1200 to the lord provost and magistrates in trust, to be distributed among deserving persons in indigent circumstances, in life pensions of not less than £4 and not more than £10 per annum. There are numerous other charitable bequests, friendly societies, institutions for the relief of sick strangers, and for various pious purposes.

The Town Hospital was originally established in 1733, in a building which, though sufficiently capacious and in an airy situation at that time, became, from the increase of the population, quite inadequate for the purpose, and was soon, from the extent of building subsequently erected, closely surrounded. The directors consequently purchased a spot of land in a more eligible situation, comprising 12,000 square yards, for which they paid £3000, and then erected a new hospital and workhouse at a cost of £19,000. This building, however, proving inadequate like the former, the directors in 1840 purchased the buildings and part of the grounds of the old lunatic asylum, as already mentioned in the account of that institution. A majestic dome crowns the central range of the structure. The hospital is supported by donations from the public bodies and individuals of the city and suburbs, and by an assessment; and is under the management of a preceptor, vice-preceptor, and

forty-eight directors, of whom twelve are chosen from each of the four bodies of the town-council, the Merchants' House, Trades' House, and the General Session, and who hold quarterly meetings, at which they elect the various officers. The internal superintendence is conducted by a committee of eight members, two each from the four bodies. There are generally about 500 poor in the house, and 600 out-pensioners; and the annual assessment averages £10,000. In 1817, which was a year of peculiar distress, in addition to the usual funds for the relief of the poor, a subscription was raised, which amounted to £12,871; and there were in that year 5140 families upon the books of the establishment. Glasgow confers the title of Earl on the family of Boyle.

GLASS, a parish, partly in the county of BANFF, but chiefly in the district of STRATHBOGIE, county of ABERDEEN, 5 miles (W.) from Huntly; containing 886 inhabitants, of whom 321 are in the county of Banff. The name of this place, in the Gaelic language signifying "grey", is descriptive of the uncultivated portion of the surface. The parish is about eight miles in extreme length, and five miles in extreme breadth, comprising an area of nearly 19,000 acres, of which 4500 are arable, and the remainder meadow, pasture, and waste. Its surface is diversified with hills, which towards the west increase in elevation, forming the boundary in that direction: on the south the parish is bounded by a range of hills which separate it from Gartly and Rhynie. There are several fertile straths between the hills, of which the vale of the Doveron is the most important: it is inclosed by hills on each side, varying from 1200 to 2000 feet in height above the level of the sea. The river Doveron, which has its source in the hills of Cabrach, flows in a serpentine course through the vale, and leaving the parish, runs for twenty-five miles in an eastern direction, and falls into the Moray Firth at Banff. From the hills issue numerous springs, of which those near the summit are frequently dry during the summer, while those at the base flow without interruption through the lower grounds. In general the soil is a light loam, yielding chiefly oats and bear, with potatoes and turnips: wheat has been sown, but remunerating crops of it have not been produced. The system of husbandry is improved: the farms are of moderate extent, few of them exceeding 150 acres; and the farm-buildings, usually of stone, with thatched roofs, are substantial and commodious. Considerable numbers of sheep were formerly reared in the pastures; but great losses having been frequently sustained during severe seasons, a few hundreds only, of the Highland black-faced breed, are now kept; and the pastures are more profitably stocked with cattle. There are a few acres of natural wood, and some lands have recently been planted with pine, larch, and forest trees. The annual value of real property in the parish is £1877. Ecclesiastically the parish is within the bounds of the presbytery of Strathbogie, synod of Moray. The minister's stipend is about £198, with a manse, and a glebe valued at £20 per annum; patron, the Duke of Richmond. Glass church, situated in a green, near the river, is a neat plain structure containing 550 sittings; it was built in 1782, and is in good repair. The members of the Free Church have a place of worship. The parochial school is well attended; the master has a salary of £34, with a house, an allowance

in money in lieu of garden, and fees averaging about £28 annually.

GLASSARY, in the county of ARGYLL.—See KILMICHAEL-GLASSARY.

GLASSERTON, a parish, in the county of WIGTOWN, $1\frac{3}{4}$ mile (S. W.) from Whithorn; containing, with the village of Monrieth, 1253 inhabitants. The name of this place is thought to signify, in the Saxon language, "a bare hill"; and it is supposed that the term was adopted from the number of bare hills in the vicinity. Very little is known of the early history of the parish. It is said, however, that St. Ninian, here usually called St. Ringan, the founder of Whithorn Priory, and first bishop of Galloway, resided for a time in a cave on the shore, at Physgill, for the purpose of mortification or penance; and the cave, which is arched with stones, is still vulgarly called St. Ringan's cave. The present parish was formed by the union of the lands of Glasserton and Kirkmaiden. The walls of Kirkmaiden church are yet in existence, on the shore, near Monrieth; and it is clear that it was formerly a distinct parish; though when it was united with Glasserton cannot now be ascertained. The PARISH is about eight miles in length, varying in breadth from one to three miles, and containing 13,477 acres. It has the parish of Mochrum on the west, the parishes of Sorbie and Kirkinner on the north, Whithorn on the east, and the bay of Luce on the south. Its coast, which is bold and rugged, and broken by numerous headlands and green peaks, lies parallel with the north coast of the Isle of Man, the island being between sixteen and eighteen miles south of Glasserton. The general appearance of the country is unequal, the surface presenting a succession of heights and hollows. There is a small lake near Castle-Stewart House, in the north, in which eels, trout, pike, and perch are found: the loch of Dowalton forms a small part of the boundary of the parish.

The SOIL varies very considerably in different parts. On the lands in the north it is damp and poor, having a tenacious subsoil of till, which holds the moisture too near the surface; in the more southern parts it is a gravelly loam, frequently mixed with clay and moss. Between 7000 and 8000 acres are under cultivation; the waste extends over about 3000 acres, and from 200 to 300 are planted. The farmers have adopted a rotation of oats; potatoes or turnips; rye-grass and clover, with wheat and barley; and a crop of hay; after which the ground returns to pasture. Agriculture has been much improved within the last thirty or forty years. The practice of raising green crops has become quite general. Much moss and heath have been brought into cultivation; and the natural obstacles to good farming arising from the nature of the soil have been successfully treated by skill and perseverance. The proper application of manure, and the attention paid to divisions and inclosures, have also contributed to produce a highly-advanced state of husbandry, and have amply rewarded the labour of the cultivator. Dairy-farming is pursued in many parts in preference to breeding, on account of its greater profit; the cows are chiefly the Ayrshire. The sheep in most repute are the Leicesters and the Highland breed; a few, purchased at Falkirk, are fattened on turnips during the winter. The cattle are the black Galloways, for which the parish has always been famous. The annual value of real property in Glasser-

ton is £8519. The subsoil of the lands is for the most part strong till and rock, clay, and gravel, presenting many impediments to agricultural improvement, which can only be successfully met by a highly-efficient system of husbandry: the strata are the greywacke rock, among which a piece of granite is occasionally found. In the parish are the mansions of Glasserton and Physgill, both of them handsome modern erections.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Wigtown, synod of Galloway, and the patronage is in the Crown: the stipend of the minister is £202, with a good manse, built in 1818, and a glebe of fifteen acres, valued at £20 per annum. Glasserton church is remarkable for the beauty of its situation, in Glasserton park, a tract of 150 acres thickly spread with ornamental plantations, among which, in different directions, a variety of single trees rise majestically, giving a bold relief to the picturesque scenery. The edifice was built in the early part of the eighteenth century, and was repaired, and enlarged by the erection of an aisle and a handsome tower, in 1836; now containing 400 sittings. There is a parochial school, the master of which has a salary of £34, and about £20 fees, with a good house, built in 1825. Another school is supported, the master of which has a salary of £15, and fees; the salary arises from the gratuities of two ladies, and the school and master's house stand on land granted by the Earl of Stair rent-free. The poor have the interest of two sums, one of £100, and the other of £60.

GLASSFORD, a parish, in the Middle ward of the county of LANARK, $2\frac{1}{2}$ miles (N. E.) from Strathaven; containing, with the villages of Westquarter and Chapelton, 1736 inhabitants. This parish, which is not distinguished by any events of historical importance, is bounded on the south by the river Avon. It is about eight miles in length, and of very irregular form, varying in breadth from nearly four miles to two miles at its extremities, and to half a mile at the centre. Glassford comprises about 7000 acres, and, with the exception of about 550 acres, is generally arable and in a state of profitable cultivation. The surface is uniformly level, but having a gradual ascent to a considerable elevation; and consists partly of dale extending along the lower parts of the parish, towards the south, and partly of moor. The soil is various, being in different parts moss, clay, and light loam: some small portion of the moss has been improved, and of the remainder it is probable that, from the rapid advance of agriculture, the greater part will be brought into cultivation. The principal crops are oats, potatoes, and turnips; attempts have been made of late to raise wheat, and with tolerable success, but hitherto a small tract only has been sown for that purpose. A considerable portion of land is in pasture, and great attention is paid to the rearing of sheep and cattle, the latter mostly of the Ayrshire breed. There is but little wood, and what there is has been planted; it consists chiefly of beech, ash, and fir. In general the lands are well inclosed, except in the moorland districts; and the fences, which are usually of thorn and beech, have of late been much attended to, and are well kept up: the farm-houses, also, many of which are of recent erection, are for the most part substantial. The annual value of real property in the parish is £6700.

Freestone is found in different parts; near the village of Westquarter are three quarries of excellent quality, and there is also one at a place called Flatt, all of which are in operation, affording employment to several men, and supplying abundant material for building. Limestone is also prevalent, and lime-kilns on an extensive scale have been established in the moors, providing plenty of lime for agricultural use. Coal is found in some parts, and at Crutherland works have been opened on a limited scale, for the supply of that estate. Ironstone has also been lately discovered in different parts of the parish. A considerable number of females are employed in weaving, and on the bank of the river Avon are a flour-mill and a mill for oats, &c. Communication is maintained with Strathaven and other market-towns by means of good turnpike-roads, one of which, from that town to Glasgow, by East Kilbride, and also one to Hamilton, pass through the parish.

Glassford is in the presbytery of Hamilton, synod of Glasgow and Ayr, and in the patronage of Lady Mary Montgomerie: the minister's stipend is £256. 17. 11., with a manse, and a glebe of about nine acres of rich land. The parish church, situated in the village of Westquarter, nearly at one extremity of the parish, was erected in 1820, and is adapted for a congregation of 560 persons. A handsome church with a spire was erected on the church-extension principle in 1839, in the village of Chapelton, about three miles from the parish church. There is a place of worship in connexion with the Free Church. A female society for the promotion of religious objects was formed in 1835, and a parochial library has been established. The parochial school, situated at Westquarter, affords education to a considerable number; the salary of the master, a portion of which has been assigned to the masters of two branch schools, is £25. 13., with £35 fees, and a house and garden. The branch schools are at Chapelton and Millwell: the former is endowed with £5. 11.; and the latter with £2. 15. 6., a house and garden given by Lady Montgomerie, and the sum of £3 from the parish. About 300 children attend three Sabbath schools, held at Westquarter, Chapelton, and Millwell; and there is also a class of adults. On the lands of Avonholm are the remains of a cromlech, consisting of three upright stones. Near Hallhill House were some ruins of an ancient castle, which were removed by the late proprietor; it appears to have been a very strong fortress, capable of containing more than 100 men, and was probably a safe retreat in times of danger. There are still some remains of the original church and belfry, built in 1633: they stand in the grave-yard, where is a tombstone inscribed to William Gordon, of Earlston in Galloway, who was shot by a party of dragoons on his way to Bothwell Bridge, in the year 1679.

GLEMSHOLM, an isle, in the parish of SOUTH RONALDSHAY, county of ORKNEY. This is a small islet lying northward of the island of Burray, from which it is distant about half a mile: it is nearly a mile in length and half a mile in breadth, and is appropriated to the pasturage of cattle and sheep. Glemsholm is an uninhabited island.

GLEN, a hamlet, in the parish of FALKIRK, county of STIRLING; containing 98 inhabitants.

GLENARY, in the county of ARGYLL.—See INVERARY.

GLENBERVIE, a parish, in the county of KINCARDINE, 7 miles (W. S. W.) from Stonehaven; containing 1296 inhabitants, of whom 397 are in the village of Drumlithie. This parish, which obviously derives its name from the situation of its church in a small glen on the north-eastern bank of the river Bervie, is totally unconnected with any event of historical importance. It is bounded on the north by the hills of Strachan and Durris, forming part of the lower range of the Grampians; and is about six miles and a half in length and five in breadth, comprising an area of 13,000 acres, of which 5000 are arable, 185 woodland and plantations, and the remainder meadow, pasture, high moorland, and waste. The surface is varied, and naturally divided into three districts, of which that on the banks of the river is level, and separated from the middle district by a deep ravine; the northern district includes a low and narrow ridge of the Grampians. The rivers are, the Bervie, which has its source in the hills to the north-west, and, taking an eastern course, flows along the southern boundary of the parish into that of Arbutnott; the Carron, which rises in the hills near the west of the glen of Bervie, and runs eastward towards Fetteresso; and the Cowie, which has its source in the hills to the north of the parish, then runs through the northern part of the parish, and flows through Fetteresso.

The SOIL is various; in the district along the Bervie, early, and fertile; in the middle district, light and cold towards the west, but more productive towards the east; and in the northern district are some tracts of good arable land, with a large extent of heath and moor. The crops are oats, barley, and bear, with potatoes and turnips; the system of husbandry is in a very advanced state, and all the improvements in the construction of agricultural implements have been adopted. The annual value of real property in the parish is £5147. There is but little wood. Glenbervie House is a plain ancient building. The only village in the parish is Drumlithie, which is chiefly inhabited by weavers, and persons employed in the usual handicraft trades requisite for the supply of the neighbourhood: the linens woven here are principally of the coarser kinds, mostly Osnaburghs and sheeting, and about eighty persons are engaged. A fair is held in the village, for the sale of cattle, generally about the second week in October. Facility of communication is maintained by good roads, of which the high road from Perth, through Strathmore, to Aberdeen passes near the village; and the Aberdeen railway has a station at the village. Agricultural produce from the parish is shipped at Stonehaven for the London market. Ecclesiastically the parish is within the bounds of the presbytery of Fordoun, synod of Angus and Mearns. The minister's stipend is £231, with a manse, and a glebe valued at £7. 5. per annum; patron, Mrs. Nicholson. Glenbervie church, a neat plain structure erected in the year 1826, contains 700 sittings. The parochial school is well attended; the master has a salary of £30, with a house, and £2. 2. in lieu of garden, and the fees average £15 per annum. This place gave the title of Baron, in the peerage of Ireland, to the Right Hon. Silvester Douglas, created Lord Glenbervie in 1800; but the dignity became extinct at his lordship's death.—See DRUMLITHIE.

GLENBUCK, a village, in the parish of MUIRKIRK, district of KYLE, county of Ayr, $3\frac{1}{2}$ miles (N. E. by E.)

from Muirkirk; containing 237 inhabitants. This place, which is situated in the extreme east of the parish, and north of the high road from Muirkirk, was an appendage to considerable iron-works, erected in 1794 by an English company; but these works having been discontinued in 1813, the village has since fallen greatly into decay. The Ayr river flows at a short distance on the south; and connected with it are two artificial lakes or reservoirs, which were formed about 1802, by the Messrs. Finlay, of Glasgow, to supply their cotton-factories at Cathrine in the parish of Sorn.

GLENBUCKET, a parish, in the district of ALFORD, county of ABERDEEN, 2 miles (N. E.) from Strathdon, on the road to Aberdeen; containing 542 inhabitants. This place derives its name from the stream of Bucket, which, rising among lofty mountains, intersects the parish, and falls into the Don near the castle of Glenbucket, the seat of the Gordons of Glenbucket. The last laird of this ancient family espoused the cause of the Stuarts, and held a distinguished command in the rebellions of 1715 and 1745: he was consequently compelled to make his escape (to France), when a very aged man, after the fatal battle of Culloden. The length of the parish is about ten miles, and its breadth about two and a half; it contains upwards of 12,000 acres, of which 1000 are arable, 200 planted, and there is some good pasture and meadow land. Glenbucket is bounded on the north-east by the parish of Cabrach, on the north-west by Banffshire, on the east by the parish of Towie, and on the south by the parish of Strathdon. It is altogether a mountainous district, and is entered from the east by a narrow and romantic pass, commencing at the confluence of the rivers Don and Bucket below the castle, which stands on the acclivity of the hill of Benneaw, an eminence rising 1800 feet above the level of the sea. The greatest elevation is the hill of Craigscore, on the north, the height of which is about 2000 feet. The climate is subject to the extremes of heat and cold, the summers being sometimes intensely hot, and the winters bringing keen north winds, deep snows, and sharp and long-continued frosts. In Glennoughty there are red deer, roe deer, grouse, ptarmigan, blackcock, dotterel, plover, and hares both common and alpine; in the low grounds, snipe, ducks, and curlew. Fine trout-fishing is to be had in the Bucket and the Don.

In general the soil is good, and the improved system of husbandry is adopted; but the deficiencies in draining, inclosing, and planting, and the want of roads, form great obstacles to rapid advances in prosperity. The produce of the farms is usually sent to the markets of Aberdeen. The rocks consist of granite, gneiss, &c., with several others of the primitive formation: there is a good supply of superior limestone, which is wrought to advantage by the tenants, both for their own use and for sale. The inhabitants are all employed in agriculture: the parish is the property of the Earl of Fife, and its annual value as returned for the property-tax amounts to £989. There is a very handsome and commodious shooting-lodge, lately built by the Earl of Fife, at Badenyon, near the celebrated Lodge anciently inhabited by John of Badenyon, a relation of the Earls of Mar, who were lords superior of the whole country: the superiority is now held by Lord Fife. At Badenyon, Mowat of Abergeldie, and George Forbes, second son of Lord Forbes, settled a feud, as stated by President

Forbes in what are called the Culloden Papers. Ecclesiastically the parish is within the bounds of the presbytery of Alford, synod of Aberdeen; patron, the Crown. The stipend is £158, of which £125 are drawn from the exchequer; there is an excellent manse, with a glebe of about £10 annual value. Glenbucket church, built about sixty years since, is a plain commodious edifice. There is a parochial school, the master of which has the medium legal salary, school fees, a house and garden, with three acres of land. A parochial library is also kept up. Burnett's mortification, shared in by all the parishes in the synod, and of which no parish can receive more than £50 nor less than £20, comes to Glenbucket about once in eight years. The old castle, now nearly in ruins, is a highly picturesque object.

GLENCAIRN, a parish, in the county of DUMFRIES, 13½ miles (N. W. by W.) from Dumfries; containing, with the villages of Dunreggan, Kirkland, and Minnyhive, 2094 inhabitants. This village is about fifteen miles long, and three and a half broad, and contains about 35,000 acres; it is bounded on the north by Tynron parish, on the south by Dunscore, on the east by Keir, and on the west by the parishes of Balmaclellan and Dalry. The surface is diversified by numerous hills and valleys, by wood and water. The hills extend in ranges from east to west, rising from 1000 to 1500 feet above the level of the sea; the higher parts are covered with heath, but the rest generally affords good green pasture. The valleys are highly cultivated, and produce crops of grain. From its proximity to the high hills on the west, the parish has a moist atmosphere; and it suffers frequently from violent inundations caused by copious rains, which bring great mischief to the low grounds. There is a lake about three miles in circumference and four or five fathoms deep, abounding with pike and a large kind of trout; the water has a black hue, on account of the mossy ground in the neighbourhood. Three streams, namely, the Castlefairn, the Craigdarroch, and the Dalwhat, rise in the western hills, and meeting a little below the village of Minnyhive, form one stream, which takes the appellation of Cairn. This river has a course of sixteen miles, and then joins the Nith, about a mile above Dumfries, and seven miles distant from the Solway Firth.

The SOIL in general is light and gravelly, and adapted in a superior degree for turnip husbandry. About 7000 acres are cultivated, or occasionally in tillage; 26,600 have never been cultivated; and 800 are occupied by wood. The crops of grain raised in the valleys are very fine, and the grounds are under the most improved system of agriculture. Great benefits have resulted from efficient draining, and the construction of embankments; and by the spirited and liberal support of some of the proprietors, much moss has been reclaimed, and excellent farm-houses and offices have been erected. The quantity of arable land has, indeed, been quadrupled within the last fifty years; and the annual value of real property in the parish now amounts to £11,138. The rocks are chiefly of the transition class: a slate-quarry was formerly wrought to some extent, but it has since been neglected. The mansions are Maxwellton House and Craigdarroch House. Fairs are held at Minnyhive, in March, July, and October, for the hiring of servants; and a market for lambs has recently been established. There is a daily post; and about eighteen miles of turn-

pike-road run through the parish, upon which the Glasgow and Dumfries coach used to travel three times a week ; there are four bridges on this road, and six upon the parish roads, and all of them are kept in good order.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Penpont, synod of Dumfries ; patron, the Duke of Buccleuch. The stipend is £280 ; and there is a manse, with a glebe of twelve acres, valued at £18 per annum. A new parish church has been lately erected to seat upwards of 1000 persons. There are a place of worship for members of the Free Church, and one belonging to the United Presbyterian Church. Three parochial schools are supported, in which the classics, with the usual branches of education, are taught ; the respective salaries are £25. 13., £17. 2., and £8. 11., and the joint fees amount to about £54. There are likewise two subscription libraries at Minnyhive, and a congregational library belonging to the United Presbyterian body. The chief relic of antiquity is a tumulus generally called the Moat, but sometimes the Bow Butts, situated about a mile and a half from the church, and supposed to have been formerly employed as a place for the exercise of archery. In the village of Minnyhive is a cross, erected about the year 1638, when a charter was granted, constituting the village a burgh of barony, with power to hold a weekly market.

GLENCAPLE-QUAY, a village, in the parish of CAERLAVEROCK, county of DUMFRIES, $4\frac{1}{2}$ miles (S. S. E.) from Dumfries ; containing 268 inhabitants. The village is situated on the eastern bank of the Nith, and has a small harbour, the water of which is twelve feet deep at spring tides. Vessels bound for Dumfries, to which town this port is subsidiary, unload here when unable from their burthen to reach the place of their destination ; and much employment is afforded to the male population, as carriers, in consequence. A road from the village runs in a northern direction, and partly along the shore, to Dumfries. A short distance hence, close by the river, was a cell or chapel dedicated to St. Columba ; and near it is a well, where persons who drank of its water usually deposited alms.

GLENCOE, a district, in the parish of LISMORE and APPIN, district of LORN, county of ARGYLL, 17 miles (N. E. by E.) from Appin. This singularly wild and celebrated Highland vale is situated nearly at the head of an arm of the sea called Loch Etive, and extends in a north-western direction to Ballichulish, on Loch Leven, a distance of about ten miles. From the latter point, the western line of the Highland military road passes through the extensive and valuable slate-quarries in that quarter, and then turns up the dark vale of Glencoe. The scenery of this vale is in many respects different from that of other Highland glens. It forms a narrow strip of rugged territory, along which flows the wild and rapid stream of the Coe ; and on each side of the banks of this stream, stupendous hills shoot almost perpendicularly upwards to the height of perhaps 2000 feet, terminating either in craggy summits or in spires and cones ; while numerous torrents descend from the heights at intervals, increasing the awful grandeur of the scene. The mountainous elevations seem as if composed of huge disjointed rocks heaped one upon another, and appear to be in danger of falling every moment, and of filling the dismal chasm below with their crumbling materials. In some places, the opposite

ranges approach so near as almost to exclude the sun from the vale, even when at its greatest height in June. Where accessible, the hills afford tolerable pasture for sheep ; but in various parts, particularly on the south side of the glen, no foot has ever trod, and the eagle and his feathered subjects are the only visitants. At its south-eastern extremity, the vale is bounded by the mountain called Buchael-Etive.

Glencoe is famous in the legends of romance as the birthplace of Ossian, and in the poems that bear his name many of the mountains, and the wild scenery of the district, are accurately described. It were to be wished that the celebrity of the vale were confined to the martial deeds of Fingal and his heroes. But the place is also memorable for one of the most barbarous and bloody crimes that have been committed in a modern age, or have ever been sanctioned by any regular and civilized government ; that known as the "massacre of Glencoe". It appears that William III. had published a proclamation inviting the Highlanders who had been in arms for James II., to accept of a general amnesty before the 1st of January, 1691, on pain of military execution after that time. Mac Ian Macdonald, laird of Glencoe, in accordance with this invitation, repaired to Fort-William on the very last day of December, and offered to surrender to the governor of that fortress, by whom, however, he was informed that he should apply to the civil magistrates. Upon this intimation, he set out with all possible haste to Inverary, the county town, and there surrendered himself to the sheriff, the time prescribed for submission having been exceeded by only a single day. The sheriff, in consequence of the previous offer to the governor of Fort-William, and moved by Macdonald's entreaties and suppliant manner, agreed to accept his oath of allegiance, and to certify to the unavoidable cause of the delay from the snows and other interruptions on the road ; and the confiding laird returned to Glencoe, assured of security and protection. But an extensive combination, it would appear, was formed for his destruction : the fact of his having sworn allegiance was altogether suppressed, at the instance chiefly of the President Stair and the Earl of Breadalbane ; and the certificate of the magistrate was erased from the minutes presented to the privy council. Early in the month of February, therefore, a party of military under the command of Captain Campbell of Glenlyon, entered the vale on pretence of levying taxes and hearth-money ; the clan became alarmed at their appearance, but on Macdonald inquiring of this officer if his intentions were friendly, he assured him upon his honour that they were. All apprehension was allayed in consequence ; and for nearly two weeks, the unsuspecting inhabitants treated their visitors with every mark of attention and hospitality. The soldiers were comfortably quartered among them ; civilities were interchanged on both sides, and even on the night of the dreadful massacre, the 13th of February, Macdonald and Campbell had played at cards, the latter renewing, when retiring, his frequently-expressed protestations of the warmest friendship for his host.

The fatal order from the executive in England arrived in the night. It directed an immediate and sudden attack upon the defenceless villagers while asleep, commanded the passes to be securely guarded to prevent escape, and exhorted the military not to suffer a man under the age of seventy to be spared by their swords.

From some suspicious circumstances, the sons of Macdonald were impressed with a presentiment of danger; but this was not the case before they discovered the approach of the soldiery; and ere they could alarm their father, the massacre was spreading through the vale. A party entering the house as friends, shot the laird as he rose from his bed. His wife was stripped naked by the assassins, who tore the rings with their teeth from her fingers; and she expired in the morning from the effects of grief and horror. A guest of the family, Macdonald of Achtrichatain, who had submitted three months before, and who had the royal protection in his pocket, was among the victims. Nine men were bound, and deliberately shot, at Campbell's quarters; his landlord was shot by his orders; and a youth, who had clung to his knees for protection, was stabbed to death. At another part of the vale, the inhabitants were shot while sitting round their fires; several women perished with their children in their arms; a man eighty years of age was put to the sword; and another, who had escaped to a house for concealment, was burnt alive. Thirty-eight persons were thus inhumanly butchered by their own inmates and guests. The rest, alarmed by the report of musketry, mostly escaped to the hills, and were preserved from destruction by a tempest that added to the horrors of the night, and which was so terrific as to prevent a detachment from Fort-William, of 400 men, under Colonel Hamilton, from advancing in sufficient time to complete the massacre. The women and children were spared from the stroke of death; but it seemed as if only to render their fate more cruel. Such of them as had not died from fright, or escaped, were turned out naked at the dead of night, in a keen frost, into a waste covered with snow, six miles distant from any inhabited place; and many of them were found dead or dying under rocks and hedges. The carnage was succeeded by rapine and desolation; the houses in the vale were demolished, and the cattle became a prey to the murderers.

According to Smollett, the Earl of Breadalbane had borne a personal enmity to Macdonald, and had, from this motive, concealed from the ministry the fact of his submission: the order for the extermination of the whole clan, countersigned, it is said, by the king himself, was thus transmitted to the secretary of state in Scotland, and but too fatally executed. The outcry against the massacre was not confined to these kingdoms; but resounded, with every aggravation, throughout Europe. Yet the secret circumstances relating to it were never sufficiently examined; no inquiry was instituted at the time, nor was any punishment inflicted subsequently upon its authors. On the contrary, it is asserted that the officers who were most active in the sanguinary deed were promoted. The place where the massacre was chiefly committed is at the north-west end of the vale; and the old house of Glencoe, still an object of horror, is now a ruin. During Her Majesty's trip to Scotland in 1847, the vale of Glencoe was visited by his royal highness Prince Albert, attended by several gentlemen of the suite. There are a mission church, a place of worship for members of the Free Church, an episcopal chapel, and a Roman Catholic chapel.

GLENCROSS, or GLENCORSE, a parish, in the county of EDINBURGH, $2\frac{1}{2}$ miles (N. by E.) from Penicuik; containing 708 inhabitants. This parish, which consists of portions severed from the parishes of Lass-

wade and Penicuik in 1616, derives its name from an ancient cross in the cemetery of the old church of St. Catherine, now covered by the water of the Compensation reservoir. The battle of the Pentland hills, between the Covenanters under Colonel Wallace and the king's troops commanded by General Dalziel, took place on Rullion Green, in this parish, on the 28th of November, 1666, and terminated in the defeat of the former, with considerable slaughter. Glencross is bounded on the north by the parish of Colinton, on the east and on the south by that of Lasswade, and on the west by Penicuik. It is three miles in length, and nearly the same in breadth, comprising an area of about 1920 acres, of which 1680 are arable, and the remainder hilly moorland. The surface is beautifully diversified with hill and dale, and abounds in scenery of strikingly picturesque character; in the northern district is a considerable portion of the Pentland hills, and throughout the parish the land is irregularly undulated. The Glencross or Logan water has its source in the Pentlands, and winding in an eastern direction through the parish, flows into the river Esk near Auchinderry, in the parish of Glencross. In its course along a valley between the Pentland hills, it has been formed, by the Edinburgh Water Company, at an immense expense, into a reservoir for the supply of the numerous mills upon the Esk, in consideration of their having diverted from that river, for the supply of Edinburgh, the powerful spring of Crawley, which rises near the manse, and discharges sixty cubic feet of water per minute.

The SOIL varies from a fine rich loam to a gravelly and stiff clay, and is adapted for crops of every kind; the principal crops are wheat, oats, barley, potatoes, and turnips, with the various grasses. The system of agriculture is in a very forward state; the lands have been well drained, and inclosed in the lower parts with hedges of thorn, and in the higher with stone dykes. The farm houses and offices are greatly improved in appearance; they are substantial and commodiously arranged, and on most of the farms are threshing-mills. Much waste land has been reclaimed and brought into cultivation, yielding fine crops of grain by the judicious use of lime formed into a compost for manure. The hills afford good pasturage for sheep, which are chiefly the black-faced, with some of the Cheviot breed, and a few of a cross between the black-faced and the Leicestershire. Plantations have been formed on an extensive scale, which are well managed, and in a thriving condition; they consist of almost every sort of trees, both of hard and soft wood. There are some remarkable specimens of Portugal laurel in the gardens of Logan Bank, and of variegated holly at Woodhouselee, some of the latter being more than thirty-five feet in height; also a silver-fir at Woodhouselee, measuring thirteen feet and a half in girth at three feet from the ground. In this parish the substrata are very various: coal was formerly wrought in Glencross muir; and a beautiful rock of porphyry in the parish was worked for some time, in the hope of finding copper or silver, but not to any great extent. The annual value of real property in Glencross is £5391. Woodhouselee, the seat of James Tytler, Esq., is an elegant mansion beautifully situated in an ample demesne tastefully laid out, and embellished with plantations: Bush, Glencross House, Logan Bank, Castlelaw, and Bellwood are also good mansions. The old house of Greenlaw was con-

verted by government into a depôt for French prisoners of war in 1803, and in 1813 a new prison was commenced, to accommodate 7000 men, but which was never used, as the war terminated before the completion of the buildings: the prisons are wholly unoccupied, but the barracks are occupied by a small detachment of troops from the castle of Edinburgh. There is no village, except a few clusters of houses at Milton-Mill; the population of the parish is entirely agricultural. A distillery was formerly carried on; but a paper-mill, lately erected, and a meal-mill, are the only works at present: a market for sheep is held on the first and second Mondays in April, at House of Muir. Facility of communication is afforded by good roads, kept in excellent repair, and by bridges over the Glencross water and the river Esk: the turnpike-road from Edinburgh to Dumfries intersects the parish.

FOR ECCLESIASTICAL purposes Glencross is within the bounds of the synod of Lothian and Tweeddale and the presbytery of Dalkeith. The minister's stipend is £156. 17., of which £88 are paid by government; patron, Mr. Tytler. The manse, about a mile from the church, was built in 1816; the glebe comprises nine acres, including garden, and is valued at £19. 15. per annum. Glencross church, situated on the summit of an isolated hill, in the centre of the parish, was erected in 1665, and partly rebuilt after sustaining damage from fire, and enlarged by the erection of transepts, in 1699; it was repaired in 1811, and contains 180 sittings, a number very inadequate to the population of the parish. The parochial schoolmaster has a salary of £34, with a good house and garden, and the fees average about £20 annually. There are vestiges of an ancient camp at Castlelaw, from which that estate most probably took its name; and on the high grounds of House of Muir are vestiges of another camp. Upon an eminence near Marchwell, till within the last few years, were some very perfect remains of a Druidical circle; but they have been removed for the sake of the materials, which have been used in the erection of a wall. William Tytler, Esq., author of an inquiry into the evidence against Mary Queen of Scots; his son, Lord Woodhouselee, author of the *Life of Lord Kames*; and Patrick Fraser Tytler, Esq., youngest son of Lord Woodhouselee, and author of the *History of Scotland*, all resided on the estate of Woodhouselee. The Rev. Dr. Inglis, author of a vindication of ecclesiastical establishments, likewise lived for many years in the parish.

GLENDOVAN, or GLENDEVON, a parish, in the county of PERTH, 8 miles (S. S. W.) from Auchterarder; containing 157 inhabitants. This parish, which is about six miles in length and four in breadth, derives its name from the river Devon, which runs through it in a direction from west to east, flowing along a narrow and verdant glen, and being inclosed by banks of considerable elevation. Glendovan lies in the midst of the Ochil hills, and is bounded on the north by the parishes of Blackford and Auchterarder, on the east by Fossoway, on the south-east by Muckart, and on the west and south by Clackmannanshire. It comprises about 6000 acres, of which not more than 100 are arable, and the whole of the remainder rich meadow and pasture land. The surface is varied by the hills, clothed to their summits with luxuriant verdure; and except about thirty persons employed in the woollen manufacture, for which a mill has

been established at Burnfoot, the population is wholly pastoral. The dairy-farms are well managed; and the produce is sent to the markets of Alloa and Stirling, where it finds a ready sale. The annual value of real property in Glendovan is £1500. A good turnpike-road passing for about three miles and a half through the parish, and which was constructed about thirty-five years ago, has been of great benefit in facilitating a supply of coal, which is plentiful in the immediate vicinity: peat-moss is also abundant, and is used to a considerable extent for fuel. The Devon, a fine copious stream, abounds with excellent trout, and flows through a tract enriched with pleasingly picturesque scenery: on the south bank is Glendovan House, a handsome mansion commanding a good view of the glen. Ecclesiastically the parish is in the presbytery of Auchterarder, synod of Perth and Stirling, and in the patronage of the Crown: the minister's stipend is £158, with a manse, and a glebe valued at £20 per annum. The parochial school is well conducted; the master has a salary of £34, with £15 fees, &c., and a house and garden.

GLENDUCKIE, a hamlet, in the parish of FLISK, district of CUPAR, county of FIFE, 3 miles (E.) from Newburgh; containing 53 inhabitants. It is seated in the extreme south of the parish, a short distance north of the high road from Newburgh to Cupar. The hamlet is appendant to the farm of Glenduckie, and consists of the farm-house and twelve or fourteen cottages.

GLENELG, a parish, in the county of INVERNESS, 188½ miles (N. W.) from Edinburgh; containing, with the island of Rassay, 2729 inhabitants. The name of this place, according to some, signifies "the valley of hunting", and according to others, "the valley of the roe", each of which descriptions is appropriate to the character of the district. The parish is about twenty miles in length, and of nearly the same breadth. It is bounded on the north-east and east by the parish of Glenshiel, in the county of Ross; on the south-east and south by Glengarry and Lochaber; on the south-west by the lake of Morir, dividing it from Ardnamurchan; and on the west and north-west by the Sound of Sleat, separating it from the Isle of Skye. The coast is abrupt and rocky, except in the bay of Glenelg and in the lochs, where good anchorage may be obtained. The interior consists of three districts, namely, Glenelg proper, Knodyart, and North Morir, which are formed by the intersection of two arms of the sea, called Loch Hourne and Loch Nevis. Its surface is diversified with hill and glen. In the district of Glenelg are two valleys, through each of which a river pursues its course; and the inhabitants reside in villages on each side of the streams, and along the shores, the arable land extending along the river-banks, and on the acclivities of the hills. In Knodyart the people live near the sea: North Morir is but little inhabited, being rocky and mountainous, and chiefly adapted for pasture. Loch Hourne and Loch Nevis are about four miles wide at the entrance, and are navigable for twenty miles; the former is celebrated for the beauty of its scenery and the well-wooded mountains rising from its margin. There are also several fresh-water lakes, which, as well as the rivers, contain a tolerable supply of fish.

The soil in Glenelg proper is loamy and fertile; that in the district of Knodyart is much lighter, but when well cultivated produces good crops. The parish, how-

ever, is chiefly pastoral, being unfit for extensive agricultural operations from the rockiness of the surface, and from the great quantity of rain to which the lands are subject at all seasons, exposing the farmer to much loss of crop. Sheep are the staple live stock, the arable land not being able to supply a sufficiency of winter provender for any other; the few cattle kept are of the pure Highland breed, and the sheep the black-faced and Cheviots. About 2000 acres are occupied by wood; and the annual value of real property in the whole parish amounts to £6442. The rocks are chiefly gneiss, with mica-slate, quartz, hornblende, granite, syenite, and serpentine. There are also several beds of limestone; but it is not wrought, as the scarcity of proper fuel renders the operation too expensive, and as the shells which abound on the coast are found to be a good substitute. Impure plumbago is to be met with in considerable quantities. The only mansion-house in the parish is that of Inverie, on the property of Glengarry, in the district of Knodyart; it is beautifully situated on the banks of Loch Nevis. The chief village is Kirkton, which, with its circumjacent scenery, has excited the admiration of most visitors to this part of the country, and is conveniently seated upon a bay affording good anchorage with the wind south-east, north-east, or east. Its principal street consists of slate-roofed houses, having some good shops, with numerous dirty and squalid cottages in the vicinity. The roads leading from the village are beautified with rows of trees; and these, together with the extensive bay and the interesting back-ground, form a very agreeable and striking picture. The village of Arnisdale, situated at the southern extremity of the district of Glenelg proper, on the banks of Loch Hourn, is also rendered attractive by its imposing Alpine scenery. There is a herring-fishery connected with the parish, which produces about £250 a year; and three annual fairs are held in the months of May, July, and September, respectively. The inhabitants enjoy good means of communication. The parliamentary road towards the Isle of Skye passes through the principal glen to the ferry of Kyle Rhea; it is kept in proper order, and has excellent bridges over the mountain streams. A steamboat, also, visits the parish weekly, except in the most stormy weather; and post-offices have been established under Lochalsh and Fort-Augustus.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Lochcarron, synod of Glenelg; patrons, the family of Baillie of Kingussie. The stipend is £237. The manse, which was built recently, is a large and handsome edifice, beautifully situated, more than a mile from the church. The glebe is of great extent, comprehending 360 acres, nearly thirty of which are arable, the rest being pasture: this tract, subject to a rent of £19. 10. per annum, was received in lieu of the old glebe, which was comprehended in a portion of land sold to government for building a fort and barracks, subsequently to the rebellion of 1715. Glenelg church contains about 400 sittings, and is in good condition, having been repaired and re-seated about 1827. In the districts of Knodyart and Morir, the population of which is almost entirely Roman Catholic, a missionary labours under the patronage of the General Assembly, also preaching every third Sunday at Arnisdale, on account of its distance from the parish church. Two Roman Catholic priests officiate in Knodyart and

Morir. The parochial school affords instruction in English and Gaelic reading, with the common branches of education, and sometimes in Latin; the master has £30 a year, with £9 in lieu of a house and garden, and about £5 fees. Other schools are supported by the General Assembly's Education Committee and the Society for Propagating Christian Knowledge. The chief relics of antiquity are two duns or Pictish towers, situated in the valley of Glenbeg; they are the finest specimens of their class in this part of the Highlands, and are supposed by many, not to be the workmanship of any purely Celtic tribe, but to have been raised by the Danes or Norwegians. Glenelg gives the title of Baron to the family of Grant, a dignity created in 1835, in the person of the Hon. Charles Grant, who had been representative in parliament of the county of Inverness for some years previously, and was at that time secretary of state for the colonies: this nobleman is proprietor of Glenelg proper.

GLENGAIRN, county of ABERDEEN.—See GLENMUICK, TULLICH, and GLENGAIRN.

GLENHEAD, a village, in the parish of LOCHWINNOCH, county of RENFREW, $2\frac{1}{2}$ miles (N. N. E.) from the town of Beith; containing 53 inhabitants. This small village is chiefly inhabited by persons employed in agriculture. It is pleasantly situated on the south side of Castle-Semple loch, and contains a school, the master of which has a salary of £5 per annum, paid by the master of the parochial school, and also a house and garden rent-free.

GLENHOLM, county PEEBLES.—See BROUGHTON.

GLENISLA, a parish, in the county of FORFAR, 10 miles (N. by W.) from Alyth; containing 1134 inhabitants. This very extensive parish, which comprehends the north-western portion of the county, derives its name from its spacious and picturesque valley watered by the river Isla. It is about eighteen miles in length and nearly six in extreme breadth, comprising an area of 39,776 acres, of which 3960 are arable, 4500 undivided common, about 500 woodland and plantations, and the remainder mountain pasture and waste. The surface is strikingly diversified: on the north the parish is separated from the county of Aberdeen by a barrier of mountainous elevation, from which there extend towards the south two ranges of nearly equal height, that bound the parish on the east and west. Between these ranges, for a short distance from the northern boundary, the surface is divided into three small vales by intervening ridges; and farther towards the south is the height of Kilry, which intersects the parish from west to east, leaving only a narrow interval, through which the Isla pursues its course. The range of mountains forming the eastern boundary divides, for some few miles, into three nearly parallel ranges, inclosing two small vales watered by the rivulets of Pitlochric and Glenmarkie. The lowest of the mountainous ranges of Glenisla has an elevation of 1400 feet above the level of the sea: towards the north they greatly increase in height, terminating in the mountain of Glassmile, 3000 feet high, on the western verge of which is raised a heap of stones, whose base lies in the three parishes of Glenisla in the county of Forfar, Kirkmichael in that of Perth, and Crathie in the county of Aberdeen. Mount Blair, on the western boundary, has an elevation of 2260 feet; and from its summit is obtained a commanding view over the adjacent district,

with the Lammermoor, Pentland, and other hills of almost infinite variety. The river Isla, which has its source in the heights of Caanloch, flows in a south-eastern direction, through an extensive tract abounding with truly romantic scenery, and forms some picturesque cascades. Near the bridge of Milna Craig, being arrested in its course by immense masses of projecting rock, it rushes with impetuous violence along its contracted channel, and falls from a height of eighty feet into a wide gulph beneath. About two miles from this, again confined within a narrow channel, scarcely three yards in width, by towering cliffs of precipitous rock, it forces its way through a frightful chasm, and descends in a torrent into a deep and spacious ravine lined on both sides with walls of perpendicular rocks, crowned with trees of every variety of foliage. This pass, which is called the Slug of Auchrannie, is much admired for the grandeur of its scenery.

The soil is partly clay alternated with gravel, and, though tenacious of moisture, is, when properly drained, productive of grain of every kind; the upper lands are chiefly moss, with some portions of gravel. The crops are mostly oats and barley, with the various green crops; and the hills afford good pasturage for sheep and cattle, especially towards the head of the parish: the system of agriculture is improved, and the rotation plan of husbandry generally prevalent. The lands are well drained, and partly inclosed; and the farm-buildings, many of which are of modern erection, are substantial and convenient. In this parish, the cattle, of which the number kept is about 1800, are of the Angus and Highland breeds; and the sheep, nearly 10,000 of which are pastured on the hills, are chiefly of the black-faced kind. The annual value of real property in the parish is £4009. The plantations, which are of modern growth, are larch and Scotch fir, and thrive well. The substratum in the southern part is of the old red sandstone formation, with some portions of trap rock and porphyry; the sandstone is excellent for building, and there are quarries of blue limestone, which is burnt for agricultural use. Communication is afforded by roads kept in repair by statute labour, of which one leads to Alyth, where is a branch post-office, and another forms part of the Kirriemuir and Castletown road: there are several bridges over the river, two of which are of stone, one of iron, and another of wood, the two last for foot passengers only. Fairs for cattle, sheep, and horses are held on the first Wednesday in March and the first Wednesday in August, O. S. For ecclesiastical purposes the parish is within the bounds of the presbytery of Meigle, synod of Angus and Mearns. The minister's stipend is £159. 12., of which about one-third is paid from the exchequer; with a manse, and a glebe valued at £10 per annum: patron, the Crown. Glenisla church, erected in 1821, and situated nearly in the centre of the parish, is a neat structure containing 700 sittings. The parochial school is well conducted; the master has a salary of £29. 18. 10., with a house and garden, and the fees average about £10 per annum. Another school is supported by the Society for Propagating Christian Knowledge, who allow the master a salary of £16 per annum. There are some small remains of the castles of Fortar and Newton, ancient baronial seats of the Earls of Airlie; the former was destroyed in 1640, by the Marquess of Argyll. In 1841 a silver coin or medal, with a half-

length figure of Anselm Casimer, Archbishop of Mentz, and silver coins of Elizabeth and James VI., were found in a field on the farm of Bellaty.

GLENLUCE, county WIGTOWN.—See LUCE, OLD.

GLENLYON, a quoad sacra parish, chiefly in the parish of FORTINGAL, and partly in that of WEEM, county of PERTH, 12 miles (W.) from the Kirktown of Fortingal; containing 570 inhabitants. This district extends in a western direction, from the head of Fortingal, nearly to the stage-house of Tyndrum, upon the western military road, a distance of about thirty-two miles. It consists of a very narrow glen, the sides of which are formed of some of the loftiest mountains in the county. What is termed its general level ground, by the river Lyon, is seldom more than a furlong broad; and the mountains on the north approach so closely in some places to the opposite range, on the south, as to confine the struggling river to a bed not much more than eight yards wide. Numerous streams, some of them four miles in length, descend from the mountains and swell the waters of the Lyon; and this river, the source of which is a lake of the same name, after flowing in nearly an eastern direction for upwards of forty miles, its tributaries rendering it more rapid at each confluence, falls into the Tay below Taymouth Castle. In the head of the district the soil is good; but the seasons are inclement, and the crops seldom attain to perfection. The hills, however, afford excellent pasturage for sheep; and in this respect Glenlyon is exceeded by few, if any, of the glens in the Perthshire Highlands. In different parts along the vale are small hamlets, so secluded amidst Alpine scenery as to be deprived of the rays of the sun for a third part of the year. The means of communication are but indifferent: a carrier or runner passes and repasses between Aberfeldy and the extremity of the glen three times a week. Ecclesiastically Glenlyon is within the bounds of the Presbytery of Weem, synod of Perth and Stirling, and the patronage is vested in the Crown: the stipend of the minister is £120, with a manse, and a glebe of the annual value of £2. 10., a privilege of cutting peat, and the summer grazing of two cows. The church, situated in the hamlet of Innerwick, was built by the heritors, in 1828, at a cost of £673, and contains between 500 and 600 sittings. This place gave the title of Baron, in the peerage of the United Kingdom, to James, second son of John, fourth Duke of Atholl, who died in 1837, and was succeeded by his son George, as second lord, now sixth Duke of Atholl.—See FORTINGAL.

GLENMORRISTON, in the county of INVERNESS.—See URQUHART.

GLENMUICK, TULLICH, and GLENGAIRN, a parish, in the district of KINCARDINE O'NEIL, county of ABERDEEN, 16 miles (W.) from Kincardine O'Neil; containing, with the village of Ballater, 2118 inhabitants. The compound Gaelic term *Glean-muic*, expressive of "a valley frequented by swine", is supposed to have been applied to this place from some part of it having been formerly celebrated for its breed of swine. The word Tullich is corrupted from *tulach*, signifying "rising grounds, or hillocks", and is descriptive of the vicinity of the village of Tullich. Glengairn is derived from the three words *glean-garbh-amhain*, meaning "the hollow or glen of the rough water", a term properly applied to the water of Gairn, on account of the rocky

channel through which it pursues its course. The outline of the parish is very irregular, the length in several places being eighteen miles and the breadth fifteen miles, and the average length about fourteen and a half and the breadth twelve and a half. Glenmuick measures in average length fifteen miles, from east to west, and five and a half in breadth; Tullich, fourteen miles in length, from east to west, and seven miles in breadth; and Glengairn, eight miles in length and four in breadth. They comprise together about 115,200 acres, of which 3643 are under cultivation, 3185 in woods and plantations, and the remainder hills, moss, and moor, affording pasture, fuel, and game. In most parts the surface is mountainous and hilly; the small portion under tillage is chiefly in fertile straths, and on the banks of the rivers. The lands are watered by the Dee, the Muick, and the Gairn; the first divides the parish throughout its whole length, the district of Glenmuick being nearly all on its southern side, and Tullich and Glengairn on the northern. There are also several rivulets or burns.

The chief mountains, which are partly in contiguous parishes, are Lochnager, Cairntaggart, Mountkeen, and Morven, rising respectively to the height of 3814 feet, 3000 feet, 3126 feet, and 2934 feet. The most considerable hills are in ranges, varying from 1000 to 2500 feet: that of Culblean, at the east of Tullich, extends from Morven in a southern direction, for six miles, as far as the river Dee. From the centre of this, another range runs westward, along the north bank of the Dee, to the valley of Gairn; and though interrupted here, it rises again on the west side of the valley, and stretches parallel with the Dee to the church of Crathie. A third chain, on the south side of the Dee, extends in a line with the former, for about six miles, towards the west; and after often changing its direction, and bounding several lochs, it reaches the parish of Crathie and Braemar at the mountain of Cairntaggart. There are also some isolated hills, of which that called Craighandaroch, 400 yards north of the church, rises to the height of 1400 feet, and another, named the Cnoc, a mile west of the church, attains an elevation of 1150 feet. The ground rising from the streams, where the ascent is not too abrupt or rocky, is cultivated to the height of between 100 and 200 feet above the streams.

The wild and romantic mountain scenery of the district is blended with many beautifully picturesque features, for which it is much indebted to its rivers and lakes. The *Dee*, rising in the mountains of Braemar, flows into this parish, and on its northern side, about one mile and a half north-west of the church, receives the river *Gairn*, which has passed through the district of Glengairn; while, half a mile west of the church, on its southern side, it is joined by the *Muick*, a stream remarkable for the beautiful cascade called the Linn of Muick. It proceeds in an eastern course to Aberdeen, where it falls into the sea. Among the lochs, that of *Dhuloch*, at the south-western extremity of Glenmuick, is celebrated for its impressive scenery; and its water, which is deep and cold, derives a sable hue from the stupendous overhanging cliffs of Craighdhuloch, which rise on its southern shore above 1000 feet in height. A mountain rivulet falls into it from a considerable elevation, over a rock, on the north; and a small stream called by its own name runs out of it in an eastern

course, forming several cascades, and at the distance of a mile and a half losing itself in *Loch Muick*. This lake is situated in the midst of romantic scenery, and is closely girt by the mountain of Lochnagar on the north, and a lofty range of the Grampians on the south and west. The loch of *Cannor*, about three miles round, and lying at the base of Culblean, in the district of Tullich, is also a beautiful sheet of water, richly ornamented with birch-wood, and interspersed with small islands. On one of these islands once stood a fortress, supposed to have been built as a hunting-seat by Malcolm Canmore; and not far from the loch is a curious excavation, called "the Vat" on account of its shape, it being nearly circular, measuring at the bottom about twelve feet in diameter, and gradually increasing in size to the top. A stream falls into "the Vat" from the height of thirty feet; and the hollow is supposed to have been gradually wrought by the pebbles driven round it, for ages, by the rapid and incessant action of the water. Salmon are found in the rivers; and the lochs are well stocked with eels, pike, par, and trout.

The SOIL is in general shallow and dry, in some parts sandy, in others gravelly: the grain chiefly cultivated is oats and bear, and most kinds of green crops are raised. The sheep are the black-faced, occasionally crossed with other sorts; the cattle are the small native breed, mixed with the Galloway and others. The larger agriculturists are gradually introducing the rotation of crops, and other approved usages; the farm-buildings are tolerably good, and some tracts of waste land have been trenched, drained, and brought under tillage, within the last few years. Embanking has also been carried on to some extent; but the inclosures are still deficient, and much is yet required to raise the parish to a level with many of the neighbouring districts. The annual value of real property in Glenmuick, Tullich, and Glengairn is £5745. The prevailing rocks are, primitive limestone, gneiss, and trap, of the first of which three quarries are in operation; and these rocks are frequently intersected with veins of quartz and porphyry. Granite occurs in numerous boulders; and ironstone and bog-iron are abundant. The natural wood consists chiefly of Scotch fir: and the plantations are of the same wood, mixed with larch, pine, mountain-ash, and others: plane, elm, and ash are not found to thrive, except in a few places. The mansion of Birkhall, built in 1715, and thoroughly repaired and enlarged in 1839, is a beautiful residence, romantically situated. Monaltrie House is a modern structure, in the vicinity of the village, and has very superior flower and fruit gardens attached to it.

The inhabitants are engaged chiefly in agriculture; but many females are employed in flax-spinning and the knitting of stockings. A post-office in Ballater communicates daily with Aberdeen; and there is a good communication road, on the north side of the Dee, to Charlestown of Aboyne, where it meets the Aberdeen turnpike-road. A substantial wooden bridge of four arches was erected over the Dee in 1834, two excellent stone bridges having been previously carried away by the floods, the first in 1799, and the other in 1829: the present structure was raised at a cost of more than £2000, defrayed partly by subscription, and partly by a grant from the Parliamentary Commissioners for Highland roads and bridges. The farmers usually send

their corn and dairy produce to Aberdeen, and the live stock to the Scotch or English cattle-markets. Fairs are held on the first Tuesday in May, O. S., the last Tuesday in June, the second Monday and Tuesday in September, O. S., and the Saturday before the 22nd of November: those in May and September are for the sale of cattle, horses, sheep, and general wares; that in June for the sale of wool, and that in November for hiring servants. Ecclesiastically the parish is in the presbytery of Kincardine O'Neil, synod of Aberdeen, and in the patronage of the Marquess of Huntly. The minister's stipend is £237, with a manse, and a glebe valued at £7. 10. per annum. The church, built in 1798, is a neat substantial edifice, with a spire and an excellent clock; it is situated in the middle of a square in the village of Ballater, and has accommodation for about 800 persons. A missionary in connexion with the Established Church officiates in a chapel at Rinloan in Glengairn, seven miles from Ballater, and, besides the usual accommodations, receives £60 per annum from the Royal Bounty Committee. The members of the Free Church have a place of worship; and there is a Roman Catholic chapel on Gairnside, five miles distant from the church, and a second, a very small one, in another part. The parochial school, situated in Ballater, affords instruction in the usual branches; the master has the maximum salary, with a house, and £15 fees, and participates in the Dick bequest. There is also a school near the chapel in Glengairn, the master of which, in addition to accommodations, has £15 per annum from a bequest by Miss Farquharson. A subscription library and a savings' bank are kept up in the parish. On the moor near Culblean are several cairns, said to cover the graves of those who fell in flight after the battle of Culblean, fought between the followers of King David Bruce, and those of Cummin, Earl of Atholl, in 1335.—See BALLATER.

GLENORCHY and INISHAIL, a parish, in the districts of LORN and ARGYLL, county of ARGYLL, 14 miles (N. by E.) from Inverary; containing 1644 inhabitants, of whom 247 are in that portion of the parish which was for a time annexed, *quoad sacra*, to Strathfillan church. These two ancient parishes, which were united in the year 1618, derive their names from the situation of their respective churches, the former in a picturesque glen watered by the river Orchy, and the latter on the beautiful island of Inishail in Loch Awe. The lordship of Glenorchy was granted in the fifteenth century, by James II., to an ancestor of the Breadalbane family, whose descendant, the marquess, is the present proprietor; the lands of Inishail are divided among several owners, of whom Mr. Campbell of Monzie is the principal. The PARISH, which is partly bounded on the west by Loch Etive, is twenty-four miles in length, varying from five to twenty miles in breadth, and comprising an area of nearly 300 square miles. With the exception of the vale of Glenorchy and the district of Inishail, the surface is hilly and mountainous, abounding in boldly romantic scenery. Of the mountainous ranges, the most conspicuous is that of Crnahan, on the north and north-eastern boundary, separating the parish from the parishes of Ardochattan and Appin, and in which are the heights of Beinabhuidh, Stob-an-Daimh, Beinmacmonaidh, and Beindourain. The range extending from the western to the eastern extremity of Loch Awe,

along the south side of the vale of the Orchy, terminates at the bases of the mountains Tighearnan and Beinachleidh, near Beinlaidh, the highest mountain in the parish. These ranges are in several places broken by intervening glens, through which run the rivers Orchy and Awe, which in their course form some pleasing cataracts, flowing between banks densely wooded and marked with features of strikingly romantic character. Both the rivers abound with salmon and trout, and are much frequented by anglers. The chief lakes are Loch Awe and Lochtolla, which contain salmon, trout of large size, eels, char, perch, and pike, the last of recent introduction. Of the former extensive lake, only the eastern extremity is in this parish; but from the beauty of the scenery on its shores, it forms a very interesting feature. Lochtolla, which is situated among the hills of Glenorchy, is about four miles in length and a mile in average breadth: on the north bank is a picturesque shooting-lodge belonging to the Marquess of Breadalbane, surrounded with thriving plantations. There are several smaller lakes in the parish.

On the banks of the rivers the SOIL is a mixture of light earth and sand, and on the sides of Loch Awe a deep and rich loam resting on a gravelly subsoil; the crops are oats, barley, bear, potatoes, and turnips. The system of husbandry has made considerable progress, and the farm-houses are generally substantial and well built; but the offices are of rather inferior order, and the lands only partially inclosed. Embankments have been raised on the Orchy, and the channel of the river Awe deepened. The upland portion of the parish is purely pastoral, and great numbers of sheep and black-cattle are reared on the hills. The sheep, with the exception of a few of the Cheviot and Leicestershire, are all of the black-faced breed; and the cattle of the pure Argyllshire breed, except some Ayrshire cows on the dairy-farms. The sheep and cattle are sent principally to the markets of Falkirk and Dumbarton, and the wool to Liverpool. There are about 4000 red-deer in the Marquess of Breadalbane's deer-forest. Though comparatively little remains of the ancient woods with which the parish formerly abounded, the lands are still far from being destitute of timber, and various modern plantations have been formed, which are in a thriving state, and add much to the beauty of the scenery. The annual value of real property in the parish is £8886. Among the seats is Inishdrynich House, a handsome mansion beautifully situated on the north side of Loch Awe, in a demesne richly wooded, and laid out with great taste. Inverawe, about a mile from Inishdrynich, and also on the banks of the loch, is an elegant modern mansion, surrounded with plantations; and Rockhill is likewise a pleasant residence, on Loch Awe, of which it commands an extensive and interesting view. There is no village of any importance. At Dalmally is a posting inn, affording every accommodation; and facility of communication is maintained by good roads which have been formed in various parts of the parish, and are kept in excellent order. Fairs are held on the third Wednesday in March, and the fourth Tuesday in November.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Lorn, synod of Argyll; patrons, the Duke of Argyll and the Marquess of Breadalbane. The minister's stipend is £206, with a manse, a glebe valued at £22 per annum, and the privilege of

pasturing eight cows on four farms in the neighbourhood, which is equivalent to about £10 more. Glenorchy church, erected in 1811, is a handsome structure in the later English style of architecture; it is beautifully situated on an islet formed by the windings of the river Orchy, and contains 500 sittings. Inishail church, formerly on an island of that name in Loch Awe, but rebuilt on the shore of the lake, is a plain structure containing sittings for 250 persons. The members of the Free Church have a place of worship. There is a parochial school in Glenorchy, of which the master has a salary of £34. 4., with fees amounting to about £8, and a house and garden. Two parochial schools are supported in Inishail, the masters of which have each a salary of £25. 13., and each fees averaging £5 per annum, without accommodations. The parochial library contains about 300 volumes.

There are some remains of ancient castles, among which are those of Fraocheilein Castle, situated on a rock in Loch Awe, and erected in the reign of Alexander III. by the chief of the clan Mac Naughton. The castle of Caolchurn, at the eastern extremity of the lake, was for many centuries the stronghold of the Breadalbane family; the great tower or keep was built by the lady of Sir Colin Campbell, ancestor of the family, during his absence in the Holy Land, in 1440. This castle, after the removal of the owners to their seat at Taymouth, fell into decay, which was greatly accelerated by the appropriation of the materials to the building of farm-houses in the parish. There are slight remains, also, of the castles of Achallader, Duchoille, and others. On the island of Inishail are the ruins of a convent for nuns of the Cistercian order, the chapel of which was used after the Reformation as the parish church of Inishail, till the erection of the present structure in 1736. Upon a small islet in the lake, called the Priest's Isle, are the remains of the house of the priest of Inishail, surrounded with a wall of dry stones; and from the south shore of the lake, may be traced some huge blocks of stone intended for the foundation of a bridge, and still called the Druid's Bridge. On opening a cairn on the farm of Stronmilchan, a few years since, was found a stone coffin containing an urn. The Rev. Dr. John Smith, translator of the Bible into the Gaelic language, and Duncan McIntyre, an eminent Highland bard, were natives of the parish. Glenorchy gives the title of Viscount to the Marquess of Breadalbane.

GLENSHIEL, a parish, in the county of Ross and CROMARTY, 16 miles (S. E.) from Balmacara in Lochalsh; containing 745 inhabitants. The derivation of the name of Glenshiel is involved in obscurity, the original word being equally applicable to a "glen of cattle", "of hunting", or "of rain". The history of the parish is also uncertain, till about the middle of the thirteenth century. At this time the McKenzies, whose founder had been rewarded by Alexander III. for his bravery at the battle of Largs, expelled from Glenshiel several tribes known by the names of Macbheolan, Macaulay, and others, and made themselves possessors of the land. In the beginning of the next century, however, the Mc Raes, a clan supposed to be of Irish origin, settled in the parish, and shortly became almost the sole proprietors. In a later age, in 1719, the descendants of this ancient tribe, with some adherents of the Mackenzie family, and 400 Spaniards headed by William, Earl of

Scaforth, engaged the royal troops in the narrow pass of Glenshiel, in the cause of the dethroned family of Stuart; but after several severe engagements, the Highlanders were repulsed, and retired, carrying with them the Earl of Scaforth, who had been dangerously wounded. The celebrated Rob Roy was concerned in this affair, against the king's troops. The Mc Raes had fought on the same side also at Sheriffmuir in 1715, but did not interfere in the rebellion of 1745. Glenshiel was formed into a separate parish, out of that of Kintail, about a century ago.

The PARISH is about twenty-six miles in length, varying in breadth from two to six miles, and containing 72,000 acres. It is bounded on the north by Loch Duich, which divides it from the parishes of Lochalsh and Kintail; on the south by the parish of Glenelg; on the east by the parishes of Kiltarlity, Urquhart, and Kilmonivaig; and on the west by the strait of Kylerea, which separates it from the Isle of Skye. The surface is formed of two divisions, the eastern and western. The eastern consists of three ranges of lofty mountains, divided by narrow valleys, and rising in a bold and precipitous manner at the western end, to an elevation of nearly 4000 feet above the level of the sea: among the many peaks by which the ranges are distinguished, Seùr-ùran is the most conspicuous. The celebrated valley of Glenshiel lies between two of these ridges. It is about fifteen miles in length, of various breadth, and narrows so much at the middle, by the approach of the mountains, as to leave only sufficient space for the stream of Shiel to pass along. In a more expanding portion it forms a bed for the waters of the lake of Cluonie; and the scenery is altogether of a bold and romantic cast. The western division of the parish, called Letterfearn, implying "the alder side", is of a different character from the other division, consisting of a verdant tract gradually rising from Loch Duich, and marked by rocky projections and headlands, diversified with well-cultivated fields and interesting copses. Good springs are numerous in the parish; and in the eastern division are two considerable rivers, of very clear water, stocked with salmon and trout, and which flow for about twelve miles, and then empty themselves into Loch Duich at the south and east extremities. One of these is the Shiel, running through the valley of Glenshiel. The principal inland lakes are Loch Cluonie, Loch Luin, and Loch Shiel, all of which abound in excellent trout.

The SOIL near the shore is gravelly, and, if well manured, produces good crops of potatoes; in several of the valleys a rich vegetable mould is found, partially mixed with sand or gravel, and admitting of superior cultivation. About 280 acres are employed in tillage, and 71,600 are under pasture: about seventy acres are wood, considerable portions of which consist of ash and alder. There are a few good farms, but the tillage is principally confined to yearly tenants who hold from one to two acres of land, which is turned with the spade, and sown with barley or oats, or planted with potatoes: the manure used is sea-weed. The houses on the superior farms are convenient and substantial buildings: those inhabited by the small tenants, however, are of a mean description, built of common stones, without cement, and containing only one apartment, with partitions. Black-cattle, which used to form the whole live stock, have been gradually yielding since the be-

ginning of the present century to sheep. The breed of these, which has been much promoted, is the black-faced, or the Cheviot, with a cross of the two: the cattle are chiefly the native Highland, celebrated for their beauty and their hardiness, and a few Ayrshire cows are kept on some of the farms for their milk. In this parish the subsoil is a stiff and tenacious till, rendering draining difficult and expensive, and impeding the efforts of cultivation. The prevailing rock is gneiss, sometimes receiving a tinge of red from iron-ore; granite, also, is found in several parts, and there is abundance of limestone on the properties of Letterfearn and Glenshiel. The annual value of real property in the parish is £3014.

There is no village in the parish: fairs for the sale of black-cattle are held at Shielhouse at Whitsuntide, in July, and September. Communication between Glenshiel and Inverness is maintained by means of a parliamentary road that runs for eighteen miles through the parish. There is a good harbour, named Ob-inag, at the point where Loch Duich joins Loch Alsh; it is capable of sheltering the largest vessels. The bays, also, of Ardintoul and Craigan-roy, at the southern extremity of Loch Duich, afford secure anchorage. Ecclesiastically the parish is within the bounds of the presbytery of Lochcarron, synod of Glenelg, and the patronage is in the Crown: the minister's stipend is £158, with a manse, built in 1834, and a glebe of about twenty-four acres, valued at £16 per annum. The church was built in 1758, and is situated in the eastern part of Letterfearn; it was repaired, enlarged, and new-roofed in 1840, and accommodates 300 persons with sittings. There is a parochial school, in which Latin, Gaelic, and English are taught; the master has a salary of £28, and about £2 fees. The only relic of antiquity is a strong circular fort on the estate of Letterfearn, called a Picts' house. In the parish are some chalybeate springs; but they have not been used for medicinal purposes.

GLENTANNER, in the county of ABERDEEN.—See ABOYNE.

GOGAR, a hamlet, in the parish of CORSTORPHINE, county of EDINBURGH, 2 miles (W.) from Corstorphine; containing 32 inhabitants. The lands of Gogar anciently formed a parish, which merged after the Reformation into the adjoining parishes of Corstorphine, Kirkliston, and Ratho. This estate was given by King Robert Bruce to Alexander Seton, one of his companions in arms; and for a long series of years subsequently, it was a possession of successive influential families. The hamlet is in that division of the ancient parish incorporated with Corstorphine, and, though now very small and unimportant, is said to have been a considerable village, at one time numbering 300 inhabitants: the road from Corstorphine to Brocksburn passes through it, and the Gogar burn flows in its vicinity, on the south and west. A small portion of the church still exists; and there is a school, supported by subscription.

GOLSPIE, a parish, in the county of SUTHERLAND, 8 miles (N. N. E.) from the town of Dornoch; containing, with the village of Bachies, 1214 inhabitants, of whom 491 are in the village of Golspie. This place, anciently called Culmallie, and the present name of which is of doubtful etymology, formed part of the ample territories of the Thaness of Sutherland, of whom William was created Earl of Sutherland by Malcolm

Canmore in 1067. Robert or Robin, the second earl, in 1100 erected here the castle of Dunrobin, which has since that time been the residence of many of his successors, and is now a seat of his descendant, the Duke of Sutherland, who is proprietor of nearly the whole county. In 1746, a battle took place on the north side of the Little Ferry, between the militia of the county and a party of the adherents of the Pretender, in which the latter were defeated with great slaughter, and the Earl of Cromarty and several other men of rank were made prisoners. The PARISH, which is bounded on the south-east by the Moray Firth, and on the south-west by the Little Ferry inlet and the Fleet stream, which separate it from the parish of Dornoch, is about eight miles in length, and six miles in extreme breadth. Its surface, though generally level, is diversified with hills, of which those in the direction of the coast are Bein-a-Bhragidh, having an elevation of 1300 feet above the level of the sea, and Silver Rock and Morvich, which are of inferior height: in the interior are Bein-Horn, 1712, and Beinlundie, 1464 feet high. In the centre of the parish is the valley of Dunrobin, which is richly wooded, and abounds in picturesque scenery; and towards the coast, and between the bases of the hills, are some level tracts of fertile land. On the summit of Bein-a-Bhragidh, a monument was erected by his tenantry in 1836 to the memory of the late Duke of Sutherland, who died in 1833. The rivers in the parish are, the Fleet, forming part of its western boundary; and the Golspie burn, which intersects the eastern portion of it, flowing through the picturesque glen to which it gives name, into the Firth, at the village. There are several inland lakes, the principal of which are Horn, Lundie, Farralarie, and Salachie; but none of them are more than half a mile in length and about one-third of a mile in breadth. The coast is indented by some small bays, and by the Little Ferry (an inlet from the Firth), at the head of which, and across the Fleet, is a strong mound of earth, connecting the parish with that of Dornoch on the opposite shore. This mound, which was erected in 1815 at an expense of £9600, towards which the Duke contributed £1600, is nearly 1000 yards in length, sixty yards broad at the base, and twenty on the summit; and terminates at the north end in a bridge of four arches. It forms an excellent road, over which the mail passes.

Of the lands in the parish about 2040 acres are arable, 800 in woodland and plantations, and the remainder hill moorland and waste. The crops are, grain of all kinds, with potatoes, turnips, and vegetables; the soil is in general light, but of good quality and fertile, and in some parts a deep loam mixed with clay. The system of husbandry has been brought to great perfection: the cultivated lands have been drained, and inclosed chiefly with stone dykes; and the farm-houses are substantial and commodious. The cattle principally reared are of the Dunrobin breed, originally introduced from Argyllshire: on some farms, however, the Highland black breed is preferred; upon one farm, Kirkton, is a stock of the black-poll'd Galloway, and on the dairy-farms the cows are chiefly the Ayrshire. The sheep, to the improvement of which great attention is paid, are of the Cheviot breed, and obtain a decided preference in the markets. A few horses, chiefly for agriculture, are also reared. The annual value of real property in the parish is £8959. The plantations have been greatly extended; and among

the trees most prevalent in the Highlands, large numbers of forest-trees of every kind have been recently introduced with success. There are two quarries of red sandstone and one of white sandstone: the stone varies much in texture, some veins being much more durable than others, and better adapted for building, for which the stone is extensively quarried. Indications of coal have also been observed in the parish. Dunrobin Castle, occasionally the residence of the Duke of Sutherland, is a spacious massive structure, situated on the summit of a rock rising from the sea: it occupies a quadrangular area, inclosed by walls of great thickness, and flanked at the angles by circular towers with conical roofs; and is surrounded with strikingly romantic scenery. The village of Golspie, which is pleasantly seated on the coast, is neatly built, and contains an excellent inn, a post-office which has a daily delivery, a branch bank, and various shops. Some of the inhabitants are employed in the usual handicraft trades, and there are some fishermen, with many agricultural labourers. A fair for cattle and for pedlery is held near the village in October. At Dunrobin is a pier for the use of small vessels. Great facilities are afforded by the Little Ferry, which in one part forms a secure harbour, and is frequented by vessels importing coal, lime, bone-dust, and various kinds of merchandise for the supply of the district, and returning with cargoes of grain, wool, and whisky. A smack plies regularly once a month between the Little Ferry and Leith, touching at Helmsdale and Aberdeen; and there is also a steamer from the Moray Firth to the south, which calls here. An act of parliament was passed in 1848 for constructing a harbour at Leck Robie, and for maintaining the harbour of Little Ferry, both in the county of Sutherland.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Dornoch, synod of Sutherland and Caithness. The minister's stipend is £204, with a manse, and a glebe valued at £6 per annum; patron, the Duke of Sutherland. Golspie church, erected in 1738 and enlarged in 1751, is a neat structure, situated in the village, close to the sea-shore, and containing 565 sittings. The parochial school is well attended; the master has a salary of £34, with a house and garden, and the fees average about £26 per annum. There are some remains of two Pictish castles, one at a short distance to the east, and the other to the west, of Dunrobin Castle: in the western ruin, the central circle and the gallery between it and the outer walls are still distinctly apparent. Near Morvich are some Druidical remains. A portion of the ancient church is yet standing, as well as part of the wall that inclosed the cemetery in which many of the Earls of Sutherland were interred: near these ruins have been found several brass rings and other relics, which are preserved in Dunrobin Castle.

GOMETRAY ISLE, in the parish of KILNINIAN, county of ARGYLL. It is a small basaltic island of the Hebrides, lying between the isles of Mull and Staffa, and separated from Ulva by so narrow a sound that, from most points of view, they appear as if one island. There is a harbour on the north, and another on the south side, both of which are safe and tolerably commodious. The inhabitants rear cattle and horses, and manufacture kelp.

GONochan, a hamlet, in the parish of FINTRY, county of STIRLING, $\frac{1}{2}$ a mile (E. by S.) from Fintry, containing 44 inhabitants. It is situated on a burn of

the same name, and on the high road from Fintry to Campsie: the burn is a tributary to the river Endrick, and both have their source in the parish. In the hamlet is the parochial school, with the dwelling of the master, the latter a neat building erected by himself.

GORBALS, a parish, in the suburbs of the city of GLASGOW, chiefly in the county of LANARK, but partly in the Upper ward of the county of RENFREW; containing 48,275 inhabitants, of whom 10,200 form the population of the civil parish of Gorbals, or Gorbals proper, and the remainder are included in that of the civil parish of Govan; the whole number of 48,275 being regarded as ecclesiastically in the parish of Gorbals. This place, originally called Bridgend, from its situation at the extremity of a bridge over the Clyde connecting it with Glasgow, was anciently part of the parish of Govan, from which it was separated in 1771. At that time it comprised only about fourteen acres, but there were subsequently added the lands of Rea, Little Govan, and the Prebend of Polmadie, containing about 600 acres, and also that part of Govan called the Barony, a tract of 400 acres, belonging to the corporation of Glasgow, the patrons of Hutcheson's Hospital, and the Trades' House. The whole of the rural district is arable land, with a small proportion of meadow and pasture; the soil is rich, and the moors have been brought into profitable cultivation. The crops are wheat, oats, potatoes, and turnips; abundance of manure is obtained from the city and suburbs, and every recent improvement in agriculture has been adopted. The population is partly agricultural, but chiefly employed in the various manufactures of Glasgow. Gorbals, with the adjacent lands, was formed into a burgh of barony and regality at a very early period, and in 1607 was bestowed by the Archbishop of Glasgow upon Sir George Elphinstone, who in 1611 obtained from James VI. a charter confirming the grant. In 1647 his successor conveyed it to the magistrates and town council of Glasgow, who are still superiors of the burgh and barony, the former of which includes the old parish of Gorbals and part of the parish of Govan, and the latter comprises the districts of Hutchesontown, Laurieston, Tradeston, and Kingston, which are described under their respective heads. An act was passed in 1846 for better supplying with water the barony or regality of Gorbals, and places adjacent.

The burgh is governed by four bailies, annually appointed by the inhabitants, and two of whom may be continued in office for a second year. Their jurisdiction is exercised chiefly in matters of police, in which they are assisted by commissioners under the police statute; they have no corporate rights or exclusive privileges. The police buildings comprise a spacious hall and courthouse. A court for the trial of civil causes not exceeding thirty shillings, in which the process is either ordinary or summary, and a court for the recovery of debts not above forty shillings, are held before the bailies occasionally, the town-clerks of Glasgow acting as assessors. Both the burgh and barony are within the parliamentary boundary of the city; the number of £10 householders is 1635. The annual value of real property in the parish is £150,202. Gorbals is ecclesiastically in the presbytery of Glasgow, synod of Glasgow and Ayr, and in the patronage of the heritors and the kirk session: the stipend is £250; there is neither manse nor glebe, in lieu of which the minister has an allowance of £25 per

annum. The church erected in 1771 was subsequently purchased for the district of Kirkfield, and a larger and more commodious edifice built for this parish in 1813, at an expense of £7350; it is a handsome structure, and contains 1460 sittings. There are places of worship for members of the Free Church, the United Presbyterian Church, and Wesleyans. A school, in which are about 140 children, is supported by the kirk session, who pay the master a salary of £50, for the gratuitous instruction of the children of the parish. There is also a school for girls, established in 1833, under a bequest of £2000 by Mrs. Waddell of Stonefield: the patronage is vested in the magistrates, and the minister and elders of the kirk session of Gorbals, with preference to children of the name of Macfarlane; the mistress has a salary of £20, with a house, coal, and candles.

GORDON, a parish, in the county of BERWICK, $8\frac{1}{2}$ miles (N. W.) from Kelso; containing 903 inhabitants. The name of this place is derived from the Gaelic word *Goirtean*, signifying "a little farm or field", probably in reference to a particular tract appropriated to the growth of corn, or under some kind of superior cultivation. The territory of Gordon, which was of great extent, is said to have been granted in the reign of Malcolm Canmore, or in that of David I., to an Anglo-Norman settler who assumed from it the surname of Gordon. One of his descendants, Sir Adam Gordon, who was killed at the battle of Halidon-hill in 1333, changed his residence to the shire of Aberdeen, in consequence of obtaining considerable possessions in the north; but the family derived the title of duke from this district until the year 1836, when the dignity became extinct. A small distance to the north of the village of West Gordon, an eminence still called the Castle is pointed out, as the spot on which the ancestors of the dukes had their seat: it is now entirely covered with plantations, and nothing remains but the vestiges of a moat or ditch. The Marquess of Huntly derives his title from a small hamlet named Huntly, near Huntly-wood, the site of which is now indicated only by a single tree. On the death of the last Duke of Gordon in 1836, his inferior title of Marquess of Huntly passed to his kinsman, the fifth Earl of Aboyne.

In ancient times the parish was of much greater extent than at present. Part of it, called Durrington-Laws, has been annexed to Longformacus, twelve miles distant; and another portion, called Spottiswoode, was united, with the parish of Bassendean, to the lands of Westruther, about 1647, in order to form the modern parish of the latter name. Religious foundations were established here at a very early period: at Huntly-wood was a chapel dedicated to the Virgin Mary, the advowson of which came into the family of Home in the reign of James IV. There was also a chapel, called White-Chapel, at the hamlet of Spottiswoode, the ruins of which but recently disappeared; it was built by John de Spottiswoode, during the reign of David II. Gordon parish church was formerly an appendage to that of Home; the monks of Kelso obtained the patronage about the year 1171, and held it in their possession till the time of the Reformation.

The PARISH lies in the western portion of the Merse, and is of oval figure, measuring about seven miles long, varying in breadth from two to four miles, and containing 8900 acres. It is bounded on the north by part of

Legerwood, by Westruther, and part of Greenlaw; on the south by Hume, now joined to the parish of Stitchell, and by Earlstoun; on the east by Greenlaw; and on the west by the parish of Legerwood. The site of the parish is elevated, and the surface uneven and hilly, though there are no mountains. The small river Eden runs through the whole extent, from north to south, dividing it into two nearly equal parts; and the north-eastern boundary is for about two miles and a half formed by the Blackadder, which separates it from Greenlaw. In general the soil is light and sandy, but in some places it approximates to clay: there are several extensive tracts of moor and moss. About 500 acres are planted with fir, beech, oak, and elm, the first of which greatly predominates; 4296 acres are cultivated, or occasionally in tillage, and 4100 are constantly waste, or in pasture. Grain of all kinds is raised, and good crops of turnips and potatoes are also produced, as well as of hay. The best system of husbandry is followed, and the rotation is the five years' change; the farm-buildings are usually substantial and convenient, and all the arable land is inclosed with stone dykes and thorn hedges. Much waste has been reclaimed and cultivated; and draining has been carried on to a considerable extent. The prevailing rock is whinstone, which lies scattered over the surface of the uncultivated moors in blocks of from a few pounds to two tons in weight: in some parts are small beds of red sandstone, but it is so friable as to be almost useless. The annual value of real property in the parish is £5495.

The only village is West Gordon, containing about 300 inhabitants. The road leading from Kelso to Edinburgh crosses the parish at the widest part, and another road, from Earlstoun to Greenlaw, runs through its whole length; these, together with the numerous parish roads, are kept in good order. Ecclesiastically Gordon is within the bounds of the presbytery of Lauder, synod of Merse and Teviotdale, and the patronage is in the Crown: the stipend of the minister is £164, with a manse, built in 1803, and a glebe of twelve acres of arable land, valued at £30 per annum. The church, built in 1736, and repaired in 1834, is conveniently placed in the centre of the parish; it contains 400 sittings. There is a parochial school, in which Latin, mathematics, and all the usual branches of education are taught; the master has the maximum salary, with a house and garden, and about £21 fees. A parochial library was established about the year 1823, and has been of great service. No important relics of antiquity remain in the parish; but there are two farms called Rumbleton and Rumbleton-Law, names which are said to be corruptions of the terms Roman-Town and Roman-Town-Law. At the latter of these places were recently appearances of extensive fortifications on a *law* or *hill*, which have been ploughed up, and inclosed; they are supposed to have been Roman works. At Huntly, also, are the remains of some walls that appear to have been part of a fortified place.

GORDONSTOWN, a village, in the parish of AUCHTERLESS, district of TURRIFF, county of ABERDEEN, 7 miles (S.) from Turriff; containing 98 inhabitants. It lies in the eastern part of the parish, a short distance east of the Ythan river; and is a small straggling village.

GOREBRIDGE, a village, in the parish of TEMPLE, county of EDINBURGH, 3 miles (N. E.) from Temple;

containing 240 inhabitants. It is situated in a detached portion of the parish between the parishes of Borthwick and Newbattle, and derives its name from a bridge over the Gore burn, a tributary to the South Esk. A considerable increase in its population has latterly taken place, caused by the establishment of the manufacture of gunpowder, mills for which were built at Stobhill, in the vicinity of the village, in the year 1794, these being the first mills of the kind erected in Scotland. The Hawick line of railway passes by Gorebridge, where it has a station, twelve miles distant from the Edinburgh terminus. The inhabitants generally attend the church at Borthwick, which is somewhat nearer than that of Temple. There is a place of worship in the village in connexion with the United Presbyterian Synod. Two schools are held, and here is a good subscription library of about 800 volumes.

GOURDON, a village, in the parish of BERVIE, county of KINCARDINE, $1\frac{1}{2}$ mile (S. by W.) from Bervie; containing 390 inhabitants. This is a fishing-village on the eastern coast, having a small harbour, which, however, is neither convenient nor safe, being difficult of entrance, and much exposed to the violence of the south and east winds. Seven boats belonging to the place, each manned, commonly, by six or seven men, are generally engaged in the cod and haddock fishery; and about ten larger boats, manned each by five men, are employed in the herring-fishery for two months in the year. Here are large and commodious granaries, from which upwards of 30,000 quarters of grain are annually shipped at the port, which is subsidiary to that of Montrose. There are also convenient sheds for coal, lime, and other articles. The eminence called Gourdon Hill is seen by mariners at a great distance out at sea.

GOUROCK, for a time an ecclesiastical district, in the parish of INNERKIP, Lower ward of the county of RENFREW, 2 miles (W. N. W.) from Greenock; containing 2448 inhabitants, of whom 2169 are in the village. This district, which was formed for ecclesiastical purposes under act of the General Assembly, is situated on the Firth of Clyde, by which it is bounded on the north; and is about three miles and a half in length and three miles in breadth. Near the shore of the bay of Gourock the surface is tolerably level; but the ground rises thence gradually towards the south and east, and the higher parts command pleasing views over the Firth, and of the adjacent country, in some directions richly cultivated, and in others boldly romantic. The soil is of moderate fertility; in several places light and sandy, and in others of better quality. The total number of acres is not precisely known; about 2000 are arable, 2500 uncultivated moor, of which nearly one-half might be rendered profitable, 200 undivided common, and about thirty acres woodland and plantations. Considerable improvements have been made in the system of husbandry, furrow-draining has been extensively practised, and the crops are generally favourable and abundant. The scenery is enlivened with some agreeable seats and villas. Gourock House is a handsome mansion, erected on the site of an ancient castle, the remains of which were taken down in 1747; it is beautifully situated, and the grounds are tastefully laid out, and embellished with flourishing plantations. Several headlands mark this part of the coast, of which Ironotter Point on the eastern, and Kempock Point on the western

shore of the bay, are the principal; the bay has depth of water sufficient to render it accessible to vessels of the largest class, and a small pier has been constructed for the landing of goods.

The village of Gourock, situated on the bay, is said to have been the first place in Scotland where the curing of herrings was practised, it having been introduced in 1688, by Walter Gibson, provost of Glasgow, who built salt-pans for the purpose; but that trade has long been discontinued, and the inhabitants, though during the season employed in the herring-fishery, are now chiefly engaged in the fishery off the coast. The fish taken are cod, ling, haddock, and whiting, with some few salmon and trout, the proceeds of all which are estimated at £300 per annum. There are two sloops, and several smaller boats, belonging to the fishermen of the place. The beach affords great facilities for bathing; and numerous families from Glasgow and Paisley consequently frequent the village in summer, for whose accommodation there are several handsome houses. The manufacture of ropes is carried on extensively by a company, who employ about thirty-five persons; the quantity of cordage averages 180 tons annually, and the proceeds amount to more than £7500. Gourock church was built in 1832, at an expense of £2286, of which sum £1731 were raised by subscription, and £535 given by General Darroch, who also presented the site; it is a handsome structure, containing 947 sittings. The minister's stipend is £120, paid from the seat-rents and by General Darroch: patrons, the Congregation. The members of the Free Church have also a place of worship. Connected with the church is a parochial library of nearly 600 volumes, but altogether in disuse. A parochial school is supported by the chief landed proprietors; the master has a salary of £20, but no dwelling-house, and the fees average £30.

GOVAN, a parish, which, regarded ecclesiastically, is wholly in the Lower ward of the county of LANARK, and Upper ward of the county of RENFREW; including the village of Strathbungo, and the former quoad sacra district of Partick; and containing 7810 inhabitants, of whom 2474 are in the village of Govan, 2 miles (N. W.) from Glasgow. The name of this parish is generally supposed to have been derived from the two Saxon words *god* and *win*, "good wine", applied on account of the superior ale for which the place was celebrated, and which, after being kept for several years, approached in flavour to wine. Some, however, derive it from the Gaelic word *gamham*, pronounced *gavan*, and signifying "a ditch", used in reference to the river Clyde, which runs through the parish, and which in ancient times was a very narrow stream. The most remote historical information relating to Govan is connected with the removal of Constantine, King of Cornwall, into Scotland. That prince is said to have come from Ireland, after resigning his crown, among the followers of St. Columba, in the year 565, and to have founded a monastery here, of which he became the first abbot. He is supposed to have been martyred by the inhabitants of Cantyre, who thus resisted his attempts to convert them to Christianity, and afterwards to have been buried in his own monastery. Many of the estates of the parish were, in early times, successively made over as gifts to the Church. David I. gave the lands of Govan to the church of St. Kentigern, otherwise called St. Mungo, at Glasgow; and

in 1136, when present at the consecration of the cathedral of that city, he bestowed a part of the estate of Partick, and subsequently another portion of the same lands, on the see. These grants, with many others, were confirmed by the bulls of several popes; and Bishop John, who filled the episcopal chair for thirty-two years, made Govan a prebend of Glasgow, the emoluments of which were increased by Herbert, Chancellor of Scotland, who presided as Bishop of Glasgow till 1164. The lands were consequently long held by tenants under the bishops and archbishops; but at the Reformation, Walter, commendator of Blantyre, was commissioned to feu the estates, that the tenants, becoming heritable possessors of their several properties, might be encouraged to improve them to the utmost. In 1595, the landholders united in procuring a charter from James VI. to confirm this privilege; and from that time the crown became lessor. Afterwards, the college of Glasgow obtained leases of the lands from the crown, and continued to hold them for upwards of a century, to the year 1825, when, in lieu of the leases, a grant was made to the establishment of an annuity of £800, for fourteen years, by George IV. The heritors still pay feu-duties to the crown, as coming in place of the archbishops. But the parish is not remarkable solely on account of its ecclesiastical history: as containing the Muir of Govan, it was in ancient times the scene of several important political and military transactions. In 1559, the lords who had confederated together in defence of the Protestant religion, after the treaty between the queen regent and the Protestants, at Leith, on July 24th, suspecting her integrity, resolved to have a meeting with "their kin and friends, upon Govan Muir, beside Glasgow", for the purpose of providing for exigencies. This meeting, however, the queen regent, by the exercise of no common address, contrived successfully to prevent. The moor is famed for the defeat of Queen Mary's army after her escape from Lochleven Castle.

The PARISH is about five miles long, and from two to three miles broad. The lands of Haggs, Titwood, and Shields belong to the county of Renfrew: the remainder of Govan is bounded on the north by the parishes of New Kilpatrick, Barony, and Glasgow; on the south by Cathcart, Eastwood, and the Abbey parish of Paisley; on the east by Barony, Gorbals, and Rutherglen; and on the west by Renfrew parish. The surface is diversified by gentle undulations and acclivities, the extensive and fertile plain in the centre of the parish being succeeded on each side by gradually rising grounds; the fields are defined by well-grown hedges, and the river Clyde, and the numerous beautiful villas in different directions, contribute to form an assemblage of very agreeable and interesting scenery. The Clyde, after being joined by the river Kelvin, runs through the centre of the parish, and though not many years ago it was a shallow stream, it is now a channel for ships of 700 tons' burthen, conveying stores from every part of the world into the harbour of Glasgow. In general the SOIL is of good quality, and produces fine crops of grain, as well as of the best potatoes and turnips. The five years' rotation is followed; and the ground is largely supplied with manure from Glasgow, to which it is chiefly indebted for its fertility: wheat and oats are the chief grain, and are grown in considerable quantities. Many improvements have been made, in former as well as more recent

times, in the agricultural character of the district; and the celebrated moor, depicted in song as "the carpet of purple heath", now consists of a number of well-inclosed fields, bearing, year after year, as luxuriant crops as are any where to be met with. Similar changes have been effected in other parts, especially about Moss House and Heathery Hall. At White-Inch, the low ground along the north side of the Clyde has been lately enriched, and elevated about ten feet, by soil obtained from the deepening and widening of the river, in consequence of which the worth of the land has been nearly doubled. The annual value of real property in Govan is £30,070.

The SUBTERRANEAN contents of the parish are chiefly coal, with the strata peculiar to that formation. Several pits are regularly worked, in one of which, at Bellahouston, on the south of the river, a portion of the layers consists of parrot or cannel coal, which sells at a high price for the purpose of being converted into gas. At Jordanhill and Cartnaveil, about fifty fathoms beneath the surface, are sixteen beds of coal, some of them two feet thick, and part being, like the parrot coal, of the finest quality for the gas manufacture. Above the gas-coal, as well as at a lower depth, are numerous seams of ironstone, which vary in thickness from five to twelve inches, and are of excellent quality. The collieries of Govan, forming part of the well-known Glasgow coal-fields, have been long wrought; and it is supposed that, beneath the seven principal seams now open, lie others, which will afford a plentiful supply if at any time those at present being worked should be exhausted. The surface just above the coal is in general composed of diluvial matter, containing rolled stones, over which are deposits of sand, fine clay, and marine shells. The roots of a number of fossil trees were discovered a few years ago at Balgray, standing close to each other in their natural position: two feet only of the trunks were found attached to the roots.

The population of the parish, which has very considerably increased of late years, from the growing prosperity of Glasgow, is largely employed in the cotton and iron manufactures, and a great number in mines and quarries. In the village of Govan are 340 hand-loom weavers; a dye-work employs 118 hands; and at a small distance from the village is a factory for throwing silk, erected in 1824, and which affords occupation to about 250 persons. Near Port-Eglington is a carpet manufactory, established several years ago, in which 554 persons are engaged; and various large concerns are actively carried on in different parts, occupied in the cotton manufacture. In the neighbourhood of the collieries are iron-works, containing several blast-furnaces, which produce many hundred tons of pig-iron annually; and near these is a bar-iron manufactory belonging to the same proprietor, producing upwards of 400 tons weekly. Ship-building is carried on. There is a fishery for salmon on the Clyde, the rent of which was formerly £326; but it has fallen since 1812 to £60 per annum, in consequence, among other causes, of the erection of the numerous manufactories on the banks of the river. In the villages of Govan and Partick are post-offices, which communicate with Glasgow twice a day. Four great roads pass through the parish, one of which runs from Glasgow to Paisley; another leads to Kilmarnock and Ayr, a third to Port-Glasgow and Greenock through Renfrew, and the fourth to the West

Highlands by the town of Dumbarton. The Glasgow and Johnstone canal also intersects the parish, and a branch of the Forth and Clyde canal touches its northern boundary. A boat, capable of conveying horses and carriages, plies upon the ferry that connects the two parts of the parish at the village of Govan: steam-boats, also, land and take in passengers here. The Pollock and Govan railway joins the mineral fields on the south-east of Glasgow with the city and the harbour, and the Greenock and Ayr railroad runs for about three miles through the parish of Govan.

For ECCLESIASTICAL purposes Govan is within the bounds of the presbytery of Glasgow, synod of Glasgow and Ayr. At the time of the Reformation, the temporal immunities of the church came into the possession of the college of Glasgow. The Regent Morton had offered the benefice to his uncle, Andrew Melville, principal of the college, on condition that he would not press his views of ecclesiastical polity; but this compromise being refused by Melville, the regent conveyed the temporalities to the college, devolving upon the principal the obligation of serving the cure; and since that time the university has held the patronage. The stipend of the minister is £315, with a good manse, standing near the church, and a glebe of seven acres, valued at £25 per annum. Govan church, situated at the west end of the village, and about 100 yards from the river Clyde, was built in 1826, and is a plain structure containing 1096 sittings: the design of the tower and spire was taken from the church of Stratford-upon-Avon, in England. The churchyard is raised several feet above the level of the adjacent ground, and is surrounded by a double row of venerable elms. There are places of worship belonging to the Free Church, the United Presbyterian Church, and Roman Catholics. The parochial school is situated in the village of Govan; the master receives the maximum salary, with £1. 13. 4. from Glasgow college, £1. 19. accruing from an ancient bequest by George Hutcheson of Lambhill, one of the founders of Hutcheson's Hospital, and £36 arising from a sum of £200 left by Mr. Abraham Hill in 1757. Mr. Hill was educated in the school as a poor orphan, and his gift was invested in ten acres of land, now producing the above sum, for which ten children are taught gratuitously. The master has also £18 fees, a good house, and an allowance in lieu of a garden. An infants' school was instituted at Partick, in 1837, on a very extensive scale; and other schools are supported in different parts of the parish. There is a good parochial library, under the management of the trustees of Mrs. Thom, its founder, and containing above 600 volumes; also a savings' bank, and several friendly societies. As already observed, the parish of Govan, ecclesiastically, is situated entirely in the Lower ward of Lanarkshire, and Upper ward of Renfrewshire, and contains only 7810 inhabitants. In a civil point of view, it is more extensive, and includes part of the suburbs of the city of Glasgow; thus regarded, it includes a suburban district attached *quoad sacra* to the parish of Gorbals, and altogether contains a population of more than 45,000.

The ruins of the once celebrated *Hospital of Polmadie* were, at the close of the last century, among the most interesting antiquities in the neighbourhood of Glasgow. This hospital was built at a very remote period, for the reception of persons of both sexes to be maintained for

life; and was dedicated to St. John. The church and temporalities of Strathblane were early annexed to it, with part of the lands of Little Govan; and these possessions, with many important privileges, were confirmed to the establishment by Alexander III., Robert Bruce, and several others. In the year 1427, Bishop Cameron, with the consent of the chapter, erected the hospital, and the church of Strathblane, into a prebend, with a provision that the person collated to the office should support a vicar in the parish of Strathblane, and pay four choristers to sing in the cathedral. *St. Ninian's Hospital*, founded by Lady Lochow, in the fourteenth century, for the reception of persons afflicted with leprosy, occupied a piece of ground called St. Ninian's croft, where part of Hutchesontown (ecclesiastically in the parish of Gorbals) at present stands; and close to its site a number of human bones were not long since found, pointing out the locality as is supposed of the lepers' churchyard. On the south of the Clyde, opposite the ferry-house, is an ancient circular hill, thought to have been the sepulchre of some celebrated hero; and in another part of the parish is the picturesque ruin of *Hagg's Castle*, built in 1585, by an ancestor of Sir John Maxwell of Pollock.—See GORBALS, HUTCHESONTOWN, &c.

GOWAN-BANK, a hamlet, in the parish of ST. VIGEAN'S, county of FORFAR; with 72 inhabitants.

GOWKHALL, a village, in the parish of CARNOCK, district of DUNFERMLINE, county of FIFE, 1 mile (E.) from Carnock; containing 196 inhabitants. It is situated in the eastern part of the parish, a short distance north of the high road from Dunfermline to Carnock; and is one of three villages the population of which is chiefly engaged in manufactures.

GOWKSHILL, a village, in the parish of COCKPEN, county of EDINBURGH; containing 219 inhabitants.

GRÆMSAY ISLE, in the parish of HOY, county of ORKNEY; containing 214 inhabitants. It is one of the Orkney group, and lies about a mile and a half south from Stromness; in length it is nearly two miles, and in breadth one. The whole of the island is level, and the lands are either cultivated for the production of grain, or suffered to remain in old grass for the pasturage of sheep and cattle. Through almost its entire extent runs a bed of schistus, or slate, used for the covering of houses. The inhabitants excel in fishing. The principal disadvantage under which they labour is the scarcity of fuel. Græmsay was formerly a vicarage, but is now united to Hoy, *which see*.

GRAHAMSTON, a village, in the parish of FALKIRK, county of STIRLING, 1 mile (N.) from Falkirk. This village derives its name from Sir John the Graham, who was killed here in the battle which Wallace fought with Edward I. in 1298. It forms part of the suburbs of Falkirk, and is included within the burgh, and situated on the south bank of the Forth and Clyde canal, over which is a drawbridge connecting it with Bainsford. The houses are handsomely built, chiefly of stone, and of modern appearance. There are numerous shops, stored with various kinds of merchandise; and the labouring portion of the inhabitants are chiefly employed in the Falkirk iron-works, and in those of the Carron Company. From its situation on the canal, the place carries on a considerable trade in timber and in grain; and numerous vessels arrive here with dried fish for the

market of Falkirk, where it finds a ready sale. A post-office, subordinate to that of Falkirk, has been established; and there are several schools in the village.

GRAHAMSTOWN, a manufacturing village, in the parish of NEILSTON, Upper ward of the county of RENFREW, 3 miles distant (S. S. E.) from the town of Paisley; containing 706 inhabitants. This village is indebted for its origin to the introduction of the cotton manufacture into the district about the year 1790, and to the erection of an extensive spinning-mill in 1801, by Mr. Graham, from whom the village takes its name. It is neatly built, and principally inhabited by persons employed in the cotton-works.

GRAITNEY, or GRETNA, a parish, in the county of DUMFRIES, $9\frac{1}{2}$ miles (N. by W.) from Carlisle, and 309 (N. W. by N.) from London; containing 1761 inhabitants. The derivation of the name is doubtful; but it is usually traced to the words *Great knowe*, descriptive of a hill standing at the distance of about a quarter of a mile from the church. This district is chiefly memorable for the many bloody feuds of which it was formerly the scene as part of the frontier land of Scotland, and the celebration of which in tales and songs has scarcely at this time altogether passed away. The parish is skirted on the east by the river Sark; and the lands lying between that river and the Esk, now forming the English parish of Kirkandrews, were for many ages debateable ground, being common to both England and Scotland. These lands extended eight miles in length and four in breadth, and were long held by a kind of lawless banditti, whose chief employment was rapine and smuggling. In the year 1552, a line of demarcation was agreed upon by the sovereigns of the respective kingdoms; but notwithstanding this, the habits of the people continued nearly the same until the union of the crowns under James VI., from which time the state of the population gradually improved.

The PARISH is six miles in length and three in breadth, and contains about 11,000 acres. It is bounded on the north by the parishes of Kirkpatrick-Fleming and Halfmorton; on the south by the Solway Firth; on the east by the county of Cumberland; and on the west by the parish of Dornock. The surface is generally level towards the south and west; but towards the east and north it is diversified by many gentle acclivities, of which Graitney, the highest, rises about 250 feet above the sea. From this eminence is obtained a beautiful and extensive view of the valleys of the Esk and the Eden, the Solway Firth, and the coast of Cumberland with St. Bees, in a southern direction, and also of the mountains of Dumfriesshire and Northumberland. The eastern portion of the parish, from the number of its hedge-rows, has the appearance of being well wooded; and the lands in this quarter are thickly interspersed with ash, oak, and plane trees. These, with the laburnum, give a pleasing variety to the scenery, and by their fine and luxuriant growth indicate the fostering power of a congenial soil. The whole southern boundary of the parish is formed by the Solway, whose flat shore consists of sand and clay. The only part of the coast approximating to the character of a bay is the curve between Redkirk and Tordoff points, the latter of which is about two miles from Bowness on the opposite shore. The Firth is between four and five miles across in the widest part, and is navigable as far as Sarkfoot,

in this parish, for vessels of 120 tons' burthen. In this estuary the tide flows with amazing rapidity, and rises, at its spring, twenty feet above the low-water mark; when it recedes, the streams of the rivers Esk and Eden, which run into the Solway from Dumfriesshire and Cumberland, are seen with a wide bed of intermediate sand, and the Firth appears like a sandy waste, for a distance of forty miles, to the south-western extremity of Dumfriesshire, where the river Nith joins it. There are several landing-places along the shore of the parish, but the navigation of the Firth is dangerous to those not acquainted with the soundings. The Kirtle stream divides the parish into two nearly equal portions. There are excellent salmon-fisheries on the coast, and sturgeon, cod, and herrings are occasionally caught: salmon ascend the rivers for spawning, in the beginning of October, and return early in March.

Near the sea the soil is a rich loam, with a subsoil of deep strong clay, and has the appearance of having been transported hither by the tides, which formerly came much higher up than at present. Further inland, the earth partakes more of the nature of clay and gravel, resting upon large hills of sand. Portions of peat-moss are to be seen in different places, in which the remains of oak-trees are embedded; and in some of them silver coins have been discovered, without a date, but bearing the scarcely legible marks of *Canterbury* and *London*. About 10,000 acres are cultivated, or occasionally in tillage; 300 acres have never been cultivated, and sixty are planted with wood. All kinds of green crops and of grain are produced, oats being the chief crop of the latter; and considerable numbers of every sort of live stock are kept. The most improved system of husbandry is followed: the manure in use comprises dung, guano, and lime, the last brought from several of the neighbouring parishes. The farms have been considerably enlarged, and the superior method of cultivation which has been pursued has nearly tripled the worth of the land since the year 1790, the annual value of real property in the parish now amounting to £6069. The prevailing rock is sandstone, through which many excellent springs of water find a passage.

Among the villages in the parish is that of Gretna, where a weekly cattle-market was formerly held, and which was a burgh of barony; the market-cross was standing till within these few years. The ancient mansion of Graitney Hall, in which one of the landowners once resided, has been fitted up in an elegant and commodious manner as an inn, where every accommodation may be had as at the best inns in England. The population are partly engaged in agriculture: about 600 persons are cotton-weavers, employed by Carlisle houses, and who receive the yarn regularly every fortnight. Vessels of 100 tons arrive at various places along the shore from the ports of Cumberland, bringing coal to the amount of 600 tons yearly, together with about an equal quantity of slate. Grain and potatoes are largely exported to Liverpool and other places on the coast of Lancashire. Till the commencement of the present century, an extensive contraband trade was carried on with the Isle of Man; but this traffic, with all its injurious consequences, has been abolished. The turnpike-roads between Glasgow and Carlisle, and between Carlisle and Portpatrick, run through the parish; and the old road to Carlisle crosses the Glasgow road at the village of Gretna, where

is a post-office, connected with that of Carlisle. There are two bridges over the Sark, and one over the Kirtle. Great facility of intercourse is also afforded by the Caledonian railway, which passes through the parish, and crosses the river Sark into England by a fine bridge of two arches. This railway is joined at Springfield, in the parish, by the Glasgow, Dumfries, and Carlisle railway. A cattle-market is held in June, and fairs on the 15th of September, the first Thursday after Falkirk tryst in October, and on the second Thursday in November.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Annan, synod of Dumfries; patron, the Earl of Mansfield. The stipend of the minister is £237: the manse has lately been enlarged and repaired, and is now a comfortable residence; the glebe consists of about sixteen acres, valued at £28 per annum. Graitney church was built in 1790, and is a commodious building capable of containing 800 persons. There is a meeting-house at the village of Rigg, belonging to the United Presbyterian Church. Two parochial schools are supported, in which the usual branches of education are taught, and the masters of which have each £25 a year, with fees amounting to about £24 and £20 respectively. A friendly society was instituted more than fifty years ago. There are the ruins of several square towers in the parish, the relics of ancient times, raised for the defence of the inhabitants against the English borderers; the walls were of great thickness, the doors of massive iron, and within were caves for the safe custody of cattle, &c. Redkirk was formerly a separate parish; but its church, situated at Redkirk point, was entirely swept away by the repeated encroachment of the tide. The remains of a Druidical temple are still visible on the farm of Old Graitney, and there are the remains of several old camps in the neighbourhood. This being the nearest and most easily accessible point in Scotland from the sister kingdom, it has long been a place for fugitive marriages, first celebrated here by a man named Paisley, a tobacconist, whose original residence was on a green between Gretna and Springfield, to the latter of which villages he removed in 1782. It is said that between 300 and 400 marriages used at one time to be annually celebrated in the neighbourhood by rival "priests", for the most part functionaries of the lowest class, who accosted parties as they passed, and officiated for a very small charge. An attempt was made in the General Assembly, in 1826, to suppress this description of marriage, but without success. Paisley died at a great age, in 1814.

GRANGE, a parish, in the county of BANFF, 3 miles (E. by N.) from Keith; containing 1661 inhabitants. This place originally formed a part of the parish of Keith, from which it was separated in the year 1618. It took its name from the circumstance of its being a country residence belonging to the abbots of Kinloss, to whom it was given by William the Lion in the twelfth century. Attracted by the beauty of the place, at that time mostly under wood, the abbots had a castle here, situated upon an eminence partly natural and partly artificial, and overlooking rich and extensive haughs, enlivened and refreshed for several miles by the meanderings of the picturesque Isla. In the neighbourhood is the Gallow-hill, the spot upon which criminals were executed within the local jurisdiction. At the time of the Reformation, the abbot, anticipating the change about to take place, feued out the district into many

small properties, of which that of Edingight still belongs to the descendant of the original feuar, and about four-fifths of the others to Lord Fife, who inherits from his ancestor, Alexander Duff of Braco, another of the first feuars. The remaining portion is in the possession of the Earl of Seafield.

The PARISH is six miles in length and five in breadth, and comprises about 20,000 acres, of which a large portion is under cultivation: there are extensive plantations of young wood. The surface is much diversified, and consists of both high and low ground, the latter comprehending most of the cultivated parts. On the east is the Knock, an eminence rising 1600 feet above the level of the sea, and which, though cultivated to a considerable height, is chiefly covered with deep peat and heather, the moss extending at the summit to a depth of eight or ten feet. A very fine and extensive view may be obtained from it. In the dry summer of 1826, its sides were surrounded by a conflagration, destroying the combustible portion of the surface; but it has not been ascertained in what way the fire originated. There are also several lofty hills in the northern part of the parish: in the southern division are two called the Mickle and Little Balloch, ornamented around their base with wood; and in the centre is the Sillyearn, where there is a large and thriving plantation. The scenery is much indebted for its variety to its sylvan beauties, and to the course of the interesting stream of the Isla, on the south of which a wide belt of larch and Scotch fir, of recent growth, especially improves the prospect. The Isla is rendered still more striking in pictorial effect by an ancient bridge, erected by a Mr. Christie, to render the church accessible to the residents of Cantly. This benevolent act was notified, and the memory of it transmitted to posterity, by an inscription on a stone once forming part of the bridge, but now supposed to be submerged in the flood below, consisting of these words: "Built by Alexander Christie, tenant in Cantly, for the glory of God, and the good of the people of Grange". A provision was made for the repairs of the bridge by the deposit of 100 merks in the hands of the laird of Edingight; and though this sum is supposed to have been long since exhausted, an addition was made to the structure in the year 1783, by erecting, and cementing to it, another bridge of the same size, to render it passable by carts, the first being only for foot-passengers. The cost of this was defrayed by the transfer, on the part of the patron, of the vacant stipend of that year.

The SOIL in some parts is very good, particularly on the banks of the Isla, where the ground, having a fine southern exposure, is tolerably dry, and produces early crops. In other parts, especially in the northern quarter, the soil is clayey, cold, and wet, with an impervious subsoil, and frequently of very poor quality. Oats forms the staple crop of grain, and the green crops consist of ryegrass and white and red clover. Husbandry is on a very respectable footing, and the six-shift course is that chiefly followed: bone-manure is much used for turnip-soils, and most of the larger farms have threshing-mills, and are inclosed with limestone-dykes and good hedges. The portion under tillage is gradually increasing in extent; and many of the lower parts of the heathy and mossy hill of Aulmore, which is interspersed with numerous cottages of the poor, have been brought into cultivation. Substantial embankments, also, have been raised on some

of the farms, against the floodings of the Isla; and on the better cultivated lands, all the implements of agriculture are of the best description, and the horses and cattle of a superior stock. Limestone of very fine quality is abundant, and is constantly worked to a great extent; large lime-works are in operation, and many of the small farms have lime-kilns. At a place called Seggiecrook is a bed of plumbago. The deep and wide-spreading mosses supply abundance of peat for fuel; and the residue of the woods that once beautified the locality is found deeply embedded, comprising thick logs of oak and fir. The annual value of real property in Grange is £5299. The mansion of Edingight, in the parish, is an ancient structure irregularly built, standing on an estate ornamented with fifty or sixty acres of young plantations. Braco was formerly the residence of the ancient family of Duff. There is a hamlet named Nethermills; and the parish is traversed by the road from Keith to Banff: the produce, consisting of grain, pork, and fat-cattle, is shipped chiefly at Banff, for the London market.

Grange is ecclesiastically in the presbytery of Strathbogie, synod of Moray, and in the patronage of the Earl of Fife: the minister's stipend is £165, with a manse, and a glebe of five acres, valued at £7 per annum. The church was built in 1795, and contains 616 sittings; it is situated within a mile of the parish boundary, on the site of the old castle occupied by the abbots of Kinloss. There is a place of worship for members of the Free Church, and another for the United Presbyterian Church. The parochial school affords instruction in the usual branches; the master has a salary of £34, with a house, and about £6 fees. He also receives a bequest of £1. 2. a year; the interest of £100 left by the late Rev. Mr. Bruce, minister of Dunbar; and a portion of the Dick bequest. There is likewise a General Assembly's school, the master of which has £25 per annum, with a small piece of land: the premises were built by subscription, in 1827, through the exertions of the minister, the Rev. W. Duff; and the tenants on the estate subscribe for the rent of the master's allotment. The Earl of Fife derives his title of Baron Braco from the farm of that name.

GRANGE, a hamlet, in the parish and district of ST. ANDREW'S, county of FIFE, $1\frac{1}{4}$ mile (S. by E.) from St. Andrew's; containing 84 inhabitants. It lies a short distance west of the high road from Anstruther Wester to St. Andrew's.

GRANGE, a hamlet, in the parish of ERROL, county of PERTH, 2 miles (N. E. by N.) from Errol; containing 68 inhabitants. It is seated on the road from Errol to Invergowrie, and is one of several small hamlets in the parish (besides the village of Errol) in which the linen-cloth manufacture engages a part of the population.

GRANGEMOUTH, for a time a quoad sacra parish, in the county of STIRLING; comprising the sea-port town of Grangemouth in the parish of Falkirk, and also part of Polmont parish; the whole containing 1722 inhabitants, of whom 1488 are in the town, 3 miles (N. E.) from Falkirk. This place derives its name from its original situation at the mouth of the Grange burn, a stream flowing round the grange of the ancient abbey of Abbotshaugh, but now, by a recent diversion of its course, falling into the river Carron at a considerable distance to the east. The town was commenced in the year 1777, by Sir Laurence Dundas, and is situated at the eastern extremity of the Forth and Clyde canal. The streets are

regularly formed, and the houses well built and of handsome appearance; the environs are pleasant, and the place has generally a cheerful and prepossessing aspect. Its trade has been progressively increasing since the formation of the harbour, and in 1810 a custom-house was established here. The trade consists principally in the exportation of coal, glass, and bricks, to Russia, Sweden, and Norway; pig and wrought iron to Denmark; coal, soap, woollens, and pig-iron to Prussia; coal, pig and cast iron, and cotton manufactures, to Holland; pig and cast iron to Germany; coal, pig-iron, glass, and bricks, to France, Portugal, Italy, and Turkey; glass, and woollen and cotton manufactures, to Van Diemen's Land; coal, bricks, cordage, woollens, and cottons, to Canada and New Brunswick; and coal and beer to Brazil. The imports are chiefly corn, tallow, flax, hemp, matting, tar, bristles, and wooden wares, from Russia; manganese ore, pitch, and linseed-cakes, from Sweden; corn from Denmark and Germany; corn, flax, timber, and wooden wares, from Prussia; bark, cheese, madder, and geneva, from Holland; and timber from Canada and New Brunswick. In a recent year the number of vessels that cleared outwards to foreign ports was 615, of the aggregate burthen of 61,979 tons; and the number that entered inwards from foreign ports was 148, of 21,145 tons: the amount of duties paid at the custom-house was £20,000. This amount of duties, however, does not show the full trade of the place, as a large part of the goods imported was removed under bond to Glasgow, where the duties were paid. The number of vessels registered as belonging to the port, in the same year, was fifty-two, of 7270 tons' aggregate burthen. A considerable coasting-trade is also carried on here; and a very extensive inland trade is pursued by means of the Forth and Clyde canal, which is navigable for vessels of ninety tons from this place to Port-Dundas, near Glasgow, and also to the Clyde by Bowling bay: the number of vessels that passed along the canal in a late year was 2959. The custom-house establishment consists of a collector, comptroller, clerk, two land-waiters, six tide-waiters, and a locker; and the officers of the canal company here, are a collector, an overseer of works, and a harbour-master.

The harbour and quays are situated near the mouth of the river Carron, at its junction with the Forth and Clyde canal. Considerable improvements have been recently made under the superintendence of Sir John Macneill, civil engineer, of London, employed for that purpose by the late Earl of Zetland and the governor and council of the canal company. According to the plan adopted, the channel of the Grange burn has been changed to the eastward, and a spacious wet-dock and entrance-lock, east of the harbour, have been constructed: the foundation stone was laid on the 25th of June, 1838, the day of Her Majesty's coronation, and the work was opened for the purposes of trade on the 12th of July, 1843. The dock is capable of receiving seventy sail of merchantmen, and steamers of the largest class can be admitted, the entrance-lock being 250 feet in length, fifty-five feet and a half wide, and twenty-four feet deep. The timber-basin has been very much enlarged; and a canal, fifteen feet in depth, forms a communication between it and the wet-dock and canal. An embankment, also, has been raised from the large lock to the entrance of the river Carron on the south-east side, and another on the north-west side has

been more recently completed, so that traders drawing nine feet are now able to enter and depart at low water. Thus have the local advantages of the port been rendered available to its improvement, and the extension of its commerce. Ship-building is carried on with success; and there is a graving-dock, which at spring tides has a depth of fourteen feet: it was constructed by Lord Dundas in 1811, and is capable of receiving two vessels of 300 tons' burthen. The first steam-boat built here, was launched in 1839 as a towing-vessel for the port of Memel: the vessels generally built at this place vary from ninety to 250 tons. The manufacture of sails and ropes is also extensive, and considerable quantities are exported to the colonies. The distance from the quay to the farthest beacon at the mouth of the Carron, is nearly a mile and a half: vessels are partly conducted by the Carron pilots stationed here under the Trinity House of Leith, and partly towed by steam-boats.

The parochial district that was for a time attached to the port, was separated for ecclesiastical purposes soon after the erection of a church here in 1837. It comprised about 1300 acres, of which 100, forming the demesne of Kerse House, a seat of the Earl of Zetland, are ornamented with thriving plantations, and the remainder are divided into farms of from sixty to 120 acres each. The surface is generally flat, and the soil almost uniformly a rich alluvial clay, with a small intermixture of fine white sand; the lands are well cultivated, and the crops are usually favourable. Kerse House, the principal mansion in the district, is surrounded with thriving plantations, and there are a few trees around some of the farm-houses; but otherwise there is little wood in the neighbourhood. The church was erected by the late earl, and is situated near Kerse House; it is a handsome structure in the Norman style of architecture, and contains 700 sittings, exclusively of the front gallery. In the year 1843, this edifice, with the consent of the present Earl of Zetland, passed into the hands of the members of the Free Church, of whom there is a considerable congregation. The only other place of worship is a small one for Baptists. Those who belong to other denominations are connected with places of worship at Falkirk. Schools for boys and girls, with dwelling-houses for the master and mistress, and a room which is used as a library, were erected by the late Lady Dundas, in 1827. The master has a salary of £10, and the mistress of £5, paid by the Earl of Zetland, with an allowance for the gratuitous instruction of poor children; and the fees average £40 and £20 per annum, respectively.

GRANGEPANS, a village, in the parish of CARRIDEN, county of LINLITHGOW, $\frac{1}{2}$ a mile (E. by S.) from Borrowstounness; containing 517 inhabitants. It is situated on the south shore of the Firth of Forth, and nearly equidistant from Borrowstounness and Bridgeness. The place has been for some time a seat of the salt manufacture, and although the trade in the article has been much reduced, yet in 1834 there were six pans in operation, producing annually about 23,000 bushels; in 1843 the number of pans had decreased to four. In the village is also a malting establishment; and until lately the manufacture of sal-ammoniac was carried on. The mansion-house of Grange is of some antiquity, and, having undergone repair, is now occupied by a tenant. The coast road from Borrowstounness to Bridgeness passes through the village.

GRANTON, a growing town, in the parish of CRAMOND, county of EDINBURGH, $2\frac{1}{2}$ miles (N. W.) from Edinburgh. This place, formerly remarkable only as the spot where the English troops under the Earl of Hertford disembarked in the year 1544, now claims importance for its magnificent and extensive pier. That truly national work was erected, at his sole expense, by the Duke of Buccleuch, who is proprietor of the estate of Caroline Park, formerly called Granton. It was commenced in November, 1835, and was partially opened on the 28th of June, 1838, the day of the coronation of Her Majesty, by Lord John Scott, brother of his Grace, in the presence of an immense concourse of spectators; and in commemoration of the day, one of the jetties is named the "Victoria". Vessels and steamers of the largest size can approach the pier, which is 1700 feet in length, and varies in breadth from eighty to 160 feet: it has a massive wall with occasional entrances to each side of the pier, running up the centre; and the whole is of the most solid and beautiful masonry. The Victoria jetty, on the west side, extends ninety feet; on the east side is a jetty of similar dimensions; and two others are at the distance of about 350 feet seawards. There are also two slips for shipping cattle; and a lighthouse at the extremity of the pier. On the Queen's visit to this part of her dominions in 1842, Granton pier was the place of Her Majesty's landing, on the 1st of September, and of her embarkation, on her return to England, on the 15th of the same month. In July, 1844, an act was obtained for the extension of the Edinburgh and New-haven railway to Granton; the line forms part of the Edinburgh, Perth, and Dundee railway, and in 1849 the proprietors of that great railway obtained an act for the construction of a pier and other works here. They had previously, in 1847, procured an act vesting in them the pier at Burntisland, and the ferry between Burntisland and Granton. The company's steamers ply regularly across the Firth of Forth, in connexion with the trains; and large moveable slips have been recently erected at Granton and Burntisland, by means of which, in connexion with a steam-vessel of peculiar construction, great facilities are afforded for the transmission of goods, which are now conveyed across without removal from the trucks. The vessel, or floating railway, as it may be called, is 175 feet long by fifty-four feet all over, and is propelled by two powerful engines, with paddle-shafts unconnected. Upon the spacious deck of this steamer are laid three lines of railway, capable of accommodating a train of from thirty to forty loaded trucks. An elegant and commodious inn has been some years erected by the Duke of Buccleuch, and there is already the nucleus of a handsome town and sea-port. The most direct road from Edinburgh to Granton is by Invercleithrow, at the head of which is the new road, on the left, through Wardie grounds.

GRANTOWN, a town, in the parish of CROMDALE, county of INVERNESS, 135 miles (N. by W.) from Edinburgh; containing about 1000 inhabitants. This place, which is situated about half a mile north of the river Spey, was founded upon an uncultivated moor, by Sir James Grant of Grant, Bart., in 1766, since which it has risen to a flourishing condition, and become one of the neatest and most interesting towns, in appearance, in the north of Scotland. It contains several good shops; and in its centre is a spacious square, 700 feet in length and

180 in breadth, on the south side of which is the Spey-side Orphan Hospital, built in 1824, with money left by Lady Grant of Monymusk. This charity is supported from a fund amounting to nearly £200 per annum, which has increased to the present sum by additions from the Grant family: the children are about thirty in number, and are boarded, clothed, and educated. Candidates must be natives of the parishes of Cromdale, Abernethy, Duthil, Inveraven, or Knockando. A branch of the National Bank of Scotland was established in 1829, and a branch of the Caledonian Bank in 1839; there is also a prison in the town. The post-office communicates daily with Carr-bridge, Forbes, and Ballindalloch; and a good road runs from the place to Keith, and another to Forbes. There are four annual markets, exclusive of cattle-trysts; cattle are purchased here by graziers for the southern markets, and much traffic is also carried on with the surrounding districts. A church was built in 1802, a little to the north of the town, containing accommodation for nearly 1000 persons; and the parochial minister officiated here and at the church at Cromdale alternately, till the year 1835, when an ordained minister was appointed to this station, comprehending the old parish of Inverallan. There is also a place of worship for Baptists. A grammar school was built a few years since by the proprietor, from whom the master receives a salary of £25 per annum: in addition to the usual branches, instruction is given in the classics and mathematics.

GRASSHOUSES OF THORNTON, a hamlet, in the parish of **GLAMMIS**, county of **FORFAR**; containing 74 inhabitants.

GRAYSTONE, a hamlet, in the parish of **CARMYLIE**, county of **FORFAR**, 4 miles (S. by E.) from Letham; containing 79 inhabitants. It lies about a mile westward of the high road from Monikie to Brechin; and is one of several small hamlets, the largest of which contains about twenty houses.

GREAT CUMBRAE.—See **CUMBRAE, GREAT**.—*And all places having a similar distinguishing prefix, will be found under the proper name.*

GREEN HOLM, an isle, in the parish of **NORTHMAVINE**, county of **SHETLAND**. It lies a short distance north of the main land of Northmavine, between Fethaland point and Romna Stacks, and is uninhabited.

GREEN HOLM, an isle, in the parish of **TINGWALL**, county of **SHETLAND**. This is an islet of very inconsiderable extent, one of the smallest of the Shetland group, situated about a mile south-west of Scalloway, a sea-port village on the main land of the parish. Green Holm is uninhabited.

GREEN HOLM, MUCKLE and LITTLE, two isles, in the parish of **EDAY**, county of **ORKNEY**. They lie to the south of the island of Eday, about a mile distant from Warness point. The larger is appropriated to the pasturage of cattle and sheep; the smaller is very inconsiderable, and both are uninhabited.

GREENFEND, a village, in the parish of **OLD MONKLAND**, Middle ward of the county of **LANARK**, 1 mile (S. W.) from Airdrie; containing 502 inhabitants. It is situated in the eastern part of the parish, a short distance north of the Calder water, which is here very devious in its course; and is one of numerous large villages that have latterly sprung up in this wealthy mining parish, now the principal seat of the iron manufacture in Scotland. The village is in the immediate vicinity of the

great Calder iron-works, and of extensive coal-mines, in both of which a large portion of the male population is engaged.

GREENGAIRS, a village, in the parish of **NEW MONKLAND**, Middle ward of the county of **LANARK**, 3 miles (N. E.) from New Monkland; containing 184 inhabitants. This place is situated in the north-eastern part of the parish, and is divided into East and West. It is one of several thriving villages which owe their prosperity and increase of population to the valuable coal and iron mines of the district. The high road from New Monkland to Slamannan church runs for a short distance on the south; and in the neighbourhood are some small streams. In the village is a school, with a house for the master.

GREENHILL, a hamlet, in the parish of **LOCHMABEN**, county of **DUMFRIES**, 2 miles (S. W. by W.) from Lockerbie; containing 89 inhabitants. It is seated in the eastern part of the parish, and on the west side of the river Annan, which winds along the borders of Lochmaben, and separates it from the parish of Dryfesdale.

GREENLAW, a burgh of barony, the county town, and a parish, in the county of **BERWICK**, 8 miles (S. W.) from Dunse, and 36 (S. E. by E.) from Edinburgh; containing 1355 inhabitants. This place is supposed to have derived its name from the situation of the ancient village on one of the several conical eminences in the parish, which eminence, from its superior verdure, obtained the appellation of the Green Law. The manor at one time belonged to the Earls of Dunbar, under whom Sir Patrick Hwm or Home, ancestor of the Home family, held the lands in 1435, when the earldom became annexed to the crown. After Berwick had ceased to be part of Scotland, in 1482, the courts of justice previously held there were generally held at Dunse, and occasionally at Lauder, till towards the close of the seventeenth century, when the town of Greenlaw was declared by act of parliament to be the head burgh of the shire. Since that time this has continued to be the county town. The burgh of Greenlaw, of which Sir Hugh Hume Purves Campbell, of Marchmont, Bart., is superior, is pleasantly situated on the north bank of the river Blackadder, over which are two bridges of stone; and consists principally of one street of considerable length, opening on the south side into a large quadrangular area. In the centre of this area was the market cross, a handsome Corinthian column, raised by the Earl of Marchmont, and on the site of which is the present county-hall. The houses are neatly built; and the inhabitants are amply supplied with water, conveyed into two spacious reservoirs of stone, erected at the expense of the superior of the burgh. A public library, containing a well-assorted collection of volumes, is supported by subscription; and there are several good inns in the town.

No manufacture is carried on at Greenlaw; only a few persons are employed in a carding and fulling mill: a considerable degree of traffic, however, arises from its situation as a public thoroughfare, and there is a post-office subordinate to that of Dunse. The weekly market has long been discontinued; but fairs are held on the 22nd of May, and the last Thursday in October, for milch-cows and various kinds of cattle, and they are numerously attended. Facility of communication is afforded by the great road from London to Edinburgh by way of Coldstream, and other roads that pass through the

place. As the county town, the sheriff's and usual courts are held, and the public business of the county transacted, here; the sheriff's and commissary courts occur every Thursday during the session, and the justice-of-peace courts for small debts monthly. The county-hall is a handsome structure in the Grecian style of architecture, erected by the late Sir W. P. H. Campbell, and containing a hall sixty feet long, forty feet wide, and twenty-eight feet in height, ornamented with columns of the Corinthian order. In the building are also various apartments for the accommodation of the sheriff and others attending the county meetings. The principal entrance is by an elegant vestibule, lighted by a dome, and containing a room for the preservation of the records. The new gaol, erected in 1824, is a neat building comprising eighteen sleeping-cells, two day-rooms for criminals, and one for debtors. Attached to the day-rooms are spacious airing-yards, to which the prisoners have access during the day, and the whole is surrounded by a lofty wall. There is a plentiful supply of water; and the prison is under excellent management.

The PARISH is from eight to nine miles in length, and nearly three miles in average breadth, forming an area of about 12,000 acres, of which nearly 7000 acres are arable, 500 woodland and plantations, 1200 undivided common affording good pasture, and the remainder moor, moss, and waste. Its surface is diversified with hills of no great elevation, and in the upper part of the parish the lands are intersected for almost two miles by a gravelly ridge called the Kaimes, about sixty yards in width at the base, and forty feet high. To the south of this ridge is the moss of Dugden, about 500 acres in extent, and in some places ten feet deep, yielding peat which, when properly dried, is little inferior to coal. The only river of importance is the Blackadder, which flows through the parish, dividing it into two nearly equal parts, and, about two miles above the town, being joined by a small stream called the Faungrass; it abounds with trout, and is much frequented by anglers. On the south side of the Blackadder the soil is a deep rich loam, producing grain of excellent quality, and on the north side, moorland and heath; the crops are wheat, oats, barley, potatoes, and turnips, with the usual grasses. The system of husbandry is in an improved state; the lands have been drained and partly inclosed, and the farm-buildings are generally substantial. The pastures are well adapted for sheep and black-cattle, of which considerable numbers are reared in the parish; and horses for agricultural purposes are bred upon many of the farms. The annual value of real property in the parish is £7410. The rocks are mostly of the old and new red sandstone formations: white sandstone and a dark claystone porphyry are also found. In this parish the mansions are Rowchester and Lambden, both of modern erection: the pleasure-grounds and house of Marchmont, also, the noble seat of Sir H. H. P. Campbell, though situated in the adjoining parish of Polwarth, add much to the beauty of the scenery.

Greenlaw is ecclesiastically within the bounds of the presbytery of Dunse, synod of Merse and Teviotdale. The minister's stipend is £254. 15., with a manse, and a glebe valued at £30 per annum; patron, Sir H. H. P. Campbell. The church, situated in the town, is a plain structure in good repair, containing 476 sittings. There are places of worship for members of the Free Church

and the United Presbyterian Church. The parochial school is attended by about 130 children; the master has a salary of £34, with a house and garden, and the fees average £50. The late Sir W. P. H. Campbell bequeathed £50 per annum to the poor. There are some remains of a Roman camp on the north bank of the Blackadder, about two miles from the town; and directly opposite to it, on the other side of the river, several trenches diverge towards Hume Castle, four miles distant. On the north-east of the parish, also, are the remains of an intrenchment, intersecting the moor for more than a mile: it is called Herriot's Dyke.

GREENLOANING, a village, in the parish of DUNBLANE, county of PERTH, 5 miles (N. E. by N.) from Dunblane; containing 58 inhabitants. It is situated in the north-east part of the parish, and on the east bank of the river Allan: there is a place of worship for the United Presbyterian Synod; and the Scottish Central railway, opened in 1848, has a station here.

GREENOCK, a sea-port, burgh, and market-town, in the Lower ward of the county of RENFREW, 17 miles (W. N. W.) from Renfrew, 22 (W. N. W.) from Glasgow, and 65 (W.) from Edinburgh; comprising the parishes of East, Middle, and West Greenock; and containing, according to the census of 1841, 36,936 inhabitants. This place is said by some to have derived

Burgh Seal.

its name, in the Gaelic language *Grian-chnoc*, from the site of its ancient baronial castle on a hill unsheltered by any intervening object from the rays of the sun. Others derive its name from *Grianaig*, "a sunny bay"; which is the present Gaelic name of the town. It originally consisted partly of the lands of Easter Greenock, in which is the suburb of Cartdyke, or, as it is also called, Crawfurdsdyke, so named from the erection of a small quay by its proprietor, Thomas Crawford, Esq.; and partly of the small village of Greenock, belonging to Sir John Shaw, owner of the barony of Wester Greenock, who in 1669 purchased from Margaret Crawford, lady of Kilberny, the barony of Easter Greenock, with the exception of the lands of Crawfurdsdyke, which are now the property of William Crawford, Esq. On the decease of Sir J. Shaw, the last of that name, in 1752, John Shaw Stewart, Esq., afterwards (on his father's death) Sir John Shaw Stewart, Bart., succeeded to the lands of Easter and Wester Greenock, in right of his mother; and on his death in 1812, they passed to his nephew, Sir Michael Shaw Stewart, from whom they descended to Sir Michael Robert Shaw Stewart, the present proprietor.

The villages both of Wester Greenock and Crawfurdsdyke at first consisted only of a few thatched huts, stretching along the bay, and inhabited by fishermen. But they gradually increased; and in 1670, Sir John, son of the former Sir John Shaw, obtained from Charles II. a charter annexing the lands of Finnart, of which he had become proprietor, to the barony of Wester Greenock, and erecting both into one barony, under the designation of the barony of Greenock. The inhabitants appear to have pursued the fishery with success; they

had some shipping, and carried on a considerable coasting, and a small foreign, trade, chiefly in herrings, of which in 1674 they sent 20,000 barrels to Rochelle, exclusively of other quantities to Sweden and the Baltic. The two places had each a harbour capable of receiving vessels of large burthen; and from that of Crawfurdsdyke, a part of the expedition to Darien was fitted out, in 1697. The union of the two kingdoms opened to the inhabitants new channels of commerce; and in 1719, they fitted out the first vessel employed in the American trade, which they afterwards prosecuted with singular success, bringing home great quantities of tobacco, which they exported for the supply of the continent. Indeed the rapidly-increasing importance of Greenock was such that it excited the jealousy of the ports of London, Bristol, and Liverpool: but the breaking out of the American war greatly obstructed its chief source of prosperity, and the loss of the American trade for some time impeded the commercial interests of the port. It was, however, soon counterbalanced by an enlarged traffic with South America, and the East and West India colonies; the trade of the port revived; and it has continued to prosper till the present time, the place now ranking as one of the principal sea-ports of the country. This was the first port to petition for the opening of the trade to the East Indies, in 1812. Greenock, extending in every direction for the accommodation of its growing population, has become the residence of numerous merchants and shipowners; the seat of various thriving manufactures, which put it nearly on a par with the most flourishing commercial and manufacturing towns in the kingdom; and more recently a parliamentary borough. In 1835, forty persons were drowned by the bursting of the Whin Hill Dam.

The town is beautifully situated on the south shore of the Firth of Clyde, which is here four miles and a half broad; and extends for almost a mile along the margin of the united bays of Greenock and Crawfurdsdyke. The buildings occupy a narrow site of level land, bounded on the south by a ridge of hills which rises abruptly to an elevation of nearly 600 feet immediately above the town, commanding a richly-diversified view of the Firth and the coast of Dumbarton, on the north, and much variety of interesting scenery on the east and west. Greenock is for the most part very irregularly built, consisting in the older portion of various narrow and ill-formed streets, and in that of more modern date of several spacious and handsome streets, with numerous pleasant villas, especially towards the west, in which direction chiefly the houses are increasing. It is paved, lighted with gas, and amply supplied with water from the vicinity, passed through filters previously to its being distributed through the town, the necessary works having been constructed by a company incorporated by act of parliament in 1825, by the name of the *Shaw's Water Joint-Stock Company*, chiefly for providing water-power for giving motion to the machinery of mills and factories. For this latter purpose, an enterprise of vast magnitude was completed under the direction of Mr. Thom, civil engineer, and proprietor of the Rothesay cotton-works, at the suggestion of the late Sir Michael Shaw Stewart. The water-works, which are mostly situated at a distance of about three miles, on the south-west side of the ridge of hills that overlooks the town, consist partly of a spacious reservoir formed by strong einbank-

ments, inclosing an area of 295 acres, and containing 284,678,550 cubic feet of water, conveyed by an aqueduct six miles in length from numerous streams. There is also a compensation reservoir of forty acres, containing 14,465,898 cubic feet, and now called Loch Thom in compliment to the engineer. From the principal reservoir, which has an elevation of 500 feet above the town, the water descends by a gradual declivity, and in its course towards Greenock forms at convenient intervals many falls of greater or less height, from which it is diverted to the several factories that have been erected near it, supplying to each 1200 cubic feet per minute for twelve hours daily. The aggregate power of the different falls, which vary in depth according to the wants of each factory, has been estimated as equivalent to that of 1782 horses. This important undertaking was successfully completed in 1829, at an expense of £51,000, including the purchase of the ground. In 1845 an act was passed to enable the company to increase the supply of water beyond what is above stated.

The Public Library, established in the year 1783, now contains about 10,000 volumes. For several years the books were kept in the Freemasons' Hall, in Hamilton-street, till they were removed into a building in Union-street, towards the erection of which James Watt, Esq., of Ashton Hall, Warwickshire, contributed £3000, as a suitable place for the reception of a marble statue by Chantrey, in honour of his father, James Watt, the celebrated improver of the steam-engine, which statue had been voted at a public meeting of the inhabitants of Greenock, the native place of Watt. This distinguished person was born on the 19th of January, 1736, and died at Heathfield, in Staffordshire, on the 25th of August, 1821. The foundation stone of the new building was laid by the late Sir Michael Shaw Stewart, M.P. for the county of Renfrew, and provincial grand master mason of the district, on the 25th of August, 1835, the anniversary of Mr. Watt's death. The building is in the early English style of architecture, and consists of a centre, containing the library, and two wings, one of which forms a reading-room, and the other a house for the librarian. The Public Library is supported by annual subscriptions of thirteen shillings paid by proprietors, and twenty-one shillings paid by general readers. A mechanics' institution was established in 1836; and a handsome building has been erected for its use at an expense of more than £1300, raised by subscription. The ground-floor contains a library of 2000 volumes, a reading-room, and an apartment for mechanical and philosophical apparatus; above which is a hall sixty-two feet long, and thirty-nine feet wide, for the delivery of lectures on chemistry, mechanics, and other subjects. There is also a mechanics' library at Cartsdyke, or Crawfurdsdyke, containing nearly 1500 volumes; and three circulating libraries have collections varying from 500 to 1500 volumes. Two public newsrooms are likewise supported, in one of which, in Cathcart-square, is a portrait of Sir John Shaw, who is justly regarded as the founder of the commercial prosperity of the town. Assemblies are held in the Exchange buildings, in which are elegant rooms; and a theatre, erected by Stephen Kemble, is opened occasionally. The Tontine hotel, in the principal street, is a spacious building, erected at an expense of £10,000, and contains some handsome apartments, and every requisite accommodation.

MANUFACTURES of various kinds are carried on here to a very considerable extent; and there are numerous large establishments for refining sugar, some breweries, distilleries, tanneries, foundries, and forges. The manufacture of woollen cloth and yarn is pursued in two factories, in one of which 25,000 stones of wool are annually consumed in the production of tartans, twilled cloths, and yarn; and the other, of recent establishment, is still more extensive. A very large cotton-work has lately been opened, the machinery of which is propelled by the Shaw's water: the building is of stone, 263 feet in length, sixty feet in breadth, and three stories in height. In those parts where the process carried on is most in danger of fire, the building is fire-proof; and in case of need, the pipes by which it is heated with steam can be rendered available with the same effect as a fire-engine. The water-wheel that drives the machinery is seventy feet in diameter, and wholly of iron, weighing about 180 tons. The number of people employed is generally 400, the greater part of whom are females. There are eleven large establishments for the refining of sugar, affording occupation to 350 persons; one of these is wholly engaged in refining for exportation, and the aggregate quantity is about 14,000 tons annually. Three breweries employ about forty-five persons, doing business to the amount of £30,000 per annum; and there is a distillery producing whisky annually to the amount of £50,000, and paying duties to the excise of £21,000. Connected with the distillery is a dairy of fifty cows. The manufacture of sail-cloth gives employment to nearly 300 persons, and consumes annually about 600 tons of raw material: attached to the premises is an extensive rope-walk, in which large quantities of cordage are made, averaging annually 700 tons. There are also three other rope-walks, in the aggregate affording employment to eighty persons. Four tanneries employ together about fifty hands, and do business to the amount of £18,000 annually; while two potteries, in which 200 people are constantly engaged, make on the average 100,000 dozens of white and printed earthenware. The paper manufacture provides occupation to about forty persons, of whom a considerable number are females, and produces yearly 300 tons of packing and coloured papers. There are also some extensive cooperages, together employing about 500 men and boys. The straw-plat manufacture of Greenock occupies generally about seventy persons on the premises, and affords employment to 150 who work at their own dwellings in the town, and to 1500 in the islands of Orkney. There are three extensive iron-foundries and forges for all kinds of castings, and for the manufacture of steam-engines and boilers, and various sorts of machinery, together affording employment to more than 1000 persons. In these establishments, steam-engines of the aggregate power of nearly 3000 horses are annually manufactured; and numerous English-built steamers, as well for government as for private individuals, have been supplied with engines and machinery from the works. Two manufactories for chain-cables and anchors, also, employ above 110 persons; and there is a work for the making of bar-iron, in which a considerable number are engaged. Four large mills for grinding grain, yield upwards of 50,000 holls a year: one of them was also supplied with machinery for freeing rice imported into this country from the husk, but this was found to be

attended without any of the expected benefit, and has been discontinued.

The trade of the port, which, after it had recovered from the depression it suffered during the American war, greatly increased, has recently sustained some diminution from the deepening of the Clyde and the introduction of steam towing-boats, by which ships that previously landed their cargoes here are now enabled to reach Glasgow. The exports are chiefly cotton, yarn, &c.; linen, woollen, and silk manufactures; hardware, earthenware, glass, refined sugar, iron and machinery, copper, and lead. The imports are cotton-wool, sugar, molasses, coffee, cocoa, pepper, tobacco, corn, wine, oil, spirits, timber, deals, mahogany, dye-woods, brimstone, and numerous other goods. In a recent year, before the establishment of the cotton-work above described, the quantity of cotton-wool imported was 11,597,653 lb., and the quantity of cotton, yarn, &c. exported was valued at upwards of £1,000,000. The number of ships and vessels entered inwards and cleared outwards to foreign ports with cargoes, in the same year, was, 225 British, of 65,864 tons, and twelve foreign, of 3095 tons, inwards; and 235 British, of 63,582 tons, and nine foreign, of 3411 tons, outwards. The number of vessels entered inwards and cleared outwards, coastwise, was, 911 vessels, of 99,430 tons, inwards; and 1222 vessels, of 128,017 tons, outwards: this latter number of vessels, however, includes vessels with part of cargoes previously cleared outwards at Glasgow. In 1848 the amount of duty paid at the custom-house was £436,985. The number of vessels registered as belonging to the port is 432, of 79,779 tons' aggregate burthen; and the number of seamen is upwards of 3000.

The HARBOUR was commenced in 1707, by the inhabitants, to whom the lord of the manor, Sir John Shaw, conveyed the ground on which it was formed, together with his right, as superior of the barony, to levy anchorage dues. In order to raise funds for its completion, they voluntarily imposed an assessment of 1s. 4d. on every sack of malt brewed into ale within the burgh. The harbour thus formed being found, however, totally inadequate to the rapid increase of the trade, an extension including the bay of Crawfurdsdyke was carried into effect, at an expense of £20,000; and the subsequent erection of dry-docks and other works requisite to render it complete, comprising warehouses, bonding-yards for timber, and other accommodations, has increased the amount to £119,000. The outer harbour, which is accessible to the largest vessels, has sufficient depth of water, and good anchorage; but the roadstead is contracted by a considerable sand-bank, extending from Port-Glasgow towards Dumbarton. The entrance to the inner harbour is 105 feet wide, and the depth great enough to allow vessels of any burthen to approach the quays. The Custom-house quay is 1035 feet in length, the East quay 531, and the West quay 425 feet, forming together a line of very nearly 2000 feet, replete with every facility for the loading and landing of cargoes, with spacious warehouses and stores. Ship-building is carried on to a great extent, for which purpose there are seven dockyards belonging to different companies, affording employment to 1200 men, with dry-docks, and three patent-slips for repairing vessels, one of which is capable of receiving ships of 400 tons. The number of vessels annually launched averages about twenty, of the aggre-

gate burthen of from 6000 to 7000 tons. Boat-building is also carried on, by companies confined to that object, who employ about forty workmen, and launch annually about 800 tons of all descriptions.

The custom-house, which is situated in the central portion of the quay, is a spacious and elegant building in the Grecian style, with a stately portico in front, the whole erected in 1818, at an expense of £30,000. A chamber of commerce and manufactures was incorporated by royal charter in 1813, and is under the management of twelve directors, of whom three annually go out of office by rotation. The Exchange buildings, erected in 1814, at a cost of £7000, afford every accommodation for the meeting of merchants and shipowners, and for the transaction of commercial affairs; they contain also two spacious assembly-rooms, in which concerts and card and dancing assemblies are held during the season. The post-office has a good delivery; and in addition to the Greenock Bank, there are branches of the Bank of Scotland, the Royal Bank of Scotland, the Glasgow Union Banking Company, the Western Bank of Scotland, and the Clydesdale Bank. The market, which is on Friday, is abundantly supplied with grain and with provisions of all kinds; and fairs are held on the first Thursday in July and the fourth Thursday in November. Facility of communication is afforded by excellent roads, of which eight miles of turnpike-road pass through the parish, and by steamers. *The Glasgow, Paisley, and Greenock Railway* was commenced under an act passed in 1837, and was opened throughout in 1841. The length is twenty-two miles and a half, of which seven form part also of the Glasgow and Ayr railway, whence the Greenock line diverges at Paisley, crossing the rivers Black Cart and Gryfe, and reaching its summit level on the Bishopton ridge. Thence it is continued by an embankment, running nearly parallel with the river Clyde, to Port-Glasgow, from which taking a curvilinear direction, it terminates at Greenock, where is a short branch leading to the docks. There are two tunnels at Bishopton ridge, cut through hard rock for above a mile in length, and thirty-seven feet in depth; the embankment near the Clyde is more than a mile long, and twenty-eight feet in height, and there is also one crossing Fulwood moss, four miles long, but averaging only ten feet in height. The railway was completed in March 1841, at an expense of £498,142, including one-half the cost of the portion between Glasgow and Paisley, of which the other half was defrayed by the Glasgow and Ayr Railway Company. An act was passed in 1846, authorizing the formation of a branch of 352 yards extending from the Glasgow, Paisley, and Greenock railway, to the Clyde at Greenock; and also the construction of a pier or wharf in connexion with it. In 1847 an act was obtained, to amalgamate the railway with the great Caledonian railway.

The town was erected into a burgh of barony by charter of Charles I., granted to Sir John Shaw, its proprietor, in 1635, and confirmed by Charles II. in 1670. In 1741, the then Sir John Shaw, by a charter which was renewed in 1751, conferred upon his tenants in the burgh the privilege of electing two bailies, a treasurer, and six councillors, with power to hold courts for the admission of burgesses, the good government of the town, and the trial and punishment of delinquents. This charter continued in force till the passing of the

Municipal Reform act of the 3rd and 4th of William IV. A provost, four bailies, a treasurer, and ten councillors, are now elected agreeably with the provisions of that measure; and their jurisdiction extends over the whole of the municipal and parliamentary boundaries of the burgh, which includes the suburb of Cartsdyke. The magistrates hold courts daily for the trial of criminal causes not extending beyond petty thefts and misdemeanors, all higher matters being referred to the sheriff of the county, who holds a court here for those cases to which the jurisdiction of the magistrates does not extend. Under the provisions of the general Reform act of the 2nd and 3rd of William IV., the burgh returns one member to the imperial parliament: the right of election is vested in the £10 householders, who also form the municipal constituency, and of whom the number is 1188. The town-hall was erected in 1765, after a design by the father of the distinguished Watt; it is a neat structure containing the several court-rooms, and other apartments for the transaction of the public business of the magistrates. The town gaol or bridewell, a handsome building in the castellated style, contains thirty-five cells for criminals. The sheriff's court-house, erected in 1834 by subscription, consists of a spacious hall for the courts, with apartments for the sheriff and his clerk, and rooms for jurymen and witnesses.

The PARISH originally formed part of that of Innerkip, from which it was separated by act of parliament, in 1592: the lands of Easter Greenock and Crawfurdsburn were annexed to it in 1618, and a considerable portion of the parish of Houston in 1650. At later periods the parish was subdivided into smaller parishes. It extends along the Clyde for nearly five miles, and is bounded on the south by the parish of Houston; on the south-east, by the parishes of Port-Glasgow and Kilmalcolm; and on the west, by Innerkip. The surface is hilly, rising towards the south, by elevated ridges, to a height of 600 feet. The coast is flat and sandy, and is not distinguished by any peculiarity of features, the bill of Binnans, the highest in the ridge, forming the only landmark of importance: from this eminence is obtained a beautiful view of the Firth. On the shore the soil is chiefly clay, intermixed with sea-shells and gravel; and in the higher grounds, a rich loam, alternated with peat-moss: there are some quarries of sandstone, but of very inferior quality. The estimated number of acres is 8000, of which nearly 3000 are arable, 1150 meadow and pasture, about fifty woodland and plantations, and the remainder moor. The scenery is beautifully diversified, and on the acclivities of the hills are numerous scattered villas, overlooking the Clyde. The mansion-house of Greenock is finely situated on an eminence above the town; the greater portion of it is ancient, but several additions have been made of more modern character. There are some trees of considerable girth near this mansion, and also near that of Crawfurdsburn or Cartsburn House, which is likewise an ancient building. The annual value of real property in Greenock is £111,493.

For ECCLESIASTICAL purposes this place is in the presbytery of Greenock, synod of Glasgow and Ayr. The original parish, which, since the New or Middle parish was disjoined from it in 1741, has been designated the *Old or West* parish, is about three miles and a half in length and two and three-quarters in breadth. The minister's income is £718, arising from a stipend of

£287, from an annuity of £25 from the corporation, and the rents of the glebe, amounting to £406; with a manse: patron, Sir Michael Robert Shaw Stewart. The old church, a cruciform structure built in 1590, being inconveniently situated, and greatly dilapidated, has been abandoned, and a new church built on a more commodious site; the present structure, which is of elegant design, contains 1400 sittings. The *Middle* parish, created by the Court of Teinds, is about one-third of a mile in length and a quarter of a mile in breadth, and wholly within the town. The minister's stipend is £200, with £20 for communion elements, and a manse; patrons, the Magistrates and Town Council, the Kirk Session, and the Feuars in the parish. The church, erected in 1747 at an expense of £2388, by subscription, aided by a grant from the corporation, is a handsome structure in the Grecian style, with a portico on the Ionic order and an elegant spire 145 feet in height, and contains 1497 sittings. A chapel has been erected in the parish by the Society for Propagating Christian Knowledge, for the use of the mariners frequenting the port; it contains 350 sittings, and divine service is performed on Sunday by a missionary, who has a salary of £26 per annum. The *East* parish was divided from the original parish, by the Court of Teinds, in 1809; it is about three miles and a half in length, and two and a half in breadth. The minister's stipend is £200, with £20 for communion elements, and a manse; patrons, the Magistrates and Council, and a committee of the Seat-proprietors. The church was erected in 1774 as a chapel of ease, and contains 976 sittings. The former quoad sacra *North* parish was separated from the West parish under act of the General Assembly in 1834, and was about half a mile in length and less than a quarter of a mile in breadth; patrons, the Communicants. The church, at first a chapel of ease, was built in 1823, at an expense of £600, and contains 1165 sittings. The *South* quoad sacra parish comprised a small district within the town; patrons, the Proprietors of the church, which was built as a Gaelic chapel of ease, in 1791, at a cost of £1300, raised in shares, and is a neat structure with 1300 sittings. The late quoad sacra parish of *St. Andrew* was also separated from the West parish; patrons, the Trustees. The church was built by subscription, aided by grant from the Church-extension fund, at a cost of £2600; it is a handsome structure in the later English style of architecture, and contains 945 sittings. The late parish of *St. Thomas* was ecclesiastically separated in 1839, from the Old parish and the Middle parish: the church was built by private subscription, aided by a grant from the extension fund. That part of the burgh which is called *Cartsdyke* (*which see*) was ecclesiastically separated from the East parish, in 1839, but, like the four preceding districts, afterwards ceased to be a quoad sacra parish. There are places of worship in the burgh for members of the Free Church, the United Presbyterian Church, Baptists, Independents, Reformed Presbyterians, and Wesleyans; an episcopal, and a Roman Catholic chapel. The members of the Free Church have altogether six places of worship in the burgh, and the United Presbyterian Church four.

The old parochial school has been superseded by the establishment of two burgh schools, in one of which the Latin, Greek, and French languages are taught; and in

the other, arithmetic, the mathematics, geography, and drawing. They are under the management of two masters, appointed by the corporation, and who have each a salary of £30, with the fees and an allowance of £25 a year in lieu of house and schoolroom. The Highlanders' Academy was built in 1837, partly by subscription, and partly by grant from government, on a site given by the late Sir Michael Shaw Stewart; it is a handsome building, containing two schoolrooms, and apartments for the masters of an infant and juvenile school, with a large inclosed play-ground. There are also two schools for orphans, built by the corporation, one for the gratuitous instruction of children in the elementary branches of education, and the other for teaching girls to sew and knit, and qualifying them for service; they are both supported by subscription, and partly by the proceeds of the children's work. The Greenock Hospital and Infirmary was established in 1809, when a building was erected at an expense of £1815, on a site of land given by Sir John Shaw Stewart. It is maintained by subscription, and the number of patients averages about 585 annually received into the house, and 200 out-patients. Two wings have been added to the building, which is now adapted for the reception of 100 patients. The institution is under the superintendence of four physicians, two surgeons, and a resident apothecary; and the annual expenditure is about £1000. There are numerous friendly and benefit societies; and a savings' bank has been some time established, in which are deposits to the amount of about £63,000. It may be mentioned that Mr. Galt the novelist resided at Greenock, where he died in 1839. The town gives the inferior title of Baron to the family of Cathcart, a dignity created in 1807, in the person of the late Earl Cathcart, upon his return from Copenhagen, where he had served as commander-in-chief of the military force employed in the expedition to that place.

GRETNA, county DUMFRIES.—See GRAITNEY.

GRIMSAY, an island, in the parish of NORTH UIST, county of INVERNESS; containing 269 inhabitants. This is an isle of the Hebrides, lying between North Uist and Benbecula, and is about two miles in length: a large portion of it is covered with heath. A great quantity of kelp is burned on its shores, the manufacture of which is the chief employment of the population. Grimsay is an island only at high water.

GROAY, an isle, in the parish of HARRIS, county of INVERNESS. It is one of a group of islets in the Sound of Harris, and is of small extent, and uninhabited.

GRUINARD, or GREINORD, an isle, in the parish of LOCHBROOM, county of ROSS and CROMARTY. It is situated at the entrance to a loch of the same name, on the western coast of the county, about five miles south-east of Udrigil Head.

GUILDIE, a village, in the parish of MONIKIE, county of FORFAR, $3\frac{1}{2}$ miles (W. N. W.) from Muirdrum; containing 83 inhabitants. It is in the eastern part of the parish, and adjoining the village of Monikie: the population is chiefly employed in the weaving of linen for the manufacturers of the neighbouring towns.

GUILDIEMUIR, a village, in the parish of MONIKIE, county of FORFAR; containing 75 inhabitants. This village and Guildie adjoin each other.

GUILDTOWN, a village, in the parish of St. MARTIN, county of PERTH; containing 178 inhabitants. It

lies in the western part of the parish, and is of modern date, having been founded within the present century. The houses are in general neat and comfortable, with a piece of garden-ground attached to each. This village, and Caroline-Place, also in the parish, are the property of the Guildry Incorporation of Perth.

GULANE, anciently GOLYN, a village, in the parish of DIRLETON, county of HADDINGTON, $5\frac{1}{2}$ miles (W. by S.) from North Berwick; containing 273 inhabitants. This village, which formerly gave name to the parish, is pleasantly situated; and the ground in the immediate vicinity is favourable to the training of race-horses, of which two separate establishments have been formed. There is a school attended by fifty children, the master of which is provided with a house and garden, rent-free, by Mrs. Ferguson, who also allows him a salary of £5 per annum, in addition to the fees.

GUNISTER, an isle, in the parish of NORTHMAVINE, county of SHETLAND. It is one of the smallest of the Shetland group, and lies about a mile southward of the main land of the parish: there is pasturage for cattle and sheep.

GUNNA, an isle, in the parish of TIREE, district of MULL, county of ARGYLL. This is a small isle of the Hebrides, lying in the sound between Tiree and Coll, and is about a mile in length, and half a mile in breadth. It is remarkable for the great quantity of sea-weed upon its shores.

GUTHRIE, a parish, in the county of FORFAR, 8 miles (N. W.) from Arbroath; containing 530 inhabitants. This place gives name to the very ancient and distinguished family of Guthrie, one of whom, on the resignation of the guardianship of Scotland by Sir William Wallace, in 1299, and his retirement into France, was sent by the Scottish nobles to solicit the return of that hero, in order to assist his countrymen to expel the English invaders. His descendant, Sir David Guthrie, who was lord high treasurer of Scotland in the reign of James III., purchased from the monks of Arbroath the church of Guthrie, which had formerly been a chapel belonging to that abbey, and founded here a collegiate church for a provost and three prebendaries. This foundation was confirmed by a bull of Pope Sextus IV., in 1479; and to it was subsequently annexed the vicarage of Kirkbuddo, or Carbuddo, now forming a widely-detached portion of the parish of Guthrie. Sir David Guthrie also erected a spacious and strongly-fortified baronial castle here, which is still entire; and on his decease, the manor passed to his son, Sir Alexander, who, with one of his sons and three of his brothers-in-law, fell in the battle of Flodden-Field. It is now the property of his descendant, John Guthrie, Esq.

Including Kirkbuddo, which is situated at a distance of nearly seven miles to the south-west, and separated by several intervening parishes, the parish of Guthrie comprises an area of about 4000 acres, of which 3200 are arable, and the remainder wood and plantations, with a very considerable tract of unreclaimed moor. The surface of the main portion is varied, sloping gradually from the hill of Guthrie (which is in the north-west, and has an elevation of about 500 feet) towards the south and east; while in the southern, or Kirkbuddo, portion, the land is nearly level, though considerably raised above the sea. The parish is watered by the small river Lunan, which flows through a narrow

valley, and forms its boundary. In some parts the soil is a rich black loam, resting on a bed of retentive clay, and in others of inferior quality, but generally susceptible of improvement by draining, which is gradually growing into general practice. The system of agriculture is advanced, and some portions of the moor have been reclaimed; the farm-buildings are usually commodious, and considerable progress has been made in the inclosure of the lands. The woodlands around Guthrie Castle and Kirkbuddo House are under good management; and in different parts of the parish are some thriving plantations, which add much to the beauty of the scenery. The annual value of real property in the parish is £2727. Guthrie Castle, the seat of Mr. Guthrie, was originally built in 1468. The more ancient part consists of a massive square tower crowned with embattled turrets, rising above the foliage of the richly-wooded demesne by which it is surrounded, and conveying an impressive idea of baronial grandeur; the more modern portions have been added at various times, and the whole has been improved by the present proprietor of the mansion. It is beautifully situated on the banks of the river Lunan, which has its source in a lake in the vicinity. Kirkbuddo House, the seat of George Ogilvy, Esq., is a handsome modern mansion. There is no village properly so called; the population are principally agricultural, with the exception of a few who are employed in weaving for the manufacturers in the neighbourhood. In Kirktown of Guthrie, a hamlet consisting only of a small number of scattered houses, are some individuals engaged in the various handicraft trades requisite for the supply of the inhabitants of the parish. Facility of communication is afforded by the Arbroath and Forfar turnpike-road, the Arbroath and Forfar railway, and the Aberdeen railway.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Arbroath, synod of Angus and Mearns. The minister's stipend is £158, of which nearly one-half is paid from the exchequer; with a manse, and a glebe valued at £9 per annum; patron, John Guthrie, Esq. The church, which is situated on an acclivity rising from the valley of the Lunan, is a substantial neat building erected in 1826, and contains 306 sittings. Divine service is occasionally also performed by the minister in a schoolroom at Kirkbuddo. The parochial schoolmaster's salary is £27, with the fees, the amount of which is small, a house, and a garden: a school at Kirkbuddo is supported by subscription; and there is a parochial library, consisting chiefly of works on religious subjects. Of the collegiate church founded by Sir David Guthrie the only remains are a small isle, now the burial-place of the family; while of the chapel of Kirkbuddo scarcely any vestiges can be traced. In the southern portion of the parish are some remains of a Roman camp, still in a very entire state, inclosing an area about 760 yards in length and 360 yards wide: in the south-east angle, supposed to have been the site of the prætorium, is an eminence commanding a view of the whole of the interior. About twelve years ago, two ancient utensils of earthenware were found at the south-east corner of the northern division of the parish, on the banks of the Lunan; one of them shaped somewhat like a kettle. John Guthrie, of this place, was consecrated Bishop of Moray, over which see he continued to preside till 1638.

H

Burgh Seal.

HADDINGTON, a burgh, market-town, and parish, in the county of HADDINGTON, of which it is the capital, 18 miles (E.) from Edinburgh, and 419 (N.) from London; containing 5452 inhabitants, of whom 1878 are in the town. This place, the name of which is of very uncertain derivation, is of unquestionable antiquity, though, from the repeated destruction of

its ancient records, comparatively little of its remote history has been preserved. It appears to have been a royal residence at an early period, and in various documents is mentioned as having been a demesne town of the kings in the beginning of the twelfth century. Ada, Countess of Northumberland, and mother of Malcolm IV., in 1178 founded here a convent for sisters of the Cistercian order, which she richly endowed, and dedicated to the Virgin Mary; and Alexander II., King of Scotland, was born at this place in 1198. The town, which was wholly built of wood, was in 1224 totally consumed by fire, supposed to have been the work of an incendiary, as, in the same night, the several towns of Stirling, Roxburgh, Lanark, Perth, Forfar, Montrose, and Aberdeen experienced a similar calamity. It was repeatedly burnt and laid waste by the English, during the frequent wars between the two countries, but always speedily recovered from its desolation. The abbey of St. Mary continued to flourish till the Dissolution; and in 1548, the Scottish parliament assembled within its walls, to deliberate upon the marriage of Mary, afterwards Queen of Scots, with the Dauphin of France, and to give their assent to her education at the French court. In 1598, the greater part of the town was destroyed by an accidental fire originating in the carelessness of a servant. Haddington suffered considerable damage, also, from inundations of the river Tyne, in the years 1358, 1421, and 1775.

The TOWN is pleasantly situated on the Tyne, which separates it on the east from the suburb of Nungate: communication between the town and the suburb is afforded by a good stone bridge of four arches; and over the same river are three other bridges within the limits of the parish. It consists principally of two parallel streets of unequal length, the longer of which, forming the High-street, and being a continuation of the road from Edinburgh, is spacious and well built, comprising handsome houses, and is intersected at right angles by a street of considerable extent. Haddington is well paved, and lighted with gas from works erected in 1835; and the inhabitants are amply supplied with water. The appearance of the place has been greatly improved by the erection of several elegant buildings; and for the accommodation of the town, a new and commodious market has been formed. The approaches from the east and west are pleasant, and ornamented with agreeable villas having fine gardens: there are also some extensive nursery-grounds; and the general aspect of the town, which is seated at the foot of the Garleton hills,

is strikingly picturesque. A beautiful emblematic monument to the late Mr. Ferguson of Raith meets the eye on entering the town from the west. A subscription library has been established, which contains more than 1000 volumes; a parochial library, also, is supported with funds left for that purpose by the late Andrew Begbie, Esq. There is a valuable library, bequeathed to the town by the Rev. John Gray, of Aberlady, who also gave fifty merks per annum for the purchase of additional volumes; and in Haddington is also kept a library for the use of the presbytery. A mechanics' institution was founded in 1823, and is supported by subscription, for the delivery of lectures on chemistry, the various branches of mechanics, and other subjects; attached to it are a good library, a museum, and the requisite apparatus. Both the Agricultural and the Horticultural Societies of East Lothian hold their meetings in the town; and there is a branch of the Bank of Scotland, and also of the British Linen Company. A considerable trade is carried on in wool, and in the preparation of bones for manure; the only manufactories are an iron forge and an establishment for carriage-building: the tanning and currying trades are pursued to a good extent; and there are two breweries and two distilleries, on an extensive scale. The market is on Friday, chiefly for grain of various kinds; it is well attended, and is one of the greatest marts in the country for wheat. The market-place for butchers' meat is a neat and commodious structure, formed at an expense of more than £2000, defrayed from the public funds of the town. Great facility of intercourse is afforded by the Haddington branch of the North-British railway.

Though Haddington has been a ROYAL BURGH from a very remote period, the earliest charter extant was granted by James VI., and is dated at Newmarket, the 30th of January, 1624. It confirmed all rights and privileges conferred by the charters which, in the repeated conflagrations of the town, had been destroyed, and vested the government in a provost, bailies, and council of merchants and tradesmen, by whom the other officers were chosen. The corporation at present consists of a provost, three bailies, a dean of guild, a treasurer, and nineteen councillors, appointed under the authority, and subject to the provisions, of the Municipal act of William IV. A baron-bailie is appointed for the suburb of Nungate, and also for the lands in Gladsmuir belonging to the corporation. The provost and bailies are *ex officio* justices of the peace within the burgh and liberties, and they have also, by their charter, the jurisdiction of sheriffs within the royalty; but they do not exercise this function, and the sheriff of East Lothian has concurrent jurisdiction with the magistrates of the burgh, who are assisted by a town-clerk and other officers. The magistrates hold a court weekly for the adjudication of civil cases, aided by the advice of the town-clerk; and also for the trial of petty misdemeanors, and for the maintenance of the police. There are nine incorporations, which have the exclusive right of exercising trade within the burgh, viz., the hammermen, wrights and masons, weavers, fleshers, shoemakers, bakers, tailors, and skimmers: each of these fraternities sends two members to a council consisting of a convener, nine deacon-conveners, and the two members of each incorporation. This burgh joins with Jedburgh, Dunbar, Lauder, and North Berwick, in the return of a member to parliament.

Haddington being the county town, the courts for the shire are held in it at the appointed periods; and recently, some elegant county buildings have been erected at the west end of the town, in the old English style, at a cost of £5500, from a design by Mr. Burn. The foundation stone was laid, with masonic honours, in May 1833, by Sir John Gordon Sinclair, Bart. The edifice contains the sheriff and justice-of-peace court-rooms, and other offices connected with the county; the front is of polished stone, and other parts of the building are also of a superior material. It occupies the site of some old ruins that consisted of a vault and part of an arched passage, the pillars of the Saxon style; but all traces of the history of these remains, thought to have been the most ancient in Haddington, are now lost. The town-house, for the transaction of the business of the burgh, has been improved at an expense of £2000, paid out of the corporation funds; it is a neat building, including an assembly-room, with a handsome spire. There is a prison containing the requisite apartments for the classification of prisoners.

THE PARISH is about six miles and a half in length and six in breadth, and comprises 11,169 acres, of which 9312 are arable, 1250 woodland and plantations, and the remainder meadow, pasture, and waste. Its surface is pleasingly undulated, and the scenery enriched with woods of ancient growth and with flourishing plantations. In general the soil is fertile, and well adapted for all kinds of grain. The rotation system of husbandry is practised; considerable improvement has been made in draining and inclosing the lands, and the introduction of bone-dust and rape for manure has much contributed to the fertility of the soil. The crops are wheat, barley, oats, beans, peas, potatoes, and turnips. The farm-buildings are substantial and commodious; and every improvement in agricultural implements has been carefully adopted. In this parish the woods consist chiefly of oak, hazel, and birch; and the plantations of Scotch fir, larch, and spruce. The annual value of real property in the parish is £33,648. *Amisfield*, a seat of the Earl of Wemyss, is a stately mansion on the south bank of the river Tyne, surrounded by a well-planted demesne and extensive park, which, during the annual sports called the Tyneside games, celebrated there under the patronage of the neighbouring nobility and gentry, are much resorted to. *Stevenson*, a seat of Sir John Gordon Sinclair's, is beautifully situated to the east of Amisfield, also in a richly-planted demesne. *Lennoxlove*, anciently *Lethington*, a seat of Lord Blantyre's, is a handsome mansion, part of which, of great antiquity, and built by the Gifford family, consists of a square tower of massive strength: the park is of considerable extent, and contains some fine old timber; it was first inclosed with walls by the Duke of Lauderdale, who was born here. *Monkrigg* is an elegant modern mansion, finely situated, and encompassed by some highly-enriched scenery; and *Coalston*, a little to the south, embraces an interesting view of the grounds of Lennoxlove, and of the surrounding country. The other seats in the parish are Clerkington, Letham, Alderston, and Haddington.

Haddington is ecclesiastically in the presbytery of Haddington, synod of Lothian and Tweeddale, and in the patronage of the Earl of Hopetoun. There are two ministers, making the church collegiate; the stipend of

the first minister is £343, with a manse, and a glebe valued at £24 per annum, and the stipend of the second minister is £366, with a manse, and a glebe valued at £25 per annum. The church, supposed to have been built in the 14th century, is a venerable and elegant cruciform structure in the decorated English style, with a lofty square embattled tower: the choir and transepts are in a dilapidated condition, but the nave has been commodiously arranged for a congregation of 1240 persons. In the aisle belonging to the Lauderdale family is a splendid monument of varied marbles to Lord Chancellor Maitland and his lady, with recumbent figures in white marble. This fine church, which is 210 feet in length, was part of a magnificent monastery of Franciscans, where Lord Seton, one of its greatest benefactors, was buried in 1441; the buildings were partly destroyed by Edward I. A handsome chapel of ease was erected in 1838, to which a district was for a time annexed, containing a population of 1878. There are also an episcopal chapel, and places of worship for members of the Free Church, the United Presbyterian Church, the Old Light Seceders, Independents, and Wesleyans. A grammar school is endowed by the corporation, who appoint two masters, and pay their salaries; it is open to all the sons of freemen. A parochial school, affording a useful education, is supported by the heritors; the master has a salary of £34, with £50 fees, and a house and garden. The parish poor receive the interest of £300, the aggregate amount of several bequests. The late David Gourlay, Esq., bequeathed a field of four acres, with £450 in money, and £840 in the funds, in trust to the ministers of Haddington, for the relief of the industrious poor not on the parish list. A dispensary for administering medicines to the sick poor is supported by subscription; and a savings' bank has been established, in which the amount of deposits is above £1000. In the suburb of Nungate are the remains of St. Martin's chapel, formerly belonging to the abbey of Haddington. John Knox, the reformer, was born in this parish, at Giffordgait, adjoining the town, in 1505, and received the rudiments of his education in the grammar school. The distinguished family of Maitland resided for many years at Lethington, which they obtained by purchase. Sir Richard Maitland, who died in 1586, was lord privy seal, and author of some poems of merit. His eldest son, William, filled the office of secretary of state in the reign of Mary, Queen of Scots; and his next son, who was created Lord Maitland, of Thirlstane, in 1590, was lord high chancellor of Scotland till his death in 1595. Haddington confers the title of Earl on the family of Hamilton.

HADDINGTONSHIRE, a maritime county, in the south-east of Scotland, bounded on the north and east by the Firth of Forth, on the south by the county of Berwick, and on the west by Edinburghshire. It lies between 55° 46' 10" and 56° 4' (N. Lat.) and 2° 8' and 2° 49' (W. Long.), and is about twenty-five miles in length and sixteen in extreme breadth, comprising an area of 224 square miles, or 144,510 acres; 8752 houses, of which 8010 are inhabited; and containing a population of 35,886, of whom 17,279 are males and 18,607 females. This county, which is likewise called East Lothian, as being the eastern part of Lothian, an extensive district including also the shires of Linlithgow and Edinburgh, was before the time of the Romans inhabited

by the *Gadeni*, and subsequently formed a portion of the Saxon kingdom of *Northumbria* till the year 1020, when it was ceded to Malcolm II., and annexed to Scotland. From that period, for nearly two centuries, it appears to have remained in almost undisturbed tranquillity, and to have made considerable progress in agriculture; but during the wars to which the disputed succession to the Scottish throne gave rise, it suffered materially, and in 1296 became the scene of the battle of Dunbar, in which Baliol was defeated by the English. Not to mention other events connected with the county, in 1650 it suffered from the English under Cromwell, on the same field; and in 1745 the battle of Prestonpans occurred, between the forces of the Pretender and the English under Sir John Cope, since which time it has enjoyed uninterrupted peace.

The county is in the synod of Lothian and Tweeddale, and comprises the presbyteries of Dunbar and Haddington, with twenty-four parishes. In civil matters, the district, for a very long period, was merely a constabulary subject to the jurisdiction of the sheriff of Edinburgh; but in the reign of James II. of England and VII. of Scotland, it was erected into an independent county. It contains the three royal burghs of Haddington (the county town), Dunbar, and North Berwick; and the populous villages of Prestonpans, Tranent, Aberlady, Belhaven, Ormiston, Dirleton, Stenton, Tynninghame, Cockenzie, East Linton, Gifford, and Salton, with numerous smaller villages. Under the act of the 2nd and 3rd of William IV., the county returns one member to the imperial parliament.

The SURFACE is varied. Towards the shores of the Firth of Forth it is nearly level; but it rises by gentle undulations towards the south, for some distance, into ridges of moderate elevation, which extend from east to west, and increase in height as they approach the southern boundary, where they form part of the Lammermoor hills. These hills, on the south-east subside for a considerable extent into a level plain, and on the west into the fruitful valley of the Tyne, between which and the Firth are some hills of inferior height. The principal heights on the ridges are the Gunlane and Garleton hills; and from the open plain rise two conical hills, at a distance of seven miles from each other, one of which, called North Berwick Law, has an elevation of 800, and the other, called Traprain Law, of 700 feet above the level of the sea. The chief rivers are the Tyne and the Peffer. Rising in Edinburghshire, the Tyne flows in an eastern direction, through the pleasant vale to which it gives name, and turning numerous mills in its course, falls into the sea at Tynninghame. The Peffer, a much smaller stream, has its source in the northern part of the county, and passing through a tract of level ground in two different directions, east and west, falls into the sea in the parish of Whitekirk on the east, and into Aberlady bay on the west. The Salton and Gifford waters are tributary to the Tyne; while Beltonford burn, which has its source in the parish of Garvald, after a course to the north-east, flows into the sea at Belhaven bay, to the west of Dunbar harbour.

About two-thirds of the land are arable, and the remainder meadow and pasture, with some extensive woodlands and plantations. Though various, the soil is generally fertile; and the system of agriculture is in the highest state of improvement. The crops are wheat, oats,

barley, peas, beans, potatoes, and turnips: wheat is the staple crop; the turnip crops are said to surpass those of any other part of the kingdom, and the county has long been distinguished for the excellence of its agricultural produce in general. The farms vary from sixty to 250 acres, and are under very skilful management: the lands are well drained and inclosed, and abundantly manured; the buildings and offices, also, are substantial and commodious. On the several farms are threshing-mills, many of them driven by steam. The Lammermoor hills afford good pasturage for flocks of sheep, mostly of the Cheviot breed, and partly of the black-faced; the cattle are partly the short-horned, but chiefly of the Highland breed. The substrata of the Lammermoor district are of the transitional, and those of the lowlands of the secondary, formation. Coal is found in the west, and limestone of the finest quality is abundant. Ironstone clay, and clay of good quality for bricks, occur in various parts of the county; and sandstone of compact texture for building, and trapstone for the roads, are quarried to a great extent. About 6000 acres are occupied by woods and plantations, which are in a very thriving state; and at Tynninghame are some remarkably fine hedges of holly, one of which is twenty-five feet in height, and thirteen feet in width. It is worthy of mention, that the first manufactory in Britain for the weaving of holland was established in this county, and that the first mill erected in Scotland for the preparation of pot-barley was at Salton. The county is, however, almost wholly agricultural, the manufactures carried on being unimportant: draining tiles are made; and there are some distilleries and breweries, with a few other works. The making of salt was once carried on to a great extent at Prestonpans; but it is now very much diminished. A herring-fishery off the coast employs about 300 boats during the months of August and September, accommodation being found in the harbour of Dunbar. Facility of communication is afforded by the North-British railway; and also by good roads, constructed under various acts of parliament, and kept in repair by commissioners. The railway passes through a country of undulating surface, richly cultivated, and agreeably diversified with hills and valleys, patches of wood, villages, and hamlets. Some fine and extensive views are obtained from the line: during a great part of its course, it forms a sort of shelf or terrace along a surface gently sloping to the sea; and excepting at a few deep cuttings, the traveller is seldom out of sight of the Firth of Forth, the coast of Fife, and the German Ocean. The annual value of real property in the county is £258,743, of which £221,714 are returned for lands, £31,558 for houses, £4908 for mines, and £563 for quarries. There are numerous remains of antiquity, consisting of mounds, encampments, and the ruins of ancient castles, abbeys and other religious houses, all which are noticed in the articles on the several parishes.

HAGGS, for a time a quoad sacra parish, in the parish of DENNY, county of STIRLING, 2 miles (S. S. W.) from Denny; containing 1905 inhabitants, of whom 431 are in the village. It occupied the southern portion of the parish of Denny, from which it was separated for ecclesiastical purposes under act of the General Assembly, in 1840. The village, which is situated on the road to Glasgow, consists of several houses of two stories, roofed with slate, some detached and pleasing cottages, and a

neat row of small houses near the coal-works, at the eastern extremity of which is a large building appropriated as a storehouse. The inhabitants are chiefly employed in the collieries in this part of Denny, and in the various manufactures in the neighbourhood. Facility for the conveyance of the produce of the mines is afforded by the Forth and Clyde canal, and by railways. The district is not remarkable for any beauty, or in an agricultural point of view: the surface is destitute of timber, and the scenery consequently of dreary aspect; the soil is generally thin and cold, and the system of husbandry in a very imperfect state. Hags is ecclesiastically in the presbytery of Stirling, synod of Perth and Stirling. The church, which was opened in 1840, was erected chiefly through the instrumentality and exertions of the Rev. John Dempster, minister of Denny, and the co-operation and assistance of William Forbes, Esq., of Callendar, M. P. for the county; it is a handsome and substantial structure, containing 700 sittings. The minister, who is chosen by the male communicants, derives his stipend from seat-rents and contributions of the congregation, no permanent endowment having been established. A school in the village is supported by the General Assembly.

HAILES-QUARRY, a village, in the parish of COLINTON, county of EDINBURGH, $\frac{3}{4}$ of a mile (N. W. by W.) from Colinton; containing 158 inhabitants. It is situated in the south-eastern part of the parish, on the road from Edinburgh to Currie; and has the adjunct to its name from a considerable stone-quarry, the material of which is of a slaty quality, and divides easily into thin portions, excellent for pavements, lobbies, and steps. The quarry is wrought to a great depth, and is very productive. In one year, 1825, when building in Edinburgh was pushed to some extent, it yielded its proprietor, the late Sir Thomas Gibson Carmichael, Bart., a rent of £9000. Hailes was anciently the name of the parish.

HALBEATH, a village, in the parish and district of DUNFERMLINE, county of FIFE, 3 miles (N. E.) from the town of Dunfermline; containing 461 inhabitants. This village is inhabited chiefly by persons employed in the extensive colliery in the neighbourhood, the produce of which is conveyed to the port of Inverkeithing, where it is shipped.

HALFMORTON, a parish, in the county of DUMFRIES, 6 miles (N. W.) from Longtown; containing 737 inhabitants. This place derives its name from its having formed part of the ancient parish of Morton, on the suppression of which in the early part of the seventeenth century, one-half was merged in the parish of Canobie, and the other, named Halfmorton, though it still remained as a parish *quoad civilia*, was ecclesiastically united to the parish of Wauchope. On the subsequent erection of Wauchope and Staplegorton into the present parish of Langholm in 1703, the minister of that parish officiated only every fourth Sunday at Halfmorton, which in 1839 was consequently disjoined from Langholm by a decree of the Court of Teinds, and erected into an independent parish. It is situated in the south-eastern part of the county, and is bounded on the east by the river Sark, which separates it from Cumberland. The parish comprises an area of about 5700 acres, of which 125 are woodland and plantations, 400 moss, and the remainder chiefly arable, with a due proportion of meadow and pasture. Its surface is agreeably diversified, and the scenery

embellished with thriving plantations. The Sark is the principal river, and a small stream called the Logan flows through the parish: in both these are found trout, but not in great abundance.

The soil along the banks of the river is deep and rich, and the arable grounds produce valuable crops: there are considerable tracts of peat-moss. The system of agriculture is improved, and the lands have been drained and partly inclosed. On the pastures are kept sheep of the Cheviot breed, and black-cattle; a considerable number of horses are reared in the parish, mostly for agricultural uses, and on some of the farms great numbers of swine are fed. The substrata are chiefly red sandstone, clay, and gravel; and limestone is found in several places. The annual value of real property in the parish is £3176. The only approximation to a village is the small hamlet of Chapelknowe, in which the church is situated. A few persons are employed in hand-loom weaving for the manufacturers of Carlisle. There are a subscription library, and a library belonging to the church. Facility of communication is afforded by roads kept in good order by statute labour. Ecclesiastically the parish is within the bounds of the presbytery of Langholm, synod of Dumfries: the minister's stipend is about £200; patrons, the Crown, and the Duke of Buccleuch, alternately. Halfmorton church, a plain structure built in 1744, has been lately enlarged. There is a place of worship in connexion with the Free Church. The parochial school is well conducted; the master has a salary of £25. 13., with a house and garden, and the fees average £30. There are no remains of the ancient church of Morton; but the churchyard is still used.

HALKIRK, a parish, in the county of CAITHNESS, 7 miles (S. by E.) from Thurso; containing 2963 inhabitants, of whom 236 are in the village. This place, the name of which is of very uncertain origin, includes the ancient parishes of Halkirk and Skinnet, supposed to have been united soon after the Reformation. It is evidently of remote antiquity, and was one of the seats of the Harolds and Sinclairs, Earls of Caithness, of whose baronial castle there are still considerable remains on the north bank of the river Thurso. On the opposite bank of that river was one of the residences of the Bishops of Caithness and Sutherland, of which, however, not the slightest vestige can now be traced. The only event of historical importance connected with the place, is the assassination of one of the bishops by some ruffians who were supposed to have been employed for that purpose by the Earl of Caithness, in revenge for an additional assessment imposed by the bishop on his lands. The perpetrators of this inhuman murder were afterwards discovered, through the strenuous exertions of King Alexander II., by whose special order they were sentenced to punishment.

The PARISH is situated nearly in the centre of the county, and measures about twenty-four miles in length and from three to twelve in breadth, comprising an area of 74,000 acres, of which 6000 are arable, nearly an equal number meadow and pasture, and the remainder moorland, water, and waste. Its surface is generally level; the only hill of any considerable elevation is that of Spittal, about three miles to the south-east of the church, and partly in the parish of Watten. There are not less than twenty lakes, of which the most extensive are Loch Calder in the north, and Loch More

in the south; the former is three miles and a half in length and nearly a mile in breadth, and the latter of about equal extent. The rivers are, the Thurso, which, issuing from Loch Morc, flows through this parish and that of Thurso, and falls into the sea at Thurso bay; and the Forss, which partly bounds this parish on the north-west, and joins the sea at Forss, in the parish of Thurso. Salmon and trout are found in both these rivers; and trout of various kinds are taken in the larger, and also in the smaller lakes, and in the various streams that issue from them into the river Thurso.

The soil is various, in many parts a clayey loam; and though generally wet and cold, resting on a clayey subsoil, it has been greatly improved by the use of lime and marl. The chief crops are oats, barley, and bear. The system of husbandry has been gradually advancing, and some considerable tracts of moor and moss have been drained, and brought into cultivation; the farm-houses and offices are in tolerable condition; and the lands have been partly inclosed. In this parish the pastures are luxuriantly rich; and considerable numbers of sheep chiefly of the Cheviot breed, and cattle of the Highland breed and crosses from the Teeswater and Ayrshire breeds, are reared, and sent to Thurso and Wick, whence many are forwarded by steam to the English markets. The annual value of real property in the parish is £6052. The moors abound with game, consisting principally of grouse, hares, snipes, and partridges; and certain portions are leased out by the proprietors, producing a rental of £500 per annum. There are but scanty remains to be seen of ancient wood; and though a few plantations have been made around the houses of some of the proprietors, they are not in a very thriving state, the soil and climate being unfavourable to their growth. The principal substrata are flagstone, limestone, and freestone; and coal and lead-ore have also been found, the latter of which was wrought by the late Sir John Sinclair, of Ulbster, Bart. There are quarries of flagstone for paving wrought at Spittal, the produce being sent to Leith and Aberdeen for exportation. Several handsome and substantial houses have been erected in various parts, inhabited by some of the principal farmers, but no seat requiring particular description. The village is neatly built; it contains a good inn, and has a friendly society with funds amounting to £300. A cattle-market, called St. Magnus', is held in the village on the third Tuesday in December; and another, called Georgemas, takes place on the last Tuesday in April and in July, on the hill of Ruggy, partly in the parish. Facility of communication is maintained by several good roads, and by two bridges over the river Thurso, one near the village, and the other at Dale, both which are substantial structures; also by a bridge of wood at Dirlot. The turnpike-road to Thurso passes for nearly a mile through part of the parish.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Caithness, synod of Sutherland and Caithness. The minister's stipend is £205. 19., with a manse, and a glebe valued at £8 per annum; patron, Sir James Colquhoun, Bart. Halkirk church, erected in 1743, and enlarged in 1833, is situated in the village, and is a neat plain structure containing 858 sittings. There is a missionary chapel at Achrenny, with 403 sittings; the minister has a stipend of £50 from the Royal Bounty, with a house and garden,

and pasture for a horse. In addition to this, he receives £45 from the inhabitants of Halsary in the parish of Watten, and Halladale in the parish of Reay, where, also, there are missionary stations at which he officiates. The parochial school is well conducted; the master has a salary of £34, with a house and garden, and the fees average about £5 per annum. There are several Picts' houses and remains of ancient chapels in the parish, the latter consisting of those of St. Thomas at Skinnet and St. Magnus at Spittal, the walls of which are still tolerably entire. Some remains of a third existed, at Banniskirk; but they have totally disappeared under the operation of the plough. There were other chapels in the parish. Of the remains of the castle of Braal, the seat of the Earls of Caithness, the more ancient portion is a tower, whose walls, of great thickness, are still remaining to the height of thirty-five feet; within the eastern wall is a staircase, leading to the summit. The more modern portion, which, from the difficulty of carrying the materials, was never completed, consists only of the ground-floor, 100 feet in length and fifty feet wide, divided into six vaults. There are also remains of castles at Dirlot and Loch More: the former, said to have been erected by the Sutherlands, is situated on the summit of a detached rock rising abruptly to the height of fifty feet, from the river Thurso, by which it was at one time surrounded. The latter was built by Ronald Cheyne, in the fourteenth century, in a district selected as abounding with deer. There are several springs supposed to possess mineral properties; but they have not been properly analysed.

HALVERA, or HAVERA, an isle, in the parish of BRESSAY, BURRAY, and QUARFF, county of SHETLAND; containing 37 inhabitants. It lies about two miles southward of Burra island, and half a mile, in the same direction, from West Burra; and at the entrance to Cliff sound. The isle is of small extent, and has the appearance of a high rock: the access to it is by a romantic kind of creek; and the houses seem built in dangerous situations on the brink of a precipice. There is a smaller isle, called Little Halvera.

HAMILTON, a parish, burgh, and market-town, in the Middle ward of the county of LANARK; including the village of Fernigair, and containing 10,862 inhabitants, of whom 8876 are in the town, 11 miles (S. E. by E.) from Glasgow, and 38 (W. S. W.) from Edinburgh. This place appears to have been distinguished at a very early period as a royal residence, under the appellation of Cadzow, of which name, however, the origin and signification are now unknown. In 1153, and also in 1289, the monarchs held their courts here; and it continued to be a royal manor till the battle of Bannockburn, immediately after which it was conferred by Bruce upon Walter Fitzgilbert de Hamilton, ancestor of the present ducal family of that name, in whose possession it has ever since remained. In 1445, James II., by charter dated the 3rd of July, created James, then proprietor of the estate, first Lord Hamilton; and erected the manor of Cadzow into a barony, which took

Burgh Seal.

its name from the family of its possessor. In the year 1474, Lord Hamilton married the Princess Mary, eldest daughter of the king, and widow of the Earl of Arran, by virtue of which alliance his descendants were, after the death of James V., recognised by parliament as heirs of the Crown in the event of the death of Mary, Queen of Scots. On their accompanying that princess into France, they were created Dukes of Chatelherault in that kingdom; and they were subsequently made Dukes of Hamilton by Charles I., and Dukes of Brandon in England by Queen Anne.

Few events of historical importance have occurred to distinguish the town. A conflict took place in 1650 between the army of the Covenanters, consisting of 1500 horse under the command of Colonel Kerr, and the forces of General Lambert sent against them by Cromwell, when, after an obstinate resistance, in which Kerr and 100 of his men were killed, the Covenanters were dispersed. In 1679, a body of Covenanters defeated a detachment of the king's troops at Drumclog, in the neighbouring parish of Avondale: this happened on Sunday, the 1st of June, the Covenanters having assembled for worship; and in consequence of the success then gained, their numbers increased to about 4000. They marched to Glasgow with the intention of making themselves masters of that city, but being repulsed with the loss of several killed and wounded, they fell back upon Hamilton, where the more moderate drew up what is called the Hamilton Declaration. Weakened by internal divisions, and having lost the prestige of success acquired at Drumclog, they encamped on the 22nd of June at Bothwell moor, between the river Clyde and the town of Hamilton, from which position they were dislodged by the royal army under the Duke of Monmouth, being defeated with the loss of many killed, and 1200 of their number who were taken prisoners. In 1774, an accidental fire broke out in the town, which, raging for several days with unabated violence, reduced a considerable portion of it to ashes.

The town is situated on a tract of elevated ground, about a mile from the confluence of the Avon with the Clyde, and considerably to the west of the ancient town, of which the only remains now existing are a small portion of an out-building belonging to the old hall in the pleasure-grounds of Hamilton Palace. It is intersected by the Cadzow burn, over which is a noble bridge of three arches, and by the roads leading to Glasgow and Edinburgh, on the line of the latter of which an elegant bridge of five arches was erected over the Clyde, by act of parliament, in 1780. Across the same river is Bothwell bridge, a very ancient structure on the road to Glasgow, of which the date is unknown, and which was lately widened and repaired: Bothwell bridge was the scene of the fight between Monmouth and the Covenanters, in 1679. A handsome bridge has been built over the Avon, on the London road; and across the same river is an ancient bridge of three arches, built by the monks of Lesmahagow. The houses are in general well built, and some additional houses have been lately erected. The streets are lighted with gas by a company of proprietary shareholders, who erected works for the purpose upon a very elegant plan: a company, also, has been formed to supply the town with water. A public library, supported by subscription, was opened in 1808, chiefly under the auspices of Dr. John Hume, which lately con-

tained more than 3000 volumes; and a mechanics' institution was established within the last few years. The cavalry barracks occupy a large area surrounded with a wall, and comprise a riding-room, and an hospital, with stabling and the other usual accommodations. There are three masonic lodges, two gardeners' societies, and several building and friendly societies. Considerable improvements have taken place in the town by the formation of new streets. The market is on Friday; and five fairs are held in the year, which were formerly great marts for lint and wool, but at present are little more than large markets: two additional fairs or markets for cattle and the hiring of servants have been established with much success. The market for butchers' meat and the shambles are situated nearly in the middle of the town, on the bank of the Cadzow burn; the buildings are neat, and well adapted to the purpose.

A very considerable TRADE was formerly carried on here in malt, under the direction of the Society of Maltsters: this society is still kept up for convivial purposes, but the trade has altogether declined. The linen trade, also, which formed at one time almost the staple business of the place, has been wholly discontinued. The cotton trade, on its first introduction, flourished here for some years, and the town became the principal seat of the district for the weaving of imitation or Scotch cambrics. This branch of trade has been on the decline since 1792, but is still considerable, and affords employment to many of the inhabitants: there are at present about 1300 looms in the town, and fifty in the rural districts of the parish; and many females are engaged in winding and in tambouring. The old lace manufacture, introduced by one of the Duchesses of Hamilton, has for many years been decaying, and is now almost extinct. A new manufacture of lace, introduced some years since by a firm from Nottingham, is at present the most flourishing trade of Hamilton, and gives occupation to nearly 3000 women in the town and neighbourhood. The principal productions are, tamboured bobbinets, and black silk veils of various patterns, with other articles, for which there is a large and still increasing demand, for the markets of England, America, and the British colonies. Many very respectable houses are engaged in this trade, which, since its introduction here by Mr. Galloch, has been much improved. Large quantities of check shirts are also made in the town, and exported to Australia: the weaving of stockings is carried on to a limited extent; and the tanning of leather, at one time extensive, is conducted on a very small scale. Great facility of intercourse is afforded by the Glasgow and Hamilton section of the Caledonian railway.

The present town, though not the original one, and though the larger part of it is comparatively modern, is of considerable antiquity, having in the reign of James II. been erected into a burgh by charter of that monarch, granted in 1456. In 1548 it was created a ROYAL BURGH by Queen Mary; and it continued to enjoy its privileges as such till 1670, when the inhabitants forfeited their rights by disuse, and accepted a new charter from Anne, Duchess of Hamilton, by which it became merely the chief burgh of the duchy of Hamilton. This charter, also, is now superseded by the late Municipal Corporations' act, by which the government is vested in a provost, three bailies, a treasurer, and a council of seven, assisted by a town-clerk and other officers. The provost

and bailies are elected annually from the council, four of whom go out of office by rotation, every year, when four new ones are chosen by the qualified electors; the treasurer and the town-clerk are appointed by the corporation. Both the provost and the bailies are justices of the peace, by virtue of their office, with power to hold courts for the determination of all claims in actions of debt, and for the trial of all criminal cases not extending to life or limb, within the burgh. They used occasionally to hold a court for the recovery in a summary form of debts under forty shillings, but this court, from a doubt of its legality, has fallen into disuse: they still hold weekly courts for the recovery of debts and for civil actions to an unlimited amount, in which the town-clerk acts as assessor; and also police courts for the trial of misdemeanors and other offences not capital. On the back of the burgh seal is the inscription, "Hamiltoun 1695". The elective franchise was granted by act of the 2nd and 3rd of William IV.; and the burgh has from that time, in conjunction with Lanark, Falkirk, Linlithgow, and Airdrie, returned one member to the imperial parliament: the right of election is vested in the proprietors or tenants and occupants of houses of the yearly value of £10 and upwards. The former court-house and prison, erected at the cross in the reign of King Charles I., were lately taken down; and the old town-hall was also disused. A new town-hall with public offices and a prison, the first stone of which was laid in 1834, has been built in lieu. It consists of a distinct range of building two stories high, comprising on the ground-floor a court-room thirty-seven feet long and thirty-two feet broad, three apartments for the sheriff's clerk, a record-room, and three rooms for the town-clerk, with an apartment for the sheriff-substitute, and another for the county procurator-fiscal: in the upper story are a large hall for county meetings, and other apartments. Behind is the prison, three stories high, containing forty-five cells, with a spacious day-room for debtors, and day-rooms for criminals; the lower part is appropriated as a bridewell, and the upper part to debtors. Between the public offices and the prison is the house of the governor, with requisite apartments, and a bath for the use of the prison. The trades' hall, in Church-street, erected in 1816, is a neat and appropriate building, comprising in the upper part a hall for the meetings of the trades, and in the lower a well-arranged tavern. The annual value of real property in the parish is £38,181.

The PARISH extends nearly six miles in length, and is almost of the same breadth; being bounded on the north and north-east by the river Clyde, on the south and south-west by the parish of Glassford, on the east by the parishes of Dalziel, Cambusnethan, Dalserf, and Stonehouse, and on the west by Blantyre. It comprises 14,240 acres of land, of which about 8000 are arable and of good quality, 2000 woodland, and 2040 unprofitable or waste. The surface is generally level, occasionally varied with sloping ridges, but not rising into hills of any considerable elevation. The most fertile lands are the extensive vales on the south-western bank of the Clyde, where the soil is a deep rich loam; and on the north-eastern side of that river are a few hundred acres belonging to this parish, though they would seem to be more properly within that of Dalziel, which nearly surrounds them. In the middle of the

parish the soil rests upon yellow clay, and is less fertile than in the valleys near the Clyde; the higher parts of the parish consist chiefly of gravel and sand, and are comparatively unproductive. The substrata are principally sandstone rock, appearing in great masses that are from under fifty to more than 300 feet in thickness; whinstone also prevails in some parts, and coal, limestone, and ironstone are found. The several strata of coal vary from twenty to twenty-four feet in average thickness. In this district the limestone is of various quality; that obtained in the south-west is excellent, and much used for building and also for agricultural purposes. The ironstone is found in seams about eighteen inches thick, and also in masses varying from very minute balls to others several inches in diameter, chiefly in the clay near the strata of coal. As yet the coal and limestone only have been wrought.

Among the crops produced are, wheat, which is grown on all the lands near the Clyde, and also on some few of the higher lands; and oats of various descriptions, of which the Polish, Essex, and Friesland species are predominant. Peas and beans are chiefly raised on the lower grounds. Barley, formerly more largely cultivated, is now seldom sown, except for preparing lands for artificial grasses; potatoes are produced in great quantities, and of good quality, and a little flax for domestic use. The system of agriculture, though varying in different parts, is generally advanced; there are some considerable dairy-farms, and much attention is paid to the breeding of cattle, in which many improvements have taken place within the last few years. Great improvement has also been made in draining and inclosing the lands; the fences are chiefly hedges, and are mostly well kept up. The pastures, especially in the low grounds bordering on the Clyde, are fertile; and attached to a few of the farms, and even to some of the houses in the town, are orchards which abound with fruit. Of late years, since fruit became so cheap, much less attention has been bestowed upon its cultivation here. There are various tracts of woodland in the parish, the principal of them being Bar-Michael wood near Bothwell bridge, Ross wood on the river Clyde, and Hamilton wood on the Avon and the Barncluith burn. Forest-trees of every kind thrive well, particularly on the lower lands. Oak is very prevalent, and many of the older trees have attained considerable size, several of those in Hamilton wood, said to be the remains of the ancient Caledonian forest, measuring thirty-six feet in girth. Larch and Scotch fir also thrive; and the banks of the rivers, where they have any elevation, are crowned with luxuriant foliage. Silver and spruce fir are grown with success; and the cedar of Lebanon has attained a tolerable size where it has been planted. In Hamilton wood are still preserved the famous breed of Scottish wild cattle, milk-white in colour, with black muzzles, horns, and hoofs. Freestone is found in several parts of the parish, of a good quality for building; and at present about fifty men are constantly employed in the various quarries.

The principal river is the Clyde, which rises in the heights of Crawford, and begins to bound the parish some miles below the falls at Lanark; it expands into a breadth varying from eighty to 100 yards, and is subject after rains to frequent inundations, by which the lands have at different times been much injured. The river Avon also, or Evan, as it is sometimes written,

intersects the parish, receiving in its course six tributary streams; and there are three other streamlets or burns, which fall into the Clyde. The Avon rises on the west, near the borders of the county of Ayr, and after a picturesque course of several miles through the dale to which it gives name, enters the parish at Millheugh bridge, and a little below flows through a defile bounded on each side by majestic rocks of romantic aspect, rising to the height of 200 or 300 feet, and richly clothed, in some parts almost to their summits, with stately and venerable oaks. Nearly in the centre of this defile are the remains of Cadzow Castle, seated on a rock ascending perpendicularly to the height of 200 feet above the level of the river; and on the opposite bank is the banqueting-house of the Duke of Hamilton, built after the model of Chatelherault, from which it takes its name. Not far from the extremity of the chasm, and about three miles from the entrance, are the gardens of Barncluith, the property of Lord Ruthven, rising in terraces from the western bank of the river, which, after forcing its way through this rocky channel, flows along the fertile valleys of the parish, and falls into the Clyde near Hamilton bridge. Of the several other streams that intersect the parish the principal are, Cadzow burn, which rises in Glassford, and after running through the town, falls into the Clyde at a short distance below Hamilton bridge; and Barncluith burn, which joins the Avon about half a mile from the town. The latter burn flows through Hamilton wood, forming in its way five or six falls, varying from five to six feet in height, and adding greatly to the beauty of the scenery. Both the Clyde and the Avon abound with fish, of which salmon, trout, par or samlet, silver-eels, and minnow are the most common; and pike, perch, lampreys, and roach are occasionally found: roach are the most uncommon.

HAMILTON PALACE, the seat of his grace the Duke of Hamilton, situated on the borders of the town, about half a mile westward of the confluence of the Avon and the Clyde, was originally a square tower of very small dimensions. The more ancient part of the present mansion was built in 1590, and nearly rebuilt about the year 1720; considerable additions have been made to the building since 1822, and at present it is one of the most splendid structures in the kingdom. Its north front is 264 feet in length, and three stories in height, with a stately portico of duplicated Corinthian columns, each thirty feet high, three feet in diameter, and formed of one single block, and the column together supporting a triangular pediment. To the west is a wing 100 feet in length, appropriated for offices and servants' apartments; and in the rear of the building is a corridor of recent addition, in which are baths and various appendages for the use of the family. The entrance hall is lofty, and richly embellished; and the state apartments, which are extremely spacious, are magnificently decorated throughout, and ornamented with sculpture. The dining-room is seventy feet in length and thirty feet wide, and has numerous embellishments, among which is a tripod of exquisite beauty standing on a pedestal of African marble: the other apartments, also, abound with costly vases, cabinets, specimens of mosaic, gems, and other rare and interesting curiosities. The gallery, which is 120 feet long, twenty feet wide, and twenty feet high, contains an extensive and very valuable collection of paintings by the most eminent masters of the

Italian and Flemish schools, and many family portraits. At the upper end is the throne used by his grace when ambassador at the court of Petersburg, and on one side of it is a bust of Augustus, and on the other one of Tiberius, both of oriental porphyry: at the opposite end of the gallery is a beautiful door of black marble, surmounted by a pediment supported on two pillars of green porphyry. The library contains a large collection of well-assorted volumes, and of prints, the latter alone being valued at £10,000. There are some stables, built between the palace and the town, on a scale adapted to the style of the palace; and the grounds abound with stately timber, and with every variety and beauty of scenery. The banqueting-house of Chatelherault was erected in 1732, by the then duke, after a model of the citadel of that name in France; it is built of red freestone, and decorated with four square towers, and, with its numerous pinnacles and other ornaments, forms a conspicuous object on the eastern side of the river Avon. Among various interesting works of taste it contains a small but choice collection of paintings; and the grounds, in which is an extensive flower-garden, are tastefully embellished. Earnock House, a seat in the parish, formerly belonging to the ancient family of Robertson, is beautifully situated in its western part, on an elevated site surrounded with flourishing plantations; the house is of modern erection, well adapted for its purpose, and the gardens and pleasure-grounds are agreeably laid out. Ross is a spacious mansion, situated in grounds comprehending much agreeable scenery: Nielsland is also a handsome residence, with an extensive demesne; and there are some good houses at Fair Hill, Grovemount, Edlewood, and Fairholme. Of Barncluith the principal feature is the gardens previously noticed; and many of the ancient seats of different branches of the Hamilton family have become farm-houses. The chief landed proprietor is the Duke of Hamilton, who owns more than one-half of the parish.

Hamilton parish formerly comprised the chapelry of Machan, now the parish of Dalserf; and it also appears that the church was granted by David I., together with the lands belonging to it, to the abbey of Glasgow, and was afterwards appropriated to the deanery of that see. The parish is within the bounds of the presbytery of Hamilton, synod of Glasgow and Ayr. There are two ministers, the first of whom has a stipend of about £314, whereof £2. 15. arise from a bequest for communion elements; £107. 10. are allowed by the Duke of Hamilton in lieu of manse and glebe: the second minister has a stipend of rather less amount, with a manse, but no glebe. The church was made collegiate under the influence of the first Lord Hamilton, in 1451; and a new church was consequently built, which was finished in April 1462: it was endowed for a provost and eight prebendaries, and contained a chapel dedicated to the Virgin Mary, for which a chaplain was appointed. This building, which was of hewn stone, consisted of a nave, choir, and transepts, of elegant design, and continued till 1732, when it fell into decay, since which time it has been greatly dilapidated, nothing of it now remaining but one of the transepts, still used as a burying-place for the Hamilton family. The present parish church, situated in the southern part of the town, is a handsome structure of circular form, erected after a design by the elder Adam, architect; and is adapted to a congregation

of 800. A second church in connexion with the Establishment, and capable of containing 1021 persons, was some years ago erected by subscription; it was known as St. John's church, and was occupied by the minister of the second charge, until the Disruption of the Church of Scotland, when it was appropriated by the members of the Free Church for their own use. There are several congregations of the United Presbyterian Church; also places of worship for Independents and others. The Episcopalians in Hamilton and its neighbourhood have lately formed themselves into a congregation, and there is also a congregation of Roman Catholics, who purchased ground a few years ago for the erection of a chapel. The grammar school is of ancient origin, and in 1588 was endowed by Lord John Hamilton with £20 Scotch per annum; it affords a liberal education to about forty children, and is under the patronage of the corporation. The master's salary is £34, and the fees on the average amount to £60: the school-house is a venerable building, nearly in the centre of the town. The Duke's Hospital, for a certain number of aged men, was originally built in the old town, but was removed to the present; it is an ancient building with a belfry, situated near the Cross, and was formerly inhabited by the pensioners, but has for some years been let out, and the receipts applied to their use along with the ordinary proceeds. An hospital was built in 1775, in Muir-street, by William Aikman, Esq., for four aged men, who have each a residence in the building, with a certain endowment. Mr. John Rae bequeathed to the town council a sum of money which, together with some bequests by other benefactors, produces an annual interest of £9. 2. 4., distributed among poor housekeepers according to the will of the testators. Mr. Robertson, of this town, and sheriff-clerk of Lanark, in conjunction with Mr. Lyon, left £4 per annum for nine aged men; and Miss Christian Allan, in 1785, left to the Kirk Session £50, in trust for the benefit of the poor. Mr. William Torbuett bequeathed to the same trustees an orchard that lets at £10 per annum; and they have also a legacy of £50, the interest of which is divided among five female housekeepers named by them; another legacy of £50, of which only £30 were paid, for clothing the indigent poor; and a donation of £100, the interest of which is applied to the instruction of twelve children. Another bequest has been made recently.

Among the ANTIQUITIES in the parish, the most conspicuous are the remains of Cadzow Castle, previously noticed as occupying the summit of a precipitous rock rising from the river Avon, in Hamilton woods. It has been repaired at various times. The keep, with the fosse around it, a narrow bridge over the fosse, and a well within the walls, are still in good preservation; and several vaults, with part of the walls of the chapel, may yet be distinctly traced. Dargaber Castle, in the south-east of the parish, supposed to have been founded by Thomas, son of Sir John de Hamilton, lord of Cadzow, occupied an elevated site at the extremity of a point of land near the confluence of two rivulets: the only remains are, portions of the foundations, which appear to have consisted of flat unhewn and uncemented stones; and some vaults, that seem to have been constructed at a much earlier period. At Meikle Earnoch, two miles south of the town, is a tumulus about twelve feet in diameter, and eight feet high, which appears to have

been originally of larger dimensions. On opening it several urns were found, containing human bones nearly reduced to ashes; they were all of baked earth, without inscription, but some of them were decorated with mouldings. Near Meikle Earnoch, in a field on the lands of Stonehall, is a small mound called the Martyr's Grave, which is regarded with much veneration by the country-people: it has always been left untouched by the plough, and is said to mark the place where one of the Covenanters was buried. To the north of Hamilton Palace is a mount supposed to have been in remoter ages a seat for the administration of justice; it is about thirty feet in diameter at the base, and fifteen feet high, and near it is a stone cross four feet in height, without inscription. This cross is thought to have been the market cross of the old town, called Netherton, which, previously to the erection of the upper or present town of Hamilton, occupied this part. In the south of the parish is a portion of a cromlech, consisting of one stone of about six feet, which, having declined greatly from its erect position, was replaced by the tenant of a neighbouring farm. The celebrated Dr. Cullen was born in this parish in 1714, and for several years was a magistrate of Hamilton. The father of the late Professor Millar, of Glasgow, was parochial clergyman here; as was also the father of the late Dr. Baillie, of London, and of his distinguished sister, Joanna Baillie.

HANDA, an island, in the parish of EDRACHILLIS, county of SUTHERLAND; containing 65 inhabitants. It is situated off the western coast of the county, and separated from the main land of the parish by a narrow sound; and is about a mile square. On the north, one vast perpendicular rock, or majestic cliff, 600 feet in height, presents its face to the sea, and is the habitation of innumerable sea-fowl during the season of incubation; on the south the isle is much lower, and the ascent gentle and easy. It has some fertile spots, producing corn and hay, but is principally appropriated to sheep-walks. Fishing is the chief employment of the population, who also obtain by fowling, and frequently by daring exploits, great quantities of birds and eggs, as well for disposal to their mainland neighbours, as for their own subsistence. This was once the residence of Little John Mac Dhoil Mhich Huishdan, one of the Maeleods of Assynt, and the murderer of Judge Morison, of Lewis, in the reign of James VI.

HANGINSHAW, a village, in the parish of CATHCART, Upper ward of the county of RENFREW, 1 mile (N. N. E.) from Catheart; containing 143 inhabitants. It is seated in the eastern part of the parish, and a short distance east of the road from Catheart to Glasgow: the Cart water flows south of the village.

HARDGATE, a village, in that part of the parish of OLD KILPATRICK which formed the quoad sacra parish of DUNTOCHER, county of DUMDARTON, 2 miles (E.) from Old Kilpatrick; containing 467 inhabitants. This is one of numerous thriving villages which have sprung up in this great manufacturing district within the present century. It arose from the erection of the mill here, in 1831, for spinning and weaving cotton, by Mr. Dunn, a large proprietor of land in this quarter, and the enterprising founder of several other mills and works in the vicinity. The villages of Hardgate, Duntocher, Faifley, and Milton, in which Mr. Dunn has considerable establishments, are all within less than a mile of each other,

and border on the Firth of Clyde, which flows on the south of the parish.

HARDGATE, a hamlet, in the parish of URR, stewardry of KIRKCUDBRIGHT, $5\frac{1}{2}$ miles (N. E.) from Castle-Douglas; containing 46 inhabitants. It lies in the centre of the parish, a short distance northward of the church.

HARRAY, county of ORKNEY.—See BIRSAV.

HARRIS, a parish, in the county of INVERNESS, 44 miles (N. W.) from Portree; containing, with the islands of Bernera, Ensay, Hermitray, Killigray, Pabbay, Scalpay, Scarp, and Tarrinsay, 4429 inhabitants. The parish of Harris was till lately called Kilbride; its present name is corrupted from the Gaelic term *na hardibh*, signifying "the heights", this district being the highest and most mountainous of any in the large Hebridean island of Lewis. It consists chiefly of the southern part of that island, separated from the northern portion by an isthmus about six miles across, formed by the approach to each other of the two great harbours, Loch Resort and Loch Seaforth. The Atlantic Ocean bounds it on the west; on the east is the Minch, which separates it from the Isle of Skye; and on the south is the channel generally called the Sound of Harris, but sometimes *Caolas Uist*, or the Sound of Uist, lying between Harris and the islands of Bernera and North Uist. The parish is fifty miles in length, varies in breadth from eight to twenty-four miles, and comprises an area of upwards of 118,000 acres, of which about 107,000 are moor and pasture, 1000 subject to tillage by the plough and 7500 by the spade, 400 under plantations, and the remainder sand and rock. The shore on the west is in some parts sandy, and in others strongly marked by precipitous rocks; the eastern coast is broken with many harbours, bays, and creeks. At a small distance on the west are the inhabited islands of Tarrinsay and Scarp; on the east side is the inhabited isle of Scalpay; and in the Sound of Harris, a channel about nine miles in breadth, affording a communication for vessels between the Minch and the Atlantic, are the inhabited islands of Bernera, Pabbay, Ensay, and Killigray; with many smaller ones, uninhabited, and entirely appropriated to pasturage. The coasts abound with oysters and lobsters, and several boats are engaged in taking the latter: the sun-fish, also, is sometimes taken in the summer months, with the harpoon; and in the island of Gaasker, seals are killed in large numbers with clubs.

The mainland of the parish is divided into two distinct portions by an isthmus about a quarter of a mile in breadth, formed by an arm of the sea on each side, respectively called East and West Loch Tarbert. The northern district is prominently intersected by part of a range of mountains running longitudinally throughout the parish, and which attain an elevation of from 2000 to 3000 feet above the level of the sea. This portion is traversed by large herds of deer, which range among the hills and glens; and, though destitute of wood, is called the Forest, having at one time, as is supposed, been a royal forest. The surface of the southern portion of the parish is similar in appearance to that of the former, but marked by more moderate elevations: grouse, wild-geese, plover, and pigeons are numerous on the moors and lower grounds; and the eagle is a visitant of some of the most lofty rocks. There are fresh-water lakes and rivulets in the parish in every direction; the waters

of Lacksta, Scurt, and Obbe abound with salmon and trout. Harris is chiefly pastoral, only a very small portion, on account of the intractable nature of the ground, being capable of the regular operations of husbandry. The soil of a large part of the land in cultivation is very poor; and several of the best farms, formerly possessed by small tenants, have been consolidated, and converted into sheep-walks. The crops consist principally of oats, barley, and potatoes; the live stock are mostly black-cattle and Cheviot sheep, to the breed of which particular attention is paid. The small tenants occupy cottages of unhewn stone, cemented with clay, and covered with straw thatch, the one building in some instances serving for the family and the cows and horses. On all the larger farms are steadings of a superior order. Here is a shooting-seat belonging to the Earl of Dunmore, who is proprietor of the parish, the annual value of real property in which is £4015.

About 250 families are engaged during the summer months in the manufacture of kelp, 600 tons of which are annually prepared: attempts were made by the late proprietor to establish fishing-stations in several parts of the parish, but they all proved unsuccessful. The harbour of Scalpay, on the eastern coast, is much frequented by foreign ships; and the numerous bays and creeks are convenient places of resort for small craft. Kelp, and wool and other country produce, are sent off by sea to market; and the lobsters taken here are regularly sent by smacks to London. A packet runs twice a week in summer, and once a week in winter, between Tarbert, in Harris, and Uig, in the Isle of Skye. An annual fair is held at Tarbert, in July, for the sale of cattle and horses; the sheep graziers send their stock to the Falkirk tryst. Ecclesiastically the parish is in the presbytery of Uist, synod of Glenelg, and in the patronage of the Earl of Dunmore: the minister's stipend is £158. 6. 8., of which nearly two-thirds are received from the exchequer; with a manse, and a glebe valued at £45 per annum. A new church with 400 sittings has been lately built, the old edifice, accommodating only 250 persons, having become too ruinous for public worship. At Bernera is a government church, erected in 1829, to which a district is attached consisting of the islands adjacent to Bernera belonging to the parish. A missionary is supported at Tarbert by the Royal Bounty; the church and manse were provided by A. N. Macleod, Esq., the late proprietor, and the Earl of Dunmore has granted an excellent glebe to the missionary. His lordship, also, secures to the parish the services of a surgeon, who, in addition to his fees from the people, receives from Lord Dunmore a salary of about £70 a year. The parochial school affords instruction in Latin, in addition to the ordinary branches; the master has a salary of £30, with a house, and about £6 fees. Other schools are supported, and at Tarbert is a school maintained by the Education Committee of the General Assembly. The chief relic of antiquity is the ruin of a church at Rodil, once attached to the priory of St. Clement's, and, until it became too much dilapidated, used as the parochial place of worship.

HARTHILL, a village, in the parish of BERTRAM-SHOTT, Middle ward of the county of LANARK; containing 176 inhabitants.

HASCUSSAY, an isle, in the parish of MID and SOUTH YELL, in the county of SHETLAND; containing 42

inhabitants. Hascussay lies on the east side of Yell, in Colgrave sound, and west of the isle of Fetlar; it is one of the smaller of the Shetland group, and was formerly uninhabited.

HASSENDKAN, a sort of hamlet, in the parish of MINTO, district of JEDBURGH, county of ROXBURGH, 7 miles (W.) from Jedburgh; containing 21 inhabitants. This place is seated on a small stream of the same name. Hassendean was anciently a parish, the lands of which are now divided among the parishes of Minto, Wilton, and Robertson. After the Reformation the church and its pertinents were granted to Walter, Earl of Buccleuch. There was formerly a cell here, dependent on the abbey of Melrose; and a farm adjoining the church site continues to bear the name of the Monks' croft. The church and greater part of the churchyard have been washed away by the river Teviot, which passes on the south of the parish of Minto, and of which the Hassendean burn is a tributary. Nor is any thing more than a slight vestige now left of the ancient tower or stronghold of Hassendean.

HAUGH, a village, in the parish of MAUCLINE, district of KYLE, county of AYR, $1\frac{1}{2}$ mile (S.) from Mauchline; containing 79 inhabitants. It is seated on the north bank of the river Ayr, and has a woollen manufactory, chiefly for carpet yarn, employing about thirty persons.

HAUGH, a village, in the parish of URR, stewardry of KIRKCUDBRIGHT, $4\frac{1}{2}$ miles (N. E.) from Castle-Douglas; containing 240 inhabitants. It is situated on the Urr water, about a mile westward from the church, and is one of the four most populous villages in the parish.

HAUGH-HEAD, a village, in the parish of CAMPSIE, county of STIRLING; containing 328 inhabitants. This place is situated in the western part of the parish, and is one of several villages the population of which is engaged in the coal-mines, print-works, and print-fields of the district.

HAUGH-MILL, a village, in that part of the parish of MARKINCH which formed the quoad sacra parish of Milton of Balgonie, county of FIFE; containing 170 inhabitants. This village has risen since the erection of some mills, in 1794, for the spinning of flax and tow into canvass yarn, for which purpose they continued to be employed till 1832, when the present proprietor introduced a complete set of new machinery, for the spinning of the finer yarns for home-made liuens. In 1835, he greatly augmented the number of spindles, now amounting to 2000. The machinery is propelled by two water-wheels of forty-horse power; and from twenty-five to thirty tons of flax are consumed monthly, imported chiefly from Holland, Belgium, France, Archangel, Riga, and St. Petersburg. In 1836, a spacious bleachfield was established in connexion with the works; and these together afford employment to about 185 persons, many of whom live in cottages built upon the premises.

HAVEN, EAST, a village, in the parish of PANBRIDE, county of FORFAR, $4\frac{1}{2}$ miles (S. W.) from Arbroath; containing 145 inhabitants. This place derives its affix *East* from its relative situation with respect to another village, about a mile distant, and also on the sea-coast. It is neatly built, and is inhabited chiefly by persons engaged in the fishery, and in the trades requisite for the supply of the immediate neighbourhood. The fish

taken are lobsters, cod, haddocks, and other kinds, which are found in abundance off this part of the coast, and are sent to Dundee and other places in the vicinity, and to the London market. Great quantities of lobsters are forwarded to London, being kept alive during the passage by the free admission of sea-water into wells constructed for that purpose. The cod and haddocks are sold fresh at Dundee, and markets in the vicinity; and after the supply of the neighbourhood, many are salted, and exported to distant places. Three boats are employed in the fishery: the season for the lobster-fishing commences in the beginning of February, and usually terminates about the end of May. A considerable trade, also, is carried on here, during the summer, in the importation of coal and lime; and there are four vessels belonging to this place and West Haven, varying in burthen from about fifty to seventy tons. The village has no properly constructed harbour, but merely an open cove or landing-place, accessible to vessels of eighty tons; so that, from the want of shelter, the trade is entirely discontinued during the winter. Facility of intercourse is afforded by the turnpike-road from Dundee to Arbroath, and by the Dundee and Arbroath railway, which has an intermediate station at East Haven, a handsome structure in the Elizabethan style, furnished with every requisite accommodation.

HAVEN, WEST, a village, in the parish of PANBRIDE, county of FORFAR, $5\frac{1}{2}$ miles (S. W.) from Arbroath; containing 301 inhabitants. This village is situated on the coast, at a distance of a mile only from East Haven; and, with the exception of a small hamlet adjoining it, to the landward, is in every respect so identified with that village in its fishery, trade, and other circumstances, as to require no separate description. Easy intercourse is afforded by the Dundee and Arbroath turnpike-road, and the Dundee and Arbroath railway. The members of the Free Church have a place of worship.

HAVERA, county of SHETLAND.—See HALVERA.

HAWICK, a burgh of barony and a parish, in the district of HAWICK, county of ROXBURGH, 10 miles (W. S. W.) from Jedburgh, and 53 (S. S. E.) from Edinburgh; containing about 8000 inhabitants, of whom about 7000 are in the burgh. This place, the name of which simply denotes "a village or town in the bend of a river", is of remote antiquity, and is generally supposed to have been originally of Saxon foundation; but very little of its history is known prior to the commencement of the fourteenth century. The first authentic notice of the burgh occurs in a charter granted by Robert Bruce; and the barony, together with that of Sprouston, appears to have been conferred by David II. on Thomas de Murray, from whom it descended, during that king's reign, to Maurice, Earl of Strathearn. In the early part of the fifteenth century, it became the property of Sir William Douglas, who, for his gallant services in the wars of the border, obtained from James I. a charter, confirming to him the lands of Hawick, and bestowing also those of Selkirk and Drumlanrig. The barony remained for many generations in the possession

Burgh Seal.

of his descendants, of whom Sir William Douglas was in 1639 created Earl of Queensberry, Viscount Drumlanrig, and Lord Hawick. It subsequently became the property of the Scott family, who continued to exercise lordly authority over their feudatories till the year 1747, when, on the final abolition of heritable jurisdictions, the Duke of Buccleuch received from parliament the sum of £400, as a compensation.

During the border warfare, the town suffered repeated devastation. In 1418 it was burnt by the forces under Sir Robert Umfraville, governor of Berwick, and in 1544 was laid waste by the troops of Sir Ralph Evers and Sir Brian Latoun. In 1570, to prevent its occupation by the English under the Earl of Surrey, the inhabitants themselves set fire to the town, which, with the exception of the ancient castle, called the Black Tower, was wholly destroyed. On rebuilding the town after these calamities, the dangers to which it was exposed led to the adoption of a peculiar style of architecture; the houses were built of rough whinstone, with walls of massive thickness, and without any entrance except from a court-yard in the rear. Of these buildings, each of which was well calculated for defence, there are still some few specimens remaining. From its situation near the confluence of two rivers, the town is exposed to inundations; and in 1767, after a heavy fall of rain, the Slitrig, in the course of two hours, rose twenty feet above its ordinary level, and carried away the garden wall of the manse, the parish schoolroom, a corn-mill, and the whole of the houses in one street.

The town is pleasantly seated on the south-east bank of the Teviot, and is divided into two parts by the river Slitrig, which flows through it into the former stream. It consists of one principal street, and of several smaller streets and lanes diverging from the main thoroughfare on both sides; some new streets have been formed, and two handsome ranges of buildings erected called Slitrig-crescent and Teviot-crescent. The streets are well paved, and lighted with gas; and the inhabitants are amply supplied with water, conveyed by pipes. Connecting the opposite sides of the town are two bridges over the Slitrig, one of which is of antique character; and towards the eastern extremity, an elegant bridge has been erected across the Teviot. The approach to the town, both from the east and west, derives great beauty from the nursery grounds and gardens in those directions; the surrounding scenery, also, is very pleasing. A public subscription library, established in 1762, is supported by a proprietary of shareholders, and forms a collection of 3500 volumes; the trades' library, opened in 1802, consists of 1200 volumes; and there are several smaller libraries. In the town are also three reading and news rooms, as well as subscription assembly-rooms, which are used occasionally for public meetings.

The staple TRADE is the woollen manufacture, which of late has been rapidly increasing, and is carried on to a very considerable extent. The weaving of coarse woollen stockings was first introduced in 1771, by Mr. John Hardie, and, on his retiring from the concern in 1780, was continued on a much larger scale by Mr. John Nixon. Still comparatively little was done previously to the adoption of machinery for the spinning of yarn, which took place about the commencement of the present century. Since that period the woollen manufacture has greatly increased in variety and extent;

and there are now eleven factories belonging to the manufacturers of the place, some of them situated within the limits of the adjoining parish of Wilton. In all of these, machinery on the most approved principles is employed; four of the factories are partly driven by water and partly by steam, and the others by water only. The principal articles are under-clothing, flannels, plaidings, shawls, tweeds, tartans, druggets, and woollen cloths of every description, lambs'-wool hosiery of the finest texture, and Scottish and English blankets. The production of these affords occupation, including women and children, to nearly 3000 persons. There are also many persons employed in the making of thongs, gloves, candles, and in the tanning of leather and dressing of sheepskins; the manufacture of machinery of all kinds is considerable, and there are numerous masons, carpenters, smiths, millwrights, and others occupied in handicraft trades. The post-office has a good delivery; and previously to the alteration in the rates of postage the revenue amounted to £1000. There are three branch banks, and a savings' bank, in which latter the deposits are nearly £7000. The market is on Thursday, and is amply supplied with grain and with all kinds of provisions. Fairs are held on the 17th of May, for cattle and the hiring of servants; on the 20th and 21st of September, for sheep; on the third Tuesday in October, for cattle and horses; and on the 8th of November, for cattle and for hiring servants. Facility of communication is afforded by the Edinburgh and Hawick railway, formed under an act of parliament passed in 1845; by turnpike and statute-labour roads, which have been greatly improved, and by bridges over the rivers, kept in excellent repair.

The more ancient records of the BURGII were lost in the destruction of the town during the border wars; and the oldest charter now extant is that granted by James Douglas of Drumlanrig, baron of Hawick, and dated in 1537. Under this charter, ratified and extended in 1545 by Mary, Queen of Scots, the inhabitants exercise all the privileges of a royal burgh, with the exception of sending a member to parliament. There are two bailies, elected annually, a treasurer, and a council of thirty-one members, of whom fifteen are appointed as vacancies occur, and hold their seats for life, and fourteen are chosen every year by the seven incorporated trades, each of which returns two. The fees for admission as a burgher are, for strangers £4, for the sons-in-law of burghers £2, and for sons £1. In Hawick the incorporated trades are, the weavers, tailors, hammermen, skinner, shoemakers, butchers, and bakers, the highest fee for admission into which is ten shillings. The magistrates hold courts when requisite, both for civil and criminal cases within the burgh, in which they are assisted by the town-clerk, who acts as assessor; in civil pleas their jurisdiction extends to sums of any amount, but in criminal cases is confined to petty misdemeanors. The corporation possess a property near the town, of nearly 1200 acres, granted to them by Douglas of Drumlanrig, in 1537, it is believed, as a reward for the valour of the inhabitants at the battle of Flodden-Field in 1513. The income of the burgh, derived almost exclusively from land, and which is rapidly increasing, exceeds £600 per annum: the debits amount to £3000. Annually, on the last Friday in May, O. S., a procession of the magistrates on horseback occurs,

which is called the riding of the marches; and on this occasion, a standard taken in 1514, the year after that on which the battle of Flodden Field was fought, is carried before them. There is a town-hall, in which the courts are held; and a gaol has been erected for the town and district.

The PARISH is situated in the western part of the county, and is about fifteen miles and a half in length, and rather more than a mile and a half in average breadth, comprising an area of 15,360 acres, of which 4100 are arable, 160 woodland and plantations, and 11,100 meadow and pasture. Its surface is beautifully diversified. A sinuous valley, watered by the river Teviot, intersects the parish nearly through the whole length, and is bounded on either side by ranges of hills, clothed with verdure to their summits, and several of which have a considerable elevation. The vale of the Slitrig, intersecting the parish towards the east, forms also a rich pastoral district, but of more wild and secluded aspect. The scenery is greatly enlivened by the windings of the two rivers, which unite at the town; and the hills command a varied prospect over the adjacent country. Along the banks of the streams the soil is in general gravelly, and on the other arable lands a light loam. The system of agriculture has much improved within the last few years; a considerable quantity of waste land has been drained, and rendered profitable, and the breed of stock has been improved. The usual crops are, grain of every kind, with potatoes and turnips. The farm-buildings are commodiously arranged; all the various improvements in agricultural implements have been adopted; and great attention is paid to the breeds of cattle and sheep, numbers of which are reared in the pastoral districts. In this parish the plantations are well managed, and in a thriving state. The rocks are composed chiefly of greywacke; and there are some quarries of stone of good quality for building purposes, and for the roads. The annual value of real property in the parish is £12,923.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Jedburgh, synod of Merse and Teviotdale. The minister's stipend is £278, with a manse, and a glebe valued at £56 per annum; patron, the Duke of Buccleuch. The parish church, erected in 1764, on rising ground in the centre of the town, is a plain structure containing 704 sittings, a number totally inadequate to the population. An elegant new church has been erected by the duke, which, in consequence of the decayed state of the parish church, is occupied by the congregation of the Establishment: it contains upwards of 1500 sittings. The members of the Free Church have also a place of worship; and there are places of worship for the United Presbyterian Church, Independents, Roman Catholics, and Society of Friends. The parochial school is under the management of a rector and his assistant, who divide between them a salary of £33 paid by the heritors, £19 the proceeds of a bequest by the Rev. Alexander Orrock in 1711, and fees averaging £106; of all which the rector has three-fifths, with an allowance of £17 in lieu of a dwelling-house, and the assistant two-fifths. This school is attended by about 220 children, who are instructed in the Latin, Greek, and French languages, the mathematics, &c. An infants' school was lately opened; and there is a school in the hamlet of Newmill, endowed by the

heritors with a salary of £12 to the master, in addition to his fees, which average £18 per annum. At the upper extremity of the town are the remains of a moat, supposed to have been a place of sepulture, and afterwards for administering justice; and in various parts of the parish are vestiges of border fortresses, the most remarkable of which is that called the Black Tower, the baronial seat of the lords of Drumlanrig, subsequently the residence of Anne, Duchess of Buccleuch and Monmouth, and now forming part of the Tower inn. Another is attached to the castle of Branxholme, the ancient residence of the Buccleuch family, and celebrated by Sir Walter Scott in his *Lay of the Last Minstrel*. This castle was burnt by the Earl of Northumberland, in 1532, and blown up with gunpowder during the invasion of the Earl of Surrey, in 1570; but was partly rebuilt, according to an inscription on the walls, by "Sir W. Scott, of Branxheim, Knyte," in 1574, and completed by "Dame Margaret Douglas, his spouse," in 1576. On the brow of a hill at Goldielands, about two miles distant, is a third border fortress, which retains much of its original character, and is said to have been the residence of the Goldie family. An ancient vessel of bronze, with a handle and spout, and standing on three feet, which is supposed to have been used by the Romans for sacrifice, was dug up a few years since at Reasknow, and now belongs to James Grieve, Esq., of Branxholme Braes, who has also in his possession a coin of Alexander III., discovered in the moss at Hislop, and in a very perfect state. On the removal of a cairn near the town, about 1809, several large stones placed edgewise, and inclosing a human skull and bones of large size, were found; and sepulchral urns of rude workmanship have been discovered at various rude.

HAWKSTONE, a hamlet, in the parish of ST. MADOKS, county of PERTH, $2\frac{1}{2}$ miles (W. S. W.) from Errol; containing 51 inhabitants. It lies in the eastern part of the parish, and is one of the only two hamlets, or, as they are sometimes designated, villages, it contains. Here is a large stone, which tradition says is the stone whereon the hawk of the peasant Hay, the supposed ancestor of the noble family of that name, alighted, after it had performed its flight over the land that was, consequently, given to that gallant rustic, in reward of the services he is said to have performed at the battle of Luncarty. Hence the name of the place.—See REDGORTON.

HAZELBANK, a village, in the parish of LESMAHAGOW, Upper ward of the county of LANARK, 4 miles (N. by E.) from Lesmahagow; containing 238 inhabitants. It is situated in the north-eastern part of the parish, on the road from Lanark to Larkhall, and on the west bank of the Clyde, which here separates Lesmahagow from the parish of Lanark.

HEBRIDES, or WESTERN ISLANDS, a series of islands in the Atlantic Ocean, about 300 in number, of which eighty-six are inhabited; lying at various distances from the western coast of the Highlands; and chiefly pertaining to the counties of Argyll, Inverness, and Ross. Of the early history of these islands but very little is known; they appear to have been anciently under the jurisdiction of petty chieftains, sometimes independent, and at other times tributary to the kings of Norway. About the twelfth century, these chieftains began to meditate inroads on the main land: in 1153, Somerled

invaded Scotland, and made an attempt to dethrone Malcolm IV., in which he was defeated by the Earl of Angus; and on a subsequent occasion he was slain in a battle near Renfrew. After the death of Magnus, son of Olave, the last of the independent chieftains, the sovereignty of the isles was ceded to Alexander III., by treaty signed at Perth in 1266; but notwithstanding that treaty, the descendants of the old chieftains assumed the title of lords of the isles, and exercised a jurisdiction irrespective of the crown. Of these, John, lord of Cantyre, married a daughter of Robert II.; and from this alliance, his family derived a great accession of power and influence. Donald, his son, at the head of 10,000 men, ravaged the county of Ross, but was eventually defeated, in 1411. James I. waged incessant war against these turbulent chiefs, many of whom he took prisoners, and hanged; and Donald, lord of the isles, was put to death in Ireland; but it was not till the reign of James V. that the lords were brought into complete subjection to the Scottish crown. Of these various isles, the principal of which are separately described, that of Lewis, with its adjacent islands, chiefly belongs to the county of Ross; those of Barra, Eig, North Uist, South Uist, Skye, and smaller isles, to the county of Inverness; and Canna, Muck, Rum, Gigha, Colonsay, Oronsay, Tiree, Coll, Mull, Jura, and Islay, with the circumjacent isles, to the county of Argyll.

HECK, a hamlet, in the parish of LOCHMABEN, county of DUMFRIES, $2\frac{1}{4}$ miles (W. S. W.) from Lockerbie; containing 57 inhabitants. It lies on the west side of the river Annan, which forms the eastern boundary of the parish. The village is ancient, and is one of several the holm ground around which is extremely rich and fertile. Mention is made of the place in royal warrants under the sign-manual of James VI. and of Charles II.

HEISKER, an isle, in the parish of NORTH UIST, county of INVERNESS; containing 39 inhabitants. It is one of the Hebrides, lying about two miles westward of North Uist; and is two miles in length, but very narrow. The soil is sandy, yielding very scanty pasture at any time, and but a small quantity of grain. The isle has hitherto derived its chief value from its kelp shores.

HELENSBURGH, a town, chiefly in the parish of ROW, and partly in that of CARDROSS, county of DUM-BARTON; containing, in 1841, 2229 inhabitants, of whom 1672 were in the burgh of barony of Helensburgh, 8 miles (N. W. by W.) from Dumbarton. This place is situated on the north shore of the Firth of Clyde, at the entrance of the Gareloch, and nearly opposite to the port of Greenock on the other side of the Firth, which is here about four miles in width. It was founded in 1777, by Sir James Colquhoun, in honour of his wife, Lady Helen Sutherland, from whom it derives its name; and has rapidly grown into importance as a fashionable watering-place, and a favourite resort of families of distinction during the summer months. The town is regularly built, and comprises one principal street, extending along the shore for more than a mile, and intersected at right angles by numerous other well-formed streets. The houses are of handsome appearance, and interspersed with pleasing villas having grounds tastefully laid out; the surrounding scenery, also, is agreeably diversified. On the opposite shore of the Gareloch are the elegant mansion and pleasure-grounds of Roseneath; and at the western extremity of the town is Ardincaple, the

beautiful seat of the Duke of Argyll, who is also proprietor of Roseneath. Along the banks of the Gareloch are various interesting promenades; and to the north, the scenery is boldly marked with rugged mountains of Highland character. A public library of more than 1000 volumes, and a newsroom amply furnished with daily journals and periodical publications, are supported by subscription; there are two commodious hotels, with several inns, and also numerous lodging-houses for the accommodation of visitors. On the shore, at the east end of the town, is a spacious and well-arranged building containing hot and cold baths with every requisite appendage.

Facility of intercourse is provided by steamers to Greenock, which make nine trips daily; and from Greenock there are steamers to Glasgow, touching at all the intermediate places on both banks of the Clyde. Between Greenock and Glasgow are also six railway trains, in connexion with the Helensburgh boats; and persons leaving Glasgow by these trains reach Helensburgh in one hour and a half. The passage, by steam-boat, to Glasgow, is about three hours, and to Greenock a quarter of an hour. An act of parliament was passed in 1846, authorizing the construction of a railway from Glasgow to Dumbarton and Loch Lomond, with branches to Helensburgh and other places. The quay, formed in 1817, and which at high water was partly obstructed, has been greatly improved; and a very substantial and commodious quay has been made about a mile westward of the town, at the entrance of the Gareloch. The town was erected into a burgh of barony by charter granted in 1802 to Sir James Colquhoun, under whom, as superior, the government was vested in a provost, two bailies, and four councillors, elected annually by the burgesses from their own body, consisting of all inhabitants who are leaseholders of houses and lands under the superior. In 1846 an act was passed for extending the limits of the burgh, for lighting and cleansing it, and establishing a police; also, in the same year, an act for improving the port and harbour. A weekly market on Thursday, and four annual fairs of two days each for horses, cattle, and other merchandise, on the second Tuesday in February, the 1st June, the 6th August, and the 12th November, are allowed by charter; but they are not much frequented. The quoad sacra parish of Helensburgh was separated from the parish of Row, by act of the presbytery, in 1839, and contained a population of 1899: it was abolished in 1843, in common with all similar divisions in the country, as being illegal. The church was originally built for a congregation of dissenters, in 1824, and, on their re-union to the Established Church, was made parochial. It passed, however, in 1843, into the hands of the Free Church, the minister and congregation joining in the great secession of that year. The building contains 600 sittings; and there is also an Independent meeting-house in the town. Mr. Henry Bell, who first successfully applied the steam-engine to navigation, resided at this place from 1804 till his decease in 1830; his first steam-boat, the *Comet*, was built at Port-Glasgow, in 1812, and he made his first passage across the Clyde to Helensburgh.

HELESAY, an island, in the parish of BARRA, county of INVERNESS; containing 108 inhabitants. It is one of a numerous group of isles that lie in the strait between Barra and South Uist, from the former of which it is

about five miles distant. On the west of the island is Ottervore Sound.

HELMSDALE, a fishing-village, in the parish of LOTH, county of SUTHERLAND, 17 miles (N. E.) from Golspie; containing 526 inhabitants. This village is situated on the north bank of the river Helmsdale, near its influx into the Moray Firth. The place consists chiefly of neatly-built houses inhabited by persons engaged in the fisheries, and is connected with the western portion of the parish by a handsome bridge of two arches, erected over the Helmsdale, at an expense of £2200, by the parliamentary commissioners, in 1811. It has long been celebrated for its valuable salmon-fisheries on the river, belonging to the Duke of Sutherland, and which are carefully managed under the superintendence of the proprietor's agents: the fish are of superior size and flavour, and are sent packed in ice to the London market, where they are purchased by contract. The herring-fishery, in the Firth, is also very extensive: houses for curing the herrings have been built on a principle well adapted for the purpose; and since the year 1815, the quantity cured at this place has gradually increased from about 5000 to 46,000 barrels annually. The whole of the herrings are now exported to the continent and to Ireland. Helmsdale harbour was greatly improved by the erection of a substantial pier by the proprietor, at a cost of £1600, in 1818, since which time additional sums have been expended; and still further improvements are in contemplation. The fishery affords employment to a very considerable number of coopers, and a steam-mill has been erected for sawing the staves of the barrels; a few of the boats are built here, for the fishery, and various handicraft trades are carried on for the supply of the inhabitants. A post-office is established, which has a daily delivery; and facility of communication is afforded by the parliamentary road from Dunrobin, in the parish of Golspie, to the Ord of Caithness; by a good road from the village, through the strath of Kildonan, to the North Sea; and by vessels from different ports of England and Ireland, which touch at the harbour. A church, capable of containing from 600 to 700 persons, was built some years ago in the village by the late Duchess-Countess of Sutherland, aided by a subscription by the present duke. After the Disruption of the Church of Scotland, there was for some time no minister appointed to it, though preaching was held in it occasionally by ministers of the Establishment. Divine service is now regularly performed in the building, by a minister of the Established Church, appointed to the station in 1845 in conjunction with the incumbency of the neighbouring parish of Kildonan. The members of the Free Church have a large place of worship, opened in February 1845, and capable of containing upwards of 1000 persons. There are some remains of the ancient castle of Helmsdale, once a hunting-seat of the Sutherland family: it is apparently of the fourteenth century, and is memorably for the death of John, the eleventh Earl of Sutherland, and his countess, who were poisoned in 1567.

HERBERTSHIRE, a village, in the parish of DUNIPACE, county of STIRLING, 7 miles (W. N. W.) from Falkirk; containing 761 inhabitants. This village, sometimes called Milton, is situated on the north bank of the Carron, over which is a handsome bridge of three arches, connecting it with the village of Denny. The inhabitants are chiefly engaged in the printing of calico, which

was first established here in 1783, and is conducted on an extensive scale, in works belonging to Charles Carnie, Esq., who has a residence near the village. The number of persons employed in this establishment is about 400, of whom 120 are females; the process is partly carried on by machinery of ingenious construction, and some of the machines will imprint four different colours at the same time.

HERIOT, a parish, in the county of EDINBURGH; containing, with the hamlets of Fala-Hill Inn, Robertson, and Broomieknowe, 355 inhabitants. The history of this parish is of little interest, except as connected with the various proprietors of its lands and ecclesiastical revenues. The church was formerly of considerable value; and its patronage, in the twelfth and thirteenth centuries, belonged to Roger de Quincy, then lord of the manor, and constable of Scotland, who is supposed to have derived it from the lords of Galloway, and these latter from the Morvilles. In portioning out his estates among his three daughters, De Quincy gave Heriot to Elena, the youngest, who married La Touche, an English baron, and who afterwards granted the church of "Heryeth", as it was then called, to the monastery of Newbottle, which gift was confirmed by a bull of Pope Nicholas, and by Fraser, Bishop of St. Andrew's, the diocesan. In 1309, William Blair, the incumbent, resigned his vicarage to Bishop Lamberton, who immediately gave the vicarage revenues to the monks of Newbottle, who already possessed the rectory. At the time of the Reformation, these monks held both the church and lands of Heryeth. The property soon afterwards came into the hands of Mark Kerr, supposed commendator of Newbottle, to whose heir it regularly descended; and on the death of the latter, the lands passed to his son Robert, second Earl of Lothian, by whom they were sold to Walter Hay, to whose son they fell in 1643. On the failure of this family in 1692 by the death of Lord Borthwick, the barony of Heriot came to a son of Lord Stair, from whom it descended, through the late Dowager Lady Dalrymple, to her eldest son, the Earl of Stair, present proprietor of the lands. There are six other landowners in the parish.

The PARISH, which is of oblong form, is about six miles and a half long, and three and three-quarters broad, and contains 15,000 acres. It is bounded on the north-west by Temple and Borthwick parishes; on the east by Stow, and part of Fala; and on the south by Innerleithen, in Peeblesshire. Heriot is altogether hilly, and a pastoral parish, only about one-tenth of the land being arable. In some parts the ground rises to a great elevation, particularly in the south-east, where is the hill of Dewar, about 1654 feet above the level of the sea; and also in the south-west, where Blackup Scars, which is the highest hill, is 1000 feet above the sea at its base, and 2193 at its summit. These hills are part of the Moorfoot range, which is a branch of the Lammermoor and Soutra, and stretches from the north-east towards Peebles on the south-west. A great variety of rare plants is to be found, affording a rich field for botanical research, especially in the months of August and September. The higher grounds are mostly bare of trees, there being, indeed, a great want of plantations in every part of the parish; a want, however, which is now being supplied by the Earl of Stair. The climate, from the elevated situation of the district, and the hilly character of the surface, is bleak

and piercing, though salubrious. The Heriot water rises in the south-west extremity of the parish, and after winding for five miles, unites with the Gala at the eastern boundary, about a mile and a half below the church. This stream, which is subject to frequent swellings, rose in August 1837 to an unusual height, destroying dykes and walls, and bringing desolation to the property within the range of its violence. The Gala water has its source in the north, and after a course of about two miles, quits the parish near its junction with the Heriot.

On the banks of the river the soil is rich and fertile, and capable of producing the finest crops, but the severity of the climate is a great obstacle to the operations of husbandry in this parish. The wheat grown is inconsiderable, and barley is now substituted in the place of bear. The number of acres under pasture is upwards of 12,000, of which about 1600 are considered susceptible of profitable cultivation. Besides the grain, potatoes and turnips of good quality are raised. The parish, however, is chiefly celebrated for its sheep and cattle, and the former, which are partly of the black-faced, but chiefly of the Cheviot and half breeds, are reared in large numbers; about 7660 sheep are regularly kept, and the lambs fetch the highest prices. Of the small quantity of wood grown, the beech, larch, and plane seem best adapted to the soil. The farms vary in size from fifty to 2000 acres. Inclosures to a very considerable extent have been made on the arable ground of late years: the farm-steadings, also, are much improved, many of them having been entirely renewed. There is no village. About three miles of good turnpike-road run through the parish; but the other roads of the locality are indifferent, and there are no facilities of this kind in the higher lands for transporting lime and manure, the extensive application of which, for the improvement of the poorer grounds, is thus prevented. Great facility of intercourse is afforded by the Edinburgh and Hawick railway, which has a station in the parish. The annual value of real property in Heriot is £3854. Ecclesiastically the parish is within the bounds of the presbytery of Dalkeith, synod of Lothian and Tweeddale, and the patronage is vested in the Earl of Stair. The stipend of the minister is £158, of which about a fifth is received from the exchequer; with a manse, built in 1793, and since repaired and improved, and a garden of the best soil: there is also a glebe of twenty acres, valued at £30 per annum. The church is situated about the centre of the parish, and accommodates 200 persons with sittings; it was rebuilt in 1804, and has undergone extensive repairs, by which it has been rendered convenient and comfortable. A parochial school is supported in the usual manner; the master has a salary of £34, with a house, and about £25 fees. There is also a parochial library. The relics of antiquity merely comprise some camps, consisting of two or three concentric circles; and a gateway, the history of which is unknown.

HERMISTON, a village, in the parish of CURRIE, county of EDINBURGH, $1\frac{3}{4}$ mile (N. by W.) from Currie; containing 164 inhabitants. It is situated on the road from Edinburgh to Mid Calder, and near the Union canal, both which intersect the northern part of the parish; and is the third village of Currie in extent.

HERMITRAY, an isle, in the parish of HARRIS, county of INVERNESS; containing 8 inhabitants. This is one of a group of isles situated in the sound of Harris,

east of the island of Bernera. A fishing station was established here by Charles I.

HERRIOTFIELD, a village, in the parish of MONZIE, county of PERTH; containing 106 inhabitants.

HESTON, an isle, in the parish of RERWICK, stewardry of KIRKCUDBRIGHT. It is a small island, situated at the mouth of the river Urr, which discharges itself into the Solway Firth. Standing high out of the water, it affords good shelter to Auchencairn bay, where is a safe and commodious anchorage for small shipping. The island is of smooth surface, and pastures sheep.

HILETON, a village, in the parish of ROXBURGH, district of KELSO, county of ROXBURGH, 1 mile (E. by S.) from Kelso; containing 214 inhabitants. This village is pleasantly situated on the turnpike-road leading from Kelso to Jedburgh, and is inhabited chiefly by persons employed in agriculture. The surrounding scenery is varied, and the adjacent lands in a good state of cultivation. There is a parochial school here.

HIGHTAE, a village, in the parish of LOCHMABEN, county of DUMFRIES, $2\frac{1}{2}$ miles (S. W. by W.) from Lockerbie; containing 436 inhabitants. It is situated in the eastern part of the parish, and a short distance from the river Annan, which separates Lochmaben from the parish of Dryfesdale. This is one of the villages denominated the "Four Towns", the lands around which being portions of the original royal domains granted by Robert Bruce in small plots to the domestic servants of Lochmaben Castle, are still held without any written title other than a transference, by a tenant, of his right to a successor. The holm ground attached to these villages, of which Hightae is the largest, is uncommonly rich and fertile. Loch Hightae, in the vicinity, is a fine lake of fifty-two acres, abounding in perch, pike, trout, bream, roach, and other fish. The Cameronians have a place of worship, built in 1796, originally for a Relief congregation; and a school is endowed with the interest of £100, left by Mr. James Richardson in 1726.—See LOCHMABEN.

HILDASAY, an isle, in the parish of TINGWALL, county of SHETLAND. It is of small extent, and lies near the south coast of the main land of Shetland, and nearly parallel with Skelda Ness.

HILLEND, a village, chiefly in the parish of INVERKEITHING, and partly in that of DALGETY, district of DUNFERMLINE, county of FIFE, $1\frac{1}{4}$ mile (N. E. by E.) from the town of Inverkeithing; containing 281 inhabitants. It is situated on the road from Inverkeithing to Aberdeen, and a small stream flows a little to the north of the village.

HILLHEAD, a hamlet, in the parish of COCKPEN, county of EDINBURGH, $\frac{1}{2}$ a mile (S. E.) from Lasswade; containing 76 inhabitants. It lies in the northern extremity of the parish, on the road from Lasswade to Cockpen; and in its neighbourhood are several coal-mines. The scenery around is embellished with some good mansions.

HILLSWICK, a hamlet, in the parish of NORTHMAVINE, county of SHETLAND; containing 211 inhabitants. It is situated near Hillswick ness, and westward of Hillswick creek, which opens into St. Magnus' bay, on the north side of Shetland. The creek affords safe and excellent anchorage for any number of vessels, and of any burthen, having good moorings of from seven to twenty fathoms. There is also a large and convenient

beach for drying fish, with warehouses, and salt and fish cellars. Numerous voes indent this part of the coast.

HILLYLAND, a village, in the parish of TIBBERMORE, county of PERTH; containing 202 inhabitants.

HILTON, county of BERWICK.—See WHITSOME.

HILTON, a hamlet, in the parish and county of INVERNESS; containing 64 inhabitants.

HILTOWN, a village, in the parish of FEARN, county of ROSS and CROMARTY, 10 miles (E. S. E.) from Tain; containing 310 inhabitants. This is a fishing-village, lying on the eastern shore of the Moray Firth: the fishing is chiefly of grey fish and herrings, and is carried on to a considerable extent, in connexion with the village of Balintore, about half a mile southward. The coast between the two places is level and sandy; at Hiltown, however, it becomes high and rocky.

HOBKIRK, or HOPEKIRK, a parish, in the district of JEDBURGH, county of ROXBURGH, 8 miles (E. S. E.) from Hawick; containing 776 inhabitants. This parish appears to have derived its name from the situation of its church in a *hope*, or narrow dale. It is eleven miles in length from north to south, and three miles in breadth; and is bounded on the north by the parishes of Cavers and Bedrule, on the east by the parish of Southdean and a small part of that of Jedburgh, on the south by Castleton, and on the west by Cavers and Kirkton. The surface is strikingly varied. In the southern extremity is a chain of hills forming part of the Cheviot range, and on the northern boundary is the Rubberslaw hill, which has an elevation of 1420 feet above the level of the sea. Between this hill and the southern range is the level valley of the river Rule, on the eastern bank of which is the beautiful hill of Bonchester, rising in a spherical form to a height of 1260 feet, and covered with rich verdure to its summit. The river Rule rises in the southern range of hills, flows northward through the whole length of the parish, and two miles beyond falls into the Teviot, after having been augmented in its course by many springs of salubrious water, and many streams from the surrounding heights. This stream, with its valley, is one of the prettiest and most sequestered in the south of Scotland. It abounds with excellent trout, and affords capital sport to the angler, though the shallows are too often swept by the net.

In general the SOIL is a red tenacious clay, presenting numerous boulders, frequently of greenstone. The greenstone rock forms caps to certain of the hills; red sandstone pervades the northern and eastern, and greywacke the western division of the parish, while a bed of limestone encroaches on its south-western border. A little northward of this, at Robertslin, occurs a stratum of agate or coarse jasper, from which brooches, seals, and other ornaments are made. The sandstone is freely employed for building purposes, and the limestone, when burnt, offers to the enterprising husbandman a proper application to the stiff clay of the district. The cultivated lands stretch along the valley: in the higher grounds heath or spongy moss prevails, except upon the limestone bottom around Langburnshiels, which yields perhaps the best pasturage of all unimproved farms in the country. The whole number of acres in the parish may be estimated at 19,000, of which 3500 are under the plough, 900 in woods or plantations, and the remainder in meadow, pasture, and waste land. The crops are principally oats and turnips, with potatoes,

barley, peas, wheat, and grasses: the system of agriculture is improved; the lands have been drained and partly inclosed, and a considerable portion of waste has been reclaimed and brought into cultivation. On the lower grounds the fences are chiefly of thorn, sometimes of whin raised upon mounds, of paling, or of reiss, for which the thinnings of the woods afford ample materials: on the higher or pasture grounds, stone walls are maintained. The old farmhouses or onsteads are indifferent, but improvement is rapidly advancing, and all the buildings of modern erection are substantial and commodious. Much attention is paid to the rearing of live stock. About 10,000 sheep, of the Cheviot breed, or with a cross of the Leicestershire, called half-bred, are pastured in the parish; and nearly 1500 stones of wool are annually produced, all pure white, that is, unlaied. Upwards of 300 young cattle, principally of the short-horned breed, are grazed here, and either fitted for the butcher, or prepared for being fattened off upon turnip. The parish is highly ornamented with trees. The older woods consist of birch, hazel, alder, which are natural, and Scotch fir, beech, oak, and elm; on some estates regularly thinned; on others so much neglected that large quantities of valuable timber might be cut with obvious advantage to the remainder. The newer plantations, of larch and Scotch fir, with oaks, ashes, and spruces interspersed, are extensive, and thriving vigorously. The annual value of real property in the parish is £6269. There are no villages, and but two small hamlets, each of six or eight dwellings. Facility of communication is afforded with the neighbouring market-towns by roads kept in excellent order, and by the turnpike-road from Hawick to Newcastle, and that from Jedburgh to Castleton, which pass nearly at right angles for several miles through the parish.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Jedburgh, synod of Merse and Teviotdale; and the patronage is in the Crown. The stipend of the incumbent is £205; the manse, which has been repaired within the last few years, is a comfortable dwelling so far as its accommodation extends, and the glebe, with half the glebe of the suppressed parish of Abbotrule, is valued at £40 per annum. The church, erected in 1700, and repaired in 1777 and in other years, is well situated, but a damp uncomfortable edifice, capable of accommodating a congregation of 400 persons: the floor, as in most ancient churches, is below the level of the churchyard. The parochial school, which is yet more incommodious, affords education to 80 or 90 children; the master has a house, with a salary of £32. 10., including an allowance in lieu of a garden, while the school-fees average £24 per annum. A subscription library has been established, and meets with due encouragement. A bequest of £100 was made some time since by Lady Yester; the interest is divided between the heritors (for charitable purposes) and the schoolmaster.

On Bonchester hill are considerable remains of ancient fortifications, some of which are square, and others of circular form, intersected also by lines of more modern construction. This hill, which is admirably adapted for the site of a camp, is supposed to have derived its name from its having been occupied by the Romans for that purpose. Querns, arrow-heads, and various other relics of antiquity have been found here. On Rubberslaw and

other heights are also traces of camps. Two cairns were lately removed, which are thought to have been raised over the remains of warriors slain in some battle that occurred near the spot; one of these was situated on the eastern side of Rubberslaw, and the other at Fodderlee. Of a battle at the latter place, there are some traditionary records; but nothing is recorded respecting the former. At Langraw, a great quantity of burnt bones and ashes have been discovered, within a circular inclosure about eighteen feet in diameter. On their removal, there were found, in the sandstone underneath, four holes, in which upright poles had been fixed, and secured by stones wedged in from above; but of the purpose of the erection of these, or the use to which they were applied, nothing is known. Several urns have been dug up in different situations. Mary, Queen of Scots, passed through this parish on her route from Jedburgh to Hermitage Castle, and, near its extremity, was obstructed by a bog, which has been ever since called the "Queen's Mire". Thomson the poet resided, or frequently visited, here, and wrote his first sketch of *Winter* from the view of Rubberslaw.

HODDAM, a parish, in the county of DUMFRIES, 6 miles (N.) from Annan; containing, with the village of Ecclesfechan, 1627 inhabitants. This parish comprehends the ancient parishes of Hoddam, Luce, and Ecclesfechan, which were united in 1609. Hoddam is spelt in ancient charters *Hodholm* and *Hodolm*, signifying "the head of the holm", and is supposed to have derived that appellation from its position on the bank of the river Annan, where the ground is flat and rich, and what is usually called holm land. The name of Luce is said to be derived from the luxuriance of the herbage; and that of Ecclesfechan from the Latin word *Ecclesia*, "a church", and an Irish abbot called *Fechan*, who is thought to have lived in this part about the seventh century. When the three parishes were united, a new church was built in a central situation, and the old churches gradually fell into decay. Hall-guards, in the parish, was the site of the old castle of Hoddam, which is considered to have been the seat of a branch of the family of Bruce. The fortress was demolished some centuries ago, in compliance with the terms of a border treaty, and was subsequently rebuilt by John, Lord Herries; but one of that family afterwards erected a castle in a more favourable situation, at Cummertrees, on the other side of the Annan, and the seat in this parish was then neglected.

The PARISH is about five miles long, and three and a half broad, and contains 7158 acres. It is bounded on the north by the parish of Tundergarth, on the south and south-west by the river Annan, on the east by Middlebie parish, and on the west by St. Mungo. Hoddam is included in the district of Annandale, and is remarkable for the beauty of its scenery, which is interestingly diversified with wood and water. The surface consists for the most part of an extensive plain, surrounded by gently swelling hills; the lands are in the highest state of cultivation, and are intersected by thriving hedges, and ornamented with groups of flourishing plantations. The highest ground is the hill of Burnswark, 740 feet above the level of the sea, and which commands views of several English counties, of the Isle of Man, and, in very fine weather, of the mountainous part of Yorkshire. The streams are the Annan, the Milk, and the

Mein, the last of which, however, is only a rivulet. Of the former, the Annan is about 100 feet wide, and has numerous pools fifteen or sixteen feet deep: it contains salmon and trout, but the fish have become much less plentiful since the use of lime in farming, as, when washed off the lands by flood or rain, it strongly impregnates the waters. The Milk touches the parish on the south-west, and falls into the Annan; it is a good trout stream, and also abounds with small fish. The Mein, which is likewise a tributary to the Annan, frequently changes its channel, bringing considerable havoc to the lands through which it takes its course.

On the holm lands the soil is a deep loam, and exceedingly fertile; the great plain in the heart of the parish is of a light gravelly soil, and also yields fine crops. The high ground in the north, however, is clayey, resting upon a cold tilly subsoil and a copper rock, and being very inferior to the lands below. About 6430 acres are under cultivation; 730 are hill pasture, and upwards of sixty in wood. All kinds of grain are produced, but the quantity of wheat bears no proportion to the oats and barley; a few turnips and large quantities of potatoes are raised, and almost every cottager keeps one or two hogs, which are fed to some extent upon potatoes. The best system of husbandry is adopted; and all the arable land being good, and a considerable portion of it of superior quality, the crops in general are very valuable. The lands have been entirely inclosed, within the last fifty or sixty years, with good fences. In this parish the substrata consist chiefly of sandstone and limestone, with slate-clay, clay-ironstone, and amygdaloid: no workable coal has yet been discovered; but some attempts recently made have excited a hope that it will eventually be found. The annual value of real property in Hoddam is £5209. The turnpike-road from Lockerbie to Longtown runs through the parish, in addition to which there are five cross roads. A large and beautiful stone bridge has been erected over the Annan, and several bridges over the Mein: these, as well as the roads and fences throughout the parish, are kept in good order. Great facilities of intercourse are afforded by the Caledonian railway, which intersects the parish, and has a station at Ecclesfechan. Ecclesiastically the parish is within the limits of the presbytery of Annan, synod of Dumfries; alternate patrons, the Duke of Buccleuch and the Sharpe family. The stipend of the minister is £259, with a superior manse, and three glebes valued at £43. 10. a year. Hoddam church, built in 1817, and standing about a mile from the village of Ecclesfechan, is comfortably fitted up, and seats 561 persons. The United Presbyterian Church has a place of worship; and there is a parochial school, the master of which receives £35 per annum, with about £12 fees. At Burnswark, in the northern extremity of the parish, is one of the most entire Roman encampments in the kingdom: it was formed by Agricola; and a number of altar-pieces, arms, &c., have been found in its vicinity. Mr. Carlyle, author of the *History of the French Revolution*, was born in the parish.—See ECCLESFECHAN.

HOLBURN, for a time a quoad sacra parish, in the parish of OLD MACHAR, city, district, and county, of ABERDEEN; containing 3757 inhabitants. This was partly a rural, and partly a town, district. A considerable portion of the rural population may be said to be congregated in three villages, the rest being dispersed

over the district generally, which comprised an extent of more than two and a half square miles. The church, which was built by subscription, in 1836, at a cost of £1858. 18. 9., and opened for divine service in September, 1837, stands at the junction of the principal roads in this portion of Old Machar, and is a neat edifice containing 1332 sittings. The stipend of the minister is £180, derived from seat-rents, and of which £100 are secured by bond: patrons, the Congregation. Holburn was one of four quoad sacra parishes which were formed under an act of the General Assembly in 1834, out of the parish of Old Machar, and were afterwards abolished.

HOLEKETTLE-BRIDGE, a village, in the parish of **KETTLE**, district of **CUPAR**, county of **FIFE**, 1 mile (S. W.) from Kettle; containing 288 inhabitants. It lies in the north-western part of the parish, on the high road from Pitlessie to Leslie; and is a village of comparatively recent growth.

HOLLEE, a village, in the parish of **KIRKPATRICK-FLEMING**, county of **DUMFRIES**; containing 114 inhabitants.

HOLM, anciently **HAM**, a parish, in the county of **ORKNEY**, 8 miles (S. E. by E.) from Kirkwall; containing, with the island of Lambholm and the village of St. Mary, 866 inhabitants. This parish, which is situated on the south-eastern portion of the main land, is bounded on the north by the parishes of Kirkwall and St. Andrew's, on the east by the North Sea, on the west by Scalpa Flow, and on the south by Holm Sound. It is about six miles in length, and varies from one mile to two miles in breadth. The coast is not very elevated: the principal headlands are, Roseness, on the southern extremity of Paplay, at the eastern entrance of the sound; Howquoy, at the western entrance; and Skel-daquoy Point, stretching out for a quarter of a mile from the shore, and forming the western boundary of Holm Sound bay. The sound, on the south side of which is the small but picturesque island of Lambholm, is an important passage from the eastern to the western coasts, through which vessels pass with greater security, and by a shorter line, than either by the Caledonian canal or the Pentland Firth. It affords, also, safe anchorage for vessels which may have to wait for the tide. The surface towards the south is low, but rises gradually towards the north, terminating in a range of hills of sufficient elevation to shelter the lands from the north winds. It is intersected by numerous limpid streams.

The whole number of acres is 7610, of which 2850 are arable, 830 in constant pasture, and the remainder undivided common. The soil is generally a light black loam, in some places alternated with sand, in others with clay; and is well adapted for the cultivation of turnips, which frequently attain a large growth, averaging from twelve to fourteen pounds each in weight. The chief crops are oats and bear, potatoes, turnips, and the various kinds of grasses; flax, also, was formerly cultivated with great success. Very considerable improvements in agriculture have taken place under the auspices of Alexander Sutherland Græme, Esq., the principal, and almost the sole, proprietor of the lands. The common Orkney breed of cattle, formerly prevalent, has been improved by the introduction of the Dunrobin, and also of the Teeswater or short-horned breed; and a powerful stimulus has been given to the rearing of cattle, by the

facilities of steam navigation, which has opened new markets for the sale of produce. That district of the parish called Paplay has been always remarkable for the fertility of its soil, and the abundance of its crops: it is supposed to have derived its appellation from having been the property of some religious establishment. There is nothing peculiar in the geological features of the parish. Græme's Hall, the seat of the ancient family of Græme, descendants of Græme, Bishop of Orkney, is deserted.

When the parish was surveyed in 1828, the site of a fishing-village was laid out on the shore of the harbour of Holm Sound, with a view to encourage the settlement of regular fishermen at this place, which, from the convenience of its harbour, and its proximity to the North Sea, is peculiarly adapted to the purpose. The fish to be found off the coast are cod, ling, haddock, halibut, flounders, and skate. For the supply of his family, almost every inhabitant has a share in a boat; and most of them are also adventurers in the herring fishery, which commences in July, and ends in September; but there is no regular fishing establishment, the population being generally agricultural, and none of the inhabitants making fishing their exclusive occupation. Fairs for cattle and horses are held quarterly. The grain raised in the parish is sent to the distilleries in Kirkwall, for which object, and for the conveyance of other produce, facilities are afforded by steamers, which, since 1833, have continued to ply here for eight months during the year. Ecclesiastically the parish is within the limits of the presbytery of Kirkwall, synod of Orkney. The minister's stipend is £157, of which more than one-third is paid from the exchequer; with a manse, and a glebe valued at £4 per annum: patron, the Earl of Zetland. Holm church, originally dedicated to St. Nicholas, and rebuilt in 1818, is situated in Paplay, the eastern portion of the parish, and affords sufficient accommodation for the parishioners. There is a place of worship for members of the United Presbyterian Church. The parochial school is well attended; the master has a salary of £26, with a house and garden, and the fees average about £5 per annum. Mr. Patrick Græme, sheriff-depute of the county in 1770, and proprietor of Græme's Hall, was a great benefactor to the parish; he supplied the inhabitants with linseed gratis, introduced the cultivation of flax, and taught the people the art of making it into cloth, of which, for many years prior to his decease, they exported 20,000 yards annually to the English markets. Admiral Alexander Græme, who distinguished himself in the action with the Dutch off the Dogger Bank, in which he lost his right arm, though not resident, was also a great benefactor to his tenants.

HOLMS (ISLES), in the county of **ORKNEY**. "Holm" signifies a small island fit only for pasturage, and is a name by which several islands of the Orkney group are known, with, in most cases, a distinctive affix referring to the name of that part of the coast off which any Holm may be situated. Of these islands, one simply called **HOLM** is in the parish of Westray, and lies on the east side of Papa-Westray. **HOLM** of **GRIMBISTER**, in the parish of Firth, is situated in a creek, off the farm or shore of Grimbister in the same parish. **HOLM** of **HOUTON**, or the Holm off the Point of Houton, belongs to Ophir parish, and is south of the main land, in Scalpa Flow; its scanty herbage feeds a few sheep. **HOLM** of **HUIP**, in the parish of Stronsay, lies north of

the island of Stronsay, and is appropriated to the pasturage of sheep and cattle: Huip is the name of a farm upon the shore of Stronsay. HOLM of PHARAY, in the parish of Eday, is situated in Westray Firth, and north-west of Eday, and forms a northern point of Ferness bay. All these isles are of very small extent, and uninhabited. HOLM of MIDGARTH, in the parish of St. Peter, Stronsay, is also of moderate extent; but it has two dwellings, and six persons at present reside upon it.

HOLMS, THE, isles, in the parish of UNST, county of SHETLAND. These are three minute uninhabited isles, which lie to the north-west of the island of Unst; they are nearly of the same size, and are the smallest of the whole Shetland group.

HOLTON-SQUARE, a village, in the parish of ALLOA, county of CLACKMANNAN; containing 295 inhabitants. It is a colliery-village, consisting of about sixty dwellings, and appendant to the mines of the same name.

HOLYTOWN, for a time a quoad sacra parish, in the parish of BOTHWELL, Middle ward of the county of LANARK, 11 miles (E. by S.) from Glasgow; containing, with the villages of Chapelhall and Newarthill, 8169 inhabitants, of whom 900 are in the village of Holytown. This district is situated in a part of the county abounding with coal and ironstone, both of which are wrought to a very great extent. The collieries comprise all the various seams, and not less than from twenty to thirty are in operation; the cll coal, the nine feet, and the splint coal are found in abundance in the mines of Chapelhall. On the Woodhall estate, ironstone of good quality, principally that called blackband, is plentiful; and it is wrought at Calderbraes, near the village of Holytown, and at Greenside, near Newhuse. The Monkland Iron and Steel Company have extensive works near Chapelhall, in which are three blast-furnaces, making together about 1440 tons of pig-iron monthly, and six others producing 2880 tons: in the same establishment are mills and forges in which 400 tons of malleable iron are manufactured weekly. Some works at Cairnbroe, also, belonging to a firm, contain six blast-furnaces, yielding 600 tons of iron per week; and two more furnaces are in contemplation. About one hundred tons of steel are made by the Monkland Company annually, of which thirty tons are wrought into files; and about sixty tons of scrap iron per month are collected by them, and manufactured into engines for steam-boats and other purposes. In the company's works more than 2400 persons, including miners, are constantly employed; and the average annual amount of the produce of the various iron-works in the district is estimated at £676,000.

Among the principal mansions are, Woodhall, an ancient house in good preservation; Cleland House, a handsome modern mansion, beautifully situated on the South Calder; Carfin and Jerviston, both on the banks of the same river; Lanchope House, an elegant mansion recently erected, and tastefully embellished; and Cardanoch, a beautiful house in the Elizabethan style. The village stands on the great road from Edinburgh to Glasgow, and the district is intersected by the Caledonian railway, by the roads from Stirling to Carlisle, and from Edinburgh to Ayr and Hamilton, and by the Monkland canal. It is inhabited chiefly by persons employed in the collieries and iron-works. The post has a

good delivery. The quoad sacra parish of Holytown was about four miles in length, and of nearly equal breadth, comprising an area of 12,000 acres, of which one-half are arable, and of the remainder about one-third woodland and plantations and two-thirds meadow and pasture. The soil is a cold and tenacious clay, difficult to work, but, from the improved state of husbandry, producing favourable crops, though not more than sufficient for the supply of the population. Ecclesiastically Holytown is within the bounds of the presbytery of Hamilton, synod of Glasgow and Ayr. A preaching station was for some time established in the district, which, within the last few years, was replaced by the erection of a handsome church, containing 830 sittings; the minister derives his stipend, £80, from the seat-rents and collections, and has a commodious and comfortable manse. This church is under the patronage of the male communicants. There is also a place of worship for the United Presbyterian Synod. District parochial schools are supported by small endowments, in addition to the fees; five schools are maintained by the parties connected with the several works, in which more than 1000 children receive instruction; and three more are about to be erected by subscription. There are also eight Sabbath schools; and to those of Holytown, Newarthill, Chapelhall, and Cairnbroe, libraries are attached.

HOLYWOOD, a parish, in the county of DUMFRIES, 3 miles (N. N. W.) from Dumfries; containing 1061 inhabitants, of whom 81 are in the village. It is uncertain when the present name was first applied to the parish; but the oak forest that once overspread the ground, and the Druidical temples situated here, leave no doubt as to its origin. The wood, or forest, extended, it is supposed, for about eight miles, reaching to Suaid, in the parish of Glencairn; and as it must have been well known by the early Christian missionaries to have been a retreat of the Druids, some of whose temples are still to be seen in the vicinity, the memory of its primitive consecration was probably transmitted by them, under the name of Holywood. The ancient ABBEY of Holywood, which stood in the south-east corner of the present burying-ground, was founded by Dervorgilla, or Donagilla, daughter of Allan, lord of Galloway, who died in 1269: she was the mother of John Baliol, declared king of the Scots by Edward I., in 1292. It was called *Monasterium sacri memoris*, on account of its situation in a grove of oaks; and its monks were of the Præmonstratensian order: among them is said to have been Johannes de Sacro Bosco, a great mathematician, and author of the book *De Sphæra*. This monastery, like that of Whithorn, is supposed to have sprung from the religious institution of Souls-seat, near Stranraer, founded by Fergus, lord of Galloway, early in the twelfth century. The remains of the abbey, the roof of which was supported by a fine pointed arch across the middle of the building, were taken down in 1778, and the materials used for the erection of the present parish church. Two bells belonging to the edifice were, however, preserved; they are of excellent tone, and are now the parish bells. The patronage of Holywood formerly belonged to the Earls of Nithsdale, one of whom sold it in 1714 to Alexander Ferguson of Isle in Kirkmahoe, whose son, Robert, disposed of it to Robert Ferguson of Fourmerkland in this parish, after which it passed through several hands, and was purchased in 1823 by the late John

Crichton, Esq., of Skeoch. Cowhill, in the parish, was long the seat of the Maxwells, cadets of the noble family of Nithsdale. In the year 1560, the old castle at Cowhill was burnt by the English; and a tower, in lieu, was built in 1579; but being obtained by purchase, in 1783, by G. Johnstone, Esq., a Liverpool merchant, he pulled the building down in order to erect an elegant mansion on its site.

The PARISH is about ten miles long, and its mean breadth is one mile and a half; containing 8960 acres. It is situated in the most beautiful part of Nithsdale, and is bounded on the north-east by the parish of Kirkmahoe; on the east by the parish of Dumfries; on the south by the parishes of Terregles, Irongray, and Kirkpatrick-Durham, in the stewartry of Kirkcudbright; and on the west and north by the parishes of Glencairn and Dunscore. Being in a broad valley, the surface is flat and low, with the exception of one range of hills, which, however, is neither abrupt nor of great height. The lands are watered by the Nith and the Cluden, the latter of which is a famous trout-stream. The soil in the vicinity of these rivers is for the most part a rich alluvial mould free from stones. Adjacent to this the earth is lighter, and rests upon fine sand or gravel. There is also a deep strong loam, incumbent upon a tilly subsoil; and although this in its natural state is not so fertile as the former kinds, yet when drained, limed, and properly tilled, it becomes very productive, except in cold and wet seasons. The hilly ground is of the same character, but less deep; it is covered with an ordinary kind of grass, mixed with heath and harsh weeds. The parish comprises 7500 acres under tillage, 560 in wood, 360 moss, 300 hill land, 120 meadow, and 120 occupied by roads. Both white and green crops of all kinds are produced, and the system of husbandry followed is of the first description. Fine crops of turnips are raised by the liberal and judicious application of bone-dust manure, and are eaten off the ground by the sheep. The cattle are mostly the black Galloways, with cows for the dairy of the Ayrshire breed; the hilly tracts are occupied by the native Scotch sheep; but the English breed is preferred on the lower grounds, from the superior quality of the wool. Extensive improvements have been carried on for a considerable time in the different branches of husbandry, comprising subdivisions of land, good drainage, the repairing and enlarging of farm-houses, &c.: indeed, the rental of the parish has been considerably more than doubled since the year 1790, the annual value of real property in Holywood now amounting to £7437. The upper or hilly part of the parish contains greywacke; in the midland district there are strata of hard red freestone and of limestone. Boulders, also, of large and small grained greywacke, conglomerate, and trap, with boulders of granite and sienite, are to be seen. There are two small villages, viz., Holywood and Cluden. The facilities of communication are unusually great, about thirty miles of road being distributed in different directions throughout the parish, all of which are in excellent condition for travelling: the turnpike-road from Glasgow to Dumfries and Carlisle is the principal of the roads. The Glasgow, Dumfries, and Carlisle railway also intersects the parish. At Cluden are some extensive mills, which are let on lease to the Company of Bakers at Dumfries: about 16,000 bushels of wheat; 12,000 of oats; of barley shelled, 1000; and of barley for flour,

between 400 and 500 bushels, are produced at the mills every year. About a mile higher up the Cluden is another mill, in which barley is ground, flax prepared, and wool carded. Wool is also spun by machinery, on a small scale, at Speddoch.

FOR ECCLESIASTICAL purposes the parish is within the limits of the presbytery and synod of Dumfries; patron, James Otto, Esq., of Skeoch. The stipend of the minister is about £200; and there is a good manse, with seven acres of arable land, valued at £10. 10. per annum. Holywood church was built in 1773, and thoroughly repaired in 1821. It is a neat building with a square tower, and well adapted for the purpose of accommodation, but inconveniently situated, being eight miles distant from a part of the population: the edifice contains 600 sittings. There are three parochial schools, in which all the usual branches of education are taught. The master of the first school has a salary of £26; the second master has £15, and the third £10. The total income of the first master is about £60; that of the second and third, between £25 and £30 each. There is also a subscription library, established about fifty years ago, the volumes in which are chiefly theological. About a quarter of a mile south-west from the church, are eleven large stones, placed in an oval form: the number was twelve till within these few years. They have been universally ascribed to the Druids; and the massy size of the stones, the largest of which weighs twelve tons, excites the astonishment of all visitors. Mr. Charles Irvine, who in 1790 discovered the method of rendering salt water fresh, for which he was rewarded by government with a grant of £5000, was connected with the parish.

HOPEMAN, a village, in the parish of DUFFUS, county of ELGIN, $2\frac{1}{4}$ miles (E. N. E.) from Burgh-Head; containing 588 inhabitants. This village, also called Hopeman Harbour, is situated on the shore of the Moray Firth, and between the ports of Burgh-Head and Lossiemouth. It is of some little importance as the seat of a considerable fishery, but though regularly built, has not been remarkable hitherto for a cleanly appearance. In 1840 a new and excellent harbour was completed here, having seventeen and a half feet of water at spring tides, and five feet at low water, with an easy entrance of thirty-six feet, at right angles to the coast, leading from the outer to the inner harbour, the whole perfectly sheltered. Salmon, herrings, and white-fish are taken off this part of the coast. In the village is a small school.

HORDA, an isle, in the parish of BURRAY, county of ORKNEY. It is one of the smaller isles, lying in the Pentland Firth, between South Ronaldshay and Swinna; and is about a mile in length and half a mile in breadth, affording pasturage to cattle and sheep.

IIORISDALE, an island, in the parish of GAIRLOCH, county of ROSS and CROMARTY; containing 27 inhabitants.

HORNDEAN, a village, in the parish of LADYKIRK, county of BERWICK, 7 miles (W. S. W.) from Berwick; containing 124 inhabitants. This place consists chiefly of the Kirktown of the ancient parish of Horndean, which was annexed at the Reformation to the parish of Ladykirk. It is pleasantly situated on a gentle acclivity rising from the banks of the river Tweed, and is inhabited by persons employed in the various handicraft

trades carried on for the supply of the neighbourhood ; in the salmon-fishery ; and in agriculture.

HOSPITAL-MILL, a hamlet, in the parish of CULTS, district of CUPAR, county of FIFE ; containing 46 inhabitants. It consists of a small group of houses, and of a mill, formerly a corn and flax mill, and now a tow mill, in which are annually spun nearly 200 tons of tow, for which Dundee is the principal market.

HOUNAM, a parish, in the district of KELSO, county of ROXBURGH, 11 miles (S. S. E.) from Kelso ; containing 280 inhabitants, of whom about 45 are in the village, and the remainder in the rural districts of the parish. This place, the name of which is of doubtful origin, is not distinguished by any events of historical importance, though, from its situation on the confines of England, and the remains of numerous forts, it probably participated in the frequent hostilities of the border warfare. It measures about eight miles in length and six in mean breadth, and is bounded on the south-east by the English county of Northumberland. The surface is almost one continued series of hills, forming part of the Cheviot range, and is diversified with gentle undulations in some parts, and in others with small valleys and narrow gleses intervening between the bolder hills. Through these valleys the waters of the Kale and Capehope wind for several miles, along the banks of which are some small tracts of level land. The highest of the hills is Hounam Law, which has an elevation of 1464 feet above the level of the sea ; it is of conical form, easy of ascent, and is about nine miles in circumference at the base. The lower hills vary from 900 to between 1200 and 1300 feet. The Kale water has its source in the hills in the parish of Oxnam, and taking a northern course, divides the parish into two nearly equal parts, and after a very circuitous progress, unites with the Capehope at the village, a little to the west of which it forms a picturesque cascade, falling from a rocky precipice. These, and various smaller streams which flow through the parish, abound with excellent trout. There are also numerous springs of excellent water, and one of medicinal properties westward of the village, which is in some repute as a gentle diuretic.

In this parish the soil varies greatly in different parts, but is notwithstanding tolerably fertile, and in the valleys and lower grounds extremely rich ; in the higher lands it is a sandy gravel, and in some places moss and heath. The whole number of acres is estimated at 14,458 ; of these, about 13,540 are hilly pasture and sheep-walks, 816 acres arable, and 102 in wood and plantations. The crops are oats, barley, potatoes, and turnips : the system of agriculture is advanced ; the lauds have been drained, and considerable portions of waste reclaimed. The farm-houses, most of which have been rebuilt, are substantial and commodiously arranged ; those of modern erection are of stone, and roofed with slate. All the more recent improvements in agricultural implements have been generally adopted. The number of sheep fed on the pastures is about 13,000. They are principally of the Cheviot breed, to the improvement of which much attention is paid ; those on the lower pastures are of a mixed breed between the Cheviot and the Leicestershire. Above 1600 stones of wool are annually produced for sale. About seventy cows are kept in the parish, and 120 head of young cattle : a few horses are reared for agricultural purposes. The an-

nual value of real property in the parish is £5171. Wood formerly abounded in some parts, and there are still scattered remains of ancient forests ; but the woods have been nearly all cut down, and very few trees, if any, have been planted in their place. The plantations are chiefly of recent formation : those of Chester House have attained considerable growth ; and the younger plantations at Greenhill, and in the vicinity of the village, are in a thriving state, and, when mature, will add greatly to the beauty of the scenery. There are also some well-grown trees in the hedge-rows, including oak, ash, elm, and beech ; and birch, hazel, alder, and mountain-ash appear to be indigenous to the soil. The plantations are mostly plane, Scotch fir, and larch. In this district the rocks are principally of porphyry formation, and in the cavities are found grey amethyst, rock-crystal, calcareous spar, quartz, agates, and jasper ; the two last afford some very beautiful specimens. The substrata in the lower parts are chiefly clay, gravel, and sand. Greenhill, a seat of the Duke of Roxburgh's, is a handsome and spacious mansion, beautifully situated in grounds tastefully laid out, and embellished with shrubberies and ornamental plantations.

The village, which is of considerable antiquity, is pleasantly seated on the eastern bank of the Kale water, and at the base of a gently rising ground, which gradually terminates in a hill of considerable height. It consists of a substantial inn, and a few dwelling-houses, each of two stories, and all lately rebuilt. Almost adjoining it, is a neat range of houses which may be regarded as a continuation of the hamlet. Fairs are held on the Oxnam side of the parish, on the 31st July and 15th October, for lambs and ewes, and they are well attended. Facility of intercourse with the market-towns is afforded by various good roads that pass through the parish, and by handsome and substantial bridges lately erected over the different streams, and all of which are kept in excellent repair. For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Jedburgh, synod of Merse and Teviotdale : patron, Sir George Warrender, Bart. The stipend of the incumbent is about £206 ; the manse, erected in 1776, and enlarged and repaired in 1832, is a tolerably comfortable residence, and the glebe comprises about nine acres, valued at £11 per annum. Hounam church is very ancient, and was formerly a cruciform structure ; but it has been curtailed in its proportions, and is at present a plain rectangular building, adapted for a congregation of not more than 200 persons. The parochial school affords education to about thirty children ; the master has a salary of £34, with a house and garden, and the fees average £11. There are traces of ancient camps in various parts : the Roman road called the "Street" passes through the parish ; and on some rising ground near the village, overlooking the Kale water, are the remains of an old fort, which has given the name of Chester House to the lands on which it is situated. On Hounam-Mains farm are distinct traces of a very extensive circular intrenchment called the Rings ; likewise part of a circle of upright stones, supposed to be Druidical ; and in several parts of the parish are similar stones, of large dimensions, in detached situations. There are also some cairns, which are thought to have been raised over the tombs of warriors killed in battle.

HOUNDWOOD, for a time a quoad sacra parish, in the parish of **COLDINGHAM**, county of **BERWICK**, 6 miles (W. N. W.) from **Ayton**; containing, with the villages of **Auchincraw** and **Reston**, 1334 inhabitants. This district, which is situated in the southern portion of **Coldingham**, comprised about 12,000 acres, of which 8500 are arable, 300 woodland and plantations, and the remainder meadow, pasture, and waste. Its surface is diversified with hills, the highest of which, **Wardlaw Bank**, has an elevation of 640 feet above the level of the sea, commanding from its summit a splendid view to the east, south, and west, embracing the **German Ocean**, the **Merse**, part of **Roxburghshire**, the heights of **Lammermoor**, and the **Cheviot hills** in the distance. The lands are watered by the small river **Eye**, which flows for nearly eight miles through the district, and falls into the sea at **Eyemouth**: common trout of excellent quality are found in abundance. The soil is tolerably fertile, and the arable grounds are in good cultivation, producing favourable crops; the system of husbandry is improved; the lands have been drained and inclosed, and the farm houses and offices are substantial and commodious. The plantations are chiefly oak, elm, birch, and fir; they are under good management, and generally in a thriving state. **Renton House**, the seat of **Sir Samuel Stirling, Bart.**, and **Houndwood House**, the property and residence of **Mrs. Coulson**, are the principal mansions. In the village of **Reston** is a small manufactory for woollen cloths of the coarser kind; but the population of the district is mostly agricultural. The cattle and sheep bred in the pastures are sent to **Ayton**, **Dunse**, and **Morpeth**; and other agricultural produce chiefly to **Dunbar**, **Eyemouth**, and **Berwick**. The North-British railway passes through the district from south-east to north-west: at **Reston** the **Dunse** branch quits the line. Ecclesiastically **Houndwood** is within the limits of the presbytery of **Chirnside**, synod of **Merse** and **Teviotdale**, and the patronage is vested in the male communicants: the stipend of the minister is £87, arising from seat-rents and collections; with a manse. A chapel which was erected on the lands of **Renton**, in 1794, by the **Renton** family, and in which divine service was performed by a minister of their endowment, has been closed since the opening of the present church in 1836. The church is a handsome structure in the Grecian style of architecture, and contains 500 sittings: it was built by subscription, at a cost of £800, towards which £167. 10. were contributed from the General Assembly's funds. **Renton** chapel is still in good repair. There are a parochial school, and a school supported by subscription. Formerly numerous remains existed of strongholds, of which that of **Houndwood** was the hunting-seat of the prior of **Coldingham**: in this ancient residence, a small apartment is pointed out as the place where **Queen Mary** rested in 1566, on her **Berwickshire** tour.

HOUSTON and **KILLALLAN**, a parish, in the Upper ward of the county of **RENFREW**; including the village of **Crosslee** and part of the late quoad sacra district of **Bridge-of-Weir**, and containing 2818 inhabitants, of whom 623 are in the village of **Houston**, 14 miles (S. W.) from **Glasgow**. This place consists of two parishes which were united in the year 1760, when the population of both of them was scarcely more than one-third of the present number. The principal resident proprietor is **W. M. Fleming, Esq.**, whose ancestor,

Peter Fleming, held the estate of **Barochan**, in this parish, and being celebrated for his skill in falconry, received from **James IV.** the hood of his favourite hawk, richly studded with gems, as a reward for his dexterity: this hood, though many of the jewels have been lost, and among them a ruby of great value, is still preserved in the house at **Barochan**, the residence of his descendant. **Houston** parish is supposed to have derived its name from **Hugo de Padvinan**, who obtained a grant of the barony of **Kelpeter** from **Baldwin**, sheriff of **Lanark**, and who substituted his own name for that by which the barony had been previously called. The name of the other parish is thought to be a corruption of **Killfillan**, an appellation said to have been obtained from **Fillanus**, its tutelary saint.

The united **PARISH** is about six miles in length and three in breadth. It is bounded on the north and east by the parish of **Erskine**; on the south by the river **Gryfe**, which separates it from the parish of **Kilbarchan**; and on the west by the parish of **Kilmalcolm**. The river **Gryfe** has its source in the upland moors and high hills between **Kilmalcolm** and **Largs**, the latter place situated on the coast of the **Firth of Clyde**; and, augmented by numerous streams that meet near **Duchal**, it enters the parish, and pursues a rapid course towards the low lands at **Fulwood**, in its progress to which it is precipitated over several rocky heights. Thence it winds its way into the **Clyde**, first receiving the river **Black Cart** at **Walkinshaw**, and the **White Cart** near the bridge of **Inchinnan**. The surface is irregular, and in many parts beautifully diversified. In the lands of **Houston** is an extensive wood, consisting chiefly of oak, ash, birch, and plane trees, many of which are of venerable growth: there is a similar wood of natural growth, with extensive and thriving plantations, at **Barochan**. The high grounds in the district of **Killallan**, likewise, are largely planted with oak, ash, beech, and Scotch fir; and the mosses have been covered with trees which appear to be thriving well. Agriculture forms but a secondary pursuit in the parish, and comparatively only a small portion of land is in cultivation; the greater number of the inhabitants being employed in the various manufactures that have been established. Improvements have been made in draining the grounds, and many of the mosses have been reclaimed, and produce abundant crops; the farm-buildings are substantial and commodious, and are all roofed with slate. The scarcity of common manure has led to the introduction of a compost of moss prepared with oil, which, under proper management, has been found to answer well. The substratum is chiefly clay, covered in some parts with moss six feet in depth. In the higher districts, granite of good quality is prevalent; and in the lower parts, sandstone and limestone are quarried. Coal exists in abundance, and mines have been opened for the supply of the extensive works in the parish, and for fuel in the neighbouring places. **Barochan**, the patrimonial seat of **Mr. Fleming**, is of considerable antiquity, and has recently undergone great improvements; it is beautifully situated, and embellished with ornamental plantations, forming a conspicuous feature in the landscape. A subscription library has been established in the village of **Houston**. Fairs are held in May, chiefly for milch-cows, young cattle, &c., of the **Highland** breed. The annual value of real property in the parish is £11,293.

The chief manufacture is that of cotton, for which several extensive mills have been erected, mostly on the banks of the river Gryfe. Among these are the New mills, near Bridge-of-Weir, in the district of Killallan, erected in 1792, and at present conducted by Messrs. Findlay: they contain 6240 mule spindles; are driven by a water-wheel thirteen feet in diameter, with power equal to that of twelve horses; and afford employment to nearly 100 persons. The mill at Gryfe grove, erected in 1822, contains nearly 1000 mule spindles, and 500 for water-twist, with the requisite machinery, set in motion by a cast-iron water-wheel of twelve feet diameter, and giving occupation to about forty persons: adjoining is a mill erected by the same proprietor, for carding wool. A mill has also been erected by Mr. Shanks, in which are 1400 spindles, driven likewise by an iron water-wheel twelve feet in diameter. Gryfe mill, to the east of the Bridge-of-Weir mill, and belonging to Messrs. John Freeland and Co., was built in 1793, and contains 18,000 spindles; it is set in motion by a water-wheel nineteen feet in diameter, and employs nearly 300 persons. Crosslee mill, conducted by Messrs. Stevenson and Sons, is driven by a wheel of cast-iron, twenty-six feet in diameter, and equivalent to seventy-horse power; it affords constant employment to 300 people. Houston cotton-mills, situated on the burn of that name, and built in 1793, is driven by a wheel of eighteen-horse power, about thirty feet in diameter, and employs 140 persons; attached to this mill is a steam-engine, by which the machinery is set in motion when the water of the stream is insufficient for that purpose. Houston bleachfield, on the same rivulet, belonging to Messrs. Carlisle, is an extensive establishment, chiefly employed for the manufacturers of Glasgow and Paisley: about 4000 pounds of cotton-yarn, 60,000 pounds of linen yarn and thread, and 12,000 pounds of raw silk, are annually bleached in this establishment, in which fifty persons are engaged. The Glasgow, Paisley, and Greenock railway, opened throughout in 1841, skirts the eastern extremity of the parish, where a station is fixed. Ecclesiastically the parish is in the presbytery of Paisley, synod of Glasgow and Ayr, and in the patronage of Alexander Spiers, Esq. The minister's stipend is £264, with a manse, and a glebe valued at £13. 10. per annum. Houston and Killallan church, erected in 1775, is conveniently situated; it is in good repair, and is adapted for a congregation of 800 persons. The members of the Free Church have a place of worship, and there is a Roman Catholic chapel. The parochial schoolmaster has a salary of £34, with £24 fees, and a house and garden.

HOWGATE, a hamlet, in the parish of PENICUICK, county of EDINBURGH, 2 miles (S. S. E.) from Penicuik; containing 81 inhabitants. It lies near the high road from Edinburgh to Dumfries; and in its neighbourhood are several fine streams, some of which are tributaries to the Esk. The village is but a short distance from the boundary of Peeblesshire. A Secession meeting-house was built here in 1750.

HOWIESHILL, a hamlet, in the parish of CAMBUSLANG, Middle ward of the county of LANARK, $2\frac{1}{2}$ miles (S. E. by E.) from Rutherglen; containing 62 inhabitants. It is situated on the road leading from Rutherglen to Hamilton, and is one of numerous hamlets in the parish.

HOWWOOD, a village, in the parish of LOCHWINNOCH, Upper ward of the county of RENFREW, $2\frac{1}{2}$ miles (S. W.) from Johnstone; containing 252 inhabitants. It is seated in the north-eastern part of the parish, and on the road from Lochwinnoch to Johnstone, which runs nearly parallel with the Ardrossan and Johnstone canal. The village is neatly built, though of small extent, and consists principally of detached houses and cottages inhabited by persons engaged in cotton-mills and in agriculture. A school has been established, the master of which has a good house and garden rent-free, and occasionally a donation raised by voluntary contribution of the inhabitants: his principal income arises from the fees. A friendly society, also, has long been formed, and has acquired ample funds.

HOY, an island, in the county of ORKNEY; containing 1486 inhabitants, of whom 1153 are in the parish of Walls and Flotta, and the remainder in that of Hoy and Græmsay. *See the articles on those two parishes.*

HOY and GRÆMSAY, a parish, in the county of ORKNEY, $2\frac{1}{2}$ miles (S.) from Stromness; containing 547 inhabitants, of whom 214 are in the small island of Græmsay. This parish is chiefly situated in the island of Hoy, the principal of the South Orkney isles. It is bounded on the north by the Sound of Hoy, which separates it from the parish of Stromness, in the main land; on the east, by the bay of Scalpa, in which is the small island of Græmsay; on the south and south-east, by the parish of Walls; and on the west, by the Atlantic Ocean. The district of Hoy, or that part of the parish which is in the isle of Hoy, is about nine miles in extreme length, and six miles in breadth. Its surface is boldly elevated, forming the highest ground in the island, and the lands are chiefly marked by three lofty hills, ranged in triangular form, of which that to the north-east rises from a broad base to a height of 1200 feet above the level of the sea. The soil along the shore is a rich loam, and in other parts peat, alternated with clay. The greater portion of the district is covered with heath, affording pasture to many flocks of sheep which roam at large: in the husbandry of what is arable very little improvement has been made. For want of timber, the scenery has a dreary aspect, relieved however in some parts by small valleys, intersecting the hills, and watered by numerous rivulets, whose banks are ornamented with a few shrubs and wild-flowers. The hills abound with Alpine plants; and there are several deep glens, in which the sound of the voice, or the report of a musket, is re-echoed by repeated reverberations. A rock on the brink of a valley, called the Dwarfie-stone, has been excavated into three distinct apartments; in one of these is something resembling a bed, and between this and a smaller apartment is a recess apparently intended as a fire-place, with a hole cut in the roof to emit the smoke. The whole mass is of sandstone, about thirty-two feet in length, seventeen feet in breadth, and seven feet and a half in height. Veins of iron and lead ore have been discovered; and the latter ore, on analysis, was found to contain a considerable proportion of silver: some grains of gold have also been met with. The island of GRÆMSAY, which is separated from the rest of the parish by a sound about a mile in breadth, is a beautiful spot, a mile and a half in length and a mile broad. Its surface is level, and covered with verdure affording luxuriant pasturage; the soil is fertile, and that portion of

the land which is arable produces rich crops of grain: the substratum throughout is clay-slate, which is wrought for roofing. Cod, ling, and other fish are found in abundance off the coast of the parish; and seven boats belonging to the parish are regularly employed in the hering-fishery, during the season.

Ecclesiastically Hoy and Græmsay are within the limits of the presbytery of Cairston, synod of Orkney. The minister's stipend is £150, to which are added £8. 6. 8. for communion elements; with a manse, and a glebe valued at £8 per annum: patron, the Earl of Zetland. There are two churches, both in good repair, the church of Hoy built towards the close of the last century, and that of Græmsay thoroughly repaired about the year 1810; they contain each 182 sittings. Divine service is performed every third Sunday at Græmsay, and on the two other Sundays at Hoy. The parochial school is well attended; the master has a salary of £26, with a house and garden, and the fees are about £2 per annum. A school in Græmsay is supported by the Society for Propagating Christian Knowledge. Among the precipices on the coast is a massive lofty insulated pillar which, from a fancied resemblance, is called the "Old Man of Hoy"; it is conspicuously seen from the Caithness coast.

HULMITRAY, an isle, in the parish of HARRIS, county of INVERNESS. This is one of the smaller isles of the Hebrides, and is situated in the Sound of Harris, north-eastward of the island of North Uist.

HUMBIE.—See KEITH and HUMBIE.

HUME.—See STITCHELL and HUME.

HUNA, a township, in the parish of CANISBAY, county of CAITHNESS, 19 miles (N.) from Wick; containing 111 inhabitants. This place is situated on the shore of the Pentland Firth. It consists, in its western part, from Huna Inn to Gill's bay, of one of the most fertile districts in the parish; and, eastward to Duncansbay burn, of moss, which prevails to the very brink of the sea. The parochial church stands on an eminence close by the shore, and the manse is built about a quarter of a mile, inland, from it: the tall white spire of the former is an excellent landmark at sea. Here is a post-office, from which the mail-boat with the Orkney bags crosses the Firth three times a week, the distance to the landing-place in Orkney being about twelve miles. Edwin, King of Scotland, fought an army of Orkney men at Huna, and signally defeated them.

HUNDA, an island, in the parish of St. Peter in SOUTH RONALDSHAY, South isles of ORKNEY; containing 6 inhabitants. It lies in Scalpa Flow, to the north of Ronaldshay, and west of the isle of Burray; and is of small extent.

HUNIE, a very small islet, in the parish of UNST, county of SUETLAND; lying on the east side of the isle of Unst, and a short distance from Balta.

HUNTERFIELD, a small village, situated in the parish of COCKPEN, and county of EDINBURGH; containing 90 inhabitants.

HUNTHILL, a hamlet, in the parish of BLANTYRE, Middle ward of the county of LANARK, $3\frac{1}{2}$ miles (W. N. W.) from Hamilton; containing 60 inhabitants. It is situated on the western borders of the parish, and nearly adjoins the village of Blantyre, in the manufactures and works connected with which the population is partly engaged.

HUNTLY, a burgh of barony and a parish, in the district of STRATHBOGIE, county of ABERDEEN, 39 miles (N. W.) from Aberdeen, and 145 (N. by E.) from Edinburgh; containing 3642 inhabitants, of whom 2731 are in the burgh. This parish, consisting of the united parishes of Dumbennan and Kinoir, anciently formed part of the ample possessions of the powerful family of Cumyn, of whose baronial seat, Strathbogie Castle, there are still considerable remains. During the contested succession to the throne of Scotland after the death of Alexander III., the Cumyns, who were adherents of Edward I. of England, were nearly extirpated by the Gordons, upon whom Robert Bruce conferred the castle and lands of Strathbogie, in reward of their important services. The castle was almost destroyed after the battle of Glenlivet, in 1594, but was restored, with considerable additions, by the first Marquess of Huntly, in 1602, and, under the name of Huntly Castle, was the seat of the head of the Gordon family till their removal to Fochabers, when this place became the residence of the Marquess of Huntly, eldest son of the Duke of Gordon. On the death of George, the fifth duke, in the year 1836, without issue, the dukedom of Gordon became extinct; while the marquessate of Huntly, his second title, descended to his kinsman, the Earl of Aboyne. The duke's heir of entail, the Duke of Richmond, is, with the exception only of the estate of Avochy, the present proprietor of all the lands.

The TOWN derives its name from its founders, the family of Gordon. It is beautifully situated on a peninsula, near the confluence of the rivers Doveron and Bogie, over the former of which is an ancient bridge of one spacious arch, and over the latter a substantial bridge of three arches. The streets are regularly formed, intersecting each other at right angles; and in the centre is a noble square, surrounded with handsome houses, some of which are of very elegant appearance. Huntly is well paved, and lighted with gas; and the inhabitants are amply supplied with water. There are several libraries, the chief of which are, the Farmers' Agricultural Library, an evangelical subscription library, and a circulating library: there is also a reading-room, supplied with public journals and periodical publications. The environs abound with picturesque scenery, enlivened by numerous villas, and deriving much interest from the venerable ruins of the ancient castle, and the beautiful grounds of Huntly Lodge, on the opposite bank of the Doveron. The linen manufacture was formerly carried on here to a great extent, but since the termination of the war it has very much declined; and at present not more than about forty weavers are employed, for the wholesale houses of Aberdeen, and a few in the weaving of damask. There are a bleach-field upon a moderate scale, and a tannery and distillery in full operation; the usual handicraft trades for the supply of the neighbouring district afford employment to many of the inhabitants, and there are numerous shops supplied with merchandise of various kinds. From its situation on the principal road from Aberdeen to Inverness, the town has a considerable degree of traffic. The post-office has a daily delivery; and there are branches of the North of Scotland, the Town and County, and the Aberdeen Banks, for the first of which a handsome building has been erected in the square. A market is held on Thursday, which is amply supplied with grain, and nume-

rously attended by dealers from different parts of the country; and fairs, chiefly for cattle and horses, are held monthly, of which those at Whitsuntide and Martinmas are also for hiring servants. Facility of communication is afforded by good turnpike-roads; that from Aberdeen to Inverness passes through the town, that to Banff through the north-east, and one to Portsoy through the northern, district of the parish. The town was erected into a free burgh of barony by charter of James III., granted to George, second Earl of Huntly; and is governed by a baron bailie, appointed by the superior, but whose jurisdiction extends only to the removal of obstructions in the streets and thoroughfares.

The parishes of Dumbennan and Kinoir were united in 1727, and, in honour of the eldest son of the Duke of Gordon, called Huntly. The united parish is about ten miles in length, and four miles in breadth. Its surface is diversified with hills of moderate height, which surround the town on all sides, and of which the hill of Kinoir, in the immediate vicinity, consisting of several thousand acres, has been planted by the Duke of Richmond at an expense of nearly £3000. The rivers are the Doveron and the Bogie. Of these, the Doveron has its source in the hills of Cabrach, and flowing through the parish in a north-eastern direction, receives the waters of the Bogie. The Bogie rises in the parish of Auchindoir, and forms the boundary between this parish and that of Drumblade for two or three miles. Both the rivers abound with trout, and salmon are also found in the Doveron. The quantity of land which is arable cannot be precisely determined, but there is little waste capable of improvement: the soil, though various, and consisting principally of clay, moss, and gravel, is tolerably fertile; and the chief crops are oats, barley, and bear. There is good pasture on the hills for cattle, of which considerable numbers are reared, and sent to the English markets; but few sheep are bred in the parish. The system of husbandry has been improved under the auspices of an agricultural society of which the Duke of Richmond is patron, and which holds annual meetings in the town for the distribution of prizes, when a cattle-show takes place. The annual value of real property in the parish is £7245. The plantations consist chiefly of birch, elm, oak, and larch, Scotch, and spruce firs, all of which are carefully managed, and in a thriving state. In general the rocks are of granite and whinstone: limestone has been quarried, though it is of inferior quality, and very difficult to work with any prospect of advantage; and ironstone and plumbago have been also found. Huntly Lodge, the seat of the Dowager Duchess of Gordon, was originally a shooting-box belonging to the dukes: about twenty years since, it was enlarged and greatly improved as a residence. It is an elegant mansion, beautifully situated in a demesne embellished with plantations, and tastefully laid out in walks, and enlivened by the rivers Doveron and Bogie, which unite within the grounds. Avochy House, the seat of John Gordon, Esq., is a pleasant residence, in the grounds of which are some slight remains of the ancient castle of Avochy.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Strathbogie, synod of Moray. The minister's stipend is £185. 13. 9., with a manse, and a glebe valued at £25 per annum; patron, the Duke of Richmond. Huntly church, situated in the centre of the town, is a spacious plain structure, erected in 1805,

at a cost of £2600, and containing 1800 sittings. The new church, erected in 1841, at an expense of £1400, is also in the town, and contains 1100 sittings; the duty is performed by a missionary, appointed by the General Assembly, and who has a stipend of £100, derived chiefly from the seat-rents. There are places of worship for members of the Free Church, the United Presbyterian Church, and Independents; also an Episcopalian chapel, and a Roman Catholic chapel, the latter a handsome structure in the later English style. The parochial school is well attended; the master has a salary of £34, with a house and garden, and the fees average £60. He also receives £30 per annum from the Dick bequest. The school is held in a building erected by the Duchess Dowager of Gordon, in which are also held a school connected with the new church, and supported by subscription, and an infant and a sewing school, the mistresses of which receive salaries from the duchess. A dispensary is maintained; and there are several friendly societies, and a savings' bank in which are deposits amounting to £3644. The remains of the castle consist partly of those of the ancient castle of Strathbogie, of which the chief portion is a large circular tower, now in ruins; and partly of the restorations of Huntly Castle, which also are greatly dilapidated. The whole forms a venerable ruin, situated on the Doveron, near the bridge.

HURLET, a village, in the ABBEY parish of the town of PAISLEY, Upper ward of the county of RENFREW, 3 miles (S. E.) from Paisley; containing 287 inhabitants. This village and the adjacent hamlets are inhabited chiefly by colliers, and others employed in the extensive mineral works carried on in the district. The immediate neighbourhood abounds with coal, which has been wrought for more than three centuries; and ironstone is found in great abundance, in the procuring of which alone about 100 men are at present constantly engaged. The manufacture of copperas was introduced into Scotland by a company from Liverpool, who established their works at this place; and a similar concern was formed at Nitshill, in the vicinity, in 1807, by a company who subsequently purchased the works at Hurlet, which they converted into a manufactory for alum. Large quantities of muriate of potash and sulphate of ammonia are also produced, and conveyed to Glasgow and Paisley by canal, and by the Hurlet railway. The produce of the mines and mineral works in the district, in a recent year, was, 42,554 tons of coal, 4931 tons of limestone, 5701 tons of aluminous schistus, 1200 tons of alum, and 300 tons of copperas; the number of men employed was 580. To remedy the distress to which the miners and others are subject, from the frequent occurrence of accidents in their dangerous employments, a friendly society has been established; and about 100 children of the workmen attend a school in the neighbourhood, where they are taught reading, writing, and arithmetic, and on Sunday receive religious instruction. The villages of Corsemill and Dovecothall, in the vicinity, are chiefly inhabited by persons employed in the bleaching and print fields on the banks of the river Levern; and several persons are occupied in the extensive cotton-mills at Barrhead, in the adjoining parish of Neilston. In the year 1848 an act of parliament was passed for the construction of a railway from Paisley to Barrhead, with certain branches; to be called the Paisley, Barrhead, and Hurlet railway.

HURLFORD, a village, in the parish of **RICCARTON**, district of **KYLE**, county of **AYR**, $1\frac{1}{2}$ mile (E. S. E.) from **Kilmarnock**; containing 371 inhabitants. This place is seated on the south bank of the river **Irvine**, over which is a good and substantial bridge, that has lately undergone extensive alteration and repair. The population is chiefly engaged in the coal-works in operation in the parish. The great high-road from **Ayr** to **Edinburgh** intersects the village. There is a school, the master of which has a free house and garden.

HUTCHESONTOWN, a small district, including a town, in the parish of **GOVAN**, barony of **GORBALS**, within the jurisdiction of **GLASGOW**, county of **LANARK**; containing about 5000 inhabitants. This place, which forms one of the principal suburbs of the city of **Glasgow**, is situated to the south of the river **Clyde**, on land purchased in 1647 by the corporation of **Hutcheson's Hospital**. The town was commenced in 1794, and consists of several spacious and well-formed streets, intersecting each other at right angles; the houses are generally from three to four stories in height, and are respectably built of stone, and roofed with slate. The whole is well lighted with gas, and amply supplied with water. There was facility of communication with the city provided by a bridge over the **Clyde**, which was scarcely completed when it was swept away by an inundation of the river, in 1795. The loss of this bridge greatly retarded the progress of the town; and it was not till the year 1829 that the foundation stone of a new one, on the same site, was laid by the preceptor of the hospital. The bridge is a handsome structure of five arches, from a design by **Mr. Robert Stevenson**, civil engineer; it is 406 feet in length, and thirty-six feet wide within the parapets.

A large portion of the population are employed in the cotton manufacture, weaving both by power and hand looms; and in different branches of the linen trade. A very extensive factory for weaving stripes and checks for furniture, various fabrics for women's dresses, shirtings, and other articles, was established here by **Messrs. Sommerville and sons**. There are also some foundries and iron-works in the district, the most important of which are those of **Mr. W. Dixon**, who has erected several hot-blast furnaces on the principle of **Neilson's** patent, in which about 4000 tons of pig-iron are annually produced. The greater portion of the town was included within the late ecclesiastical district of **Hutchesontown**, formed under an act of the **General Assembly**, and attached to the parish of **Gorbals**. The church is a plain but elegant structure, erected in 1839, at a cost of £2600, by the **Church-Building Society**, and containing more than 1000 sittings: it is now rented by a **Free Church** congregation. The members of the **United Presbyterian Church** have also a place of worship. A school-house, capable of receiving 650 children, has been built by subscription, aided by a grant from government; instruction is afforded upon very moderate terms. There are likewise several Sunday schools for children of both sexes.

HUTTON, a parish, in the county of **BERWICK**, 6 miles (W. by N.) from **Berwick-upon-Tweed**; containing, with the village of **Paxton**, 1133 inhabitants. The parish of **Hutton** was enlarged in the year 1614, by the annexation of the neighbouring parish of **Fishwick**; and these two districts form the parish as it at present exists. **Hutton**, which lies near the **Whitadder** river, is supposed

to have derived its name from the situation of its village in a hollow, whence the term **How-town**, corrupted into **Hutton**. **Fishwick**, which is on the banks of the **Tweed**, is generally thought to have derived its name from the avocations of its inhabitants as fishermen in ancient times: the churchyard there still continues, but the owner of the property some years since built a family cemetery in the pointed style, in the form of a chapel, on the ruins of the church, which are not now visible. From a diary of the progress of **Edward I.** through **Scotland**, it seems probable that the king encamped in this locality on the 29th of **March**, 1296, the day preceding that on which he took the town of **Berwick**. It appears that **Hatton**, or **Hauden**, was the place where he rested with his army the day after he left **Coldstream**; and as this parish lies in the direct line of his march to **Berwick** from **Coldstream**, where he crossed the **Tweed** on the 28th of **March**, it is concluded that **Hutton** must be the spot there referred to.

The PARISH, which resembles in figure an irregular triangle, is about four miles long and three broad, and contains 5261 acres. It is bounded on the north by the parishes of **Chirnside**, **Foulden**, and **Mordington**, from which it is separated by the **Whitadder** river; the parish has the river **Tweed** on the south, the parish of **Berwick** on the east, **Edrom** on the west, and **Whitsome** and **Ladykirk** on the south-west. The surface presents almost one continued flat, with the exception of the ground on the banks of the **Tweed** and **Whitadder**, which, being diversified with gentle elevations, relieves the tame and uninteresting scenery in the other parts of the parish. The height of these elevations, however, above the sea, seldom exceeds 150 feet. Near the rivers the soil is a rich deep loam, resting upon sandstone, and exceedingly fertile, producing heavy crops. In the middle of the parish the ground is of an inferior quality, being thin, wet, and moorish, and rests upon a tenacious clayey subsoil. A tract of this description, about a mile broad, commences here, and runs from east to west, to the extremity of the county; while on each side of it the earth is rich and productive. The parish comprises 4950 acres either cultivated or occasionally in tillage. Above sixty acres on the banks of the rivers, being too steep for the operations of the plough, remain for the most part in natural pasture, part of which is of very superior quality. About 250 acres are occupied by wood, consisting of ash, elm, plane, oak, beech, and all the varieties of fir: this department of rural economy claims much of the attention of the proprietors, especially on the estates of **Broad Meadows**, **Paxton**, and **Fishwick**, where the plantations are in a very thriving condition. The lands are considered most suitable to wheat, but excellent crops of turnips are produced, as well as of grain of all kinds. Tile-draining has of late years been extensively practised in the parish with great effect. The farm-buildings and offices are in general neat and convenient; and nearly the whole of the grounds are inclosed with good thorn-hedges. Improvements in every department of husbandry have, indeed, been carried on for many years past. Sandstone of various kinds is the prevailing rock: on the estate of **Hutton Hall** is a stratum of very fine gypsum. The annual value of real property in the parish is £10,446.

There are several mansion-houses, of which **Hutton Hall** is the most ancient and remarkable. It is situated

on an eminence near the Whitadder, and appears to have been originally a square tower constructed principally for observation and security, to which many subsequent additions have been made, to accommodate it to the usages of modern times. This mansion is now uninhabited, and fast verging to ruin. The mansion of *Paxton* was built about eighty or ninety years ago, of dark sandstone; the front is massive and commanding, and the house is enlivened by the passage of the river Tweed on the south-east: the apartments are elegant and commodious, and a very valuable collection of paintings enriches the mansion. *Broad-Meadows* is constructed of fine white freestone, and is a modern building in the Grecian style of architecture. The scenery in the vicinity of these residences is interesting, and in some parts beautiful, especially that near Paxton. Not far from the last-named place are *Spittal House* and *Tweed Hill*, the latter of which stands on the river Tweed, in the vicinity of the Union chain-bridge.

The population are almost entirely agricultural; their chief communication is with the town of Berwick. On the estate of Paxton is a manufactory for bricks and tiles, where large quantities of the latter are produced for drainage. Three corn-mills are also in operation in the parish, the produce of which, consisting of flour, meal, and pearl-barley, is exported from Berwick to London. Upon that part of the Tweed forming the boundary line of the parish are four or five fishing-stations; upwards of twenty men are employed, and considerable quantities of trout, salmon, and grilse are caught, which are packed in ice at Berwick, and despatched by steam-vessels to the London market. Two turnpike-roads pass through the parish, one leading from Berwick to Dunse, and the other from Berwick to Kelso by way of Swinton: the lines of turnpike-road are about ten miles, and the parish roads of equal extent. About two miles and a half from the village of Hutton, and six from Berwick, is the iron suspension-bridge over the Tweed, erected in 1820, and by which many serious accidents and the loss of lives have been prevented: it is 361 feet in length, and of one hundred tons' weight of malleable iron; the whole expense being between £7000 and £8000. Another bridge has been lately erected near Hutton Mill, across the Whitadder, connecting the parish with Foulden, and also opening a facility of communication with the sea-port of Eyemouth: it is a handsome structure, and most convenient for the locality. Ecclesiastically Hutton is within the limits of the presbytery of Chirnside, synod of Merse and Teviotdale, and the patronage is vested in the Crown: the stipend of the minister is £236, with a manse, built fifty or sixty years ago, and enlarged and repaired in 1822. There are two glebes, one of them in Hutton and the other in Fishwick, amounting together to about thirteen acres, valued at £30 per annum. The present church, erected in 1834, is remarkably neat in its external appearance; it is in the Norman style of architecture, and affords excellent accommodation for upwards of 600 hearers. There is a parochial school, in which Latin, mathematics, geography, &c., are taught, and for which a good school-house, and dwelling-house for the master, were lately built: the master's salary is £34. Another school is held in Paxton, and a girls' school in Hutton. The parish also has two small parochial libraries, a friendly society, and an agricultural association, the last designed chiefly to promote improvements in ploughing.

Dr. Andrew Foreman, Bishop of Moray, Archbishop of Bourges in France, and afterwards Archbishop of St. Andrew's, who flourished at the beginning of the sixteenth century, was a native of the parish.

HUTTON and CORRIE, a parish, in the county of DUMFRIES, 7 miles (N. N. E.) from Lockerbie; containing 809 inhabitants. The name of Hutton appears to be derived from the term *Holt*, signifying an elevated piece of ground or a mound of earth: some mounds of artificial construction in the district were used in ancient times as seats of deliberation, and for the administration of justice. Corrie, which was joined to Hutton soon after the Reformation, derives its appellation from a rivulet which runs through it, and the name of which, in the Gaelic language, signifies "a narrow glen": the stream issues from a glen. On the farm of Closs, in the parish, are some remains of a place called Maskersa, where the Grahams of Gillesbie formerly had their residence, but from which they removed, more than 300 years ago, to a tower on the brink of the Dryfe, which was a fortress of great strength, surrounded by a fosse. Of this family the descendants still retain property in the neighbourhood. It was in the Tower of Gillesbie that the first president of the court of session was for a time confined, when taken away to prevent his giving a decision in a suit in which one of the parties thought he had too much influence.

The PARISH extends twelve miles in length from north-west to south-east, and the average breadth is about three miles; comprising an area of nearly 23,000 acres. It is bounded on the north-east by the ridge of hills which divides Annandale from Eskdale; on the south-east by the Water of Milk, which separates Corrie from the parish of Tundergarth; and on the north and west by the parishes of Wamphray, Applegarth, and Dryfesdale. The general aspect of the country is diversified with an agreeable variety of scenery. Towards the north the hills are covered with verdure, and the banks of the Dryfe with wood, the effect of which is considerably heightened by the course of the stream, which runs over a gravelly, and frequently a rocky, bottom. In the direction of the Milk, the view is somewhat similar; but the features of the landscape are less marked and prominent. On the heights between these two waters, the scene is reversed, and becomes bleak and rugged. The soil in some places in the parish is mixed with a fine gravel, and in others with good clay; in the high lands it is mossy or moorish. About 3000 acres of land are occasionally cultivated. None of the remaining 20,000 have been ploughed within the last fifty years: much of this ground was formerly in tillage; but the consolidation of the small farms has led to the conversion of a considerable quantity of ploughed land into pasture. All kinds of white and green crops are raised, with the exception of wheat; and the system of husbandry in this as in other parishes is greatly improved. About two-thirds of the lands are employed as sheep pasture in nine or ten regular breeding-farms, keeping about 10,000 sheep, which are wholly Cheviots except 600 or 700 of the black-faced. The cattle, which are also of a superior description, and much attended to, are of the black Galloway breed. The annual value of real property in the parish is £5300. The communication of the people is chiefly with Dumfries, seventeen miles distant. Formerly the roads were in bad condition; but they have been

entirely re-constructed within the last thirty or forty years : among them are two lines, one of which leads from Dumfries towards Hawick, and the other from Moffat towards Langholm and Carlisle. There are bridges over the Dryfe, the Corrie, and the Milk, which, as well as the roads, are kept in good repair.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Lochmaben, synod of Dumfries; patrons, the Johnstone family of Annandale. The stipend of the minister is about £240, with a manse, built in 1803, and since enlarged and improved, and a glebe of about thirty-six acres, worth £25 per annum. The church is situated near the Dryfe, equidistant from the north-eastern and southern extremities of the parish; it is in good repair, and accommodates 312 persons with sittings. There is a parochial school in the Hutton division of the parish, where the classics, mathematics, and French, with the usual branches of education, are taught. The master has a salary of £27, a house and garden, and about £20 fees; he receives also two-thirds of the interest of £260 bequeathed in 1802 by Mr. James Graham, a native of the parish, for teaching poor children reading, writing, and arithmetic. There is another parochial school at Corrie, which has been for a considerable time endowed with a bequest by Mr. Edward Moffatt, of Exeter, consisting of the interest of £280, for teaching the children of this division of the parish reading and writing. In 1820, Col. James Wilson, grand-nephew of the founder, added £20 per annum to the salary, on condition of the master teaching the children arithmetic, and that the school should be considered as endowed, he and his heirs appointing the master. The heritors of Corrie pay the master £16 a year; and besides a house and garden, he has five acres of good pasture ground; together with fees paid for teaching other branches than reading, writing, and arithmetic, these three being taught free. The same branches of instruction are taught here as in the school at Hutton. The relics of antiquity consist of the remains of several old intrenchments of a circular form, called British forts, and of a rectangular intrenchment at Carter-town, which was a Roman camp, and is supposed to have been a post of communication between Annandale and Eskdale, where the Romans had several stations.

I

IBRIS, or EYEBROUGHY, an isle, in the parish of DIRLETON, county of HADDINGTON. This islet lies close to the main land of the parish, in the Firth of Forth, and is of small extent, and very narrow. The isle of Fidrey, also appertaining to Dirleton, is distant about a mile east-north-east from Ibris.

ICOLMKILL, county of ARGYLL.—Sec IONA.

ILLARY, an island, in the parish of NORTH UIST, county of INVERNESS; containing 80 inhabitants. It is one of the Hebrides, lying westward of North Uist; and is three miles in length, and in most places one mile and a half in breadth. The soil is partly sandy, and partly a black loam, yielding tolerable crops of barley, and some pasture for cattle. Illary is of insular appearance only at the flow of the tide.

INCH, a parish, in the county of WIGTOWN, $2\frac{1}{2}$ miles (E.) from Stranraer; containing, with the villages of Cairnryan and Lochans, 2950 inhabitants. This place, which is of great antiquity, and distinguished for its lochs, appears to have derived its name from an island in the loch of Castle-Kennedy, which was called the Inch, an appellation corrupted from the Celtic word *Inis* or *Yuis*, signifying "an island". In very ancient times the locality was occupied by the *Novantes*, whose town of *Rerigonium* was situated on the bank of the *Rerigonius sinus*, now called Loch Ryan, and was near the farm of Innermessan, adjacent to which is a large circular mound or moat, formerly surrounded, as is supposed, by a fosse, and measuring seventy-eight feet in height, and 336 feet round its base. Various purposes have been assigned to this work of antiquity; but whether it was intended for the administration of justice, for a rendezvous in times of danger, or for the Beltan (Bel's fire), or for all these, is uncertain. The circumstance, however, of charred wood, ashes, and bones having been found at some depth below the surface, within its line of circumscription, is strong evidence of its having been used occasionally, and perhaps regularly, as a place of sepulture. On or near the site of *Rerigonium*, at a later period, stood the town and castle of Innermessan. The former, till eclipsed by the town of Stranraer, was the largest place in the Rhins of Galloway; the latter belonged to Sir Andrew Agnew of Lochnaw; but no traces of either remain, except a sewer about three feet under ground.

The celebrated abbey of SOULSEAT, or Saulseat, was founded here in the twelfth century, by Fergus, lord of Galloway, for Præmonstratensian monks. Though its history is for the most part involved in obscurity, Chalmers is of opinion that it was the first institution of the order in Scotland; that its abbots were the superiors of the Præmonstratensian monks throughout the kingdom; and that the establishment was the parent of the more opulent priory of Whithorn, as well as of the abbey of Holywood. In an act of parliament of 1487, it is spoken of as not being subject to the authority or appointment of the Pope. In 1532, it appears that David, abbot of Soulseat, was invested with a commission from the king, to visit and reform all the houses in Scotland of his own order; and in 1658, the abbot is named in a document as uniting with others in defence of the queen. The abbey was situated on a peninsula that stretched out into a lake, to which it gave its name; and was surrounded by a burying-ground: it was called *Sedes Animarum*, and *Monasterium viridis stagni*, the latter term in allusion to the green appearance, at certain times, of the surface of the lake. Soulseat Abbey was a ruin in 1684, and but very small portions of the remains are now to be seen: part of the burying-ground is still occasionally used as a place of interment. The mansion of CASTLE-KENNEDY, which was accidentally destroyed by fire in 1715, was a lofty and spacious structure, supposed to have been built in the reign of James VI., and was the seat of the powerful Earls of Cassilis, whose property and influence spread over so large a part of Wigtownshire. It passed with the lands, in the time of Charles II., to Sir J. Dalrymple the younger, of Stair, in whose family the estate has since continued, though the building, the remaining walls of which are seventy feet high, has not been inhabited since the fire. The structure is surrounded by grounds beautifully laid out

after a military plan devised by Marshal Stair; and adjoining are flourishing plantations, containing some lofty and luxuriant ash-trees.

The PARISH formerly comprehended the parish of Portpatrick and part of that of Stranraer. Portpatrick was separated and made distinct in 1628; and about the same period, a portion of Inch, with some land in Leswalt, was allotted to form the parish of Stranraer, and the old parish of Soulseat was united to Inch. The parish has the county of Ayr on the north, the parishes of New and Old Luce on the east, and that of Stoneykirk on the south; on the west it is bounded for about eight miles by Loch Ryan. It is ten miles in length, and in one part nearly of the same breadth, comprising 30,600 acres, of which 12,600 are cultivated or occasionally in tillage, and the remainder waste or natural pasture. The northern portion is principally high land, rising in some places to an elevation of 812 feet above the level of the sea; and, with the exception of a small portion under the plough, is in general rugged, and covered with heath, about 800 acres only being considered capable of cultivation. The southern portion, which is part of an isthmus formed by Loch Ryan and the bay of Luce, is slightly undulated, but when viewed from the hills has the appearance of a continuous plain. It contains several hollows, provincially called *Pots*, which were produced by the action of the water when spread over this division of the parish, and one of which is 1000 feet in circumference, and 100 feet deep.

The river Luce, in which are good salmon, forms the boundary line between this parish and Luce; and the Piltanton, a smaller and slower stream, falling, like the former, into the bay of Luce, divides Inch from Stoneykirk. There are also twelve fresh-water lochs, including those of Castle-Kennedy and Soulseat, both which are celebrated for their beautiful scenery. The whole of the lakes abound in pike, perch, trout, eels, and roach; and in the frosty weather, some of them are frequented by large numbers of wild-duck, teal, widgeon, coots, and cormorants. These, with the swarms of wild-geese near the brooks and the sea-shore, and the flocks of curlews, plovers, and every kind of game on the high lands, afford ample gratification to the sportsman, and impart an air of liveliness to the district, which is sometimes increased by crowds of persons of all ranks enjoying the favourite amusements of curling and skating upon the frozen surface of the lakes. Swans, also, frequently visit the place in the winter; and in the spring the sea-mew finds a retreat among the sedge of the lochs, for bringing forth her young. Loch Ryan, at the mouth of the Clyde, has always been a secure retreat for vessels entering or leaving that river, and for vessels navigating the Irish Channel, even in the most stormy and dangerous weather, there being excellent anchorage and safe shelter off the village of Cairnryan. It is between eight and nine miles in length, from its northern extremity to the town of Stranraer at its head, and is about three miles wide at the entrance. The loch has at first from four to five fathoms' depth of water, which gradually increases to from seven to eight; and it is considered to be admirably adapted for a mail-packet station between Scotland and Ireland. Salmon are taken in its estuaries; and the produce of the fishery of Loch Ryan comprises cod, haddock, whiting, herrings, flounders, and oysters of very superior quality.

The SOIL, varying almost as much as the surface, is in the high grounds partly loam, but chiefly clay, with a considerable portion of moss, and large tracts of peat, from which the inhabitants are plentifully supplied with good fuel. In the lower parts it is light and fertile, resting on gravel or sand, and produces good crops of all kinds of grain, with potatoes, turnips, and hay. The cultivation of the turnip was introduced into the parish, about a century since, by Marshal Stair, and though practised only to a very inconsiderable extent till within the last few years, has now become a favourite branch of husbandry, the lightness of the soil being remarkably suited to the root. The turnip crops are eaten off the ground by sheep, to the great advantage of the land. In this parish the cattle are still partly of the Galloway kind; but the great regard formerly paid to this stock has lately much diminished, and the farmers, turning their attention more to the dairy, have introduced the Ayrshire cow; and cheese now forms a considerable part of the disposable produce. Numerous improvements in agriculture have taken place within the present century: many acres of bog have been reclaimed, and converted into good arable land, now yielding fine crops; and most of the farm-houses have been rendered comfortable dwellings. The present Earl of Stair resides at Culhorn House, in the parish, and has given a fresh stimulus to agricultural improvements by his encouragement and example. The fences on the lower grounds are occasionally formed of thorn-hedges, but are generally turf dykes, sown with whins; on the higher lands they are entirely of stone. The annual value of real property in Inch is £10,986. The geology of the parish has no striking features, the hills consisting chiefly of stratified transition rocks, the principal of which is greywacke: detached blocks of granite are occasionally to be seen; and near Loch Ryan is an excellent slate-quarry. Several attempts have been made to discover coal, but without effect. There is a little natural wood, principally in the glens of the higher district; the plantations cover 655 acres of land, all inclosed. The oldest of the plantations are those made by Marshal Stair, and consist chiefly of beech, a wood supposed at that time to be the only one suited to the soil and climate, but which has since been equalled, if not surpassed, in growth and value by the ash and plane. These latter, with oak, elm, and larch, are now to be found, in a thriving condition, in most of the plantations, and serve very beneficially as a protection to the arable grounds.

The chief village is Cairnryan, which contains 196 persons, and is distant seven miles from the parish church; about 100 persons reside in another village, and a few in a suburb of Stranraer, lately built in the parish. The high road from London to Portpatrick, and that from Glasgow to the same place, pass through the parish; and the steam-packet plying between Glasgow and Stranraer, and that from Belfast to Stranraer, touch at Cairnryan for passengers and goods. A monthly market, called "the Stranraer cattle-market", is held from April to October. Ecclesiastically the parish is in the presbytery of Stranraer, synod of Galloway, and in the patronage of the Crown. The stipend is £264; and there is a manse, rebuilt in 1838, with a glebe containing eighteen acres, valued at £15. 15. per annum, and four acres, lately added by the draining of a loch. Inch church, built in 1770, and capable of ac-

accommodating 400 persons, occupies a beautiful situation adjoining the picturesque woods and lake of Castle-Kennedy. A chapel was built at Cairnryan some years ago, in connexion with the Establishment; and there are two places of worship for members of the Free Church, one of them situated at Cairnryan, and the other in another part of the parish. The parochial school affords instruction in the classics, practical mathematics, and the various branches of a good education; the master receives the minimum salary, about £23 in fees, and has a house and garden.

At Glenterra is a relic of antiquity called the *Standing Stones*, situated near the road to New Luce, consisting of four large upright stones, and conjectured to have been originally a Druidical temple: near these is a single stone, also erect. There is likewise a series of stones called the *Stepping-Stones of Glenterra*, disposed like stairs, extending for about a quarter of a mile along a peaty moss, and supposed to have been placed there for the convenience of transit. Stone axes are occasionally discovered; and there are numerous cairns in the upper, and tumuli in the lower, part of the parish, which are generally thought to have been raised by the *Novantes* for sepulchral purposes. The cairns are usually called the *Auld Grèy Cairns*, and are formed of a circular heap of stones, from fifty to seventy feet in diameter, and rising from six to eight feet in the centre: in the interior is a cavity formed by large flat stones, in which an urn is generally found, containing bony fragments, ashes, &c. At the farm of Larg, near the river Luce, are the remains of a castle, once the residence of the Lyns of Larg. The castle of *Craig-Caffie* was the property of the Nelsons, a family now extinct, and is a moderate-sized ancient structure, surrounded by a fosse, and still in good condition, but converted into a farmhouse. In that part of the parish which, with a portion of Leswalt, was detached to form the parish of Stranraer, was a chapel dedicated to *St. John*; and near this stood a castle, which Symson, in his description of Galloway, written in 1684, calls "a good house pertaining to Sir John Dalrymple, younger, of Stair," but which is now a jail for the town of Stranraer. There are several chalybeate springs, and some partially sulphureous. Marshal Stair, celebrated in military and political history, was a native of the parish of Inch. North-west Castle is the seat of Sir John Ross, the well-known navigator of the Arctic, who was born here in 1777, during the incumbency of his father, the Rev. Andrew Ross; and General Sir J. Alexander Agnew Wallace, distinguished as a military officer in Egypt, India, and the Peninsula, resides at Lochryan House, in the parish.

INCHBRAYOCK.—See ROSSIE.

INCH-CAILLOCH, an isle, in the parish of BUCHANAN, county of STIRLING. This beautiful island, the name of which signifies the "Isle of Old Women", is situated in Loch Lomond, and is one of a cluster in that magnificent and celebrated lake. It lies close to the shore, about two miles distant in a line westward from the church of Buchanan, and is a mile in length, elevated, and covered with wood, except where cultivated for wheat and oats, which it produces of very good quality. Here formerly stood a nunnery, the church attached to which was once the parochial church of Buchanan; but owing to the inconvenience arising from crossing to the island in boisterous weather, divine

service was transferred to a chapel near the house of Buchanan. This place is the property of the Duke of Montrose.

INCHCOLM, an island, in the parish of ABERDOUR, district of DUNFERMLINE, county of FIFE, $1\frac{1}{2}$ mile (S. by W.) from Aberdour; containing 5 inhabitants. It is situated in the Firth of Forth, immediately opposite to Aberdour; and the approach to it is very beautiful. On this island are the remains of a celebrated monastery of Augustines, founded in 1123, by Alexander I., in accordance with a vow, and most richly endowed by his munificence. It soon became famous for its sanctity; and in consequence, Alan de Mortimer, lord of Aberdour, bestowed half of the lands of the parish on the monks, for the privilege of a family burial-place in their church. The wealth of the convent proved so great a temptation to the army and seamen employed in the invasion of the kingdom by Edward III., that they ravaged it without mercy, not sparing even the vessels consecrated to divine worship. A storm, however, happening instantly to follow, which overtook their ships, and in which many of them perished, they were struck with what they regarded as a judgment upon their impiety; and they returned on the cessation of the tempest, and restored the spoil. The monastery continued a place of consequence, and was highly venerated, until the Reformation. On every side the island is hemmed in by rugged rocks: in the centre is a hollow vale, connecting the two circular ends of the island, as if by an isthmus; and a range of fine land and marine scenery appears in all directions, with a splendid view of the city of Edinburgh on the south-east. A small part of the island is arable; and a few stunted trees grow round the ancient walls of the ruined cloisters. The isle abounds in rabbits; has an occasional lobster-fishery; and is noted for its onions, which it produces in great quantities. During the late war with France, Inchcolm was garrisoned by a party of artillery; and on the east end, where it is high and rocky, a battery of ten guns was at that time erected.

INCH-CONAGAN, an isle, in the parish of LUSS, county of DUMBARTON. It lies in the fine water of Loch Lomond, about a mile eastward of the shore, and is one of a group of several isles closely bordering on one another. Inch-Conagan is more than half a mile in length, and about two furlongs and a half in breadth; containing about ninety-four acres, chiefly under wood.

INCH-CRUIN, an isle, in the parish of BUCHANAN, county of STIRLING. This isle, the name of which signifies "the Round Island", is situated in Loch Lomond, and is about three-quarters of a mile in length, affording some good arable and pasture ground. There was formerly a retreat here for insane persons.

INCH-FAD, an isle, in the parish of BUCHANAN, county of STIRLING. The name of this isle, in English "Long Island", is descriptive of its form; it is about a mile in length, and between two and three furlongs in breadth, and lies, like the preceding isle, in Loch Lomond, not far from the main land of the parish. The soil is very fertile, producing excellent grain, and fine pasture; and there is a small portion of wood.

INCHGARVIE, an isle, in the parish of INVERKEITHING, county of FIFE. This is a small islet in the Firth of Forth, about half a mile south of Queensferry in the parish of Inverkeithing, and double this distance from Queensferry on the opposite shore of Linlithgowshire.

In the reign of James IV., a fort was erected here, which was latterly used as a state prison; and this fort, or another built on its site, is still remaining on the summit of the isle, in ruins. Owing to the alarm occasioned by the appearance of Paul Jones and his squadron in the Firth, in 1779, the fortifications were renewed, and four twenty-four pounders were mounted upon them; but they have been since removed.

INCHINNAN, a parish, in the Upper ward of the county of RENFREW, 3 miles (N.) from Paisley; containing about 500 inhabitants. This place derives its name, signifying in the Gaelic language "a river island", from its peninsular situation, being almost surrounded by the rivers that form its principal boundaries. In some documents it is mentioned under the designation of Killinan, from the circumstance of the site of its church being totally insulated by the winding of one of those rivers, the channel of which, however, was long since diverted. The manor was one of the many grants conferred upon the family of Stuart, previously to their accession to the throne; and is particularly noticed in a charter of Malcolm IV., dated at Roxburgh in 1158, in which that monarch confirms to Walter Stuart the office of high steward of Scotland, and the lands that had been bestowed upon him by David I. In 1511, James IV. granted by charter to Matthew, Lord Darnley, and second Earl of Lennox, the manor and palace of Inchinnan with their dependencies, all which, upon the death of the fourth earl, descended to his grandson James VI., who conferred them upon his great-uncle John, Lord D'Aubigny, whom he also raised to a dukedom in 1581. These estates, again reverting to the crown, were in 1680 given by Charles II. to his natural son Charles, whom he had created Duke of Lennox and Richmond, and who sold them to the Duke of Montrose, from whom they were ultimately purchased by the ancestor of Mr. Campbell of Blythswood, the present proprietor.

The PARISH is about three miles and a half in length, and varies from three-quarters of a mile to something more than two miles in breadth. It is bounded on the north by the river Clyde, which separates it from the parish of Kilpatrick, in the county of Dumbarton; on the south by the river Gryfe, which separates it from the parish of Renfrew; on the east by the river Cart, which also divides it from Renfrew; and on the west, by the parishes of Erskine and Houston. The surface rises gradually from the rivers in a gentle acclivity, in some parts diversified with hills of considerable elevation, cultivated from the base nearly to their summits, which are clothed with plantations, adding much beauty and variety to the scenery. The Clyde, which has been much improved by the deepening of its channel, still affords some salmon; and great quantities of those fish used to be taken here, but the operations of late years carried on for deepening the river have materially affected the salmon-fishery. The river Gryfe flows with a tranquil course, in a clear and pellucid stream, between picturesque banks, till it forms the boundary of the parish. It then passes through the grounds of Walkingshaw, where it receives the Black Cart; and afterwards winding along a level tract of rich land, meanders round the rocky hill on which the church is built. Then, being joined by the White Cart near the bridge of Inchinnan, it takes the name of Cart, expands into ample breadth,

and continues its course till it falls into the Clyde near Blythswood. Both the Gryfe and the Cart abound with perch, and trout, and eels; and in the river Cart, near its confluence with the Clyde, is an island occasionally frequented by the haleyon or kingfisher. On the banks of the Gryfe and other streams, snipes, wild-duck, and other water-fowl are abundant; pheasants and partridges are plentiful, and grouse are often found on the moors.

The whole number of acres in the parish is 3060, of which 2600 are arable land in good cultivation, 100 natural pasture, and 300 wood. In general the soil is a stiff clay; on the banks of the rivers, a rich black loam; and in the hilly parts, a light sand and gravel. The crops are oats, barley, wheat, potatoes, and turnips; the system of husbandry is in a very advanced state, and great improvement has been made in draining and inclosing the lands. Much attention is paid to the management of dairy-farms, and nearly 300 cows are kept for that purpose, which are the finest of the Ayrshire breed: few horses are reared but such as are employed in agriculture; these are the Clydesdale. The produce of the dairies finds a ready market at Paisley, to which town also, and to Glasgow, the grain raised in the parish is sent. The farm-buildings are substantial and commodious, and, with very few exceptions, are all roofed with slate. Considerable portions of the moorlands have been reclaimed, and brought into cultivation. Such of them as still remain produce great quantities of peat, which is used for fuel; and much of the best quality, which is found on the Southbarr estate, is sent to Edinburgh and Clackmannan by water, and to Glasgow and Greenock by land carriage, for the supply of the distilleries. The substratum of the soil is generally a loose gravel, interspersed with boulders of primary and secondary rocks, resting upon a bed of carboniferous rock, traversed by dykes of whinstone, some of which are of great thickness, and alternated with grey sandstone, in which are found occasionally beautiful specimens of fossils. Limestone and coal are predominant; and both have been worked, especially the first, to a very considerable extent. Whinstone is quarried for paving, and for mending the roads. Freestone of superior quality is quarried on the lands of Park, whence the stone was taken of which the church and the bridge of this parish are built; and from the whin dykes, all the materials were furnished for the use of the trustees for the improvement of the Clyde navigation. The annual value of real property in the parish is £6305. The seats are Southbarr, Park, and House of Hill or Northbarr. There are two assemblages of houses, namely, Broomlands and Luckensford, but neither deserves the name of village: the population of the parish is purely agricultural. The bridge over the Gryfe and the White Cart, near their confluence, is an elegant structure erected at an expense of £17,000, and consists of two divisions, each spanning one of those rivers: near it is a wharf, to which coal is brought for the supply of the inhabitants; and there is another bridge at Barnsford. Good roads afford communication with the neighbouring towns.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Paisley, synod of Glasgow and Ayr. The stipend of the incumbent is about £260; the manse is a comfortable residence of modern erection, and the glebe comprises seven acres and a half of profitable land, valued at £20 per annum. The incumbent

also receives the revenue arising from a piece of land called Ladyacre, which, before the Reformation, was given for the maintenance of an altar in the parish church. Inchinnan church was a very ancient building, supposed to have been founded before the reign of David I., who granted it with all its dependencies to the Knights Templars, after whose suppression it was transferred to the Hospitallers, who had a commandery at Torphichen, in the county of Linlithgow. The last of the superiors, at the dissolution of monasteries, laying aside his monastic office and title, purchased the lands that had belonged to the establishment from the crown, and was created Lord Torphichen. At later periods the patronage of the church of this place was held by the Dukes of Lennox and Montrose, from the latter of whom it passed by purchase to the ancestor of Mr. Campbell of Blythswood, in whom it is at present vested. The present parish church was erected on the site of the ancient structure, in 1829; it is a handsome edifice in the pointed style, with a massive square tower. Inchinnan parochial school is under good regulation, and is attended by about sixty scholars; the master has a salary of £34, with £24 fees, and a house and offices, a spacious schoolroom and play-ground for the children, and half an acre of garden. Agricultural chemistry is taught in this school. There is a female school of industry, superintended by a mistress, who has a schoolroom, house, and garden provided for her by the heritors, and is supported partly by the fees, which are very moderate, and principally by subscription. The parish has also two Sabbath schools, and a parochial library containing a good collection of religious and historical works, to which all the parishioners have access on payment of a nominal subscription. The ancient palace of Inchinnan, which was situated in the northern part of the parish, overlooking the Clyde, was built by Matthew, Earl of Lennox, at the commencement of the sixteenth century: there are now no remains of it, the materials having been used for various purposes; and no memorial is preserved except the site. Silver and copper coins of the reigns of Henry IV. of France, and William and Mary of England, were found among the ruins of the old church, which was taken down in 1828. In the churchyard are several tombs, with crosses of different character sculptured on the ridges of the covering stone; they are said to have been the tombs of Knights Templars. Robert Law, author of the *Memorials of Scotland*, was a native of the parish.

INCHKEITH, an island, in the parish of KINGHORN, district of KIRKCALDY, county of FIFE, $2\frac{1}{2}$ miles (S. S. E.) from Kinghorn; containing 9 inhabitants. This is a rocky isle, in the Firth of Forth, lying nearly equidistant between Kinghorn and Leith. It derives its name from the gallant Keith, who in 1010 greatly signalised himself at the battle of Barrie, in Forfarshire, against the Danes; the island, with the barony of Keith, being conferred upon him on that occasion, as a reward for his valour, by Malcolm II. In the fourteenth century, having fallen to the crown, it was bestowed, with the lands of Kinghorn, on Lord Glamis; and the Strathmore family retained it until 1649, when it became the property, by purchase, of Sir John Scott of Scotstarvit. After passing subsequently into the hands of various persons, it at length came to the Dukes of Buccleuch. The isle is above a mile in length, of various breadth,

and of irregular surface: it has excellent pasturage for cattle and sheep, and some patches of good arable land; with fine springs of water, collected by tubes into a tank for the supply of vessels. On the south side is a small quay; and a lighthouse stands on an elevation of 180 feet above the sea, and is seen at the distance of eighteen nautical miles. At the close of the fifteenth century, Inchkeith was made a place of compulsory retirement for persons labouring under a loathsome disease called the "grandgore". It was subsequently an important military station, particularly during the regency of Mary of Guise, and the reigns of the unfortunate Queen Mary, and Charles I.

INCH-KENNETH, an isle, in the parish of KILFINICHEN, county of ARGYLL. This isle lies in Loch-na-Keal, about two miles east of Colonsay, on the western coast of Mull, and twelve miles west-by-south from Aros. It is a pleasant island, about a mile long and half a mile broad, and having some good land. In 1773, Inch-Kenneth was the retreat of Sir Allan Maclean, the chief of his clan, who was here visited by Johnson and Boswell: his residence is now in ruins. Some vestiges of a chapel mark the site of an ancient seminary of monks, dependent on the abbey of Iona.

INCH-LONAIG, an isle, in the parish of LUSS, county of DUMBARTON. This islet is one of a numerous group, beautifully situated in Loch Lomond, and is about a mile long and a quarter of a mile broad, and estimated to contain 145 acres, of which a number are occupied by wood. It lies equidistant between Luss, on one side of the lake, and the parish of Buchanan, on the opposite shore; and has been latterly appropriated as a deer-park, by the Colquhoun family, whose handsome seat of Rhoss-dhu is on the borders of the lake. The isle is remarkable for the number and size of its fine old yew-trees, which are of natural growth, and of which bows and arrows were formerly made.

INCH-MARNOCK, an island, in the parish of ROTHESAY, and lying in the Firth of Clyde, 2 miles distant (W.) from the Isle of Bute. This island, which is situated opposite to St. Ninian's Point in the bay of that name, was anciently a settlement of Culdee monks. It was subsequently granted by Roderick of Cantyre to the monastery of Cantyre, about the year 1229, before the erection of Rothesay into a parish; and continued to form a part of that establishment till the Reformation. Inch-Marnock is two miles in length and half a mile in breadth, and comprises 560 acres, of which 120 are arable, and the remainder moorland and pasture. The surface is pleasing; and near the eastern shore are the remains of a chapel dedicated to St. Marnock.

INCH-MICKERY, an isle, in the parish of CRAMOND, county of EDINBURGH; situated in the Firth of Forth, near the isle and village of Cramond, and a little to the east of Inchcolm. It is of very small extent, not being more than a few furlongs in circumference; and is remarkable for a profusion of mosses, lichens, and long tangling sea-weed. On its shores are noted oyster-beds.

INCH-MOAN, an isle, in the parish of LUSS, county of DUMBARTON. This isle, the name of which signifies "the Moss Isle", lies in Loch Lomond; is about three-quarters of a mile in length and a quarter of a mile in breadth; and contains about 100 acres, mostly covered with moss, and supplying peat to the village of Luss and its neighbourhood.

INCH-MURRIN, the largest and most southern of the islands of Loch Lomond. This island, according to some accounts, is not included in any county, or parochial division: by other accounts it is placed in Dumbartonshire. Its length is about two miles and its breadth one; it is finely wooded, and affords excellent pasture. The isle was the residence of the ancient Earls of Lennox; and at the south end are the ruins of a castle, surrounded by venerable oaks, in which the noble family resided. It is now the property of the Duke of Montrose, and is kept chiefly as a deer-park. In 1793, the late duke built a handsome hunting-seat and offices here, at present occupied by the keeper, who cultivates some ground around the house. The island is said to have derived its name from St. Murrin, the tutelary saint of Paisley.

INCH-TAVANACH, an isle, in the parish of Luss, county of DUMBARTON; one of the numerous islands in Loch Lomond, and lying near the west margin of the lake, between Ross-dhu and the village of Luss. The name signifies "the Island of the Monk"; and the isle appears to have been a place of retirement for some contemplative hermit. This is the loftiest land in the loch, and is chiefly composed of grey granite, with some rocks of micaceous schistus, and quantities of quartz. Inch-Tavanach is about three-quarters of a mile in length and three furlongs in breadth, and is largely covered with wood and heath, some out-field occasionally producing good crops. A family resides upon it.

INCHTURE and ROSSIE, a parish, in the county of PERTH; including the villages of Baledgarno and Ballindean, and containing 765 inhabitants, of whom 243 are in the village of Inchture, 13 miles (E. by N.) from Perth. The word Inchture is altogether of doubtful derivation, but is conjectured to be formed from the terms *innis*, "an island", and *ear*, "the east", the eminence on which the church and village stand being the most eastern of a series of elevations that are said to have been formerly islands. The present parish comprehends the ancient parish of Rossie, which is now extinct, though the ruin of the church still remains. It is situated on the north-west side of the estuary of the Tay, and measures in length four miles from north to south, and three miles in breadth, comprising an area of about 4650 acres, of which about 4000 are in tillage and pasture, and the remainder in wood. Being mostly included in the rich and fertile tract of the Carse of Gowrie, usually considered as the "garden of Scotland", the parish shares in all the superiority of scenery, soil, and produce for which that beautiful district is so justly celebrated. The surface is considerably diversified. On the south-east, where the lands are washed by the estuary, are extensive sand-banks, which at ebb-tide are seen stretching over several hundreds of acres, and which are bordered inland with a broad margin of sedge or reeds. This is succeeded by a rich alluvial plain, elevated about twenty feet, extending the whole breadth of the parish, and reaching north-westward for two or three miles. At the extremity of this plain, again, is the eminence ornamented with the pleasing village of Inchture; and still further towards the north-west appear in succession the hills of Rossie, Baledgarno, and Ballindean, forming a portion of the district called the "braes of the carse"; and the border of the Sidlaw range, rising about 500 feet high. The parish is watered by two principal

streams designated "pows", which are augmented by numerous rivulets descending from the hills. One of the two streams flows for a considerable distance along the south-western boundary into the Firth at Powgavie, where it forms the harbour of that name; while the other, towards the north, formed of the burns of Baledgarno and Rossie, partly separates the parish from Longforgan, into which it afterwards runs, and where it reaches the Firth. The estuary is about three miles wide; but at low water the tide recedes to a great distance from the shore, and the sands are marked by many deep fissures, called "water-runs", being channels for the streams. The water of the Tay is strongly impregnated with salt in consequence of the large influx from the sea and the rapidity of the tide.

On the level grounds, which constitute by far the larger portion of the parish, the soil is a rich alluvial clay of great depth; the undulations and hills comprise loam, gravel, and sand, with a little peat, resting generally on red sandstone or on whinstone. The whole is highly cultivated, and presents one of the finest specimens to be met with of agricultural skill. All kinds of crops are raised: the rotation followed on about two-thirds of the grounds is the seven-shift, and in the remainder the six-shift course is followed. A large part of the district in which the parish is situated being a corn country, the rearing of cattle has hitherto been a subordinate consideration; but much more attention is now paid to it than formerly; and Leicester sheep, and the Ayrshire and the Teeswater stock of cattle, have been to some extent introduced, as well as an improved breed of horses. Most of the farms have been thoroughly drained; the reclaiming of land overflowed by the tide is carried on with spirit, and many embankments have been raised. Though the inclosures at present are principally in the upper portion of the parish, numerous hedge-rows have been planted, and palings erected, on the lower grounds; and in general the farm-houses and buildings are in good condition. In 1838 a threshing-mill driven by steam, the only one of the kind in the parish, was erected on Lord Kinnaird's property at Powgavie. The substratum of the lower parts consists of red sandstone, and the hills of whinstone, of each of which several quarries are in operation. There is limestone, but not at present worked; and the locality contains several veins of copper, which, however, have never been wrought: valuable pebbles also, and various minerals, have occasionally been found. The plantations, with the exception of the ornamental portions, are chiefly on the hills; they comprise oak, ash, elm, beech, birch, larch, and other kinds. The annual value of real property in the parish is £8011.

Rossie Priory, situated on the slope of Rossie hill, and commanding most extensive and beautiful views, was built chiefly by the late Lord Kinnaird, in 1807; it is a very superior mansion, erected with stone from the quarries on the estate, and has been much enlarged and improved by the present noble proprietor, whose ancestor, in the twelfth century, obtained a grant of the lands here from William the Lion. The only other mansion is a modern edifice named Ballindean House, situated near the foot of the hill of the same name. The village of Inchture is famed for its excellent beer; and from its brewery large supplies are sent weekly to Perth, Dundee, Cupar-Angus, and all parts of the surrounding

district. Besides Inchtute the parish contains the villages of Baledgarno and Ballindean. The former of these is supposed to have been so called from Edgar, who came to the throne at the beginning of the eleventh century, and whose name is contained in the two middle syllables: his castle was on an adjoining hill, still called Castle hill, but no remains of the building are now visible. There are also several hamlets in the parish. The manufacture of linen is carried on in private houses; the article produced is a very coarse fabric for sacks or packing. The population, however, are almost all agricultural, and have somewhat diminished in number within the last few years, in consequence of the consolidation of some of the smaller farms. There is a general post-office established at Inchtute, and both the railway and the high road between Perth and Dundee pass through the parish. Powgavie or Polgavie harbour forms the chief point of traffic: a considerable number of vessels come laden with coal, lime, manure, seeds, and grain, and carry away farm-produce, especially corn and potatoes, wood, fruits, &c. In 1847 an act of parliament was passed for the construction of a branch of three-quarters of a mile, from the Perth and Dundee railway, to Powgavie; and of a branch of one mile and three-quarters, to Inchtute. Ecclesiastically the parish is in the presbytery of Dundee, synod of Angus and Mearns, and in the patronage of the Crown: the minister's stipend is about £200, with a manse, and a glebe of ten acres, valued at £30 per annum. Inchtute church, conveniently situated in the middle of the principal village, was built in 1835, of red sandstone from a quarry in the vicinity. The parochial school affords instruction in the usual branches; the master has a salary of £34, with a dwelling-house, and £27 fees. On the borders of the parish is a large stone, supposed by some to be that on which the falcon alighted when, according to tradition, boundaries were assigned to the lands given to the gallant Hay and his two sons, after the celebrated battle of Luncarty. Other antiquities are, the ruins of the castle of Moncur, the cross formerly surrounded by the village of Rossie, and the interesting remains of the old church of that name, now overgrown with ivy and ash.

INISHAIL, county of ARGYLL.—See GLENORCHY.

INNERKIP, a parish, in the Lower ward of the county of RENFREW; including the village of Gourrock, and containing 3420 inhabitants, of whom 431 are in the village of Innerkip, 6 miles (S. W. by W.) from Greenock. This parish, the name of which, originally Inverkip, is derived from its situation at the mouth of the river Kip, formerly included the parish of Greenock, which was separated from it by charter, obtained by Sir John Shaw of Wester Greenock in 1589, and ratified by parliament in 1594. The parish is about seven miles in length and six in breadth, and is bounded on the north and west by the Firth of Clyde, on the east by the parish of Greenock, and on the south by the parish of Largs in the county of Ayr. Its coast is indented with several bays, the principal of which are Gourrock on the north, and Lunderston, Innerkip, and Wemyss, on the west. The surface has a gradual ascent from the shore towards the south-east, and is beautifully diversified with level plains and gentle undulations, and intersected by small rivulets, flowing in some parts through verdant meadows, and in others disappearing in thickly-wooded glens. The principal rivers are the Kip and the Daff, which latter

forms a confluence with the Kip near its influx into the bay of Innerkip. Along the shore the soil is light and sandy, in the higher grounds of heavier quality, but much intermixed with gravel. The whole number of acres has not been ascertained: more than half the parish is moorland, of which a considerable part is undivided common; there is a large extent of natural meadow and pasture, and but a small proportion is arable. The farmers rely more upon the produce of the dairy, for which they find profitable markets, than on the cultivation of the soil. Considerable improvement has, notwithstanding, been made in the system of agriculture; furrow-draining has been adopted with success, and some small portions of waste land have been reclaimed. The rocks are principally of the old red sandstone formation, and towards Wemyss bay are intersected with trap: in the upper part of the parish, sandstone of fine quality has been extensively quarried for building. The annual value of real property in Innerkip is £14,205.

The scenery throughout is pleasingly diversified; and the higher grounds embrace extensive and interesting prospects. Ardgowan House, the seat of Sir Michael Robert Shaw Stewart, is an elegant mansion, beautifully situated on the shore near Innerkip bay, embosomed in thriving plantations, and commanding a fine view over the Firth of Clyde. Kelly, the seat of the family of Wallace, is also a handsome mansion, on the shore of Wemyss bay, and embellished with plantations. There are several other good houses belonging to different proprietors. The village is pleasantly situated on the banks of the river Kip, near its influx into the Clyde; it is chiefly inhabited by fishermen, and is much frequented during the season for sea-bathing. There are some well-furnished houses for the accommodation of visitors; and a post-office, subordinate to that of Greenock, has been established here. Facility of communication is afforded by an excellent turnpike-road from Greenock. Ecclesiastically the parish is within the bounds of the presbytery of Greenock, synod of Glasgow and Ayr. The minister's stipend is £278. 14. 6., with a manse, and a glebe of four acres; patron, Sir Michael Robert Shaw Stewart. Innerkip parish church is a neat modern structure, containing sufficient accommodation for the population. A church has been erected in the district of Gourrock, of which an account will be found under the head of Gourrock. The parochial school is well attended; the master has a salary of £30. 15., but no house, and the fees average £26 per annum. On the lands of Ardgowan are some remains of the ancient mansion-house, consisting of a venerable tower; and over the Dunrod rivulet is a very antique bridge. Nearly opposite to the Cloch lighthouse, the *Comet* steam-boat was run down by the Ayr steam-packet, about five and twenty years ago, in the night, when upwards of fifty persons found a watery grave.

INNERLEITHEN, a parish, chiefly in the county of PEEBLES, and partly in the county of SELKIRK, $6\frac{1}{2}$ miles (E. S. E.) from Peebles; containing 931 inhabitants, of whom 463 are in the village, and 468 in the rural districts of the parish. This place, properly *Inverleithen*, derives its name from one of the numerous streams that flow through the lands into the river Tweed. The parish comprises about 30,000 acres, whereof 2000 are arable, 500 woodland and plantations, 30 in brush-wood, and the remainder, of which probably 1500 might

be brought into profitable cultivation, hilly pasture. Its form is that of a triangle, the longest side extending along the river Tweed, and the two other sides meeting in the ridge of mountains called the Moorfoot hills. Along the shore of the Tweed the surface spreads into a rich and fertile plain, and in other parts is intersected with numerous deep glens, watered by running streams: of these glens the most spacious is that through which the Leithen flows, which contains a considerable portion of level meadow land. There are many springs in the parish, and some of them possess highly medicinal properties; the principal is that issuing from the base of a hill near the village, which from that circumstance has obtained its rapid increase. The scenery is strikingly varied, and in parts very picturesque. From the farm of Purves Hill, which has a considerable elevation, is a descent towards the river, by a continued succession of terraces, about 200 yards in length and eighteen feet broad, divided into several series by unequal intervals of level ground. These terraces, as seen from the lands below, form a singular feature in the landscape; and some timber of mature growth, and various thriving plantations on some of the lands in the parish, add much to the beauty of the scenery.

Near the river the soil is rich and fertile, but in the higher grounds of inferior quality, abounding with heath and moss. The crops are wheat, barley, oats, peas, and turnips: the system of husbandry is advanced; the farm-buildings are substantial and commodious, and the lands are well inclosed. About 400 head of cattle are kept in the parish, and much attention has been paid to the improvement of the breed, originally the old Tweeddale, by the introduction of the Alderney and the Northumberland: about 16,000 sheep, also, are pastured here, which are chiefly of the black-faced and Cheviot breeds. Few horses are reared, except for purposes of agriculture. The woods consist of oak, ash, elm, hazel, and birch; and the plantations, of larch and other firs, intermixed with the usual hard-woods. The substrata are greywacke, greywacke-slate, clay-slate, and porphyry of red and grey colour, the last of which abounds with crystals of felspar. Slate has been quarried in several parts; and a quarry at Hollylee, which was long abandoned, has again been opened by the proprietor, and the produce used for paving the halls of his mansion. The annual value of real property in the parish is £7072, of which £818 are returned for the Selkirkshire portion. The chief houses are Glen-Ormiston and Hollylee, which are both spacious and handsome structures, finely situated, and embellished with thriving plantations: that of Glen-Ormiston was purchased with the beautiful estate, in 1849, by the well-known Mr. William Chambers, of Edinburgh.

The village, as already stated, is indebted for its increase to the mineral water of Innerleithen. It is neatly built; and several good houses have been erected for the accommodation of the numerous visitors who, during the summer, take up their residence here for the benefit of the water, which is found efficacious in various complaints. On being analysed the water is found to contain, in one imperial quart, 5·3 grains of carbonate of magnesia, 9·5 grains of muriate of lime, and 21·2 grains of muriate of soda. The spring issues from a mountain composed of greywacke, clay-slate, and red porphyry; and there is a second spring, which varies a little in the

proportions of its ingredients, containing 10·12 grains of carbonate of magnesia, 19·4 of muriate of lime, and 31· of muriate of soda. A handsome building has been erected, with a viranda in front, for the use of the visitors; and the village is growing into some repute as a watering-place. A club has been formed for the promotion of gymnastic exercises, under the patronage of several noblemen and gentlemen of the district; and is supported with much spirit. The woollen manufacture was introduced here about fifty or sixty years since, by Mr. Brodie of Traquair, who erected a large factory for that purpose, which, after his decease, was let to several tenants, by whom the various departments of the trade are still carried on, giving employment to fifty persons. Facility of intercourse with Peebles, the nearest market-town, and with the other towns in the district, is afforded by good roads, of which the turnpike-road from Kelso to Glasgow passes for nearly ten miles along the shores of the Tweed. Ecclesiastically the parish is within the bounds of the presbytery of Peebles, synod of Lothian and Tweeddale; patron, John Booth, Esq. The stipend of the incumbent is about £250; the manse is a comfortable residence, and the glebe comprises twelve acres, valued at £20 per annum. Innerleithen church, built in 1786, is a neat substantial edifice, conveniently situated, and adapted for a congregation of 350 persons. The members of the Free Church have a place of worship. The parochial school is well attended; the master has a salary of £34 per annum, with a house and garden, and the fees average about £40 per annum. There is a friendly society, which is well supported, and has contributed materially to diminish the number of applications for parochial relief.

INNERLEVEN, in the county of FIFE.—See DUBSIDE.

INNERWICK, a parish, in the county of HADDINGTON, 4 miles (S. E. by S.) from Dunbar; containing, with the hamlet of Skateraw, and village of Thorntonloch, 961 inhabitants, of whom 144 are in the village of Innerwick. This place, the name of which is descriptive of its relative position, was granted by David I. to Walter Stewart, to whom the gift was confirmed by Malcolm IV. in 1157; and it remained in the possession of his descendants till the reign of Charles II. It afterwards passed to the Hamiltons, and ultimately to Sir Peter Wedderburn of Gosford, ancestor of the present proprietor. The parish, which is about ten miles in length, and varies from two to three miles in breadth, is bounded on the north-east by the German Ocean, and comprises 11,725 acres, whereof 5040 are arable, 6300 meadow and pasture, and 378 woodland and plantations. Its surface is varied with fertile vales and deep dells, and, from the shore, rises gently towards the Lammermoor hills: the coast, which extends for about two miles, is rocky, but marked with few features of grandeur. The scenery is pleasing, and in some places enriched with wood: that part of the parish bordering upon the hills is characterized by picturesque beauty. There are two small streams, one of which, called the Monynut, rises nearly in the centre of the parish, and taking a south-eastern course, falls into the Whitadder at Abbey St. Bathans in the county of Berwick. The other, called the Thornton water, rises also near the centre of the parish, and flowing in a direction from south to north, falls into the sea near the village of Thorntonloch.

In general the soil is fertile, consisting of a deep rich loam; and the crops are oats, wheat, barley, peas, beans, potatoes, and turnips. The system of agriculture is in a very advanced state; the course of husbandry on the lighter soils is a five, and on the heavier a six, shift course. Lime and bone-dust are the principal manures. The farm-houses and offices are substantial and well arranged; and the lands are partly inclosed with stone, and partly with hedges of thorn, all of which are kept in good order: most of the farms are furnished with threshing-mills, some of them driven by steam, others by water. Much attention is paid to the rearing of live stock, for which the extent of natural pasture affords abundant opportunity. About 5000 sheep are fed in the hilly district, and a large number, also, are pastured on the lower lands: the former are chiefly of the Cheviot and black-faced breeds, with occasionally a cross between the two; the latter are the Leicestershire. Very few black-cattle are reared; but a considerable number are purchased and fattened for the markets. The annual value of real property in the parish is £10,384. The woods are mostly oak, and the plantations fir: some of the trees are of very ancient growth; and from the names of several places, it would appear that the lands were at one time covered with extensive woods. Of the higher portion of the parish the substrata are greywacke, greywacke slate, and red sandstone intersected with veins of trap rock; and of the lower, limestone, ironstone, bituminous shale, and indications of coal, which last appears to have been formerly worked. The limestone, which is of excellent quality, is quarried at the Skateraw shore, where is also a kiln for burning it into lime for agricultural use. Great quantities of limestone used to be sent from the quarries to the Devon iron-works; at present, the stone is burnt here, and then sent chiefly to Berwickshire. Freestone of good quality for building is also found in the parish, and is worked as occasion requires. A small harbour was constructed on the Skateraw shore, some years since, for the exportation of the produce of the quarries, and for the importation of coal; and belonging to it are two boats employed in the fishery off the coast, where haddock, mackarel, lobsters, and other fish are taken. The village of Innerwick is situated about a mile from the London turnpike-road; it consists of irregularly built and detached houses, on the base of a steep but richly cultivated hill. The inhabitants are chiefly employed in agriculture, and in the trades requisite for the supply of the parish. The North-British railway and the London road intersect the lower part of the parish, and other facilities of intercourse are afforded by roads kept in repair by statute labour.

Innerwick church, together with its revenues, was granted by Walter Stewart to the abbey of Paisley, which gift was confirmed by Malcolm IV. in the twelfth century; it of course ceased to belong to the monks at the Reformation, and in 1670 the great and small tithes were bestowed on Sir Patrick Wedderburn. The parish is now in the presbytery of Dunbar, synod of Lothian and Tweeddale, and in the patronage of Mrs. Hamilton Nisbet Ferguson; the minister's stipend is £277. 19., with a manse, and a glebe valued at £15 per annum. The church, situated on an eminence, in the village of Innerwick, is a neat plain edifice, erected in 1784. The members of the Free Church have a place of worship. Innerwick parochial school, also situated in the village,

is well attended; the master has a salary of £31, with £33 fees, and a house and garden. There is a parochial library in the village; and at Thorntonloch, a small itinerating library. The poor are partly supported by the interest of £800 vested in securities. There are some remains of the ancient castle of Innerwick, formerly the baronial residence of the Stewarts, and afterwards of the Hamiltons. In 1403, when occupied by an English garrison, it was assaulted and taken by the Regent, the Duke of Albany; and, together with Thornton Castle, which stood on the opposite bank of the glen, it was attacked by the Protector Somerset, on his invasion of Scotland. The remains are now very slight, and are rapidly disappearing. At a short distance from the castle are some small remains of Edinkens Bridge, the origin of which is involved in obscurity: near it were four large stones, apparently indicating the tomb of some distinguished person, supposed to have been Edwin of Northumbria, who took refuge with Malcolm III. from the tyranny of William the Conqueror. Several stone coffins have been found in the parish, in two of which were a ring and part of a sword; and near the village is a field called Corsikill Park, in which tradition records a conflict to have taken place between Cospatrick and William Wallace. On the Skateraw shore was an ancient chapel dedicated to St. Dennys, the remains of which have within the last few years been completely destroyed by encroachments of the sea.

INNISKENNETH.—See INCH-KENNETH, and KILFINICHEN.

INSCH, a parish, in the district of GARIOCH, county of ABERDEEN, $3\frac{3}{4}$ miles (W.) from the village of Old Rain; containing 1379 inhabitants. The name Insch is thought to be of Celtic derivation, and to signify "an island": the reason of its application is doubtful, but the site of the village appears to have been formerly surrounded by water. The parish is situated on the northern bank of the small river Shevoek, which separates it from the parishes of Premnay and Kinnethmont, and running eastward, falls at length into the Urie. The lands measure six miles in length and three miles in breadth, comprising 7618 acres, of which 5410 are under cultivation, 108 in plantation, and the remainder waste. The surface is varied by several interesting elevations. That of the hill of Foudland is the most lofty, forming the chief of a series of slate hills stretching into Gartly on the west, and into Culsamond on the east; it rises 1100 feet above the level of the sea, and commands extensive and beautiful prospects, especially of the rich and fertile vale of the Garioch. The hill of Dunnideer, however, about a mile west of the village, though only half the height of the former, is by far the most striking object in the scenery, not only on account of its isolated situation, and its ample base, measuring 3000 yards in circumference, but especially from its abrupt and almost perpendicular ascent, and its conical form. Its summit, somewhat flattened, attracts the antiquary by the curious ruins to be seen on it, and the tourist by its picturesque beauty. Opposite to Dunnideer, on the west, is the equally abrupt eminence of Christ-kirk, in the parish of Kinnethmont, which is separated from Dunnideer only by a narrow valley, watered by the Shevoek.

The soil in general is a light loam, upon a gravelly or clayey subsoil: on the sides of the hill of Foudland it is a clay, mixed with slaty earth; and in this

and various other parts are peat mosses, supplying fuel. Most of these, however, have become nearly exhausted, so that wood and coal are now much used, the latter brought from Aberdeen by canal to Inverury. Much of the arable land is of superior quality, and produces excellent crops, chiefly of oats. The cattle are of the Aberdeen or the Angus kind, which are frequently crossed with the short-horned or Durham breed; and the improvement in the stock has been considerable, in consequence of the great encouragement offered by the cattle-shows held by the Highland and the local agricultural societies. A six years' rotation is prevalent; and the general system of husbandry includes all the modern improvements: bone-manure is liberally and successfully applied to the turnip lands; and threshing machines, generally driven by water, one of them by steam, are every where in operation. The chief deficiency is the want of inclosures and of good farm-buildings. The annual value of real property in the parish is £5334. J. M. Lesly, Esq., of Balquhain, holds the estates called the Barony of Meikle-Wardhouse, Knockenbaird, and others. The slate of the Foudland hill quarries, an excellent material of blue colour, has long been highly celebrated, and wrought to a great extent. About 900,000 slates used to be annually raised, a large portion of which were sent to Aberdeen; but not more than half this number are now produced, the demand having diminished on account of the facility with which the Easdale slates, from Argyllshire, can be conveyed by sea. In the smaller hills the rock is principally gneiss, with black or grey granite; and on the low grounds, near the base of Dunnideer, considerable quantities of bog-iron ore have been found. The only gentleman's seat is Rothney, a handsome modern mansion in the cottage style, finely situated on a gentle acclivity on the northern bank of the Shevock; it is beautifully ornamented with wood, and the approach to it from the village is particularly admired.

The inhabitants are chiefly engaged in agriculture, and in trading in corn and cattle; a few are employed in making stockings for the Aberdeen manufacturers. The feuars of Insch are heritable proprietors of their houses and small gardens; they also mostly rent about four acres of ground each, under Sir Andrew Leith Hay, superior of the ancient burgh of Insch, to which it is supposed the power of "pot and gallows" was formerly attached, there being a mound near the village called the Gallow hill. Within the last thirty years, the village has been almost entirely rebuilt; the houses are generally of two stories, constructed of stone and lime, and there are several good shops. It has been some years supplied with gas. The Aberdeen mail-road passes through the parish, and is of considerable service, the produce of the district being conveyed along it to the canal at Inverury, from which place the carts bring back coal, lime, and bones for manure. Two fairs for cattle, horses, and general wares, are held respectively on the third Wednesday in May and third Tuesday in October (both O. S.); and there are feeing-markets on the Fridays before the 18th May and 18th November. The weekly market, held on Friday, has been discontinued.

Ecclesiastically the parish is in the presbytery of Garioch, synod of Aberdeen, and in the patronage of Sir John Forbes, Bart. The minister's stipend is about £200, with a manse, a glebe of twelve acres, valued at £15 per

annum, and a right to fuel, which has been commuted for an annual payment of £9. 8. 10. Insch church, a plain building in the village, is supposed, from a date on its fine old belfry, to have been built in the year 1613; it was well roofed in 1789, new-seated in 1793, and contains 460 sittings, of which sixty are under the control of the Kirk Session, and are let on very low terms for the benefit of the poor. The members of the Free Church have a place of worship. The parochial school affords instruction in Greek and Latin, English grammar, geography, mathematics, &c.: the master has a salary of £27, with a house and garden, and about £15 fees; he also participates in the benefit of the Dick bequest. There is likewise a school supported by the General Assembly; the master receives a salary of £25, with £14 fees, and has a house, garden, and three acres of ground. The same branches are taught in this school as in the parochial school; and its situation among the glens of Foudland, convenient not only for part of Insch, but for parts of the parishes of Forgue, Drumblade, and Gartly, far removed from their respective parochial schools, renders it a source of much advantage. A saviogs' bank has also existed some years: the deposits are upwards of £2700. The relics of antiquity comprise several Druidical remains on eminences, and stone pillars, and obelisks; but the principal relic is the celebrated vitrified fort on the hill of Dunnideer. It consists of an outwork in the shape of a parallelogram, inclosing an old ruin of a tower; and the stones, which are of granite, have been cemented by that singular process seen in similar antiquities in the country, but of the precise character of which many opinions exist. The castle in the interior, constructed apparently of the materials of the vitrified fort, is supposed by some to have been built by King Gregory.

INSH, for a time a quoad sacra parish, formed of part of the parish of KINGUSSIE, and a small part of that of ALVIE, in the county of INVERNESS; containing 613 inhabitants, of whom 88 are in the village of Insh, 7 miles (N. E.) from Pitmain. This place was anciently a vicarage, united to the rectory of Kingussie; and under act of the General Assembly in 1833, it was again declared a distinct parish, ecclesiastically, which privilege, however, it afterwards ceased to possess. It is situated on the south bank of the Spey; and when the river swells, a branch of it flows on each side of a small hill whereon the church stands: hence the name of Insh, signifying "an island". The Spey passes here through a fine lake called Loch Insh, about a mile and a half in length and nearly the same in breadth; and near its eastern margin is the mansion-house of Invereshie, where is a ferry across the Spey. Ecclesiastically Insh is in the presbytery of Abernethy and synod of Moray, and the patronage is vested in the Crown: the stipend of the minister is £120, with a manse, and a glebe valued at £2. 10. per annum. The church is dedicated to St. Ewan. A school, situated at the village of Insh, is supported by the Education committee of the General Assembly. A considerable increase in the population of this district took place within the decennial period between the late and the preceding census.

INVER, a village, in the parish of LITTLE DUNKELD, county of PERTH, $\frac{1}{2}$ a mile (W. S. W.) from Dunkeld; containing 106 inhabitants. This is a small place, situated at the confluence of the rivers Tay and

Bran, and on the great Highland road from Perth to Inverness. Before the bridge of Dunkeld was built, here was a ferry across the Tay. The celebrated composer of Scotch reels, Neil Gow, was a native of the village.—See DUNKELD, LITTLE.

INVER, a village, in the parish of TAIN, county of ROSS and CROMARTY, $4\frac{1}{2}$ miles (E. by N.) from Tain; containing 211 inhabitants. This village is situated at the eastern extremity of the parish, on the shore of Dornoch Firth; and is inhabited chiefly by persons employed in the fishery, for which it forms the principal station. The fish taken here are haddock, flounders, cod, whiting, and skate, which are found in great abundance, for the supply of the adjacent district; and during the season, herrings are also plentiful. A school for the instruction of the children of the fishermen, who speak chiefly the Gaelic language, is supported in the village by the Society for Propagating Christian Knowledge.

INVERALLOCHY, a village, in the parish of RATHEN, district of DEER, county of ABERDEEN, 4 miles (E. S. E.) from Fraserburgh; containing 507 inhabitants. This village is situated on the north-eastern shore of the parish, a short distance eastward from Cairnbulg Point, and nearly adjoining the fishing-town of Cairnbulg. The male population consists chiefly of fishermen, who with their families remove in the summer season to Fraserburgh, where they assist in the herring-fishery of that place. On the shore here is an abundance of seaweed, which is largely used in manuring the neighbouring lands. Until of late, kelp was manufactured to some extent; the reduced value of the article, however, has led almost to the abandonment of its manufacture. The castle of Inverallochy, now in ruins, appears to have been a place of considerable strength; it was anciently the property of the Cumyns, Earls of Buchan. There is a place of worship for members of the Free Church.

INVERARITY, a parish, in the county of FORFAR, $4\frac{1}{2}$ miles (S.) from Forfar; containing 997 inhabitants. This place derived its name from a Celtic term descriptive of the locality of its church, which, till the year 1754, was situated near the spot where the river Arity is joined, almost at right angles, by the Corbie burn, at a small distance from the present house of Fotheringham. The parish comprehends the ancient parish of Meathie; it measures three miles square, and contains about 6000 acres. On the north it is bounded by the parish of Forfar, on the south by the parishes of Monikie and Murroes, on the east by Guthrie and Dunnichen, and on the west by Kinnettles, Tealing, and Glammis. The surface is uneven, consisting of a valley, well cultivated and fenced, surrounded by rising grounds and hills of various elevation, some of which are richly wooded. The soil on the higher lands is a dark loam; in several places it is alluvial; its ordinary character, however, is that of clay. About 4000 acres are cultivated; 1000 are waste, consisting of coarse pasture and moor; and the remainder are occupied by plantations, composed of oak, beech, plane, and all the firs usually grown in the country. The value of the produce is considerable; grain of every kind forms a prominent article, and all the various green crops are also raised, of good quality. The common breed of cattle is the Angus or native black, to which great attention is paid. The best system of agriculture is followed; and extensive drainage,

the inclosing with hedges or stone-dykes, and marl-manuring, with various other improvements in husbandry, have been carried on to such an extent that very little remains to be done. In this parish the prevailing rocks are sandstone and grey slate, several quarries of which are extensively wrought. The mansions are those of Fotheringham, the seat of the ancient family of that name, and the House of Kincaldrum. Four miles of the turnpike-road from Forfar to Dundee pass through the parish; and before the introduction of railways a coach from Aberdeen to Edinburgh, and another from Brechin to Dundee, used to travel daily upon it. The annual value of the real property in the parish is £5593.

Ecclesiastically the parish is in the presbytery of Forfar and synod of Angus and Mearns; patrons, the family of Fotheringham, of Powrie. The stipend of the minister is about £300, with a good manse, and a glebe of twelve acres. Inverarity church, in the centre of the parish, was built in 1754, is in good repair, and will accommodate 600 persons with sittings. There is a parochial school, in which Latin is taught, with the usual branches of education; the master has the maximum salary, and fees to the annual amount of about £27. The chief relic of antiquity is the Roman camp called "*Haer Faads*", part of which lies in the parish of Guthrie; it is nearly a parallelogram, measuring about 300 yards by 700. At the Kirk Brae, near the dene of Fotheringham, is the last vestige of the old church. James Webster, the traveller in Egypt, &c., whose posthumous works have been published; Drummond, the botanist, who died some time since; and the mother of the distinguished Professor Playfair, were natives of the parish.

INVERARY, or INVER-ARAY, a royal burgh, the county town, and a parish, in the district and county of ARGYLL, 60 miles (N. W. by W.) from Glasgow, and 114 (W. N. W.) from Edinburgh; containing 2285 inhabitants, of whom 1233 are in the burgh. This place takes its name from its situation at the mouth of the river Aray, which here falls into Loch

Burgh Seal.

Fine or Fyne. It appears to have been, if any thing, only an inconsiderable hamlet consisting of a few fishermen's huts, prior to the fourteenth century, when the Campbell family, selecting it as their principal residence, erected a baronial castle, around which the original town gradually arose. In 1745, Archibald, third Duke of Argyll, commenced the erection of the present magnificent castle, which, after a short interruption during the time of the rebellion, was completed at an expense of nearly £300,000, when the ancient castle was taken down. In 1748, the duke introduced the linen manufacture, which was carried on for some time with considerable benefit to the inhabitants; and in 1776, John, the fifth duke, established a woollen manufacture at the Water of Douglas. For this purpose he built premises, erected machinery, and provided every requisite, at his own expense; giving the farm on which the factory was built, and the factory itself, at a low rent, to a person who carried on the manufacture for a time with tolerable

success. His grace also pulled down the houses nearly contiguous to the castle, and built others of superior character, on grounds which he gave to the inhabitants at a nominal rent.

The town is beautifully situated on the western shore of Loch Fine, and to the south of the pleasure-grounds of the castle, of which it commands an interesting view. The houses are substantially built, and of handsome appearance; the streets are clean, and lighted with gas, and the inhabitants are amply supplied with water. The principal trade carried on here is the herring-fishery: the season commences generally about the end of June, and continues till the beginning of January; and during the interval, the fishermen are many of them employed in agriculture. The number of boats engaged in the herring-fishery of Loch Fine is about 500, employing on an average three men and a boy each; and nearly 160 persons are occupied in curing and packing the fish, of which about 20,000 barrels are annually exported. Inverary harbour is not adapted for vessels of any considerable burthen; and previously to 1809 the quay was in a very bad state; but a good pier has since been constructed, which in 1836 was extended at an expense of £1200, whereof £800 were contributed by the Fishery Board, and the remainder by the then Duke of Argyll and the corporation of the town. The post-office has a daily delivery of letters. A ferry to the opposite shore of Loch Fine is kept up by the corporation; and great facilities of communication are afforded by steamers. The market is well supplied with provisions; and fairs are held annually on the 17th of May and 16th of September, for cattle, and on the 15th of July, for wool.

The first notice of the place occurs in a charter granted to Colin, first Earl of Argyll, erecting the town into a burgh of barony; and it was subsequently made a ROYAL BURGH by charter of Charles I. while a prisoner in Carisbrooke Castle, vesting the government in a provost, four bailies, and a council. Since the passing of the Municipal Reform act, however, the corporation has consisted of a provost, two bailies, and sixteen councillors. The magistrates exercise both civil and criminal jurisdiction over the chartered boundary of the burgh, with the exception of the castle and park of Inverary; but the former kind of jurisdiction has been almost superseded by the sheriff's small-debt court, and the latter is limited to petty riots and assaults. This burgh is associated with Oban, Campbeltown, Rothesay, Irvine, and Ayr, in returning a member to the imperial parliament. The number of £10 householders within the parliamentary boundaries is sixty-three, of whom thirty-one are burghesses; and of those above £5, and below £10, twenty-three, of whom four are burghesses. The town-house, in which the courts for the burgh and for the county are held, is a handsome building containing a spacious courtroom, and the sheriff, justice of peace, and town-clerk's offices. A new prison has been built, of much larger dimensions than the old one.

The PARISH, originally named Kilmilieu, is situated between the Lochs Awe and Fine, and bounded on the south and east by the latter, along which it extends for about ten miles, in the form of a crescent, presenting an outline of projecting rocks indented with bays. It is sixteen miles in extreme length, varying from three to six miles in breadth, and is supposed to comprise an area of fifty-two square miles, or 34,280 acres, of which

by far the greater portion is in pasture. The surface is mountainous, and of great diversity of character. The highest of the mountains is Benbui, which has an elevation of 2800 feet; and in front of the castle are two perpendicular masses of porphyritic rocks, called Dunchuaich and Dunchorvil, the former of them 700 and the latter 800 feet high. The headlands of Kenmore and Stronshira command an interesting view of the parish. In general the shores are smooth and level; but towards the southern extremity, the rocks rise precipitously from the loch, and assume a bold rugged aspect. The chief rivers are, the Shira, which flows through the vale of Glenshira into the Douloch, or "black lake"; and the Aray, flowing through Glenary into Loch Fine. A river called the Gear-Amhuinn, or "short river", connects the Douloch with Loch Fine. Both these lochs abound with salmon, trout, and other kinds of fish; and salmon-trout, herrings, cod, and flounders are often taken together in the same net. Near the shore the soil is chiefly a thin light loam, on a gravelly bottom; at the bases of the mountains, in the valleys, a deep dark loam on sand and clay; and in other parts, moss, with a small quantity of earth washed down from the higher grounds. The system of agriculture in the valleys is in an improved condition; but in the higher lands so much progress has not been made, as the farms contain a much larger portion of pasture than of arable ground. On the principal farms the buildings are substantial, but many of those on the smaller farms are of very inferior order. Much regard is paid to the rearing of cattle, generally of the West Highland breed: little attention is bestowed on the dairy, though for some years the Highland Society has awarded prizes in the county for cheese. The sheep, of which great numbers are reared, are of the black-faced breed. The horses are sometimes of a mixed breed between the native and the Clydesdale, and considerable numbers of pigs are fed for market. The annual value of real property in the parish is £6836, of which £1973 are returned for the burgh. The geological formation is mica-slate intersected with porphyry, limestone, and greenstone; and many of the rocks abound with garnet. There is an extensive quarry of good paving-stone, great quantities of which are raised for the city of Glasgow.

The plantations are in a very thriving condition, and consist mostly of oak, Scotch fir, spruce, larch, ash, beech, and plane. They were chiefly formed by the first Marquess of Argyll and his son, the ninth earl, and by Archibald, third duke, and his successors; and are supposed to occupy an area of about 12,000 acres. Among the earliest were those of Dunchuaich and the heights above the castle of Inverary, including the stately avenue of beech at the entrance of the vale of Glenshira; and among the more recent are those of the hills of Douloch and Stronshira, which contain some beautiful specimens of larch, Norway spruce, and American black and white spruce, silver fir, laburnum, and lime. Inverary Castle, the seat of the Duke of Argyll, erected near the site of the ancient baronial castle, is a spacious quadrangular structure, with circular towers at the angles. The great hall is ornamented with ancient armour, among which are 150 stand of arms used by the Campbells at the battle of Culloden, ranged on each side: in a circular recess fronting the entrance, are various specimens of Highland armour. The gallery leading to the principal

apartments is spacious, and superbly decorated; and the paintings, family portraits, and tapestry are all of the very highest order. The demesne, which is nearly thirty miles in circuit, is tastefully embellished, and laid out in walks and rides, comprising much picturesque and romantic scenery, and commanding extensive and richly diversified prospects. A noble avenue of trees of ancient growth leads into the beautiful glen of Essachossan. In her trip to Scotland in the year 1847, Her Majesty the Queen paid a visit to his grace the Duke of Argyll at Inverary Castle: the royal party was received by a distinguished circle, and after a stay of about an hour and a half, returned to the royal squadron.

Inverary is the seat of the presbytery of Inverary, and the synod of Argyll. There are two ministers: the minister of the first charge has a stipend of £168. 15. (one-third paid from the exchequer), with a glebe valued at £45 per annum, and also a manse; and the minister of the second charge, a stipend of £157. 15. (four-fifths derived from the exchequer), with a manse, and a glebe valued at £30 per annum: patron of both charges, the Duke of Argyll. The church, erected in 1798, and repaired, after being greatly damaged by lightning, in 1838, is a spacious and handsome structure, with a central tower and spire 115 feet in height, dividing it into two distinct portions, one for the first or Gaelic church, containing 450, and the other for the English congregation, containing 410 sittings. There are places of worship in connexion with the Free Church and the United Presbyterian Synod. Of the several schools in the burgh, are, a parochial school, with a salary of £25. 13., besides a schoolroom, dwelling-house, and garden; and a grammar school under the patronage of the corporation, with a salary of £20, and the other accommodations. A female school in the burgh is supported by the Duke of Argyll, who pays the teacher £20 per annum, to which £4 are added by the council; and a female school of industry, also in the burgh, is supported by the duchess, who allows £26 to the teacher, with a dwelling-house, coal, and other perquisites. In the rural districts of the parish are, a parochial school, the master of which has a salary of £25. 13., with a house and garden; a school maintained by the Society for Propagating Christian Knowledge, the master of which has a salary of £15, to which the duke adds £8, with a house and garden, fuel, and grass for a cow; and a female school, the teacher of which has £5 from the society, and a house from the duke. The poor, the average number of whom on the parish list is fifty, are supported partly by collections at the church, averaging £65 annually, and the interest of funds in the hands of the Kirk Session, producing nearly £10; but chiefly by the Duke of Argyll, who, in various ways, distributes about £300 annually for their relief. There are some slight vestiges of an old fort at Dunchuaich; of the ancient castle of the Mac Naughtens, on the banks of Douloch; and of some religious houses at Kilbride and Achantiobairt. The market-cross, supposed to have been brought from Iona, was removed from the old town, and erected in the present burgh; and on the lawn of Inverary Castle is an upright stone, thought to have been erected in commemoration of some battle near the spot. Over the water of Douglas is a very ancient bridge of one arch, forming the segment of a circle, and thence called the Roman bridge; but the date of its erection is unknown.

INVERAVEN, a parish, partly in the county of ELGIN, but chiefly in the county of BANFF, 11 miles (N. E. by E.) from Grantown; containing 2417 inhabitants. This place derives its name from its situation at the mouth of the river Aven, which has its source in a lake at the base of the mountains Benmacdui, Bein-na-main, and Cairngorum, and after receiving various streams in its course, enters the parish of Inveraven, and falls into the Spey about a mile above the church. The parish is chiefly noticed in historical records as the scene of a memorable battle which occurred in 1594, between the Earl of Huntly and the Marquess of Argyll, when the latter, after an obstinate engagement, in which many were slain on both sides, was totally defeated. Not far from the field of battle is a tumulus called Lord Auchindown's Cairn, pointing out the spot where Sir P. Gordon, of Auchindown, was killed while fighting on the side of the Earl of Huntly. Inveraven parish is bounded on the north-west by the river Spey, is about twenty miles in length, and varies from nearly four miles to eight or nine in breadth. It comprises 6400 acres of arable land in good cultivation, about 1000 in plantations, and 500 in natural wood, with a wide extent of heath and moor. The surface is mountainous, with large intervening tracts of moorland; and the lower part, near the Spey, is divided from the district of Glenlivet, forming the rest of the parish, by the Cairnocay mountains, a lofty range extending, in a direction almost parallel with the Spey, from the hill of Benrinnes to the stream of the Aven. The district of Glenlivet is separated into two nearly equal portions by the hill of Bochle, which rises to a considerable elevation from the centre of the vale, which is watered by the Livet, a tributary to the Aven. On this river was a waterfall called the Linn of Livet; but it was destroyed in order to give a readier passage to the salmon that frequent the stream. The Spey, which flows by the parish for several miles, abounds with various kinds of fish, and was formerly much celebrated for the size and flavour of its salmon, which were found in greater numbers than at present, both in that river and in the Aven; but the fishery has been much diminished by the establishment of others nearer the mouth of the Spey, which prevent many of the fish from ascending so far up. In that part of the parish bordering on Kirkmichael is a small lake formed by the river Aven, and supposed to be almost of unfathomable depth.

The SOIL of the cultivated lands, though inferior in some places, is generally fertile, consisting, in the lower portion, of loam partly mixed with gravel, and in the district of Glenlivet of pure loam and a rich strong clay. Considerable improvements have been made in the agriculture of the parish: large tracts of waste have been drained, and brought into cultivation; and numerous thriving plantations have been raised, especially near the Spey, in Inveraven Proper, which abounds with ornamental timber. The principal crop is oats, with a good proportion of barley; and wheat is also raised in small quantities, in the low end of Glenlivet. In this parish the plantations consist of larch, oak, and mountain-ash, which grow luxuriantly on the banks of the Spey and Aven; and of Scotch and spruce firs, of which there are some beautiful specimens. The Highland and Agricultural Society encourage the breed of live stock by the distribution of premiums; but comparatively little attention is paid to improvement in this respect. In general

the sheep are of the black-faced kind, with a few of English breed, which are not so well adapted to the soil; the breed of horses is rather small, but better suited to the state of the country than a breed of larger size. The farm-buildings are usually commodious, though still capable of great improvement; and in parts, especially in Glenlivet, are several of very superior character. Glenlivet was formerly noted for the manufacture of illicit spirits, and on almost every stream in the parish were houses for making whisky in defiance of the law; but this practice has of late materially diminished, and there are now in the vale two very extensive distilleries, where whisky of the best quality is legally produced, which obtains a high price in every part of the country. In the parish are several mills; also some small manufactories for woollen cloths and plaidings, chiefly under the management of the farmers. The annual value of real property in Inveraven is £5032.

Ballindalloch House, in the parish, the property of Sir John Macpherson Grant, Bart., is a perfect specimen of the old Scottish castle; it is a square edifice with three circular towers, and some additions have been made to the old building during the last century. The place is situated about half a mile from the confluence of the Aven with the river Spey; it is richly embellished with timber, and surrounded by scenery of interesting character. At a short distance may still be traced the foundations of the original castle, which has long been suffered to fall into decay, and almost into oblivion, the only memorial being preserved in a traditionary legend, by which its restoration is said to have been prohibited. Sir John's estate of Ballindalloch has been much improved of late years, especially by extensive draining. The substratum of the parish is generally primitive rock. Red granite, of good quality for building, is found near the river Spey, and on the north of the Benrinnes mountain, in which asbestos has also been discovered. Limestone, embedded in gneiss, is found in the vale of Glenlivet: no regular quarries have been opened, but it is frequently dug by the tenants on the different farms, for their own use; and numerous limekilns have been erected in various parts of the vale. The roads and bridges are kept in good repair; and considerable intercourse is maintained with the villages of Tomantoul and Charlestown (respectively three miles from each extremity of the parish), where markets are occasionally held; and also with Grantown and Dufftown. Fairs are held at Burnside, about a mile from the church, on the Tuesday before the third Friday in February, the Tuesday before the 26th of May, the second Tuesday in July, O. S., and the Tuesday before the 23rd November, for the sale of horses, cattle, and grain, and for the hiring of servants.

Ecclesiastically the parish is in the presbytery of Aberlour, synod of Moray, and in the gift of the Earl of Seafield; the minister's stipend is about £238, with a manse, and a glebe valued at £7 per annum. The church, which was erected in 1806, is in good repair, and affords accommodation to about 550 persons. In Glenlivet is a missionary station, supported by the Royal Bounty: the chapel was erected, or rather rebuilt, in 1825, and the minister has a salary of £60, with a house, a small farm, and a range of hill pasture for sheep, on the Gordon estate, rent-free. There are also in the vale two Roman Catholic chapels, one at Tombia, and the other at Chapelton; the former will contain a congregation of nearly

1000, and the latter of about 300 persons. The parochial school affords education to about fifty children; the master has a salary of £28. 17. 5., with £11 fees, a house and garden, and a portion of the Dick bequest. There are two male, and one female school, for Protestants, in the vale of Glenlivet. The masters of the two former derive their salaries from the Society for Propagating Christian Knowledge, and the General Assembly's Committee for Highland schools, and have free houses, crofts, and gardens, on the Gordon estate. From this estate, also, the mistress of the female school has a house and garden, and the sum of £5 per annum, in addition to a similar sum from the society. In Glenlivet are likewise three Roman Catholic schools, two for females and one for males, all supported by funds contributed by the congregations at the two chapels: two of these schools are aided by a bequest. Various traces of the Druids exist in several parts of the parish, the most considerable of which are at Chapelton of Kilmaichlie. On Kilmaichlie farm, ancient coins of silver of the size of half-crowns, and some old weapons, have been discovered by the plough. The cemetery of a religious house formerly existing at Downan is still used as a burying-ground, as is also that of another, at Buitterlach, near which is a cairn of large dimensions. On the farm of Haughs of Kilmaichlie, is a spot of ground supposed to have been anciently a place of sepulture, and which has been lately planted with trees. A portion of the old castle of Drumin occupies an elevated site on a promontory, near the confluence of the rivers Livet and Aven; the walls on the east and north sides are of considerable height, and of massive thickness. At Blairfindy are the ruins of a hunting-seat that belonged to the Earls of Huntly.

INVERBERVIE, in the county of HADDINGTON.— See BERVIE.

INVERBROTHOCK, a quoad sacra parish, in the parish of St. VIGEAN's, county of FORFAR; containing 5195 inhabitants. This place, which is situated on the small river Brothock, forms the principal suburb of the town of Arbroath, and participates largely in manufactures. The spinning of hemp and flax gives employment to more than 1500 of the inhabitants; and the yarn produced from the several mills is partly exported, and partly woven. About 300 persons are employed in weaving the coarser kinds of linen, for sacking, and for sail-cloth for the supply of shipping. The terminus of the Arbroath and Forfar railway is within this district; and facility of communication is also afforded by the Dundee and Arbroath railway, the great north road, and various other roads. Inverbrothock church was erected in 1828, at an expense of about £2000, raised by subscription, towards which the town council of Arbroath and the principal heritors largely contributed; it is a neat structure containing 1230 sittings. The minister, who is chosen by the proprietors of the pews, has a stipend of £150, with an allowance of £20 for communion elements. There are places of worship for members of the Free Church, Original Seceders, and Wesleyans. A handsome schoolroom was erected in the year 1842, by subscription, aided by a grant from government; it is capable of receiving 250 scholars, and the school is supported wholly by the fees. There is a Sabbath-school library, containing 480 volumes; also a theological library of 400 volumes.—See the articles on ARBROATH, and ST. VIGEAN'S.

INVERCHAOLAIN, a parish, in the district of **COWAL**, county of **ARGYLL**, 7 miles (N.) from **Rothsay**; containing 699 inhabitants. The name of this place is derived from the **Chaolain**, a small stream which joins **Loch Straven** or **Striven**, an arm of the sea intersecting the parish in a northern direction. **Inverchaolain** is situated in the south-eastern part of the county, and is about fifteen miles long, and eight miles in extreme breadth, including **Loch Straven**: it comprises upwards of 40,000 acres, of which 1300 are arable, 1500 low pasture, nearly 1500 wood, and the remainder hill pasture. The surface is irregular, and rises in the form of elevated ranges on each side of the loch, which is more than nine miles long, and about two miles broad at the entrance, narrowing as it penetrates into the country. The depth of the loch varies in the middle from twenty to fifty or sixty fathoms, but in general it is more shallow towards the shores, which in many parts are smooth and sandy, offering excellent facilities for bathing. Other waters connected with the parish (besides a few rivulets which exhibit several interesting cascades) are the **Kyles of Bute** and **Loch Ridon** or **Riddan**, forming respectively the south-western and western boundaries, and affording herrings and the ordinary white-fish. The whole of the sea-shore belonging to the parish measures between thirty and forty miles.

Near the coast the **SOIL** is light and sandy, mixed in some parts with moss; in the more inland tracts it passes through several varieties, and much of the earth is of a red cast. Agriculture is in a very low state, the old system of cultivation generally prevailing. Most of the land is laid out in sheep-farms, merely interspersed with arable tracts, and held on lease for only nine years. Some parts, however, form an exception, are highly cultivated, drained, and fenced, and have very comfortable houses, the leases running for nineteen years. The sheep, which number upwards of 10,000, are all of the black-faced kind, except a few **Leicesters** fed on the lower grounds. Considerable numbers of cows are kept, chiefly the **Argyllshire**, with some of the **Ayrshire** for the dairy; and about 200 calves are annually reared. In general the cattle are disposed of to the drovers, for the low-country markets; the sheep are sold to the **Greenock**, **Glasgow**, **Rothsay**, or **Dunoon** butchers. The substrata of the parish chiefly comprise **mica-slate**, and a variety of hard common rocks lying in beds, with many **whinstone dykes**. **Limestone** was formerly quarried, but it has been superseded by **Irish lime** in shell, the latter being of superior quality and less expensive. The wood comprehends about 440 acres of thriving plantations, principally **larch**, **spruce-fir**, **oak**, **ash**, and **birch**: there are also 1000 acres of **oak coppice**, the periodical cuttings of which make a profitable return. The annual value of real property in the parish is £3283. The mansion of **Southhall**, situated near the opening to the **East Kyles of Bute**, embraces beautiful views of the **Firth of Clyde**; and at **Gortan**, on the eastern side of **Loch Straven**, a cottage has been lately built, surrounded with nearly 100 acres of plantations, and commanding fine prospects of **Rothsay bay**, with **Ayrshire** and **Arran** in the distance.

The dwellings of the inhabitants are scattered in various directions, and the people are chiefly employed in agriculture, but mostly keep nets for taking the fish with which the different waters abound, comprising all

kinds of white-fish, with herrings, and lobsters, crabs, and other shell-fish. The peat obtained in the district is used for fuel; but more frequently coal is burnt, brought from various places. The parish is tolerably well supplied with roads, some of which are kept in very good order. A fair is held in November, for the sale of black-cattle. **Inverchaolain** is in the presbytery of **Dunoon**, synod of **Argyll**, and in the patronage of the **Marquess of Bute**. The minister's stipend is £150, of which more than a third is received from the exchequer; with a mause, and a glebe of nearly five acres, valued at £13. 10. per annum. The church, built in 1812, is situated on an eminence, and surrounded by a picturesque burying-ground; it contains 250 sittings, and forms that will accommodate about forty more. A chapel connected with the Establishment, and situated on the **East Kyles of Bute**, was opened in 1840, having been built by subscription, and a contribution from the **General Assembly's church-extension fund**. There are two schools, a parish school and a side school; the masters have salaries of £22 and £11 respectively, and the fees. On a small island in **Loch Riddan** is the ruin of the ancient castle of **Elland-heirrig**, fortified by the **Earl of Argyll** when he made his descent upon Scotland in 1685, and which is seen by passengers in steam-boats passing along the **Kyles of Bute**. The island, and the property lying in the vicinity, were at that period possessed by a family named **Campbell**, now extinct, who had other very considerable lands in this part of Scotland, and were of some celebrity as warriors.

INVERCRUDEN, in the county of **ABERDEEN**.— See **CRUDEN**.

INVERESK, a parish, in the county of **EDINBURGH**, 5 miles (E. by S.) from **Edinburgh**; containing, with the town of **Musselburgh**, and the villages of **Monktonhall**, **Cowpits**, **Craighall**, **Stoneyhill**, and part of **New Craighall**, 8263 inhabitants, of whom 211 are in the village of **Inveresk**. This place derives its name from its situation near the influx of the river **Esk** into a bay on the south shore of the **Firth of Forth**. The parish is about three miles in length and two and a half in breadth, comprising 4000 acres, of which, with the exception of a small portion of woodland and plantations, the whole is arable, and in a high state of cultivation. Its surface, though generally level, and sloping towards the coast, is pleasingly varied with gentle undulations, which, in the direction of the southern boundary of the parish, terminate in a ridge, but of inconsiderable height, having an elevation of little more than 500 feet above the level of the sea. Along the shore of the **Firth** are some beautiful downs of great extent, well adapted for the celebration of public games, and on which a fine race-course has been formed, and a handsome and commodious stand erected. The river **Esk**, combining the waters of the **North Esk**, which has its source in the **Pentland hills**, and of the **South Esk**, which rises in the **Moorfoot range**, flows from **Dalkeith Park** (where the two streams unite), in a pleasing winding course through the parish, and falls into the bay of **Musselburgh**. **Salmon** are found in the river, though not in any considerable numbers; and off the coast are taken **haddock**, **cod**, **flounders**, **whiting**, and occasionally **soles** and **mackerel**.

Near the village the **SOIL** is a light sandy loam, of great fertility; and on the higher grounds, a deep clayey loam; the whole producing exuberant crops of wheat,

barley, oats, peas, beans, potatoes, and turnips. The system of husbandry has been brought to much perfection, and the lands generally are in the highest state of cultivation; the farm-houses are substantially built and well arranged, and on most of the farms are threshing-mills, several of which are worked by steam. The lands have been well drained, and inclosed either with stone walls or hedges of thorn; and all the more recent improvements in the construction of agricultural implements have been adopted. The cattle reared are not confined to any particular breed, the horses are usually the Clydesdale, and the sheep of the Cheviot and Leicestershire breeds. A considerable portion of land is cultivated as gardens; and large quantities of fruit, flowers, and vegetables are raised for the supply of the Edinburgh and Glasgow markets. The annual value of real property in the parish is £26,677. The plantations are ash, oak, elm, plane, beech, and larch, Scotch, and spruce firs, with a few pines, all of which seem well adapted to the soil, and are in a thriving state. In this parish the principal substrata are coal, freestone, and limestone. The coal-field extends under the whole of the parish, on both sides of the river Esk, and contains forty seams, varying from two and a half to nine feet in thickness: of these seams three are wrought, which are respectively three, four and a half, and four feet thick, and at depths of nine, twelve, and ninety fathoms. The chief collieries now in operation are at New Craighall, Monktonhall, and Edmonstone: at New Craighall a steam-engine of 140-horse power was many years ago erected, at an expense of £6000, by Messrs. Claud Girdwood and Company, for drawing off the water. Another, of still greater power, has recently been erected. There were formerly collieries at Pinkie-burn, Midfield, and Cowpits; but the workings have been long abandoned. Several quarries of limestone are wrought to a considerable extent, both at Chalkieside, in this parish, and at Cousland, in the adjoining parish of Cranston.

Among the principal mansions in the parish is *Pinkie House*, the seat of Sir John Hope, Bart., anciently the country residence of the abbots of Dunfermline, and, according to an inscription in front of the building, enlarged or improved by Lord Seton in 1613. Its most ancient portion is a massive square tower, crowned with turrets, and the walls of which are of immense thickness, and the ground-floor strongly vaulted. The mansion in its present state, though only part of a more magnificent structure, is spacious, and contains many splendid apartments, in one of which, called the King's Room, the abbot entertained his sovereign. The painted gallery, which is 120 feet in length, and has an enriched ceiling painted in device, was used as an hospital for the wounded, after the battle of Pinkie; and Prince Charles Edward slept in the apartment on the night after the battle of Prestonpans. *Carberry House* is beautifully situated on the acclivity of Carberry hill, upon the summit of which the place is still pointed out where Mary, Queen of Scots, sat, while holding a conference with Kirkaldy of Grange. This mansion, which is of great antiquity, has within the last thirty or forty years been repaired, and partly modernised; it commands a fine prospect embracing the Firth of Forth. The grounds are tastefully embellished, and enriched with groves and avenues of oak, chesnut, and beech, of stately and venerable growth. There are numerous other mansions, the principal of which are,

Stoneyhill House, anciently the seat of the son of Archbishop Sharpe; *Monkton House*, now in ruins, said to have been built by General Monk; and *New Hailes*, formerly the seat of Lord Hailes, author of the *Annals of Scotland*. The grounds of the last are pleasingly laid out; and near the house is a column, erected to the memory of the Earl of Stair. The village of Inveresk is beautifully situated on rising ground overlooking the picturesque and fertile valley of the Esk; and from the mildness of the climate, and the interesting variety of the scenery around, it has long been distinguished as the "Montpelier" of Scotland, and selected as a favourite place of residence. Great facility of intercourse is afforded by the North-British railway.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Dalkeith, synod of Lothian and Tweeddale. The minister's stipend is £324. 11., with a manse, and a glebe valued at £22 per annum; patron, the Duke of Buccleuch. There is also an assistant minister, who receives the interest of a bequest of £340, £5 from seat-rents, and from £35 to £40 from his office as session-clerk. The church of St. Michael, a spacious building, supposed to have been originally erected soon after the introduction of Christianity into Britain, was taken down in 1804, and a new structure erected on its site in 1806. The present church, containing 2400 sittings, is a plain edifice in the Grecian style of architecture; with a lofty tower and spire, forming a conspicuous landmark, and towards the building of which a contribution was made by the Commissioners of Northern Lighthouses. A "quoad sacra" church has been built in Fisherrow, in the parish; and there are places of worship for members of the Free Church, the United Presbyterian Church, Independents, and Wesleyans; and an episcopal chapel. A grammar school, at Musselburgh, is under the patronage of the magistrates and town council, who give the master a salary of £27. 4. 5., in addition to the house and schoolroom. There are also English schools in Musselburgh and Fisherrow, the masters of which receive salaries of £12 and £17, respectively, from the corporation funds. The relics of antiquity that have been discovered in various parts of the parish, afford striking evidence that this place was not merely a military station, but a Roman colony or *municipum*. The ancient church of St. Michael was built on the site, and partly with the materials, of the prætorium of a Roman camp on Inveresk hill. Foundations of baths, and numerous other vestiges of Roman occupation, have been discovered at different times. Among these were, a votive altar inscribed *Apollini Granno*; a golden coin of Trajan, much obliterated; and a copper medal with the inscription *Diva Faustina*. Walker, an eminent engraver of portraits, and Burnet, a distinguished historical engraver, were natives of the parish; as is, also, Alexander Ritchie, who has excelled as a sculptor. Logan, the poet, was educated in the grammar school.—See MUSSELBURGH, NORTHESK, &c.

INVERGORDON, a village and small sea-port, in the parish of ROSKEEN, county of ROSS and CROMARTY, 19 miles (N. E.) from Dingwall; containing 998 inhabitants. This place, which is situated on the north shore of Cromarty Firth, at nearly an equal distance from Tain and Dingwall, has greatly increased in importance since the construction of a commodious harbour by Roderick McLeod, Esq., in 1828, at a cost of more than

£5000. The village is neatly built, and the scenery derives much additional beauty from the pleasure-grounds of Invergordon Castle, in its immediate vicinity. A subscription library has been established. A cattle-show takes place annually; there are numerous inns for the accommodation of travellers; and from its central situation, the place is rapidly advancing. Invergordon harbour is accessible to vessels of large burthen. The port carries on an extensive trade in the exportation of grain, cattle, horses, sheep, pigs, and all the various kinds of agricultural produce; and is one of the most frequented in Easter and Wester Ross. A substantial pier has been erected for the loading and unloading of vessels, and also a slip for building and repairing ships. A wooden jetty has lately been added to the pier, in order to secure a depth of ten feet water at ebb-tides; and the trade of the place is facilitated by a ferry across the Firth to Cromarty. Facility of communication is also afforded by good roads, and by steamers, which ply during the summer months, weekly, to Inverness, Aberdeen, and Leith, and every alternate week to London. The north and south mails pass daily through the village. Fairs for cattle, horses, agricultural produce, fish, and various kinds of wares, are held on the first Thursdays in every month throughout the year; on the second Tuesdays in April, October, and December; on the third Tuesday in February; and the first Tuesday in August.

INVERGOWRIE, a village, in the parish of LIFF, BENVIE, and INVERGOWRIE, county of FORFAR, 3 miles (W.) from Dundee; containing 108 inhabitants. It is pleasantly situated on the south bank of the Tay estuary, and gives name to a fine bay, at the bottom of which is the small mouldering ruin of Invergowrie church, half covered with ivy, close on the water's edge. This is said to have been the first Christian structure north of the Tay; it was probably founded in the seventh century, by a papal legate named Boniface. From Invergowrie Alexander I. embarked on his escape from assassination at the palace of Liff. The village stands at the commencement of the Carse of Gowrie, on the high road from Perth to Dundee, and near the Perth and Dundee railway, which has a station here. About half a mile from it, on Invergowrie hill, are the remains of a Roman camp, which had a communication on the north-east with the camp of Hare Faulds, and was designed, it is supposed, to keep up a communication with the Roman shipping in the Tay. Its site is now surrounded with a plantation of trees.

INVERKEILLOR, a parish, in the county of FORFAR, 6 miles (N. by E.) from Arbroath; containing, with the hamlets of Chapelton of Boysack, Leysmill, March of Lunanbank, and Millfield, 1879 inhabitants, of whom 141 are in the village of Inverkeillor. This parish derives its name from its situation at the mouth of the Keillor, a small rivulet which flows into the bay of Lunan about a mile south-eastward of the village. It lays claim to a considerable degree of antiquity; and near the mouth of the river Lunan are the ruins of the ancient house of Redcastle, said to have been built for a hunting-seat, the probability of which is confirmed by the names of several of the adjacent lands. In the year 1749 the roof and part of the walls of Redcastle were taken down; a statue of King William the Lion was then removed from its pedestal, and owing to the inattention or unskilfulness of the workmen, it fell to the ground,

and was broken to pieces. The PARISH is bounded on the north, and also intersected, by the river Lunan; on the east is the sea. It is about seven miles in length, and of very irregular form, varying from about two and a half to four and a half miles in breadth; and comprises an area of 7500 acres, of which 130 are woodland and plantations, 2500 pasture, and the remainder arable. The surface is generally level, but rises towards the north by a gentle acclivity from the river Lunan, and towards the south from the Keillor, terminating, in the latter direction, in a high ridge of rocky coast, at the promontory of Redhead, which has an elevation of 230 feet above the level of the sea. Of the two streams, the Lunan has its source near Forfar, and flowing eastward, through the northern portion of the parish, falls into Lunan bay: the Keillor rises in the southern part of the parish, and joins the sea at the southern extremity of the bay of Lunan. The coast extends for nearly six miles; and the shore along the bay of Lunan is a flat firm sand, beyond which, to the south, it is bold and rocky. Lunan bay affords good anchorage for vessels; and all along the coast are salmon-fisheries.

The SOIL is in general fertile, in some places a deep rich loam, and in others of a lighter quality; the crops are, grain of every kind, with potatoes and turnips. The system of husbandry is in a very improved state; the lands are well drained, the farm-buildings of superior construction, and the fences, which are chiefly of stone, are kept in good order. Of the live stock, the cattle reared in the parish are usually of the Angus black breed, without horns: most of them are sold when three years old, for the English market, where they obtain a high price; and the others are pastured for home use, or for the Glasgow market. The sheep are of the Highland black-faced breed, with a few of the Cheviot and the Leicestershire. The annual value of real property in the parish amounts to £8761. The plantations are beech, elm, oak, birch, and plane, with larch and Scotch fir, for which the soil is well adapted. Freestone is extensively quarried at Leysmill, where paving-stones are dressed by machinery driven by steam: in the works here, which are the property of Mr. Carnegie of Boysack, about fifty men are constantly employed. Ethie House, the seat of the Earl of Northesk, is an ancient mansion originally erected by Cardinal Beaton, and is pleasantly situated near the coast. The only other houses of any note are Kinblethmont and Anniston.

The village of Inverkeillor stands on the great north road from Edinburgh to Aberdeen: its inhabitants are the ordinary tradesmen necessary for the convenience of a country population. Some of the inhabitants of the parish are employed in the spinning of flax, for which there are several mills, some being driven by steam, and others by the water of the Lunan. Near the church is a posting-house, called Chance Inn; and facility of communication is afforded by the Arbroath and Forfar and the Aberdeen railways, by good roads, and several bridges over the Lunan river. For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Arbroath, synod of Angus and Mearns. The minister's stipend is £246. 14., with a manse, and a glebe valued at £8. 15. per annum; patron, the Crown. Inverkeillor church, erected in 1735, and enlarged by the addition of an aisle in 1799, is a plain structure containing 700 sittings. There is a place of worship for members of the

Free Church. The parochial schoolmaster has a salary of £34 a year, with a house and garden; he receives £10 from a bequest, for the gratuitous instruction of twelve poor children, and the fees average about £15 per annum. There is also a school at Chapelton, the master of which has a free house and garden, and a salary of £7 arising from a bequest, in addition to the fees. The bequest from which the two payments to the schools are made, amounts to £1000, under the management of the Kirk Session, who appropriate the remainder of the proceeds to the poor not upon the parish roll. Near the sea are the remains of St. Murdoch's chapel, with the burying-ground attached to it; and at Chapelton are the remains of the chapel of Quytefield, the burial-place of the family of Boysack.

SEAL AND ARMS.

INVERKEITHING, a parish, sea-port, burgh, and market-town, in the district of DUNFERMLINE, county of FIFE, $12\frac{1}{2}$ miles (N. W. by W.) from Edinburgh; containing, with the village of Hillend, 2530 inhabitants, of whom 1674 are in the burgh. This place is supposed to have derived its name from its position at the influx of the river Keithing into the Firth of Forth, and the parish at present includes the ancient parish of Rosyth, so called, in the Gaelic language, from its peninsular situation. Inverkeithing appears to be of considerable antiquity; and the adjacent ferry was, on her flight from England, the landing-place of Margaret, who afterwards became the queen of Malcolm III. Several battles have at various times occurred in the immediate vicinity, the last of which was between the Scots and the forces of Oliver Cromwell, in 1651; and there are still the remains of a redoubt, said to have been thrown up by Cromwell's army while it was encamped on the Ferry hill. The town is pleasantly and advantageously situated on an eminence overlooking the bay of St. Margaret's Hope in the Firth of Forth, and consists chiefly of one principal street, from which a smaller street and some lanes branch off in different directions. In general the houses are well built, of sandstone or greenstone; and many of the older buildings have been taken down, and replaced with others of more modern and handsome appearance. There are a public subscription library, a circulating library, and a library exclusively for religious works, all of which are well supported. The environs are pleasant, and abound with objects of interest; the place has, on the whole, a clean and cheerful aspect, and has lately been lighted with gas.

A distillery is conducted on a very extensive scale, employing about eighty persons; and the produce, which is chiefly whisky, is shipped off for the supply of

the London market. There are two iron-foundries, where works of the larger kind are cast; and in connexion with them are forges, in which steam-engines and various kinds of machinery are manufactured; the whole affording occupation to fifty persons. Bricks for common uses, and fire-bricks of very superior quality, are made in great numbers; chimney and other ornaments are manufactured, resembling freestone in appearance, and retorts are supplied hence for the principal gas-works of Scotland. These retorts have attained considerable celebrity, lasting from two to three years, whilst iron ones last only about six months. There are a tannery, salt-works, and a laboratory for magnesia, in full operation; two mills for meal and flour; one for barley; and a mill worked by steam for crushing bones for agricultural purposes, the produce of which is sent to most places on the eastern coast. Inverkeithing has also a large yard for building and repairing ships, and a rope and sail work; where a considerable number of people are engaged.

It appears that the trade of the port in stone was formerly very extensive, but declined for some time, until its revival within the last few years. Large quantities of whinstone or trap rock used to be shipped here for paving the streets of London, but this stone has for some years been to a great extent superseded for that purpose by the use of granite from Aberdeen. The trade, however, has of late revived, and upwards of a hundred men are employed in working the stone, principally for government works at Chatham, Woolwich, and other places, as well as for the London market, railways, &c. There is also a considerable trade carried on in the export of lime, sandstone, corn, and the produce of the manufactories, and in the importation of timber, bark, and bones for grinding. But the principal feature in the trade of the port, which is very extensive, is the export of coal for the foreign and home markets; this being the shipping-place for the coal from not less than six different collieries, namely, Cuttlehill, Lochgelly, Townhill, Crossgates, Halbeath, Cowdenbeath, and Hill of Beath. The coal raised at these works is of the best quality for the use of steamers. There is a railway from Halbeath and the Dunfermline coal-fields, six miles in length, for conveying coal, stone, lime, and bricks to the shipping. In 1843 there were twenty-eight vessels, varying from twenty to 160 tons' burthen, registered as belonging to the port, and mostly employed in the coasting-trade. Steam-boats sail from the village of North Queensferry, in the vicinity, to Leith, Stirling, and other ports, affording a facility of intercourse with the principal towns in this part of the country; and several lines of good turnpike-road, also, serve to maintain an easy communication with the neighbouring market-towns. The market, on Mouday, for grain and live stock, is held in a handsome and commodious market-house. Five annual fairs are held in the town for horses, cattle, and various kinds of merchandise, which used to be numerously attended by dealers from different parts; but very little business is at present transacted, except at the cattle-fair in May, and the Lammis fair on the first Friday in August, which latter is resorted to by considerable numbers of people from the neighbouring districts, when horse and foot races regularly take place. A branch of the Eastern Bank of Scotland has been established.

Second Seal of the Burgh.

The inhabitants at a very early period received a charter of incorporation, which is recited in a charter granted by William the Lion, and was confirmed and enlarged by charters of Robert III. and James VI., giving to the burghesses certain land customs, and the customs on vessels navigating the port from the great stone near Milnathort on the north to the middle of the Firth of Forth on the south, and from the river Leven on the east to the river Devon on the west; with certain tracts of land, and various other privileges. By these charters, the government is vested in a provost, two bailies, a dean of guild, a treasurer, and a council of ten burghesses, assisted by a town-clerk and other officers, all chosen under the regulations of the Municipal Reform act. The provostship was made hereditary, by a grant of Mary, Queen of Scots, in the family of Henderson of Fordel; but the burgh successfully resisted this grant as an invasion of their independence. The provost of this burgh was, in public processions, next in precedence to the provost of Edinburgh. By their ancient charter, the magistrates had power of jurisdiction in capital offences; and a rising ground near the town still retains the name of Gallowhill, being the place where criminals were executed. The provost, bailies, and the other officers of the corporation, were formerly all elected by the council; and the council filled up vacancies as they occurred from the burghesses, by a majority of their own body. There are five incorporated trades, viz., the hammermen, tailors, shoemakers, bakers, and weavers, which are severally governed by deacons; and the freedom of the burgh is obtained by becoming a member of any one of these companies, on the payment of certain fees. The jurisdiction of the provost and bailies, the former of whom is a justice of the peace by virtue of his office, extends over the whole of the royalty of the burgh, and the magistrates hold courts for the determination of civil actions to any amount; but all criminal cases, except trifling misdemeanors, are referred to the county assizes. Inverkeithing unites with Culross, South Queensferry, Stirling and Dunfermline, in returning one member to the imperial parliament; the right of election being vested, by the act of the 2nd and 3rd of William IV., in the householders and owners of property of the annual value of £10 or upwards, resident within seven miles of the royalty. The number of electors is ninety, of whom thirty-four are burghesses; and the number of persons whose houses are below the value of £10 per annum, is forty-five, of whom six are burghesses. There is a town-hall, a neat building of stone, well adapted to the use of the corporation, and for holding the courts: the prison, which is only for the temporary confinement of offenders, is small and insecure. The market-cross is a neat, and rather lofty, pillar of stone; and between the town and the village of North Ferry, is a handsome building originally erected for a lazaretto, but which has been superseded by stationing a frigate in the bay of St. Margaret's Hope, for the quarantine service. The annual revenue of the burgh is between £600 and £700, and is increasing.

The PARISH extends for six miles along the shore of the Firth, including the bay of St. Margaret's Hope, so called from the landing of Queen Margaret. It comprises about 2500 acres, chiefly arable, with a moderate portion of pasture, and a few acres in plantations. The surface is greatly varied, consisting of hills of considerable elevation with intervening valleys, and level sands stretching along the coast and often interrupted by cragged heights. In the Firth are the rocky island of Inch-Garvie and the rock of Bimar, which latter has been the cause of frequent shipwrecks. The streamlet called the Keith or Keithing, as already stated, here falls into the Firth; and two small burns, after intersecting the parish, unite their streams, and also join the harbour. The scenery is marked rather with features of romantic character, than of picturesque beauty; and the want of ornamental timber gives an appearance of bleakness to the landscape. In this parish the soils are various, but fertile, and much waste and mossy land has been reclaimed by draining, and brought into profitable cultivation; the system of husbandry is of the most approved kind. The crops are wheat, barley, oats, beans, peas, potatoes, and turnips; the little pasture there is, is on the acclivities of the hills. The plantations are chiefly of recent growth; they consist of larch and fir, interspersed with oak, ash, beech, and elm trees, and on the banks of the streams there are some alder and willow. For the most part the farm-buildings are substantial and commodious, and several, of modern erection, are very superior: steam-power is generally used for threshing-mills. The lands are inclosed principally with hedges of thorn, which are kept in good order; but a few of the fields are fenced with stone dykes. The substratum is generally greenstone, or trap rock, in the southern part of the parish, and coal, limestone, and sandstone in the northern part. Among the minerals are quartz, steatite, felspar, sulphate of barytes, calcareous spar, ironstone, and pyrites of iron; and boulders of chlorite and mica-slate are frequently found. The greenstone is quarried extensively for building, paving, and for mending the roads; and large quantities are shipped from the port: the sandstone is also quarried, and sent to the towns on the neighbouring coast; and there are quarries of limestone of excellent quality, of which great quantities are forwarded to distant places. The coal is worked to the extent of 30,000 or 40,000 tons annually in the parish. The yearly value of the real property in the parish is returned at £7431. On the estate of Duloch is an ancient mansion; also a modern house, the occasional residence of its proprietor; and on a promontory near St. Margaret's Hope is a handsome marine villa.

Inverkeithing is ecclesiastically in the presbytery of Dunfermline, synod of Fife, and in the patronage of Lady Baird: the minister's stipend is about £300, with a manse, and a glebe valued at £40 per annum. The church, which is situated in the centre of the town, is a handsome edifice in the later style of English architecture, built, with the exception of the tower, in 1827, to replace the former structure, destroyed by an accidental fire in 1825. It is a conspicuous feature in the view of the town, and is adapted for a congregation of nearly 1000 persons. There is a place of worship for a congregation of the United Presbyterian Church. Inverkeithing parochial school, for which an elegant building

has been erected, and which is also the burgh school, affords a liberal education to 170 scholars: the master, who is appointed jointly by the town council and the heritors, has a salary of £34, with £100 fees, and a house and garden. A female school has been established for teaching reading and sewing, the mistress of which is appointed by the council, who give her a salary of £5 and a school-house, in addition to the fees.

There are some Druidical remains on the summit of Letham hill; and in the north of the parish is a stone pillar, about ten feet in height, on which are rudely-sculptured figures of men and horses, much defaced by time: it is supposed to have been raised in commemoration of some successful conflict with the Danes. On the summit of a rock in the bay connected by a narrow isthmus with the main land, are the remains of the ancient castle of Rosyth, consisting of the walls of a square tower, which, from the traces of foundations, appears to have been at the north-east angle of a quadrangular range of buildings. The castle is said to have been anciently the baronial seat of the Stuarts of Rosyth, descendants of Walter, high steward of Scotland, and father of Robert II.; it is now the property of the Earl of Hopetoun. Over the gateway is a coat of arms, those of Queen Mary, surmounted by a crown, with the inscription M. R. and the date 1561; and near the door on the south side is a couplet in the Scottish dialect, having allusion to the bell, as summoning the guests to the banquet. On the transoms of the windows in the hall, also, are engraved the initials M. S. and M. N. An old building in the town is said to be the remains of the residence of Annabella Drummond, queen of Robert III., in which she died in 1403: the tenement, though in the centre of the town, is exempt from the jurisdiction of the magistrates, who, under their charter from that monarch, were obliged to pay her 100 shillings annually. Near it are numerous ruins, among which were lately discovered the foundations of an ancient chapel belonging to one of the monasteries founded here for brethren of the Franciscan and Dominican orders. In the town are also some old houses that were the residences of the families of Fordel, Claverhouse, and Rosebery. During the repairs of the former church, there was found a beautiful hexagonal font of sandstone, richly sculptured on each face of the shaft with the bust of an angel with expanded wings, bearing on its breast a shield of antique form, in which were the arms of Scotland and of several of the monarchs: it had apparently been buried with care.

INVERKEITHNY, a parish, in the county of BANFF, 10 miles (N. E.) from Huntly; containing 687 inhabitants. This place takes its name from the large burn of Keithny, which here falls into the river Doveron. The parish lies on the south side of the Doveron, extending along that stream between five and six miles, and measuring from four miles to five in breadth. On the north it is bounded by the parish of Marnoch, on the west by that of Rothiemay, on the south-west and south by Forgue, on the south-east by Auchterless, and on the east by Turriff, the three last parishes in the county of Aberdeen. It is computed to contain 5610 acres, of which 4000 are cultivated, 800 waste or natural pasture, and the same number in woods, plantations, and undivided common. There is scarcely any thing to be met with in the nature of peat or moss. The soil is tolerably

good, and a considerable quantity of grain is annually raised; the land is farmed upon the most approved system, and the rents average about 15s. per acre, the annual value of real property in the parish amounting to £3343. The public road from Banff to Huntly, to the former of which towns the agricultural produce is mostly sent, passes through the western portion of the parish. Ecclesiastically the place is within the bounds of the presbytery of Turriff, synod of Aberdeen; and the patronage is vested in Thomas G. Bremner, Esq.: the stipend of the minister is £215, with a manse, built in 1787, and a glebe of nearly six acres, valued at £10 per annum. Inverkeithny church, a very plain edifice, stands in a narrow vale, near the bank of the Doveron, where, also, is the manse. The parochial school affords instruction in the usual branches; the salary of the master is £34 per annum, with about £30 fees, and a house: fifty children are educated.

INVERLEVEN, in the county of FIFE.—See DUBSIDIE.

INVERMORRISTON, a village, in the parish of URQUHART and GLENMORRISTON, county of INVERNESS, $21\frac{3}{4}$ miles (S. W. by W.) from Bonar Ferry; containing 94 inhabitants. It is situated at the confluence of the river Morriston with Loch Ness; and an excellent road has been formed from it, coastwise, along the north-west shore of the loch, to Bonar Ferry. The Grant family have a handsome seat in the vicinity; and there is an excellent inn. A missionary preaches here, and in the upper part of the glen, alternately; and a branch of the parochial school is in the village.

INVERNESS, a royal burgh, a sea-port town, and parish, in the county of INVERNESS, of which it is the chief town, 156 miles (N. N. W.) from Edinburgh; containing, with the villages of Balloch, Clachnaharry, Culcaboch, Hilton, Resawrie, and Smithtown of Culloden, 15,418 inhabitants, of whom 11,568 are in the burgh.

This place derives its name from its situation near the mouth of the river Ness, and is the largest and most flourishing town in the Highlands, of which it may be considered as the capital. It is supposed to have been the ancient metropolis of the kingdom of the Picts, and the residence of their kings previously to the union of the Picts and Scots in the reign of Kenneth II., who lived in the ninth century. It is also thought to have been visited, in the sixth century, by St. Columba, for the conversion of the inhabitants to the Christian religion. The CASTLE, for many years the occasional residence of the Scottish kings, is identified by Shakespeare as the scene of the murder of Duncan by Macbeth, lord of Ross and Moray, though, by most historians, the perpetration of that crime is said to have taken place in the vicinity of Elgin. It was razed to the ground, about the middle of the eleventh century, by Duncan's son, Malcolm Canmore, who erected, near the site, a strong fortress which was held for the king by one of the most powerful of the nobility, with a view to keep the inhabitants of this Highland district in subjection. Soon after the completion of

Arms.

this castle, some houses were raised in its immediate neighbourhood; and a town gradually arose, which, under its protection, increased in extent and importance, and was frequently visited by the kings. Though often plundered by the inhabitants of the Isles and by the Highlanders, the town continued to prosper; and in the thirteenth century it had attained a considerable degree of commercial consequence, being inhabited by numerous Flemings and Saxons, who had settled here, and who carried on a lucrative trade in the exportation of hides, malt, and various kinds of fish.

In 1303, the castle was besieged and taken by Edward I. of England; but it was soon afterwards retaken by the adherents of Robert Bruce, who was then raising forces in the Western Islands, to assert his right to the throne; and it remained in the possession of his successors, kings of Scotland, till the reign of James I. In 1411, the town was plundered by Donald, Lord of the Isles, who, in his march from the battle of Harlaw, set fire to the castle, which was nearly destroyed; it was, however, restored by the king, who repaired the fortifications, and made the chief of the Macintosh family, descended from one of the Earls of Fife, governor. The castle continued for some time to be a place for the confinement of state prisoners, and, in 1508, was placed under the command of the Earl of Huntly, who was also created heritable sheriff of the county. On the insurrection of a succeeding earl, in 1562, Mary, Queen of Scots, in her progress to the north to quell the rebellion, came to Inverness with a few attendants, and being refused admission into the castle, at that time held in her name by the insurgent earl, lodged in a house at the base of the fortress. From this perilous situation the queen was relieved by the Frasers, Monroes, and Mackenzies, whom her proclamation had brought to her assistance; the castle was compelled to surrender, and the deputy-governor was executed on the spot. The queen, after remaining four days in the castle, left the town, and retired to Aberdeen.

During the parliamentary war, the castle was an object of constant dispute between the contending parties. It was repeatedly besieged and taken for the king by the Marquess of Montrose, and as frequently retaken by his opponents: in 1649, it was nearly demolished by the royalists under Sir Thomas Urquhart; and during the same year, the town was seized by the royal forces under Generals Middleton and Monroe. The castle was, however, recaptured by Cromwell, who erected a strong fortress for the defence of the town, capable of accommodating 1000 men, to provide materials for which he destroyed the monasteries of Kinloss and Beauly, and all the religious houses in the neighbourhood. After the Restoration, this fortress was demolished, to conciliate the Highlanders, who had been held under powerful restraint, and severely annoyed, by the garrison of Cromwell; and several of the more ancient houses in the town were built with the materials. The royal castle which had been nearly demolished by Urquhart was, at the time of the Revolution, restored by government, at an expense of £50,000, and garrisoned, in order to keep the Highlanders in subjection. It was still further improved, in 1718, by the erection of a house for the governor; and the whole of the buildings, called Fort-George, formed a royal garrison under a governor chosen by the crown, an appointment held always by one of

the principal of the nobility, and which, though it subsequently became merely nominal, was possessed by the Gordon family till the death of the last duke, in 1836. In 1745, the castle was assaulted by the forces under the command of Charles Edward, the Young Pretender, by whom it was taken and destroyed. That prince, on the night last but one before the battle of Culloden, which took place near the town, slept at the house of Lady Drummair, in Church-street; and on the night after the battle, the Duke of Cumberland, who made Inverness his head-quarters, slept in the same house, which appears to have been almost the only one of any importance in the place. The circulation of money by the troops of the duke during their stay in the town, appears to have contributed greatly to its restoration from that state of decay into which, from the time of the Revolution, it had been gradually falling. The walls of the royal castle, which remained nearly entire for some years, have been removed, and the site converted into a bowling-green. During Her Majesty's stay in Scotland in the autumn of 1847, the town of Inverness was visited by His Royal Highness Prince Albert, who on the same day dined with Mr. Baillie, M.P. for the county, at Dochfour: in the evening the prince paid a second visit to the town, for the purpose of attending the grand annual ball of the Northern Meeting, after which he returned to Dochfour, where he passed the night. Towards the end of January 1849, an inundation of the river caused great damage. The fine old bridge was swept away, and the streets on both sides of the river were flooded, in some places to the depth of five feet; a third part of the town was submerged, and upwards of 1000 people were with difficulty rescued in open boats. The damage done to the Caledonian canal was estimated at £10,000.

The town is situated chiefly on the east bank of the river Ness, near its influx into the Moray Firth, and consists of several well-formed and spacious streets, crossing each other at right angles. In general the houses are substantial and well built, and many are large and of handsome appearance, the residence of opulent families; the streets are paved with granite, and the foot-paths laid with Caithness flags. Inverness is lighted with gas from works erected at an expense of £8757, by a company established under an act of parliament; and the inhabitants are supplied with water raised from the river by machinery, and distributed to the houses by pipes. In 1847 an act was passed for better supplying the town and suburbs with gas and water. There are several subscription and circulating libraries, and two public reading and news rooms, all well furnished with newspapers, and the most interesting periodical works. The Northern Institution for the promotion of science and literature, established here in 1825, has been discontinued; and its valuable library, and museum of antiquities and natural curiosities, have been presented to the directors of the Inverness Academy, for the use of the pupils. In Church-street is a plain neat building called the Northern Meeting Rooms, containing an elegant ball-room, in which card and dancing assemblies are held, a spacious dining-room, and other rooms, in which public meetings take place. Leading from the extremity of the High-street, was a handsome bridge of stone, of seven arches, erected in 1685-88, by subscription, at a cost of £1300, and connecting the principal

part of the town with that portion of it which lies on the west bank of the river, and with the various suburbs in that vicinity. This bridge was destroyed by an inundation of the river, as above mentioned, in 1849. Higher up is the new bridge, of wood, built in 1808, by private subscription, at an expense of £4000. The environs abound with interesting and pleasing scenery. In the river, which is here of great breadth, are two picturesque islands, beautifully laid out in lawns, shrubberies, and walks, connected with the opposite banks of the stream by suspension-bridges, and forming delightful promenades. The neighbourhood of Inverness is remarkable for the luxuriance of its gardens, fields, and plantations, presenting a great variety and richness; and the mountain screens are fine and various: each outlet is different from the others, and each is beautiful; while a short and commodious ferry connects the town with the lovely country opposite. "It is the boast of Inverness," says Dr. Macculloch, "to unite two opposite qualities, the characters of a rich open Lowland country with those of the wildest Alpine scenery, both being close at hand, and in many places intermixed; while to all this is added a series of maritime landscape not often equalled." There are several good family hotels in the town, of which the Caledonian hotel is very extensive, and elegantly fitted up; also numerous commodious inns and lodging-houses. An act was passed in 1846 authorizing the construction of a railway to Aberdeen.

The chief manufacture carried on is that of cloth for bags, sacking, and tarpaulins, for the London market, and for exportation to the East and West Indies: about 300 persons are employed in this manufacture, of whom more than half are women. The weaving of Highland plaids and tartans is also pursued to a small extent, affording occupation to twenty-five persons. There are three tanneries, a distillery, and two public breweries; and about 100 families are supported by the sawing of timber. The trade of the port consists chiefly in the exportation of wool, grain, and hempen cloths; and the importation of hemp and timber from the Baltic, and tar from Archangel, of which last, upon an average, from 400 to 600 tons are annually landed. There are six vessels belonging to the port, of 130 tons' average burthen, employed in the trade with London; three in that of Leith; and two in that of Aberdeen. Since the completion of the Caledonian canal, the commerce of the town has been greatly extended, a direct line of intercourse having been thus opened with Glasgow and Liverpool, and with the manufacturing districts in their vicinity. The jurisdiction of the port, which embraces a large district, extends from the mouth of the river Spey to Dornoch Firth on the east, and from Assynt Point to Ardnamurchan on the west. The aggregate tonnage of the registered shipping of the whole district, in 1848, was 10,882 tons, chiefly belonging to this place: the custom duties in the year 1848 amounted to £6852. Inverness harbour, at the mouth of the river, is accessible to vessels of 250 tons; and ships of 500 tons can anchor with safety in the Kessock roads, or deliver their cargoes at the wharfs of the Caledonian canal, within a mile of the town. An act was passed in 1847 for improving the harbour and the navigation of the river, and regulating the anchorage and shore dues. During the summer months, steam-vessels sail regularly from Inverness to Leith, Aberdeen, and London. Ship-building

has within the last few years been introduced, and is carried on upon a moderate scale. The market-days are Tuesday and Friday, when butchers' meat, eggs, and poultry, and garden and agricultural produce of every kind, are exposed for sale in great abundance. Fairs are held in February, July, August, and November, for cattle, horses, butter, cheese, home-made stuffs, and various other kinds of merchandise. The July fair is attended by the principal Highland sheep-farmers, and by the South-of-Scotland and English wool-staplers, when not less than 100,000 head of sheep, and an equal number of stones of wool, are generally sold. The exchange, situated near the town-hall, is a neat building, well adapted for its use; and the old cross, in front of it, is still in good preservation.

THE CALEDONIAN CANAL, which extends from Inverness on the north-east to Corpach, near Fort-William, on the south-west, intersects Scotland from sea to sea. It passes for eight miles within the parish; and its entire length is sixty miles and a half, of which twenty-three miles have been formed by excavation, and the remainder consists of a succession of three natural lakes, Loch Ness, Loch Oich, and Loch Lochy. The canal is 120 feet wide at the top, fifty at the bottom, and the full depth of water corresponding to these dimensions was proposed to be as much as twenty feet; but the works were not completed to afford a greater practicable depth than about thirteen or fourteen feet. There are twenty-eight locks on the line, fourteen ascending to, and fourteen descending from, the summit level in Loch Oich, which is about ninety-five feet above ordinary high-water at Inverness. The locks are 170 feet long, by forty in breadth, the rise in most cases being eight feet; and the bridges are of cast-iron, and swing horizontally. Acts for the construction of the canal were passed in 1803 and 1804; the works were commenced under the superintendance of Mr. Telford, in 1805; and after an expenditure of nearly £1,000,000, the navigation was opened in 1822, in the unfinished state already mentioned. The rate of tonnage-duty, levied on sailing-vessels or steam-boats laden or unladen, passing along the canal in either direction, is one farthing per ton per mile; there being no dues chargeable upon goods of any description. The produce of the rate amounted, for the year ending 30th April, 1842, to £2723; and the number of passages made by vessels during that period was 1350. Since then, the navigation has only been partially open, at irregular intervals, owing to the works not being in a perfect state. The defective and unsatisfactory condition of the canal has, however, of late engaged the serious attention of government; and nautical and engineering surveys and reports have been made by Sir Edward Parry and Mr. Walker, who concurred in recommending the efficient repair and completion of the works, with the establishment of steam tug-boats and other facilities for the accommodation of the larger classes of commercial shipping. The estimated expense of these operations was about £200,000, towards which the sum of £105,000 was voted by parliament up to 1844; and a contract was entered into for the engineering details, amounting to £136,000, to occupy a period of three years from their commencement in October 1843. The passage from sea to sea was obliged to be interrupted during their progress; but parts of the canal were directed to be kept open, and made available for the local traffic.

Burgh Seal.

The town was made a ROYAL BURGH by charter of David I. ; and additional privileges were granted by succeeding monarchs to the time of James VI., under whose charter in 1591 the government is vested in a provost, four bailies, a dean of guild, a treasurer, and fourteen councillors. The councillors were formerly elected by a majority of their own body, five of whom retired every year, and were replaced : the provost, bailies, dean of guild, and treasurer remained members of the council for one year after the expiration of their office, and of course were not of the number that retired. There are six incorporated trades, viz., the hammermen, wrights and coopers, shoemakers, tailors, weavers, and skinnners, into one of which a person must enter before he is eligible to the council or magistracy ; the fees of admission vary from £1. 1. to £3 for sons of freemen, for apprentices from £5 to £6, and for strangers from £20 to £30. An act of parliament was passed in 1847, for establishing a general system of police in the burgh, for regulating the petty customs, and for other purposes. The magistrates hold courts, with jurisdiction equivalent to that of the sheriff, for the determination of civil pleas, and the trial of criminal offences, in which the town-clerk acts as assessor : the average number of civil causes tried annually is forty, of from £2 to £20 in amount ; and of criminal causes two. There is also a court held by the dean of guild, as well as a sheriff's court for the recovery of small debts. In conjunction with the burghs of Forres, Fortrose, and Nairn, the burgh of Inverness returns a member to the imperial parliament. The town-hall, at the extremity of Church-street, was erected in 1708, and contains the necessary accommodations for transacting the public business : the gaol, erected in 1791, has a handsome spire 150 feet in height, but is ill adapted for the classification of the prisoners. The county-hall, situated on the Castle Hill, is a good building in the castellated style, erected at an expense of £7000, after a design by Mr. Burn, of Edinburgh, and has the requisite court-rooms and offices : immediately adjoining is a site reserved for the erection of a new gaol for the county and the town. From the upper windows of the county-hall is obtained a view of one of the most magnificent landscapes in Scotland.

The PARISH extends along the coast of the Moray and Beaully Firths, and is about fourteen miles in length and two and a half in average breadth, comprising an area of 12,000 acres, whereof 9000 are arable, and the remainder, of which 1000 might be brought into cultivation, woodland, plantations, and waste. The surface, a considerable portion of which, forming part of the Caledonian valley, or great Glen of Albin, is tolerably level, is diversified on each side by the mountainous chains that bound the vale, and which, towards the coast, decrease in height. These mountains subside on the east into a smooth ridge having an elevation of about 400 feet, and on the west divide into groups of picturesque hills, terminating in Craig-Phadric, a remarkable elevation with a tabular summit, the ascent to which is by precipitous and rugged acclivities. Along

the line of coast, which is marked with bays of gentle curvature, is a level tract of rich land in the best state of cultivation ; and most of the higher grounds are beautifully ornamented with luxuriant woods, and plantations of Scotch fir, larch, ash, elm, beech, and oak. The river Ness has its source in Loch Ness, and after a course of eight miles, flows through the parish into the bay opposite Kessoch point, between the Moray and Beaully Firths : there are also numerous rivulets, several of which in their progress form picturesque cascades. The Ness formerly abounded with salmon, and the fisheries on it produced a rental of £1100 per annum, which, within the last thirty or forty years, has been reduced to £370 ; and there is a prospect of a still further reduction. A few herrings or coal-fish are occasionally taken on the sea-shore. The prevailing scenery is marked with features, in some parts of grandeur, and in others of romantic beauty ; and the views from the higher grounds are extensive and richly varied. Numerous handsome seats of the gentry are situated in the glens, and on the elevated ridges that intersect the parish ; and the pleasing hamlets of their tenantry are scattered through the various districts. There are also many tastefully ornamented villas in the immediate neighbourhood of the town. In the upper lands the soil is light and sandy, resting on a substratum of gravel ; and in the lower lands, a deep rich loam, intermixed with clay : the crops are wheat, barley, oats, hay, and the usual green crops. The system of agriculture is advanced ; the lands are well inclosed with fences of stone or hedges, and the farm houses and offices are generally substantial and commodious. Tracts of waste land have been reclaimed and brought into profitable cultivation, and all the more recent improvements in implements of husbandry have been adopted. The cattle are usually of a mixed breed, partaking of the Old Highland, Moray, and Ayrshire kinds ; and considerable attention is paid in rearing them for the dairy, and also for the market. There are some quarries of red and of grey sandstone, which are wrought to a moderate extent, chiefly for domestic purposes. The annual value of real property in the parish is £30,258, including £10,500 for the burgh. Among the gentlemen's seats are Culloden House, Raigmore House, Newcastle, the Inches, Culduthel, Dochfour, Dunain, and Muirtown, all beautifully situated in richly-planted demesnes.

This parish, with which that of Bona was united at a time not distinctly known, is the head of the presbytery of Inverness, in the synod of Moray. There are three parochial ministers, who officiate in the two ancient churches. The first and second have each a stipend of £276. 10., with a small allowance in lieu of the manses, which, being ruinous, were sold for inconsiderable sums, of which they receive the interest respectively ; and the proceeds of the glebe, amounting to £100 per annum, are equally divided between them. The third minister has a stipend of £200, part of which is paid from the exchequer ; but he has neither manse nor glebe. Of the two old churches, the one called the High church, in which divine service is performed only in the English language, was built in 1772 ; it is a plain edifice containing 1260 sittings, and has an ancient square tower, said to have been erected by Oliver Cromwell. The other, called the Gaelic church, because the service is performed in that language, was built in 1794, and is

also a plain structure, containing 1220 sittings. The patronage is in the Crown and Lord Lovat; but the latter has transferred his portion of it, during his life, to Professor Scott, of King's College, Aberdeen. The former quoad sacra parish of North Church was separated from the parish of Inverness under act of the General Assembly: the church, erected in 1837, at a cost of £1400, raised by subscription, aided by a grant from the Assembly, is a neat structure containing 1033 sittings. The former quoad sacra parish of East Inverness was nearly five miles in length and about two miles in extreme breadth, comprising an area of 5000 acres, and including an extensive rural district: the church, built in 1798, at a cost of £1400, by subscription, and altered and repaired in 1822, has 1177 sittings. There is a preaching station in the ancient parish of Bona, where divine service is performed by the assistant of one of the ministers of the parish. The episcopal chapel, erected in 1801, at a cost of £1000, is a neat building; and there are places of worship for the United Presbyterian Church, Independents, and Wesleyans; and a Roman Catholic chapel, erected in 1836, at an expense of £2000. There are also places of worship for members of the Free Church.

The old burgh grammar school has long merged into the *Royal Academy*, founded in 1792, for the education of children in the higher classes of the Highland population; incorporated by royal charter; and endowed by liberal subscriptions, and the transfer of the funds appropriated by the burgh to the support of the old grammar school. To these sources of income has been added a munificent bequest of property, now amounting to £26,794, by Captain William Macintosh, of Farr, in 1803, for the education of boys of that name, of the families of Farr, Holm, Dalnigavie, and Kellachy, or the nearest of kin; of whom there are nearly forty in the establishment. The academy is under the direction of the provost and magistrates of the burgh, the sheriff of the county, the moderator of the presbytery, and a committee of five persons chosen annually from the subscribers; and the instruction is given by a rector, who has a salary of £250 per annum, without any fees, and four classical and other masters, who, in addition to their fees, have salaries varying from £30 to £40 each. The course of studies consists of the classics, mathematics, the elements of chemistry, natural history, and philosophy, with all the branches of a commercial education. There are at present about 300 pupils. *Mr. John Raining*, of Norwich, in 1747, bequeathed £1000 to the General Assembly, for the foundation of a school, which has been established here, and placed under the direction of the Society for Propagating Christian Knowledge: it has two masters, who receive salaries of £48 and £40 per annum, respectively, with a house and garden each; and the number of pupils is 250. Two other schools in the parish, the masters of which have salaries of £17 and £15 each, are supported by the same society. A large school, likewise, has lately been erected by the magistrates, to whom the *Rev. Dr. Bell* bequeathed £10,000, in trust, for the foundation and support of schools on the Madras system.

The *Infirmiry*, to which a lunatic asylum is attached, was founded in 1804, chiefly through the exertions of the provost, William Inglis, Esq., and is supported by subscriptions and donations. It is under the general

direction of the magistrates of the burgh, the sheriff of the county, the moderator of the presbytery, the ministers of the parish, and a committee of subscribers annually chosen: the medical department being superintended by the faculty, who visit the institution gratuitously, by a resident house-surgeon and apothecary, a matron, nurses, and the requisite attendants. The buildings, which are pleasantly situated on the west bank of the river, beyond the town, form a handsome and spacious structure, including a distinct arrangement for the asylum, which is detached from the infirmary. The latter contains numerous airy and well-ventilated wards for the various classes of patients, with hot and cold baths. *The Dispensary*, situated on Muirtown Green, was established in 1832, for administering advice and medicines to the poor, and has afforded extensive relief; it is wholly supported by subscription. There are also several benefit societies in the town, which have tended to diminish the number of applications for parochial relief. *Mr. Jonathan Anderson*, of Glasgow, bequeathed to the magistrates property now amounting to £3845; and *Mr. Klien*, also, bequeathed £1000, the interest of which is distributed annually among decayed householders. *The United Charitable Institutions*, for which a neat building has been erected on an eminence to the south of the Castle Hill, include an infant school, a female school, a female work society, and an association for the distribution of blankets and clothing to the poor: it is proposed to add a tower to the building, fitted up for an observatory.

Above the village of Clachnaharry, westward of the town, are some rocky eminences called the *Watchman's Stones*, where anciently a guard was stationed to give notice of the approach of any hostile force, and on one of which a lofty column was erected by the late H. R. Duff, Esq., of Muirtown, to commemorate a sanguinary conflict that took place in 1333, between the clan Chattan and the Monroes of Fowlis. Near these eminences is the hill of *Craig Phadric*, on the summit of which, at an elevation of 435 feet above the level of the sea, is a vitrified fortress with a double vallum, exhibiting heaps of boulder stones strongly cemented by fire. It was connected with a chain of similar fortresses extending in various directions into the centre of the county, and upon which beacon-fires were anciently lighted, to convey signals to neighbouring parts. To the west of *Craig Phadric* is a high gravelly ridge called *Tor-a-Bhean*, supposed to contain the tomb of Donald Bane, a chieftain of the Hebrides, who in 1187, at the head of a body of islanders, encountered Duncan Macintosh, son of the governor of Inverness Castle, when a severe conflict ensued, in which both were killed. Near the base of this ridge, on the shore of the Caledonian canal, a massive silver chain of thirty-three double circular links was found in 1808, weighing 104 ounces, and thought to have been worn by that island-chief as an ensign of office: it is now in the museum of the Society of Antiquaries, Edinburgh. On the margin of Loch Dochfour are the remains of the church of *Bona*; and between Loch Dochfour and Loch Ness is a quadrilateral inclosure, rounded at the angles, supposed to have been a Roman camp, and on the highest point of which are the ruins of a fort commanding the fords across the river Ness. In the same vicinity are numerous sepulchral tumuli. The eastern portion of the parish con-

tains part of the memorable field on which the battle of Culloden was fought; and bordering on the parish of Croy are many cairns, and various circles that are supposed to be Druidical. Near the mouth of the river Ness is *Cairn Arc*, a large pile of stones, in the Moray Firth; and in Beaully Firth are several similar cairns, which are corroborative of the opinion, not unsupported by facts, that the sea has made considerable encroachments on this part of the coast. The late Duke of Sussex bore the inferior title of Earl of Inverness; and the place at present gives the title of Duchess to the widow of his royal highness.

INVERNESS-SHIRE, an extensive county, in the north of Scotland, bounded on the north by Ross-shire and the Moray Firth; on the east, by the counties of Nairn, Elgin, Banff, and Aberdeen; on the south, by Perthshire and the county of Argyll; and on the west, by the Atlantic Ocean. It lies between $56^{\circ} 54'$ and $57^{\circ} 50'$ (N. Lat.), and $4^{\circ} 20' 10''$ and $6^{\circ} 35'$ (W. Lon.), and is about ninety miles in length, and nearly eighty in extreme breadth; comprising an area of 7200 square miles, or 4,608,000 acres, exclusive of the several islands attached to it; and containing, according to the last census, 19,779 houses, of which 19,194 are inhabited; and a population of 97,799, of whom 45,538 are males and 52,261 females. This county, which takes its name from its chief town, originally formed the western portion of the ancient province of Moray, and, prior to the union of the Scottish and Pictish kingdoms under Kenneth II., was inhabited by the Picts, who are said to have had frequent battles with the Danes, by whom their territories were invaded. The town of Inverness is thought to have been the residence of the Pictish kings, and is so identified with the historical events of the county as to render any notice of them here superfluous. Prior to the abolition of episcopacy, the county was part of the diocese of Moray; it is now included in the synods of Moray, Ross, and Glenelg, containing several presbyteries, and about forty-five parishes. For civil purposes, it is under the superintendence of four sheriffs-substitute, appointed by the sheriff, and who hold their courts respectively at Inverness, Fort-William, Skye, and Long Island. The county contains the villages of Fort-George, Fort-Augustus, Portree, Grantown, Campbellton, Kingussie, Beaully, and several others. Under the act of the 2nd and 3rd of William IV., it returns one member to the imperial parliament: the constituency numbers 850.

The SURFACE is strikingly diversified by wild and lofty mountains interspersed with deep and narrow glens, and by numerous ridges of hills inclosing valleys of various width and aspect. The mainland is divided into two nearly equal parts by the vale of Glenmore, which intersects it throughout in a direction from north-east to south-west, reaching from the Moray Firth to Loch Eil, and containing a succession of lakes, by the connecting of which the great Caledonian canal has been formed. On both sides of this valley are a number of straths, separated by mountainous ridges, and all watered by streams descending from the heights. The country on the west of Glenmore, between it and the Atlantic, is the more extensive and mountainous, constituting the Highland district; that on the east is the Lowland district, and, though in many parts of wild appearance, is in a better state of cultivation. The coast

is indented with a variety of inlets from the sea, forming salt-water lochs, several of which, on the south-west, separate it from the county of Argyll; and in addition to the districts of Badenoch, Lochaber, Glenelg, Glogarray, Arisaig, Moydart, and Strathglass, into which the main land is naturally divided, the county contains the Isle of Skye, part of Lewis, North and South Uist, Benbecula, Barra, Eigg, Eriskay, Bernera, and others of the Hebrides. Among the mountains are, Ben-Nevis, which has an elevation of 4370 feet above the level of the sea; Mealfourvie, which rises to the height of 3600 feet; and Scarsough, 3412 feet.

The chief rivers are the Ness and the Spey. The river *Ness* issues from Loch Ness, in the valley of Glenmore, and taking a north-eastern course for a few miles, falls into the Moray Firth, forming the harbour of Inverness, to which town it gives its name. The river *Spey* has its source in Loch Spey, in the district of Badenoch; and flowing eastward with great rapidity, and receiving numerous tributary streams in its long and winding course through the strath to which it gives name, it passes the village of Rothies, and diverting its course towards the north, falls into the Moray Firth at Garmouth. Of the smaller rivers, the Beaully, the Foyers, and the Garry only are deserving of any particular description. The *Beaully* has its source in the confluence of the rivulets Farrar, Carrick, and Glass, which give their names to the straths they flow through: after a course of about eight miles between rocky and precipitous banks, in which it makes some beautiful falls (the chief one being at Kilmnack), it runs into Beaully Firth. The *Foyers* rises in the mountainous district of Badenoch, and after a course of ten miles through a tract of country abounding in romantic scenery, joins Loch Ness. In its progress it makes some highly-picturesque cascades. At one part, its waters form three successive descents together from a height of above 200 feet into a pool beneath, beyond which the stream, flowing along a narrow rocky channel, falls from an elevation of more than 212 feet in one unbroken sheet, which, after heavy rains, has an impressive grandeur of effect. The river *Garry* has its source in a small lake of that name, nearly in the centre of the county, and passing through the strath of Glogarray, runs into Loch Oich. The principal rivers, and also their tributaries, abound with salmon. In this county the lakes form a very important feature: the chief of them are, Loch Ness, Loch Oich, and Loch Lochy, which are situated in the valley of Glenmore, and connected with each other by the Caledonian canal; Lochs Laggan, Treag, and Erich, in the south; Lochs Affarie, Benevier, Clunie, and some others, in the north; and Lochs Morir, Quoich, Arkaig, and Shiel, in the western part of the county. The salt-water lochs, or inlets from the sea, in the mainland, are Lochs Moidart, Nevis, Hourn, and Beaully.

Of the lands not more than the one-twelfth part is under cultivation, the remainder being either covered with heath, or in mountain pasture. The soil on the level grounds near the sea is chiefly clay alternated with loam, and in some parts a fine rich black mould. In some of the straths, also, between the mountain ridges, the soil is extremely fertile, except in those parts where, from the rapidity of the mountain streams, beds of gravel accumulate. The arable lands are in a good state of cultivation, producing excellent crops of wheat, barley,

oats, &c. : great quantities of potatoes are raised. The system of agriculture has been very much improved, and considerable tracts of waste land have been drained and brought into cultivation : the farm houses and offices, also, are generally substantial and well arranged ; but the cottages of the labourers are very indifferent. Many of the farms are of course in pasture, and the breed of cattle and sheep has of late been an object of considerable attention : the cattle, which may be averaged at 50,000, are principally of the Skye or the Kyloe breed ; the sheep, of which from 120,000 to 130,000 are pastured on the different farms, are of the Linton and Cheviot breeds. The horses, previously to the increase of the sheep-pastures, were of the Old Highland breed ; but the number has been greatly reduced, and those which are now reared, chiefly for purposes of husbandry, are of various kinds, according to the choice of the different proprietors, who breed them only for their own use. Considerable numbers of swine have been lately reared in several parts, the Highlanders having in a great measure overcome their wonted prejudices against that kind of food ; and the stock has been improved by the introduction of the Chinese breed.

The whole county appears to have been at a remote period covered with woods ; and in most of the mosses, some of which are very extensive, there are found trunks of trees. In Glenmore and Strathspey are not less than 15,000 acres of natural fir, exclusive of 70,000 acres of modern plantations of firs and larch ; and in other parts of the county are most extensive and flourishing plantations of fir, larch, beech, plane, and oak, of which last there are some carefully-preserved woods at Lochiel and Fasfern. The substrata are principally limestone, freestone, and granite : the limestone abounds in many places, yet, from the scarcity of fuel, little of it is burnt into lime, which for agricultural purposes is chiefly imported. Slate of durable texture is quarried, and great quantities of it are shipped off : a quarry of grey slate was opened at Aultmore, but of too porous a texture for roofing. Marble of every variety of colour, and of excellent quality, is found in Ben-Nevis and in most of the islands ; and common granite, of which the hills principally consist, is extensively quarried. A dark-coloured granite occurs in many places, in large blocks with scarcely any fissures, and is much esteemed for ornamental buildings ; and a variegated kind of granite, with black, white, and red spots, which sparkle in the sun, is found in Badenoch. Freestone of a reddish colour, of compact texture, and susceptible of a high degree of polish, is met with on the lands of Lovatt ; but no sandstone occurs in the county. There are some indications of coal ; but the only mineral worked is lead-ore, of which there are mines in Ben-Nevis, at Inver-skaddel, near Loch Arkaig, Glengarry, and other places. Black-lead, of good quality for pencils, is also found, but is not wrought : there is clay for bricks and tiles along the coast. In this county the gentlemen's seats are, Castle-Grant, Dunvegan, Castle Mc Leod, Erchless Castle, Fasfern, Lochiel, Beaufort, Belladrum, Rothiemurchus, Kinarara, Farraline, Belville, Glengarry, Dalchully, and others.

The principal manufactures are those of hemp, thread of various colours, kelp, bricks, and tiles ; and some branches of the woollen manufacture, chiefly for domestic use, and confined to private families. There are

several bleaching and print fields, tanneries, breweries, and distilleries ; and at Inverness, and other places on the coast, a considerable trade is carried on in the exportation of cattle, sheep, wool, timber, and slates, and in the importation of coal, lime, flour, oatmeal, groceries, and other articles for home consumption. There are valuable salmon-fisheries on the rivers ; the herring-fisheries, also, employ a number of the inhabitants on the western coast of the county. Facility of communication is afforded by several good roads that have been formed throughout the interior ; and the great Caledonian canal, which intersects the county from north-east to south-west, passing through the valley of Glenmore for more than sixty miles, and connecting the German Ocean with the Atlantic, offers means of inland navigation for ships of considerable burthen, and facility for the conveyance of produce of all kinds. The annual value of real property in the county is £182,064, of which £161,499 are returned for lands, £17,894 for houses, £2596 for fisheries, and £75 for quarries.

Among the various remains of ANTIQUITY are the ruins of ancient fortresses consisting of stones of enormous size, placed together without cement of any kind. They are generally of circular or elliptical form, containing, between two concentric walls, a considerable interval supposed to have been used for keeping military and other stores : the area within the inner wall, which alone was pierced with windows, is thought to have been occupied by the garrison. Of these fortresses the three most perfect are at Glcnelg, Castle-Spynie, in the district of Aird, and Dun-da-law, in Badenoch. On the summit of Craig-Phadric are the remains of a vitrified fort of elliptical form, of which the longer diameter is 220 feet, and the shorter little more than half that length ; and near Fort-William are the remains of a similar fortress, called Dughairdghall. Upon the east bank of the river Lochy are the remains of Inverlochry Castle, a square structure with circular towers at the angles, surrounded by a ditch inclosing an area of 7000 square yards. On the summit of a precipitous rock that divides the channel of the Lochy, are the ruins of Tor Castle ; and on a projecting rock on the west side of Loch Ness, are the remains of Urquhart Castle, which was taken in 1303 by Edward I. of England, who, exasperated at the obstinate and protracted defence, put the governor and the whole of the garrison to the sword. The roads of Glenroy, consisting of three parallel lines on one side of the river, opposite to three similar lines on the other, are most probably natural, though some suppose them to have been made for the purpose of hunting. There are several Druidical remains ; and in the Firth of Beaully are some ancient cairns, two of which, larger than the rest, rise above the surface of the water, and have been found to contain beams of timber, and human bones.

INVERNOCHTIE, in the county of ABERDEEN.— See STRATHDON.

INVERTIEL, or WESTBRIDGE, for a time a quoad sacra parish, partly in the parish of ABBOTSHALL, and partly in that of KINGHORN, district of KIRKCALDY, county of FIFE, 1 mile (S. W. by S.) from Kirkealdy ; containing 1465 inhabitants. This district was estimated to comprise 1000 acres, of which about 700 are in tillage, 200 in pasture, and the remainder under plantation. The substratum consists chiefly of brown sand-

stone of the coal formation; and coal was for some time wrought, but no mines are at present in operation. About 700 persons are employed in hand-loom weaving; and there is a flax-spinning mill, in which 100 hands are engaged. The Firth of Forth lies on the south of the parish, and the public road between Edinburgh and Dundee runs close by the village. Inveriel was within the presbytery of Kirkealdy and synod of Fife, and the patronage was vested in the heads of families being communicants: the stipend of the minister was £80, arising from seat-rents and collections. The church, a plain structure, was erected in 1836-7, by subscription, aided by a grant of £272 from the Church-Extension fund: its erection removed, in a great measure, the inconvenience felt in the parish of Kinghorn from want of accommodation and pastoral attendance. The members of the Free Church have now possession of it, and the village is included within the limits of the Free Church presbytery of Kirkealdy and synod of Fife. The number of sittings in the building is 726. Sir Michael Scott, a celebrated statesman and philosopher of the thirteenth century, one of the most learned men of his age, and called by the people of his times "the Wizard", was born, and resided, at Balwearie, in this district: he was knighted by Alexander II., and died in 1296.

Burgh Seal.

INVERURY, a royal burgh, and a parish, in the district of GARIOCH, county of ABERDEEN, 16 miles (N. W.) from Aberdeen, and 137 (N. N. E.) from Edinburgh; containing 2020 inhabitants, of whom 1619 are in the burgh. This place, which derives its name from its situation at the confluence of the river Ury with the Don, is of remote antiquity, and, as part

of the lordship of Garioch, was granted by William the Lion to his brother David, Earl of Huntingdon, youngest son of David I.; from whom King John Baliol, King Robert Bruce, and the present royal family are descended. Of the baronial castle of the earl, which occupied a site near the Bass, and appears to have been the first stronghold erected in the county, there are no remains existing; but a charter of the date of 1178 is still extant, by which the earl granted the church of Inverury, with several others, to the abbey of Lindores. During the wars with England in the reign of Edward I., Robert Bruce, who had removed to this place from Sliach, in Strathbogie, in a state of ill health, was attacked by the English army under Cumyn, over whom he obtained a signal victory, in acknowledgment of which he erected the town of Inverury into a royal burgh. In 1745, a battle occurred here between the forces of the Pretender and the Macleods, the latter of whom Lord Loudon had sent from the north, with a body of men, to relieve the city of Aberdeen, at that time in the possession of the rebels, who had imposed upon the inhabitants a tribute of £1000. The Macleods, on their arrival at this place, were attacked by Lord Lewis Gordon, who, with a force of 1200 men, crossing the river Ury, surprised and defeated them: there was, however, a sharp encounter, in which many were killed and taken prisoners on both sides.

The town consists of irregularly built and detached houses, scattered along the turnpike-road from Huntly to Aberdeen. From the difficulty of access previously to the existence of the bridge over the Don, which was built at a cost of £2000 in 1791, the place was not much more than an obscure village, and had neither any manufacture nor trade. Upon that event, however, it became of some little importance. The construction of the Aberdeen and Inverury canal, which was completed in 1807, at a cost of £44,000, gave an additional impulse to its trade; and the subsequent erection of three bridges at different points on the river Ury has supplied all that was wanting to its prosperity in respect to means of communication. Considerable improvements have since taken place in the town, which is now lighted with gas. The manufacture of linen is pursued to some extent, affording employment to more than sixty of the inhabitants. Various handicraft trades, also, are carried on for the accommodation of the adjacent district; and there are several shops in the town well supplied with goods. The increase of trade since the completion of the canal has been very great; and large quantities of grain, lime, coal, salt, and other produce, are now sent to, or received from, Port-Elphinstone, where the canal terminates, near the bridge over the Don, on the opposite bank of the river, in the parish of Kintore. The post-office has two deliveries daily. Branches of the Aberdeen, the Town and County, and the North of Scotland Banks have been established; and facility of communication is afforded by good roads, and by the canal, on which an iron boat for passengers and light goods plies daily to Aberdeen. Fairs for cattle, sheep, horses, and grain are held monthly, those at Whitsuntide and Martinmas being likewise for hiring servants; also every alternate Tuesday from the first Tuesday in November till March. After the loss of its original charter, the town was created a ROYAL BURGH by charter of *novodamus* by Mary, Queen of Scots, in 1558: the government is vested in a provost, three bailies, a dean of guild, a treasurer, and four councillors, chosen under the regulations of the Municipal Reform act. There are no incorporated trades; but the guild burgesses have an exclusive privilege of trading, and are exempt from the payment of custom dues. The magistrates possess jurisdiction over the whole of the royalty, and hold courts for civil actions to an unlimited amount, and for the trial of petty delinquencies. Inverury is associated with Banff, Cullen, Elgin, Kintore, and Peterhead, in returning a member to the imperial parliament; the number of qualified voters is 115.

The PARISH, which is bounded on the south by the river Don, and on the north and east by the Ury, is about four miles in extreme length and two miles in breadth, comprising an area of 5100 acres, of which 3000 are arable, 1000 woodland and plantations, and the remainder moorland pasture and waste. Its surface, though level near the banks of the rivers, rises gradually towards the west, terminating in the three nearly equidistant hills of Manar to the south, Knoekinglew in the centre, and Drimmies to the north, between which are some fine tracts of fertile vale. On the lower grounds the soil is a rich light mould, superincumbent upon sand, but on the higher grounds of less fertility; the chief crops raised are oats, barley, potatoes, and turnips, with the usual grasses. The system of husbandry is improved, and a rotation of crops is duly observed; lime and bone-

dust, for which the canal affords facility of conveyance, are applied to the soil, and some of the unprofitable land has been brought into cultivation. The Aberdeenshire breed of cattle is that most prevalent, but on some farms a few of the short-horned are reared; a cross between the short-horned and Aberdeenshire breeds is also in high favour, and is rapidly increasing. No regular flock of sheep is pastured; some sheep of English breeds are kept by different farmers for domestic use, and chiefly for their wool. The annual value of real property in the parish is £6395. The plantations are well attended to, and are generally in a thriving state: there are considerable remains of ancient wood. The rocks are chiefly of granite. Manar House is a substantial modern mansion, beautifully situated on the southern acclivity of Manar hill, commanding a fine view of the river Don, and surrounded with plantations.

For ECCLESIASTICAL purposes the parish is within the limits of the presbytery of Garioch, synod of Aberdeen. The minister's stipend is £257. 11., with a manse, and a glebe valued at £15 per annum; patron, the Earl of Kintore. Inverury old church, built in 1775, contained only 400 sittings, a number very inadequate to the increased population; and consequently, a new church, containing 1330 sittings, has been erected on its site by the heritors and the burgh magistrates. The present structure is of beautiful granite, in the later English style of architecture. The burial-ground is situated near the river, where the church stood previous to 1775. There are places of worship for members of the Free Church, Independents, and Wesleyans; and an episcopal chapel. A Roman Catholic seminary, formerly at Aquhorties, in this parish, has been removed to Blairs, in the parish of Maryculter, county of Kincardine; and the building, beautifully situated, is at present a farm-house. Inverury parochial school is attended by about ninety children; the master has a salary of £30, with a house and garden, and the fees average £35 annually. The chief monuments of antiquity are two tumuli, one of which, called the Bass, and situated at the southern extremity of the town, is in the form of a truncated cone, and is supposed to have been a seat for the administration of justice; the other, called the Conyng hillock, is traditionally said to have been raised over the remains of one of the Pictish kings. There is also a very complete Druidical temple in a field about two miles west of the burgh. Inverury gives the title of Baron to the Earl of Kintore.

IONA, or ICOLMKILL, an island of the Hebrides, and a quoad sacra parish, in the parish of KILFINICHEN, district of MULL, county of ARGYLL; the quoad sacra parish containing 1084 inhabitants, of whom 460 are on the island, and the remainder in that part of the quoad sacra parish which is in the Isle of Mull. Iona, which is situated to the south-west of the Isle of Mull, in the Atlantic Ocean, is of remote antiquity; and, at a very early period, was the principal seat of the Druidical worship, from which circumstance it obtained the appellation of Inish-Druinish, or the "Island of Druids". It was subsequently occupied by the ancient Culdees, for whom, it is recorded, Fergus II. erected a monastery and a stately church, which became the burying-place of many of his successors, kings of Scotland. Its name Iona, signifying, in the Gaelic language, the "Island of Waves", appears to have been derived from the violent agitations of the narrow sound that separates it from Mull; that

of Icolmkill, by which it is not uncommonly known, arose from the foundation of a religious establishment by St. Columba, about the middle of the sixth century. St. Columba, emigrating from Ireland, for the conversion of the natives of the Hebrides to the Christian faith, landed here with twelve of his companions in the year 563, and having converted many of the northern Picts to Christianity, received from their king a grant of the island, on which he founded a MONASTERY for canons regular of the order of St. Augustine. This monastery, which was amply endowed, flourished under the superintendence of its founder, and acquired such reputation for sanctity and learning as to obtain for the isle the appellation of the Holy Island, and to render it the resort of pious and learned men from Ireland, Norway, and all parts of Scotland, for which it was the principal school of theology and philosophy.

St. Columba presided over the monastery he had founded till his death in the year 597, at which time his zeal for the propagation of Christianity had prompted him to found, in various parts of Britain, 100 monasteries and 365 churches, and to ordain not less than 3000 priests. The island hence became the grand centre from which the truths of the Christian religion, and the benefits of sound learning, were diffused to every portion of the kingdom; and after the death of St. Columba, the monastery continued to flourish under his successors, and was held in such veneration, that the island was regarded as consecrated ground, and became the burying-place of many of the kings of Ireland and Norway. From this monastery, which was independent of the papal jurisdiction, and in which, under St. Columba and his successors, the principles and discipline of the Culdees were retained, Oswald, King of Northumbria, in 632 obtained a bishop to teach his subjects the principles of Christianity; and in 765 Neil Frasach, King of Ireland, abdicated the sovereignty, and retired to this island, where he died. In 777 Asglal, son of the King of Connaught, became a monk of Iona, which was still, and continued for many years, the principal university of Britain. To this celebrated institution the young princes of Scotland and other kingdoms were sent to receive their education. The monastery became subject to the predatory incursions of the northern pirates, by whom it was frequently plundered and laid waste; and in 797 it was burnt by the Danes, who, again, in 801 massacred nearly eighty of the monks, and compelled the abbot and the rest to seek safety by flight. At a subsequent period, the monastery of Iona is recorded to have been refounded for monks of the Cluniac order, under whose superintendence it subsisted till the Dissolution; its revenues were then appropriated to the see of Argyll, and, after the abolition of episcopacy, became the property of the dukes.

Of the ancient buildings connected with the monastery, the principal REMAINS are those of the abbey church, which was also the cathedral of the bishops of the Isles, and, with its tower, is almost entire. It is a cruciform structure of red granite, chiefly in the Norman style, 160 feet in length, seventy feet across the transepts, and twenty-four feet in mean breadth, with a tower rising from the centre to the height of seventy feet. The choir, which is sixty feet in length, is divided from the nave by massive circular pillars, supporting the tower, and the capitals of which are sculptured with grotesque figures,

displaying scriptural allusions and other devices. The nave and choir are separated from the aisles by ranges of pillars of similar form, and obtusely-pointed arches, sustaining the roof; and are lighted by a lower tier of large windows of various character and inelegant design, and by a range of clerestory windows, some of which are Norman, and others headed in trefoil. The high altar, of marble brought from the Isle of Skye, unfortunately acquired the reputation of possessing a charm against shipwreck, and has totally disappeared by fragments. Around the cathedral are divers ruins of walls, supposed to have been chapels, and parts of the monastic buildings: four of the arches of the cloister are still remaining, and portions of the bishop's palace, the hall, and the refectory. On the south side of the cathedral are the remains of St. Oran's chapel, a rude edifice sixty feet in length, and twenty-two feet broad, in a roofless state, but otherwise in good preservation: the sculpture of the doorway, which is a Norman arch with chevron mouldings, is especially worthy of attention. In the chapel are various tombs of different periods, among which is that of St. Oran, the disciple of St. Columba, a handsome monument, apparently of much more recent date than the chapel. On the north of this chapel are the ruins of the Nunnery, or rather the chapel of the Nunnery, a structure in the Norman style, nearly of the same dimensions as the chapel of St. Oran; part of the vaulted roof is still remaining, and there are some very slender traces of the conventual buildings. The tombstone of the Princess Anna, lady abbess, is yet to be seen; it bears the date 1543, and presents a figure of the abbess, in the attitude of prayer to the Virgin Mary, who has an infant in her arms, and a mitre on her head.

To the south of St. Oran's chapel is the inclosure called "Relig-Owran", or "the burying-place of Oran", in which are a vast number of tombs, overgrown with grass and weeds, and mostly so defaced as to render the inscriptions on them altogether illegible. In this cemetery it is said that one of the kings of France, four kings of Ireland, eight kings of Norway, and forty-eight kings of Scotland, are interred, the last commencing with Fergus II. and ending with Macbeth, whose successor, Malcolm Canmore, removed the place of royal sepulture to Dunfermline. The precincts of the cemetery, which contained also the tombs of the lords of the Isles, and of the most distinguished families, had the privilege of sanctuary; and in various parts of the island were not less than 360 crosses of stone, of which four only are now left. At the time of the Reformation, the synod of Argyll ordered sixty of these crosses to be thrown into the sea; and the remainder appear to have been either wantonly destroyed, or suffered to fall from neglect. Of those that remain, two are in a perfect state, one of which is sculptured with figures of Adam and Eve, standing by the forbidden tree; a third has only ten feet of the shaft, and of the fourth the foot only is left, embedded in a mound of earth. In order to preserve all these venerable remains from further injury, they have been inclosed with walls by the Duke of Argyll, and placed under the vigilant superintendence of a keeper. During Her Majesty's visit to Scotland in 1847, the royal squadron anchored in the Sound of Iona, and His Royal Highness Prince Albert proceeded to view the ruins.

The ISLAND is about three miles in extreme length, and a mile and a half in average breadth, comprising an

area of 2000 acres, of which not more than 600 are arable, and the remainder hill pasture, rock, or morass. Its surface rises into eminences, the highest of which, Dun-ii, has an elevation of 400 feet above the level of the sea. The coast on the eastern side is low and sandy, and is indented with a bay, called the Bay of Martyrs, in which were landed the bodies of such as were intended for interment in the cemetery. This bay, which affords good anchorage in five fathoms, within two cables' length of the shore, is frequented by steamers conveying passengers to visit the island; and near it is the village, containing about 170 persons. On the western shore of the isle is Port-na-Currach, or the "bay of the boat", where St. Columba is said to have landed, in commemoration of which event a heap of earth, about fifty feet in length, was thrown up in the form of a boat, with the keel upwards. Numerous small springs of excellent water intersect the island; and near the abbey gardens are vestiges of an artificial lake of several acres, surrounded by hills; also the ruins of a mill. The soil of the arable land is light and sandy, but fertile, producing favourable crops; several of the hills are arable to their summit, and in good cultivation, and most of the others afford excellent pasture. Marble of good quality was formerly wrought, and considerable quantities of it were sent to Leith and London; but the quarries have been discontinued for some time. Pebbles of green serpentine, also, are found along the shore; they are susceptible of a high polish, and are formed into various elegant trinkets. The quoad sacra parish of Iona, erected by authority of act of parliament, comprises, besides the island, a district of Mull containing a population of 620 persons: it is in the presbytery of Mull and synod of Argyll. The minister's stipend is £120, paid by government; with a manse, and a glebe valued at £1. 10. per annum: patron, the Crown. Iona church, erected in 1828, at a cost of £700, is a neat structure containing 266 sittings. The members of the Free Church have a place of worship. A school, for which an appropriate building was erected by the ducal family of Argyll, is supported by government; and in the Mull district of the quoad sacra parish is a school maintained by the Society for Propagating Christian Knowledge.

IRONGRAY, in the county of KIRKCUDBRIGHT.— See KIRKPATRICK-IRONGRAY.

Obverse.

Reverse.

SEAL OF IRVINE.

IRVINE, a royal burgh, and a parish, in the district of CUNNINGHAME, county of AYR, 26 miles (W. S. W.) from Glasgow, and 68½ (W. by S.) from Edinburgh; the parish containing 5214 inhabitants, of whom 4594 are

resident within the burgh; exclusively of 3053 in the parish of Dundonald, into which the town extends, the total population of the town being 7647. This place derives its name from the river on which it is situated, and appears to have attained a high degree of importance at a very early period. The inhabitants obtained from Alexander II. a charter conferring upon the town the privileges of a royal burgh; and a charter confirming all previous grants was subsequently given to them by Robert Bruce, in recompense of their services during his wars with England in the reign of Edward I. These two charters were renewed and enlarged by successive sovereigns till the reign of James VI.; and the various immunities possessed by the inhabitants were ratified by parliament in 1641. The town is finely situated on the north-east bank of the river Irvine, near its junction with the Garnock, and comprises one spacious street, extending throughout its whole length, from which several smaller but well-formed streets diverge at right angles. The streets are well paved, and lighted with gas, and the inhabitants are amply supplied with water, all at the expense of the corporation. A public library was established in 1796, and is supported by subscription; there is also a reading and news room, well supplied with the daily journals and the most esteemed periodical publications. A handsome bridge, erected in 1746, and greatly improved in 1827, connects the town with the spacious suburb of Fullarton, on the opposite bank of the river; and in the immediate vicinity are some fine downs, on which the game of golf takes place, and the Eglinton races are held. The environs are interspersed with numerous pleasant villas; and the scenery, in itself picturesque, is heightened by the proximity of the grounds of Eglinton Park.

The chief manufacture carried on is the weaving of book-muslin, jaconets, and checks, in which more than 500 looms are engaged; and great numbers of females are employed in tambouring muslin. The manufacture of anchors and cables is also considerable: there are extensive rope-walks, a yard for ship-building, and some works for magnesia and other chemical processes. This port, previously to the erection of Port-Glasgow, was the shipping-place of the Glasgow merchants: the trade now consists principally in the export of coal, of which nearly 300,000 tons are annually shipped, chiefly for Ireland and various parts of the British coast, but occasionally for France, Malta, Gibraltar, and other foreign parts. The chief imports are, timber, and sometimes grain, from America; grain and butter, in large quantities, from Ireland; and iron, slates, and limestone, from various places. In 1843, the number of vessels belonging to the port was 122, of 15,380 tons' aggregate burthen; and the amount of duties paid at the custom-house, £2040. Irvine harbour, which was greatly improved in 1826, and has since been under the superintendence of commissioners, has thirteen feet and a half depth of water on the bar at spring-tides, and is accessible to vessels of from 200 to 250 tons. The jurisdiction of the port extends over that portion of the coast included between Troon and Largs. The post-office has a good delivery. Branches of the Union Bank of Scotland, the Ayrshire Bank, and the British Linen Company, have been established; and great facility of communication is afforded by the Glasgow and Ayr railway, which has a station in the town, and is here joined by a branch

from Busby, near Kilmarnock. The market, which is abundantly supplied with grain and provisions of all kinds, is on Monday. Fairs are held on the first Wednesday in January, for horses; the first Tuesday in May, for cattle; and the third Monday and Wednesday in August, for horses, and for lint and wool. A market-cross, a very elegant structure in the centre of the town, was removed in 1694, and the materials employed in the erection of the present meal-market.

The government of the burgh is vested in a provost, two bailies, a dean of guild, and a treasurer, with twelve councillors, chosen under the regulations of the Municipal Reform act. There are six incorporated trades, namely, the shoemakers, coopers, tailors, weavers, hammermen, and squaremen. The fee of admission as a guild burghess is £5; and as a common burghess £2. 10. for a stranger, and half that sum for a son or son-in-law of a burghess. The magistrates, whose jurisdiction extends over the royalty, hold burgh courts both in civil and criminal matters; and the sheriff of the county holds a court here once in every two months, for causes not exceeding £8. 6. 8. A justice-of-peace court is also regularly held. The town-hall, situated in the centre of the principal street, was built in 1745, and is a neat plain structure, containing a court-room and a council-chamber, the public library, and three apartments for criminals. The debtors' prison has been discontinued since 1840, under the new Prison act, and has been transferred to the county gaol of Ayr, whither, also, all criminal prisoners are sent whose cases require more than temporary confinement. This burgh is associated with Ayr, Campbelltown, Iuverary, and Oban, in returning a member to the imperial parliament: the number of qualified voters, including the suburb of Fullarton, which is within the parliamentary boundaries, is 235. The celebrated Robert Barclay was provost of the burgh.

The parish, situated in the north-western portion of the county, is bounded on the east and south-east by the river Annick; on the west, by the Irvine; and on the north-west, by the river Garnock. It is about four miles in length and nearly two in extreme breadth, comprising an area of almost 4000 acres, of which 3000 are arable, and the remainder woodland, plantations, and waste. Along the shore, and on the banks of the rivers, the surface is flat and sandy: the soil near the town is a light rich loam, and in the higher parts a strong clay. The crops are wheat, oats, barley, potatoes, and turnips: the system of husbandry is improved; the lands are well drained and inclosed, and the farm-buildings generally substantial and commodious. Dairy-farming is well managed, and the produce is in high reputation. The annual value of real property in the parish is £10,156. The plantations distributed over various parts are mostly in a thriving state: there are some considerable remains of ancient timber. The chief substrata are, coal, of which there are numerous seams; freestone; and whinstone, of good quality for building, and of which an extensive quarry, near the town, is in full operation. This whinstone is in great demand for oven soles, for which it is admirably adapted, and which are frequently sent as far south as London. The only seat of importance is Bourtree Hill, pleasantly situated on the banks of the Annick, about a mile and a half eastward of the town.

For ecclesiastical purposes the parish is within the bounds of the presbytery of Irvine, of which this place is

the seat, and the synod of Glasgow and Ayr. The minister's stipend is about £280, with a manse, and a glebe valued at £25 per annum; patron, the Earl of Eglinton. Irvine church, erected in 1774, and repaired in 1830, is a spacious structure with a handsome tower and spire, and contains 1800 sittings. There are places of worship for members of the United Presbyterian Church, the Free Church, and Baptists. An academy, for which a building was erected in the town in 1816, capable of receiving 500 pupils, is under the patronage of the corporation, who appoint a rector, an English master, and a commercial master, who have salaries of £30 each, in addition to the fees, which, however, are moderate. Near Bourtrees Hill are some remains of an ancient structure called Stone Castle, belonging to the Earl of Eglinton; the principal portion is a square tower, of unknown antiquity. With this castle is said to have been connected a nunnery with a chapel and cemetery. Irvine is remarkable as the birthplace of Montgomery, the poet, and of the late Mr. Galt, the novelist; and as having been for some time the residence of Burns: whilst the last named was endeavouring to establish himself in business here as a flax-dresser, his shop was unfortunately burnt, and his prospects blighted. In Irvine also was born the Right Honourable David Boyle, the present distinguished head of the court of session.—See FULLARTON.

ISLAY, a large island, in the county of ARGYLL; comprising the parishes of Kilehoman, Kildalton, and Kilarrow; and containing 13,602 inhabitants. It is variously called, by some Ila, Ilay, and Isla, but more commonly Islay; and according to some accounts is twenty-eight miles in length and eighteen in breadth, while others make its length twenty-five miles and its breadth twenty-two. The island is separated from Jura by a narrow sound, over which is a ferry from Portaskaig to Feoline on the opposite shore. Islay was once a part of the kingdom of the lords of the Isles, who were crowned here by the bishops of Argyll, upon a large stone, which is still pointed out; and numerous ruins and memorials of antiquity, consisting of castles, forts, and chapels, are to be found in almost every direction, attesting the former importance of the isle. It continued under the lords until the reign of James III.; and when their power was abolished, their descendants, the Macdonalds, were the proprietors, holding directly of the Crown. The property afterwards passed, by the fortune of war, to the Macleans; but James VI., irritated at the disturbances raised by the private wars waged between these and other clans, rescinded the grant made by his predecessor, and transferred the lands of Islay, Jura, and Muckairn, to Sir John Campbell of Cawdor, ancestor of the Earls Cawdor, in consideration of an annual feu-duty, whereof the portion for this island was £500, paid to this day. It now belongs to another family of Campbell, a member of which was lately the representative of the county.

Islay is in general mountainous, especially towards the north, but there is much low, level, and cultivated land; the coast is indented by bays and points, and the shores are for the most part rugged. The inlets of Loch Indal and Loch Gruinard nearly insulate a considerable part of the district of Kilehoman; and besides several inland lakes, there are numerous streams and rivulets, in some of which are salmon and trout: the whole coast, also, abounds with fish. A lead-mine was at one time

very successfully wrought, to the north-west of Portaskaig; and a copper-mine, likewise, was long in operation; but as the ore was mixed with lead, and the separation was troublesome, both mines were at length abandoned. The facilities for the improvement of the land are very great, and more than one-half of the surface could be brought into regular tillage. The island boasts of the breed and number of its cattle and horses; but whisky, for which it is also celebrated, is the great staple commodity, producing annually to government a revenue of more than £30,000: two-thirds of the grain used in the distillation are raised on the isle. Bownmore is the principal village. It is situated on the banks of Loch Indal, at the extremity of the bay, and is a neat and improving modern village, consisting of regularly-formed streets; these intersect each other at right angles, and the houses are in general well-built. It has an excellent harbour, with a fine quay, and there is good anchorage for vessels drawing ten feet of water. The village is the seat of the presbytery of Islay and Jura. (See BOWMORE.) There are a few handsome seats: Islay House stands at the head of Loch Indal; it has in front an extensive level lawn, and is surrounded by plantations, the ground gently rising, and being extremely well-wooded behind. Ardnave, near Loch Gruinard, was either the birthplace or the paternal residence of the lady of the celebrated Prince Polignac, involved in the fate of Charles X. of France, and for years a state prisoner in the fortress of Ham. On the islet of Oversay, opposite to Portnahaven, is a fine lighthouse, of which the light, flashing every five seconds, is seen at the distance of seventeen nautical miles.—See KILCHOMAN, KILDALTON, and KILARROW.

ISLE OF WHITHORN, county of WIGTOWN.—See WHITHORN, ISLE OF.

ISSAY, an island, in that part of the parish of DUIRINISH which constituted the former quoad sacra parish of WATERNISH, county of INVERNESS; containing 90 inhabitants. This isle, also called *Eilean Isa*, or "Island of Jesus", is the largest of several isles lying between Loch Bay and Loch Dunvegan, two considerable north-western inlets of the Isle of Skye. It is about three miles in circumference; and the soil, being generally fertile, affords comfortable support to about fifteen families.

J

JAMESTOWN, or DAMHEAD, a village, in the parish of BONHILL, county of DUMBARTON; containing 314 inhabitants. This place, heretofore a small hamlet, has latterly increased in population and extent, owing to the numerous and flourishing calico-printing and bleaching establishments which have sprung up in the parish, and in which the population here are chiefly employed.

JAMESTOWN, a village, in the parish of CONTIN, county of ROSS and CROMARTY; containing 115 inhabitants.

JANETOWN, a village, in the parish of LOCHCARON, county of ROSS and CROMARTY, 1 mile (S.) from

Lochcarron ; containing 513 inhabitants. It is situated on the eastern shore of the Carron loch, an arm of the sea, into which the Carron water falls about two miles northward of the village. From a very small hamlet consisting of only three families, it has risen latterly into comparative importance, in consequence, principally, of the division of land into lots. The high road leading from Dingwall to the western coast passes through ; and there is a post-office, where the mails arrive three times a week. On the Carron is a good salmon-fishery.

Burgh Seal.

JEDBURGH, a burgh, market-town, and parish, in the district of JEDBURGH, county of ROXBURGH, of which it is the capital, 11 miles (S. W. by S.) from Kelso, and 49 (S. E. by S.) from the city of Edinburgh ; containing, with the villages of Bongate, Bonjedward, Lanton, and Ulston, 5116 inhabitants, of whom 2697 are in the town. This place derives

its name, originally *Jedworth* or *Jedwood*, from its situation on the river *Jed*, which rises on the north side of the *Carlin Tooth*, in the *Cheviot* range, and after flowing with considerable rapidity through nearly the whole length of the parish, and receiving in its course numerous tributary streams that descend from the higher lands into the vale of the *Jed*, falls into the river *Teviot* about two miles and a half to the north of *Jedburgh*. From the name of the river, in ancient records frequently called *Ged* or *Gad*, the place is thought to have been the principal seat of the *Gadeni*, who occupied the district lying between the county of *Northumberland* and the river *Teviot*. The ancient town, now called *Old Jedworth* in contradistinction to the present burgh, from which it is about four miles distant, appears to have originated in the foundation of a chapel by *Egred*, Bishop of *Lindisfarn*, who died in 845 ; and there are still some slight remains of the walls of the building, and of the tombstones in the cemetery, though scarcely above the level of the ground, and perfectly hidden by the grass by which they are overspread.

The present town owes its origin to the foundation of the magnificent abbey of *Jedburgh*. This establishment is, by some historians, said to have been founded in 1118, and by others in 1147 ; but from the great antiquity of some parts of the structure, and also from old documents in which *St. Kennock* is mentioned as abbot in the year 1000, it is supposed to have existed prior to the time of *David I.*, by whom it was probably rebuilt or enlarged. From the situation of *Jedburgh* as a border town, it was exposed to continual depredations, and was frequently plundered and reduced to ashes. It suffered materially during the invasion of *Scotland* by *Edward I.*, and subsequently by the incursions of hostile clans ; the abbey was burnt and pillaged by the *Earl of Surrey* in 1523, and by the *Earl of Hertford* in 1545. In 1566, *Mary, Queen of Scots*, attended by an armed retinue, held a court of justice at this place, for the suppression of the turbulence of the borderers ; and, being seized with a dangerous illness during her continuance here, resided in "the house of the Lord Compositor"

till her recovery, when she returned along the eastern borders to *Dunbar*. In 1575, a severe affray, called the "Raid of the Reed Swire", happened here : it was the last of those hostile feuds which so frequently took place between the borderers of *Scotland* and *England* ; and since its occurrence the only event deserving of historical notice, has been the temporary alarm created by the arrival of the *Pretender* and his *Highland troops* in 1745.

From its exposed situation, the town was strongly defended by castles, and numerous other fortifications ; and the forest in its immediate vicinity was the rendezvous of armies. *The Castle of Jedburgh* was of great antiquity, though the precise time of its erection, and the name of its original founder, are unknown ; it was a place of much strength, and the favourite seat of *Malcolm IV.*, who died here in 1165. This castle was the frequent residence, likewise, of many others of the kings, among whom were *William the Lion*, *Alexander II.*, and also *Alexander III.*, whose son, *Alexander*, was born here in 1263, and who, after the death of his children, celebrated in the castle with unusual pomp his marriage with *Jolande*, daughter of the *Count of Dreux*. During the wars between the two kingdoms, it was often an object of contest : after the battle of *Durham*, it was taken by the *English*, who kept possession of the castle till 1409, when it was retaken by the *Scots*, by whom it was afterwards demolished. *The Castle of Fernihirst*, situated on the eastern bank of the river *Jed*, about two miles from *Jedburgh*, is supposed to have been founded by the ancestors of the *Marquess of Lothian*. It was taken in 1523, by the *Earl of Surrey*, and remained in the hands of the *English* till 1547, when, after an obstinate siege, it was retaken by the *Scots*, assisted by a party of *French* at that time stationed at *Jedburgh*. In 1569, the *Earl of Westmorland*, who had entered into a rebellion against *Elizabeth*, in favour of *Mary*, after the dispersion of his troops took refuge in the castle, where he remained in concealment till he finally effected his escape into the *Netherlands*. In the year following, the castle, in consequence of its owner having joined with others of the border chiefs, in an irruption into the *English pale*, was taken and demolished by the *Earl of Sussex* and *Sir John Foster* ; but it was rebuilt in 1598, and part of it still remains entire. After the destruction of *Jedburgh Castle*, the town was defended by six towers, none of which, however, are remaining ; and numerous other fortifications were scattered through the parish, of which the tower at *Lanton*, and the ruins of another at *Timpendean*, are still left.

The town is pleasingly situated in the picturesque and fertile valley of the river *Jed*, over which, within the parish, are nine bridges. Of these, one at the foot of the *Canongate*, handsomely built of stone, and having three ribbed circular arches, is of great antiquity, supposed to be coeval with the abbey, and had formerly a gateway over the centre, long since removed. The bridge near *Bongate* is of modern erection ; near it is a large stone, sculptured with representations of various animals, and inscribed with nearly obliterated characters, and which is supposed to have been the pedestal of the ancient cross of *Bongate*. The house in which *Queen Mary* resided during her illness is still entire ; it is a spacious building with walls of great thickness, and some of the ancient tapestry is yet preserved : the house is at

present the property of the Lindsay family, by whom it was purchased from the Scotts of Ancrum. The streets are spacious and regularly formed, the houses in general well built; and in the immediate neighbourhood of the town are many handsome villas. There are three public libraries, one of which, called the Company's Library, contains a very extensive collection; also a circulating library and a reading-room, and two public reading-rooms. The principal TRADE is the manufacture of blankets, flannels, tartans, shawls, plaidings, hosiery, woollen-yarn, and carpets, affording constant employment to nearly 400 persons. There are also foundries for brass and iron, and a manufactory for printing-presses, in which latter about twenty persons are engaged. Jedburgh has two branch banks, one a branch of the Linen Company, and the other of the National Bank; likewise a savings' bank for the district of Jedburgh, including the parishes of Jedburgh, Ancrum, Bedrule, Southdean, Hobkirk, Minto, Oxnam, and Crailing, established by Mr. Rutherford of Edgerston, in 1815, and the expenses of which are defrayed from a fund raised by subscription. The market is held weekly on Tuesday, for grain, which is sold by sample to a very considerable amount, and for other business. There is a market for cattle and sheep on the second Thursday of each month, from December until May, both inclusive. A market for the hiring of hinds is holden on the first Tuesday of March, and one for hiring servants on the Tuesday on or before the 16th of May. Whitsuntide fair, for cattle and horses, is held on the first Tuesday after the 26th of May; Lady-day fair, for cattle and horses, and for hiring shearers, on the Tuesday on or before the 20th of August; Rood-day fair, for cattle and horses, on the 25th of September, excepting when the 25th falls on the Saturday, Sunday, or Monday, in which case it is held on the Tuesday; and Rite or Martinmas fair, for cattle and horses, and for hiring servants, on the Tuesday before the 22nd of November. There are also large fairs for sheep, at Rink, in the parish, seven miles from the town, on July 12th and October 15th, which are numerous attended by farmers, and dealers in wool, both of Scotland and England. In 1846 an act was passed authorizing the construction of a branch railway from Roxburgh to the town of Jedburgh, in connexion with the Kelso branch (sanctioned by parliament the same year) of the Edinburgh and Hawick railway.

The various charters by which the BURGH was originally incorporated were all destroyed during the wars with England, in the course of which the town was frequently burned; but they were renewed and confirmed by Queen Mary, in 1556, when the magistrates were invested with the power of apprehending, and passing sentence upon, criminals guilty of capital offences. By another charter, James VI., in 1569, granted to the corporation all the revenues of the abbey of Jedburgh arising within the parish, for the purpose of erecting hospitals for the support of the poor and infirm, and for other pious uses. This gift was ratified by parliament in 1597; and a further charter was bestowed by Charles II., in 1641. By these charters, the government of the burgh is vested in a provost, four bailies, a dean of guild, and a number of councillors: the incorporated trades consist of the smiths, weavers, shoemakers, masons, tailors, wrights, butchers, and glovers. The revenues above-

mentioned are not now held by the magistrates. Under the act for amending the representation, the burgh unites with Haddington, North Berwick, Lauder, and Dunbar, in returning one member to parliament. The original boundary has been changed by the inclusion of a considerable suburb on the south side of the river, and the exclusion of a few acres of uninhabited land: the number of houses of the value of £10 and upwards is 208, and of those above £5 and below £10, sixty-eight. In addition to their control within the burgh, the magistrates exercise jurisdiction over the great fair of St. James, near Kelso, where they preside at a court to take cognizance of offences during the fair. A bailie-court, and a court of the dean of guild, are held in Jedburgh; but since the small-debt sheriff's court, and that of the justices of peace, have been established, the burgh courts have greatly declined. The chief officer under the corporation is the town-clerk, who holds his office for life. The county-hall is a neat building of stone, containing the necessary apartments for transacting the public business of the county and the burgh. What is called the Castle, comprising the gaol and bridewell, is a handsome edifice, well arranged for classification, and containing day-rooms, airing-yards, and every requisite for the health, cleanliness, and comfort of the prisoners.

The PARISH, which is divided into two detached portions by the intervening parishes of Oxnam and Southdean, is bounded on the north by the parish of Ancrum, on the west by the parishes of Bedrule and Southdean, on the east by Oxnam, Crailing, and Eckford, and on the south by the county of Northumberland. The lower portion, in which the burgh is situated, is about seven miles in length and five in breadth, and the upper portion five miles in length and four in breadth, including together an area of about thirty-eight square miles. The eastern part of the lower portion is intersected by the river Oxnam, and the northern part bounded by the Teviot. The surface is pleasingly diversified with hills and valleys: the high grounds on the sides of the vale of Jedburgh are penetrated by deep ravines, and in some places gradually attain an elevation of 300 feet above the level of the river. In the upper part of the parish are several green hills of conical form, two of which, rising to the height of 1021 feet, are apparently lessened from their proximity to Carter Fell, one of the Cheviot hills, which has an elevation of more than 2000 feet. The Dunian, the highest hill in the parish, but the summit of which is in the parish of Bedrule, attains an elevation of 1120 feet above the level of the sea. Some remains of the ancient forest of Jedburgh, consisting of a few clusters of birch-trees, still exist near Fernihirst; and considerable plantations, which have now attained a luxuriant growth, add much to the beauty of the scenery. Two oaks, also, of the ancient forest are yet left, near the town: one, rising to the height of ninety-nine feet, measures fourteen feet in girth; and the other, which has less height, but branches out more widely, is twenty-one feet in girth at three feet from the ground. Forest-trees of every kind grow well in the lower lands; in the higher, Scotch fir and larch are the prevalent trees. From the old stocks in the forest, which was cut down in the last century, many new trees have arisen; and the whole district abounds in timber.

The SOIL is peculiarly favourable for the growth of fruit-trees; and pears in great variety, and of the finest

quality, are produced in abundance. The land, especially in the lower districts, is fertile, and of good quality, and the system of agriculture is much improved; considerable tracts of waste have been reclaimed within the last thirty years, and at present the number of acres under tillage is 14,281, in pasture 6930, and in wood 2488. The prevailing plan of husbandry is the five-shift, consisting of two white and three green crops. The fences and inclosures are kept in excellent order, and the farm-buildings are commodious and in good repair. Many improvements have been made in draining and planting, and in the breed of stock, under an association called the Farmers' Club; and the Roxburgh Horticultural Society hold monthly meetings in the town from the beginning of April to the end of September, for the distribution of prizes to the most successful growers of flowers, fruits, and vegetables. Limestone of excellent quality abounds in the southern parts of the parish; and near the town are several strata ranged above each other, one of which is nine inches in thickness. Coal exists, and there are appearances of its having been formerly worked; but some recent attempts to procure it have been discontinued. There are quarries of sandstone of a white, and of a reddish colour. Iron-ore is found in a bed three feet in thickness, occurring between the primary and secondary formations, which near the town are seen in combination; the strata of the former are vertical and in many places irregular, and of the latter horizontal, alternating with red freestone and soft sandstone of the same colour. Several of the hills are of whinstone, resting on sandstone. In this parish the chief seats are Edgerston, Mossburnford, Langlee, Lintalee, Hundalee, Glenburn Hall, Hunthill, Stewartfield, and Bonjedward. The annual value of real property in the parish of Jedburgh is £22,370.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Jedburgh, of which this is the seat, and of the synod of Merse and Teviotdale; patron, the Crown. The stipend of the incumbent averages about £300, with a manse, built in 1806; and the glebe comprises seven acres of arable land worth £5 per acre, and pasture land that lets for £13. 13. The church is part of the ancient ABBEY, of which the western portion of the nave has been fitted up for public worship, and affords accommodation to 910 persons. Of that stately and magnificent structure, situated on the sloping bank of the river Jed, near the southern extremity of the town, the only remains are the nave, the north transept, and the choir of the church, a cruciform building 230 feet in length, with a massive central tower rising to the height of 100 feet, and surmounted by a projecting battlement crowned with turrets and pinnacles. The western entrance is strikingly beautiful, consisting of a lofty Norman doorway of deeply-recessed arches, springing from slender clustered columns, richly moulded and elaborately ornamented. Above the doorway is a spacious window of three compartments, of which the central arch is circular, and the others finely pointed; and in the gable is a round window of very elegant design. The nave, 130 feet in length, is separated on each side from the aisles by a series of lofty arches supported on clustered columns with sculptured capitals: the triforium consists of semicircular arches richly moulded, circumscribing two pointed windows of elegant

tracery; and the clerestory, of a range of pointed windows of graceful proportions. The choir, which is greatly dilapidated, is of more ancient character. Its roof is supported on massive pillars, from which spring broad circular arches of the earlier Norman style, ornamented with zigzag mouldings; the triforium is of similar character, surmounted by a range of sharply-pointed clerestory windows of later date. The north transept, which is still entire, is embellished with windows of elegant design, highly enriched with tracery; and the principal window is of lofty dimensions and of great beauty. The south transept, the cloisters, the chapter-house, and other conventual buildings, have all disappeared; but a doorway, forming the south entrance to the church from the cloisters, is still remaining, an almost unrivalled specimen of architectural beauty and elaborate decoration. On the south side of the choir is a chapel, formerly used as a grammar school. There are three neat places of worship in connexion with the United Presbyterian Church, a place of worship for members of the Free Church, and a particularly beautiful Episcopal chapel.

The United Schools of Jedburgh, consisting of the grammar-school and the burgh English school, united in 1804, contain about 150 children, and are under the superintendence of the heritors and the magistrates of the burgh, by whom the rector is appointed. The rector receives from the burgh £21. 6. 8., and £12 for the English school, for which he is bound to keep an assistant; also £8. 6. 8. from the heritors, making a total salary of £41. 13. 4. The school fees amount on the average to £120, and the offerings at Candlemas to nearly £30; the rector has also a commodious house and garden. Two parochial schools, at Lanton and Rink, are well attended; the masters are allowed by the heritors £11. 2. each. There is also an infants' school endowed by the Marquess of Lothian. The town has two religious societies, one for the diffusion of education, and the other for imparting religious knowledge; they are supported by subscriptions, amounting on an average to £15. A dispensary was founded in 1807, chiefly by donations from the Kerr family, and is maintained by annual subscriptions: a commodious house, with baths and other requisites, was erected in 1822, by the then Marquess of Lothian. The number of patients, who are received from the parishes of Jedburgh, Ancrum, Bedrule, Southdean, Hobkirk, Minto, Oxnam, and Crailing, amounts annually to about 220. A sum of money arising from accumulated legacies, chiefly by Lady Yester, a daughter of Ker of Fernihirst, produces an interest of £23, appropriated to the education of poor children, and to the relief of the poor, for whose benefit also about £40 are annually collected at the church. The poor are chiefly maintained by assessments.

A Roman road, crossing the Jed and the Teviot about half a mile above their junction, intersects the northern part of the parish within two miles of the town; it is paved with whinstone, and in a state of good preservation. There are also vestiges of an ancient road leading over the high ground from Ancrum bridge to the town. Near Monklaw are the remains of a Roman camp about 160 yards square; and there are traces of camps at Howdean, Swinnie, Scraesburgh, Camptown, and Fernihirst, but nearly obliterated by the progress of cultivation. At Lintalee are the remains of an encamp-

ment formed by Douglas for the defence of the frontier, during the absence of Bruce in Ireland, and celebrated for a memorable engagement in which the Earl of Richmond, who had invaded Scotland at the head of 10,000 men, fell in a personal combat with Douglas: the double rampart by which it was defended is still remaining. In the face of the precipice below the camp, and now inaccessible, is a cavern dug in the rocky bank of the river Jed; and at Hundalee and Mossburnford are similar caverns, excavated in the rock as places of refuge, and for the concealment of property during the frequent irruptions of the English borderers. In the year 1827, many ancient coins of silver, chiefly of the reign of Ethelred, and one of the reign of Canute, were found in a field near Bongate, with a ring formed of silver wire; some of the coins are at present in the possession of Mr. Bainbridge, of Gattonside, but most of them are widely dispersed. A number of coins of the reigns of Edred, Edwy, Ethelred, Edward I. and III., and of Henry I. and II., have been also found, near the abbey bridge; and some Roman coins are said to have been discovered at Stewartfield. A horn was discovered near Swinnie within the last few years, containing silver coins of the reign of James V.; and in the year 1834, about 400 silver coins of the reigns of Henry VIII., James V., Robert III., and Mary, Queen of Scots, were ploughed up near the farm-house of that place. A silver coin, or medal, commemorating the marriage of Mary, with the Dauphin of France, was not long since found at Larkhall. On one side are combined the letters F. and M., surmounted by a crown, with the inscription *Fecit utraque unum* 1558; on the other are the arms of Scotland impaled with those of the Dauphin, and the inscription *Fran. et Ma. D. G. R. R. Scotor. D. D. Vien.* Arrow-heads of flint are occasionally dug up on Howdean moor, which is reported to have been the scene of a battle; and a camp-kettle, which was presented to the late Sir Walter Scott by Mr. Rutherford, was found at Edgerston.

In 1815, a sarcophagus of stone, formed of unhewn slabs, four feet six inches in length, and two feet six inches in breadth, containing a large urn and three of smaller size, one of which was full of pure water, was found in a garden on the west side of the High-street. The large urn, near which were parts of skulls, was of very elegant form; two of the smaller urns crumbled into dust on being touched. In the same garden, which is in some records called the Temple Garden, were discovered the foundations of ancient buildings, at a depth of six feet below the surface. A trophy taken from the English at the battle of Bannockburn, and another from the Highlanders at Killiecrankie, are in the possession of the corporate body of weavers; and another, taken from the English at the battle of Newburn, in that of the shoemakers. The inhabitants of Jedburgh, and of the forest, constantly accustomed to warfare, were a brave and hardy race; and their valour is recorded by the Earl of Surrey, in his despatches to Henry VIII. respecting the storming of Jedburgh. Their favourite weapon was the Jedworth axe, and their war-cry, "Jedworth's here". At Tudhope, about half a mile from the town, is a foundry strongly impregnated with sulphur and iron, and found very efficacious in scorbutic disorders: there are chalybeate springs in several parts of the parish, and at Gilliestongues is a petrifying spring.

Among the eminent persons of this place were numerous abbots of Jedburgh, successors to St. Kennock, who held various high offices of trust and importance under the kings of Scotland, and were greatly distinguished by their learning and talents. Adam Bell, a brother of the Carmelite convent, who died here, was the author of a history of Scotland from the earliest period to the year 1535, entitled *Rota Temporum*. John Rutherford, principal of St. Salvator's college, St. Andrew's, and author of a work on the *Art of Reasoning*, was a native of the town. Samuel Rutherford, principal of St. Mary's college, St. Andrew's, and author of the *Letters*, who was born in an adjoining parish, received his early education in the grammar school of Jedburgh; as did also the poet Thomson; and among distinguished natives may be named Andrew Young, regent of philosophy in the university of Edinburgh, and Sir David Brewster.

JEMIMAVILLE, a village, in the parish of KIRKMICHAEL, county of ROSS and CROMARTY; containing 139 inhabitants. It is one of three very small villages in the parish, and, though the largest of them, consists of only a group of houses, of an inferior class.

JOCK'S-LODGE, a village, in the parish of SOUTH LEITH, county of EDINBURGH, $1\frac{1}{2}$ mile (E. by S.) from Edinburgh; containing 449 inhabitants. This is a considerable, though scattered, village, situated on the southern border of the parish, and on the road from Edinburgh to Portobello and Musselburgh. It is said by some to have had its eccentric name from that of a beggar who, in the eighteenth century, inhabited a small tenement on the spot; but it appears, on better authority, that the village was called Jock's Lodge in Cromwell's time. The place is opposite to Piershill cavalry barracks, which were built in 1793, and are named from Colonel Piers, who commanded a regiment stationed at Edinburgh in the reign of George II., and who either erected or rented a villa on the height of a rising ground overlooking Restalrig, now occupied by the officers' apartments, and called Piershill. On the right hand of the village are many neat residences.

JOHNSHAVEN, a village, in the parish of BENTHOLME, county of KINCARDINE, 4 miles (S. W. by S.) from Bervie; containing 1172 inhabitants. This place, which comprises the principal part of the population of the parish, is chiefly inhabited by fishermen and weavers, whose houses are small and irregularly built. It is situated on the shore of the German Ocean, close to a small harbour which is frequented in summer by coal sloops, and occasionally by vessels freighted with lime. Off the coast, fish are caught, consisting for the most part of cod, haddocks, and turbot.

JOHNSTONE, a parish, in the county of DUMFRIES, 9 miles (S. by E.) from Moffat; containing 1072 inhabitants. It is generally supposed that the name of this place was derived from some ancient and important personage of the name of John, distinguished either by his possessions or achievements, and to whose name the ordinary Saxon termination *ton* or *toun* was added. From time immemorial the lands have been the property of the family of Johnstone, lairds of Annandale, whose castle of Lochwood, now in ruins, was situated in the north of the parish, and almost surrounded by impassable bogs and marshes. This fort, which was a place of great strength, and inaccessible to a foe, induced James VI. to

declare that "he who built Lochwood, though outwardly an honest man, must have been a knave at heart". About the end of the sixteenth century, it was burnt by Robert, natural brother to Lord John Maxwell; in revenge for which the Johnstones, who were a warlike tribe, assisted by the famous Buccleuch, the Elliots, Armstrongs, and Grahams, the bravest of the warriors of the Scottish border, attacked and cut to pieces a party of the Maxwells near Lochmaben, where the incendiary himself, Robert, was among the number of the slain. Those who escaped taking refuge in the church of Lochmaben, the sacred edifice was burnt to ashes by the Johnstones. This rash and sacrilegious act occasioned the memorable battle of Dryfesands, in which the Johnstones finally prevailed, Lord Maxwell being attacked behind and slain by "Will of Kirkhill", while engaged in single combat with Lord Johnstone.

The PARISH is situated in that district of Dumfriesshire known by the name of Annandale, and comprehends a considerable portion of the old parishes of Garvald and Dumgree. It is six miles in length, and averages three in breadth. On the north it is bounded by the parish of Kirkpatrick-Juxta; and on the east by Applegarth and Wamphray, from both which parishes it is separated by the river Annan. On the south, at a narrow part of about a mile, forming the vertex of the triangular figure of Johnstone, is the parish of Lochmaben; and on the south-west, the river Kinnel divides the lands from Kirkmichael parish. The country is generally flat with a gradual ascent towards the west. A large proportion of the surface is stony, supplying great facilities for filling the thorough-drains that have been cut to so considerable an extent of late years, and that are so necessary to prepare the land for the successful operation of the subsoil plough, now in very general use. The whole of the parish lies between the rivers Annan and Kinnel, with the exception of 2000 or 3000 acres to the west of the latter stream, which in their ascent towards Nithsdale rise about 1200 or 1500 feet. The two rivers form a junction two miles below the southern extremity of the parish. The Annan abounds with yellow and sea trout, eels, and salmon. Its banks are subject, in rainy and snowy seasons, to violent inundations, from which great mischief has arisen to the crops: two of the most remarkable floods were in August 1782, and in August, September, and October 1790.

The SOIL of the flat alluvial land along the Annan is a dry loam or gravel: in other parts the soil is chiefly a light loam, resting on gravel or rock, or a moorish soil lying upon a retentive clay or till; and there are several peat-mosses, extending to some hundreds of acres. Of the total area, between 5000 and 6000 acres are under tillage; about 5000 are uncultivated, or in natural pasture; from 500 to 1000, which have never been ploughed, are considered capable of cultivation; and 1500 are under plantations or natural wood. Wheat was at one time unknown in this district as a part of the produce, but it is now partially cultivated; other kinds of grain are raised, and the green crops, of which turnips and potatoes are the principal, are abundant and of good quality. The most improved system of husbandry has been for some time adopted, and within the last half century the aspect of the parish has been changed by the construction of roads, the formation of inclosures, and especially by the number of comfortable dwellings

erected for the accommodation of the labouring classes. Pigs are reared in large numbers, and hams and flitches are sent in great quantities to England. There are two sheep-farms, on which the stock consists partly of the native black-faced, and partly of Cheviots. The cattle are the Galloway, except upon two or three of the farms, where they are of the pure Ayrshire breed. Great attention has been paid to the improvement of the cattle, and in several instances the farmers have obtained premiums from the Upper Annandale Agricultural Society. The plantations receive much care: they were greatly increased about half a century ago by the then Earl of Hopetoun, at which time a large quantity of Scotch firs, interspersed with larch and spruce, were added to the former stock. About a dozen fallow-deer brought from Hopetoun House, in the year 1780, were put into an inclosure opposite the house of Raehills, and after a while broke loose, and established themselves among these extensive plantations: since that time no one has been able to capture or control them; and they are now increased to the number, as is supposed, of about 200 or 300. The rocks in the district consist of red sandstone, and whinstone, the latter of which varies much in its fineness and consistence. Attempts have been made to discover a vein of lead-ore, the existence of which seemed to be indicated by several portions occasionally found above the surface, near Lochwood ruins; but the expected success has not attended the undertaking. The annual value of real property in the parish is £4408. The mansion-house of Raehills, the seat of J. J. Hope Johnstone, Esq., descendant of the Earls of Hopetoun, was principally built by James, third earl, grandfather of the present possessor, in the year 1786; and is a castellated edifice, of the old baronial style which prevailed in the reign of Queen Elizabeth. A large addition, fronting the south, and containing an elegant suite of apartments, has lately been erected, constituting it one of the most splendid and imposing mansions in the south of Scotland.

This is entirely an agricultural parish, and the population are scattered. The road from London to Glasgow, by Carlisle, passes for five miles through the parish; and that from Dumfries to Edinburgh, by Moffat, for the same distance: a turnpike-road from Moffat to Lochmaben and Annan runs for six miles, from north to south, nearly through its centre. There is a bridge over the Kinnel at St. Ann's, and one across the Annan at Johnstone Mills, besides several bridges over the smaller streams: all these, with the roads, are kept in good repair. Ecclesiastically the parish is within the bounds of the presbytery of Lochmaben and synod of Dumfries; patron, Mr. Johnstone. The stipend is £165. 13., and there is a good manse, with a glebe of ten acres worth about 20s. per acre. Johnstone church, which is inconveniently situated, at the eastern extremity of the parish, was built in 1733, and rebuilt on an enlarged scale in 1818; it is now a comfortable and commodious edifice. There is a parochial school, where Latin, Greek, and French, and all the usual branches of education are taught: the master has the maximum salary, with the fees, which average about £21 per annum, and £3 received from a bequest left by the late Mr. Aitkin, farmer, of Kirkbank; he has also the legal allowance of land. Of two other schools, the teacher at Goodhope receives £16 a year from the pa-

tron of the parish, with about £10 fees; the master of the school at Cogrieburn-bridge has an income of £10, independently of the fees. The parochial library, now consisting of 300 volumes, was established in 1828, by the minister of the parish. There was once also a farming society, founded in 1818, which proved beneficial in supplying a stimulus to improvements in husbandry, and especially in the rearing of cattle; but it is now discontinued. Near the farm of Crawknowes is a small barrow, or tumulus, said to mark the spot where the Laird of Lochwood, in a private quarrel, shot the Laird of Dumgree, whose body he afterwards hid in the earth. The only other memorial of antiquity is the old castle of Lochwood, already referred to, supposed to have been built during the fourteenth century. Dr. Matthew Halliday, physician to the Empress Catherine of Russia, and Dr. John Rogerson, who succeeded him in that station, were born in the parish of Johnstone; the latter died about twenty years since.

JOHNSTONE, a village, or rather a manufacturing town, and for a time a quoad sacra parish, in the ABBEY parish of PAISLEY, Upper ward of the county of RENFREW, $3\frac{1}{2}$ miles (W. by S.) from Paisley; containing, in 1841, 5824 inhabitants. This place, which, about sixty or seventy years since, consisted merely of a few scattered cottages, is pleasantly situated on the river Black Cart, over which is a bridge, from which it derived its former name. It is indebted for its rise, and subsequent rapid increase, to the introduction of the manufacture of cotton-yarn, and to the encouragement given by its spirited proprietor Mr. Houston, who granted leases of land for the erection of dwelling-houses, and for the works which have been since opened. The increase of the place both in population and manufacturing importance has been unrivalled in the history of any other place in Scotland. In 1781, when the lands were first leased, it contained only ten inhabitants: in 1792, the number had augmented to 1434; in 1811, to 3647; and in 1831, to 5617. The town is regularly built, consisting of Houston-square, nearly in the centre; a spacious market-place; and numerous handsome streets intersecting each other at right angles. The houses are of stone, and to each is attached an adequate portion of garden ground; the inhabitants are amply supplied with water, and the streets are well lighted with gas. Assembly-rooms have been erected; a lodge of freemasons has been instituted; circulating libraries are kept by the various booksellers; a post-office with two daily deliveries has been established; and in almost every respect the town may be said to be improving. It contains an old-established library, and there is a mechanics' institution, with a library attached; but these institutions are not well supported. Johnstone Castle, in the vicinity, the seat of the Houston family, is a large and handsome structure in the modern castellated style, surrounded by luxuriant wood.

The population are chiefly employed in the cotton trade, for which mills have been erected in the town and immediate vicinity. According to a statement made some years ago, the mills contained in the aggregate 90,000 spindles; two of them were propelled by water, and the others by steam-power. The capital employed in their erection, and in keeping them in operation, was estimated at £135,000; and they afforded employment to more than 2500 persons. At the present time, there

are fifteen cotton-mills in active operation. A flax-mill, a very substantial fireproof building, has been erected, in which flax is spun into yarn, and dyed; and an old cotton-mill has been converted into a shawl-weaving factory. There are six manufactories of machinery, to one of which a foundry is attached; there are also a very extensive iron-foundry, and a brass-foundry of less dimensions: boiler-making has of late been commenced in one of the machine shops. In this flourishing town are likewise a saw-mill, a cooperage, and a shop for turning operations. Numerous collieries and lime-works are carried on in the neighbourhood. Branches of the Union Bank of Scotland and the City of Glasgow Bank have been established. There are numerous excellent shops in the town, which is well stocked with every kind of provisions; and fairs are annually held on the Thursday after the second Monday in July, and the last Thursday in December, for cattle. Great facility of communication is afforded by the Glasgow and Ayr railway, which passes by Johnstone, and has a handsome station here. The Glasgow, Paisley, and Ardrossan canal, commencing at Port-Eglington, near Glasgow, is completed only to this place, a distance of eleven miles free of lockage. It is twenty-eight feet broad at the top, fourteen at the bottom, and four feet and a half in depth; and cost nearly £100,000. The navigation was opened in 1811, and light iron passage-boats were established in 1831; but by a recent arrangement with the Ayrshire and the Greenock Railway Companies, the conveyance of passengers is to be discontinued for twenty-one years, and the traffic confined to heavy goods, of which 68,063 tons were carried in the year ending 30th Sept. 1844. The canal terminates in a basin at one extremity of the town, and adjoining the wharf is a yard for landing the stone from the Nitshill quarry. The magistrates hold a petty-session in the assembly-rooms on the first Friday in every month. A church was erected here in 1793, at a cost of £1400; it contains 995 sittings, and is a handsome octagonal edifice, with a very light and elegant spire, built in imitation of the spire of Lincoln designed by Sir Christopher Wren, but on a smaller scale. This church forms a strikingly interesting object as seen from the road to Paisley, and gives to the town a very pleasing appearance. Ecclesiastically the place is in the presbytery of Paisley, synod of Glasgow and Ayr, and the patronage is vested in the Congregation; the stipend of the minister is £150, arising from seat-rents and collections, and part of the amount is secured by bond. Besides the church, or chapel of ease, there are two places of worship for the United Presbyterian Synod, and one, a fine building with a small tower, for the Free Church. A body of Methodists, and another sect called Latter-Day Saints, occupy halls where they have public worship regularly on Sundays; and a charity school has been established, which is upheld by the voluntary subscriptions of the inhabitants.

JOPPA, a village, in the parish of COYLTON, district of KYLE, county of AYR, $3\frac{1}{2}$ miles (S. E. by E.) from Ayr; containing 168 inhabitants. It is situated on the road from Ayr to Coylton, a short distance westward of the Coyl water, and is regarded as the principal village in the parish, the others being chiefly groups of cottages. There is a Sabbath school here; also a private school, attended by about fifty children, and the teacher of which has a rent-free schoolroom.

JOPPA, a village, in that part of the parish of DUNNINGTON, county of EDINBURGH, which formed the quoad sacra parish of PORTOBELLO, $\frac{1}{2}$ a mile (E. S. E.) from Portobello; containing 275 inhabitants. This is a modern and neat village, situated on the sea-side, and on the road between Edinburgh and Musselburgh. The North-British railway passes by. Joppa may be said to form a suburb of the large and fashionable village of Portobello, which, on account of its excellent beach and its proximity to Edinburgh, is visited as a bathing-place in the summer season. In the vicinity are some handsome villas.

JUNIPER-GREEN, a village, in the parish of COLINTON, county of EDINBURGH, $1\frac{3}{4}$ mile (W. by S.) from Colinton; containing 325 inhabitants. It lies on the high road from Currie to Edinburgh, and in the western extremity of the parish. Juniper-Green is one of the five principal villages of Colinton; and has a small school.

JURA and COLONSAY, a parish, in the district of ISLAY, county of ARGYLL; containing 2299 inhabitants. This parish, which is situated to the west of the main land, comprises the islands of Jura, Colonsay, Oronsay, Scarba, Lunga, Balnahaugh, and Garvelloch, and several small uninhabited islets. The island of JURA takes its name from the numerous herds of red-deer with which it abounded, and of which many are still preserved. It is separated from the main land by the sound of Jura, which forms its eastern boundary; and from the isle of Islay by the sound of that name, which bounds it on the south: on the west is the Atlantic Ocean. It is about thirty-six miles in extreme length, and varies from two to nearly eight miles in breadth; the number of acres has not been ascertained. The surface is rugged, and broken by mountains of conical form, of which the three principal, called the *Paps of Jura*, are Beinn-a-Chaolais, Beinn-an-Oir, and Beinn-Shianta. These mountains, the highest of which, Beinn-an-Oir, has an elevation of 2700 feet above the level of the sea, form a conspicuous landmark for mariners; they are seen from a great distance, and are the first points discovered by vessels navigating the Atlantic.

The coast of the island is rocky and precipitous, and in many places perforated with deep caverns, some of them affording secure shelter. Of these the most remarkable is *Uaghlamaich*, on the western coast, the entrance of which is thirty-eight feet above the level of the sea at high tides, and thirty-three feet in height. The interior has an area of 1312 square yards; the floor is smooth, and the roof beautifully arched. So perfectly is this cavern protected, that, during the severest storms, scarcely a breath of wind is felt within it. There are numerous moorland lakes, several of which abound with trout; and from them issue various streams, which in their course towards the sea form considerable rivers, wherein trout and salmon are found. Of these rivers the largest are the *Knockbreck*; on which the proprietor, Mr. Campbell, has a salmon-fishery, and the *Avin Lussa*, in the north of the island: the river *Corran* has its source in some springs issuing from the mountains, and flowing eastward receives different tributaries in its course, and falls into the sound of Jura near Corran House. The shore on the west is deeply indented by *Loch Turbet*, an inlet from the sea, which almost divides the island into two parts; and on the eastern shore are

several bays, of which *Lowlandman's bay* and the bay of *Small Isles* constitute commodious harbours. The former bay, two miles and a half in circumference, has an entrance 570 yards in width, and is from five to six fathoms in depth; the latter, which is more capacious, is formed by three small islands, ranging in a line nearly parallel with the coast, and between which are the entrances. Between the north point of Jura and the island of Scarba is the famous whirlpool of *Coryvrechan*.

The SOIL in the east of the island, in which direction nearly the whole population of Jura reside, is stony and shallow along the shore, but on the acclivities, where most of the arable land is situated, of better quality. The crops are oats, barley, potatoes, and a little flax: the system of agriculture has been improved; much of the land has been drained, and some tracts of moss have been brought into cultivation. In general the farm-buildings are commodious; and the lands have been inclosed, partly with stone dykes, and partly with hedges of thorn. The cattle are of the native black breed, and about 1200 are annually sold from the isle: the sheep, of which, also, a number are reared in the pastures, are generally the black-faced, with some of the Cheviots, which are increasing in favour. The prevailing rocks are of the primitive class, and comprise mica-slate, quartz, trap, and whinstone: slate was formerly quarried. The annual value of real property in the parish is £5761. The mansions in the island are, *Jura House*, the seat of the principal proprietor, a spacious residence, with some splendid additions of recent date; and *Ardlussa*, also a handsome mansion, beautifully situated, and surrounded with plantations. The only village is *Miltown*, which includes *Craighouse*; the inhabitants are chiefly employed in weaving, and in the various handicraft trades requisite for the supply of the neighbourhood. There is a neat inn at *Craighouse*, that has been rebuilt and enlarged. A distillery has been erected, which produces about 700 gallons of whisky per week; and there is likewise a corn-mill, whence the village takes its name. Facility of intercourse is afforded by several roads and bridges, and by three ferries, where there are staiths for the shipping of cattle: the ferry at *Kenuachdrach* communicates with *Craignish*; that of *Lagg* with *North Knappdale*, and the ferry of *Feoline* with *Portaskaig*. From *Feoline* to *Lagg*, a distance of seventeen miles, a government road has been formed, adding greatly to the means of intercourse; and at the latter place is a sub-office, where the London, Edinburgh, and Glasgow mails are received from Islay.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Islay and Jura, synod of Argyll. The minister's stipend is £200, charged with the payment of £50 to an assistant at Colonsay; he has a manse, and a glebe valued at £12 per annum: patron, the Duke of Argyll. The church, erected about the year 1776, is a neat plain structure; it has been enlarged and greatly improved by Mr. Campbell, and contains 250 sittings. In the old churchyard is an elegant mausoleum for the Campbell family. There are two schools in Jura, and one in Colonsay, among the three masters of which the parochial salary of £34 is divided: Mr. Campbell has erected two commodious schoolrooms, with good houses for the masters, to each of whom he gives a garden and a small portion of land. Two other schools are supported by the Society for Propagating

Christian Knowledge, one of which is at Colonsay. The sick poor are admissible to the infirmary and asylum of Glasgow, through the liberality of Mr. Campbell. Stones of vast dimensions are found along the shores, and in other places; they are supposed to have fallen from the erect position in which they were originally raised in commemoration, it is said, of ancient battles. There are

also the ruins of many chapels of early date. In digging the foundation for an inn at Lagg, several stone coffins were found; and in forming the road from Feoline to Lagg, numerous urns, containing ashes, were discovered. Silver coins of the reign of Charles I., also, were found many years since.—See COLONSAY, &c.
