ST. JOHN'S SQUARE.

P R E F A C E.

THE Proprietors of the "Topographical Dictionary of Scotland" have much satisfaction in presenting their Subscribers with the concluding portion of their undertaking in illustration of the Topography of the United Kingdom. Some time has now elapsed since they first circulated proposals for publishing Dictionaries of England, Wales, Ireland, and Scotland, in succession, in ten volumes. They trust, however, that the delay has enabled them to make the volumes more exact and comprehensive than they could possibly have been made in a shorter period; and the Proprietors of this almost national Publication can truly say, that they have spared no pains, and held back from no reasonable expense, calculated to render their labours worthy of the favour of the Subscribers.

In compiling the present Dictionary, the Proprietors have had the benefit of the stores of topographical and statistical information collected in the fifteen octavo volumes of the "New Statistical Account of Scotland," a work to which the Established Clergy were the chief contributors. It would be impossible to enumerate the various private parties to whom the Dictionary is indebted for valuable assistance. As in the prefaces to the former volumes, the Proprietors must now content themselves with a general and yet most grateful acknowledgment of the kind aid they have received from numerous persons.

For the SEALS and ARMS that embellish the Work, the Proprietors' thanks are chiefly due to the Town-Clerks of the several Burghs, who obliged them with the wax impressions from which most of the engravings have been executed. Their best acknowledgments are also due to the Principals of King's College Aberdeen, of Marischal College Aberdeen, and of Glasgow College; the Reverend the Librarian of the University of Edinburgh; and the Reverend C. J. Lyon, M.A., of St. Andrew's, Author of the valuable History of that city; for copies of the Official Seals of the five great Universities of Scotland.

It may be well to remind the Reader, that the Work, as denoted in the title-page, simply comprises *separate* articles upon the Islands, Counties, Cities, Towns, Parishes, and Principal Villages; the rivers, mountains, lakes, seats, and such objects, being (unlike the manner of a general gazetteer) described under the heads of parishes, &c. Thus, the far-famed mansion of *Abbotsford* is noticed in the article on *Melrose*. The arrangement of the places is strictly alphabetical, each being given under its proper name; and the epithet, if any, by which it is distinguished from another locality of the same designation, following after the chief heading. In this way, all such terms as *St., East, West, North* and *South, Great* and *Little, Old* and *New*, will be found to come after the real names: as Andrew's, St.; Berwick, North; Cumnock, Old; Monkland, New.

The following minor points may also be noticed. The statements of acres in the Work refer to the imperial standard measure. The ministers' stipends, which usually depend on the price of grain, are in most cases taken from the Report made by the Royal Commissioners; in other cases they are derived from private and later information: the sum for communion elements is generally included in the statement. The annual value of real property in each parish is inserted also on the authority of a parliamentary paper, printed some years ago, and having reference to the assessments under the property-tax.

In conclusion, the Proprietors have to request the indulgence of the Subscribers with regard to any errors they may detect. No topographical work can be wholly free from errors. To say that inaccuracies have crept into a compilation of this nature would be only to say, in other words, that the hand of time may be stayed, and that the fugitive and varying circumstances of a country can be always the same. The Proprietors have used every means to ensure correctness; and they hope that the Work will be received by the Subscribers with kind consideration.

TOPOGRAPHICAL DICTIONARY

OF

SCOTLAND.

A B B O

A B B O

ABBEY-GREEN, a considerable village, in the parish of **LESMABAGOW**, Upper ward of the county of **LANARK**, 6 miles (S. W.) from Lanark; containing, with **Turfholm**, 881 inhabitants. This village, formerly called **Macute's-Green**, derives its present name from its vicinity to the ruins of an ancient monastery dependent on the abbey of **Kelso**. It is pleasantly seated in a valley on the west bank of the **Nethan**, a fine stream tributary to the **Clyde**. The village is in the centre of the parish, and contains the parochial church. The inhabitants are employed in various trades requisite for the supply of the neighbourhood, and in hand-loom weaving for the manufacturers of **Glasgow** and **Paisley**.

ABBEY PARISH, **RENFREWSHIRE**.—See **PAISLEY**.

ABBEY ST. BATHAN'S.—See **BATHAN'S**, **ST.**

ABBOTSHALL, a parish, in the district of **KIRKCALDY**, county of **FIFE**; containing, with the village of **Chapel**, 4811 inhabitants, of whom 4100 are in the town of **Abbotshall**, consisting of **Linktown** and **Newtown**. This place derived its name from its having been the residence of the abbots of **Dunfermline**, one of whom erected a mansion here, the site of which is still pointed out by a yew-tree of very ancient growth. The lands, about the middle of the fifteenth century, belonged to the abbey of **Dunfermline**, and are supposed, after the dissolution of monasteries, to have been granted to the bailies and corporation of the town of **Kirkcaldy**, and by them transferred to the family of the **Scotts** of **Balweary**, from whom they passed into the possession of the **Ramsays** of this place, and were purchased by the ancestors of the present proprietor. The greater portion of the lands formerly in **Kirkcaldy**, was, in the year 1650, separated from that parish, and, together with the lands of **Easter** and **Wester Touch**, formerly in the parish of **Kinghorn**, and those of **Wester Bogie**, in the parish of **Dysart**, erected into a separate and distinct parish, under the appellation of **Abbotshall**.

The **PARISH** is situated on the **Firth of Forth**, by which it is bounded on the south-east, and comprises

about 4000 acres, of which about 3320 are under tillage, and the remainder in natural wood and in plantations. Along the coast the surface is level; but the ground rises in a gentle slope, towards the middle of the parish, and thence is pleasingly undulated. A small stream issuing from the **Camilla loch**, in the parish of **Auchtertool**, on the west, flows through the lower lands into the river **Tiel**, near its influx into the sea. The soil is mostly fertile: towards the coast, it is light, but productive; on the rising grounds, more inland, it is a deep rich loam, and in other parts varies considerably in quality. The crops are, wheat, barley, oats, potatoes, and turnips, with peas, beans, and other green crops; the system of husbandry is in a highly improved state, and the farm-buildings, and the inclosures and fences, are kept in excellent repair. Some sheep are fed, principally on the lands belonging to the principal seats; and these are generally of the **Cheviot** breed: there are also a few black-cattle reared, chiefly of the **Fifeshire**, and a mixture of the **Fife**, **Angus**, and other breeds. The plantations are mainly on the estate of **Raith**, and consist of oak, ash, elm, chesnut, sycamore, beech, spruce, and Scotch firs, with some larch, with the exception of which last all thrive well, and attain to a majestic growth. In general the substratum is carboniferous limestone, and coal interspersed with trap; the limestone is quarried for farming and other uses, and there are extensive lime-works in the village of **Chapel**, but the coal, from the immediate vicinity of long-established mines, from which an abundant supply is obtained at a moderate price, has not been worked for many years. Fossils of various kinds are found imbedded in the limestone. There are also some quarries of freestone in the parish, which is used for building purposes. The annual value of real property in the parish is £8777.

The chief seat is **Raith**: the mansion-house was partly built in 1694, by **Lord Raith**, who erected the central portion, to which two capacious wings were

added by a late Mr. Ferguson; and the late proprietor, his successor, completed the building by the erection of a beautiful portico of the Ionic order, rendering the whole one of the most spacious and elegant mansions in the country. The demesne is very extensive, and richly planted; and the pleasure-grounds are ornamented by a picturesque lake, surrounded with fine walks, varied with parterres of flowering shrubs and thriving plantations. This lake, which covers more than twenty acres, was formed in 1812; it is in some parts twenty-five feet in depth, abounds with fish of various kinds, and is frequented by numerous aquatic birds: it is situated at the base of the eminence on which the mansion is built, and adds greatly to the beauty of the scenery. Within a short distance of the house, and nearly on the summit of a hill, is a lofty tower, from which is obtained, on a clear day, a view over fifteen counties. In front of the house is a remarkably fine beech-tree, measuring fourteen feet in girth; and among the plantations are numerous specimens of stately and venerable timber. Wester Bogie, another residence, is a handsome castellated mansion of modern erection, situated in a demesne of no great extent, but laid out in fine taste and embellished with flourishing plantations.

The chief manufacture is the weaving of ticking, which is carried on to a very considerable extent, employing nearly 500 looms; the weaving of dowlas has also been introduced, both for the home trade and for exportation. There is a factory worked by steam, for manufacturing a thin kind of linen sheeting, another for canvass for making sails, and also a bleachfield. The parish contains several mills for barley-meal and flour, all of which, together with one for grinding flint, are driven by water; a pottery for brown earthenware is carried on by the proprietor of the flint-mill, and there is likewise a large establishment for the making of bricks and tiles, for which purpose clay of good quality is found in the neighbourhood. Coal-gas works have been established for lighting the towns of Linktown and Newtown. A brewery is also conducted, but the only produce is small beer. Great facility of intercourse is afforded by the Edinburgh, Perth, and Dundee railway. Fairs are held in Linktown on the third Friday in April and October, which were great marts for the sale of linseed and black-cattle; but both have for some time been declining, and the principal articles exposed for sale are shoes, brought from a distance, and articles of pedlery.

Ecclesiastically the parish is within the bounds of the presbytery of Kirkcaldy and synod of Fife; patron, R. Ferguson, Esq., of Raith. The stipend of the incumbent is £199. 11. 11.: the manse was rebuilt in 1772, and has been recently enlarged; the glebe comprises six acres and a half of good land, valued at £36 per annum. The present church, which occupies the site of the ancient edifice, was built in 1788, and is adapted for a congregation of 825 persons. An additional church, in connexion with the Establishment, has been erected for the benefit of the surplus population of this and the adjoining parish of Kinghorn; and there are places of worship for members of the Free Church and the United Presbyterian Church. The parochial school affords a liberal education; the master has a salary of £34. 4. 4., with £35 school fees, and money from other sources. There is also a free school endowed by Robert Philip, Esq., who bequeathed property to the amount of

£80,000, for the foundation and endowment of schools in Abbots hall, Kirkcaldy, Dysart, and Kinghorn: the number of children attending the school in this parish is 100; they are all clothed, and supplied with books and stationery, and, on leaving the school, receive a sum of money to enable them to learn some trade.

Near the site of the tower in the demesne of Raith, have been found coffins of stone, rudely formed, and urns containing human bones. There are still some remains of the ancient castle of Balweary, consisting chiefly of the eastern wall, which is entire, and part of the north and south walls; they are more than six feet in thickness, and appear to have inclosed an area of about thirty feet. Balweary was the birth-place of Sir Michael Scott, who, from his eminence in the science of mathematics, and in general literature, was regarded as a prodigy: on his return to his native land, after many years spent in the universities of the continent, he was appointed, on the death of Alexander III., to bring home the young queen from Norway. William Adam, the architect, was also a native of Abbotshall parish. The parish has given title to many distinguished persons, among whom were, Thomas Scott and Andrew Ramsay, Lords Abbotshall; and George Melville, Earl of Raith.—See LINKTOWN, and NEWTOWN.

ABDIE, a parish, in the district of CUPAR, county of FIFE, $2\frac{1}{4}$ miles (S. S. E.) from Newburgh; including the villages of Lindores, Grange of Lindores, Glenburnie, and a suburb of the town of Newburgh, called Mount-Pleasant; and containing 1508 inhabitants. This place formed part of the lands of Macduff, Thane of Fife; it continued in the possession of his descendants for many ages, and afterwards, together with the earldom, passed to the family of Mordac, Duke of Albany, on whose attainder and decapitation at Stirling, in the reign of James I., his estates in Fife, and other property, reverted to the crown. The lands of Denmill, which included the greater portion of this parish, were granted by James II. to James Balfour, son of Sir John Balfour, of Balgarvie, one of whose descendants was killed in the battle of Fludden Field, to which he attended his sovereign James IV.; and another, Sir James Balfour, of Denmill, was appointed lyon king-at-arms to Charles I. and Charles II. There are still remaining some vestiges of the ancient castle of Lindores, in the village of that name, said to have been the residence of Duncan Macduff, first Thane of Fife; near which, according to the annals drawn up by Sir James Balfour, a sanguinary battle took place in the year 1300, between the Scots, headed by Sir William Wallace, and the English, when the latter were defeated, with the loss of 3000 slain on the field, and 500 taken prisoners.

The parish, anciently called Lindores, was formerly of much greater extent than at present, including the lands of the parish of Newburgh, which was separated from it in 1633. Its surface is very uneven, rising in some parts into hills of considerable elevation, of which the highest are the Norman's Law and the Clatchard Crag. The former is 936 feet above the level of the sea, and commands an extensive prospect, combining much interesting scenery, especially towards the north, embracing the Carse of Gowrie, with its richly cultivated surface, and the Firth of Tay, and lands in its vicinity, which are richly planted. The Clatchard Crag, situated to the south-east of Newburgh, is a tall and stately cliff,

abruptly rising to an elevation of 250 feet above the level of the plain, and towering with rugged majesty above the road, which passes near its base. The river Tay bounds the parish on the north and east; and a powerful stream issues from the loch of Lindores, in the parish, and in its course gives motion to several large mills. The loch of Lindores is a beautiful sheet of water, covering nearly seventy acres of ground, and measuring in many places almost twenty feet in depth. It is supplied by a copious stream that rises in a tract of moss about half a mile distant, called the Priest's burn, which in the winter is never frozen, and in the driest summers is always abundant. The lake abounds with perch, pike, and eels, and is much frequented by ducks, teals, and snipes.

The number of acres in the parish is nearly 7000, whereof 4580 are arable, about 1530 in pasture, 300 in wood, and the remainder waste land, of which, probably, nearly 200 acres might be brought into cultivation. The soil is extremely various: along the banks of the Tay, in the lower part of the parish, it is remarkably fertile; on the slopes it is a black loam of great depth, and in other parts light and gravelly. The acclivities of the hills are partly covered with heath, but in many places afford good pasturage for sheep, of which considerable numbers, chiefly of a mixed breed, are reared in the parish, and sold in the neighbouring markets. Great numbers of sheep of different kinds are also fed here upon turnips, and shipped to London by steamers from Leith and Dundee. The chief crops are, barley, oats, wheat, potatoes, and turnips: from the improved system of agriculture, and the draining and reclaiming of waste lands, the crops have been greatly increased in value; and large quantities of grain and potatoes are exported. There are likewise several dairy farms, producing butter and cheese of good quality. The substratum is generally whinstone, of which there are quarries in full operation; it is much valued for building and other purposes, and was formerly exported to a great extent. A kind of red sandstone is prevalent, which was once quarried; and limestone is also found, but, from the distance of coal, every attempt to work it for burning into lime has been given up. The annual value of real property in the parish is £8145.

The principal seat is Inchrye House, a castellated building in the early English style, crowned with battlements, and embellished with turrets, erected at an expense of £12,000. It is seen with peculiar effect from the road leading to Newburgh; it is surrounded with thriving woods and ornamental plantations, and the grounds are laid out with great taste. The House of Lindores, the residence of Admiral Maitland, who commanded the *Bellerophon* when Napoleon Buonaparte surrendered himself prisoner, is pleasantly situated upon an eminence, embracing much varied and interesting scenery overlooking the loch of Lindores. There are various other handsome residences, finely seated, and adding to the beauty of the landscape. The weaving of linen is carried on in the parish, affording employment to a considerable number of persons who work with hand-looms in their own dwellings; there are corn and barley mills in full and increasing operation, a saw-mill for timber, on a very extensive scale, and a mill for grinding bones for manure. Great facility of intercourse is afforded by the Perth line of the Edinburgh, Perth,

and Dundee railway. Ecclesiastically the parish is within the bounds of the presbytery of Cupar and synod of Fife; the Earl of Mansfield is patron, and the stipend of the incumbent is £233, with a manse, and a glebe comprising four acres of arable, and six of pasture, land, valued at £23 per annum. Abdie church, a plain substantial edifice, was erected in 1827, and is adapted for nearly 600 persons. The parochial school affords a liberal course of instruction; the master has a salary of £34. 4. 4., with £17 from school fees, and a good house and garden.

There are some remains of the ancient church, in the porch of which is still the basin for the consecrated water; and, till lately, the steps that formed the ascent to the altar were also entire. Urns containing human bones and ashes have been found in several parts of the parish. One containing a skull and several bones was dug up a short time ago near the foot of Clatchard Crag; it was inclosed in loose flat stones placed together in the form of a kistvaen. A similar urn was found near the site of the ancient abbey of Lindores, containing a great number of small bones. On the summit of Clatchard Crag are the vestiges of an ancient fort; and near the top of Norman's Law are three concentric circles, of rough stones rudely formed, supposed to have been a Danish encampment.

ABERCHIRDER, a village, in the parish of MARNOCH, county of BANFF, 7 miles (W. by N.) from Turriff; containing 819 inhabitants. The whole parish was formerly called by the name of this place, derived from Sir David Aberkerder, Thane of Aherkerder, who lived about the year 1400, and possessed great property in this vicinity. The village consists chiefly of three streets, regularly laid out, parallel to each other, with a square in the centre, in addition to which, several good substantial houses have been recently built. Aberchirder contains a branch of the North of Scotland Bank, a stamp-office, and a post-office; it is crossed by the turnpike-road between Banff and Huntly, and that between Turriff and Portsoy also passes through it. There is an Episcopalian chapel.

ABERBROTHOCK.—See ARBROATH.

ABERCORN, a parish, in the county of LINLITHGOW, $5\frac{1}{2}$ miles (E. by N.) from Linlithgow; containing, with the villages of Newtown and Philipstoun, about 950 inhabitants. This place, which derives its name from its situation at the influx of the small river Cornie into the Firth of Forth, is of very remote origin. Its ancient castle occupied the site of a Roman station between the wall of Antonine and the port of Cramond on the Firth, in the harbour of which the Romans moored their ships. A monastery appears to have been founded here at a very early period by the Culdees, which, in the seventh century, became the seat of a bishopric; but after the death of Egfrid, King of Northumbria, who, in 696, was killed in a battle with the northern Picts, the bishop who then presided over the see, not thinking the establishment sufficiently secure, removed it to a place less exposed to danger. Of this monastery, which is supposed to have occupied a site near the present parish church, there are not the slightest vestiges remaining; and its only memorial is preserved in the names Priestinch, Priest's Folly, and others, by which some lands in the parish that most probably appertained to it, are still distinguished. The

castle, and the lands belonging to it, in the twelfth century were the property of the Avenale family, from whom they passed by marriage to the Grahams; and in 1298 they were held by Sir John Graham, the friend and firm adherent of Sir William Wallace, under whose banner, fighting for the independence of his country, against Edward I. of England, he fell in the battle of Falkirk. Abercorn subsequently became the property of the Douglas family, and on the rebellion of the Earl of Douglas, the castle, which was one of the strongholds of his party, was besieged by James II., and taken by storm on the 8th of April, 1455, when the earl's retainers were put to death, and the fortifications demolished. Eventually the castle became a complete ruin, and every vestige of it has long since disappeared: the site, however, is still apparent, being marked by a grassy mound on which several cedars of Lebanon now grow. The lands were afterwards granted by the crown to Claude Hamilton, third son of the Earl of Arran, and the first Viscount Paisley, by whose devoted attachment to the fortunes of Mary, Queen of Scots, they became forfeited; but they were subsequently restored by James VI. to his son, whom, in 1606, that monarch created Earl of Abercorn. From this family, the estate passed successively to the Muirs, the Lindsays, and the Setons; and in 1678, the lands, which had been greatly diminished in extent, but to which was still attached the sheriffdom of the county, were sold by Sir Walter Seton to Sir John Hope, ancestor of the Earls of Hopetoun. The office of sheriff was separated from the estate about the middle of the eighteenth century.

The PARISH is situated on the south shore of the Firth of Forth, and comprises about 4500 acres, of which 3700 are arable, meadow, and pasture, 670 woodland and plantations, and the remainder roads and waste. Its surface is pleasingly undulated, and rises in two points into hills of inconsiderable eminence, of which the highest, Binns, has an elevation of about 350 feet, and Priestinch of nearly 100 feet. The former of these, at the western extremity of the parish, ascending gradually from the shore of the Firth, is arable to the very summit, and commands an interesting and extensive view; and the latter, on the south border of the parish, is a precipitous rock of trapstone, of elliptical form, on the flat summit of which are some remains of an ancient fortification. The shore, extending for about four miles, is beautifully diversified with bays, headlands, and undulating banks, enriched with plantations to the water's edge, and occasionally interspersed with verdant patches of sloping meadow-land. The only rivers are, the Nethermill burn, and the Cornie, a still smaller stream, both which, uniting near the church, flow into the Firth; and the Blackness and Linnmill burns, of which the former separates the parish from that of Carriden, and the latter from the parish of Dalmeny. In general the soil is a clayey loam, producing grain of all kinds of good quality, with potatoes and turnips; the pastures are rich, and the meadows yield abundant crops of hay. Considerable attention has been paid to the rearing of cattle, in which much benefit has been effected by the introduction of the Teeswater breed; and all the recent improvements in husbandry, and in the construction of agricultural implements, have been generally adopted. The plantations, which are extensive, and carefully managed by regular thinning and pruning, consist mostly

of beech, elm, oak, sycamore, lime, and chesnut, with larch, Scotch, silver, and spruce firs, of all of which many beautiful specimens are to be found. There are quarries of valuable freestone in various parts of the parish, which have been wrought for many generations, the stone varying in colour from a light cream to a dark grey; and in the hill of Priestinch is a quarry of trap, affording excellent materials for the roads. Limestone is also abundant, and of very pure quality, better adapted for agricultural purposes than for building; it occurs in beds ten feet in thickness, generally at a depth varying from fifteen to twenty-five feet below the surface. There is likewise a small mine of coal near Priestinch, of moderate quality, in working which about twenty persons are employed. The annual value of real property in the parish is £8009.

Hopetoun House, the seat of the Earl of Hopetoun, originally commenced after a design by Sir William Bruce, in 1696, and completed under the superintendence of Mr. Adam, is a spacious and handsome mansion, consisting of a centre connected by colonnades of graceful curvature, with boldly projecting wings, terminating in octagonal turrets crowned with domes. Being seated on a splendid terrace overlooking the Firth, it forms a truly magnificent feature as seen from the water. It contains numerous stately apartments, decorated with costly splendour; the library contains an extensive and well assorted collection of scarce and valuable books and manuscripts, with numerous illuminated missals and other conventual antiquities, and the picture-gallery is rich in specimens of the ancient masters of the Flemish and Italian schools. The grounds are tastefully laid out, embellished with plantations; and the walks along the heights overlooking the Firth command diversified prospects: the eastern approach to the mansion is through a level esplanade, and the western under a stately avenue of elms. His Majesty George IV. visited General the Earl of Hopetoun at this seat, on the day of his return from Scotland, in 1822, and, after partaking of the earl's hospitality, embarked at Port-Edgar, for London. *Binns House* is an ancient castellated mansion, beautifully situated on the western slope of the hill of the same name, and surrounded with a park containing much picturesque and romantic scenery; the grounds are pleasingly embellished with plantations, interspersed with lawns and walks, and on the summit of the hill is a lofty circular tower forming a conspicuous landmark. *Duddingston House* is a modern mansion in the castellated style, situated on an eminence in the south-east of the parish, and commanding an extensive view. *Midhope House*, formerly a seat of the Earls of Linlithgow, is an ancient mansion still in tolerable preservation, and now occupied in tenements, to which an old staircase of massive oak affords access; the building consists of a square embattled tower with angular turrets, and above the entrance is a coronet, with the letters J. L.

The inhabitants are chiefly engaged in agricultural pursuits, and in the quarries and mines. About thirty persons are employed in a salmon-fishery at the mouth of the Linnmill burn, where several stake-nets are placed. The quantity of fish taken was formerly very considerable, but has, within the last few years, very much diminished; the lessee of the fishery pays a rent of £60 per annum, and the whole produce is estimated at about £200. Facility of communication is afforded by the

turnpike-road from Queensferry to Linlithgow; the Union canal intersects the southern portion of the parish, and the Edinburgh and Glasgow railway, which pursues a direction parallel with the canal, frequently approaches within a few yards of its line. At Society, in the parish, is a small bay, where vessels with coal land their cargoes on the beach, and occasionally take back lime. There are two corn-mills propelled by water, and a saw-mill has been built on the Nethermill burn.

Ecclesiastically the parish is within the bounds of the presbytery of Linlithgow and synod of Lothian and Tweeddale. The minister's stipend is £188. 15. 2., with a manse, and the glebe is valued at £16 per annum; patron, the Earl of Hopetoun. Abercorn church, a very ancient building, was enlarged at the time of the Reformation; it is an irregular building, but in 1838 was thoroughly repaired, previously affording very indifferent accommodation. There is a place of worship for members of the Free Church. The parochial school is well conducted; the master has a salary of £34. 4. 4., with a house and garden, and the fees average about £40 per annum. A parochial library was established in 1833, but it was superseded in 1844 by a parish church library, which contains upwards of 300 volumes.

ABERCROMBIE, or ST. MONAN'S, a parish, in the district of ST. ANDREW'S, county of FIFE, 2 miles (W. by S.) from Pittenweem; containing 1157 inhabitants, of whom 1029 are in the town of St. Monan's. This parish, which appears to have been a distinct parish since the middle of the twelfth century, is in ancient documents invariably called Abererombie, or Abererumbin; but towards the close of the year 1647, on the annexation of the barony of St. Monan's, previously in the adjoining parish of Kilconquhar, it obtained the latter appellation, by which, till within the last thirty or forty years, it was generally designated. It is bounded on the south by the Firth of Forth, and is about a mile and a half in length from north to south, and a mile in breadth from east to west. The surface rises abruptly from the coast to the higher lands, which are agreeably undulated, and the general appearance of the parish is enriched and varied with thriving plantations. A small rivulet called the Inweary, rising in the marshy lands of Kilconquhar, intersects the parish, and, after a course of nearly two miles, falls into the Firth near the church; while on the north-east flows the burn of Dreel, which, after bounding that portion of the parish, falls also into the river Forth at Anstruther Wester.

The soil is mostly a light and friable loam, partly intermixed with clay, and generally very fertile; the system of agriculture is in an improved state, and the crops are oats, barley, wheat, beans, potatoes, and turnips. There is comparatively little land in pasture. The substratum is chiefly sandstone and limestone, with some till, of which the rocks on the coast principally consist; ironstone is found in great abundance on the beach, and coal in various parts of the parish. In the barony of St. Monan's are not less than six seams of coal, of different thickness, varying from one foot and a half to eighteen feet: they were formerly worked to the depth of nearly thirty fathoms; but from want of capital, they have been for some time discontinued. There are also several seams in the lands of Abercrombie, which have never been wrought. The limestone is of excellent quality; but the depth from the surface ren-

dered the working of it unprofitable, and since the coal-works have been discontinued, the quarries have been altogether abandoned: the want of lime is, however, supplied by the great quantities of sea-weed thrown upon the shore, which is carefully collected for manure. The ironstone is chiefly obtained in nodules from one to two pounds in weight; it is found to contain from twelve to eighteen hundred weight in the ton, and considerable quantities are sent away as ballast by ship-masters. Freestone is also found. The annual value of real property in the parish is £2134.

Ecclesiastically, the parish is within the bounds of the presbytery of St. Andrew's and synod of Fife; patron, the Crown. The stipend of the incumbent amounts to £162. 0. 11., of which about a fifth is received from the exchequer; the manse was rebuilt in 1796, and enlarged in 1819, and the glebe comprises about twelve acres of good land. The church, formerly the chapel of St. Monan, is said to have been originally founded by David II., about the year 1370, and by him dedicated to St. Monan, the tutelar saint of the place, in gratitude for the deliverance of his queen and himself from shipwreck on this part of the coast. It is a beautiful specimen of the style prevailing at that period, and forms a cruciform structure, with a square tower rising from the centre, surmounted by an octagonal spire. The nave had become a complete ruin, and had been altogether removed; the transepts were roofless and dilapidated, and the choir, the only portion, except the tower, which remained entire, was for many years used as the parish church; but in 1828, the building was restored, with the exception of the nave; the walls of the transepts were raised to a height equal to that of the choir, and the whole now forms one of the most beautiful edifices in the country. It is adapted for a congregation of 530 persons. The parochial school is under good regulation; the master has a salary of £34. 4. 4., and fees £34, with a house and garden.

At the north-east end of the parish, near the lands of Balcaskie, are some remains of the ancient church of Abercrombie, which, after the annexation of the barony of St. Monan's, was abandoned as a place of worship; they are situated in a secluded and romantic spot, formerly the churchyard, and still the burying-place of the Anstruther family, and of others. There are also some remains of the old mansion-house of Newark, the ancient residence of the family of Sandiland, lords of the barony, consisting of three stories. The northern part is still in tolerable repair, but the other portion is roofless and much dilapidated; the ground-floor contains several apartments with vaulted roofs, and the upper stories had, till lately, some comfortable rooms occupied by servants belonging to the farm. The building is so near a lofty rock rising precipitously from the sea-shore, that there is scarcely room for a person to pass between the cliff and the southern gable. Lieut.-General Sir David Leslie, son of Lord Lindores, resided at Newark, which he had purchased from the Sandiland family, and was created Lord Newark in the reign of Charles II.; he distinguished himself greatly in the civil wars, and was interred at this place.—See MONAN'S, ST.

ABERDALGIE and DUPPLIN, a parish, in the county of PERTH, 3 miles (S. W.) from Perth; containing 360 inhabitants. These two ancient parishes were united in the year 1618. They are beautifully situated on

the northern side of the vale of Strathearn; they measure about three miles in length, from east to west, and two miles and a half in breadth, comprising 2900 acres, of which more than 2000 are under tillage, and the remainder wood and waste. The river Earn flows on the south, and, with its picturesque windings through the strath, and its banks ornamented with gentlemen's seats, good farm-houses, and well-cultivated lands, forms a principal feature in the interesting scenery of this locality. In the direction of the river, the prospect is terminated by the Ochil hills; whilst towards the north, where the higher lands of the parish gradually slope again in a northern direction, appear the vales of the Almond, the Tay, and Strathmore, the richly diversified views being bounded by the Grampian mountains. The parish consists of six large farms and three of smaller extent, which are under the best system of husbandry. In the northern district, where the climate is sharp and the soil cold and tilly, the lands produce oats, barley, peas, and beans; in the southern portion wheat is much cultivated, the greater warmth of the sun and the rich loamy and clayey soil favouring its growth. Among the many improvements in agriculture, wedge-draining has been of great service on the wet cold grounds, and is extensively practised: much benefit has also been derived from the introduction of turnip husbandry, and the increase in the growth of potatoes. The prevailing rock is the old red sandstone, of which there are several quarries. The annual value of real property in the parish is £3871. Here is the handsome mansion of Dupplin Castle, the seat of the Earl of Kinnoull, the sole heritor. The former house was accidentally burnt on the 11th of Sept., 1827, and a new edifice was erected on the same site, and completed about the year 1832, in the Elizabethan style, by the present earl, at a cost of upwards of £30,000. The wood on the property is exceedingly beautiful, extending over some hundreds of acres, and comprising sweet and horse chesnuts, beech, spruce, and Scotch fir, some of which are of large bulk and stature. Dupplin Castle was visited by Her Majesty, during her first tour in Scotland, on the 6th of Sept., 1842; she arrived here at two o'clock, and, after partaking of a sumptuous *déjeuner*, received a deputation from the city of Perth, consisting of the provost, magistrates, and other authorities, who presented a loyal address. There are considerable facilities of intercourse. The old road from Perth to Stirling passes through the northern declivity of the parish, and a new line running along the plain below was finished in 1811, for the commencement of which the Earl of Kinnoull advanced £3000. On the sides of this road, many excellent farm-houses have been built, and it has proved of great advantage to the locality for the conveyance of lime and manures, as well as for the export of general produce, consisting chiefly of grain and potatoes, sent to Perth and Newburgh.

Ecclesiastically the parish is in the presbytery of Perth, synod of Perth and Stirling, and in the alternate patronage of the Crown and the Earl of Kinnoull: the minister's stipend is £157. 19. 4., with a manse, and a glebe of fourteen acres, including the site of the manse, garden, &c. The present church of Aberdalgie was built in 1773, and a vault was constructed under it for the Hay-Drummond family, though their ancient burial-place is at the church of Kinnoull. In the churchyard is

the burial-place of the Lords Oliphant, of Bachilton, for centuries the feudal lords of Aberdalgie, and on the outside is a large stone with a well-executed figure of a warrior. The foundations of the old church of Dupplin are still remaining, within an inclosed churchyard. The parochial school affords instruction in the ordinary branches; the master has a salary of £34. 4. 4., with a house, and £13 fees. The Earl of Kinnoull takes the title of Viscount Dupplin from this place.

ABERDARGIE, a village, in that part of the parish of ABERNETHY which is in the county of PERTH, 1 mile (W.) of Abernethy; containing 200 inhabitants. It is pleasantly situated, and the road from Kinghorn to Perth passes through the village. A part of the inhabitants, both male and female, are engaged in weaving linen-yarn.

SEAL AND ARMS.

Reverse.

ABERDEEN, a city, and sea-port town, the seat of a university, the capital of the county of ABERDEEN, and the metropolis of the NORTH of SCOTLAND, 109 miles (N. N. E.) from Edinburgh, and 511 (N. by W.) from London; containing, with parts of the parishes of Old Aberdeen and Banchory-Devenick, 67,000 inhabitants. This ancient city is by some historians identified with the *Devana* of Ptolemy; and according to an absurd tradition, Gregory the Great, King of Scotland, is said to have made the town a royal burgh. Little of its authentic history is known prior to the reign of *Malcolm III.*; and the first traces of its having attained any importance are found in a charter granted at Perth, by *William the Lion*, conferring on the inhabitants the privilege of free trade, as fully as their ancestors had enjoyed that liberty in the time of Malcolm: the same monarch, by a second charter, dated 28th of Aug., 1179, granted them exemption from tolls and customs in all markets and fairs within his kingdom. About this time, *Esteyn*, one of the Norwegian kings, in a piratical excursion along the British coast, landed at this place, and plundered the town, which had attained sufficient importance to attract the notice of the sovereign, who erected for his occasional residence, when visiting here, an edifice near the east end of the present Green, which he afterwards bestowed on the monks of the Holy Trinity, who had recently been introduced into Scotland. William also established an exchequer and a mint, near the south end of the modern Castle-street, where money was coined during his reign. *Alexander II.* on various occasions made protracted visits to the town; and about the year 1222, in company with his sister, the Princess Isabella, he celebrated the festival of Christmas here: he subsequently built, on

the site now occupied by Gordon's Hospital, a convent for Dominican or Black friars. This monarch, by a charter to the burgesses, confirmed all the privileges bestowed by his predecessors, to which he added the grant of a weekly market, and the right of establishing a merchant guild. In 1244, the town was nearly destroyed by an accidental fire, which burnt many of the houses, at that time built chiefly of wood; and about the year 1260, it suffered materially from a similar calamity. *Alexander III.*, by charter dated at Kintore, in 1274, granted to the burgesses the privilege of an annual fair, to continue for fourteen days. The town, however, had made but little progress in commerce; though, as a sea-port, it had obtained a reputation for the curing of fish, of which its rivers and the sea afforded ample supplies for the use of the inhabitants, and also for exportation.

Aberdeen, after it had recovered from the devastation it had suffered from fire, was defended by a strong castle, and by gates at the entrances of the principal streets; and the inhabitants, who in every time of danger were distinguished by their undaunted courage in resisting the attacks of its enemies, in all cases of assault were headed by their chief magistrate, who invariably acted as their captain. In the wars which, after the death of *Alexander III.*, arose from the disputed succession to the throne, the city had its full share of vicissitude and of the troubles of that distracted period. *Edward*, King of England, to whom the arbitration of the contest had been referred, though he appointed *John Baliol* to the Scottish throne, yet considered himself entitled to the sovereignty, and taking advantage of the internal hostilities which prevailed, invaded Scotland with a powerful army, and made himself master of the southern portion of the kingdom. Having dethroned *Baliol*, he advanced with his forces to Aberdeen, and, securing possession of the castle, placed in it an English garrison, which held the town and neighbourhood in subjection. On the approach of *William Wallace* to the relief of the citizens, the English reinforced the garrison, plundered and set fire to the town, and embarked on board their ships. *Wallace*, after besieging the castle without success, retreated to *Angus*, and having sustained various reverses, was betrayed into the hands of *Edward*, and conveyed prisoner to London, where he suffered death as a traitor; and his body being quartered, one of his mangled quarters was exposed on the gate of the castle here, to intimidate his followers in this part of the country. *Robert Bruce*, in asserting his right to the Scottish throne, experienced many privations, and was reduced to the necessity of taking refuge, with his wife and children, among the mountains of *Aberdeenshire*; but having mustered a considerable force, which was augmented by the citizens of Aberdeen, who embraced his cause, he gave battle near the hill of *Barra*, and obtained a victory over the English, who were under the command of *Comyn*, *Earl of Buchan*, and *Mowbray*, the English leader. According to *Boecc*, the citizens, flushed with this success, returned to the town, assaulted the castle, which they took by storm, and put the garrison to the sword; and to prevent its falling again into the hands of the enemy, they demolished the fortifications. The English in the vicinity assembled their forces, and assaulted the city; but the townsmen,

led on by *Fraser*, their provost, repulsed them with considerable slaughter. In reward of their patriotism and valour on this occasion, the king granted the city new armorial-bearings, with the motto *Bon Accord*, their watchword on that memorable occasion; and after the battle of *Bannockburn*, being firmly seated on the throne, he gave the citizens several charters, some ample donations of lands, and the forest of *Stocket*, with all the privileges attached to it, reserving to himself only the growing timber, with the right of hunting. In 1319 he honoured the town with a visit.

Subsequently to the death of *Robert Bruce*, and during the minority of his son *David II.*, a civil war broke out in the country; and *Edward III.* of England, who, with the exception of Aberdeen, had all the Scottish fortresses in his possession, invaded the kingdom to assert his right to the sovereignty. While triumphant in the southern districts of the kingdom, *Sir Thomas Roscelyn*, one of his knights, landed a body of forces at *Dunnottar*, with which he advanced to Aberdeen: the citizens, taking arms, met the invaders on the *Green*, but were defeated with considerable loss, though *Roscelyn* fell in the encounter; and the town was given up to plunder, and set on fire by the English. *David II.*, who during these troubles had remained in France, returned with his queen, and having regained his kingdom, held his first parliament in Aberdeen, which he occasionally made his residence. He confirmed to the citizens all the grants which his father had conferred, and gave them every assistance in rebuilding their town, which thence took the appellation of *New Aberdeen*, though of much greater antiquity than the *Kirktown of Seaton*, since that period called *Old Aberdeen*.

After the expulsion of the English from Scotland, Aberdeen began to flourish as a place of commerce, and was represented in parliament. In a parliament held at *Edinburgh*, in 1357, to concert measures for the ransom of the Scottish king, *David II.*, who since the battle of *Neville's Cross* had been detained prisoner in England, the city ranked as the fourth in the kingdom, and became joint guarantee for the payment of the stipulated sum. The king, on his return to Scotland, took up his residence in the town, which he frequently afterwards visited, and which, in a subsequent parliament, appeared as the first city on the roll, after *Edinburgh*. *Robert II.*, the first of the race of *Stuart*, assembled a parliament in the town, in order to plan a hostile incursion into England; and granted various privileges to the city, which was at that time the residence of several branches of the royal family, among whom were the *Princess Matilda*, sister of *King David*, and *Christian*, sister of *King Robert Bruce*. The trade of the port had now become considerable, and consisted chiefly in wool, hides, tallow, coarse woollen-cloth, cured salmon and other fish, which were exported to England, France, Holland, Flanders, and *Hamburgh*, whence there were imported linen, fine woollen-cloth, wines, oil, salt, soap, dye-stuffs, spices, hardware, iron, armour of various kinds, malt, wheat, and numerous other articles. During the regency of the *Duke of Albany*, in the time of *Robert III.*, *Donald*, Lord of the *Isles*, having entered into an alliance with England, asserted a claim to the earldom of *Ross*, and raised an army of 10,000 men, to obtain forcible possession of that territory; on which occasion the citizens of Aberdeen, headed by *Sir Robert*

Davidson, their provost, joined the forces under the Earl of Mar, which had been raised to oppose Donald, Lord of the Isles; and encountering the army of Donald at Harlaw, about eighteen miles to the north of the city, a sanguinary battle took place, in which Sir Robert and many of the citizens were killed. The conflict terminated with the day, neither party claiming the victory, but in the course of the night the Highlanders retreated to the mountains. The provost was buried in the church of St. Nicholas, near the altar of St. Ann, which his father had founded. The standard borne by the citizens on the occasion of this battle was long preserved in the armoury of the town. On the release of *King James*, son of Robert III., who had been kept as a prisoner in England during the regency, Aberdeen was one of the four cities which became bound to pay the English monarch £40,000, for his maintenance and education while in captivity. After the murder of James, in the year 1437, the citizens chose for their provost Sir Alexander Irvine of Drum, whom they invested with the title of captain and governor of the city; and in the anarchy which prevailed during the minority of *King James II.*, they fortified the town, armed themselves, and enforced the strictest military discipline. In 1448, James II. made his first visit to the city, where he was received with every demonstration of loyalty and respect; and in 1455, the same marks of attention were paid his queen.

Upon the death of *James III.*, at the battle of Sauchie-Burn, in 1488, an attempt was made to rescue the young prince from the power of a faction that had led him into rebellion against his father, James III.; in which attempt the citizens concurred, attaching the common seal of the corporation to their resolutions to that effect. About the same time, Sir Andrew Wood, admiral of Scotland, endeavoured to deprive them of the lands of Stoeket granted to them by King Robert Bruce, but, on appeal to the sovereign, their possession was confirmed by a decree of JAMES IV., in 1497. This monarch frequently visited the city, and, on one occasion, remained here for a considerable time, while making arrangements for the establishment of a university, for which purpose he obtained from Pope Alexander a bull dated the 6th of February, 1494. Under an apprehension of invasion from England, in consequence of the countenance afforded to Perkin Warbeck, in the reign of Henry VII., by the Scottish monarch, the citizens fortified the town, erected a blockhouse near the mouth of the river, and threw up a breastwork as an additional defence; but a treaty for peace rendered these preparations unnecessary; and on the subsequent marriage of James IV. with the Princess Margaret, daughter of the English monarch, the council sent a deputation of the citizens, attended by a band of minstrels, to congratulate their sovereign. In the year 1511, the queen visited Aberdeen, where she was received with acclamations of joy; and during her stay the chief streets of the city were hung with tapestry and fancifully adorned. The inhabitants, in 1513, contributed a company of spearmen, and a squadron of horse, towards the expedition of Flodden Field, in which the king and many of the Scottish nobility were killed. A few years afterwards, in 1525, Alexander Seton of Meldrum, in resentment of a supposed affront to his clan, entered the city at night, with a large party of his followers, and a battle

ensued, in which eighty of the citizens, including several of the magistrates, were slain. In 1530, Lord Forbes of Castle-Forbes, who had been in the habit of receiving annually a tun of wine for preserving the fisheries of the rivers Dee and Don, provoked by the discontinuance of this present in consequence of a quarrel between his sons and the citizens, entered the city with a numerous retinue, and a fierce conflict arose, which terminated in his complete defeat. On his giving security, however, for the future good conduct of his partisans, the magistrates renewed their accustomed present. In 1540, James V., after the melancholy loss of his two sons in one day, visited the city, attended by his queen and court, to divert his grief, and remained for fourteen days; and the citizens fitted out a ship of war, to join the royal squadron in the Firth of Forth, to convoy the king to England, on a visit to Henry VIII. Upon the invasion of Scotland by the Duke of Somerset, in 1547, the citizens furnished a large supply of men to join the queen's forces under the Earl of Arran, of whom very few returned from the fatal battle of Pinkie; and in 1552, the earl, who had been appointed regent during the minority of Mary, attended by the queen dowager, visited the town, and was hospitably entertained by the citizens.

On the introduction of the Reformed religion, the citizens were little disposed to receive it. At the solicitation of Gavin Dunbar, Bishop of Aberdeen, in 1525, a manifesto was issued by the king, directing the magistrates of Aberdeen to inquire into the conduct of those who maintained heretical opinions; but it was not till 1544 that any attention was paid to that injunction, when two Protestant citizens were committed to prison by the Earl of Huntly, then provost of the city, till they should be brought to trial. In 1559, on the approach of a body of Reformers called the Congregation, the magistrates took the precaution of removing from the church of St. Nicholas the sacred vessels, and ornaments, with every thing of value, which they deposited, with the archives of the town, in a place of security. On the 29th of December, in that year, a large party of Reformers from Angus and Mearns entered the city, resolved upon the destruction of the sacred edifices, and commenced an attack on the spire of the church, which they attempted to pull down. But the citizens, flying to arms, arrested the work of demolition, and it was not till the 4th of January following, that the Reformers ventured to renew their efforts. They then proceeded to the monastery of the Black friars, in School-hill, and the convent of the Carmelites, on the Green; and, having demolished those buildings and carried off the property, advanced to the monastery of the Grey friars, in Broad-street, stripped the church of its leaden roof, and were about to demolish the building, when the citizens again interposed and prevented further injury. The citizens, notwithstanding, ultimately embraced the Reformed religion; and in a meeting of the council, it was resolved to demolish the monasteries, to convert the materials to the public use, and to sell the silver, brass, and other ornaments, which had been removed from the church of St. Nicholas, and place the proceeds in the common fund of the city. It was resolved, also, to furnish forty men for the service of the Congregation, and to use all their efforts for the suppression of idolatry; and Adam Heriot, friar of the

order of St. Augustine, and a brother of the abbey of St. Andrew, having renounced the errors of popery, was appointed by the General Assembly minister of Aberdeen, which office he held till his death. In 1562, MARY, Queen of Scots, in her progress through the north, visited Aberdeen, where she was hospitably entertained, and during her stay was waited upon by Lady Huntly, who, interceding for her son Sir John Gordon, obtained his pardon, on condition of his confinement in Stirling Castle during her majesty's pleasure. On his way to that fortress, however, he escaped from his guards, and returning to the north, appeared with a body of 1000 horse, and was soon after joined by his father, the Earl of Huntly. The queen's army, under the command of the Earl of Murray, having come from Inverness to Aberdeen, marched against the forces of the Earl of Huntly and his son, over whom they gained a complete victory; the earl was killed, and his two sons, Sir John and Adam Gordon, with many others, were brought prisoners to Aberdeen, where Sir John Gordon, two days after the battle, was beheaded in Castle-street.

In 1581, JAMES VI. paid a visit to Aberdeen, on which occasion the citizens presented him with 3000 merks in gold; and in 1589, that monarch, attended by his court, remained in Aberdeen for some time, during which butts for the practice of archery were erected on Castle-hill, for their amusement. In the same year, the citizens fitted out a ship of war, to join the squadron intended to convoy the king and queen, on their return from Denmark. In 1592, the king again visited the city; and though welcomed by the usual presents, he took a bond from the magistrates that they would not confederate with the Earl of Huntly, nor join with Jesuits, priests, or rebels, but faithfully observe the true doctrines of the Reformed religion. On the defeat of the royal forces in Banffshire, in 1594, the king repaired to Aberdeen, where, raising a body of troops, he was joined by Lord Forbes and other barons, against the popish Lords Errol, Angus, Huntly, and others; and in 1600, the inhabitants celebrated the escape of their sovereign from the conspiracy of the Earl of Ruthven, by a public procession, and presented an address, composed in Latin by the rector of the grammar school, expressing their abhorrence of the attempt on his life. In 1617, after his accession to the throne of England, James VI. visited his native country, and the magistrates of Aberdeen received intimation that he would visit their city, in his progress through the north; but their expectations were not fulfilled. In 1620, Sir Thomas Menzies, provost of the city, was sent on a mission to the court of London, and on his introduction presented to the king a valuable pearl, which, it is said, has a place in the imperial crown of Great Britain.

The city sent a deputation to express to CHARLES I., on his landing in Scotland, a testimony of their affectionate loyalty. At this time, the Covenant, which had obtained almost universal subscription, found but little support in Aberdeen; and the citizens, firmly attached to their sovereign, acquiesced in all his endeavours to establish episcopacy. In 1638, the Earl of Montrose, the Lords Coupar, Forbes, and others, with the ministers of Irvine and Pitsligo, appeared in the town, as commissioners from the General Assembly, and called upon

the citizens to subscribe the Solemn League and Covenant. Failing in their object, they took their departure, and the Assembly held a court at Glasgow, at which they ordered the Covenant to be subscribed, on pain of excommunication: this order was generally obeyed, and the whole country became subject to the Covenanters, with the exception of Aberdeen, which, under the influence of the Marquess of Huntly, a zealous adherent of the reigning monarch, still held out. In this state of affairs, the citizens placed the town in a posture of defence: the provost and sixteen of the principal citizens formed a council of war; a vessel laden with arms and warlike stores arrived in the harbour from England, and every preparation was made to resist an attack. The Earl of Montrose, at the head of an army of Covenanters, made his appearance in the neighbourhood, and advanced to the town with a force of 9000 horse and foot, which he encamped on the links of Aberdeen; while the Earl of Kinghorn, who had been appointed governor of the town, had only a garrison of 1800 for its defence. After some time, the Earl of Montrose withdrew his army to Inverury; but, again encamping on the links, the citizens ultimately subscribed the Covenant, and four of them were appointed by Montrose as commissioners to the General Assembly at Edinburgh. During the progress of the civil war, the town suffered materially from all parties, as they became successively predominant, and was exposed to continual vicissitudes. The last battle that occurred here was in 1646, in which year Major Middleton, arriving in the town, took the command of the Covenanters' army, against the Marquess of Huntly and the Earl of Aboyne, when it fell an easy conquest to the marquess, who was, however, soon after seized by the Covenanters, and sent, with many others, to Edinburgh, where he was put to death. *Charles II.*, on his return from the continent, was received in Aberdeen with every feeling of attachment; the keys were delivered to him by the provost, and he remained in the town for more than a week. On his restoration in 1660, the citizens testified their joy by a public procession, and sent a deputation to London, to present a congratulatory address.

In 1668, the city raised a corps of 120 men, in augmentation of the militia; and on the subsequent accession of *James II.* and of *William III.*, the inhabitants duly testified their loyalty. The accession of *Queen Anne*, daughter of James II., was proclaimed here with public rejoicings; and on the union of the two kingdoms, in 1707, Aberdeen, in conjunction with the burghs of Arbroath, Montrose, Brechin, and Bervie, sent a member to the united parliament. Soon after the accession of *GEORGE I.*, the Earl of Mar, a zealous adherent of the exiled family, assembled some forces at Braemar, in the highland districts of Aberdeenshire, and proclaimed the Chevalier de St. George, son of James II. (or James VII. of Scotland), sovereign of Britain by the title of James VIII., and levied an army of 10,000 men for his support. The magistrates of Aberdeen, who were zealously attached to the reigning family, put the city in a state of defence; but the partisans of the Pretender, having gained an ascendancy, assumed the civil government, and the earl-marischal, arriving soon after with a squadron of horse, proclaimed the Pretender at the Cross, on the day for the election of the city officers.

The magistrates and council absented themselves, without making any election for the ensuing year; and on the day following, the earl-marischal, in the East church, chose such of the burgesses as were favourable to his cause, and formed an administration for the government of the city. The earl levied an imposition of £200 for the use of the Pretender's army, and £2000 as a loan, which, with other supplies, were sent to his head-quarters at Perth. The Pretender soon afterwards arriving, with a retinue of six gentlemen, from France, landed at Peterhead, and passed incognito through Aberdeen to Fetteresso, on his way to Perth, where he was received by the Earl of Mar and the earl-marischal; the professors of Marischal and King's Colleges having waited upon him at Fetteresso, with an address of congratulation. The royal army, however, under the Duke of Argyll, was every day increasing in numbers, while that of the Pretender was rapidly diminishing, and was eventually dispersed; the administration of the city returned into its proper channel, and the election of the magistrates, which had been interrupted by this rash adventure, was made as usual. In 1716, a fire broke out at the Gallowgate, which very soon extended itself to other parts of the town; many houses were destroyed, and the council made a liberal contribution for the relief of the sufferers. This calamity was not long after followed by apprehensions of a famine, from a continued state of unfavourable weather; to counteract this evil, the magistrates and council, with the neighbouring gentry, supplied the town with 4000 bolls of meal, and imported a considerable quantity of grain from Holland. In 1741, a fire broke out in Broad-street which destroyed many houses, the dwellings being at that time chiefly built of wood: and an act of council was soon afterwards passed, enjoining that the outer walls of all houses should be in future built of stone. The city consequently began to assume a more regular and handsome appearance.

On the landing of Charles Edward, eldest son of the Pretender, in 1745, the citizens firmly maintained their allegiance to the reigning family; and General Cope embarked his forces at this place, previously to the battle of Prestonpans. Hamilton, an exceedingly zealous partisan of the adventurer, marched to Aberdeen, with a detachment of the rebel army, on the day of election of the town magistrates, and proclaimed Prince Charles regent of the kingdom; he compelled the magistrates to attend him, and liberated the prisoners in the gaol. In November, Lord Lewis Gordon, who had been appointed by the Young Pretender lord lieutenant of the counties of Aberdeen and Banff, made his appearance in the city, summoned the magistrates to attend him at the town-house, and completed the election which had been suspended on the arrival of Hamilton: he appointed magistrates whom he thought likely to promote his views, but they all refused to act; and made his deputy lieutenant-governor of the town. Soon afterwards, Lord John Drummond arrived in the city, as commander-in-chief of the forces of His Most Christian Majesty, and published a manifesto at the market-cross, calling on the citizens for their support; but it received little attention. In the mean time, the Earl of Loudon, commander-in-chief of the royal forces, having assembled an army of Highlanders, consisting of the clans of the M'Leods, Monroes, Sutherlands, and others, ad-

vanced to Aberdeen, to deliver the city from the possession of the rebels; but Gordon, who had gone out to intercept them, meeting with some success, returned to Aberdeen with several prisoners, among whom was the principal of Marischal College, and levied a contribution of £1000 for the maintenance of the rebel army. On the 8th of February, 1746, a party of the rebels, flying from before the army under the Duke of Cumberland, arrived in the city; but they were soon followed by the whole of the royal forces, who were cantoned in the town, in Old Aberdeen, and the neighbouring villages; and on the 27th, the duke, with his entire staff, and a company of dragoons, made his appearance here, and was congratulated by the provost and magistrates on his success. The army remained in their quarters till the beginning of April; and upon their departure, the city was protected by a garrison, and the newly-erected buildings of Gordon Hospital were occupied as a temporary fort. After the battle of Culloden, the magistrates voted the freedom of the city to the Duke of Cumberland, which was presented to him in a box of gold. On the anniversary of the accession of George I., some of the officers of the army quartered in Aberdeen ordered a general illumination, which not being so fully complied with as they expected, orders were given to their soldiers to break the windows of the houses of the inhabitants. Upon this occasion, the magistrates issued a warrant for the apprehension of the officers who had issued those orders, and committed them to prison, till they gave security for the reparation of the damage.

The coronation of *George III.* was celebrated here with great rejoicings; and soon after the commencement of the American war, the city raised a corps of 500 volunteers for the defence of the town and port, and offered to provide a regiment for the service of government: in 1781, it fitted out three privateers, two of which were cut out of the bay of Aberdeen, where they were riding at anchor, by the notorious Captain Fall, under the guns of the newly-erected battery. During the scarcity that prevailed in 1782, the magistrates raised large sums of money for the alleviation of the sufferings of the poor; and in cases of shipwreck, of which many melancholy instances have occurred off this part of the coast, they have always been remarkable for the liberality of their contributions of relief. In 1809, from the increase of the trade and shipping of the port, it was found necessary to extend and improve the harbour, a work which was shortly proceeded with under the superintendance of the late Mr. Telford, the eminent engineer; and subsequently, many changes have been made in the buildings and plan of the city. New streets have been opened; the public roads and approaches have been greatly improved; several handsome public buildings have been erected, and the whole being built of the beautiful species of granite peculiar to this part of the country, the city presents an appearance of splendour and magnificence fully entitling it to the appellation of the metropolis of the north.

In the month of September, 1848, Her Majesty the Queen, Prince Albert, the Prince of Wales, Prince Alfred, and the Princess Royal, with their attendants, visited the city on their way to Balmoral, in Strathdee. The royal yacht arrived here on the morning of Thursday, the 7th of September; and at half past one o'clock, the provost and magistrates of the city proceeded from

the town-house to the yacht for the purpose of presenting a dutiful address to Her Majesty, and the freedom of the city to her royal consort. A deputation from the senatus academicus of Marischal College was also in attendance, for the purpose of presenting an address from the university. Later in the afternoon, His Royal Highness visited Old Aberdeen, halting at King's College, where the Earl of Aberdeen, as chancellor of the university of King's College, and the professors of this ancient seat of learning, were in waiting to receive the party at the entrance: an address from the senatus was presented to the prince in the college hall by Lord Aberdeen, and Provost Nicoll presented an address from the magistrates of Old Aberdeen. After visiting the library and chapel, His Royal Highness walked from the college to the old cathedral, and was there received by the reverend minister of the parish, who conducted him through the edifice. The royal party then returned to New Aberdeen, and paid a visit to Marischal College: here an address was also presented, and the prince inspected the library, museum, and observatory of the university. The polished-granite works of Messrs. McDonald and Leslie were next visited; and at about half past five o'clock, His Royal Highness rejoined the queen in the royal yacht. In the course of the evening, Her Majesty received the principal and professors of King's College in the saloon of the yacht; also the provost and magistrates of Old Aberdeen: and on the following morning, the 8th of September, the corporate, ecclesiastical, and other authorities of Aberdeen took up their appropriate positions for the public reception of her Majesty on landing. At half past eight o'clock the royal family quitted the yacht, and took their seats in the royal carriage, a procession being formed, which passed along the quay, and through the city. On arriving at the confines of the city at Holburn, the magistrates and other city officials drew aside, and the carriages of the royal party proceeded on their way to Balmoral, which was reached in the afternoon, after a progress marked with the most lively demonstrations of loyalty and affection. On the occasion of this visit, His Royal Highness Prince Albert was invested with the freedom of Old Aberdeen, as well as that of Aberdeen; and also had the degree of LL.D. conferred upon him by the senatus academicus of King's College.

This town, which, on its being restored from the devastation it suffered during the wars with England, obtained the name of New Aberdeen, is situated on slightly elevated ground on the north bank of the river Dee, near its influx into the sea, and about a mile and a half from the mouth of the river Don. It is bounded on the south by the harbour, and on the east by the Castle-hill. The more ancient part is built on a very unequal surface, consisting of several hills of trifling elevation, of which the Castle-hill, St. Katharine's hill, School-hill, Woolman-hill, and Port-hill are the most prominent. At the entrances from the suburbs into the principal streets were formerly gates, the chief of them being Gallowgate, Justice-port, Futtie's-port, Trinity or Quay-head port, Netherkirkgate-port, and Upperkirkgate-port, all of which have been removed in the various improvements effected at different times. The present town is rather more than a mile in length, from the barracks on the east to the extremity of Union-street on the west, and about 1500 yards in breadth, from the quays on the

south to Love-lane on the north. The more modern part, forming by far the greater portion, consists of spacious and well-formed streets, of which Union-street, extending from the west end of Castle-street to the western extremity of the town, is seventy feet wide, and is carried over the Denburn rivulet, and the vale through which it flows, by a magnificent bridge of granite. This bridge consists of one spacious arch, 150 feet in span, and 50 feet in height, crowned with a parapet and cornice surmounted by an open balustrade, and having a rise of twenty-nine feet only from the spring of the arch, on the west side of which is a dry arch, and on the east two dry arches, to raise the street to a proper level. Two streets, also, have been arched over for the line of Union-street; and carriages highly loaded can pass under the arches with ease. King-street, leading from Castle-street towards the north, is a fine street, sixty feet in width; and St. Nicholas street, branching from Union-street to the north, is also a handsome and spacious street. During the latter part of the last century, a number of new streets were opened, of which the principal are Virginia-street, Tannery-street, North-street, Marischal-street, Belmont, Queen, James, Carmelite, George, and St. Andrew's streets; and since the commencement of the present century, the area of the town has been at least doubled. The houses, built of fine granite, with which the neighbourhood abounds, have a splendid appearance; and the city generally, from the style and character of its buildings, wears a commanding aspect.

Aberdeen was at first lighted with gas extracted from oil, by a company established in 1824; but finding it an unprofitable undertaking, they afterwards had recourse to coal-gas, in the production of which the best parrot-coal is used, and the streets are now brilliantly lighted with gas, carefully purified, and conducted by cast-iron pipes, of which the aggregate length exceeds forty-eight miles: the works are extensive, and conveniently situated in the lower part of the town. The inhabitants were originally supplied with water from wells sunk in various parts of the town, and from a cistern in Broad-street, containing more than 30,000 gallons. The quantity, however, being found inadequate to the increasing population, works were constructed by commissioners for bringing a supply from the river Dee, and steam-engines erected at the north end of the bridge of Dee, to which the water is conveyed by a tunnel about 500 yards in length, into which it enters, not directly from the river, but after passing through a filtering bed of sand. The engines, two in number, of thirty-horse power each, can raise in twenty-four hours a supply of 1,100,000 gallons; and the water is thence forced into a cistern at the west end of Union-place, 40 feet above the level of the street, and 130 feet above that of the engine, from which cistern the water is distributed through the city by cast-iron pipes. The management of the supply of water, and also of the lighting, watching, and cleansing of the streets, is vested in the commissioners of police.

The approaches have been rendered commodious, and much improved in appearance; the great north road from Stonehaven, the road from Charlestown on the north side of the Dee, the road from Skene, and the great roads from the north and north-west, all meet in the centre of the town. The bridge over the Dee was pro-

jected in 1488, by Bishop Elphinstone, who, dying before any considerable progress was made in its erection, left a large sum of money for its completion, which was applied to that purpose by his successor, Bishop Dunbar, who, on the opening of the bridge, in 1518, made over to the magistrates and council ample funds for keeping it in repair. It is a handsome structure of seven arches, and had a chapel at the northern extremity, dedicated to the Virgin Mary, which was destroyed at the Reformation, and at the other end a watch-tower, in which the citizens mounted guard in times of danger. The greater portion of the bridge was rebuilt in 1722, and about ten years ago it was nearly doubled in width, at an expense of £7000; the whole charges at each period were defrayed from the endowment left by the bishops, and the funds are still unexhausted. Lower down the river, where the banks are precipitously steep, an elegant suspension-bridge has been constructed, at an expense of £8000, raised by subscription, affording facility of access to the city in that direction; and communicating with Old Aberdeen is an interesting and truly picturesque bridge over the Don, of one lofty arch, the particulars of which are detailed in the article OLD ABERDEEN.

In Castle-street, to the west of the town-house, is the *Cross*, the pavement round which was formerly used as an exchange, and frequented by the merchants of the city. This structure was erected in 1686, to replace the ancient cross, and is of hexagonal form, eighteen feet in height: the faces, which are ten feet in breadth, are ornamented with duplicated Ionic columns at the angles, sustaining an entablature and cornice, surmounted by a parapet and an open balustrade; and from the centre of the area, which is twenty-one feet in diameter, rises a lofty Corinthian column, supporting a unicorn bearing a shield with a lion rampant. The entrance was once by a door in the north face, leading to a staircase forming an ascent to the platform, from which all public proclamations were read. The entablature above each of the faces is divided into two compartments, in the western and eastern of which are respectively the arms of the town and the royal arms of Scotland, and in the others busts of the sovereigns from James I. of Scotland to James II. of England. A few years ago the Cross was taken down, and rebuilt on a site farther to the east than the former; but the original structure was carefully preserved, except that the masonry between the supporting columns was removed, and the lower part of the fabric thus thrown open. *The Barracks* stand near the site of the ancient chapel of St. Ninian, on the Castle-hill, which, together with all the ground within the ramparts of the castle, was given to government for that purpose, by the magistrates and council of the city. They were erected in 1794, at an expense of nearly £18,000, and form a handsome range of buildings, containing, exclusively of the officers' apartments, accommodation for 600 men, with guard-room, chapel, infirmary, and other requisites, and an ample ground for parade.

The Mechanics' Institution was commenced in 1824, for the improvement and instruction of its members, by the delivery of lectures, at a moderate expense, on chemistry, natural philosophy, and other branches of science. In a few years, it began to languish, and in 1830 it was found necessary to discontinue the lectures.

The library, however, which at that time contained nearly 1100 volumes on practical science, induced those of the subscribers who remained, to supply funds for its preservation; and in 1835, the plan of the institution was remodelled by the establishment of classes, upon moderate terms, in the various branches of science and literature, since which it has continued to flourish. *The Society of Advocates* was incorporated by royal charter in 1774, and in 1799 by a more extensive charter, in which they are styled the "President and Society of Advocates in Aberdeen," for the improvement of its members in their profession, and for the establishment of a fund for the relief of their widows, orphans, and near relatives. The widows receive an allowance of £40 per annum. The society have a valuable law library of 1900 volumes, which is open to the use of all its members; and they have lately erected a spacious building in Union-street, containing a handsome hall for holding their meetings, a library, and other apartments. *The Medical Society* was first instituted in 1789, by a small number of young practitioners, for their mutual improvement. They held their meetings in one of the class-rooms of Marischal College, and subsequently in apartments hired for that purpose, till, from the increase of their numbers, and the acquisition of sufficient funds, they erected the Medical Hall in King-street, which was completed in 1820. It contains a hall for their public meetings, a library of 3000 volumes on medical science, to which the members have free access, and a museum, with class-rooms and other apartments. The society consists of two classes of members, one of practitioners resident in the city and neighbourhood, who meet once in the month for mutual communication; and the other of students of medicine, who meet weekly for the discussion of medical questions, and for attending lectures on the various branches of the profession.

There are several subscription libraries, of which the principal are those of Messrs. Brown and Co., D. Wyllie and Son, and W. Russel; they contain collections amounting in the whole to about 60,000 volumes, and the terms of subscription vary from fifteen shillings to £1. 11. 6. per annum. *The Athenæum* in Castle-street, and the Union Club News-rooms in Union-street, are well supported, and amply supplied with journals and periodical publications. Card and dancing assemblies, which are maintained by subscription, are held regularly every month, during the winter season, in the spacious rooms erected about thirty years ago. *The Theatre*, situated on the west side of Marischal-street, was built by subscription, in 1795, at an expense of £3000; it is a handsome structure, capable of seating 600 spectators, and is opened occasionally by itinerant companies, to whom it is let by the subscribers. A weekly concert was, for many years, conducted by a proprietary of amateur and other subscribers, and a hall was erected for its use, on the east side of Broad-street; but the concerts have long been discontinued. A *Golf Club* was originally established in the vicinity, by a society of gentlemen, in 1780, which after its dissolution in the course of a few years, was revived in 1815, under the appellation of the Aberdeen Golf Club. It is under the direction of a committee, consisting of a captain, secretary, and four councillors, chosen annually at the general meeting. The members are admitted by ballot, on payment of £1. 1., and an annual subscription of five

shillings; and at the annual meeting, which takes place in May, a gold medal is awarded to the most successful player. A society for the practice of archery also once existed, under the designation of the "Bowmen of Mar:" in a short time, however, it dwindled away. Races were formerly celebrated here, under the patronage of the members of the Northern Shooting Club, who, in 1790, voted a piece of plate, of fifty guineas value, and the magistrates also gave a purse of thirty guineas; but they were soon discontinued. After an interval of twenty years, an association of the gentry of the counties of Aberdeen, Banff, and Kincardine, was formed for their revival; and an excellent course was made on the links of Aberdeen, where races took place annually in October, until 1828, continuing for four days, under the superintendence of a president and stewards, chosen from the association. At one of the meetings, four silver cups, value fifty guineas each; a purse of sixty guineas, by subscription of the ladies; an open plate of fifty guineas, by the corporation of the city; a silver cup, value 100 guineas, by the members of parliament for the counties; and an open plate of fifty guineas, by the members for the boroughs, were run for, and spiritedly contested.

A mineral spring called the *Spa well*, rising at the base of Woolman-hill, near the site of the Infirmary, was long celebrated for its efficacy in the cure of nephritic diseases; it appears to have been in repute from a remote period, and was inclosed with a building ornamented with representations of six of the Apostles. In 1516, it attracted the notice of Mr. William Barclay, an eminent physician, who analyzed the water, which he found to contain carbonate of iron and vitriol. The building having fallen into dilapidation, was restored by George Jamieson, the celebrated painter, but was afterwards destroyed by an inundation of the Denburn rivulet, and the spring remained concealed under the ruins of the building, till 1670, when it was discovered, and the present building erected by Alexander Skene, of Newtyle, then bailie of the town. It was again lost in 1751, and subsequently discovered by Dr. James Gordon, long after which it continued to flow with its accustomed freedom; but from recent erections at the infirmary, in the immediate neighbourhood, the water has a third time disappeared. Baths were opened a century ago on the east side of the Denburn vale, for which there was a commodious bathing-house, with dressing-rooms and every requisite; they were amply supplied with pure spring water, and, previously to the establishment of those near the sea, numerous attended. The beach on the sea-coast is a fine level sand, affording every facility for bathing, and is much frequented during the season, by visitors from different parts of the country; bathing machines are kept, and on the shore are warm salt-water baths fitted up with every accommodation. The environs of Aberdeen afford various interesting walks and rides, through a district abounding with romantic scenery.

The principal MANUFACTURES carried on in the town, prior to 1745, were plaidings, serge, coarse woollen-stuffs, and knit-stockings, of which last great quantities were sent to Holland and Germany; and to such perfection were the stockings made here brought, that those of the finest wool were sold at from two to five guineas per pair. The manufacture of coarse woollen-cloth was also introduced about this period, but, after languishing

for a time was abandoned, towards the close of the century. The *Linen* manufacture was originally introduced in 1749, by a company from Edinburgh, for the spinning of flax, the making of thread, and the weaving and bleaching of cloth, all of which were soon brought to a considerable degree of perfection. An extensive mill for spinning flax was erected on the left bank of the river Don, in 1798, and also works for bleaching yarn and cloth. Another was soon after erected at Broadford, near the town, the machinery of which was driven by steam; and there are now three extensive establishments for the manufacture of linen of every quality, from the coarsest Osnaburghs to the finest shirting, and for the making of thread of every degree of fineness. The manufacture of sail-cloth is also carried on, and likewise that of brown sheeting, of which large quantities are sent to the East Indies and America. Tape is woven to a large extent, by the Aberdeen Tape Company. The number of persons employed in the flax manufacture is about 3000, of whom about one-half are females. The *Cotton* manufacture was introduced in 1779, by Messrs. Gordon, Barron, and Company, who established a spacious bleaching and printing field at Woodside, where they also erected a large mill for spinning cotton-yarn, and weaving by machinery put in motion by the river Don. Another mill was soon afterwards established by Messrs. Forbes, Low, and Company, on the south side of the Denburn rivulet; the machinery of which is propelled by steam. There are now four establishments in the cotton trade, producing every variety of cotton goods; and in one of them, thread, equal in quality and fineness to that of flax, is made in large quantities and of all colours. The number of persons employed in the trade is about 4000, of whom a considerable number are women and children. The *Woollen* manufacture was introduced in 1789, by Mr. Charles Baird, who brought from England some carding-engines and spinning-jennies, with other apparatus, and erected a mill at Stonewood, for the manufacture of plaiding, serge, and the coarser woollen-cloths, by the aid of machinery. Several other factories were soon afterwards established, and the Messrs. Haddens, who had been long engaged in the stocking trade, erected extensive works on the Green, in which they employed the most improved machinery, propelled by powerful steam-engines. The manufacture of carpets is also carried on with success. The number of persons employed in the woollen trade is about 2500.

The manufacture of *Paper* was introduced in the year 1770, at Peterculter, in the vicinity of Aberdeen, where the business is still pursued; and several mills were subsequently established, of which the only one now left is on the right bank of the river Don, for making all the various kinds of paper, which, previously to the establishment of these works, was imported from Holland. The number of persons employed in the trade is about 400. The manufacture of *Combs*, which had been introduced in 1788, and carried on to a very moderate extent, was in 1830 commenced upon a greatly enlarged scale, by Messrs. Stewart, Rowell, and Company, who first employed steam-power in the manufacture, and introduced other improvements by which the articles can now be produced almost at a sixth part of the former cost. In this concern, about 250 persons are employed, and the number of combs of all kinds made

is about 43,000 weekly. The *Iron* manufacture is also very extensive. There are not less than eight foundries at present in active operation, in which the largest castings, and the heaviest articles, are produced; and numerous establishments are carried on for the manufacture of machinery of all kinds, five of which are engaged in the making of steam-engines. Iron boats are constructed in considerable numbers, and an iron vessel of 550 tons' burthen has lately been launched from the docks. There are also several establishments for the manufacture of chains and chain-cables, and of boilers for steam-engines. Above 1000 persons are generally employed in the iron trade. There are several *Rope-walks* of large extent, for the supply of the shipping of the port, and others on a smaller scale, for the making of cord and twine for various uses, and to a great extent for the making of fishing-nets: the number of persons in these works is about 200. Some breweries are conducted on an extensive plan, from which considerable quantities of ale and porter are sent to London and other places, where they find a ready market; and also several upon a smaller scale, for the supply of the town and neighbourhood. There are likewise tanneries in operation here. The present extensive trade in *Granite* appears to have originated with the Messrs. Adam, architects, of London, who, having entered into a contract for paving the metropolis, in 1764, commenced some quarries in the rocks on the sea-coast, near the lands of Torrie, and brought the stone, when prepared, to London. Finding this mode of supply, however, too expensive, they employed the Aberdeen masons to furnish them with stone; and in a short time a very extensive trade was established, not only in paving-stones, but in blocks of granite for public buildings and works of great magnitude. Many of the largest blocks have been sent to Sheerness, for the construction of the docks at that place, and to London, for the erection of bridges over the Thames, and the foundation of the new houses of parliament. The granite, which is extremely hard, and of great beauty when polished, has lately been brought into extensive use for chimney-pieces, vases, pedestals, and other ornamental works, by the application of machinery to the purpose of polishing it, by which the expense is reduced to about one-third of that by hand labour. The quantity of granite exported in 1844, exceeded 27,400 tons.

Aberdeen carries on an extensive TRADE with Russia, Sweden, Denmark, Poland, Prussia, Germany, Holland, Spain, Portugal, and with the West Indies and America. Its chief exports are oatmeal, grain, butter, eggs, salmon, porter and ale, cattle, sheep, and pigs, linen, cotton, and woollen manufactured goods, and granite; the chief imports are coal, lime, flax, cotton, hemp, wool, iron, salt, timber, whalebone, wheat, and flour. The number of vessels registered as belonging to the port, in 1844, was 206, of the aggregate burthen of 38,000 tons. The tonnage of the several vessels which entered the port in the same year, was 289,483, of which 257,703 belonged to Aberdeen, 27,540 to other British ports, and 4240 to foreign ports; and the amount of duties paid at the custom-house was £76,259. The HARBOUR was, for many years, an open basin, with an island in the centre called the Inches, which separated the channel of the river from the harbour, on the north side of it; and the only building was the Quay-head,

which, having become ruinous, was repaired in 1484, and rebuilt in 1527, with stone brought from Dundee. A pier was built in 1607, which, in 1623, was extended from the quay-head towards the fishing-village of Futtie: by this means a considerable portion of land was gained from the basin, and which now forms part of the town. In 1755, the magistrates and council engaged Mr. John Smeaton, an eminent engineer, to improve the harbour; and in 1770, he proposed a stone pier on the north side of the entrance, which, confining the stream of the river within narrow limits, would remove a bank of sand accumulated there. In 1773, an act of parliament was obtained, and the improvements on Mr. Smeaton's plan were carried into full operation, at a cost of £18,000. This pier was 1200 feet in length; it was twenty feet broad at the base, twelve on the summit, and sixteen feet in height, at the western extremity, and gradually increased towards the east, where it was thirty-six feet broad at the base, twenty-four on the summit, and thirty feet high. It was faced with blocks of granite, many of which weighed more than three tons each. The pier, however, by a deviation from Mr. Smeaton's original plan, being erected too far towards the north, a great swell was occasioned in the harbour at high water, to remedy which, a breakwater was projected from the west end of it, towards the channel of the river, with complete effect. The harbour was further improved by Mr. Telford, who, in 1810, extended the original pier 900 feet further towards the east, where it terminated in a circular head, sixty feet in diameter, which was destroyed by the sea in the following winter, and rebuilt with a slope towards the sea. A breakwater 800 feet in length was also erected, on the south side, by which the harbour was protected from the south-east storms, and the depth of water increased to nineteen feet. Commodious wharfs were formed along the harbour, on the south-west side of the village of Futtie, and quays nearly 4000 feet in length have been constructed: the Inches, also, are now connected with the town by a swivel-bridge opposite the end of Marischal-street. In 1843 an act of parliament was obtained for converting a large part of the harbour into a wet-dock, and in 1847 an act was passed, as noticed below, for some further harbour works. The custom-house, situated on the Quay, is a neat building purchased by government, and fitted up for the purpose; the establishment consists of a collector, comptroller, land and tide surveyors, four land-waiters, twenty-eight tide-waiters, six boatmen, and other officers.

Ship-building is carried on to a considerable extent; there are six building-yards, and a patent-slip has been constructed in the harbour, at an expense of £3337: in 1838, the number of vessels built in these yards was twenty-three, and their aggregate burthen 4058 tons. Four steam-packets, of the aggregate burthen of 1360 tons, and of 810-horse power, have long continued to ply to Leith, Inverness, Caithness, Orkney, and Shetland. In 1827, a steam-packet of 550 tons, called the *Queen of Scotland*, began to ply between Aberdeen and London, since which, others have been added, which sail weekly to London, and likewise one to Hull: these, together with a vessel engaged in the London and Inverness trade, belong to one company, whose steamers are now five in number, of nearly 3900 tons' burthen, and 1420-horse power. There are also steamers to Dundee,

and to Peterhead, during the summer. A *Salmon-fishery* has been carried on here from a remote period, and from the abundance of the supply afforded by the rivers Dee and Don, it is still continued, on an extensive scale, affording employment to about 200 persons. The average number taken in a season, is 20,000 salmon averaging ten pounds each, and 40,000 grilse of about four pounds each, of which by far the greater portion are packed in ice, and sent to the London market. The *Herring* fishery, a pursuit of comparatively recent establishment, at present employs about sixty boats, and, from the success with which it is attended, has every prospect of being considerably increased. The *Whale* fishery was first introduced here in 1753, and for some time continued to prosper; in 1820 there were fifteen vessels employed in the trade, each having a crew of fifty men, and in 1823 the quantity of oil brought home was 1841 tons. From that time, however, the trade began to decline, and it is now nearly abandoned.

The *Aberdeen Canal*, from the harbour of Aberdeen to the burgh of Inverury, was constructed by a company of £50 shareholders, who in 1795 obtained an act of parliament, incorporating them under the designation of the "Proprietors of the Aberdeenshire Canal Navigation," and empowering them to raise a capital of £20,000, which by a subsequent act, in 1801, was extended to £40,000. It was completed at an expense of £43,895, and opened to the public in 1807. The whole line, from the quay at this place to Port Elphinstone, on the river Don, at Inverury, is $18\frac{1}{4}$ miles in length: the width on the surface is 24 feet, and the average depth $3\frac{3}{4}$ feet; it has 17 locks, 5 aqueducts, and 56 common bridges, and the highest summit level is 163 feet above low water mark.

In 1845 an act of parliament was passed authorizing the construction of the *Aberdeen railway*, from Aberdeen to the Arbroath and Forfar line at Friockheim and at Guthrie, in the county of Forfar, with branches to the towns of Montrose and Brechin. This important line of communication, connecting the city with the south of Scotland and with England, leaves Aberdeen on the south side, and in its progress round the basin of the Dee, crosses the river by a majestic viaduct standing in a skew line across the channel. It passes near the towns of Stonehaven and Lawrencekirk, in Kincardineshire, through which county it takes its course into Forfarshire, where it has branches to the towns of Montrose and Brechin, the former on the east and the latter on the west side of the main line. The whole railway was permanently opened on April 1, 1850. In 1846 an act was obtained for the construction of a line to be called the *Deeside railway*, from Ferryhill, near Aberdeen, to Charlestown of Aboyne, a distance of 29 miles, along the valley of the Dee. Another act was passed the same year, for a railway from Aberdeen to Inverness. In 1847 an act of parliament was passed to authorize the purchase for railway purposes of a piece of ground at the upper part of the Inches, and upper part of the harbour of Aberdeen, previously vested in the harbour commissioners; and to enable the commissioners to construct some new harbour works.

The **MARKET**, which is amply supplied with corn, and with provisions of all kinds, is on Friday, and on the preceding day for meal: the market for fish, with which

the town is abundantly supplied, is daily. Fairs are held on the last Wednesday in April for linen; on the last Thursday and Friday in June, and the first Thursday and Friday in July, for wool; and on the last Wednesday in August for timber. The butchers' market, on the east side of the town, was erected by the corporation, in 1806, and consists of two ranges, having in one thirty-eight stalls twelve feet square, with a pavement four feet broad in front, and in the other forty-eight stalls, each ten feet square: within the area are fifteen slaughter-houses. Another market for butchers' meat was formed in 1816, in the Lochlands, on the north side of the town, containing forty-two stalls, thirteen feet long, and twelve feet wide, with a pavement in front five feet broad, and covered with a roof supported on slender cast-iron pillars. The fish market is held on the south side of the Shiprow, and is well arranged and fitted up, with a view to prevent the exposure of fish for sale in Castle-street. The meal, poultry, and fruit and vegetable markets are situated on the west side of King-street, and are amply supplied. In the fruit market, great quantities of strawberries and gooseberries, the produce of gardens in the neighbourhood of the town, are exposed to sale, frequently to the amount of £1000 annually. On the 29th of September, 1840, the foundation stone was laid of a *New Market*, the principal front of which is towards a street opened about the same time between Union-street and the quay. The structure is 318 feet in length, and 106 feet in breadth, and is divided into two stories, the lower of which is even with the old street called the Green, and the upper has three spacious and elegant entrances from Market-street. The hall, on the level of Market-street, extends the whole length of the building; it is fifty feet in height and the same in breadth, and towards its west end, near the top of the flight of steps leading to the basement story, is a beautiful fountain of polished granite, the work of Messrs. Mc Donald and Leslie. The roof of the hall is supported by fifty-eight pillars, and between them and the outer walls are the galleries, twenty-five feet broad, containing fifty-three shops and 160 yards of counter for dealers in small wares, besides a space of fifty by twenty-eight feet at the east end, occupied weekly as a grain market. In the hall, under the galleries, are fifty-three shops, and in its area benches upwards of 370 yards in extent for gardeners and provision sellers. The basement floor contains ninety shops, and forty-three yards of tables for fishmongers. This elegant building was designed by Mr. Archibald Simpson, a native of Aberdeen, and in every respect it does credit to his acknowledged talents and good taste.

The **GOVERNMENT** of the city, under a succession of charters from the reign of William the Lion to that of Charles I., who greatly extended the privileges conferred by his predecessors, which have been also confirmed by subsequent monarchs, is vested in a provost, four bailies, and eight councillors, assisted by a treasurer, master of shore-works, master of kirk and bridge works, master of the guild brethren's hospital, master of mortifications, and a dean of guild. There are seven incorporated trades, viz., the hammermen, bakers, wrights and coopers, tailors, shoemakers, weavers, and fleshers. The burgesses are entitled to numerous privileges, among which are, freedom to trade, and exemption from all tolls and customs on goods brought into the

town for their own use. The corporation are patrons of the city churches, and of the professorships of mathematics and divinity in Marischal College, and have the presentation to thirty-six bursaries in that establishment; they are also patrons of the grammar-school, and various other schools, and of the charitable endowments in the city. Here are two classes of burghesses, namely, burghesses of guild, who are entitled to trade in all branches of merchandise, but not to exercise any craft; and freemen of the seven incorporated trades, who have the privilege of exercising their respective crafts. The fees paid by strangers on becoming guild burghesses are £35, and by the sons of burghesses, £12; the fees paid by strangers on becoming trade burghesses are £11. 12. 2., and by sons of freemen, 10s. for the eldest, and £1. 10. for the younger. The jurisdiction of the magistrates extends over the whole of the city and royalty, and they hold a bailie court every Saturday, for civil actions to any amount, in which they are assisted by an assessor, appointed for that purpose, who is generally an advocate of Aberdeen. The sheriff, however, exercises a concurrent jurisdiction with the magistrates; and since the establishment of the sheriff's small-debt court, the civil business of the bailie court has been very much diminished. The police establishment is considered to be fully sufficient for all purposes connected with its institution, and is under the control of commissioners elected by the nine wards into which the police district was divided by the act of 1829. This city was formerly the head of a district, including the burghs of Arbroath, Montrose, Brechin, and Bervie, in conjunction with which it returned one member to the imperial parliament. At present, Aberdeen of itself sends a representative to the house of commons; and the right of election, previously in the magistrates and council, is, by the Reform act, vested in the resident £10 householders. The annual value of real property in the six parishes of the city, assessed to the Income tax for the year ending April, 1843, was £96,588; the amount for the parish of Old Aberdeen was £67,192.

The *Town House*, built at various periods, is situated on the north side of Castle-street, and has undergone frequent alterations: in 1750 the appearance of the front was greatly improved. It has five spacious and handsome windows, and above the roof is a tower surmounted by a spire 120 feet in height. The town-hall is about forty-seven feet in length, and twenty-nine feet wide, and is embellished with an elegant mantel-piece of variegated marble, executed in Holland, above which is a perspective view of the city, taken from the lands of Torrie. The walls of the apartment are hung with a full-length portrait of Queen Anne by Sir Godfrey Kneller, and full-length portraits of the Earl and Countess Findlater by Alexander; a portrait of Provost James Hadden by Pickersgill, and one of Provost James Blaikie by Phillips. This hall, which is appropriated to the meetings of the magistrates and council, is on public occasions brilliantly lighted by three elegant cut-glass chandeliers, suspended from the ceiling, and by twelve sconces on the walls. In the upper part of the building, on the west, is the town armoury, in which are deposited 300 muskets, a very ancient coat of mail, the staff of the banner borne by the citizens at Harlaw, and the furniture of the provost's charger when he attended the coronation of Charles I. at Edinburgh. The *County*

Buildings, in Union-street, erected in 1820, by the counties of Aberdeen and Banff, for festive meetings, at a cost of £11,500, is a handsome structure of finely-dressed granite, in the Grecian style of architecture, with a stately portico of the Ionic order. It contains a spacious assembly-room, richly decorated; card, tea, and supper rooms, and various other apartments.

The *Town Gaol*, adjoining the town-house, has been considerably enlarged. Above the entrance is a strong vaulted chamber, in which are deposited the records and archives of the town, the church registers, and other valuable documents. The *City Bridewell* was erected at an expense of £12,000, on a site of two acres and a half on the confines of the town, and was opened in 1809. It is a handsome structure in the castellated style, surrounded with a wall fourteen feet in height. There are five stories, of which part of the uppermost is used as an hospital, and the interior is divided throughout its whole length by a gallery, on one side of which are dormitories, and on the other cells for labour; the whole number of cells is 109, each eight feet long, and seven feet wide. The building is warmed by steam and lighted with gas. Adjoining the rear is the governor's house, containing a committee-room for the meeting of the magistrates, a chapel, and apartments for a surgeon, in addition to the requisite accommodations for the governor, matron, and other officers necessary for the performance of the various duties of the establishment. The prisoners are employed in profitable labour.

The university of MARISCHAL COLLEGE was founded in 1593, under a charter from James VI., by George Keith, fifth earl-marischal of Scotland, who endowed it with the church, conventual buildings, and lands of the Franciscan monastery, which had been presented to him for that purpose by the magistrates and council of the city, and with the lands,

tenements, and other property of the Dominican and Carmelite convents situated respectively on the School-hill and the Green, and which had been demolished at the Reformation. The original endowment was augmented by a grant of £300 per annum, by William III., payable out of the bishops' rents of Aberdeen and Moray, and by a grant of £105 per annum by Queen Anne; and the funds have since been increased by royal grants, for the foundation of additional professorships, and by donations and bequests from various individuals, for the foundation of bursaries and lectureships. The primary establishment consisted of a principal, three regents in philosophy and languages, six bursars, an *aconomus* and other officers. As at present constituted, the university consists of a chancellor, generally a nobleman of high rank, who is elected by the *senatus academicus*, and holds his office for life; a rector elected periodically by the *suppositi* of the university; a dean of faculty, elected by the *senatus academicus* and the senior minister of Aberdeen; and a principal, who is appointed by the crown. There are thirteen professorships, of which the Greek, civil and

Seal and Arms.

natural history, natural philosophy, and moral philosophy and logic, were founded in 1593, at the original institution of the university; and those of mathematics, divinity, oriental languages, church history, humanity, medicine, chemistry, anatomy, and surgery, at subsequent periods. Of these professorships, that of divinity, founded in 1615 by Mr. Patrick Copland, a dissenting minister at Norton in the county of Northampton, and that of mathematics, founded in 1613 by Dr. Duncan Liddell, are in the patronage of the town council; that of oriental languages, founded in 1723 by the Rev. Gilbert Ramsay, rector of Christ Church, Barbadoes, is in the patronage of his descendant, Sir A. Ramsay, of Balmaine; and all the others are in the patronage of the crown. There are also lectureships on practical religion, the evidences of Christianity, Scottish law and conveyancing, botany, *materia medica*, institutes of medicine, midwifery, medical jurisprudence, comparative anatomy, and agriculture. The lectureship on practical religion is in the patronage of the trustees of Mr. Gordon of Murtle; on Scottish law and conveyancing, in the patronage of the Society of Advocates; on agriculture, in that of the magistrates of Aberdeen; and all the others in the patronage of the college. Attached to the university are likewise 115 bursaries, varying in value from £5 to £30 each per annum, tenable for four years, and of which more than sixty are open to general competition, and thirty-six in the patronage of the town council. The average number of students is about 400.

The University Library, now very extensive and valuable, consisted originally of the books belonging to St. Nicholas' church, among which were several previously in the ancient monasteries, comprising the lives of the fathers of the church, and some volumes of the classics in manuscript. The collection has been greatly increased by successive donations, the most considerable being that of Mr. Thomas Reid, Latin secretary to James VI., who, in the course of his travels, had purchased the best editions of the classics, with the most celebrated works of the ancient philosophers, lawyers, and critics, and numerous valuable MSS., all of which he bequeathed to the university, in which he was educated, with a sum of money as a fund for its further improvement, and for a salary to the librarian. In 1782, the Earl of Bute, then chancellor, presented to the library a collection of 1400 volumes; and it was subsequently enlarged by the collections of Sir William Fordyce and Professor Donaldson. Altogether the number of volumes is about 12,000. *The Museum* contains numerous specimens in the various departments of natural history, and many artificial curiosities. Among its contents are, an Egyptian mummy; an antique statue of Esculapius, in white marble, two feet in height; the staff of office of the earls-marischal of Scotland; a box of gold presented to the university by the Earl of Buchan, in 1769, inclosing a silver pen, which is annually awarded as a prize to the most successful student of the Greek class; the dies for a gold medal two ounces in weight, given by the late John Gray, Esq., of London, to be presented to such of his mathematical bursars as should distinguish themselves in acquirements; the various apparatus for the illustration of natural history; and the common seal of the university, bearing the arms of the marischal family, and those of

the city of Aberdeen impaled, with the crest a meridian sun, and the motto *Luceo*. *The Observatory*, formerly on the Castle-hill, at a distance from the college, was removed on the erection of the present barracks, and government granted to the university a sum of money towards the building of another within the precincts of the college, which was completed in 1840. It contains a universal equatorial circle, a transit instrument, a moveable quadrant of two feet radius, an achromatic telescope with refraction apparatus, reflecting-telescopes, an orrery, and various other astronomical instruments, with a clock striking the seconds within the hearing of the observer, and an astronomical clock exhibiting the motions of the celestial bodies.

The buildings of the university, originally the Franciscan monastery, several portions of which were rapidly falling into decay, were taken down in 1838; and the present elegant structure, towards the erection of which government made a grant of £15,000, was completed at an expense of £25,000. The principal front of the present buildings, on the east side of Broad-street, occupies three sides of a quadrangle, and is in the later style of English or pointed architecture. The central range is ornamented with a stately square tower, with octagonal turrets at the angles, surmounted by minarets crowned with ogee domes, crocketed, and terminating in flowered finials. Above the doorway is a noble oriel window of two stages, and on each side are three open arches, leading into the interior portion of the structure, above which are windows of two lights, cinquefoiled, and surmounted with square-headed dripstones. The wings, which are also two stories high, are lighted by ranges of windows of corresponding style, and at the angles are octagonal turrets, rising to the parapets, and crowned with lofty minarets similar to those of the principal tower. The buildings contain a public hall, library, museum, and observatory, with spacious class-rooms and other apartments. In the hall are portraits of the fifth earl-marischal, founder of the university, the last earl, and his brother, Field-Marshal Keith; of Bishop Burnet, the Earl of Bute, Sir Robert Gordon of Straloch, Dr. Arthur Johnston, Sir Paul Menzies, provost of Aberdeen, and others, by the celebrated artist Jamieson.

The city formerly constituted the parish of St. Nicholas alone, which was divided by the authority of the Court of Teinds, in 1828, into the six separate PARISHES of East, West, North, South, the Grey Friars, and St. Clement. The parish of the *East Kirk*, situated in the centre of the city, contains a population of 4798; the minister's stipend is £300, paid by the corporation, who are patrons of the whole of the six churches, and receive the seat-rents, and apply them to Church purposes. The church, originally the choir of the collegiate church of St. Nicholas, was rebuilt about fifteen years ago, at an expense of £5000; it is a handsome structure in the later English style, eighty-six feet in length, and is separated from the West church, which formed the western portion of the old edifice, by the lofty arches of the tower. Externally, the two churches are connected, and embellished with an elegant façade of granite, 160 feet in length. The East church contains 1705 sittings. There are places of worship for the United Presbyterian Synod and United Original Seceders, and an episcopal chapel dedicated to St. Paul, erected in 1722, at an expense of £1000; also places of worship for Wesleyans,

Glassites, Unitarians, and United Christians. The parish of *West Kirk* contains a population of 10,186; the minister's stipend is £300, paid by the corporation. The West church, originally the nave of the ancient church of St. Nicholas, is separated from the East church by the arches of the tower, which is surmounted by a lofty spire 143 feet high; the church was handsomely rebuilt in the eighteenth century, was enlarged in 1836, and now contains 1454 sittings. There are places of worship for Independents and members of the United Presbyterian Church. The parish of *North Kirk* is situated within the town, and contains a population of 5381; the minister's stipend is £300, paid by the corporation. The church is a handsome structure of dressed granite, in the Grecian style, with a lofty tower, and an elegant portico of the Ionic order; it was erected in 1831, by the corporation, and contains 1486 sittings. There are a place of worship for Independents, a Roman Catholic chapel, an episcopal chapel dedicated to St. John, and one dedicated to St. Andrew, the latter a handsome structure in the later English style, erected in 1817, at an expense of £8000. The parish of *South Kirk* is situated within the town, and contains a population of 3934; the minister's stipend is £250, paid by the corporation. The church, originally a chapel of ease, was rebuilt in 1831, at an expense of £4544, and contains 1562 sittings. There are places of worship for the United Presbyterian Church and Independents. The parish of the *Grey Friars* is wholly in the town, and contains a population of 5356; the minister's stipend is £250, paid by the corporation. The church, formerly the church of the monastery of Grey Friars, is a very ancient structure, enlarged and improved some years since, and contains 1042 sittings. There is a place of worship for the Society of Friends. The parish of *St. Clement* is to the south-east of the town, in the district of Futtie, and contains a population of 7092; the minister's stipend is £250, arising principally from bequeathed lands. The church, erected in 1787, on the site of an ancient chapel, was afterwards rebuilt, on a larger scale, at an expense of £2600; it is capable of accommodating 1300 persons. The *Union* quoad sacra parish, which, like similar ecclesiastical districts in other parts of the country, was afterwards dissolved, was separated from the parishes of East Kirk and St. Clement in 1834, and contained a population of 2790. The church was built by subscription, in 1822, at an expense of £2600, and contains 1238 sittings. A chapel for seamen was built in the same year, at an expense of £800, by the Seamen's Friend Society, containing 570 sittings, all of which are free. The quoad sacra parish of *Spring-Garden* was separated from the parish of West Kirk, and annexed to a Gaelic church, in 1834, and contained a population of 1887; the church was built in 1795, by subscription and loan, and contains sittings for 700 persons. The quoad sacra parish of the *Holy Trinity* was separated from the parish of South Kirk, in 1834, and contained a population of 2058; the church was erected in 1794, at an expense of £1700, and contains 1247 sittings. The quoad sacra parish of *John Knox*, separated from the parish of the Grey Friars, in 1836, contained a population of 3377; the church was built by subscription, at a cost of £1000, and contains 1054 sittings. Places of worship for members of the Free Church have been built in different parts of the city: of these, three are at the head of

the Mutton Brae, connected together, and surmounted by a lofty and elegant spire.

The *Grammar School* is of so remote antiquity that the origin of its foundation is not distinctly known; in 1418 Andrew de Syves, vicar of Bervie, who had been master for some years, died, and the school has since that period continued to prosper under a succession of masters, whose salaries have gradually increased from £5 Scotch to 600 merks per annum. It appears to have been supported by various donations, and small fees paid by the scholars, till 1634, when Dr. Patrick Dun, principal of Marischal College, bequeathed the lands of Ferryhill, for the support of four masters, appropriating one-half of the proceeds to the head master or rector, and the remainder to be equally divided among the other three masters. The school is under the patronage of the corporation, the ministers of the town, and the professors of Marischal College, by whom the masters are appointed, with preference to candidates of the name of Dun. Instruction is given in the Greek and Latin classics, the French language, history, geography, arithmetic, and the mathematics. The salary of the rector is £100, and that of the other masters £50 each, with the fees of their respective classes, amounting to 13s. 4d. for each pupil, with the exception of the sons of poor tenants on the Ferryhill property, who are taught gratuitously. There are about 200 scholars in attendance. The buildings, erected in 1757, form three sides of a quadrangle, with two additional wings in the rear.

Gordon's Hospital, for the maintenance and education of the sons of decayed burgesses, was founded in 1732, by Robert Gordon, Esq., who by deed conveyed the whole of his property, amounting to £10,300, in trust to the provost and council of the city, and the ministers of Aberdeen. These trustees accordingly erected a handsome building on the ground, formerly belonging to the Dominican friary, on School-hill, which had been purchased by Mr. Gordon; but the funds, having been much reduced by the erection of the building, were suffered to accumulate till 1750, when the hospital was opened, and thirty boys admitted on the foundation. The number gradually increased to eighty; and in 1816, Alexander Simpson, Esq., of Collie-hill, bequeathed to the principal and professors of Marischal College, and the ministers of Aberdeen, lands in the parishes of New and Old Deer, for the maintenance and education of an additional number of boys, for which purpose the building was enlarged by the erection of two wings, at an expense of £14,000, and fifty more boys were admitted. The buildings consist of a central range, connected with the wings by a handsome colonnade, and surmounted by a small neat spire: over the principal entrance, in a niche, is a statue of the founder, in white marble. In the hall is a full-length portrait, and in the public school-room a half-length portrait of the founder. The *Boys' Hospital* originated in the separation from the Poor's hospital of the adult inmates and girls, and the subsequent appropriation of the remaining part of the funds to the maintenance and education of poor boys, of whom twenty-five were admitted in 1768, since which time the number has been increased to fifty, who are clothed, maintained, and taught the ordinary branches of learning. The *Girls' Hospital*, upon a similar plan, was instituted in 1829, and is supported by subscription and annual collections: thirty girls are clothed, maintained, and in-

structed, till they are fourteen years of age, when they are placed out to service. Dr. Bell, of Madras, bequeathed to the magistrates and council £10,000 three per cents., for the support of schools upon his system; and two have been consequently established, in one of which are 400 boys, and in the other 300 girls. Schools on the Lancasterian plan were opened in 1815, in which, for some years, were 450 boys and the same number of girls; but since the establishment of the Madras schools, the number of scholars has been reduced to less than one-half. The Aberdeen schools of industry, established in part in the year 1841, have done much for the prevention of crime, by affording employment, instruction, &c., to juvenile vagrants. In addition to these institutions, there are nearly forty parochial and other schools in the town and neighbourhood, in which the fees vary from two to five shillings per quarter, and the aggregate number of scholars amounts to nearly 4000. There are also week-day evening schools, in which the number of scholars is about 700; and twenty Sabbath-schools, in which there are 2000 scholars.

The *Infirmary* was first established in 1739, by subscription, aided by a grant of £36 per annum by the magistrates, who also gave a site for the erection of the building, which was partly effected in 1760, when forty-eight patients were admitted. An addition to the building, in 1820, increased the number to seventy, and in 1833 the managers resolved to erect an edifice on a larger scale, which was accomplished in 1835, at an expense of £8500, and the institution adapted for the reception of 210 patients. The government is vested by charter in the magistrates, the professor of medicine in Marischal College, and the moderator of the synod of Aberdeen, who, with all benefactors of £50 each, constitute the body of directors, of whom sixteen, chosen annually, form a committee of management. There are two physicians, two surgeons, a resident surgeon, and an apothecary. The buildings are spacious, and well ventilated; there are twenty wards of large dimensions, and eleven apartments for cases requiring separate treatment and attendance. The income averages £2500. A dispensary was originally established in connexion with the infirmary, and partly supported from the same funds; but subsequently dispensaries were opened, and maintained by subscription, three of them in the town, and two in the suburbs: these, in 1823, were incorporated into one institution called the *General Dispensary*. The *Lunatic Asylum* was first instituted in 1799, and a building erected for the purpose at a cost of £3484, towards which the magistrates, as trustees of Mr. Cargill's charity, contributed £1130, on condition of being permitted to send ten pauper patients gratuitously; and for the reception of an increasing number of patients, and their requisite classification, some ground adjoining the asylum was purchased, and an additional building erected, in 1819, at a cost of £13,135, towards which the governors appropriated a bequest of £10,000 by John Forbes, Esq. In 1836, about eleven acres of land were purchased for £3000, in the cultivation of which many of the patients are engaged; several workshops have also been erected for such as show any predilection for mechanical pursuits, and to these are added the powerful influences of religious worship, for which there is a chapel. *John Gordon, Esq.*, of Murtle, in the year 1815 bequeathed considerable property to trustees, for pious

and charitable uses, of which they assigned £100 per annum to the lecturers on practical religion in King's and Marischal Colleges, £150 to aged female servants, £150 towards the support of Sunday schools, £300 for the establishment of an hospital for female orphans, and the residue in annual donations to the Deaf and Dumb Society, and other institutions. Mr. John Carnegie, in 1835, left nearly £8000 to trustees, for the establishment of an *Orphan Hospital* for females, and in 1836, Mrs. Elmslie, of London, bequeathed for the same purpose £26,000: with these funds, an appropriate building has been erected, on the west side of the town, and properly endowed. The *House of Refuge* was established in 1836, by subscription, aided by a donation of £1000 from George Watt, Esq., and is supported by annual contributions: the number of inmates, in the year 1839, was 420, of whom 120 males and 90 females, under fourteen years of age, were being instructed in the ordinary branches of a useful education. The *House of Industry* and the *Magdalen Asylum* were also founded chiefly by Mr. Watt, who for that purpose conveyed to trustees the property of Oldmill, producing a rental of £164. The *Deaf and Dumb Institution* was established by subscription, in 1819; but from the inadequacy of the funds, only one-half of the expense of maintenance is afforded to the inmates, who generally derive the remainder from other charitable funds: the management is vested in a committee, and the teacher is allowed to receive private boarders, who are not chargeable to the funds. The *Asylum for the Indigent Blind* was instituted in 1818, by the trustees of Miss Cruickshank, who devoted the bulk of her property to that benevolent purpose, which, after the funds had been suffered for some years to accumulate, was carried into effect, and an appropriate building erected. An hospital for the maintenance and education of five orphan or destitute boys, and as many girls, and for which, at present, a house has been hired in the Gallowgate, was founded by a bequest of Alexander Shaw's, in the year 1807. The boys are apprenticed, and the girls placed out as servants; the former, on the expiration of their indentures, and the latter after five years' service in the same family, receive a premium of £10. There are also numerous missionary and other religious societies, some of which are supported exclusively by members of the Established Church, others by various dissenting bodies, and some indiscriminately by both: as, however, they have no permanent funds or vested property for their support, and present no peculiar features in their management or objects, it is unnecessary to give a detailed account of them.

Among the most *Eminent Natives* may be noticed, John Barbour, Archdeacon of Aberdeen in 1330, and author of a metrical history of Robert Bruce; George Jamieson, a portrait-painter, who was born in 1586, and painted more than 100 portraits of the principal nobility and gentry, which are held in high estimation; David Anderson, distinguished for his mechanical genius, and who, in 1618, greatly improved the harbour by the removal of a large rock which lay in the middle of the channel, and obstructed the entrance; James Gregory, inventor of the reflecting-telescope, born in 1638, and educated at Marischal College; James Gibbs, born in 1688, the architect of the church of St. Martin's-in-the-Fields, London, who furnished the design for the present

West church in his native city; John Gregory, born in 1724, professor of medicine in King's College, Aberdeen, and afterwards of Edinburgh, where he was succeeded by his son, Dr. James Gregory, also a native of this place; and John Ramage, eminent for his practical skill in the construction of reflecting-telescopes, of which he made one now in the Royal Observatory, which, though greatly inferior in size, is nearly equal in power to Herschel's celebrated forty-feet reflector. Connected with the town have been also, Dr. Robert Hamilton, professor of natural philosophy, and afterwards of mathematics, in Marischal College, and author of a valued essay on the national debt; Dr. Patrick Copland, likewise professor of mathematics and natural philosophy in the college, the museum of which he enriched with apparatus and models of his own construction; and Dr. Thomas Reid, Dr James Beattie, and the late Lord Byron, who were residents of Aberdeen. In the foregoing enumeration of natives and others, are probably some that were connected with Old Aberdeen; but it would not be easy, and perhaps it is not necessary, to draw an accurate line between those men of talents and celebrity who have lived in Aberdeen, and those who properly belong to the adjoining town. The city gives the title of Earl to a branch of the Gordon family, a dignity created in the year 1682.

Burgh Seal.

ABERDEEN, OLD, or OLD MACHAR, a parish, chiefly without, but partly within, the city of ABERDEEN, in the county of ABERDEEN; comprising the former quoad sacra parishes of Bon-Accord, Gilcomston, Holburn, and Woodside; and containing 28,020 inhabitants. This place, originally a small hamlet, consisting only of a few scattered

cottages, was, from the erection of a chapel near the ancient bridge of Seaton by St. Machar in the ninth century, called the Kirktown of Seaton. It was undistinguished, however, by any event of importance till the year 1137, when it became the seat of a diocese, on the removal of the see of Aberdeen by David I. from Mortlach, in the county of Banff, where it was originally founded by Malcolm II., and had continued for more than 120 years. Bishop Kinnimond, at that time prelate of the see, founded a cathedral church on the site of the ancient chapel of St. Machar; and towards the end of the thirteenth century, this church was taken down by Bishop Cheyne, for the purpose of erecting a structure of more ample dimensions, and more appropriate character; but in the contested succession to the throne of Scotland, becoming an adherent of Baliol, he was compelled to retire into exile, and the rebuilding of the cathedral was suspended. On the establishment of Robert Bruce, that monarch recalled the exiled bishop, who recommenced the work; and the undertaking was continued by his successors, of whom Bishop Elphinstone, the founder of King's College, with the assistance of James IV., made rapid progress in the rebuilding of the cathedral. It was completed by Bishop Dunbar, in 1518, and, since the abolition of episcopacy in Scotland, has been appropriated as the parish church. In the

long line of bishops who made this place the seat of ecclesiastical state, there were some who by their deeds and character threw a lustre even upon their high and holy office.

The town is pleasantly situated on a gentle eminence, near the river Don. Across the river is an ancient picturesque bridge of one lofty arch, in the early English style, said to have been built by Bishop Cheyne, though by others ascribed to King Robert Bruce, and concerning which, under the appellation of the *Brig of Balgownie*, a traditionary legend prophetic of its downfall is quoted by Lord Byron. Considerably to the east of this, is another bridge, affording a passage from Aberdeen to the north, erected from the funds for keeping the old bridge in repair, originally left for that purpose by Sir Alexander Hay, and which, from £2. 5. 6., had accumulated to £20,000: it is a handsome structure of five arches, built of granite. The principal street, which consists of houses irregularly built, extends from south to north, to the town-house, where it diverges into two branches, one leading to the church, and the other to the old bridge; the streets are lighted, and the inhabitants are well supplied with water by commissioners appointed by the rate-payers. The environs are extremely pleasant, and richly wooded; and in the immediate vicinity of the town are numerous villas.

On the establishment of the see at this place, the town was made a BURGH OF BARONY, by charter of David I.; and the various privileges conferred upon it by subsequent sovereigns were confirmed by charter of George I., who granted the inhabitants the power of choosing their own magistrates. The government is vested, by charter, in a provost, four bailies, a treasurer, and council of eight merchant and five trade burgesses, assisted by a town-clerk, procurator-fiscal, and other officers. There are seven incorporated trades, viz., the hammermen, weavers, tailors, wrights and coopers, bakers and brewers, fleshers and fishers, and shoemakers, who elect their own deacons, and also a deacon convener. The fees on entrance to these trades, which confer the privilege of carrying on trade in the burgh, are £8, and a payment of £3 to the court of conveners; and for a merchant burghess £5. 7. The jurisdiction of the magistrates extends over the whole burgh, but is seldom exercised: not more than two civil causes have been determined in one year; in criminal cases, their jurisdiction is limited to petty misdemeanors, and all more serious offences are referred to the sheriff's court. For parliamentary purposes the burgh is associated with Aberdeen, and the right of election, under the Reform act, is vested in the resident £10 householders of the place. The number of members of all the several guilds does not in the aggregate exceed 120, and of these not more than fifteen exercise any trade. The town-hall, which is situated at the northern extremity of the principal street, was built by subscription, in 1702, and has been since rebuilt. It contains a spacious hall for public meetings, a council-room for the occasional use of the magistrates, and various other apartments; in the upper floor is the grammar school, and on the ground floor a school for English. Opposite to the town-hall was formerly an ancient cross, consisting of a pedestal bearing the arms of the Bishops Dunbar, Stewart, and Gordon, from which rose a pillar surmounted by an effigy of the Virgin Mary; but this was removed on the rebuilding of the hall.

Seal of the University.

Since the dissolution of the see, the town has owed its chief prosperity and support to its university, which was founded by Bishop Elphinstone, in the reign of James IV., who for that purpose procured a bull from Pope Alexander VI. The college was first dedicated to St. Mary; but from the great liberality of the monarch in its endowment, it was subsequently called KING'S COLLEGE, a designation it has ever since retained. The first principal of the college was Hector Boethius, the celebrated historian, under whom and his successors it continued to flourish till the Reformation, when many of its functionaries were expelled. In 1578, the institution received a charter from the parliament, after which it languished under the gross mismanagement of its principals, who sold the ornaments of the chapel, alienated the revenues for their own emolument, and committed other abuses. In 1619, however, Bishop Forbes, by great perseverance, recovered part of the alienated property, and restored several of the professorships, to which, in 1628, he added a professorship of divinity, which was afterwards held by his son. From this time, the institution revived, and continued to flourish till the introduction of the Covenant, for refusing to sign which several of the professors were expelled, among whom was Dr. Forbes, the divinity professor. Many of the new professors appointed by the Covenanters were, in their turn, ejected by Cromwell, under whom General Monk despatched Colonels Desborough, Fenwick, and others, to visit and reform the college: these officers, though they removed some of the professors, and appointed others, still promoted the general interests of the establishment, and subscribed liberally towards the erection of houses for the students. After the restoration of Charles II., the bishops of Aberdeen assumed their authority as chancellors of the university, and reformed the disorders which had been introduced during the interregnum.

The university, as at present constituted, is under the direction of a chancellor, generally a nobleman of high rank, who is elected by the *senatus academicus*; a rector, chosen by the same body; and a principal and sub-principal, elected by the rector, *procuratores gentium*, and the professors, and admitted by the chancellor. There are nine professorships, of which those of Greek, humanity, medicine and chemistry, and civil law, are in the patronage of the rector, *procuratores*, and *senatus academicus*; that of divinity in the patronage of the synod of Aberdeen, the principal, and dean of faculty of theology; those of mathematics, natural philosophy, and moral philosophy, in the patronage of the *senatus academicus*; and that of oriental languages, in the patronage of the crown. There are also eleven lectureships, of which that of practical religion is in the patronage of the trustees of John Gordon, Esq., of Murtle, the founder; and those of the evidences and principles of the Christian religion, Murray's Sunday lectures, *materia medica*, anatomy and physiology, surgery, practice of medicine, midwifery, institutes of medicine, medical jurisprudence, and botany, are all in the patronage of

the *senatus academicus*. The number of bursaries is above 150, varying from £5 to £50 per annum, and mostly tenable for four years. Of these, ninety-six are open to public competition, and the others are in the patronage of the professors of the college, or representatives of the founders.

The site of the college occupies a quadrangular area of considerable extent, surrounded with buildings raised at different periods, of which the most ancient were erected in 1500. The whole possesses a strikingly venerable appearance. In the north-west angle is a lofty massive tower, strengthened with canopied buttresses, bearing the royal arms of Scotland, and those of Stewart, Archbishop of St. Andrew's, and others: above the parapet is a lantern, supported by flying buttresses springing from the angles, in the form of an imperial crown: This kind of lantern also surmounts the cathedral of St. Giles at Edinburgh, the Cross or Tolbooth steeple at Glasgow, and at one time surmounted the central tower of the parish church of Haddington, and the tower of the church of Linlithgow: in England, only one example of it is known, namely, that which, far excelling any of these in the north, crowns the tower of St. Nicholas' church at Newcastle-on-Tyne. On the north side of the college quadrangle is the ancient chapel erected by Bishop Elphinstone, originally a stately structure of elegant design, with a lofty spire, and internally embellished with most costly ornaments, which, as before noticed, were sold by the parliamentary functionaries. The nave is now appropriated to the use of the college library, and the chancel is the college chapel. There are still remaining, in the former portion, many traces of its pristine beauty, and an inventory in Latin of the various ornaments of the chapel; and in the chancel are the rich tabernacle work of the prebendal stalls, the pews for the diocesan synod, the carved oak roof, and the tombs of Bishop Elphinstone and the first principal, Boethius. The south side of the quadrangle, rebuilt by Dr. Fraser in 1725, is of plain character, 112 feet in length, with a piazza in front, and at the extremities were circular towers, of which one only is remaining. The common hall, which is sixty feet in length, and twenty-three feet wide, contains numerous portraits by Jamieson, including portraits of Bishops Elphinstone, Dunbar, Forbes, Leslie, and Scougal, Professors Sandiland and Gordon, George Buchanan, and Queen Mary. In the committee-room is a painting, on panel, of the college as it appeared in the sixteenth century. The library contains a very valuable and extensive collection of books and manuscripts, and was formerly entitled to a copy of every work entered at Stationers' Hall, of which privilege it was deprived by act of parliament in 1836, the loss being compensated for by an annual grant of £320. It comprises about 34,000 volumes. The museum contains a large collection of specimens in mineralogy and zoology, numerous Grecian and Roman coins and antiquities, casts from ancient gems, and some valuable books of engravings illustrative of these subjects: this department was, in 1790, enriched with the coins and medals bequeathed by Dr. Cummin, of Andover, and has been subsequently increased by numerous specimens. A commodious room, in the more modern portion of the building, was handsomely fitted up by subscription, in the year 1842, as a museum of natural history.

Among the many distinguished individuals that have been connected with the university may be noticed, George, Earl Marischal, the founder of Marischal College; Chancellor Gordon, of Haddo, created Earl of Aberdeen in 1682; Dr. Thomas Bower, an eminent mathematician; the celebrated Dr. Reid, professor of philosophy, and afterwards of Glasgow; Lord Monhoddoo; Mr. Charles Burney, a distinguished Greek scholar; Arthur Johnston, a Latin poet; Dr. James Gregory, and his sons, afterwards professors of medicine at Edinburgh; Robert Hall, the distinguished preacher; and Sir James Mackintosh.

The PARISH originally comprehended the parishes of New Machar and Newhills, which, after the Reformation, were separated from it: anciently there was a deanery of St. Machar. The present parish is about eight miles in length, and varies from two to four in breadth, situated on a peninsula, between the rivers Dee and Don. Its surface rises gradually from the sea-shore, and the scenery is interspersed with flourishing plantations, and with the windings of the Dee and the Don, the banks of which latter are richly wooded, and in some parts, from their precipitous acclivity and rugged aspect, have a strikingly romantic appearance. The higher grounds command extensive views of the German Ocean, of the lofty and ancient bridge on the one side, and on the other of the cathedral and the spires of Aberdeen. The soil is various, in some parts richly fertile, and in others almost sterile; but the lands are generally in good cultivation, and the state of agriculture highly improved. The annual value of real property in the parish is £67,192.

Ecclesiastically the parish is in the presbytery and synod of Aberdeen, and patronage of the Earl of Fife; the stipend of the first minister is £273. 1. 3., and that of the second £282. 19. 9., with a manse, and a glebe valued at £31. 10. per annum. The church was formerly an elegant structure, of which the choir was destroyed by the reformers; and the remainder of the building was preserved from demolition only by the Earl of Huntly, and Leslie of Balquhan, who, at the head of a large body of their armed retainers, drove away the band which had been assembled for its destruction. The interior of the remaining portion suffered great mutilation under the Covenanters, who destroyed the altar, and the rich carvings and other ornaments; and in 1688, the high tower at the east end of the nave, which had been undermined by the soldiers of Cromwell, through the removal of masonry for the erection of their works at Castle-hill, and which, with its spire, 150 feet in height, had long served as a landmark to mariners, fell to the ground, destroying in its fall a considerable portion of the nave, with several of the monuments. The great arches on which the central tower was supported, have been built up, and the two towers at the west end are in good preservation; they are 112 feet high, and after rising to the height of fifty-two feet in a quadrilateral form, are continued by a succession of octangular turrets, decreasing in size till they terminate in a finial surmounted by a cross. The nave is nearly perfect; and its western front, built of the obdurate granite of the country, is stately in the severe symmetry of its simple design. The choir seems never to have been finished; and of the transepts, only the foundations now remain. The ceiling of the nave is

divided into forty-eight compartments, in which are emblazoned, in vivid colours recently renewed, the armorial bearings of the Scottish kings, the ecclesiastical dignitaries, and the principal nobility. Of the several monuments still remaining, that of Bishop Scougal, father of Henry Scougal, author of the *Life of God in the Soul of Man*, is the most interesting and entire; there are also a monument to William Blake of Haddo, sub-principal of King's College, and tablets to Gordon and Scott, professors, and David Mitchell, Esq., LL.D. The portion of the building appropriated as the parish church is neatly fitted up, and contains 1594 sittings; the chapel in King's College contains 350 sittings. There are places of worship for members of the Free Church.

The grammar school, which is held in the town-hall, is under the patronage of the magistrates and council, and is visited annually by the professors of the college, and the ministers. The parochial school affords instruction to about seventy scholars; the master has a salary of £30, with an equal sum from the trustees of Dick's bequest, and the fees average about £30 per annum. There are also two schools on the Madras system, founded by a bequest left by Dr. Bell. An hospital was founded in 1531, by Bishop Dunbar, who endowed it for twelve aged men; the buildings consisted of a refectory, twelve dormitories, and a chapel surmounted with a small spire. The endowment has been subsequently increased by donations and bequests, and by the proceeds of the sale of the buildings; the present funds are about £3000, from the interest of which twenty-one aged men derive relief. An hospital was founded in 1801, by Dr. Mitchell, for lodging, clothing, and maintaining five widows, and five unmarried daughters of burgesses in indigent circumstances, for which purpose he bequeathed ample funds, in trust, to the principal of King's College, the provost and senior bailie of the town, and the two ministers of the parish. The building, which is situated near the church, is one story high; it contains a kitchen, refectory, and dormitories, neatly furnished; and attached to it is a pleasure-ground. A dispensary was established in 1826.

ABERDEENSHIRE, a maritime county, in the north-east part of Scotland, and one of the most extensive counties in the kingdom, bounded on the north by the Moray Firth; on the east by the German Ocean; on the south by Perth, Forfar, and Kincardine shires, and on the west by the counties of Banff and Inverness. It lies between 56° 52' and 57° 42' (N. Lat.), and 1° 49' and 3° 48' (W. Lon.), and is eighty-six miles in extreme length, and forty-two miles in extreme breadth; comprising an area of 1985 square miles, or 1,270,400 acres; 32,063 inhabited, and 1091 uninhabited, houses; and containing a population of 192,387, of which number 89,707 are males, and 102,680 females. From the time of David I., the county was included in the diocese of Aberdeen; at present, it is almost wholly in the synod of Aberdeen, and includes several presbyteries, the whole containing eighty-five parishes. For civil purposes, it is divided into eight districts, Aberdeen, Alford, Deer otherwise Buchan, Ellon, Garioch, Kincardine-O'Neil, Strathbogie, and Turriff, in each of which, under the superintendence of a deputy lieutenant, the county magistrates hold regular courts. It contains the three royal burghs of Aberdeen, Kintore, and Inverury, the

market-towns of Peterhead, Fraserburgh, Huntly, Turriff, and Meldrum, and numerous large fishing-villages on the coast. Under the act of the 2nd William IV., the county returns one member to parliament.

The SURFACE, towards the sea, is tolerably level; but the greater portion forms part of the central highlands, and consists of high mountains, interspersed with a few valleys. The principal mountains are, Ben-Macdhui, the loftiest in Britain; the Braeriach, which has an elevation of 4304 feet; Ben-Aburd, Ben-Aven, Loch-nagar, and Morven, which vary from 2500 to 4300 in height, with numerous others from 800 to 2000 feet in height. Of the valleys the chief are the Garioch and Strathbogie, the former inclosed on all sides with hills of moderate height, and the latter enriched with wood, abounding in beautiful scenery, and highly cultivated. The rivers are the Dee, the Don, the Ythan, the Doveron, and the Ugie, but the rapidity of their currents renders them comparatively useless for the purpose of navigation; they have their sources, generally, among the mountains in the south-west, and flow towards the north and north-east. All of them abound with fine salmon, and fish of every kind is taken on the coast.

About one-third of the land is under cultivation, and the remainder mountain, pasture, and waste. Towards the sea, and in the valleys, the soil is rich and fertile, producing excellent crops of wheat and other grain; and in the more secluded portions of the county is some fine timber, among which are numerous lofty pine-trees, fit for the masts of ships; but from the want of inland navigation, few of them are felled for that purpose. Between the Dee and the Ythan is a low tract of waste, on which are some sand-hills that have been lamentably destructive of the adjacent lands; several fertile fields, to the north of the Ythan, have been covered, to a great extent, with sand blown from these hills, and the walls of a church and a manse that have been buried by them are still to be seen. The minerals are quartz and asbestos; and various gems and pieces of amber are found in the mountains: the principal quarries are of granite of very superior quality, of which vast quantities are sent to London and other places, and freestone and limestone are also extensively quarried. Many of the proprietors reside on their lands, and have materially contributed to their improvement, by extensive plantations, and the introduction of a better system of agriculture, and superior breeds of cattle; and much waste land has been brought into cultivation under the patronage of the Highland Society. The chief seats are Haddo House, Aboyne Castle, Huntly Lodge, Slains Castle, Keith Hall, Mar Lodge, Delgaty Castle, Skene, Castle-Forbes, Philorth House, Monymusk, Ellon Castle, Fintray House, Fyvie Castle, Gordon Lodge, and Castle-Frazer. The coast is bold and rocky, with some alternations of level beach. On the Moray Firth, the most prominent headlands are Roseheartly Point and Kin-naid Head; and on the German Ocean, Cairnbulg Point, Rattray Head, Scotstown Point, Invernetty Point, and Buchan Ness. The chief bays in the former are, the harbour of Roseheartly, and the bay of Fraserburgh; and in the latter, Peterhead Bay, Cruden Bay, Sandy Haven, Long Haven, Garrick's Haven, and the bay of Aberdeen. Facility of communication is maintained by good roads, some of which were made under the authority of the commissioners for Highland roads and

bridges, appointed by act of parliament. The annual value of real property in the county is £605,802, of which £423,388 are returned for lands, £145,366 for houses, £8864 for fisheries, £1087 for canal navigation, £1085 for quarries, and £26,012 for other species of real property.

ABERDOUR, a parish, in the district of DEER, county of ABERDEEN; containing 1645 inhabitants, of whom 376 are in the village of New Aberdour, 8 miles (W. by S.) from Fraserburgh. The name of this place is supposed to have been derived from the Gaelic term *Aber*, signifying "mouth" or "opening," in reference to the rivulet *Dour*, which finds an entrance into the sea a short distance below the manse. There are numerous cairns and tumuli, containing stone coffins with the ashes and bones of human bodies, indicating the parish to have been the theatre of military conflict. The castle of Dundargue, also, stands here, which Sir Thomas Beaumont fortified and garrisoned, in right of his wife, daughter to the Earl of Buchan, when he accompanied Edward Baliol, who came to claim the kingdom of Scotland. This castle was of great importance in the feudal times, and is famed for a long siege in 1336, when Henry de Beaumont, the English Earl of Buchan, capitulated to Murray, Regent of Scotland, during the captivity of David Bruce. On the coast is a cave called Cowshaven, which is celebrated as the hiding-place of Lord Pitsligo, after the battle of Culloden: this retreat was at last discovered by the impressions on the snow, of the footsteps of a woman who supplied him with food; and he was obliged to flee thence for safety.

The parish contains 15,165 acres, of which 5873 are cultivated, 5608 are moor or green pasture, 3496 moss, 88 wood, and 101 occupied by roads, &c. Its form is altogether irregular, consisting of a kind of zig-zag boundary, some parts of which strike off to a considerable extent. The northern boundary runs for about seven miles along the shore of the Moray Firth, which is broken by numerous openings and caves, some of them penetrating for a long distance into the land. The coast in general is bold and rocky, and on the estate of Auchmedden rises the colossal Pitjossie, an immense natural arch, which strikes the beholder with astonishment, when viewed from the summit of the adjoining cliff, and is said to rival the celebrated Bullers of Buchan. On the coast are also the three small bays of Aberdour, Pennan, and Nethermill, the beach of which consists of large quantities of stones washed down the Dour burn and other streams, and thrown back by the violence of the sea on the occurrence of a storm. The surface of the parish, generally, is unequal, the eastern division being flat and low, while the estate of Auchmedden, on the western side, rises about 200 or 300 feet above the level of the sea: on that property are several deep ravines and dens, which, with the adjacent scenery, present a striking and romantic appearance. In the south-eastern extremity are three farms, entirely cut off from the rest of the parish by the lands of Tyrie, and which some suppose to have been originally grazing land for the cattle belonging to the tenants on the sea-coast; whilst others think that, at the time the parish was erected, they formed a separate estate belonging to the proprietor, who, wishing to have all his property in one parish, included them within the bounds of Aberdour. In the south-west of the parish, on the farm of

Kinbeam, is a fresh-water loch called Monwig, situated in a large and deep moss; it is 200 yards long and twenty-two broad, in some parts very deep, and the dark mossy water of which it consists is covered in the season with flocks of wild geese and ducks. There are several small streams, all of which run into the Moray Firth; and near Pitjossie, in the glen of Dardar, is a cascade, the water of which, after dashing from the top of a rock into three successive basins, glides gently for 100 yards, until it falls into the Firth.

Near the coast the soil is a strong loamy clay, which, with good husbandry, yields fine crops; but in many other parts it is cold and mossy, exhibiting merely cultivated patches of land: the produce raised chiefly comprises oats, turnips, potatoes, barley, bear, and hay. Great improvements have taken place in agriculture within the last thirty or forty years, especially upon the estate of Aberdour, where a regular and scientific system of drainage has been adopted. The bog, the moss, and moor, with which the arable land was mixed, have been removed, bridges and roads have been constructed, and a proper rotation of crops has been introduced and observed; improvements which have entirely altered the character of the parish. In other parts, however, there is a deficiency of good inclosures, arising from the scarcity of stones for forming dykes. The rocks along the shore, which are lofty and precipitous, and of considerable interest, are a coarse sandstone, frequently passing into conglomerate of various degrees of coarseness, and connected with a greywacke slate: the outlying blocks of loose stone, or boulders, are primary trap or granite. There are several quarries in the parish of granite and sandstone, and two quarries of millstone, one of which latter, in the rocks of Pennan, is said to contain some of the best stones in Britain: the stones from this quarry were formerly in great repute, and sent to the south and west of Scotland, but the demand for them has of late years greatly diminished. The annual value of real property in the parish is £4510. Aberdour House is an old-fashioned narrow building, occupying a very bleak situation; and there are several other residences, including one on the estate of Auchmedden: the glens of this estate are justly celebrated as the beds of the finest collection of plants to be found in Scotland, and afford some scarce specimens of botanical treasure.

The parish contains the villages of New Aberdour and Pennan, the former erected in 1798; the inhabitants are employed in agricultural pursuits, with the exception of a few engaged in fishing at Pennan. A manufacture of kelp was formerly carried on to a considerable extent, but it has been greatly reduced, in consequence of the repeal of the duty upon Spanish barilla, which is now generally used instead of kelp. The white-fishing at Pennan, on the estate of Auchmedden, employs six boats, with four men each, who pay a rent to the proprietor of £20 and some dried fish; and several long boats annually proceed to the herring-fishing in the Moray Firth, which abounds with fish of almost every description, except salmon, very few of which are to be obtained. There are two meal-mills in the parish, one at Aberdour, and the other at Nethermill, each of them built partly of granite and partly of red sandstone. Four annual fairs are held at New Aberdour, for cattle, merchandise, and for hiring servants, in the middle of April, at Whitsuntide, in the middle of August, and at

Martinmas: there is also a cattle-fair called Byth Market, occurring twice in the year, in May and October, upon a moor in the south of the parish. The turnpike-road from Fraserburgh to Banff touches the parish, at the two points of Bridgend in the east, and Cowbog in the west, and is rendered available to the parishioners by an excellent junction road.

For ecclesiastical purposes the parish is in the presbytery of Deer and synod of Aberdeen; patron, A. D. Fordyce, Esq.: the minister's stipend is sixteen chalders and a half of victual, half meal half barley, payable by the fairs of the year; with a manse, built in 1822, and a glebe of about seven acres, valued at £14 a year. The church, which is conveniently situated at the northern extremity of the village of New Aberdour, was erected in 1818, and contains about 900 sittings. There is a parochial school, where Latin is taught, with all the ordinary branches of education; the master has a salary of about £32, and £15 fees, with a house. The chief relic of antiquity is the castle of Dundargue, situated upon a lofty precipice overhanging the sea; and at a place called Chapelden, on a hill opposite the Toar of Troup, are the ruins of a chapel. Of the mineral springs that are to be found in every direction, the most famed is one named Mess John's Well, a strong chalybeate, celebrated for its medicinal virtue; it issues from a rock about 200 yards west of the burn of Aberdour, and has a small basin, like a cup, to receive the water that drops. The basin is commonly said to have been formed by John White, laird of Ardlaw-hill during the contest of religious parties.

ABERDOUR, a parish, in the district of DUNFERMLINE, county of FIFE; including the island of Inchcolm, and the village of Newtown; and containing 1916 inhabitants, of whom 307 are in Easter and 469 in Wester Aberdour, 8 miles (S. W.) from Dunfermline. This place takes its name from its situation at the mouth of the Dour, a rivulet which flows into the Forth near the village. It was anciently the property of the Vipont family, of whose baronial castle there are still considerable remains. The castle, with the lands, passed in 1125 from the Viponts, by marriage, to the Mortimers, of whom Allen de Mortimer granted the western portion of the lands to the monks of Inchcolm, in consideration of the privilege of being allowed to bury in the church of their monastery on the isle, about a mile distant from the mainland. When conveying the remains of one of that family to the abbey for interment, a violent storm is said to have arisen, and compelled the party to throw the coffin into the channel, which, from that circumstance, obtained the appellation of "Mortimer's Deep." The ancient castle is a stately pile of massive grandeur, situated on an eminence, on the east bank of the Water of Dour, and commanding an extensive view of the Firth of Forth: in front is a spacious terrace, overlooking the gardens, into which are several descents by flights of steps. It was partly destroyed by an accidental fire, about the beginning of the eighteenth century, since which time it has been abandoned, and suffered to fall into decay; but the roof is still entire, and several of the apartments are in tolerable preservation, though used only as lumber-rooms. At a small distance is the old church, now a roofless ruin; it contains the ancient family vault of the Morton family, and is surrounded by a small cemetery.

This parish, which is bounded on the south by the river Forth, is about three miles in length, from east to west, and nearly of equal breadth, comprising about 6240 acres, of which 3240 are arable, about 1800 woodland and plantations, and the remainder meadow and pasture. The surface is broken by the ridge of the Collelo hills, which traverses the parish from east to west, and the summits of which are well wooded, and the southern acclivities in profitable cultivation. Towards the river, along which the parish extends for more than two miles, the ground is for the most part tolerably level; but on the east, the coast is rocky and precipitous, rising abruptly into eminences that are wooded to the margin of the Forth. On the face of the hills, walks have been laid out, commanding diversified prospects; and on the west is a rich bay of white sand, surrounded with trees, whence the ground rises towards the west into eminences crowned with thriving plantations, which, stretching southward, terminate in a perpendicular mass of rock washed by the sea, by which, and by the headlands on the south-east, the harbour is securely sheltered from the winds. To the north-west of the harbour, the surface again rises into a hill finely wooded, adding greatly to the beauty of the scenery, and commanding, on the right, a view of the island of Inchcolm, with the picturesque ruins of the abbey, and, on the left of it, the town of Burntisland, with the coasts of Lothian, the city of Edinburgh, and the Pentland hills in the distance.

The soil on the north side of the ridge of hills, which has a considerable elevation above the sea, is cold and sterile, but on the south side more genial and fertile; and generally a rich black loam, in some parts alternated with sand. The chief crops are wheat, oats, barley, beans, potatoes, and turnips; the system of agriculture is much improved, and the farm-buildings are substantial and commodious. The substratum abounds with coal, of which an extensive mine on the lands of Donibristle, belonging to the Earl of Moray, is in operation, about two miles and a half from the village; and coal is also wrought on Cottlehill. Freestone of a white colour, and of compact texture, was formerly quarried to a great extent, and much of it sent to Edinburgh and Glasgow for ornamental buildings; and on the lands of the Earl of Morton is a quarry producing stone admirably fitted for piers and other purposes where great durability is requisite: large blocks from this quarry were used in the construction of Granton Pier. The annual value of real property in the parish is £5581.

Aberdour House, the seat of the Earl of Morton, is a spacious mansion on the west bank of the Dour, opposite to the ancient castle, and surrounded with pleasure-grounds richly wooded, and tastefully laid out. Hillside is a stately mansion commanding views of the Firth of Forth, the opposite coasts, and the adjacent scenery; and Whitehill Cottage and Cottlehill House are also finely situated. The village of Aberdour is divided into two portions called Easter and Wester, by the river Dour, over which is a handsome bridge; and to the south of the western portion is the village of Newtown, consisting of Sea-side-place and Manse-street. The beauty of the surrounding scenery, the numerous retired walks in the neighbourhood, and the fine sandy beach, have rendered these villages places of favourite resort

during the summer months, for bathing; and for the accommodation of the numerous visitors, lodging-houses are extensively provided. Steamers ply twice a day from Edinburgh, during summer, and pinnaces daily from Leith harbour, throughout the year. The manufacture of coarse linen was formerly carried on extensively by hand-loom weavers; but it has greatly decreased. On the Dour, about a mile from the old village, is an iron forge, in which spades, shovels, and other implements are made, and of which the great hammer is worked by water power. There are also a brick-work, and some saw-mills of recent establishment. Considerable quantities of coal are shipped from the harbour, for exportation; and several foreign vessels arrive weekly for freights of coal from the mines. Between the harbour and Burntisland is an oyster-bed belonging to the Earl of Morton, which is leased to the fishermen of Newhaven. A fair is held on the 20th of June, chiefly for pleasure.

Ecclesiastically the parish is in the presbytery of Dunfermline and synod of Fife. The minister's stipend is £207. 14. 6., with a manse, and a glebe valued at £13 per annum; patron, the Earl of Morton. The church, erected in 1790, and repaired in 1826, is a plain building. There is a place of worship for members of the Free Church. The parochial school is attended by about 100 children; the master has a salary of £34. 4. 4., with a house and garden, and the fees average £30 per annum. An hospital was founded in Wester Aberdour by Anne Countess of Moray, who endowed it for four aged widows, of whom three are appointed by the family, and one by the clerk of the signet; each of the widows has a separate apartment, with an allowance of coal and candles, and £5 per annum in money. On the summit of a hill on the farm of Dalachy, was a cairn, on the removal of which, during agricultural improvements, were found a stone coffin containing a human skeleton, several earthen vessels containing human bones, a spear-head of copper, and various other relics. The field adjoining the garden of the old manse is called the "Sisters' land," from its having been anciently the site of a Franciscan nunnery. Aberdour gives the title of Baron to the Earl of Morton.

ABERFELDY, a village, partly in the parish of DULL, and partly in that of LOGIERAIT, county of PERTH, $6\frac{1}{2}$ miles (N. E.) from Kenmore; containing 823 inhabitants. This is a considerable and thriving village, situated on the southern bank of the river Tay, and on the great Highland road. It belongs solely to the Marquess of Breadalbane, but is held, with a few exceptions, under building leases, of ninety-nine years' duration. The village is surrounded with thick and luxuriant wood of hazel and birch; and in its vicinity are the falls of Moness, remarkable for the beauty and grandeur of the scenery, and the majesty of their torrents, which rush furiously from precipice to precipice, with a tremendous and fearful roar; the ascent is from the village, and is attained by pleasing and varied walks, with seats at intervals for the accommodation of the visiter. The Moness mineral water, which was accidentally discovered a few years ago, has been pronounced by competent authority to be an excellent chalybeate. The river is crossed at Aberfeldy by a bridge, erected by General Wade. Some fairs are held at the village; also a quarterly sheriff's court for small debts. In 1846 an

act of parliament was passed "for making a railway from the line of the Perth and Inverness railway to Aberfeldy, to be called the Strathtay and Breadalbane railway." There are places of worship for Independents and members of the Free Church; a post office, a branch bank, and a savings' bank. The Evangelical Library, instituted in 1823, has nearly 400 volumes, and there is a literary society of recent formation, with a library in connexion with it.—See DULL.

ABERFOYLE, a parish, in the county of PERTH, 14 miles (W. by S.) from Doune, and 20 (W. by N.) from Stirling; containing 543 inhabitants. It derives its name from the situation of the church, near the mouth of a rivulet called in Gaelic the Poll or Foile, which forms a confluence with the river Forth, at this place an inconsiderable stream. The lands originally formed part of the possessions of the ancient family of Graham, Earls of Menteith, and on failure of heirs male, about the end of the seventeenth century, became the property of the ancestors of the Duke of Montrose, the present sole proprietor. This parish, which is in the south-western portion of the county, forms the extreme precinct of the Highlands, in that direction, and extends for nearly fourteen miles from east to west, and from five to seven miles from north to south; comprising the beautifully romantic vale of Aberfoyle, and part of the vale of the river Teith, which abound with all the varieties of Highland scenery. Between the vales are lofty mountains, forming a part of the Grampian range, and of which the highest are, Benvenue, having an elevation of 2800, and Benchochan, of 2000 feet above the sea. From both these mountains, beneath which lies the celebrated scenery of the Trosachs, are obtained extensive views of "the windings of the chase," and the most interesting parts of the surrounding country, described by Sir Walter Scott in his poem of the *Lady of the Lake*.

In the parish of Aberfoyle are the Lochs Katrine, Ard, Chon, Auchray, and Dronky. *Loch Katrine*, which has a depth of about seventy fathoms, is about nine miles in length and one mile broad; the lofty, and in some parts precipitous acclivities on its shores, are finely wooded nearly to their summits, and the lake is adorned with various rocky islets, which rise to a considerable height out of the water, and are tufted over with shrubs and trees, adding greatly to the beautiful scenery for which it is so eminently distinguished. *Loch Ard*, about four miles in length and one mile in breadth, is divided into two portions, the Upper and Lower Ard, connected by a channel 200 yards in length; it is in the vale of Aberfoyle, and is bounded on one side by the lofty mountain Ben Lomond, whose richly-wooded declivity extends to its margin. On a small island in the lake are the ruins of an ancient castle built by the Duke of Albany, uncle of James I. of Scotland. *Loch Chon*, about two miles and a half in length and one mile in breadth, is in the same valley; it is beautifully skirted on the north-east by luxuriant plantations, and on the south-west by the mountain of Ben Don, 1500 feet in height, the sides of which are covered with forests of aged birch and mountain-ash. *Loch Auchray*, near the Trosachs, and *Loch Dronky*, which is two miles long and about half a mile broad, are both finely situated, and embellished with rich plantations. Of the above lakes, Loch Katrine and Loch Auchray

separate the parish from the parish of Callander. Between the mountains are several small valleys, about a mile in length and a quarter of a mile in width, formerly covered with heath, but which have been cleared, and brought into cultivation. The river Forth has its source at the western extremity of the parish, at a place called Skid N'uir, or "the ridge of yew-trees," issuing from a copious spring, and flowing through the Lochs Chon and Ard. About half a mile to the east of the latter, it receives the waters of the Duchray, a stream rising near the summit of Ben Lomond, and which is also regarded as the source of the Forth, though the former is the larger of the two.

The scenery of the *Trosachs* is approached from the head of Loch Auchray. At this point an inn is situated, the last human habitation on the route, and here travellers usually quit their vehicles in order to walk the remainder of the distance; the road will, however, accommodate a chaise to the verge of Loch Katrine. What is called the Trosachs is simply a concluding portion of the Teith valley, about a mile in extent, and adjoining to the bottom of Loch Katrine, just mentioned. From the tumultuous confusion of little rocky eminences, of the most fantastic and extraordinary forms, which lie throughout the bottom of the vale, and are every where rendered shaggy with trees and shrubs, nature here wears an aspect of tangled and inextricable roughness: the hills, moreover, on each side of the contracted valley, rise to a great height, and are entirely covered by birches, hazels, oaks, hawthorns, and mountain-ashes. The author of the *Lady of the Lake* has described the Trosachs as "a wildering scene of mountains, rocks, and woods, thrown together in disorderly groups;" and the meaning of the name in some measure, also, describes the character of the scenery, the word Trosachs signifying a rough or *bristled* piece of territory. At the termination of this tract, commences Loch Katrine.

The arable lands bear but a very inconsiderable proportion to the pasture and woodlands. The upper, or highland, part of the parish, which is by far the greater, is divided principally into sheep-farms, upon which scarcely sufficient grain is raised to supply the occupiers and their shepherds; the lower grounds are chiefly arable, and in good cultivation, yielding grain of every kind, for the supply of the parish, and also for sending to the markets. In the lower portions the soil is fertile, producing not only grain, but turnips, with the various grasses, and excellent crops of rye and clover; the farm-buildings, with very few exceptions, are commodious, and mostly of modern erection, and the lands are well drained. The sheep are of the black-faced breed, and great attention is paid to their improvement. The cattle on the upland farms are of the black Highland breed, and in addition to those reared on the lands, great numbers are pastured during the winter, for which many of the farms are well adapted by the shelter afforded by the woods; the cattle on the lowland farms are chiefly of the Ayrshire breed. The whole of the woods, from the head of Loch Chon to the loch of Monteith in the parish of Port of Monteith, are the property of the Duke of Montrose; they consist of oak, ash, birch, mountain-ash, alder, hazel, and willow, and are divided into twenty-four portions, of which one is felled every year, as it attains a growth of twenty-four years, within which

period the whole are cut down, and renewed, in succession. On the west side of the mountains is limestone of very superior quality, of a blue colour, with veins of white, and susceptible of a high polish; it is extensively wrought near the eastern extremity of the parish, for building, and for manure, solely by the tenants of the several farms. To the west of the limestone range is a mountain consisting almost entirely of slate, occurring in regular strata, in the quarries of which about twenty men are employed. The prevailing rocks are conglomerate and trap, or whinstone; but the want of water carriage, and the distance of the markets, operate materially to diminish their value. The annual value of real property in the parish is £3600.

The village is situated near the eastern extremity of the parish: the making of pyroligneous acid affords employment to a few persons. A post-office has been established as a branch of that of Doune; and fairs are held in April, for cattle; on the first Friday in August, for lambs; and on the third Thursday in October, for hiring servants. The lakes and rivers abound with trout, pike, perch, and eels; and char is also found in Loch Katrine. Ecclesiastically the parish is within the bounds of the presbytery of Dunblane and synod of Perth and Stirling. The minister's stipend is £158. 6. 8., of which part is paid from the exchequer; with a manse, and a glebe containing about nineteen acres of good land, partly arable and partly meadow: patron, the Duke of Montrose. Aberfoyle church, built in 1774, and thoroughly repaired in 1839, is a plain structure, containing 250 sittings. Divine service is also performed occasionally, by the minister, in the schoolroom. The parochial school is well attended; the master has a salary of £28, with a house and garden, and the fees average about £6 per annum. Near the manse are the remains of a Druidical circle, consisting of ten upright stones, with one of much larger dimensions in the centre. The Rev. James Richardson, whose son William was professor of humanity at Glasgow; and the Rev. Patrick Graham, eminent for the variety and extent of his talents, and employed in revising an edition of the Sacred Scriptures in the Gaelic language; were ministers of the parish.

ABERLADY, a parish, in the county of HADDINGTON, 4 miles (N. W.) from Haddington; containing 1050 inhabitants, of whom 537 are in the village. This place is situated on the Firth of Forth, and near the mouth of the small river Peffer, supposed to have been anciently called the Leddie, from which circumstance the name Aberlady is said to have been derived. A strong castle was built here in 1518, by Patrick Douglas, grandson of Sir Archibald Douglas of Kilspindy: he was treasurer of Scotland during the minority of James V., but sharing in the fate of the Douglasses, he forfeited his estates, and died in exile. The parish is bounded on the north and north-west by the Firth, and comprises an area of about 4000 acres, chiefly under tillage, with very little permanent pasture, and only a small portion of woodland. Its surface is generally flat, but has a very gradual rise from the coast to the south and south-east; and though attaining no considerable elevation even at the highest point, it still commands a richly-varied and extensive prospect over the Firth of Forth in its widest expanse, the Pentland hills, the city of Edinburgh with its castle, and the Grampian hills.

Near the coast the soil is light and sandy, in some parts clayey, and on the more elevated lands a rich and fertile loam. The system of agriculture is in an improved state; tile-draining has been extensively practised, and on all the farms are threshing-mills, many of which are driven by steam. Comparatively little attention has been paid to the rearing of live stock; but the number of sheep and cattle is increasing, and it is not improbable that in due time the farmers will be distinguished for improvements in the breeds of stock. The chief substrata are limestone and whinstone, and coal is supposed to exist in some of the lands; the limestone is not worked, but along the coast the whinstone is quarried extensively. Clay of good quality for bricks and tiles is found, and about twenty persons are employed in works for that purpose. The annual value of real property in the parish is £8151.

Ballencrieff, the seat of Lord Elibank, is a handsome mansion, in a richly-planted demesne, commanding some fine views of the surrounding country. Gosford, the seat of the Earl of Wemyss and March, upon which large sums have been expended, was anciently a possession of the noble family of Acheson, whose titles as Barons, Viscounts, and Earls Gosford have been chosen from this place, where was formerly a village that no longer exists. The mansion is beautifully situated, and contains an extensive and very choice collection of paintings, most of them by the old masters. Luffness is an ancient mansion, considerably enlarged and improved, but still retaining much of its original character; the grounds are well planted, and laid out with exquisite taste. The village is pleasantly situated, near the influx of the Peffer into the Firth, and is neatly built; a subscription library has been established, and there is also a parochial lending library. At this part of the coast is a small haven, where vessels of seventy tons may anchor at spring tides, but from which their return to the sea is difficult when the wind happens to be westerly: the haven is the port of Haddington, but the trade carried on is insignificant. Great facility of communication is afforded by the North-British railway, which passes through the parish.

At a remote period, there appears to have been an establishment of Culdees near the village, probably subordinate to the monastery of Dunkeld, on the erection of which place into a bishopric, David I. conferred the lands of Aberlady and Kilspindy on the bishop, in whose possession they remained till the Reformation. Gavin Douglas, Bishop of Dunkeld, granted these lands to Sir Archibald Douglas in 1522, and in 1589 they were resigned to the crown, and the church of Aberlady became a rectory, independent of the diocese; the patronage remained with the Douglas family, from whom it passed to others, and ultimately to the Earl of Wemyss, the present patron. The parish is in the presbytery of Haddington and synod of Lothian and Tweeddale; the stipend of the incumbent is £280. 11. 11., with a manse, and a glebe valued at £27. 10. per annum. Aberlady church, rebuilt in 1773, is a neat and substantial edifice, adapted for a congregation of 525 persons: four handsome silver cups, for the communion service, were presented by the Wedderburn family. The parochial school affords a liberal course of instruction; the master has a salary of £34. 4. 4½., with £34 fees, and a house and garden.

Till lately there were some remains of the castle of Kilspindy, already noticed, situated between the village and the sea-shore; but they have now totally disappeared. On the margin of a small stream which separates the parish from that of Gladmuir, are the ruins of Redhouse Castle, apparently a place of great strength, the erection of which is referred to the sixteenth century; the lands belonged in the fifteenth century to the family of Laing, of which one was treasurer of Scotland in 1465, bishop of Glasgow in 1473, and high chancellor in 1483. The more ancient portion of the house of Luffness was formerly inclosed within a fortification, raised to intercept the supplies sent by sea to the English garrison at Had-dington; the fortification was demolished in 1551, but the house was preserved. Near the site was once a convent of Carmelite friars, to whom David II. granted a charter; and at Ballencrieff and Gosford were ancient hospitals, of which there are now no remains. Along the coast, stone coffins and human bones have been frequently dug up, supposed to have been those of persons slain in some conflict near the spot.

ABERLEMNO, a parish, in the county of FORFAR; containing, with the chapelry of Auldbar, 1023 inhabitants: the hamlets of Kirktown and Crosston of Aberlemno are equidistant from the towns of Forfar and Brechin, being about 6 miles from each. Aberlemno is named from the small river Lemno, the word signifying "the mouth of the Lemno." This stream, after flowing a few miles towards the south-west, and winding northward around the western extremity of the hill of Oathlaw, runs to the east, and falls into the Esk, about a mile from its source. The parish is separated on the north, by the Esk, from Tannadice and Careston, and measures about six miles in length, and in some places five in breadth. It forms part of a hilly district situated towards the south of Strathmore, and the higher portions, which are bleak, are mostly covered with broom and heath, while the lower grounds are generally fertile, though in one district subject to inundations from the Esk. The hill of Turin is the highest eminence; the others attain only a moderate elevation: it rises about 800 feet above the level of the sea, commanding extensive prospects, and by the plantations of fir upon its slope contributing greatly to the improvement of the scenery. The lake of Balgavies, on the southern boundary, affords good pike and perch angling: it formerly yielded a large supply of marl for manuring the lands. The inhabitants, with the exception of a few engaged in weaving and in quarrying, follow agricultural pursuits; and the farmers pay much attention to the rearing of cattle, considerable numbers of which, and large quantities of potatoes, are sent to the London market. There are four meal and barley mills, driven by water; and all the large farms have threshing-mills. Several quarries of fine slate stone of a greyish colour are in operation, supplying a good material for building, paving, and the roofing of houses. The annual value of real property in the parish is £6833.

In this neighbourhood are various old castles and remains of strong places, including the houses of Auldbar and Balgavies, both of which are surrounded with fine wood: the first of these consists of an ancient and a modern portion, and that of Balgavies is comparatively modern, a single vault only of the more ancient structure remaining. The house of Carsegownie has

been lately partially stripped of its ancient feudal appearance; while the castle of Flemington, a little to the east of the church, retains all the distinguishing features of the predatory era in which it was erected. The Auldbar turnpike-road, connecting the railway station of the same name with Brechin, passes through the parish, as does also the turnpike-road from Forfar to Montrose; and there is a parish road from Forfar to Brechin, running in a north-eastern direction through the whole length of the district. Ecclesiastically the parish is in the presbytery of Forfar, synod of Angus and Mearns, and in the patronage of the Crown and the family of Smythe of Methven; the minister's stipend is £228. 6. 6., with a manse, and a glebe valued at £15 per annum. The present church was built upon the old foundation, from about three feet above the ground, in the year 1722, and accommodates 450 persons with sittings. The parochial school affords instruction in the usual branches; the master has a salary of £34. 4. 4., with fees producing between £12 and £14. There is a library of miscellaneous works. The most interesting relic of antiquity is the ruin of Melgund Castle, said to have been built by Cardinal Beaton, and still indicating by its extent and strength its former magnificence. On the summit of Turin hill are the remains of an ancient fort called Camp Castle, commanding most extensive views, and supposed to have been raised as a watch-tower. There are also numerous tumuli and cairns in the parish, and several obelisks or monumental stones, ornamented with various devices, one of the chief of which is in the churchyard, exhibiting on one side a cross in bold relief covered with flowers, and on the other a number of martial figures, thought to be memorials of important military achievements. The title of Viscount Melgund is borne by the Earl of Minto, who is proprietor of nearly half the parish.

ABERLOUR, a parish, in the county of BANFF, a few miles (W. N. W.) from Dufftown, and on the road from Elgin to Grantown; containing, with the village of Charlestown, 1352 inhabitants. This parish, which was formerly called Skirdustan, signifying in the Gaelic tongue "the division of Dustan," its tutelary saint, derived its present name from its position at the mouth of a noisy burn which discharges itself into the river Spey. It is situated in the western part of the county, and extends nearly seven miles along the south bank of the Spey, from the hill of Carron on the west, to the mouth of the river Fiddich on the east. The surface is very uneven. Towards the southern part is an almost unbroken chain of mountains, consisting of the Blue Hill, the East and West Conval hills, the mountain of Benrinnes, and the broad hill of Cairnakay; with part of the hill of Carron, on the border of the Spey, and separated from Benrinnes by a narrow valley. A deep and narrow pass called Glackbarnis, of great length, and of uniform breadth at the bottom, separates the mountain of Benrinnes from the Conval hills, and is remarkable for the great height and regularity of its declivity on both sides. The mountain of Benrinnes, as its name implies, is precipitous in its ascent, and sharp on the summit. It has an elevation of 2756 feet above the sea, and of 1876 feet from its base, being the highest in the country for many miles around. From the summit are seen the Grampian hills to the south, the interesting valley and hills of Glenavon to the west, and to the

north the mountains of Ross, Sutherland, and Caithness; it embraces a fine view of the sea, along the coasts of Moray and Banffshire, and forms a conspicuous landmark for mariners. The Couval hills are spherical in form, and profusely covered with heath; and between these and Benrinnas is the fine valley above mentioned, the south part of which, consisting of sloping land, and including the district of Edinville, is divided on the north-east, by a brook, from the lands of Allachie, and on the north, by the burn of Aberlour, from the district of Ruthrie. To the north-west of Ruthrie is the district of Kinnermony. The lands of Aberlour are watered by two rivulets, descending from the Blue hill, and which unite to form the burn of Allachoy, separating the lands of Aberlour from the district of Drumfurrich.

These several districts contain some good tracts of holm land, and form the principal arable grounds of the parish, of which, upon the whole, not more than one-half is under cultivation. The soil, near the river, is a rich deep loam, mixed with sand; towards the hills a deep clay, lying on a substratum of rough gravel, and covered with a thin alluvial soil; and towards the centre of the parish, a richer alluvial soil, resting on a bed of granite. In the neighbourhood of Glenrinnas, limestone is quarried for agricultural purposes, and, by many of the farmers, burnt upon their own lands. The principal crops are barley, oats, wheat, and peas; and the barley produced here weighs more, per bushel, than that of the heavier soils of the adjoining parishes. The Morayshire breed of black-cattle is raised, and the sheep are of the hardy black-faced kind. Several of the farms are inclosed with fences of stone, and the farm-buildings generally are substantial and commodious. The annual value of real property in the parish is £3169. Here is the handsome seat of Aberlour, occupied by Alexander Grant, Esq., the chief resident proprietor: a column of the Tuscan order has lately been erected on the estate. There are several flourishing plantations of fir in the hilly districts, and of elm and ash near the river, the banks of which are in some places decorated with birch-trees of very luxuriant growth.

The river Spey, from the rapidity of its current, and the narrowness of its channel, frequently overflows its banks, and damages the neighbouring lands. In 1829 a very destructive flood occurred, the waters rising to the height of nearly twenty feet above the ordinary level, sweeping away the entire soil of several fields, with all their crops, and leaving upon others a deposit of sand and rough gravel, to the depth of several feet. A cottage and offices were carried away; and the dry stone arches which formed the approach to the bridge of Craig-Ellachie were entirely destroyed, only a few yards of masonry being left on which the end of the arch rested. This bridge consists of one metal arch, more than 160 feet in span, abutting on a solid rock on the north side of the river, and supported on the Aberlour side by a strong pier of masonry, built on piles. It was erected in 1815, at an expense of £8000, of which one-half was defrayed by government, and the other by subscription. The rivers Spey and Fiddich afford excellent salmon and trout; the fishing season commences in February, and closes in September. The parish also abounds with various kinds of game. On the burn of Aberlour, about a mile above its influx into the Spey, is

a fine cascade, called the Lynn of Ruthrie; the water falls from a height of thirty feet, and, being broken in its descent by a projecting platform of granite rock, richly adorned with birch-trees and various shrubs, presents an interesting and highly picturesque appearance. Fairs are held annually in the village of Charlestown.

For ecclesiastical purposes the parish is in the presbytery of Aberlour and synod of Moray: Lord Fife is patron, and the stipend of the incumbent is £287. 8. 2. The church, a well-arranged structure, erected in 1812, is situated to the north of Charlestown, at a distance of about 300 yards from the ruins of the old church near the influx of the burn of Aberlour into the Spey; Mr. Grant has lately made an addition to the length of the edifice, and erected a handsome tower. In the valley of Glenrinnas is a missionary establishment, and a chapel of ease has been erected, the minister of which has a stipend of £60 per annum, royal bounty, with a manse, glebe, and other accommodations provided by the heritors. The parochial school affords instruction in the Latin language, arithmetic, elementary mathematics, &c.; the master has a salary of £34. 4. 4½. per annum, with a house and garden, and the school-fees average about £40.

ABERLUTHNOTT, in the county of KINCARDINE.
—See MARYKIRK.

ABERNETHY, a parish, in the counties of INVERNESS and ELGIN, 5 miles (S. W. by S.) from Grantown; containing, with Kincardine, 1832 inhabitants, of whom 1083 are in Abernethy proper. This parish, to which that of Kincardine was annexed about the time of the Reformation, derives its name from the position of the church near the influx of the river Nethy into the Spey: Kincardine, or Kinie-chairdin, implies the "clan of friends." The united parish is fifteen miles long and from ten to twelve broad, containing about 120,000 acres, of which about 3000 are in tillage, 40,000 forest and plantation, and 77,000 uncultivated. It extends from the borders of Cromdale to Rothiemurchus, and the lower end of it falls within the county of Inverness: the surface is mountainous and woody, interspersed with corn-fields. The parish is bounded on the west, throughout its entire length, by the river Spey; and the Nethy, when swollen, is of sufficient size to allow of the passage of floats of timber into the Spey. There are several lakes also, in Kincardine; the chief is the oval basin in Glenmore forest, which is nearly two miles in diameter. The soil in some parts is deep raith, but frequently thin and dry, and in some places wet and cold; wood is abundant, and about 7000 acres on one estate are under fir of natural growth. Some of the farms exhibit the appearance of superior husbandry, and have substantial and commodious buildings. Improvements have been carried on for a considerable time, to the advance of which, the plentiful supply of limestone in the parish, and of native fuel for preparing it, has greatly contributed: every farmer, however small his ground, has a lime-kiln in use. Parallel to the river Spey extends a range of mountains, a branch of the Grampians, which exhibits a great variety of rock: commencing with the well-known Cairngorm and Ben-Macdhui, its southern extremity, granite stretches to the north, for several miles; then appears primary limestone, and this is succeeded by trap and micaceous schist.

A regular "manufacture" of timber has been carried on in the Abernethy district, for more than sixty years. The Duke of Gordon, in 1784, sold his fir-woods of Glenmore, in the barony of Kincardine, for £10,000, to an English company, who exhausted them; and from the forest of Abernethy, belonging to the Earl of Seafield, great quantities of timber are still forwarded yearly to Garmouth or Speymouth, by large rafts in the river Spey: much of it has been formed into vessels of large burthen, at the former place, and considerable quantities sent to the royal dockyards in England. The trade was immense during the war, the annual value for many years averaging £15,000: it is now considerably diminished, although still employing a large number of the population. The annual value of real property in the parish is £3442.

The parish is within the bounds of the presbytery of Abernethy and synod of Moray; the Earl of Seafield is patron, and the stipend of the minister is £234. 2. 1., with a glebe of the annual value of £7. The church in the district of Abernethy, a commodious structure with seats for 600 persons, was erected eighty or ninety years since; and that of Kincardine, a well-built edifice, seven miles distant from the manse, containing about 330 sittings, was built in 1804. There is a parochial school, in which Latin, mathematics, and the usual branches of education are taught; the master has a salary of £25. 13., with £22 fees, &c., and a house. A Gaelic school at Kincardine is chiefly supported by £17 a year from the Society for Propagating Christian Knowledge. Several ancient remains are to be seen, particularly of Druidical circles; and on rising ground near the church is an old building, of which no satisfactory account has ever been afforded. The topaz called *cairn gorm* is found in considerable numbers in the mountain of that name; and at the end of Lochaven is an interesting natural curiosity, in the form of a cave, commonly called *Chlachdhian*, or "the sheltering stone," and which is surrounded by vast mountains. It is sufficient to contain a number of persons, and people frequently take shelter in it for security from rain and wind, after hunting or fishing, and sometimes being driven by necessity. Some pine-trees of immense size are to be found throughout the forest: the trunk of one, at nine feet from the ground, is nineteen feet in circumference.

ABERNETHY, a burgh and parish, partly in the district of CUPAR, county of FIFE, but chiefly in the county of PERTH, 3 miles (W. S. W.) from Newburgh; containing, with the village of Aberdargie, 1920 inhabitants, of whom 827 are in the town of Abernethy. This place, originally called Abernethyn, is supposed by some to have derived its name from the small stream of the Nethy, flowing through the centre of the parish, and so denominated from the old British term *neith*, or *nid*, implying a "turning" or "whirling stream", of which term *nethy* is a diminutive. But others are of opinion that the appellation has been received from Nectan or Nethan, one of the Pictish kings who dignified the place, and of whose kingdom it was the capital. The most ancient and credible of the Scottish historians agree in representing this locality as the metropolis of the Pictish nation, both in civil and religious matters; but the particulars relating to the erection of the church are variously described. The Pictish Chronicle states the edifice to have been raised by Nethan, or Nectan, I.,

about the year 456, as a sacrifice offered to God and St. Bridget, for the recovery of his kingdom; whilst Fordun asserts, that St. Patrick himself introduced St. Bridget and her nine nuns into the religious establishment of Abernethy. Others, however, think that the church was founded and endowed towards the close of the sixth century, by King Garnard M'Dourmach, or in the beginning of the seventh century, by Nethan II., his immediate successor. The church was shortly after made the head of an episcopal see; and here was the residence of the metropolitan of the Pictish kingdom, and probably of all Scotland, until the Picts were subdued by one of the Kenneths, and both the see and the residence of the bishop were transferred to St. Andrew's, the head of which was afterwards acknowledged as the national bishop. Abernethy was subsequently comprehended in the bishopric of Dunblane, founded in the twelfth century, by King David I., out of the national bishopric of St. Andrew's.

After the removal of the see from this place, the church became collegiate, and was in the possession of the Culdees, of whom but little is known with certainty, except that this parish was their principal seat, and that here they had a university for the education of youth, in which the whole of the sciences were taught, as far as they were then known. In the twelfth century, by a charter of King William the Lion and of Lawrence de Abernethy, the church and advowson of Abernethy, with its pertinents, were conveyed to the abbey of Arbroath; and about the year 1240, the altarage of the church was given with certain lands to the Bishop of Dunblane, who in return, among other things, engaged to provide for the service of the church, to enrol it among his prebendal institutions, and to instal the abbot of Arbroath as a prebendary or canon, with a manse and privileges similar to those of the other canons. The ancient monastery, in 1273, became a priory of canons regular, and a cell of Inchaffray, all the Culdee institutions yielding to the increasing power of the Romish Church; and this priory seems to have been afterwards converted into a provostry or college of secular priests, the church becoming a collegiate establishment. The church was valued at the Reformation at £273 per annum, and was afterwards a parsonage.

The civil occupancy of the principal lands appears to have taken place at an early period. In the twelfth century, Orme, the son of Hugh, received the lands of Abernethy from King William the Lion, and from them both himself and his posterity took their name. Alexander de Abernethy, a descendant, swore fealty to Edward I. in 1292, and was appointed by Edward II., in 1310, warden of the counties between the Forth and the Grampians. His lands are supposed to have been forfeited after the battle of Bannockburn, or to have been continued in the family only by the marriage of his daughters, the eldest of whom, Margaret, was united to John Stewart, Earl of Angus, who thus obtained the lordship of Abernethy, and whose grand-daughter, Margaret Stewart, married William, Earl of Douglas. Their son, George Douglas, on the resignation of his mother in 1389, became Earl of Angus. This family, in the earlier period of Scottish history, were numerous and powerful: during their more intimate connexion with the parish, they seem to have had a castle or place of residence here, which tradition says was near the

house of Carpow; and some of the most illustrious of the Earls of Angus were interred in the parish. According to some authors, it was at Abernethy that Malcolm Canmore did homage to William the Conqueror; but so many different opinions exist on the point as to render it altogether doubtful.

This town, which is of great antiquity, and, from the ruins discovered eastward of it, is supposed to have been once much more extensive, is situated near the confluence of the Tay and Earn rivers, on the south-eastern border of the county, and adjoining Fifeshire, in which county a small portion of it stands. The lands in the vicinity, and throughout the greater part of the parish, are interesting and beautiful, consisting of large tracts highly cultivated, forming on the north a portion of the rich vale of Strathearn, enlivened by the rivers; on the south the lands are for the most part hilly, occupying about two-thirds of the whole area, and belonging to the picturesque range of the Ochils. About a mile to the east is the mansion of Carpow, a neat modern structure; a little beyond it is a small stream which separates Abernethy from the parish of Newburgh, in Fifeshire, and to the west is the mansion of Ayton House, skirted by the Farg rivulet, which flows through the romantic scenery of Glenfarg, and joins the Earn at Colfargie. In the south-western district, about three-quarters of a mile from the town, rises Castle Law, a steep grassy elevation, 600 feet high, the summit of which is the seat of a vitrified fort. It commands a beautiful view of Strathearn and the Carse of Gowrie, with the interjacent Tay, where there is an island named Mugdrum, belonging to this parish, a mile in length, comprehending thirty-five acres of rich arable land, and which is thronged in autumn and winter with various kinds of water-fowl, and sometimes is visited by fine wild swans.

The town contains a library, but no other institutions of interest. The Perth line of the Edinburgh, Perth, and Dundee railway company passes here, and has a station. A large portion of the inhabitants, both male and female, as well as of those residing in the villages of Aberdargie and Glenfoot, in the parish, are employed in weaving linen-yarn, for the manufacturers of Newburgh. The trade consists chiefly in the sale of grain and potatoes, the former being sent to the weekly market of Newburgh, and the potatoes taken to Ferryfield, on the estate of Carpow, where is a stone pier, and thence conveyed to the London market. The Earl of Wemyss has fishings on the Earn, and there are others on the Earn and the Tay, belonging to the estate of Carpow. A brick and tile work is in operation; and a bleachfield has been formed at Clunie, in the eastern district, which has to some extent caused an increase in the population. Besides the above mentioned line of railway, the turnpike-road from Perth to Edinburgh passes through the parish: several good roads, also, are kept in repair by statute labour, one of them leading from Perth to Cupar, in which line a new bridge was erected over the Farg a few years since. There are two ferries, one at Cary, and the other at Ferryfield. Cattle-fairs are held on the 12th of February, the fourth Wednesday in May, and the second Thursday in November; they are, however, in a very low state.

Abernethy is a *NURGH* of barony, held under Lord Douglas. It had a charter from Archibald, Earl of Angus, Lord of Abernethy, dated the 23rd of August,

1476, in which mention is made of a royal charter of erection, in his favour, by King James II. By a charter of William, Earl of Angus, dated the 29th day of November, 1628, the privileges were confirmed, and, among them, the right of fairs and markets, the customs of which were to be applied to the use of the burgh, unless they amounted to more than 100 merks Scots yearly, when the surplus was to be accounted for to the superior. The practice of the burgh has fixed the number of bailies at two, and the councillors at fifteen, and by right of charter the burgesses elect their magistrates; the fee for admission as a burgher, to a stranger, is 10s. 6d., and to the son of a burgher, half that sum. The bailies formerly exercised both a civil and criminal jurisdiction, to a small extent, but their authority has been lately challenged; they still, however, hold courts for petty offences, from which there is no appeal but to the court of justiciary or session.

The *PARISH* comprises about 7030 acres, of which 2568 acres are comprehended in the northern division, forming the lowest part of the vale of Strathearn, and the remainder consists of a portion of the Ochil hills. The soil of the former is deep rich clay, black earth, and sand; and that of the latter, tilly, and resting on whinstone, among which numerous valuable pebbles have at different times been found. All kinds of grain and green crops, of the first quality, are raised on the lower portion, where the lands are cultivated to the highest degree; the hilly part contains 950 acres of permanent pasture, 850 acres in plantations, and 2660 arable, the last producing oats, barley, turnips, potatoes, &c. The whole farming of the parish is of the most approved kind. The rocks between the Tay and the Ochils consist principally of the old red sandstone, and the substrata of the Ochils chiefly comprise the clinkstone, amygdaloid, porphyry, and claystone varieties of the trap formation. Gneiss, primitive trap, and quartz are found in boulders, especially on the hills; and quarries of the greenstone and clinkstone rocks are in operation, supplying a material for roads and coarse buildings. Zeolites of great beauty are found in Glenfarg, and agates, jaspers, &c., in many places; there is limestone in Auchtermuchty, and in the Glenfarg quarry have been found scales of the ichthyolites. The annual value of real property in the parish is £9626.

Ecclesiastically the parish is in the presbytery of Perth, synod of Perth and Stirling, and in the gift of the Earl of Mansfield; the minister's stipend is £256. 5. 7., with a manse, and a glebe valued at £12 per annum. The church, built in 1802, is a plain but commodious edifice, containing 600 sittings. There are places of worship belonging to the Free Church and United Presbyterian Church, and another at Aberdargie connected with the United Presbyterian Church. The parochial school affords instruction in the usual branches; the master has the maximum salary, and the fees, together with about £13. 13., chiefly arising from a bequest by Lord Stormont, of £200, in 1748, and another producing £1. 13., for teaching. On the top of a hill behind Pitlour, are the remains of an ancient fort called the "Roman camp," supposed by some antiquaries to have been occupied by the Roman army before the great battle with Galgacus. Many Roman antiquities have been discovered in the parish, leading to the supposition that this people had an important military station here; and a Roman road is

said formerly to have existed, conducting to Ardoch; and another to Perth. In the south-western extremity of the parish, in Fifeshire, is the ruin of Balvaired Castle, situated among the Ochils, the property of the Earl of Mansfield and his ancestors since the time of Robert II., and which conferred a title on Andrew Murray of Balvaired, who was settled minister of Abdie in 1618, knighted in 1633, and created Lord Balvaired in 1641. But the most interesting relic of former times, and that which has excited the greatest interest, is a round tower, to which there is nothing similar in Scotland, except at Brechin, and the origin of which is altogether involved in obscurity. It stands at the entrance of the church, near the site containing the old college and ecclesiastical establishment, and also the ancient church taken down in 1802; and has a clock, and an excellent bell which has been used from time immemorial for ecclesiastical purposes, and to a certain extent by the burgh for civil purposes. The building is seventy-four feet high, and forty-eight feet round outwardly at the base, and consists of sixty-four courses of hewn freestone, diminishing a little towards the summit, where there are four windows, equidistant, facing the four quarters of heaven, each five feet nine inches high, and two feet two inches wide. The walls, at the bottom, are three feet and a half thick; and opposite to the north is a door, eight feet in height and three feet wide, arched overhead. The structure is flat at the top, having a large projecting moulding for the uppermost course of stones; and, being entirely hollow, and without staircase, is ascended by scaling ladders attached to wooden platforms. The Rev. John Brown, for thirty-six years minister of the Associate Burgher congregation at Haddington, and author of the *Self-interpreting Bible* and other theological works, was born at Carpow in 1722.

ABERNYTE, a parish, in the county of PERTH, ten miles (W.) from Dundee; containing 280 inhabitants. The name of this place is of Gaelic origin, referring to the situation of the principal village near the confluence of two rivulets, one of which is supposed to have borne the appellation of Nyte. Very little is known concerning the transactions that anciently occurred here. A battle is said to have been fought in the parish between two powerful families, the Grays of Fowlis and the Boyds of Pitkindie, in which the latter were victorious; and upon the top of a hill called Glenny-law are two cairns, thought to have been raised in consequence of this engagement. This parish, including Glenbran annexed to it quoad sacra, is about three miles in extreme length and two in breadth, and contains about 1703 acres under cultivation, 172 in good pasture, and about 341 in plantations, consisting chiefly of larch and Scotch fir. It is bounded on the north-west by the Sidlaw hills, the district lying among those hills that rise gradually from the Carse of Gowrie to the top of the ridge of Dunsinnan, the highest point of which in this parish, called King's Seat, is 1050 feet above the sea. The most cultivated part of the parish is situated 300 feet above the level of the Tay, and about three miles only in a direct line from that river. The numerous hills and vales in the locality impart to the scenery a picturesque character, and fine prospects may be had from several of the heights; there are many rivulets among the valleys, and at the head of a romantic dell is a beautiful cascade, the waters of which fall from a perpendicular height of almost forty feet.

In the lower parts, the arable land is in general of a light fertile soil, lying frequently on gravel, and sometimes on clay, or on a mixture of both: in some parts the carth runs to a considerable depth. The portions of the higher grounds which are not planted, are covered with coarse grass or heath. All the usual white and green crops are produced, of good quality; the best system of agriculture is followed, and great advantages are said to have resulted from the consolidation of small farms. The use of bone-dust for turnip husbandry, and the practice of turning in the sheep to eat off the turnips, have proved of much benefit. The implements of husbandry are good, and the farm-houses and buildings have mostly been placed upon an excellent footing; but the fences, which form an exception to the generally improved appearance of the parish, are deficient in extent, and sometimes in very bad order. The rocks are sandstone, with amygdaloid containing agates or pebbles. The annual value of real property in the parish is £2041. For ecclesiastical purposes the parish is within the bounds of the presbytery of Dundee, synod of Angus and Mearns; patron, the Crown. The stipend is nominally £150, but has lately fallen short of this sum: there is a commodious manse, with a glebe of nearly seven arable acres, and three of pasture, and a large garden. The church, built in 1736, and lately repaired, is situated at the lowest extremity of the parish. A tabernacle built about fifty years since, by Mr. Haldane, for a missionary, is now occupied by a congregation of United Original Seceders. There is a parochial school, in which instruction is given in every branch of education; the master has the maximum salary, with about £27 fees. Several Druidical circles yet remain; and in the parish is also the "Long Man's Grave," a noted spot at the road-side, north-east of Dunsinnan Hill, of which the traditionary account states that one, guilty either of suicide or murder, was buried there.

ABERTARFF.—See BOLESKINE and ABERTARFF.

ABINGTON, a village, in the parish of CRAWFORD-JOHN, Upper ward of the county of LANARK, 3 miles (N. by W.) from Crawford; containing 135 inhabitants. It is situated on the road between Glasgow and Carlisle, on the river Glengonnar; and has a station of the Caledonian railway on the other side of the river, in the parish of Crawford. In the vicinity are vestiges of gold-mines, said to have been explored in the reign of James VI., and with some success. A school here is aided by a heritor, with £6 per annum.—See CRAWFORDJOHN.

ABOYNE and GLENTANNER, a united parish, in the district of KINCARDINE O'NEIL, county of ABERDEEN, 5 miles (W. by S.) from Kincardine O'Neil; containing, with the burgh of barony of Charlestown, 1138 inhabitants. The Gaelic words *A*, signifying a "ford," and *boinne* or *buinne*, a "thin rippling water," originated the appellation of the first of these places, on account of its proximity to a ford on the river Dee; and the name Glentanner is said to be compounded of the Gaelic terms *Glean-tan-ar*, meaning "the glen of scanty arable land." The date of union is uncertain; but previously to 1763, there was a church in each parish, the two being served by one parochial minister. Glentanner, before the union, formed a separate chapelry, and Aboyne was then united to Tullich, an intermediate chapel being situated at Braeroddach, equidistant from the churches of Aboyne and Tullich. On the south bank of the Dee,

and surrounded by a burying-ground, are still to be seen the remains of the old church of Glentanner, called, on account of its heather thatch, the "black chapel of the moor." The portion of Aboyne on the north side of the Dee formed two baronies, the burgh of which, now named Charlestown, formerly Bunty, is near Aboyne Castle; but the tolbooth was destroyed at the close of the last century, and all traces of the pot and gallows have nearly disappeared. The Knights Templars once had possessions here, given to them by the Bissets; from that body they passed to the Frasers of Cowie, and from them to Lord Keith, whose daughter Elizabeth, having married Sir John Gordon of Huntly, carried the lands and castle to the Gordons, with whom they have remained.

The main outline of the PARISH is irregular, rendering the statement of an accurate measurement difficult; besides which, there is a detached portion with a population of about sixty, situated on the left bank of the Feugh, about nine miles south-east from the church, and separated by the parish of Birse. The length from east to west, between extreme points, is supposed to be thirteen miles, and the breadth twelve miles; comprising 37,000 acres, of which a small part is arable, and the remainder moorland, natural pastures, and in wood. This is a mountainous and woody district, watered by numerous rivulets, among which are the Tanner, the Feugh, the burn of Dinnert, and that of Dess, beautifully winding in different directions, but all in subordination to the stately and majestic Dee, which here pursues its course through the middle of the parish, Aboyne lying chiefly on the northern, and Glentanner on the southern, bank. The district is bounded on all sides either by rivers or mountains; it is skirted on the west, south, and east by ranges of the Grampians. The climate is serene; during heavy falls of snow, and the blowing of the keener winds, it is intensely cold, but it is considered salubrious, particularly about the banks of the Dee, and the Tanner. Invalids frequently resort hitber in summer, to enjoy a picturesque and romantic seclusion, and to drink the goats' whey for which the place is celebrated; while the heath-clad hills and Alpine forests, ascended by steep and craggy slopes, afford exercise for the more hardy, who, having reached the summits, are amply repaid for their fatigue by the fine views around them, embracing Aberdeen, Montrose, and many other objects of commanding interest.

The SOIL near the rivers is a thin alluvial deposit, formed, in consequence of the rapidity of the currents, chiefly of sand and gravel; but advancing towards the hills, the earth is stronger and of better quality, consisting of a black or clayey till. Extensive tracts of peat-moss are found on the higher grounds, to a large extent supplying the inhabitants with fuel. The only grain raised is oats and bear. The farms vary much in size, some being mere crofts, and others comprising more than 100 arable acres; but the latter are few in number, and the average dimensions are from twenty to fifty acres. Between 5000 and 6000 sheep, chiefly of the Linton breed, are pastured upon the hills and moorlands; and the black-cattle, to the rearing of which much attention is paid, comprise the Aberdeenshire horned and the Buchan polled breeds, crossed not unfrequently with the short-horned. The rocks mostly consist of granite, existing in various forms, according to

the proportions of its constituent parts; gneiss is also common, and ironstone, limestone, topaz, crystallized quartz, and fullers'-earth are found. The annual value of real property in the parish is £4001. About 4500 acres of natural fir, a remnant of the ancient Caledonian forest, still remain in Glentanner; and on the estate of Balnacraig, where stand the old mansion-house of the same name and the house of Carlogie, about 1400 acres are covered with Scotch fir, which is in a thriving state, like most of the other wood in the parish. There are also 2144 acres of plantations near Aboyne Castle, the ancient seat of the Earls of Aboyne; consisting chiefly of Scotch fir, with many sprinklings of larch, oak, ash, beech, elm, and other varieties. The castle grounds are ornamented with an artificial lake of thirty-two acres, interspersed with wooded islets. The castle was partly rebuilt in 1671, by Charles, first Earl of Aboyne; and the east wing was added in 1801, by his great-great-grandson, now Marquess of Huntly. This mansion is surrounded with beautifully-wooded hills commanding extensive and interesting views.

The village of Charlestown has a daily mail to Aberdeen. The turnpike-road from that city terminates here, but the communication is continued by good commutation roads, on each side of the Dee, to Ballatar and Braemar; there are also commutation roads leading hence in the direction of Tarland and other places, and the parliamentary road to Alford commences here. Numerous small bridges cross the different streams; and at Aboyne, nearly opposite the church, is an elegant suspension bridge, erected in 1831, by the Earl of Aboyne, in place of a former one built in 1828, and swept away by the great flood in August in the following year. In 1846 an act of parliament was passed for the construction of a railway from Charlestown of Aboyne, along the valley of the Dee, to Ferryhill, near Aberdeen. The trade in the sale of grain and cattle is principally carried on with Aberdeen; and besides the cattle sold for this city, or forwarded by the steamers to the London market, large numbers in a lean state are sent to the south of Scotland or to England. Fairs are held at Candlemas, Michaelmas, Hallowmas, and in June and July, on a green between the village of Charlestown and the church.

Ecclesiastically the parish is in the presbytery of Kincardine O'Neil, synod of Aberdeen, and in the patronage of the Marquess of Huntly. The minister's stipend is £158. 6. 8., part of which is received from the exchequer; with a manse, and a glebe of twenty acres of very poor land, assigned in lieu of the old glebes of the two parishes, when a central church was built for the united parish, in 1763: the present handsome edifice, containing 628 sittings, was erected in 1842, at an expense, exclusive of carriage, of £900. The parochial school affords instruction in the usual branches; the master has a salary of £26, with £28 in fees, and a portion of Dick's bequest. The antiquities comprise Picts' houses, cairns, tumuli, and the remains of encampments, of the history of which nothing is known. Aboyne gives the inferior title of Earl to the Marquess of Huntly.

ACHARACLE.—See AHARACLE.

ACHARN, a village, in the parish of KENMORE, county of PERTH; containing 42 inhabitants. It is a small place, of which the residents are entirely engaged in agriculture. The Acharn burn, a feeder of Loch Tay,

runs through the eastern portion of the parish.—See **KENMORE**.

ACKERGILL, a village, in the parish of **WICK**, and county of **CAITHNESS**. It was anciently called Aikrigill, and lies on the shore of Sinclair bay, and on the road between Staxigo and Keiss. The lands were formerly a possession of the Keiths, earls-marischal, whose residence here was Ackergill Tower, a spacious rectangular structure, the walls of which, thirteen feet in thickness, and crowned with battlements, are eighty-two feet in height; it is in a state of entire preservation, and, from its antiquity, has an impressive aspect.—See **WICK**.

ADAMSROW, a village, in the parish of **NEWTON**, county of **EDINBURGH**; containing 249 inhabitants.

AFTON-BRIDGEND, a village, in the parish of **NEW CUMNOCK**, district of **KYLE**, county of **AYR**; containing 261 inhabitants. This village is situated on the banks of the Afton, a small stream tributary to the river Nith, into which, flowing northward through Glen-Afton, it merges near New Cumnock. The Afton gives name to a barony, wherein is a lead-mine. The parochial church is between the villages of Afton-Bridgend and New Cumnock.

AHARACLE, or **ACHARACLE**, a quoad sacra parish, in the parish of **ARDNAMURCHAN**, partly in the district and county of **ARGYLL**, and partly in the county of **INVERNESS**; containing 2916 inhabitants. It is about twenty-four miles in extreme length and ten in breadth; is formed, for the most part, of the eastern portion of Ardnamurchan; and includes the islands of Shonaveg, Portavata, and Shona. The district is in the presbytery of Mull and synod of Argyll; the stipend of the minister is £120, subject to a deduction for communion elements, and there is a manse, with a glebe valued at £2. 10. per annum. The church, which stands at the west end of Loch Shiel, and about four miles distant from the nearest boundary of the district (the Western Ocean), was built in 1829, and contains 270 sittings. Another place of worship connected with the Establishment, is distant from the parochial church about eleven miles. A great portion of the population are Roman Catholics. A school has been built by Sir James M. Riddell, Bart., and endowed by government.

AIGASH ISLE, in the parish of **KILTARLITY**, county of **INVERNESS**. This isle is formed by a division into two branches of the river Beaul; it is of an oval figure, and about a mile and a half in circumference, comprising an area of fifty acres. Aigash is chiefly whinstone. It rises, in a slope, about a hundred feet above the level of the water; and being covered with natural oak, birch, alder, and other trees, presents, with the surrounding rocks, a beautiful and picturesque appearance. The islet communicates with the main land by a bridge.

AILSA, an island belonging to the parish of **DAILLY**, in the district of **CARRICK**, county of **AYR**. This island lies in the Firth of Clyde, between the shores of Ayrshire and Cantyre, from the former of which it is distant eight miles. It is a rugged rock, about two miles in circumference at its base, rising precipitously from the sea to an elevation of 1100 feet, and accessible only on the north-east side, where a small beach has been constructed. The rock is basaltic, and in several parts assumes the columnar formation: at a considerable height are the remains of ancient buildings, supposed

to have been originally a castle, with a chapel. A small portion of its surface affords a scanty pasturage; but it is frequented merely by various aquatic birds, of which the most numerous are the solan geese; and the only income arising from the island is derived from the sale of feathers, for the collection of which, during the season, a person resides on the spot. It was in contemplation, some time since, to make this island a fishing station, for the supply of Glasgow and Liverpool by the numerous steamers which pass this way, and the erection of some buildings for that purpose was commenced, but the idea was subsequently abandoned. The island gives the British titles of Marquess and Baron to the family of Kennedy, who are the owners of the property. It is mentioned by the poet Burns in his song of *Duncan Gray*.

AIRD, a hamlet, in the parish of **INCH**, county of **WIGTON**; containing 18 inhabitants. It is situated near the head of Loch Ryan bay, about a mile eastward of Stranraer, and the same distance south-west of the parochial church.

AIRDRIE, a town of extent and importance, in the parish of **NEW MONKLAND**, Middle ward of the county of **LANARK**, 11 miles (E. by N.) from Glasgow, and 32 (W. by S.) from Edinburgh; containing, in 1841, as many as 12,418 inhabitants, of whom 2556 were in the then quoad sacra parish of East Airdrie, 3213 in that of West Airdrie, 4666 in that of South Airdrie, and 1983 in that of High Church. This place stands on the principal line of road between Glasgow and Edinburgh, and occupies a slightly rising ground sloping westward, but presenting no marked or interesting features. Little more than a century ago, there was but a solitary farmhamlet on the site of this large, well-built, manufacturing and commercial town. Within the last fifteen years, the place has increased in wealth and population to an extent unequalled by any other burgh in Scotland. It owes its rapid growth to the rich and extensive beds of ironstone and coal which surround it, and the consequent opening of iron-works and collieries in the neighbourhood; whilst the situation of the town within a moderate distance of the western metropolis of Scotland, and other principal towns, has also given it a large share in the weaving orders of the Glasgow manufactures. In 1831, the population of the burgh amounted to about 6000, and of the whole parish of New Monkland to 9867; according to the census taken in 1841, the population of the burgh amounted to 12,418, and that of the whole parish to 20,511. Airdrie enjoys the benefit of both railway and canal communication. The streets are lighted with gas, and well paved; the town is watched by a party of police, and there is a company called the Airdrie and Coatbridge water company. A market for grain is held every Thursday, and fairs are held on the last Tuesday of May, and third Tuesday of November. Branches are established of the National Bank, the Bank of Scotland, and the Western Bank of Scotland.

The town was erected into a free burgh of barony in 1821, by the act 1st and 2nd of George IV., cap. 60; and by the general act 1st and 2nd of William IV., cap. 65, it was made a parliamentary burgh, to share with Falkirk, Hamilton, Lanark, and Linlithgow in the return of a member to the house of commons. In 1849 an act was passed to extend and partly repeal the former

of these statutes; to provide for the municipal and police government of the burgh; and the better paving, watching, lighting, and cleansing of the place. Airdrie is governed by a provost, three bailies, a treasurer, and seven councillors, assisted by a town-clerk and a procurator-fiscal. The town-hall is a neat edifice, comprising also a police office, and a small prison for the temporary confinement of offenders previous to their committal to the Airdrie bridewell, a large and well-constructed building. There are, besides, different public halls connected with the trade of the town, and a theatre. Ecclesiastically this place is in the presbytery of Hamilton, and synod of Glasgow and Ayr: the East church, containing 631 sittings, was erected in 1797, and the West church, containing 1200 sittings, in 1835. There are two places of worship for members of the Free Church, two in connexion with the United Presbyterian Synod, and places of worship for other denominations. A town school is under the patronage of the magistrates of the burgh, and the managers of the East parish; it is attended by about 120 pupils in summer, and 80 in winter. Chalmers is of opinion that Airdrie is the *Arderyth* of the British triads, on the heights of which Rydderech the Bountiful, King of Strathclyd, in 577 defeated Aidan the Perfidious, King of Cantyre, and slew Gwenddolan, the patron of Merlin, who was also engaged in the battle. Near Airdrie is a mineral well of a sulphureous quality, called Monkland Well.

AIRLIE, a parish, in the county of FORFAR, 4 miles (W. S. W.) from Kirriemuir; containing 868 inhabitants. The name of this place, written in ancient records Errolly, Erolly, Irolly, and Airlie, is altogether of uncertain derivation: by some it is supposed to come from the Gaelic term *Aird*, signifying the "extremity of a ridge", which description is applicable to the locality of Airlie Castle. The parish is situated at the western extremity of the county, bordering on Perthshire, and measures in extreme length six miles, from east to west; while the breadth varies from half a mile to four miles; the whole comprising 8600 acres, of which 6848 are cultivated, 1365 in wood, and 387 in pasture, waste, &c. The southern part of the district lies in the vale of Strathmore, from which the land rises towards the north in a succession of undulated ridges, forming a portion of the braes of Angus, and the southern Grampians. In this direction, the Isla pours its waters through a deep rocky gorge, out of the higher into the lower country; and the ravine, separating at Airlie Castle into two channels, makes courses respectively for the Isla and Melgum streams. The scenery about this spot, which is highly picturesque, is to a great extent indebted for its attractions to the romantic Den of Airlie, extending for above a mile from the confluence of the two streams. The pellucid stream of the Isla, sweeping in some places over a rocky channel, pursues its winding course among the thickly-wooded and precipitous braes; and the pleasing landscape in this part is completed by the interesting feature of the Kirktown, situated about one mile and a half south east from the castle, and less than a mile east of the river. All the streams are famed for their abundance of fine trout, and are the favourite resorts of anglers; the Isla and Melgum are also much visited by salmon. In the Dean is found the fresh-water muscle, often mistaken for the pearl oyster so common in the South Esk; and some

of the rivers are frequented by numerous migratory birds, some of them being of very rare species. The Den of Airlie is distinguished for its botany, containing some plants that are not to be found in any other place in Scotland.

The soil runs through the several varieties of fine brown and black loam in most of the better portions of the district. There are also gravelly, sandy, and clayey tracts in different places, varying in quality from very fertile to unproductive: on the sand and gravel is a considerable tract of inferior soil which, if allowed to remain long in grass, becomes overspread with broom. In the northern part is a thin barren earth on a tilly subsoil. But though much of the land is either very poor or only of moderate fertility, there are some rich tracts in the parish, particularly a long and broad strip of deep alluvial loam, along the whole course of the Dean river. The agriculture of the parish has been greatly improved since the beginning of the present century, and deep and extensive drains have been constructed; furrow-draining, with tiles and stones, has been practised, and shell-marl is much used as manure. The number of sheep and cattle, and the superiority of the breeds, furnish a striking contrast to the state of the district in these respects about thirty or forty years since. Most of the thinner soils are now covered with flocks of native black-faced sheep, besides regular stocks of Leicesters in other parts; and in addition to the Angus, a very fine description of cattle is to be seen on several of the larger farms, which is often crossed with the Teeswater. Since the introduction of steam navigation, large numbers have been sent to London, exclusively of those sold at Edinburgh and Glasgow, and they obtain the highest prices.

The strata consist entirely of the old red sandstone, with the exception of a trap-dike crossing the channel of the Isla, near Airlie Castle. The upper beds are in general too friable for use, crumbling almost as soon as they are exposed to the air; but those at a considerable depth are of tenacious consistence, and, having several varieties of fine and coarse grain, are capable of being applied to many purposes. Most of the rocks are overlaid with debris, of different depth, and above are usually beds of sand and gravel. At Baikie is a bed of marl once covering forty acres, and extending from one to six or seven yards in depth, but which has been much employed for agricultural use: it lies under a surface of peat. Antlers of deer and horns of oxen have been found in the moss. Many plantations have been formed in the present century, comprising the usual kinds of trees; but they are to a great extent in a pining state, especially the larch, numbers of which have been entirely destroyed by blight and canker. The annual value of real property in the parish is £7434.

Airlie Castle, a plain modern residence, situated at the north-western point of the parish, on a lofty precipice, is the property of the family of Ogilvy, who became connected with the parish in 1458, when Sir John Ogilvy of Lintrathen, received a grant of the barony from King James II. The family were created Barons Ogilvy in 1491, and Earls of Airlie in 1639. One side only of the ancient castle remains, the rest having been burnt down by the Earl of Argyll, in the year 1640, during the absence of the Earl of Airlie, a zealous supporter of the royal cause, which event is celebrated in the popular

ballad entitled "Bonnie house of Airlie". The present peer succeeded to the titles and property in 1849. Lindertis House is a handsome edifice of recent date, beautifully situated on the northern slope of Strathmore, and commanding fine views of an extensive range of country. A considerable number of the inhabitants of the parish are engaged in weaving coarse linens for Dundee houses. Several public roads, leading to some of the great thoroughfares, pass through the place; and the Midland Junction railway passes along the south-eastern border. Ecclesiastically the parish is in the presbytery of Meigle, synod of Angus and Mearns, and in the patronage of the Earl of Strathmore; the minister's stipend is £219. 1. 5., with a manse, and a glebe of nine acres valued at £12 per annum. The church is a very neat edifice, built in 1781, and substantially repaired in 1844. A Free Church place of worship has been erected in the southern part of the parish, with a manse. The parochial schoolmaster has a salary of £34. 4. 4., with a house, and £13 fees. Near Cardean are the remains of a Roman camp, and also of the great Roman road which ran from this spot along the valley of Strathmore.

AIRNTULLY, or ARNTULLY, a village, in the parish of KINCLAVEN, county of PERTH, 8 miles (N.) from Perth; containing 159 inhabitants. This place, of which the houses are scattered in every direction, was formerly of greater extent than it is at present; and though it has of late years considerably decreased in size and population, it still exhibits a striking picture of the ancient villages of the kingdom. It is now chiefly inhabited by weavers for the linen manufacturers of Cupar-Angus, Blairgowrie, and Newburgh; and attached to each of their cottages, is a portion of land sufficient to maintain a cow, and to yield meal and potatoes for the supply of their families.

AIRTH, a parish, in the county of STIRLING, 6½ miles (N.) from Falkirk; containing, with the villages of Airth and Dunmore, 1493 inhabitants, of whom 561 are in the village of Airth. The Gaelic term *ard* or *ardhé*, signifying "a hill", is supposed to have given the name to this place, the eminence called the Hill of Airth being a conspicuous figure, and forming a striking contrast to the level district by which it is surrounded. The parish is situated on the shore of the Forth, which is its boundary on the north and east for about eight miles and a half; and contains the three small landing-places or harbours of Newmiln, Airth, and Dunmore. Its length, from north to south, is six miles and a half, and its breadth three and a half; comprising 16,400 acres of land, mostly in tillage. The small river Pow is the only water besides the Forth; it rises in the parish of St. Ninian's, and after being crossed by several stone bridges, falls into the latter river near Kincardine ferry. The prevailing soil consists of alluvial deposits from the Forth; and the layers of shells at a small depth from the surface, on the lower grounds, afford plain evidence that this portion of the parish formed originally a part of the bed of the river. Most kinds of grain and green crops are raised, averaging £100,000 in annual value; and the general husbandry, which has been for some time advancing, is considered equal to that of the best cultivated districts. The rocks comprise distinct varieties of sandstone, differing in colour, texture, and extent; and there are several quarries.

Argillaceous rock of the fire-proof species also exists here, on which rest beds of coal, belonging with their appropriate strata to the great coalfield of Scotland, but which are not at present worked, the pits formerly in operation, near the village of Dunmore, having been closed since 1811 on account of their exhausted state. The annual value of real property in the parish is £12,420. The plantations are chiefly in the vicinity of the beautiful Hill of Airth, and Dunmore Park, the most prominent and striking portions of the parish. On the hill is situated Airth Castle, a very ancient building, with a new Gothic front, surmounted in the centre by a tower, the whole forming a picturesque object from every part of the surrounding country. In Dunmore Park is the mansion of the Earl of Dunmore, in the Elizabethan style, built about twenty-five years since, and standing upon an extensive lawn richly diversified with trees, and encompassed with grounds thickly planted, like those of the Castle, with larch, Scotch fir, birch, oak, and beech. About 185 acres of land, recovered from the sea, have been added to the Airth estate, and 150 acres to the estate of Dunmore, within the last fifty or sixty years: the land is secured by embankments of soil and turf, defended by stone facings. Considerable tracts of moss, also, are annually recovered by the employment of what are called "moss lairds", who by hard labour are gradually reducing the large extent of moss, amounting to between 300 and 400 acres, receiving for their work £24 per acre.

The parish is traversed by the Glasgow turnpike-road, and there is constant communication with Edinburgh, by means of steam-boats plying on the Forth, throughout the whole year. Over the small river Pow, up which the tide flows for above a mile, is the Abbey-town bridge, situated on the road from Airth and Dunmore to Carron and Falkirk: it received this name from a town, as is supposed, to which it led in a direct line, and near which was an ancient abbey. There are two old ferries, called Kersie and Higgin's Neuck, the latter about a mile across, and the former half that distance. The small harbours of Airth, Dunmore, and Newmiln are within the jurisdiction of the custom-house of Alloa, and there are four registered vessels belonging to the parish. An annual fair is held on the last Tuesday in July, chiefly for the hiring of servants as shearers. Ecclesiastically the parish is in the presbytery of Stirling, synod of Perth and Stirling, and in the patronage of the family of Graham of Airth; the minister's stipend is £281. 12., with a manse, and a glebe of ten acres (including the site of the manse and garden) valued at £27 per annum. The church, which is conveniently situated, was built in 1820, and is capable of accommodating 800 persons. There is a place of worship for the United Presbyterian Synod. The parochial school affords instruction in Latin, book-keeping, and the usual elementary branches; the master has a salary of £34, and £40 fees. A school attached to the United Presbyterian place of worship is supported by subscription; and near the north-west extremity of the parish is a school, built and maintained by the Countess of Dunmore. A dead-fund society was established in 1821, and the poor enjoy the benefit of several considerable bequests. The family of Murray, Earls of Dunmore, derive their title from their ancient seat of Dunmore, in the parish.—See DUNMORE.

AIRTHRIE, STIRLING.—See ALLAN, BRIDGE OF.

AITHSTING.—See SANDSTING AND AITHSTING.

ALDHOUSE, a village, in the parish of EAST KILBRIDE, Middle ward of the county of LANARK. This place, which includes Crosshill, lies in about the centre of the parish, and contains a branch of the parochial school.—See KILBRIDE, EAST.

ALEXANDRIA, for a time a quoad sacra parish, in the parish of BONHILL, county of DUMBARTON; containing 3397 inhabitants, of whom 3039 are in the village, 4 miles (N.) from Dumbarton. This village is on the west bank of the river Leven, and its population has of late years very considerably increased, owing to the establishment of bleach-fields and print-fields in the parish; the persons employed here, in these works, are very numerous. Alexandria church is a handsome edifice, and contains about 1000 sittings; the minister's stipend is £206. 17. 4., with a manse, a glebe valued at £6. 13. 4. per annum, and a right to fuel on a moss, cominuted for £4 worth of coal, and 13s. 8d. money. In the village is a place of worship for Independents.—See BONHILL.

ALFORD, a parish, in the district of ALFORD, county of ABERDEEN, 26 miles (W. N. W.) from Aberdeen; containing 1037 inhabitants. This place, the name of which is of uncertain derivation, is situated in the south-western portion of a district nearly in the centre of the county, called the How of Alford, a valley comprising also the parishes of Keig, Tough, and Tullynessle and Forbes, and entirely surrounded with mountains and hills. The only event of historical importance is the battle of Alford, which took place here on the 2nd of July, 1645, and terminated in the entire defeat of the army of the Covenanters under General Baillie, by the royal forces under the command of the Marquess of Montrose, and in which Lord Gordon, the eldest son of the Marquess of Huntly, was killed. On the field of battle, the site of which is marked out by an upright stone, the body of a horseman in complete armour was found within the last century, by some men digging peat; and cannon-balls, military weapons, coins, and other relics have been discovered near the spot.

The parish is about seven miles in extreme length, and nearly three miles in breadth, comprising an area of 8715 acres, of which 4767 are arable, 1169 woodland and plantations, about 200 rich meadow, and the remainder mountain pasture, moss, and waste. In the north-eastern part the surface is almost level, but to the south and west are ranges of nearly contiguous hills of circular form, of which the bases have an elevation of 420 and the summits of 800 feet, and which increase in height towards the mountain of Callievar, on the western boundary, which has an elevation of 1480 feet above the sea. The principal river is the Don; it forms the northern boundary of the parish, and is here about 120 feet wide, flowing from east to west, between verdant banks of great beauty. The river Leochel has its source in the parish of Leochel-Cushnie, is scarcely twenty-five feet in breadth, and flows into the Don; the burn of Bents, a still smaller stream, skirts the parish on the east, and the burn of Buckie, the smallest, flows through the eastern portion of the parish. The Don and the Leochel abound with trout. There are also numerous springs of excellent water, and some slightly chalybeate.

The SOIL is mostly a dry friable loam, well adapted for turnips, and in some parts of great depth and fertility; the crops are oats, bear, potatoes, and turnips. The system of agriculture is in an improved state; much waste land has been reclaimed; the farm buildings are in general substantial and commodious, and the lands are inclosed with stone dykes. Great attention is paid to the improvement of live stock, for which the hills afford good pasture; the sheep, with the exception of a few of the black-faced, are usually of the Leicestershire and Merino breeds, reared chiefly for their wool, and about 800 are generally fed in the pastures. The rearing of black-cattle, however, is the main dependence of the farmers, and of these about 2000 head are kept, chiefly of the Aberdeenshire polled breed, and a cross between it and the short-horned: a great number are now fed off annually for the London market, where they command the highest prices. The plantations are of larch, Scotch, and spruce firs, beech, elm, ash, mountain-ash, lime, plane, oak, willow, birch, and poplar. The rocks are principally of the primitive formation, chiefly micaceous schist, and granite, of which latter there are several varieties, some resembling the grey granite of Aberdeen, and others the red granite of Peterhead: many of the rocks are almost in a state of decomposition. The annual value of real property in the parish is £4627. Haughton, the seat of the principal landed proprietor, is an elegant mansion of dressed granite, beautifully situated on the bank of the Don, in a wide demesne tastefully laid out, and embellished with thriving plantations. Breda, another seat, and Kingsford, recently built, are also handsome houses.

The village consists for the most part of houses of neat appearance, to each of which is attached a portion of land, and extends for about three-quarters of a mile along the road to Aberdeen. A post-office has been established, and facility of communication is afforded by good roads, and by substantial bridges across the various streams, one of which, over the Don, an elegant structure of granite, was erected in 1810, by the Parliamentary Commissioners, at a cost of £2000. In 1846 an act of parliament was passed authorizing the construction of a railway from Alford to Kintore, nearly sixteen miles in length. Fairs are held for black-cattle, horses, and sheep, on the Tuesday before the second Wednesday in June (N. S.), and the Friday after the second Thursday in September (O. S.); and markets for black-cattle and grain, on the first Monday in every month, from October till May. Ecclesiastically the parish is within the bounds of the presbytery of Alford and synod of Aberdeen: the minister's stipend is £206. 17. 4., with a manse, and a glebe valued at £6. 13. 4. per annum; patron, the Crown. Alford church, erected in 1804, and enlarged in 1826, is a neat structure containing 550 sittings. The parochial school is attended by about eighty children; the master has a salary of £34. 4. 4., augmented by the proceeds of bequests, &c., to £38, and the fees average about £15 annually. On the summit of a hill called Carnaveran (a name supposed to signify "the Cairn of Sorrow") is a cairn in the form of a truncated cone, 120 feet in diameter at the base, in removing a portion of which were found several coffins of flat stones.

ALLAN, BRIDGE OF, a village, in the parish of LOGIE, county of STIRLING, 4 miles (N.) from Stirling;

containing several hundred inhabitants. This village, which is pleasantly situated on the banks of the river Allan, formerly consisted only of a few irregular and detached cottages, and derived its chief importance from an ale and porter brewery that had been established here, towards the close of the last century. From its proximity, however, to the mineral spring of Airthrie, and also to the well of Dunblane, the water of which, discovered in 1814, has been found to possess similar properties, but of milder operation, the village has rapidly increased in extent and population, and, on the failure of a project for conveying the water of the latter by pipes into the town of Dunblane, has, in that respect, attained precedence before Dunblane as a place of fashionable resort. An excellent inn for the accommodation of visitors, and numerous houses for the reception of families residing here during the summer months, have been erected within the last few years; and good shops, amply stored with articles of every kind, have been opened for their convenience. Here is also a station of the Scottish Central Railway. The environs abound with pleasing scenery, among which the grounds of Keir House form a conspicuous feature; and are interspersed with handsome villas, inhabited by opulent families. The river, near the village, rushes with impetuosity along a deep glen richly wooded, forming an interesting and secluded retreat. Airthrie spring rises on the high grounds above the village, on the estate of Airthrie, and was discovered during the working of a copper-mine. The water is a saline aperient, similar to that of Cheltenham, but not so strong, containing as its chief ingredients common salt, muriate of lime, and sulphate of lime: it has been fast advancing in reputation, especially for scorbutic complaints. The water of Dunblane well has been analysed by Dr. John Murray, an eminent physician, and found to contain, in one imperial pint, 24 grains of muriate of soda; of muriate of lime, 18 grains; of sulphate of lime, 3·5 grains; of carbonate of lime, 5 grains; and of oxide of iron, 17 grains. The woollen manufacture is carried on to a small extent, for which there is a mill at the hamlet of Keir; and there is also a paper manufactory. The members of the Free Church have a place of worship.

ALLANTON, a village, in the parish of EDROM, county of BERWICK, $1\frac{1}{4}$ mile (S.) from Chirnside, containing 267 inhabitants. This village, which is situated at the confluence of the rivers Whitadder and Blackadder, is neatly built, and inhabited chiefly by persons employed in the manufactories in the neighbourhood; some of the houses are detached, and surrounded with pleasant gardens. A considerable traffic is carried on in coal, which is brought from the county of Northumberland, and also from Eyemouth, to which place it is sent by sea from Newcastle. There is a daily delivery of letters in the village, by a branch from the post-office at Dunse. A place of worship in connexion with the Free Church has been erected.

ALLOA, a burgh of barony, sea-port town, and parish, in the county of CLACKMANNAN, 7 miles (E.) from Stirling; containing, with the villages of Cambus, Coalyland, Holton-Square, and Tullibody, 7921 inhabitants, of whom 5434 are in the burgh. This place, the name of which, in various documents written *Auleway* and *Alloway*, is supposed to signify in the Gaelic language "the way to the sea", includes also the ancient

parish of Tullibody, memorable for the erection of its village, in 834, by Kenneth M'Alpine, on the plain where he encamped the main body of his army previously to the victory which put an end to the Pictish dynasty in Scotland. In 1149, David I. erected, and annexed to the abbey of Cambuskenneth founded by him on the field where the battle took place, the church of Tullibody, which he endowed with land, and with some islands in the Firth of Forth, for the maintenance of the officiating priests. In 1559, the French forces under General D'Oysel, who were stationed on the coast of Fife, on the appearance of the English fleet made a precipitate retreat to Stirling; but being retarded in their progress by Kirkcaldy of Grange, who had broken down the bridge of Tullibody, they unroofed the church, and, converting the timbers into a temporary bridge, effected their escape across the Forth. The church, thus exposed to the injuries of the weather, soon fell into a state of dilapidation; and the parish of Tullibody, about the time of the Reformation, became united to that of Alloa. In 1645, the Earl of Montrose, on the night before the battle of Kilsyth, encamped his forces in the woods of Tullibody, and was hospitably entertained by the Earl of Mar in his castle of Alloa.

The family of Erskine, ancestors of the Earls of Mar, were distinguished at an early period for their eminent services; and John, the fifth earl, who became Regent of Scotland, was entrusted with the guardianship of Mary, Queen of Scots, who, during her infancy, remained under his protection at Alloa Castle till 1548, when, by order of the estates of the kingdom, he conveyed her to the court of France. John, the sixth earl, was appointed guardian to the infant monarch, James VI., who spent many of his earlier years at Alloa, and also at Stirling. The castle of Alloa, anciently one of the residences of the Scottish kings, was in the thirteenth century given by David II. to Lord Erskine, in exchange for the estate of Strathgartney, in the county of Perth. Of the ancient edifice, one tower only is now remaining, eighty-nine feet in height, and the walls eleven feet in thickness; the other portions of the buildings which constituted the family residence, were destroyed by an accidental fire in 1800, and a splendid mansion has been since erected by the Earl of Mar. This is a spacious structure, of white freestone from a quarry in the park, beautifully situated on a gentle acclivity, within about 200 yards of the old tower, and inclosing a quadrangular area 180 feet in length, and 120 feet in breadth. The principal front occupies the whole width of the area, forming an elegant specimen of the Grecian style; and the interior contains numerous stately apartments, superbly decorated. Four entrance lodges, also, have been recently built; but the whole of the arrangements are not yet completed.

The town is situated on the Firth of Forth, and, though irregularly built, consists of several good streets. John-street, planned by John, Earl of Mar, in the year 1704, is about eighty feet in width, leading to the quay, and terminating in a gravel-walk, shaded by a row of lime-trees on each side, and forming a pleasant promenade. The old houses in the principal streets have been mostly taken down, and replaced with modern buildings of handsome appearance; and many of the shops display much elegance of style. The streets are well paved, and lighted with gas from works erected in 1821, by a

company of shareholders, at an expense of £3000; the inhabitants are also amply supplied with water, conveyed into the town by pipes, from springs in the vicinity. Considerable additions have been made to the town, which is rapidly extending towards the west; and within the few last years numerous villas have been erected in that direction. The Clackmannanshire library, founded here in 1797, is supported by annual subscriptions of ten shillings each, and contains a collection of more than 1500 volumes; there are also a reading and news room, an Odd-Fellows' hall, and an assembly-room. A mechanics' institution was established in 1826, which was for some time well supported, but of late has not been so warmly patronized: connected with it is a library of 470 volumes.

The principal MANUFACTURE is that of woollens, which, though formerly of very limited extent, has latterly much increased, several additional mills having been erected on a large scale. There are at present six factories, four of which are worked by steam. The chief articles are yarns, plaiding, shawls, tartans, druggets, blankets, and cloth of various kinds, together affording employment to 200 men, seventy-two women, and ninety children; and connected with the factories, is an extensive establishment for the manufacture of machinery. The glass manufacture, for which works, commenced at an early period, were extended by a joint-stock company in 1825, produces glass bottles equal to those of Newcastle in Northumberland. There are eight extensive breweries, five of which are in the town; the ale produced is in high repute, and is sent in large quantities to London, and exported to the continent, North and South America, the East and West Indies, and other places. Large distilleries are conducted at Cambus and Carse Bridge. At that of Cambus, nearly 6000 gallons are produced weekly, consuming about 374 quarters of malt, and feeding 400 head of cattle; there are sixty men employed in the establishment, and the amount of duty paid to government exceeds £50,000 per annum. The distillery at Carse Bridge is nearly equal in extent. Extensive tanneries are carried on at Tullibody, in which leather is made to the amount of £20,000 annually; and there are also works for the manufacture of glue, belonging to the same company, and mills, driven by steam, for grinding bones for manure, together affording employment to about forty men. The iron-foundry, and works for the manufacture of steam-engines, are also very extensive, employing nearly 100 men. There are large potteries for white and coloured earthenware of every kind, and the manufacture of bricks and tiles occupies more than forty persons; the fire-bricks made here are considered equal to those of Stourbridge, and adjoining the works is a commodious wharf for shipping the produce. Ship-building is also carried on; vessels of 300 or 400 tons' burthen are frequently built, and in 1845 a vessel of 800 tons was launched here for the foreign trade. Boat-building is pursued, and there is a dry-dock for repairing vessels; the making of sails and ropes is also considerable, and there are numerous mills, driven by water and steam.

The PORT includes the creeks of Kincardine and Stirling, and is a bonding port. It carries on an extensive coasting, and a considerable foreign, trade, the latter chiefly with Holland and the Baltic. The principal exports are coal, pig-iron, woollen goods, glass, ale,

whisky, leather, bricks, and tiles; the chief imports coastwise are grain, malt, wine, groceries, wool, and fullers'-earth, and, from foreign ports, timber, deals, hemp, oak-bark, and bones for manure. The amount of registered tonnage, including the creeks, is about 19,000 tons, of which about 10,000 belong to Alloa; the number of vessels that entered inwards in 1838 was 600, and the number that cleared outwards, 1250. Alloa harbour is accessible at high water to vessels of large burthen, and shipping may lie in safety at the quays, which are commodiously adapted to the loading and unloading of the cargoes, and on which is a custom-house. A steam-boat ferry is maintained across the Firth. It is a singular circumstance connected with the tides in this district, that there are what are called double or "leaky" tides, chiefly observed at high and low water, during spring-tides: when the tide has flowed apparently to its full height, it ebbs and flows downwards, until it has sunk from a foot to fifteen inches perpendicularly; the flowing then returns, and frequently overflows the first flowing, more than a foot in height. The market-days are Wednesday and Saturday, the latter being the principal. Fairs are held on the second Wednesday in Feb., May, August, and November; the August fair, which is the most numerously attended, is for hiring servants, and for general business, and the other three are for cattle. The post-office has a delivery twice a day; and facilities of intercourse are afforded by the Stirling and Dunfermline railway, which passes by Alloa: the Stirling and Granton steamers, also, call here. Alloa was erected into a burgh of barony in the reign of Robert Bruce, and is governed by a baron bailie, appointed by the Earl of Mar; the courts of the sheriff and justices of peace have been transferred from Clackmannan to this town, and a county prison has been recently built here.

The PARISH, which is bounded on the south by the Forth, and on the east partly by the Black Devon, is of very irregular form, comprising about 5000 acres, of which 4375 are arable, 514 woodland and plantations, and the remainder waste. Its surface, though not mountainous, is beautifully diversified with hills of moderate height, and fertile valleys. From the higher of the eminences, none of which exceed 400 feet in elevation above the Forth, are views of picturesque and romantic character; a fine tract of rich carse land extends along the banks of the Forth, and the scenery, enriched with wood, and interspersed with streams, is of very pleasing aspect. The river Devon flows through the south-western portion of the parish, into the Forth, at the village of Cambus, about two miles from Alloa; and the Black Devon, after forming part of its eastern boundary, takes a western course, and flows through the parish into the Firth of Forth at Clackmannan. A large reservoir called Gartmorn Dam, 160 acres in extent, and thirty-seven feet in depth, was formed by John, Earl of Mar, about the year 1700, by throwing a dam-head across the Black Devon at Forest Mill; the bed of that river was thus raised sixteen feet above its former level, and from it he carried an aqueduct of four miles in length, for the supply of this reservoir, which he constructed for driving the machinery of the Alloa colliery, and of several mills.

The soil of the lower lands is richly fertile, but of the higher, thin and light, on a cold tilly bottom; the prin-

cial crops are wheat, barley, beans, peas, and oats, with the various green crops. The system of husbandry has been much improved under the auspices of the Clackmannanshire Agricultural Society; the lands have been well drained and partially inclosed, and many of the farm-buildings are now of a superior description. The cattle are chiefly of the Ayrshire breed, with a few of the short-horned, though no great number are reared; and a few sheep, of various kinds, are fed for the butcher. Very little of the ancient forests of Clackmannanshire is now remaining; the principal woods are those of Tullibody, in which are many stately trees of venerable growth. The plantations consist mostly of oak and other hard-wood trees, intermixed with firs; they are regularly thinned, and are in a thriving state. The substrata are, sandstone of different colours, clayslate, limestone, and coal, which last occurs in seams varying from a few inches to nine feet in thickness. Of the sandstone two quarries are wrought, to a very moderate extent, one affording stone of white, and the other of a reddish, colour. The coal is extensively worked in three several fields, the Coalyland, the Carse Bridge, and the Sauchy, which extends into the parish of Clackmannan; the average quantity annually raised amounts to nearly 80,000 tons, which are conveyed to the harbour at Alloa. The annual value of real property in the parish is £21,951. Tullibody House, the seat of Lord Abercromby, and the birth-place of General Sir Ralph Abercromby, is pleasantly situated on the bank of the Forth, in a richly-planted demesne abounding with fine old timber, and surrounded by thriving plantations. Shaw Park House, a seat of the Earl of Mansfield's, formerly the property of the Cathcart family, is a handsome mansion on elevated ground, about two miles to the north of the Forth, and commanding a very extensive view embracing the windings of the river, with the castle of Stirling, and the mountains of Ben-Lomond, Ben-Ledi, and Tinto in Clydesdale.

For ECCLESIASTICAL purposes Alloa is within the bounds of the presbytery of Stirling and synod of Perth and Stirling; patron, the Crown. The minister's stipend is about £300, with a manse, and a glebe valued at £63 per annum; there is also an assistant minister, who receives the interest of two bequests, one of £800, and the other of £500. The parish church, erected by the heritors and feuars, in 1819, on a site given by the late John Francis, Earl of Mar, is a handsome structure in the later English style, with a square embattled tower surmounted by a lofty spire, together 207 feet in height, and contains 1561 sittings: the steeple of the old church is still remaining, and near it is the mausoleum of the Erskine family. The ancient church of Tullibody, which had been in disuse from the time of the Reformation, was restored about fifteen years since, and again appropriated to the purposes of divine worship. There are also places of worship for members of the Free Church, the United Presbyterian Church, Independents, Wesleyans, and Swedenborgians; and an episcopal chapel, erected in 1840 from a design by Mr. Angus. The parochial school is well conducted; the master has a salary of £34. 4. 4., with an allowance of £16 in lieu of house and garden, and the fees average £25 per annum. The Alloa academy was erected in 1824, by subscription, and for some few years a salary was received by the rector, whose present income is derived solely from the

fees, of which a portion is paid to an assistant; the course of studies is extensive, and the fees vary from 5s. to 11s. 6d. per quarter.

In repairing the road, in 1828, about twenty sepulchral urns of Roman pottery were found, containing burnt bones, placed in an inverted position, on a flagstone; also two stone coffins, about three feet in length, in each of which was a pair of bracelets of pure gold, highly polished, but without ornament: one of the two pairs was purchased from the workmen by Mr. Drummond Hay, and deposited in the Antiquarian Museum, Edinburgh. Several Roman coins have been discovered in different parts of the parish; and a few years since, a brass coin was dug up, having the letters S.C. on the one side, and on the other the legend "Augustus Tribunus". About a mile eastward from the town is an ancient upright stone called the Cross, near which, about forty or fifty years since, human bones were found, and a coffin of flagstones, three feet in length, on which were cut two small figures of the cross.

ALMOND-BANK, a village, in the parish of METHVEN, county of PERTH; containing 245 inhabitants. The population is engaged principally in the works situated on the river Almond; and a portion finds employment in a hand-loom weaving establishment at Woodend, in the vicinity of the village. There is a flourishing unendowed school here, the teacher of which is nominated by the patron of the parish, who, with some other persons, makes a contribution for his support. In digging a trench in the neighbourhood, the skull of an animal was discovered, supposed to be of the ox tribe, which existed wild in Scotland some centuries ago; it measured, from between the centre of the horns to the nose, two feet four inches, and the horns were sixteen inches round in their thickest part. The curiosity fell to the possession of the late Lord Lynedoch.

ALNESS, a parish, in the county of Ross and CROMARTY, 9 miles (N. E. by N.) from Dingwall; containing 1269 inhabitants, of whom 202 are in the village. This parish, which takes its name from two Gaelic words signifying a "burn" or small river, and a "point", is about twenty miles in extreme length, and five in average breadth. It is bounded on the north by Kincardine parish; on the south by the Cromarty Firth, which is here two miles broad; on the east by the parish of Rosskeen, from which it is separated by the river of Alness; and on the west by Kiltarn, from which it is separated by the river Auldgrande. The surface, towards the Firth, is for the most part flat, but in the northern part mountainous and wild; the climate is dry and salubrious, and the general appearance of the parish is pleasing, it being well-wooded, and presenting an agreeable variety of moor and well-cultivated land. In the northern quarter are two fresh-water lochs, abounding in black trout: one of them, called Loch Mary or Gildermay, is distinguished for its great depth, and the lofty and abrupt mountain scenery in its vicinity; the other, Loch Glass, is situated in a glen of that name. The salmon and salmon-trout taken in the Firth and the rivers are of very superior quality, and would be numerous were it not for the illegal depredations committed during the interdicted season. The chief rock in the parish is the old red sandstone; immense boulders of granite and gneiss are to be seen in different places, especially in the moorland districts, and some iron-ore

has also been discovered, about five miles from the Firth, imbedded in a gneiss rock. The only village is Alness, which is nearly equally divided between this and the neighbouring parish of Rosskeen, by the river of Alness; in the Rosskeen portion a market is held for the sale of cattle, monthly. The annual value of real property in the parish is £4280.

Ecclesiastically the parish is within the bounds of the presbytery of Dingwall and synod of Ross; the Marchioness of Stafford is patron, and the minister's stipend is £230. 19. 11., with a manse, and a glebe valued at £12 per annum. The church, which was built in 1780, is in good condition, and will hold 800 people. A Free Church place of worship has been erected. The parochial school affords instruction in every branch of education; the master has a salary of £34, with £20 fees. There is also a school supported by the Society for Propagating Christian Knowledge, the teacher of which has a salary of £15, and land valued at £5 per annum, with the school-fees. Another is maintained by the funds raised under the auspices of the General Assembly; its master receives a salary of £20, and has a house, and a small piece of ground granted by the proprietor, Hugh A. J. Munro, Esq., of Novar. At Multivie, in the parish, two cairns were opened some years since, and found to contain human bones of a remarkably large size.

ALTIVAIG, a small island, in the parish of KILMUIR, county of INVERNESS. This is one of several islets extending from Aird point, southward, to Ru-na-Braddan, on the north-eastern coast of the Isle of Skye. Altivaig is about two miles in circumference, and very fertile; the soil is appropriated to the pasturage of sheep. Here is a harbour with good ground for anchorage, but from being open to the North Sea, it is judged to be unsafe.

ALVA, a parish, in the county of STIRLING, 7 miles (N. E. by E.) from Stirling; containing 2216 inhabitants, of whom 2092 are in the village. The name of this place, the orthography of which has successively passed through the different forms of Alueth, and Alvath or Alveth, to that of Alva, is of Gaelic origin, and is supposed to be derived from the term *Aibheach*, signifying "rocky": it was probably applied to this spot as descriptive of the general character of its hills. The parish is locally situated in Clackmannanshire, and formerly belonged to that county, by which it is bounded on all sides except the north, where it touches Perthshire. After the beginning of the seventeenth century, it was annexed to the county of Stirling, though four miles distant from its nearest point, and to that county it has since been united in all respects, till associated for political purposes, under the Reform act, to its ancient shire. It comprises about 4120 acres, of which 867 are arable, 3072 natural pasture, including 140 or 150 acres of cultivated grass, and 181 are wood. The lands, on the north, consist principally of the Alva hills, which constitute the most interesting and beautiful portion of the Ochil range, forming here a rich mineral district, traversed in all directions by large flocks of sheep, and ornamented with numerous cascades. At the base of these lofty elevations commences a valley, a part of which, stretching towards the south, covers the rest of the parish, and is replete with richly diversified and highly picturesque scenery, embracing the river Devon,

which runs along the boundary of the parish in this direction, and, like most of the burns, contains abundance of excellent trout. The most lofty of the Ochils, Bencloch or Bencleugh, rises 2420 feet above the Devon, and is situated at the north-eastern extremity of the parish, commanding from its summit, not only fine views of local scenery, but, in the distant prospect, the whole Grampian range, with part of thirteen counties, and their villages and towns.

The soil has several varieties. That in the vicinity of the Devon, which overflows its banks two or three times in the year, is a rich, sandy, alluvial earth of great depth, forming what is termed haugh land. Next to this, northward, is a strong clay, after which follows a tract of moss, from 50 to 100 yards broad, and in some parts seven feet deep; and the remaining portion of the arable ground, extending to the hills, is a rich hazel mould, mixed occasionally with gravel and small stones. The system of agriculture is in a highly improved state; the crops consist of wheat, oats, barley, peas, beans, clover, potatoes, and turnips, and a small portion of ground is annually planted with woad for dyeing. The hills belong to the trap formation, and contain heavy spar, onyx, and, among many other pebbles, that called the Ochil eye, which is said to be peculiar to this range. The chief celebrity of the parish, however, as a mineralogical district, has arisen from its treasure of silver ore, which was discovered and worked between the years 1710 and 1715 by Sir John Erskine, who is said to have derived from it £4000 per week, and an aggregate of £40,000 or £50,000, the material being so pure as to afford 12 oz. of silver from 14 oz. of ore. Attempts to obtain the precious metal were afterwards renewed, in 1759, by a branch of the same family, who had purchased the barony. Veins were then discovered of lead, copper, iron, and cobalt; but the silver was found in such small portions, that the pursuit was abandoned, whilst the cobalt, being so plentiful, and of such good quality, was worked extensively, and has since proved a source of considerable wealth to the different proprietors.

The woods and plantations are extensive and beautiful; they form a prominent feature in the scenery, and invest this place with a peculiar sylvan appearance, especially when contrasted with the surrounding country. Woodhill, elevated 1620 feet above the lowest ground, is shrouded with almost every description of rich foliage, for more than two-thirds of the ascent; the plantations around the base comprising oak, elm, ash, beech, and larch, with various species of pine, planted by Sir John Erskine. The plantations on the east and west sides of the hill were planted by Lord Alva, and subsequent proprietors of the mansion of Alva, which stands on a projecting part of the eminence, and commands very extensive prospects. The old mansion of the Stirlings of Calder in Clydesdale, who possessed originally these estates, and afterwards of the Erskines, was enlarged and modernised in 1820; it is surrounded by elegantly laid-out grounds, interspersed with stately ash-trees and several venerable oaks, and the road to the village church, about a mile distant, is through an avenue of richly verdant foliage.

The village, which is of considerable extent, and of very irregular form, having been built at different periods, and increased by cottages and houses erected on

ground leased under Sir John Erskine and Lord Alva, has been doubled in size within the last fifty or sixty years. It has been known for its manufacture of serges ever since the latter part of the seventeenth century. A woollen-mill was first established in 1801: the number of mills has now increased to eight, besides many smaller works, and the present articles wrought are, plaidings, blanketings, and coarse stuffs; those of chequered cassimeres, carpets, shawls, and trowser-cloths having more recently been added. The quantity of wool annually consumed is about 480,000 pounds, chiefly from the Cheviot sheep; and in the manufacture of these articles, which are sold at Stirling, Perth, and Edinburgh, but chiefly at Glasgow, about 560 persons are employed. The annual value of real property in the parish is £4853.

Alva is in the presbytery of Stirling, synod of Perth and Stirling, and in the patronage of James Johnstone, Esq.; the minister's stipend is £157. 5. 4., with a manse, and a glebe, valued at £27 per annum. The church was formerly vassal, and belonged to the bishopric of Dunkeld; the present edifice was built in 1632, by Alexander Bruce, then proprietor of Alva, and was entirely rebuilt in 1815, at the expense of James Raymond Johnstone, Esq., with seats for 586 persons. The cups for the communion service were made from the silver found in the parish, and presented by Lord Alva, in 1767. The parochial school is situated in the village; the master has a salary of £29. 18. 10., and £28 fees. The only antiquities are several large stones supposed to be Druidical. The hawk used formerly in sporting, of the species *falco peregrinus*, is a native of this parish, and has nestled, from time immemorial, in a lofty perpendicular rock called Craigleith: from this place, Mary, Queen of Scots, procured falcons, after her arrival from France; and a short time since, a pair of these birds were sent by the proprietor of Alva to the Duke of St. Alban's, king's falconer in England.

ALVAH, a parish, in the county of BANFF, 3 miles (W. S. W.) from Banff; containing 1407 inhabitants. The origin of the name of this place, which in different records is variously spelled, is altogether involved in obscurity; but authentic sources of information still remain, throwing light on the apportionment of its lands, in early times, to several distinguished families. In 1314, a charter was granted by Marjory, relict of John, Earl of Atholl and Lord Strath-Alveth, conveying the patronage of the kirk, with considerable property here, to the abbot of Cupar. This parish, from which that of Forglen was disjoined prior to the middle of the seventeenth century, is situated near the north-eastern extremity of the county, separated from the Moray Firth by only a small intervening portion of the parish of Banff, and bounded on the east by the shire of Aberdeen, where the line of division is very nearly formed by the course of the river Doveron. It comprises 11,133 acres, of which 6955 are cultivated, 3428 waste and pasture, and 750 wood. The parish exhibits throughout an uneven and rugged surface, occasionally marked by lofty elevations, among which the Hills of Alvah and Maunderlea are the most conspicuous, the former rising 578, and the latter 733, feet above the sea. The scenery in the western and south-western portions is wild and dreary, taking its character chiefly from the numerous eminences connected with the Hill of Maunderlea, which

stretches in a northern direction from the parish of Marnoch. In the other parts it possesses great picturesque beauty, being ornamented by the silvery meanderings of the Doveron, and by the lofty and majestic Hill of Alvah, which, rising from the midst of rich and well cultivated lands surrounding its base, displays a profusion of sylvan beauty on its sloping sides, and from its tabular summit commands diversified views in several directions. The Doveron, being in one place impeded by a rocky barrier stretching from east to west, takes a curve for about a mile, when, meeting with an outlet through a chasm, whose precipitous sides are united by a massive arch erected in 1772 by the late Earl of Fife, it resumes its former direction, and passes through some very bold and romantic scenery. The sides of the rocky chasm, after expanding themselves, form a lofty acclivity on each side of the intermediate basin, and, rising like the walls of a majestic amphitheatre about 100 feet above the stream, exhibit a grotesque and imposing assemblage of shrubs, trees, and mosses.

The SOIL in the eastern part of the parish, through which the river takes its course, consists of an alluvial loam of considerable depth, incumbent upon blue clay containing admixtures of clay-slate. In the remaining portion of the lower grounds, the earth rests upon a coarse diluvial clay, mixed in some places with ferruginous sand, shingles, and occasionally boulders. On the higher grounds, the soil has a subsoil frequently of a very sandy nature, much interspersed with shingles, and pieces of greywacke slate and other rocks. The average value of the produce is £19,800 per annum, of which upwards of £10,000 are derived from oats, and the remainder from turnips, potatoes, hay, and pasture, and a small quantity of bear and barley. The cattle are of the Aberdeenshire breed, or approximating very closely to it; but within the last few years, the Teeswater, or short-horned, have been introduced upon several of the best farms, where they thrive well, and are often used for a cross with the native cow. Within the present century, considerably more than 2000 acres of waste have been improved, a large portion of which was covered with furze and heath; and fenny or boggy grounds have also been reclaimed to a great extent, by draining. Lime is employed as a stimulant for the land, and bone-dust manure has been recently applied in soils adapted to it, with great advantage. The rocks consist principally of clay-slate and greywacke. Of these the latter is succumbent, and interlined with thin veins of quartz: the line of bearing, with a trifling variation, is from north-east to south-west, dipping to the north-west. The angle of elevation of the clay-slate varies, increasing from the low grounds, where the rock is almost horizontal, till it arrives at nearly a perpendicular towards the top of the Hill of Alvah. The plantations, including about 300 acres formed in the course of the present century, for the most part consist of Scotch fir and larch, among which are trees of beech, ash, oak, elm, plane, &c. The annual value of real property in the parish is £4870.

The chief mansion is the House of Montblair, built in 1791, and since repaired and considerably enlarged: it is situated on the west side of the Doveron, on a sloping bank, in the midst of thriving and beautiful plantations; and contains a fine gallery of portraits of

illustrious persons. Dunlugas, about half a mile distant, on the opposite bank of the river, was erected in 1793, and is a spacious structure, ornamented with a lawn in front, stretching to the margin of the river, and embellished with several lofty trees; the background, with its thriving plantations of sable firs, furnishing a striking contrast to the surrounding scenery. In the parish of Alvah are six meal-mills, a malt-mill, a lint-mill, and thirty-one threshing-mills, the last of which have all been erected during the last thirty or forty years. A distillery, built about twenty years since, on the estate of Montblairy, at an expense of £4000, was in full operation, and capable of producing 40,000 gallons of spirits annually; but the speculation having become unprofitable, it was given up a few years ago. Ecclesiastically the parish is in the presbytery of Turriff, synod of Aberdeen, and in the patronage of Sir Robert Abercromby, Bart.; the stipend of the minister is about £180, and there is a manse, built in 1764, and repaired in 1815, with a glebe containing between six and seven acres, valued at about £25 per annum. The church is a plain edifice, erected in 1792. There is a parochial school, the master of which gives instruction in Latin, occasionally in Greek and French, and in all the ordinary branches of education; he has a salary of £30, in addition to the fees, with a house, and a portion of the Dick bequest.

The antiquities are few and unimportant, consisting chiefly of several cairns and Druidical circles, not of sufficient consideration to merit notice. The ruins of the ancient castle, which stood near Montblairy, and is supposed to have been built by one of the Stewarts, Earls of Buchan, are no longer visible; and those of the old chapel near the same spot, have been removed of late years. On the estate of Sandlaw, and in several other places, large trees have been found, at a great depth below the surface; and memorials of the ancient cultivation of the soil may be traced over about 1000 acres of land, at present the poorest in the district. Alvah is celebrated for its fine springs, the principal of which, called Comes-well, and mentioned by that name in a charter more than 500 years ago, discharges twenty-seven gallons per minute of water almost as clear as that produced by distillation. There are also several chalybeates, the most famed of which are, the Red Gill well at Brownside Hill, and a spring on the hill-head of Montblairy. Dr. George Chapman, author of a treatise on education, was born here in 1723; and Major-Gen. Andrew Hay, who fell at Bayonne, in the fifty-second year of his age, on the 14th of April, 1814, and to whose memory a monument was erected in St. Paul's Cathedral at the public expense, was at one time resident proprietor of the estate of Montblairy, in the parish.

ALVES, a parish, in the county of ELGIN, 5 miles (W.) from Elgin, on the road to Inverness; containing, with the small hamlets of Coltfoot and Crook, 913 inhabitants. This parish, which is about five miles long, and of nearly the same breadth, contains about 12,000 acres. It is bounded on the north by the parish of Duffus, the Moray Firth, and part of Kinloss; by the hill of Pluscarden on the south; by the parish of New Spynie on the east; and by Kinloss and Rafford on the west. The surface is agreeably diversified, consisting of pasture and arable land, with a considerable quantity of land covered with plantation, and scarcely any waste. With the exception of the Knock of Alves, a small

conical hill in the east end of the parish, the hill of Pluscarden is the only part that deserves the name of hill; the rest of the parish consists of a gently undulating surface, every portion of which may be brought under tillage. The Knock of Alves is entirely covered with wood: on its summit is a tower called York Tower, erected some years ago by the proprietor in honour of the late Duke of York, and commanding an extensive view of the surrounding country. What was formerly a waste common of several thousand acres was divided a short time since among the three adjoining proprietors, and is now a thriving plantation: besides containing this young plantation, about 100 acres in the parish are covered with Scotch fir.

In general the soil is a deep rich loam, upon a clay bottom, though in some places it is of a lighter quality. The pasture and arable land is portioned into twenty-five large farms, which are cultivated in the best manner; all kinds of produce are raised, and a great part of the grain is shipped at Burgh-Head, or Findhorn, and sold in the London market. The cattle are usually of a mixed breed between the Aberdeenshire and the Highland, with a few of the polled from Buchan. Great improvements have been carried on for some years past in draining, inclosing, the recovery of mosses, and the erection of good farm-houses and offices: in this parish the stone inclosures are very extensive, probably more so than in any other parish in the north of Scotland. The rocks consist of freestone, of which quarries are regularly worked; there is a quarry supplying mill-stones, and in several places a considerable depth of peat-moss occurs. The annual value of real property in the parish is £5708. There are two mansion-houses; Milton-Brodie, at the west end of the parish, an ancient edifice, to which a handsome front has been recently added, greatly improving its appearance; and the house of Newton, at the east end, a plain building, with a pleasing lawn before it. The population are agricultural, and their houses are for the most part in groups. The chief fuel formerly in use was peat, but the cutting of it has been prohibited, and at present the fuel used is principally English coal, cargoes of which are imported from Sunderland, and landed at Burgh-Head and Findhorn.

For ecclesiastical purposes Alves is within the bounds of the presbytery of Elgin and synod of Moray. The Earl of Moray is patron; and the minister's stipend is about £208, exclusively of an allowance of £8 for a grass-glebe: there are also a good manse, lately built, and having convenient offices and garden; and a glebe of four acres of land, worth £9 a year. Alves church, built in 1769, is a long narrow edifice containing sittings for 590 persons. There is a place of worship in connexion with the Free Church. The parochial school affords instruction in Latin, Greek, and the mathematics, in addition to the ordinary branches of education, and the master has a salary of £34. 4., with fees, a house and garden, and, if found qualified, a share of the Dick bequest. Another school is maintained by subscription, and the teacher of a female school in the Crook receives a small salary from the heritors. A parochial library is supported, which contains about 200 volumes.

ALVIE, a parish, in the district of BADENOCH, county of INVERNESS, 9 miles (N. E.) from Kingussie; containing, with part of the former quoad sacra parish of Insh, 972 inhabitants, of whom seventy-three are in the

village of Lynchat. Alvie is supposed to have derived its name, signifying the "isle of swans", from the situation of its ancient church on a peninsula in the north-west extremity of the parish, formed by Loch Alvie, which from time immemorial has been frequented by numbers of swans. The parish extends for nearly twenty miles in length, from north to south, including the outline of the hills which terminate in the Grampian range; and varies from two to six miles in breadth, from east to west. It is calculated to comprise about eighty-four square miles, or 53,600 acres, of which 2574 are arable, 1842 meadow and pasture, and the remainder, exclusively of some large tracts of wood and plantations, moorland and waste. The surface is generally high: that portion of the strath of Badenoch which is within the parish has an elevation of nearly 650 feet; while of the numerous hills and mountains, the Grampians, forming the southern boundary of the parish, rise to the height of 4500 feet above the sea, and those on the north-west boundary, though of inferior elevation, attain a very considerable height. The river Spey, which rises in the braes of Badenoch, near Lochaber, flows through the parish in a direction nearly from west to east; and the small river Feshie falls into the Spey near the church: salmon are sometimes taken in the Spey. Loch Alvie is about a mile in length, and half a mile in breadth; the average depth is about eleven fathoms: the surrounding scenery is pleasingly picturesque.

The SOIL is generally light and gravelly, with the exception of the meadow-lands on the banks of the Spey, which are luxuriantly rich; the chief crops are oats, barley, wheat, potatoes, and turnips, with the various grasses. The system of husbandry has been gradually improving, and on some of the larger farms is in a very advanced state; on the smaller farms it has made comparatively little progress. There are very few inclosures, and the farm-buildings are of inferior order. Little attention is paid to the rearing of live stock; the sheep are commonly of the black-faced, and the cattle of the Highland black breed. The hills and mountains are composed chiefly of gneiss, intersected with veins of granite and red porphyry: the granite occurs in two varieties; the white, which is preferred for building, and more easily dressed, and the red, which is harder and more durable. Limestone is quarried on the lands of Dunachton; and veins of lead are found in the gneiss at Tyncaim, and the burn of Raitts, on the lands of Belleville. The annual value of real property in the parish is £4260.

The principal seats are Belleville and Kinrara. The former is a spacious and elegant mansion, built after a design of the architect Adams, by James Macpherson, translator of Ossian's poems: it is beautifully situated in a picturesque demesne, embellished with stately timber and thriving plantations; and within a cluster of larches is an obelisk of marble, erected to the memory of Mr. Macpherson, on which is his bust, finely sculptured. Kinrara, a handsome mansion in the cottage style, built by a Duchess of Gordon, and in which she resided during the summer months till her decease in 1812, occupies a highly romantic and sequestered spot, about two miles from the church of Alvie. In the grounds is a monument of granite, erected by her husband the fourth duke to the memory of the deceased, whose remains were brought from London, and interred, at her own request,

in a spot which she had selected. On Tor Alvie, to the north-west of the cottage, is a monument erected by the fifth and last duke, to the officers of the 42nd and 92nd regiments who fell in the battle of Waterloo. At Lynviulg, about half a mile from the church, is a branch post-office; and facility of communication is afforded by the turnpike-road from Edinburgh to Inverness, which passes through the whole length of the parish.

Ecclesiastically the parish is within the bounds of the presbytery of Abernethy and synod of Moray: the minister's stipend is £158. 4. 6., with a manse, and a glebe valued at £5 per annum; patron, the Duke of Richmond. The church, situated on the shore of Loch Alvie, is a plain structure, built in 1798, and repaired in 1832, and contains 500 sittings. The parochial school is well conducted; the master has a salary of £28. 18. 9., with a house, an allowance of £2. 2. in lieu of garden, and fees averaging about £20 per annum. Another school, the master of which has a salary of £20, with £10 fees, is supported by the General Assembly. At Delfour, about a mile west of the church, are the remains of a Druidical temple, consisting of two concentric circles of upright stones, of which the inner circle is twenty-five feet, and the outer, formed of larger stones, is fifty-five feet in diameter; near this work is an obelisk eight feet six inches in height, and both are situated in the middle of a field which is under arable cultivation. At Raitts are the remains of an artificial cavern, anciently the haunt of banditti.

ALYTH, a parish, partly in the county of FORFAR, but chiefly in that of PERTH, 17 miles (N.W.) from Dundee; containing 2910 inhabitants, of whom 190 are in the county of Forfar, and 1846 in the village or town, which is a burgh of barony. This place appears to have derived its name, signifying in the Gaelic language an "ascent", from the gradually sloping eminence on which its ancient church, and the older portion of the village, are built. The most ancient document where its name occurs is a charter of Alexander II., in 1232, granting the lands of Bamff, in the parish, to Nessus de Ramsay, ancestor of Sir James Ramsay, Bart., the present proprietor of that estate; the remainder of the lands belonged to the Lyndesays, Earls of Crawford, for many generations, till the year 1630, when they were purchased by the Ogilvy family. During the wars of the Covenanters, the army of the Marquess of Montrose was frequently stationed in the immediate neighbourhood; and during the siege of Dundee by General Monk, a meeting of the principal inhabitants, held in the village, to deliberate on the best means of defence, was surprised by a detachment of the English, who took many of the members prisoners.

The parish is bounded on the south-east by the river Isla, and is about fifteen miles in length, and from one mile to six miles in breadth, comprising 34,160 acres, of which about 8100 are arable, 1070 woodland and plantations, and the remainder meadow and pasture land. Its surface is diversified with ranges of hills, of which those of Alyth, Loyall, and Barry divide it into two unequal districts: the southern is in the valley of Strathmore, and the northern includes the forest of Alyth, and the Blacklunans, which last are in the county of Forfar. The height of the lands varies from 130 to nearly 1700 feet, ascending from the Isla to the summit of Mount Blair; the hill of Kingseat has an elevation of 1178

feet, and the hills of Alyth, Loyall, and Barry rise about 700 feet above the sea. The principal rivers are, the Isla; the Ericht, a tributary of the Isla; and the burn of Alyth, which rises in the forest of that name, and falls into the Isla at Inverquiech, about two miles east of the village. Salmon occasionally ascend the Isla, and trout are found in most of the streams, and in some, pike.

The SOIL is greatly diversified. On the level lands near the river, it is a deep rich black loam; in the Blacklunans district, a lighter, but fertile, loam, much encumbered with stones and rock; on the sides of the hills, a fine sharp gravelly soil, well adapted for oats, turnips, and potatoes; and in many parts, peat moss, and moor, of which a considerable portion might be brought into cultivation. The lands have been drained and inclosed, and much waste has been reclaimed; the farm-buildings, and the houses of the cotters, are substantial, and the lands near the Isla, which were exposed to frequent inundation, have been protected by embankments. The hills afford good pasture for sheep, of which from 2000 to 3000 are reared in the parish, all of the black-faced breed; the cattle, on the uplands, are of the native Angus breed, and on the lower farms a cross between the Angus and the Teeswater. In general the rocks are trap and conglomerate; and the principal substrata are, mica, and clay-slate, sandstone of the old red formation, with some small beds of a light-grey colour, and a yellowish compact limestone, well adapted for building. The natural wood, of which but little remains, is birch, hazel, and alder; and the plantations, the greater part of which are of recent date, are larch, Scotch, and spruce firs, interspersed with various kinds of hard-wood; but the larches are not in a thriving state. The annual value of real property in the parish is £10,396. Bamff House is a handsome mansion of great antiquity, with many modern additions and improvements, pleasantly situated about three miles from the village, in grounds commanding some fine views. Balhary, another seat, is a modern, substantial, and spacious mansion, built on a rising ground on the bank of the Isla; and Jordanstone is also a handsome residence.

The VILLAGE stands on the burn of Alyth, and consists of several streets of good houses, of which those in the older part of it are of great antiquity: the inhabitants are well supplied with water. There are three bridges of stone over the burn, the handsomest of which was lately built by Sir James Ramsay to improve the approach to Bamff House: one of the bridges is of considerable antiquity, bearing the arms of Lord Gray, who held property in the parish three centuries ago. Most of the population are employed in weaving coarse linen for the manufacturers of Dundee, producing annually more than 10,000 webs, of 150 yards each; there is a fulling-mill in the village, and also at Inverquiech. Alyth was erected into a burgh of barony in the reign of James III.: a baronial court is held on the first Tuesday in every month, under a baron bailie appointed by the Earl of Airlie, who is superior of the burgh; and a system of police has also been established. Fairs for sheep and cattle are held on the Tuesday after the second Thursday in March; the second Tuesday, and the 25th, of June; the last Tuesday in July; the Tuesday before the 10th of October; the first Tuesday and Wednesday, and the Tuesday after the 11th, of November; and the second Tuesday in December; all O. S.

A post-office under that of Meigle, and a branch of the Western Bank, have been established here; and facility of communication is maintained by good roads, kept in repair by statute labour.

For ecclesiastical purposes the parish is within the bounds of the presbytery of Meigle and synod of Angus and Mearns: the minister's stipend averages about £235, with a manse, and a glebe valued at £14 per annum; patron, the Crown. The church, situated in the village, is a handsome and spacious structure in the Norman style, built in 1839, from a design by Mr. Hamilton of Edinburgh, and contains 1290 sittings. There are places of worship for members of the Free Church and the United Presbyterian Church, and a small Episcopal chapel. The parochial school was erected in 1835; the master has a salary of £34. 4. 4., with a house, and an allowance in lieu of a garden, and the fees average £20 per annum. Five boys and five girls are instructed and clothed from a rent-charge of £30 on the Ballinloch estate. On Barry Hill are some remains of a Pictish encampment, and of a narrow bridge over the fosse by which it was surrounded; and to the south of the hill, on the low grounds, are several upright stones supposed to commemorate some warlike exploit. Stone coffins containing human bones have been dug up near these places. At the influx of the burn of Alyth into the river Isla, are the ruins of the ancient castle of Inverquiech; and at Corb, on the south-west of the forest of Alyth, are the remains of a castle, probably a hunting-seat of the Earls of Crawford. The parish gives the title of Baron Alyth to the Earl of Airlie.

AMISFIELD, a village, in the parish of TINWALD, county of DUMFRIES, 5 miles (N. E.) from Dumfries; containing 140 inhabitants. This place, anciently *Emsfield*, was erected into a burgh of barony by Charles I., with a weekly market and fairs; at present, it consists merely of a few old thatched houses, which the proprietors are allowing to go to decay. Amisfield Castle, long the seat of the ancient family of Charteris, stands west of the high road from Dumfries to Edinburgh, and is a quadrangular building, having a high tower of picturesque appearance on the south-west, and a more modern erection, now the dwelling-house, on the east. Near the village are distinct vestiges of a Roman fort. —See TINWALD.

AMULRIE, a village and district, in the parish of DULL, county of PERTH, 11 miles (N. by E.) from Crieff; containing 406 inhabitants. It is situated on the road between Crieff and Aberfeldy, and is watered by the small river Bran, which flows hence in a north-eastern direction, and falls into the Tay at Inver, opposite to Dunkeld. Here is a sub post-office; and an excellent inn, much frequented by visitors to the neighbouring lake of Freuchie, is distant about a mile and a quarter westward of the village. Fairs for cattle and sheep are held on the first Tuesday and Wednesday in May, and the Friday before the first Wednesday in November. There is a chapel in connexion with the Established Church, under the patronage of the Committee of the General Assembly: the minister has a stipend, paid from the royal bounty, of £65, including £5 for communion elements; with a house and garden, a few acres of land, and fuel.

ANABICH, an island, in the parish of HARRIS, county of INVERNESS; containing 41 inhabitants.

ANCRUM, a parish, in the district of JEDBURGH, county of ROXBURGH, 4 miles (N. W. by N.) from Jedburgh; containing 1407 inhabitants, of whom 499 are in the village. The name of this place, anciently *Alne-crumb*, is derived from the situation of its village on a bend of the river Alne, now the Ale. There were formerly two villages distinguished by the appellations of Over and Nether Ancrum, of the former of which nothing now remains. The principal event of historical importance is the battle of Ancrum Moor, which originated in an attempt made in 1545, by Sir Ralph Evers and Sir Bryan Layton, to possess themselves of the lands of the Merse and Teviotdale, which had been conferred upon them by a grant of Henry VIII., King of England. The Earl of Angus, who had considerable property in that district, determined to resist the attempt, and a battle between his forces and those of the English took place on a moor about a mile and a half north of the village, in which the latter were defeated with great loss. In this conflict, both the villages of Ancrum were burnt to the ground; the village of Nether Ancrum was soon afterwards rebuilt, but of the other nothing remains but the ruins of one or two dilapidated houses.

The PARISH comprises about 8400 acres, of which one-half is arable, 520 acres in woods and plantations, and the remainder meadow and pasture. Its surface is pleasingly undulated, rising in some parts into considerable eminences, and presenting a continued variety of level plains and sloping heights. The Teviot forms the southern boundary of the parish, and the river Ale traverses it from east to west; the banks of the latter are highly picturesque in several parts of its course, presenting in some points precipitous masses of bare rugged rock, and in others overhung by rocks richly wooded. Both the rivers abound with excellent trout, and are much frequented by anglers. The soil is greatly varied: on the banks of the Teviot it is luxuriantly rich, and of great depth; in other parts of less fertility, and in some almost sterile. The chief crops are oats, wheat, barley, potatoes, turnips, peas, and beans. The system of agriculture is in an improved state; draining has been carried on to a considerable extent, and much of the inferior land has been rendered productive. Much attention is paid to the rearing of live stock, for which the pastures are well adapted; the sheep are mostly of the Leicestershire breed, and a cross between that and the Cheviot, and the cattle are all of the short-horned kind. The woods contain many stately trees, and the plantations are extensive and well managed. The principal substrata are red and white freestone, which are both of good quality, and extensively wrought for the supply of the surrounding district. The annual value of real property in the parish is £8893. Ancrum House, the seat of Sir William Scott, Bart., is a spacious and venerable mansion, in an extensive and richly-wooded park stocked with deer. Chesters is a handsome modern mansion, romantically situated at the mouth of a deep and thickly-wooded dell, on the bank of the Teviot; and Kirklands, in the later style of English architecture, is beautifully situated on a wooded height on the bank of the Ale, forming a strikingly picturesque object in the landscape. The village is on the south bank of the Teviot. Facility of communication is maintained with Jedburgh and other market-towns in the vicinity, by good roads; the turupike-road from Edin-

burgh to Newcastle passes along the eastern boundary of the parish for several miles, and the Hawick railway intersects the western part of the parish.

Ecclesiastically, Ancrum is in the presbytery of Jedburgh and synod of Merse and Teviotdale: the stipend of the incumbent is about £224, with a manse, and a glebe valued at £30 per annum; patron, Sir William Scott. The church, which anciently belonged to the see of Glasgow, having been annexed to it on the dissolution of the abbey of Lindisfarn, was rebuilt in 1762, and is a neat and substantial edifice, adapted for about 520 persons. The parochial school is well attended; the master has a salary of £34. 4. 4., with £28. 15. fees, and a good house and garden. Till very lately, there were considerable remains of what were called the Malton Walls, which inclosed an area of about an acre and a half. The spot is supposed to have been the site of a commandery of the Knights of Malta, or St. John of Jerusalem, said to have been established here in the reign of David I.; and in the adjacent field, numerous human bones, and frequently entire skeletons, have been discovered by the plough. Within the area of the walls were various vaults and subterraneous passages, apparently the foundations of the ancient building; but even those portions of the outer wall which alone were left standing have disappeared, and little but the site is now left. On the hill behind Ancrum House are the remains of a circular fort, with a triple intrenchment. In the parish are numerous caves, formed as places of retreat in times of danger, one of which, on the glebe, was the favourite resort of the poet Thomson, and still bears his name. A monument has been raised over the tomb of Lilliard, a Scotch female who fell in the battle of Ancrum Moor, covered with wounds, while fighting with desperate valour, and who was buried on the spot where she fell. The place confers the title of Earl on the Marquess of Lothian.

ANDERSTON, a burgh, and for a time a quoad sacra parish, consisting of part of BARONY parish, in the suburbs of the city of GLASGOW, county of LANARK, 1 mile (W.) from Glasgow; containing 3759 inhabitants. This place derives its name from its founder, Mr. John Anderston, of Stobcross, who in 1725 formed the plan of a village, and divided the lands of one of his most unproductive farms into building lots, thus laying the foundation of a very considerable suburb to the city. It is on the north side of the river Clyde, and though of irregular form, and less modern in appearance than others of the suburban districts, it contains many well-built and handsome houses; the lands to the north are chiefly garden-ground, and on the banks of the river are several pleasing villas, inhabited by some of the most opulent merchants of Glasgow. A considerable part of the population are employed in the cotton manufacture, in iron-foundries, and the production of machinery; many are mariners belonging to the port, and there are shops of various kinds for the supply of the inhabitants.

Anderston was erected into a burgh of barony, by royal charter, in 1824; the district includes parts of the lands of Stobcross, Gushet, Parsonscroft, and Rankenshaugh, and is wholly within the parliamentary boundary of the city of Glasgow. The government is vested in a provost, three bailies, a treasurer, and eleven councillors, annually elected by the burghesses;

the bailies and treasurers from the councillors, and the provost from the burgesses generally. The magistrates exercise civil jurisdiction in pleas not exceeding forty shillings in amount, and eriminal jurisdiction in all cases within the Police act: courts for the former are held weekly, or every alternate week, and for the latter four times in the week; in both of which, the town-clerk acts as assessor. The burgesses pay a fee of £2. 2. on admission. The corporation have power to hold a weekly market and two annual fairs: the fairs were formerly held, but they have been discontinued. Anderston quoad sacra parish was formed in 1834, and, like every similar division, was subsequently abolished: the minister's stipend is £300, derived from the seat-rents, of which £80 are secured by bond. The church was originally built as a chapel of ease, in 1799, at a cost of £2500, raised by voluntary subscription, and has been since repaired; it is a neat structure, and contains 1246 sittings. A school for this parish and the former quoad sacra parish of St. Mark, was erected at an expense of £1700, of which £850 were subscribed by the two parishes, and the remainder granted by the treasury; it is a spacious building, containing three schools, attended by 600 children paying very moderate fees. There is also a Free church. St. John's episcopal church, at Anderston, was commenced in September, 1849.

Seal and Arms.

formed part of the territories of the Pictish kings, of whom Hergustus, whose capital was at Abernethy, had a palae or hunting-seat near the site of the present town, at that time a forest frequented by wild boars, and thence, as well as from its situation on a promontory overlooking the bay, called *Mucross*, a name still retained in that of the present village of Boarhills. The origin of the town is ascribed by tradition to *St. Regulus*, abbot of the monastery of Patrae, in the Greeian province of Achaia, who about the year 370, attended by a company of his brethren, sailed from Patrae, bearing with him a portion of the relics of the Apostle St. Andrew, which had been deposited there; and was driven by a storm into the bay of this place, where with difficulty, after the loss of their ship, the crew escaped to land, with the sacred relics they had preserved. Hergustus, the Pictish monareh, informed of the arrival of these strangers, came to visit them in person, and, pleased with the simplicity and sanetity of their manners, became a convert to Christianity; granted them his palace, with the adjoining lands for a settlement; and after the subsequent erection of a church, changed the name *Mucross* into *Kilrymont*, or "the church of the King's Mount". *St. Regulus* lived for thirty years afterwards at this place, under the patronage of Hergustus, dis-

ANDREW'S, ST., a city, the seat of a university, and anciently the metropolitan see of Scotland, in the district of ST. ANDREW'S, county of FIFE, 42 miles (N. N. E.) from Edinburgh; containing, with the villages of Boarhills, Grange, Kincaple, and Strathkinness, 6017 inhabitants, of whom 3959 are in the city. This place, which is of remote antiquity,

seminating the doctrines of the Christian faith throughout this part of the country, and was buried in the church over which he had so long presided. After the subjugation of the Pictish dominion, and the establishment of the Scottish monarchy, by Kenneth McAlpine, that king transferred the seat of government from Abernethy to this place, to which, in honour of the Apostle, he gave the name of St. Andrew's, by which it has ever since been designated; and on the division of the country into dioceses, in the reign of Malcolm III., St. Andrew's became the metropolitan see of the kingdom. In 1120, an Augustine priory was founded here, by Robert, Bishop of St. Andrew's, who also, in 1140, obtained from David I. a charter erecting the town into a royal burgh. To this important priory the nomination of the bishop was transferred, partially at first, but completely in 1273, from the Culdees, whose chapel of St. Regulus served as the diocesan church before the cathedral was erected. In 1159, Bishop Arnold commenced the erection of the cathedral, which was continued under his successors for more than a century and a half, and ultimately completed by Bishop Lamberton, a zealous adherent of Bruce. According to the uniform practice of the period, the eastern portion was first finished, and at once used for the performance of divine service; the transepts and nave were next proceeded with, and the whole was consecrated by Bishop Lamberton in 1318, in the presence of King Robert I. and the chief persons in the kingdom. In 1200, Bishop Roger built the castle of St. Andrew's, which was for many years the residence of the prelates of the see; and in 1274 Bishop Wishart founded a Dominican priory.

After the battle of Falkirk, in 1298, Edward I. of England summoned the Scottish parliament to meet at St. Andrew's, and compelled every member, with the exception only of Sir William Wallace, to swear fealty to his government. A few years subsequently, the same parliament assembled here to take the oath of allegiance to Robert Bruce. Edward III. of England, in 1336, placed a garrison in the castle, which, in the year following, was reduced by the Earls of March and Fife; and in 1401, David, Duke of Rothesay, brother of James I., on a false charge of treason was imprisoned in the castle by his uncle, the Duke of Albany, and afterwards removed to Falkland, where he was starved to death. The university of St. Andrew's was founded in 1410, by Bishop Wardlaw, and in the following year was incorporated by charter, conferring all the powers and privileges enjoyed by foreign universities. James I., after regaining his liberty, visited the establishment, bestowing on its members many marks of his favour, and in 1431 granted them a charter of exemption from all taxes, tolls, or services, in every part of the kingdom. Bishop Kennedy, nephew of James I., in 1455, founded the college of St. Salvator, chiefly for theological studies and the liberal arts; the foundation charter was confirmed by Pope Nicholas V., and the institution was subsequently endowed with numerous royal grants. In 1471, the bishops of St. Andrew's were dignified with the title of archbishops, and the metropolitan see was elevated to the primacy of the kingdom. In 1512, John Hepburn, prior of the Augustinian monastery, founded the college of St. Leonard, and endowed it from the revenues of the hospital which had been built for the reception of pilgrims visiting the shrine of St.

Andrew, and out of his own private property, chiefly for the education of the brethren of the convent. During the numerous religious persecutions which preceded the Reformation, George Buchanan, afterwards preceptor of James VI., was imprisoned in the castle of St. Andrew's, for writing against the Franciscan friars, but contrived to make his escape through one of the windows, and fled into England. In 1537, Archbishop James Beaton, uncle and predecessor of Cardinal David Beaton, obtained a bull from Paul III. authorizing the foundation of a college to be dedicated to St. Mary, on the site of the ancient pedagogium; he endowed the institution with certain tithes, and soon after the commencement of the building, his successor the cardinal undertook the completion. Cardinal Beaton, however, had only removed the fabric of the pedagogy, when his death also put a stop to further progress: the next archbishop, Hamilton, finished the erection, and in virtue of a bull from Pope Julius III., in 1552, endowed it out of his episcopal revenues, for the maintenance of four professors and a number of bursars and servants. The establishment was remodelled in 1579, by Archbishop Adamson and George Buchanan, and since that time has been confined to the study of theology. In 1546, Cardinal Beaton was assassinated in the castle, and his dead body suspended for a time on the wall, from the same window whence he had witnessed the martyrdom of Wishart. In 1559, after a sermon preached by John Knox the reformer, the populace immediately commenced the destruction of the venerable cathedral of St. Andrew's, which in a few hours they reduced to a heap of ruins; and they afterwards plundered and destroyed other religious establishments of the city.

The history of St. Andrew's presents many features of interest, connected with the progress of the Reformation in Scotland, as might naturally be expected from the city being a stronghold of the Church whose corruptions made the great change necessary. The first martyr to reformed opinions in Scotland was *John Resby*, an Englishman, who, having become a convert to the doctrines of Wycliffe, Huss, and Jerome of Prague, preached those doctrines within the diocese of St. Andrew's, and was apprehended by command of Bishop Wardlaw. Resby suffered at Perth, where he had been signally successful as a reformed preacher; and a quarter of a century afterwards, in 1432, *Paul Crow*, a native of Bohemia, and a disciple of Huss and Jerome, was condemned to the stake at St. Andrew's, in which city he had settled as a physician, and had been exceedingly zealous in propagating reformed truth. Another martyr connected with St. Andrew's was the famous *Patrick Hamilton*, abbot of Fern, and nephew of the Earl of Arran, who suffered in 1527, during the archiepiscopate of James Beaton, at the early age of twenty-three. About four years after this martyrdom, which took place in front of St. Salvator's college, *Henry Forrest*, a young man, a native of Linlithgow, invested with a small order in the Church, was incarcerated by the same archbishop, and condemned to suffer at the stake as a heretic, the sentence being carried into effect at the north gate of the cathedral, that the people of Angus, seeing the flames, might forbear to embrace doctrines whose profession was attended with consequences so dreadful. Soon afterwards, two persons of the names of Gourlay and Straiton were consigned to the flames

in the city, charged with denying the supremacy of the pope, and propagating the doctrines of protestantism. The next martyr was the celebrated *George Wishart*, for the purpose of whose martyrdom, says Spottiswood, "a scaffold was erected on the east front of the castle, towards the abbey, with a great tree in the midst of it, in manner of a gibbet, unto which the prisoner was to be tied; and right against it was all the munition of the castle planted, if, perhaps, any should press by violence to take him away. The fore tower was hung with tapestry, and rich cushions laid, for the ease of the cardinal (Beaton) and prelates who were to behold that spectacle." Wishart suffered in 1545, urging the people to cling to the good word of God, and the true gospel of Christ. The spot where the martyrdom took place is at the foot of North Castle-street. In the spring of 1558 suffered the last martyr of St. Andrew's in the cause of the Reformation, *Walter Mill*, an aged priest of the parish of Lunan, near Montrose, who was detected by Archbishop Hamilton, and condemned to suffer in front of the principal entrance to the cathedral. Being upwards of eighty years of age, he was unable to walk without help to the place of execution; and though some of the previous martyrdoms had presented features of extreme barbarity, yet the cruelty of persecuting so venerable a man was especially conspicuous, rousing the indignation of the people that witnessed the melancholy scene. Within the last few years, a monument in memory of those who suffered at St. Andrew's by fire, in the cause of truth, has been erected at the west end of the Scores, at the top of the declivity towards the Links.

In 1583, James VI., escaping from the thralldom in which he was held by Gowrie, Glencairn, and others, shut himself up in the castle, by connivance of the governor, and was joined here by a number of his loyal subjects. After his accession to the English throne, he assembled here a meeting of the prelates and principal clergy, to deliberate on the future interests of the Church. In 1645, the Scottish parliament met in the lower room of what is now the university library, and passed sentence of death upon Sir Robert Spottiswood, son of the late archbishop, and three other royalists, who had been taken prisoners at the battle of Philiphaugh, and who were publicly executed in the principal street of the city. In 1679, Archbishop Sharpe was murdered at Magus Muir, within four miles of the city, by a party of Covenanters, of whom five, that were afterwards taken prisoners at the battle of Bothwell Bridge, were executed on the spot where the murder was committed, and their bodies hung in chains. Previously to the Reformation, the city was a place of considerable commercial importance, and the resort of numerous merchants from France, Holland, and other trading ports; and according to Martine, at the Senzie fair, held within the priory in the month of April, and which lasted fifteen days, its harbour was filled with two or three hundred vessels from Flanders, Holland, France, and other parts of the commercial world. But after the Reformation, and the consequent suppression of its ecclesiastical supremacy, its trade and shipping fell into rapid decay. In 1655, it was so reduced that a petition was addressed by the magistrates and council to General Monk, praying to be relieved from an assessment, on the ground of "the total decay of shipping

and sea trade, and the removal of the most eminent inhabitants"; and in 1656, there was only one vessel, of twenty tons' burthen, belonging to the port. The chief support of the inhabitants, after the Reformation, was derived from its university; and although its trade has in some degree revived, yet the city has never regained its original commercial importance. An elaborate *History of St. Andrew's*, abounding in interesting ecclesiastical information, has been written by the Rev. Charles John Lyon, M.A., the episcopal clergyman in the city.

The town is beautifully situated on the bay of St. Andrew's in the German Ocean, and mainly consists of three spacious and nearly parallel streets, of which the principal is South-street, at whose western extremity is Argyle Port, the only remnant of the ancient fortifications of the city; it is still in good preservation, and over the arched gateway are the city arms. On the north of South-street is Market-street, to the north of which is North-street; and still further to the north, and bordering upon the bay, is said to have been Swallow-street, formerly the principal residence of the merchants, but which, if it ever existed, has long since disappeared, and the site been converted into a public walk called the Scores. The three streets are intersected at right angles by various smaller streets; and a new street called Bell-street has been formed, connecting North with Market street, and which has since been extended to South-street. The houses are generally well built, and of handsome appearance, and many of them are spacious; the streets are paved, and lighted with gas, and the inhabitants are supplied with excellent water, though in insufficient quantity. A literary, scientific, and antiquarian society was instituted in 1838; the mechanics have established a public library and reading-room, and there is a library and reading-room supported by annual subscriptions of one guinea. The sea-beach is well adapted for bathing; and near the castle, on an eminence overlooking the sea, a building has been erected containing every requisite accommodation of hot and cold baths. On the extensive links to the west of the town, the ancient game of golf is pursued by the inhabitants, as their principal recreation; a club for that purpose was established in 1754, which consists of about 400 members, and holds two meetings in the year, and to such an extent is this amusement generally followed, that not less than 5000 balls are annually used by the players. The Union Club consists of 230 members; every member must belong to the golf club, and must pay the annual subscription of ten shillings, with £2 entrance fee: in the building rented by the club is an excellent reading-room, supported by the members resident in the city. The environs of the town possess much beauty and variety of scenery, and the numerous remains of its ancient ecclesiastical structures, and its colleges and public buildings, give to it a venerable and interesting appearance. Its salubrity of climate, the easy access to it by the St. Andrew's branch of the Edinburgh, Perth, and Dundee railway, and the remarkable facilities it affords for education, also render it a desirable residence. It is especially adapted as a place of retirement from the fatigues of military life or of commerce, and visitors come to it from very considerable distances on account of the advantages it presents for bathing.

Within the last few years, St. Andrew's has attracted public notice for the spirited improvements that have been carried into effect by its authorities. These improvements may be dated from the year 1842, when Major Hugh Lyon Playfair, of St. Leonard's, was elected chief magistrate of the burgh: through the energy and public spirit of that gentleman, the town has been improved in a variety of respects, and now presents a more worthy remnant of its bygone splendour. The condition of the streets first claimed attention; they have been mostly repaired, and provided with suitable foot pavement, projections have been removed, and the public convenience and comfort has been generally studied. Bell-street has been extended, as already observed, to South-street; other lines of building have been raised, and the structure of Argyle or West Port, by which South-street is entered from the west, has been completely renovated. It was mainly through the active zeal of the provost, that the Madras Infant School was built in 1844, and that further grants were obtained from government in 1844 and 1847, for the completion of the new buildings of the United College. On the removal of the infant school to its present convenient and healthful position, he converted the building behind the parish church, in which the school had previously been taught, into a spacious city hall, supplying a desideratum for the accommodation of public meetings, long felt to exist. It may be noticed as a gratifying feature in the various improvements, that they have all been carried out with the utmost regard to the preservation of the ancient architectural remains, which have, moreover, been so freed from every thing unseemly, that the ruins of the city are now more worthy than ever of the inspection of the visitor. Provost Playfair has also displayed a warm interest in the moral and spiritual improvement of the labouring classes, especially of the long-neglected fisher population. Such is a brief account of what has been done on behalf of the ancient and once metropolitan city of St. Andrew's within the last few years, chiefly through the perseverance of its active provost. But for carrying out these improvements, the public are also specially indebted to the distinguished liberality of the citizens and the members of the corporation, as without the contributions of the former, and frank co-operation of the latter, the greater number of these works of reform could not have been effected. An account of the recent changes will be found in the *History of St. Andrew's* by the Rev. Charles Roger, published in 1849, from which some particulars have been derived for this article.

The UNIVERSITY, which consists of St. Mary's or the New College, and the United Colleges of St. Salvator and St. Leonard, is under the control of a chancellor, chosen by the senatus academicus; two principals appointed by the crown, one for St. Mary's, with an average stipend of £313, and one for St. Salvator's and St. Leonard's, with an average income of £338; and a rector, elected by the professors and students. The principal of St. Mary's is also primarius

Seal of the University.

professor of divinity in his college, taking the department of systematic theology : his total income is above stated. The professorships of ecclesiastical history, biblical criticism, and oriental languages, in St. Mary's, and the professorship of mathematics in the United College, are in the patronage of the Crown, and are valued respectively at £354, £306, £279, and £386, per annum. The professorships in the United College in its own gift, are, the Greek, valued at £418; logic, £338; moral philosophy, £322; and natural philosophy, £313 : that of medicine, £316, is in the patronage of the university. The professorship of humanity, also in the United College, valued at £422, is in the gift of the Marquess of Titchfield; the professorship of civil history, valued at £230, is in the patronage of the Marquess of Ailsa; and the lectureship of chemistry, founded from a bequest by Dr. Gray, and to which the first appointment was made in 1840, is valued at £70, and is in the patronage of the Earl of Leven. The senatus academicus consists of the principals and professors of both colleges, and the rector of the university presides at its meetings. By this body alone are degrees conferred, the several faculties recommending the candidates.

The *College of St. Mary* is confined to the study of theology. The students neither wear gowns, nor pay any fees, but previously to their admission, must have passed through the ordinary routine of classical and philosophical studies in some of the Scottish colleges; the session commences on the 1st of December, and closes on the 31st of March. In the gift of this college are twenty bursaries, among which are, one of £18, two of £15 each, ten between £15 and £10, three of £10, and one of £7. Of these twenty bursaries the greater number have been merged into a common fund, which, at the close of the session, is divided among those students who are not otherwise provided with bursaries, according to their respective circumstances and merits. The college has also the patronage of several incumbencies. The buildings, which have been restored, and partly rebuilt, by government, occupy two sides of a quadrangle : on the west side are the lecture-rooms and dining-hall, and on the north the principal's official house, and also the university library, containing more than 50,000 volumes, open to the use of both colleges. The structure of the library is very spacious, comprising four large halls. Its front towards the street is ornamented with a series of shields, containing the armorial bearings of the several chancellors of the university, from its foundation to the present time.

The *Colleges of St. Salvator and St. Leonard* were united by act of parliament, in 1747, and placed under the superintendence of one principal. The students wear gowns of scarlet frieze, and pay a fee of £3. 3. to each of the professors whose lectures they attend; the session commences on the first Tuesday in October, and closes on the last Friday in April. In the gift of the college are sixty-four bursaries, of the aggregate value of £840. Eight are in the patronage of the Madras school; seven in that of the university and united college; three, of about £90 each, in the patronage of Sir Alexander Ramsay, Bart., for candidates of the names of Ramsay, Durham, Carnegie, and Lindsay; and the remainder are open to general competition. The college has also the patronage of the livings of Dunino, Kemback, Kilmany, Cults, and Forteviot. The

buildings have been completely renovated and much enlarged, by government, at an expense of about £18,600. They form a spacious quadrangle, containing the apartments in which the professors deliver their lectures; a hall; a venerable chapel, in which is the splendid tomb of the founder of St. Salvator's, Bishop Kennedy, with an inscription almost entirely obliterated; a museum connected with the literary, scientific, and antiquarian society of St. Andrew's; and other accommodation. The chapel, which was formerly much larger, and had a beautifully groined roof, since removed from an unfounded apprehension of insecurity, is now used as the parish church of St. Leonard. In the tomb of Bishop Kennedy were found, in 1683, an exquisitely wrought silver mace, now appropriated to the use of the college, and five others merely plated, of which two are preserved in the college of St. Mary, and one each were presented to the universities of Aberdeen, Glasgow, and Edinburgh. The college also possesses three silver arrows which were annually awarded as prizes to a company of archers, from the year 1618 to 1751, and, after being held by the winners for one year, were returned with silver medals attached to them; to one are appended thirty-nine medals, weighing together 166 ounces, and to another thirty, weighing fifty-five ounces.

Of the college of St. Leonard, now in ruins, all that remains is the roofless chapel, the hall, and some other buildings which form dwellings. In the chapel are the supposed monument of the founder, Prior Hepburn; the monument of Robert Stewart, Earl of March, bishop-elect of Caithness, and commendator of the priory of St. Andrew's; the tomb of John Wynram the reformer; and a mural monument to Robert Wilkie, for twenty-one years principal of the college. The hall contained the refectory and dormitories of the students; and on one of the walls is the inscription "*Erexit Gul. Guild. S.S.T.D.,*" with the date "1650".

Among the many distinguished men who have studied, or held office, in the university of St. Andrew's, may be mentioned *Sir David Lindsay*, of the Mount, one of the most celebrated Scottish poets. *John Knox*, who entered as a student in 1524, early devoted himself to the Protestant cause, and about 1542, as a regent in the university, inculcated doctrines contrary to the tenets of the Church, for which he was compelled to seek personal security by flight. After being driven from place to place, he at length found an asylum for a time, in 1547, in the castle of St. Andrew's, then in the possession of Cardinal Beaton's assassins. It was while resident here that he first publicly preached the Gospel. Some years later, he preached at St. Andrew's the sermon already referred to as leading to the destruction of the chief ecclesiastical buildings in the city. He was successively appointed minister of the congregations at Edinburgh and St. Andrew's; and after the troubles of the period had terminated in the public recognition of the Reformed faith, he was stately fixed as minister in the former city. In 1570, on account of his health, Knox retired to St. Andrew's, where he remained till within a few weeks of his last illness and death : he died at Edinburgh on the 24th November, 1572. Other eminent men who studied or taught in the university were, *George Buchanan*, the historian; *Andrew Melville*; *Samuel Rutherford*, author of the well-known "*Letters*"; *Archbishop Sharpe*; *Dr. Adam Ferguson*, author of the "*History of*

the Roman Republic"; *Dr. James Playfair*, author of a complete System of Chronology; *Dr. Thomas Chalmers*, the distinguished preacher and theological writer; *Lord Campbell*, lord chief-justice of the court of Queen's Bench; &c., &c.

The *Madras College*, situated in South-street, was founded by the late Rev. Dr. Andrew Bell, who in 1831 conveyed, for that and other purposes, to the provost of St. Andrew's, the two ministers of the parish, and the professor of Greek in the university, £60,000 three per cent. reduced annuities, and £60,000 three per cent. consols. Of these funds, five-twelfths were to be transferred by them to the provost, magistrates, and town council of Edinburgh, of Glasgow, Leith, Aberdeen, and Inverness, for the foundation of schools on the Madras system; one-twelfth to the trustees of the Royal Naval School, for a similar purpose; and one-twelfth to the provost and council of St. Andrew's, Dr. Bell's native place, for the formation of a permanent fund for the moral and religious improvement of the city. The remaining five shares were to be vested in the same trustees, substituting only the sheriff depute of Fife for the professor of Greek, after the death of the present professor, for the erection and endowment of a college to be called the Madras College of St. Andrew's, and for the establishment of eight bursaries in the United College, tenable by such as have been three years in the Madras College. Buildings were soon after erected, in the Elizabethan style, from a design by Mr. Burn, architect, of Edinburgh, inclosing a spacious quadrangular area, and containing the requisite class-rooms for the school, and two handsome residences for the English and classical masters. The college is under the visitation of the lord-lieutenant of the county, the lord justice clerk of Scotland, and the bishop of Edinburgh. It is conducted on the Madras system, by a classical master and an assistant, and an English master, who has also an assistant, the former having a salary of £50, and the latter of £25, from the funds of the college, in addition to their fees; by masters of arithmetic, writing, and the modern languages, each of whom has a salary of £50, in addition to their fees; and by masters of the mathematics, geography, drawing, and church music. The total number of the pupils is about 900, including those of the English and grammar schools of the city, which have been incorporated with this institution; and about 150 children of the poorer citizens, also, receive a gratuitous education in the establishment. In another part of the town is the Madras infant school, erected in 1844, partly out of the Bell fund, and partly by means of a government grant.

The only manufactures in the town are, that of golf balls, of which about 10,000 are annually made; and the weaving of linen for the manufacturers of Dundee. The TRADE of the port is very inconsiderable. Some vessels occasionally bring cargoes of timber from Norway and the Baltic, but when drawing more than fourteen feet of water, they are obliged to discharge part of their lading before they can enter the harbour. The number of vessels belonging to the port is eleven, of the aggregate burthen of 566 tons. In 1848, upwards of 200 vessels arrived in the harbour; and the revenues arising from shore-dues, levied by authority of the magistrates, have averaged, during the last few years, about £175 per annum. The harbour is formed chiefly

by the Kinness rivulet, and is difficult of access; it was deepened in 1836, has since been improved by the erection of a new quay on the west side, and at spring tides can receive vessels of 300 tons. The estuary of the river Eden, on the northern confines of the parish, is navigable when the tide is nearly full. There are fourteen boats employed in the fisheries off the coast: the fish usually taken are, haddock, cod, ling, skate, halibut, and flounders, the produce of which, after supplying the home markets, is sent to Cupar; and during the season, the greater part of the boats are employed in the herring-fishery off the coast of Caithness. In the Eden, as far as the tide extends, is a salmon-fishery; but the produce is inconsiderable. The corn-market is held weekly on Monday, and is well supplied: a weekly market is also held for poultry, butter, eggs, and provisions of all kinds. There are fairs on the second Thursday in April, the 1st of August, and the 30th of November (all O. S.): the first, anciently called the Senzie Fair, was formerly resorted to by merchants from various foreign ports; the August fair is generally very large, and is much resorted to for the hiring of farm-servants, as well as for general business. The post-office has a good delivery; and communication is maintained by good roads, and by the St. Andrew's branch of the Edinburgh, Perth, and Dundee railway. There are branches in the city of the Bank of Scotland, the Clydesdale Banking Company, and the Edinburgh and Leith Bank.

The city received its first charter of incorporation from David I. in 1140, erecting it into a ROYAL BURGH. Under this charter, confirmed by Malcolm IV. in 1153, the government is vested in a provost, four bailies, a dean of guild, a treasurer, and twenty-two councillors. There are seven incorporated guilds, viz., the smiths, wrights, bakers, shoemakers, tailors,

Second Seal of the Burgh.

weavers, and butchers, into one of which an individual must be admitted, previously to his becoming a burghess qualified to carry on trade; the fees vary from £45 to £15 for strangers, from £20 to £12 for apprentices, and from £2. 10. to £1 for sons of freemen. The magistrates exercise both civil and criminal jurisdiction within the burgh, the former to any amount, but the latter confined chiefly to petty offences. They accordingly hold courts for the recovery of small debts on the first Monday in every month, and a bailie-court twice a week: in the former, the number of cases has greatly diminished since the establishment of the sheriff's small-debt court. A dean-of-guild court is held occasionally. This city, with the burghs of Anstruther Easter and Wester, Crail, Cupar, Kilrenny, and Pittenweem, returns a member to the imperial parliament; the number of qualified voters in St. Andrew's is about 280. The town-hall, an ancient building situated in Market-street, has been enlarged and repaired; and the gaol, which is chiefly for the temporary confinement of petty delinquents, is under good regulations.

The PARISH is bounded on the east by the German Ocean, and is about ten miles in length and two miles in extreme breadth, comprising 10,300 acres, of which

9840 are arable, 345 woodland and plantations, and the remainder meadow, pasture, and waste. Its surface is generally level, except towards the east, where the hills of Balrymont have an elevation of 370 feet, and towards the west, in which direction the hill of Clatto rises to the height of 548 feet above the sea. The coast is about six miles in extent, and is bounded in some parts with rocks, of which the Maiden rock and those of Kinkell and Buddo are the most conspicuous. About a mile from the town is the cave of Kinkell, about eighty feet in length and twenty-five feet wide; the roof, apparently of one entire stone, is about eleven feet in height, but inclining so much towards the east as to form an angle with the floor, which on the west side, about forty feet from the entrance, is covered with plants whose growth is promoted by water constantly trickling from the roof. The principal river is the Eden, over which is an ancient bridge of six arches, called the Gair or Guard bridge, built by Bishop Wardlaw, and wide enough only for one carriage to pass. There are also two small rivulets, of which the larger, after a course of nearly five miles, having turned several corn-mills, flows into the harbour, on the south-east; and the other falls into the sea at the north-west of the city. The soil is mostly fertile, and the lands are generally better adapted for tillage than for pasture, producing abundant crops of grain of all kinds; the system of agriculture is improved, and many acres of land near the mouth of the Eden have been protected from inundation by embankment. The cattle, which were all of the Fifeshire breed, have been mixed with various others of recent introduction; and the sheep, the number of which has been for some time gradually increasing, are principally of the Highland and Cheviot breeds. The chief substrata are, sandstone, in which are found thin seams of coal; slate clay; and clay ironstone: the sandstone is of a grey colour, very durable, and of good quality for building. The plantations are mainly around the houses of the landed proprietors, and in a thriving state; they mostly consist of ash, oak, elm, beech, plane, and larch, with some Scotch firs, which are chiefly on the poorer soils. The annual value of real property in the parish is £26,834.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of St. Andrew's and synod of Fife. The living is collegiate, consisting of two charges, of which the first is in the patronage of the Crown, and the second in that of the Magistrates and Council of the city. The minister of the first charge has a stipend of £439. 9. 4., with a glebe valued at £23 per annum; and the minister of the second charge has £171. 18. 2., with a manse, and a glebe valued at £16. 15. per annum. They officiate in the parish church and St. Mary's church, in the morning and afternoon alternately. The parish church, originally erected by Bishop Turgot, about the commencement of the twelfth century, anciently contained numerous chapels, which were suppressed at the Reformation: after the destruction of the cathedral, it was substituted as the cathedral of the archbishops of St. Andrew's. It was rebuilt in 1798, is a spacious structure with a tower and spire, and contains about 2200 sittings. In the great aisle is a splendid monument of white marble, erected to the memory of Archbishop Sharpe, by his son, Sir William Sharpe, in 1679. An episcopal chapel was built in 1825, at a cost of £1400; there are also places of worship for

members of the Free Church, the United Presbyterian Synod, Independents, and Baptists.

Among the monuments of antiquity with which the city and its environs abound, are the remains of the church of *St. Regulus*, which is supposed by some to be the original structure erected by Hergustus, King of the Picts, on his conversion to Christianity. Others refer the remains to the seventh or eighth century, but they are rather to be assigned to the twelfth, when the building is on good grounds supposed to have been raised by the zeal of Bishop Robert. They stand thirty-five yards south-east of the cathedral, and consist chiefly of the tower, 108 feet high and twenty feet square at the base, formerly (though not, perhaps, originally) surmounted by a spire; and the eastern portion of the church, thirty-one feet in length and twenty-five feet wide, having two windows on the north and two on the south side. Since the decay of the spire, the tower has been roofed with a platform of lead, to which there is an ascent by a spiral staircase within. On the east face of the tower are traces of its having been joined by three several roofs of different heights, with which the adjoining church was covered either at its erection or at three various times; and from the summit is obtained an extensive prospect over the bay and the adjacent country. The ancient *Cathedral*, completed in 1318, was a magnificent cruciform structure, 375 feet in length, 180 feet across the transepts, and seventy-two feet in mean breadth, with a lofty central tower, of which nothing now remains but the bases of the columns whereon it was supported. It had also two turrets at the western, two at the eastern, extremity, and one at the end of the south transept, each 100 feet in height. Of this splendid structure, which was destroyed at the Reformation, only the eastern gable with its turrets, one of the turrets at the west, and portions of the walls, are now remaining; the style of architecture is partly Norman, and partly of the early and later English, which latter is more prominent in the western portion of the building, from the greater richness of detail. The interior has been cleared, by order of Her Majesty's exchequer, from the accumulated heaps of rubbish with which it was for years obscured; and such repairs have been made as were requisite for the preservation of the remains. Within the area of the cathedral precincts, which occupy a space of about eighteen acres, are also some portions of the famous *Priory*, or Augustine monastery, founded by Robert, Bishop of St. Andrew's, and other monastic buildings, in a state of irretrievable decay. The whole of the ecclesiastical remains above described were enclosed by a wall erected by Prior Hepburn, part of which is now destroyed: it is almost a mile in length, about twenty feet in height, and four feet thick, defended by thirteen turrets at irregular distances, and having three gateways.

To the north-west of the Cathedral, on an eminence overlooking the sea, are the remains of the *Castle*, rebuilt by Bishop Trail about the close of the fourteenth century. After the murder of Cardinal Beaton in 1546, it was besieged and destroyed, but was subsequently rebuilt by Archbishop Hamilton, and continued to be the residence of the prelates till the death of Adamson in 1591, after which period it was suffered to fall into decay. The only remains are part of the south side of the quadrangle, with a handsome square tower, and a few other

fragments. The ancient convent of *Franciscan* friars was demolished at the Reformation, and the site is now occupied by a part of Bell-street; and the *Dominican* convent founded in 1274 shared the same fate, with the exception of its chapel, a beautiful specimen of the early English style, within the grounds of Madras College, and for the preservation of which Dr. Bell, the founder, made due provision. On an eminence to the west of the harbour are the ruins of the *Kirkheuch*, a collegiate establishment for a provost and ten prebendaries, originally a Culdee college, said by Fordun to have been erected by Constantine II. in the ninth century, and of which Constantine III., after resigning his crown, became abbot.—See LEONARD'S, ST.

ANDREW'S, ST., a parish, in the county of ORKNEY; containing, exclusively of the former quoad sacra parish of Deerness, 926 inhabitants. This parish is situated on the eastern coast of the mainland, and is bounded on the north by the Firth of Shapinshay; on the east by Deer Sound, which separates it from Deerness; and on the west by the bay of Inganess. It is about six miles in extreme length and two in average breadth, and is connected with the peninsula of Deerness by a narrow isthmus less than a quarter of a mile in length. The coast is so singularly indented with bays and inlets from the sea, that the form of the parish cannot be well defined or its extent accurately ascertained; it is generally estimated at thirteen square miles, and the length of the line of coast at about eighteen miles. The surface, though generally low, is intersected by three nearly parallel and equidistant ridges of inconsiderable height, and diversified with hills of gentle acclivity, the highest of which has an elevation of 350 feet above the sea, and, towards the north-east, terminates in precipitous rocks, of strikingly romantic appearance. In one of these is a remarkable cavern, sixty feet in length and about thirty feet wide, communicating with the sea by a passage, through which a boat may pass at certain times of the tide. Deer Sound forms an excellent roadstead for vessels in boisterous weather; it is about four miles long and two miles broad, has a depth of six or seven fathoms at the entrance, with a sandy bottom, and affords good anchorage for vessels of any size. Inganess bay, on the north-west coast, about two miles and a half in length and more than a mile in breadth, varies in depth from three to twelve fathoms, and affords good anchorage and shelter from all winds. Neither of these bays, however, is at present much frequented.

The SOIL is extremely various in different parts of the parish, consisting of sand, loam, clay, and moss, alternating, and frequently found in combination. The number of acres under tillage is about 2200; the chief crops are oats and bear, with a small proportion of potatoes and turnips. The farming is in a very unimproved state; some attempts have been made to drain the lands, but very little progress has hitherto been effected in the general system of agriculture. Little attention has been paid to the improvement of the breeds of live stock: the horses most in use are of the Norwegian kind called the Garron, strong and hardy, but seldom exceeding fourteen hands in height; the black-cattle are small, thin, and ill-conditioned, from the scantiness of the pastures; and the sheep, inferior to those of the Shetland breed, are also of a coarser texture of wool, though the wool is of a much finer quality than that of the

sheep of the southern counties. The farm-buildings are generally of stones and clay, roofed with thatch; and the few inclosures that are to be seen, are made by mounds of turf. The rocks are argillaceous sandstone and flag, apparently of the old red sandstone formation, alternated with trap; and traces of calc-spar and pyrites of iron are found occasionally: slates of inferior quality, and also freestone, are obtained in some parts.

The manufacture of kelp, formerly carried on here to a great extent, has of late greatly diminished; and that of straw-plat, which was also extensive, has been almost discontinued. Fairs for cattle are held at Candlemas, Midsummer, and Martinmas. The fish generally found off the coast are, cod, haddocks, flounders, skate, thorn-backs, and coal-fish; and crabs, lobsters, cockles, and other shell-fish are found on the shores; but no regular fishery of these has been established. The herring-fishery was commenced in 1833, and is carried on to a very considerable extent; curing-houses have been erected, and there is every prospect of the formation of an extensive and lucrative herring station at this place. Communication with Kirkwall, and with other parts of the mainland, is maintained by good roads, of which that to Kirkwall is one of the best in the county. Ecclesiastically the parish is within the bounds of the presbytery of Kirkwall and synod of Orkney: the minister's stipend is about £208, with a manse, and a glebe valued at £14 per annum; patron, the Earl of Zetland. The church, built in 1801, and enlarged in 1827, is a neat structure, conveniently situated, and containing 400 sittings. A Free Church place of worship has been erected here. The parochial school affords the general course of instruction; the master has a salary of £27, with a house and garden, and the fees average £9. There are some slight vestiges of ancient chapels; and on the point of Inganess are traces of an old circular fort of stones and earth, commanding the entrance of Deer Sound. Several tumuli also remain, one of which, on the glebe land, is about 140 yards in circumference at the base, and twelve feet high; another, nearly in the centre of the parish, is ninety yards in circumference and sixteen feet high, and a third, of much larger dimensions, is situated on the isthmus at the southern extremity of the parish.

ANDREW'S (ST.) LHANBRYDE, a parish, in the county of ELGIN, 3 miles (E.) from Elgin; containing 1176 inhabitants, of whom 174 are in the village of Lhanbryde. The parish of St. Andrew's was anciently called the barony of Kill-ma-Lemnock. Lhanbryde, signifying in Gaelic "the church of St. Bridget," was united to it in 1782, in addition to two other chapels that had been joined before the Reformation. The whole is three miles broad, from east to west, and about four long, from south to north; exclusively of the Teindland, which is detached one mile distant on the south, and although generally considered as belonging to this parish, pertains to that of Elgin. St. Andrew's Lhanbryde contains about 5000 acres, of which four-fifths are under cultivation, and 650 acres are woodland. It is intersected by the great north road and the river Lossie. The isolated tract just named was originally the moor where the cattle were collected for drawing part of the teinds of both parishes, before they were converted into money; from which circumstance it derives its name. The surface has in general the appearance of a plain.

in which a series of low hills rise, apparently connected together, and all covered with corn, grass, or wood. In the spring season, the district is subject to a succession of storms, some of which are of the most violent, piercing, and blighting nature, equally injurious to vegetation and to animal life. There are three lakes on the confines of the parish: the largest of them, called Spynie, consisting of shallow water covering a deep rich mould, offered a temptation to reclaim it by drainage, which, a few years since, was prosecuted at an expense of nearly £10,000; but the operation has not yet fully succeeded. These lakes abound with trout, eels, and pike, and are visited by a great variety of wild ducks, and sometimes by wild geese and swans. The river Lossie, which, entering the parish at the north-west corner, divides it there from the town of Elgin, is subject to great floodings, and the grounds on its banks frequently suffer injury. Salmon, pike, trout, &c., are found in it, though not in any considerable quantity.

The soil in general is sandy, yet fertile where the land is low and damp; for, in this part of the county, the farmer has mostly to complain of drought, by which he loses much every summer. All kinds of grain are produced, in a larger quantity than is necessary for domestic use; as well as the ordinary green crops and grasses: most of the farms are of considerable size, and occupied by gentlemen of skill, and with adequate capital. The whole extent of the parish is incumbent upon a bed of limestone belonging to the calciferous sandstone of the old red formation. About a mile eastward of the manse, a small section made by the burn of Lhanbryde exposes a bed of the inferior oolite kind; and two miles north-west of the manse there appear, at Linksfeld, Pitgaveny, &c., insulated patches of the Purbeck beds of the wealden, or fresh-water deposit, rarely met with in Scotland. Limestone is burnt for agricultural and building purposes, and the wealden clays and marls are applied to fertilizing the light sandy soil in the neighbourhood. Pitgaveny House is a handsome residence, with grounds tastefully laid out. There is a manufacture of malt in the parish; and a cast-iron foundry, and a manufactory of woollen stuffs, are carried on, the latter of which employs about forty-five hands. A fair is held at Lhanbryde on the fourth Tuesday in October, for cattle, farming implements, and similar commodities. The annual value of real property in the parish is £4104.

For ecclesiastical purposes the parish is in the presbytery of Elgin and synod of Moray; the patronage is vested in the Crown and the Earl of Moray alternately, and the minister's stipend is £206. 19., with a manse. The church is a commodious building, and will hold between 400 and 500 persons. There is a parochial school, the master of which has a salary of £34. 14., with a house and garden, and about £12 fees, teaching the classics, mathematics, French, and Gaelic, together with the ordinary branches of education. About half a mile south of the manse is a small square fort of great antiquity, called the Tower of Coxton, which appears to have been of considerable strength. The neighbourhood affords numerous interesting specimens of fossils: many of the distinguishing fossils of the inferior oolite have been found in the bed exposed by the Lhanbryde burn; at Linksfeld a great variety also occurs, and of the greatest number and interest, in a dark-

coloured shale bed containing slabs of highly crystallized limestone.

ANGUS.—See FORFARSHIRE.

ANNAN, a royal burgh, and a parish, in the county of DUMFRIES, 15 miles (E. S. E.) from Dumfries, and 79 (S.) from Edinburgh; containing, with part of Brydekirk quoad sacra district, 5471 inhabitants, of whom 4409 are in the burgh. This place, which is of remote antiquity, and supposed to have been a Roman station of some importance, was, after the departure of the Romans from Britain, occupied by the ancient inhabitants till their expulsion by the Northumbrian Saxons. After the dissolution of the Saxon heptarchy, the surrounding territories were annexed to the kingdom of Scotland, in the reign of Malcolm Canmore; and the lands were subsequently granted to Robert de Bruce, Lord of Annandale, who built a castle for the defence of the town, in which he occasionally resided. From its proximity to the English border, the town was frequently plundered during the Border warfare, and sometimes burnt; and it suffered greatly in the wars consequent on the disputed succession to the Scottish throne, in the reign of Edward I. of England. In 1298 the town and church were burnt by the English, but they were subsequently restored by Robert Bruce, who in 1306 ascended the throne of Scotland; and in 1332, Edward Baliol, after his coronation at Scone, repaired to the castle of Annan, whither he summoned the nobility of Scotland to pay him homage. During his continuance here, Archibald Douglas, the firm adherent of the Bruces, having collected a force of 1000 cavalry at Moffat, advanced to Annan during the night, and surprised and defeated his guards. Baliol was then induced to make his escape from the castle, and, hastily mounting a horse with neither saddle nor bridle, with considerable difficulty reached Carlisle, without a single attendant.

In 1547, the town was plundered and burnt by the English under Wharton, accompanied by the Earl of Lennox; on which occasion, as the castle was at that time dismantled, the inhabitants fortified the church, and for some time successfully resisted the invaders. In the two following years, the town and the surrounding district were continually infested by the predatory incursions of the English borderers, against whose attacks the governor, Maxwell, levied a tax of £4000 for repairing the castle, and placing it in a state of defence. During the regency of Mary of Guise, on the arrival of a large body of French soldiers in the river Clyde, the greater number of them were stationed in this town, for the protection of the neighbourhood; and in 1570 the castle was again destroyed by the English forces, under the Earl of Sussex. It was afterwards restored, and continued to be kept up as a border fortress, till the union of the two crowns by the accession of James VI. At this time, the town was reduced to such a state of destitution that the inhabitants, unable to build a church, obtained from that monarch a grant of the castle for a place of public worship; and during

Seal and Arms.

the wars in the reign of Charles I. the town suffered so severely that, by way of compensation, the parliament, after the restoration of Charles II., granted to the corporation the privilege of collecting customs and other duties for their relief. The Highland army, on their retreat before the Duke of Cumberland, in the rebellion of 1745, encamped here on the night of the 25th of December, after having lost great numbers of their men, who were drowned while attempting to cross the rivers Esk and Eden.

The town is pleasantly situated on the eastern bank of the river Annan, two miles from its influx into Solway Firth. It consists of several spacious and regularly-formed streets, intersecting each other at right angles; and is connected with the country on the opposite bank of the river, by an elegant stone bridge of three arches of sixty-five feet span, erected in 1824, at an expense of £8000. From the beauty of the scenery in the environs, and the facilities of sea-bathing afforded by the Firth, Annan is a favourite place of residence. The houses are well built, and of handsome appearance, and in the immediate vicinity are numerous villas and mansions; the streets are paved and lighted, and the inhabitants amply supplied with good water. A public library is supported by subscription. The spinning of cotton-yarn, which was introduced here in 1785, is still carried on, and affords employment to about 140 persons; the factory, in which the most improved machinery is employed, has been enlarged, and the quantity of yarn produced averages 4000 pounds per week. The usual handicraft trades requisite for the supply of the neighbourhood are pursued; and there are numerous shops, amply stocked with various kinds of merchandise. A market is held on Thursday; and fairs, chiefly for hiring servants, are held annually on the first Thursdays in May and August, and the third Thursday in October. Facilities of inland communication are afforded by good roads, of which the turnpike-road from Dumfries to Carlisle passes through the town, and by cross-roads connected with the roads to Edinburgh and Glasgow. Great facility of intercourse is also presented by the Glasgow, Dumfries, and Carlisle railway, which here crosses the river Annan, and has a station.

The trade of the port partly consists in the importation of timber, deals, lath-wood, and tar, from America and the Baltic, in which two vessels are employed; and about thirty vessels are engaged in the coasting-trade. The exports are chiefly grain for the Glasgow and Liverpool markets, and timber and freestone for various English ports. By the steamers that frequent the port, grain, wool, live stock, bacon, and hams, are sent to Liverpool and the adjacent towns of Lancashire, from which they bring manufactured goods; and the other imports are mostly coal, slates, salt, herrings, grain, and iron, from Glasgow and places on the English and Irish coasts. The number of vessels registered as belonging to the port, is thirty-four, of the aggregate burthen of 1639 tons. The port, which is under the custom-house of Dumfries, and is formed by an inlet from the river, has been much improved by the embankment of Hall meadow, on the Newby estate, by the proprietor, John Irving, Esq., at a cost of £3000, which has rendered the channel of sufficient depth for the safe anchorage of vessels of considerable burthen. Two piers have been erected by the proprietors of the

steamers frequenting the port, to which a road has been formed from the burgh, by subscription, at a cost of £640; and a commodious inn with good stabling has been built near the jetties, within the embankment.

The ancient records of the BURGH having been destroyed during the frequent devastations of the town, a charter confirming all previous privileges, and reciting a charter of James V. in 1538, by which it had been erected into a royal burgh, was granted by James VI. in the year 1612. Under this the government of the town is in the control of a provost, two bailies, and a number of councillors. There are no incorporated guilds, neither have the burghesses any exclusive privileges in trade; the magistrates issue tickets of admission to the freedom of a burghess, without any fee. Courts are held both for civil and criminal cases; but in neither do the magistrates exercise jurisdiction to any considerable extent. The burgh is associated with Dumfries, Kirkcudbright, Lochmaben, and Sanquhar, in returning a member to the imperial parliament: the number of the constituency, parliamentary or municipal, is about 170. A new prison or lock-up house, containing three cells, was erected some years ago in lieu of the old prison, which is dilapidated.

The PARISH is about eight miles in extreme length, and varies from two and a half to four miles in breadth, comprising an area of 11,100 acres, of which about 1000 are woodland and plantations, and the remainder arable, meadow, and pasture. The surface is generally level, with a slight inclination towards the south, and is intersected by three nearly parallel ridges of moderate height. Of these, the western ridge terminates in a conical hill called Woodcock-air, which has an elevation of 320 feet, and is completely covered with wood; and on the coast are the Annan and Barnkirk hills, the former of which has an elevation of 256, and the latter of 120 feet above the sea. On the banks of the river, the soil is a rich alluvial deposit; to the west, a clayey loam, alternated with gravel; towards the east, a poor though deep loam; and in the northern districts, mostly light, with tracts of moor and moss. The chief crops are grain of all kinds, and the most improved system of husbandry is generally in use; the farm-buildings are substantial and well arranged. A large open common, of nearly 2000 acres, has been divided among the burghesses, and is now inclosed and cultivated. The pastures are rich: the cattle are of the Galloway breed, with a few of the Ayrshire and short-horned; there are few sheep reared, but by most of the farmers a considerable number of pigs are fed. Salmon, grilse, and trout are found in the Annan, and in the Firth; and in the former are three fisheries, one the property of the burgh: the fish taken are, sparring, cod, haddock, sturgeon, turbot, soles, and skate. The annual value of real property in the parish is £13,297, including £5163 for the burgh. The principal substrata are, fine sandstone well adapted for building, limestone, and ironstone: several attempts have been made to discover coal, which are supposed to have failed only from the borings not having been made to a sufficient depth. Mount Annan, the seat of the late Lieut.-Gen. Dirom, is a handsome mansion, situated on an eminence on the eastern bank of the Annan, about two miles from the town, commanding a fine view of the Firth and the northern counties of England; the grounds are tastefully embellished, and the scenery is

picturesque. Warmanbie, on the east bank of the Annan, about half a mile to the south of Mount Annan, is an elegant mansion, erected within the last few years, and surrounded with pleasure-grounds; and Northfield House, on the same river, three-quarters of a mile from Annan, is also a handsome mansion, lately enlarged.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Annan and synod of Dumfries: the minister's stipend is about £250, with a manse, and a glebe valued at £30 per annum; patron, J. J. Hope Johnstone, Esq., of Annandale. The church, erected in 1790, is a handsome structure with a spire, and contains 1190 sittings. A second church, situated on the south of the town, a very handsome building affording accommodation to 950 persons, was erected at a cost of £1400, and opened in August 1842: the stipend of the minister is about £70. There are also places of worship for Episcopalians, the United Presbyterian Synod, members of the Free Church, Independents, and Roman Catholics. The parochial school is attended by nearly 100 children; the master has a salary of £31. 16. 6., with a house and garden, and the fees average about £40 per annum. The Annan academy, a building containing commodious classrooms, was erected and endowed with the funds arising to the burgh from the division of the common land. It is under the direction of two masters, and is attended by 140 pupils. The masters have a salary of £54 each, and are obliged to employ an assistant teacher, who is paid from the fees; the fees amount to about £160, and are equally divided between the masters, after paying the assistant. A sum of £5 is annually given from the endowment, for prizes.

The only remains of the castle of Annan are, a small portion of one of the walls, incorporated in the town-hall, and a stone built into a wall of a small house, with this inscription, "*Robert de Brus, Comte de Carrick, et seiniour de Val de Annand, 1300*". About two miles from the town, and to the north of the Carlisle road, was a rude monument to the memory of the Scots who fell in a battle with the English, in which the latter were defeated with great slaughter; among the English slain in the conflict were Sir Marmaduke Langdale, Sir Philip Musgrave, and Lord Howard, whose remains were interred in the churchyard of Dornock. Close to the spot is a well in which the Scots washed their swords after the battle, and which has since been called the "Sword Well." Near the site of the castle is an artificial mound, supposed to have been a spot for administering justice during the times of the Saxons; and further up the river is an elevated bank called Galabank, the place of execution. On Battle Hill was lately discovered a mineral spring of great strength, which has not yet been analysed. The celebrated Dr. Thomas Blacklock; Hugh Clapperton, the African traveller; and the late Rev. Edward Irving, minister of the Scottish church in Regent-square, London, were connected with this place. Dr. Blacklock, who was born at Annan in 1721, though early deprived of sight, was not deterred from prosecuting his studies for the Church, which he pursued for ten years at the university of Edinburgh. His acquirements in the Latin, Greek, and French languages were very considerable; his knowledge of the sciences intimate; and his attainments in poetry remarkable, considering his disadvantages.

ANSTRUTHER EAST-ER, a burgh, sea-port, and parish, in the district of ST. ANDREW'S, county of FIFE, 9 miles (S. S. E.) from St. Andrew's, and 35½ (N. E. by N.) from Edinburgh; containing 997 inhabitants. This place, which is of great antiquity, was in the reign of Malcolm IV. the property of William de Candela, Lord of Anstruther, whose sons assumed the name of their patrimonial inheritance, and whose descendants are the present proprietors. It appears to have derived its early importance from its favourable situation on the Firth of Forth, and the security of its harbour, in which, on the dispersion of the Spanish armada, the captain of one of the vessels found an asylum from the storm. The town is separated from the parish of Anstruther Wester by a small rivulet called the Drael burn, over which is a bridge; and consists of a long narrow street, on the road from the East Neuck of Fife to Kirkcaldy and Burntisland, extending along the margin of the Firth. It was first lighted with gas in 1841.

The trade appears to have been formerly very considerable; a custom-house was erected here in 1710, and in 1827 the jurisdiction of the port was extended to St. Andrew's, Crail, Pittenweem, St. Monan's, and Elie. The amount of duties once averaged £1500 yearly; ship-building was carried on to a considerable extent, but after gradually declining for several years, it was at length entirely discontinued. The chief manufacture now pursued is that of leather. The trade consists principally in the fisheries, in curing and exporting the fish, in the exportation of grain and other agricultural produce of the surrounding district, and in the importation of various articles of merchandise for the supply of the neighbourhood. Barrels are made for the package of herrings taken off the coast, and more than 40,000 barrels of them are annually sent from this port, properly cured, for exportation. There is also a large brewery. The number of vessels belonging to the port is nine, of the aggregate burthen of 964 tons; a steam-packet plies twice a week, and a sailing-packet once a week, between this place and Leith, and the Edinburgh and Dundee steamers touch at the port. The harbour is safe, and easy of access; it is protected from the south-easterly winds by a natural breakwater, and an extensive and commodious quay. The custom-house, though an independent establishment, has, since the decline of the trade, communicated with that of Kirkcaldy. The market for corn and other produce is held on Saturday. There are two banks.

Anstruther Easter was incorporated by charter of James VI., under which the government was vested in three bailies, a treasurer, and fifteen councillors, assisted by a town-clerk and other officers. The bailies and treasurer are elected by the council, who are chosen by the registered £10 electors, under the provisions of the Burgh Reform act. The bailies are justices of the peace within the royalty of the burgh, which is co-extensive with the parish, and exercise both civil and criminal jurisdiction; since 1820, however, few cases have been tried in the civil court, and in the criminal court only

Burgh Seal.

twelve cases, chiefly petty misdemeanors : the town-clerk, who is appointed by the magistrates and council, is assessor in the bailies' court. By act of the 2nd and 3rd of William IV., this burgh, together with Cupar, St. Andrew's, Anstruther Wester, Pittenweem, Crail, and Kiltrenny, returns one member to the imperial parliament ; the right of election is vested in the £10 voters, and St. Andrew's is the returning burgh. The town-hall is a neat building.

The parish is situated at the head of a small bay in the Firth, and comprises about nine acres of land, formerly included within the parish of Kiltrenny, from which Anstruther Easter was separated in the year 1636. The annual value of real property in the parish is £1115. The incumbency is in the presbytery of St. Andrew's and synod of Fife : the minister's stipend is £190, inclusive of a glebe, with a manse built by the celebrated James Melville ; patron, Sir Wyndham Carmichael Anstruther, Bart. The church, built by subscription in 1634, and to which a spire was added about ten years after, was repaired in 1834, and is well adapted for 700 persons. There are places of worship for Baptists, Independents, members of the Free Church, and the United Presbyterian Synod. The burgh school is attended by about ninety scholars ; the master has a salary of £5. 6. 8., and about £65 from fees, with a house rent-free. There are several friendly societies, one of which, called the "Sea Box Society", established in 1618, and incorporated by royal charter in 1784, has an income of £300, for the benefit of decayed ship-masters and scamen belonging to the port. The late distinguished Dr. Chalmers, and the late Professor Tennant of the university of St. Andrew's, were born here ; the former died in 1847, and the latter in 1848.

Burgh Seal.

ANSTRUTHER WESTER, a royal burgh, and a parish, in the district of ST. ANDREW'S, county of FIFE ; adjoining Anstruther Easter, and containing 449 inhabitants, of whom 339 are in the burgh. This place, the name of which in the Celtic language is supposed to be descriptive of the low marshy ground on which the church was built, is situated on the

Firth of Forth, about six miles to the west of Fifeness. The people of Anstruther Wester, who, during the wars consequent on the attempt to establish episcopacy, were zealously devoted to the Presbyterian form of worship, joined the Covenanters ; and many of them fell in the battle of Kilsyth. The town suffered much in 1670 by an inundation of the sea, which greatly injured the harbour, and undermined the foundations of many of the houses. A second inundation, towards the end of the same century, swept away the houses in the principal street, and destroyed nearly one-third of the town.

The town is separated from Anstruther Easter by the Dreel burn, over which a bridge was erected, at the joint expense of the two burghs, in 1801. It has been much benefited by the widening of the principal street, and the houses in that, and also in the other streets, have been considerably improved in their appearance. The streets are paved and macadamised, and the town is well

lighted, and supplied with water. Anstruther Wester was erected into a royal burgh by charter of James VI., in 1587, and the government is vested in a provost, two bailies, a treasurer, and eleven councillors, elected annually ; the old council choosing the new council, and the latter electing the provost, bailies, and treasurer. The magistrates hold a court ; but few cases of civil actions have been brought before them for some years ; and their jurisdiction in criminal cases seldom extends beyond petty offences, in deciding on which they are assisted by the town-clerk, who acts as assessor. The town-hall is a commodious building. This burgh is associated with Pittenweem, Anstruther Easter, Kiltrenny, and others, in returning a member to the imperial parliament.

The PARISH is bounded on the south by the sea. It is about two miles in length, and of irregular form, comprising not more than 600 acres, of which, with the exception of a few acres of common pasture, the whole is arable. The soil, near the sea, is in some parts a rich black loam, and in others a light sand mixed with shells, both of which, though of no great depth, are very fertile ; in the higher grounds the soil is of lighter quality, intermixed with tracts of deep clay. The crops are grain of all kinds, with potatoes, turnips, and other green crops ; the lands are chiefly inclosed with stone dykes, but in some places with hedges of thorn. Salmon are caught on the shores of the burgh. The annual value of real property in the parish is £1998. Grangemuir, the seat of Lord William Douglas, of Dunino, a handsome and spacious mansion, built by the late Mr. Bruce, and greatly enlarged by the present proprietor, is pleasantly situated in grounds laid out with much taste. Ecclesiastically the parish is in the presbytery of St. Andrew's and synod of Fife : the minister's stipend is £142. 5. 6., of which part is paid from the exchequer ; with a manse, and a glebe valued at £22. 10. per annum. Sir Wyndham Carmichael Anstruther, Bart., is patron of the incumbency. The church is a very ancient structure situated in the burgh, near the sea-shore. The parochial school is well conducted ; the master has a salary of £34. 4. 4., with £4 per annum from a bequest, a house and garden, and school-fees averaging about £75 per annum. There is a bursary in the United College of St. Andrew's, for a scholar from this parish, endowed by the late William Thomson, Esq., chief magistrate of the burgh.

ANWOTH, a parish, in the stewartry of KIRK-CUBRIGHT ; containing, with part of the burgh of barony of Gatehouse, 883 inhabitants. This parish is bounded on the south by Wigtown bay, on the south-east by the bay of Fleet, and on the east by the river Fleet, which separates it from the parish of Girthon. It is about six miles and a half in length, and two and a half in breadth, comprising an area of 10,500 acres, of which nearly one-half is arable, and the remainder meadow and pasture. The surface near the sea-shore is generally flat, and towards the north rises into hills of various elevation, of which the highest, Cairnharrah, partly in this parish but chiefly in that of Kirkmabreck, is 1100 feet above the sea, and commands an extensive view embracing the Isle of Man, part of Cumberland, and the coast of Ireland. The river Fleet, which has one of its sources in a small loch of that name, in the parish of Girthon, after receiving various tributary

streams, falls into the bay of Fleet; from which it is navigable, for about three miles, to Gatehouse. Salmon, sea-trout, and flounders are found in this river, but not in any great quantity.

The soil on the coast is dry and fertile, and in other parts thin and light. It has been much improved by the use of lime, which is brought from Cumberland at a moderate cost; marl, also, is found in the parish, and a great abundance of shells on the sea-shore, which are used for manure. The chief crops are oats and barley, with some wheat, and potatoes, of which large quantities are sent to the ports on the Clyde, and to Whitehaven and Liverpool. The system of agriculture has been greatly improved; the lands have been well inclosed, and the farm-houses and offices are in general substantially built. The cattle are mostly of the black native breed, and the sheep, for which the moorlands afford good pasture, are principally of the black-faced kind; considerable numbers of both are reared in the parish, and sent to the English markets. There are some large tracts of ancient wood on the banks of the river, and in the grounds of the principal landed proprietors; the plantations, which are of oak, ash, birch, and fir, are also extensive, and in a thriving state. The annual value of real property in the parish is £3717. The principal mansions are, Cardoness, which has been rebuilt within the last twenty or thirty years; and Ardwall and Rusco, which are of older date. The road from Carlisle to Port-Patrick passes along the southern border of the parish; and the river Fleet, the navigation of which has been greatly facilitated by the construction of a canal by the Murrays of Broughton, affords facility for coasting-vessels bringing supplies of coal, lime, and various kinds of merchandise, and for the transport of cattle, sheep, and agricultural produce.

Ecclesiastically the parish is within the bounds of the presbytery of Kirkcudbright, and synod of Galloway: the minister's stipend is £230. 15. 2½., with a manse, and a glebe valued at £10 per annum; patron, Sir David Maxwell, Bart. Anwoth church, erected in 1826, at a cost of nearly £1200, is a neat structure, with a tower at the west end surmounted by a spire, and contains 400 sittings. There is a small place of worship in the parish for dissenters. The parochial school is well attended; the master has a salary of £34. 4. 4., with a house and garden, and the fees average £20 per annum. The only remains of antiquity are the Tower of Rusco and the Castle of Cardoness, both on the river Fleet, the former two miles above where it ceases to be navigable, and the latter beautifully situated near its mouth; they are quadrilateral structures, apparently of great strength, but nothing is known of their origin or history. On the summit of a hill to the south-east of the church are the remains of a vitrified fort, 300 feet above the level of the sea, and defended, where most easily accessible, by a double fosse: near the spot have been found several silver coins of Elizabeth, and one of Edward VI. Samuel Rutherford, author of the *Letters*, was minister of Anwoth.

APPIN, county of ARGYLL.—See LISMORE.

APPLECROSS, a parish, in the county of Ross and CROMARTY, 18 miles (W.) from Lochcarron; containing, with the island of Crolin, and part of Shieldag quoad sacra district, 2861 inhabitants. It was originally called Comaraich (a Gaelic word signifying protection) on account of the refuge afforded to the oppressed and to

criminals, by a religious establishment that existed here in ancient times. The present name is of modern date, having been given to the place by the proprietor of the estate upon its erection into a parish, at which time five apple-trees were planted cross-ways in his garden. This parish, which formed part of that of Lochcarron till 1726, stretches along the shore of the Atlantic Ocean, and is distributed into the three large portions or districts of Applecross, properly so called; Lochs, consisting of Torridon, Shieldag, &c.; and Kishorn. It is of irregular form, twenty miles long, and as many miles in breadth, containing about 1800 acres cultivated or occasionally in tillage, about 400 acres in wood, and 400 or 500 waste, besides an immense tract of pasture in a natural state. The surface, in its general appearance, is hilly and rugged, consisting of rocky elevations covered with heather and wild grass; and the climate, though not unhealthy, is foggy, and very rainy.

The soil is light and gravelly, and produces good crops of oats, barley, and potatoes; the two former are grown to the value of £3000 annually, and potatoes and turnips yield about £1500. The farms are of small extent, averaging in rent not more than £6 or £7 each. There are very few inclosures, and though some advances have been made in the draining and improvement of land, the agricultural state is low, the parish being compelled frequently to import grain and potatoes for home consumption. The annual value of real property in the parish is £2488. The rocks consist of red sandstone, gneiss, and quartz; at Applecross and Kishorn are found large quantities of limestone, and at the latter place is also a copper-mine, which, when worked some time since, produced a fine rich ore. The only mansion of note is on the estate of Applecross; it is a large ancient building, with some elegant modern additions, and surrounded by about thirty acres of thriving plantation. At Poldown, Shieldag, and Torridon are convenient harbours, to which there belong about twenty-one vessels of from twenty to fifty tons' burthen each, employed in the fishing and coasting trade. Most of the population are in some way engaged in the herring-fishery, which in certain seasons is very profitable; and at Torridon and Balgie are salmon-fisheries that let at £15 or £16.

Ecclesiastically the parish is in the presbytery of Lochcarron and synod of Glenelg: the Crown is patron; the minister's stipend is £158. 6. 5., partly paid from the exchequer, and there is a manse, built in 1796, with a glebe valued at £12 per annum. The parochial church, which was erected in 1817, is in good repair, and accommodates 600 persons. At Shieldag, twelve miles distant, is a government church, built in 1827. There is a parochial school, the master of which has a salary of £27, with about £8 fees, and teaches the classics, mathematics, Gaelic, and the ordinary branches of education. Four schools are supported by societies for promoting education. Many fossils have been found.

APPLEGARTH and SIBBALDBIE, a united parish, in the district of ANNANDALE, county of DUMFRIES, 2 miles (N. W. by N.) from Lockerbie; containing, with the chapelry of Dinwoodie, 857 inhabitants. The term Applegarth is compounded of the words *Apple* and *Garth*; the latter signifies in the Celtic language an "inclosure", and both conjoined are invariably taken for an "apple inclosure" or "orchard". *Bie*, or *bye*, which terminates the name Sibbaldbie, signifies in the

Saxon a "dwelling-place", and the entire name is thought to have been applied to the district from its having been the residence of *Sibbald*. The annexation of *Sibbaldie* took place in 1609; and the chapelry of *Dinwoodie*, which some suppose to have been a distinct parish, was also attached to *Applegarth*: it is said to have belonged to the Knights Templars, who had large possessions in *Annandale*. *Chalmers*, on the authority of the Royal Wardrobe accounts, states that on the 7th July, 1300, *Edward I.*, who was then at *Applegarth*, on his way to the siege of *Caerlaverock*, made an oblation of seven shillings at *St. Nicholas'* altar, in the parish church here, and another oblation of a like sum at the altar of *St. Thomas à Becket*. A large chest was found some years ago not very far from the manse, which is conjectured to have been part of the baggage belonging to *Edward*, who remained for several days at *Applegarth*, waiting for his equipage. An ancient thorn called the "*Albie Thorn*", still standing in a field, within 500 yards of the church, is said to have been planted on the spot where *Bell of Albie* fell, while in pursuit of the *Maxwells*, after the battle of *Dryfe-sands*, in the year 1593.

The parish contains 11,700 acres, and is situated in that part of the shire formerly called the stewardry of *Annandale*. Its surface is diversified by two principal ranges of hills, one on each side of the river *Dryfe*, which runs from the north-east in a southern direction; the highest part of the western range, *Dinwoodie* hill, rises 736 feet above the sea, and *Adder Law*, in the eastern range, attains an elevation of 638 feet. In addition to its being intersected by the *Dryfe*, the parish is washed on its eastern boundary by the *Corrie* water, and on its western by the river *Annan*, the banks of which streams are in many parts precipitous, and clothed with brushwood and plantations. Among the trees, comprising most of those common to the country, the larch, spruce, and Scotch fir, particularly the larch, after flourishing for twelve or fourteen years, exhibit symptoms of decay, and gradually pine away, in consequence of their roots having come into contact with the sandstone rock and gravel. In the rivers and their several tributary streams, eels, pike, trout, and many smaller fish are numerous: and in the *Annan*, salmon of good quality are plentiful.

The soil is in general fertile. Between the banks of the *Annan* and the *Dryfe*, the land is alluvial, and interspersed with strata of river gravel; the soil on the declivity of the western range is in some parts sharp and good, but in many places has a wet and tilly substratum, and on the higher portions is to be found a black moory earth. Of the entire area, 7392 acres are either cultivated or occasionally in tillage; 3777 are waste, or in permanent pasture, including sixty or seventy acres of moss; 331 are in wood, and from 150 to 200 are incurably barren. Among the white crops, wheat, which was formerly unknown in the parish, is now an important article of produce; all kinds of green crops, also, are raised, of good quality, including considerable quantities of turnips and potatoes. An approved system of husbandry is followed, but agriculture has not been carried to the same perfection as in some other districts, chiefly from a deficiency in manuring and draining, and from exhausting the soil by too severe a course of cropping. Considerable improve-

ments have been made, during the present century, in the erection of cottages. The breed of black-cattle has been particularly attended to, and in symmetry and general excellence now rivals the best specimens of the best districts. The annual value of real property in the parish is £6850. The prevailing rock is the old red sandstone, and the western ridge is interspersed with large nodules of white and greenish whinstone, while on the summit there are greywacke slate and greenstone, diversified by numerous veins of quartz. The seats are, *Jardine Hall*, built in 1814, and the mansion of *Hook*, built in 1806: the former edifice is of red sandstone, cut from a quarry on *Corncockle muir*, in *Lochmaben* parish; the latter is chiefly of greenstone, from the bed of the river *Dryfe*. In this parish the inhabitants are altogether of the agricultural class, with the exception of a few tradesmen residing chiefly in the small village of *Milnhouse*. The road from *Glasgow* to *Carlisle*, and that from *Dumfries* across *Annandale* to *Eskdale*, both run through the parish: there are two good bridges over the *Annan*, one of which is on the *Glasgow* line, and the other on the road from *Dumfries*. Great facility of intercourse is also afforded by the *Caledonian* railway, which has a station in the parish.

Ecclesiastically the parish is within the bounds of the presbytery of *Lochmaben* and synod of *Dumfries*; patrons, *Sir William Jardine, Bart.*, of *Applegarth*, and *John James Hope Johnstone, Esq.*, of *Annandale*. The stipend averages nearly £250, and there is a manse, built in 1805, with a glebe of six acres and a half of good land. The church, a plain substantial structure, built in 1760, is inconveniently situated at a distance of five or six miles from some of the population; it has been at different times repaired and enlarged, and accommodates 380 persons with sittings. There are two parochial schools, in which Greek, Latin, French, and geometry are taught, with all the ordinary branches of education: the master of one school has a house and garden, with a salary of £34. 5., and about £25 fees; the other master has the same accommodation, with a salary of £17. 2. 6., and £15 fees. Roman stations are visible in several places, and a Roman road traverses the parish in a northern direction. Part of the ruins still remain of the church of *Sibbaldie*; and in *Applegarth* churchyard is a very ancient ash-tree, measuring fourteen feet in girth at a yard from the ground, and called the "*Gorget Tree*" from having been used as a pillory: the iron staples which held the collar or *gorget* were visible not many years ago.

APPLETREE-HALL, a village, in the parish of *WILTON*, *Hawick* district of the county of *ROXBURGH*, $2\frac{1}{2}$ miles (N. N. E.) from *Hawick*; containing 75 inhabitants. It is situated in the north-eastern part of the parish, east of the road from *Hawick* to *Selkirk*.

ARBEADIE, a village, in the parish of *BANCHORY-TERNAN*, county of *KINCARDINE*; containing 301 inhabitants. This village, which is of very recent origin, takes its name from the estate on which it has been built, and appears to have been erected to supply the want of the ancient village of *Banchory*. A post-office has been established; there are three good inns, and, in the immediate vicinity, a branch of the Bank of Scotland, and a small lock-up house for the temporary confinement of petty offenders. The Independents have a place of worship.

ARBIRLOT, a parish, in the county of FORFAR, $2\frac{1}{2}$ miles (W.) from Arbroath; containing, with the village of Bonnington, 1045 inhabitants, of whom 77 are in the village of Arbirlot. This place appears to have derived its name, a contraction of Aber-Elliot, from the river Elliot, which runs into the sea a little below its eastern boundary. The earliest account connected with its history, states, that a member of the ancient family of Ochterlony originally owned the castle of Kelly, in the parish. This family was succeeded by the Irvines, who also held the castle, which afterwards came into the possession of the Maule family, now sole proprietors of Arbirlot. The parish is about four miles long and three broad, and contains 5050 acres, of which 4200 are cultivated or occasionally under tillage, 800 waste, and fifty wood. It is intersected by the Arbroath and Dundee road and railway, and is bounded on the south by the sea, which at this parish has an extent of coast nearly three miles long, level and sandy, and much frequented in the summer for the purpose of bathing. In the interior, also, much of the surface is low and flat; and the rest gradually rises to a gentle acclivity. There is no part deserving of particular notice, except the immediate vicinity of the ancient castle of Kelly, which is situated on the bank of the Elliot, and is in good preservation, and surrounded by scenery that is highly picturesque. The Elliot, a stream of inconsiderable size but of great beauty, rises in Ditty Moss, in the parish of Carmylie, and pursuing a south-eastern course for a few miles, through a deep and romantic glen, falls into the sea in the east part of the parish. It has numerous mills erected upon it, and formerly abounded in salmon, but since the construction of some dam-dykes, these fish have forsaken it: the stream is still frequented by good trout. There is a chalybeate spring in the parish, of some little celebrity, but it is not now so much frequented as formerly.

The soil in the lower parts consists chiefly of a light productive loam, but on the higher portions is damp and mossy, and in some places mixed with clay; the subsoil is a gravelly clay: on the northern boundary is an extensive muir. The average annual produce is valued at £15,000, chiefly derived from crops of oats, barley, hay, and potatoes; the annual value of real property in the parish is £6395. The only mansion-house is the seat of Kelly, situated in the vicinity of the old castle. A small fair is held once a year. Near the mouth of the river, at Wormy-hills, is an establishment for bleaching yarns, and on the same stream are three meal-mills and a flax-mill. There is also a meal-mill on a small river which forms the boundary line between this parish and Panbride. Ecclesiastically Arbirlot is within the bounds of the presbytery of Arbroath and synod of Angus and Mearns; the patronage is vested in the Crown, and the minister's stipend is £184. 4. 5., in addition to which he has a manse, and a glebe of the annual value of £6. The church, rebuilt in 1832, is an elegant structure, situated on the bank of the Elliot, and containing about 640 sittings. A place of worship has been erected for members of the Free Church. There is a parochial school, the master of which has a salary of £34. 4., and £20 fees, &c., with a house and garden. A savings' bank managed by the minister, and a parochial library, consisting of above 500 volumes, kept in the manse, are also supported.

ARBROATH, or ABERBROTHOCK, a thriving seaport, a burgh, and parish, in the county of FORFAR, 15 miles (S. E. by E.) from Forfar, and 60 (N. N. E.) from Edinburgh; the parish containing, with the former quoad sacra parish of Abbey, and part of the quoad sacra parish of Ladyloan, 8707 inhabitants, of whom 7218 are in the burgh. Within

Seal and Arms.

the parliamentary boundary is a population of 14,591. This place derives its name (originally *Aberbrothock*, of which its present appellation is a contraction) from its situation at the mouth of the river Brothock, which falls into the German Ocean. An abbey was founded here in the year 1178, by William the Lion, King of Scotland, for monks of the Tyronensian order, brought from the abbey of Kelso, and was dedicated to St. Thomas of Canterbury, in honour of the Archbishop Thomas à Becket. This establishment was amply endowed by the founder and his successors, and its abbots had a seat in parliament. A general assembly of the estates of Scotland was held in the abbey in 1320, when a declaration was drawn up, in strong and emphatic terms, asserting the independence of the Scottish Church of the Roman see, and renouncing all subjection to the interference of the pope. In 1445, a battle took place here between the retainers of the families of Lindsay and Ogilvie, which originated in a contest concerning the election of a baillie of the burgh, and in which the chieftains on both sides were killed, with nearly 500 of their dependents. In the sixteenth century, the abbey was almost destroyed by Ochterlony, a chieftain in the neighbourhood, who, having quarrelled with the monks, set fire to the buildings; and at the Dissolution, which followed a few years afterwards, this once extensive pile was little more than a wide heap of scattered ruins. The revenues were returned at £2483. 5. in money, with about 340 chalders of grain, and the patronage of thirty-four parish churches; and the site and lands belonging to the abbey were, after its dissolution, erected into a temporal lordship, in favour of Claude Hamilton, third son of the Duke of Chatelherault, who was created Lord Aberbrothock, which still forms one of the inferior titles of the Duke of Hamilton. In 1781, the town was menaced by the commander of a French privateer, who approached the port, and commenced a brisk firing for a short time, which was succeeded by his sending a flag of truce, demanding from the magistrates and inhabitants the payment of £30,000 as a ransom for the town, which, on their refusal, he threatened to set on fire. The authorities of the place obtained by parley a short interval, in which having armed several of the inhabitants, they set him at defiance, and he left the coast, making prizes of some small craft that he met with in his retreat. A battery was soon afterwards erected in front of the harbour, to protect the town from similar insult, and was kept up till the termination of the last war, when it was dismantled.

The town is situated at the mouth and on each side of the river Brothock, and from being a place of scanty population and inconsiderable trade has within the last

half century become a thriving and populous burgh, the seat of extensive manufactures, and remarkable for the spirit and enterprise of its inhabitants. Its situation is irregular, but striking and picturesque. The High-street, reaching from the sea to beyond the abbey ruins, is spacious and handsome, especially at the market-place or cross, where the town-house, guildhall, trades-hall, and Commercial Bank are conspicuous objects. Parallel to it are other streets both to the east and west, which are intersected by minor streets extending over a large area, and running at several points into the parish of St. Vigean's, in which a considerable portion of the suburbs is situated. Fronting the harbour, on the west side of the Brothock, is a handsome range of houses, forming part of Ladyloan-street, which, stretching westward, is adorned on the north by Ladyloan church, a neat modern erection, and on the south or seaward side by the signal tower of the Bell-rock lighthouse, and the well-built station of the Dundee railway. Many of the private houses are elegant and substantial, and those in the suburbs, being embellished with gardens and shrubberies, produce a pleasing effect. All the houses are built of stone obtained from quarries in the neighbourhood, and the quarries are also celebrated for the production of a superior description of pavement, of which immense quantities are annually shipped for both home and foreign markets, under the well-known denomination of Arbroath pavement. The abundance of this article is visible in the excellent footways that are found here, even in the most obscure streets; the care of these and of all other police matters, being committed to a board elected by the £10 parliamentary voters. Arbroath is lighted with gas, manufactured by a joint-stock company. Water is chiefly derived from an excellent spring in Boulzie hill, an eminence at the head of Hill-street, and from private wells: the supply is rather deficient, but as the town becomes larger, means will no doubt be taken for obtaining ampler supplies of this necessary of life. The town is clean, airy, and healthy, but cold in spring from the prevalence of easterly winds, which blow keenly from the sea.

Westward of Arbroath is the spacious field forming the public common, accessible at all times to the citizens for pleasure and recreation: the national game of golf is occasionally played here, but not with the spirit observable in some of the other Scottish burghs, and cricket is unknown. This common, as well as all the low ground to the west, the site of part of the town itself, and to the east of it, has evidently been reclaimed from the sea; the rising ground all along the coast, at various distances from the present high-water mark, exhibiting clear indications of having at some remote period formed the boundary of the ocean. At the common this geological feature is distinctly perceptible, as an elevation varying from twenty to fifty feet gives to the spot the respective appellations of high common and low common. Along the ridge is a walk commanding a fine view of the bay, the Tay estuary, and the east coast of Fife. Eastward of the town, the Boulzie hill forms an attractive object, the view from it of the sea, the town, and neighbouring country, being of great interest and extent. A footpath leads thence along the edge of the cliffs to Seaton-den, a distance of half a mile, where the elevated ground assumes a bolder aspect, and, projecting further seaward, presents for miles a most striking and

picturesque line of coast. Here the rocks, in many parts lofty and precipitous, assume strange and fantastic shapes; deep gullies and dark subterranean caves astonish the spectator, and such is the character of the coast for six miles, terminating in the bold promontory of Redhead, a rocky bulwark some hundreds of feet high. Redhead is in the parish of Inverkeillor, which is separated from that of Arbroath by St. Vigean's parish.

There is a public subscription library in the town, supported by a proprietary of £5 shareholders, in which is a collection of about 4000 volumes on subjects of general literature; and smaller libraries, of miscellaneous and theological works, are attached to the quoad sacra churches. A mechanics' library, now containing about 400 volumes, was established in 1824, and connected with it is a mechanics' institution, or school of arts, for which an appropriate building has been erected, containing a reading-room well supplied with periodicals and newspapers. Besides these institutions, there are two public reading-rooms, and one belonging to the shipping interest; also three masonic lodges, and a gardeners' society. A museum, likewise, has been established, which, though comparatively in its infancy, already boasts of a fair collection of the antiques and curiosities usual in such a repository.

Arbroath has long been famous for its hand-loom manufactures of canvas and linens, and in this respect it still retains its deservedly high character, these articles being still manufactured and exported to a large extent: a portion of the sailcloth required for the royal navy is annually supplied from this place. The spinning of flax and tow is also carried on largely; about 7000 tons of flax are on an average imported yearly from Riga, Petersburg, Memel, and other ports in the Baltic; and this, with the supplies derived from other quarters, is hackled, and spun into yarns of various sizes from a pound and a half per spindle upwards. The number of spinning mills or factories in the town and suburbs is nineteen, driven by steam-engines of 350-horse power in the aggregate: nearly all of them are within the parish of St. Vigean's. These mills, with the bleaching, mill-washing, manufacturing, and other processes carried on, give employment to several thousand persons of both sexes, from thirteen years of age upwards. After supplying the demand on the spot, the surplus yarns are sent to the neighbouring towns of Forfar, Kirriemuir, and Brechin, where manufacturing is carried on to a large extent: a considerable quantity of linen yarns has also, of late years, been exported to France. Thus Arbroath may be considered, in reference to its size, as one of the most flourishing seats of the linen manufacture in Scotland; that manufacture, indeed, forming the staple trade of the place. There are also such works as cast-metal foundries, tan-works, bone-mills, rope-works, &c., largely carried on; and ship-building is pursued to a considerable extent. The Arbroath and Forfar railway, as originally constructed, was opened to the public in January 1839; the line is about fifteen miles in length, and the principal station is a handsome building with every requisite accommodation. The Dundee and Arbroath railway, along the coast, has also its terminal station here; it is about seventeen miles long, and is connected with the Arbroath and Forfar line. The market is on Saturday, and is supplied

with grain of all kinds. Fairs are held on the last Saturday in January, the first Saturday after the old term of Whit-Sunday, on the 18th of July, and the first Saturday after Martinmas: the fair on the 18th of July is denominated St. Thomas's market, and on the day following is what is called the Old market, both having been holidays from time immemorial.

Arbroath was formerly a creek to the port of Montrose, but in consequence of its growing importance as a maritime town, and its increasing manufactures, the lords of the treasury were lately pleased to entertain a representation made by the citizens, and raise the place to the status of an independent port. There is now a regular establishment of officers, consisting of a collector, comptroller, and the requisite complement of subordinates. The principal imports, besides flax, are hides, bark, bones, timber, hemp, and occasionally grain, to which was latterly added guano direct from Ichoboe. A large coasting-trade is also carried on. In the London trade alone three first-rate clippers are employed; with Newcastle a large intercourse is constantly kept up in coal and goods, and there are regular traders also to Leith and Glasgow, besides which a number of small craft are employed in bringing coal, lime, and other articles, and in carrying away agricultural produce, pavement, &c. There are at present registered as belonging to the port 106 vessels of the aggregate burthen of 10,898 tons. In a recent year, the number of ships reported inwards from foreign parts was 101; the amount of duties was £8725.

The HARBOUR appears to have been first constructed in 1394, by the inhabitants, in conjunction with the abbot, who contributed the greater portion of the expense, in consideration of a certain duty to be paid annually from the lands of the burgh. A pier of wood was erected at the extremity of the High-street, which, being found ill-adapted to the purpose, was abandoned in 1725, and the harbour removed to the western side of the river, where a basin faced with stone was constructed, 124 yards in length and eighty yards in breadth, and a substantial pier of stone built. Great as this improvement was, however, it was found in the course of another century to afford very inadequate accommodation to the trade and shipping of the place; and the inhabitants, alive to the necessity of removing so serious a drawback to the prosperity of the town, obtained an act of parliament in 1839 for enlarging and improving the harbour. A spacious new tidal harbour was accordingly formed, to the south and east of the old one, at an expense exceeding £50,000. A sea-wall of great length and solidity, constructed of ponderous blocks of hewn stone treamled together, defends the harbour from the German Ocean, which in easterly gales drives ashore with much violence. At the western extremity, or return-head, as it is called, of this mural bulwark, is a lighthouse of the improved construction for directing vessels into the harbour at night, a signal-post with balls and flag serving the same purpose during the day. On the opposite side is a breakwater composed of the same massive materials, and between this and the return-head is the entrance to the harbour, which is calculated to admit ships of from ten to fifteen feet draught of water, according to the state of the tides. The bar, which consists of silt and soft sandstone, is not considered as a formidable obstacle to the entrance

of ships. On each side of it is a range of low rocks, in the direction of which some succeeding generation will doubtless erect another sea-wall and breakwater, thus annihilating the bar. The harbour is under the management of a board of trustees elected annually under the provisions of the above-mentioned act of parliament. The revenue in 1844 amounted to upwards of £3000, shewing a vast increase in the trade of the port, the amount in 1819 having been only £679. In connexion with the harbour, and under the same management, is a patent-slip, well adapted for the repairing of vessels.

At a distance of twelve miles from the shore, but opposite to the harbour, is the *Bell Rock Lighthouse*, erected under an act of parliament obtained in 1806, and completed in 1811. It is built upon a rock about 427 feet in length, and 230 feet in breadth, at low water, and rising to an average height of about four feet from the sea. The lighthouse is of circular form. The two lower courses of masonry, all of which are dove-tailed, are sunk into the rock. The diameter at the base is forty-two feet, gradually diminishing to the floor of the light room, which is thirteen feet in diameter. From the foundation the elevation is solid to the entrance, which is at a height of thirty feet, and is attained by a ladder of ropes with steps of wood; the walls here are seven feet in thickness, and gradually decrease to one foot at the lantern, which has an elevation of 100 feet from the base, and is fifteen feet in height, and of octagonal form. The lantern contains a light of Argand burners with powerful reflectors, revolving round its axis in six minutes, and in each revolution displaying alternately a bright and a deep red light, which in clear weather may be plainly seen at a distance of eighteen miles. Two large bells connected with the lighthouse are tolled by the machinery which moves the lights, when the weather is foggy; and on the harbour of Arbroath a building has been erected for the accommodation of the keepers, three of whom are constantly at the lighthouse for six weeks, when they are relieved, and spend two weeks on shore. Attached to this building is a signal tower, fifty feet high, by means of which the keepers on the shore communicate with those on the rock. The whole expense of the lighthouse, which is of such important benefit to the navigation of this part of the coast, did not exceed £60,000.

The town was made a ROYAL BURGH by charter of James VI., in 1599, reciting that the original charters, with the title-deeds of the town, and other documents, were taken from the abbey, where they had been deposited for security, and destroyed by George, Bishop of Moray. The inhabitants appear to have been before incorporated by the abbots, who reserved to themselves the nomination of one of the bailies by whom the town was governed. By King James's confirmatory charter of all previous rights and privileges, the burgh and harbour were made free, and the lands called the common muir were conveyed to the burgesses, with power to levy anchorage customs and shore dues, and to apply the produce to the maintenance of the harbour. Under this charter, and the recent Municipal Reform act, the government is vested in a provost, two bailies, a dean of guild, and treasurer, and twelve councillors, all chosen subject to the provisions of the Municipal Reform act. There are seven incorporated trades, the whole of which have the exclusive right of carrying on

their trades within the burgh, with the exception of the weavers; the dean of guild also grants temporary license to trade, to traders who decline entering with the guild corporation. The magistrates possess all the jurisdiction appendant to royal burghs, and hold courts of pleas in civil actions weekly to an unlimited extent, and also criminal courts, in which, though by the charter they have full jurisdiction in capital cases, they confine themselves to the trial of petty offences, the town-clerk acting as assessor. The magistrates have power by the charter to hang and drown, and to replevy any action whatever against an inhabitant of the burgh, from all judges in the kingdom, upon giving security for administering justice within the term of law. The dean of guild likewise holds a court for deciding on cases of disputed marches within the burgh, and for enforcing compliance with the acts of parliament regulating weights and measures; in which he is assisted by a clerk and procurator-fiscal. Previously to the union of the two kingdoms, the burgh sent a member to the Scottish parliament, but after that event was associated with Montrose, Brechin, Bervie, and Aberdeen in returning a representative to the imperial parliament; and the only change in this respect, under the act of the 2nd and 3rd of William IV., is the substitution of Forfar in lieu of Aberdeen, and the extension of the elective franchise to £10 householders. The provost is the returning officer. The guildhall is a neat plain edifice, adapted for the business of the guild corporation; and the trades'-hall, erected in 1814, is a handsome building. The town-house, erected in 1806, is a spacious and elegant structure, comprising a great hall, and offices for the town-clerk and others, with apartments for the meetings of the council, and for holding courts: the upper part, formerly used as the burgh gaol, has been fitted up as commodious committee-rooms, and for other public purposes. At a short distance behind the town-house stand the new gaol, the gaoler's house, and the police-office, the whole forming a neat building, with very little appearance externally of the purposes to which it is devoted. The cells are constructed on the modern principle, properly ventilated, and well arranged for the health and classification of prisoners. In the police department is a small but commodious court-room, where the burgh magistrates sit every Monday for the summary disposal of petty delinquencies.

Arbroath PARISH is about three miles in length, and of very irregular form, varying from little more than 200 yards to a mile and a quarter in breadth. It comprises 820 acres of arable land, and twenty-six of common land in pasture. The surface is comparatively level, rising by a gradual ascent from the shore till, at the opposite extremity, it attains an elevation of 150 feet above the sea. The only river is the Brothock, which rises in the adjoining parish of St. Vigean's, and after a course of five or six miles, flows through this parish for about a quarter of a mile, and falls into the sea at the harbour. A small stream which in its course gives motion to several spinning-mills, forms a tributary to the Brothock; but unless swollen with incessant rains, it is comparatively a shallow stream. The scenery is pleasingly varied; and the town, as seen from the sea, is an interesting feature, seated in the curve of a range of small hills, which rise behind it. These hills command an extensive prospect

of the Lothians, the eastern portion of the coast of Fife, and the estuaries of the Forth and Tay, towards the south; the view terminating, towards the north, in the range of the Grampian hills. Near the town the soil is a rich black loam; in the higher lands, thin, resting upon a retentive clay, which renders it scarcely susceptible of improvement; and along the coast, light and sandy. The chief crops are grain of all kinds, potatoes, and turnips; bone-dust and guano are used for manure, and the farms are in general well arranged and skilfully managed. The annual value of real property in the parish is £17,314. A fishery is carried on with considerable success: cod, haddock, and flounders are taken in abundance off the coast, with herrings and mackerel, in their season; lobsters, crabs, and various kinds of shell-fish are found in great plenty, and attempts have been made to procure a supply of salmon by putting down stake-nets, but hitherto without much success.

This parish is the seat of the presbytery of Arbroath, in the synod of Angus and Mearns; patron, the Crown: the minister's stipend averages about £210, with a glebe valued at £4. 8. 11. There is also an assistant minister, appointed by the Kirk Session, whose emoluments, including the session clerkship, average about £85. The church, which was enlarged in 1764, and to which an elegant spire was added in 1831, at an expense of £1300, raised mostly by subscription, is a plain cruciform structure, situated nearly in the centre of the town, and adapted for 1390 persons. A chapel of ease was erected in 1797, on the grounds of the ancient abbey, and is thence called the Abbey chapel; it is a neat edifice for a congregation of about 1280, and a quoad sacra district was annexed to it, comprising a population of 2289: income of the minister, about £100. Another chapel of ease was erected in 1829, for the accommodation of the inhabitants of that portion of the suburbs within the parish of St. Vigean's; it is a neat structure, and contains 1080 sittings, from the rents of which the minister derives an income of £150: a quoad sacra district named Inverbrothock has been attached to it, containing 5195 persons. A few years ago another chapel of ease was erected, for the accommodation of the inhabitants on the west side of the Brothock: it has a district assigned it for quoad sacra purposes, containing a population of 2116, partly in St. Vigean's parish. There are places of worship for the Free Church, the United Presbyterian Synod, Episcopalians, Original Seceders, Independents, Baptists, Bereans, Glassites, and Wesleyans.

The burgh school, and also the parochial school, have merged into an institution of more recent establishment, called the Academy, for which a handsome and appropriate building was erected in 1821, at an expense of £1600, raised chiefly by subscription. This institution is under the control of a rector, appointed by the corporation, and three masters, chosen by the directors; to each of these a distinct department is assigned, and there are consequently four separate schools. The classical and mathematical school is under the superintendence of the rector, whose salary is £34 per annum, which, augmented with an allowance of £6. 10. for house-rent, and the proceeds of a bequest by Mr. John Colvill for the gratuitous instruction of five children, amounts to £60 per annum: the commercial, English, and general schools are under the three masters, who have a salary of £25 each. These salaries are paid from

the various funds constituting the endowment of the schools, and are exclusive of school-fees. The Sabbath-evening School Society, which has been established for more than thirty years, comprehends the whole of the town and suburbs; and connected with the schools under its superintendence is a library of more than 1100 volumes, containing many standard and valuable works, in addition to such as are requisite for the children attending school. On the high common is an infirmary, a building of elegant design: it cost about £1500, defrayed by subscription, and Lord Panmure presented £1000 towards the endowment. Mr. Carmichael, in 1733, bequeathed £600 and some rent-charges for the benefit of seven widows of ship-masters, producing at present about £130 per annum; and the above-mentioned Mr. John Colvill, late town-clerk, in 1811 left £10 per annum to the minister of the Episcopal chapel, £10 per annum to the poor of the parish, and a sum for the assistance of twenty householders, which now produces to each £3. 10. annually.

The chief relics of antiquity connected with Arbroath are the remains of its venerable abbey. This ancient building was one of those which suffered most from popular violence at the Reformation, the whole being then burned, and reduced to ruin. The north wall, in particular, of the nave and transept, was completely thrown down, so as to leave the interior open on that side to the adjacent cemetery; soil collected, and trees grew up, among the broken fragments, and in course of time the traces of the north wall were entirely obliterated, and graves were gradually extended into the area of the church itself. After the destruction of the abbey, no attention appears to have been paid to its preservation. On the contrary, it was subject to constant dilapidation, not only from the ravages of time, but from the frequent and extensive demolition of the ruins in order to furnish the citizens with materials for building. Accordingly, traces of the carved stones of the abbey are to be found in many old houses in the town. About the year 1806, however, the officers of state laid claim to the remains on behalf of the crown; and after removing various encroachments made by sundry parties on the abbey precincts, they commenced excavating the ruins down to the original pavement, carefully transferring the remains of the dead deposited in the area of the abbey church, to the adjoining churchyard. In the course of these operations, various objects of antiquity were brought to light, including a beautifully carved truncated statue of Thomas à Becket in his robes of office, and a marble slab supposed to have been the lid of the royal founder's coffin, adorned with the figure of a man in alto relievo, with a lion couchant at his feet. The tomb of the king, who was buried under the steps leading to the high altar, was not discovered. In addition to these excavations, the crown has from time to time executed important repairs of the ruins, with a view to their preservation, under the superintendence of the crown architect for Scotland, acting under the instructions of the Commissioners of Woods and Forests. The whole area of the church is now cleared out, and the bases of the pillars that supported the roof displayed. The church appears to have been 270 feet in length, from the great entrance at the west to the high altar at the east, and 130 feet in breadth, along the transepts; the nave was 148 feet in length, by about seventy feet

in height, and the choir about seventy-five feet long. The western entrance is tolerably entire, exhibiting the remains of a large circular window above the doorway, which must have thrown a flood of light into the area of the church: but the portions of the tower by which the entrance was flanked are so dilapidated that scarcely any indication of their original style of architecture presents itself. Adjoining the south transept are the remains of a building containing a large vaulted apartment in excellent preservation, supposed to have been the chapter-house. The principal remaining tower, locally called the Old St. Thomas, rises to the height of 112 feet. The cloisters have disappeared; and the abbot's palace, which, after the abolition of episcopacy in Scotland, was converted into a manse for the parish minister, is now a private residence.

This important religious establishment occupied an area 1150 feet in length and about 700 in width, inclosed by a stone wall nearly twenty-four feet in height. At the north-west angle is a tower twenty-four feet square, and seventy feet high, which is still entire; and at the south-west angle was another, of smaller dimensions, which being ruinous was some time ago taken down. The principal entrance was through a stately gateway-tower on the north side, defended by a portcullis and drawbridge; and at the south-east angle was a postern of inferior character, called the Darngate, from which the town arms are derived. The abbey buildings are now placed under the care of a resident keeper, appointed by the crown; and the crowds of visitors to the ruins, especially during the summer months, attest the interest felt by tourists in these venerable remains of our ancient ecclesiastical architecture. The public burying-ground adjacent, which is the only place of sepulture for the town, is tastefully laid out, and, with its numerous monuments of the dead, adds not a little to the feelings of solemnity which a visit to this sacred spot is calculated to inspire.

ARBUTHNOTT, a parish, in the county of KINCARDINE; adjoining the town of Bervie, and containing 1015 inhabitants. The name of this place has undergone many changes in its pronunciation and spelling. From documents in the possession of the Arbuthnott family it appears that, previously to the twelfth century, it was called *Aberbothenothe*, which form, about the year 1335, had been changed to *Aberbuthnot*, and, in 1443, to the mode now retained. The original term signifies "the confluence of the water below the baron's house", and is descriptive of the situation of the ancient castle and of the present mansion-house, upon the narrow point of a projection overlooking the Water of Bervie, which is joined by a rapid rivulet, formerly of considerable breadth, about 100 yards distant from the mansion. This parish, in whose early history the Arbuthnotts have held the most conspicuous place, contains an area of 9423 acres, of which 6200 are in tillage, 250 in plantations, and 2223 uncultivated. It is intersected by the roads from Stonehaven to Brechin, and is bounded on the north by the river Forthy, which separates it from Glenbervie; and on the south and west by the Water of Bervie, dividing it from the parishes of Bervie, Fordoun, and Laurencekirk. The surface is irregular, being much diversified by hill and dale. It rises on every side from the valley of the Bervie Water, the windings of which, between steep and richly-wooded

banks, present in many parts interesting and beautiful scenery. In summer the stream is small, and slow in its course, flowing at the rate of about a mile an hour; but in the rainy seasons it rises rapidly, the flood being considerably augmented through the agricultural drains; and embankments to some extent have been found necessary, to secure the neighbouring lands against the havoc consequent upon its overflowing. The highest land is Bruxiehill, which has an elevation of about 650 feet above the sea.

The SOIL, towards the southern quarter, is a strong clay, with a cold retentive subsoil; and in the direction of the northern boundary, light and dry. There is also some rough wet pasture and moor, but this kind of land has been greatly ameliorated and recovered by recent drainage. The chief crops are grain of different kinds, potatoes, turnips, and beet-root. The parish is altogether agricultural, and the cultivation of the soil is carried on with great spirit; the five and the seven years' rotation of crops are each followed, but the latter is thought to succeed the best. Bone-dust has been applied with advantage as manure on light soils, where the turnips are eaten off by the sheep. Improvements have been vigorously carried on, chiefly consisting of an extensive and efficient drainage of the lands, the cultivation of much barren soil, and the construction of embankments along the course of the Bervie, for the protection of the fertile haughs through which it runs. The wood planted consists of Scotch fir, larch, spruce, chesnut, poplar, hazel, and almost every species known in the country; and upwards of twenty different kinds of oak, chiefly American, have been introduced into the nursery by Lord Arbuthnott, with a view to plantation. The annual value of real property in the parish is £6592. The rocks are mostly coarse sandstone, trap, and what in the country is called scurdy: blocks of gneiss and granite are sometimes to be seen. On the north bank of the Bervie, pebbles beautifully varied have been found embedded in trap; and calcareous spar, heavy spar, and veins of manganese also exist in the parish. In the deepest part of a small peat-bog called the "Hog's Hole", the skeletons of two red deer were lately found, the antlers of whose horns were respectively seven and eight in number, some of them measuring eighteen inches in length.

Arbuthnott House, the seat of the ancient and noble family of Arbuthnott, is beautifully situated on the Bervie, almost concealed by thriving plantations. It has been greatly improved by the present owner. The grounds are laid out with much taste, and the mansion is approached by a fine avenue of beech-trees, upwards of two centuries old. In the library of his lordship are, the missal used in the parochial church in former times, and the psalter and office belonging to a chapel connected with the church, and dedicated to the Virgin Mary; the penmanship is exceedingly beautiful, and many parts are splendidly illuminated. The castle of Allardyce, also on the bank of the river, and which is the property of the ancient family of Allardyce, has lately been repaired; and the house of Kair is a modern mansion of neat and elegant appearance.

Ecclesiastically the parish is within the bounds of the presbytery of Fordoun, synod of Angus and Mearns; the patronage belongs to Viscount Arbuthnott, and the minister's stipend is £225, with a manse, and a glebe

of the annual value of £9. The church, which is situated near the north bank of the river, about three miles distant from the furthest extremity of the parish, though much altered and enlarged, is probably four centuries old, and was in former times dedicated to St. Ternan. An elegant aisle, of finely-hewn ashlar, was added to it on the south-east in 1505, by Sir Robert Arbuthnott, who also repaired and improved the west gable, on which he placed a round tower; this aisle is the burial-place of the family, and contains a full-length statue, of stone, of Hugh de Arbuthnott. There is a parochial school, the master of which has the maximum salary, with a house and garden, and about £10 fees; and a savings' bank, established in June 1822, is in a prosperous condition. The learned Alexander Arbuthnott, first Protestant principal of King's College, Aberdeen, was a native of the parish, and some time its minister, to which office he was appointed in 1567; and the well-known Dr. Arbuthnott, physician to Queen Anne, and one of the triumvirate with Pope and Swift, was born here in 1667. The place gives the title of Viscount to the family of Arbuthnott.

ARCHIESTOWN, a village, in the parish of KNOCK-ANDO, county of ELGIN; containing 174 inhabitants. This is the only village in the parish, and is of modern origin, having been commenced about 1760, by Sir Archibald Grant, the great-grandfather of Sir James Grant, of Monymusk, the present baronet. It is built on the moor of Ballintomb, and consists of a double row of houses, about three-quarters of a mile in length, having a square in the centre, of about half an acre, and some by-lanes. The village suffered severely in 1783, from an accidental fire, but it has latterly recovered from this calamity, and several new houses have been erected very recently. In a preaching station, which accommodates about 200 persons, divine service is performed once a month, by the minister of the parochial church; and a few dissenters belonging to the United Presbyterian Church occasionally assemble here. There are schools likewise, which open and close with prayer.

ARDCHATTAN, a parish, in the district of LORN, county of ARGYLL, 8 miles (E. N. E.) from Oban; containing 2421 inhabitants, of whom 960 are in the quoad sacra parish of Muckairn, which is separately described. The place is supposed to have derived its name from Catan, who accompanied St. Columba to Scotland about the year 563, and from its mountainous aspect, of which the term *Ardchattan* is descriptive, signifying "the hill" or "promontory of Catan". It obtained for some time the appellation of *Bal Mhoadan*, or "the residence of Moadan", in honour of whom a church was erected in the vicinity, which afterwards became the church of the parish of Kilmodan. That portion of the parish which is comprehended between Loch Creran and Loch Etive, still retains the name of *Benderloch*, descriptive of a mountainous district between two arms of the sea. The parish is bounded on the north by the river and loch of Creran, on the south and east by Loch Etive and the river and loch of Awe, and on the west by Loch Linnhe. Exclusively of Muckairn, which is not included in those boundaries, it is about forty miles in length, and ten miles in average breadth. The surface is generally mountainous, but diversified with several glens and valleys of considerable extent, some of them richly embellished with wood, and displaying much romantic

scenery; the level lands are intersected with numerous streams, and the hills of more moderate height are crowned with plantations. With the exception of the valley of Glenure and a few other spots, the only arable lands are towards the north and east, beyond which little cultivation is found; lofty mountains, in various directions, rise so abruptly from the sides of the lochs as to leave little land that can be subjected to the plough.

Of the mountains, the principal is *Ben-Cruachan*, the highest in the county, having an elevation of 3669 feet above the sea, and rising from a base more than twenty miles in circumference: the acclivity towards the vale of Glencoe is precipitously steep, but from the south, behind Inverawe, the ascent is more gradual, terminating in two conical summits commanding a most unbounded prospect. *Ben-Cochail*, to the north of *Ben-Cruachan*, though little inferior in height, appears much diminished by comparison; and *Ben-Starive*, still further up Loch Etive, rises from a base of large extent, to an elevation of 2500 feet: the acclivities of the latter, of barren aspect, are deeply furrowed; and in the channels of the streams which descend from it are found beautiful crystals, not much inferior to the cairngorms of the Grampians. *Ben-Nan-Aighean*, or the "mountain of the heifers", to the south of *Ben-Starive*, rises to a great height, terminating in a peak of granite; for about half way up the acclivities it affords tolerable pasture, and is thence rugged and barren to its summit: rock crystals are found near its base, and in the beds of its numerous streams. *Ben-Chaorach*, or the "mountain of the sheep", near *Ben-Starive*, is of inferior height, but affords good pasturage. *Ben-Ketlan*, to the north of it, is of greater elevation, and presents a finer outline, bounded on one side of its base by the *Alt-Ketlan* stream, and by the *Alt-Chaorach* on the other; it is the most fertile of the mountains. Two most conspicuous mountains called *Buachail-Etive*, or the "keepers of the Etive", situated near the termination of the loch named Etive, are distinguished by the names *Buachail-Mor* and *Buachail-Beg*, from the respective extent of their bases, though neither of them has an elevation of less than 3000 feet. *Ben-Veedan*, called also *Ben-Nambian*, or the "mountain of the deer-skins", from the number of deer which are killed there, is separated from *Buachail-Beg* by the mountain-pass of *Larig-Aoilt*, a lofty and stupendous range scarcely inferior in elevation to *Ben-Cruachan*, and which opens into the vale of Glencoe. *Ben-Treelahan*, on the west side of Loch Etive, which washes its base for nearly five miles, and *Ben-Starive* (already described), on the opposite side, greatly contract the breadth of the loch, and, by their rugged aspect, spread over it a romantic gloom hardly surpassed in mountain scenery. In the north-east of the parish, also, are other mountains, of which the principal are *Ben-Aulay*, the highest of the range; *Ben-Scoullard*, *Ben-Vreck*, *Ben-Molurgan*, and *Ben-Vean*.

Of the numerous glens interspersed between the mountains, is *Glen-Noe*, about four miles in length and one mile in breadth, inclosed on the north side by *Ben-Cruachan*, and on the south by *Ben-Cochail*. It is clothed with rich verdure, and watered throughout by a stream whose banks, as it approaches the sea, are finely wooded. A house has been built near the opening for the residence of the farmer who rents it, than which a

more delightful summer retreat can scarcely be imagined. *Glen-Kinglas* is about nine miles in length and nearly two in breadth, and watered by the river to which it gives name. The north side is rocky and barren, but the south affords excellent pasture. This glen formerly abounded with timber, which was felled for charcoal by an iron-smelting company, about a century since; so that, with the exception of a few alders on the banks of the river, and some brushwood of little value, it is now destitute of wood. *Glen-Ketlan*, inclosed on one side by the mountain of *Ben-Ketlan*, is about two miles in length, and watered by the river Etive, which enters it about three miles from the head of Loch Etive. *Glen-Etive* commences at the head of Loch Etive, and is more than sixteen miles in length. It was formerly a royal forest, the hereditary keeper of which claims exemption from certain payments. One portion of the glen, with a contiguous tract in the parish of Glenorchy, has been stocked with red deer by the Marquess of Breadalbane, and another portion of it has been appropriated by Mr. Campbell of Monzie to the same purpose. The whole tract is marked by features of sublimity and grandeur, though stripped of the majestic timber with which it was anciently embellished. *Glen-Ure*, or the "glen of yew-trees", opens from the river Creran, and expands to the south and east for about three miles. Near the river are the dilapidated remains of the ancient mansion of the family of Glenure, and adjacent is the farm of Barnamuch, which has been always famed for the richness of its pastures. The remote extremity of the glen is marked with features of rugged grandeur. *Glen-Dindal*, or *Glen-Dow*, about seven miles to the west of Glenure, is three miles in length, and in the lower part luxuriantly wooded; it is frequented by numbers of fallow deer, originally introduced about the middle of the last century. *Glen-Salloch*, the most elevated of the glens, is situated between Loch Etive and Loch Creran, and extends from south to north for about six miles; it comprehends much variety of scenery, and the views from any point commanding either of the lakes are romantically picturesque.

The principal lochs are Loch Etive and Loch Creran. *Loch Etive* branches from the Linnhe loch near Dunstaffnage Castle, and extends eastward to Bunawe, after which it takes a northern direction among the mountains, and terminates at Kinloch Etive. It is about twenty-two miles in length, varying from less than a quarter of a mile to more than a mile and a half in breadth, and being from twenty to 100 fathoms in depth. The bay affords safe anchorage to vessels not exceeding 100 tons; and at Connel Ferry, near the western extremity, the tide rises to a height of fourteen feet, forming in the narrow channel, which is not more than 200 yards in width, and obstructed by a ledge of rock, a foaming and apparently terrific rush of water, which the skill of the boatmen has rendered available to facilitate the passage. There is another ferry across the loch at Bunawe, opposite to which is the small island of Elan-Duinish, inhabited only by the family of the ferryman, and connected with the mainland, on the opposite shore, by a stone causeway, along which passes a road that afterwards diverges to Inverary and Glenorchy. *Loch Creran* issues from the Linnhe loch near the island of Eriska, and extends in a north-eastern direction for about twelve miles, the breadth being on an average a

mile and a half. It is about fifteen fathoms in depth, and the spring tides rise from fifteen to sixteen feet; the bay, having a clayey bottom, affords good anchorage, and there is a ferry across the loch at Shean, in the narrowest part. The loch has several barren and uninhabited islets; and the island of Eriska, which is well wooded, contains a considerable portion of pasture and arable land, forming a very compact farm.

Among the chief rivers is the *Awe*, which, issuing from the loch of that name, and flowing between richly-wooded banks, after a course of about four miles, falls into Loch Etive at Bunawe. The *Etive*, which has its source near Kings-house, in the parish, flows in a western and south-western direction, and gradually expanding in its progress, after a course of nearly sixteen miles, falls into Loch Etive near its head. The *Kinglas* has a course of about twelve miles to the south-west, flowing along a channel of rock and granite; its waters are remarkably transparent, and salmon are found in numbers. The *Liver*, which rises to the south of the Kinglas, flows for about six miles in a western direction, and falls into Loch Etive at Inverliver. The *Noe*, which waters the glen of that name, has a course of four miles between rugged mountains, and, near its confluence with Loch Etive, forms a romantic cascade. The *Creran*, which has its source near Ben-Aulay, flows westward for nearly twelve miles, and after passing through the inland lake of Fasnacloch, forms a channel navigable for small boats, and falls into the sea at the head of Loch Creran. The *Ure* has a course of about seven miles in a northern direction, and passing to the west of Glenure House, falls into the Creran river. The *Tendal* has a western course of about six miles, through the glen of that name, and forms several interesting cascades. The *Buie*, after a course of little more than three miles, and the *Dergan*, which rises in the heights of Glen-Salloch, both fall into Loch Creran; and the *Esragan-More* and the *Esragan-Beg*, separated by the mountain of Ben-Vean, after a course of about five miles, fall into Loch Etive. The rivers generally form in their progress numerous cascades, many of which, especially those of the mountainous districts, are incomparably beautiful.

Though generally a pastoral district, there is still a considerable portion of arable land, estimated at about 1700 acres; the soil is chiefly a light loam, requiring much manure, but producing good crops of oats, bear, potatoes, and turnips. The farm-houses, with very few exceptions, are of an inferior order, thatched with straw, and ill adapted to the accommodation of the occupiers. Great numbers of cattle and sheep are fed in the pastures, and considerable attention is paid to the rearing of stock; the cattle are of the Highland black breed, and on the dairy-farms the cows are of the Ayrshire breed. The sheep, which were originally of the small white-faced kind, have been almost entirely superseded by the black-faced, and a few of the Cheviot breed have been recently introduced; the number of sheep reared annually is estimated at 32,000. About 2700 acres are woodland and plantations: the coppices are chiefly oak, ash, birch, and mountain-ash; and the plantations consist of ash, beech, elm, sycamore, and larch, Scotch, and spruce firs, all of which are in a thriving state. The annual value of real property in Ardchattan and Muckkairn is £10,987. Lead-ore has been discovered on the farm of Drimvuick, but not wrought; large

boulders of granite are found in abundance, and on the upper shore of Loch Etive a quarry has been opened by the Marquess of Breadalbane, from which blocks are raised of large size, and of very superior quality. The principal mansions in the parish are, *Lochnell House*, originally built by Sir Duncan Campbell, and improved at an expense of £15,000 by General Campbell, his successor; *Barcaldine House*, recently enlarged, and beautifully situated in a richly-wooded demesne; *Ardchattan Priory*, a portion of the ancient convent, converted into a private residence; *Inverawe House*, pleasantly situated on the banks of the Awe, and surrounded with stately timber; and *Drimvuick House*, a pleasant residence. There is a post-office at Bunawe, about four miles distant from the church; the mail from Fort-William, likewise, passes through a portion of the parish, and facility of communication is afforded by good roads. A fair for cattle and horses, which is also a statute-fair, is held at Shean Ferry twice in the year.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Lorn and synod of Argyll: the minister's stipend is £283. 3. 2., with a manse, and a glebe valued at £8 per annum; patron, Archibald Campbell, Esq., of Lochnell. The church, erected in 1836, is a neat structure, situated on the north shore of Loch Etive, and containing 430 sittings. There is a preaching station at Inverghiusachaw, in Glen-Etive, about sixteen miles distant from the church, where a missionary supported by the Royal Bounty preaches once in three weeks. A place of worship in connexion with the Free Church has been built. The parochial school is attended by about fifty children; the master has a salary of £29. 16. 7., including the proceeds of a bequest producing £4. 3. 4., with a house and garden, and the school-fees average about £11 per annum.

There are some remains of *Ardchattan Priory*, founded in 1231, by Duncan Mc Coull, the supposed ancestor of the lords of Lorn, for monks of the Benedictine order; the house of the prior has been converted into a residence by Mr. Campbell, the proprietor, and there are traces of the abbey and cloisters, with numerous monumental relics. Some remains also exist of the ancient churches of *Bal-Moadan* and *Kilcolmkill*. The *Castle of Barcaldine*, erected in the fifteenth century, by Sir Duncan Campbell, on a neck of land between Loch Creran and the bay of Ardmucknish, is rapidly falling into decay. There are remains of Druidical circles of large granite stones placed on end, and smaller circles of upright stones, on the summits of which latter are slabs of granite; also stone coffins, in some of which have been found rude urns containing human bones; and numerous tumuli, in one of which was an urn containing calcined bones and an arrow-head of flint. Many ancient coins have been likewise discovered, including several silver coins of the reign of Edward I., on the reverse of which were the names London, Cambridge, and Oxford, in good preservation. The site of the old city of *Beregonium*, supposed to have been the ancient metropolis of Scotland, and concerning which so many conflicting accounts have been written, and so many fabulous legends propagated by tradition, is referred to an eminence between the ferries of Connel and Shean, called Dun Mac Suiachan, on which are the remains of a vitrified fort. The Rev. Colin Campbell, an eminent mathematician and metaphysician, was mi-

nister of the parish in 1667. For a description of Muckkairn, which is not comprised in the foregoing article, see MUCKKAIRN.

ARDCLACH, a parish, in the county of NAIRN, twelve miles (S. S. W.) from Forres; containing 1177 inhabitants. This place derives its name from its situation in a mountainous and rocky district, of which the Gaelic words are faithfully descriptive. The parish is bounded on the north by the parishes of Auldearn and Nairn, and on the west by the parish of Cawdor; it is nearly sixteen miles in extreme length, and twelve miles in extreme breadth. During the wars of the Covenanters, it shared largely in the hostilities of that distracted period; after the battle of Auldearn, in 1645, the lands here of Brodie of Lethen were plundered by the forces of the Marquess of Montrose, and in 1649 and 1653 were again desolated, after unsuccessful assaults of Lethen Castle, by the Marquess of Huntly and the troops under the Earl of Glencairn, respectively. The number of acres in the parish is about 40,000, of which nearly 4000 are arable, about 2800 woodland and plantations, and the remainder hill-pasture, moorland, and waste. The surface is mountainous, and some of the hills are considerable; that called the Shaw has a height of 800 feet, and the hill of Lethenbar of 862 feet, above the level of the sea. The lower lands are watered by numerous springs, and by the river Findhorn, which rises in the mountains of Inverness, and flows through the parish in a north-eastern direction into the Moray Firth. In its course it receives many tributary streams from the higher lands, the principal of which are, the burns of Torgarrow and Altnarie, forming in their descent beautiful cascades; the burns of Drumlochan and Tomnarrach; and the burn of Lethen, or Muckle-Burn, which flows for nearly ten miles through the parish, and falls into the Findhorn near its mouth.

The system of AGRICULTURE has been greatly improved under the liberal encouragement given to his tenants by Mr. Brodie of Lethen, and the rotation plan of husbandry is generally prevalent; the crops are oats, with other kinds of grain, and various green crops. In the lower lands, the soil is tolerably fertile, and has been benefited by the use of lime; the mountainous districts afford pasture for cattle and sheep, of which the former are chiefly of small size, but hardy and adapted to the pastures, and the latter have been much improved by a cross with the Lanarkshire breed. The natural wood is mostly Scotch pine, birch, alder, hazel, mountain-ash, and poplar; and the plantations are principally larch, interspersed with fir: the wood of Dulcie forms an extensive forest of fir, wholly indigenous, and there are ample and thriving plantations at Glenfairness and Lethen. The annual value of real property in the parish is £2373. The rocks along the course of the river Findhorn are mainly granite, gneiss, and quartz; the substratum in the western portion of the parish is the old red sandstone, with some of the schistose formation, in which are found impressions of plants, occasionally resting on a layer of conglomerate, with nodules containing imperfect marine fossils, and which, when burnt, produce excellent lime for agricultural use. The moors afford black game and grouse, partridges, snipes, woodcocks, and other birds; and hares and rabbits are found in great number. The lake on the lands of Lethen called Loch Belivau, which covers an area of twenty-seven

acres, abounds with trout of three distinct species, weighing on the average about two pounds each; and in the centre is an island frequented by aquatic fowl of every kind. Salmon are taken in abundance in the river Findhorn. Coulmony House, the property of Mr. Brodie, is a handsome mansion, beautifully situated on the river. Glenfairness was purchased a few years ago by Mr. Dougal, who has carried out extensive improvements, and has built a new and handsome mansion on his estate.

This parish, which till 1773 was united to Edenkilleie, in the presbytery of Forres, is within the bounds of the presbytery of Nairn and synod of Moray: the minister's stipend is £248, with a manse, thoroughly repaired in 1841, and a glebe of seven acres and a half, valued at £5 per annum; patron, Mr. Brodie. Ardclach church, situated nearly in the centre of the parish, and surrounded with a spacious cemetery, was originally built in 1626, rebuilt in 1762, and again in 1839 at a cost of £500; it contains 686 sittings, and the service is performed alternately in the English and Gaelic languages. A place of worship has been erected in connexion with the Free Church. The parochial school affords an ample course of instruction; the master has a salary of £36. 7. 3., including an allowance of £2 for a garden, with a good dwelling-house, and the fees average from £10 to £15 per annum. There are also, a female school for reading, knitting, and sewing, which receives £5 per annum from the Society for Propagating Christian Knowledge; and a school at Fornighty, the master of which has a salary of £15 from the society, and receives £2 from a bequest by Mr. Dunbar, of London. About a mile below the bridge of Dulcie, on the lands of Glenfairness, is an ancient obelisk, on which are rudely sculptured two figures in the Highland costume, supposed to commemorate the fate of a Celtic princess who, eloping with her Danish paramour, was pursued to the hill of Dunearn, on the verge of the river, into which they precipitated themselves, and perished together. On the summit of the hill of Lethenbar is a very perfect Druidical circle; and in the neighbourhood are several tumuli.

ARDEN, a village, in that part of the parish of NEW MONKLAND which formed the quoad sacra parish of CLARKSTON, Middle ward of the county of LANARK; containing 646 inhabitants. It is situated about four miles east of the town of Airdrie, and in the southern portion of the parish.

ARDERSIER, a parish, in the county of INVERNESS; containing, with the village of Campbelton proper, and the garrison of Fort-George, 1475 inhabitants, of whom 716 reside in the village. This parish, called in ancient documents *Ardrosser*, is supposed to have derived its name from a bold promontory towards the western shore, which rises to a height of 200 feet above the level of the sea. A considerable portion of the lands belonged to the diocese of Ross, and in 1574 was granted, with consent of the dean and chapter, to John Campbell of Calder, ancestor of the present proprietor, Earl Cawdor, who still pays to the crown an annual sum as bishop's rent. The Knights Templars had also some lands in the parish, over which they possessed a jurisdiction of regality; and the last preceptor, Sir James Sandilands, obtained from Mary, Queen of Scots, the erection of his estates into a temporal barony, and, in 1563, was created Lord Torphichen.

The PARISH, which is bounded on the north and west by the Moray Firth, extends about four miles in length, from north-west to south-east, and is two miles in breadth, comprising 3250 acres, of which 1434 are arable, about 500 in plantations, and the remainder, meadow, pasture, and heath. The surface, with the exception of the high grounds to the west and north, is generally flat, and, towards the coast, low and sandy. In some parts the soil is a deep black mould, in others of lighter quality, and in some places a strong clay, alternated with shallow sand. The usual crops of grain, and large quantities of potatoes, are raised; the lands have been partly inclosed, and the modern improvements in husbandry are gradually taking place. The annual value of real property in the parish is £1540. A salmon-fishery on the coast is carried on to a moderate extent, there being two stations, the rents of which together amount to £60 per annum. Ecclesiastically Ardersier is within the bounds of the presbytery of Nairn and synod of Moray: the minister's stipend is £158. 6. 7., part of which is paid from the exchequer; with a manse, and a glebe valued at £25 per annum: patron, Earl Cawdor. The church, situated in the eastern part of the parish, was built in 1802, and is a neat structure, containing 500 sittings. There are places of worship for the United Presbyterian Synod and members of the Free Church. The parochial school is well attended; the master has a salary of £36. 7. 1 $\frac{3}{4}$., with a house and garden, and the fees average about £20 per annum.

On the heath near the borders of the adjoining parish of Nairn, is an obelisk supposed to indicate the spot where the Danes were repulsed; and at Achnuallan were the remains of a Druidical circle, near which a horn filled with silver coins was found in 1800; but those remains have been removed for building materials. At Dalyards, the ruins of a building thought to have belonged to the Knights Templars have disappeared in the progress of agriculture; and on a hill behind Campbelton is a circular mount 120 yards in diameter at the base, and surrounded towards the summit by a rampart of clay and earth: it was called (in the Gaelic) *Cromal*, now corrupted into "Cromwell's mount", and has been partly destroyed, like many other fortlets. A Roman sword; the head of a spear; and some stone-axes supposed to be of Danish origin, have been found in the parish.

ARDGOUR.—See BALLICHULISH.

ARDNAMURCHAN, a parish, partly in the county of ARGYLL, and partly in the county of INVERNESS; comprising the quoad sacra districts of Aharacle and Strontian, and containing 5581 inhabitants. The present parish of Ardnamurchan, previously to the Reformation, formed three separate parishes, comprehending the five districts of Ardnamurchan, Sunart or Sunart, Moidart, Arasaig, and South Morir. These districts still remain as distinct portions, and from the first the parish takes its name, signifying "the promontory" or "heights of the great sea". This term was originally applied with great propriety, the district of Ardnamurchan being nearly a peninsular promontory, extending from the mainland, to a considerable extent, into the waters of the Atlantic Ocean. The districts of Ardnamurchan and Sunart are in the county of Argyll, and the other three districts in Inverness-shire; the whole being supposed to comprise more than 250,000 acres, of which upwards of 110,000 are in the Argyllshire portion. The parish is bounded

on the south by Loch Sunart, separating it from the parish of Morvern; on the south-west, by the northern end of the Sound of Mull; on the north, by Loch Morir and the river flowing thence, which separate it from North Morir, in the parish of Glenelg; and on the north-west and west, by that part of the Atlantic Ocean which reaches to the opposite shores of Skye and the Small Isles. On the east it is bounded by the parish of Kilmalie. The coast, which is continuously, and remarkably, indented with creeks and bays forming numerous points and headlands, is supposed to embrace a line of several hundreds of miles, and exhibits a bold and rocky appearance. At some seasons, the foaming surges of the neighbouring waters are to be seen driven landward by the westerly winds, and occasionally rendering inaccessible the several creeks and landing-places. The *headland of Ardnamurchan*, which is the most western part of the mainland of Great Britain, and the most prominent point on the line of coast between Cape Wrath and the Mull of Cantyre, was formerly used as a geographical mark, in respect to which the Western Isles were denominated north or south. At a creek on its extreme point, the picture of dreariness and desolation, a few green mounds indicate the place where the mutilated bodies of shipwrecked seamen rest below, vessels having not unfrequently been dashed to pieces on the adjoining rocks. There has been a lighthouse recently built on this point. The whole coast surrounding the district of Ardnamurchan is a series of indentations and projecting rocks. Beyond this, which is the southern part of the parish, the line of coast runs along the Moidart district on the west and north, and then forms the western limit of Arasaig and South Morir, marked with many rocky points and headlands, of which the *point of Arasaig*, the promontory next in importance to Ardnamurchan, is well known to mariners, and is visited by steamers plying from Glasgow to the Isle of Skye. The coast here is very rugged, but not abrupt or precipitous. It has numerous shelving rocks, extending under water to the northern boundary of the parish.

A deep and wide bay is formed by the line of shore stretching in an eastern direction from the point of Ardnamurchan to the isthmus of that district, then northward, and afterwards round to the west, reaching to the point of Arasaig. In the south-eastern part of this great bay, at the flexure of the coast of Ardnamurchan towards Moidart, are the fine sands of Kintra, measuring about two square miles in extent, of nearly circular form, and covered at high water by the sea, which enters by a small inlet. The principal harbours along the coast of the parish are, the bay of Glenmore, on the south of Ardnamurchan, in the mouth of Loch Sunart, affording excellent anchorage; that of Kileoan, a small harbour on the same coast, forming the chief point of communication with Tobermory; and, on the north coast of Ardnamurchan, at Ardtoe, a small bay where inferior craft may find a safe retreat. At the island of Shona, north of Kintra bay, also, and in the opening of Loch Moidart, are several creeks with good anchorage, the resort of boats from the southern highlands, in the season for cod-fishing; and in Loch Sunart are the harbour of Strontian, and the creek of Salin, at which latter a pier has been built. Of the several maritime lochs in or bounding the parish, some are of considerable extent, and form a distinct feature in the general scenery of the coast.

Loch Sunart branches off from the Sound of Mull, where it is about six miles in breadth, and extends inland for about twenty-five miles. The tide runs with much impetuosity through the channels formed by the islands of Carna, Resga, and Oransay, six or seven miles from the mouth; but further inland the water lies quietly, with the exception of the ebb and flow of the tides, between lofty rocks and precipitous banks overgrown with wood, which at many points present most picturesque scenery. *Loch Moidart* is about four miles long, from east to west, and communicates with the open sea by means of a narrow channel on each side of the island of Shona. Being surrounded with steep and lofty mountains, it is usually unruffled; and its scenery embraces all the striking features of a Highland district. The remaining salt-water lochs are *Loch-nan-Uamh*, situated between Moidart and Arasaig; *Loch Ainart*, a branch of the former; and *Loch-na-Keull*, just north of Arasaig point; all of comparatively small extent. In different parts of the coast there are caves, some of them very extensive, but none of much note: in one at Baradale, in Arasaig, a damp, rough, dark excavation, Prince Charles Stuart concealed himself for three days, after his defeat at Culloden.

The INTERIOR of the parish, consisting of land of very rugged character, is crowded with the features, variously combined, of almost every description of wild and romantic scenery, comprising lofty mountain ranges, precipitous rocky elevations, thickly-wooded hills, dells, and ravines, with numberless inland lochs, and several rivers. The *Ardnamurchan* portion is strongly marked by a range of hills, of no great elevation, running from the western point for about twenty-four miles towards the east, and varying from four miles and a half to seven in breadth. Near the coast are many farms under good cultivation, within the first ten or twelve miles; but afterwards the pasture becomes coarser. Oak, birch, and hazel are to be seen covering the rocks, and the lower hills on the south, to Loch Sunart; while, on the north, the district is occupied at its eastern extremity by a very extensive moss, girt by the river Shiel. This stream flows from Loch Shiel, and falls into the western ocean, forming one of the two principal streams in the parish, the other of which flows from Loch Morir into the western sea, and constitutes part of the northern boundary of the parish. The *Sunard* or *Sunart* district, in some ancient records written *Swynefort* or *Swyniford*, is supposed to have derived its appellation from the circumstance of a king of Denmark named Swin, who was driven from his own country for apostatizing from Christianity, having in the tenth century landed in a creek here on the western shore, called Swineard in consequence of that event. This tract is a continuation of that of Ardnamurchan, and is about twenty-five miles long and ten in average breadth. For several miles from its commencement, it has the appearance of a mountain ridge. After this the eminences expand, reaching to Loch Sunart on the south and Loch Shiel on the north and north-west, leaving a large intermediate space occupied with lofty hills and deep valleys and glens, thrown together in apparently the greatest irregularity and confusion. The most lofty mountains are Ben-Reisipoll, Scur-Dhoniell, Scour-Choinich, Creach-Bhunn, and Glaschoirein Hill, reaching respectively 2661 feet, 2730 feet, 2364 feet, 2439 feet, and 1920 feet in height. The

district contains two extensive and interesting valleys, of which that of Strontian, near its eastern extremity, opening at Loch Sunart, stretches for about five miles inland. It is ornamented in succession from its entrance with clusters of fine natural oak, flourishing plantations surrounding a tasteful mansion with well laid out grounds, an excellent and well-cultivated farm, with the crofts and tenements of numerous cottagers, the government church near the stream that runs through the valley, and, further on, the beautifully-situated manse. Glenaheurich, a few miles north of the former valley, contains a spacious lake, and affords excellent pasturage for sheep. Besides these there are other glens of inferior dimensions, bounded with picturesque hills displaying a profusion of verdure and ornamental wood. The district of *Moidart* takes its name from a compound Gaelic term signifying "the height of sea-spray". It extends about ten or twelve miles in breadth; and twenty-five in length, in a direction parallel with Sunart, along the whole boundary of Loch Shiel. It is bounded on the west and north by the sea; and the continuous range of mountains along the coast on each side, incloses an intermediate and lofty ridge, exhibiting a summit with a most magnificent assemblage of crags, rocks, hills, and ravines, rendered more interesting to the curious observer by the almost impossible attempt to find their parallel. There are, however, some tolerably fertile plains in this interesting district of the parish; and a valley called Glenaladale, about three hundred yards broad, containing fair arable and pasture land. The districts of *Arasaig* and *South Morir*, not separated from each other by any marked natural features, constitute together a tract twenty-four miles in length, and fifteen broad. A long and very dreary valley named Glenmeuble stretches along Arasaig for ten miles, with a farm at the eastern end, and a small loch called Beoraig, not very far off. South Morir is bounded on the north by Loch Morir, and the river that flows from the loch into the sea.

The parish contains numerous fresh-water lakes, many of which abound with varieties of excellent trout. The principal of them is *Loch Shiel*, which here separates the county of Argyll from that of Inverness, and is embosomed amid mountains of the most magnificent description, very little known to travellers. Near the western extremity of this lake is the beautiful green island of Finnan, truly an oasis in the bleak wilderness, where the remains of an ancient monastery are still very distinct, and where the bell that used to summon the inmates to matins and vespers is yet to be seen. Loch Shiel empties itself by the river Shiel into the western sea; and so trifling is the fall in the course of this stream that, during high tides, boats of six or seven tons' burthen can ascend it, and are often seen spreading their sails at the eastern extremity of the lake, twenty-seven or twenty-eight miles from the sea. An important salmon-fishery is carried on at the river Shiel, one of the most important indeed in the north of Scotland, paying a large rental. The fish caught here are of a superior quality, and are exported in great quantities to the India and other distant markets, being prepared for exportation in a large curing establishment lately built on the river-side.

The SOIL is various, but generally light and shallow. Only a small portion of it is fit for superior husbandry;

the remainder is moor and moss, of which latter there are several large tracts styled moss-flats, especially adjacent to Loch Shiel. That called the Moss of Kintra covers an area of seven square miles, and, like some of the others, is a quagmire in the middle, of unknown depth, though considerable portions near the margin are capable of improvement. Oats and bear are raised; but potatoes, hay, wool, and the cuttings of wood, form the largest items in the returns of produce. The sheep that are kept are the black-faced; and the cattle, the Argyllshire: both the sheep and the cattle are generally of a superior description, the pasture in many parts being admirably adapted for them. The method of cultivation varies according to the nature of the soil, and the locality; ploughs and spades of all kinds are in common use, and shell-sand mixed with kelp, and various deposits from the sea-shore, are extensively employed as manure. Considerable improvements have been made on some of the estates within these few years, and the farm-buildings of the superior tenants are good, whilst those of the inferior class are of the worst description. There are several farms tilled according to the most improved system of agriculture. The extent of arable land in the Ardnamurchan and Sunart districts is upwards of 5000 acres, about half turned by the plough, and half by the spade; and it is supposed that the quantity throughout the parish might be doubled with a profitable application of capital, there being in these two districts alone about 13,000 acres of pasture, more than 3000 of moss, and upwards of 80,000 of moor, much of which is capable of tillage. An agricultural association, principally connected with Ardnamurchan and Sunart, and some neighbouring places, meets annually at Strontian; under the auspices of which great improvement has taken place in the breed of horses, black-cattle, and sheep. The annual value of real property in the parish is £6894. The geological structure of the parish is of great interest, presenting one of the most inviting fields in Scotland to the student of geology. The natural wood is of considerable extent, including much oak, valuable for its bark and timber, birch, hazel, alder, and ash: the plantations in the parish comprise fir, plane, oak, and ash trees. There are various mansion-houses of proprietors, generally plain comfortable buildings suited to the climate, and those more recently erected shewing a due regard to ornament. The population is rural, and scattered through the different districts. Some of the inhabitants are engaged in salmon-fishing on the river Shiel, and others in taking herrings on some of the lochs. Indeed the whole sea-coast abounds with a variety of fish, especially cod, ling, sethe, lythe, gurnet, flounder; while lobsters, oysters, and the smaller kinds of shell-fish, are also plentiful; though the apathy and ignorance of the people prevent their availing themselves to any great extent of this bountiful provision made for their wants. Two decked-vessels belong to the place, one of fifty and the other of twenty tons. An extensive manufactory of bobbins for thread is carried on at Salen, on Loch Sunart; the machinery is very ingenious, and moved by immense power, the water-wheel being forty feet in diameter. There is a post-office at Strontian, with a daily post; also one at Arasaig, with a delivery three times a week; and a third at Kilchoan, communicating with Strontian by a messenger twice a

week. A road runs from Arasaig, by Glenfinnan, to Fort-William and the Caledonian canal, and another from Strontian to Corran Ferry, by each of which cattle and sheep are driven to the southern markets. The principal communication, however, is by steam-vessels from Glasgow, which touch at the point of Arasaig, and at Tobermory, a sea-port in the northern extremity of the island of Mull, about five miles south from the harbour of Kilchoan, in Ardnamurchan. A fair is held at Strontian in May, and another in October, for cattle and sheep: there is also a cattle and sheep fair at Arasaig.

The parish is ECCLESIASTICALLY in the presbytery of Mull, synod of Argyll, and for pastoral purposes distributed into five portions, namely, the parish church district, two quoad sacra parishes, a district under the care of a missionary, and another under that of an assistant. The first of these embraces the western portion of the peninsula of Ardnamurchan, and contains a place of worship at Kilchoan, on the south, four or five miles from the point, and one at Kilmorie, on the northern coast, at which the minister officiates alternately. Kilchoan church, which, on account of its situation, commands the larger attendance, is a very superior edifice, built in 1831, and accommodating more than 600 persons; that of Kilmorie, raised by a former incumbent, is a very humble structure, originally built of dry stone, and thatched. The minister has a stipend of about £270, subject to a deduction to the assistant; with a manse, and a glebe of twenty-seven acres, valued at £10 or £12 per annum: patron, the Duke of Argyll. The quoad sacra church at Strontian is thirty miles distant from the parish church; that at Aharacle is situated at the west end of Loch Shiel, twenty-three miles distant. The mission of Laga comprehends about eleven miles of the coast of Loch Sunart, partly in the parish church district, and partly in that of Aharacle; the minister receives £60 per annum from the Royal Bounty, and has built a preaching-house at his own expense. The district of the assistant is by far the largest ecclesiastical division, embracing the principal part of Moidart, and the whole of Arasaig and South Morir. It has a small preaching-house, built partly by subscription, at Polish, near Inveraylort, and a school-house at Ardnafuaran, in Arasaig. The assistant receives from the parish minister £55. 11. 1., and £32 from the Royal Bounty, with £5 for communion elements. There are five Roman Catholic chapels in the parish, with two officiating priests. The parochial school, situated at Kilchoan, affords the ordinary instruction; the master has a salary of £95. 13. 3., and £10 fees, with a house, garden, and two acres of land, the whole valued at £7. There are two schools attached to the quoad sacra parishes of Aharacle and Strontian, erected by Sir J. M. Riddell, Bart., and endowed by government; while in other parts of the parish are schools supported by various religious societies. The chief relic of antiquity is the castle of Mingary, on the southern shore of Ardnamurchan, once the stronghold of Mac Ian, from which James IV. in 1493 granted a charter, and where, two years afterwards, he held his court to receive the submission of the nobles of the forfeited lordship of the Isles. The parish contains several vitrified forts. On the plain of Glenfinnan is a tower erected in commemoration of the events of 1745, by Alexander McDonald of Glenaladale, with an inscription by Dr. Donald

Mc Lean; the successor to the property, Angus Mc Donald, Esq., has lately much improved the tower, and crowned it with a statue of Prince Charles Stuart.

ARDOCH, for a time a quoad sacra parish, comprising the hamlets of Balhaddie, Buttergask, Greenloaning, and Rottearn, in the parish of DUNBLANE; the thriving post-village of Braco, in the parish of MUTHILL; and part of the parish of BLACKFORD, in the county of PERTH; the whole containing 1584 inhabitants. The parish was about seven miles in length by six in breadth, and intersected by the high road from Crieff to Dunblane and Stirling; two-thirds of the soil are in tillage or pasture, and the remainder, with the exception of a portion under plantation, is uncultivated. Great facilities of communication are afforded by the Scottish Central railway. At Rottearn is a small manufactory for converting potatoes into flour. Fairs are held at Braco on the first Wednesday in January, the last Tuesday in April, and the first Tuesday in August, chiefly for cattle. The district is in the presbytery of Auchterarder, synod of Perth and Stirling; the minister is under the jurisdiction of the ministers of Duublane and Muthill, and has a manse and garden. The church, or chapel of ease, erected by subscription in 1780, is a plain edifice, and contains 555 sittings. The United Presbyterian Synod and the Free Church have places of worship also in the district: that for the latter body is a handsome structure with a tower and spire, and contains sittings for 700 persons. There is a school for the benefit of all denominations, and a library is supported. Near the village is the most entire Roman camp that remains in Scotland.—See MUTHILL.

ARDRISSAIG, a village, in the parish of SOUTH KNAPDALE, county of ARGYLL; containing about 400 inhabitants. This village, which is situated at the harbour of Ardrissaig in Loch Gilp, has sprung up since the commencement of the Crinan canal, in 1793, and is of respectable appearance. It is the scene of much bustle and traffic, occasioned by the convenience of its harbour, at the opening of the canal into Loch Gilp. Exclusive of the business in goods and passengers connected with the canal, it is computed that about 24,000 persons are landed and taken on board annually, besides large numbers of sheep and cattle, by the Glasgow steam-vessels, three of which in summer, and one in winter, arrive here daily. In the harbour is a slip and steam-boat pier, erected in 1837, at an expense of more than £1000; and independently of the boats belonging to the parish, forty or fifty in number, many others, making together above 100, are frequently in the harbour in the fishing season, herrings being taken in Loch Fine (of which Loch Gilp is a branch) in very large numbers. In her visit to Scotland in 1847, Her Majesty and the royal party landed at Ardrissaig in the month of August, and proceeded along the Crinan canal in a barge which had been prepared for their reception, rejoining the royal squadron at the other extremity of the canal. Her Majesty also returned to England by way of the Crinan line of navigation, in the month of September. The revenue of the canal is scarcely sufficient to defray the cost of maintaining it. One of the parochial schools is established here.

ARDROSSAN, a parish, in the district of CUNNINGHAME, county of Ayr; including the thriving sea-port town of Ardrossan, and the greater part of Saltcoats,

seventy-four miles (W. S. W.) from Edinburgh; and containing 4947 inhabitants. This place derives its name, of Celtic origin, from the situation of its ancient baronial castle on a small promontory. Little is known of its earlier history; and of its ancient proprietors not much further notice occurs than that Sir Fergus de Ardrossan accompanied Edward Bruce in his expedition into Ireland, in 1316, and was one of the Scottish barons who in 1320 signed a memorial to the pope, complaining of the aggressions of Edward I. of England. During the time of Baliol, the castle being occupied by the English, was surprised and taken by William Wallace, who, arriving in the night with some of his followers, set fire to the few houses situated around the base of the hill on which it stood; and on the garrison going out to extinguish the flames, the assailants rushed into the castle, made themselves masters of the gates, and put all the English to the sword, as they unsuspectingly returned. The castle appears to have been inhabited till the time of Cromwell, who is said to have thrown down its walls, and to have not only demolished it, but carried away the materials for the erection of the fort which he built at Ayr. On the death of the last Baron Ardrossan without issue male, the estate passed, by marriage with his heiress, to the Montgomerie family, its present proprietors.

The town is beautifully situated on the shore of the Firth of Clyde, and owes its rise to the fostering patronage of the late Earl of Eglinton, by whom it was originally built, and by whom the harbour to which it is so much indebted was originally constructed, chiefly at his own expense. Ardrossan is rapidly increasing in importance. It consists of various spacious and regularly-formed streets, intersecting each other at right angles, and containing houses uniformly and handsomely built; the town is lighted with gas, and is supplied with excellent water by means of cast-iron pipes, which are laid down from a reservoir fed by a small stream called the Stanley burn. It is much frequented, during the season, as a watering-place. Lodging-houses have been built for the reception of the company who resort hither for bathing; and a large hotel has been erected, containing ten public rooms, and a proportionate number of sleeping-rooms, with hot and cold baths. The public baths, for which a handsome building was raised, were originally established on the tontine principle by the late Earl of Eglinton, after whose decease in 1819 they were suspended for a time, till in 1833 they were purchased by the present proprietor, by whom the buildings have been enlarged, and put into a state of complete repair. The baths are of marble, with convenient dressing-rooms attached to each; they are under excellent management, and hot, cold, shower, and vapour baths are prepared on the shortest notice. Connected with the establishment are numerous lodging-rooms, which are fully occupied during the season; there is also a bath gratuitously appropriated to the use of the poor. In the immediate neighbourhood of the town are several villas, pleasantly situated, commanding good views of the Firth; and around the margin of the bay a crescent has been laid out, forming a splendid addition to the appearance of the town. The Pavilion, the marine villa of the Earl of Eglinton, is an elegant seat, occasionally the residence of his lordship: There are many agreeable walks in the environs, and between this and Saltcoats is a fine sandy beach, about three-quarters of a mile in

length, which is a favourite promenade. In the year 1846 an act of parliament was passed for erecting the town and places adjacent into a burgh of barony; for paving, lighting, and cleansing the same; and establishing a police. There are about sixty looms in the town, employed in the weaving of shawls and heavier articles, and lighter articles of silk and cotton; and in Saltcoats nearly 450: many of the females are also engaged in working muslin. Fairs are held in July, and on the fourth Thursday in November, for cattle and various kinds of merchandise.

The HARBOUR was projected by the late Earl of Eglinton, in the beginning of the present century, with a view to accommodate the shipping belonging to the Firth of Clyde. At that time, the river Clyde had not been deepened, and only the smallest class of coasters could reach Glasgow. The accommodation at Greenock and Port-Glasgow was limited, and as the trade of the city of Glasgow was rapidly increasing, it was very probable that a safe and commodious harbour at the mouth of the Firth of Clyde, with a proper communication to Glasgow, would confer a great benefit on the manufacturing and commercial interests of the west of Scotland, and command a large return upon the capital required for the construction of the necessary works. Lord Eglinton was strongly impressed with this opinion, and through his influence and exertions two companies were organized, one for the construction of a tide-harbour and wet-dock at Ardrossan, and the other for the construction of a canal from Glasgow, by Paisley and Johnstone, to the proposed harbour. The acts incorporating these two companies were obtained in 1805 and 1806, and the works were commenced immediately after. In a very short time, however, it was found that the capital subscribed for the two undertakings would be far short of what was necessary for their completion. The canal was only completed to Johnstone, when the funds were exhausted, and the canal company stopped the further progress of the works. The same result would have followed the deficiency in the harbour company's capital, had it not been for the public spirit of Lord Eglinton, who took the whole responsibility upon himself, and continued to prosecute the works until his death in 1819. At that period the tide-harbour was opened, and the wet-dock nearly completed; the whole outlay then amounting to upwards of £100,000. But though the works were thus far advanced, there was little prospect of the canal ever being finished, and as the harbours of Greenock and Glasgow were by this time greatly improved, it was deemed imprudent by the trustees left in charge of the harbour to lay more money out upon it. An attempt was made in 1827, to carry out the original plans by forming a railway from Ardrossan to Johnstone, to join the canal there: an act was obtained, but the line was only constructed to Kilwinning, six miles from Ardrossan, with a branch of four miles more to the Eglinton coal-fields. In 1840 the communication was finally opened by the construction of the Glasgow and Ayrshire railway, which passes through Kilwinning, and there joins the Ardrossan line. About this time, the harbour proprietors addressed the present Earl of Eglinton, requesting him to take the harbour into his own hands, and complete it; to which his lordship acceded. An act was accordingly passed in 1842, vesting the works in Lord Eglinton, on his paying the other share-

holders the value of their shares; the works were again commenced in 1844, and were completed the following year. In 1846 an act was passed authorising the construction of the Glasgow, Kilmarnock, and Ardrossan railway, to commence at the Neilston end of the Glasgow and Neilston railway, and to form a junction with the Ardrossan line. The same act gave power to purchase the Ardrossan railway and harbour, for which the new company engaged to pay £208,000 in three yearly instalments; and in 1849 an act was obtained for enlarging the provisions of the acts relating to the harbour, and the Glasgow, Kilmarnock, and Ardrossan railway.

The harbour is perfectly safe, and easily taken in every wind: no damage has ever been occasioned in it during the heaviest storms, and vessels have been known to quit their moorings in other ports in severe gales, and run to Ardrossan for shelter. The entrance bears East $\frac{2}{3}$ North magnetic, and is shewn at night by two red guiding lights: the most conspicuous landmark is a tower on the Horse island, whose latitude is $55^{\circ} 58' 40''$ N., and longitude $4^{\circ} 50' 23''$ W. The depth of water in the dock is nineteen feet at neap, and twenty-two feet at spring tides; it is capable of accommodating forty square-rigged vessels, and the harbour can accommodate about eighty of the same class. It has been in contemplation, also, to extend the piers into deeper water, so as to inclose a greater area, of such depth that the largest vessels might be afloat at low water. The arrangements for loading and unloading are very complete; the railway is carried along every part of the quay walls, and the trucks can be taken directly alongside the vessels. The facilities thus afforded for transmitting goods, conjoined with the great natural advantages of Ardrossan, will no doubt be the means of realizing the anticipations of the noble proprietor, and making the place one of the most thriving sea-ports in the west of Scotland. The export trade consists principally of iron and coal from the mineral fields in the neighbourhood, and general goods from Glasgow: the chief imports are, timber from America; corn, cattle, and provisions from Ireland; and goods from the manufacturing districts of England. Before the opening of complete railway communication between Scotland and England, steamers used to sail four times a week from Ardrossan to Fleetwood, in Lancashire, furnishing the most rapid communication between Paisley, Greenock, Glasgow, Edinburgh, &c., in Scotland, and Preston, Manchester, Liverpool, Leeds, Birmingham, and London. These steamers were supposed to be the fastest then afloat, and plied in connexion with the railway trains to Ardrossan and to Fleetwood. Passengers were repeatedly taken in rather less than twenty-four hours from London to Glasgow, and twenty-six hours from London to Edinburgh, by this route. Steam-boat communication is maintained with Belfast, &c. An excellent graving-dock, here, is capable of admitting vessels of 1200 tons' register, and there is a patent-slip which can take on vessels of 800 tons' register: these afford the most ample facilities for repairing vessels. Ship-building is carried on to a considerable extent, and vessels of every description and size have been built, which bear a very high character. There is a large saw-mill on the harbour grounds.

The PARISH is bounded on the south and south-west by the Firth of Clyde, and comprises about 7000 acres, of which 1580 are arable, 3000 meadow and pasture,

2270 hilly pasture, and about 190 woodland and plantations. Its surface is agreeably diversified with tracts of level land, and gentle undulations rising into hills of different elevation, which increase in height towards the coast. The highest of the hills is called Knock-Georgan, and is 700 feet above the sea, commanding a rich prospect; of the others, only one has an elevation of 400 feet. Several of them are ornamented with clumps of trees, and add much to the beauty of the scenery. The shore is generally level, and indented with bays of various dimensions, of which that of Ardrossan is very picturesque; it is about three-quarters of a mile in length, and to the north of it is another fine bay, of larger size; the coast here becomes rocky and irregular, and ridges of shelving rocks extend for a considerable length. Nearly opposite the harbour, and about a mile from the shore, is Horse Isle, containing about twelve acres: on this isle a beacon tower was erected by the late Earl of Eglinton for the benefit of vessels approaching the harbour, and it has been in contemplation to convert the tower into a light-house. The chief rivulets are, the Stanley and Monfode burns, which descend from the higher lands, and after flowing through the parish, fall into the Firth; and the Munnock or Caddel burn, a more copious stream, which intersects the upper part of the parish, and falls into the river Caaf, which separates the parish from that of Dalry.

The soil, towards the coast, is light and sandy, and in the higher grounds a tenacious clay, occasionally intermixed with loam. It has been rendered generally fertile by long cultivation, and a judicious use of seaweed and lime. The principal crops are oats, wheat, potatoes, and turnips. The system of agriculture is in a very advanced state; the lands are well drained and inclosed, and great improvements have been made, and much unprofitable land reclaimed, under the auspices of the Agricultural Society, which holds its meetings here in November. Great attention is paid to the management of the dairies; and about 10,000 stone of cheese of good quality are annually produced, which supply the neighbouring markets: the cows are generally of the Cunninghame or Ayrshire breed. The annual value of real property in the parish is £11,775. The substrata are limestone, freestone, and coal. The last was formerly wrought in the northern part of the parish, and in the vicinity of Saltcoats, but the workings have been for some time discontinued. There are three limestone-quarries in the upper part of the parish. The freestone is found both of a red and white colour, and there is an extensive quarry of the former close to the town of Ardrossan, from which the stone was raised for building the town and forming the quay. Near the town are also various kinds of whinstone, of which whole rocks have been blasted with gunpowder, and used in the formation of the breakwater. There are several strata of ironstone near the public baths, varying from two inches to nearly five feet in thickness, but from their situation, the working of them has not been thought likely to repay the expense. A variety of fossil shells is found in several parts, and it is generally supposed that the sea has considerably receded from this part of the coast.

Ecclesiastically the parish is in the presbytery of Irvine and synod of Glasgow and Ayr: the minister's stipend is £261. 1. 3., with a manse, and a glebe valued at £20 per annum; patron, the Earl of Eglinton. The old church,

which was situated on the Castle-hill, at Ardrossan, was destroyed by a storm in 1691, and another erected on a site about half a mile further from the coast. This church, also, being so much shaken by a storm, in 1773, as to be considered unsafe, was taken down, and the present church built, in the town of Saltcoats, in 1774; it is a substantial edifice, adapted for a congregation of 840 persons. Another church connected with the Establishment was built in 1844, in Arran place, Ardrossan; it is a handsome edifice in the painted style, and ornamental to the town. There are places of worship for dissenters in Ardrossan and Saltcoats. The parochial school, situated in Saltcoats, is well conducted; the master has a salary of £34. 4. 4., and £25 from fees, with a house and garden. Of the ancient castle of Ardrossan some small fragments only are remaining. Upon the lands of Monfode are the remains of a baronial castle, much dilapidated, formerly the residence of a family of that name. On Knock-Georgan are the remains of a Danish camp; and on one of the other hills in the parish is an artificial mound of rectangular form, sixteen yards long, nine yards wide, and the same in height, with sloping banks; concerning which nothing authentic is recorded. Dr. Robert Simson, professor of mathematics in the university of Glasgow, was a heritor of this parish, where he was accustomed to reside during the vacations, on his estate of Knockewart.

ARGYLLSHIRE, a maritime county, in the south-west of Scotland, bounded on the north by Inverness-shire; on the east by the counties of Inverness, Perth, and Dumbarton; and on the south and west by the Firth of Clyde and the Atlantic Ocean. It lies between 55° 21' and 57° (N. lat.), and 4° 15' and 7° 10' (W. long.), and is about 115 miles in extreme length, and about 50 or 60 miles in average breadth; comprising an area, including the various islands connected with it, of about 3800 square miles; of which, what may be considered as the continent contains about 2735 square miles, or 1,750,400 acres. There are 19,207 houses, of which 18,552 are inhabited; and a population of 97,371, of whom 47,795 are males, and 49,576 females. The county appears to have been occupied at an early period chiefly by the Scots, who, emigrating from the Irish coasts, settled in the peninsula of Cantyre, and after the subjugation of the Picts, and the union of the two kingdoms under Kenneth Mc Alpine, became identified with the general population of the country. In the legends of romance, this part of Scotland is celebrated as the principal scene of the exploits of the heroes of the race of Fingal, and as the birthplace of the bard Ossian, whose poems are still the subject of deeply-interesting research among the learned. Ossian is said to have been born in the valley of Glencoe; and the county, which abounds with numerous localities connected with the achievements of his heroes, still retains, in a very high degree, that spirit of feudal vassalage for which it was for ages pre-eminently remarkable. The family of Campbell, long distinguished as the principal of that extensive and powerful clan, and ancestors of the Dukes of Argyll, for many generations possessed an absolute and sovereign authority over their vassals, who on every occasion rallied round the standard of their chieftain, with all the fidelity of kindred attachment, and tendered the most arduous services with implicit submission to his control.

Prior to the Reformation, the county was for centuries the seat of a diocese, the bishop of which resided on the island of Lismore (between the main land and the isle of Mull), where the cathedral church was situated; and the jurisdiction extended over all the adjacent islands, including those of Bute and Arran. Since that period, it has constituted the chief part of the synod of Argyll, comprising the presbyteries of Inverary, Dunoon, Cantyre, Islay and Jura, Lorn, and Mull; and about fifty parishes. For civil purposes, the county is divided into the districts of Argyll, Cowal, Islay, Cantyre, Lorn, and Mull; and is under the jurisdiction of a sheriff-depute, by whom three sheriffs-substitute are appointed, who reside respectively at Inverary, which is the county town, at Campbelltown, and Tobermory. The courts of assize and general quarter-sessions are held at Inverary; and courts for the recovery of small debts are held four times in the year at Oban, Lochgilphead, Dunoon, and Bowmore; and twice in the year at Strontian. The royal burghs are Inverary and Campbelltown; and in addition to the other places above noticed, the county contains the small towns of Ballinchulish and Tobermory, the village of Ardrissaig, &c. Under the act of the 2nd of William IV., the county returns one member to the imperial parliament; and the royal burghs of Inverary and Campbelltown, with the parliamentary burgh of Oban, unite with Ayr and Irvine, in the county of Ayr, in returning another member.

The SURFACE is generally wild and mountainous, especially towards the north, where it borders on the Grampian range; and even along the coasts, which form a line of more than 600 miles, and where the land is lowest, there are numerous hills of very considerable elevation. The most mountainous parts of the county are, however, interspersed with pleasing and fertile tracts of valley, watered by streams, on the banks of which are some productive arable lands; and in many places the slopes of the hills afford good pasture. Of the numerous *Islands* that are included within the limits of the county, the principal are Mull, Jura, Islay, Coll, Tiree, Colonsay, Lismore, and Oronsay, with smaller islands, all of which are noticed under their respective heads. Between these islands and the main land are several extensive sounds, the principal of which are, the Sound of Mull, between the island of that name and the main land; and the Sound of Jura, separating that island from the continent: the Sound of Islay is between the isles of Jura and Islay, and the Firth of Clyde separates part of Argyllshire on the west from the counties of Ayr and Renfrew on the east. The most prominent *Mountains* are, the Cruachan, rising from the north-eastern extremity of Loch Awe, to the height of 3390 feet; the Cruachlussa, in the district of Knapdale, attaining an elevation of 3000 feet; Benreisipoll, in Arduamurchan, 2661 feet in height; Buchael-Etive, near Loch Etive, towards the north, rising 2537 feet above the sea; the Paps of Jura, in the isle of Jura, 2476 feet in height; and Beininturk, in Cantyre, which has an elevation of 2170 feet.

The coasts are deeply indented with arms of the sea, constituting salt-water lochs of considerable extent. Among these is *Loch Fine*, which is of very great depth, sixty miles in length, and varying from two to three miles in breadth, and on the shore of which is situated

the town of Inverary: its great depth is thought to be one cause of the superior quality of its herrings. *Loch Linnhe* lies between the districts of Morven and Lorn, and is the source of most of the inland lakes which form the Caledonian canal; the scenery on both its shores is strikingly romantic, and the borders are thickly interspersed with the remains of ancient fortresses, and enlivened with numerous handsome residences. *Loch Long* extends from the Firth of Clyde, for nearly twenty-two miles, into the land, separating the county from that of Dumbarton; and from the west side of this arm of the sea branches off *Loch Goil*, crowned on its precipitous banks with the ruins of Castle Carrick, a royal residence, of which His Grace the Duke of Argyll is hereditary keeper. Of the inland lakes of the county, by far the most extensive is *Loch Awe*, about twenty-eight miles in length, and from one to two miles in breadth; it abounds with salmon, eels, and trout, and from one side of it issues a stream called the Awe, which flows through the magnificent pass of Brander into the Loch Etive, at Bunawe ferry. The pass of Brander, which was the scene of a battle between Robert Bruce and Mac Dougall of Lorn, seems to have been formed by some violent convulsion, causing the rare circumstance in nature of a lateral escape of water from a lake. *Loch Etive*, a lake of much smaller extent, communicates with Loch Awe by the river Awe, and on the west with the Sound of Mull, from which it forms an inlet, nearly opposite the island of Lismore: on the north shore are the ruins of the ancient priory of Ardochattan. There are several smaller lakes, but none of sufficient importance to require particular notice; also numerous streams intersecting the lands in various places, few or none of which, however, are navigable.

The quantity of land which is arable and in cultivation is little more than 100,000 acres; about 30,000 acres are in woodland and plantations, and the remainder, nearly 1,300,000 acres, with the exception of about 25,000 in inland lakes and rivers, is principally heath, and hill and mountain pasture. The soil of the arable land is extremely various. Along the coasts, it is generally a light gravelly loam, resting upon a clayey bottom, and differing in fertility in different places. On the lower grounds, in some parts, is a mixture of clayey loam; in others, a kind of black mossy earth; and on the slopes of the hills, a light gravelly soil. The system of agriculture is moderately improved, and the rotation plan of husbandry is growing into use. The chief crops are oats, bear, and potatoes, with peas and beans, and various green crops; the cultivation of turnips has been extensively introduced. Wheat of excellent quality has been raised, but though the soil in many parts is favourable to its growth, very little attention is paid to its culture. Flax, for domestic use, is raised in considerable quantities. The cattle are principally of the black West Highland breed, and, being in much demand, on account of the superior beef they afford, are reared to a great extent throughout the county, especially in the islands: next to sheep, they form the staple trade of the county. The sheep-farms are in general very extensive, and the stock is principally of the Linton or black-faced breed, though the Cheviot breed, which has been lately introduced in some places, has been found equally well adapted to the pastures, and more profitable.

The chief *Substrata* are, limestone, which is very abundant, and freestone of various kinds and colours, some fine specimens of which are found in Cantyre, and also in Glenorchy. Slate is abundant in the neighbourhood of Easdale, and is also wrought in the district of Appin. Near Inverary is a kind of granite which is susceptible of a high polish, resembling spotted marble; and there are quarries of marble in Lorn, on the estate of Lochiel, and in the island of Tiree, which last is of very beautiful quality. Coal is found near Campbelltown, and is wrought for the supply of that district; there are also indications of coal in Morven, and in the isle of Mull. Lead-ore has been wrought at Strontian, and found in other places; a copper-mine has been opened in the parish of Kilmalie, and there are numerous vestiges of ancient iron-works in the mountains, though no ore of sufficient quality to remunerate the expense of working it is now found. The greater portion of the county was formerly covered with *Woods*, of which but very small remains now exist: the deficiency has been partly supplied by modern plantations, especially on the lands of the Duke of Argyll. The soil and climate are well adapted to the growth of timber of every kind: the most flourishing descriptions at present are oak, beech, elm, plane, birch, ash, chesnut, larch, and Scotch spruce, and silver firs; and within the last few years plantations have been gradually increasing. The principal manufacture is that of wool, which has been made into carpets, under the auspices of the Duke of Argyll; but it is limited to a very small extent. The spinning of flax is carried on, for domestic use. There are several distilleries, tanneries, and some bleach-fields; and the herring-fishery in Loch Fine is on an extensive scale. Facility of intercourse has been obtained by the formation of roads in various directions, and canals; and from the inlets from the sea, every advantage of steam navigation is obtained. The annual value of real property in the county is £262,273, of which £232,441 are returned for lands, £25,362 for houses, £1430 for fisheries, and the remainder for other species of real property. There are numerous remains of ancient castles, forts, Danish encampments, monasteries and other religious houses, cairns, tumuli, Druidical remains, vitrified forts, many Fingalian relics, and other monuments of antiquity, all of which are noticed in the articles on the several localities where they occur. The county confers the title of Duke on the celebrated family of Campbell, who were created Earls of Argyll in 1457, advanced to the Marquessate in 1641, and made Dukes in 1701, and who also bear several dignities named after different divisions of the county.

ARINANGOUR, a village, in the island of COLL, parish of TIREE and COLL, county of ARGYLL; containing about 170 inhabitants. This place, which is situated about the middle of the island of Coll, contains the only harbour of any note in that portion of the parish. It has a pier, and is considered a safe retreat for shipping, but has the disadvantage of a rocky entrance.

ARMADALE, a village, in the parish of BATHGATE, county of LINLITHGOW, 2 miles (W.) from Bathgate; containing 121 inhabitants. It derives its name from an estate in the vicinity, which once belonged to a senator in the college of justice whose title was Lord Armadale, being taken from the estate. The road from Linlithgow to Whitburn runs through the village, and

it is also situated on one of the great roads between Edinburgh and Glasgow, from which cities it is nearly equidistant. The population is employed in agriculture, and in the mines and quarries of the neighbourhood.

ARNGASK, a parish, in the counties of FIFE, KINROSS, and PERTH, 6 miles (N. N. E) from Kinross; containing, with the villages of Damhead and Duncrivie, 750 inhabitants. This parish constitutes a portion of the Ochil hills, and is situated around the junction of the counties of Perth, Fife, and Kinross, at Damhead. It is nearly of a circular figure, and extends in length four miles from east to west, and about three from north to south, comprising 6116 acres, of which 4590 are arable, 1291 uncultivated, and the remainder plantations, formed chiefly within the last thirty or forty years. The surface is in general hilly, consisting of numerous undulations and smooth round eminences varying from 600 to 800 feet in height above the level of the sea. Some of them are picturesque and well-wooded, and among the many points commanding extensive and interesting views, that of Cairn-Geddes, a part of the lands of Fordel, is especially worthy of notice, as affording a diversified and magnificent prospect embracing the Firth of Tay, the Carse of Gowrie, the Sidlaw hills, the upper portion of Strathearn, and a large section of the Grampians. The Farg, a fine trout-stream much frequented by anglers, rising near the western boundary, separates the parish for more than a mile from that of Forgardenny, and divides, in its onward course till it reaches Damhead, the counties of Perth and Kinross; after which it runs between the counties of Perth and Fife, till it departs from this locality, in about the centre of the celebrated and romantic glen to which it gives its name.

The uncultivated part of the land contains large tracts of a moorish or heathy soil; but the soil which prevails in other portions is mostly a good black loamy earth, partially formed from the decomposition of the trap or whinstone rocks, and, though light and shallow in some places, is generally rich. It produces abundant crops, consisting of the ordinary sorts of grain (including wheat), peas, potatoes, turnips, and grass for hay. In consequence of the introduction of bone manure, turnip husbandry has within these few years been greatly extended, the root being eaten off the ground by the sheep, to the decided advantage of the soil. The parish contains four mills for grinding corn, and twenty-two for threshing, twenty of which are worked by horses, one by steam, and the other by water. The annual value of real property in the parish is £4394, of which £1909 are for the Fife portion, £1344 for the Kinross portion, and £1141 for that in Perthshire.

Duncrivie village is pleasantly situated at the southern extremity of the parish: and Damhead lies in the vale through which passes the great north road from Edinburgh to Aberdeen: it has a post-office, established in 1838, in connexion with Kinross on the south, and Bridge of Earn on the north. About eight hand-loom are in operation, and there is a saw-mill worked by water. Cattle-fairs are held at Damhead on the last Tuesday in April (O. S.), the first Thursday in August, and the first Tuesday in October; there is also a cattle-market which has been held from time immemorial at Lustielaw, on the third Tuesday in May (O. S.). Ecclesiastically the parish is in the presbytery of Perth,

synod of Perth and Stirling, and in the joint patronage of Mrs. Wardlaw, and Robert Low, Esq., of Fordels; the minister's stipend is £178. 19. 10., with a manse and offices, built in 1829, and a glebe valued at £9. 13. 4. per annum. The church, which is pleasantly and conveniently situated, is a plain substantial edifice; it was built in 1806, and contained 240 sittings previously to 1821, at which period 140 additional sittings were obtained by the erection of galleries. The parochial school affords instruction in Latin and Greek, in addition to the usual branches; the master has a salary of £34, including allowance for garden, besides £26 fees.

ARNPRIOR, a hamlet, in the parish of KIPPEN, county of PERTH; containing 96 inhabitants. It is situated to the south of the river Forth, and had anciently a castle, of which the remains may be traced.—See KIPPEN.

ARNTULLY, county of PERTH.—See AIRNTULLY.

ARNYFOUL, a hamlet, in the parish of GLAMMIS, county of FORFAR; containing 73 inhabitants.

ARRAN, an island, in the county of BUTE; comprising the parishes of Kilbride and Kilmory, and containing 6241 inhabitants. This island, called *Glotta Astuarium* by the Romans, is situated in the Firth of Clyde, between the coast of Ayrshire, which is on the east, distant about thirteen miles, and Cantyre, in Argyllshire, lying to the west, and distant about six miles. It is of an oval form, indented by bays, and extending thirty miles in length, and fifteen in its greatest breadth. The surface throughout is rugged and mountainous, and intersected with mossy glens, whence streams, flowing from the heights, make their course to the sea. Arran is highly interesting to the geologist, on account of its presenting, within a narrow space, an epitome of the whole geological structure of Scotland; while its pathless glens and picturesque hills commend it equally to visitors in general. There are several safe and commodious harbours, of which that of Lamplash, on the east side, will afford good anchorage to several hundred vessels; and the Cock of Arran, on the northern extremity, is a well-known landmark. The higher parts of the island are rocky and sterile, and generally covered with fern and heath; but in the valleys, and in the vicinity of the lakes, which are five in number, the soil is moderately fertile, though not well cultivated. Coal and limestone are said to exist; freestone, ironstone, and marble are abundant, and jasper has been found on Goat-Fell, a hill above 3000 feet in height. There are several cairns, some remains of Druidical edifices, ruins of ancient fortresses, and some natural caves remarkable for their great extent; and various places exhibit marks of volcanic fire. Arran is the property of the Duke of Hamilton, and gives the title of Earl to his grace.—See KILBRIDE, and KILMORY.

ARROCHAR, a parish, in the county of DUMBAR-TON, 22 miles (N. N. W.) from Dumbarton, and 22 (E. S. E.) from Inverary; containing 580 inhabitants. The name of this place, which at different times has been variously spelt, is derived from a Gaelic term signifying "high" or "hilly", in reference to the nature of the ground. The parish is remarkable for the magnificence of its scenery, and is much resorted to by tourists on account of the peculiar and numerous attractions which it presents, as well as from the excellence of the inns, the good order of the roads, and other advantages.

Arrochar was disjoined from the parish of Luss in 1658. It is about fifteen miles long and three broad, and contains 31,000 acres; including two farms named Ardleish and Doune, which lie on the east side of Loch Lomond, and occupy the north-eastern extremity of the parish, almost separated from the main portion by the lake. The parish is bounded on the north by the parish of Strathfillan, in Perthshire; on the south by the water of Douglass, and part of the parish of Luss; on the east, by Loch Lomond; and on the west, by Loch Long, and part of Argyllshire. The surface is altogether hilly and mountainous. It has about fourteen miles of coast bounding Loch Lomond, and a coast of three miles extending along Loch Long: on the Lomond side, the shore is flat and sandy, and diversified by numerous bays and headlands. The mountain of Ben-Vorlich, clothed with rich pasture, is the most elevated in the parish, rising 3000 feet above the sea; it is frequented by white hares, ptarmigan, and various kinds of wild fowl. There are four rivers, none of which are of large size; viz., the Falloch, the Inveruglass, the Douglass, and the Linnhe, the three first of them running into Loch Lomond, and the last into Loch Long. Loch Lomond, which is twenty-four miles long, in some parts seven broad, and varies in depth from sixty to 100 fathoms, abounds with bold and romantic scenery, and is considered the finest sheet of water throughout the country. It contains salmon, trout, pike, perch, eels, and also powans, generally called fresh-water herrings. Loch Long is about twenty-one miles in length and one and a half or two in breadth; its depth is from ten to twenty fathoms. The fish found in it are halibut, soles, flounders, whittings, skate, lythe, sethe, cod, salmon, trout, herrings, &c. Its banks in some parts exhibit fine picturesque breaks, especially at the opening of Loch Goil; and towards its head the scenery is equal to any part of Lomond. There are some beautiful cascades in the parish.

The SOIL, except in some districts, is thin and poor, and only about 300 or 400 acres are arable; a considerable number of acres are under wood, and on the shores of Loch Lomond are large plantations of oak, which are annually thinned; the remaining land consists of indifferent pasture. The sheep are the black-faced, and the cattle comprise both the native breed and those introduced from Argyllshire. Some waste, to the extent of about fifty acres, has been reclaimed within these few years. The inclosures and farm-buildings generally are in an indifferent state. The rocks consist for the most part of mica slate; in some parts are traces of iron-ore, and there are two whinstone quarries near the whinstone dyke between Lochs Lomond and Long. The annual value of real property in the parish is £3096.

The parish contains two small villages; in addition to which, a considerable number of houses have been erected within the last few years for sea-bathing visitors. Among the inns is one which ranks with the most commodious and excellent in Scotland, and which, before being converted to its present use, was the mansion of the chief of the Macfarlane clan. During the summer months, a coach runs daily from Inverary to Tarbet in the morning, and returns in the afternoon; and vehicles of every description may be obtained at the inns of Tarbet and Arrochar, to which visitors come from all

parts to view the scenery in the neighbourhood of the lakes. Steam-boats run on Loch Lomond and Loch Long from May till October. Another plies between Arrochar and Glasgow; and ships with coal and lime from Glasgow and Ireland frequently come to the head of Loch Long, whence, also, wool is often sent to the market of Liverpool. A herring-fishery is carried on in Loch Long, with considerable profit, during the months of June and July, the boats afterwards proceeding successively to Loch Fine and the neighbourhood of Campbelltown, where they fish to the end of the season. Each boat contains about three men, and produces in the season from £30 to £60.

Ecclesiastically the parish is within the bounds of the presbytery of Dumbarton and synod of Glasgow and Ayr; the patronage belongs to Sir James Colquhoun, Bart., and the minister's stipend is £241, with a glebe worth £13 a year, and a manse erected in 1837. The church, situated in a corner of the parish, was built in 1733, and is in indifferent repair; it contains 300 sittings. A place of worship has been erected in connexion with the Free Church. There is a parochial school, in which the ordinary branches of education are taught; the master has the maximum salary of £34. 4., with £8 fees, and a house. Another school, privately endowed, affords instruction in the classics, mathematics, and the other usual subjects; the master receives £25 from the resident proprietor of land, and about £15 or £20 fees.

ARTHURLEE, CROSS, a village, in the former quoad sacra parish of BARRHEAD, parish of NEILSTON, Upper ward of the county of RENFREW; containing 663 inhabitants. This place owes its origin to the establishment of a bleachfield in its vicinity, by a gentleman named Adair, about the year 1773. It was chosen by him as a most suitable situation for works of this nature, and his example having been followed by others, the neighbourhood has since become a considerable bleaching district. The village is situated in the north-eastern part of the parish, and not far distant from the village of Barrhead.

ARTHURLEE, WEST, a village, in the parish of NEILSTON, Upper ward of the county of RENFREW, $\frac{1}{2}$ a mile (W.) from the village of Barrhead; containing 441 inhabitants. This village, which is situated a little to the west of the road between Neilston and Barrhead, owes its origin to the introduction of the cotton manufacture, and is chiefly inhabited by persons employed in the bleaching and printing establishments connected with that trade.

ASHKIRK, a parish, partly in the county of SELKIRK, but chiefly in the district of HAWICK, county of ROXBURGH, 6 miles (S.) from Selkirk; containing 563 inhabitants. The name of this place is said to have been derived from the great number of ash-trees with which the neighbourhood abounded, and of which a considerable number is still remaining. Ashkirk was formerly part of the see of Glasgow, and the occasional residence of the bishops, who had a palace here, some slight vestiges of which might lately be traced in a field retaining the name of Palace Walls. The parish is about seven miles in length, and three miles and a half in breadth, comprising about 3000 acres under cultivation, 400 in woods and plantations, and a considerable portion of waste. The surface is generally hilly, with

tracts of level land in the intervals between the hills and the narrow valley of the Ale. The Ale has its source in the lakes of Ale Moor and Shaws, and flowing through the parish in a direction from west to east, divides it into two nearly equal portions; it abounds with trout of excellent quality, and a few sea-trout and small salmon are occasionally taken in it after floods. There were formerly numerous lakes in the parish, but from the practice of draining the lands, many of them have disappeared. The principal now remaining are, Essenside loch, covering about twenty acres of ground; and the Sheilwood loch and Headshaw loch, both of which are of smaller dimensions: they all abound with perch, pike, and trout; and afford good sport to the angler. Synton Moss, once a very extensive lake, has been completely drained for the sake of obtaining the marl and peat with which it abounded, and which have been successfully applied to the improvement of the lands. In this moss, many interesting organic remains are occasionally dug up.

The soil is generally light, in some places clay mixed with gravel, and in others a rich loam; the chief crops being oats, barley, wheat, potatoes, and turnips. The system of agriculture is improved, and the farm-houses are tolerable, but the cottages are in general very wretched. Some few dairy-farms are managed with great care, and the butter produced here is of excellent quality. Considerable attention is paid to the rearing of live stock, upon which the main dependence is placed: the sheep are almost exclusively of the Cheviot breed, with occasionally a mixture of the Cheviot and the Leicestershire; and the cattle are of the short-boned breed, which are found to be the best adapted to the lands. A few Highland cattle are pastured here during the winter. There appears to have been formerly a great abundance of natural wood, but very little ancient timber at present remains: the plantations are larch, spruce, and Scotch firs, intermixed with oak, ash, elm, and other forest-trees; they are all of modern formation, and are in a thriving state. The annual value of real property in the Roxburgh portion of the parish is £3483, and in the Selkirk portion, £1510. The rocks belong to the transition series, and consist almost entirely of grey-wacke with a basis of clay-slate: the general direction of the stratification is from south-west to north-east.

The parish is in the presbytery of Selkirk and synod of Merse and Teviotdale: the minister's stipend is £205. 12. 9., with a manse, and a glebe valued at £28 per annum; patron, the Earl of Minto. Ashkirk church, erected in 1791, is a plain substantial edifice adapted for about 200 persons. A place of worship has been erected in connexion with the Free Church. The parochial school is attended by about 80 children; the master's salary is the maximum, with about £16 fees, and a house and garden. There are remains of two Danish encampments on the lands of Castleside, one of which is in good preservation, but the other is almost obliterated by the plough. On the lands of Salineside was formerly a very strong tower, of which there are scarcely more than some slight vestiges; and in various parts of the parish are remains of ancient encampments. The farm of Whitsled, in the parish, is the scene of the popular and very ancient Scottish song "The Ewe-buchts": the "merry knows" mentioned in the song still retain the name.

ASSYNT, a parish, in the county of SUTHERLAND, 30 miles (N. W. by W.) from Dornoch; containing, with the former quoad sacra district of Stoer, and the village of Lochinver, 3178 inhabitants. This place is supposed to take its name from its irregular boundary line, the Gaelic term, *as agus innle*, signifying "out and in". It was once a forest of the ancient Thanes of Sutherland, one of whom gave it in vassalage to Mac-Kry-Cul, who held that part of the coast of Coigach afterwards called the village of Ullapool, as a reward for his having recovered a great number of cattle that had been carried off from the county of Sutherland by the Scandinavians, who had also burnt the great fir forests on this and the neighbouring coast. Mac-Kry-Cul's family being reduced by the disasters of war to one heir female, she was given in marriage to a younger son of McLeod, laird of Lewis, with the consent of the Thane of Sutherland, who made this parish over to the newly-married couple, with its superiority. After this event, there were fourteen successive lairds of the name of McLeod. About 1660, the parish and its superiority became the property of the Earl of Seaforth, from whom it passed to a younger son of his family, whose successors possessed it for three or four generations; and it was afterwards purchased by Lady Strathnaver, who presented it to her grandson, William, Earl of Sutherland, from whom it has descended to the present Duke of Sutherland.

The extreme length of the parish is about thirty-six miles, and its greatest breadth eighteen; containing an area of 97,000 acres. It is situated in the north-west part of the county, and divided on the north from the parish of Eddrachillis, in the Reay country, by an arm of the sea called the Kyle: on the west it is bounded by the Atlantic Ocean. The coast, which is about thirty miles in extent, is bold, rocky, and dangerous, and has several extensive and interesting caves; but in some places there is a fine sandy bottom, with safe landing. Attached to the parish are numerous islands, some of which are merely bare rocks affording neither pasture nor shelter: the most considerable is Oldney, which is about a mile long and a quarter of a mile wide, and is used for the pasturage of sheep; the other islands are Crona, Soya, and Klett. The appearance of the district is altogether wild and mountainous, and its scenery romantic; the most remarkable heights are Benmore, Cuniack, Suilvhen, and Cannisb, of which Benmore, the highest mountain, rises about 3230 feet above the level of the sea. The hills, also, are very numerous, and most of them abound with springs of excellent water. There are several fine lakes, among which that of Assynt is pre-eminent: it is seven miles and a half long, and about a mile broad, with banks in most places covered with brushwood; it abounds in trout, and is distinguished for its striking and singularly picturesque scenery.

The principal part of the parish is employed in sheep-farming, to which much attention is paid. The larger number of the population dwell along the shores, and avail themselves of the advantages offered for fishing, from which, together with their small allotments of land, they draw their subsistence. Game is plentiful. There is some sandstone rock, but limestone is the prevailing formation, of which an immense ridge on the Stronchrubic farm extends about a mile and a half, overhanging the public road, being mantled in many places with

ivy, and forming a covert for birds of prey. The annual value of real property in the parish is £1212. The village of Lochinver has several good houses and shops, and near it is a manufactory for preserving butcher's meat, fish, and vegetables, fresh, for the purpose of being carried out to sea; there is a post-office here, and another near the church. Excellent roads have been formed, to the extent of forty miles, as well as numerous roads for local use. At Lochinver is a small harbour with a pier, and several creeks afford shelter and anchorage. There are two small fisheries let at a moderate rent, and one or two vessels belong to Assynt, besides which, several come in the herring season to fish on the coasts, and a few to take away the disposable produce of the parish, which consists chiefly of wool. An annual cattle-fair has been established at Inchnadaff.

Ecclesiastically the parish is within the bounds of the presbytery of Dornoch and synod of Sutherland and Caithness; the Duke of Sutherland is patron, and the stipend of the minister is £158. 6. 8., with a glebe worth about £36 per annum, and a manse. The church, a small building seating about 280 persons, is inconveniently situated nine miles from the southern boundary of the parish, the great bulk of the population residing at distances of from twelve to eighteen miles; it was built about sixty or seventy years since, and has been extensively repaired. There are two preaching stations, one at Lochinver, fourteen miles from the church, and the other at Kyle side, nearly the same distance, the services of which are performed by the parochial minister. At Stoer is a government church, built in 1829. A place of worship has been erected in the parish in connexion with the Free Church. Here is a parochial school, the master of which receives a salary of £34; and several other schools are supported by general societies for promoting education. Among the antiquities are, Ardvrack Castle, built by the Mc Leods about the year 1590, and now in ruins; Calda House, erected by the Mc Kenzies; and a large Druidical temple.

ATHELSTANEFORD, a parish, in the county of HADDINGTON, 3 miles (N. E. by N.) from Haddington, and 9 (W.) from Dunbar; containing 991 inhabitants, of whom 274 are in the village. This place, which is noticed by Camden, is said to have derived its name from Athelstan, an English warrior, who was killed in battle together with the greater number of his forces, about the commencement of the ninth century, and was interred here. The parish is about four miles in length and three in breadth, and bounded on the north by the streamlet of the West Peffer. Its surface is abruptly irregular, consisting of large tracts of low land, and elevated ridges of rock sloping in some places gently towards the plain, and in others forming a nearly horizontal level of considerable height. The scenery is greatly diversified, affording in parts a striking contrast of richly cultivated fields and barren and rugged rocks. From the higher grounds are obtained extensive and interesting views of the Firth of Forth, the Bass rock, and the county of Fife. The lands are watered by the two branches of the Peffer stream, which rises in a meadow in the lowlands: the East Peffer joins the sea below Tynninghame bay; whilst the West Peffer, flowing westward, falls into Aberlady bay. The channel of the Peffer was widened, and made deeper, some years since, on which occasion several stags' horns were found, at a depth of nearly

three feet below the surface of its bed, and large oaks were discovered embedded in moss on the banks, which, previously to the practice of draining the lands, were nearly covered with the water that stagnated on the adjoining woodlands.

The number of acres in the parish has been estimated at more than 4000, of which nearly 3800 are arable, and the remainder, with the exception of about fifty acres of hilly pasture, are in woods and plantations. The soil has been much improved by draining, and great quantities of marshy and unprofitable land have been rendered fertile; the chief crops are, wheat, for which the soil is extremely favourable, oats, barley, potatoes, and turnips. A considerable number of sheep are reared, and fed principally on turnips. The substrata are mostly whinstone and porphyry, of which the rocks consist: coal is supposed to exist, but it lies at so great a depth from the surface that none has yet been discovered. Some beautiful specimens of rock crystal are found in the quarries, which are wrought for building purposes and for the roads. The annual value of real property in the parish is £7996. Gilmerton House, the property of Sir David Kinloch, Bart., is a splendid seat. The only other residence of note in the parish is an ancient baronial mansion formerly belonging to the Earls of Winton, a quadrilateral building, of which a small part only is now inhabited, and the remainder is in ruins; the principal room is still preserved, and attached to the house are a large garden and a bowling-green. Great facility of intercourse is afforded to the inhabitants by the North-*British* railway, and its North *Berwick* branch.

For ecclesiastical purposes the parish is within the bounds of the presbytery of Haddington, synod of Lothian and Tweeddale. Sir David Kinloch, Bart., is patron, and the stipend of the incumbent is £262; the manse is a comfortable residence, and the glebe comprises five acres, valued at £15 per annum. The old church, which belonged to the monastery founded at Haddington by Ada, Countess of Northumberland, mother of Malcolm IV., was used till the year 1780, when, falling into a dilapidated state, the present church was erected, in a more convenient situation, for a congregation of 500 persons. The parochial school affords education to about eighty scholars; the master has a salary of £35. 10., with a house and garden, and the fees are £48: the schoolroom is one of the best in the county. On the spot where Athelstan is said to have been buried, a stone coffin was found by some men who were quarrying stone for mending the roads, a few years since. This coffin, consisting of five stones cemented together, was lodged in the rock, which had been excavated for its reception, about two feet below the surface, and contained a human skeleton in a state of almost total decomposition. The lands on which the battle was fought, were anciently given by the king of Scotland to the Culdee priory of St. Andrew's, in acknowledgment of the victory obtained; and at the Revolution of 1688, they were bestowed upon the royal chapel of Holyrood House. On the lands constituting the barony of Drem are the remains of a Pictish town, consisting of various houses built round the brow of a low hill of conical form, which had been strongly fortified by three tiers of ramparts, with a deep circumvallation below: these works are supposed to have been thrown up as a defence against the Romans, who had a station about half a mile distant, on the alleged site of

which, various Roman relics have been found, including an urn of superior workmanship containing burnt bones. There are some remains of the ancient church, built in the early part of the twelfth century by Ada, and in which service was originally performed by the monks of Haddington.

Among the eminent men of the place, has been the Rev. Robert Blair, author of *The Grave*, who was for fifteen years incumbent, and was interred in the churchyard, in which a monument was erected to his memory. His son, the late Robert Blair, lord president of the court of session, was born here, during the incumbency of his father. John Home, author of the tragedy of *Douglas*, was incumbent after the death of the Rev. Robert Blair; and Archibald Skirving, an eminent portrait painter, who, having perfected himself in the study of his profession at Rome, exercised it here for many years with great success, was a native of the parish.

AUCHINBLAE, a village, in the parish of FORDOUN, county of KINCARDINE, 5 miles (N. by E.) from Laurencekirk; containing 643 inhabitants. This place, the name of which signifies "the field of blossoms", is situated on the banks of the Luther water, and on the side of a fine valley, gently sloping to the south. It contains several well-built houses, and has risen into consideration within the last half century, the population finding employment from the increase of the trade and manufactures, the principal of which latter are yarn and brown linen. The place has been erected into a burgh of barony, and is governed by a baron-bailie appointed by the Earl of Kintore. Fairs are held in April and May, and, during the winter portion of the year, markets on every Friday, for the sale of cattle and grain.—See FORDOUN.

AUCHINCAIRN, a village, in the parish of RERRICK, stewartry of KIRKCUDBRIGHT, 7 miles (E.) from Kirkcudbright; containing 373 inhabitants. It is seated at the north-western extremity of the fine bay of Auchincairn, or Balcarry, which is about two miles in length and one in breadth. The bay has a beach of smooth and firm sand, and small vessels may load and unload on any part of it; on the west side is a large natural basin, where ships of burthen find safe anchorage in the most stormy weather, and at every point of the wind. A post is established here, under the Castle-Douglas office; and a fair is held annually in August, but very little business is now transacted at it. In the village are places of worship for Baptists and the Free Church: here is one of the parochial schools, and children are also taught in the Baptist place of worship.

AUCHINCRAW, a village, in the parish of COLDINGHAM, county of BERWICK, 2 miles (N. W.) from Ayton; containing 203 inhabitants. It is situated at the boundary of the parish; and upon the height called Warlaw, to the west, is a camp of oval form covering an area of five or six acres of very poor moorland, but respecting which both history and tradition are silent. In the village is a school connected with the Synod of United Original Seceders.

AUCHINDOIR and KEARN, a parish, in the district of ALFORD, county of ABERDEEN, 36 miles (W. N. W.) from Aberdeen; containing 1188 inhabitants. The name Auchindoir, which is of Gaelic origin, and signifies "the field of pursuit", is supposed to have been applied from the circumstance of Luthlac, son of Mac-

both, having been pursued through the valley of Auchindoir to that of Bogie, where he was overtaken and slain by Malcolm. Kern is said to be a corruption of *Cairn*, there being a remarkable cairn or tumulus in that district, of the history of which nothing, however, is known. The two places were united in 1811, previously to which Kern was joined to Forbes. The length of the habitable part is about seven miles, the breadth nearly the same, and the parishes together contain about 15,600 acres under cultivation, and 2100 under plantation and natural wood, besides pasture and waste. The surface is varied and irregular, consisting of numerous hills and pleasing valleys, ridges, and mountains, some of which are covered with wood, and have a considerable elevation; Correen, in the southern quarter, is about 1350, and the Buck of the Cabrach, in the west, 2377 feet above the sea. In the higher parts the climate is cold and bleak, exposed to severe frosts and heavy falls of snow, but in the lower and more sheltered places it is temperate and salubrious. The river Bogie, which is formed by the junction of the Craig and Corchinan burns at the manse, after pursuing a serpentine course of about eleven miles through a fine valley, joins the Doveron at Huntly: it is plentifully supplied with fine trout. The Don runs for about two miles on the south-east; and the small stream of Mossat divides the parish from Kildrummy on the south.

The *SOIL* presents a considerable variety, consisting in some parts of a rich alluvial loam, and in other places of clay, with a large proportion of sand and pebbles. In the lower grounds it is in general sharp, dry, and fertile, but towards the hills mossy and poor. The quantity of arable land is on the increase; much barren land has been reclaimed, and the method of cultivation has recently been considerably improved: the houses and cottages, also, are in a much better condition than they were thirty or forty years since. The annual value of real property in the parish is £3600. The plantations are numerous and extensive, and comprise trees of all the kinds usually reared. Sandstone of excellent quality is found, as well as limestone, and whinstone is also in great abundance. There are two gentlemen's seats, Craig and Druminnor, both of them of considerable antiquity, the former bearing the date 1518, and the latter, which was once the chief seat of the Forbes family, that of the year 1577. Near the castle of Craig is the "Den", a celebrated spot in this part of the country, surrounded by scenery of a varied and beautiful description, and much resorted to by tourists as an object of curiosity. The only village is Lumsden, which is of recent growth, and contains about 300 persons, chiefly traders and handicraftsmen. The main population of the parish is agricultural, being employed in the rural districts in cultivating the land, and in rearing cattle, for the sale of which four markets are held during the year. Here is a post-office. Ecclesiastically the parish is within the bounds of the presbytery of Alford and synod of Aberdeen; the Earl of Fife is patron. The minister's stipend is £158, part of which is received from the exchequer; there is a manse, erected in 1843, and the glebe is valued at £10 a year. The church, which was built in 1811, accommodates 450 persons. At Lumsden is a place of worship belonging to the United Presbyterian Synod. A place of worship has been erected in connexion with the Free Church; and

there is a parochial school, the master of which has a salary of £30, about £20 fees, and a house and garden. The moat or mount where the ancient *Castrum Auchindoriae*, mentioned by Boethius, seems to have stood, is still shown in the parish; and another most interesting relic of antiquity, situated near it, is the old parochial church, now a venerable ruin, attracting attention from its ivy-mantled walls, its fine Saxon gateway, and its inscriptions and sculpture.

AUCHINDRYNE, a village, in the parish of CRAITHIE and BRAEMAR, district of KINCARDINE O'NEIL, county of ABERDEEN; containing 174 inhabitants.

AUCHINEARN, OLD and NEW, a village, in the parish of CADDER, Lower ward of the county of LANARK; containing 561 inhabitants, chiefly employed in agriculture. In this village is situated one of the parochial schools, endowed with 1000 merks by the late Rev. James Warden, a former incumbent of the parish. In 1764 Dr. William Leechman, principal of the university of Glasgow, and then proprietor of this estate, gave in trust to the Kirk Session, a schoolroom and house for a teacher, with a small portion of land, on condition that they should appoint a master. The school-house was handsomely rebuilt in 1826, by the late Charles Stirling, Esq., assisted by Archibald Lamont, Esq., and other heritors. The master receives a salary of £8. 10., with £12 fees, and the interest of the Rev. James Warden's bequest. A library has lately been established in the village.

AUCHINLECK, a parish, in the district of KYLE, county of AYR, $1\frac{1}{2}$ mile (N. W.) from Old Cumnock; containing 1659 inhabitants, of whom about 600 are in the village. This place, the Celtic name of which is descriptive of its abounding with stone, is supposed to be of considerable antiquity. But little of its history is known prior to the commencement of the sixteenth century, when the manor, which belonged to a family of the same name, becoming forfeited to the crown, was granted by James IV. to Thomas Boswell, a branch of an ancient family in the county of Fife, ancestor of the biographer of Dr. Johnson, and who was killed at the battle of Flodden-field. The parish is about seventeen miles in length, from east to west, and not more than two miles in average breadth, comprising about 19,000 acres, of which 5000 are arable, 300 woodland and plantations, and 13,000 natural pasture and waste. Its surface is generally elevated, and towards the east the hills rise to a height of upwards of 1000 feet. A moss several miles in length called Aird's Moss, nearly in the centre of the parish, gives it a barren appearance. The vale of Glenmore, also, of considerable extent, and in a state of nature, presents features of wild aspect; but the more western portion of the parish, being wholly in cultivation, has an air of cheerfulness and fertility. The river Ayr forms for a small space a boundary between this parish and that of Muirkirk, and pursues its course into the parish of Sorn; while the Lugar, another river, separates Auchinleck for about five miles from Cumnock, and for about two miles from the parish of Ochiltrec, and flows into the river Ayr about a mile below this place, near the town of Mauchline.

The *SOIL* is various, generally a stiff retentive clay, but by draining and good management has in many parts been rendered productive. Some progress has been made in furrow-draining, and a portion of the

mossy land has been reclaimed and brought into cultivation. The chief crops are oats, potatoes, beans, and turnips, and there are a few acres of bear, barley, and wheat. The principal reliance of the farmers is on the dairy. A large number of milch-cows, mostly of the Ayrshire breed, are kept, and a great many young cattle are reared; the milk is chiefly made into cheese of the Dunlop kind, and sent to the markets of Glasgow and other towns. A considerable number of sheep are also fed, of the black-faced breed. The woods contain many fine specimens of stately timber of ancient growth, and the plantations are in general thriving and ornamental. The annual value of real property in the parish is £7497. The substrata are limestone, coal, ironstone, sandstone, and freestone of various sorts. The limestone and coal have been long extensively wrought, and of the former there are two large quarries, one on the lands of Auchinleck, producing annually about 50,000 bushels of excellent quality, and one belonging to the proprietor of Dalblair, yielding also a fair quantity. Near these is an inferior kind of coal, used for burning the lime. Coal-pits have also been opened on the lands of Mr. Alexander of Ballochmyle, on which, as well as on the Auchinleck property, steam-engines have been erected; the seams of coal vary in thickness, and in the depth at which they are found from the surface, and the average annual produce is about 8500 tons. Ironstone likewise abounds in the parish. Freestone, much esteemed for millstones, is quarried on the banks of the Lugar; and at Wallace-town is found a stone which is fire-proof. The present house of Auchinleck is a handsome mansion in the Grecian style, erected by Lord Auchinleck, and is situated in a diversified demesne, comprehending much beautiful scenery, richly wooded.

The village stands on the road from Glasgow to Carlisle, by Kilmarnock, and has a station on the Glasgow, Dumfries, and Carlisle railway. Many of the inhabitants are employed in weaving for the manufacturers of Paisley and Glasgow; the principal articles are light silks and muslins. Some females are also employed in flowering muslins in a variety of patterns, for which this neighbourhood is celebrated. The manufacture of snuff-boxes is carried on to a considerable extent; it was introduced into this place from Cumnock, and the workmen here manufacture card and needle cases, and ornamental boxes of various descriptions. The wood used for this purpose is plane-tree, and many of the specimens are painted in devices, tartan plaiding, and other patterns, and, being well varnished, have a very handsome appearance. They are quite equal in point of workmanship to those made at Laurencekirk, though sold at an inferior price. About sixty dozens are sometimes finished weekly, and sent off, chiefly to the London market, but the demand for them is very fluctuating: the principal manufactory is now at Mauchline. A fair for lambs is held on the last Tuesday in August, and is numerously attended. For ecclesiastical purposes the parish is in the presbytery of Ayr, synod of Glasgow and Ayr, and in the patronage of Sir James Boswell, Bart.; the minister's stipend is £161. 1. 11., with a manse, and a glebe valued at £10 per annum. The old church is an ancient edifice, to which an aisle was added by Lord Auchinleck in 1754; and underneath it is the burying-place of the Auchinleck family, hewn out of the solid rock. A new church

has been erected, near the site of the former; it is a substantial and handsome edifice, adapted for a congregation of 800 persons. There is a place of worship for the United Original Seceders. The parochial school is well attended; the master has a salary of £34. 4. 4½., with £10 fees, and a house and garden. In the grounds of Auchinleck House are some remains of the ancient castle, in a greatly dilapidated condition; and in the upper part of the parish, near the junction of the Gelt and Glenmore streams, are slight remains of the castle of Kyle, the history of which is involved in great uncertainty. On the banks of the Ayr, near the confines of the parish of Muirkirk, are the vestiges of some old iron-works, said to have been established by Lord Cathcart. William Murdoch, of the firm of Boulton and Watt, of Soho, near Birmingham, and who first applied gas for the illumination of buildings, was a native of this parish.

AUCHINLOCH, a hamlet, in the former quoad sacra parish of CHRYSTON, parish of CADDY, Lower ward of the county of LANARK, 2 miles (S.) from the town of Kirkintilloch; containing 138 inhabitants. This village has its name from a considerable loch now drained, and owes its origin to the mines of coal in its immediate vicinity, which have been worked on a moderate scale by its inhabitants, though the quality is scarcely good enough to remunerate the expense of obtaining it. There are also limestone-quarries, from which materials are raised for building and agricultural purposes, and for which works have been established at Garnkirk. In the village is a school endowed by Patrick Baird with £300, the interest whereof is paid annually to the master.

AUCHINMULLY, a village, in the parish of KILSYTH, county of STIRLING, 2 miles (E. N. E.) from Kilsyth; containing 212 inhabitants. It is also called Lower Banton, and is situated in the east barony division of the parish. On the south flows the river Kelvin, from which the village is distant about a mile.

AUCHINRAITH, a hamlet, in the parish of BLANTYRE, Middle ward of the county of LANARK; containing 77 inhabitants. It lies a short distance to the east of the village of Blantyre. The Alston family have a handsome seat here.

AUCHINTIBER, a hamlet, in the parish of BLANTYRE, Middle ward of the county of LANARK; containing 73 inhabitants. It is situated in the western part of the parish, on which side the Rotten-Calder water forms the boundary, and separates the parish from that of Kilbride.

AUCHLEVEN, a village, in the parish of PREMNAY, district of GARIOCH, county of ABERDEEN; containing 107 inhabitants. It is seated in the south of the parish, on the road from Insch to Keig, which at this place crosses the river Gady by a light bridge of two arches, built in 1836. The manufacture of woollen cloth is carried on here, on a small scale; and a corn-mill in the village is turned by the water of Gady.

AUCHMILLAN, a hamlet, in the parish of MAUCHLINE, district of KYLE, county of AYR, 2 miles (N. by E.) from Mauchline; containing 24 inhabitants. This place is situated, equidistantly, between the roads from Mauchline to Kilmallock and from Sorn Castle to Galston. The number of the population has latterly declined.

AUCHMITHIE, a village, in the parish of ST. VIGEAN'S, county of FORFAR, 3½ miles (N. E.) from Ar-

broath; containing 307 inhabitants. It stands upon the coast, on a high rocky bank which rises nearly 120 feet above the sea; and is irregularly built. There are several good houses, but the dwellings are chiefly those of fishermen, who form a large part of the population. The harbour is a level beach, formed by an opening between the rocks that here surround the coast: near the village is the Gaylet Pot, a remarkable cavern into which the sea flows. Divine service is performed in a small chapel by a minister of the Established Church.

AUCHNACRAIG, a village, in the parish of TOROSAY, island of MULL, county of ARGYLL, 18 miles (S. E.) from Aros. It is situated on the eastern coast of the island, and has a post-office establishment. There is also a regular ferry, first to Kerrera, and thence to the main land near Oban, affording facility for the transport of horses and cattle to the several markets; but the number at present ferried over is not so great as formerly.—See TOROSAY.

AUCHTERARDER, a town, the seat of a presbytery, and a parish, in the county of PERTH, $54\frac{1}{2}$ miles (N. W.) from Edinburgh; containing, with the village of Smithyhaugh, 3434 inhabitants, of whom 2068 are in the town. This place anciently belonged to the abbey of Inchaffray; and in 1328 the lands were granted by charter of Robert Bruce to Sir William Montifix, justiciary of Scotland, whose daughter and heiress conveyed them by marriage to Sir John Drummond, with whose descendants they remained till their forfeiture by the participation of that family in the rebellion of 1715. During that period of distraction, the town was laid waste and burnt by the Pretender's army, under the Earl of Mar, in order to check the progress of the royal forces. For this injury, indemnification was promised to the inhabitants, by proclamation issued from the ancient palace of Scone in 1716; but the only compensation they received was from the reigning family, to such of them as had not been concerned in the rebellion. The commissioners appointed to take charge of the forfeited estates, made a survey of the barony of Auchterarder in 1778, by which it appears that the inhabitants were in a very distressed condition, on account of the backward state of agriculture and the want of employment. From this depression, however, they have been gradually rising; and since the purchase of the estate by Captain Hunter, the place has rapidly improved.

This TOWN, which, upon disputed authority, is supposed to have been anciently a royal burgh, is situated on the turnpike-road from Glasgow to Perth, and has a station of the Scottish Central railway in its vicinity. It consists chiefly of one street, more than a mile in length, in which are some well-built houses, and numerous other dwellings of inferior appearance, occupied by weavers and manufacturers. The inhabitants are amply supplied with pure water, from a copious spring conveyed by pipes into their houses, mainly through the exertions of Captain Aytoun, of the Royal Artillery, in 1832. The chief trades are, the weaving of cotton for the manufacturers of Glasgow, in which more than 500 looms are in constant operation; and the making of shawls, blankets, and other articles of the woollen manufacture. There are two breweries for ale and beer; and a branch of the Central Bank of Scotland, and a branch of the National Savings' Bank, have been established. The town is supplied with gas. A market is

held on Saturday, and is well supplied with provisions and with grain, for which it is the principal mart of the district. Fairs are held on the last Tuesday in March, for grain; the Thursday after the last Tuesday in May, for cattle; the Fridays before the Falkirk trysts in August, September, and October, for cattle and horses; and the 6th of December, for cattle and general business. The post-office has two deliveries daily; and facility of communication with Edinburgh, Glasgow, Perth, and Stirling, is maintained by railway.

The PARISH includes the ancient parish of Aberuthven, united to Auchterarder prior to the Reformation. It is bounded on the north by the river Earn, and extends eight miles in length from north to south, and three miles in breadth from east to west, comprising 13,747 acres, of which 7176 are arable, about 300 acres woodland and plantations, and the remainder meadow, pasture, and waste. The surface is hilly, and rises from the banks of the Earn to the Ochil hills, of which the highest, Craig Rossie, 2359 feet above the level of the sea, is within the limits of the parish. The principal rivers are, the Earn, which rises in Loch Earn, and falls into the Tay; and the Ruthven, which, after receiving the waters of several rivulets descending from the Ochils, flows through the parish, and falls into the Earn. In the Earn are found salmon and large white and yellow trout, and in the Ruthven a small species of trout remarkable for the delicacy of its flavour. The soil, in the eastern part of the parish, is light and sandy; in the lower lands, a clayey loam; and in the neighbourhood of the town, a rich black loam. The chief crops are oats, barley, wheat, potatoes, turnips, and peas, with the usual grasses. The system of husbandry has been greatly improved; much waste land has been reclaimed by embankment from the overflowing of the Earn, and a considerable stimulus is afforded by the premiums awarded at an annual ploughing-match, by the agricultural society of the parish. Cows of the Ayrshire breed are kept on the dairy-farms; the cattle on the pastures are generally the Teeswater, and on the lower lands sheep of the Leicestershire breed have been introduced. The annual value of real property in the parish is £8600. The substrata are mostly of the old red sandstone formation, grey slate of good quality for roofing, and limestone, which, from the scarcity of fuel, is not much wrought: a search has been made for coal, but without success. There is little old wood now remaining; the plantations, which are principally of modern date, are chiefly larch and oak. Auchterarder House is a handsome mansion in the Elizabethan style, lately erected, and situated in grounds that have been greatly improved.

For ecclesiastical purposes the parish is within the bounds of the presbytery of Auchterarder and synod of Perth and Stirling: the minister's stipend is £199. 14. 2., with a manse, and a glebe valued at £17 per annum; patron, the Earl of Kinnoul. The church, rebuilt in 1784, and enlarged in 1811, is a plain structure, situated in the town, and containing 930 sittings. In the aisle at Aberuthven is the mausoleum of the Graham family, in which are several coffins containing the remains of departed Dukes of Montrose, and in the vault beneath have been interred many of their ancestors. There are places of worship in connexion with the United Presbyterian Synod and the Free Church. The parochial

school is well attended: the master has a salary of £34. 4. 4., with a house, and an allowance of £2 in lieu of a garden; the fees average about £40 per annum. There is also a school for which a building was erected in 1811 by John Sheddan, Esq., who endowed it with property to the value of about £1000, the proceeds of which are paid to the master on condition of his teaching twelve children gratuitously. To the north of the town are the ruins of a building supposed to have been a hunting-seat of Malcolm Canmore's; the walls, which are of great thickness, have been nearly demolished for building materials. Eastward of these ruins are the remains of the ancient church of St. Mungo, formerly the parish church, the cemetery of which is still used as a place of sepulture by the parishioners; and in digging the foundation for the present church, a coin of the Emperor Titus Vespasian was found, in a very perfect state.

AUCHTERDERRAN, a parish, in the district of KIRKCALDY, county of FIFE, 6 miles (N. W. by W.) from Kirkcaldy; containing 1913 inhabitants, of whom 770 are in the village of Lochgelly. This parish derives its name from the Gaelic, *uachdar darran* signifying "the height or ridge of oaks". It is about six miles in length, and varies from one to four in breadth. The surface is mostly flat, though varying in elevation, the lands near Lochgelly being more than 100 feet above the general level. The river Ore, which has its source in the parish of Ballingry, flows through this parish in its course to the Leven, and has two bridges, each of one arch. Viewed from the adjacent heights, the parish has a very interesting appearance, the scenery being greatly varied, especially near the lake of Lochgelly, a large sheet of water about three miles in circumference, the north side of which, being beautifully covered with wood, presents a rich and most picturesque scene, and forms a striking contrast to the south side, which is bleak and dreary, but might be much improved by planting. The soil is chiefly clay, interspersed with sand, and in several places are tracts of black loam, producing abundant crops; about one-third of the land is in pasture, about 500 acres wood, and the remainder arable in good cultivation. Great progress has been made in agricultural improvement, within the last few years, by some of the landed proprietors. A considerable tract of waste land was reclaimed by the late proprietor of Raith, now forming the farm of New Cardon; and Col. Ferguson, the present proprietor, has carried out all the new improvements, on an extensive scale, on the farm of Dothan. James Aytoun, Esq., of Capeldrae, has admirably exemplified the effect of thorough draining, on that part of his property called Harestanes. These improvements have had a most beneficial influence, and the enterprising farmers are following the proprietors' example with great spirit. The crops raised in the parish are wheat, barley, oats, potatoes, beans, and peas; the cattle are of the black Fifeshire breed, and much attention is paid to their improvement. The farm-buildings are commodious, and the lands are generally enclosed with stone dykes. The annual value of real property in the parish is £5018.

There is very little natural wood, and the plantations are mostly of recent growth; about nineteen acres of moss have been lately planted with Scotch firs, which are thriving well. The substratum is mainly whinstone;

limestone of excellent quality is quarried in several places, and coal is every where abundant. The coal-mines at Cluny, belonging to Col. Ferguson, are very productive; about 70,000 loads are annually raised for the supply of the neighbourhood, and more than seventy persons are employed in the works. The mines on Lord Minto's lands of Lochgelly produce 50,000 loads annually, and afford constant occupation to about fifty persons; while the works at Dundonald, belonging to R. W. Ramsay, Esq., produce about 7000 loads. Iron-works have lately been erected, and from the extent and quality of the mineral field the district promises to become of still greater mining importance. Facility of communication is afforded by the Dunfermline branch of the Edinburgh, Perth, and Dundee railway.

The parish is in the presbytery of Kirkcaldy and synod of Fife: the minister's stipend is £237. 11. 10., with a manse, and a glebe valued at £30 per annum; patrons, the Boswell family of Balmuto. Half the barony of Auchterderran came into the possession of Roger de Boswell, in consequence of his having married the co-heiress of Sir William Lochore, of Lochore; and thus the family have continued patrons of the parish, though they have ceased to be proprietors in it. The church was built in 1789. There is a place of worship for dissenters in the village of Lochgelly. The parochial school is attended by nearly 100 scholars; the master has a salary of £34. 4. 4., with £25 fees, and a good house, and £2. 2. 4. in lieu of a garden. The church, the manse, and school-house are beautifully situated near the east side of the parish; immediately behind is the finely-wooded ridge from which the parish derives its name, and when the broom is in bloom, it is a scene of beauty.

AUCHTERGAVEN, a parish, in the county of PERTH, $8\frac{1}{2}$ miles (N. by W.) from Perth; containing, with the villages of Bankfoot, Carnie-Hill, and Waterloo, and the greater part of Stanley, 3366 inhabitants. This place was distinguished in former times as the scene of some fierce contentions between the Bishop of Dunkeld and Sir James Crichton, of Strathford, in the parish, who had forcibly taken possession of the lands of Little Dunkeld, belonging to that see. In the rebellion of 1745, Lord Nairne, who owned considerable estates here, embarked in the cause of the Young Pretender, whom he joined at the city of Perth, and on his defeat accompanied him to the continent, where he continued to reside. The title, upon his attainder, became forfeited; and the splendid baronial mansion which he had nearly completed, to replace the former that had been destroyed by fire, was sold with the estates, and afterwards taken down by the Duke of Atholl, who became the proprietor by purchase.

This parish, which derives its name from a Celtic term descriptive of its situation, is about ten miles in length, and of very irregular form, varying from less than two to six miles in breadth. It is bounded on the east by the river Tay, and on the west by a brook which separates it from Mullion, a detached portion of the parish of Redgorton. Its natural limits comprehend an isolated tract four miles in length, but of very small breadth, called Tullybeagles, belonging to the parish of Methven. The surface is agreeably diversified with hills and dales, the land rising gradually from the banks of the Tay to a lofty range on the west and north-west, forming a

portion of the Grampian heights, of which the highest within the parish is Birnam Hill, 1300 feet above the sea; the other hills are Craig-Obney, Craig-Gibbon, Tullybelton, and Corrody hills, which are not much inferior in elevation. On one of these hills, still called "Court Hill", the sheriff is said to have held his court, for the trial of a lawless set of banditti who committed great depredation on the lands; and some trees on which the men were executed are styled "Hanged Men's Trees". Numerous streams descend from the mountains, affording an abundant supply of water, and adding to the beauty of the scenery, which is richly embellished with woods and plantations. Of these streams the principal is the Corral burn, which issues from a spring at the base of the Obney hills, flows through the village of Bankfoot, and falls into the Garry near the church, receiving in its course the waters of the Aldinny, which rises also in the Obney hills. The Garry, issuing from the head of Glen-Garr, flows between the hills above Strathban, and after receiving the waters of the Corral, falls into the Ordie at Loak. The Ordie has its source in a lake in the hill of Tullybelton, and after traversing the centre of the parish, and receiving the Wynnies, which rises in the district of Tullybeagles, flows into the Shochie in the parish of Redgorton. The Shochie, which has its source in Glen-Shee, and is joined by the above-named tributary streams, falls into the Tay.

The parish comprises 19,200 acres, of which about 6000 are arable and in a high state of cultivation, 796 woodland, and 1200 pasture. Considerable additions have been made to the arable and pasture lands by improvements in draining and fencing, and an advanced state of agriculture; and comparatively little of the moor and waste will remain long in an unproductive state. The soil is various in the different districts, but in general is a loam intermixed with sand and pebbles, and, on some of the farms, with large boulders of stone. In the upper lands it is very retentive of moisture, and in the lower grounds comparatively dry and light. The principal crops are oats, barley, wheat, potatoes, and turnips; bone-dust has been introduced for manure on the turnip lands with very great success. Much attention is paid to the rearing of live-stock: the cattle are mostly the Ayrshire, with a cross of the short-horned breed, and some few of the Angushire; the sheep are nearly all of the Scotch black-faced kind, which feed in the hills, and a few of the Leicestershire, which are pastured on the low lands. The annual value of real property in the parish is £9896.

The woods mainly consist of oak, common and mountain ash, elm, and beech, and the plantations of larch, spruce, and Scotch firs; along the banks of the Tay are some remarkably fine beech-trees. In the lower lands the substratum is chiefly gravel of very great depth, intersected by a seam of whinstone, which is quarried for mending the roads, and alternated with strata of red sandstone; the hills are principally of clay-slate and greywacke, in which masses of quartz are found. At Glen-Shee is a quarry of slate of good quality for roofing; there are two varieties, blue and grey, the latter of which is the more durable: slate of a similar kind was formerly quarried at Obney and at Tullybeagles. The sandstone is quarried for building purposes at Stanley, and in other parts of the parish: the

finest quarry is at Speedy Hill; the stone found here is of greenish hue, very compact, and susceptible of a fine polish, and was employed in the erection of the new castle of Dunkeld. Stanley House, an ancient mansion to which repeated additions have been made, and which is greatly modernised, is beautifully situated on the shore of the Tay, embosomed in a richly-wooded demesne, containing many stately trees. Airlywight House is a handsome residence of modern erection, on elevated ground commanding an extensive prospect, and forms an interesting and very prominent feature in the landscape. A considerable number of the inhabitants are employed in weaving for the manufactures of Blairgowrie, Dundee, Arbroath, Newburgh, and Cupar-Angus; the principal fabrics are white linens and dowlas, and in the weaving of these articles, and in spinning and winding, about 300 persons are engaged, of whom a large portion are females. More than 1000 persons are employed in the Stanley cotton-works, which are separately described. There are five corn and two lint mills. The road from Perth to Dunkeld, forming part of the road from Edinburgh to Inverness, passes for five miles through the parish, which is also intersected by the Perth and Forfar railway. A fair is held in the village of Auchtergaven, on the second Friday in November, for the sale of cattle, sheep, and horses, and for agricultural produce.

For ecclesiastical purposes Auchtergaven is within the bounds of the presbytery of Dunkeld and synod of Perth and Stirling; patron, the Crown. It comprises the small ancient parish of Logiebride, which was united to it by act of parliament in 1618, and subsequently severed from it by the Bishop of Dunkeld, but again united at the period of the Revolution in 1688: the church of Logiebride stood on the bank of the Ordie, but has long since disappeared, though the ancient cemetery is still used as a place of sepulture. The stipend of the incumbent is £179. 6. 4.; the manse is a plain building, erected within the last twenty or thirty years, and the glebe lands are valued at £15 per annum. The church, situated on an eminence rising from the road between Dunkeld and Perth, is a plain substantial edifice, with a western tower added by the Duke of Atholl, and is adapted for a congregation of 1200 persons. There are places of worship in connexion with the United Presbyterian Synod and the Free Church. The parochial school affords a liberal course of instruction; the master has a salary of £34. 4. 4½., with a house and garden, and the fees average about £15 per annum.

On the farm of Middle Blelock, and at Obney, are some large upright stones, concerning which nothing authentic is known. A vitrified fort has been discovered on Obney hill; and near the ruins of an old chapel, at Tullybeagles, some ancient coins have been discovered, which are in the cabinet of the Literary and Antiquarian Society of Perth. Human bones have been found near the site of another chapel, on the lands of Berryhill farm, in the same district, on the banks of the Ordie. Near Stanley are the remains of a round tower called Inverbervie, or Inchebervie, which is said to have been originally a religious house, and a cell to the abbey of Dunfermline; and at the Westertown of Kinglands is the site of a mound or a cairn, which has not yet been explored.

AUCHTERHOUSE, a parish, in the county of FORFAR, 7 miles (N. W. by N.) from Dundee; containing, with the villages of Dronley and Kirkton, 769 inhabitants. This parish, the name of which is of uncertain derivation, is nearly of triangular form, and in its northern portion includes part of the range of the Sidlaw hills, separating it from Strathmore. Along its southern boundary runs the Dighty water, which falls into the Tay near the influx of the latter into the German Ocean. It has an undulated surface, and comprises an area of about 5450 acres, of which 3567 are in cultivation, 1406 in wood, and the remainder hill pasture. The ground rises from south to north, and the acclivities are under cultivation to the spot where the church stands, 800 feet above the level of the sea; but more northward the land rises considerably, reaching at the White-Sheets of Sidlaw, the highest part of the parish, to about 1400 feet above the high-water mark at Dundee, and being there only fit for pasture and forest-planting. The burn of Dronley, and that of Auchterhouse, turn several mills in their separate courses from the west and north-west, before their junction at the village of Dronley; after which, the united streams take the name of Dighty, for the rest of their passage to the ocean. The climate, in the higher district, is cold and bracing: in the lower division it has been much improved within these few years by extensive draining, and is pure and salubrious.

The soil of the uncultivated portions, with slight exceptions, consists of a thin moorish earth, lying on a retentive tilly subsoil with a substratum of sandstone. The land under tillage is mostly a black mould, in some places sandy, resting on till or marl, and with skilful management yielding good average crops of oats and barley, with the usual green crops, and sometimes wheat, though this last has been nearly discontinued, not having in general succeeded. The dairy is much attended to. Subsoil-ploughing and furrow-draining are extensively practised, with great advantage; and by the kindly feeling and steady co-operation of landlords and tenants, among many other improvements, nearly 500 acres of moor, moss, and bog have been reclaimed within the present century, and now produce fair crops. The annual value of real property in the parish is £5316. The soil throughout the parish is underlaid with sandstone very near the surface, and the Sidlaw hill consists of the same rock, occasionally intersected with trap dykes, and affording good materials for many useful purposes: a quarry is in operation on the estate of Scotstown, giving employment to five or six hands. Plantations comprising larch, spruce, and Scotch fir, elm, ash, plane, and beech, have been formed on the hills, and on the moors of Dronley and Adamstown, by the Earl of Camperdown, to the extent of nearly 300 acres; the spruce and Scotch fir, however, alone being likely to succeed. The late Earl of Airlie planted above 500 acres of the hill of Sidlaw. The House of Auchterhouse, with its orchards in front, is the best relic of an old baronial residence now existing in this part of the country: it is the property of the Earl of Airlie. Facility of communication is offered by the Dundee and Newtyle turnpike-road, running through the parish from the south to the north-west; and by the railway between the same places. Dundee is the nearest market-town to Auchterhouse.

Ecclesiastically the parish is in the presbytery of Dundee, synod of Angus and Mearns, and in the patronage of the Earl of Airlie; the minister's stipend is about £200, with a manse, and a glebe of seven acres, valued at £15 per annum. Auchterhouse church was rebuilt in 1775, and consists of portions both old and modern; it has on the west a steeple, and on the east a very ancient burying-place containing the remains of some members of the Erskine, Lyon, and Ogilvy families. The parochial school affords instruction in the usual branches; the master has a salary of £34. 4. 4., with £20. 12. 4. fees. Near the mansion of Auchterhouse are the ruins of a square building called Wallace Tower, supposed to have taken its name from a visit paid here to Sir John Ramsay, the proprietor, by the Scottish patriot, Sir William Wallace, after landing at Montrose with his French auxiliaries. Not far from this spot, and in other parts of the parish, are some of those caverns styled "Weems", in which various relics have been found, indicating their former use as abodes of men. On the south of the hill of Sidlaw is a Druidical altar in good preservation.

AUCHTERLESS, a parish, in the district of TURRIF, county of ABERDEEN, seven miles (S. by W.) from Turriff; containing 1685 inhabitants. The name of this place is derived from a Gaelic word signifying "a cultivated field on the side of a hill", and the application of the term is favoured by the general appearance of the surface. The parish is of an irregular oblong figure, about eight miles in length and four in breadth, and contains nearly 16,000 acres, of which two-thirds are cultivated, and nearly 500 acres are in plantation. It is bounded on the north by the county of Banff. The lands are watered by the river Ythan, the only considerable stream, which, rising about a mile from the boundary of Auchterless, and flowing through the vale in a north-eastern direction, discharges its waters into the German Ocean below Ellon. In some parts the soil is clayey, but more frequently consists of gravel, lying upon a bed of clay-slate, and is almost uniformly dry. The cattle are of the Aberdeenshire breed, which sprang from a cross between the native and the old Fife stock about seventy years since; the sheep, which are not numerous, are the Cheviots. The husbandry is of the best kind, and the free use of lime, guano, compost manure, and bone-dust, has much contributed to the fertility of the soil. Almost every farm, too, of any extent, has a threshing-mill on the premises, turned by one of the tributary streams of the Ythan. The annual value of real property in the parish is £6773. The prevailing rock is a clay-stone slate, which runs through the whole of the parish from north-east to south-west, but lies at too great a depth to be available for the purposes of quarrying.

The villages are, Gordonstown, about two miles distant from the church, and the little hamlet of Kirktown. At the latter a market is held on the Wednesday after the second Tuesday in April (O. S.) for the sale of sheep and cattle, which is called Donan fair from the ancient tutelary saint of the parish. The Aberdeen and Banff turnpike-road runs for nearly three miles along the eastern extremity of the parish, and a new turnpike-road from Inverury to Forgue passes along the south-west of the parish. At Badenscoth inn, on the latter road, markets for the sale of cattle and grain are held

on the second Mondays of December, January, February, and March. For ecclesiastical purposes Auchterless is within the bounds of the presbytery of Turriff and synod of Aberdeen; the patronage belongs to the family of Duff of Hatton, and the minister's stipend is £191. 6. 5., with a good manse and offices, and a glebe of about six acres, valued at £18 per annum. The church, a plain edifice, built in 1780, and repaired in 1832, seats 750 persons. There is a parochial school, affording instruction in Greek, Latin, and mathematics, with all the usual branches of education; the master has a salary of £34, £21 fees, and a house and garden. Near the farming-village of Glen-Mailen is the strong and extensive Roman camp called The Rae-Dykes, situated on the south side of the Ythan, a mile below the two well-known springs of the river. According to Mr. Chalmers, it was undoubtedly the *Ad Itunam* of Richard of Cirencester, which, from its central position, commanded the ample extent of the shire of Aberdeen, the ancient country of the *Taixali*. In the vicinity of The Rae-Dykes are other remains, indicating the long residence of a military people; and the antiquities of Auchterless also comprise some Druidical circles. This parish has been famed for the longevity of several of its inhabitants, one of whom, Peter Garden, a farmer, died about the year 1780 at the advanced age of 132, having lived under eight sovereigns, commencing with Charles I.: he was one of the garrison in the old castle of Towie Barclay when Montrose defended it against Argyll.

Burgh Seal.

appropriated to the accommodation of part of the royal household, during the kings' residence in the palace of Falkland, about three miles distant. The town is situated on the road from Kinross to Cupar, and is irregularly built, consisting of several ill-formed streets and lanes of houses of mean appearance, many of them having thatched roofs, though intermixed with some of more modern and handsome character, with neat gardens attached. It is inhabited by an industrious and thriving population, and has a public library supported by subscription. The inhabitants are chiefly employed in handloom weaving for the manufacturers of Dunfermline, Newburgh, and Kirkcaldy; the principal articles are linen goods, consisting of checks, drills, dowlas, sheetings, and other fabrics, in making which about 1000 persons are engaged. A considerable number were formerly occupied in these manufactures on their own account; but only one or two establishments of the kind now remain. On the banks of a rivulet near the extremity of the town are a cloth and yarn bleach-field, a flour-mill, and saw-mill. There are also a thriving distillery and an extensive malting concern. A branch of the

Union Bank of Scotland has been established, as well as a savings' bank. The market, which is on Monday, is well supplied with grain and provisions of every kind; and fairs are held on the 25th of March (O. S.), the 13th of July, and the 21st of August, for horses and cattle: the July fair is also a statute-fair. The inhabitants were first incorporated by charter of James IV., who erected the town into a royal burgh; and its liberties, as such, were confirmed by James VI.: the right of sending a member to parliament was lost, from disuse, some time before the Union; but it still retains its corporation, and most of its other privileges. The government is vested in three bailies, a treasurer, and a council of fifteen members, chosen under the authority of the Municipal Reform act. The magistrates have jurisdiction over the whole of the royalty, and hold courts for the determination of civil pleas to any amount; in criminal cases their jurisdiction is confined to misdemeanors. The post-office has two deliveries daily; and facility of communication with the neighbouring places is afforded by good roads, of which the turnpike-road from Stirling to St. Andrew's passes through the southern extremity of the town.

The PARISH is about four miles in length, from north-east to south-west, and extends from one to two miles in breadth, comprising about 2900 acres, of which 220 are woodland and plantations, 90 undivided common, and the remainder arable land and pasture. Its surface is varied, in the south-east forming an extensive and richly fertile plain, and in other parts rising to a considerable elevation. In the level lands the soil is a deep loam, producing abundant crops of all kinds. Of late years, the system of agriculture has been brought to a state of great perfection under the encouragement of the Auchtermuchty Agricultural Society, which holds an annual meeting in the town, on the first Monday in October, for the distribution of premiums. The lands have been drained and inclosed, and the farm-buildings are substantial and well arranged. The pastures are luxuriantly fertile, and the cattle, which are chiefly of the Fifeshire black breed, bring a good price in the market. The annual value of real property in the parish is £6845. The substratum is mostly whinstone, which forms the basis of the higher grounds. The plantations, mainly of modern growth, are in a thriving state. Myres Castle, the principal mansion in the parish, was for many years the seat of the Moncrieffs, and now belongs to the family of Bruce of Falkland: the building, to which a considerable addition was made about the year 1830, is finely situated in a park of about thirty acres. Bellevue and Southfield are also pleasant residences. This parish is ecclesiastically within the bounds of the presbytery of Cupar and synod of Fife: the minister's stipend is about £250, with a manse, garden, and a glebe valued at £30 per annum; patrons, the Bruce family. The church, a plain building erected in 1785, was enlarged by the patrons, in 1837, at a cost of £500, and now contains 1100 sittings. There are places of worship for the United Presbyterian Synod and the Free Church. The parochial school of Auchtermuchty is well attended; the master has a salary of £34. 4. 4. per annum, with a house and garden.

AUCHTERNUD, a village, in the parish of FONDERTY, county of Ross and CROMARTY; containing 115 inhabitants.

AUCHTERTOOL, a parish, in the district of KIRKCALDY, county of FIFE, 4 miles (W. by S.) from Kirkcaldy; containing, with the village of Newbigging, 530 inhabitants, of whom 239 are in the village of Auchtertool. This place is supposed to derive its name, signifying in the Gaelic language "the high grounds on the river Tiel", from its elevated situation with respect to that stream. The parish is about three miles in length, one mile in average breadth, and comprises about 2500 acres, of which 1700 are arable, and the remainder pasture, and waste land capable of being brought into cultivation. Its surface is varied, and, towards the west, rises into a range of steep acclivities called the Cullalo hills, the highest of which has an elevation of 750 feet above the sea, commanding an extensive prospect over a richly-cultivated tract of country; but the scenery within the parish is almost destitute of beauty, from the want of wood. The river Tiel has its source here; and the parish is also intersected by two streamlets which, though very small, frequently, after continued rain, are greatly increased, and in their course through a narrow channel form beautiful cascades: one of these falls, near the end of a deep and narrow dell, is truly picturesque. Near the ancient mansion of Camilla, formerly the residence of the Countess of Moray, is an extensive loch, bounded on the north side by a precipitous eminence covered with furze; and not far from it are the ruins of the ancient mansion of Hallyards, still retaining traces of baronial grandeur, with some portion of the plantations of the demesne, forming a romantic feature in the scenery of the lake. This sheet of water is about eighteen acres in extent, and abounds with perch, eels, and pike; its greatest depth is twenty-two feet.

In the southern parts the soil is a rich loam, varying from one foot to five feet in depth; and in the north and western parts, clay, which by draining and good management has been rendered nearly as fertile as the loam; and moss land, of which a large portion is of great depth, and apparently incapable of being brought into profitable cultivation. The chief crops are wheat, barley, oats, potatoes, and turnips. The system of agriculture is in a very improved state, and draining has lately been carried on with success. Considerable attention has been paid to the rearing and feeding of live-stock: the cattle are generally of the black Fifeshire breed, with some of the Teeswater lately introduced; and there are a few sheep, all of the Cheviot breed. The substratum is mostly whinstone, freestone, and limestone: the whinstone is quarried, chiefly for mending the roads, and occasionally for building; the freestone is of very inferior quality, and is seldom worked; the limestone, which is mainly found on the lands belonging to the Earl of Moray and Captain Wemyss, is quarried only by the tenants for their own immediate use. The village of Auchtertool is neatly built; the houses are principally of stone and lime, and those of more recent erection are covered with blue slate. A parochial library has been established here, and a savings' bank. There was formerly a brewery of porter, ale, and table-beer, in the village, for the supply of the neighbourhood; it was long in very great repute, and a large quantity of the ale was sent to Kirkcaldy, and thence shipped for the London market, but the buildings are now apparently in a state of decay. For ecclesiastical purposes the parish is in the presbytery of Kirkcaldy, synod of Fife, and in the

patronage of the Earl of Moray; the minister's stipend is £157. 18. 10., with a manse in the later English style, and the glebe is valued at £20 per annum. The church, which was substantially repaired in 1833, is situated within a mile of the village, and is adapted for a congregation of about 300 persons. The parochial school affords a liberal course of instruction; the master has a salary of £33. 6. 8., with £28 fees, and a good dwelling-house and garden. At the west end of the loch of Camilla is a mineral spring.

AUCKINGILL, a township, situated in the parish of CANISBAY, county of CAITHNESS; containing 209 inhabitants.

AULDEARN, a parish, in the county of NAIRN, 2 $\frac{3}{4}$ miles (E. S. E.) from Nairn; containing 1466 inhabitants, of whom 351 are in the village. This place is said by some to have derived its name, in the Gaelic supposed by them to be *Alt-Ern*, from a brook which flows through it into the river Nairn, and the banks of which are thickly planted with alder-trees. Shaw, in his History of Moray, deduces the name of Auldearn from words signifying "the iron-coloured brook"; whilst common tradition derives it from *Auld Nairn*, supposing the place to have been the original Nairn, and much more ancient than the present burgh of that name. Auldearn was the head of the deanery of Moray; and up to a comparatively recent period, Nairn was only a vicarage belonging to the deans. The parish was of much greater extent till the year 1650, when parts of it were annexed to the parishes of Nairn, Cawdor, and Ardcloch. In 1645, a sanguinary battle took place near the village, between the forces under the Marquess of Montrose, and a detachment of the army of the Covenanters, commanded by Hurry, and consisting of about 4000 men, when the former, after an obstinate conflict, obtained a decisive victory. About 800 of the Covenanters fell, and a considerable number of the forces of the marquess; the slain on both sides were interred in a field to the south-west of the village, and the spot, which has been since planted, is surrounded with a moat. The parish is bounded on the north by the Moray Firth, here about seven miles broad, along the coast of which it extends for four miles. It is six miles and a half in length from north to south, and about five miles in breadth from east to west, comprising 13,680 acres, of which 4778 are arable, 5111 meadow and pasture, 3603 woodland and plantations, and 198 acres under water. The surface for nearly three miles from the shore, though varying in elevation, is low; it thence rises to a considerable height for nearly two miles, where it is intersected by the valley of the Muckle brook, beyond which it attains a more abrupt and precipitous elevation. About half a mile from the shore, to the west, is an island of sand called the Bar, which is formed at high water, and is constantly changing its position westward; and opposite to it are two hills of sand, about 100 feet in height, which are continually changing their position towards the east, without any apparent alteration in their form.

In the south-eastern part of the parish the soil is luxuriantly rich; in the south-western, of very inferior quality; and in the north-east and north-west, a heavy cold loam. There are two lakes of considerable extent, one of which, called Loch Lithy, covers an area of forty acres, and produces abundance of rich marl; the other, Loch Loy, in the northern part of the parish, is about a

mile in length and a quarter of a mile broad. There is also a large tract of moss called the Moss of Inshoch, in which vast quantities of roots, and sometimes entire fir-trees, are found embedded. The crops are grain of all kinds, potatoes, and turnips: the system of agriculture has been much improved; waste land has been drained and brought into profitable cultivation, and much of the inferior soil been rendered more fertile by the use of marl, lime, and bone-dust manure. The cattle are of the Highland breed, and the sheep of the white-faced kind. The annual value of real property in the parish is £6148. The plantations are chiefly Scotch fir, larch, oak, beech, elm, and ash, of which three last there are some fine specimens at Boath and Lethen; and to the east of Inshoch is a thriving plantation of birch. The substratum is principally sandstone, some of which is of excellent quality; and from a quarry on the lands of Brodie, was raised the stone for the towers of the suspension bridge over the river Findhorn near Forres. Near Boath is found a black stone which, on the application of fire, emits a flame; and at Clune, on the lands of James C. Brodie, Esq., of Lethen, are nodules of limestone, in which are fossils of various kinds of fishes.

The prevailing scenery is of pleasing character, embellished with plantations; and the views obtained from the higher grounds are extensive and richly diversified, commanding the wide expanse of the Firth, the rocky coasts and lofty mountains of Ross in combination with those of Sutherland, and numerous other deeply interesting features. *Lethen*, the seat of Mr. Brodie, is a spacious and handsome mansion, finely situated in the valley of the Muckle burn, and consisting of a centre and two wings, erected about the commencement of the last century; the grounds are tastefully laid out, and the house is embosomed in a plantation of venerable beech-trees, on the summit of a thickly-wooded acclivity rising from the stream. *Boath*, the seat of Sir Frederick William Dunbar, Bart., is an elegant mansion of freestone, erected in 1830, and beautifully situated in the valley of the Auldearn, near the junction of the two branches of that stream. The village is neatly built, and is inhabited chiefly by persons engaged in agriculture. Fairs are held annually, for cattle and horses on the first Wednesday after the 19th of June, and for agricultural produce on the first Tuesday after the Inverness fair at Martinmas; the first of these is called St. Colin's market, and the other St. John's, following which are two fairs held respectively a fortnight and a month after. The turnpike-road from Elgin to Inverness passes for four miles through the parish; and further facility of communication is afforded by good roads and bridges in almost every direction.

Ecclesiastically the parish is within the bounds of the presbytery of Nairn and synod of Moray: the minister's stipend is £241. 5. 4., with a manse, and a glebe valued at £12 per annum; patron, Mr. Brodie of Brodie. The church, built in 1751, and improved in 1816, is a neat structure, situated close to the village, and contains 635 sittings. There are places of worship for Free Church and United Presbyterian congregations. The parochial school affords instruction to about 130 scholars; the master has a salary of £36. 7. 2., including an allowance for a garden, and the fees average £10 per annum. On the higher grounds in the parish are some Druidical remains, of which the most perfect, near the old castle

of Moyness, consists of two concentric circles, with a slightly-rocking stone weighing about four tons; and on a small eminence designated the Black Hillock has been found a kistvaen, containing a human skeleton and several urns filled with ashes. Upon a farm called Knock-na-Gillan, the Cummings of Rait once seized thirteen of the clan of Mackintosh who were passing through the parish, and put twelve of them to death; and some time after, these hostile clans meeting at the castle of Rait, in the parish of Nairn, the Mackintoshes in retaliation put the whole clan of the Cummings to the sword, and burnt their castle. About a mile to the north of the church are the ruins of the ancient castle of Inshoch, the seat of the Hays of Loch Loy; and a mile to the east of it were till lately the remains of the house of Penick, the residence of the deans of Moray.

AULDFIELD, for a time a quoad sacra district, forming part of the town of POLLOCKSHAW, in the parish of EASTWOOD, Upper ward of the county of RENFREW; containing 3252 inhabitants.—See POLLOCKSHAW.

AUSKERRY ISLE, in the parish of STRONSAY, county of ORKNEY. It is situated about two miles to the south of the island of Stronsay, and is small and uninhabited, and appropriated to the pasturage of cattle. There are some remains of a chapel, and the ruins of a dwelling which bears the name of the Monk's House. Kelp is manufactured in considerable quantity.

AVOCH, a parish, in the county of Ross and CROMARTY, $1\frac{3}{4}$ mile (S. W. by W.) from Fortrose; containing 1931 inhabitants, of whom 936 are in the village. This place apparently derives its name, said to signify in the Gaelic language "shallow waters", from the small river on which the village is situated. The parish is bounded on the south and south-east by the Moray Firth, and on the south-west by the bay of Munloch; and is about four miles and a quarter in length, and three miles in extreme breadth, comprising 6198 acres, of which about 2500 are arable, 1500 woodland and plantations, and the remainder meadow, pasture, and waste. Its surface, though generally level, with a gentle acclivity from the shore of the Firth, contains a portion of the Milbuy hill, which has an elevation of nearly 500 feet; and is also intersected, in the lower parts, by several prominent ridges. The river from which it is said to take its name rises within its limits, near a pool called the Littlemilstick, and after a beautifully winding course, in which the stream turns several mills, falls into the Firth near the village. The coast extends for about three miles, and is bounded by a high ridge of rocks, projecting slightly in two points, between which is a beach of sand and gravel.

The soil, which comprises almost every variety, has been greatly improved, and the pastures are mostly rich; the crops are wheat, oats, barley, potatoes, and turnips, with the usual grasses. Considerable attention has been for some time paid to the rearing of live-stock; and the farms have been newly divided in portions adapted to the ability and resources of the various tenants, by which a much better system of management has been introduced. The annual value of real property in the parish is £3658. The substrata are generally of the red sandstone formation, interspersed with rocks of granite; and indications of limestone occur, though none has yet been wrought: there are freestone quarries in several places, from one of which, affording stone of a deep red

colour, it is supposed that the materials were taken for the erection of the cathedral church of Chanonry. Rosehaugh, the seat of Sir James J. R. Mackenzie of Seatwell, Bart., is an elegant modern mansion, beautifully situated on an eminence about half a mile from the sea, and embellished with woods and thriving plantations. Avoch House, a handsome mansion embosomed in romantic scenery, was destroyed in 1833 by an accidental fire. Bay Cottage is situated near, and derives its name from, the bay of Munlochry.

The village stands on the river Avoch, near its influx into the Moray Firth, which is here about four miles in breadth, and, between the promontory of Fort-George on the east and the town of Inverness on the west, has the appearance of a beautiful inland lake. The inhabitants are chiefly employed in fisheries, in which nine boats, having each a crew of ten men, are engaged in taking haddock, whiting, cod, and other fish, on the coasts of Sutherland and Caithness: in the Moray Firth are found oysters, flounders, and halibut. After supplying the neighbourhood, the remainder of the fish are sent to the Inverness market. During the season, commencing about the middle of July, the fishermen of this place send thirty-five boats to the herring-fishery at Caithness, from which they return some years with from £20 to £50 each of clear gain, while in other years few are able to cover the necessary expenses. In the intervals of the fishing season, the inhabitants are employed in making nets, not only for their own use, but also for the fishing-stations in the north and west Highlands. The harbour that is formed near the mouth of the river affords good anchorage and shelter for the boats, and a substantial pier has been constructed, at which vessels of considerable burthen land cargoes of coal from Newcastle; it is also safely accessible to trading vessels, which, from London, Leith, Aberdeen, and Dundee, regularly touch at the port. There are two salmon-fisheries, one on the estate of Rosehaugh, and the other on the estate of Avoch. In Munlochry bay, mussels are found in profusion. Facility of communication is afforded by the turnpike-road from Fort-George ferry to the western coast of Ross-shire, which passes through the village and the southern part of the parish, leading to Kessock ferry on the west, and to the town of Dingwall on the north-west. Ecclesiastically the parish is within the bounds of the presbytery of Chanonry and synod of Ross: the minister's stipend is £249. 9. 6., with a manse, and a glebe valued at £7. 10. per annum; patron, Sir J. J. R. Mackenzie. The church, a neat plain structure, erected in 1670, enlarged in 1792, and repaired in 1833, is situated close to the village, and contains 600 sittings. There is a place of worship for Independents. The parochial school is well conducted; the master has a salary of £30, with a house and garden, and the fees average between £20 and £30 per annum.

There are some slight remains of the ancient castle of Avoch, consisting chiefly of the site, occupying a rocky knoll on the northern promontory of the bay of Munlochry, and distinguished by the rubbish of ruined walls which surrounded the summit of the hill. It was the residence of the lord of Moray, who died in 1338. The castle subsequently passed to the Earls of Ross, on whose forfeiture it was annexed to the crown, and was granted by James III. to his second son, the Marquess

of Ormond, from which circumstance the knoll was called Ormond's Mount. The lower story, or dungeon, of the Tower of Arkendeith, supposed to have been built by the Bruces of Kinloss, is also remaining. Chambers of Ormond, the Scottish historian, was born in the parish; and Sir Alexander Mackenzie, who discovered the river in America which is called by his name, resided for many years at Avoch House, and was interred here.

AVONDALE, a parish, in the Middle ward of the county of LANARK; containing, with the market-town of Strathaven, 6180 inhabitants. The proper name of this parish, which, from its including the market-town, has been called sometimes Strathaven, and by contraction Straven, is Avondale, an appellation derived from its position on the river Avon, by which it is divided into two nearly equal parts. The barony of Avondale was anciently the property of the Baird family, and subsequently belonged to the Earl of Douglas, on whose forfeiture in 1455 it was granted by James III. to Andrew Stewart, whom he created Lord Avondale, and who exchanged it for the barony of Ochiltree with Sir James Hamilton, in whose family it has ever since remained. The place has derived some historical celebrity from the defeat of the troops under General Claverhouse, at Drumclog, by a congregation of Covenanters who had assembled there for public worship on Sunday, the 1st of June, 1679, and, anticipating an attack by the former, who were stationed at Strathaven, had provided themselves with arms for their defence. On the approach of Claverhouse with his dragoons, the armed part of the congregation went forward to meet him, and taking post on soft level ground, having before them a rivulet, over which the general had to pass, and of which the bank was from its softness impassable to the cavalry, defeated his forces with considerable loss, the general himself escaping with difficulty. In 1820, the place was disturbed by a few rioters (old men and boys) under the command of James Wilson, who, upon false intelligence that a rebellion against the government had broken out in Glasgow, marched thither to join the insurgents; but they were instantly dispersed, and their leader, who was made prisoner, was brought to the scaffold, and suffered the penalty of his folly.

The parish comprises about 32,000 acres, of which 15,000 are arable, and the remainder, with the exception of some tracts of moss and marsh land, formerly more extensive, is in pasture. Its surface is generally level, rising gently from the banks of the river towards the south and west, and partially intersected with ridges and small hills, the highest of which, situated towards the borders of Ayrshire, scarcely attain an elevation of more than 900 feet above the sea. Of these the most prominent are Kype's rigg, and Hawkwood and Dungal hills, with the picturesque but smaller eminences of Floors hills and Kirkhill. The Avon, which rises on the confines of Ayrshire, in its course through the parish receives numerous tributary streams, the chief being the Cadder and Pomilion on the north, and the Givel, the Lochan, and the Kype on the south: the waters of the Kype, about a mile south of the town, are precipitated from a height of nearly fifty feet, forming an interesting fall. In all these streams trout is abundant. Salmon were formerly found in the Avon, even at its source; but latterly their progress upward has been intercepted. The scenery of the parish, though destitute of orna-

mental wood, is pleasingly varied, and in many parts picturesque.

The soil is generally fertile. The crops comprise oats and barley, with some wheat; potatoes are also raised in great quantities, and are sold for seed; but though the soil is extremely favourable for turnips, they are not much cultivated. There are numerous dairy-farms, and the pastures throughout the parish are luxuriant; great numbers of cows, principally of the Ayrshire breed, are pastured here, and there are at present not less than 2000 acres of undivided common. The Clydesdale breed of horses is reared here in considerable numbers. Many improvements have been made in draining; and the whole of Strathaven moss, comprising above 200 acres of unprofitable land, has been reclaimed, affording more valuable crops than any other portion of the parish. The parish is capable of very great improvement: by judicious draining, and inclosing with hedge-rows and belts of planting, not only would its aspect be improved, but in twenty years the rental might be doubled. A tile-work has been built at Drumclog within the last few years. The annual value of real property in the parish is £24,785. Whinstone abounds, as does also ironstone; and limestone is found in several parts, and burnt for agricultural purposes: coal is also found in the neighbourhood of the limekilns, in considerable quantity, and of a quality sufficient for burning the lime, but not adapted to household use. The moors abound with grouse and other game, and the Duke of Hamilton has an extensive tract of pasture land for sheep, which is kept for grouse shooting; partridges are also numerous in the lower lands, and plovers and wild ducks are every where abundant. Besides the two turnpike-roads leading westward towards Ayr and Muirkirk, there are parish roads with the necessary bridges, to the extent of sixty miles, all in good repair: the bridges, however, are in general too narrow.

Ecclesiastically the parish is in the presbytery of Hamilton, synod of Glasgow and Ayr, and in the patronage of the Duke of Hamilton. The minister's stipend is £305. 2. 6., with a manse, and the glebe is valued at £24 per annum. There is also an assistant minister, appointed by his grace, to whom a stipend of 500 marks is paid, according to the will of the late "good Duchess Anne"; he visits the sick, and catechises the parishioners. The church, erected in 1772, is a plain edifice with an unfinished spire, adapted for a congregation of 800 persons. Under the auspices of the present minister, an additional church has been erected for 900 persons, at an expense of £1400, to which a district called East Strathaven has been assigned, and which is supplied by a minister appointed by the congregation. There are places of worship for the United Presbyterian Synod. The parochial school affords an efficient education; the master's salary is £34. 4. 4., with £36 from fees, and a good house and garden. There is also a parochial school for East Strathaven. Some remains of a Roman road may be traced on the south side of the river Avon, passing by the farm of Walesley; and on the lands of Gennerhill, small coins and Roman sandals have been discovered. Roman coins have also been found on the lands of Torfoot, near Loudoun hill, supposed to have been in the line of the Romans, in their route through the Caledonian forest, towards the western coast.

AYR, a sea-port, burgh, and market-town, in the district of KYLE, county of Ayr, of which shire it is the capital, 87 miles (S. W. by W.) from Edinburgh, and 40 (S. S. W.) from Glasgow; containing 8264 inhabitants, and, including Newton-upon-Ayr and Wallacetown on the opposite side of the river Ayr, which are within the parliamentary boundary of

Seal and Arms.

upwards of 18,000 inhabitants. This place derives its name from the river on which it is situated, and appears to have attained a considerable degree of note at a very early period. A castle was erected here by William the Lion, to which reference is made in the charter subsequently granted to the town by that monarch; and from the importance of its situation, it was besieged and taken by Edward I. during his invasion of Scotland. In 1289, Robert Bruce, on the hostile approach of an English army towards the town, finding himself unable to withstand their progress, set fire to the castle, to prevent its falling into their hands; and at present there are no vestiges of it remaining. During the usurpation of Cromwell, a very spacious and strongly-fortified citadel was erected here as a military station for his troops, for the maintenance and security of the town and harbour of Ayr, which at that time were of great importance, as enabling him to hold the western and southern parts of the county in subjection; and of this fort the greater part is still in good preservation.

The town is finely situated on a wide level plain, on the sea-coast, and at the head of the beautiful bay of Ayr, by which it is bounded on the west. The more ancient part consists of houses irregularly built, and of antique appearance; but that portion which is of more modern origin contains numerous handsome ranges of buildings, among which may be noticed Wellington-square, Alloway-place, Barns-street, and a spacious and well-built street leading to the new bridge. Very great improvements have been made in the aspect of the town, which is seen to much advantage from the higher grounds, and more especially on the approach from the south; and many agreeable villas have been erected in the vicinity, which are embellished with shrubs and trees. The principal streets are well paved, and lighted with gas; and the inhabitants are amply supplied with water, partly from numerous wells opened in convenient situations, and partly from a softer spring, in Carrick, by pipes laid down for that purpose. The environs are extremely pleasing, abounding with richly-diversified scenery, embracing fine views of the sea, and many interesting features. There are two bridges over the river Ayr, celebrated by the poet Burns in his *Two Brigs of Ayr*, one of which, erected about sixty or seventy years ago, is a very handsome structure, affording communication with the towns of Newton-upon-Ayr and Wallacetown. The beach, which is a fine level sand, is much frequented as a promenade, and contributes greatly to render the town desirable as a place of residence.

There are two libraries supported by subscription, containing good collections of standard and periodical works,

and newsrooms or reading-rooms well supplied with journals; and a mechanics' institution established in 1825, with a library attached of more than 3000 volumes, for the increase of which a specific sum is annually appropriated. Races are annually held by the Western Meeting, in the first week in September, on an excellent course in the immediate vicinity of the town, comprising about fifty acres inclosed with a stone wall; and the members of the Caledonian Hunt hold a meeting here once in five years. Two packs of fox-hounds, and a pack of harriers, are kept in the neighbourhood. Assemblies are held in an elegant and spacious suite of rooms, admirably adapted for that purpose, in the *Town's Buildings*, a stately edifice embellished with a spire (with clock) rising to the height of 226 feet: it contains, in addition to the assembly-rooms, two large newsrooms, rooms for town's meetings, and various apartments for public purposes. There is also a handsome structure in the early English style called *Wallace Tower*, erected on the site of an ancient building that bore the same name: this tower is 115 feet in height, and is adorned in the front with a well-sculptured statue of Wallace by Thom; it contains a clock, and forms a conspicuous object in the distant view of the town. The *Ayrshire Horticultural and Agricultural Society* was established in 1815, under the auspices and patronage of the late Lord Eglinton, for the distribution of prizes for the best specimens of flowers, fruit, and vegetables, and for improvements in husbandry and agricultural implements; exhibitions are annually held, and attached to the institution is a library. A *Medical Association* has also been founded by members of that profession resident in the town and neighbourhood, the library of which contains a selection of the most valuable works on medical literature. The *Barracks*, an extensive range of building near the harbour, pleasantly situated on a fine level plain, are adapted for the reception of a regiment of infantry, and during the late war were fully occupied by the military stationed here; but since the peace they have been unoccupied. There are public baths at Ayr.

On the summit of the bank of the river Doon, about two miles from Ayr, is a stately monument in honour of the poet *Burns*, erected by subscription at an expense of £2000, and consisting of a circular building, rising from a triangular basement fifteen feet in height, to an elevation of more than sixty feet. It is surrounded by nine Corinthian pillars with an enriched cornice, supporting a cupola, which is surmounted by a gilt tripod resting upon dolphins; and a window of stained glass gives light to a circular apartment eighteen feet in diameter, in which are a portrait of the poet, an elegant edition of his works, and various paintings illustrative of the principal scenes and descriptions in his poems. Opposite to the entrance is a semicircular recess decorated with columns of the Doric order, intended for the reception of his statue; and in the grounds, comprising an area of about two acres, disposed in gravel-walks and shrubberies, and embellished with plantations of every variety of forest-trees, are placed in a handsome building for the purpose the well-known statues of Tam O'Shanter and Souter Johnny, executed by the late James Thom, and exhibited, previously to being deposited here, in almost every town of Britain. The Burns Monument was designed by Mr. Hamilton, and finished in 1823.

Notwithstanding the very advantageous situation of the town, which stands in the midst of a richly-cultivated district abounding in mineral wealth, and commands extensive means of communication both by sea and land, the town has never been much distinguished for its manufactures. A principal manufacture carried on here is that of shoes, which has for some years very much diminished, affording employment at present to little more than 200 persons. The working of muslins in varieties of patterns, for the Glasgow manufacturers, is carried on to a considerable extent, occupying about 300 persons at their own dwellings. Weaving with the hand-loom, for manufacturers in distant towns, employs about 150 persons; and tanning and currying are carried on upon a limited scale. A spacious factory for the spinning of wool and the manufacture of carpets, has been established by Mr. Templeton, which originated in a small establishment for the spinning of cotton-yarn; since its application to the present use, the building has been enlarged, and supplied with the most improved machinery of every kind, and the concern at present affords employment to 200 persons. A mill for carding, spinning, and weaving wool for plaids and blankets, has been also erected; the machinery is impelled by water, and about thirty persons are employed.

The foreign trade of the port consists almost entirely in the exportation of coal, and the importation of hemp, mats, tallow, tar, iron, pitch, timber, and other commodities; the number of vessels engaged in this trade is about eighteen. About 300 vessels are employed in the coasting trade, which is carried on to a very considerable extent; the imports are corn, groceries, hardware, iron, lead, haberdasheries, and other wares, and the exports are coal, corn, wool, and agricultural produce. In a late year, 739 vessels, of 62,730 tons' aggregate burthen, cleared out from the port, exclusively of steam-boats: 3136 quarters of wheat, 306 cwt. of flour, 11,145 quarters of oats, 5623 cwt. of meal, 318 quarters of barley, 643 quarters of beans, and fifty-one quarters of peas, were brought into the port in the year; and 60,000 tons of coal, 5571 quarters of wheat, 5586 cwt. of flour, eighty-seven quarters of oats, 3178 cwt. of oatmeal, eighty-four quarters of barley, and 183 quarters of beans, were shipped coastwise. The port appears to have been distinguished at an early period, and ships are said to have been built here by several of the kings of Scotland. The harbour is capacious, and affords good accommodation for vessels, but the entrance is somewhat obstructed by a bar thrown up by the accumulation of alluvial deposit, for the removal of which considerable sums have been expended with great effect. A wall was raised, nearly twenty feet in height, tapering from a base nearly thirty feet in breadth to about eight feet on the summit, and extending nearly 300 yards into the sea, on the south side; and a similar pier on the north side, parallel to the former, was likewise erected, at a very great expense, and recently enlarged. By these means the harbour has been considerably improved; and to render it still more complete, a breakwater has been partly erected at the mouth of the harbour, stretching still further into the sea, and which it is estimated will be completed at an expense of about £4000. The depth of water is from fourteen to sixteen feet, at ordinary spring tides; and about eighty sail of ships may lie in perfect safety within the bar.

The rivers Ayr and Doon abound with excellent salmon, and considerable quantities are taken with drags, and afterwards with stake-nets, and, besides affording an abundant supply for the town and neighbourhood, are sent to the Glasgow, Edinburgh, and London markets; the fishery in the Doon is let for £235, and the other for £45 per annum. The fisheries off the coast are extensive, and at present twenty boats, each managed by four men, are employed in taking cod, ling, haddock, whiting, turbot, skate, flounders, mackerel, and herrings, which last are taken only during the summer months: soles, red gurnet, and large conger-eels are found occasionally. The post-office has several deliveries daily, and the utmost facility of intercourse is maintained with the neighbouring towns, and with England and Ireland. The roads are kept in excellent order; and the trade of the place has been much improved by the formation of a railroad to Glasgow, for which there is an appropriate station on the north bank of the river, near the new bridge, having a frontage of eighty-four feet, with every accommodation for goods and passengers. The market-days are Tuesday and Friday; the markets are amply supplied with grain and provisions of every kind, and four annual fairs are held for cattle, horses, sheep, and agricultural produce.

The charter of INCORPORATION was first granted in the year 1202, by William the Lion, who conferred upon the burgesses the whole of the lands of the parish, with many valuable privileges. This charter was confirmed by Alexander II., who added the adjoining parish of Alloway, and extended the jurisdiction of the magistrates over the two parishes; and Robert Bruce, by a charter dated at Dunfermline, ratified all the grants of his predecessors, and erected Alloway into a barony, of which the corporation were the lords. Under these charters, the government of the burgh is vested in a provost, two bailies, a dean of guild, a treasurer, and twelve councillors, of which last number ten were formerly of the merchants' guild, and two of the trades'. The provost, bailies, and dean of guild are *ex officio* justices of the peace of the county. Until lately the burgh magistrates were elected from the guild brethren, who formed the council, by whom all the officers of the corporation were appointed; but the magistrates and councillors are now chosen agreeably with the provisions of the Municipal Reform act, by the parliamentary voters within the limits of the municipal burgh. The incorporated trade guilds were nine in number, and were styled the squaremen, hammermen, tailors, skimmers, coopers, weavers, shoemakers, dyers, and butchers. The magistrates have jurisdiction in civil and criminal cases, but confine the latter to petty misdemeanors; they hold courts weekly for civil and criminal causes. The more important cases are instituted in the sheriff's court, held every Tuesday from May to July, and from October to April: the number of causes in this court averages about 500 in the year, and very few of them are removed into the court of session, or supreme court. A sheriff court for the recovery of debts not exceeding £8. 6. 8. is held every Thursday; and a court every Monday chiefly for breaches of the peace. A dean-of-guild court is holden occasionally. These courts are held in the *Court-House* or *County-Hall*, on the north-west side of Wellington-square, a spacious and elegant building after the model of the temple of Isis at Rome, erected within the last

thirty or forty years, at an expense of more than £30,000. The front is embellished with a portico of massive circular columns, affording an entrance into a lobby, lighted by an ample and stately dome rising to a considerable height above the building, which consists of two stories. The interior comprises the requisite offices for persons connected with the proceedings, arranged on the ground floor; while the upper story, to which is an ascent by a noble circular staircase, contains two spacious halls, with rooms for the judges and barristers, and retiring-rooms for the juries and witnesses. Of these halls, one is appropriated to the business of the courts, and the other chiefly used as a banqueting or assembly room; the latter is splendidly fitted up, and is embellished with a portrait of the late Lord Eglinton as colonel of the Royal Highland regiment, of Lord Glasgow, late lord-lieutenant of Ayrshire, and Mr. Hamilton, late convener of the county. The prisons for the burgh and county are spacious and well ventilated, and the arrangement is adapted for the classification of the prisoners, who are regularly employed in various trades, and receive a portion of their earnings on leaving the prison. Ayr is the head of a parliamentary district comprising the burghs of Irvine, Campbelltown, Inverary, and Oban, which are associated with it in returning a member to the imperial parliament: the right of election, previously vested in the corporation, is now, by the act of William IV., extended to the £10 proprietors and householders; the sheriff is the returning officer, and the present number of voters in the parliamentary burgh of Ayr is about 420.

The PARISH, including Alloway, forms part of an extensive and richly-cultivated valley, and comprises about 5000 acres. It is bounded on the north by the river Ayr, which separates it from the parishes of Newton and St. Quivox; on the south-west by the river Doon; and on the west by the sea. Towards the sea the surface is generally flat for about two miles, beyond which it rises by a gentle ascent to a considerable elevation, forming a range of hills that inclose the vale, and terminate towards the south-west in the loftier chain of Brown Carriek, which projects into the sea in some precipitous rocky headlands called the Heads of Ayr. The *river Ayr*, which has its rise in the eastern extremity of the county, divides the valley in which the parish is situated into two nearly equal parts, and flows between banks richly embellished with plantations and pleasing villas. It is subject to violent floods, and in its course to the sea conveys great quantities of alluvial soil, which, accumulating at its mouth, and to some extent obstructing the entrance to the harbour, is removed by the means formerly mentioned. The *river Doon* has its source in a lake of that name, to the south-east, on the confines of the stewartry of Kirkcudbright, and in its progress displays many strikingly romantic features. A small stream called the *Glengaw burn* flows between the ancient parishes of Ayr and Alloway; and numerous springs are every where found, at a small depth from the surface, affording an abundant supply of water, but not well adapted for domestic use, containing carbonate and sulphate of lime, with some traces of iron in combination. Close to the eastern border of the parish is *Loch Fergus*, about a mile in circumference, and abounding with pike: near the margin were formerly the ruins of an ancient building of a castellated form, which have

been long since removed to furnish materials for the erection of farm-buildings, and in the centre of the lake is a small island, the resort of wild ducks and other aquatic fowl.

The scenery is interspersed with numerous pleasing villas and stately residences. Among these are, Castle-hill, commanding a fine view of the town and bay; Belmont Cottage, embosomed in trees; Doonholme, with its richly-planted demesne extending along the banks of the river; Rozelle, a stately mansion surrounded with trees of venerable growth; Belle-isle, an elegant castellated mansion with turrets, rising above the trees by which it is surrounded; and Mount Charles, with its flourishing plantations crowning the precipitous bank of the river Doon. The beautiful bay of Ayr is remarkable for the scenery it discloses. To the north are the islands of Cumbray, the Bute hills, and the Argyllshire mountains, with the summit of Ben-Lomond in the distance. To the west are seen the coast of Ireland, and, near the Ayrshire coast, the Craig of Ailsa, rising precipitously from a base two miles in circumference, to a height of 1000 feet above the level of the sea by which it is surrounded. The island of Arran with its lofty mountains, behind which is seen the Mull of Cantyre, also forms a conspicuous and interesting feature in the view.

The SOIL varies in different parts of the parish; but from the progressive improvements in agriculture, and the extensively adopted practice of tile-draining, the lands have been rendered generally fertile, and a considerable quantity of unprofitable land has been made productive. The greater portion is under tillage, and produces abundant crops of grain of all kinds, with turnips and other green crops. Considerable attention is paid to the rearing of live-stock; the sheep are chiefly of the Leicestershire and Cheviot breeds, and the cattle, with the exception of a few of the short-horned kind, are of the genuine Ayrshire breed, which has been brought to great perfection. The annual value of real property in the parish is £24,664. The substratum is mostly trap and whinstone, of which the rocks principally consist. Coal is prevalent, but the working of it has not been found profitable in this parish, though it has been extensively wrought in the parishes adjoining. Red sandstone and freestone also exist, and the latter was formerly quarried. Some beautiful specimens of agate are found upon the shore; and in the bed of the river occurs a peculiar species of claystone with small grains of dark felspar and mica, which is frequently used for polishing marble and metals, and as a hone for giving a fine edge to cutting tools.

The parishes of Ayr and Alloway were united towards the close of the seventeenth century. The church of Ayr, which had been made collegiate in the reign of Mary, afforded sufficient accommodation for the whole population; and divine service, which, for some time after the union of the parishes, was performed in the church of Alloway every third Sunday, was finally restricted to the church of Ayr. For ecclesiastical purposes the parish is within the bounds of the presbytery of Ayr and synod of Glasgow and Ayr. The stipend of the incumbent of the first charge is £178. 5., including half the interest of a sum of £1000 bequeathed for the equal benefit of both ministers; with a manse, a comfortable modern residence. The second minister has also a stipend, including £20 interest money above

stated, £82. 15. 8. received from the public exchequer, and £108. 6. 8. paid from the funds of the burgh; with an allowance for a manse. The Old church was erected about the middle of the seventeenth century, to supply the place of the church of St. John, which had been desecrated by Cromwell, and converted into an armoury for the fort that he erected around the site. It is a substantial edifice, but greatly inferior to the original church in elegance of design. The New church was erected in 1810, at an expense of nearly £6000, and is a handsome edifice. The two churches together are capable of accommodating from 2000 to 2500 persons. There are places of worship for members of the Free Church, the United Presbyterian Synod, Wesleyans, United Original Seceders, Reformed Congregation, Episcopalians, and Moravians. The parochial schools of the burgh, by a charter in 1798, were incorporated into an institution called the Academy, and a handsome and capacious building was erected with funds raised by contributions from the heritors, and subscriptions. It is conducted under the superintendence of a committee of directors, by a rector who has a salary of £100 per annum, and three masters with salaries of about £20 each; the course of instruction is comprehensive, and the number of pupils averages about 500. A school in which about 200 children are taught, is supported by the produce of a bequest of £2000 by Captain Smith, under the direction of the two ministers and the magistrates.

The hospital for the poor, or Poor's House, was erected in 1759, at the expense of the corporation, aided by subscription, for the reception of the infirm and helpless poor; it is conducted by a master and mistress with a salary of £80. A dispensary was established in 1817, which afforded medical assistance to more than 500 patients annually, and a fever hospital has been lately built, with which the dispensary is now conjoined: the subscriptions amount to about £300 per annum. A savings' bank was instituted in 1815; the present amount of deposits is about £3000, and the number of contributors 700: the gross amount of deposits, since its commencement, exceeds £30,000. Numerous charitable benefactions have been made, the principal of which are, a bequest by Mr. Patterson, of Ayr, to the Glasgow Infirmary, of £500, in consideration of which the parish is privileged to send four patients to that institution; an annual income of £55, derived from a bequest left by Mr. Smith, a native of this town, and alderman of Londonderry in Ireland, distributed among poor persons; a bequest of £300 by Mr. James Dick, the interest of which is similarly distributed among the poor; the farm of Sessionfield, consisting of 100 acres, bequeathed by Sir Robert Blackwood, of Edinburgh, a native of this parish, the produce of which is distributed among poor householders; a bequest of £1000 by Mrs. Crawford, for reduced females; a bequest of £300 by Captain Tennant, to the Poor-house; a bequest of £5 annually to ten females, by Miss Ballantine, of Castle-hill; and a bequest of £1000 to the poor of the parish, by Mr. Ferguson of Doonholme.

There are remains of the church of St. John, within the area of Cromwell's fort, consisting of the tower; and also of the old church of Alloway, of which the walls are entire. The moat of Alloway may be traced, on the approach to Doonholme House: on its summit, according to ancient records, courts of justice were

held for the trial of petty offences. There are evident traces of the old Roman road leading from Galloway into the county of Ayr, and passing within half a mile of the town: portions of it are still in tolerable preservation. A tract on the coast, called the Battle Fields, is supposed to have been the scene of a fierce conflict between the natives and the Romans. Both Roman and British implements of war, urns of baked clay, and numerous other relics of Roman antiquity, have been found at this place. Coins of Charles II. were discovered under the foundation of the old market-cross, a handsome structure of hexagonal form, removed in 1788.

Johannes Scotus, who flourished in the ninth century, eminent for his proficiency in Greek and oriental literature, and who was employed by Alfred the Great to restore learning at Oxford; and *Andrew Michael Ramsay*, better known as the *Chevalier Ramsay*, the friend of Fenelon, Bishop of Cambrai, were natives of Ayr. *John Loudon McAdam*, celebrated for his improvements in the construction of roads, and *David Cathcart*, *Lord Alloway*, one of the lords of session and of the high court of judicary, were also natives; and *John Mair*, author of a system of book-keeping, and *Dr. Thomas Jackson*, professor of natural philosophy in the university of St. Andrew's, and author of several valuable works, were connected with the town. But the most celebrated name connected with the place, is that of **ROBERT BURNS**, who was born at Alloway, in the parish, in a cottage which is still remaining. On the 6th of August, 1844, the town of Ayr was the scene of great rejoicings, occasioned by a national festival being held in the neighbourhood, on that day, in honour of the memory of Burns, and to greet the three sons and the sister of the bard. At an early hour of the morning, visitors from all parts of Scotland and many from England and Ireland had arrived, to join in or be spectators of the proceedings; and a grand procession was shortly formed, which passed from the town along a road thronged with people, to the more immediate scene of the events of the day, the banks of the river Doon. Here, in the vicinity of the poet's birth-place, beside the old kirk of Alloway which his muse has immortalized, and beneath the monument raised by his admiring countrymen, the procession closed; and not long afterwards a banquet was partaken of by above 2000 persons, including many visitors of distinguished talent, in a large pavilion 120 feet square, that had been specially erected in a field adjoining the monument. Numerous appropriate speeches, some of considerable eloquence, were made upon the occasion. That of the Earl of Eglinton, lord-licutenant of the county, who presided, and that of the croupier, Professor Wilson, were particularly remarkable; and the whole of the proceedings were characterized by the utmost enthusiasm, and by an universal desire to merge every individual feeling, that the day might be truly devoted to its own peculiar object.

AYRSHIRE, an extensive county, on the western coast of Scotland, bounded on the north by Renfrewshire, on the east by the counties of Lanark and Dumfries, on the south by the stewartry of Kirkeudbright, and Wigtonshire, and on the west by the Firth of Clyde and the Irish Channel. It lies between 54° 40' and 55° 52' (N. lat.), and 4° and 5° (W. long.), and is about sixty miles in length and nearly thirty in extreme breadth, comprising an area of about 1600 square miles,

or 1,024,000 acres; containing 31,497 houses, of which 30,125 are inhabited; and a population of 164,356, of whom 78,983 are males, and 85,373 females. This county, which includes the three districts of Carrick, Kyle, and Cunninghame, was originally inhabited by the *Damnii*, with whom, after the departure of the Romans, were mingled a colony of Scots, who emigrated from Ireland, and settled in the peninsula of Cantyre, in the county of Argyll. In the eighth century, the Saxon kings of Northumbria obtained possession of this part of the country; and in the reign of David I., Hugh de Morville, who had emigrated from England, and was made by that monarch constable of Scotland, received a grant of the whole district of Cunninghame, in which he placed many of his English vassals. Previously to their final defeat at the battle of Largs, in 1263, the county was frequently invaded by the Danes; and during the wars with Edward of England, it was the scene of many of the exploits of William Wallace in favour of Robert Bruce, who was a native of the county, and obtained by marriage the earldom of Carrick, which, on his accession to the throne, merged into the property of the crown. The change in the principles of religion, which led to the Reformation, appears to have first developed itself in this county; and Kyle is noticed by the reformer Knox as having at a very early period embraced the reformed doctrine.

Before episcopacy was abolished, the county was included in the diocese of Glasgow; it is now almost entirely in the synod of Glasgow and Ayr, and comprises several presbyteries, and forty-six parishes. Within its limits are the royal burghs of Ayr (which is the county town) and Irvine; the towns of Largs, Beith, Ardrossan, Saltcoats, Kilwinning, Kilmarnock, Mauchline, Catrine, Old and New Cumnock, Muirkirk, Maybole, and Girvan; and numerous large and populous villages. Under the act of the 2nd of William IV., the county returns one member to the imperial parliament. The surface is varied. In the district of Cunninghame, which includes the northern portion, it is comparatively level; in Kyle, which occupies the central portion, it is hilly and uneven, though containing some large tracts of fertile and well cultivated land; and the district of Carrick, in the south, is wild and mountainous. The principal mountains are, Knockdolian, which has an elevation of 2000 feet above the sea; Cairntable, rising to the height of 1650 feet; Knockdow and Carleton, each 1554 feet high; and Knocknunan, 1540 feet. The chief rivers are the Ayr, the Doon, the Garnock, the Girvan, and the Stinchar; and the county is intersected by numerous smaller streams, the principal of which are the Rye water, the Irvine, and the Kilmarnock water. There are also numerous small lakes, especially in the district of Carrick; but the only one of any extent is Loch Doon, from which issues the river of that name. The coast, particularly that of Carrick, is precipitous, rocky, and dangerous, and possesses few good harbours; towards the extremities it is almost inaccessible owing to rocks in the offing, and towards the centre the beach is sandy, and the water so shallow as generally to preclude the approach of vessels of any considerable burthen.

About one-third of the land is arable and in cultivation, and the remainder, of which a very large portion is mountain waste, is chiefly meadow and pasture. The

soil is in some parts light and sandy, and in others a rich clay, and nearly the whole of the district of Cunninghamham is a rich and fruitful vale. The dairies are well managed, and their produce is in very high repute; the county is distinguished for its excellent breed of cattle. The moors abound with all kinds of game, and the rivers with salmon and trout. The minerals are, coal, ironstone, lead and copper ore, black-lead, and gypsum, the two first of which are largely wrought; the coal is very abundant, and the working of it for exportation is daily increasing, for which purpose tram-roads have been laid down, and harbours have been constructed. There are also extensive quarries of freestone and marble. The ancient forests of Ayrshire have long since disappeared; and the plantations, which are extensive, are mostly of recent growth. In this county the seats are Kelburn House, Eglinton Castle, Culzean Castle, Loudoun Castle, Fairley Castle, Dalquharran, Blairquhan, Bargeny, Fullarton House, Dumfries House, Stair House, Auchincruive, Auchinleck, and many others. The manufactures comprise the various branches of the woollen, the linen, cotton, and thread manufactures, for which there are extensive works at Kilmarnock and Catrine; the weaving of muslin is also general throughout the county, and the Ayrshire needlework has long been distinguished for its elegance. There are tanneries and potteries, iron-foundries, and some very large iron-works, of which those at Muirkirk, Dalry, and Glengarnock are among the most celebrated in the country. Along the coast are valuable fisheries, and salt-works, and works for kelp and soda. Facility of communication is maintained by excellent roads, and bridges kept in good repair; also by the railway from Ayr to Glasgow, with its different branches. The annual value of real property in the county is £531,319, of which £390,278 are returned for lands, £86,430 are for houses, £27,851 for mines, £11,313 for railway communication, £1301 for quarries, £843 for fisheries, £507 for iron-works, and the remainder for other species of real property. There are numerous remains of antiquity, consisting of the ruins of fortresses and religious houses, in various parts of the county; all of which are described in the articles on the several parishes where they are situated.

AYTON, a post-town and parish, in the county of BERWICK, 9 miles (N. W. by N.) from Berwick-on-Tweed, and $47\frac{1}{2}$ (E. by S.) from the city of Edinburgh; containing about 1700 inhabitants. This place, which takes its name from the water of Eye, on whose banks it is situated, is intimately connected with important transactions of early times. It was formerly dependent on the monastery of Coldingham, upon the settlement of which, between the years 1098 and 1107, under the auspices of King Edgar, that monarch made several grants to the monks, including "Eytun" and "aliam Eytun", the latter being Nether Ayton, on the opposite side of the river. Ayton then belonged to the parish of Coldingham; and it is considered that its church was founded about that time, as a chapel to the neighbouring priory, to which use it was appropriated till the Reformation, when this district was disjoined from Coldingham, and united to Lamberton on the south-east, a short time after which it was erected into a parish of itself. The Castle of Ayton, a place of some consequence in turbulent times, but long since demo-

lished, is supposed to have been founded by a Norman called De Vescie, whose family afterwards changed their name to De Eitun, and of whom the Aytons of Inchdarney in Fife are said to be the lineal descendants. This castle was subjected to a siege by Surrey, the famous general of Henry VII., in 1497. It appears that the village of Ayton sprang up in its vicinity for the sake of the protection which it afforded in times of danger. The estate of Prendergast, a distinct and very ancient portion of the parish, in the reign of David I. partly belonged to Swain, priest of Fishwick on the banks of the Tweed, who afterwards renounced his claim to it in favour of the Coldingham monks. A truce between the hostile kingdoms was signed in the church in 1384; and another in 1497, for seven years, after the capture of the castle in July in the same year.

The PARISH is bounded on the east by the sea. It is about four miles in length, the same in breadth, and contains an area of about 7050 acres, of which 6000 are arable, 250 pasture, and 800 plantation. The surface is most elevated in the southern part, which consists of a sloping range of high land, adorned with beautiful copses, and reaching at its highest elevation to about 660 feet above the level of the sea: on the northern side the ground is lower, but has some very fine lofty undulations. The sea-coast extends between two and three miles, and is abrupt and steep, one point, called Blaiky's, rising to a height of 350 feet. There are one or two caves on the shore, accessible only by sea, and which, it is supposed, were formerly used for smuggling; they are the resort of marine fowls and shell-fish. At the south-eastern point of the boundary is a rocky bay, approached from land by a deep ravine, at the foot of which stand the little fishing-village of Burnmouth, and a singular rock called the Maiden Stone, insulated at high water, and which has been separated from the precipice above by the undermining of the sea. At the north-eastern point of the parish are two or three islets called the Harker rocks, over which the sea continually rolls, and, when driven by strong east winds, exhibits a succession of waves of sweeping foam. The chief rivers are the Eye and the Ale, the former of which rises in the Lammermoor hills, and after flowing for nearly twelve miles, enters the parish by a right-angled flexure on its western side, and at length falls into the sea. The scenery of the valley through which it flows, if viewed from Millerton hill, the old western approach to Ayton, is of singular interest and beauty: the nearer prospect consists of the village, manse, and church, Ayton House with its beautiful plantations, and the commanding house and grounds of Peelwalls; a number of mansions and farm-houses appear in various parts on the right, skirted by a range of hill country, and the expansive and restless sea closes the prospect on the north-east. The Ale rises in Coldingham parish, and after running two or three miles, forms the north-eastern boundary of this parish, separating it from Coldingham and Eyemouth for about two miles, when it falls into the Eye at a romantic elevation called the Kip-rock.

The soil is in general good, consisting in the southern part of a fertile loam, and in the northern exhibiting a light earth, with a considerable admixture of gravel in many places. The finest crops, both white and green, are raised in the parish; the land is in a high state of

cultivation, and every improvement in agriculture has been introduced, the most prominent signs of advance being the adoption of a complete system of draining, and the plentiful use of bone-dust as turnip manure. The annual value of real property in the parish is £12,970. The prevailing rock in the district is the greywacke and greywacke slate, of which formation large supplies of sandstone of good quality are quarried for building. Considerable deposits of coarse alabaster, or gypsum, have been dug up near the hamlet of Burnmouth; and in the vicinity of the Eye are large quantities of coarse gravel, boulders, and of rolled blocks under the soil, apparently alluvial, and rounded by the perpetual action of water.

The mansion-house of Ayton, which was destroyed by fire in 1834, was afterwards sold as a ruin with the adjoining property for £170,000, and has been rebuilt on a scale of architectural splendour: it is situated on a beautiful acclivity, near the great London road, on the bank of the Eye, and is surrounded by extensive grounds. The house of Prendergust is a modern building of superior construction; and at Peelwalls is an elegant residence, lately built of the celebrated stone from the quarries of Killala, in Fifeshire: it is situated in grounds which vie in beauty with the mansion. Guns-green House, standing by the sea-side and harbour of Eyemouth, is also a fine mansion, erected by a wealthy smuggler, who caused many concealments to be constructed in the house, and under the grounds, for the purpose of carrying on his contraband traffic. A new and elegant seat was lately erected on the estate of Netherbyres, by Capt. Sir Samuel Brown, with an approach from the north side by means of a tension-bridge over the Eye, by which, with many other improvements, this valuable property has been rendered more attractive.

The village of Ayton contains about 700 persons, and the village of Burnmouth a third of that number. At the former, a recently established cattle-market takes place monthly, which is well supported; and fairs have long been held twice a year, which at present are not of much importance. Numerous buildings have been erected upon the new line of the London road, under leases granted by the proprietor; and the village has thus been very considerably improved. There are several manufactories, the principal of which is a paper-mill, where pasteboard and coloured papers are chiefly prepared: it possesses new and greatly improved machinery, the drying process being effected by the application of the paper to large cylinders heated by steam; about £800 are annually paid to the workmen, and the excise duties amount to upwards of £3000 per annum. A tannery, which is at present on a small scale, but progressively increasing, was commenced in the village a few years since; and at Guns-green is a distillery, not now at work, that yielded about 1500 gallons of aqua weekly, chiefly derived from potatoes, 6000 cwt. of which were sometimes consumed in two months. Kelp has occasionally been made on the shore, at Burnmouth; but the return is too small to induce the inhabitants to prosecute the manufacture with vigour. A harbour has been lately constructed at Burnmouth, as a security against the violence of the sea: it is of sandstone found in the parish, and was completed at a cost of £1600, three-fourths defrayed by the commissioners for fisheries,

and one-fourth by the fishermen. Large quantities of white fish and occasionally of red, of very fine quality, are taken off the coast; and cod, ling, and herrings are cured for distant markets: lobsters are sometimes sent to London; and periwinkles, with which the rocks abound, are likewise an article of trade, for the use of those fishmongers who convert them into sauce. There is the greatest facility of communication, the London road and the North-British railway intersecting the parish, and another road crossing the London line nearly at right angles, and leading from Eyemouth into the interior of the county.

For ecclesiastical purposes the parish is within the bounds of the presbytery of Chirnside and synod of Merse and Teviotdale; the patronage is possessed by the Crown, and the minister's stipend is about £218, with a glebe valued at £35 per annum, and a manse on the bank of the river Eye, erected at the close of the last century. The church is conveniently situated about half a mile from the village, in a romantic and sweetly secluded spot, near the river Eye, commanding a fine view of Ayton House. It consists partly of the walls of the ancient church, built about the twelfth century by the monks of Coldingham, and which was of very considerable dimensions. The old south transept is still entire, shrouded with mantling ivy, and converted into a burying-place for the Ayton family; the gable of the chancel is also remaining, but its side walls have been removed for the sake of the sandstone material, which appears to have been cut from the quarry at Greystonlees. The present building was repaired and enlarged about twenty-five years since, and contains 456 sittings. There are two places of worship belonging to the United Presbyterian Synod. The parochial school affords instruction in the usual branches of education, with the classics, mathematics, and French if required; the master has a salary of £34. 4. 4., and a good house and garden, with fees and other emoluments to the amount of £84 a year.

On the highest point of the southern extremity of the parish is the round camp of Drumaw, or Habchester, which, before recent mutilations by the plough, was a fine specimen of ancient British encampments. It commands an extensive prospect both by sea and land; and from its situation on the northern side of the hill, and its use for observation and defence, it is thought to have been constructed by South Britons in order to watch the movements and repel the attacks of their northern neighbours. In the vicinity are remains of other camps, all of which, in process of time, yielded to the more efficient and permanent defence of castles, remains of which are still visible in many parts. The encampment of Drumaw was situated near the Roman road which extended from the wall of Severus, and, after crossing the country at Newcastle, terminated at the Roman camp near St. Abb's Head in this district.

B

BACHIES, a village, in the parish of GOLSPIE, county of SUTHERLAND; containing 145 inhabitants.

BACKDEAN, a hamlet, in the parish of NEWTON, county of EDINBURGH; containing 45 inhabitants.

This hamlet lies near the source of a small tributary to the Esk water, and borders upon the parish of Inveresk, which is situated to the north-east of Backdean.

BACKMUIR, a hamlet, in the parish of LIFF, BENVIE, and INVERGOWRIE, county of FORFAR; containing 166 inhabitants. It is situated in the north-western extremity of the parish, upon the border of the county of Perth, and close to the Dighty water; and the road from Dundee to this place here branches off into two roads, one leading to Cupar-Angus, and the other to Meikle.

BALLIESTON, a village, in the former quoad sacra parish of CROSSHILL, parish of OLD MONKLAND, Middle ward of the county of LANARK, $4\frac{3}{4}$ miles (E. by S.) from Glasgow; containing 639 inhabitants. This is the principal village of Crosshill district, and is situated in the western part of the parish of Old Monkland, on the border of that of Barony, and near the roads from Glasgow to Airdrie and to Hamilton. For many years past, the Monkland, Bothwell, Barony, and Cadder Farming Society have held their annual exhibition of live stock in the village. The show is considered to be in Scotland second only to the exhibitions of the Highland Society; the description of stock is of the first class, and prizes are frequently obtained by agriculturists of this neighbourhood at the latter exhibitions, where the competition is open to England and Scotland. A subscription library is supported here.

BAINSFORD, a village, in the parish of FALKIRK, county of STIRLING, 1 mile (N.) from Falkirk. This village forms part of the suburbs of the town of Falkirk, and is included within the parliamentary boundary. It is situated on the north side of the Forth and Clyde canal, over which is a drawbridge, affording access to the village of Grahamston. The inhabitants are chiefly employed in the Carron iron-works, and the proprietors of that establishment have a basin here, communicating with the canal, and which is connected with the works in the adjoining parish of Larbert, by a railway. There is a rope-walk, where several persons are employed; and in the village, which is neatly built, is a well-conducted school.

BALBEGGIE, a village, in the parish of KINNOULL, county of PERTH, 5 miles (N. E.) from Perth; containing 222 inhabitants. This village is situated in the northern extremity of the parish, on the road to Cupar-Angus; and the United Presbyterian Synod have a place of worship here, with a residence for the minister, and a garden attached.

BALBIRNE, a hamlet, in the parish of RUTHVEN, county of FORFAR; containing 43 inhabitants.

BALBIRNIE, county of FIFE.—See MARKINCH.

BALBLAIR, an island, in the parish of FODDERTY, county of ROSS and CROMARTY; containing 7 inhabitants.

BALBROGIE, a village, in the parish of CUPAR-ANGUS, county of PERTH, $1\frac{1}{2}$ mile (N. N. E.) from the town of Cupar-Angus; containing 80 inhabitants. A weekly market has been established at this place, which is conveniently situated near the road from Cupar-Angus to Meikle, about midway between it and the river Isla.

BALBUNNO, a village, in the parish of LONGFORGAN, county of PERTH; containing 200 inhabitants. This village, which stands entirely upon the lands of Mylnefield, is neatly built, and inhabited chiefly by per-

sons employed in a bleachfield in the immediate neighbourhood, though not within the limits of the parish of Longforgan. The bleachfield has been established within the last few years, and to it the origin of the village may be attributed.

BALCHULLISH.—See BALLICHULISH.

BALCURVIE, a village, in that part of the parish of MARKINCH which formed the quoad sacra parish of MILTON of BALGONIE, county of FIFE; containing 186 inhabitants.

BALDERNOCK, a parish, in the county of STIRLING, 7 miles (N.) from Glasgow; containing, with the villages of Balmore, Barraston, and Fluchter, about 800 inhabitants. The name is corrupted, as is supposed, from the Celtic term *Baldrinick*, signifying "Druid's town"; an opinion which receives strong support from the numerous remains found here, pertaining to the ancient order of Druids. This parish, of which the eastern half was in that of Campsie till 1649, is situated at the southern extremity of the county, where it is bounded by the river Kelvin, which flows towards the west; and by the Allander, a tributary of the Kelvin. It comprehends 3800 acres, of which 3100 are under cultivation or in pasture, 240 in wood, and the remainder occupied by roads and water. About equal parts are appropriated for grain, green crops, &c.; and for pasture. The surface is greatly diversified, consisting of three distinct portions succeeding each other on a gradual rise from south to north; each varying exceedingly from the others in soil, produce, and scenery; and the whole circumscribed by an outline somewhat irregular, but approaching in form to a square, the sides severally measuring about two miles. The northern tract, situated at an elevation of 300 feet above the sea, and embracing fine views in all directions, contains a few isolated spots under tillage, surrounded by moss land, with a light sharp soil incumbent on whinstone. Below this, the surface of the second tract assumes an entirely different appearance, being marked by many beautifully picturesque knolls, and having a clayey soil resting on a tilly retentive subsoil. To this portion succeeds the lowest land in the parish, and by far the richest, comprising 700 or 800 acres along the bank of the river Kelvin, formed of a soil of dark loam, supposed to have been washed down gradually from the higher grounds: this division is called the Balmore haughs.

Oats and barley are the prevailing crops of grain, and all the ordinary green crops are raised: little wheat is grown. Draining is extensively carried on, but there is still much land in want of this necessary process. The inundations from the river Kelvin, formerly often destructive to the crops on the lower grounds, are now to a great extent prevented by a strong embankment, and by a tunnel at the entrance of a tributary of the river, by which the torrents that once poured forth, in rainy weather, uncontrolled, are so checked as to obviate danger. The annual value of real property in the parish is £5713. The rock consists of trap in the southern and midland portions; but in the northern district limestone, ironstone, pyrites, alum, and fire-clay are abundant: there are lime-works, collieries, and an alum-work, in the parish, all in the neighbourhood of Barraston. Iron-ore has lately been discovered in the coal-mines of Barraston, unlike the common argillaceous kind formerly known to exist; it consists of a mixture

of iron with carbonaceous substances, similar to that found in the mines near Airdrie, but no iron is wrought in the parish. The coal and limestone that have been obtained, for 150 years, from this locality, lie in beds from three to four feet thick, and from twelve to twenty-four feet under the surface, the superincumbent strata being formed of argillaceous slate, calcareous freestone, and ironstone: the lime is excellent, and sent in large quantities to Glasgow and many other places in the country. Bardowie, a very ancient mansion, once fortified, and a considerable part of which is now modernised, is ornamented in front with a beautiful loch a mile long: it is the seat of the chief of the clan Buchanan. Towards the north-west of the parish, on an eminence, are the remains of a tower once a family-mansion; near this is the seat of Craigmaddie, and, in another direction, the mansion of Glenorchard. The parish is traversed by a high road from east to west, and the Forth and Clyde canal passes within a small distance of the south-eastern boundary. A fair used to be held in the summer for cattle and horses, but it has fallen into disuse.

Baldernock is ecclesiastically in the presbytery of Dumbarton, synod of Glasgow and Ayr, and in the patronage of the Crown: the minister's stipend is about £157, part of which is received from the exchequer; with a manse, and a glebe valued at £19 per annum. The church is a plain edifice, built in 1795, and contains 406 sittings. There is a place of worship for members of the Free Church. The parochial school affords instruction in reading, writing, and arithmetic; the master has a salary of £34. 4. s., and the fees. In the vicinity of Blochairn farm, near which a battle is said to have been fought with the Danes, are several cairns, and, not far from these, three stones called "the Auld Wives' Lifts", supposed to be Druidical.

BALDOVAN, a hamlet, in the parish of STRATHMARTINE, county of FORFAR; containing 44 inhabitants. It is in the south-eastern part of the parish, near the Dighty water.

BALEDGARNO, a village, in the parish of INCHTURE and ROSSIE, county of PERTH, 9 miles (W.) from Dundee; containing 110 inhabitants. It is situated in the Carse of Gowrie, and southern portion of the parish, and is a neat and thriving place, the property of Lord Kinnaird. The hill of Baledgarno is finely planted with various kinds of timber.

BALERNO, a village, in the parish of CURRIE, county of EDINBURGH, 7 miles (S. W.) from Edinburgh; containing 303 inhabitants. This place is situated on the Leith water, on which are some mills for the manufacture of paper. A freestone-quarry has been worked in the vicinity for a number of years, and many of the buildings of the New Town of Edinburgh have been erected with materials from it.

BALFIELD, a hamlet, in the parish of LETHNOTT and NAVAR, county of FORFAR; containing 41 inhabitants. It lies in the south-eastern portion of the parish, a little to the north of the West water.

BALFRON, a parish, in the county of STIRLING; containing 1970 inhabitants, of whom 1568 are in the village. It has been supposed by some that this place derived its name, which is said to signify "the town of sorrow" or "mourning", from a dreadful calamity experienced by the original inhabitants, who, having left their children in their tents, and departed to a spot at a

short distance for the performance of religious rites, found upon returning that they had been all destroyed by wolves, with which the neighbourhood was infested. Others, however, interpret the name "the town of burns", and imagine that it arose from the situation of the original village, now fallen to decay, at the confluence of two small streams. The parish is eleven miles in length from east to west, and three miles in breadth, comprising 14,080 acres, of which 3320 are under cultivation, 105 in plantations, and the remainder waste. Its surface is diversified with pleasing eminences, on one of which, gently sloping to the south, stands the neatly-built and interesting village, enlivened by the stream of the Endrick, winding through a richly-wooded vale at its foot, and supplying to the lovers of angling an ample stock of trout of a peculiarly fine flavour. The lofty hills called the Lennox fells, rising 1500 feet above the level of the sea, form a singularly striking feature here, bounding the scenery in one direction; and the distant view embraces the Grampian range, presenting to great advantage the majestic Ben-Lomond, with many subordinate yet imposing elevations.

The farms in general are of small size, and the soil, which in some places is light and sandy, but more frequently wet and tilly, is cultivated with much skill. Dairy-farming is a favourite branch of husbandry, and the stock, consisting of the Ayrshire breed, has been very much improved, as has also the stock of sheep, in consequence of the liberal patronage of the Strath-Endrick Agricultural Club. The annual value of real property in the parish is £4704. Limestone is abundant; but it has not been wrought to any extent, through the want of coal for burning it into lime: coal is supposed to exist here, on account of the usual accompanying trap-rocks having been found; but all attempts to discover it have hitherto failed. The ancient mansion of Ballindalloch, in the parish, formerly belonged to the Glencairn family, celebrated in Scottish history, and of whom Alexander, the fifth Earl of Glencairn, was the friend, associate, and patron of John Knox. The population was once entirely rural, and the chief point of interest was the old village with its spreading oak-tree, where the church and burying-ground are situated; but about seventy years since, manufactures were introduced, and a new village quickly sprang up. In 1780 the manufacture of calicoes was commenced, and in 1789 cotton-spinning succeeded, when a mill was erected, known by the name of the Ballindalloch cotton-works, now employing upwards of 250 hands, chiefly females, and driven by a stream supplied by the Endrick, augmented in case of failure by the water of a large reservoir in Dundaff moor. There are between 300 and 400 hand-loom in the village, employing the larger part of the population in making light jaconets and lawns, and all kinds of fancy dresses and shawl patterns: these branches, however, have been for some time greatly depressed. Facility of communication is afforded by good roads that run to Stirling and Glasgow, from which towns Balfron is nearly equidistant, and with which latter the chief communication is carried on. A large cattle-fair is held at Balgair on the last Tuesday in March, and another in the last week in June.

Ecclesiastically the parish is in the presbytery of Dumbarton, synod of Glasgow and Ayr, and in the patronage of the Earl of Kinnoull: the minister's stipend is £158. 6. 8., above half of which is paid from the

exchequer; with a manse, and a glebe of seventeen acres, valued at £25 per annum. Balfron church is a very plain structure, built in 1832, at a cost of £930; it contains 690 sittings, and is conveniently situated in the village, but being remote from the eastern quarter, the minister preaches there once every six weeks in summer, and once a quarter in winter. There are places of worship for the United Presbyterian Synod and United Original Seceders. The parochial school affords instruction in the ordinary branches; the master has a salary of £25, and £10 fees. The parish contains a library of 400 volumes in miscellaneous literature, and one of religious books, consisting of about 150 volumes. This place, with some others, asserts a claim to the honour of being the birthplace of Napier, the inventor of Logarithms.

BALGONIE, in the county of FIFE.—See **COAL-TOWN**, and **MARKINCH**.

BALGRAY, a hamlet, in the parish of **TEALING**, county of **FORFAR**; containing 63 inhabitants. It is situated in the south-eastern part of the parish, near the church, from which it is divided by a small rivulet that rises within the limits of Tealing.

BALHADDIE, a hamlet, in the parish of **DUNDLANE**, forming part of the late quoad sacra parish of **ARDOCH**, county of **PERTH**; and containing 33 inhabitants.

BALINTORE, a village, in the parish of **FEARN**, county of **ROSS** and **CROMARTY**, $2\frac{1}{2}$ miles (E. by S.) from Fearn; containing 313 inhabitants. This is a fishing-village, situated on the coast of the Moray Firth, which has here a flat and generally sandy shore. On the south is the ferry of Cromarty, distant about four miles.

BALISHEAR, an island, in the parish of **NORTH UIST**, county of **INVERNESS**; containing 157 inhabitants. It is situated in the channel between the islands of North Uist and Benbecula, and has a small village on the east side.

BALKELLO, a hamlet, in the parish of **TEALING**, county of **FORFAR**; containing 88 inhabitants.

BALLANTRAE, a parish, in the district of **CARRICK**, county of **AYR**, 13 miles (S. by W.) from Girvan; containing 1651 inhabitants, of whom 605 are in the village. This place, anciently called Kirkeudbright-Innertig, derived that appellation from the position of its church at the mouth of the river Tig; and, on the removal of the church from the old site to the town of Ballantrae, assumed its present name, which in the Celtic language is descriptive of its situation on the sea-shore. The parish is bounded on the west by the Irish Sea, and comprises nearly 25,000 acres, of which about 7000 are arable, 400 woodland and plantations, and the remainder rough moorland, affording scanty pasture. Its surface is greatly diversified with hills and dales, and is intersected by a series of four parallel ridges, increasing in elevation as they recede from the shore, and of which the third and highest is distinguished by a hill 1430 feet above the sea, that was selected as one of the stations for carrying on the late trigonometrical survey of this part of the coast. From this point is obtained an extensive and beautiful prospect, embracing the Isle of Man, the north-east coast of Ireland, Cantyre, the isles of Ailsa and Arran, and the Ayrshire coast, terminated by the West Highland mountains in the background; while in another direction appear the Dum-

fries-shire hills, the Cumberland and Westmorland mountains, and Solway Firth. The coast extends for about ten miles; the shore is bold, and interspersed with rocks, except for about three miles near the village. The principal river is the Stinchar; it rises in the parish of Barr, flows south-west, crosses Colmonell, forms the northern boundary of part of Ballantrae, then runs through it for about three miles, and discharges itself after a course of about thirty miles into the sea. The Tig, rising in the high grounds, after a short course flows into the Stinchar; and the App, a very inconsiderable stream, flows westward, along the picturesque dell of Glen-App, into Loch Ryan. These streams all abound with common and sea trout, par, and occasionally salmon, which last are plentiful in the Stinchar.

The **SOIL** is chiefly of a light and gravelly quality; near the shore, sandy; and in the level lands, especially near the rivers, a rich and fertile loam. The crops are oats, wheat, bear, potatoes, turnips, and a few acres of beans and peas. Bone-dust has been introduced as manure; the lands have been drained, and other considerable improvements were made under the auspices of the late Stinchar Agricultural Association, which included this parish, where it originated. There are several dairy-farms, all of them well managed, and in the aggregate producing annually about 5000 stone of sweet-milk cheese, under the designation of Dunlop cheese. The annual value of real property in the parish is £7265. The natural woods are very inconsiderable, though, from the number of trees found embedded in the soil, they would appear to have been formerly extensive; they consist mostly of oak, ash, and birch, and on the banks of the Stinchar and the Tig are some valuable trees. The plantations are of comparatively recent formation; they are in a thriving condition, and some which have been laid down in Glen-App, and on the ridge to the north of it, by the Earl of Orkney, promise to become a great ornament in the scenery of the parish.

The **VILLAGE**, which was once a burgh of barony by charter of James V., is pleasantly situated on the north bank of the river Stinchar, about half a mile from its influx into the sea; a public library is here supported by subscription, and a post-office has been established. A considerable salmon-fishery is prosecuted at the mouth of the Stinchar: the fish are sent chiefly to the markets of Ayr and Kilmarnock, and the annual produce may be estimated at about £500; the season generally commences in February, and closes in September. The white-fishery is carried on extensively, employing twenty boats, to each of which four men are assigned: the fish are principally cod and turbot, and in some seasons herrings are also taken in abundance; the annual produce may be estimated at about £2000, and the season usually commences in January, and ends in April. A court of petty-session was formerly held in the village every alternate month, at which two of the county magistrates presided. The Glasgow and Stranraer steam-boat calls at this place, and a facility of intercourse is also afforded by excellent roads.

Ecclesiastically the parish is in the presbytery of Stranraer, synod of Galloway, and in the patronage of the Duchess de Coigny; the minister's stipend is £248. 1. 3., with a manse, and a glebe valued at £15 per annum. The present church, erected in 1819, is a substantial edifice, adapted for a congregation of 600

persons : the former church of Ballantrae, together with a manse, was erected in 1617, at the sole expense of the laird of Bargany. There are still some remains of the original church at Innertig. A place of worship has been erected in connexion with the Free Church. The parochial school is well conducted; the master has a salary of £34. 4. 4½, with £16 fees, and a house and garden, and he receives the interest of a bequest of £400 for the instruction of an additional number of poor scholars. The late Mrs. Caddall bequeathed £4500, and fifteen acres of land, for the endowment and erection of a chapel and school in Glen-App, in connexion with the Established Church; the trustees have established the school and selected land for the glebe, and intend to build the chapel, when the funds shall have accumulated sufficiently to provide for the endowment of a minister after defraying the expense of its erection. On a rock near the village, and within the precincts of the parish glebe, are the remains of the ancient castle of Ardstinchar, formerly belonging to the Bargany family.

BALLATER, a village, in the parish of **GLENMUCK**, **TULLICH**, and **GLENGAIRN**, district of **KINCARDINE O'NEIL**, county of **ABERDEEN**; containing 371 inhabitants. This place, which is situated in a beautiful valley, on the north bank of the Dee, was formed about the beginning of the present century, by the late proprietor, William Farquharson, Esq., of Monaltrie, by whose directions the site was laid out for the erection of regular streets and squares. The streets cross each other at right angles; the squares, with allotments of ground, have been let out in perpetual feu tenements. Besides the numerous well-constructed private houses, the village contains an excellent inn, some good shops, a circulating library, and a post-office communicating with Aberdeen, to which place there is a daily mail-coach, together with several weekly carriers. The salubrity of the air, and the imposing scenery of the locality, draw many visitors from Aberdeen and other parts in the summer months; but the chief attraction is the chalybeate waters of Pananich, in the vicinity, which hold in solution carbonate of iron, lime, magnesia, &c., and are considered of much efficacy in scorbutic and nephritic complaints. There are superior hot, cold, and shower baths, and many convenient lodging-houses. In a square in the village stand the parish church, and, at a short distance, the parochial school. Over the Dee is a good wooden bridge of four arches, erected in 1834 at a cost of upwards of £2000.

BALLENDÉAN, a hamlet, in the parish of **INCHTURE** and **ROSSIE**, county of **PERTH**; containing 80 inhabitants. This place is situated in the Carse of Gowrie, near Ballendean hill, which is of considerable elevation, and also near the mansion of Ballendean House.

BALLENLUIG, a village, in the parish of **LOGIERAIT**, county of **PERTH**; containing 114 inhabitants. It is in the north-eastern portion of the parish, near the river Tummel, which flows on the north-east.

BALLICHULISH, a quoad sacra parish, in the parish of **KILMALIE**, partly in the district and county of **ARGYLL**, and partly in the county of **INVERNESS**, 11 miles (S. by W.) from Fort-William; containing 1235 inhabitants. The village of Ballichulish, or North Ballichulish, consisting of about forty families, stands on the Lochaber or Inverness-shire side of Loch Leven, near its junction with Loch Linnhe, where is a ferry between

the opposite coasts of Lochaber and Appin, a distance of three miles below South Ballichulish, a large village in the Argyllshire parish of Lismore and Appin. On each side of this ferry across Loch Leven is an inn, the prospect from which is of the most imposing character, embracing mountains of towering height and rugged grandeur, relieved by water, woods, and pastures, and other interesting features. The quoad sacra parish of Ballichulish, or rather Balliehulish and Corran of Ardgour, consists of two distinct districts, separated from each other by Loch Linnhe, and having a church in each of them. The district connected with the church at North Balliehulish, in the county of Inverness, extends seventeen miles by seven, or 119 square miles; while that connected with the church at Ardgour, in the county of Argyll, extends fourteen miles by six miles, or eighty-four square miles, making a total area of 203 square miles. Both the churches were built in the year 1829, and they are about four miles apart; the church of Ballichulish contains 300 sittings, and that of Ardgour 210: divine service is performed once a fortnight in each. A school is supported by government in the former district; and another, in the latter, by the Society for the Propagation of Christian Knowledge. At Corran of Ardgour is a ferry connecting the two divisions, with an inn on each side: the inn on the Ardgour shore is very comfortable, and much frequented in summer. Cuil House, the residence of the chief of Ardgour, Colonel Mc Lean, stands at the foot of a range of lofty mountains, and at the edge of an extensive flat, and commands one of the grandest prospects in this part of the county.

BALLINGRY, a parish, in the district of **KIRKCALDY**, county of **FIFE**, 2 miles (N. E. by E.) from Blair-Adam Inn; containing 436 inhabitants. This place is supposed to have derived its name, of Gaelic origin, from its having at one time been an occasional residence of the Scottish kings. During the invasion of Britain by the Romans under Agricola, the neighbourhood is conjectured by some to have been the scene of the battle between the Caledonians under Galgacus, and the IX. legion, which may have been stationed here. The Romans were totally defeated; but Agricola, upon receiving intelligence of the event, put the whole of his army in motion, and, falling upon the rear of the Caledonians, compelled them to yield to superior numbers, and retire from the field. The latter, however, retreated in good order, bravely defending the fords of Loch Leven, it is said, against the invaders, and obstinately disputing every inch of ground. Numerous memorials of a contest have been met with: at the east end of the loch, and also where Auchmuir bridge now crosses that ancient ford, Caledonian battle-axes and Roman weapons have been discovered; and a few years since, a Caledonian battle-axe of polished stone, firmly fixed in an oaken handle, twenty-two inches long, was found near the spot. No vestige remains of the supposed Roman camp in the parish: near its site is now the steading of the Chapel farm.

This parish, which is of very irregular form, comprises about 3700 acres, whereof 1394 are arable, 1874 meadow and pasture, 242 woodland and plantations, and the remainder common and waste. The surface is in part a level, broken by the hill of Binarty, the southern acclivity of which has been richly planted, forming an interesting feature in the scenery. In the northern portion of the

parish the soil is rich, dry, and fertile, but in other parts of inferior quality; the crops are oats and barley, with some wheat, beans, and potatoes. Great improvement has been made by draining, but in rainy seasons the drains are insufficient to carry off the water; much more draining is necessary, and stones in many places still encumber the ground: the loch on the estate of Lochore has been drained, and now produces excellent crops of grain. The annual value of real property in the parish is £4611. Limestone and coal are found in various parts; the former is of inferior quality, and not worked, but the latter is wrought on the Earl of Zetland's property, and also on the Earl of Minto's, with success: whinstone and freestone are also found here, and, on the hill of Binary, basaltic whinstone. Facility of communication is afforded by the Dunfermline branch of the Edinburgh, Perth, and Dundee railway. The parish is in the presbytery of Kirkcaldy, synod of Fife, and in the gift of Lady Scott of Abbotsford; the minister's stipend is about £150, with a manse valued at £10, and a glebe at £20, per annum. The church is a substantial and neat structure, erected in 1831. The parochial schoolmaster's salary is £34. 4. 4., with about £4 fees, a house, and an allowance in lieu of garden. The poor are partly supported by the rent of land producing £21, and by the proceeds of a bequest of £100 by William Jobson, Esq., of Lochore.

BALLOCH, a village, in the parish and county of **INVERNESS**; containing 104 inhabitants.

BALLOCHNEY, a village, in that part of the parish of **NEW MONKLAND** which formed the quoad sacra parish of **CLARKSTON**, Middle ward of the county of **LANARK**; containing 559 inhabitants. This place, which is situated in the southern part of the parish, in an important coal and ironstone district, gives name to a line of railway extending from it, for about four miles westward, to the southern terminus of the Monkland and Kirkintilloch, and the eastern terminus of the Glasgow and Garnkirk, railroad. The capital of the company, which was incorporated in 1826, was originally £18,000; but power was acquired in the session of 1835 to increase it to £28,000; and by an act passed July 1, 1839, the capital was further augmented to £70,000, for the purpose of improving the line, which now has several branches. In 1843 the company was empowered to increase its capital to £110,000. An act was passed in 1846 enabling it to improve the gauge of the rails; and in 1848 an act was obtained to amalgamate the Ballochney, the Monkland and Kirkintilloch, and the Slamannan railways.

BALMACLELLAN, a parish, in the stewartry of **KIRKCUDBRIGHT**, $\frac{1}{2}$ a mile (N. E.) from New Galloway; containing 1134 inhabitants, of whom 113 are in the village. This place takes its name from its ancient proprietors, a branch of the family of Maclellan of Bombie, lords of Kirkcudbright, who flourished here for many generations. The parish is bounded on the west by the river Ken, and on the east by the river Urr. It is of an irregularly oblong figure, comprising about 23,737 acres, of which 4000 are arable, 300 wood and plantation, and the remainder, with the exception of some extensive tracts of moorland and moss, meadow and pasture. The surface is varied with hills, some of which rise to a considerable height, and is interspersed with small valleys of different degrees of fertility, and

great variety of aspect. The lower grounds are watered by the Craig and Crogo rivulets, issuing from a range of hills in opposite directions, and dividing the parish from that of Parton on the south: on the north lie the parishes of Dalry and Glencairn, the Garple burn dividing Balmaclellan from the former, and the Castlefern burn from the latter. Along the banks of the Ken, a range of mounts called Drums extends for two or three miles into the interior of the parish, beyond which the country assumes a more wild and rugged aspect, consisting of large tracts of moor and peat moss, interspersed with a few detached portions of cultivated land. In the upper parts of the parish are numerous lakes, of which Loch Breck, Loch Barscobe, Loch Skae, and Loch Lowes are the principal; but the most extensive and beautiful lake is Loch Ken, on the western border of the parish, into which runs the river Ken, a stream that frequently overflows its banks. The several streams and lakes abound with trout, and more especially Loch Breck, in which are yellow trout equal in quality to those of Lochinvar; pike are also found in most of them, and in Loch Ken one was taken that weighed 72lb. The Garple burn forms in its course numerous picturesque cascades, of which the most interesting and most romantic is that called the Holy Linn. The scenery is in many parts diversified, and, particularly around the village, is beautifully picturesque.

The soil is extremely various: the lands under cultivation have been much improved, and considerable tracts towards the east, hitherto unprofitable, are gradually becoming of value; but there is still much moor and moss, scarcely susceptible of improvement. The chief crops are grain of all kinds, with potatoes and turnips. The cattle are generally of the Galloway breed, except a few cows of the Ayrshire kind on one of the dairy-farms; and the sheep are of the black-faced breed, except on one farm, which is stocked with a cross between the black and the white faced, and a few of the Cheviot. A very considerable number of pigs are reared, and sent to the Dumfries market. The farm-buildings on some of the lands are substantial and commodious, but on others of a very inferior order. The annual value of real property in the parish is £5115. The substratum is almost wholly whinstone, of which the rocks chiefly consist, and of which great quantities are raised, affording excellent materials for the roads; slate is found, and till lately there were two quarries of it in operation. The plantations, which are mostly oak, ash, and fir, are distributed throughout the lands, in detached portions of ten or twelve acres each. Holm is a handsome residence in the parish; and there are also the houses of Craig and Craignuie. The chief village stands on the turnpike-road leading from Edinburgh to Wigtown; the small village of Crogo is a retired hamlet in the south of the parish, containing about sixty inhabitants, and takes its name from the rivulet on which it is situated. In 1822 a substantial bridge of granite, of five arches, was built over the river Ken, by the floods of which stream two several bridges had been previously swept away; the central arch has a span of 100 feet.

For ecclesiastical purposes Balmaclellan is within the bounds of the presbytery of Kirkcudbright and synod of Galloway: the minister's stipend is £222, with a manse and glebe valued at £60 per annum; patron, the Crown. The church is a plain structure, built in 1772, and

enlarged and repaired in 1833, and contains 370 sittings ; the churchyard is spacious, and commands a fine view extending over the whole vale of the Ken. There are two parochial schools, the masters of which have each a salary of £17. 2. 2., with fees averaging about £8 per annum. A free school is supported by an endowment of £70 per annum, arising from land purchased with a bequest of £500 by Edward Murdoch, Esq., in 1788 ; the school-house was built about fifteen years ago, with a dwelling-house for the master, who has a salary of £17. 2. 2., but, in consideration of the endowment, receives no fees from the pupils. Barscobe Castle, anciently a seat of the Maclellans, is little more than a heap of ruins. On Dalarran Holm is an erect stone of great size, without inscription, supposed to mark out the spot where some Danish chief fell in battle. A large ball of oak, and a set of bowling-pins, all of which, except two, were standing erect, were discovered some years since in the parish, by persons cutting peat, at a depth of about twelve feet below the surface.

BALMAGHIE, a parish, in the stewartry of KIRKCUDBRIGHT, four miles (N. W.) from Castle-Douglas ; containing 1252 inhabitants, of whom 275 are in the village of Laurieston, and 243 in that of Bridge of Dee. This place takes its name from its ancient proprietors the Mc Ghies, whose ancestor, an Irish chieftain, settled here at an early period, and who retained possession of the chief estate in the parish till near the close of the last century, when the Balmaghie property was purchased by the present family. The celebrated castle of Threave, anciently the baronial residence of the family of Douglas, was built upon the site of a more ancient structure belonging to the lords of Galloway, who for many years exercised a kind of sovereignty independent of the crown of Scotland. In 1451, the eighth Earl of Douglas, in retaliation of some aggression on his territories, seized Sir Patrick Maclellan of Bombie, and detained him prisoner in the castle of Threave, intending to bring him to trial by right of his hereditary jurisdiction ; and on the arrival of Sir Patrick Grey of Foulis, commander of the body-guard of James II., with a warrant from the king demanding his release, Douglas, suspecting his errand, instantly ordered Maclellan to be beheaded in the court-yard. A succeeding Earl of Douglas, levying war against his sovereign, was worsted in the conflict ; and the castle was eventually besieged by the king in person. On this occasion, the artillery making no impression upon the walls, which were of extraordinary thickness, a blacksmith who witnessed the assault offered to make a cannon of sufficient power for the purpose ; and the family of Maclellan providing him with iron for the work, he constructed the enormous cannon afterwards called Mons Meg, weighing more than six tons and a half. This formidable engine, which was made in the vicinity of the royal camp, being with great difficulty dragged to a commanding position in front of the castle, the first shot spread consternation among the besieged, and the second pierced through the wall of the castle, and entering the banquet-hall, carried away the right hand of the countess, who at the moment was raising a goblet of wine to her mouth. The garrison immediately surrendered, and the king presented to the blacksmith, whose name was Mc Kim or Mc Min, the lands of Mollauce, as a reward for his ingenuity in devising and accomplishing the means of his success.

This castle was the last of the various fortresses that held out for the Earls of Douglas, after their rebellion in 1453 ; and subsequently to the fall of that family, and the consequent annexation of Galloway to the crown of Scotland, which took place in 1455, the castle was granted by the sovereign to the family of Maxwell, who became hereditary stewards of Kirkcudbright, and afterwards Earls of Nithsdale. During the parliamentary war in the reign of Charles I., the Earl of Nithsdale, who held the castle for the king, kept up in it a garrison of eighty men, with their officers, at his own expense ; and when no longer able to maintain it against its assailants, the king, who could send him no assistance, recommended him to make the best terms that were possible for the garrison and himself. As hereditary keepers of the castle, the earls used to receive a fat cow annually from each parish in the stewartry ; and on selling the estate in 1704, they reserved the castle and the island, to which they appointed a captain in order to secure their right to the cattle, which were regularly paid till the attainder of the earl for rebellion in 1715. There are still some very conspicuous remains of the ancient castle, situated on an island about twenty acres in extent, formed by the Dee, at the south-eastern angle of the parish ; they are the most striking object in the landscape, and consist chiefly of the keep, which was surrounded by an outer wall, with four circular turrets, one only of which is standing. Several stone balls weighing from one to three pounds and a half, and a gold ring supposed to be that worn by the countess when her hand was shot off, were found in the castle in 1843 ; and in the year preceding, a large ball of granite nineteen inches in diameter, thought to be that discharged from Mons Meg, was found by some labourers who were clearing the ground.

The PARISH, which is situated nearly in the centre of the county, is bounded on the north by the Blackwater of Dee, and on the east by the river Dee. It is about nine miles in length, and seven in extreme breadth, comprising 22,000 acres, of which nearly 7000 are arable, and the remainder meadow, pasture, and waste, with a moderate proportion of woodland and plantations. Towards the south-east the surface is tolerably level, but in all other parts hilly, though not strictly mountainous : the higher grounds command extensive views, including the Carsphairn and Minnigaff hills to the north-west, and to the south-east those of Cumberland, with the Isle of Man in clear weather. In the uplands are several lakes, of which Loch Grannoch, or Woodhall, the largest, is about two miles and a half in length and half a mile in breadth ; and with the exception of Lochinbreck, which abounds in trout, they are all well stored with pike and perch.

In the valley of the Dee the soil is fertile, and there are extensive and productive tracts of meadow adjoining the river ; the principal crops grown are oats, barley, potatoes, and turnips. The system of agriculture is improved ; the farm-buildings are generally substantial and commodious, and those on the lands of Balmaghie are all of recent erection, and of a very superior order. Bone-dust is used as manure for turnips ; the lands have been well drained, and are mostly inclosed with stone dykes. The moorlands afford tolerable pasture for sheep, of which about 4000, of the black-faced breed, are annually reared ; and about 350 of the white-faced,

a cross between the Leicestershire and the Cheviot, are annually reared on the low grounds. The cattle, of which about 1000 are fed every year on the uplands, are of the Galloway and Highland breeds; and on the lowland farms are numerous cows, principally Galloways, although the Ayrshire breed is being more and more introduced. The annual value of real property in the parish is £6603. The substrata are chiefly greywacke or whinstone, and in the higher lands granite is found in abundance; but there is no limestone, so that what is required for building or agricultural purposes is brought from Cumberland. The plantations are not extensive, but thrive well; they consist mainly of larch and oak, which appear adapted to the soil. Balmaghie House, an ancient mansion, in which parts of an older building have been incorporated, is pleasantly seated near the river Dee, in grounds beautifully undulated, and embellished with plantations. Duchrae House, a handsome mansion of granite, built in the old English style, about the year 1824, is finely situated near the confluence of the Dee and the Ken. Ecclesiastically the parish is within the bounds of the presbytery of Kirkcudbright and synod of Galloway: the minister's stipend is about £235, with a manse and glebe rated together at £42. 10. per annum; patron, Capt. Gordon, R.N. The church, built in 1794, is situated near the Dee: it is in good repair, and contains 400 sittings. There are two parochial schools; one at the village of Laurieston, the master of which has a house, and a salary of £30, with fees averaging nearly an equal sum; and the other at Glenloch, the master of which has a salary of £21. 6. 6., with fees amounting to about £14. Besides these, is a third school, endowed by the Society for Propagating Christian Knowledge.

BALMALCOLM, a village, in the parish of **KETTLE**, district of **CUPAR**, county of **FIFE**, 1 mile (S. E.) from Kettle; containing 113 inhabitants. It is a small place, on the road between Cupar and Leslie, and a short distance south of the river Eden.

BALMBRAE, a village, in the parish of **FALKLAND**, district of **CUPAR**, county of **FIFE**; containing 114 inhabitants, employed in agriculture, and in hand-loom weaving at their own dwellings.

BALMERINO, a parish, in the district of **CUPAR**, county of **FIFE**, 5 miles (W.) from Newport; containing, with the villages of Balmerino, Kirkton, and Galdry, 993 inhabitants, of whom 62 are in the village of Balmerino. This place, the name of which, of Celtic origin, signifies "the town of the sea", or "sailor's town", most probably derived the appellation from its position on the estuary of the river Tay. It appears to have been distinguished at a very ancient period for the mild temperature of its climate, and early in the thirteenth century was selected by Queen Ermengard, widow of William the Lion, and mother of Alexander II., as a place of occasional resort, for the benefit of her health; and subsequently by Magdalene, queen of James V., for the same purpose. A monastery for Cistercian monks was founded here by Alexander II. in 1230, at the solicitation of Ermengard, in gratitude for the benefit she received while resident here; which monastery he dedicated to the Virgin Mary and to St. Edward the Confessor, and in which he placed monks from the abbey of Melrose. This establishment was endowed by Queen Ermengard with lands in the county, purchased

from Adam de Stawell, to which Alexander added the church and lands of Lochmure in Angus, and those of Petgornoc and Drumdol in the county of Fife. It continued to increase in wealth, by the liberality of subsequent benefactors, till the Dissolution, when its revenues amounted to £704. 2. 10½. in money, exclusively of a considerable income in grain and other agricultural produce. The abbey was demolished in 1558, by the lords of the congregation, on their route from St. Andrew's: the site, with the lands appertaining to it, was subsequently granted to Sir James Elphinstone, of Barnton; and after the Reformation, the estates were constituted a lordship in favour of Sir James, who was raised to the Scottish peerage in 1604 by the title of Lord Balmerino, which became extinct in 1745 by the attainder and execution of his descendant, the then lord.

The **PARISH** is bounded on the north by the Firth of Tay, along the shore of which it extends from Birkhill to Wormit bay; and comprises an area of 3400 acres, of which nearly 2700 are arable and in profitable cultivation, 500 in woods and plantations, and the remainder pasture and waste. Its surface is greatly varied, and traversed by two nearly parallel ridges, extending from east to west, and inclosing a lovely valley, in which the village is situated. The highest points of these ridges are, the Scurr hill on the north, which has an elevation of 400 feet; and the Coultrey hill on the south, which rises to the height of 500 feet above the sea. There is also a considerable portion of high table land on the southern ridge, on which the village of Galdry stands. The scenery abounds with romantic features, and is every where enriched with woods and thriving plantations: a little to the east of the church, and nearly in the centre of the valley, is a small elevation, on the brow of which is Naughton House, and on the summit are the ruins of an ancient castle; beneath is a picturesque dell, from which a mass of rock rises abruptly to the height nearly of 100 feet. The shores of the Tay are bold and rocky, having in some parts precipitous and lofty cliffs; and on that portion of the shore which rises more gradually are the picturesque ruins of the abbey, overlooking the river. The Tay affords excellent facilities for bathing, being strongly impregnated with saline particles. There are no other rivers in the parish, but the lands are well watered by numerous springs, many of which appear from their names to have been formerly of great notoriety, and from which issue various small streams that attain sufficient power to turn several mills.

The **SOIL** is generally light; in some parts, a rich black loam; and in others, gravelly; but, under good management, is rendered fertile and productive. The crops are grain of all kinds, potatoes, and turnips: the system of agriculture is improved; the farm-buildings are substantial and commodious, and on all the farms are threshing-machines, some of which are driven by water. The annual value of real property in the parish is £4962. The substrata are chiefly sandstone and whinstone, of the former of which there are two varieties, one extremely compact, and well adapted for building purposes; the other more friable, and abounding with nodules of quartz, and other substances. The whinstone is of different qualities, comprising amygdaloid, trap tuffa, felspar, and clay-stone porphyry; that

which is of coarser grain contains amethyst, calcareous spar, chalcidony, and agates. The Scurr hill abounds with mineral varieties; the most beautiful agates occur there, and boulders of primitive rock are found along the shore of the parish, and on the highest ridges. Naughton House was erected towards the commencement of the present century, and has since been enlarged and improved. Birkhill is an elegant and spacious mansion, on the bank of the river, and embosomed in rich and beautiful plantations.

A salmon-fishery was formerly carried on in the Tay, to a large extent, and proved a source of great gain; but since the prohibition of the use of stake-nets, in 1816, it has materially declined. The quantity previously taken in the firth was, on an average, about 30,000 in the season; at present, the number of fish scarcely amounts to one-tenth part. Since this alteration, several who were once employed in the fishery are now engaged in weaving at their own houses, for the manufacturers of Dundee; the principal articles woven are dowlas and Osnaburghs, and about 150 persons are thus engaged, of whom a large portion are women. Great quantities of grain were formerly shipped from the harbour of this place, which was the chief port on the south side of the Tay for that article; but at present only small quantities of wheat are sent by the farmers here, to the bakers of Dundee, by a passage-boat which is kept up by subscription of the parishioners. Considerable quantities of potatoes are sent to the London market; and many vessels with coal land their cargoes here. The village of Balmerino is pleasantly situated on the western declivity of the Scurr hill, already mentioned.

For ecclesiastical purposes the parish is in the presbytery of Cupar and synod of Fife; the minister's stipend is £239. 9., with a manse, and the glebe is valued at £18 per annum. Balmerino church, a neat and substantial edifice of stone, erected in 1811, is nearly in the centre of the parish. The parochial school affords instruction to about 130 scholars; the master's salary is £34. 4. 4., with £28 fees, and a house and garden. The ruins of Balmerino Abbey consist chiefly of a small portion of the walls, with some clustered columns, and part of the corbels from which sprang the arches that supported the roof, and which are in the decorated English style; and of one cell, still in tolerable preservation. There are also remains of the ancient castle of Naughton, said to have been built soon after the Conquest, by Robert de Lundon; they comprise only some fragments of the side walls, which derive their chief importance from their situation, on the summit of a lofty crag rising almost perpendicularly from a deep and richly-wooded dell. An establishment of Culdees is said to have existed here, in connexion with that at St. Andrew's; and in a field in the parish, still called the Battle Law, an engagement is reported to have taken place between the Scots and the Danes, the latter of whom were driven to their ships: stone coffins, broken armour, and bones have been discovered near the spot. Some years since, two pieces of gold were found in a field on the farm of Peashills, which appear to have formed ornaments of some kind, and were of the value of £14.

BALMORE, a village, in the parish of BALDERNOCK, county of STIRLING; containing 158 inhabitants.

It lies in the south-eastern portion of the parish, on the road between Torrance and Bardowie, and about half a mile south of the Kelvin water.

BALMULLO, a village, in the parish of LEUCNARS, district of St. ANDREW'S, county of FIFE, 6 miles (E. S. E.) from St. Andrew's; containing 274 inhabitants. This village is pleasantly situated on the road to Dundee, and chiefly inhabited by persons employed in weaving and in agriculture. There is a place of worship for United Original Seceders.

BALNABRUACH, a village, in the parish of TARBAT, county of ROSS and CROMARTY; containing 167 inhabitants. It is a small place, situated on the eastern coast, and chiefly inhabited by fishermen.

BALNA-HUAIGH ISLE, one of the Hebrides, in the parish of JURA, district of ISLAY, county of ARGYLL. It is north of the island of Jura, and of Luing Sound. The isle is about a mile in circumference, and entirely composed of a bluish-coloured slate, of good quality. A number of families who derive their subsistence from the quarry, reside upon the isle.

BALNASUIM, a village, in the parish of WEEB, county of PERTH; containing 48 inhabitants.

BALQUHIDDER, a parish, in the county of PERTH, 9 miles (S. by W.) from Killin; containing, with the villages of Strathyre and Locheearnhead, 871 inhabitants. This parish, whose name, descriptive of its situation in the county, is derived from the Gaelic, is about eighteen miles in length, and rather more than six miles in breadth. The surface is very irregular, and comprehends a rich variety of valleys and hills, of level lands and deep glens, and of lofty rocks rising abruptly from the plains. The principal hills are Benvorlich, Benchrain, Benvane, Binean, Benchoin, and Bentallachan. In the hill of Craighuigh, Robert Bruce is said to have concealed himself after the defeat of his forces in the battle of Dalrey. The river Balvag, over which are two bridges in good repair, rises in Loch Voil, winds for several miles through the parish, and falls into Loch Lubnaig; and the small river Calair, which issues from Glenbuckie, though generally a peaceful stream, at times overflows its banks, and acquires the rapidity of a torrent. There are numerous lakes in the parish, the principal of which are Loch Voil, Loch Doine, and parts of Loch Lubnaig and Loch Earn. The scenery is also richly embellished with woods, consisting mostly of oak, birch, alder, and common and mountain ash; and with thriving plantations, chiefly of Scotch and spruce firs, and larch-trees, for all of which the ground is well adapted. At Edinample is an ancient castle belonging to the Marquess of Breadalbane, embosomed in a wood of lofty plane-trees, near which is a beautiful cascade.

The soil in the lower lands is fertile; the hills afford pasture, and there are considerable tracts of good meadow. The system of agriculture is improved, and great attention is paid to the improvement of the breeds of cattle and sheep; the former are chiefly of the West Highland breed, and the latter, which are of the black-faced kind, command a ready sale in the neighbouring markets. The annual value of real property in the parish is £6100. The rocks are mainly mica and clay slate, with quartz, porphyry, and primitive greenstone. Edinample Castle, an ancient mansion romantically situated, and Glenbuckie House, a handsome modern residence, are the only houses of distinction. Ecclesi-

astically the parish is within the bounds of the presbytery of Dunblane and synod of Perth and Stirling: the stipend of the incumbent is £275. 15. 11.; the manse is a comfortable residence, and the glebe is of the annual value of £20. The church, situated nearly in the centre of the parish, is an ancient edifice, adapted for a congregation of 425 persons. The parochial school affords a liberal course of instruction; the master has a salary of £34. 4. 4 $\frac{1}{2}$., with £8 fees, a house, and two bolls of meal in lieu of a garden. In a field near the manse is an upright stone, about five feet in height, called Puidrac; but nothing of its history is known: to the east of it is a spot celebrated as the scene of a desperate battle between the families of McLaren and Leney. The late Sir John Mac Gregor Murray, Bart., an eminent Gaelic scholar, and an indefatigable collector of the writings of the ancient Gaelic bards, and who, holding the rank of colonel in the British army, raised at his own expense a regiment of infantry for the service of his country, which was commanded by his brother Colonel Alexander Mac Gregor Murray, was, together with his brother, buried in the family vault in this parish.

BALTA, a small islet, in the parish of **UNST**, county of **SHETLAND**. This is nearly the northernmost isle of the Shetland range. It is situated in the latitude of 60° 47' north, and on the east side of Unst island, the sea between being called Balta Sound. Here the shore of Unst forms a fine and safe inland harbour, stretching east to west about two miles, protected at its mouth by the isle of Balta.

BALWAHANAID, a hamlet, in the parish of **WEEM**, county of **PERTH**; containing 23 inhabitants.

BALWHERNE, a hamlet, in the parish of **METHVEN**, county of **PERTH**; containing 60 inhabitants.

BANCHORY-DEVENICK, a parish, partly within, and partly without, the city of **ABERDEEN**, district and county of **ABERDEEN**, but mostly in the county of **KINCARDINE**; including the villages of **Downies**, **Findon**, and **Portlethen**, and containing 2736 inhabitants. The distinctive appellation of **Devenick** is derived from a celebrated saint of that name, who flourished about the year 887, and at one time ministered in this parish. The figure of the parish is extremely irregular; its extent from north-east to the southernmost point at the sea is about eight miles, and its breadth varies from two miles and a half to four miles. The river **Dee**, which passes through it, and here divides the two counties, rises among the highest of the mountains of **Aberdeenshire**, and after a course of upwards of sixty miles, falls into the bay of **Aberdeen**, about a mile and a half below the eastern extremity of the parish. Its span near the church is from 180 to 250 feet. Some years ago, a handsome suspension foot-bridge, connecting the parishioners of the **Aberdeenshire** district with the church and school, was erected over the river, at an expense of about £1450, by the Rev. Dr. Morison, the late venerable incumbent of the parish, and father of the Church of Scotland. The **Kincardineshire** district is bisected by the eastern range of the **Grampians**, the most elevated part of which afforded a station for the persons who were employed a short time since, by government, to make a trigonometrical survey of the island. For a distance of about three miles this district is bounded on the south by the sea, the coast of which is bold, rocky, and in many parts highly picturesque.

The soil is diversified, running through all the varieties, from pure alluvial to hard till, and from rich loam to deep moss. Agriculture is much attended to; the farms are generally small, and the farmers supply the town of **Aberdeen** with agricultural produce. The population is entirely rural, and has been much increased of late years by the allotment of portions of uncultivated land to small tenants, who hold their farms under improving leases, and by whose means the greater part of the waste ground in the parish has been reclaimed. These tenants are mainly supported by the sale of peat from the extensive mosses in the parish, the preparation of peat forming a lucrative occupation to a considerable portion of the population, during the summer. Abundance of blue granite is to be found in the hilly parts: owing, however, to the hardness of its quality, it is not quarried to any extent, but is chiefly used as paving-stones for home use and for the **London** market. There are several plantations in the parish, one of them covering 250 acres; but those which are near the sea are not in a thriving state, as there is no shelter against the blighting influence of the east wind. In former times, it appears that forests of oak extended to the sea-shore, where no tree can now be raised. The annual value of real property in **Banchory-Devenick** is £6946. On the coast are three harbours for fishing-boats, **Findon**, **Portlethen**, and **Downies**: the villages thus named, conjointly contain a population of about 600; they send to sea about eighteen boats manned by from four to five men each, and are celebrated for the smoked fish well known by the general name of **Finnan** (**Findon**) haddocks. The great road from **Edinburgh** to **Aberdeen** passes through the parish, at about the distance of a mile from the three villages; and the line of railway from the south to **Aberdeen** runs between the above road and the sea. A beautiful line of turnpike-road extends along the south side of the river **Dee**, from the old **Dee** bridge nearly to **Banchory-Ternan**; and another turnpike-road, from **Aberdeen** to **Ballater**, runs through the **Aberdeenshire** division of the parish.

Banchory-Devenick is within the bounds of the presbytery and synod of **Aberdeen**, and in the patronage of the Crown: the minister's stipend is £150, being made up to that sum by an annual allowance from the exchequer of £22. 18. 10. The church, which contains 900 sittings, was built in the year 1822, on the site of a former edifice, the bell of which bears the date of 1597: the coping-stone of the old churchyard is dated 1608. At **Portlethen**, four miles from the church, is a church in connexion with the Establishment, with a minister of its own; and two Free churches have been raised in the parish, one in the **Kincardineshire** and the other in the **Aberdeenshire** division, and each about half a mile from the parish church. The former of these Free churches has a settled minister, but none has been provided as yet for the latter. The parochial school is situated near the church: the master has a salary of £30 from the heritors; £20 from a bequest left by Dr. Milne, of **India**, for educating twenty-five poor children nominated by the kirk-session; a third of the usual allowance from **Dick's** bequest, and other perquisites. There is a school at **Portlethen**, which is noticed under the head of that place; and at **Cults**, in the **Aberdeenshire** division, is a school erected by Mr. Symmers, late proprietor at **Cults**, and endowed by

him to the amount of about £25 a year. A school is likewise held in connexion with the Free Church, and there is a female school, erected by the late Mr. Hogg, of Shannaburn, partly endowed by him, and partly by Dr. Morison. Sabbath schools are taught by the teachers of all these schools, except the female school. There is a parish library, consisting of a good many volumes; also a parish savings' bank, instituted in 1816, of which the minister is treasurer, and which contains deposits from the parishioners to the amount of nearly £5000. The antiquities of the parish consist of two Druidical circles, in a fine state of preservation; and of three very large tumuli, in an elevated situation, on the north side of the river. In Her Majesty's visit to Scotland in September 1848, the royal family, after landing at Aberdeen, passed through this parish on their way to Balmoral.

BANCHORY-TERNAN, a parish, in the county of KINCARDINE, 15 miles (N. W.) from Stonehaven; containing, with the villages of Arbedie and Banchory, 2241 inhabitants, of whom 66 are in Banchory. This place, the name of which, signifying "a fine choir", has reference to some ancient religious establishment, and the adjunct *Ternan* most probably to its patron saint, is of very remote antiquity. St. Terne, or Ternanus, who is said to have been a native of Mearns, flourished about the middle of the fifth century. He accompanied Palladius in his mission to the Irish Scots; and by him he was ordained, and commissioned to extirpate the Pelagian heresy, and to establish the true faith among his own countrymen. In this undertaking, his eminent success and the sanctity of his life obtained for him a high degree of veneration; and many churches were afterwards erected and dedicated to his memory, among which was the church of this parish. In 1562, a battle took place between the army of Mary, Queen of Scots, under the Earl of Moray, and the forces of the Earl of Huntly, at the Howe of Corrichie, a glen in the hill of Fare, towards the northern boundary of the parish. The latter were defeated with great slaughter, and the Earl of Huntly, who was taken prisoner, died before he was removed from the field of battle. In the bottom of the glen are several tumuli, raised over the bodies of the slain; and a recess among the rocks overlooking the glen, in which Mary is said to have witnessed the engagement, is still called the Queen's Chair. There are also numerous tumuli on the north side of Glassel, where the chief carnage took place. In 1644, the Duke of Montrose, having crossed the river Dee at a ford near the Mills of Drum, in this parish, passed a night at the house of Leys, and next day proceeded to Aberdeen, where he encountered and defeated an army of the Covenanters; and the remains of his encampment on a subsequent occasion, on his route to Strathbogie, are still pointed out, under the appellation of Montrose's Dyke, near the entrance of the Howe of Corrichie.

The **PARISH** is situated on the river Dee, which intersects the southern portion of it, from west to east, throughout its whole extent. It is nearly ten miles in length and about nine miles in breadth, of irregular form, and comprises an area of 21,600 acres, of which rather more than 6000 are arable, 5230 woodland and plantations, and the remainder, a considerable portion of which might be brought into cultivation, is meadow, pasture, and waste. The surface is strikingly diversified

with hill and dale, and with wood and water. The hill of Fare, on the north, has an elevation of 1793 feet: that of Kerloack, on the south, forming a part of the Grampian range, and extending eastward to the sea at Aberdeen, is 1890 feet high; and between these is a lower ridge, of which the greatest elevation is not more than 1000 feet. That portion of the parish which is on the south side of the Dee is intersected by the river Feugh, and is richly wooded, and interspersed with masses of barren and precipitous rock; the scenery is bold, enlivened with numerous rivulets, and embellished with handsome mansions. At the eastern extremity is Loch Drum, in the adjoining parish of Drumoak, which has been nearly exhausted by draining; and in the central portion is Loch Leys, containing an artificial island, formed on piles of oak, with remains on it of ancient houses that appear to have been fortified. The river Dee, which enters the parish near Trustach Hill, flows along a rocky channel; and its stream is divided by two small islands, one of which, about eight acres in extent, is covered with furze and heath, and the other, of about one acre, and of greater elevation above the stream, is planted with trees. The Feugh, after forming various pleasing falls, divides into two channels, which, reuniting, flow into the Dee nearly in the centre of the parish. Before it joins the Dee, the Feugh is spanned by a bridge of two arches, on the south of which is a ledge of rocks twenty feet in height, forming a very beautiful waterfall during the floodings of the river.

The **SOIL** varies greatly in different parts, but is generally light, and not naturally fertile; towards the river, gravelly; on the higher grounds, a strong loam; and on the lower, a species of moss, intermixed with gravel. The system of agriculture is improved; the chief crops are oats, barley, and some wheat, with potatoes, turnips, and hay. The moorlands afford tolerable pasture for sheep and cattle, to the improvement of which much attention has been excited by the Deeside Agricultural Association, which holds its annual meeting here, and awards prizes to the amount of £70 to the most successful competitors at the show of cattle. The dairy-farms are more carefully attended to than formerly. The buildings are substantial and commodious, and threshing-mills have been erected on most of the farms. The annual value of real property in the parish is £7479. The hills are principally of red granite, traversed by veins of sulphate of barytes; and limestone, in some parts of coarse and inferior quality, and in others compact and highly crystallized, is found in abundance, and is extensively quarried on the lands of Tilwhilly for agricultural purposes.

The plantations, which are of very great extent, consist chiefly of pine and larch, interspersed with birch, oak, beech, ash, and a few other trees. They are of comparatively modern growth, and considerable additions have within the last few years been made to the number of forest-trees, of which nearly 70,000 oaks have been planted on the lands of Leys. On the road to Aberdeen is a remarkably fine holly of more than twenty stems, springing from the crevices of a rock; and in the grounds of Crathes Castle is a beech-tree twenty-five feet in girth and sixty feet high. Crathes Castle, the seat of Sir Alexander Burnett, Bart., a handsome baronial mansion erected about the year 1512, is

finely situated on a gentle acclivity, at the extremity of a rocky and richly-wooded ridge, on the north bank of the Dee. It is a spacious structure, with a lofty square tower crowned by embattled turrets, and many modern additions have been made. The ancient hall is still entire, and contains some family portraits, among which is a portrait of Dr. Gilbert Burnett, Bishop of Salisbury, by Sir Godfrey Kneller. The castle of Tilwhilly, on the opposite bank of the river, is an ancient massive building, in the occupation of the tenant of the farm. Banchory Lodge, a few hundred yards from the church, was erected by the late General Burnett. Inchmarlo is a handsome mansion, erected in 1800; and Glassel and Raemoir are also good modern houses. The village of Banchory, or the Kirktown, which was anciently a burgh of barony, and is noticed in 1324 as a place of considerable importance, has almost disappeared; and only a few houses in the vicinity of the churchyard, called the Town Head, are now remaining, and the shaft of a broken stone cross. A small woollen-factory has been established, and there are likewise two small bobbin-factories. Salmon are taken in the Dee, but there is no regular fishery. Fairs, chiefly for horses, cattle, and sheep, are held on the second Tuesday in February, the last Thursday in March, the third Tuesday in June, the first Tuesday in July, the second Tuesday in August, and the first Wednesday in December.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Kincardine O'Neil and synod of Aberdeen; Sir Alexander Burnett, Bart., is patron, and the minister's stipend is £287. 10. 9., with a manse, and a glebe valued at £10 per annum. The church, rebuilt in 1824, is a handsome structure in the later English style, and contains 1300 sittings. A place of worship has been erected in connexion with the Free Church; and in the village of Arbeadie is a meeting-house for Independents. There are three parochial schools, the masters of which divide among them £51. 6. 6 $\frac{3}{4}$., in addition to a house and garden for each, and the fees average respectively £20, £16, and £10 per annum. A school was founded and endowed in 1638, by Sir Thomas Burnett in conjunction with Dr. Alexander Reid, and is conducted by one of the parochial schoolmasters, who derives an additional salary of £16 from the endowment. A parochial library has also been established, which has a collection of more than 400 volumes, chiefly on religious subjects. At Cairnton, on the hill of Trustach, are some remains of an old intrenchment, now covered with birch, about 150 yards square, defended by two ramparts of earth 300 yards in length, extending from the inclosure in a converging direction, leaving an opening of about twenty yards in width at their extremities: it is supposed to have been a Roman camp. Near Kerloack are Druidical remains consisting of three circles of upright stones, nearly entire, the largest of which is about twenty-five yards in diameter, and the others about fifteen yards: in each of them are vestiges of an inner circle inclosing a small cairn. Bishops Burnett and Douglas, both of the see of Salisbury, were descended from families connected with this parish; and Dr. George Campbell, author of the celebrated *Dissertation on Miracles, The Philosophy of Rhetoric, &c.*, was for some years minister of it. In Her Majesty's visit to Scotland in September 1848, the royal party passed through Banchory on their way from Aberdeen

to Balmoral, and here a loyal address was presented to the queen from the nobility and gentry of the county of Kincardine.

BANETON, or BAYNTON, a village, in the parish of KENNOWAY, district of KIRKCALDY, county of FIFE, 1 mile (N. N. E.) from Kennoway; containing 204 inhabitants. It is in the north-eastern portion of the parish, and a little north of the road between Kennoway and Cupar.

BANFF, a sea-port, burgh, market-town, and parish, in the county of BANFF, of which it is the chief town, 165 miles (N. by E.) from Edinburgh, and on the road from Aberdeen to Inverness; containing 3958 inhabitants. This place, called in ancient records *Bainiffe, Boineffe, &c.*, appears to have derived its name from the district in which it is situated, and which

Seal and Arms.

obtained the appellation of *Boyn* from the Gaelic, signifying "a stream", in reference to the river Boyn, by which the district is intersected. The town, previously to the middle of the 16th century, was little more than a small fishing-village. It seems to have owed its origin to the foundation of a Carmelite monastery, that was occasionally the residence of some of the Scottish kings; and to the erection of a castle, governed by a thane, or constable, who administered justice, and of which the only vestiges now remaining are, a portion of the outer walls, and the ditch whereby it was surrounded. Few transactions of historical importance occur with reference to the place. In 1644, the lairds of Gight, Newtown, and Ardlogie, with a party of horse and foot, made an irruption into the town, levying exactions upon the bailies, in the absence of the provost, who had taken flight, and compelling them and the townsmen to abjure the covenant, and acknowledge submission to the king and his deputies, as formerly. In the following year, the Marquess of Montrose entered the town with a hostile force, plundered the inhabitants, and burnt several of their houses, in compensation for which losses, on their petition to parliament, a grant of their own excise. In 1746, the Duke of Cumberland's troops, on their march to Culloden, passed through the town, burnt the episcopal chapel, and hanged one of the inhabitants, whom they suspected of being a spy; and in 1759, a French fleet under the command of Thurot appeared off the coast; but the apprehensions of the inhabitants were relieved by the dispersion of the vessels in a storm, before the enemy attempted to effect a landing. A battery of eighteen and twenty-four pounders was subsequently erected on the heights immediately above the harbour, at an expense of £400, defrayed by the inhabitants; but soon after the peace, it was dismantled, and the cannon returned to the government, by whom they had been supplied.

The town consists of two portions, detached from each other; one of which, constituting the port, stands on an elevated level, terminating abruptly towards the Moray Firth, and having the battery at its northern extremity. Between this and the other portion, which is partly on the plain, and partly on the declivity of

the bank of the river Doveron, is the present castle, a plain modern building occupying an elevated site, and commanding the sweep of the river, with the fine slope on the opposite side, surmounted with the woods of Mountcoffer. The streets are regular and spacious, and the houses, though unequal in size, are in general neatly built; most of the older houses have been taken down, and rebuilt in a modern style, and the town retains few indications of its real antiquity. The streets are lighted with gas by a joint-stock company established in 1831; the inhabitants are supplied with water, conveyed into the town by pipes laid down in 1810 at an expense of £1100, and there are pumps attached to several of the houses. Hot, cold, and shower baths, fitted up with every accommodation, have been established by a company. In connexion with a literary society founded in 1810, and which has a library of 2000 volumes, is a reading room, well supplied with newspapers and the most popular periodical prints. An institution for the cultivation of science and the encouragement of native talent, was founded in 1828, and has collected a museum of natural history, antiquities, and curiosities, among which is a very extensive collection of the most beautiful shells found in Java and in the Eastern Archipelago. A room in the academy buildings is appropriated to the use of the scientific institution, and the literary society occupies a room in the town-house.

A principal TRADE of the port is the herring-fishery, which, within the last thirty or forty years, has been established on the shores of the Firth with considerable success, and is still very prosperous. The quantity of fish cured in the district of Banff, which extends from Gardenstown to Portsoy, is in favourable seasons about 30,000 barrels, of which one-half are sent to Germany, a considerable quantity to London, and the remainder to Ireland. The number of herring-boats from the port of Banff alone, has fluctuated exceedingly, and is at present very much reduced, probably from the want of room near the harbour for the erection of the requisite buildings, and from the higher rate of dues; but the general herring-trade of the district is still flourishing. Cod, ling, and turbot are found in abundance off the coast, and if prosecuted with spirit, the fishery of them might add greatly to the trade of the port. Lobsters, crabs, shrimps, and other fish are brought to the markets, but only for home consumption, though the bay abounds with shrimps, which might be made a profitable branch of trade. The salmon-fishery in the river Doveron, which is the property of Lord Fife, is let for £1600 per annum, and on each side of the estuary is a fishery in the open sea, one being let by the corporation for £191 per annum; the salmon are sent, either packed in ice or pickled, principally to the London market. A very considerable trade is also carried on in the exportation of grain, live cattle, and cured pork; and in the importation of coal, groceries, and other commodities. During a late year, 29,790 quarters of oats, 1174 quarters of wheat, 976 quarters of barley and bear, and 194 bags of potato-flour, were shipped from the port, chiefly for London and Leith; and 440 head of live cattle, 911 pigs, and 156 sheep and lambs, for the London market alone. The trade in cattle has since greatly increased; and in 1841 not less than 1792 head of cattle were sent to London. More grain is sent to London from the port of Banff than from all Scotland

besides. The number of vessels registered at Banff as the head of the district, some years ago, was sixty-seven, of the aggregate burthen of 4301 tons; of these, ten schooners of 878 tons', and eleven sloops of 657 tons' aggregate burthen, belonged to this port, and the remainder to the several creeks of Fraserburgh, Gardentown, Macduff, Portsoy, Port-Gordon, and Garmouth. In 1847 the number of registered vessels had increased to 114, of the aggregate burthen of 9396 tons. Several of these vessels make voyages to Sweden, for iron and deals; to Russia, for hemp; and to Holland, for flax; and, in the autumn, frequently to Hamburgh and Stettin, with cargoes of herrings, bringing in return grain, wool, bark, and hides.

The HARBOUR is situated at the western extremity of a circular bay, at the opposite extremity of which are the town and harbour of Macduff; both these extremities are rocky, and between them is a beach of sand. The old or inner harbour, completed in 1775, was formed by two piers and the land, inclosing a triangular area, having at the angle towards the north-north-east an entrance which, in 1816, was protected by a new pier and breakwater, forming a basin or outer harbour to the north of the former. This addition was made under the superintendence of the late Mr. Telford, at an expense of £18,000, one-half of which was defrayed by government; and though not productive of all the benefit expected from it, ships having since been wrecked in the new basin, it has still materially diminished the swell in the old harbour, now one of the safest in the Moray Firth, and has afforded additional facilities for the entrance and departure of vessels. A vessel drawing twelve feet water can enter the new basin at high-water of neap tides, and one drawing fifteen feet, at spring tides; and vessels drawing respectively eight feet and ten and a half feet water, may enter the old harbour at high-water of neap and of spring tides. A patent slip on Morton's principle has been constructed.

Ship-building is occasionally carried on; and there is a small manufactory for ropes and sails, chiefly for home use. The thread and stocking manufacture, formerly pursued here, has been discontinued some years. A public brewery, erected on the high ground above the harbour, was once conducted on a large scale, but of late it has been confined to the supply of the immediate neighbourhood: a distillery at the Mill of Banff, about a mile from the town, produces on an average from 11,000 to 12,000 gallons of proof spirits annually. A foundry for machinery, grates, ploughshares, and various kinds of cast-metal work, was established about twenty years since by Messrs. Fraser, and affords employment to ten men; the works are set in motion by a steam-engine of six-horse power, constructed by the proprietors. The market is on Friday, and is well supplied with fish of every kind; there are no cattle-markets, and though by charter the inhabitants are allowed seven or eight fairs, only four are held, and of these the Whitsun fair alone is of any consideration. Coaches pass daily to and from Aberdeen and Elgin, and to and from Peterhead. In 1846 an act was obtained authorizing the construction of a railway from Aberdeen to Inverness, with branches to Banff and other places.

From a grant of a toft and garden in the burgh by William the Lion, in 1165, to his chaplain, Douglas, Bishop of Moray, the town appears to have been pre-

viously a ROYAL BURGH; and according to tradition, it received from Malcolm Canmore those privileges which were ratified by Robert Bruce, and subsequently, in 1372, by Robert II., who also conferred upon the inhabitants liberties equal to those of Aberdeen, which were afterwards confirmed by James VI. and Charles II. The government is vested in a provost, four bailies, a dean of guild, a treasurer, and ten councillors, all elected by the £10 constituency. The corporation revenue is about £935. The taxes and assessments for the burgh are not imposed as in other burghs, by the magistrates and council, but by the inhabitants themselves, assembled in a special court for that purpose. The affairs of police are under the management of commissioners, who are elected in accordance with the provisions of a particular act of parliament, and by whose authority the police rates are levied and expended. No one, legally speaking, can carry on business without becoming a member of the merchant-guildry of Banff, or of the incorporated trades, which are six in number, namely, the hammermen, wrights, shoemakers, tailors, coopers, and weavers, who all claim exclusive privileges. In practice, however, for some years past, the burgh has been perfectly open in this respect, and all exclusive privileges and monopolies are abolished. It is classed with Elgin, Cullen, Inverury, Kintore, and Peterhead, in returning a member to the imperial parliament; and the parliamentary constituency of Banff includes the qualified voters in the neighbouring, and otherwise independent, burgh of Macduff. The town-hall, a spacious but plain building, erected within the last sixty or seventy years, occupies two sides of a quadrangle, with a tower at the external angle, of older date, surmounted by a spire of graceful proportion, together 100 feet high; the building is of hewn stone, three stories in height, and contains a hall, two large drawing-rooms, a council-chamber, a court-room for the sheriff's court, offices for the chamberlain and sheriff clerks, &c. The old prison contained two apartments, each nineteen feet square, for the reception of civil prisoners; and two cells for criminals; but it was badly arranged, and totally inadequate for the purpose of classification. The new jail, by which the old one has been superseded, is built on the most approved principles.

THE PARISH formed part of that of Boindie from the Reformation until about 1634. It measures about six miles and a half in length, and is two miles and a half in breadth in the centre, from which, towards each extremity, it diminishes materially; comprehending about 6312 acres, of which 3778 are good arable land, 1161 uncultivated and in pasture, and about 220 wood. It is bounded on the east by the river Doveron, which has its source on the confines of the counties of Aberdeen and Banff, and falls into the sea at the town; and on the west, by the burn of Boindie, by which it is separated from the parish of that name. Over the former of these rivers, close to the town, is a substantial stone bridge of seven semicircular arches, erected at the expense of government, in 1779; and over the latter, are two stone bridges of two arches each. The surface is very uneven, rising in the lower part of the parish from 200 to 300 feet above the sea, and forming an eminence called the Gallow Hill; while in the upper part of the parish are eminences of much greater elevation, though less raised above the surface of the adjacent lands. The system of

agriculture is improved; and within the last forty or fifty years a large tract of land, previously in pasture, has been brought under tillage. Draining has also been carried on to a very considerable extent, and the greater portion of the land is inclosed with fences of stone; the farm-houses and offices are generally well built, and many of them afford superior accommodations. The annual value of real property in the parish is £12,889, including £6977 for the burgh. The substrata are chiefly clay-slate and greywacke. At Cairn of Ord, in the south-western part of the parish, is found granite, which in some places rises to the surface; it is of excellent quality for building, and has been quarried for that purpose, but on account of its distance from the sea, it has not been worked to any great extent.

In several parts the scenery is pleasing, and in others romantic and picturesque. The river Doveron, on its first entering the parish, winds into a rocky glen, whose steep sides, crowned with luxuriant wood, are connected by a circular arch of stone. Beyond this point, the glen gradually expands into an open valley, round the eastern side of which the river forms a graceful curve, inclosing the plain whereon Duff House is situated. The road from Aberdeen winds round the verge of a verdant hill, on the extremity of which, sloping towards the sea, and stretching into the bay, is the town of Macduff; and on the western side, near the bend of the river, rises a precipitous bank, on whose summit is to be seen the mausoleum of the Duff family, embosomed in sheltering woods, and near it a funereal urn containing some human bones that were found on the spot, which was the cemetery of the ancient Carmelite monastery. Duff House, the splendid residence of the Earl of Fife, occupies the grounds formerly belonging to the monastery, which were conveyed in 1630 to Lord Airlie, and in 1690 to the Duff family, who in 1752 purchased the superiority, which had been granted by James VI. to King's College, Aberdeen. The mansion was erected about the middle of the last century, by Lord Braco, after a design by Adam, the first of the celebrated architects of that name, at an expense of £70,000. It is a spacious quadrilateral structure of freestone, in the Roman style of architecture, and contains a choice collection of paintings of the Flemish and Italian schools, and numerous portraits by the most eminent masters. The demesne is richly planted; it comprehends much interesting scenery, and from many points commands extensive and varied prospects.

The parish is ECCLESIASTICALLY in the presbytery of Fordyce and synod of Aberdeen: the minister's stipend is £245. 19. 9., with a manse, and the glebe is valued at £45; patron, the Earl of Seafield. Banff church, situated on the south side of the town, is a plain structure, erected in 1790, and capable of containing 1500 persons. The interior is chastely decorated, and has some handsome monuments of marble, one of which, by Bacon, representing a soldier weeping over a funereal vase, is finely executed, and was erected by Sir David Ochterlony, and the army under his command, to the memory of Lieut.-Col. Peter Lawtie, a native of this place. A chapel in connexion with the Established Church, for a district including the more remote portion of the parish and others adjoining, and a manse, have been erected at the upper end of the parish, at an expense of £600; the stipend of the minister is derived from the seat-rents,

augmented with £20 Royal bounty. There are places of worship for members of the Free Church, Episcopalians, the United Presbyterian Synod, Independents, and Wesleyans, and a Roman Catholic chapel.

A grammar school was founded in 1786, under the direction of Dr. Chapman, formerly rector of the grammar school of Dumfries; the number of boys usually attending is about 170, and the rector, who is obliged to employ two qualified assistants, has a considerable salary from the town. This school is endowed with funds, the interest of which is regularly appropriated to the maintenance of sixteen bursaries; one, in the gift of the presbytery of Fordyce, is worth about £30, and the others are from £2 to £3 per annum. A free school was founded by Mr. Alexander Pirie, who in 1804 bequeathed to the town-council and kirk-session £1100 for that purpose, with a tenement, and £100 for the erection of a school-house and house for the master. *Mr. George Smith*, a native of Fordyce, by will dated at Bombay, in 1769, vested in the magistrates of Banff the residue of his estate, amounting to £10,297. 16. 6., of which he appropriated £1000 to the endowment of an infirmary in this town or at Fordyce, and £40 per annum to a schoolmaster to educate as many boys of the name of Smith as the funds would maintain, at £25 per annum each. The dividends, amounting to £308. 18. 8., are applied according to the will, and nine boys are maintained and educated. *Mr. James Wilson*, of Grenada, vested the whole of his stock, after the decease of certain annuitants, in the magistrates of Banff, to be appropriated to charitable purposes, according to their discretion. This estate, which ultimately produced £3561. 16. 1. three per cents and £2647 in cash, was appropriated to the erection of a splendid building, for an infant school, a free school on the Madras system, and class-rooms for the grammar school teachers, with a library and museum. *Mr. Alexander Cassy*, a native of the town, then resident in Pentouville, in 1819, bequeathed the residue of his estates to the magistrates, to be appropriated to the half-yearly relief of aged and infirm persons and helpless orphans: of this property, £10,000 three per cents have already fallen to the disposal of the trustees, who apply the dividends. *Miss Elizabeth Wilson*, in 1825, bequeathed to trustees the whole property of which she should die possessed, the produce to be appropriated to six poor tradesmen and six poor maidens: the annuitants receive from £9 to £10 each per annum. *Alexander Chalmers, Esq., of Cluny*, in 1834 bequeathed property which will amount to £40,000, in trust, to the lord-lieutenant and member for the county, the minister and magistrates of Banff, and others, for the erection and endowment of an hospital and dispensary, to be called Chalmers' Hospital, for the county of Banff; the hospital to be erected on the site of the residence of the founder.

Scarcely any vestiges of the ancient Carmelite monastery are remaining; some arches, apparently parts of cells, are still to be traced in the yard of the inn called the Royal Oak, and near the foundry is a vaulted chamber, now occupied by the boiler of the steam-engine belonging to that establishment. The building occupied by Sir George Ogilvy, afterwards Lord Banff, and which appears to have been regarded as a palace, from the occasional visits to it by the Scottish kings, was destroyed in 1640 by General Monro, who, having marched into the town, encamped in the gardens of the house, and

destroyed both them and the building, carrying away the timber and iron-work, and leaving only the shattered walls, a heap of ruins. That part of the town which is called the Sea-town, is supposed to occupy the lands of the chapels of the Holy Rood, St. Catherine, and St. Mary: a chapel dedicated to St. Thomas is thought to have stood somewhere between the site of the parish church and St. Andrew's chapel, and another chapel, dedicated to St. Ninian, stood near the churchyard. The Knights Templars anciently had a preceptory in the town; their possessions were erected into a lordship, in favour of Sir John Sandilands, in 1563, and several small and scattered portions of their lands appear to have passed into burghage tenures. The old castle of Inchdrewer, erected about the time of James IV. or James V., is still so entire as to be habitable, and is now in the occupation of a tenant; it is chiefly memorable for the death of a Lord Banff, who was burnt in it in 1713, under circumstances that have never been fully explained. Adjoining the mausoleum of Lord Fife is an ancient monument, on which is the recumbent figure of an armed warrior, with the inscription, "*Hic jacet Johannes Duff, de Maldavat et Baldavi; obiit 2 Julii, 1404*": this monument, with the ashes of the deceased, was brought from Cullen. James Sharp, Archbishop of St. Andrew's, who was waylaid and assassinated near that archiepiscopal city, was born at Banff Castle, in 1613.

BANFFSHIRE, a maritime county, in the north-east part of Scotland, bounded on the north by the Moray Firth; on the east and south-east, by Aberdeenshire; and on the west, by the counties of Moray and Inverness. It lies between 57° 5' and 57° 43' (N. lat.) and 2° 17' and 3° 37' (W. long.), and is about fifty miles in length, varying from twenty miles to only three miles in breadth. It comprises an area of about 647 square miles, or 414,080 acres, and contains 11,149 inhabited houses, with a population of 49,679, of whom 23,249 are males, and 26,430 females. This county, which includes the districts of Boyne, Enzie, Strath-Doveron, Strathaven, Balvenie, and part of Buchan, was a sheriffdom in the reign of David I., and, previously to the Reformation, was included in the diocese of Moray. It is now partly in the synod of Moray, and partly in that of Aberdeen, and comprises several presbyteries, with twenty-four parishes. The county contains the royal burghs of Banff and Cullen, the former of which is the county town, and several thriving and populous villages, whereof the chief are Keith, Newmill, Gardenstown, Dufftown, Buckie, Portsoy, and Macduff. Under the act of the 2nd of William IV. it returns one member to the imperial parliament.

The surface is beautifully diversified with mountains and vales, and the scenery enriched with woods and plantations, and enlivened with rivers and lakes. The principal mountains in the county are, Ben-Macdhui and the Cairngorm, which have an elevation of more than 4000 feet above the sea; Benrinnes, rising from the banks of the river Spey to the height of 2747 feet; Knockhill, near the north termination of the Grampian range, the Buck of Cabrach, and others, about 2500 feet high. Its chief vales are, those of Strath-Doveron and Strathaven, the former branching off to the right, and the latter to the left, from the forest of Glenavon; Glen-Livet; and Glen-Fiddich, which last extends to the strath of Balvenie. Its rivers are, the Spey, which has

its source in Loch Spey, and after a long course falls into the Moray Firth near Fochabers; the Doveron, which rises in the hills of Cabrach; the Avon; the Livet; and the Isla; with countless smaller streams, which turn numerous mills. The salmon-fisheries on the Spey and the Doveron are extensive, the former yielding a rental of £6000, and the latter of nearly £2000 per annum. The coast, which extends for nearly thirty miles, is bold and rocky, in some parts precipitous; and is much indented with small bays.

The soil, near the sea, is rich; in the valleys, luxuriantly fertile; and the mountainous districts afford tolerable pasturage: the moors abound with game. Nearly one-half of the land is under cultivation; the system of agriculture is in a highly improved state, and much waste has been inclosed and rendered profitable. The natural woods and the plantations are extensive and well managed, and there are numerous oaks and firs of extraordinary dimensions. The chief minerals are ironstone and lead-ore, and there are some fine quarries of limestone, freestone, gneiss, and granite: a mine of manganese has lately been wrought to a great extent by the Duke of Richmond near Tomintoul. In this county the best seats are Gordon Castle, Glenfiddich, Duff House, Rothiemay, Banff Castle, Balvenie Castle, Cullen House, Birkenbog, Forglen, Troup, Arndilly, Baldorney, Edingarth, and Kinnairdy. The principal manufacture is that of linen. There are several tanneries, some distilleries, and works in connexion with the shipping, which is almost confined to the ports of Banff, Macduff, Portsoy, and Gardenstown. The herring-fishery is also very extensive, and is prosecuted along the coasts with great industry and success. Facility of intercourse has been greatly promoted by many excellent roads, constructed by commissioners appointed under an act of parliament; and the bridges over the different streams are kept in good order. The annual value of real property in the county is £124,347, of which £110,608 are returned for lands, £8403 for houses, £2592 for fisheries, £380 for quarries, and the remainder for other kinds of real property. There are numerous cairns, tumuli, ruins of ancient castles, and other monuments of antiquity, all noticed in the respective articles on the localities in which they are situated.

BANKEND, a village, in the parish of CAERLAVEROCK, county of DUMFRIES, $\frac{1}{2}$ a mile (S.) from Caerlaverock; containing 189 inhabitants. It lies in the eastern portion of the parish, and on the west side of the river Locher, which separates it from the parish of Ruthwell.

BANKFOOT, a village, in the parish of AUCHTERGAVEN, county of PERTH; containing 760 inhabitants. This village, which takes its name from its situation at the base of an elevated ridge, on the road from Perth to Dunkeld, is of very recent origin, having been wholly built on lands leased for that purpose by Mr. Wylie. The houses are neatly built, and chiefly inhabited by persons employed in weaving for the manufacturers of the neighbouring towns, and in various trades. A daily post has been established, which forwards letters to Perth; and facility of intercourse is maintained by good roads, kept in repair by statute labour. There is a considerable trade in coal, for the supply of the adjacent parts of the parish. A subscription library was opened in 1822, under the direction of a committee of sub-

scribers; the collection consists of about 300 volumes on theological, historical, and literary subjects. There are two places of worship for the United Presbyterian Synod.

BANKHEAD, for a time a quoad sacra parish or district, in the parish of MIDMAR, district of KINCARDINE O'NEIL, county of ABERDEEN, 4 miles from Leggerdale. It lies about a mile north of the road from Aberdeen to Tarland, and two miles south of that to Alford; the soil of the district is generally light, and far from being productive. The population is chiefly engaged in agriculture: and the females employ themselves, to a large extent, in stocking-weaving. The quoad sacra parish was within the bounds of the synod of Aberdeen and presbytery of Kincardine O'Neil; and the election of the minister was vested in the communicants. The church, now belonging to the Free Church, is a plain substantial building, erected in 1832, by subscription, and seated for 300 persons; it stands in the north-western part of the parish of Midmar, adjoining the parishes of Kincardine O'Neil and Cluny. In the vicinity are a few Druidical remains and Pictish encampments, but none of them are of sufficient importance to require a particular description.

BANKHEAD, a hamlet, in the parish of MONIKIE, county of FORFAR, 4 miles (W. by N.) from Monikie; containing 56 inhabitants.

BANKTON-PARK, a village, in the parish of KETTLE, district of CUPAR, county of FIFE, $\frac{1}{2}$ a mile (S.) from Kettle; containing 136 inhabitants. It is pleasantly situated on the road from Cupar to Leslie, and consists of neat houses of modern erection.

BANNOCKBURN, for a time a quoad sacra parish, including the village of Bannockburn, in the parish of ST. NINIAN'S, county of STIRLING; containing 3176 inhabitants, of whom 2206 are in the village, 2 miles (S. S. E.) from Stirling, on the road to Falkirk. Nearly all the inhabitants of the village are employed in manufacturing tartans, shawls, and carpets. There are very extensive coal-works, producing a material of the best quality, which is sent in large quantities to most of the surrounding districts; and also a tan-work for preparing foreign skins, as well as skins from the country around. A post-office is established under Stirling; here is a station of the Scottish Central railway, and fairs are held in June and October. The small river Bannock, running directly through the village, gives name to this place, which is celebrated in history as the scene of the decisive battle between Robert Bruce and Edward II., in 1314, when the Scots obtained a signal victory, Edward and the English being completely routed. To the south of the field of Bannockburn, on the 11th of June, 1488, was fought the field of Stirling, or battle of Sauchie, between James III. and the confederate lords, wherein that monarch lost his life. A church, containing 900 sittings, was opened in October 1838; it now belongs to the Free Church, and there is also a place of worship for the United Presbyterian Synod.—See NINIAN'S, ST.

BANTON, for a time a quoad sacra parish, forming part of the parish of KILSYTH, in the county of STIRLING; extending about five miles in length, and three in breadth, and containing 964 inhabitants, of whom 136 are in the village of Banton, 200 in the village of Auchinmully, and 65 in the Mullans. These villages

are inhabited mostly by colliers and miners, and lie about three miles north-east of Kilsyth. In the year 1844, there were in the district twelve ironstone pits and four coal-works, all in working order; a corn-mill, two flax-mills, a paper-mill, and a sickle-mill; also a power-loom factory, newly erected to contain sixty-four looms. The church was built in 1837, by subscription, and a grant from the General Assembly's church extension committee; it is seated for 426 persons, and is capable of being enlarged by a gallery to accommodate 200 more. This place of worship now belongs to the Free Church. A school, and a dwelling-house for the master, were erected in 1771, at a cost of about £30, and rebuilt in 1837 on a larger and improved plan, at an expense of about £320, which was defrayed by voluntary contributions. There is a subscription library, opened in 1835, which contains about 200 volumes.

BARA, county of HADDINGTON.—See GARVALD.

BARACHNIE, a village, in the parish of OLD MONKLAND, forming part of the late quoad sacra parish of CROSSHILL, Middle ward of the county of LANARK, $3\frac{1}{2}$ miles (E.) from Glasgow; containing 235 inhabitants. This place is situated on the road from Glasgow to Airdrie, a short distance from Bailliestone Toll, and on the borders of Barony parish. In the vicinity are extensive coal-works.

BARBARAVILLE, a village, in the parish of KILMUIR EASTER, county of ROSS and CROMARTY; containing 173 inhabitants.

BARBERSWELLS, a hamlet, in the parish of RUTHVEN, county of FORFAR; containing 36 inhabitants. It is situated on the borders of Airlie parish, a little to the south of the road between Blairgowrie and Kirriemuir; and the river Isla flows eastward of the hamlet.

BARHILL, a small hamlet, in the parish of COLMONELL, district of CARRICK, county of AYR, 12 miles (S. S. E.) from Girvan. This place, which is of recent origin, is situated on the river Dhuisk, and on the road from Girvan to Newton-Stewart. Cattle-markets are held on the fourth Friday in April, September, and October (O. S.), and are attended by numerous dealers from the adjoining districts.

BARJARG, a hamlet, in the parish of KEIR, county of DUMFRIES; containing 58 inhabitants. It lies near the river Nith, on the east side of the parish, about two miles and a half south from the village church, and on the road between Penpont and Dumfries.

BARLEYSIDE, a village, in the parish of FALKIRK, county of STIRLING, 3 miles (S. by W.) from Falkirk; containing 92 inhabitants. It is situated near the western boundary of the parish of Polmont.

BARNHILL, a hamlet, in the parish of MONIFETH, county of FORFAR; containing 41 inhabitants. It lies a little south of the Dundee and Arbroath road.

BARNHILL, a village, in the parish of BLANTYRE, Middle ward of the county of LANARK, $\frac{1}{2}$ a mile (N.) from Blantyre; containing 165 inhabitants. It is near the eastern boundary of Cambuslang parish.

BARNWELL, county of AYR.—See CRAIGIE.

BARNYARDS, a village, in the parish of KILCONQUHAR, district of St. ANDREW'S, county of FIFE; containing 232 inhabitants. It adjoins the village of Kilconquhar, which lies to the north of Elie, and of which, although it retains a separate name, it may now be said to form a part.

BARONY, county of LANARK.—See GLASGOW.

BARR, a parish, in the district of CARRICK, county of AYR, 8 miles (E. S. E.) from Girvan; containing 959 inhabitants, of whom about 230 are in the village. It is supposed to have derived its name from the almost inaccessible site of the ancient village, surrounded on all sides by rugged hills of precipitous elevation, and only to be approached by a narrow and wild glen, frequently impassable from the swelling of a small stream which intersects it, and which in winter attains the violence of a torrent. This parish, which formed a natural barrier between the counties of Ayr and Galloway, was included in the parishes of Girvan and Dailly till the year 1653, when it was erected into a parish of itself. It comprises nearly 70,000 acres, of which only 1200 are arable, and not above 1000 more capable of being rendered profitable. The surface is mostly an extensive level, with various ridges of different elevation, two of which rise from the banks of the river Stinchar to the height of nearly 1200 feet; while a third, in a direction nearly parallel to these, on the south-east, is about 1400 feet above the sea. Another range, forming part of that chain of mountainous heights stretching from Ayrshire into Galloway, has an elevation of nearly 2700 feet. The chief rivers are, the Stinchar, which has its source in this parish, and taking a south-western course, falls into the sea at Ballantrae; and the Minnoch, which, rising in the highest ridge of hills, flows southward through the lands, and falls into the river Cree, a stream that separates this parish from the county of Galloway. In its course of nearly fifteen miles through the parish, the Stinchar forms a beautiful cascade of about thirty feet; and most of the smaller burns with which the parish abounds, in their several courses fall from heights, with various degrees of beauty. There are numerous lakes of different extent, varying in depth from six to fifteen feet, all of which afford trout of a dark colour, and also yellow trout. The scenery is dreary, from the want of wood, of which there is scarcely any in the parish.

In the lower lands the soil is of good quality, and in the high lands principally moss; the chief crops are grain of all kinds, and potatoes. Surface-draining has been extensively practised, and the grounds are partially inclosed; but improvement in the system of husbandry is greatly retarded from the want of good roads and facilities of drawing lime. Attention is paid to the management of the dairy, and a moderate number of milch-cows, mostly of the Ayrshire breed, have been introduced; but the main dependence of the farmer is on the rearing of cattle and sheep, for which the hills provide tolerable pasturage. The annual value of real property in the parish is £7578. The few trees indigenous to the soil are ash and alder; and the plantations, which are on a very limited scale, are larch, interspersed with oak and ash, which seem to thrive well. The substrata are chiefly conglomerate rock, which appears in very irregular masses, and limestone of good quality, which is wrought to a small extent: in that portion of the limestone that lies near the bed of the river, some fine specimens of fossil shells are found. Slate-quarries have been also opened, but they have not been wrought to any extent. The village, which is neatly built, has a post-office established under Girvan. Fairs are held annually, but very little business is trans-

acted at them, and from the want of good roads, little facility of intercourse is afforded with the surrounding district.

Ecclesiastically the parish is in the presbytery of Ayr, synod of Glasgow and Ayr, and in the patronage of the Crown; the minister's stipend is £231. 3. 1., with a manse, and a glebe valued at £18 per annum. The church, an ancient edifice, is in good repair, and had a gallery added in 1834; it is adapted for a congregation of 410 persons. A place of worship has been erected in connexion with the Free Church. The parochial school is well conducted; the master's salary is £34. 4. 4½, with £18 fees, and a house and garden. A parochial library has been established, which has a collection of nearly 200 volumes. There are some remains of a chapel called Kirk Dominæ, and on the rising ground near its site is a well, to which is an approach through an ancient and well-built archway: this chapel was in tolerable preservation till the year 1653, when the roof was taken off, and placed on the parish church. Viscount Stair, well known as ambassador of George II., at the court of France, in 1720, was born in the parish.

BARRA, a parish, in the county of INVERNESS; including the islands of Barra, Bernera, Fladda, Fuday, Helesay, Mingala, Pabba, Sandra, and Watersay; and containing 2363 inhabitants, of whom 1977 are in the island of Barra. The word Barra is supposed by some to be formed of *Bar*, a point or top, and *Ay* or *I*, an island, and to have been applied to this place in reference to its position in the great group to which it belongs, it being the most southern or head of the larger islands among the Hebrides. But its etymology is more generally traced to St. Barr, the tutelary saint to whom the principal place of worship, called Killbar, was dedicated, and whose reputation was here so great, that his anniversary has been celebrated for ages, on the 25th of September, and is still regularly observed with morning ceremonies at the chapel, and afternoon festivities at Killbar, by the inhabitants, most of whom are Roman Catholics. The island of Barra, and the islands surrounding it, have been from time immemorial the property of the Macneils, who are said to have had possession of them before the Danish invasion, and to have been the first of that name who came from Ireland. This family, by their great power, and particularly their skill in maritime affairs, gave great annoyance to all their neighbours, carrying their depredations into every part of the Western Islands; and one them, called Ruaridh an Tartair, or "the noisy or troublesome Roderick", signalized himself especially by his piracies. He was at length captured on an attack on one of Queen Elizabeth's ships; great skill and ingenuity, in consequence of a reward offered, having been employed to effect his apprehension. The seat of the family was Kismull Castle, still in good preservation, situated in the centre of a bay, and on a small rock which is covered at high water. The structure is of irregular figure, about sixty feet high, with a square tower at one corner, the whole strongly built, and surrounded by spots for the anchorage of small vessels. It was the residence of the lairds of Barra till the beginning of the last century, about which time it ceased to be inhabited.

The PARISH consists of more than twenty islands, about half of them uninhabited, and serving only as grazing stations. It was disjoined from that of South

Uist in 1733. The parish is situated at the south-western extremity of the Hebrides, and measures in length, from Scirival, the most northern point of the main island, to Bernera, the most southern island, about twenty-eight miles, including the several intervening channels. The area is about 22,000 acres, of which 3922 are under cultivation, 1540 sandy waste, 16,139 hill pasture, and the remainder moss. The currents run with great rapidity and violence through the channels, of which that on the north is six miles across, separating Barra from South Uist. On the east are the islands of Canna and Rum, distant twenty-six miles; those of Coll and Tiree, on the south, are thirty miles off, and on the west is the Atlantic Ocean, which, at the blowing of the south-west wind, rolls its waves with such impetuosity and fury that they not only drive large quantities of sand over the islands, but render intercourse between them quite impossible.

The shore is indented with numerous fissures and creeks, and pierced with many arms of the sea. Upon the west, with the exception of two or three sandy inlets and bays, it is thickly set with rocks, a huge barrier of which, broken in several parts into frightful chasms by the constant action of the sea, rises majestically against the tremendous waves, and supplies a powerful rampart to check their fury. On the east, the coast is in general rocky, with some intervening portions of heath, moss, and sand; and in this part are the principal bays, which form excellent and safe harbours, and among which are those of Bayhierava, Uilevay, Castlebay, Watersaybay, Fladda Sound, and Ottirvore. The chief headland is Barra Head, on the island of Bernera, where a very superior lighthouse has lately been erected. This island, and the contiguous one of Mingala, are particularly distinguished for the height of their rocks, and for their grand and romantic scenery, increased in its effect by the numberless sea-fowl that frequent them throughout the summer. Barra, the largest island, is about twelve miles long, from three to six miles broad, and is broken, especially on the eastern side, by many bays and arms of the sea. It has a rocky barren aspect at a distance, but upon a nearer approach its appearance is more interesting, and its lower grounds, containing some rich meadows and fertile valleys, contrast well with its lofty hills, covered to the summits with verdant pasture. There are many springs of good fresh water, and four fresh-water lakes abounding in black trout and eels, and varying in length from half a mile to a mile.

The SOIL comprises light black, and sandy earth, moss, and meadow; and the crops, consisting of barley, oats, and potatoes, grown merely for home consumption, ripen very early on the sandy soils, of which there is a considerable extent. Agriculture here takes its prevailing character from that of the population; it is unformed and rugged, and the district is more suited to grazing than tillage. The lands are let principally to small tenants, and the habitations in general are of the very lowest kind, as well as the resources and manner of life of the tenants. The cattle are of a good description, and a new and improved breed of sheep has been recently introduced; the horses are small, but hardy and well shaped, and are numerous in the parish, being found useful in transporting sea-weed for manure, and for the preparation of kelp. The annual value of real property in the parish is £2470. The rocks consist chiefly of

coarse granite; but in the island of Bernera a quarry has been opened of granite of a very superior kind, of which the lighthouse was built. At Eoligary is the house of Barra, a commodious residence, well sheltered, and surrounded by good fields: it was built by the late proprietor, who transplanted some trees, of which the parish is remarkably bare, to the grounds of his mansion; but though they had thriven tolerably well in their former situation, they soon pined away after their removal. A few of the inhabitants are engaged in fishing, and four vessels used for this purpose belong to the place; but the poverty of the people operates not only to straiten their agricultural efforts, and to keep the capabilities of the soil in a great degree in abeyance, but also to confine their fishing within very narrow limits, although Barra is one of the best stations on the west coast. Besides lobsters, crabs, whelks, limpets, mussels, and cockles, the last of which are very abundant, and often supply a principal article of food, the neighbouring seas abound with ling, cod, tusk, hake, turbot, and flounders; and immense shoals of herrings also come up, which the inhabitants are unable to take for want of suitable tackle. About twenty or thirty boats are sometimes employed, with five men in each; and if successful, and the weather permits, they carry the ling and cod to Glasgow and Greenock in their own boats. Many cearbans, or sail-fish, were formerly taken by means of the harpoon, and large quantities of oil extracted; but this branch has now failed, through the inability of the fishermen to provide the tackle.

Ecclesiastically the parish is in the presbytery of Uist, synod of Glenelg, and in the patronage of the Crown: the minister's stipend is £165. 10. 5., of which a portion is received from the exchequer; with a manse, and a glebe valued at £17. 10. per annum. The church is a plain structure, built a few years since, and conveniently situated in the centre of the parish, about six miles from each extremity of the main island. There is a Roman Catholic chapel. The parochial school affords instruction in English and writing, and the master is qualified to teach the classics, book-keeping, and geography; he has a salary of £26: the school has been only lately opened, and education is at present quite in its infancy, the inhabitants being mostly unable to read or write. The poor enjoy the benefit of a bequest of £400, left by two persons, natives of the parish. At Killbar are several ruins of ancient chapels dedicated to St. Barr, some of which have an altar of rough stones at one end, and the pedestal of a cross at a short distance: a wooden figure of the saint was formerly fixed up for the adoration of the people, and was dressed in superior attire on the celebration of the anniversary. Watch-towers are to be seen in every direction; and upon the lakes are "duns", supposed to be of Scandinavian origin. There are also many of the circles usually called Druidical. A few years since, a gold medal was found in digging the clergyman's garden, about the size of a half-crown piece, cast for the coronation of Augustus II., King of Poland, and which is said to have belonged to some passenger on board of a Dutch ship wrecked here in the early part of the last century.

BARREL-OF-BUTTER, an islet, in the parish of ORPHIR, county of ORKNEY. It is one of the smallest of the Orkneys, and is situated to the south of the island of Pomona, in Scalpa Flow, a large expanse of

water resembling a small Mediterranean Sea. Here was formerly a seal-fishery, for which the neighbouring farmer paid the proprietor a barrel of oil yearly, until the frequency of shipping scared the seals from the isle, when the proprietor, determined not to lose his rent, converted the tack-duty into a barrel of butter, which is still paid by the tenant. Hence the isle derives its present name, the ancient one being Carlin-Skerry.

BARRHEAD, for a time a quoad sacra parish, including the villages of Barrhead, Cross-Arthurlee, Grahamstown, and Newton-Ralston, in the parish of NEILSTON, Upper ward of the county of RENFREW, 4 miles (S. by E.) from Paisley; the whole containing 5337 inhabitants. This place is situated on the stream of the Levern, on which are a number of waterfalls that have contributed much to the manufactures of the district, consisting of cotton spinning and weaving, and printing, bleaching, and dyeing, all extensively carried on, principally for the Glasgow and Paisley markets. Coal is abundant in the district, and mines are in operation. The village, situated on the road from Glasgow to Irvine, is of considerable size, and for the most part inhabited by persons engaged in the various works; it has a post-office with a good delivery, and an act was passed in 1845 for the construction of a railway from Glasgow by Barrhead to Neilston, which is now open from Glasgow to Barrhead. In 1848 an act was passed for a railway from Paisley to Barrhead. A fair is held, chiefly for pleasure, on the last Friday in June, when a horse-race also takes place. The parish was in the presbytery of Paisley and synod of Glasgow and Ayr: the church, a neat structure, was built by subscription, in 1839; and the minister was elected by the male communicants. There is a good school, of which the teacher has a room rent-free; also a mechanics' subscription library.

BARRY, or BARRIE, a parish, in the county of FORFAR, including the former quoad sacra district of Carnoustie, and containing 2124 inhabitants, of whom 217 are in the village of Barry, 9 miles (E. N. E.) from Dundee, and 1268 in the village of Carnoustie. This parish is situated at the southern extremity of the county, on the shore of the German Ocean, and at the mouth of the Firth of Tay; measuring about four miles from north to south, and three and a half from east to west. In the latter direction it is intersected, throughout its whole extent, by a high verdant bank, supposed to have once formed a steep shore of the ocean, and separating the locality into two grand divisions totally dissimilar in character. That on the north is of a good soil, and elevated about fifty feet above the southern portion, from which it has the appearance of an extensive and regularly constructed terrace. The lower division is sandy and sterile, affording in general but a scanty pasture for a few sheep and cattle, with small patches of arable land, producing, in moist seasons, moderate crops of grain. The whole comprises about 4000 acres, half being in the sandy, and half in the cultivated, portion. In the upper part the soil has the several varieties of light loam, good gravel, and a deep black earth; and under the skilful application of the most approved usages of husbandry, crops are obtained of wheat, barley, oats, peas, turnips, flax, clover, and potatoes, nearly equal to those grown in more favoured districts. Of the part never yet cultivated, covering nearly 2000 acres, very little is serviceable on account of the light and sandy

nature of the soil, except for occasional pastures. The annual value of real property in the parish is £4052. The larger part of the population, both male and female, are engaged in the manufacture of brown and white linen, for the Dundee and Arbroath houses. A vitriol-work, employing four or five hands, was erected a few years since; and there are five stations for the fishing of salmon, belonging to three different proprietors. The turnpike-road and the railroad between Dundee and Arbroath pass through the parish; and to these two towns the produce is usually sent for sale. Ecclesiastically the parish is in the presbytery of Arbroath, synod of Angus and Mearns, and in the patronage of the Crown; the minister's stipend is £143. 12. 11., with a manse, and a glebe of five acres, valued at £5. 10. per annum. The church, situated in the centre of the parish, is a plain structure, altered and enlarged in the year 1818. A place of worship and a schoolroom have been erected in connexion with the Free Church. The parochial school affords instruction in the usual branches; the master has a salary of £29. 18. 9., with £30 fees. Till lately there were several tumuli on the eastern limit of the parish; and in the same vicinity, near Carnoustie, were the vestiges of a camp, where, it is said, the Danes under Camus were defeated by the Scots headed by Malcolm II.

BARVAS, a parish, in the island of LEWIS, county of ROSS and CROMARTY, 10 miles (N. W. by N.) from Stornoway; containing, with the former quoad sacra district of Cross, 3850 inhabitants. The name of this place, like many other names in the neighbourhood, is supposed to be of Norwegian derivation; but its signification is altogether unknown. From the memorials which still remain, the Danes appear to have had some connexion with the district. A fort, now in ruins, evidently of Danish construction, stands on the border of a loch south of Bragar, and three buildings of the same description are to be seen between Shadir and Borve, each of them, by its peculiar form, locality, and appendages, indicating the scene of the military operations of that people. On a plain of moss between Barvas and Shadir stands an immense stone, eighteen feet high, and almost as much in girth, supposed to have been raised as a triumphal memorial of the slaughter of some cruel and reckless tyrant of the Danish nation. The ruins of several old chapels and burying-grounds also remain in the parish, shewing the subsequent occupation of the soil by religious teachers. The chapels were dedicated to St. Bridget in Borve, St. Peter in Lower Shadir, St. Mary in Barvas, and St. John in Bragar.

The PARISH, which is remotely situated, in the northern extremity of the island of Lewis, is about twenty-two miles long and seven broad, containing 16,103 acres, of which number 1468 are in tillage, 489 the best kind of pasture, and 14,146 pasture of an inferior kind. It is bounded on the north-west by the Atlantic Ocean. The coast, which comprises a length of about fourteen miles, is rugged, in many parts bold and rocky, and is beaten by a violent surf when the wind blows from the west or north-west. The surface of the interior is diversified by gentle elevations, except in one or two instances, where it is broken by a deep glen traversed by rivulets, or occupied by a sweeping moor the resort of red mountain deer. There are five rivers, the Glen, the Borve, the Shadir, the Arnal, and the Torra,

which rise from springs or lochs, generally six or seven miles up the country, and empty themselves into the ocean. The climate is surcharged with vapour and fog, and subject to violent storms and rains; the striking phenomenon of the Aurora Borealis is frequently seen, in all its splendour and majesty.

The soil of the cultivated land, which chiefly lies along the sea-shore, is black earth, often largely mixed with gravel or sand; but as the main part of the parish is moor, the soil is mostly mossy. The arable portion is overspread with quantities of stones, and the exposure of the land to winds from the sea, without bill or mountain to protect behind, presents a formidable impediment to the labour of the farmer, and sometimes destroys his crops altogether. The rental is small. No produce is exported, the whole being required for home consumption; and but few improvements have been made in agriculture, the backwardness arising chiefly from the shortness of the leases, and the poverty of the people, who in seasons of scarcity are compelled to live upon whelks, periwinkles, limpets, and crabs, the only shell-fish to be found. About 2500 head of black-cattle are reared, which are fed in winter chiefly on sea-weed. The sheep amount to upwards of 7000, and are all of small stature, as also are the horses, which, however, are compact, active, and mettlesome, and well suited to their ordinary work of carrying the sea-weed in double-baskets, over difficult and rocky grounds. The subsoil is a stiff hard clay, which in some parts is covered with large banks of sand, twenty feet high, driven inward from the shore by the continued action of westerly winds. The annual value of real property in the parish is £1942.

The inhabitants live in numerous villages on the coast, almost entirely in an isolated state, having very little communication with others. There are two roads, one running along the coast, and another to Stornoway, the only mart in the island. The parish contains four small bays, into which boats sometimes enter; but the violence of the wind prevents the anchorage of any vessel. Salmon-fishing has been carried on for some years, with considerable success, near the mouths of the rivers; but the nature of the coast rendering other fishing impracticable, the people are generally little inclined to make the employment a steady pursuit. For ecclesiastical purposes the parish is within the bounds of the presbytery of Lewis, synod of Glenelg, and in the patronage of the Crown: the minister has a stipend of £158. 6. 8., partly paid from the exchequer; with a manse, and a glebe worth about £20 per annum. The church, built about sixty years since, is a long narrow building, and contains 300 sittings. There is a parochial school, in which the classics and the common branches of education are taught; the master has a salary of £28. Two other schools are supported by the Edinburgh Gaelic School Society. The parish contains several chalybeate springs, but none of them of any note.

BASS, ISLE, in the parish of NORTH BERWICK, county of HADDINGTON. It is situated in the mouth of the Firth of Forth, about a mile and a half from the shore; the circumference of the rocky isle is full a mile, and its height above the surface of the sea 420 feet. On the north it is lofty and precipitous; on the south somewhat conical, sloping moderately down to the base: it is only accessible on the south-east. Pasture is afforded for about thirty sheep, and the rock is the

resort of myriads of sea-fowl. Its history is of considerable interest: it was purchased by government in October 1671, and converted into a state prison for the Covenanters, a purpose which it served during the reigns of Charles II. and James II. After the Revolution, it held out for several years against the new dynasty, amidst numerous and vigorous enterprises for its reduction, and was signalized as the last place in Great Britain that yielded to the rule of William and Mary. In 1701 the king ordered the fortifications to be demolished, and in 1706 the Bass was granted by the crown to President Sir Hew Dalrymple for one Scots penny, reserving the power of re-fortifying the rock, should government at any time deem it expedient to do so. The fort and the dungeons are all unroofed, and the chief interest of the isle arises from its historical associations, these crumbling ruins speaking of seventeen years' solitude and suffering, endured by above fifty of Scotland's sons, who, some for a longer and some for a shorter part of that period, here endured a painful imprisonment and exile for their zeal as Covenanters.—See NORTH BERWICK.

BATHAN'S (ST.), ABBEY, a parish, in the county of BERWICK, 7 miles (N. by W.) from Dunse; containing 146 inhabitants. The appellation of this place has been successively written St. Boythan's, Bothan's, and Bathan's, which last form it has preserved since the earlier part of the eighteenth century: the name was derived from the patron saint, Baithen, who laboured here in the former part of the seventh century, and to whom the first church was dedicated. The word Abbey, it is supposed, was prefixed to distinguish the parish from the parish of Gifford or Yester, in East Lothian, which was also called St. Bothan's, but had no convent. Near the church, which was destroyed more than once by fire during the incursions of the Danes, a convent of Cistercian nuns was founded between the years 1184 and 1200, with the title of priory, by Ada, daughter to King William the Lion, and wife to Patrick, Earl of Dunbar. This institution, by the liberal benefactions of the foundress and her husband, and various other persons, acquired considerable estates, in addition to the patronage of the church, by which the nuns were enabled, through the appointment of a vicar, to appropriate to themselves the revenues of the living. A chapel was also founded in the parish, about a quarter of a mile from the nunnery, on the same side of the river Whitadder; the foundations of which lately existed. At Strafontane, which is now part of the parish, but was anciently distinct, an hospital was founded in the reign of David I., which at one time was dependent on the abbey of Alwick, but was transferred in 1437 by the abbot of that place to the monastery of Dryburgh. It came afterwards into the possession of the collegiate church of Dunglass, and was ultimately converted into a church.

The mean length of the parish, from east to west, is about three miles and a quarter, and its breadth two miles and a half. It contains about 5000 acres, of which 2600 are hilly pasture never cultivated, 100 wood, and 2300 arable. The parish is situated among the Lammermoor hills, and the surface consequently consists of hills and slopes, the former of which are for the most part covered with heath; the hills rise to various elevations, of between 300 and 400 feet above the intervening

vales, and then spread out into extensive flats. The level grounds on the banks of the streams which receive the drainage of the hills, are in general fertile, as well as many of the slopes, but the upper lands are altogether barren. The Whitadder is the only river: after a course of about twelve miles, in which it is joined by the Dye and many smaller streams, it assumes, in its passage through the parish, a beautifully meandering form, and receives, besides many rivulets, the tributary waters of the Monynut and the Ware, which extend its width to about eighty feet. A bridge of wood upon stone piers, on the tension-bar principle, has been erected across the river, and is much admired for its simplicity of construction and elegance of form. The soil of the parish is equal, if not superior, to any part of the Lammermoor range, which is throughout of meagre quality, and much better suited to the pasturage of sheep and cattle than the growth of corn. The agricultural produce principally comprises oats, barley, potatoes, and turnips: the sheep are the Cheviots, mixed with a few of the black-faced, and the ewes of each of these are in many cases crossed with the Leicesters. Considerable improvements have been made in husbandry, consisting chiefly in drainage, and the reclaiming of waste land. The annual value of real property in the parish is £1397. Veins of copper-ore have been discovered on the estate of St. Bathan's, and the mineral was worked in 1828 by an English mining company, but after the first attempt the undertaking was abandoned. There is no village; but a group of pleasing and interesting objects in the romantic vale through which the Whitadder runs, includes the house of St. Bathan's, a corn-mill, the church, the manse standing on an acclivity in the midst of trees, and the school-house.

For ecclesiastical purposes, the parish of Abbey St. Bathan's is within the bounds of the presbytery of Dunse, synod of Merse and Teviotdale. The patronage belongs to the Crown; and the minister's stipend is £158. 6. 8., with a manse, built in 1822, and a glebe of fourteen acres, worth £13 per annum. The church, which is conveniently situated, is an ancient edifice in good repair, and accommodates 140 persons. The east window, part of the ancient building, is still in some measure preserved; and when lately repairing the north wall of the edifice, a recumbent statue of a nun was found, but without any inscription: in this wall was formerly an arched door, now built up, which communicated with the monastic buildings. There is a parochial school, in which the usual branches of education are taught, with mathematics and Latin; the master has a salary of £26. 8., with about £12 fees, and a house. In a woody nook at a little distance from the church is a spring named St. Bathan's well, formerly esteemed of miraculous power in healing diseases, and to which the superstitious still attach many surprising virtues.

BATHGATE, an independent burgh of barony, and a parish, in the county of LINLITHGOW, 7 miles (S. by W.) from Linlithgow, and 18 (W. by S.) from Edinburgh; containing, with the village of Armadale, 3928 inhabitants, of whom 2809 are in the town. This place, the name of which, in a charter of Malcolm IV. written *Batket*, is of unknown derivation, formed part of the extensive possessions given by King Robert Bruce, in 1316, with his daughter the Princess Marjory, on her

marriage to Walter, high steward of Scotland, ancestor of the royal family of Stuart, who had one of his principal residences at this place, where he died in 1328. Of this ancient castle, some slight traces of the foundations only are discernible, in a morass about a quarter of a mile from the town, in which, though the land has been drained and brought into cultivation, kitchen utensils of brass, and coffins rudely formed of flat stones, have been discovered by the plough. The barony, with the sheriffdom of Bathgate, which had been annexed to it, was granted by Charles II. in 1663 to Thomas Hamilton, and subsequently became the property of the Hope family, of whom John, the second Earl of Hopetoun, on the abolition of hereditary jurisdictions in 1747, claimed £2000 as an indemnity. There are few events of importance connected with the history of Bathgate, with the exception of some occasional encounters which took place during the time of the Covenanters, between the inhabitants and the soldiery who were sent to disperse their meetings.

The town is chiefly situated on the acclivity of a hill, on the north side of the middle road from Glasgow to Edinburgh, and consists of several well-formed streets of neatly-built houses, from which others, of inferior character, branch off in various directions. The principal streets are paved, and well lighted with gas from works erected by a company; and the inhabitants are amply supplied with water. A subscription library has been established, which has a collection of about 300 volumes, and is well supported. The post-office has two deliveries from Glasgow, and one from Edinburgh, daily; and branches of the National Bank of Scotland and the Glasgow Union Bank, have been opened in the town. The cotton manufacture is carried on to a considerable extent, affording employment to about 500 of the inhabitants, in hand-loom weaving, chiefly for the Glasgow houses; and about 160 women and girls are engaged in tambour-work. A distillery and a brewery, both on an extensive scale, are in active operation; and there are two brick and tile works, where several hands are employed. The market, which is abundantly supplied with grain, and numerously attended, is on Wednesday. Fairs for cattle and horses are held on the third Wednesday in April, the first Wednesday after Whitsuntide (O. S.), the fourth Wednesday in June, the third Wednesday in August, the fourth Wednesday in October, and the first Wednesday after Martinmas (O. S.). Of these the principal are the Whitsuntide and Martinmas fairs, which are attended by dealers from all parts of the country. Facility of communication is afforded by the Edinburgh and Glasgow, and the Lanark and Borrowstounness, turnpike-roads, which pass through the parish, and by other roads kept in good repair by statute labour. But the chief means of intercourse are those presented by the railway, lately opened, from Bathgate to the Edinburgh and Glasgow line near the Ratho station.

In 1824 the inhabitants, with the concurrence of the superior of the town, obtained an act of parliament conferring a charter of incorporation, and vesting the government of the town as an independent burgh of barony in a provost, three bailies, a treasurer, and twelve councillors, annually elected by the burgesses, who must be holders of houses or tenements valued at £3 per annum, and are entitled to become burgesses on

the payment of fees not exceeding £2. 2. Originally the town was a burgh of barony, a baron-bailie being appointed by the proprietor of the estate. The jurisdiction of the magistrates, which is confined to the limits of the burgh, extends to civil pleas not exceeding £25, and to the trial of petty offences, for which they hold courts as occasion may require; but the number of causes is very inconsiderable. A sheriff's small-debt circuit court is held four times in the year, under the sheriff of the county, who is also appointed sheriff of Bathgate. There is a small prison, containing three cells for criminals, and a room for debtors, under the management of the corporation; but it is rarely used. The seal of the burgh simply bears the inscription, "*Sigillum Commune Burgi de Bathgate*", in an outer circle; and, within, the words, "erected by act of parliament 5th George IV. 1824", with a crown.

The PARISH is about seven miles and a half in length, and about four miles in extreme breadth, comprising an area of 11,214 acres, of which 8700 are arable, 800 pasture, 500 woodland and plantations, and the remainder, excepting the site of the town of Bathgate and the village of Armadale, roads and waste. Its surface, though generally level, is diversified by the hills of the Knock and the Reiving Craig, which nearly equal the Cairn-apple in height, attaining an elevation of about 1450 feet above the sea. The only river is the Almond, which separates it for about a mile from the parish of Whitburn. There are numerous springs, and, in the grounds of Balbardie, a lake partly artificial, about eleven acres in extent, and averaging five feet in depth. The soil, on the slopes of the hills, is rich; in the lower grounds it is wet and marshy, though it has been greatly benefited by draining: the lands which are not under tillage, afford good pasturage for cattle. The system of agriculture is in an improved state, and a considerable portion of waste has been reclaimed; the crops are grain of every sort, with potatoes and turnips, and much attention is paid to the management of the dairy-farms. Few sheep are pastured, and the cattle are of various mixed breeds, but, on the dairy-farms, mostly of the pure Ayrshire kind. The farm buildings are inferior to others in the district; but improvements are gradually taking place under the auspices of an agricultural society in the town, which awards premiums at its annual meetings, when there is a show of cattle. A horticultural society has also been established. The plantations consist of oak, ash, elm, and plane, with larch, silver, spruce, and Scotch firs. The annual value of real property in the parish is £12,975.

The substratum is principally coal, forming part of the central coal-field of Scotland, and of which several mines are worked: the seams are frequently intersected with dykes of whinstone. Limestone is also found, both of the marine and lacustrine formation; in the former are various species of corallines, ammonites, and marine shells, and in both are veins of lead containing portions of silver-ore. In one of the quarries, called the silver mine, the ore was wrought for some time, yielding a considerable quantity of silver, which gradually diminished till the working was ultimately discontinued. There are several limestone-quarries and lime-works, producing lime of good quality. In connexion with the strata of coal is found iron-ore, which was formerly wrought by the Carron Iron Company,

and for the working of which, in another part of the parish, a company recently formed are carrying on operations. Thin layers of mineral pitch are occasionally found in the limestone. Freestone and whinstone are likewise abundant; one of the quarries of the former is constantly wrought, on the lands of Balbardie, producing stone of excellent quality for building, and the latter is wrought chiefly for the roads. Balbardie House is a handsome mansion, erected towards the close of the last century, after a design by Mr. Adam, and beautifully situated in a well-wooded park of more than 100 acres, containing much diversified scenery; and Boghead, another residence, is surrounded with thriving plantations, formed by the present proprietor.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Linlithgow, synod of Lothian and Tweeddale: the minister's stipend is £132. 8. 4., with a manse, and a glebe valued at £19 per annum; patron, the Earl of Hopetoun. The church, erected in 1739, is a plain building, situated in the town, and nearly in the centre of the parish; it is in good repair, and contains 719 sittings. There are places of worship for the Free Church, the United Presbyterian Synod, and United Original Seceders. The parochial school is well attended; the master has a salary of £34. 4. 4½., with a house and garden, and the fees average £26 per annum. The Bathgate Academy was founded by Mr. John Newlands, a native of this parish, who died in Jamaica in 1799, and bequeathed the principal part of his property to trustees, for the erection and endowment of a free school here. The trustees, after resisting an attempt to invalidate the bequest, in which they were indemnified by the personal security of Mr. Majoribanks, received £14,500, and immediately opened schools in different parts of the parish, which, on the subsequent increase of the funds, were concentrated in 1833 in the present institution. It is under the superintendence of a rector, who is also the classical master, two English masters, and a master for writing, arithmetic, and the mathematics; and is attended by about 500 children, who are all gratuitously taught. The building is handsome; it consists of a centre and two wings connected by a colonnade, and comprises a house for the rector, with four ample class-rooms, a library, in which are more than 700 volumes, and other apartments, with a spacious play-ground in front. The poor are partly supported by the interest of £1100 bequeathed by Mr. Henry Calder, yielding £53 per annum. There are some Druidical remains in the vicinity; and in different parts of the parish have been found coins of Edward I., Queen Elizabeth, and Charles II. Several of the springs are strongly chalybeate; and on the estate of Couston, the water resembles in its quality that of the celebrated spring of Dollar.

BAYNTON, county of FIFE.—See BANETON.

BEATH, a parish, in the district of DUNFERMLINE, county of FIFE, 2½ miles (S.) from Blair-Adam Inn; containing, with the villages of Cowden-Beath, Kelty, and Oakfield, 973 inhabitants. This parish, though now destitute of any trees of the kind, is supposed to have originally abounded with birch, and from that circumstance to have derived its name, anciently written *Baith*, which in the Gaelic language signifies a birch-tree. It is situated on the great road from Perth to Queensferry, extending about four miles in length and

three miles in breadth, and comprising 6500 acres, of which about 5300 are arable, 500 meadow and pasture, 500 woodland and plantations, and the remainder water and waste. The surface is very irregular, rising in many places into hills of considerable elevation, some of which afford rich pasture, and one called the Hill of Beath commands interesting views. The scenery has been in some parts enriched with thriving plantations, and is enlivened by the Loch Fitty, a fine sheet of water about three miles in circumference, and abounding with pike, perch, and other fish. In general the soil is good, consisting of a clay and loam, interspersed occasionally with moss; the crops are oats, barley, peas, beans, potatoes, and turnips, with wheat occasionally, and a small quantity of flax. The system of agriculture is greatly improved; a considerable quantity of waste has been reclaimed, and much land which from previous mismanagement was unproductive has been rendered fertile. The annual value of real property in the parish is £4404. Among the substrata are whinstone and sandstone: coal is found in abundance, and three collieries are worked in the parish, which afford a plentiful supply of fuel: limestone is also wrought, but on a very limited scale. Facility of communication is presented by the Dunfermline branch of the Edinburgh, Perth, and Dundee railway. Ecclesiastically the parish is in the presbytery of Dunfermline, synod of Fife, and in the patronage of the Earl of Moray; the minister's stipend is about £165, with a manse, and a glebe valued at £17 per annum. The church is a handsome edifice, erected in 1835, and affords ample accommodation. The parochial school is attended by about 100 pupils; the master has a salary of £34. 4. 4., with £30 fees, and a house and garden.

BEAULY, a village, in the parish of KILMORACK, county of INVERNESS, 18 miles (W.) from Inverness; containing 560 inhabitants. It is situated at the mouth of the river of the same name; and was distinguished for a priory founded in 1230, which at the Dissolution came into the possession of Hugh, Lord Frazer, of Lovat, in whose family it continued until 1745, when it was forfeited to the crown: a portion of the walls is still standing. The village is a considerable thoroughfare to and from all the more northern Highland counties; and the Beauly is navigable for small vessels for about three miles above it. The river is formed by the union, near Erechless Castle, of the Farrer, Canieh, and Glass streams; it takes an eastern course, and after forming the falls of Kilmorack and other cascades, merges in an arm of the sea connected with the Moray Firth.—See KILMORACK.

BEDRULE, a parish, in the district of JEDBURGH, county of ROXBURGH, 3 miles (S. W.) from Jedburgh; containing, with the villages of Bedrule, Newtown, and Rewcastle, 256 inhabitants, of whom 111 are in the village of Bedrule. This place derives its name from its situation on the small but rapid and impetuous river Rule, whose waters, impeded in their progress by fragments of loosened rock, pursue their course with tumultuous noise. It lays claim to considerable antiquity, and formed part of the possessions of the Turnbull family, one of whose descendants was keeper of the privy seal in 1441, and subsequently Bishop of Glasgow: he procured a bull from Pope Nicholas V. for erecting a college for literature within the city of Glasgow, in 1452 or

1453. The parish, which is nearly in the centre of the county, is of elliptic form, and comprises about 1600 acres of arable land, an equal quantity in pasture, about forty acres of woodland and plantations, and a considerable portion of waste. The surface is diversified with hills and dales: of the former, the hill of Dunian, in the south-east, is the highest, rising in a circular form to an elevation of 1031 feet above the sea; it is flat on the summit, and forms a conspicuous mark for mariners. The scenery is generally picturesque, and in some parts enriched with stately wood. The chief rivers are, the Rule, which winds between wooded banks displaying much beauty; and the Teviot, which skirts the parish for a considerable distance, and receives the waters of the Rule at no great distance from the village.

The soil is extremely various, though generally fertile: near the rivers it is a rich sandy loam, resting on a bed of gravel, and in some parts intermixed with clay; in other places, of a thinner and less productive quality, on a subsoil of retentive clay. The principal crops are oats, barley, wheat, potatoes, and turnips; the system of agriculture is improved, and lime and bone-dust are unsparingly used for the benefit of the land. Great attention is paid to the rearing of live stock, for which the pastures are well adapted: the sheep are of the Cheviot breed, with a few scores of the Leicestershire, and a few Merinos; the cattle, of which only a moderate number are fed for the butcher, are all of the short-horned breed. The annual value of real property in the parish is £2747. The woods consist chiefly of birch, alder, common and mountain ash, hazel, cherry, and oak; and the plantations, of firs of all kinds, which thrive well. In general the substrata are greywacke, of which the hills mainly consist, and sandstone of a reddish hue; the sandstone is of excellent quality, and is extensively quarried for building and for ornamental uses. There are some indications of coal, but no adequate attempts have been made to obtain it: limestone is also found, at Bedrule hill, and a quarry was formerly open there, but the working of it has been discontinued. Knowsouth House, in the parish, is a very elegant mansion in the Elizabethan style of architecture, situated in a highly picturesque and richly-wooded demesne, laid out with great taste.

For ecclesiastical purposes the parish is in the presbytery of Jedburgh, synod of Merse and Teviotdale: the minister's stipend is £150, with a manse and glebe; patrons, the Hume family. The church, erected about 1805, is a substantial edifice, situated on the summit of a steep bank, and adapted for 140 persons. The parochial school is well attended; the master's salary is £26, with from £15 to £20 fees, and a house and garden. There are some slight remains of the castle of Bedrule, the baronial seat of the Turnbulls, consisting chiefly of the foundations of the ancient buildings, on the right bank of the Rule; and on the opposite side of the river are vestiges of out-works formerly connected with that stronghold: the site commands an extensive prospect. Remains also exist of an old fort at Fulton, one of the numerous strongholds erected during the times of border warfare. On the farm of Newton, near the road from Jedburgh to Hawick, is the site of an encampment, surrounded on all sides but one by a fosse of running water; it is situated on a sloping piece of ground in Newton moor, and is about 600 feet in cir-

cumference: the work is supposed to have been an out-station connected with a Roman camp at Stirkrigg, about a mile distant, but of which every trace has been obliterated by the plough. Not far from this station is a well called Our Lady's Well, which runs into a neighbouring pond, said to have been constructed by the monks of Jedburgh for a fish-pond.

BEIL-GRANGE, a hamlet, in the parish of STENTON, county of HADDINGTON, 1 mile (S. S. W.) from Stenton; containing 53 inhabitants. It is near the borders of the parish of Dunbar, and is remarkable for a splendid mansion in its vicinity. The Beil rivulet passes on the north of the hamlet, and, flowing by Belton and Westbarns, falls into the ocean.—See STENTON.

BEITH, a parish, chiefly in the district of CUNNINGHAME, county of AYR, and partly in the Upper ward of the county of RENFREW, 18 miles (W. S. W.) from Glasgow; including the villages of Gateside, Northbar, and Burnhouse, and containing 5795 inhabitants. This place is supposed to have taken its name from a Celtic term signifying "birch", and many parts of the district are referred to, as still bearing names formed partly with the word *wood*, such as Roughwood, Woodside, Threepwood, and others. In ancient times the locality consisted of the two great divisions called the barony of Beith, and the lordship of Giffen, the latter being the more extensive, and the two districts being divided from each other by the Powgree, a stream that falls into the Garnock near the south end of Kilbirnie loch. The barony was given in the twelfth century to Kilwinning Abbey by Richard de Moreville, the son and successor of Hugh de Moreville, constable of Scotland, and lord of Cunninghame; and his wife Avicia de Lancaster gave the lands of Beith, Bath, and Threepwood, also to the abbey. This religious establishment erected a chapel here, afterwards the church of Beith, the monks enjoying the tithes and revenues, and finding a curate to do the duty. About the period of the Reformation, the abbot and chapter feued out the lands in the barony for small feu-duties, which, with the other temporalities of the church, passed to Hugh, fifth Earl of Eglinton, who was created lord of erection of the monastery. The lordship of Giffen was given by the family of Moreville to Walter de Mulcaster, the donation comprehending the whole of the lands to the south and west of the Powgree: the ruins of a chapel founded by the monastery of Kilwinning, and dedicated to St. Bridget, are still to be seen on a part of this property.

BEITH, at the beginning of the last century, was only a small village, consisting of a few houses in the vicinity of the church; but has since grown into a thriving manufacturing town, with a large and industrious population. It is situated on an eminence, in the midst of a district abounding with beautiful scenery. The town is well lighted with gas, supplied by a company established in 1831, with a capital of £1600. It contains a subscription library of 400 volumes, and two circulating libraries. The population comprises several merchants who deal very extensively in grain, and persons engaged in various kinds of traffic, but is to a great extent composed of hand-loom weavers; and about 200 persons resident in the parish are regularly engaged in the manufacture of flax thread. A mill for spinning flax, lately erected at North-bar, two miles from the town, affords employment to eighty hands; the proprietor has built

several houses, and has commenced feus, so that a considerable village may be expected shortly to arise on this spot. At Roughbank is an establishment of the same description, on a smaller scale, and also a mill for making potato-flour, occupying about fourteen persons; while at Knows an establishment has been formed containing forty steam-looms, furnishing employment to thirty persons. There are two bleachfields at Threepwood, in the north-eastern part of the parish; and the tanning and currying of leather are pursued to a considerable extent in the town. The enterprising spirit of the inhabitants has left untouched scarcely any article of profitable speculation. Beith is a post-town, and there are two arrivals and departures daily; also a daily despatch of letters to the neighbouring towns of Dalry, Kilbirnie, and Lochwinnoch. The great line of road from Glasgow to Portpatrick passes through the town, and the Glasgow and Ayrshire railway has a station about a mile distant from the place.

The marketable produce is usually sent for sale to Glasgow and Paisley; a weekly market, however, of ancient date, is held on Friday, and there are likewise annual fairs, chiefly for horses, on the first Friday in the months of January, February, May, and November (O. S.). A festival vulgarly called Tenant's day, attended by a great concourse of people, and celebrated for its show of horses, is held yearly on the 18th of August (O. S.), in honour of St. Inan, from whose name, with the last letter of the word saint, the appellation of the fair has been formed, by corrupt usage. Inan flourished about the year 839, and though chiefly resident at Irvine, occasionally remained for a time at this place, where he has left memorials in the name applied to the cleft in a rock, still called St. Inan's Chair, and in the name of a well, called St. Inan's Well. A fair called the "Trades' race" was formerly held in the month of June, when the trades assembled, and went in order through the town, with music and flags: this has been given up; but there is still an annual dinner of the merchants, who were united as a society previously to the year 1727, and the whole of whom meet for the purpose of conviviality on the anniversary, and choose a president. A kind of fair, likewise, is held in July, called the "Cadgers' race", when the carters ride in procession through the town. A baron-bailie and a baron-officer were formerly appointed by the Earls of Eglinton, who had considerable property in the parish; but nothing of this kind has taken place for many years, and the town has no particular local government. The town-house was built by subscription, in 1817: the lower part consists of two shops, and the upper part of a large hall, in which the justice-of-peace courts, the sheriff small-debt circuit courts, and public meetings are held; it is also used as a public reading-room.

The PARISH is in the form of a triangle, and is bounded on the west by Kilbirnie loch. It measures at its greatest length, from south-east to south-west, four miles; and comprises an area of 11,060 acres, of which 500 are in Renfrewshire. About 320 acres in the parish are uncultivated, 100 acres in plantations, and the remainder is pasture and tillage. The surface is considerably varied, throughout, with undulations, without presenting any remarkable elevations, the highest point, called Cuff hill, being only 652 feet above the sea. From this eminence, as well as from some of the uplands, extensive views are

obtained of the surrounding country, amply compensating for the general uniformity of the local scenery. The hill is supposed to take its name from the word Coifi, or Cuifi, the appellation of the chief priest of the Druids, and to have been a principal seat of the worship of that ancient order: the fair of St. Inan, also, in later times, was held here. The prospect from the summit embraces the mountain ranges of Galloway and Carrick, the expansive estuary of the Clyde, the outline of the Perthshire hills, and the majestic Ben-Lomond. The surface of the parish gently slopes from the north-eastern quarter, the vicinity of Cuff hill, and is lowest at Kilbirnie loch, being here only ninety feet above the sea level. From this sheet of water a stream flows northward through Lochwinnoch to the river Clyde, along a valley in which the line of railway to Glasgow also runs. At Blaeloch-head is a small lake; and different parts of the parish are enlivened by streams: the two principal are the river Lugton, rising in Lochlibo, and falling into the Garnock below Eglinton Castle; and the Dusk, which rises at Threepwood, and joins the Garnock at Dalgarvan, below Dalry.

The lands present a great variety of soil, but in general are fertile, and tolerably well cultivated; the chief crop is oats. Large portions are in pasture, and about 900 milch-cows, mostly of the Ayrshire breed, besides young cattle, are grazed on the different grounds. Cheese is consequently a leading article of traffic, and is purchased of the tenants by cheese-merchants for the Glasgow market; milk is disposed of to some extent in the surrounding villages, and large quantities of rye-grass seed are shipped to England by merchants residing in the town. The farms are of small size, varying from fifty to 100 acres; and full two-thirds of the rent are made by the sale of the cheese, which is of excellent quality, and brings the highest price at market. The annual value of real property in the parish is £15,140. The chief mineral deposits are coal and limestone, which are wrought extensively: clay-ironstone is also found, and brick-clay is dug for use at two manufactories of drain-tiles; ironstone exists in several parts, and a freestone-quarry is in operation. Plantations are rare, especially those of an ornamental kind, except in the vicinity of the mansions, among which is Caldwell House, at the eastern extremity of the parish, a large and elegant modern structure, surrounded by a spacious park richly ornamented with trees, including some of great stature and beauty.

Ecclesiastically the parish is in the presbytery of Irvine, synod of Glasgow and Ayr, and in the patronage of the Earl of Eglinton: the minister's stipend is £251. 5. 11., with a manse, and a glebe valued at £130 per annum. Beith church, commenced in 1807, and opened for public worship in 1810, is a plain edifice with a tower and clock, and accommodates 1254 persons; it was erected at a cost of £2790, and the bell, which has a very fine tone, was the gift of Robert Shedden, Esq., of London, a native of this parish. There are places of worship for the United Presbyterian Synod and members of the Free Church. The parochial school affords instruction in the usual branches; the master has a salary of £26, with a substantial dwelling-house, a good garden, and the usual fees. There are also schools at Hazlehead and other places. A savings' bank was formed in 1834; and two societies have been partly endowed, for the relief of the poor. Alexander Montgo-

merie, one of the earlier Scottish poets, and of some celebrity, was born in the parish.

BELHAVEN, a village and watering-place, in the parish of DUNBAR, county of HADDINGTON, $\frac{3}{4}$ of a mile (W.) from the town of Dunbar; containing 380 inhabitants. It is a suburb of Dunbar, pleasantly situated on the south-eastern shore of Belhaven bay, which opens into the Firth of Forth; and a strong mineral spring draws hither a number of summer visitors. A church was opened in 1840, which is now a place of worship in connexion with the Free Church. The place gives the title of Baron to a branch of the noble family of Hamilton.

BELHELVIE, a parish, in the district and county of ABERDEEN, 8 miles (N. by E.) from Aberdeen; containing 1594 inhabitants. The name of this place is derived from a word in the Gaelic language, signifying the "mouths of the rivulets", the locality being marked by the course of several small streams into the sea. Here were several Druidical temples, which have now disappeared before the operations of husbandry. Numerous tumuli and barrows are still visible, in which urns are found, made of coarse clay, and filled with dust and human bones, pointing out this spot as the scene of some extensive military operations, the particulars of which are entirely unknown; and on the sea-shore is a bed of yellow flints, where a considerable number of arrow-heads have been found at different times. A large part of the parish, known as the estate of Belhelvie, once belonged to the Earl of Panmure, but being forfeited in 1715, it was purchased by the York Buildings' Company, and again sold, in lots, in 1782, before the court of session; since which time it has been brought into a very superior state of agricultural improvement.

The parish is bounded on the east by the German Ocean, and the number of acres within its limits is 19,000, of which 5000 were recovered not long since from moorland, and 5000 still consist of sea-beech, peat-bog, and wood. About 4000 acres of the cultivated land are in grain crop, and 10,000 in turnip, potatoes, hay, pasture, grass, &c. The coast consists of a fine sandy beach; but the general character of the surface, from the sea to the western extremity, is hilly and broken. The first land from the coast is a narrow belt of sand, with short grass suited for pasture: this tract, on account of its smooth surface, was selected by the government engineers appointed to measure Scotland, as the most level ground to be met with, for laying down a base line of five miles and 100 feet. The next tract is an alluvial deposit, crowded with marine stones of all sizes, covered with mould and moss. After this, the ground rises towards the western boundary, until it attains an elevation of about 800 feet above the level of the sea. The hills whereof the parish consists are formed into two general ridges, from south to north, the termination of the western extremities of which is the highest land in the district.

The soil in the parts nearest the shore is sandy, and in some places mixed to a great extent with clay and stones; some parts are rich alluvial deposits, and the interior is a deep clayey mould, mixed sometimes with peat-moss: the subsoil is usually clay and sand, with a considerable admixture of stones. The wood, which generally stands in hedge-rows, has all been recently planted; it comprises chiefly elm, plane, ash, alder, and willow. The few sheep that are kept are the black-faced;

and the cattle are mostly of the improved Aberdeenshire breed, which, being small-boned and fleshy, and easily fed up, are found most profitable: the cultivation of grain, however, is the main dependence of the farmer. Considerable improvements have taken place in husbandry of late years, in the reclaiming of waste land, in draining, and the formation of inclosures; the farm-houses are also on a much better scale than formerly. Most of the changes have been made upon the best principles, and by the united efforts of the people among themselves. The annual value of real property in the parish is £7317.

The rock consists of trap, a seam of which, about half a mile broad, runs for seven miles through the parish from south-east to north-west; a rivulet flows through this bed, and small hills frequently rise above the stream to a height of some hundreds of feet, among which are found all the ordinary kinds of minerals. On the south-west side of this layer, the rocks are chiefly granite; on the opposite side they consist of coarse stone, fit only for the construction of dykes. There are large beds of peat-moss, some of which, near the shore, are covered with ten or twelve feet of sea-sand. They are supposed to extend some distance under the sea, as large masses or blocks of hard peat-moss, with the remains of trees embedded, are frequently cast upon the beach in stormy weather: in the year 1799, a block containing upwards of 1700 cubic feet was thrown upon the shore, which, with the wood contained in it, had been perforated by several large auger worms alive in their holes. A salmon-fishery is carried on along the coast, in which stake-nets are employed, and the profits arising from it are very considerable. Fairs are held for the sale of cattle, in spring, summer, and autumn.

Ecclesiastically the parish is subject to the presbytery and synod of Aberdeen, and is in the patronage of the Crown: the minister's stipend is £179. 13., and there is a good manse, with a glebe of five acres. The church, which is in due repair, contains 519 sittings. There are places of worship for the Free Church and United Presbyterian Synod. A parochial school is held on the usual footing, the master having a salary of £27, a house and garden, fees to the amount of about £40, and a portion of Dick's bequest: the classics and mathematics are taught, with all the ordinary branches of education. Another school is endowed with a few acres of land. There is a savings' bank, with a stock of about £300; and bequests have been left for the relief of the poor, amounting to about £20 per annum. The antiquities are, some tumuli, and the ruins of an old chapel. There are several chalybeate springs, but none of them of particular note.

BELLIE, a parish, in the counties of BANFF and ELGIN, 8 miles (E. by S.) from Elgin; comprising the village of Fochabers and part of the quoad sacra district of Enzie, and containing 2434 inhabitants. By some the Gaelic word *bellaidh*, signifying "broom", has been considered as giving name to this place; but others derive the appellation from *beul-aith*, the meaning of which is "the mouth of the ford". The parish is situated on the eastern bank of the river Spey, and is bounded on the north by the Moray Firth. It is of an oblong form, but narrower at the northern than at the opposite end; and comprises 12,048 acres, of which 3658 are arable, 643 pasture, 2852 wood, and the remainder chiefly moor.

The highest land is in the south-eastern portion, consisting principally of barren uncultivated moor, diversified by hills of various figure and altitude; the soil here is partly clayey loam, mixed with moss, and resting on a substratum of blue slate. On the west and south of this high district is a red impervious clay, intermixed with gravel and small stones. The soil near the eastern boundary of the parish is sandy and light, and the lower lands are of the same nature, approximating in the vicinity of the river to a fertile loam, resting on a stony or gravelly bed, once overflowed with water. The tract along the coast, about a quarter of a mile wide, is altogether barren. All kinds of grain and of green crops are raised, of good quality; and an improved method of husbandry has been pursued with considerable enterprise, for a number of years: barley was formerly the leading crop, but since the suppression of illicit distillation, wheat has been grown in large quantities, and, with oats, turnips, and potatoes, receives much attention. The manures comprise lime, sea-weed, farm-yard dung, and the refuse of herrings obtained from the fishing-station of Port-Gordon; with, sometimes, portions of bone-dust. The annual value of real property in the parish is £4802, including £617 for the Elginshire portion.

The principal rock is the red sandstone, consisting of a mixture of dark argillaceous and siliceous earths, large masses of which are applied to various architectural uses; but though very hard when first quarried, its friable quality after long exposure to the air renders it necessary to cover it with a thick coating of lime. The loose strata, of the same component parts, in which it is generally found, are much in demand for roads and garden-walks, and its interior often contains breccia rock. Beautiful specimens of asbestos are frequently found, washed down, as is supposed, by the mountain streams. The scenery is relieved with Scotch fir, and some birch and larch. The grounds of the splendid mansion of Gordon Castle exhibit a fine display of numerous other trees, among which are many limes, planes, and horse-chestnuts, with majestic rows of elm and beech; and an eminence known as the "holly bank" is covered with a profusion of that evergreen, of the most luxuriant description. The magnificent Castle, the seat of the Duke of Richmond, is situated in a spacious park in the immediate vicinity of Fochabers, and extends in a direction from east to west nearly 570 feet. It is a modern structure, and the roof and interior of the eastern wing are of very recent date, having been restored in consequence of an accidental fire on the 11th of July, 1827. The great road from Edinburgh to Inverness through Aberdeen traverses the parish, and crosses the Spey by a bridge originally built in 1804, at a cost of upwards of £14,000. Two of the western arches of the bridge were carried away by the flood of 1829, and were replaced in 1832 by a beautiful wooden arch of 184 feet span, raised at an expense of more than £5000, for defraying which a pontage is levied on wheel-carriages, horses, and foot-passengers.

For ecclesiastical purposes the parish is in the presbytery of Strathbogie, synod of Moray, and in the patronage of the Duke of Richmond: the minister's stipend is £158. 6. 8., of which about £60 are received from the exchequer; with a manse, and a glebe valued at £33 per annum. The church is situated in the village of Fochabers, and is a handsome edifice, built in 1798.

There is a place of worship for members of the Free Church. An episcopal chapel was lately built by the Duchess of Gordon, on the north side of Fochabers; the Roman Catholics have a place of worship in that village, and another about four miles distant, near the eastern boundary, where their clergyman resides. The parochial school affords instruction in the classics, in addition to the usual branches: the master has a salary of £34. 4. 4., with a house and garden given by the Gordon family, and £18 fees; he also participates in the Dick bequest. A legacy of 100,000 dollars was left by Mr. Alexander Milne, merchant of New Orleans, and a native of Fochabers, who died in October 1839, for the erection and endowment of a free school for the parish of Bellie: a great part of this money has been realized, and a body of directors, incorporated by act of parliament, have established a free school. To the north of Gordon Castle are the remains of a military station of quadrangular form, styled the "Roman Camp", thought to have been formed by a portion of the troops of Agricola, and intended to cover a ford on the river Tuessis, or Spey. A little to the east are the remains of a Druidical temple; and not far off, a mound called the "Court hillock", supposed to have been the seat of an ancient court of justice. Within the Duke of Richmond's park is an old cross, around which the village of Fochabers stood, until the latter was removed to its present situation by Alexander, fourth Duke of Gordon.—See FOCHABERS.

BELLS-QUARRY, a village, in the parish of MID CALDER, county of EDINBURGH, 2 miles (W.) from Mid Calder; containing 120 inhabitants.

BELLSHILL, a village, in the parish of BOTHWELL, Middle ward of the county of LANARK, 1½ mile (E.) from Bothwell; containing 1013 inhabitants. It lies on the great road from Edinburgh to Glasgow, and the hill from which it is named attains an elevation of 372 feet above the sea. The population partake in the manufactures of the parish. There is a post-office; also a United Presbyterian meeting-house, and two schools.

BELLSTOWN, a hamlet, in the parish of METHVEN, county of PERTH; containing 25 inhabitants.

BELLYCLONE, a hamlet, in the parish of MADERTY, county of PERTH; containing 69 inhabitants. It is situated a little east of the road from Foulis to Auchterarder, and on the south side of the small river Pow.

BENBECULA, an island, in the parish of SOUTH UIST, county of INVERNESS; containing 2107 inhabitants. It lies between the islands of North and South Uist, from the latter of which it is separated by a narrow channel, nearly dry at low water. Benbecula is a low island, about nine miles in length and the same in breadth, with a sandy and unproductive soil, except on its western side, which is rather fertile. The coast all round is indented with bays, and in the interior are numerous fresh-water lakes: a great quantity of sea-weed is thrown on the shore, from which kelp is made. A missionary here has a stipend of £60, with an allowance of £20 more in lieu of a manse. There were formerly some remains of a nunnery, the stone of which has been used in the erection of a mansion.

BENDOCHY, a parish, in the county of PERTH, 2 miles (N.) from Cupar-Angus; containing 783 inhabitants. This place, previously to the Reformation, belonged principally to the monks of the Cistercian abbey at Cupar-Angus, and till that time the church was the

parish church of Cupar-Angus; but after the dissolution of monasteries the lands were sold, and the resident tenants generally became the purchasers. Many of these lands still retain their ancient names, as Monk-Mire; Monk-Callie; and the Abbey Mill of Blacklaw, to which the adjacent estates were bound in thirlage, from which the proprietors lately obtained their exemption by the payment of large sums of money. At Monk-Callie formerly existed a small cell, the cemetery of which is still used as a burying-ground; and there are yet to be traced the foundations of an ancient chapel dedicated to St. Phink. The parish, which is situated near the eastern extremity of the county, is bounded on the south by the river Isla, and the lower lands are intersected by the river Ericht, which divides them into two nearly equal parts. The Isla and the Ericht both have their source in the Grampian range: the former, after a south-eastern course of several miles, entering Perthshire, deviates to the south-west, and falls into the Tay at Kinclaven; and the Ericht, which consists of the united streams of the Blackwater and the Ardle, forms a confluence with the Isla. The northern extremity of the parish is as much as twelve miles distant from the southern; but the surface is divided into detached portions by the intervention of the parishes of Rattray and Blairgowrie, which separate the highland from the lowland districts; and the whole area is not more than 10,000 acres, of which 5145 are arable, 2963 meadow and pasture, and 986 woodland and plantations.

The soil, in the lower lands, is rich, and the system of agriculture in a highly improved state; the chief crops are wheat, barley, and oats, with potatoes and turnips. The introduction of bone-dust, and more lately of guano, for manure, has tended greatly to the improvement of the lands; furrow-draining has been extensively practised, and by the construction of embankments near the Isla and the Ericht, 500 acres of most valuable land have been protected from the floods of these rivers. No sheep are reared in the parish, but considerable numbers are bought in October, and fed upon the turnips. The cattle are of the Teeswater and Angus breeds in the lower parts of the parish, and in the uplands chiefly of the Highland breed: great numbers of cattle are stalled, chiefly on potatoes, for the shambles. There are salmon-fisheries on the Isla and Ericht, but they are not rented at more than £20 per annum. The annual value of real property in the parish is £6951. The substratum of the lower districts affords a supply of freestone, several quarries being in operation; and there is a bed of clay-slate crossing the highland portion of the parish, which might perhaps be profitably wrought. A mill was erected at Cupar-Grange, by Mr. Archer, about the year 1840, for extracting the farina of potatoes; and the flour thus obtained is of excellent quality. The turnpike-roads from Cupar-Angus and from the Bridge of Cally to Blairgowrie pass through the parish, and an omnibus runs daily to the railway at Cupar-Angus. For ecclesiastical purposes, Bendochy is within the bounds of the presbytery of Meigle and synod of Angus and Mearns: the minister's stipend is about £250, with a manse, and a glebe valued at £14 per annum; patron, the Crown. The church is a very ancient structure, containing a monument to Nicol Campbell, of Keithick, son of Donald, abbot of Cupar-Angus; a curiously carved pulpit, and various antique relics: it was re-

paired in 1843, and has 400 sittings. The parochial school is well conducted; the master has a salary of £34. 4. 4., with a house and garden, and other emoluments to the extent of £15 per annum. The late Principal Playfair, of St. Andrew's, author of a work on chronology, was a native of this parish.—See PERSIE.

BENHOLME, a parish, in the county of KINCARDINE, three miles (S. W.) from Bervie, and on the road from Aberdeen to Dundee; containing, with the village of Johnshaven, 1648 inhabitants. The name is derived from *ben*, a hill, and *holme*, a piece of low level ground; terms which are descriptive of the peculiar features of the district. Very little is known concerning the early history of the locality. It appears that the ancient Tower of Benholme, a strong building still in a good state of preservation, was formerly the residence of the earls-marischal, memorials of whom remain in inscriptions upon two monuments transferred from the burying-aisle of the old church, and now forming part of the wall of the present edifice. The parish is nearly square in form, and contains about 5400 acres, of which upwards of 4000 are under cultivation, and 325 in wood. It is bounded on the south-east by the German Ocean, and the surface is considerably varied, though there is no elevation deserving the name of a hill, except that of Gourdon, which rises to a height of 400 feet at the boundary between Benholme and Bervie. The shore is about three miles in length, and along it is a plain extending the whole distance, and varying in breadth from 100 yards to a quarter of a mile. Beyond is an acclivity of equal extent, the surface of which is furrowed in many places with lofty ridges; and from this the ground gently rises till it reaches the high lands of Garvock, on the western boundary of the parish. The coast, which in general is rough and cragged, has neither cliffs nor headlands, and is altogether barren and uninteresting in its aspect; it is indented with the small bay of Johnshaven, and that of the Haughs of Nether Benholme. There are three small streams in the parish, two of which meet a little below the church, at the corner of the manse garden, and after running about a quarter of a mile, fall into the German Ocean. These rivulets, during heavy rains, frequently swell to a considerable size, and augmented by the waters from the drainage of the lands, overflow the banks of the deep and narrow hollows through which they flow, and commit great havoc upon the neighbouring grounds.

There is every variety of soil, from fine soft loam to wet heavy clay, the latter of which predominates. In some places the earth is light and sandy, and consists to a very considerable extent of a deep alluvial deposit, intermixed with boulders of different sizes, some of quartz, some of granite, others of greywacke, and a few of trap, and which are scattered in great quantities over the fields. Most of the plantations are of recent growth, except those about Benholme and Brotherton: they consist chiefly of fir, ash, beech, and oak; but the trees invariably pine and become stunted in growth when within the range of the sea-breeze, those only exhibiting a tolerably healthy appearance which are further removed and under some protecting cover. The state of husbandry is excellent: the lands are well drained, and many of the farms are provided with threshing-machines, more than half of which are driven by water; the farm-buildings are generally good, and much spirit and enter-

prise have been shewn within the last twenty or thirty years in recovering desolate wastes. The annual value of real property in the parish is £5501. The prevailing rock is the old red sandstone and conglomerate, the strata of which are intersected from east to west with dykes of trap; these rocks are diversified by almost every variety of quality and intermixture, and in the trap formation agates have been found in different parts of the parish. There is a considerable quarry of sandstone on the farm of Forth, upon the Brotherton estate, on the western boundary of the parish. The seats are, the mansion-house of Benholme, the entrance to which, in the direction of Benholme Tower, is by a passage formed over the moat on the west of that ancient structure; and Brotherton House, a very ancient edifice, with a terraced garden. The linen manufacture employs about 230 hands; and there is a fishery, the produce of which, consisting of cod, haddocks, and turbot, with a few small fish, is cured, and sent to Laurencekirk, Fordoun, &c., and sometimes to Montrose. Herrings are also taken; and salmon are caught with tolerable success by means of bag-nets, the shore being too rocky to allow of the use of stake-nets.

Ecclesiastically the parish is within the bounds of the presbytery of Fordoun, synod of Angus and Mearns. The patronage belongs to the family of Scott of Brotherton, and Lord Cranstoun, proprietor of Benholme, the former for two turns, and the latter for one: the stipend of the minister is £232. 4., with a manse, built in 1826, and a glebe of six acres, valued at £12. 10. per annum. Benholme church, built in 1832, is a neat edifice in good repair, accommodating 768 persons: the old church, which was taken down in 1832, was furnished with a font for holy water, an incense altar, and a niche in the wall, supposed to have been a receptacle for sacred relics; and there are several curious inscriptions on the stones yet preserved, one of which points to this edifice as the burying-place of the Keith family. Here are places of worship belonging to the Free Church and United Presbyterian Synod. The parochial school affords instruction in Latin and the usual branches of education, under a master who has a salary of £34. 4. 4., with £22 fees. A parish library consisting of 500 volumes, and a juvenile library with 400, are extensively used by the inhabitants. There are also two friendly societies, one of which has a stock of £600; and a clothing and fuel society has been established.

BENNETSTONE, a village, in the parish of **POLMONT**, county of **STIRLING**; containing 642 inhabitants. It is situated a few miles east of Falkirk, and the population consists chiefly of labourers and a few artisans. In a schoolroom in the village, divine service is occasionally performed by various ministers of dissenting congregations.

BENVIE, a village, in the parish of **LIFF** and **BENVIE**, county of **FORFAR**, 5 miles (W. by N.) from Dundee; containing 60 inhabitants. It is situated near the borders of Perthshire, which bounds the parish on the east. About a mile from the present church are the ruins of the old church of Benvie; and near the village is a strong chalybeate spring.

BERNERA, an island, in the parish of **BARRA**, county of **INVERNESS**; containing 30 inhabitants. It is one of the Hebrides, and the most southern of the whole range of these islands. Bernera is about one

mile in length, and three-quarters of a mile in breadth. From its being also called the Bishop's Isle, it seems to have belonged to the Bishop of the Isles; and it is said to have previously been a sanctuary of the Druids. The soil is fertile, and in the centre is a fresh-water lake, diversified with small islets; towards the south the rocks are rugged and precipitous, and on this side is a point of land called Barra Head.

BERNERA, an island, in the parish of **HARRIS**, island of **LEWIS**, county of **INVERNESS**; containing 713 inhabitants. This isle, with the isles of Pabbay, Killigray, and Ensay, constituted the quoad sacra parish of Bernera. It is situated in the sound of Harris, and is about four miles in length and one and a half in breadth, comprising 3545 acres of arable and 1310 of pasture land. The surface is rocky, principally whinstone, and the soil mostly of a sandy quality, interspersed with patches of moor; the tenants have a small portion of ground called a croft, and two tenants have each about 330 acres. The manufacture of kelp partly employs the population; and fish, chiefly ling, cod, and skate, are obtained at certain seasons. Fairs for black-cattle and horses take place in July and September. The parish was in the presbytery of Uist, synod of Glenelg, and in the patronage of the Crown; the stipend of the minister is £120, with a manse, and a glebe valued at £1 per annum, with the right of cutting peat. Bernera church was erected in 1838. There are some remains of religious houses on the island.

BERNERA, GREAT and **LITTLE**, two islands, in the parish of **UIG**, island of **LEWIS**, county of **ROSS** and **CROMARTY**. These islands are situated in Loch Roag, and off the western coast of the island of Lewis; the first is about twelve miles long and four broad, and the other four miles in length and one in breadth. They are two of a large group of islands in an arm of the sea which here indents the main land of Lewis. Great Bernera abounds with lakes, and has a considerable portion of fertile land; it contains a tolerably entire circle of large upright stones, only paralleled by those of Stonehenge and Stenhouse, and supposed to be of Druidic origin. Little Bernera, in which is a fresh-water lake, is covered with pasture.

BERRIEDALE, for a time a quoad sacra parish, in the parish of **LATHERON**, county of **CAITHNESS**, 27 miles (S. E.) from Wick; containing 1750 inhabitants. This district, which lies on the coast, between the Ord of Caithness and the harbour of Dunbeath, was separated from Latheron in 1833. The church, which is close to the sea-shore, was erected by government in 1826, at an expense of £750; it is a neat structure, containing 312 sittings. The minister has a stipend of £120, paid by government, with a manse and small glebe provided by the late, and continued by the present, Mr. Horne, proprietor of Langwell. About three miles from Berriedale is a small place of worship for members of the Free Church. A parochial school in connexion with this district has been built at Dunbeath by William Sinclair, Esq., of Freswick, at an expense of £300; and there are also a school supported by the General Assembly, and a Sabbath school. The place gives the title of Baron to the Earl of Caithness.

BERTRAM-SHOTTS, or **SHOTTS**, a parish, in the Middle ward of the county of **LANARK**; including the villages of Harthill, Omoa-New-Town, Sallsburgh, and

Shotts-Iron-Works; and containing 3861 inhabitants, of whom 751 are in the village of Shotts-Iron-Works, 5 miles (E. by S.) from Holytown. This place is generally supposed to have derived its name from a famous robber called Bartram de Shotts, who in ancient times signaled himself by his depredations, and was eventually killed near the site of the present church. The whole of this extensive parish, except Blair-mucks and Murdostown, belonged to the Hamilton family from the year 1378 to the year 1630, when the Marquess of Hamilton disposed of the larger part of the barony. Not far from the mansion of Murdostown stood the abbey of St. Bertram; but no portion of this ancient establishment is now to be seen. The parish, which was formerly part of that of Bothwell, is nearly a parallelogram in form, and is ten miles long and eight broad, containing 25,434 acres. It is bounded on the north by the North Calder, which separates it from East Monkland and Torphichen; and on the south by the South Calder, which divides it from the parish of Cambusnethan. The surface is in general tolerably level, but in the middle quarter it is diversified by elevations, among which are the Hirst, the Tilling, and the Cant hills. The climate is more than ordinarily salubrious, which induced the celebrated Dr. Cullen, who commenced practice in the parish, to say, that Bertram-Shotts was the Montpellier of Scotland. The rivers connected with the district are the North and the South Calder, with a few small burns not of sufficient importance to demand notice. There is a loch called the Lily, in which common trout and an excellent species of red char are found.

The soil is for the most part clayey; on the banks of the rivers a loamy soil prevails. Nearly two-thirds of the land are arable; and the rest, with the exception of a small proportion of wood and common, is unsheltered moor, annually covered with the blossom of the heather-bell. About 1000 acres are in wood, consisting of Scotch fir, spruce, and larch, all of which thrive well; formerly the Scotch fir was the only kind attended to. The cows are in great repute for the superiority of the stock, the improvement of which has been promoted by the establishment of an agricultural society; and the horses, which are of the Clydesdale breed, are famed for their strength and symmetry. Every kind of farming-stock has been greatly improved within the last thirty or forty years; and much waste land has been reclaimed by means of draining and digging, for which two prizes were some time since awarded to two gentlemen in the parish by the Highland Society of Scotland. The state of the farm-houses is generally below that of buildings of this class in parishes where agricultural improvement has made much progress, but they are far better than formerly, and are undergoing a gradual change, several of them now being equal to almost any in Scotland. The annual value of real property in the parish is £19,910. The parish forms a portion of the great coal-field of Lanarkshire, and its carboniferous and mineralogical productions are extensive and various, the two grand general divisions of its subterraneous contents being the igneous and the sedimentary rocks. The northern half of the land consists almost entirely of the trap, or common greenstone; the other half is the coal-bed, which consists of the splint coal, the parrot or canal coal, the smithy coal, and the Shotts-Iron-Works first and second coal. In some parts is a very fine iron-

stone, above the coal, and in others, a considerable quantity of limestone, lying at a great depth beneath the coal, with a succession of 147 different strata between them. There is an abundant supply of fire-clay of various kinds in the carboniferous division of the parish, lying over the coal, and large quantities of it are used for making bricks for blast and air furnaces; one of the strata has been wrought for a considerable period, and is several feet in thickness, though the portion which is worked, in the middle of the stratum, is not more than about three feet deep.

The parish contains two iron-works, one of which, in the south-eastern quarter, designated Shotts-Works, is not only adapted for the smelting of iron-ore, for which there are three furnaces, but has connected with it an extensive foundry, and a large establishment where steam-engines of a superior kind for both land and water are constructed. At the other establishment, called the Omoa Iron-Works, situated in the south-west part of the parish, three furnaces are also in effective operation. These works, which together employ about 1400 or 1500 persons, have contributed to a large increase in the population; and by the circulation of several hundreds of pounds weekly in the form of wages, great changes and improvements have taken place in the general appearance of the neighbourhood, particularly through the formation of roads and the cultivation of the land. Among the principal residences are, Murdostown House, belonging to Sir T. Inglis Cochrane; Easter Moffat, a handsome modern edifice in the Elizabethan style; Shotts House; Craighead House, belonging to D. C. R. C. Buchanan, Esq.; and Fortissat. Sub-post-offices have been established at the villages of Sallsburgh and Shotts-Works. There are annual fairs, chiefly for the sale of horses and cattle, on the third Tuesday in June and November (O. S.), both of ancient date, being held by a warrant granted by James II. in 1685 to the Duke of Hamilton. The parish is intersected in the centre by the south road from Edinburgh to Glasgow, the most ancient road between those two cities.

For ecclesiastical purposes, Shotts is within the bounds of the presbytery of Hamilton, synod of Glasgow and Ayr. The patronage belongs to the Duke of Hamilton, and the minister's stipend is £267. 11., with a substantial and commodious manse built in 1838, and a glebe of nearly forty-four acres, in which are two seams of coal. The church, the position of which is central, occupies an elevated site; it was built in 1820, and has 1200 free sittings. There is a place of worship belonging to the United Original Seceders. The parochial school affords instruction in the classics, with the usual branches of education; the master has a salary of £34. 4. 4., about £28 fees, and a house. Belonging to the Shotts iron-works is also a school. Another, called Murdostown school, has an endowment of £19 per annum, assigned by Sir Thomas Inglis; Harthill school was endowed by the late James Wilson, Esq., with £500, and another is supported by Mrs. Robert Haldane. There are two circulating libraries, in one of which, at the Shotts works, the collection of books is very superior; and the poor have the benefit of a bequest of £500, left by Thomas Mitchell, a native of the place. Gavin Hamilton, the historical painter; John Miller, professor of law in the University of Glasgow, well known to the literary world by several learned publications,

and who was buried at Blantyre, not far from Shotts ; and Dr. Matthew Baillie, physician to George III., and brother of Joanna Baillie the authoress, were all natives of the parish. The Rev. James Baillie, father of Dr. Matthew Baillie, was minister of Shotts.

Burgh Seal.

BERVIE, or INVERBERVIE, a royal burgh, and a parish, in the county of KINCARDINE, $8\frac{1}{2}$ miles (N. E.) from Edinburgh ; containing, with the village of Gourdon, 1342 inhabitants. This place is named from the small river Bervie, on its north-eastern boundary, and the stream is so called from an ancient British word signifying a *boiling* or *ebullition*,

and descriptive of the peculiar course of the water. The town appears to have been of importance in early times, and to have attracted some attention. The fine old castle of Hallgreen, which is romantically situated on the shore, a little to the south of the town, and has been recently repaired with due attention to its original style, has a date on the west front, which, though partially effaced, is traced to the year 1376. The walls of this building are massive, and perforated with arrows ; and it seems to have been formerly surrounded by a moat, with a drawbridge and a portcullis near the outer gate of the court. Above one of the doors in the court, the date of 1687, with the initials of the proprietor of that period, is still visible. In one of the principal rooms, on the stucco ceiling, is a coat of arms, with the motto *spero meliora*, and the date 1683 ; and on the old wainscots are some Dutch paintings, consisting of two landscapes and a flower-piece. A spacious mansion indicating, like the castle, the ancient residence of important personages, and which is said to have belonged originally to the Marischals, and was recently in the possession of the noble family of Arbuthnott, was removed about twenty or thirty years since, to make way for improvements of building and agriculture ; and several other old buildings are still pointed out as having been the town residences of neighbouring lairds. There was also, in former times, a religious establishment of White friars ; and the discovery of some graves, in the construction of a turnpike-road, near a place called Friar's Dubbs, is supposed to mark the spot where this monastic order had a burying-ground.

At the time of the Rebellion in 1745, the troops of the Duke of Cumberland, suspecting that the inhabitants of the neighbouring parish of Benholme had transported provisions, by means of the Bervie boats, for the use of the Pretender's troops who were passing by sea, began to destroy and plunder the village of Johnshaven, in Benholme parish, and to burn the boats of the Bervie fishermen. The minister of Bervie, Mr. Dow, upon hearing of this, repaired to the bridge of Benholme, three miles distant, where he met the army, headed by the royal suite, and so satisfied the duke of the loyalty of his parishioners, that his royal highness went with the minister to his house, and became his guest for the night. An unusual occurrence took place here in the year 1800, when a French privateer made its appearance off the coast, and pursued several merchant vessels,

which were compelled to take shelter in the port of Gourdon. A small body of volunteers belonging to the place were immediately assembled, and marched down to the beach in two divisions, to face the enemy ; and one party, stationed among the rocks on the shore, exchanged several rounds of musketry with the guns of the sloop ; upon which the crew, suspecting that a battery was about to be opened upon them by the other division, who had proceeded in the direction of the old castle of Hallgreen, crowded sail and made off.

The TOWN is situated at the eastern extremity of the parish, near the small bay of Bervie, on the shore of the German Ocean. The approach on the north-east is by an elegant bridge over the river Bervie, of one arch, the height of which from the stream is about eighty feet. A meal and barley mill stands on the haugh below the bridge, and near it a small spinning-mill ; on the upper side of the bridge is a spinning-mill of three stories, the first that was erected in Scotland for yarn and thread. At the north entrance to the burgh stands the head inn, commanding a fine view of the scenery above the bridge, the remote distance being adorned by the old castle of Allardice, with its trees and shrubbery, in the parish of Arbuthnott. Water of the best description, from springs in the parish, is conveyed into the town by leaden pipes, and deposited in reservoirs of metal for general use. The chief manufacture is that of the linens usually called duck and dowlas, which is carried on to a considerable extent through the medium of agents, who superintend for merchants in Aberdeen, Dundee, and Arbroath. A kelp manufacture existed for some time ; but, like most others of the same description, it was given up when the duty was taken off foreign barilla. The small port and fishing-village of Gourdon, upwards of a mile distant, but within the parish, is a place of some trade : vessels, however, are not chartered here, but have to clear out at the custom-house in Montrose. Two shipping companies are connected with the place, and vessels frequently come in with coal, lime, pavement, wood, tiles, slates, and sometimes Orkney and Shetland cattle and ponies ; and in return take ballast or grain, grain being the only article exported from Gourdon.

The principal fisheries are of salmon, cod and ling, and haddock. The first of these is carried on in the bay, commencing on the 2nd of February, and ending on the 14th of September ; and the fish taken are considered of superior quality. The cod and ling fishery begins on the 1st of October, and ends on July 15th : about 300 cwt. are shipped every year, at Montrose, for the London market. The haddocks which are caught are dried and smoked, and consigned by a company established here, to dealers in Glasgow and London, with whom an extensive traffic is maintained. Six boats are also engaged in a turbot and skate fishery, which begins on the 1st of May, and ends on the 15th of July. A herring-fishery formerly carried on was some time since broken up, in consequence of the shore being deserted by the fish. Crabs and lobsters are taken in great numbers among the rocks near the bay, and there is a good supply of shrimps on the sands.

A market for corn was established a few years ago, which commences at the close of harvest, and is open every Wednesday afterwards for six months. It is in a very flourishing state, being frequented by corn-mer-

chants from Montrose, Brechin, and Stonehaven, and by farmers and millers from all the neighbouring parishes. About 40,000 quarters of grain are purchased yearly, and the greater part of it shipped at Gourdon. Two fairs have long been held annually for the sale of cattle, one on the Thursday before the 19th of May, and the other on the Thursday before the 19th of September. In 1834 three additional markets were established, for the hiring of servants and the sale of cattle: that for cattle in general, and for hiring servants, is on the Wednesday before the 22nd of November, and those for fat and other cattle are on the Wednesday before Christmas (O. S.), and the Wednesday before the 13th of February. The Aberdeen turnpike-road runs directly across the parish, and affords considerable facility of intercourse.

Bervie was erected into a ROYAL BURGH in 1362, by charter from King David II., who, having been forced by stress of weather to land on a rock in the parish of Kinneff, still called Craig-David, was received by the inhabitants of Bervie with so much kindness and hospitality that he raised the town to the dignity of a royal burgh as a mark of his gratitude and esteem. In the year 1595, James VI. renewed the charter, and confirmed the privileges before granted. The public property is distinctly marked out by the charter, comprehending nearly the whole extent of the parish; but the lands now belonging to the town consist only of a piece of moor, a few acres of haugh ground, and a range of braes about a mile in extent: the revenue is about £120 a year. The burgh is governed by a provost, three bailies, a dean of guild, nine councillors, a treasurer, and a clerk; and, with Montrose, Brechin, Arbroath, and Forfar, returns a member to parliament. The town-hall is an edifice of two stories, the upper of which consists of a hall and council-room, and the lower contains the flesh and meal market, with a small arched vault for the confinement of prisoners, which is very deficient as a place of security. On the top of the building is a handsome belfry, with a bell which is rung four times every day. Near the town-hall is a market-cross of great antiquity, formed of a column of stone that measures about fourteen feet high, with a ball on the summit, and a flight of steps surrounding the base.

The PARISH, which was formerly joined to that of Kinneff, but was separated from it about the time of the Reformation, is of quadrilateral figure, and contains about 1800 acres, of which 1222 are under cultivation, about 70 planted, and 500 acres waste. It is bounded on the south-east by the German Ocean, and embraces about a mile and a half of coast, which, with the exception of the part near the town, is covered with rocks, mostly hidden at high water. The craig where King David landed, also called Bervie Brow, bordering on the parish, is a conspicuous landmark for mariners; and Gourdon Hill, in the parish, is also seen at a great distance. The interior of the parish is considerably diversified in its surface, rising gradually from east to west, and being marked by two ranges of hills parallel to each other. The ground is flat near the southern and eastern boundaries, but the vicinity of the latter is ornamented with a small fertile valley, through which the water of Bervie (well stocked with trout) runs to the sea, and on each side of which the land is elevated and varied. The streams are, the Bervie, which rises in the Grampians,

and falls into the sea at the eastern extremity of the district; and the burn of Peattie, which runs from the north-east boundary into the Bervie, and, though small, is of very considerable benefit to the tenants through whose farms it pursues its course.

The soil in the lower lands is a deep fertile loam, resting on a gravelly subsoil; the haugh lands adjoining the sea consist of black earth, mixed with large quantities of pebbles, upon which they are said to be dependent for their great fertility. In the upper district of the parish, some of the land is a strong soil, upon a clay bottom; but on the surface in the highest part, which reaches an elevation of about 400 feet, very little earth is to be seen, the ground chiefly consisting of naked rock. All kinds of corn and green crops are produced, of excellent quality; the plantations are flourishing, though of recent growth, and comprise every variety of trees usually to be met with. The system of husbandry is of the most approved kind, and the highest state of cultivation is indicated by the abundance and quality of the produce. Improvements have been carried on to a considerable extent within the last few years, especially in draining and reclaiming waste land; and the farm-houses and offices, which are roofed with slate or tiles, are in good condition. The annual value of real property in the parish is £3344. The predominating rock is sandstone, which in some places is marked by veins of trap, between one and two feet in thickness. Boulders of quartz, granite, mica-slate, gneiss, &c., are to be seen upon the shore, and near the village of Gourdon the beach consists of masses of small pebbles of jasper, porphyry, slate, and agate, of the last of which beautiful specimens are sometimes found among the loose soil on the higher grounds, as well as on the beach. Several quarries of sandstone are wrought in the parish, supplying an excellent material, of which the church and most of the new buildings in this and the neighbouring parishes were constructed.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Fordoun, synod of Angus and Mearns; the patronage belongs to the Crown, and the minister's stipend is £141. 12., with a manse, and a glebe worth £18 per annum. Bervie church, which was opened on the 1st of January, 1837, and contains 900 sittings, is an elegant structure, with a square tower more than 100 feet in height, ornamented with carved minarets. The site, which is gently elevated, at a small distance from the street, is highly advantageous; and the main entrance and imposing outer gate heighten the general effect of an object that has greatly contributed to improve the aspect of the town. There are places of worship belonging to the Free Church and the Independents. The parochial school affords instruction in the classics, mathematics, and the usual branches of education; the master has a salary of £29. 18. 9., with an allowance of £2. 2. 9. in lieu of a garden, and between £15 and £20 fees. A bequest of £500 was left to the poor, who receive the interest, by the late James Farquhar, Esq., of Hallgreen. The burgh confers the title of Baron on Lord Viscount Arbuthnott, whose ancestor Sir Robert Arbuthnott was knighted for his faithful adhesion to the fortunes of Charles I., and was afterwards raised to the peerage by the style of Baron Inverbervie and Viscount Arbuthnott, Nov. 16th, 1641: he died in 1655. The present peer is the eighth viscount.

Burgh Seal.

BERWICK, NORTH, a burgh, market-town, and parish, in the county of HADDINGTON, 10 miles (N. by E.) from Haddington, and 22 (N. E. by E.) from Edinburgh; containing 1708 inhabitants, of whom 1028 are in the town. It derives its name of Berwick from its situation at the mouth of the Firth of Forth; and though its origin is involved in ob-

scurity, the manor appears to have belonged to the Earls of Fife, in whose possession it remained till near the close of the fourteenth century, and of whom Duncan, who died in the year 1154, founded a convent here for sisters of the Cistercian order. This establishment was amply endowed by the founder, and by numerous other benefactors, with lands in the counties of Berwick, Roxburgh, Edinburgh, and West Lothian; and continued to flourish till the Reformation, when the site and revenues were conferred by James VI. on Sir Alexander Home, of North Berwick. After the death of Isabel, the last Countess of Fife, the manor passed into the possession of William, Earl of Douglas, who in 1373 obtained from Robert II. a charter constituting this place a royal burgh, with the privileges of a market and port, a custom-house, and other advantages. In 1455, the manor became forfeited to the crown, on the attainder of James, Earl of Douglas; but it was restored by James III. to Archibald, Earl of Angus, the heir male of the Douglas family, and erected into a free barony in his favour. After the grant of the monastery and part of its lands to Sir Alexander Home by James VI., the barony, on the failure of that family, passed into other hands, and in 1640 was confirmed by act of parliament to Sir William Dick, from whom it passed to Sir Hew Dalrymple, president of the court of session, and ancestor of the present proprietor.

The town is advantageously situated on the south side of the Firth of Forth, near its junction with the sea, and consists principally of two streets. One of these is of considerable length, extending from east to west, and is intersected near its eastern extremity by the other, a shorter street, which is continued to the harbour. The houses in the first are irregularly built, and many of them of antique appearance, while those in the other street are of a superior class, and mostly inhabited by the gentry and more opulent families. On both sides of the latter street are rows of trees, giving it a pleasant and cheerful appearance; and the scenery surrounding the town combines many interesting and picturesque features. A subscription library has been established, which is well supported, and contains a good collection; and a branch of the East Lothian Itinerating Library is also stationed here. The waste or common lands on the west of the town are much frequented by the members of a golf club, who hold meetings for the celebration of that game, which is also the favourite amusement of the inhabitants. The only manufactory is a foundry for the construction of steam-engines, machines for making tiles for draining, and other articles. The trade of the port consists mainly in the exportation of agricultural produce and of lime, chiefly for the Newcastle and London markets; and the importation of coal, rape and oil cake,

and crushed bones for manure: the exportation of grain and lime has materially decreased, but that of potatoes very much increased, within the last few years. There are four vessels registered as belonging to the port, of the aggregate burthen of 273 tons. The harbour is spacious and secure; it is dry at low water, but is commodious, and several sums have been expended on its improvement. Fishing is pursued on a limited scale. The market is chiefly for the supply of the town and neighbourhood: fairs are held in June and November, and facility of communication with the adjacent towns is maintained by good roads, and by the North Berwick branch of the North-British railway.

The inhabitants obtained their earliest charter in the reign of Robert II. It was confirmed in 1568 by James VI.; and the government of the burgh is vested in two bailies, a treasurer, and nine councillors, elected according to the provisions of the act 3rd and 4th of William IV., cap. 76. The magistrates hold no regular courts, but act as justices of the peace within the royalty of the burgh; all criminal jurisdiction is referred to the procurator-fiscal and sheriff of the county, and petty misdemeanors are punished by temporary confinement. A town officer is appointed by the magistrates, who also choose a town-clerk and a shore-master. The town-hall is a commodious building, and there is a small prison. Since the Union the burgh has united with Haddington, Dunbar, Lauder, and Jedburgh, in returning a member to the imperial parliament; and by the act 2nd and 3rd of William IV., cap. 65, the right of election, previously vested in the corporation and burgesses, was extended to the £10 householders, resident within the parliamentary limits of the burgh. The bailies are the returning officers.

The surface of the PARISH is greatly varied. A range of rocks of various hues intersects it from east to west, presenting in some parts a barren and rugged aspect, and in others being clothed with wood. About half a mile south of the town is a hill of conical form, called *North Berwick Law*, crowning a gently sloping eminence, and rising to an elevation of 940 feet above the sea. It was occupied as a signal station during the war; and the remains of the buildings, which were suffered to fall to decay, have the picturesque effect of an ancient ruin. The hill is wooded near its base, and the other parts of its surface, comprising an area of nearly seventy acres, afford pasturage for sheep; the views from it are extensive and strikingly diversified. In the mouth of the Firth of Forth, and about a mile and a half from the shore, is the well-known rock called the *Bass*, nearly a mile in circumference, rising abruptly from the sea, in a circular form, to a height of 420 feet. It is of very rugged aspect, extremely precipitous on the north side, on the south more resembling a cone in form, and accessible only on the south-east, where are two landing-places. About half way up the steep are the remains of an ancient chapel. The rock is perforated, from the north-west to the south-east, by a cavern, which is dry at full tide; and on the side commanding the landing-place are the remains of an old fortress, and of the dungeons formerly used for state prisoners, for which purpose it was purchased from Sir Andrew Ramsay in 1671. Its surface is estimated at seven acres, and it forms an object both of scenic and historical interest. It is supposed to have been the retreat of Baldred, the apostle of

East Lothian, in the sixth century; and in 1406 was the temporary asylum of James I., in which he was placed by his father, Robert III., previously to his embarkation for France, to avoid the persecution of his uncle, the Duke of Albany. On its purchase in 1671, it was converted into a state prison for the confinement of Covenanted ministers: after the Revolution of 1688, it was no longer used for such a purpose. This rock, which is let on lease to a keeper, affords pasturage for sheep, which are in high estimation; and is frequented in great numbers by Solan geese, which, when young, are taken by a hazardous process, and conveyed to the opposite shore. Opposite to the town, and about a mile from the coast, is the island of *Cragleith*, a barren rock about a mile in circumference, abounding with rabbits, and resorted to by sea-fowl, of which the puffin is the most conspicuous. The coast of the parish is boldly rocky, and indented with bays, one of which, of semicircular form, reaches from the west of the harbour to Point Garry; and a still larger bay, about two miles east of the town, and directly opposite to the Bass rock, called Canty Bay, is the residence of the tenant of that rock and his assistants. To the west the shore is a flat sand, and towards the east a line of precipitous rocks, terminating in a lofty eminence, on whose summit are the picturesque ruins of Tantallan Castle, noticed hereafter.

The SOIL, though various, is generally fertile, and the system of agriculture in a highly improved state; the whole number of acres is estimated at 3456, of which 3280 are arable, about 170 in pasture and in woods and plantations, and the remainder common. The chief crops are wheat, barley, oats, peas, beans, potatoes, and turnips. The principal manures are lime and rape-cake; furrow-draining with tiles has been extensively adopted, and the farm-buildings and offices are generally substantial and commodious. About 1000 sheep are annually fed; and from 300 to 400 head of cattle, mostly of the short-horned breed. The annual value of real property in the parish is £12,967. The woods are chiefly ash, elm, oak, beech, and plane. In this parish the substrata are mainly trap, sandstone, and limestone; the sandstone, which is usually of a reddish hue, is frequently intersected with strata of limestone. The rocks are principally of the secondary formation: the lower part of North Berwick Law is trap tuffa, above which is a sonorous clinkstone, and near the summit the height assumes the character of amygdaloid; the Bass rock is generally a fine granular greenstone, abounding with felspar, and strongly exhibiting the tabular structure. At North Berwick Law are extensive quarries of excellent building-stone; and at Rhodes, and on the Balgone estate, limestone is quarried to a considerable extent. North Berwick House is a fine mansion, erected in 1777, and standing in grounds embellished with thriving plantations; Balgone and Rockville are also handsome mansions, finely situated.

The parish appears to have existed from a remote period of antiquity, and its church was most probably founded by St. Baldred: on the foundation of the nunnery here, the church, with all its possessions, was given by the noble founder to that establishment. For ecclesiastical purposes, North Berwick is within the bounds of the presbytery of Haddington, synod of Lothian and Tweeddale. The stipend of the incumbent is £306. 2. 5., and the patronage is exercised by Sir Hew Dalrymple,

Bart.; the manse is a substantial and comfortable residence, built in 1825, and pleasantly situated on an eminence, and the glebe is valued at £35 per annum. The church, erected in 1770, on the site of the former edifice, was in 1819 thoroughly repaired, and the interior renewed; it is adapted for a congregation of 550 persons, and has a spacious cemetery, planted with stately avenues of elms. There are places of worship for members of the Free Church and the United Presbyterian Synod: the former was erected with a view to honour the memory of the Covenanters imprisoned on the Bass rock, and the expense was defrayed by special subscription. The parochial school is but indifferently attended: the master has a salary of £34. 4. 4½., with a house and garden; the school fees are very inconsiderable. An infants' school has been established; and on the lands of Tantallan is a sub-parochial school. There are a bequest by Alexander Home, Esq., and a donation of £450 called the Edwin fund, for the poor.

About a quarter of a mile to the west of the town are the remains of the Cistercian abbey, beautifully situated on an eminence planted with trees, but so greatly dilapidated as scarcely to convey a faint idea of that once venerable and stately edifice: the vaults, which formed the principal relic, were many years since destroyed. Near the harbour are the remains of what is supposed to have been the ancient church, consisting chiefly of the entrance doorway, which is still entire; the sea is constantly encroaching upon the cemetery, and laying bare the remains of bodies interred there. Three miles to the east of the town are the remains of the old *Castle of Tantallan*, seated on a precipitous eminence projecting into the sea. The outer walls, of hexagonal form, are of massive thickness; and above the entrance is a sculptured stone shield, bearing the device of its ancient proprietors the Douglasses. The interior consists of numerous apartments, inaccessible from the dilapidated state of the various staircases which formerly afforded an approach; and the vaults contain many dark dungeons. The original foundation of this castle is not distinctly ascertained. It was the stronghold of the Douglas family on their obtaining the barony of East Lothian, at the accession of Robert II., and for centuries the seat of their power. The fortress was always regarded as impregnable, and was frequently assaulted without effect: it was finally besieged, and, after an obstinate defence, taken by the forces under Oliver Cromwell; and, together with the lands, was sold by the Marquess of Douglas to Lord President Dalrymple, by whom it was dismantled, and suffered to fall into decay. About half a mile to the west of the castle is *St. Baldred's Well*, a spring of excellent water. *Fenton Tower*, an ancient edifice, of which only the bare walls remain, is situated on a commanding eminence; and nearly adjoining are the remains of the palace of Sydsarf, so called from St. Serf, the instructor of Kentigern, whose retreat was in this place.

John Mair or Major, author of the work *De Gestis Scotorum*, published in 1521, was born at Glegghornie, in the parish, in 1469: he became a member of Christ's College, Cambridge, where in 1518 he seems to have written his learned history; and he subsequently taught theology at Glasgow, and at St. Andrew's, dying about 1547. Blackader, one of the martyrs of the Bass, is buried in North Berwick churchyard.

Arms.

BERWICK - UPON - TWEED, a port, borough, parish, and a county of itself, 58 miles (E. by S.) from Edinburgh, and 370 (N. by W.) from London; containing 8484 inhabitants. The name of this town is supposed by Leland to have been originally *Aberwick*, from the British terms, *Aber*, the mouth of a river, and *Wic*, a town. By Camden

and other antiquaries the name is considered as expressive merely of a hamlet, or granary, annexed to a place of greater importance; such appendages are usually in ancient records styled *berewics*, and the town is thought to have obtained its name from having been the *grange* or *berewic* of the priory of Coldingham, ten miles distant. The earliest authentic notice of Berwick occurs in the reign of Alexander I. In 1176 it was given up to Henry II. of England, with four other towns, by William the Lion, as a pledge for the performance of the treaty of Falaise, by which, in order to obtain his release from captivity after the battle of Alnwick in 1174, he engaged to do homage to the English monarch as lord paramount for all his Scottish dominions. Richard I., to obtain a supply of money for his expedition to the Holy Land, sold the vassalage of Scotland for 10,000 marks, and restored this and the other towns to William, content with receiving homage for the territories only which that prince held in England. King John, on retiring from an unsuccessful invasion of Scotland, burnt the town, which the Scots almost immediately rebuilt.

In 1291, in the reign of Edward I. of England, the Commissioners appointed to examine and report on the validity of the title of the respective claimants to the crown of Scotland, met at Berwick, and pursued the investigation which led to the decision in favour of John Baliol. Edward having compelled Baliol to resign his crown, took the town by storm in 1296, when a dreadful carnage ensued; and here he received the homage of the Scottish nobility, in the presence of a council of the whole nation, and established a court of exchequer for the receipt of the revenue of the kingdom of Scotland. In the following year, Wallace, laying siege to the town, took it, and for a short time retained possession, but was unsuccessful in his attempt upon the castle, which was relieved by the arrival of a numerous army. Edward II., in prosecuting the war against Scotland, assembled his army here repeatedly, and hence made inroads into the enemy's territory. Robert Bruce took Berwick in 1318, and having raised the walls, and strengthened them with towers, kept it, notwithstanding several attacks from Edward II. and Edward III., until it surrendered to the latter after the celebrated battle of Halidown Hill, within the borough, which took place on the 19th of July, 1333. From Edward IV. and his successors, as well as from preceding kings of Scotland, including Bruce, it received several charters and privileges, in confirmation and enlargement of the charter granted by Edward I., in which the enjoyment of the Scottish laws as they existed in the time of Alexander III. had been confirmed. After having been exposed, during the subsequent reigns, to the continued

aggressions of the Scots and the English, Elizabeth repaired and strengthened the fortifications, and new walled part of the town: the garrison which had for some time been placed in it was continued till the accession of James to the English throne, when its importance as a frontier town ceased. During the civil war in the reign of Charles I., it was garrisoned by the parliament.

The town is pleasantly situated on the northern bank, and near the mouth, of the river Tweed. The approach to it, from the English side, is over a handsome stone bridge of fifteen arches, built in the reigns of James I. and Charles I., and connecting it with Tweedmouth on the south. The streets, with the exception of St. Marygate (usually called the High-street), Castlegate, Ravensdowne, the Parade, and Hide-hill, are narrow; they are neatly paved, and the houses are in general well built. The town is lighted with gas, and an abundant supply of water is obtained by pipes laid down to the houses from the public reservoirs, which are the property of the corporation. Fuel is also plentiful, there being several collieries on the south, and one on the north, side of the river, within from two to four miles of the town. A public library was established in 1812, and a reading-room in 1842; the theatre, a small neat building, is opened at intervals, and there are assembly-rooms that are used on public occasions.

The new fortifications, which are exceedingly strong, have displaced those of more ancient date, of which only a few ruins now remain; the present works consist of a rampart of earth, faced with stone, and affording an agreeable promenade, much frequented by the inhabitants. There are no outworks, with the exception of the old castle, which overlooks the Tweed, and is now completely in ruins, and an earthen battery at the landing-place below the Magdalen fields. The line of works towards the river is almost straight, but to the north and east are five bastions, to two of which there are powder magazines: the harbour is defended by a four and a six gun battery near the governor's house; and a saluting battery of twenty-two guns commands the English side of the Tweed. There are five gates belonging to the circumvallation, by which entrance is obtained. The barracks, which were built in 1719, form a small quadrangle, neatly built of stone, and afford good accommodation for 600 or 700 infantry. To these was not long since attached the governor's house, for officers' barracks; but that building and the ground adjoining, formerly the site of a palace of the kings of Scotland, have been sold by the crown to a timber-merchant, and are now occupied for the purposes of his trade.

The port was celebrated in the time of Alexander III. for the extent of its traffic in wool, hides, salmon, &c., which was carried on both by native merchants and by a company of Flemings settled here, the latter of whom, however, perished in the conflagration of their principal establishment, called the Red Hall, which was set on fire at the capture of the town and castle by Edward I. There is at present a considerable coasting-trade, though it has somewhat declined since the termination of the continental war: the exports are corn, wool, salmon, cod, haddock, herrings, and coal; and the imports, timber-deals, staves, iron, hemp, tallow, and bones for manure. About 800 men are

employed in the fishery : the salmon and trout, of which large quantities are caught, are packed in boxes with ice, and sent chiefly to the London market ; great quantities of lobsters, crabs, cod, haddock, and herrings are also taken, and a large portion forwarded, similarly packed, to the metropolis. The principal articles of manufacture, exclusively of such as are connected with the shipping, are damask, diaper, sacking, cotton-hosiery, carpets, hats, boots, and shoes. About 200 hands are employed in three iron-foundries, established within the present century : steam-engines, and almost every other article, are made ; the gas-light apparatus for Berwick, Perth, and several other places, was manufactured here, and iron-works have lately been erected at Galashiels and at Jedburgh by the same proprietors.

The HARBOUR is naturally inconvenient, the greater part of it being left dry at ebb-tide ; it has, however, been lately deepened several feet, and vessels of large tonnage come up to the quay. The river is navigable only to the bridge, though the tide flows for seven miles beyond it : on account of the entrance being narrowed by sandbanks, great impediments were occasioned to the navigation till the erection, in 1808, of a stone pier on the projecting rocks at the north entrance of the Tweed ; it is about half a mile in length, and has a lighthouse at the extremity. This, together with the clearing and deepening of the harbour, has materially improved the facilities of navigation, and been of great importance to the shipping interest of the place. On the Tweedmouth shore, for a short space, near the Carr Rock, ships of 400 or 500 tons' burthen may ride in safety. The smacks and small brigs, formerly carrying on the whole traffic of the place, are now superseded by large and well-fitted steam-vessels, schooners, and clipper-ships. There are numerous and extensive quays and warehouses, with a patent-slip for the repair of vessels. Great facility of intercourse is afforded by the York, Newcastle, and Berwick railway, the North-British railway, and the Berwick and Kelso branch of the former line. The market, which is well supplied with grain, is on Saturday ; and there is an annual fair on the last Friday in May, for black-cattle and horses : statute fairs are held on the first Saturday in March, May, August, and November.

By charter of INCORPORATION granted in the thirty-eighth year of the reign of James VI., the government was vested in a mayor, bailiffs, and burgesses ; and there were, besides, an alderman for the year, a recorder, town-clerk, town-treasurer, four scribeants-at-mace, and other officers. The control now resides in a mayor, six aldermen, and eighteen councillors, together composing the council, by whom a sheriff and other officers are appointed. Berwick is distributed into three wards, and its municipal and parliamentary boundaries are the same. The mayor and late mayor are justices of the peace, and twelve other gentlemen have been appointed to act under a separate commission. Berwick was one of the royal burghs which, in ancient times, sent representatives to the court of the four royal burghs in Scotland ; and on being annexed to the kingdom of England, its prescriptive usages were confirmed by royal charter. It sent representatives to parliament in the reign of Henry VIII., since which time it has continued to return two members. The right of election was formerly vested in the freemen at large, in number about 1140 ; now, the resident freemen and

certain householders are the electors : the sheriff is returning officer. The limits of the borough include the townships of Tweedmouth and Spittal, on the south side of the river. The corporation hold courts of quarter-session for the borough, and a court of pleas every alternate Tuesday for the recovery of debts to any amount ; a court-leet, also, is held under the charter, at which six petty constables are appointed. The powers of the county debt-court of Berwick, established in 1847, extend over the registration-district of Berwick. The town-hall is a spacious and handsome building, with a portico of four massive columns of the Tuscan order. A portion of the lower part, called the Exchange, is appropriated to the use of the poultry and butter market ; the first story of the building contains two spacious halls and other apartments, in which the courts are held and the public business of the corporation transacted, and the upper part is used as a gaol. The whole forms a stately pile of fine hewn stone, and is surmounted with a lofty spire, containing a peal of eight bells, which on Sunday summon the inhabitants to the parish church.

The LIVING is a vicarage, valued in the king's books at £20 ; net income, £289 ; patrons and appropriators, the Dean and Chapter of Durham. The church is a handsome structure in the decorated English style, built during the usurpation of Cromwell, and is without a steeple. One of the Fishbourn lectureships is established here, the service being performed in the church. There are places of worship for members of the Scottish Kirk, the United Presbyterian Synod, Particular Baptists, Wesleyans, and Roman Catholics. A school for the instruction of the sons of burgesses in English and the mathematics, was founded and endowed by the corporation in 1798 ; to each department there is a separate master, paid by the corporation, and the average number of pupils is about 300. The burgesses have also the patronage of a free grammar school, endowed in the middle of the seventeenth century by Sir William Selby, of the Moat, and other charitable persons. The Blue-coat charity-school was founded in 1758, by Captain Bolton, and endowed with £800, since augmented with several benefactions, especially with one of £1000 by Richard Cowle, who died at Dantzic, in 1819 ; the whole income is £155, which is applied to educating about 150 boys, of whom forty are also clothed. A pauper lunatic house was erected in 1813, and a dispensary was established in 1814. A considerable part of the corporation land is allotted into " meadows " and " stints ", and given rent-free to the resident freemen and freemen's widows, according to seniority, for their respective lives. Among the most important bequests for the benefit of the poor are, £1000 by Richard Cowle, £1000 by John Browne in 1758, and £28 per annum by Sarah Foreman in 1803. Some remains are still visible of the ancient castle of Berwick, and of a pentagonal tower near it ; also of a square fort in Magdalen fields, and some entrenchments on Hallidown Hill. All vestiges of the ancient churches and chapels of the town, of the Benedictine nunnery said to have been founded by David, King of Scotland, of the monasteries of Black, Grey, White, and Trinitarian friars, and of three or four hospitals, have entirely disappeared. During the reigns of William the Lion, and of Edward I., II., and III., and other Scottish and English monarchs, Berwick was a place of mintage ; and several of its coins are still pre-

served. There is a mineral spring close to the town, which is occasionally resorted to by invalids.

BERWICKSHIRE, a maritime county, in the south-east of Scotland, bounded on the north by the German Ocean and the county of Haddington; on the east and north-east, by the German Ocean; on the south, by the river Tweed, which separates it from the English counties of Durham and Northumberland; and on the west and south-west, by the counties of Edinburgh and Roxburgh. It lies between $55^{\circ} 36' 30''$ and $55^{\circ} 58' 30''$ (N. Lat.), and $1^{\circ} 41'$ and $2^{\circ} 34'$ (W. Long.), and is about thirty-five miles in length, and twenty-two miles in extreme breadth; comprising about $446\frac{1}{2}$ square miles, or 285,760 acres, and 7408 inhabited houses, and 381 uninhabited; and containing a population of 34,438, of whom 16,558 are males, and 17,880 females. The county derives its name from the ancient town of Berwick, formerly the county town, and was originally inhabited by the *Ottadini*. After the Roman invasion it formed part of the province of Valentia; and though not the site of any station of importance, it is intersected by several Roman roads. Subsequently to the departure of the Romans from Britain, this part of the country was continually exposed to the predatory incursions of the Saxons, by whom, about the middle of the sixth century, it was subdued, and annexed to the kingdom of Northumbria, of which it continued to form part till the year 1020, when it was ceded to Malcolm II., King of Scotland, by Cospatrik, Earl of Northumberland, whom that monarch made Earl of Dunbar.

From its situation on the borders, the county was the scene of frequent hostilities, and an object of continual dispute between the Scots and the English. In 1176, it was surrendered by William the Lion to Henry II. of England, by whom he had been made prisoner in battle, as security for the performance of the treaty of Falaise, on failure of which it was for ever to remain a part of the kingdom of England. On payment of a ransom, it was restored to the Scots by Richard I. In 1216 it suffered greatly from the army of John, who, to punish the barons of Northumberland for having done homage to Alexander, King of Scotland, burnt the towns of Roxburgh, Mitford, and Morpeth, and laid waste nearly the whole county of Northumberland. During the disputed succession to the Scottish throne, after the death of Alexander III., this district suffered materially from the contending parties; and in 1291 the town of Berwick was surrendered to Edward I. of England, who, as lord paramount of Scotland, received the oaths of fealty and allegiance from many of the Scottish nobility. The inhabitants soon after revoking their allegiance to the English crown, Edward advanced with his army to Berwick, which he took by assault, and held a parliament in the castle, in 1296, when he received the oath of allegiance; and in the year following he made Berwick the metropolis of the English government in Scotland. The town was restored to the Scots in 1318, but, after the death of James III., was finally ceded by treaty to the English, in 1482. In 1551, the town, with a district adjoining, called the liberties of Berwick, was made independent of both kingdoms, and invested with peculiar privileges. After Berwick ceased to be the county town, the general business of the county was transacted at Dunse or Lauder, till the year 1596, when Greenlaw was selected by James VI. as the most appropriate for the

purpose; and that arrangement was ratified by act of parliament in 1600.

The county was anciently included in the diocese of St. Andrew's; it is now almost wholly in the synod of Merse and Teviotdale, and comprises several presbyteries, with thirty-four parishes. Exclusively of the seaport of Berwick-upon-Tweed, which has a separate jurisdiction, it contains the county town of Greenlaw, the royal burgh of Lauder, and the towns of Dunse, Coldstream, and Eyemouth, with the villages of Ayton, Gourdon, Earlstoun, Chirnside, Coldingham, and others. Under the act of the 2nd and 3rd of William IV., the county returns one member to the imperial parliament. Its surface varies in the different districts into which the county is naturally divided, and which are the Merse, Lammermoor, and Lauderdale. The Merse is a level district, extending for nearly twenty miles along the north bank of the Tweed, and about ten miles in breadth; it is richly fertile, and well inclosed, pleasingly diversified with gentle eminences, and enriched with plantations. The district of Lammermoor, nearly of equal extent, and parallel with the Merse, is a hilly tract, chiefly adapted for pasture. The district of Lauder, to the west of the two former, is also diversified with hills, affording good pasture for sheep, principally of the black-faced breed, and for a coarse breed of black-cattle; and has fertile vales of arable land, yielding abundant crops. In this county the highest hills are in the Lammermoor range, varying from 1500 to 1650 feet in height. The principal rivers are, the Tweed, which forms the southern boundary of the county; the Whitadder, the Blackadder, the Leader, and the Eden, which are tributaries to the Tweed; and the river Eye, which falls into the sea at Eyemouth. The coast is bold and rocky, rising precipitously to a great height, and is almost inaccessible, except at Eyemouth and Coldingham Bay, and in some few points where there are small beaches of sand or gravel near the rocks. The minerals found are not of any importance: some coal has been discovered in the parishes of Mordington and Cockburnspath; limestone, marl, and gypsum have been quarried, but to no great extent, and freestone and whinstone are abundant. The annual value of the real property in the county is £254,169, of which £237,042 are returned for lands, £16,743 for houses, £196 for fisheries, and £188 for quarries. In Berwickshire the chief seats are Thirlstane Castle, Dryburgh Abbey, Mellerstain, The Hirsell, Marchmont, Ladykirk, Blackadder, Dunse Castle, Kelloe, Mertoun, Spottiswood, Ayton, Dunglass, Wedderburn, Paxton, Langton, Kimmergham, and Nisbet.

Great facility of intercourse is afforded by the North-British railway, and its branch to Dunse. In the county of Haddington, the railway passes through a country of undulating surface, richly cultivated, and presenting scenery of the softer kind, with villages, hamlets, and other simply rural features interspersed. On entering Berwickshire, however, at Cockburnspath, the prospect changes; the country around is bold and striking, steep hills and deep ravines appear, and the scenery is of a more romantic character. From Cockburnspath to Houndwood is a range of seven miles of this interesting scenery, after which the country opens out, and the eye of the traveller takes in a sweetly rural landscape of five or six miles on either side, of well-

cultivated and richly-wooded land, adorned with cottages, hamlets, and gentlemen's seats. After passing Ayton the line runs along the coast, at an elevation of fifty or sixty feet, sometimes within two or three yards of the cliff's edge.

BIGGA ISLE, in the two parishes of **DELTING**, and **MID** and **SOUTH YELL**, county of **SHETLAND**. It is a small isle, lying between the Mainland of Shetland and the island of Yell, in the sound of Yell. Half of it belongs to the parish of Mid and South Yell, and half to that of Delting. The inhabitants consist of a few families who pasture black-cattle and sheep.

BIGGAR, a parish and market-town, in the Upper ward of the county of **LANARK**, 12 miles (S. E.) from Lanark, and on the road from Dumfries to the city of Edinburgh; containing 1865 inhabitants, of whom 1395 are in the town. The original name of this place, as it occurs in several ancient charters, is generally written *Biger* or *Bigre*. It is supposed to have been derived from the nature of the ground on which the castle of the Biggar family was situated (in the centre of a soft morass), and to have been thence applied to the whole of the parish. From the same circumstance, the castle assumed the name of Boghall. The manor was granted by David I. to Baldwin, a Flemish leader, whose descendants still retain the surname of Fleming; they appear to claim a remote antiquity, and the name of Baldwin de Biger appears in testimony to a charter, prior to the year 1160. Some accounts, chiefly traditional, are still retained of a battle fought at this place between the English forces under Edward I., and the Scots commanded by Wallace, in which the former were defeated; and though not authenticated by any historian of acknowledged authority, the probability of the event is partly strengthened by the frequent discovery of broken armour in a field near the town; by the name of a rivulet called the Red Syke, running through the supposed field of battle, and so named from the slaughter of the day; and by the evident remains of an encampment in the immediate neighbourhood. On this occasion, Wallace is said to have gained admission into the enemy's camp disguised as a dealer in provisions, and, after having ascertained their numbers and order, to have been pursued in his retreat to the bridge over the Biggar water, when, turning on his pursuers, he put the most forward of them to death, and made his escape to his army, who were encamped on the heights of Tinto. A wooden bridge over the Biggar is still called the "Cadger's Brig"; and on the north side of Bizzyberry are a hollow in a rock, and a spring, which are called respectively Wallace's Seat and Well. The Scottish army under Sir Simon Fraser is said to have rendezvoused here, the night previous to the victory of Roslin, in 1302; and Edward II., on his invasion of Scotland, in 1310, spent the first week of October at this place, while attempting to pass through Selkirk to Renfrew. In 1651, after Cromwell's victory at Perth, the Scottish army, passing by Biggar, at that time garrisoned by the English, summoned the place to surrender; and in 1715, Lockhart of Carnwath, the younger, raised a troop for the service of the Pretender, which, after remaining for some time here, marched to Dumfries, and joined the forces under Lord Kenmure.

The **TOWN** is finely situated on the Biggar water, by which it is divided into two very unequal parts, the

smaller forming a beautiful and picturesque suburb, communicating with the town by a neat bridge. The houses in this suburb are built on the sloping declivities, and on the brow, of the right bank of the rivulet, and have hanging gardens extending to the water's edge: the opposite bank is crowned with venerable trees. Biggar consists of one wide street, regularly built, and from its situation on rising ground, commands an extensive and varied view; most of the houses are of respectable appearance, and within the last few years several new and handsome houses have been erected. There is a scientific institution, founded in the year 1839, and having a library of 220 volumes, mostly of works on science: the members meet during winter once a month, when a popular lecture on science is delivered, and a discussion ensues. A public library was established in 1791, which contains about 800 volumes. Another was opened in 1800, which has a collection of more than 500; and a third, exclusively a theological library, was founded in 1807, and has about 700 volumes. Attached to the parish school is a fourth library, instituted in 1828, and now containing 500 volumes. A public newsroom was opened in 1828; but it met with little support, and was consequently discontinued.

The trade consists chiefly in the sale of merchandise for the supply of the parish and surrounding district, and in the weaving of cloth, in which latter about 200 of the inhabitants are employed. A branch of the Commercial Bank was established in 1833, and a building erected for its use, which adds much to the appearance of the town; and a branch of the Western Bank of Scotland has since been established. A savings' bank was opened in 1832, for the accommodation of the agricultural labourers and others; there are about 460 depositors, and the amount of deposits is about £3500. The market is on Thursday. Fairs are held at Candlemas, for hiring servants; at Midsummer, for the sale of wool; and on the last Thursday in October (O. S.), for horses and black-cattle; all of which are numerously attended. An act of parliament was passed in 1847, authorizing the construction of a branch railway from the great Caledonian line at Symington to Biggar and Broughton. The inhabitants, in 1451, received from James II. a charter erecting the town into a free burgh of barony, and granting a weekly market and other privileges, which grants were renewed at intervals down to the year 1662.

The **PARISH**, which borders on the county of Peebles, is about six miles and a half in length, and varies very greatly in breadth, being of triangular form, and comprising about 7370 acres, chiefly pasture land. Its surface is generally hilly, though comprising a considerable proportion of level ground, particularly towards the south, where is a plain of large extent; the hills are of little height, and the acclivities, being gentle, afford excellent pasture. The principal stream is the Biggar water, which rises on the north side of the parish, and after a course of nearly two miles, intersects the town, and flows along a fine open vale, to the river Tweed; the Candy burn rises in the north-east portion of the parish, which it separates from the county of Peebles, and falls after a course of three miles into the Biggar water. The scenery is considerably diversified; and the approach to the town by the Carnwath road presents to the view a combination of picturesque features. In this

parish the soil is various: above 1000 acres are of a clayey nature, on a substratum of clay or gravel; between 2000 and 3000 are a light black loam, resting upon whinstone, and the remainder sandy, and black loam inclining to peat-moss. The system of agriculture is greatly improved, and green crops have been introduced with success; the chief produce in grain consists of oats: much attention is paid to the management of the dairy, and to the improvement of live stock. The cattle are mostly a cross between the native and the Ayrshire breed, which latter is every day becoming more predominant; many sheep are pastured on the hills and acclivities, and the principal stock regularly reared are of the old Tweeddale breed. Great progress has been made in draining and inclosing the lands. Two mills for oats and barley have been erected, and there are not less than twenty-five threshing-machines, one of which, constructed by Mr. Watts, has the water-wheel fifty feet below the level of the barn, and 120 feet distant from it, the power being communicated to the machinery by shafts acting on an inclined plane. The annual value of real property in the parish is £7329. About 950 acres are in plantations, chiefly Scotch fir, in the management of which much improvement has been made by the introduction of a new method of pruning; and on the several farmsteads are numerous fine specimens of hard-wood trees, which are better adapted to the soil, and are consequently growing gradually into use in the more recent plantations. Of these, the ash and elm seem to thrive best; and the beech and the plane also answer well. Among the various mansions are, Edmonston, a castellated structure, pleasingly situated in a secluded vale near the east end of the parish; Biggar Park and Cambus-Wallace, both handsome residences in the immediate vicinity of the town; and Carwood, a spacious mansion, lately erected, surrounded by young and thriving plantations.

The origin of the parish is rather obscure; but it appears that a chaplaincy was founded here in explanation of the murder of John, Lord Fleming, chamberlain of Scotland, who was assassinated in 1524 by John Tweedie of Drummelzier, his son, and other accomplices. For this purpose, an assythment in lands was given to Malcolm, Lord Fleming, son of the murdered lord, with £10 per annum granted in mortmain, for the support of a chaplain, to pray and sing mass for the soul of the deceased in the parish church of Biggar, which Malcolm in 1545 made collegiate, and endowed for a provost, eight canons and prebendaries, and four choristers, with six aged poor men. On this occasion, the church of Thankertoun, which had previously been bestowed on the abbey of Kelso by one of his predecessors, was given up to Malcolm by the monks, and annexed to the collegiate church. The parish is now in the presbytery of Biggar, synod of Lothian and Tweeddale, and in the patronage of the family of Fleming; the minister's stipend is £263. 4. 7., with a manse, and a glebe valued at £30 per annum. Biggar church, erected in 1545, was formerly an elegant and venerable cruciform structure in the later English style, with a tower which was not finished, as the Reformation occurred while the building was in progress. This structure, though complete in every other respect, and uninjured by time, has been dreadfully mutilated. The western porch, the vestry communicating with the

chancel, and having a richly groined roof, the buttresses that supported the north wall of the nave, and the arched gateway leading into the churchyard, though perfectly entire, and beautiful specimens of architecture, were all taken down about fifty or sixty years since, and the materials sold for £7, to defray some parochial expenses. At the same time, the interior of the church underwent a similar lamentable devastation; the organ-gallery was removed, and the richly-groined roof of the chancel, which was embellished with gilt tracery, was destroyed, and replaced with lath and plaster, seemingly for no better reason than to make it correspond with the roofs of the aisles and nave. Latterly, the church has received an addition of 120 sittings, by the erection of a gallery; it has been also newly-seated, and affords considerable accommodation. There are places of worship for the United Presbyterian Synod and United Original Seceders. The parochial school affords education to about 180 scholars; the master has a salary of £34. 4. 4. per annum, about £75 fees, and a house and garden.

At the western extremity of the town is a large mound, more than 300 feet in circumference at the base, 150 feet on the summit, and thirty-six feet in height, supposed to have been in ancient times a seat for the administration of justice; it appears to have been also used as a beacon, and to have formed one of a chain extending across the vale between the Clyde and the Tweed. There are several remains of encampments, one of which, about half a mile from the town, is 180 feet in circumference, defended by a deep moat and double rampart; and near Candy bank is another, of oval form. On the banks of Oldshields are some Druidical remains consisting of four upright stones, near which arrow-heads of flint have been found; and on the lands of Carwood, two Roman vessels of bronze were discovered in a moss: one, having a handle and three legs, holds about two quarts, and the other, less elegant in form, about eight quarts. The venerable remains of the castle of Boghall, which gave so great an interest to the scenery of the beautiful vale in which they were situated, have been almost demolished, for the sake of the stone; and little more is left than a small angular tower, serving to mark the site. The late Dr. A. Brown, Professor of Rhetoric in the University of Edinburgh, and Robert Forsyth, Esq., an eminent advocate, were natives of the parish; and many of the landed proprietors have been eminently distinguished in the annals of their country.

BILSDEAN, a hamlet, in the parish of OLDHAM-STOCKS, county of HADDINGTON, $2\frac{1}{2}$ miles (N. E.) from Oldhamstoeks; containing 59 inhabitants. It is seated on the sea-shore, and is chiefly inhabited by fishermen, whose principal employment is taking lobsters for the supply of the London market. Various other kinds of fish are also caught, the most common being turbot, cod, haddock, and herrings. Several boats belong to the creek, carrying four men each. The Dunbar and Berwick road, and the North-British railway, pass here.

BIRDSTONE, a village, in the parish of CAMPSIE, county of STIRLING, 1 mile (N.) from Kirkintilloch; containing 100 inhabitants. It lies east of the road from Kirkintilloch to Campsie, and a little west of a small stream that falls into the Kelvin water on the confines of the county.

BIRGHAM, a village, in the parish of ECCLES, county of BERWICK, $2\frac{1}{2}$ miles (W.) from Coldstream; containing 241 inhabitants. This is a small ancient village, seated on the north bank of the Tweed, opposite to Carlham in Northumberland; and the road from London to Edinburgh by way of Kelso, and that from Kelso to Berwick, pass through the place. It is noted for several events connected with history, among which was the meeting, in 1291, of the twelve competitors for the Scottish throne, with the commissioners of Edward I. of England, to represent their claims, acknowledging his paramount authority over Scotland. One of two burying-places in the parish is situated here.—See ECCLES.

BIRNIE, a parish, in the county of ELGIN, 3 miles (S.) from Elgin; containing 407 inhabitants. This place is said by some to have been the site of the first cathedral of the diocese of Moray; and it is probable that Simeon de Tonei, one of the bishops, was buried here, in 1184. The parish approaches in figure to an oblong, extending about seven miles in length and one and a half in mean breadth, and containing nearly 8000 acres, of which about 2000 are under tillage, 304 in wood, and the remainder waste. It is separated from the parish of Knockando, on the south, by the junction of the parishes of Dallas and Rothies, and is bounded on all the other sides by the parish of Elgin. It lies on the north side of the high ground that rises between the Spey river and the flat of Moray. The surface is irregular and abrupt, is marked with several ravines and high hills covered with heath, and has in general a bleak and rugged appearance. The lands are intersected with the rivulets Lennox, Barden, and Rashcrook, which flow into the Lossie, a stream containing abundance of common trout. The arable soil is in general of a gravelly or sandy kind, occasionally clayey, and by the sides of the Lossie and of the rivulets it is loamy; parts are of a mossy or moory nature. All kinds of grain are produced, as well as potatoes and turnips, with a small quantity of flax. The cattle, which have been lately much improved, are usually a cross between the low-country cows of Moray and West Highland bulls; the sheep are chiefly Cheviots, and the horses, though small, are active, and well adapted for ploughing the light shallow land of which the parish mainly consists. The improved system of agriculture is followed, and very considerable advances have recently been made. The annual value of real property in the parish is £1249. The chief rocks in the district are sandstone and gneiss, with a small proportion of slate.

Ecclesiastically, the parish is within the bounds of the presbytery of Elgin, synod of Moray. The patronage belongs to the Earl of Moray, and the minister has a stipend of £156. 8. 4., a portion of which is received from the exchequer; with a manse, and a glebe of about eight acres of good land. The church is a very ancient structure, repaired in 1817, with accommodation for 250 persons. It contains a fine Saxon arch, separating the choir from the body of the edifice; also a stone baptistery, and an old bell composed of silver and copper, of an oblong shape, which tradition asserts to have been made at Rome, and consecrated by the pope. There is a parochial school, the master of which has a salary of £26, with a house and garden, and about £4 fees. The poor have the benefit of a bequest pro-

ducing about £3 per annum. About a mile east from the church, on the side of the road, is a stone called the "Bible Stone", having the figure of a book distinctly engraven on it: and in the corner of a field once called Castlehill, the foundations of what is supposed to have been the ancient episcopal palace were dug up about half a century ago.

BIRSAY and HARRAY, a parish, in the county of ORKNEY; containing 2406 inhabitants, of whom 1634 are in Birsay, and 772 in Harray. These two ancient parishes, which were united under the Earls of Orkney, originally constituted a province or district called "Bergisherard", signifying in the Norwegian language lands appropriated to the diversion of hunting; and previously to the rise of Kirkwall, here was the residence of the Earls, and the Bishops of Orkney. There are still considerable remains of the episcopal palace, occupying a beautiful site near the sea. By whom it was originally built, is not distinctly known; but numerous additions were made to it from time to time by the Sinclairs, who were styled indifferently Princes and Counts of Orkney. It was subsequently enlarged and improved by Robert Stuart, brother of Mary, Queen of Scots; and above the principal entrance was a stone bearing an inscription to that effect, with armorial bearings, and the motto *Sic Fuit, Est, et Erit*; which stone passed into the possession of the Earl of Morton, to whom the lands were sold, and from whom they were afterwards purchased by Sir Lawrence Dundas, ancestor of the Earl of Zetland, the present proprietor.

The parish is about eleven miles in extreme length, and eight miles in extreme breadth. It is bounded on the north and west by the sea; on the north and east, by the parishes of Evie, Rendal, and Firth; and on the south and west, by the parish of Sandwick, and Loch Stenness. Towards the west the surface is for some distance level, but towards the east more elevated, rising into hills of considerable height. It is diversified with several lakes of great beauty, abounding with trout and other fresh-water fish, and frequented by numerous kinds of aquatic fowl; and the lands are intersected by various rivulets and smaller burns, which, for want of bridges, interrupt the communication. The soil is generally fertile, though varying in different parts of the district: that of the lands called the barony of Birsay is a mixture of clay and sand, producing luxuriant crops of oats and barley; in other parts a deep black loam prevails, producing grain of good quality, and also potatoes and turnips. Sea-weed, of which abundance is found on the coast, is used for manure; and the system of agriculture, though well adapted to the present state of the farms, might, under a different tenure, be very greatly improved. The substrata are principally limestone and clay-slate, the latter of which is quarried for pavements and roofing; building-stone is also found here, and in some parts of the district marble and alabaster have been discovered. The manufacture of straw-plat is carried on extensively, affording employment to nearly 450 of the females; the males are employed in agriculture and in the fisheries. There are twenty boats belonging to Birsay, which during the season are engaged in the cod and lobster fishery; and five are employed in the herring-fisheries at Stronsay and Wick, whence they generally return with remunerating suc-

cess. The coast is rocky and precipitous, and the want of a convenient harbour is unfavourable to the extension of the fisheries of the place. Fairs for cattle and horses are held annually.

For ecclesiastical purposes the parish is within the bounds of the presbytery of Cairston, synod of Orkney. The minister's stipend is £218. 6. 8., including an allowance of £8. 6. 8. for communion elements; with a manse situated at Birsay, and two glebes valued together at £21 per annum: patron, the Earl of Zetland. Birsay church is an ancient building, enlarged in 1760, and containing 565 sittings; the church of Harray, a neat plain building erected in 1836, contains 400 sittings. There are places of worship for members of the Free Church, United Original Seceders, and Independents. The parochial school of Birsay is well attended; the master has a salary of £26, with a dwelling-house and garden. A school at Harray is supported by the General Assembly, who pay the teacher a salary of £25, with a house and garden, and other perquisites. There is a parochial library, containing nearly 180 volumes, chiefly on religious subjects. About half a mile from the site of the episcopal palace is the brough of Birsay, a portion of high land at the north-western extremity of the parish, formed into an island by the action of the sea, and to which access by land is obtained only at low water. From some remains of walls, there appears to have been an ancient fortress on the spot, though when or by whom erected is not known; a chapel dedicated to St. Peter was subsequently erected on the site, of which the only remains are part of a wall and one of the windows. There are also remains of ancient Picts' houses, and upright stones, in various parts of the parish.

BIRSE, a parish, in the district of KINCARDINE O'NEIL, county of ABERDEEN, $2\frac{1}{2}$ miles (E. S. E.) from Aboyne; containing 1295 inhabitants. This place was formerly called Press, a word of Gaelic origin, signifying a wood or thicket, and most probably used in reference to the extensive forest and woods in the district. The parish is situated at the south-eastern extremity of the county, and approaches in form to a square, varying in length from eight to ten miles, and in breadth from six to nine or ten miles. It comprises upwards of 40,000 acres, of which about 3360 are cultivated, nearly 4000 in wood and plantations, and the remainder wet and rocky, a large part of which is too rugged to be brought under the plough. The surface consists of hills and mountains, with three valleys stretching eastward. The valley on the south is the largest; and though narrow, bleak, and wild at its western extremity, where it is called the forest of Birse, about five miles further it begins to expand, and continues to improve in its scenery from this point to its termination in Kincardineshire, at the union of the Feugh with the Dee, near the village of Banchory. The former of these two rivers waters the valley, and much adorns the rich and beautiful scenery in the midst of which the stream takes its departure from the parish. The valley called Glen-Chatt is smaller than the former, and is watered by the Cattie burn. The third strath forms a portion of the vale of the Dee, but is divided into two parts by the burn of Birse: it is ornamented in its centre by the church and manse. The Grampians constitute a marked barrier on the southern limit of the parish, and one part

of the range, called Mount Geanach, rises there to a very conspicuous height, and gives to the locality a wild, and in some parts a romantic, appearance. On the south-eastern boundary runs the river Aven, a tributary of the Feugh; while the Dee flows along the northern boundary, and unites with the peculiar features of that portion of the parish to render its scenery most attractive. The moors abound with grouse and a great variety of wild-fowl, and the rivers and mountain streams with trout; the Dee has also salmon, grilse, eel, and pike, and the lovers of angling find here every facility for their favourite amusement.

The soil is a light loam, in many parts rather gravelly, and takes its leading character from its mixtures of decomposed granite and sand, which are sometimes clayey. Oats and barley are the usual grain cultivated; and potatoes and turnips, with grass for pasture and hay, also form a considerable part of the produce. The sheep are the black-faced; the cattle are much mixed, and in general small and of inferior quality, but the kind which most prevails is the Aberdeenshire polled and horned. The state of husbandry is backward, compared with the better cultivated districts of the south, but has been improved within the last twenty or thirty years, the rotation of crops having been introduced, with a few other modern usages. The annual value of real property in the parish is £4106. The rocks comprise granite, a blue stone called heathen stone, and limestone, of which last there are two or three quarries in operation, the produce being generally used for agricultural purposes; the granite is found in large blocks, scattered on or near the surface, and is used for building, without the trouble and expense of quarrying. A fine specimen of red porphyry is found in the river Dee at the Bridge of Potarch.

The mansion of Fiuzean, in the south-east of the parish, and in the vale of the river Feugh, is an ancient structure, built in the form of three sides of a square. That of Ballogie, situated in the valley of Glen-Chatt, is a neat and comfortable residence, partly ancient and partly modern, and, like the former, surrounded with well laid-out grounds and thriving plantations. The male population are chiefly engaged in husbandry, and many of the females during winter in knitting worsted stockings, for which most of the wool produced here is purchased. A suspension-bridge over the Dee, on the west, was built by the Earl of Aboyne in 1828, and rebuilt in 1830 in consequence of its destruction by flood; a communication is thus opened with the north, and another bridge over the Dee, called the Bridge of Potarch, built in 1813, forms part of the road from Brechin to Huntly and Inverness, over the Cairn o' Mount and Grampians. The turnpike-road on the south side of the Dee, from Aberdeen to Braemar, also opens up an important means of intercourse. Four fairs are held at Bridge of Potarch in April, May, October, and November, for cattle, sheep, horses, coarse linen, sacking, &c.; that in October being the principal.

Ecclesiastically the parish is in the presbytery of Kincardine O'Neil, synod of Aberdeen, and in the patronage of the Crown: the minister's stipend is £158. 7. 4., a portion of which is received from the exchequer; with a manse, and a glebe of four acres. The church, inconveniently situated in the north-western part of the parish, is a neat substantial edifice, erected in 1779, and

capable of accommodating between 500 and 600 persons. There is a Roman Catholic chapel near Ballogie. The parochial school affords instruction in the usual branches; the master has a salary of £28, with a house, £6. 10. fcs, and an allowance from the Dick bequest. Another school is supported by money derived from the fund of Dr. Gilbert Ramsay, who was rector of Christ-church, Barbadoes, and left £500 for the endowment of a free school in this, his native parish, £500 to the poor, and a sum for the erection of a bridge over the Feugh. A religious library was established in 1829, and a savings' bank in 1837. The chief relic of antiquity is a castellated ruin called "the Forest", said to have been erected by Bishop Gordon of Aberdeen for a hunting seat.

BISHOPMILL, a village, in the parish of **NEW SPYNE**, county of **ELGIN**; containing 755 inhabitants. It is a suburb of Elgin, from which town it is distant about half a mile, and stands on the north side of the Lossie, the former course of which river was nearer the town than the present course. The village is included within the parliamentary limits of the borough of Elgin, the cross of Bishopmill being the extreme northern boundary.—See **NEW SPYNE**.

BISHOPBRIDGE, a hamlet, in the parish of **CADDER**, Lower ward of the county of **LANARK**; containing 213 inhabitants. It is situated in the western part of the parish, and on the road from Glasgow to Kirkintilloch. An infant and sewing school was established here by Mrs. Stirling of Cadder, and is supported jointly by that lady and Mr. Stirling, who pay the mistress a salary of £30.

BISHOPTON, a village, in the parish of **ERSKINE**, Upper ward of the county of **RENFREW**; containing 315 inhabitants. It is a modern village, situated on the south side of the Firth of Clyde, a short distance north of the road from Port-Glasgow to Paisley; and a post-office under the latter town has been established, having three daily deliveries.

BLACKBURN, a village, chiefly in the parish of **LIVINGSTONE**, and partly in that of **WHITBURN**, county of **LINLITHGOW**, 7 miles (W. by S.) from Mid-Calder; containing 443 inhabitants. This village is pleasantly situated on the river from which it derives its name, and on the road from Glasgow to Edinburgh. The inhabitants are partly engaged in agricultural pursuits, and partly in the cotton manufacture, for which there is an establishment affording employment to about 120 persons. A branch office has been established here, under the post-office at Whitburn. In 1846 an act of parliament was passed for the construction of a railway from Airdrie to Bathgate, with a branch to Whitburn and Blackburn. Near the village is a quarry of lake-stone; it affords excellent stone for laying ovens, and the produce is sent to all parts of the country. Subscriptions have been opened for the erection of a church; in the mean time, public worship takes place in the village schoolroom. There is a meeting-house for Independents. Blackburn House is a handsome mansion.

BLACKFORD, a parish, in the county of **PERTH**, 4 miles (S. W.) from Auchterarder; containing, with part of the late quoad sacra parish of Ardoch, 1782 inhabitants, of whom 547 are in the village. This place probably derives its name from the ancient word *fjord*, a way by land or water; being equidistant from the towns

of Perth and Stirling, between which it formed the principal line of communication. The parish is bounded on the north by the river Earn, and on the south by the river Devon, and is about ten miles in length and five in breadth. Its surface is varied with level and elevated grounds. The Ochil hills, whose sloping acclivities afford excellent pasturage for sheep, intersect the parish towards the south; and the low lands are fertilized by several small rivers, which add much to the beauty of the landscape. Of these, the river Machany, rising in the high lands of the parish of Muthil, after flowing through this parish falls into the Earn at Kinkell. The Ruthven, which has its source at Gleneagles, in the parish, is but a small stream, pursuing its course through the glen of Kincardine for nearly three miles, when, taking an eastern direction, it flows through the parish of Auchterarder into the river Earn. Another stream, the Allen, which also rises at Gleneagles, takes a western course through the parish of Dunblane, and falls into the river Forth. The soil, especially in the northern part of the parish, is rich, and in good cultivation; the system of agriculture is improved, and considerable portions of waste land have been reclaimed. Much attention has also been paid to the growth of plantations, which have been extensively formed on the wide moor of Tullibardine, and in other parts. The principal trees of older growth are oak and birch: at Tullibardine are still remaining a few trees of a plantation of thorn, raised by a shipwright, in commemoration of the building of a large ship for James IV., in which he had been employed. The annual value of real property in the parish amounts to £10,700.

The village is inhabited principally by persons engaged in weaving, and the manufacture of a coarse kind of woollen-cloth affords employment to a considerable number; a factory has been erected, in which machinery has been introduced, and from seventy to eighty persons are regularly employed, exclusively of many who work at their own homes. In the vicinity of the village is a station of the Scottish Central railway. Two fairs are held annually; but from the proximity of Auchterarder and other market-towns, they are not much attended. The parish is ecclesiastically in the presbytery of Auchterarder and synod of Perth and Stirling; the minister's stipend is about £200, with a manse, and a glebe valued at £18 per annum. Blackford church, built in 1738, and lately repaired, is adapted for a congregation of 500 persons. The parochial school affords a liberal course of instruction; the master has a salary of £34. 4. 4., with fees, and a good dwelling-house and garden. There are several remains of ancient military works, connected probably with the Roman camp at Ardoch, to which station they are supposed to have been out-works; also numerous cairns and tumuli in different parts of the parish. Some remains likewise exist of the castles of Kincardine and Ogilvy, the walls of which are of great thickness; and at Gleneagles and Tullibardine are the remains of chapels. The lands of Tullibardine give the title of Marquess to the Duke of Atholl.

BLACKNESS, a village, in the parish of **CARRIDEN**, county of **LINLITHGOW**, 3 miles (E.) from Borrowstounness; containing 107 inhabitants. This place was formerly the sea-port of Linlithgow, and the residence of numerous merchants, who carried on an extensive trade with Holland, Bremen, Hamburg, and Dantzic, in

which they employed thirty-six ships of large burthen. It is now an inconsiderable hamlet, distinguished only by its royal castle, which is one of the four Scottish fortresses kept in repair according to the articles of the union of the two kingdoms. The harbour and quay are in a ruinous state: the custom-house has been converted into lodgings for the few individuals who, during the summer, resort to this deserted spot for the benefit of bathing; and the only business carried on is the occasional shipping of bricks and tiles made at Brickfield, in the immediate vicinity, and the landing of lime and manure. Stake-nets for salmon have been laid down from the point of Blackness.

The castle, which is still entire, is situated on a promontory on the south shore of the Firth of Forth, near the influx of the Black burn, and at a small distance from the village. It is supposed to occupy the site of a Roman station on the wall of Antonine, which, according to most writers, terminated at this place; but the date of the present structure is not distinctly known. In 1481, the castle, with eight ships at that time in the harbour, was burnt by the English fleet; and in 1488, the nobles who had rebelled against James III. held a conference with that monarch here, which was called the "Pacification of Blackness". In 1542, Cardinal Beaton was imprisoned in the castle by the Earl of Arran, then regent, but he was soon liberated, through the influence of the clergy; and after the battle of Pinkie, in 1547, Lord Clinton, the admiral of the English fleet, took three and burnt seven of the vessels lying in the harbour. The castle was garrisoned by the French forces under the command of General D'Esse in 1548, and also under the regency of Mary of Guise; but in 1560 it was taken by the sheriff of Linlithgow. In 1571, it was garrisoned by Claude Hamilton, a zealous adherent to the interests of Mary, Queen of Scots; and by him it was held in her name till 1573, when it was delivered up to the Earl of Morton, then regent. During the progress of the Reformation, and the contests that arose between the advocates of Presbytery and Episcopacy, the castle was frequently a place of confinement for the non-conforming clergy; and in the latter part of the eighteenth and earlier part of the nineteenth century, it was chiefly occupied by French prisoners of war. The Earls of Linlithgow were hereditary constables of the castle till 1715, when that office was forfeited on the attainder of James the sixth earl, for his participation in the Earl of Mar's rebellion. There are a governor and a lieutenant-governor attached to the castle, neither of whom is resident; and the garrison till lately consisted of two gunners, a serjeant, two corporals, and fifteen privates; but at present the only inmates are an inferior officer and his family. The buildings consist of a principal tower, with ramparts commanding the entrance, and a court-yard, and have accommodation for 100 men.

BLACKRIDGE, for a time a quoad sacra parish, chiefly in the parish of TORPHICHEN, county of LINLITHGOW, 3 miles (W.) from Bathgate; containing 900 inhabitants, of whom 94 are in the village. This parish comprised portions of the civil parishes of Torphichen, Shotts, Bathgate, Slamannan, and New Monkland. The village lies at the west end of the first-named parish, near the river Avon; and the inhabitants are employed in agriculture, and in the mines and quarries in the neigh-

bourhood. The church, situated in the village, was erected by subscription, in 1838, and is a neat structure containing 400 sittings. One of the two parochial schools in Torphichen is fixed here; the master has a salary of £20 from the lands of Blackridge, and 100 marks Scots from heritors, with a house and garden, and the fees average about £14. Here is also one of the two parochial libraries.

BLADNOCH, a village, in the parish and county of WIGTOWN, 1 mile (S.) from Wigtown; containing 215 inhabitants. This village is pleasantly situated on the north bank of the river Bladnoch, over which is a bridge, connecting it with the parish of Kirkinner, on the south. An extensive whisky distillery has been established, in which about twenty persons are constantly employed, and which annually consumes about 16,000 bushels of barley. There is a small salmon-fishery carried on here, and various kinds of white fish are taken in the bay.

BLAIR-ATHOLL, a parish, in the county of PERTH, 20 miles (N. by W.) from Dunkeld; containing, with part of Tenandry quoad sacra parish, 2231 inhabitants. This place, the name of which in the Gaelic language signifies "the plain of Atholl", comprises the four ancient parishes of Blair, Lude, Kilmaveonaig, and Strowan, united into one parish in the early part of the seventeenth century. In the reign of James V., that monarch, with his mother, and the pope's legate, were entertained at Blair Castle with great hospitality by the Earl of Atholl, who, for their diversion, accompanied them in a celebrated hunt on the north side of the mountain Beinn-ghlo. The castle afterwards became the head-quarters of Viscount Dundee, in the memorable campaign of Killiecrankie, the battle taking place on the fields of Runrory, on the north side of Girnag mountain. It was, indeed, frequently occupied as an important military station, not only during the times of feudal warfare, but also in the rebellion of 1745 and 1746, when it was garrisoned with a force of 300 men under the command of Sir Andrew Agnew, whom the Duke of Cumberland, on his arrival at Perth, had despatched to take up his quarters here, and so cut off all communication between the northern and southern parts of the country. In order to gain possession of this station, Lord George Murray, accompanied by several officers of the Highland army, and with a force of 100 men, was sent to surprise the castle, which, from its scanty supply of provisions, he attempted to reduce by famine. With this view, having made prisoners of all the detached out-posts, he took up his head-quarters in the village, and closely blockaded the castle. But after having reduced the garrison to the last extremity, he suddenly raised the blockade, and returned to join the Young Pretender's army at Inverness; and on the following day, the garrison were relieved by the Earl of Crawford, and received the thanks of the Duke of Cumberland for their gallant defence.

The PARISH is bounded on the north by the Grampian hills, and is about thirty miles in length and eighteen miles in average breadth, comprising 105,000 acres of hill pasture, 3000 of arable land under cultivation, and 2500 in wood and plantations. The surface is finely varied with hills and valleys. On both sides of the river Garry is an extensive and fertile plain, constituting the vale of Garry, and extending from the pass of Killiecrankie to Strowan, terminating in hills whose slopes are under cultivation, and the summits clothed with heather.

In the Grampian range are several lofty mountains, of which Beinn-ghlo, Beinn-mheadhonaidh, Beinn-chait, and Beinn-deirg are the principal; the mountain Beinn-ghlo, which stands upon a base many miles in circumference, presents to view four detached summits, one having an altitude of 3720 feet above the level of the sea, and the others being little inferior in height. The surface is also diversified with lakes, one of the chief of which is Loch Garry, near the boundary of the counties of Perth and Inverness; it is inclosed on all sides by hills of lofty elevation, and is about six miles in circumference, abounding with trout of excellent quality. Loch Tummel is a picturesque sheet of water, four miles in length and nearly a mile in breadth, tastefully embellished with an island of artificial formation, on which are the ruins of a castle, and inclosed with banks richly cultivated, interspersed with small hamlets. The castle was built in the time of Robert Bruce, by Duncan the Gross, founder of the clan Robertson. This lake, also, abounds with pike and trout of the largest size. The river Garry issues from the lake of that name, and after a course of nearly thirty miles, in which it receives the streams of the Erichkie, Bruar, and Tilt, falls into the Tummel at the south-eastern extremity of the parish; the Tummel has its source in Loch Tummel, and urges its rapid and impetuous course but for a short way through the parish. The river Tilt, from the loch of that name, on the summit of the Grampian range, pursues a course of sixteen miles, and flows into the Garry at Blair, displaying in its progress a succession of beautifully picturesque scenery. Almost all the rivers form interesting cascades. The falls of the Garry, obstructed in its course by shelving rocks, are peculiarly interesting; and those of the Tummel are magnificently grand, from the vast body of water which is precipitated from rocks clothed to their summits with stately birch-trees. The Bruar, also, descending from a height of some hundred feet, forms a succession of cataracts, rendered still more striking from the beauty of the surrounding scenery.

The soil is various; in the valleys, and on the slopes of the hills, a light loam or a gravelly soil prevails, and in the more elevated lands the mossy soil of the Grampian range. The chief crops are different kinds of grain, and turnips, for which latter the soil is well adapted, and of which considerable quantities are raised. The farm-houses are generally well built; and considerable improvements have been made in husbandry, under the auspices of the Atholl Club, which distributes annual prizes for the promotion of agriculture and the breed of stock. The cattle are usually of the black Highland breed, to the rearing of which great attention is paid; about 1200 milch-cows are regularly pastured, and 30,000 sheep are annually fed, all of the black-faced breed. Atholl "forest", formerly enjoying many privileges, is partly in the parish, and about 12,000 head of red deer are found within its limits. The annual value of real property in the parish is £11,847. The natural woods are principally oak, ash, birch, alder, and aspen; and the plantations, which are very extensive, consist of Scotch firs, spruce, and larch, with lime, elm, and plane trees, of which there are some very fine specimens in the park of Blair. The substratum is chiefly limestone, which forms part of the great vein extending from near Callender to Braemar, and is quarried for agricultural

and other purposes, but not in sufficient quantity for the lands, in consequence of the scarcity of fuel for burning it. Marble, also, of various colours is abundant, especially a vein of a green colour, much esteemed for mantel-pieces.

Blair Castle, already noticed, the baronial seat of the Murray family, Dukes of Atholl, is a spacious structure, supposed to have been erected by John Cumin, of Strathbogie, who became Earl of Atholl in right of his wife. In 1750 the building was reduced by taking down two stories, and converted into a family mansion. It contains a handsome suite of state apartments, but its castellated appearance has been lost by the removal of its turrets. The house is inclosed in a very extensive park, embellished with ancient timber and thriving plantations; and the grounds, which are laid out with great taste, command a rich variety of scenery. Her Majesty and Prince Albert, on their second visit to Scotland, spent three weeks at this place, in September, 1844; the castle was prepared by Lord Glenlyon (now Duke of Atholl) for Her Majesty's reception, and he introduced to the royal notice the most remarkable natural features of the vicinity. Lude House, a spacious modern mansion, occupies an elevated site, and forms an interesting object in the scenery of the Garry. Auchleeks is also a handsome modern mansion, pleasantly situated. A post-office has been established, which has a daily delivery; and fairs are held at Blair-Atholl on the 2nd of February for general traffic, and the third Wednesday in May for horses and cattle; at Tilt Bridge, on the 25th of June and the 20th of August (O. S.), for cattle; and at Trinafour, on the third Tuesday in March (O. S.), for horses, and the Wednesday in October before the tryst of Falkirk, for cattle.

Ecclesiastically the parish is in the presbytery of Dunkeld, synod of Perth and Stirling, and in the patronage of the Duke of Atholl; the minister's stipend is about £200, with a manse, and the glebe is valued at £150 per annum. The parochial church is a handsome and substantial edifice of modern erection, adapted for 650 persons, and the churchyard is spacious. A church was erected in the Strowan district, in 1829, for a congregation of 450 persons; and divine service is performed on two consecutive Sundays at Blair-Atholl, and every third Sunday at Strowan. The old church of Kilmaveonaig was rebuilt in 1791, and appropriated as a place of worship by the Episcopalians. There is also a meeting-house for Baptists. The parochial school affords education to about a hundred scholars; the master has a salary of £34. 4. 4., with about £30 fees, and a house and garden. There are vestiges of an old religious establishment on the banks of the Tilt, called Cill Aindreas, consisting chiefly of sepulchral remains; and in various parts of the parish are upright stones, the remnants of Druidical circles, near some of which are traces of ancient cemeteries. The walls of the church of Lude are also still remaining.

BLAIR-LOGIE, a village, in the parish of LOGIE, county of PERTH, 2 miles (N. N. E.) from Stirling; containing 124 inhabitants. This village, situated at the foot of the Ochil hills, is celebrated for its beauty and cleanliness, and the salubrity of its air, and is much visited by invalids for its goat's-whey. It contains a small library belonging to the parish, and there is a place of worship connected with the United Presbyterian

Synod. On the heights is the Castle of Blair-Logie, now occupied by a farmer.

BLAIRBURN, a village, in the parish of CULROSS, county of PERTH; containing 85 inhabitants.

BLAIRDAFF, ANERDEEN.—See GARIOCH.

BLAIRGOWRIE, a burgh, market-town, and parish, in the county of PERTH, 58 miles (N. by W.) from Edinburgh; containing about 3700 inhabitants, of whom about 2600 are in the town. *Blair* is a term of doubtful etymology, by some supposed to be derived from a Gaelic root signifying a mossy locality, and by others thought to come from a word denoting the scene of a battle or of war. *Gourie* was the ancient denomination of the district in which the parish is situated, and has been used as an affix to distinguish it from several other places of the name of Blair. The town stands not far from the eastern boundary of the county, bordering on Forfarshire, and on a pleasant eminence on the western bank of the river Ericht, forming the first step of the acclivity of the hill of Blair. From its secluded and remote neighbourhood, it has been free from the collisions of the great political and religious tumults which have been felt so frequently and extensively throughout the country, the only historical recollection noted of this kind being the passage of the celebrated Montrose through the place, in one of his hostile descents into the valley of Strathmore. But what, at the commencement of the present century, was a small, quiet, and inconsiderable village, has since grown into a bustling manufacturing and market town; and not only the inhabitants of this spot, but those of the parish generally, have exchanged their rural for a commercial character, the peasantry having given place to artisans, partly through the breaking up of the cottar system by the consolidation of small farms, but chiefly through the extensive introduction of manufactures. About forty or fifty years since, the village consisted of small, unsightly thatched houses, collected in the vicinity of the church. It now contains some good streets, which are well lighted with gas, supplied by a joint-stock company established in 1834; and its new and attractive character has for some time been gradually drawing, from the other parts of the parish, a considerable portion of the people to take up their residence here. Blairgowrie is approached by several good roads from different quarters. The most considerable of these is the great north road from Perth to Fort-George, which enters the parish at the southern boundary, about two miles distant, and crosses the Ericht a little way from the town, by the bridge of Blairgowrie. This road has lately been made a turnpike as far as the bridge of Cally, six miles north of the town.

The river Ericht, forming the eastern boundary of the parish for ten miles, is a lively and interesting feature in the strikingly beautiful scenery which is commanded by the well-cultivated hill of Blair; it has its course through diversified and romantic combinations of woods and rocks, and falls into the Isla at Cupar-Grange. Within half a mile of the town is a small cascade or salmon-leap, partly artificial, called the Keath. The hill of Blair, immediately behind the town, is crowned by the church, and skirted by a deep well-wooded ravine stretching down abruptly nearly to the river. From the churchyard a view of the first order is obtained, embracing the whole valley of Strathmore, in the northern portion of which part of the parish lies, and terminated on the east by the

Hunter hill of Glammis, and on the south by the picturesque chain of the Sidlaws. Near the town are the mansions of Newton and Ardblair, large structures in the castellated style, the former commanding beautiful and extensive prospects over Strathmore, and being itself seen as a conspicuous object from several parts; and not far distant is Blairgowrie House, a large edifice, situated on the low grounds to the south of the town, the whole of the vicinity of which partakes of the rich and varied scenery characteristic of the lower or southern division of the parish, the northern district exhibiting the features of a highland locality.

The spinning-wheel, formerly so much in use here, has been entirely superseded by machinery; and there are at present five mills in operation, worked by water-power, and employing about 200 hands in the spinning of flax and tow into yarn. The flax used is imported into Dundee from the Baltic, and after being spun, is either taken to the former place for sale, or disposed of to manufacturers in the neighbourhood, and at Alyth and Cupar-Angus. The value of flax annually consumed at three mills near the town is from £20,000 to £26,000 per annum, and the value of yarn spun at the same mills, from £33,000 to £36,000. About 350 persons are occupied in weaving yarn by hand-loom into cloth of different fabrics, consisting of fine dowlas and drill, and especially Osunburghs and coarse sheetings: these are generally sold at Dundee, but sometimes shipped, on the part of the manufacturer, direct to North and South America and France. Another branch of trade carried on is that of salmon-fishing, which, however, is in a very low state, the rental for the whole course of the Ericht from the Keath to the boundary of the parish being only £21. 12. per annum. This change from its former extent, which was very considerable, is owing partly to the circumstance of there being fisheries lower down, on the Tay and Isla, and partly to the erection of the numerous mills on the river, which in summer drain off nearly the whole of the water. A general post-office is established in the town. Besides the road from Perth to Fort-George, already noticed, there is a road from Blairgowrie to Cupar-Angus, made turnpike in 1832, which quits the parish about two miles south of the town; and the line of road from Kirriemuir, Forfar, and other places, to Dunkeld, passes through the town, in crossing the parish from east to west. In 1846 an act was obtained for the construction of a branch to Blairgowrie of the Perth and Forfar railway. A market, which is well attended, is held on Wednesday, in alternate weeks, during winter and spring, for cattle and grain; and there are annual fairs in the town on the third Wednesday in March; the 26th of May, if it fall on Wednesday, if not, the first Wednesday after; the 23rd July; the first Wednesday in Nov.; the 22nd Nov., or first Tuesday after; and the Wednesday before Falkirk tryst. There are two branch banks, and a savings' bank in connexion with the Perth National-Security Savings' Bank: the deposits in the savings' bank amount to upwards of £3000.

Blairgowrie was erected into a burgh of barony by charter from Charles I., dated 9th July, 1634, in favour of George Drummond, then proprietor of the estate. In the year 1809, the town was created a free burgh of barony by a charter from Colonel McPherson, the superior, and the burgesses were empowered to elect a bailie and four councillors for the management of the affairs

of the burgh. The bailie, and two of the councillors, vacate their office every two years; and their places are filled up by the burgesses. The police is in accordance with the general police act, and under the control of the chief magistrate and four commissioners, the latter being annually elected by the £10 householders; but the provisions of the act respecting watching and paving have not been adopted, the householders being still bound by their charter to take the watching by turns, themselves personally, or to provide substitutes. There are two commodious and well-ventilated cells in the lower story of the town-house, used as a prison, for the punishment of offenders within the jurisdiction of the burgh magistrate. The town is one of the seats of the quarterly sheriff-court, under the Small-Debt act, and a polling-place for the county parliamentary elections.

The PARISH consists of a principal portion, about seven miles long and one mile and a half in average breadth, and of two detached parts. One of these, lying north-west of the large division, and separated by branches of the parishes of Kinloch and Bendochy, contains a tract on each side of the river Ardlie (consisting of the estates of Blackeraig, Wester-Cally, and Whitehouse), and part of the district of the Forest of Cluny; covering altogether about four square miles. The other detached part, called Creuchies, situated to the north-east, and separated by the parish of Rattray, contains about two square miles. The total number of acres in the parish is estimated at about 16,000 or 17,000, of which about 10,000 are or have been cultivated, 5000 are waste and pasture, and the remainder wood and plantations, comprising alder, birch, hazel, mountain-ash, larch to a considerable extent, and Scotch fir. Blairgowrie parish comprehends two divisions, the highland and the lowland, separated from each other by a branch of the Grampian range; the former is hilly, and constitutes the northern boundary of the vale of Strathmore, while the surface of the latter, which belongs to that vale, is tolerably equal, and replete with that beautiful and richly-diversified scenery for which the whole sweep of country is so highly celebrated. The Ardlie and Blackwater streams, partly skirting the northern division, unite near the bridge of Cally, and form the principal river, the Ericht. This river, in the vicinity of Craighall, passes through some of the most wildly romantic portions of the district, the beauties of which supplied the author of *Waverley* with many of the principal features in the description of Tully-Veolan. The parish is partly bounded on the south by the Lunan; and the Lornty, after flowing for some distance, falls into the Ericht about half a mile above the town. The streams abound with trout: pike, perch, and eels are plentiful in all the lochs, which are six in number; and the loch of Stormont is frequented in summer by swarms of sea-gulls, that build among the reeds and rushes, and furnish large quantities of eggs.

The southern and most cultivated division of the parish, stretching southward from the hill of Blair, for four miles, to the middle of the valley of Strathmore, exhibits great diversity of soil, comprising stiff clay, moss, rich loam near the town, and alluvial earth; the last, on the bank of the river, being the most fertile. In this division is the muir of Blair, a tract comprehending about 1000 acres, chiefly covered with thick plantations of Scotch fir, beyond which, to the south, the soil, though

thin and light, is mostly under cultivation. All kinds of grain and green crops are raised, and a considerable revenue is derived from pastures and the thinning of woods. The sheep kept here are not bred in the parish, but are purchased in autumn, and fattened with turnips eaten off the ground in winter, for sale in the following spring. Much improvement has taken place in the stock of cattle, by crossing the native cows with the short-horned bulls, and large numbers are fed for the Glasgow and Falkirk markets. The husbandry is of a superior kind, all the modern usages having been introduced, and draining and inclosing have been practised to a great extent. The annual value of real property in the parish is £9291. The rocks consist chiefly of grey-wacke, greenstone, and sandstone; the last, which is a coarse red conglomerate, is extensively quarried in the vicinity of the town, and there are several other quarries in different parts, including one of clay-slate, not now in operation.

For ecclesiastical purposes, the parish is in the presbytery of Meigle, synod of Angus and Mearns, and in the alternate patronage of William McPherson, Esq., of Blairgowrie, and the Trustees of the late James Blair Oliphant, Esq., of Gask and Ardblair. The minister's stipend averages £222. 18.; with a manse, rebuilt in 1838, with the offices, at a cost of upwards of £500; and a glebe comprising $9\frac{1}{2}$ acres, valued at £20 per annum. The church, built in 1824, on the site of the old edifice, on an eminence close to the town, contains 1000 sittings. A chapel situated in Brown's-street was purchased for the sum of £400, of the Burgher congregation who had before used it, and was opened in 1837 in connexion with the Established Church. The money for the purchase, with the exception of £100 granted by the Church-extension Committee, was raised by subscription. No minister is now appointed. There are a Roman Catholic chapel, and places of worship for members of the Free Church and Independents; and a handsome edifice has been erected in the early English style, consisting of a nave and chancel, for the use of a congregation of Episcopalians; it is named St. Catharine's, and was founded at the expense of the Rev. John Marshall, who ornamented the chancel with an elegant window of stained glass. Attached to it is a library containing many works of science and general literature, for the use of all denominations. The parochial school affords instruction in the usual branches; the master has a salary of £34. 4., and about £60 fees. The late Mr. George Barty, tobacconist at Perth, and a native of this place, who died in 1838, bequeathed £1400 for the education of poor children belonging to this parish, and the parishes of Rattray, Bendochy, and Kinloch, in the parochial school of Blairgowrie. An elegant new school-room was built in 1842, at an expense of upwards of £800. The antiquities comprise the ruins of the castle of Glaslune, formerly the property of the Blairs, and of that of Drumlochy, the seat of the Herons; the buildings are in close vicinity to each other, and between the possessors a feud once raged, ending in the ruin of the latter. There are several ancient cairns. A chalybeate spring called the "Heugh well", situated in a cliff about a mile from the town, is found of great benefit in cutaneous and dyspeptic complaints. After the royal visit to Ireland, Her Majesty, accompanied by Prince Albert and her suite, passed through the town of Blair-

gowrie on the 15th August, 1849, on her way from Glasgow to Balmoral in Aberdeenshire.

BLAIRINGONE, for a time a quoad sacra parish, chiefly in the parish of FOSSOWAY and TULLIEBOLE, county of PERTH; containing 574 inhabitants, of whom 210 are in New, and 79 in Old, Blairingone, 10 miles (W.) from Kinross. This parish, the name of which implies "the Field of Spears", included portions of the parishes of Muckart, Dollar, and Clackmannan; it was bounded on the north by the river Devon, and intersected by the road between Alloa and Kinross. Coal is abundant, and several mines are in operation; ironstone of very superior quality is also wrought, and some veins of an ore supposed to contain a considerable proportion of sulphur have lately been discovered. In the parish are several handsome residences, among which are, Devonshaw, a modern building in the Elizabethan style, beautifully situated on the south bank of the Devon; and Arndean, also a modern mansion, of the same style. The village is in the south-western part of the parish, and is chiefly inhabited by the work-people of the collieries. Blairingone was ecclesiastically in the presbytery of Auchterarder, synod of Perth and Stirling; the minister was appointed by the heads of families: the church is a neat plain building, erected by subscription, aided by a grant from the General Assembly's Church-extension Committee. There is a congregation of members of the Free Church, who assemble in a schoolroom of handsome design, erected in 1843: the school is for all denominations, and connected with the Free Church is a library. On the banks of the Devon is a remarkable spring issuing from among strata of ironstone, and used medicinally.—See FOSSOWAY.

BLAIRMORE, a hamlet, in the parish of KENMORE, county of PERTH; containing 21 inhabitants.

BLANTYRE, a parish, in the Middle ward of the county of LANARK; including the villages of Auchinraith, Auchintiber, Barnhill, Blantyre, Blantyre-Works, Hunthill, and Stonefield; and containing 3047 inhabitants, of whom 1464 are in the village of Blantyre-Works, and 264 in that of Blantyre, or Kirkton, 3 miles (N. W.) from Hamilton, and $8\frac{1}{4}$ (S. S. E.) from Glasgow. The lands formerly belonged to the Dunbars of Enteckin, in which family they remained till the Reformation, when they were purchased by Walter Stewart, son of Lord Minto, treasurer of Scotland, upon whom, on the suppression of monastic establishments, the ancient priory of this place was bestowed by James VI., who also created him Lord Blantyre. The priory is said to have been founded by Alexander II., as a cell to the abbey of Jedburgh, or, according to Spottiswoode, of Holyrood House; and Walter, who was prior in the fourteenth century, was one of the commissioners appointed to negotiate for the ransom of David Bruce, the Scottish king, who had been made prisoner by the English, in the battle of Durham, in 1346. The remains of the priory, which are very inconsiderable, are situated on the summit of a high rock on the bank of the river Clyde, opposite to the ruins of Bothwell Castle. Little more is left than one of the vaults, which is still entire, with two gables, and a portion of the outer walls. The buildings were of red granite; and in combination with the castle, the ruins form an interesting feature in the scenery.

The PARISH extends for six miles in length, from north to south, and varies greatly in breadth, not averaging more than one mile in the whole. It comprises 4170 acres, of which, excepting 200 acres of moss land, and plantations, all is arable. The principal rivers are, the Clyde, which enters the parish at a short distance below Bothwell bridge, and forms a boundary between this place and the parish of Bothwell for about three miles, flowing majestically between lofty banks richly clothed with wood; and the Calder, which enters the parish near Rottenburn, and after forming several picturesque falls in its course along the western boundary, flows into the river Clyde near Daldowie. Other streams are, the Redburn, which has its source in the lands of Park farm, and joins the Clyde near Bothwell bridge; and two other rivulets, one rising in the lands of Shott, and one at Newmain, which also fall into the river Clyde. Salmon are taken in abundance near the mill-dam of Blantyre. In many parts the scenery is exceedingly beautiful; the parish is generally well wooded, and diversified with gently undulating eminences and fertile dales. The soil is various, being in some parts a fine rich loam, in others a strong clay, and in others sand, with some portions of moss; the system of agriculture is improved, and good crops of various kinds of grain are raised. Great improvement has been made in draining the lands, and a considerable tract called Blantyre moor, formerly a common, has been subdivided, and brought into cultivation: the farm houses and buildings are of a superior order. The annual value of real property in the parish is £8280. Peat for fuel is cut on Edge Moss; and coal, the veins of which are very thin, is worked at Calderside and Rottenburn. Limestone of a quality well adapted for building, and for agricultural purposes, is wrought in the southern part of the parish. Ironstone, also, is abundant, and at Black-Craig, on the borders of the parish, not less than seventeen different seams are to be seen, superincumbent on each other: the ironstone is worked in the parish of Kilbride, where are the openings of the mines, but the strata lie chiefly in this parish.

The principal village is situated on an eminence overlooking the river Clyde, and in the midst of a beautiful country, embellished with timber of venerable and stately growth. It appears to have attained its present importance and extent, from the introduction of the cotton manufacture by Messrs. Dale and Monteith, who in 1785 erected a mill for the spinning of cotton-yarn, and, in the year 1791, another for the making of mule twist. In 1813 Messrs. Monteith and Company erected a weaving factory, in which the number of looms has since that time increased from 450 to nearly 600; and around these works, giving profitable employment to a large number of the population, the present village is erected. In the two spinning-mills, which are both worked by water-power, are 30,000 spindles, affording occupation to about 500 persons; and in the weaving establishment, the works of which are driven partly by water-power and partly by steam, are 600 power-looms, in the management of which more than 300 persons are regularly employed. In connexion with these works is an establishment for dyeing cotton-yarn with the Turkey red. The total number of persons employed in all the departments is nearly 1000, of whom more than 500 are females. The houses are

comfortable and neatly built, and the village is watched and cleansed by persons paid by the company, who have also built a public washing-house, and appropriated a large bleach green, on the banks of the Clyde, for the use of the inhabitants, who are supplied with hard and soft water for domestic purposes by force-pumps at the factory. A library has been some years established, which contains an extensive collection of useful volumes. Great facility of intercourse is afforded by the lines of the Caledonian railway company.

Blantyre is ecclesiastically within the bounds of the presbytery of Hamilton, synod of Glasgow and Ayr, and in the patronage of Lord Blantyre; the minister's stipend is about £184, with a manse, and a glebe valued at £16 per annum. The parish church was erected in 1793, and will only hold about 300 persons. There is a chapel at the Blantyre Mills, erected by the company for the accommodation of the work-people employed there, and containing sittings for 400 persons; the minister's stipend is paid, one-half by the proprietors of the works, and the other half from the seat rents. A place of worship has been erected for members of the Free Church. The parochial school affords a liberal education; the salary of the master is £26, with £19 fees. There is also a school for the children of the work-people at the mills, to which purpose the chapel is applied during the week; the master is appointed by the company, who give him a house and garden rent free, and a salary of £20.

Ancient urns have been at various times discovered in several parts of the parish; some of these were inclosed in a kind of kistvaen, covered by heaps of loose stones, and contained ashes, with remnants of half-burnt bones scattered round them. Within the last few years a stone coffin was discovered, containing an urn of baked earth, in which was a skull with the teeth nearly entire and in good preservation; and fragments of six larger and more richly ornamented urns were found in another part of the same field, which is now called "Archers Croft". Stone coffins have also been found at Lawhill and Greenhall, and other places situated within the limits of the parish. At Calderside is a large hill called the Camp-Know, of conical form, 600 feet in circumference at the base, and surrounded by a moat; and near it is a kind of subterraneous cavern of flags. At Park farm is a fine spring, which has long been in high repute for the cure of scorbutic affections and diseases of the eye; it is strongly impregnated with sulphur, combined with muriate and sulphate of lime, and was formerly much resorted to by invalids from Glasgow and its neighbourhood. There are also various mineral springs on the banks of the river Calder. The late John Miller, Esq., professor of law in the university of Glasgow, resided for some years at Milheugh, in the parish, and was buried in the churchyard.

BLEBO-CRAIGS, a village, in the parish of KEMBACK, district of ST. ANDREW'S, county of FIFE, $\frac{1}{2}$ a mile (S. E.) from Kemback; containing 234 inhabitants. It lies a short distance to the north of the road from Ceres to St. Andrew's. On the estate of Bleho, a vein of lead-ore was discovered in 1722, and was worked for some time, but relinquished in consequence of the expense. In the vicinity are extensive mills. Blebo House, the property of the Bethune family, is an elegant mansion, surrounded by fine plantations.

BLUE-ROW, a hamlet, in the parish of NEW KILPATRICK, county of DUMBARTON, containing 53 inhabitants.

BLUEVALE, a village, in the former ecclesiastical district of CAMLACHIE, BARONY parish, county of LANARK. This is a suburb of the city of Glasgow, and one of the divisions that were ecclesiastically separated from Barony parish. It consists chiefly of small cottages, irregularly built, and occupied by hand-loom weavers and day-labourers. There are five schools connected with this place and the other divisions of Camlachie, Keppoch Hill, and Ladywell, which are attended by about 300 children.

BOARHILLS, a village, in the parish and district of ST. ANDREW'S, county of FIFE, 4 miles (S. E.) from St. Andrew's; containing 155 inhabitants. It is situated on the eastern coast, and southern point of St. Andrew's bay. A little northward of it is Mount Buddha rock.

BODDAM, a village, in the parish of PETERHEAD, district of BUCHAN, county of ABERDEEN, 3 miles (S.) from Peterhead; containing 526 inhabitants. This place anciently belonged to a branch of the Keith family, who had a strong baronial castle, situated on a rock overhanging the sea, and of which there are still considerable remains. The village is situated on the eastern coast, near the headland of Buchanness, and is inhabited chiefly by persons employed in the fisheries, which are carried on to a great extent. In the haddock-fishery, commencing in March, and continuing till July, twenty-two boats, of four men and a boy each, are engaged; and during the season, each boat takes generally about 30,000 fish, which are cured, and dried upon the rocks, and sell at from £3 to £4 per thousand. The herring-fishery begins in July, and continues till September: it employs twenty-three large boats, with crews of six men each; and the quantity of fish taken during the season averages, when sold, about £100 for each boat. There are twelve boats employed during the winter months in the cod and white fishery; the fish are cod, ling, skate, and turbot, and from 1200 to 1800 are taken by each boat, and produce from £30 to £40. The fish cured here obtain a decided preference in the market, especially the haddocks, which, from being dried on the rocks, are perfectly free from sand. The village has been extended and improved; and a harbour of larger capacity has been constructed, which has a greater depth of water than that of Peterhead, and the approach of which is rendered safe by the lighthouse on Buchanness.

BOGHEAD, a village, in the parish of LESMAHAGOW, Upper ward of the county of LANARK; containing 198 inhabitants. It is in the northern part of the parish, and on the road between Lesmahagow and Strathaven.

BOHARM, a parish, partly in the county of ELGIN, but chiefly in that of BANFF, 6 miles (W.) from Keith; containing 1261 inhabitants. The original word Bucharin, or Bocharin, from which Boharm has been formed, is said to signify "the bow or bend about the hill". It was correctly applied to this locality on account of the cultivated part consisting chiefly of a valley, stretching in a circular form around the north, east, and south sides of the mountain of Benagen, which rises abruptly from the Spey river, the boundary line of the district on the west. There was formerly a church on the estate of Arndilly, called the church of Artendol; and it appears that, about the year 1215, one of the family of

Freskyn de Moravia, who had large estates here, granted to the cathedral of Moray "the church of Artendol, with all its pertinents, excepting the corn-tithes of the two Davochs, which lay next to his castle of Bucharin". It is therefore conjectured that the old parish was named Artendol, and that, upon the church there falling into ruin, the chapel of the castle of Bucharin was used in its stead as the parochial church, in consequence of which the parish was called Bucharin. The parish was augmented in 1788, to the extent of about one-third, by the annexation of part of the suppressed parish of Dundurcus, lying on the east of the river. The whole measures about twelve miles in extreme length, and four at its greatest breadth, comprising 4739 acres under tillage, besides a large extent of wood, mountain-pasture, and waste. The lofty eminence of Benagen, situated about the middle of the parish, and attaining an elevation of 1500 feet above the sea, occupies so large a portion of the surface as to render the valley at its base comparatively narrow. At its summit level the valley is about 400 feet above the sea, and from this height gradually descends towards each extremity, when it abruptly falls into the valley of the Spey. The sides of the vale are cultivated for a considerable distance upwards, as well as the bed; and the southern and eastern sides of the mountain, for nearly half way up, have been brought under tillage.

The Fiddich, a stream of some magnitude, flowing between beautifully-wooded banks, forms a confluence with the Spey near the bridge of Craigellachie, from which point to the distance of a mile above the village of Fochabers, the latter river separates this parish from Rothes. Both these streams are subject to violent floodings, and sometimes, by the sudden and irresistible impulse of their waters, have destroyed the bridges, tenements, crops, and almost every thing in their way. A very ancient bridge, chiefly of wood, formerly crossed the Spey near the influx of the Orchil, and was supposed to have been constructed by the Romans under Severus; but no remains of it have been visible for many years: the passage was afterwards accomplished by a ferry-boat. An establishment called the Hospital of St. Nicholas stood near this bridge, on the Boharm side of the river, having been founded in the beginning of the thirteenth century by Muriel de Pollock, heiress of Rothes, and dedicated to God, the Virgin, and St. Nicholas, for the reception of poor passengers. Andrew, Bishop of Moray, granted to the hospital the church of Rothes with its pertinents, and Alexander II. in 1232 endowed it with a chaplaincy: it had pretty extensive estates also in the neighbourhood. It is supposed that the bridge was kept in repair by this house, and that, about the time of the Reformation, the structure either fell to decay, or was destroyed by a flood, and, having lost its means of support, was not renewed. The ruins of the hospital were removed, and a new bridge built, a few years since, at a cost of £3500, on the suspension principle, with a span of 235 feet. The Orchil, or burn of Mullen, formed by a collection of the waters of the lower part of the district where a valley from Keith opens into the circular valley, runs rapidly through a rocky and romantic channel into the Spey at Boat of Bridge; and the Aldernie conveys the waters of the upper district to the Fiddich. These streams abound with trout, which, as well as grilse and salmon, are also found in the Spey.

The soil in some parts is gravelly, and in others sandy, but is more frequently clayey, and very retentive of moisture. All sorts of grain are raised, the wheat in small quantity, and also most kinds of grasses and green crops. Much attention is paid to turnips, the growth of which has increased of late years, and large applications of bone-manure have been made with great success. Lint also is cultivated, but oats of excellent quality are the staple article. Lime is extensively used for agricultural purposes, and draining and the improvement of waste land have been carried on with spirit: good inclosures and farm-buildings are still much needed, though in several parts the latter have been greatly improved. The black-cattle, which are small in size, are chiefly the Highland and the Aberdeenshire, and the sheep are the Leicester and the Linton, the former kept on the lower, and the latter on the higher grounds: there are some sheep also of the large English breed, valued for the wool. The annual value of real property in the parish is £3764.

Gneiss is the prevailing rock in the southern portion of the district. Talc-slate is found in the principal valley, and up to the summit of the hills, traversed by veins of quartz, and by a strip of primitive limestone originating in the great limestone formation of Banffshire. This last is wrought for burning into lime, and also for building, being well adapted for the latter purpose on account of a siliceous mixture. The rocks in the valley of the Spey are gneiss and quartz, in some places overlaid by a large deposit of red clay and gravel, spreading itself extensively in several directions. Boulders of granite and hornblende are numerous, and supply an excellent material for buildings. Mica-slate is also found in large beds. The woods and plantations form a prominent feature in the scenery, and comprise almost every description of trees grown in the country. In the south-west corner of the parish, on the bank of the Spey, is the mansion-house of *Arndilly*, occupying an eminence once the site of the church, the remains of which were removed to make way for the present residence, and the ancient glebe now forms part of the lawn before the mansion. It is situated in a recess of Benagen, nearly surrounded by wood, with the river in front, and commanding fine views. The only other mansion is *Auchlunkart*, a spacious residence in the midst of plantations, and enlivened by a pleasing brook; it has a colonnade and portico in the Grecian style, and a conservatory, attached to the southern portion, communicating with the drawing-room.

Ecclesiastically the parish is within the bounds of the presbytery of Aberlour, synod of Moray, and in the patronage of the Crown and the Earl of Fife; the minister's stipend is above £200, with a manse, built in 1811, and a glebe valued at £22. 10. per annum. The church and manse stand nearly in the centre of the parish, upon the boundary line of the old parish and the annexed portion of Dundurcus; the church was built in 1793, and accommodates 700 persons. The parochial, or grammar, school affords instruction in the usual branches; the master has a salary of £34. 4. 4., with a house, £17 fees, and a portion of the Dick bequest. Boharm has also a parochial library, and a savings' bank instituted in 1821. The castle to Bucharin, now Galval, supposed to have been built by the Freskyns, is the chief antiquity, forming a fine ruin, situated on an

eminence between the brooks Aldernie and Fiddich : silver spoons were found under the buildings some years since ; and lately, from beneath a stone in the floor of the oratory, a silver ring was taken up, on which was a small shield, with two martial figures. James Ferguson, the celebrated astronomer, received the rudiments of his education here ; he died in the year 1766.

BOINDIE, county of BANFF.—See BOYNDIE.

BOLE, a hamlet, in the parish of RESCOBIE, county of FORFAR ; containing 17 inhabitants.

BOLESKINE and ABERTARFF, a parish, in the county of INVERNESS ; containing the village and post-town of Fort-Augustus, 131 miles (N. W.) from Edin-burgh ; and comprising 1876 inhabitants. The name Boleskine has usually been traced to the Gaelic term *Bail-os-cionn*, which signifies "the town hanging above the loch" (Loch Ness). Another derivation, however, has been assigned to it, by which it is identified with the compound term *Boile-eas-ceann* ; *ceann* signifying "height" or "summit", *eas* "a cataract", and *boile* "fury", which, taken together, would mean "the summit of the furious cascade", viz., the fall of Foyers. The whole of the parish, previously to the fifteenth century, was the property of the Lovat family ; and at a still earlier period, it is supposed to have been possessed by the Cummius, a very powerful and warlike clan ; Fort-Augustus being still called, in the common language of the district, *Kilichuiman*, or "the burial-place of the Cummius". Strath-herric, a district of Boleskine, was anciently possessed by the clan Grant, the time and cause of whose departure are uncertain. Before the year 1545, the parish is said to have been occupied by the tribes of Mc Gruer, Mc Imesheir, and Mc Tavish, retainers of the Lovat family, and the principal of whom, having accompanied Lord Lovat in his expedition to settle the heir of the Clanronald family in his father's estate, were, in their return from the Hebrides, intercepted at the east end of Loch Lochy, by the clan Mc Donald, and almost extirpated. The numerous offspring descended from the Frasers killed in that engagement, in process of time spread throughout the parish ; and Foyers is now the seat of the representative of this ancient and powerful clan.

The PARISH is twenty-one miles long, and about ten broad, and its surface is considerably diversified throughout. The district of Strath-herric consists of flat lands, with a few undulations, near which is a great extent of hilly ground, and in the eastern quarter is a range of high hills, called Monadhliath : tracts of low land are to be seen in other parts, suited to the growth of oats, barley, and potatoes. Loch Ness, which is twenty-four miles long and about one mile and a half broad, bounds the parish on the north for fourteen miles. This lake, in the middle, is from 106 to 130 fathoms deep, and near the sides from sixty-five to seventy-five ; and, from its great depth, never freezes : the ground around rises to a considerable height, and is ornamented with a variety of trees. There are about twelve other lakes in the parish. In Abertarff are two streams that fall into Loch Ness, the Oich and the Tarff, which latter gives name to the district of Abertarff ; and there are two celebrated cascades in the parish, formed by the same river, within less than half a mile of each other, and known as the Fall of Foyers, the grandeur and magnificence of which, increased by the sublimity of the surrounding scenery, can

be adequately conceived by those only who have beheld the spectacle.

The soil exhibits all the varieties of gravel, clay, till, loam, and peat-moss, and is generally of a poor or middling character. The lands are mainly devoted to the rearing of sheep, of which about 30,000 are kept, all of the Cheviot breed ; and the wool is sold chiefly to wool-staplers in the north of England. The greater part of the district is without inclosures, but good farm-buildings have been erected on all the principal lands, where, also, good fences are to be seen. The rocks comprise blue and red granite, which exist in large quantities, and limestone is also plentiful, but not much wrought. The annual value of real property in the parish is £5887. There is a salmon-fishery, which lets for £30 a year. Annual fairs are held at Fort-Augustus, in the beginning of June and end of September, chiefly for the sale of cattle, but at which, also, some traffic is carried on by pedlers and others ; and occasional trysts for blaek-cattle take place in spring and autumn. The only turn-pike-road is the old military road, which runs for about twenty-two miles on the south side of the parish, and is kept in good order. There are three district roads, in indifferent repair ; and the Caledonian canal, which passes through the parish, opens up a communication by means of steam-packets and other vessels.

For ecclesiastical purposes the parish is within the bounds of the presbytery of Abertarff and synod of Glenelg ; the patronage is exercised by Professor Scott of Aberdeen, and the minister's stipend is £238. 2. 2. There is an excellent manse with offices, and the glebe comprises upwards of fifty-two acres, of which thirty-five are in good cultivation, and the remainder indifferent pasture. Till about seventy or eighty years since, there were two glebes in the united parish, one near Fort-Augustus, and the other on the banks of Loch Ness, both eligible and desirable tracts of laud, which were then exchanged for the present glebe. The church, conveniently situated for the bulk of the population, was built in 1777, and is a neat and well-finished building, seated for 560 persons. There is a missionary minister in connexion with the Established Church, who regularly officiates at Fort-Augustus ; and in the same district is a Roman Catholic chapel. The parochial school affords instruction in Latin, Gaelic, and the ordinary branches of education ; the master has a salary of £30, with about £13. 10. fees. At Fort-Augustus, also, is a school, supported by charity.—See FORT-AUGUSTUS.

BOLTON, a parish, in the county of HADDINGTON, 2 miles (S. by W.) from Haddington ; containing 341 inhabitants. This manor belonged to Hephurn of Bolton, who, as the associate of the Earl of Bothwell, was executed for the murder of the Earl of Darnley ; and on its consequent forfeiture, it was granted to William Maitland, better known as Secretary Lethington. The grant was confirmed to his kinsman the Earl of Lauderdale, in whose family the property continued till the Revolution, when it was sold to Sir Thomas Livingstone. In 1702 it passed by purchase into the noble family of Blantyre, its present proprietors ; as did also the adjoining property of Lethington, now called Lennoxlove. The parish, which is about six miles in length and one mile and a quarter in average breadth, is bounded on the east and north-east by the Gifford or

Bolton water, and comprises 3090 acres, of which 370 are woodland, 70 acres meadow and pasture, and the remainder arable. Its surface, though pleasingly undulated, possesses little other variety, seldom rising to any considerable elevation; the scenery is, however, greatly enriched with woods, in which are some remarkably fine trees. The chief stream is the Bolton water, which is the boundary between this parish and that of Haddington for nearly three miles. It rises in the Lammermoor hills, and, receiving various tributary streams in its descent, flows with a rapid current past the parish, and falls into the Tyne near Haddington. It adds greatly to the scenery, having banks crowned with thriving plantations, and abounds in trout of excellent quality. The Birns water, a small stream rising also in the Lammermoor hills, after forming a boundary between this parish and that of Hlumbe, falls into the Tyne at Salton. There are likewise various springs of good water, affording an abundant supply for domestic use.

The soil is generally a fertile clay, with the exception of a small portion of inferior quality. The principal crops are wheat, barley, oats, potatoes, and turnips; the lands are well drained and inclosed, and all the modern improvements in husbandry, and in agricultural implements, have been adopted. Great attention is paid to sheep and cattle, and to the cultivation of green crops, on which they are fed throughout the winter season. The annual value of real property in the parish is £3072. The woods consist of the various kinds of forest-trees, many of which are of ancient and stately growth; and in the grounds of Eaglescarnie are some remarkably fine chesnut-trees. In this parish the principal substrata are, sandstone of coarse texture, and greenstone of very compact quality, but no quarries have been opened; limestone is supposed to exist, but none has hitherto been worked. The only mansion-house is Eaglescarnie, pleasantly situated near the bank of the Bolton water, which enlivens the demesne; the lands are embellished with thriving and extensive plantations. The ancient manor-house of Bolton has long since disappeared, and the only remaining memorial of it is the site on which it stood, still called the Orchard Park. Ecclesiastically, Bolton is in the presbytery of Haddington and synod of Lothian and Tweeddale: the minister's stipend is £153. 15. 5., with a manse, and a glebe valued at £18 per annum; patron, Lord Blantyre. The church, erected in 1809, is a handsome structure in the later English style, with a square embattled tower, and is well adapted for a congregation of 350 persons. The parochial school affords instruction to about eighty scholars; the master has a salary of £34. 4. 4., with £40 fees, and a house and garden. There are some remains of a Roman camp, of quadrilateral form, occupying an area of more than five acres.

BON-ACCORD, for a time a quoad sacra parish, in the parish of OLD ABERDEEN, district and county of ABERDEEN; containing 5170 inhabitants. This district, which comprises about twenty-eight acres, and is wholly situated within the town of Old Aberdeen, was separated in 1834, and continued for some years a quoad sacra parish. The church was built in 1823, by a congregation of Scottish Baptists, from whom it was purchased in 1828, as a chapel of ease to the parish church, at an expense of £1250; it is a neat structure, containing 840 sittings. There are congregations of the Free Church

and Baptists; several Sabbath schools, and a library of 500 volumes.

BONAR, a village, in the parish of CRUECH, county of SUTHERLAND, 12 miles (W.) from Dornoch; containing 247 inhabitants. It is prettily seated on the northern shore of Dornoch Firth, at the junction of the Assynt, Reay, Caithness, and Ross-shire roads. Bonar has latterly rapidly increased from a small hamlet to a good-sized village, owing to the erection of a bridge, by which it has become the chief entrance into the county from the opposite shore; and it is likely to be the nucleus of a future town of considerable extent and importance. The bridge, called BONAR BRIDGE, is of one iron and two stone arches, and was built in 1812, by the landowners of the county, at a cost of about £14,000. Some trade is carried on with this village and neighbourhood by means of small vessels, for which there is a sufficient depth of water; and markets for the sale of cattle are held in July, August, and September.

BO'NESS.—See BORROWSTOUNNESS.

BONGATE, a village, in the parish and district of JEDBURGH, county of ROXBURGH; containing 241 inhabitants.

BONHILL, a parish, in the county of DUMBARTON, 3 miles (N.) from Dumbarton; containing, with the villages of Alexandria, Dalvait, Damhead, and Mill of Haldane, 6682 inhabitants, of whom 2041 are in the village of Bonhill. The name of this parish was originally written Buchnall, afterwards Bulhill, and at length Bunnul; and the original term is supposed to be a corruption of the Gaelic *Bogh n' uill*, which signifies "the foot of the rivulet". More recently, the parish was called Boneil or Buneil, probably from the Gaelic words signifying "the root or foot of the waters". As the south end of Loch Lomond enters and bisects the parish about halfway from the north-west corner of it, it may be, and is invariably, called the *foot* of it; and as the lake empties itself into the river Leven at the same end, it may, likewise, and with equal propriety, be called the *root*, or parent, of its waters. The whole lands formerly belonged to the family of Lennox, but in the fifteenth century the Darnley family obtained one-half of the estate, with the titles, by marriage, and the other half was afterwards divided between the families of Napier and Gleneagles; Darleith was the property of the Darleiths, who are said to have been hereditary followers of the Earls of Lennox. The castle of Belloch or Balloch, here, was the early seat of the Lennox family, whose charters are often dated hence in the thirteenth and fourteenth centuries; the site is still marked by the fosse, but no remains of the building are visible. The Lindsays, another family of note, also anciently resided in the parish; their ancestors were knights in the reign of David II., and they acquired the estate by grant from their relation, the Earl of Lennox, by whom, likewise, they were appointed foresters of the earldom. The male line failing soon after the Restoration, the estate passed to Sir James Smollett, provost, and representative in parliament, of Dumbarton, and afterwards a commissioner of the Union.

The PARISH is four miles and a half in length and four in breadth, and comprises 5752 acres, whereof 3056 are arable, 538 plantation, and the remainder uncultivated moor. The river Leven, which is remarkable for the softness and clearness of its water, issues from Loch Lomond

at Balloch, flows through the parish, and falls into the Firth of Clyde at Dumbarton Castle, after a circuitous course of about nine miles. The tide runs up it for about three miles, and it is navigable for lighters drawn by horses throughout its whole extent. It produces excellent salmon and a variety of other fish. In the vale of the Leven the soil is alluvial, and, where any excavations have been made, has been found to have under it, at different depths, and of different thicknesses, successive beds of fine sand, coarse gravel, and shell marl. The soil of the high grounds, on the east side of the vale to the extent of three-fourths, and on the west side of it to the extent of one-half, is incumbent on red sandstone, which is soft and porous, except at a great depth; the soil of the other half of the west side lies upon a bluish sandstone, susceptible of a fine polish, but brittle, and with indurated nodules of a purplish clay here and there embedded in it. The woods are famed for the number of woodcocks which visit them in winter, and the river and lake for a great variety of aquatic birds. The lands are all cultivated according to the most improved methods; and furrow-draining, and the subsoil plough, have been adopted with great advantage: the horses are of the Clydesdale breed, and the Ayrshire cows are kept for the dairy. The annual value of real property in the parish is £16,776. The mansions are, the House of Darleith, the ancient seat of Bonhill, the modern castles of Balloch and Tillichewen, and the houses of Broomly, Woodbank, Cameron, Belretiro, and Arden.

Bleachfields and print-works furnish the chief employment of the place, and since their establishment the population has rapidly increased. The parish long ago acquired celebrity for its bleaching processes, from the introduction of workmen from Holland, and the establishment of bleachfields on the Dutch method: the first print-field on the Leven was not begun till about the year 1768, and even then, the printing was almost entirely confined to handkerchiefs, and done by block-printing, but copperplate presses were soon erected, and afterwards presses to be driven by water. During the present century, the number of the works has much increased, and both departments are now simultaneously carried on in the same establishments. The works in operation are those of Dalmonach, Bonhill, Ferryfield, Levenfield, Levenbank, and Alexandria; those of Dallchip, Kirkland, and Milburn, for bleaching, dyeing, and printing; and Milburn works for producing pyroligneous acid, tar, pyroxilic spirit, kreosote, &c., at which works, also, a fine Prussian-blue is manufactured. At these various places, steam-engines and water-wheels are in operation, and the total number of persons employed is about 4000. A fair is held at Bonhill on the first Thursday in February, and another at Balloch on September 15th, both for horses.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Dumbarton, synod of Glasgow and Ayr. The minister's stipend is about £200, with a manse, and a glebe of the annual value of £30: the patronage is in the Campbell family of Stonefield. Bonhill church, a plain structure with a tower, was opened in 1836, and contains 1200 sittings: another church, on the General Assembly's Extension scheme, was opened in 1840; and the United Presbyterian Synod and the Independents have places of worship. A place

of worship has also been erected for the Free Church. In the churchyard of the parochial church is an ancient and gigantic ash-tree, which, in the agricultural survey of the shire, published in 1811, is said to measure round its trunk eighteen feet where smallest; it has long been the wonder and admiration of the beholder, but is now going rapidly to decay. Until lately there was another ash in the parish, of still larger dimensions, in the trunk of which a room was formed, nine feet in diameter. Two parochial schools are supported, the master of each of which has a salary of £21. 7., with about £15 fees, and a house and garden. There is a mechanics' institution in the parish.

BONJEDWARD, a village, in the parish and district of JEDBURGH, county of ROXBURGH, containing 107 inhabitants. This was formerly one of the seats of the Douglas family, who had a stronghold in the village, which was demolished in the course of the last century. The village is pleasantly situated, and the lands are fertile and in good cultivation; there are some corn-mills here, and the inhabitants are chiefly employed in agriculture.

BONKLE, a village, in the parish of CAMBUSNETHAN, Middle ward of the county of LANARK; containing 110 inhabitants. It is a small romantic village, situated on the northern boundary of the parish, and on the road from Stuart-Town to Shotts. The United Presbyterian Synod have a place of worship here.

BONNINGTON, a village, in the parish of RATHO, county of EDINBURGH, $1\frac{1}{2}$ mile (S. W.) from Ratho; containing 132 inhabitants. It is situated east of the Amond water, and a short distance north of the road between Edinburgh and East Calder. Ratho House, a modern mansion, is in the vicinity. In the village is a small school.

BONNINGTON, a hamlet, in the parish of ARBIRLOT, county of FORFAR; containing 67 inhabitants.

BONNYBRIDGE, a village, in the parish of FALKIRK, county of STIRLING, 4 miles (W. S. W.) from Falkirk; containing 184 inhabitants. This village is pleasantly situated on the turnpike-road to Glasgow, and on the eastern bank of the river Bonny, which separates the western portion of the parish from the parishes of Denny and Dunipace. The inhabitants are chiefly employed in agriculture, and in the various works in the neighbourhood. At Bonnymuir, in the immediate vicinity, is a distillery, in which about twelve persons are regularly engaged, and which, on an average, pays government duties amounting to £150 weekly; and at Bonny-side is a saw-mill, driven by water, where fourteen persons are employed. A school has been established here, the master of which receives a salary of £4, arising from a bequest of £100 by Mr. Scott; he has also a house and garden rent-free. In the neighbourhood of Bonnybridge is a small burying-place.

BONNYRIGG, a village, in the parish of COCKPEN, county of EDINBURGH, 3 miles (N. W.) from Cockpen; containing 650 inhabitants. It is a considerable village, situated on the road between Lasswade and Cockpen, in the northern part of the parish; and in the vicinity are extensive coal-works. A school has been established here.

BOOSHALA or BUACHAILLE ISLE, in the parish of KILNINIAN, county of ARGYLL. It is one of the Hebrides, and lies south of Staffa, from which island it

is separated by a stormy channel about ninety feet wide. The isle is of an irregular pyramidal form, entirely composed of basaltic pillars, inclining in every direction.— See KILNINIAN, and STAFFA.

BORA HOLM ISLE, in the parish of RENDAL, county of ORKNEY. It is situated opposite to the entrance of a harbour called the Mill-Burn, in the isle of Gairsay, and is uninhabited.

BORELAND, a village, in the parish of DYSART, district of KIRKCALDY, county of FIFE, $\frac{1}{2}$ a mile (N. by E.) from Dysart; containing 193 inhabitants. This place, which is situated about half a mile south-east of the village of Gallaton, was built about the middle of the last century, and is chiefly inhabited by persons employed in the collieries in the neighbourhood, which were formerly carried on to a much greater extent than they are at present. Since the limitation of those works, within the last twenty or thirty years, the population of the village has diminished from more than 300 to its present number. A school has been endowed, the master of which has a salary, a schoolroom and dwelling-house rent-free, and a supply of coal.

BORERAY, an island, in the quoad sacra parish of TRUMISGARRY, island of NORTH UIST, county of INVERNESS; containing 181 inhabitants. It lies a little south of North Uist, and west of Bernera, in the Sound of Harris; and is about three miles in circumference, and rather fertile, with a fresh-water lake. A considerable quantity of kelp is made, the manufacture forming the chief employment of the population.

BORGUE, a parish, in the stewartry of KIRKCUDBRIGHT, 5 miles (S. W. by W.) from Kirkcudbright; containing, with the villages of Chapelton and Kirk-Andrews, 1060 inhabitants, of whom 47 are in the village of Borgue. This place, the name of which is descriptive of the eminence whereon the church is built, comprehends the ancient parishes of Kirk-Andrews and Sandwick, which, after the dilapidation of their churches, now in ruins, were united with it in 1670. The parish is situated on the river Dee, and bounded by the Solway Firth. It is about ten miles in length and seven miles in extreme breadth, and comprises 12,864 acres, of which about 8000 are arable, about 250 woodland and plantations, and the remainder rough pasture. The surface of the parish is undulated, and diversified with hills of moderate elevation. The coast is indented with numerous bays, and is bold and rocky, and in some parts precipitously steep, rising in cliffs of irregular and fantastic form towards the heads called Borness and Muncraig. These heads command an extensive view, embracing a wide expanse of sea, with a beautiful variety of vale and mountain scenery, including the course of the river Dee, the town of Kirkcudbright, the rich foliage of St. Mary's Island, the range of the Cumberland mountains, the Isle of Man, and the coast of Wigtown. The more level parts of the parish, inclosed by numerous gentle hills, formed several small lakes, which have been drained, though enough are still remaining to afford an abundant supply of water; and scattered over the surface are not less than thirty mounds, called drums, from 200 to 300 yards in length, the grounds around which are wet and marshy.

The soil is what is called free mould, of various quality, well adapted for oats and barley, but not of sufficient depth for wheat: the chief crops are oats, barley,

potatoes, and turnips, with the various grasses; and the system of agriculture is improved. A considerable quantity of waste land has been rendered profitable by effective draining. The fences, mostly of stone, are kept in good repair, and the farm-buildings and offices are generally substantial and commodious. Bone-dust is used for manure, and the soil has been benefited by the judicious use of lime, by which much of the moss has been converted into good pasture land. The cattle are principally of the Galloway breed, and the sheep of the Leicester and Cheviot breeds. The annual value of real property in the parish is £9554. The rocks are mainly of the transition formation, and the principal substrata, greywacke, slate, and clay-slate; there are some quarries of stone, from which materials are raised for the fences and for common building purposes. The plantations are comparatively of modern growth; they are well managed, and in a thriving state. Earlston is a handsome mansion in the parish, beautifully situated in a richly-wooded demesne, commanding a fine view of Wigtown bay and the Cumberland mountains.

The village population is agricultural and pastoral; and from the proximity of a convenient harbour, one of the farmers has built two vessels, for the exportation of grain. Salmon is found in great abundance in the river Dee, and also in the bays with which the southwestern coast of the parish is indented. Ecclesiastically, Borgue is within the bounds of the presbytery of Kirkcudbright and synod of Galloway: the minister's stipend is about £265, with a manse, and the glebe, including those of Kirk-Andrews and Sandwick, is valued at £40 per annum; patron, the Crown. The church, conveniently situated nearly in the centre of the parish, is an elegant cruciform structure in the early English style, with a lofty square embattled tower, erected in 1814, and containing 500 sittings: from its elevated site, it forms a conspicuous object, and is seen at a great distance. There is a place of worship for members of the Free Church. The Borgue Academy is an extension of the parochial school, under the endowment of Mr. Rainy, of the island of Dominica, who bequeathed £3000 for the promotion of education in his native parish. It is under the management of a head master, who has a salary of £34. 4. 4. in addition to the fees, and an assistant, whose salary is paid from the endowment. The usual number of scholars is 120, of whom twenty are taught gratuitously, their fees being paid from the same bequest. The poor are partly supported from Mr. Rainy's endowment, and the proceeds of small charitable bequests. There are some slight remains of ancient castles, several British forts, and various other relics of antiquity, in the parish.

BORLAND-PARK, a village, in the parish of AUCHTERARDER, county of PERTH, $\frac{1}{2}$ a mile (N. W.) from Auchterarder; containing 141 inhabitants. This village was built by government, for the accommodation of the disbanded military, after the conclusion of the war, in 1763; but was soon deserted by the soldiers for whose residence it was originally designed. It is now inhabited chiefly by weavers, employed by the manufacturers of Glasgow.

BORROWSTOUN, a village, in the parish of BORROWSTOUNNESS, county of LINLITHGOW, $\frac{3}{4}$ of a mile (S.) from the town of Borrowstounness; containing 60 inhabitants.

BORROWSTOUNNESS, a sea-port town, burgh of barony, and parish, in the county of LINLITHGOW, 3 miles (N.) from Linlithgow; containing, with the villages of Borrowstoun and Newton, 2347 inhabitants, of whom 1790 are in the town. This place appears to have originated in the erection of some buildings on a *ness*, or a point of land, boldly projecting into the Firth of Forth, about three-quarters of a mile to the north of the small village of Burwardstown, or Borrowstoun; from which circumstance it derived its name, Borrowstounness, or, by contraction, Bo'ness. In 1600, there was only one solitary house on the site of the present town, while the ancient town of Kinneil, which had grown up near the baronial castle of Kinneil, contained more than 500 inhabitants; but the advantageous situation of the ness, and the abundance of coal in the immediate vicinity, soon attracted shipping to its port; and the prosperous state of trade about the commencement of the seventeenth century, induced many rich merchants and ship-owners to settle in the town, which from that time rapidly advanced. In 1634, the increase of its population, and the distance of the parish church of Kinneil, situated near the baronial mansion, induced the inhabitants to erect a church for themselves, in which the minister of Kinneil continued to officiate alternately, for their accommodation, till the year 1649, when, on their petition to parliament, the town of Borrowstounness, with its environs, was separated from the parish of Kinneil, and erected into an independent parish. In 1669, the Duke of Hamilton obtained from the Scottish parliament an act declaring the church of this town the parish church of the whole barony of Kinneil and Borrowstounness, since which time the two have been consolidated into one parish. The place continued to increase in prosperity, and, from the superiority of its situation for trade, to withdraw the population from Kinneil, which in 1691 contained only a few families, and now has wholly disappeared: in 1748 the town upon the ness was erected into a burgh of barony, under the Duke of Hamilton. Kinneil was the head of the barony of that name, granted by Robert Bruce to the ancestor of the Dukes of Hamilton, in acknowledgment of his services on the field of Bannockburn.

The town is situated in the north-eastern extremity of the parish, on the south shore of the Firth of Forth, and consists principally of narrow streets, of houses of ancient and irregular appearance. It was formerly one of the most thriving towns on the eastern coast, ranking, prior to 1780, as the third sea-port in Scotland; and though the opening of the Forth and Clyde canal, and the establishment of the port of Grangemouth, have contributed much to diminish its commerce, it is still far from being inconsiderable. The female population were once employed in tambour-work to a very large extent, and many females are yet engaged in that pursuit. A pottery was established in 1784, and has since that time been greatly increased. There is an extensive foundry, and chemical works are carried on upon a large scale. A distillery is in full operation, paying weekly to government more than £300 for duties. There are several large malting establishments; and at the east end of the town, and on the links, are a rope-walk and extensive wood-yards, connected with which is a saw-mill worked by steam, the engine of which is also employed in the preparation of bone-dust for manure.

The chief trade of the port is in grain, for which the merchants have extensive granaries, capable of warehousing 15,000 quarters; a considerable trade is also carried on in the exportation of salt, coal, ironstone, and earthenware: the imports are principally timber, iron, flax, grain, bark, and madder. The number of vessels registered as belonging to the port, in a late year, was 101, of the aggregate burthen of 6521 tons; and the amount of duties paid at the custom-house was £4824. The harbour, which has been greatly improved, under the superintendence of fifteen trustees, chosen from the merchants and ship-owners, is one of the safest and most accessible on this part of the coast, and is formed by two piers, extending 568 feet into the Firth. It is 240 feet wide, and at spring tides has an average depth of from sixteen to eighteen feet. Between the piers a broad wall has been constructed, cutting off, towards the land, a basin, which is filled with water by the tide, and at low water emptied by sluices, by which means the harbour is cleansed and deepened; and on the west side of the basin is a patent-slip, to which vessels are admitted for repair. There were once eight ships belonging to the place employed in the whale-fishery, but that trade has for some years been decreasing, and at present only one vessel is engaged in it; there are two boiling-houses for extracting the oil, one of which has been lately much improved. The Stirling steamers touch here on their passage to and from Edinburgh. A branch from the town to the Forth and Clyde canal was commenced by a subscription of £10,000, raised under an act of parliament, in 1782, and an aqueduct across the Avon was constructed for that purpose; but the work was abandoned after an outlay of £7500, before it was half completed, and has not since been resumed. In 1846 a railway act was passed for the purpose of connecting Borrowstounness with the Edinburgh and Glasgow railway and the Slamannan railway. A market is held weekly on Monday, and a fair annually on the 16th of November; a pleasure fair is also held, in July. The burgh is governed by a baron-bailie, appointed by the Duke of Hamilton as superior: a building erected by one of the dukes, for a court-house and prison, is now occupied chiefly as a granary; it is situated at the head of the harbour, and forms a conspicuous object.

The PARISH is bounded on the north by the Firth of Forth, and on the south and west by the river Avon. It is of triangular form, about four miles in length from east to west, and two miles in breadth, comprising about 3000 acres, of which 270 are woodland and plantations, and the remainder arable in the highest state of cultivation, of which 430 acres are esteemed to be the richest carse land in the country. The surface, with the exception of the carse, is much varied, rising towards the south-eastern extremity of the parish, to a height of 520 feet above the level of the sea. From this eminence, which is called the Hill of Irongath, the ground slopes gradually to the south and west, and is embellished with stately timber and strips of planting, to the wooded banks of the Avon. This river, from its numerous windings at the west end of the parish, forms an interesting feature in the scenery, from many points of view; and the Dean and Gil burns, flowing through romantic dells near Kinneil House, add greatly to its beauty. The soil is mostly fertile, and the chief crops are wheat, barley, oats, beans, and the usual green crops: the sys-

tem of agriculture is good ; draining has been practised to a considerable extent, and all the more recent improvements in husbandry have been generally adopted. The annual value of real property in the parish is £8369. The substratum is of the coal formation, with very little variety : the coal occurs in seams of great thickness, and is of excellent quality ; ironstone is likewise found, and very extensive iron-works have been erected within the last few years. There are some quarries of good freestone, and also of whinstone and limestone, but the limestone is of inferior quality, and more used for building than for agricultural purposes. *Kinneil House*, one of the seats of the Duke of Hamilton, is an ancient mansion, beautifully situated on the brow of a steep bank, commanding a fine view of the Firth, and has undergone various changes at different times. The ancient castle has been modernised by a new front, and the battlements replaced by a balustrade ; the original windows have been enlarged, and a wing projecting at right angles from the northern extremity has been added : a corresponding wing on the south was probably contemplated, the whole to form three sides of a quadrangle. The approach is by a stately avenue of venerable trees, and the ample and richly-varied demesne by which the mansion is surrounded abounds with beautifully picturesque scenery. The numerous apartments of this once princely house are now unoccupied ; and among the tenants who have resided in it, since it was deserted by its noble proprietors, have been the celebrated Dugald Stewart, and James Watt, the improver of the steam-engine.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Linlithgow, synod of Lothian and Tweeddale ; patron, the Duke of Hamilton : the minister's stipend is about £270, partly arising from lands bequeathed for that purpose ; with a manse, and a glebe valued at £21 per annum. The church, nearly rebuilt in 1775, and enlarged in 1820, is a neat plain structure containing 950 sittings. There are still some remains of the ancient church of Kinneil, near Kinneil House. A place of worship is maintained in connexion with the United Presbyterian Synod. The parochial school is attended by about fifty children ; the master has a salary of £34. 4. 4., with a house and garden, and the fees average about £40 per annum. A parochial library, in which is a collection of about 1250 volumes, is supported by subscription. In various parts of the parish are traces of the wall of Antoninus, which is supposed to have extended originally to Kinneil, and afterwards to Carriden. Near the farm of Upper Kinneil was a cairn called the Laughing Hill, in which were found four stone coffins containing black mould, and four urns, in an inverted position, containing human bones. A similar coffin and urn were found in the side of an eminence called Bell's Know, immediately above the town of Borrowstounness. Below Kinneil House, upon the coast, and near the lands called the Snab, was the castle of Lyon, of which some remains of the garden wall, and a path leading from it to the shore, called the Castle-Loan, are the only memorials.

BORTHWICK, a parish, in the county of EDINBURGH, 3 miles (E. by N.) from Temple ; containing, with the villages of Clayhouse, Dewartown, Middleton, North Middleton, Newlandrig, and part of Stobbsmills, 1617 inhabitants. This place, anciently called Lochewart, assumed the appellation of Borthwick about the

time of the Reformation, from the family of that name. The most remote possessors of the extensive estates in this district of whom we have any account, were the family of Lyne, who occupied the domain till the reign of Alexander II., when it passed to the Hays, who in the time of James I. disposed of the lands to Sir William de Borthwick, founder of the magnificent castle afterwards so celebrated in Scottish history. This personage was created Lord Borthwick in 1433 ; and the castle thus became the seat of a barony, and, by a special license obtained from the king, was fortified in a very complete manner, and supplied with every thing necessary for its safety and defence. The descendants of this baron were illustrious for the general character of integrity and honour which they sustained, and for the part they took in the public transactions of their times. William, the third lord, was slain, with James IV., at the fatal battle of Flodden. John, the fifth lord, was a zealous supporter of Queen Mary, who occasionally visited his castle, and made it an asylum, before the commencement of her long series of troubles. John, the eighth lord, in the time of the civil wars, strenuously supported the cause of the Royalists, and, being besieged in his castle by Cromwell after the execution of the king, was obliged at length to surrender. In 1449, the ecclesiastical revenues of the parish were appropriated to the collegiate church of Crichton. But in April 1596, James I. of England dissolved from that establishment several prebendaries, with two boys or clerks to assist in the performance of divine service here, assigning to them proper salaries ; and these prebends, with the vicarage of Borthwick, manse, and glebe, were then by royal charter erected into a distinct charge, called the parsonage of Borthwick. This arrangement was ratified by parliament, in 1606, and confirmed by the Archbishop of St. Andrew's as patron of the prebends.

The PARISH is about six miles long and four miles broad, and contains about 21,000 acres, of which 19,100 are in tillage or pasture, 700 in plantations, and 1200 are uncultivated. The surface is of an undulated character, presenting an agreeable succession of eminences, most of which are well cultivated ; and these, as well as the low grounds, are in many cases sheltered and ornamented with thriving plantations. The rising grounds are intersected by a number of picturesque and beautiful valleys, watered by winding streams. The south-east corner of the parish lies high, and strikes the traveller from the south as bleak ; but as he proceeds a short distance on the road to Edinburgh, and obtains a view of the rich and wide valley of Mid-Lothian, of which Borthwick at this point is the entrance, the character of the landscape rapidly improves, and presents, if not a rich, at least a romantic and agreeable aspect. From the summit of Cowbrae Hill, at the upper boundary of the parish, an extensive prospect may be obtained of the surrounding country, well repaying the labour of ascending the eminence. In the proper seasons, the great profusion of plants and flowers, especially of wild roses, for which Borthwick is famed, makes it alike inviting to the admirer of garden scenery and the lover of botanical research. Two burns traverse the higher part of the parish, called the North and South Middleton, which, after their junction at the end of the neck of land on which the castle is situated, take the

name of the Gore, and at length, winding through the whole extent of the valley, fall into the South Esk at Shank Point.

The SOIL is various, being in some parts a fine light mould, and in others loamy, and approaching to heavy clayey earth: in the vicinity of the streams the alluvial land is subject to occasional inundations. All kinds of grain are raised, with the usual green crops; and the lands are plentifully manured with farm-yard dung, lime, and bone-dust: the farms are in general in a high state of cultivation. The cattle bred here are the short-horned, and the sheep principally the black-faced and the Cheviot, although a cross between the Leicester and the Cheviot has been preferred on some of the large estates. A long barren moor at the base of the Lammermoors, with other ground of the same description, has to a considerable extent been cultivated; and the river localities, with several low swamps, have been cleared of their wild wood, and intersccted with drains; improvements that have greatly added to the value of the land. The annual value of real property in the parish is £6837. The rocks consist chiefly of grey-wacke, limestone, and sandstone; of the first kind are the Lammermoor hills, on the southern boundary of the parish, and the substance of Cowbrae Hill is the same. On the abrupt borders of Currie Wood, a coarse-grained reddish sandstone is found, in layers, interlined with some lighter-coloured varieties of the same rock. The sandstone hitherto discovered in the parish contains a strong admixture of calcareous matter, which greatly deteriorates its value as a building material; but the district contains very superior limestone and coal, which are wrought extensively, and sent to Edinburgh and some of the southern towns of Scotland. Lime-burning is regularly carried on, and large quantities of lime are used for agricultural purposes. Great facilities of intercourse are afforded by the Edinburgh and Hawick railway, which has a station near Fushie-Bridge, in the parish.

Among the chief mansions is the *House of Arniston*, an extensive and majestic structure of baronial appearance, ornamented by numerous ancient trees of unusual size, with rich plantations, and finely laid-out grounds, watered by the beautiful stream of the South Esk. Most of its old wood is supposed to have been planted by the first baron of Arniston, Sir James Dundas, who was knighted by James V. about the year 1530. *Middleton House*, situated in the higher part of the parish, is in a similar style, but of smaller dimensions; it stands in the midst of thick woods and verdant fields, and is surrounded by grounds that are much admired. *Currie House* was formed about thirty or forty years ago, by enlarging and improving a house upon the property. In the vicinity is Currie Wood, the prospects from which comprise almost every object the union of which may be conceived necessary to constitute a landscape of finished and perfect beauty. *Vorgie House* is a narrow long building, with little pretension to architectural taste; but the adjacent grounds are rich, consisting of romantic glens, ornamented with many fine and majestic trees. *Harvieston House*, in its external appearance, is somewhat similar to that of Vorgie; it was originally of exceedingly plain appearance, but some additions were judiciously made to it a few years ago, and the lands around it have been greatly improved.

FOR ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Dalkeith, synod of Lothian and Tweeddale; the Dundas family are patrons, and the stipend of the minister is £198. 12. 3., with a manse, and a glebe of fourteen acres. The church was built in 1780, on the destruction of the ancient edifice by fire, and contains about 450 sittings. There is a parochial school, in which the usual branches of education are taught; the master has the maximum salary, with £40 fees, and the legal accommodation of house and garden. Another school is endowed with a bequest of £3. 17. per annum, the teacher deriving the rest of his income from the scholars. The ancient castle of Borthwick, the chief relic of antiquity in the parish, consists of a single tower, having an embattled wall of hewn stone, thirteen feet in thickness near the base, but contracting gradually to about six feet towards the top. The proportions of the building, without the walls, are seventy-four feet by sixty-eight, and about 110 feet from the area to the highest part of the roof. It has a sunk apartment, above which are two large halls, one over the other, the lower of which is ample, elegant, and finely formed, and has a roof ornamented with numerous antique devices. There are also two flights of bedrooms, and various other internal and external appendages, constituting the castle one of the most striking buildings of the class in Scotland. It is beautifully situated, and is famous in history for the visits and residence of the unfortunate Queen Mary, while Bothwell was lord of the neighbouring castle of Crichton. The eminent historian, Dr. Robertson, was born in the manse, where he received the earliest part of his education.

BOSTON, for a time a quoad sacra parish, in the parish of DUNSE, county of BERWICK; containing 1223 inhabitants. This parish formed part of the town of Dunse, and derived its name from Thomas Boston, a theological writer, who was born in Dunse parish in 1676. It was separated in the year 1839, on the erection of a church, and was in the presbytery of Dunse, synod of Merse and Teviotdale; the minister was elected by the managers and male communicants. The children of Boston are eligible to the parochial school of Dunse.

BOSWELL'S, ST., a parish, in the district of MELROSE, county of ROXBURGH, 4 miles (S. E.) from Melrose; containing, with the village of Lessudden, 747 inhabitants. This place derives its name from its church, which is supposed to have been first founded by St. Boswell, abbot of Melrose, whose disciple, St. Cuthbert, flourished in the ninth century; and traces of the ancient village of St. Boswell's are still occasionally discovered by the plough. Few historical events are recorded; the principal one is the burning of the village by the English of the border, in 1544, when many of the inhabitants were killed, and the lands laid waste: at that time the village is said to have contained many fortified houses. The parish is situated on the river Tweed, which forms its eastern and northern boundary, for two miles; and is about three miles in length, and one mile and a half in breadth, comprising an area of four and a half square miles. Its surface is uneven, rising in the upper portion in ridgy undulations, with intervening valleys, but towards the river being more level. The lower grounds are watered by numerous springs, and by a rivulet called St. Boswell's burn,

which in its course towards the Tweed is augmented by several tributary rills. The scenery is generally of pleasing character. Adjoining the village of Lessudden is an elevated ridge, from which is obtained a fine view of the old abbey of Dryburgh, shaded by venerable woods, and nearly surrounded by the windings of the Tweed; and of the remains of Lessudden Place, an ancient fortress, the property of the Scotts of Raeburn, forming an exceedingly interesting feature in the landscape.

The lands, with the exception of about thirty acres on the steep banks of the river, nearly 180 acres of woodland, and about forty acres of common called St. Boswell's Green, are all arable, and about 2300 acres are under cultivation. The soil, for the greater part, is a stiff clay; in the neighbourhood of Lessudden, a black loam; and in other parts alluvial. The system of agriculture is good, and considerable improvements have been made in draining the lands, and in the formation of plantations; the soil is well adapted to the growth of forest-timber of every kind, and on the lands of Ellieston are some of the most flourishing larch-trees in the kingdom. Lime is to be obtained only from a great distance, and bone-dust has been substituted, which has been found to succeed well for turnips. Some progress has been made in embankments against the inundations of the Tweed, and two have been completed to a considerable extent on the farms of Fens and St. Boswell's. The annual value of real property in the parish is £3800. There are quarries of red sandstone, which is of good quality for building, and in some places appears resting on a seam of whitish-coloured stone of great hardness, strongly impregnated with pyrites of iron: coal is supposed to exist, but no attempts to procure it have been attended with success. Great facility of intercourse is afforded by the Edinburgh and Hawick railway, which intersects the parish. To the north of the Green, a very handsome hunting establishment has been erected by the Duke of Buccleuch. A fair is held on the Green on the 18th of July, or the following Monday, if the 18th happen on a Sunday: it is a very extensive market for sheep and lambs, cattle, and horses, the sales which annually take place averaging from £8000 to £10,000; it is also frequented by a great concourse of people from all parts, for the purchase and sale of Scotch and Irish linens, hardware, books, toys, and other articles.

For ecclesiastical purposes the parish is within the bounds of the presbytery of Selkirk, synod of Merse and Teviotdale; patron, the Duke of Buccleuch. The stipend of the incumbent is about £212; the manse, built in 1791, was substantially repaired in 1811, and the glebe comprises seven acres of excellent land. St. Boswell's church, situated at the eastern extremity of the parish, was built near the site of a more ancient structure which had fallen into decay, and probably about the year 1652; it was enlarged and thoroughly repaired in 1837, and affords accommodation to 430 persons. A place of worship has been erected in connexion with the Free Church. The parochial school affords education to a considerable number of scholars.

BOTHKENNAR, a parish, in the county of STIRLING, 3 miles (N. by E.) from Falkirk; containing, with part of the village of Carronshore, about 1000 inhabitants: according to the census of 1841, the population was only 848, but since that time a coal-work on the

property of the Earl of Zetland has been brought into operation, at which a great number of men are employed. Bothkennar is bounded on the east by the Firth of Forth, and on the south by the river Carron; forming part of the tract called the Carse of Falkirk. It is about one mile and a half in length, and of nearly the same breadth, comprising about 1560 acres, the whole under tillage. The surface is entirely level; and the soil, under which, at various depths, are found layers of marine shells, is a very rich alluvial loam, highly cultivated according to the most improved methods of husbandry, and producing all kinds of crops, but wheat and beans in the largest proportions, with hay of a superior quality, which is sent for sale to the Edinburgh market. There are numerous orchards, some of which are supposed to have been planted by the monks of Cambuskenneth; they yield various kinds of fruit, but especially very fine pears, of which the trees bearing an indigenous species called the "golden nap" are particularly celebrated for their luxuriance and beauty, and sometimes produce each, yearly, fruit to the amount in value of £10. The whole of the lands, with very few exceptions, have been improved by tile-draining, the benefit of which has been so extensive as to pay the farmer in two years for the outlay. Great attention is given to the rearing of horses of a superior kind for the uses of husbandry. The annual value of real property in the parish is £4299. Coal of excellent quality is abundant, and has for a number of years been wrought by the Carron Company, who pay £1000 per annum to the proprietors for this privilege: within the last few years, as already observed, a new coal-work has been brought into operation. Ecclesiastically the parish is in the presbytery of Stirling, synod of Perth and Stirling, and in the patronage of John Dallas, R.N.; the minister's stipend is £201. 12. 10., with a manse, built in 1816 at a cost of £1600, and a glebe valued at £12 per annum. The church was built in 1789; it has since undergone considerable repairs, and is a plain comfortable edifice, suited to the accommodation of the parishioners. The parochial school affords instruction in English grammar, arithmetic, writing, geography, mathematics, Latin, and Greek; the master has a salary of £34. 4. 4., with £25 fees.

BOTHWELL, a parish, in the Middle ward of the county of LANARK; including the villages of Bellshill, Bothwell, Chapelhall, Holytown, Newarthill, and Udington; and containing 11,175 inhabitants, of whom 570 are in the village of Bothwell, 8 miles (S. E.) from Glasgow. The name is supposed by some to be derived from *Both*, an eminence, and *wall*, a castle; terms applied to the parish from the elevated situation of Bothwell Castle above the river Clyde. Others derive the appellation from two Celtic words, *Both*, signifying a dwelling, and *ael* or *hyl*, a river, as descriptive of the castle in its contiguity to the river. This extensive barony, in the reign of Alexander I., was held by Walter Olifard, justiciary of Lothian, who died in 1242. It afterwards came into the possession of the distinguished family of Moray, consisting at that date of a tower and fortalice, with their appurtenances, and of lands in various districts, constituting a lordship. In the time of Edward I. of England, it became a place of great importance, and it appears that that monarch resided in the castle from the 17th to 20th September, 1301. In this reign, also,

it was the residence of Aylmer de Valence, Earl of Pembroke, who fled hither from Loudon Hill, where he had been defeated by Wallace, in 1307, and who in 1309 was made governor of the castles of Selkirk and Bothwell. At the time of the battle of Bannockburn, Sir Walter Fitzgilbert, ancestor of the Hamilton family, was governor; and after the death of Bruce, when Edward III. invaded Scotland, in 1336, the king was at the castle from the 18th November till the 13th December, in the course of which time fifteen writs were issued thence in his name. It came at length to the Earl of Bothwell, from whom it descended to Archibald the *Grim*, Earl of Douglas; and after passing through many other hands, it reverted to the ancient family of Douglas in 1715. The collegiate church of Bothwell was founded for a provost and eight prebendaries on the 10th October, 1398, in the reign of Robert II., by the first Earl of Douglas, and was richly endowed. Most of the superiorities, with part of the property, and all the tithes, now belong to the Duke of Hamilton. Bothwell-Bridge, in the southern part of the parish, is celebrated in history for the battle fought there, in 1679, between the Covenanters and the Duke of Monmouth; and at a little distance is Bothwell-Haugh, formerly the property of James Hamilton, who shot the regent Murray, for confiscating a part of his estate, and the barbarous treatment of his wife, on account of his having espoused the cause of Mary, Queen of Scots.

The PARISH is about eight miles and a half in extreme length, and varies in breadth from two to four miles, containing 13,600 acres. It is bounded on the north and west by the North Calder, and on the south by the South Calder and the river Clyde. The parish is comprehended by the elevated ground running along the north-eastern bank of the Clyde from Lanark to near Glasgow, which range, however, recedes from the river in traversing this district, and leaves an intermediate plain, till it again inclines to the stream in the neighbourhood of Bothwell-Bridge. Near this it forms a piece of table-land about one mile in extent, running westward, at the head of which are situated the church and village, about 120 feet above the level of the sea, and commanding to the east a beautiful view of the vale of Clyde. From the eastern boundary of the parish, the land falls rapidly to a distance of nearly four miles, after which a flat of about equal length succeeds, declining southward towards the Calder and the Clyde; and the western extremity of this tract sinks gradually into the extensive plain on which Glasgow is situated. The Clyde, the chief river, enters the parish at Bothwell-Haugh, and forms a majestic stream, the banks of which are famed for their diversified and picturesque scenery; it is 120 yards broad at Blantyre-Works, but at Bothwell-Bridge contracts itself to a span of seventy-one yards. The North and South Calder, after running separately for about fifteen miles, form each a confluence with the Clyde; they flow between banks of sandstone rock, beautifully abrupt in many parts, and affording well-wooded and romantic scenery. Of these rivers, the Clyde was formerly celebrated for the abundance of its salmon, but it has now greatly fallen off in this respect, very few fish comparatively visiting it, a circumstance owing to many causes, one of which is said to be the impediment presented to their progress by the dam over the river between Blantyre Mill and Bothwell.

The prevailing SOIL is clay, resting upon a tilly sub-soil, and frequently, and in various proportions, mixed with loam and sand. In some places the soil consists of fine light mould, and in the vicinity of the rivers is a fertile alluvial deposit. The whole land is productive, with small exceptions of moss and moor: two-fifths are in pasture, and grain of all kinds, and of good quality, is raised; potatoes, turnips, peas, &c., are also cultivated, with some flax, though this last is not grown so largely as formerly. Considerable attention is given to dairy-farming, there being no less than 1000 cows kept, most of which are native varieties of the Ayrshire breed. The horses are in general likewise of a good stock. The annual value of real property in the parish is £35,207. The predominating rock is the red sandstone, which lies over the whole coal-bed in this district, at a distance of twenty or thirty fathoms above the coal; it is bright in colour, and, though sometimes soft and friable, generally well adapted for building. There are several quarries of good freestone of a red colour near the Clyde, and in the upper parts of the parish white freestone is found. Coal abounds in every direction, and the mineral is chiefly procured from four large seams, extending throughout the parish, in which the Ell-coal, Pyotshaw, main, and splint coal succeed each other, the last being best suited for the smelting of iron. The average amount of coal obtained is estimated in value at £80,000 annually, and of ironstone, £20,000: the annual rentals paid to the proprietors by the several tacksmen of the collieries amount to £9500, and the rentals of the ironstone to £2500. The principal manufactures in the parish are of pig-iron and steel, the former of which is produced at the Monkland Company's works at Chapelhall, to a great extent: in the same establishment are mills and forges in which 400 tons of malleable iron are manufactured weekly; about 100 tons of steel are manufactured annually, thirty tons of which are made into files, and upwards of 2400 persons, including miners, are employed at the works. Other similar works are carried on in the parish. Post-offices are established at Bothwell, Bellshill, and Holytown; and the lines of the Caledonian railway company afford great facilities of intercourse.

The chief mansion is *Bothwell Castle*, a simple yet commodious residence, built of the same red sandstone as the old castle, and consisting of an extensive front and two wings; the apartments are ornamented with several excellent portraits. The grounds are elegantly laid out, and the neighbouring scenery, comprising the waters of the Clyde and its picturesque banks, is ennobled by the ancient and venerable ruin of the castle, in which the chief of the English nobility were confined after the battle of Bannockburn. *Woodhall*, on the bank of the North Calder, is a spacious mansion in the style of the age of Louis XIV.; valuable pictures adorn some of the apartments, and the entrance-hall contains several French cuirasses and helmets of brass, brought from the field of Waterloo. The mansions of Cairnbroe and St. Enoch's Hall, both on the North Calder; Cleland; Carfin; Jerviston; and Douglas Park, are all superior residences, standing in the midst of interesting scenery; and Bothwell Park, a handsome and commanding mansion, has a fine view of the fertile haughs of Hamilton, and of the vale of Clyde.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Hamilton and synod of

Glasgow and Ayr: the stipend of the minister is £282. 14. 8., with a good manse, and a glebe valued at £36 per annum; patron, the Duke of Hamilton. The church, opened in 1833, is a superior building in the pointed style of architecture, and measures seventy-two feet by forty-five, containing 1200 sittings; the cost of the building was £4200, and it has a good bell, provided by the parish at an expense of £150, and a clock which cost £133, raised by voluntary subscription. A church was some years ago erected at Holytown, late a quoad sacra parish; and there are meeting-houses at Bellshill and Newarthill belonging to the United Presbyterian Synod. The members of the Free Church have likewise two places of worship, one at Bothwell, the other at Holytown. Three parochial schools are supported, situated respectively at Bothwell, Holytown, and Newarthill, the master of the first of which has a salary of £34. 4. 4., a house, and £70 fees; the others have £8. 11. each: the classics, mathematics, and all the usual branches of education are taught.

The chief relic of antiquity in the parish is the magnificent ruin of the ancient castle, situated near the modern castle, on the summit of a verdant slope, in the midst of beautiful woods and pleasure-grounds. The old church, which was originally the choir of the collegiate church (the most famous of the five collegiate churches in Lanarkshire), is a very fine specimen of ancient architecture; it was built about 1398, and disused as a church in 1828. Bothwell bridge, across the Clyde, is of great antiquity, though the age is not precisely known; it originally consisted of four arches, each spanning forty-five feet, and measuring fifteen feet in breadth, but it has been considerably enlarged within these few years, by which an additional width of road is obtained. There is another bridge, supposed to be of Roman construction, across the South Calder, consisting of one arch of semi-circular form, high and narrow, without parapets; it is thought to have been on the line of the great Roman Watling-street, which ran through this part of the country, along the north-east bank of the Clyde. Chalybeate springs are very numerous in the district, and many of them are strongly sulphuretted. The celebrated Joanna Baillie was born in the manse, during the incumbency of her father, the Rev. James Baillie.

BOTRIPHNE, a parish, in the county of BANFF, $5\frac{1}{2}$ miles (S. W.) from Keith; containing 714 inhabitants. This parish, which is situated in the narrowest part of the county, is bounded by Aberdeenshire on the south, and on the north by Moray, and measures about four miles and a half from north to south, and three miles from east to west. It consists principally of a beautiful vale, lying between two ridges of hills, respectively on the north and south; and comprises 9386 acres, of which 4360 are in tillage, 3540 waste and pasture (430 of these being considered capable of profitable cultivation), and 1486 acres under natural wood and in plantations. The strath is watered by the small river Isla, which, taking its rise at a loch in the western portion, runs between banks beautifully ornamented with alder and birch trees. The soil is a rich black loam in some places, and in others a strong clay, incumbent on a bed of limestone, replete with numerous springs of fine water. A large extent of land, consisting of alluvial soil, has been added in later times to the cultivated ground, by the straightening of the course of the river,

and now produces in good seasons heavy crops of grain. Extensive tracts, also, of moor or rough pasture have been brought under tillage, chiefly by the use of lime obtained from the limestone so plentiful in the locality. The annual value of real property in the parish is £2620. The only mansion is Botriphnic House, a shooting-seat. A public road from the upper districts passes through to Keith and Banff, and has two branches near the centre of the parish, one leading to Huntly, and the other to Fochabers and Elgin. A fair, called Fumach fair from a tutelary saint, is held on the 15th of February for general commodities and for horses, few, however, of the latter being brought for sale. Ecclesiastically the parish is in the presbytery of Strathbogie, synod of Moray, and in the patronage of the Earl of Fife; the minister's stipend is about £178, with a manse, and a glebe of six acres, valued at £10 per annum. The church was built in 1820, and has lately been repaired and renovated. The parochial school affords instruction in the usual branches; the master has a salary of £30, with a house, £7 fees, and a share of the Dick bequest.

BOURTIE, a parish, in the district of GARIOCH, county of ABERDEEN, $1\frac{1}{2}$ mile (S. W.) from Old Meldrum; containing 469 inhabitants. This parish in figure resembles an irregular triangle. It measures five miles in length from east to west, and about two in average breadth, and comprises 5000 acres, of which nearly 3600 are under cultivation, 360 in plantations, consisting chiefly of Scotch fir and larch, 1000 uncultivated and waste, and a few acres covered with moss, supplying peat. The surface is distinguished by two bold elevations, about 600 feet in height, rising nearly in the middle of the parish, a mile from each other; the one on the north being called the Hill of Barra, and the other the Hill of Lawhill-side. They run towards the east, to the extremity of the district, and, uniting there, terminate in the Hill of Kingoody. In some parts of the parish the soil is a strong clay, but more frequently a light loam, and the principal crops are oats, turnips, potatoes, and various grasses: the rotation of crops practised here, as in most other parts of the county, is what is called the seven-shift, which is considered the most suitable to the nature of the land. Between 300 and 400 acres of waste have been brought under cultivation within the last few years, and nearly two-thirds of the remaining portion of waste land are considered capable of the same improvement. The rocks are of the trap formation, and some suppose that the summit of the Hill of Barra is the crater of an ancient volcano. The annual value of real property in the parish is £3150. There are two gentlemen's seats, Bourtie House and Barra, the latter of which is a venerable castle, forming three sides of a quadrangle, with turrets at two of the angles. The road from Aberdeen to Banff passes through a corner of the district. Ecclesiastically the parish is in the presbytery of Garioch, synod of Aberdeen, and in the patronage of the Crown; the minister's stipend is about £230, with a manse, and a glebe, valued at £10 per annum. The church, situated in about the centre of the parish, is a plain structure containing 300 sittings, built in 1807. The parochial school affords instruction in the ordinary branches of education; the master has a salary of £30, with a house, and £8 fees. Several cairns and Druidical circles are to be seen; but the chief relic of antiquity is a fortification on the Hill of

Barra, called "Cummings' Camp" from having been either constructed or used by the Cummings, who were proprietors of the greater part of Buchan at the time of the celebrated engagement which took place near Inverury, when they were routed by King Robert Bruce.

BOWDEN, a parish, in the district of MELROSE, county of ROXBURGH, 3 miles (S. by E.) from Melrose; containing, with the villages of Bowden and Midlem, 857 inhabitants, of whom 253 are in the village of Bowden. This parish, in ancient records, is called Bothenden, Botheldene, and Boulden. Early in the twelfth century it was granted to the abbey of Selkirk, by a charter of David I., in which it is designated by the first of these names; and in subsequent charters, confirming that grant, bestowed by Malcolm IV. in 1159, and by Walter, Bishop of Glasgow, in 1232, it is mentioned by the latter appellations, probably corruptions of the former. The monks had a grange at Holydean, in this parish, which in the sixteenth century was given by royal charter to Sir Walter Ker of Cessford, ancestor of the Dukes of Roxburghe, as a reward for his services during the border warfare. A strong fortress was erected by the proprietor on the lands of Holydean, which was occasionally the residence of the family; but at present very little is remaining, the greater portion having been removed during the minority of John, the third duke, by his grace's agent, to furnish materials for the erection of a large farm-house and offices. The court-yard, comprising an area of nearly an acre, was inclosed with walls of stone, four feet in thickness and sixteen feet high, pierced at intervals for the discharge of arrows and musketry, and having an arched gateway defended with a strong portcullis. Within the inclosure were two strong towers, the one three, and the other five, stories high, containing many spacious apartments, and every requisite for a baronial residence. Part of the wall on the south side is remaining, but greatly dilapidated; and near it is the ancient well of the castle, which affords a supply of excellent water to the family living at the farm-house. About 500 acres of the farm of Holydean are inclosed with a wall of loose stones, which has stood for more than three centuries, and is still in good condition; this inclosure is called in an old lease the "Great Deer Park of Haliudean".

The parish is situated on the river Ale, by which it is bounded on the south, and is about five miles and a half in length, and four and a half in breadth, comprising above 6000 acres, of which 3460 are arable, 2531 meadow and pasture, 260 woodland and plantations, and 30 acres garden and orchards. Its surface is broken by a series of parallel ridges, extending from east to west, and declining in height towards the south, between which are fertile valleys of various breadth, watered by rivulets flowing eastward into the Tweed; and towards the south-west are some smaller streams, that fall into the river Ale. One of the Eildon hills, and part of another, rising in three conical summits, to the height of 900 feet above the general level, and about 1360 above that of the sea, are within the limits of the parish, and form conspicuous objects in the landscape. The scenery is pleasingly enriched with plantations of modern growth, and the several demesnes of the chief proprietors contain many trees of lofty and venerable appearance. In the ancient deer-park of the Duke of Roxburghe is some fine timber; at Holydean is a

wood forming the only remains of natural forest in this neighbourhood, and around the churchyard are some of the largest sycamores and ash-trees in the country.

Towards the north and west, the soil is a stiff clay of considerable depth; in the southern part, especially on the ridges, lighter and more friable; and in the valleys, a rich deep loam. The substratum is generally whinstone; and in some parts are considerable tracts of moss, below which shell marl is found, resting on a layer of fine blue clay. The system of agriculture is highly improved, and the crops are favourable; lime, marl, bone-dust, and guano are the principal manures. The lands are all inclosed and subdivided: most of the fences are thorn-hedges, with hedge-row trees. Considerable improvements have been made in draining, and in the breed of sheep and cattle, of which great numbers are fed: the sheep are mostly of the Leicester and the Cheviot kinds, and occasionally a cross between them, which is on the increase; the cattle are chiefly of the short-horned breed. Numbers of small Highland cattle are pastured here during the winter, and fattened in the summer and sold to the butchers. The annual value of real property in the parish is £4963. Among the seats is Kippilaw, a handsome mansion, pleasantly situated in a demesne embellished with timber of luxuriant growth; Cavers and Linthill are also pleasant, and on the north bank of the Ale, to which the lawns in front have a gentle slope. The village contains little that is remarkable, except an ancient cross in the centre, the date of which is unknown: there were lately removed the remains of one or two small towers or peels, of which there were several within the last thirty years, containing in the lower part a place for cattle, and in the upper, apartments for the family, to which access was afforded by a stone staircase outside.

Ecclesiastically the parish is in the presbytery of Selkirk, synod of Merse and Teviotdale, and in the patronage of the Duke of Roxburghe; the minister's stipend is about £210, with a manse, and a glebe valued at £15 per annum. Bowden church, situated near the eastern extremity of the parish, is an ancient structure, of which the original foundation is unknown; it affords accommodation for nearly 400 persons, and is in a state of good repair. The oldest date that appears on any part of the building is 1666. Under the east end is the funereal vault of the Ker family, containing twenty-one coffins, ranged along the sides of the building, among which are those of five Dukes of Roxburghe, predecessors of the present duke. There are places of worship for members of the Free Church and United Original Seceders. Two parochial schools were until lately supported, one in the village of Bowden, and the other in that of Midlem, but the latter has been discontinued as a parochial school; the master of the former has a salary of £30 per annum, with a house and garden rent-free, and the fees produce about £12.

The remains of a military road, with stations or camps of a circular form at intervals of more than two miles, uniformly occupying eminences in view of each other, may be traced in various places, extending across the centre of the parish, in a direction from south-east to north-west. Where not obliterated by the plough, the road may be traced, in the form of a ditch about twenty feet in width, and, in some places, in the form of two parallel ditches, with an interval between them fifty

feet in width. Warlike instruments of different kinds have been discovered by the plough, in the immediate neighbourhood of the road, and also in the adjacent mosses. On the summit of a precipice at Holydean, nearly 150 yards from the principal farm-house, and overhanging a deep dell called Ringans-Dean, was an ancient chapel and burying-place; the foundations of the building may yet be traced, and grave-stones, handles of coffins, and human bones have been frequently found near the site. It has been conjectured that from this ecclesiastical establishment the place derived the name of Holydean. Trees of various kinds, and of very large dimensions, have been discovered in the mosses of the parish, while digging for peat and marl; they are chiefly oak, ash, and fir, and have been found generally at a considerable depth below the surface, and in a good state of preservation.

BOWER, a parish, in the county of CAITHNESS, 11 miles (S. E. by E.) from Thurso, and the same distance (N. W.) from Wick; containing 1689 inhabitants. This place is said to derive its name from a Danish word signifying "a valley", and the application of the term to this locality seems to be by no means inappropriate. The parish is about twelve miles long, and four broad, and the surface is in general low and flat, being diversified only by a ridge of green hills, of small elevation, running from north to south, through the whole. On an eminence in this ridge is a large perpendicular stone called *Stone Lude* or *Lutt*, supposed to mark the sepulchre of some Danish or Norwegian chief who fell here. The soil of the arable land consists mostly of strong clay and loam, and the subsoil is clay; in some of the hollows and valleys a fine rich marl is obtained in great abundance, and extensively and very beneficially used as manure. The parish is altogether agricultural and pastoral: the recent prevalence of sheep-farming has diminished the importance of the former branch, and given to the latter a decided predominance. Grain and live stock are frequently sent to the south, being shipped at Wick by steamers or trading vessels. The annual value of real property in the parish is £4300. The rocks are of the primitive class; a vein of copper was discovered some time ago, but was never worked. Barrack House and Stempster House, both of them modern edifices; Stanstill; and Tister, are the principal residences. The population is scattered among the rural districts: of late years, many, in consequence of the expulsion of agricultural labourers by the extensive introduction of sheep-farming, have been driven to the moors, or to seek a livelihood in foreign lands. Four annual fairs are held here, namely, Campster fair, on the Tuesday after St. Patrick's day; Lyth fair, on the second Tuesday of October; St. Maud's, on the second Tuesday in November (all O. S.); and Stanstill, held in November. There is also a cattle-market every Wednesday from June till October, inclusive. The post-road, which is in good condition, passes through the south-west part of the parish for several miles, and there are also some good county roads, one of which joins the post-road above Halkirk, on the hill of Sordal. Ecclesiastically the parish is within the bounds of the presbytery of Caithness, synod of Caithness and Sutherland; patron, Sir James Colquhoun, Bart.: the stipend of the minister is about £190, with a manse and glebe, and twenty-two acres allotted for pasture on a division of

commons. The church is ancient, and the number of its sittings is computed at 440. A parochial school is supported, at which the usual branches are taught. Here are several Druidical circles or temples, and numerous tumuli; the most striking relic is the cairn of Heather Cow, which is surrounded by six or seven circles of large stones, and situated on an eminence commanding an extensive prospect.

BOWLING-BAY, a village, in the parish of OLD KILPATRICK, county of DUMBERTON, 5 miles (E. by S.) from Dumbarton; containing 182 inhabitants. It is situated on the north bank of the Firth of Clyde, and on the road which passes, close by the river, from Glasgow to Dumbarton. The locality is very beautiful; and immediately opposite, on the south side of the Clyde, is Erskine House, the fine seat of Lord Blantyre. At this village the Forth and Clyde canal terminates. There is a ship-building yard, and belonging to the canal company is a basin, for the enlargement of which an act was passed in 1846. In the same year an act was passed for the construction of a railway from Glasgow, by Bowling-Bay, to Dumbarton, Loch Lomond, and Helensburgh.

BOWMORE, a village and small sea-port, in the parish of KILARROW, district of ISLAY, county of ARGYLL, 10½ miles (S. S. W.) from Port-Askaig. This place is situated on the eastern shore of Loch Indal. The village was first commenced in 1768, and consists of several well-formed and regular streets, intersecting each other at right angles, of which the principal, a spacious street, leads from the quay by a gradual ascent to the church; and another, crossing this at right angles, terminates at the parochial school. The houses are generally neatly built, though in some of the smaller streets are many of inferior appearance. Since its commencement the village has rapidly increased in extent and population, and it is now the seat of the presbytery of Islay and Jura. A neat building, containing a spacious assembly-room, has been erected, to which is attached a room for the temporary confinement of petty offenders. The environs of Bowmore are pleasant, and derive much interest from the grounds of Islay House. A very extensive distillery of whisky is carried on here; and there are several vessels belonging to the port employed in the coasting-trade, which is considerable. The harbour is commodious, and accessible to the quay, for vessels drawing eight or nine feet water, at ordinary tides; the quay, which was constructed by Mr. Campbell, is substantial and well adapted to the purpose. A post-office with a daily delivery has been established; and facility of communication is afforded by a good road to Port-Askaig, on the sound of Jura, where steam-boats from various places touch in their passage.

BOWRIEFAULD, a village, in the parish of DUNNICHEN, county of FORFAR, 2 miles (W. by S.) from Letham; containing 109 inhabitants.

BOYNDIE, or **BOINDIE**, a parish, in the county of BANFF, 3 miles (W.) from Banff; containing, with the village of Whitehills, 1501 inhabitants. This place, to which Banff was united from the era of the Reformation to about the year 1635, was anciently called *Inverboyndie*, signifying "the mouth of the Boyndie", in consequence of the situation of the old church, now in ruins, near the spot where the small stream of the Boyndie falls into the sea. The word Boyndie is sup-

posed to be a diminutive of Boyn, the name of a larger stream bounding the parish on the west. The parish is washed by the Moray Firth, and is nearly of triangular form, the northern line measuring between two and three miles, the south-eastern about five miles and a half, and the western boundary between four and five miles. It comprises about 6300 acres, of which 4540 are cultivated, 750 in plantations, and the remainder uncultivated, waste, and pasture. The surface is level, with the exception of the fine cultivated valley of the Boyndie, and is but little elevated above the sea. On the north the coast is in general rocky, with a portion of sandy beach, and at the extremity is the Knockhead, a headland running out into a reef of rocks, visible at half-tide, called the Salt-Stones. Here the coast turns southward, forming one side of a bay; and the shore between this point and the part where the Boyndie empties itself into the sea, measures something less than a mile, and consists of a beach of sand and gravel. The harbours are, one at the fishing-village of Whitehills, of small extent, with about ten feet depth of water at spring-tides, used by two or three vessels employed in the herring-fishery, and the importation of salt, coal, &c.; and another a little to the east, at Blackpots, affording also accommodation for the prosecution of the herring and salmon fishings, and for the exportation of tiles.

In the upper part of the parish the climate is humid and bleak, but in the opposite part dry and salubrious. The soil most prevalent is a light earth, on a retentive subsoil; the exceptions being certain tracts in the centre of the parish, chiefly clay and loam of rich quality, and some land in the eastern portion, consisting of a deep, black, sandy mould on a porous subsoil, which produces heavy and early crops. This parish was one of the first in the north of Scotland in which the system of alternate crops and turnip husbandry were practised, having been introduced here about the year 1754 by the last Earl of Findlater, at that time Lord Deskford, who also formed the older plantations in the place. Oats and barley are the principal kinds of grain; and among the green crops, the cultivation of turnips receives much attention. The range of pasture is limited, but 1000 head of oxen are annually grazed, comprising the polled Buchan and Banffshire horned breeds, with some crosses with the Teeswater stock, many of which are fed for the London market. The annual value of real property in the parish is £4168. The rocks comprise grey-wacke, primitive limestone, slate, and hornblende; and to the east of Whitehills is a diluvial clay in extensive beds, containing specimens of belemnites, cornua ammonis, &c., and supplying material for a brick and tile work.

In this parish the wood, consisting for the most part of Scotch fir, with sprinklings of larch, beech, and other trees, is generally in a thriving condition. Near the ancient castle of Boyn are some portions of hard-wood, which, being favoured by shelter and a superior soil, are in an exceedingly flourishing state. This mansion, which was the family seat of the Ogilvies till the transfer of the estates to the ancestor of the present owner, at the beginning of the last century, is beautifully situated at the western extremity of the parish, on the Boyn water, but is now ruinous. The surrounding scenery, among which are visible the remains of a more ancient mansion,

is highly picturesque; and attached to the castle is an orchard, abounding in black and white wild cherries. Agricultural pursuits occupy the greater part of the population. The bleaching and preparation of threads and stockings for market were formerly carried on to some extent, but the only work connected with manufactures now existing is a wool-carding mill on the burn of Boyn, attached to which are works for the weaving and dyeing of cloth. There are a saw-mill, a lint-mill, a flour and barley mill, and several meal-mills. The turnpike-road from Banff to Portsoy and Inverness runs through the parish, from east to west, and a branch diverges to Keith and Huntly, besides which there are several good county roads, and numerous bridges over the streams, affording facility of communication. A cattle-fair has been instituted at Ordens, which is held eight times a year.

Ecclesiastically the parish is in the presbytery of Fordyce, synod of Aberdeen, and in the patronage of the Earl of Seafield; the minister's stipend is about £200, with an excellent manse, lately built, and a glebe valued at £12 per annum. Boyndie church, accommodating 600 persons, was erected in 1773: the ruin of the old edifice still remains, with its burial-ground, on a site near the sea, where a battle with the Danes is supposed to have taken place, in the reign of Malcolm II., to whose personal friend, St. Bovenden or Brandon, a monk, the edifice was dedicated. The members of the Free Church and the Wesleyans have places of worship. The parochial school affords instruction in Greek, Latin, and mathematics, in addition to the usual branches; the master has a salary of £25. 12. 4., with £22. 12. fees, and also shares in the Dick bequest. The Rev. James Stewart, a native of the parish, in 1809 left a sum now amounting to £390, the produce to be equally divided for the support of six poor persons, and for the education of six boys, who are natives. There are several remains of Druidical circles, of cairns, and military works; and various minor relics of antiquity have at different times been found, the most interesting of which are, a short Roman sword, deposited in the armoury at Duff House, and a seal, composed of fine clay-slate, marked with the arms of Bishop James Kennedy, who founded the college of St. Salvator in the university of St. Andrew's. Thomas Ruddiman, the well-known author of a Latin grammar, was a native of the parish.

BRACADALE, a parish, in the Isle of SKYE, county of INVERNESS, 12 miles (S. E.) from Dunvegan; containing 1824 inhabitants. This parish is washed on the south and south-west by the sea; it is about twenty miles in length and eight in extreme breadth, and comprises 73,189 acres, of which 4878 are arable, and the remainder pasture and hill-grazing. The coast extends for about sixty miles, and is very irregular, being indented by numerous arms of the sea, and, though occasionally flat, being in most parts bold and rocky, and the beach very rough and stony. At the southern extremity is the headland of Rhuandunan, and towards the west, Tallisker-head, at the southern entrance of Loch Bracadale, which, and Loch Eynort, are the principal harbours, both affording convenient and secure anchorage to vessels of any burthen. The chief islands are, Soay, on the south-east; and Vniay and Taarner, situated at the mouth of Loch Bracadale, opposite Tallisker-head, to the north. In the interior the surface is generally

hilly, and the most conspicuous eminences are part of the range of Coullin, highly picturesque in appearance, and stretching along the boundary between this district and Strath. A few detached fields are to be seen adjacent to the coast, but the low grounds and valleys are chiefly in that district called Minginish, where the vale of Tallisker is particularly celebrated for its beautiful scenery. The parish is for the most part pastoral, and about 4500 sheep, and 450 head of black-cattle, are annually exported; the soil near the bays is sandy or clayey, but in some of the lower grounds remarkably fertile: the small portions under tillage are always let in connexion with pasture. The annual value of real property in the parish is £3921. The inhabitants generally are exceedingly poor, and upon the lowest scale with respect to clothing and food. The road from Inverness to Dunvegan passes through the district, and there are post-offices at Struan and Carbost. At Carbost is a celebrated distillery, the only one in the Isle of Skye. A fair for the sale of black-cattle and sheep is held at Sligechan on the third Tuesday in September. Ecclesiastically the parish is in the presbytery of Skye, synod of Glenelg, and in the patronage of the family of Macleod of Macleod: the minister's stipend is £158. 6. 8., of which half is received from the exchequer, with a manse, and a glebe of thirty acres, valued at £15 per annum. The church, built in 1831, is conveniently situated near the public road, and contains between 500 and 600 sittings. There is a place of worship for members of the Free Church; also an episcopal chapel, a neat building, erected in 1838, and containing accommodation for about 200 persons. A missionary is supported by the Royal Bounty, and the parochial school affords instruction in Gaelic, English, writing, and arithmetic; the master has a salary of £28.

BRACO, a village, in that part of the parish of **MUTHILL** which constituted a portion of the district of **ARDOCH**, county of **PERTH**; containing 370 inhabitants. This village, which is rapidly increasing in extent, owes its origin to the erection of a chapel of ease for the district. The houses are neatly built, and it has already attained some little importance: it is the resort of the neighbouring farmers for the purchase of cattle, for which two large fairs are held annually. Besides the chapel of ease, there is a place of worship for members of the Free Church.—See **ARDOCH**.

BRAEHEAD, a village, in the parish of **CARNWATH**, Upper ward of the county of **LANARK**, $3\frac{1}{2}$ miles (N.) from Carnwath; containing 312 inhabitants. This village, which is pleasantly situated on the road to Wilson-town, is inhabited chiefly by persons engaged in agricultural pursuits, and partly by others employed in weaving at their own dwellings for the Glasgow and Paisley manufacturers. There is a place of worship for New Light Burghers.

BRAEMAR, **ABERDEENSHIRE**.—See **CRATHIE**.

BRAGRUM, a hamlet, in the parish of **METHVEN**, county of **PERTH**; containing 44 inhabitants.

BRAIDWOOD, a village, in the parish of **CARLUKE**, Upper ward of the county of **LANARK**, 4 miles (N. W.) from Lanark; containing 234 inhabitants. It is on the great Roman Watling-street, and was formerly a possession of the Earls and Marquesses of Douglas. In the vicinity, limestone and ironstone are found; and, on the Braidwood estate, a vein of fine encrinal marble.

BRECHIN, a burgh, market-town, and parish, in the county of **FORFAR**, 8 miles (W. by N.) from Montrose, and 66 (N. N. E.) from Edinburgh; containing, with the villages of Trinity-Muir and Little Brechin, 7560 inhabitants, of whom 2986 were in the late East quoad sacra parish. This place derives its name, of Gaelic origin, from its situation on

Burgh Seal.

an acclivity rising from the banks of the river South Esk. It is of very considerable antiquity, and was formerly the seat of a diocese, the cathedral of which is now the church of the parish. During the wars between the Scots and the English, in the reign of Edward I., Sir Thomas Maule, lord of Brechin Castle, defended it for some time against the assaults of the English whom that monarch had sent to reduce it, till, being killed by a stone slung from an engine by the besiegers, the garrison capitulated and surrendered the castle to the English. A battle took place in the immediate vicinity in 1452, between the forces of the Earl of Huntly and those of the Earl of Crawford, in which the latter were defeated, and which, from the proximity of the spot whereon it was fought, has been invariably called the battle of Brechin. In 1573, Sir Andrew Gordon, an adherent of the unfortunate Mary, Queen of Scots, and who was then besieging the castle of Glenberrie, hearing that a party of the king's friends were assembled at this place, attacked them early in the morning, and surprised and cut off the whole of the force. The castle of Brechin, a place of great strength, and, from its situation on the summit of an abrupt precipice, regarded, before the use of artillery, as impregnable, was long the baronial seat of the family of Maule, afterwards created Earls of Panmure: this title was forfeited on the rebellion of 1715, but the nobility of the family was revived by William IV., at his coronation, when he granted the title of Baron of Panmure to their descendant. The building is of various dates and styles of architecture, and the demesne abounds with romantic and beautiful scenery, commanding a fine view of the river.

BRECHIN is situated on the rising banks of the South Esk river, over which, at the southern extremity of the town, is a bridge of stone, supposed to be the most ancient structure of the kind in the kingdom. The town is neatly built, consisting of several well-formed streets, and a spacious market-place nearly in the centre. A handsome building in the Elizabethan style, with a tower eighty feet high, has been erected at the west entrance of Brechin, by Lord Panmure, for the use of a literary and scientific institution; it contains a lecture-room and library, and many valuable paintings presented by his lordship. The streets of the town are macadamized, and the approaches have been levelled to render the place easier of access. The trade arises principally from weaving, and the several handicraft trades requisite for the supply of the neighbourhood. There are two mills for spinning flax, in which about 300 persons are engaged; and from 1200 to 1500 of the inhabitants are employed in weaving coarse linens: about sixty are employed in heckling, and from seventy to eighty in bleach-

ing. Two distilleries for making whisky from malt have been erected in the vicinity, which are conducted on an extensive scale, and are in full operation. There are two fishing stations on the South Esk, within the parish, where salmon are taken in considerable numbers. The post-office has a good delivery, and facility of intercourse is afforded by various roads; a bridge has been built at Stannachy ford to continue a new road from Arbroath to Dundee, and there is now a branch to the town of the Aberdeen railway. The market, which is abundantly supplied with corn and other agricultural produce, and numerously attended by the farmers of a widely-extended district, is held weekly on Tuesday; and there are weekly marts for horses and cattle, from the last Tuesday in February till the last Tuesday in March. Fairs are held at Trinity-Muir, about a mile from the town, four times in the year: one of these, on the second Wednesday in June, for cattle, horses, and sheep, continues three days, and is among the chief fairs in the county.

From time immemorial the town has been a ROYAL BURGH, and the government is vested in a provost, two bailies, a dean of guild, a treasurer, and a council of eight burgesses, assisted by a town-clerk and other officers. There are six incorporated trades, viz., the hammermen, glovers, bakers, shoe-makers, weavers, and tailors, all of whom, except the weavers, have the exclusive privilege of carrying on trade within the burgh. The provost, bailies, and dean of guild are magistrates by virtue of their office, and their jurisdiction extends over the whole of the royalty; they hold a bailie-court every Wednesday for the determination of civil pleas to any amount, and also for the trial of criminal cases, in which they are assisted by the town-clerk, who acts as assessor. Brechin is associated with Arbroath, Bervie, Forfar, and Montrose, in returning a member to the imperial parliament. The franchise, previously vested in the corporation, was extended by the act of the 2nd and 3rd of William IV. to resident £10 householders. The provost is the returning officer. The town-hall, situated nearly in the centre of the town, was built in the year 1789; it is a neat structure, containing, on the first story, a good hall, with smaller apartments for the meetings of the council, and below them a court-room and a prison.

The PARISH comprises about 15,840 acres, of which 9840 are arable, 3260 woodland and plantations, and 2740 rough pasture and waste. Its surface is generally level, rising in some parts into gentle undulations, and the only eminence that deserves the name of a hill is that of Burghill, to the south of the town. The prevailing scenery is agreeably diversified, and enlivened with numerous thriving plantations: from several points of view, the Grampian hills form a conspicuous feature in the distant landscape. Though various, the soil is mostly fertile; the chief crops are oats, barley, wheat, potatoes, and turnips. The lands are well drained, and every recent improvement in husbandry has been adopted, under the auspices of the Eastern Forfarshire Farming Association. This society was established here in 1814 with the patronage of Lord Panmure, and has its meetings in spring and autumn, when cattle-shows are held on Trinity-Muir, and prizes are awarded to the most successful competitors. The utmost attention is paid to live stock: the sheep are of the black-faced breed, but a very small number is kept; the cattle are of the

Angus breed generally, with, of late, an occasional intermixture of the short-horned or Teeswater. The annual value of real property in the parish is £21,563, including £7960 for the burgh. In the vicinity of the town are three nurseries, comprising together about twenty-five acres, well stocked with forest-trees for supplying the plantations of the district, and with fruit-trees of various kinds, and ornamental shrubs and evergreens. There are also several orchards. The substrata are chiefly the old red sandstone, with limestone, and also sandstone of a greyish colour, of good quality for building, and susceptible of a high polish: of this stone the tower and spire of the old cathedral were built. The limestone is extensively quarried for burning into lime for agricultural purposes, and there are at present three lime-works in operation; also several quarries of freestone.

In an ecclesiastical point of view the parish is the seat of the presbytery of Brechin, in the synod of Angus and Mearns. The church has two ministers, respectively of the first and second charges. The stipend of the first charge is about £280, and the minister resides in a house erected about fifty or sixty years since, in lieu of the episcopal palace, by the exchequer, and to which is attached about an acre of garden ground: the stipend of the second charge is about £270, with a manse, and a glebe valued at £30 per annum. The church is the nave of the ancient cathedral; it is in good repair, and adapted for a congregation of 1500 persons. A church containing 864 sittings was erected under an act of the General Assembly, in 1836, for a district of the parish called East-Church; and the minister derived his income, £150, from seat-rents and collections: since the recent secession from the Church of Scotland, the church has ceased to be used in connexion with the Establishment. There are congregations of members of the Free Church, the United Presbyterian Synod, and Antiburghers. An Episcopal chapel, erected about twenty or thirty years since, has been lately enlarged and beautified, and is a handsome edifice; the western gable is surmounted by a cross, and flanked at the angles with minarets. There are parochial and burgh schools, and a grammar school; the parochial teacher has a salary of £34. 4. 4., with fees, and £10 paid by the magistrates from the burgh funds in lieu of a house and garden. The rector of the grammar school is appointed by the corporation, and is also preceptor of the hospital of Maison Dieu, of which he enjoys the revenue, amounting to £50 per annum. There is a parochial library, containing about 600 volumes; and circulating libraries are kept by the booksellers in the town. The above hospital, formerly attached to the cathedral establishment, affords weekly a small allowance to the poor; there is a society of ladies for the relief of indigent females, and a dispensary was established some years since, with the proceeds of a bequest by Mrs. Speid of Ardovie.

Some remains yet exist of the ancient chapel called Maison Dieu; and a round tower nearly adjoining the cathedral, and supposed to be of Pictish origin, is still entire, and an object of much interest. It is a lofty slender column of very ancient character, and in high easterly winds is observed to vibrate. The remains of the cathedral consists chiefly of the nave and tower; the western entrance is of beautiful design, and the interior is lighted by a spacious window above the doorway, and the roof supported by a range of clustered

columns and pointed arches: the choir was destroyed at the Reformation. At the eastern extremity of the parish is a cemetery, which is still called St. Magdalen's Chapel, the memorial, perhaps, of an edifice of that name. Mr. Guthrie, author of the *Historical and Geographical Grammar*; Maitland, the laborious historian of London and of Edinburgh; Dr. John Gillies, historiographer for Scotland to His Majesty; and his brother, the Honourable Adam Gillies, one of the senators of the College of Justice, were all natives of Brechin.

BRESSAY, BURRA, and QUARFF, a parish, in the county of ORKNEY and SHETLAND; containing 1798 inhabitants, of whom 904 are in the island of Bressay, and 870 in the late quoad sacra district of Burra and Quarff. These three ancient parishes, now united, comprehend six islands and a part of the tract called Mainland. The district of Bressay is to the east of the mainland, and consists of the islands of Bressay and Ness, separated from each other by Ness Sound, and from the mainland by Bressay Sound. Bressay island, which is nearly six miles long, and varies in breadth from two to three miles, exhibits a highly-diversified surface, especially in the western portion, where the rugged features of the coast, the tracts of arable land stretching from south to north, and sloping to the sea, interspersed with cottages, with lofty hills rising in various directions, contribute to form a scene marked to a considerable extent by beauty and grandeur. Among the elevated ridges running in irregular lines through the island, and the spaces between which are covered with a mixture of pasture and peat-moss, is a dorsal eminence on the eastern side, called St. Andrew's or Ander hill, upwards of 400 feet in height. At the southern extremity is a lofty elevation called the Ward; also Beacon hill, rising 724 feet above the level of the sea, and which is covered with peat-moss and various kinds of short grass and heath: its sombre hue and majestic height render it a striking object in the scenery. The coast is every where rocky, abounding with fissures, caverns, and headlands, the last chiefly in the southern portion of the island; and there are twelve lochs, which, however, are of very inconsiderable dimensions, only two or three having the extent of half a mile in length or breadth: some of them are celebrated for their fine trout.

There are several sounds or channels, formed by, and taking their names respectively from, the islands to which they are adjacent. The chief is *Bressay Sound*, which expands into a fine bay towards Quarff, on the south, where its waters deepen, and afford excellent anchorage for vessels in stress of weather. Many hundreds of Dutch boats, in time past, used to resort hither to fish for herrings; but the sound has derived its greatest celebrity from other circumstances. In this fine harbour, the fleet of King Haco was moored several days after sailing from Norway in his unsuccessful expedition against Scotland. In later times, the notorious Earl of Bothwell, who had fled to Shetland for safety, being pursued in his adversity by Kirkaldy of Grange, with great difficulty escaped by sailing out at the northern entrance of the sound, in which direction his enemy's vessel, attempting to follow him, was wrecked on a very dangerous rock, since called the Unicorn after the name of the ship. The other channels are, *Ness Sound*, less than a quarter of a mile broad, supposed to be about twenty feet deep, and dangerous to pass with an easterly

wind; *Cliff Sound*, not quite half a mile broad, with nine or ten fathoms of water, and of difficult navigation in stormy weather; and *Stream and Burra Sounds*, the latter of which is the safest and most tranquil of the whole, and peculiarly adapted to small vessels.

The quantity of land under tillage is small compared with the waste, and employed chiefly in the cultivation of oats, bear, and potatoes, the two first being sown in alternate years, and potatoes once in four or five years. The soil is manured with a compost of sea-weed, dung, and mossy earth, and with the garbage of herrings: the last is held in high repute for the purpose. Some improvements have been made in agriculture within these few years, chiefly in rebuilding the farm-cottages in a superior manner; but various obstacles, the want of leases, the state of the roads, and especially the poverty of the inhabitants and their extensive occupation in fishing, repress all systematic attempts to establish agriculture on a good footing. The annual value of real property in the parish is £1527. The rocks in Bressay and Ness are the old red sandstone; in Quarff, clay-slate and mica slate; and in the isles of House, Burra, and Hálvera, of the primitive formation. At Bressay there are flag and slate quarries in operation, the produce of which is shipped to different parts of the country, and sometimes sent to the south; and in Quarff and Burra several species of limestone of inferior quality are found. The lands appear to have been formerly better wooded than they are at present, trunks of trees, of some bulk, being found among the mosses. The only plantations recently made are in the vicinity of the mansion-house, and consist of willow and ash, the former being the most flourishing; and near these, of older growth, are aspen, elm, laburnum, poplar, and plane trees, which seem to be in a thriving condition.

A large proportion of the population is engaged in the fisheries, the principal of which are those of ling, cod, and herrings. Various other kinds of fish, such as tusk, halibut, skate, whiting, and flounders, are taken at different times; and sillocks, on which the inhabitants to a considerable extent live, are taken throughout the whole year: oysters, also, are found at Burra in abundance. The ling-fishing employs about thirty boats, generally carrying six men each. The cod-fishery, beginning about Whitsuntide, occupies numerous sloops of between fifteen and twenty tons' burthen; and at the termination of this fishing that for herrings commences (usually in the month of August), in which the same boats are employed as those engaged in the ling-fishing, with some of larger size. About thirty women and children are employed in Bressay, during the season, in curing herrings; and the manufacture of herring-nets has recently excited much interest among the inhabitants: nearly every female in Quarff above six years of age is occupied in knitting woollen-gloves, and those in Burra in knitting stockings. For ecclesiastical purposes the parish is in the presbytery of Lerwick, synod of Shetland, and in the patronage of the Earl of Zetland; the minister's stipend is £158. 6. 8., with a manse, rebuilt in 1819, and a glebe valued at £12 per annum. The church, which is conveniently situated, was erected in 1815, and contains 370 sittings. There are places of worship for dissenters. The parochial schoolmaster has a salary of £25. 13., and teaches reading, writing, arithmetic, and book-keeping.—See BURRA, NESS, &c.

BRIDEKIRK, DUMFRIES.—See BRYDEKIRK.

BRIDGE OF ALLAN.—See ALLAN, BRIDGE OF. *And all places having a similar distinguishing prefix, will be found under the proper name.*

BRIDGEND, a village, in the parish of KILARROW, district of ISLAY, county of ARGYLL, 3 miles (N.) from Bowmore. This village is situated at the north-eastern extremity of Loch Indal; and there is a good road to Port-Askaig, distant, in a north-eastern direction, about eight miles. A branch post-office has been established under Bowmore, and a justice-of-peace court is held here. The grounds of Islay House are almost in contact with the village.

BRIDGEND, a hamlet, in the parish of LINTATHEN, county of FORFAR; containing 31 inhabitants. It is situated a short distance from the parish church.

BRIDGEND, a village, in the parish of RUTHVEN, county of FORFAR; containing 172 inhabitants.

BRIDGEND, a burgh of barony, in the parish of KINNOULL, county of PERTH; containing 1737 inhabitants. This village forms a suburb to the city of Perth. It derives its name from the erection of a bridge over the Tay, connecting the parishes of Perth and Kinnoull, between which all communication after the destruction of the old bridge in 1621 was by a ferry, till the completion of the present structure in 1771. Prior to this date, the village consisted only of a few cottages, inhabited by the boatmen employed on the ferry; but from the greater facility of intercourse with Perth, it has rapidly increased in extent and importance, and at present contains nearly three-fifths of the population of the parish. The streets are regularly formed, and lighted with gas; the houses are substantially built, and along the banks of the river, and on the rising ground, are numerous elegant villas, surrounded with scenery richly diversified. The village of Bridgend was erected into a burgh of barony, in favour of the Earl of Kinnoull, by charter, which also conferred the privileges of a weekly market and several annual fairs, now in disuse.

BRIDGEND, or KENDROCHAD, a hamlet, in the parish of KENMORE, county of PERTH; containing 68 inhabitants. In the vicinity is a small school.

BRIDGEND, a village, in the parish of ROSSKEEN, county of ROSS and CROMARTY; containing 413 inhabitants. This place is also called the Bridgend of Allness, it being considered as part of the village of Allness, the other part of which is in the parish of that name, the river Allness dividing the entire village into nearly equal portions. A market, chiefly for cattle, is held here monthly. At Mossfield, in the vicinity, is a school, established in the year 1824.

BRIDGEND, SOUTH, a village, in the parish of MUTHILL, county of PERTH; with 118 inhabitants.

BRIDGEND, WEST, a village, in the parish of CARDROSS, county of DUMBARTON; containing 799 inhabitants. It is a suburb of the town of Dumbarton; and the United Presbyterian Synod have a place of worship in it.

BRIDGENESS, a village, in the parish of CARRIDEN, county of LINLITHGOW, 1 mile (E.) from Bo'ness; containing 89 inhabitants. It is situated on the south shore of the Firth of Forth, and its population is engaged in the works in the vicinity. There is an excellent pier here, which some years since was extended about 150 feet further into the sea, in order to improve the accom-

modation, by securing a greater depth of water for the vessels by which the harbour is frequented. The vessels are chiefly employed in the export of coal and salt, and the import of manure and limestone. As many as 300 coasters, varying from twenty to 100 tons' burthen, annually enter from different ports in Scotland; and about ten foreign ships, of greater tonnage, yearly take in coal at this place. Formerly, chemical-works were established here, for the manufacture of vitriol and sulphuric acid; but they have been some time relinquished.

BRIDGETON, formerly a quoad sacra parish, consisting of part of BARONY parish, in the suburbs of GLASGOW, county of LANARK; containing, according to the last census, 3583 inhabitants. The village of Bridgeton, which takes its name from its vicinity to the bridge over the Clyde leading to Rutherglen, is partly indebted for its origin to Mr. John Walkinshaw, who in 1705 purchased some lands eastward of the city, which he divided into building lots, for the formation of a village, then called Barrowfield. In 1724, however, he had let only nineteen small portions, and the land was subsequently purchased by the corporation, in conjunction with the Trades' House, who in 1731 conveyed it to Mr. John Orr, merchant, of Glasgow, who, being more successful in disposing of the ground, may be regarded as the founder of the present town. This now flourishing village contains, according to the last census, above 14,000 persons. It stands on the north side of the river, to the south-east of Calton, and, like that place, consists of several spacious and well-formed streets. The houses are generally built of stone, and roofed with slates; but a considerable number are built of brick, and roofed with tiles, for the manufacture of which clay of excellent quality is found in the immediate vicinity. The population are chiefly employed in the cotton manufacture, and other works in the neighbourhood of the city. There are seven or eight extensive factories, two large dye and print works, a most extensive gas-work for supplying the village and adjacent city with gas, and numerous shops for the supply of the inhabitants with groceries and various kinds of merchandise. The parish, consisting of part of the village, was formed in 1837, under act of the General Assembly. The church is a neat structure, erected by the Church-Building Society of Glasgow, and contains 1024 sittings. It is now rented by members of the Free Church, and in the village is also a large place of worship in connexion with the United Presbyterian Synod. There are two spacious schoolrooms.

BRIDGETOWN, a village, in the parish of REDGORTON, county of PERTH; with 97 inhabitants.

BROADHAVEN, a village, in the parish of WICK, county of CAITHNESS, 1 mile (E.) from Wick; containing 170 inhabitants. This village is situated at the head of the haven from which it takes its name, and extends along the northern shore of the bay of Wick. It is inhabited chiefly by persons engaged in the fishery. The haven, which affords good shelter for vessels, is formed by the head of Wick on the south, and the headland of Papigo on the north, both of which extend considerably into the Moray Firth.

BROADSEA, a village, in the parish of FRASERBURGH, district of DEER, county of ABERDEEN; containing 326 inhabitants. This is a fishing village, situated a short distance west of the town of Fraserburgh, in a small bay near Kinnaird Head.

BROCKLEHURST, OLD, a hamlet, in the parish of **MOUSWALD**, county of **DUMFRIES**; containing 39 inhabitants.

BRODICK, a village, in the parish of **KILBRIDE**, **ISLE OF ARRAN**, county of **BUTE**; containing 163 inhabitants. It is seated in a semicircular bay of the same name, on the eastern coast of the island, defended at its entrance by the islet of **Lamlash**, or **Holy Island**; and to the south is a lighthouse. The castle of **Brodick**, now called **Arran House**, stands on an eminence above the bay. A place of worship has been built, and one of the parochial schools is situated in the village. An annual fair is held.—See **KILBRIDE**.

BROOMKNOLL, **LANARKSHIRE**.—See **AIRDRIE**.

BROOMLANDS, a hamlet, in the parish of **INCHINNAN**, Upper ward of the county of **RENFREW**; containing 79 inhabitants. It is one of two assemblages of houses in the parish.

BRORA, a village, in the parish of **CLYNE**, county of **SUTHERLAND**, 5 miles (N. E.) from **Golspie**; containing 123 inhabitants. It is situated on the eastern coast, at the mouth of the **Brora water**, a fine stream which rises in the highlands, and pursues a winding course of thirty miles in a south-eastern direction to this place, where it falls into the sea. There is a tolerable harbour for boats and small vessels, constructed by the **Duke of Sutherland**. **Brora lake**, a few miles westward, is a beautiful and extensive piece of water, within which is an islet 140 feet in length and seventy in breadth, surrounded by a wall built so close to the water's edge that no boat can land, except at one spot, where there are steps. On all sides of the lake are lofty hills, interspersed with pleasant hamlets and plantations.—See **CLYNE**.

BROTHER ISLE, in the parish of **DELTING**, county of **SHETLAND**. It lies in **Yell Sound**, westward of the island of **Yell**, and is inhabited by a very few persons.

BROUGH-HEAD, in the county of **ELGIN**.—See **BURGH-HEAD**.

BROUGHTON, GLENHOLM, and KILBUCHO, a parish, in the county of **PEEBLES**; containing, with the whole of **Kilbucho**, 929 inhabitants, of whom 294 are in **Glenholm**, 361 in **Kilbucho**, and 274 in **Broughton**, including 85 in the village of **Broughton**, 2 miles (N. N. W.) from **Rachan Mill**. This parish is bounded on the east and south by the river **Tweed**, and consists of the ancient parishes of **Broughton** and **Glenholm**, and the greater portion of that of **Kilbucho**, the remainder of which is annexed quoad sacra to the parish of **Culter**. It is about nine miles and a half in length, and three miles and a half in average breadth, comprising about 20,000 acres, whereof 5000 are arable, 300 woodland and plantations, and the remainder, of which not more than 1000 are capable of cultivation, meadow land and hill pasture. The surface is greatly diversified with hill and dale, and intersected by mountainous ridges and fertile valleys. **Rachan Hill**, in the district of **Glenholm**, is a detached eminence, rising precipitously from the plain, on the side towards the **Tweed**, and sloping by a gentle declivity towards the **Holms water**; it is covered with verdure to its very summit, and forms an interesting feature in the landscape. A chain of mountainous heights extending for nearly three miles from north to south, intersects the parish, separating **Broughton** from the parishes of **Stobo** and **Kirkurd**. Another,

extending for nearly five miles in a direction from north-east to south-west, separates **Glenholm** from **Kilbucho** and the parish of **Culter**: a third range stretches for nearly three miles parallel with the **Tweed**; and there are some others, one of which passes through the district of **Broughton**. The highest points of these ranges, which in general are precipitous, are **Culterfell**, **Cardon**, and **Chapelgill**; the first has an elevation of 2430 feet above the sea, and the others are very little inferior in height. Between the ranges of hills are several beautiful valleys; the vale of **Glenholm**, extending for nearly four miles, is strikingly picturesque, and is enlivened by the **Holms water**. The **Biggar water**, which forms a boundary between the district of **Broughton** and those of **Glenholm** and **Kilbucho**, receives various rivulets, among which are the **Holms water** and the **Broughton** and **Kilbucho burns**, and falls into the **Tweed** opposite to **Drummelzier**. At **Rachan** are two fine pieces of water, ornamented with wooded islets; one is stocked with trout, and the other with perch. Among the hills are several springs, the water of which is intensely cold; and in the old glebe land of **Broughton** is a well possessing some medicinal properties.

The soil, in the upper parts of the valleys, is rather inclined to moss, and in the lower parts is a deep rich loam; near the confluence of the **Biggar water** with the **Broughton burn** the land is extremely fertile. The chief crops are wheat, barley, oats, peas, potatoes, and turnips; and the system of husbandry is in an advanced state: the woods contain but little old timber, and most of the plantations are of comparatively modern growth. The annual value of the real property in **Broughton** is £1579; in **Glenholm**, £2625; and the whole of **Kilbucho**, £3230. The chief substrata are greywacke, limestone, and slate; sand of a remarkably fine quality is found in the district of **Broughton**, and there are numerous pits of good gravel. Of the various houses in the parish, **Rachan**, **Rachan Cottage**, **Mossfennan**, **Broughton Place**, and **Kilbucho Place**, are the principal: the mansion of **Broughton** was burnt by an accidental fire in 1774, and rebuilt with the old materials on a smaller scale; **Kilbucho Place**, now a farm-house, was the family seat of the **Dicksons**, and its last occupier was **General Dickson**. The village was once a considerable market for cattle; but a fair only is now held, on the 3rd of October, principally for hiring servants, and for the sale of various wares. The road from **Edinburgh** to **Dumfries** passes through the parish, and in 1847 an act was obtained for the construction of a branch line from the **Caledonian railway** at **Symington** to **Biggar** and **Broughton**.

Ecclesiastically the parish is in the presbytery of **Biggar**, synod of **Lothian and Tweeddale**, and in the patronage of **William Renny, Esq.**; the minister's stipend is about £230, with a manse, and a glebe valued at £64. 14. 9. per annum. The church, which is situated in the district of **Kilbucho**, and nearly in the centre of the parish, is a plain substantial edifice, erected in 1804, and adapted for a congregation of 500 persons. A place of worship has been erected in connexion with the **Free Church**. There are three parochial schools, one in each of the three districts; the master of each has a salary of £32, with a house and garden, and, including proclamations of banns and other small emoluments, the fees for **Broughton** amount to about £25, for

Glenholm to about £30, and for Kilbucho also to about £30. Numerous remains may be traced of circular camps, one of which, called Macbeth's Castle, was surrounded with a double intrenchment. Some stone coffins also, containing human skeletons, have been found near the confluence of the Biggar and the Tweed, in a tumulus; one of the bodies was of gigantic size, and the arms were encircled with bracelets of gold or yellow metal.

BROUGHTY-FERRY, for a time a quoad sacra parish, partly in the parish of **MONIFIETH**, and partly in the parish of **DUNDEE**, county of **FORFAR**, 4 miles (E.) from Dundee; containing about 2400 inhabitants. This place, a small part only of which belongs to the parish of Dundee, at the close of the last century consisted merely of a few fishermen's huts; but the proprietor having begun to feu it about the year 1790, a large addition was quickly made to its population, and it has been since regularly increasing. It is a neat, clean, and thriving fishing and sea-bathing village on the Firth of Tay, having an interesting and picturesque appearance from the water; the gentle acclivity behind, studded with numerous pleasing and elegant villas, greatly heightening the general effect, and improving the scenery. Altogether the village is one of the most beautiful in Scotland; the houses are rapidly increasing, and a considerable number of the higher classes from Dundee, &c., have built handsome villas for their summer and winter residences. As a sea-bathing place, its repute is now very high. Many families from Dundee, Edinburgh, Perth, and other places, resort hither in the summer season, for the benefit of bathing, and find ample accommodation of every kind, a considerable proportion of the inhabitants letting their houses in lodgings for visitors. The Perth, Dundee, and Arbroath railway passes here, and on the opposite shore of the river is the Cupar line of the Edinburgh, Perth, and Dundee railway company, to whom the ferry across belongs. Thirteen boats are regularly employed, and in summer many more, in the white-fishing, upon which upwards of fifty families depend for support; and the fish taken, comprising cod, haddock, soles, ling, whiting, plaice, flounders, and many others, valued at £5000 per annum, constitute the principal supply of the town of Dundee. About 400 cod are also prepared weekly, for exportation, at a curing establishment here; and among several other branches of manufacture and trade, are two rope-works, a brewery, &c. Small vessels are occasionally built, opposite to those parts where the depth of water offers the necessary facility for launching them. A chapel of ease was erected in 1826, containing 755 sittings, and the attached district was formed into a quoad sacra parish in 1834; the minister, who is elected by the male communicants, receives about £150 per annum, derived from seat-rents and collections, and of which £120 are guaranteed. An excellent school has been formed in connexion with the Establishment, the master of which has a salary of £9. 18. 6., and fees; and there are places of worship belonging to the United Presbyterian Synod and the Free Church. Some remains exist of Broughty Castle, formerly a key to the navigation of the river, and much connected with historical events.

BROWNFIELD, for a time a quoad sacra parish; consisting of part of the parish of **ST. GEORGE**, in the city of **GLASGOW**, county of **LANARK**; and containing

2525 inhabitants. This place, which forms part of the suburb of Anderston, is situated on the north bank of the Clyde, and to the west of the Broomielaw Quay. The church is a neat structure.

BROXBURN, a village, in the parish of **UPHALL**, county of **LINLITHGOW**, 2 miles (E.) from Uphall; containing about 500 inhabitants. It is pleasantly situated on the road from Glasgow to Edinburgh, and on the banks of the Union canal, near a rivulet of the same name. Through the exertions of the late Earl of Buchan, the proprietor, it very much increased in extent and population, and a fair for cattle is held on the Friday after the second Tuesday in September. The parochial school is situated in the village, and there is a place of worship in connexion with the Free Church. In the vicinity is a station of the Edinburgh and Bathgate railway.

BRUNTON, a village, in the parish of **CREICH**, district of **CUPAR**, county of **FIFE**; containing 90 inhabitants. This village, which is pleasantly situated, is inhabited chiefly by persons employed in agriculture, and in hand-loom weaving for the linen manufacturers of Cupar, under the inspection of a resident agent who furnishes the materials. Previously to the introduction of machinery, several of the females were employed in spinning yarn; but at present there is only one spinning-wheel in operation.

BRYDEKIRK, formerly a quoad sacra parish; consisting chiefly of a portion of the parish of **ANNAN**, and partly of portions of the parishes of **CUMMERTREES** and **HODDAM**, in the county of **DUMFRIES**; and containing 881 inhabitants, of whom about 400 are in the village of Brydekirk, 3 miles (N. by W.) from Annan. The district forms a section of the vale of Annandale, about five or six miles above the entrance of the beautiful river Annan into the Solway Firth. The scenery is remarkably rich, varied, and extensive, rising on either side of the Annan (the banks of which are finely wooded) to a considerable elevation, and embracing from different positions the whole sweep of the surrounding country. The greater portion of the soil is under cultivation, in the usual routine of farming; and the remainder, to a large extent, is covered with timber and plantations. The village is pleasantly situated on the western bank of the Annan which is here crossed by a substantial bridge; it is neatly built, and intersected by the road from Annan to Lockerbie. In 1847 an act of parliament was passed for the construction of a branch railway, by the Caledonian railway company, from their line at Ecclesfechan, southward, by Brydekirk, to the Glasgow, Dumfries, and Carlisle line at Annan. The woollen manufacture was established in 1824, but the spacious building that was erected for the purpose at the east end of the bridge, has been some years converted into corn-mills: there is still a small carding-mill. Ecclesiastically Brydekirk is in the presbytery of Annan and synod of Dumfries. The church, erected in 1835, chiefly at the expense of Mrs. Dirom of Mount Annan, and her friends, is a neat structure, standing at the western extremity of the village, and contains 370 sittings. The minister's stipend is derived from the seat-rents, augmented by donations from the proprietor of Mount Annan; and a handsome house has been erected for his residence: the patronage is vested in the subscribers, managers, and male communicants, being seat-holders. Application is about to be made to the Court of Teinds, for the erection of Brydekirk into a pa-

rish under what is called Lord Aberdeen's Act; and should the application prove successful, the stipend of the minister will be £120, exclusively of the manse. There is a branch here of the parochial school, the master of which has a salary of £10, in addition to the fees, together amounting to about £40; and a parochial library is under the superintendence of the minister.

BUACHAILLE, in the county of ARGYLL.—See STAFFA.

BUCHANAN, a parish, in the county of STIRLING, 1 mile (N. W.) from Drymen; containing 754 inhabitants. The name of this place was originally Inchealeoch, which it received from an island in Loch Lomond, its western boundary; but a detached portion of the parish of Luss, containing the Buchanan estates and chapel, having been annexed to it in 1621, and the inhabitants finding this religious edifice more convenient than the church, regularly attended at the former, in consequence of which the parish assumed the name of Buchanan. This appellation is of uncertain origin; but the family who used it in consequence of having, at a very early period, obtained a grant of the lands so called, sprang from Anselan, a native of Ireland, who is supposed to have located himself here in the eleventh century. From this ancient race, always more celebrated for literary than political or military fame, descended the poet and historian George Buchanan, born in 1506; Dr. Buchanan, author of works on the civil and natural history of India; and Dr. Claudius Buchanan, whose writings, designed to awaken the British nation to a sense of the necessity of extending education and religious instruction in India, are well known. The parish is situated at the western extremity of the county, bordering on Dumbartonshire, and is bounded on the south by the river Endrick. It is about twenty-four miles in length and five in breadth, and comprises 76,800 acres, of which 1500 are arable, 69,750 natural pasture and waste, 4250 in woods and plantations, and the remainder in pleasure-grounds, &c. It contains a portion of lowland, some of the islands in Loch Lomond, and a mountainous ridge belonging to the highlands, stretching along the eastern bank of the loch, and terminating the Grampian hills on the west. This ridge is altogether a dreary barren tract, consisting chiefly of sheep-pasturage, used formerly, as is supposed, for the purpose of hunting, and now abounding in grouse, black game, and other fowl.

Loch Lomond, the rich and magnificent scenery of which is perhaps unrivalled, and which has been so often described, is twenty-four miles in length and about seven at its greatest breadth, and is twenty-two feet above the level of the sea. It contains salmon, pike, eels, &c., and a fish called powans, somewhat similar to a herring. On the east it is joined by the river Endrick; the Leven quits it on the south, and, running into the Clyde, affords to boats the means of communication with Glasgow, Greenock, and other places. A steam-boat, in the summer season, plies upon this beautiful expanse of water chiefly for the accommodation of visitors. The lake is studded with above thirty islands, mostly at the southern extremity. These, together with the shores of the loch, are in general clothed with dark wood, which gave occasion to a distinction drawn some years ago by a Swiss tourist, between Lausanne and Loch Lomond: "Our lake", he said, "is the fair beauty; your's, the

black". In ancient times, the lake was famed for three wonders, "waves without winds, fish without fins, and a floating island". The first phenomenon is attributed to a peculiar atmospheric effect, not easily described, but which has also been observed on the Cumberland lakes: vipers swimming from island to island account for the second; whilst the floating island is supposed to have been a detached fragment of moss, or a matted mass of aquatic plants, which ultimately fixed itself near the west side of Inch Conagan. Most of the islands in the lake are unimportant. The largest is Inchmurrin, which is two miles in length and about half as broad, and contains a considerable number of deer, the property of the Duke of Montrose: at the western limit of the island, on a hill, are the ruins of a castle built by the ancient Earls of Lennox, and near the same place is a lodge of modern date erected by the same family. In the parish is the lofty mountain of *Ben Lomond*, the highest point of the Grampians, rising 3000 feet above the sea, and commanding from its summit, which is of conical form, a prospect, on the north, of an interminable range of mountains rising in succession, one above another; and, on the south, of all the rich and varied scenery in the great tract from the Western Isles to the Firth of Forth. It is one of the most striking and commanding objects in the whole country, having the remarkable advantage of not being overcrowded or crowded up with surrounding hills; and besides the varied and most extensive prospect it embraces in every direction, Ben Lomond in itself affords a great variety of scenery. To the south it stretches out into a slope of a very gentle declivity; the north side is awfully abrupt, and presents a concave precipice many hundred yards in depth. The whole consists of three great stages, one rising above another; and these, again, are divided into a number of smaller swelling knolls, some of which are covered with heath and crags, whilst others are smooth and verdant.

The soil, on the bank of the Endrick, is for the most part alluvial; and towards the mountains the land comprises clay, gravel, and moss, the last supplying abundance of peat. The chief agricultural produce is barley and oats, the latter of which are raised in by far the larger quantity; potatoes and turnips are also grown. But the principal wealth of the parish arises from its sheep and black-cattle, grazed on the mountainous tracts; the sheep are of the black-faced breed, and of small size. The annual value of real property in the parish is £6400. The rocks mostly consist of various kinds of slate, but the quarries formerly wrought have been discontinued. The natural wood contains about 3000 acres; the plantations are chiefly oak and larch, and were for the most part formed by the late Duke of Montrose, whose decease occurred in 1836. Buchanan House, the summer residence of the Duke of Montrose, was situated in the lower district, and surrounded by extensive and well laid-out grounds; the body of the edifice was ancient, but the wings comparatively of modern date. This mansion was unfortunately destroyed by fire on January 22nd, 1850: the pictures and family records were saved. At Balmaha is a manufactory for the preparation of pyroligneous acid; 700 tons of small wood are annually used in the works, and the acid and dye-stuffs extracted from it are sold to the proprietors of print-works in the vicinity of Glasgow.

Ecclesiastically the parish is in the presbytery of Dumbarton, synod of Glasgow and Ayr, and in the patronage of the Duke of Montrose: the minister's stipend is £156. 12. 8., of which above a third is received from the exchequer; with a manse, and a glebe valued at £10 per annum. The church, situated in the lower portion of the parish, is a neat edifice, built about 1764, and contains 300 sittings. A small part of the ruins of the old church still remains, in the island of Inchcalloch. The master of the parochial school receives a salary of £30, with fees; and at Salochy, in the higher district, is a school, the master of which has £15 per annum, paid by the Edinburgh Society, and a house, with a piece of grass-land, given by the duke. A library was formed some years since.

BUCHANHAVEN, a village, in the parish of PETERHEAD, district of BUCHAN, county of ABERDEEN, 1 mile (N.) from Peterhead. This village is situated on the east coast, to the north of the haven of Peterhead, and near the mouth of the river Ugie, which here flows into the German Ocean. The inhabitants are engaged in the white and herring fisheries, both of which are successfully carried on, at no great distance off the coast. Five boats are employed in each, for the accommodation of which a small harbour has been lately constructed.

BUCHANTY, a hamlet, in the parish of FOWLIS WESTER, county of PERTH; containing 48 inhabitants.

BUCHANY, a village, in the parish of KILMADOCK, county of PERTH, 2 miles (W. N. W.) from Doune; containing 113 inhabitants. This village, which is on the road from Doune to Callander, and near the picturesque burn of Annat, is inhabited by persons engaged in agricultural pursuits, or employed in the manufactories in the vicinity. The mansion of Cambus Wallace is beautifully situated on an eminence immediately above the village, commanding an extensive view of the river Teith, the town and castle of Doune, the pleasure-grounds of Blair-Drummond, and Stirling Castle. On the acclivity of the hill are vestiges of a camp said to have been the resort of Sir William Wallace, from which circumstance the mansion derived its name. The house is surrounded with a well-wooded park, embracing great variety of scenery.

BUCKHAVEN, an extensive village and fishing station, in the parish of WEMYSS, district of KIRKCALDY, county of FIFE, 4 miles (E.) from Kirkcaldy; containing 1526 inhabitants. This village is situated on the Firth of Forth, and consists of an irregular range of houses, extending along the shore, and chiefly inhabited by persons employed in the fisheries, of which it is the principal station on this part of the coast of Fife. A library has been founded, which is well supported by subscription, and contains a good collection of volumes; and a savings' bank has been opened, with every prospect of success. The fishery here has been long established, and is gradually increasing; it affords employment to nearly 200 persons, and about 150 boats of various tonnage are regularly engaged during the season, which generally commences about the end of June, when the boats sail to the herring-stations of Fraserburgh, Wick, and Helmsdale, returning to this place with their cargoes about the beginning of September. The value of the boats is more than £8000, and, including the nets, nearly £20,000, in the aggregate. The harbour, which is safe and commodious, has been improved by the erec-

tion of a new pier, at an expense of more than £4000, of which the Board of Fisheries contributed £3000; and from its very advantageous situation, rendering it easy of access, it is well adapted to afford shelter in stress of weather to vessels of considerable burthen. A number of the inhabitants are employed in the weaving of linen, and an extensive factory is established.

BUCKHOLMSIDE, a village, in the late quoad sacra parish of LADHOPE, parish of MELROSE, county of ROXBURGH; containing 396 inhabitants. This place is situated on the east side of the river Gala, and, though within the parish of Melrose, is more properly an appendage of Galashiels, with which town it is connected by a stone bridge, and in the manufactures of which the larger part of the population is employed. Great facility of intercourse is afforded by the Edinburgh and Hawick railway, lately opened. There is a school in the village, for which a comfortable house has been built by the heritors.

BUCKIE, a post-town, in the parish of RATHVEN, county of BANFF, situated on the sea-shore, at the mouth of the burn of Buckie, about a mile northward of the turnpike-road from Banff to Elgin, and above five miles eastward of the mouth of the river Spey. It is divided into the Sea-town and New-town, the total population, according to the last census, being 2165. The Sea-town extends both east and west of the burn's mouth, and has been a fishing station for about two centuries; the New-town was commenced in the year 1779. West of the mouth of the burn is a small pier, chiefly for the benefit of the fishermen's boats, but coal and salt, with other articles, are unloaded at it in summer. The white-fishing is prosecuted by thirty-two boats and upwards of 300 men; seven smoking-houses for curing haddocks have been lately established, and a brisk trade is carried on in exporting those fish. A considerable number of boats also go from this shore to the herring-fishery: in the year 1844, it appears that 152 boats went. On the east side of the burn's mouth, contiguous to the coast-guard station, soundings were taken about the time the Caledonian Canal was cut, with the design of constructing a harbour of refuge for vessels making the transit from the east to the west seas by the canal. The locality is most suitable for a capacious and secure harbour: at the point of the rocks, at a stream ebb, the depth of water is six feet, and stream high water rises to twenty feet. Both the agricultural and commercial interests urgently call for the formation of a harbour. Buckie has a branch of the North of Scotland Bank, and contains places of worship for members of the Free Church, Episcopalians, and Roman Catholics; also a school provided by the members of the Free Church, who pay the teacher.

BUCKLERHEAD, a hamlet, in the parish of MURROES, county of FORFAR; containing 48 inhabitants.

BUCKLYVIE, formerly a quoad sacra parish; consisting of part of the parish of DRYMEN, in the county of STIRLING, and part of that of KIPPEN, in the counties of PERTH and STIRLING; containing 963 inhabitants, of whom 381 are in the village, 5 miles (W. S. W.) from Kippen. Bucklyvie is situated on the road from Kippen to Drymen, and is a burgh of barony, and entitled to hold five fairs. The parish was in the presbytery of Dunblane, synod of Perth and Stirling. The church was built in 1835, by subscription, at a cost of £600, and contains 352 sittings; but it is not now opened. The

stipend of the minister was £70, with a small allowance for communion elements. There are places of worship for the United Presbyterian Synod and members of the Free Church.

BUITTLE, a parish, in the stewartry of **KIRKCUDBRIGHT**, 4 miles (S. E. by S.) from Castle-Douglas; containing, with the village and port of Palnackie, 1059 inhabitants. This place, whose name is of very uncertain derivation, is of great antiquity; and there are still some remains of its castle, supposed to have been the principal seat of the ancient lords of Galloway. The parish is bounded on the east by the river Urr, and on the south by the bay of Orchardton in Solway Firth. It is about eight miles in length, and nearly three in average breadth. The surface is diversified by hill and dale; in the middle and lower districts it is broken with numerous rocky knolls, covered with furze and broom, but in the upland districts the ground is more uniformly level, and better adapted for the plough. The soil is various, and, on the arable lands, generally fertile; the chief crops are oats, barley, wheat, potatoes, and turnips. The system of agriculture is improved; the lands have been extensively drained, and large tracts of moss have been brought into profitable cultivation. Great attention is paid to the rearing of cattle; they are usually sold to the dealers at two or three years old, and driven to England, where they are fed for the English markets. Considerable numbers of sheep are also reared; they are fed upon turnips, and mostly sent to Liverpool. The annual value of real property in the parish is £7757. The plantations, which have been greatly extended within the last few years, now comprise about 960 acres. They consist chiefly of oak, ash, larch, and Scotch fir; and on some of the lands planted at an earlier date, are remarkably fine specimens of luxuriant growth; though many of the larches, after flourishing vigorously for a few years, degenerate. The substratum is chiefly granite, of very excellent quality, of which an extensive quarry was opened some time since at Craignair Hill, and afforded employment to about 200 men; blocks weighing from seven to eight tons were for some years shipped for Liverpool, but the quarry at present is only wrought to a very limited extent, for home use.

For ecclesiastical purposes the parish is within the bounds of the presbytery of Kirkcudbright and synod of Galloway: the minister's stipend is about £230, with a manse, and a glebe valued at £20 per annum; patron, the Crown. The church, situated in the centre of the parish, and erected in 1819 at an expense of £1000, is a handsome structure in the early English style, containing 400 sittings, and, from the height of the walls, well adapted for the erection of galleries, if additional seat room should be required. In the churchyard are the walls of the ancient church, covered with ivy, and forming a beautiful ruin. There are two parochial schools, the masters of which respectively have salaries of £28 and £23, with dwelling-houses, and the fees. On a farm called Castlegower, on the north-west border of the parish, are the remains of a vitrified fort. There are two wells, formerly held in high repute, and one of which was celebrated for the cure of diseases peculiar to cattle; but they are now totally disregarded.

BULLERS-BUCHAN, a village, in the parish of **CRUDEN**, district of **ELLON**, county of **ABERDEEN**; containing 91 inhabitants. This is a small fishing village,

seated on the eastern coast, in the neighbourhood of the stupendous rocks of the same name, where is a circular basin about 150 feet deep, into which a boat can sail, under a long vaulted arch. The view from the sea is peculiarly striking, two hideous cliffs presenting themselves; the vault in general, where most confined, is thirty or forty feet in height, and the tide rushes in tumultuously, and produces a boiling motion round the sides of the pit. "No man", observes Dr. Johnson, "can see the Buller with indifference, who has either sense of danger or delight in rarity: if I had any malice against a walking spirit, instead of laying him in the Red Sea, I would condemn him to reside in the Buller of Buchan". Above the surface of the water are several caverns of unknown extent.

BUNDALOGH.—See **DORNIE**.

BUNKLE and **PRESTON**, a parish, in the county of **BERWICK**, 5 miles (N. N. E.) from Dunse; containing about 650 inhabitants. The name of this place is derived from the Celtic word *bon*, signifying the foot or base, and *hill*, a cell or chapel; the word **Preston**, if of Saxon origin, would signify *Priest-town*, or the town of the priests, but some derive it from the Gaelic term *Preas*, a thicket, and *tun*, a town or farm. The manor was formerly possessed by Sir Alexander de Bunkle or Bonkle, by whom it was transferred in 1288 to Sir John Stewart, on his marriage with the only child of Sir Alexander. The property passed from Sir John Stewart, by an heiress, to a different branch of the Stewarts, one of whom was created Earl of Angus and Lord de Bunkle; and a granddaughter of this earl, by her marriage with William, Earl of Douglas, carried the property to the family of Douglas. The ancient castle of Bunkle, of which a ruin only now remains, was the residence of the Stewarts. The parish contains 9300 acres. Its surface, in the southern division, is tolerably level, sloping gently towards the south-east; the northern part is traversed by the Lammermoor hills, the southern ridge of which, called Bunkle Edge, is 700 feet above the sea, but not more than half that altitude above its own base, showing the site of the parish to be of considerable elevation. The river Whitadder runs along the southern and western boundary of the parish, and, from its width, its beautiful meanderings, and picturesque valleys, forms an interesting object; it abounds with salmon and trout, and is frequently visited by the lovers of angling.

On the hills the soil is thin and poor, but in the lower parts, especially in the vicinity of the Whitadder, a rich fertile loam. The cultivated land comprehends 7280 acres, one-half of which is usually in tillage, and the other half in pasture, and of the former, about two-thirds produce white crops, and the rest potatoes and turnips. Little wheat is raised, and only a sufficient quantity of hay for domestic use. About 1600 acres are moorland or heath, and about 420 planted, chiefly with Scotch fir, of recent growth. The rotation system of husbandry here adopted consists of two or three years of pasture, followed by three years of tillage; but the farmers give their chief attention to the rearing of sheep, there being on some farms no less than 1500 or 1600, principally of the Leicester breed. Considerable improvements have been made within the last half century, and nearly all the waste land capable of cultivation has been reclaimed. The annual value of real property in the parish is £8833. There are three distinct classes of rocks, the transition

series, the old red sandstone, and the new red sandstone. On the Hoardwell estate, close by the river, is a coppermine, the property of Lord Douglas, worked about sixty or seventy years since by an English company, but abandoned as unprofitable a few years afterwards: in 1825 it was again wrought, and again relinquished on the same account. The eastern boundary of the parish is skirted by the Dunse branch of the North-British railway.

Ecclesiastically the parish is within the bounds of the presbytery of Dunse, synod of Merse and Teviotdale; patron, Lord Douglas: the stipend of the minister is about £250, with a manse, and a glebe of the annual value of £46. When the ancient parishes of Bunkle and Preston were united, about the year 1714, public worship was performed in each alternately, till at length, both churches needing repair, that of Bunkle was chosen as most suitable for the joint population; it is a neat edifice, rebuilt in 1820, on the old site, and capable of accommodating 400 persons. There is a parochial school, where the usual branches of education are taught, the master receiving the maximum salary, with £26 fees, a house, and garden. Dr. James Hutton, born at Edinburgh in 1726, and author of a *Theory of the Earth*, resided in the parish, and greatly promoted agricultural improvements in this part of the country; and Dr. John Browne, the celebrated medical theorist, author of the system called from him the Brunonian, was born here in 1735.

BURGH-HEAD, a village and district, in the parish of DUFFUS, county of ELGIN, 9 miles (N. W.) from Elgin; containing 829 inhabitants. This place is equidistant from Elgin and Forres, and is seated on the north of a fine bay of the same name, said to be one of the best roadsteads on the east coast of Scotland. The harbour, which is commodious, was formed about 1811, and as many as 400 vessels now enter it in the course of the year; twelve vessels of the aggregate burthen of 738 tons belong to the port, and by these traders, and by steam-ships, there is a regular communication with London, Liverpool, Leith, and Aberdeen. The greatest length of the district is five miles, and its greatest breadth three. The village is very thriving, and has several good houses, an excellent inn, a public reading-room, and convenient baths for the accommodation of summer visitors, who frequent it in great numbers. In 1846 an act of parliament was passed authorizing the construction of a railway from Aberdeen to Inverness, with branches to Burgh-Head and other places. A chapel of ease was built in 1832, and in 1834 it was slightly altered to increase the number of sittings, which are now 414; the minister's stipend is £70, paid partly by seat-rents and partly by two societies, with a house rent-free. The members of the Free Church, and the United Presbyterian Synod, have each a place of worship, and a school is supported by the General Assembly. On the promontory of Burgh-Head are considerable remains of a regular Roman or Danish insulated fortification. The works were divided into two parts, a higher and a lower, and presented four strong ramparts, built with oaken logs, directed towards the small isthmus upon which the village now stands. A deep well, of extreme regularity in its construction, and much too carefully formed to allow of its being supposed to be Danish, was lately discovered on the spot, and adds another link to the

chain of evidence adduced by General Roy, in his learned work on Roman antiquities, to show that Burgh-Head was a Roman station of very considerable importance.

BURNBANKS, a village, in the parish of NIGG, county of KINCARDINE; containing 60 inhabitants. This is a small village, lying contiguous to two others, on the eastern coast. It is occupied by fishermen, who have two boats engaged in the white-fishery, and three boats which proceed yearly to the herring-fishery on the north coast.

BURNBRIDGE, a village, in the parish of MUIR-AVONSIDE, county of STIRLING; containing 67 inhabitants. It lies in the east part of the parish, where the river Avon separates the county of Stirling from Liulith-gowshire.

BURNNESS, county of ORKNEY.—See CROSS.

BURNHAVEN, a village, in the parish of PETER-HEAD, district of BUCHAN, county of ABERDEEN, 2 miles (S.) from Peterhead. This village is situated near the mouth of the burn of Invernettie, from which it has its name; and consists of about thirty houses, erected by George Mudie, Esq., and inhabited by fishermen, who employ seven boats in the herring-fishery. The houses are on the acclivity of the sea-shore, nearly level with the high-water mark. A small but convenient harbour for the fishing boats has been constructed by Mr. Mudie, at an expense of £300.

BURNS, a hamlet, in that part of the parish of MARKINCH which formed the quoad sacra parish of MILTON of BALGONIE, county of FIFE; containing 28 inhabitants.

BURNTISLAND, a parish, burgh, and sea-port town, in the district of KIRK-CALDY, county of FIFE, 4½ miles (S. W. by W.) from Kirkcaldy, and 9 (N. by E.) from Edinburgh; containing, with the village of Kirk-ton, 2210 inhabitants, of whom 1572 are in the burgh.

This place is erroneously said to have derived its appellation from a small island in the harbour, originally inhabited by a colony of fishermen, whose dwellings were destroyed by fire: the ancient name was Bertylund, afterwards corrupted into Burntland, and Burntisland; and its etymology is uncertain. The harbour appears to have been selected as a landing-place for his forces by the Roman general Agricola, who with his fleet explored this part of the coast of Britain; and on the summit of an eminence in the parish, called Dunearn Hill, are the ruins of a fortress in which his army was stationed. Few events of historical importance are recorded: the town belonged to the abbey of Dunfermline, previously to the middle of the sixteenth century, when James V. exchanged it for other lands, and erected it into a royal burgh, soon after which it became a place of considerable trade, and its harbour was the chief port of an extensive line of coast including the ports of Kinghorn, Kirkcaldy, Dysart, Wemyss, Leven, Elie, St. Monan's, Pittenweem, Anstruther, Crail, St. Andrew's, and South Queensferry. In 1601, a meeting of the General Assembly of the Kirk of Scotland was held in the town, at which James VI. was present, and recommended

Burgh Seal.

a revision of the common translation of the Sacred Scriptures, and of the version of the Psalms of David. During the parliamentary war in the reign of Charles I., the town was assaulted by the forces of Cromwell, to whom the inhabitants surrendered it. In the disturbances of 1715, the town was taken possession of by the Earl of Mar's forces, who, by commanding the harbour, insured the arrival of stores and auxiliaries from abroad.

The town is situated on a peninsula projecting into the Firth of Forth. It is neatly built, and amply supplied with water, which was first introduced by the magistrates and council at an expense of £1000, defrayed from the funds of the burgh. A subscription library, containing about 600 volumes, has been established. A fair is held on the 10th of July; and from the favourable situation of the place, and the facilities of bathing which this part of the coast affords, the town is much frequented during the summer months. Within the last few years, Burntisland has become a great national ferry-station; a splendid low-water pier, where steam-vessels can land at all times of the tide, has been built by the Duke of Buccleuch and Sir John Gladstone, and the Edinburgh, Perth, and Dundee railway has an important station here. The pier now belongs to the railway company, and the company's steam-vessels ply, in connexion with the trains, across the Firth of Forth to and from Granton, on the south shore of the Firth, whence the line of railway extends to the heart of Edinburgh. The act vesting the pier and ferry in the company was passed in 1847, and conferred power to extend and improve the pier. A large moveable slip has been recently erected, by means of which goods are now conveyed across the Firth, on a steam-vessel of peculiar construction, without removal from the trucks. Besides the pier, the company possess the property to the west, presenting a considerable harbour frontage, and including a very commodious graving-dock; and lines of rails cross over on the level in front of the spacious Forth hotel, which looks down the pier. To the right of, and connected with, the hotel, stands the elegant station-house, having a colonnade of highly symmetrical Corinthian columns, built of the excellent freestone of Fifeshire. The station is ensconced below the beetling brow of the sea-cliff, behind which the town is situated within the gorge, and on the steep acclivities of a narrow valley, formed between the sea-cliffs and the elevated ridge extending from Rossend Castle to the School hill or Mount Pleasant, Kirkton hill, and the Binn.

The port formerly carried on an extensive trade, for which it was chiefly indebted to the convenience of its harbour. For its great security and facility of access, the harbour obtained the appellation of *Portus Gratia*; and in many old documents it is mentioned by the designation of *Portus Salutis*. The trade, which consisted mainly in the exportation of coal and salt, and the importation of wines from France, and timber from Norway, declined greatly after the Union, and was almost discontinued for a considerable time; but it afterwards revived, and at present consists principally in the curing of herrings, which are taken in the fishery established here, and exported to the neighbouring towns. The number of herrings annually cured and exported amounts, on an average, to about 18,000 barrels; there are eight establishments for curing, which together employ from seventy to eighty boats, having about 400 men. The season commences in July, when the boats set sail for Wick,

Fraserburgh, and Roseheart, where they remain for nearly two months; and between this place and the several fishing-stations, about ten sloops are constantly engaged in taking out cargoes of barrels and salt, and in bringing home the fish that have been caught at each place, to be cured for exportation. The whale-fishery was carried on here for a few years, by a company that annually sent out two vessels, of the aggregate burthen of 700 tons, and each a crew of fifty men. During the period from 1830 to 1835, the quantity of oil procured was 1200 tons, and of whalebone more than fifty tons; the preparation of which afforded employment to thirty persons, of whom nearly one-half were oil-coopers, and the remainder women who were occupied in cleansing the bone. This fishery, proving a bad speculation, has been discontinued. The building and repairing of ships were formerly carried on extensively, and at present engage more than 100 persons; but the largest vessel built has not exceeded 450 tons' burthen. A distillery at Grange, in the parish, consumes annually about 11,000 quarters of malt, in the production of nearly 190,000 gallons of whisky; and the amount of duty payable exceeds £36,000. In connexion with this establishment, the buildings of which are situated half a mile from the town, about 700 head of cattle are annually fed, producing to the proprietors a considerable income; and the whole concern affords employment to about 100 men and fifty horses. The harbour is capacious and easy of access, and, from its depth, affords shelter to vessels of great burthen. A dry-dock has been some time constructed, in connexion with the harbour; it is about 200 feet in length, and seventeen feet in depth at high water, and is capable of receiving vessels of 1000 tons. The roadstead affords good anchorage, and is much frequented in stormy weather; the bottom is deep, even near the shore, and the high grounds on the north, and a sand-bank extending considerably into the sea on the east, provide shelter for vessels in distress. An act of parliament to improve the harbour was passed in 1848. At Starly burn is a small harbour, from which the limestone found on the lands belonging to the Carron Company is shipped, and where also ships frequently touch to take in a supply of fresh water. There is also a pier east of the town, chiefly used for shipping lime to neighbouring districts.

The town was erected into a royal burgh in 1541 by James V., whose charter was confirmed by his successor, James VI., with additional grants; and a new charter was bestowed upon the inhabitants by Charles I., under which the government is vested in a provost, three bailies, a treasurer, procurator-fiscal, and a council of twenty-one, assisted by a town-clerk. The provost and bailies, with all the other officers, are elected by the council, who are chosen by the parliamentary electors within the royalty. The magistrates exercise jurisdiction within the burgh, and the bailies hold courts for the trial of civil cases to any amount, and for the decision of criminal offences, chiefly misdemeanors; there is also a court of guild, under a dean of guild chosen by the council. The trades or companies consist of the hammermen, tailors, weavers, fleshers, shoemakers, and bakers. Burntisland unites with Kirkcaldy, Dysart, and Kinghorn, in returning a member to the imperial parliament; the right of election is vested in the resident householders occupying premises of the value of £10 per annum, and there are at present about fifty voters on the roll.

The PARISH was anciently called Kinghorn Wester. It is bounded on the south by the Firth, and comprises about 3000 acres, of which 500 are meadow and pasture, 100 woodland and plantations, and the remainder arable land. The surface is exceedingly irregular, being broken into parallel ridges of various eminence, and, throughout the whole of its extent, being finely diversified with hills and dales; the highest of the hills is Dunearn, which rises to the height of 700 feet above the level of the sea, commanding a most extensive and richly-varied prospect, embracing portions of nearly fourteen counties. The soil is very various, consisting of rich deep loam, of great fertility, with lighter loam, gravel, sand, clay, and moss; the principal crops are wheat, barley, oats, beans, and potatoes, with the usual green crops. Great improvement has taken place by draining the lands, and the system of agriculture is in a very forward condition. The cattle are of the old Fifeshire breed, and the sheep generally of the Cheviot. The annual value of real property in the parish is £8846. The plantations are but of modern growth, and there is comparatively little ornamental timber, though the soil seems well adapted to hard-woods of every kind. The substrata are chiefly limestone, sandstone, ironstone, clay-slate, shale, greenstone, trap-tuffa, and basalt; and coal is supposed to exist, though none has hitherto been wrought. In the strata of sandstone, limestone, and shale, are various fossils; and amethysts, agates, and chalcedony are found in great variety. The limestone and sandstone are extensively quarried. Collinswell, Grange, and Newbigging, all handsome edifices, are pleasantly situated in grounds tastefully embellished.

Ecclesiastically the parish is in the presbytery of Kirkcaldy, synod of Fife, and in the patronage of the Crown; the minister's stipend is £185. 17. 4., with a manse, and a glebe valued at £50 per annum. The church, a substantial edifice with a low square tower, situated near the shore of the Firth, was erected by the inhabitants, in 1592; it is adapted for a congregation of 900 persons. There are places of worship for members of the Free Church and United Presbyterian Church. The burgh school affords instruction under a master appointed by the council, who pay him a salary of £26. He also receives a fourth part of the rent of lands bequeathed in the year 1659 by John Watson, Esq., provost of Burntisland, and now producing in the whole £63 per annum, of which the remaining three-fourths are divided among three widows, under the direction of the magistrates and council. In consideration of the sum the master receives from the endowment, he is bound to teach, if required, poor scholars to that amount; for each, £4 Scots, or 6s. 8d. sterling. The town was at one time fortified. On the south-east side of the harbour, part of the walls of a fort is still standing; and some years ago, traces of the ancient fortification were discernible on the small eminence in the north side of the town. On a knoll projecting boldly into the sea, at Lamberlaws, are traces of an encampment said to have been occupied by Cromwell; and on an eminence overlooking the harbour are the remains of Rossend Castle, built in the fifteenth century: it has been greatly improved within the last few years, and forms a pleasant residence, surrounded with gardens and plantations. Not long since, distinct traces might be seen of fortification along the braes forming the north boundary of the

town. There are several tumuli in various parts; in one of them were found coffins, of rudely squared stones. On an eminence in the north-west of the parish are some remains of the fort called Knockdavie, and about a mile and a half to the east of it, of another of similar construction.

BURRA and QUARFF, for a time a quoad sacra parish, in the parish of BRESSAY, county of ORKNEY and SHETLAND; containing 870 inhabitants. The district of *Burra* lies west of the Mainland, from which it is separated by Cliff Sound, and comprehends the isles of House, Burra, Halvera, and Papa, the two last of which are of very small extent. Halvera, situated two miles south from Burra, is a precipitous elevation, approached by a creek, and tenanted by only a few families; and Papa, a mile north from Burra, merely affords a residence to two families. *House* or the *Eastern* isle, which is about half a mile from Quarff, and *Burra* or the *Western* isle, which is mostly the same distance from House, are each formed principally of a hilly ridge of rugged and irregular appearance, that of the former about five miles in length, and of the latter about six. In one place the isles nearly touch each other, the communication being carried on by means of a small bridge, consisting of beams of wood resting on two piles of uncemented stones. The coast of both islands is rocky. They are considered among the richest islands of their size in the country. Burra is highly picturesque, and contains many spots of fertile and cultivated land. The island of House, so called from the circumstance of the first slated house in Shetland having been built upon it, is inferior in appearance, but contains, besides several miles of peat-moss, a considerable tract of good natural pasture, and a few pretty spots of cultivated ground. The manor-house of House, being the third house on the same site, is a neat modern building, with out-kitchen and suitable offices: attached to it are about three acres of land, tastefully laid out, and inclosed by a stone wall from six to eight feet in height. What adds principally to the value of these islands is their contiguity to a fishing-ground and a valuable bed of oysters upwards of a mile in length: many of the inhabitants are employed in procuring these oysters, and exporting them to Lerwick, where they meet with a ready sale. The district of *Quarff*, situated between the districts of Bressay and Burra, and forming part of the Mainland, is six miles south-west from Bressay. It consists of a valley, about two miles long and half a mile broad, inhabited and partly cultivated; together with a tract of natural pasture on the north, and another on the south, about a mile each in length. The whole forms a pleasingly rural picture, with cottages on each side of the winding valley, skirted by the mountains, and separated from each other by meadows, with the advantage of an interesting bay on the east and west. Quarff is nevertheless a poor district; the vale is generally rough and uncultivated, and affords great scope for improvement. The southern part of the valley is defended by the Cliff and Coningsburgh hills, which here unite in a ridge, and the northern part by those of Tingwall and Lerwick, the highest point of which is estimated at 500 feet. Ecclesiastically, Burra and Quarff are in the presbytery of Lerwick, synod of Shetland; the patronage belongs to the Crown, and the stipend of the minister is £120, with a manse and glebe, situated near the centre of the valley above described.

There are two churches, of which that of Burra, near the southern extremity of the Western isle, was built in 1804, and accommodates about 200 persons; that of Quarff was erected in 1830, by government, and contains about 300 sittings. A place of worship has been built for members of the Free Church, and the Methodists and the Baptists have each a place of worship.—See BRESSAY.

BURRAY, an island, forming part of the ancient parish of ST. PETER, island of SOUTH RONALDSHAY, South isles of ORKNEY; containing 532 inhabitants. This is a low island, bounded on the south by Water Sound, and on the north by Holm Sound; it is about four miles in length, and one in breadth. The soil, which affords good pasturage, is in general a light dry sand, mixed in a few places with some coarse clay. Fishing is the employment of a large portion of the population. Across Water Sound is a ferry, a mile broad, to the island of Ronaldshay.

BURRELTOWN, a village, in the parish of CARGILL, county of PERTH; containing 485 inhabitants. Here are a chapel of ease, unendowed, supported by subscription, and a small school; also a place of worship for members of the Free Church.

BUSBY, a village, partly in the parish of EAST KILBRIDE, Middle ward of the county of LANARK, but chiefly in the parish of MEARNS, Upper ward of the county of RENFREW; containing 902 inhabitants. This village is pleasantly situated on the river White Cart, the sides of which, abruptly precipitous and rocky, are thickly wooded, and display much variety of scenery. The inhabitants are employed chiefly in a print-field and a factory in the immediate neighbourhood; the print-field is in the parish of East Kilbride, and the cotton-factory, which was established in 1780, in that of Mearns. A post has been instituted here, under the post-office of Glasgow.

BUSHYHILL, a village, in the parish of CAMBUSLANG, Middle ward of the county of LANARK; containing 393 inhabitants.

BUTE, ISLE OF, in the county of BUTE; comprising the parishes of NORTH BUTE, KINGARTH, and ROTHESAY, and containing 8078 inhabitants. It is in the Firth of Clyde, and separated from Cowal, a district of Argyllshire, by a narrow channel. Its length is eighteen, and its breadth between four and five, miles. The northern parts are rocky and barren, but the southern extremity is more fertile, well cultivated and inclosed, and in some places finely wooded; and it is said that no part of Scotland has made more rapid progress in agriculture than this island, within the last twenty or thirty years. The climate is remarkably mild, especially in winter and spring, and during these seasons the isle is much resorted to by invalids. The coast is rocky, but is indented with several safe harbours, in which a number of small craft are fitted out for the herring-fishery, which is the principal occupation of the male inhabitants: the chief port is Rothesay. The annual value of real property in the island is £17,777. Bute contains several remains of antiquity; in particular, near Rothesay are the ruins of an ancient castle, with a fort, barracks, and drawbridge, once a residence of the kings of Scotland. There are some Danish towers, and fragments of fortifications on some of the hill-tops.

BUTE, NORTH, a new parish, taken out of the parish of ROTHESAY, in the isle and county of BUTE, 1½

mile (N. W.) from Rothesay; containing, with the island of Inch-Marnock and village of Port-Bannatyne, 1091 inhabitants. This parish, which comprises about half the island of Bute, owes its origin to the erection and endowment in 1835, by the late Marquess of Bute, of an elegant church for the accommodation of the inhabitants in the northern portion of the parish of Rothesay. The district was disjoined from Rothesay, and erected into a separate parish, in June 1844, by a decree of the court of teinds, and plantation of kirks, under the name of North Bute. The church is pleasantly situated in a valley between Kames bay on the east, and Etterick bay on the west; and the erection and endowment, and the building of the manse, with other expenses attendant on the completion of the marquess's design, were estimated at £8000. The stipend of the minister is £150, with an allowance of £12 in lieu of glebe, and £10 for communion elements. The members of the Free Church have a place of worship, with a school, at Port-Bannatyne; and a parochial school is situated, rather inconveniently, at Etterick, and supported by a salary from the marquess's family, and by the fees.—See PORT-BANNATYNE.

BUTESHIRE, a county, on the western coast of Scotland, consisting of the isles of Bute, Arran, Inch-Marnock, and Great and Little Cumbray, in the Firth of Clyde; separated on the north from Argyllshire by the straits called the Kyles of Bute, and on the west, from the peninsula of Cantyre, by Kilbrannan Sound. It lies between 55° 26' and 55° 56' (N. Lat.), and 4° 54' and 5° 23' (W. Long.), and comprises an area of about 257 square miles, or 164,480 acres; 3067 inhabited houses, and ninety-seven uninhabited; with a population of 15,740, of whom 7155 are males, and 8585 females. The island of Bute, at a very early period, became the property of Sir John Stuart, a son of Robert II.; it was confirmed to him by his brother, Robert III., and is still the property of his descendants, the Marquesses of Bute. That of Arran was granted by James III. to Sir James Hamilton, whose descendant, the Earl of Arran, was regent of Scotland during the minority of Mary, Queen of Scots; and it now is the property of the Duke of Hamilton. The civil business of the county is transacted at the royal burgh of Rothesay, which is the only town; and under the act of the 2nd of William IV., the county returns a member to the imperial parliament.

The surface is various. The island of Bute, in the central part, is diversified with hills affording excellent pasturage, and with valleys of rich arable land in excellent cultivation. Arran is rugged and mountainous, interspersed with glens of moss, through which several streams, descending from the heights, flow into the sea. The highest of the mountains in Arran is Goat-Fell, which has an elevation of 3500 feet above the sea; and from its summit is an extensive view embracing England, Ireland, and the Isle of Man. In both islands there are numerous lakes; and the coasts are indented with fine bays, the chief of which in Bute are, Kilehat-tan, Rothesay, and Kames, on the east; and Dungoil, Stravannan, Scalpsie, St. Ninian's, and Etterick, on the west. The bays in Arran are, Lam-lash, which is accessible in every wind, Whiting, and Bro-dick, on the east; and Druimadonn and Machry, on the west. Opposite to St. Ninian's bay is the island of Inch-Marnock, and at the entrance of Lam-lash bay is the Holy Island. Freestone, limestone, slate, and an inferior kind of coal,

are the prevailing substrata; and near the shore are some beds of coral and shells of great thickness. The annual value of real property in the county is £31,162, of which £20,597 are returned for lands, £9836 for houses, and the remainder for other species of real property. The chief seats are, Arran House, at the head of the bay of Brodick; and Mount Stuart, situated on an acclivity opposite to the entrance of the Clyde. The island of Bute gives the title of Marquess to the ancient family of Stuart.

BUTTERGASK, a village, in the former quoad sacra parish of **ARDOCH**, parish of **DUNBLANE**, county of **PERTH**; containing 65 inhabitants. It is situated in the eastern part of the parish, on a stream tributary to the Allan, and a short distance from the road between Auchterarder and Dunblane.

BYTH, NEW.—See **NEWBYTH**.

C

CABRACH, commonly called **THE CABRACH**, a parish, partly in the district of **ALFORD**, county of **ABERDEEN**, but chiefly in the county of **BANFF**, 12 miles (W.) from Clatt; containing 827 inhabitants. This parish extends in length from north to south about twelve miles, and about five miles in breadth in the upper end, and three in the lower. The portion in the county of Aberdeen consists of a deep tract in the form of a basin, surrounded by hills, the highest of which is the Buck, on the south, rising to the height of 2730 feet. This part of the parish abounds much with moss and fir roots, and hence arose the name of the whole parish, from certain Gaelic terms signifying "the timber moss". The Banffshire portion, which is separated from the former for about two miles by intervening hills, juts out into three glens or valleys, skirted by lofty eminences, and stretching along the courses of their different streams, the Blackwater, Doveron, &c. Another river, in the upper part of the parish, is called Ruster. The surface is exceedingly rugged, and the entire district bleak, wild, and mountainous, being occupied, to a great extent, with tracts of peat-moss, affording an inexhaustible supply of fuel; large moors abounding with grouse, partridges, hares, and almost every kind of game; and waste land incapable of cultivation. The parts under tillage bear a very small proportion to the aggregate number of acres. Green crops, and grass for hay, thrive better than grain; oats and bear, which are the kinds of grain chiefly sown, seldom come to maturity, especially in the higher district, except in fine seasons. In the lower district, the climate is much more mild, and not so subject to frosts. The inhabitants engage in agricultural pursuits with great spirit, and have introduced most of the improvements of the southern parts. A considerable extent of waste has also been brought under tillage within the present century, and inclosures of various kinds are in progress; but the bad state of the roads, and the want of sufficient capital for their repair or enlargement, render agricultural improvement difficult. The cattle are the black native breed, large numbers of which are reared, with a good many sheep; and much of the stock is sent for sale to the markets in

the south, as well as to the surrounding districts, most of the farmers being cattle-dealers. The annual value of real property in the parish is £2462, being £1632 for the Banffshire portion, and £830 for the Aberdeenshire portion.

The district abounds with limestone; and a small grey slate is occasionally dug up, and used chiefly for building within the locality: small garnets are found in a sort of serpentine, about two miles south of the manse; and asbestos, about two miles west, in great abundance. The mountain streams supply abundance of trout; the Doveron, which rises here in several heads, contains excellent salmon, and in addition to the game upon the moors, the forests of Glen-fiddich and Blackwater are well stocked with fine deer. There were formerly two establishments for the distillation of malt spirits, producing 10,000 gallons annually. An annual market is held on the Thursday after the third Tuesday in July (O. S.), and another on the Monday before the second Tuesday in October (O. S.), chiefly for the sale of black-cattle bred here. Ecclesiastically the parish is in the presbytery of Alford, synod of Aberdeen, and in the patronage of the Duke of Richmond: the stipend is £158. 6. 7., of which nearly half is received from the exchequer; there is a manse, built in 1802, and the glebe consists of about twenty-eight acres, valued at £10 per annum. The church is a plain edifice, erected about 1786. The parochial schoolmaster receives a salary of £32. 2., with a few pounds derived from fees. Another school has a small endowment from the Duke of Richmond. On the farm of Spennell, at a place called "King's haugh", is an ancient ruin, traditionally reported to have been the residence of Malcolm Canmore; and near Lesmurdie, on the north bank of the Doveron, are the remains of a chapel and burying-ground. Cabrach lays claim to the old ballad and beautiful tune of "Roy's Wife of Aldiwalloch"; the walls of Roy's house are still standing, and several of his descendants live in the parish.

CADDER, or **CALDER**, a parish, in the Lower ward of the county of **LANARK**, 3 miles (W. by S.) from Kirkintilloch, and $4\frac{1}{2}$ (N. by E.) from Glasgow; containing, with the village of Auchinearn, the hamlet of Bishopbridge, and the former quoad sacra district of Chryston, 4425 inhabitants. This place derives its name from its situation in the midst of a district abounding with wood and water, of which its appellation in the old British language, *Calder*, is significant. It is supposed to have owed its origin as a parish to the foundation of a church by St. Patrick, who is said to have been born in the immediate vicinity, and, towards the close of the fifth century, to have founded numerous other churches in the neighbourhood, which were subsequently endowed by Convallus II. with lands for the maintenance of their respective clergy. The parish is about fourteen miles in length, and four in breadth. Its surface, which is generally undulating, is diversified with various tributary streams that fall into the river Kelvin, the parish boundary on the north and west. Of the lakes the most important were, Auchinloch, nearly in the centre of the parish, from which, on its being drained some years since, a stream was conducted under the Forth and Clyde canal to the Kelvin; Loch Grog, drained in 1844; and Robroyston loch, in the western part, now almost reclaimed into arable land, and two-thirds of which are

beyond the boundaries of Cadder. Johnston loch, in the eastern part, is about a mile in circumference, and is employed, by the Forth and Clyde Company, as a reservoir for supplying their canal, for which purpose, also, they have appropriated the Bishop's loch, a small portion of which is within this parish.

The soil is extremely various; in some parts, a rich black loam; in others, mossy; on the banks of the various streams, chiefly alluvial; and in some parts, sandy. Several of the mosses have been reclaimed, affording excellent crops. About 9000 acres of land are in cultivation, about 300 are deep moss, and there are something more than 500 acres in plantations, the principal of which, on the Cadder estate, contains many trees of ancient and luxuriant growth. There are several extensive dairy-farms, mostly stocked with cows of the Ayrshire breed. The crops are oats, wheat, potatoes, barley, rye, and turnips, in the production of which the improved system of agriculture is adopted. The annual value of real property in the parish is £21,941. The substratum is partly freestone, and a whinstone dyke which extends from the river Clyde to the river Forth runs the whole length of the parish; the freestone is of the finest quality, and great quantities of it are sent to Glasgow, where it is used in the construction of the principal buildings. Limestone is prevalent, and is largely wrought: coal, also, exists in the parish, at a considerable depth, but the quality is not sufficiently good to remunerate the labour of working it. There are some extensive tracts of clay, for pottery and bricks; various elegant specimens of vases and chimney cases have been produced, and fire-bricks, crucibles, common bricks, house-tiles, and draining-tiles are made. Ironstone abounds, and is wrought to a considerable extent by the Carron Company. The Forth and Clyde canal intersects the western portion of the parish for upwards of five miles, passing in a line nearly parallel with the river Kelvin. The Kirkintilloch railway, opened in 1826, crosses its eastern extremity; the Garukirk and Glasgow railway, opened in 1831, passes on the south side, for several miles, and the line of the Edinburgh and Glasgow railway, opened in 1842, divides the parish into two unequal portions. The village of Cadder, formerly extensive, contains at present only sixty-four inhabitants, employed on the lands of its proprietor, whose mansion, lately enlarged, forms the principal object of interest in the place.

For ecclesiastical purposes the parish is within the bounds of the presbytery of Glasgow, synod of Glasgow and Ayr; the patronage is in the Heritors and Kirk Session, and the stipend of the incumbent is £280. 8., with a manse, and a glebe of about ten acres. The church, erected in 1830, is a neat edifice of stone, in the early English style, with a square tower, and is adapted for a congregation of about 800 persons. There are three parochial schools, situated respectively at Cadder, Chryston, and Auchinearn: the master in Cadder has a salary of £26, and the fees amount to about £56; the master at Chryston has £17, with about £56 fees, and the master of Auchinearn has £8. 10., with £12 fees, and the interest of 1000 merks bequeathed by the Rev. James Warden, a former incumbent. Another school, in the village of Auchinloch, is endowed with the interest of £300, bequeathed by Patrick Baird, Esq.; and a fifth school, which is free, has been lately built at Bishop-

bridge, by the family at Cadder, who allow the mistress £40 per annum. The *vallum Antonini*, or Graham's Dyke, is situated nearly parallel with the Kelvin, at a distance from it of about half a mile: its remains are very distinct near the church and glebe. Within the parish were four stations on the wall, at Easter Cadder, the church, Hilton, and Balmuldie. In the eastern wing of the House of Cadder is a stone found in the neighbourhood, a representation of which, with the Roman inscription, may be seen in Camden's *Britannia*. In 1813, a gold coin of Antoninus Pius was discovered, in a very perfect state, on clearing out the pond of Cadder; and in levelling the lawn before the house, the foundations of the old tower appeared, in which was found a vessel containing more than 300 gold coins, of the size of a shilling, with the inscription *Jacobus*.—See CHRYS-
TON.

CAERLAVEROCK, a parish, in the county of DUMFRIES, 5 miles (S. S. E.) from Dumfries; containing, with the villages of Bankhead, Blackshaw, Glencaple-Quay, Glenhowan, Sherrington, and part of Kelton, 1297 inhabitants. Different opinions exist in regard to the derivation of the name of this parish, some interpreting the words of which it is composed, "the castle with the buttress jutting out", and others, "the castle close upon the sea"; referring to the most prominent historical memorial in the place, the singularly formed and strong fortress called Caerlaverock Castle. It stands near the shores of the Solway Firth, and is of triangular figure, having a double moat, with portcullis after portcullis, to defend the entrance: there is also a provision for the discharge of a torrent of molten lead on the heads of the besiegers. The existing castle is the second building, the first, which has long been totally destroyed, having nothing left but the foundations: these are visible about 300 yards from the more modern structure, and indicate the old castle to have been somewhat smaller than the present, but of the same form. The original castle is said to have been founded in the sixth century by Llywarch Og, and in the days of King Malcolm Canmore to have been the chief seat of the ancient and illustrious family of Maxwell. It was attacked and taken by King Edward I., who afterwards passed several days here. The time when the second castle was built has not been precisely ascertained, but it is known to have been before the year 1425. In 1570 it was ruined by the Earl of Sussex, who had been sent with an English army to support James VI., after the murder of the regent. It was, however, reinstated in its former strength by Robert, first Earl of Nithsdale, in 1638; and during the troubles of Charles I., its owner, who supported the royal cause with all his energies, was ordered by that monarch to yield it up, on the best terms he could obtain. After the siege by Cromwell, it was found to contain eighty-six beds, forty carpets, and a library worth £200. Caerlaverock Castle was the place Sir Walter Scott had in his mind as the chief scene in the novel of *Guy Mannering*: it was here that Dirk Hatteraick was imprisoned by Gilbert Glossin.

The PARISH is six miles long and about two broad, containing 5800 acres. It is bounded on the south by the Solway Firth; on the east, by the Lochar; and on the west, by the river Nith, which separates it from the county of Kirkcudbright. In this part the Solway is about twelve miles wide. The Nith is affected by the

tide as far as Dumfries, but at low water is easily fordable; it forms about six miles of the boundary line of the parish. The Lochar, on the other side, flows through an extensive moss, which prevents all communication in that quarter, except in the driest months of summer, and then it is passable only by pedestrians. The soil, to some extent, is mossy, but its general character is that of light loam; and in this district the worst soil is usually in the valleys: 4323 acres are cultivated, and produce all kinds of white and green crops; 126 acres are in wood, 75 acres are moss and river, and 252 marsh. Lochar Moss is chiefly in the parishes of Dumfries, Torthorwald, and Mouswald, about a hundred acres only being in this parish. The cattle are of the Galloway breed, with a few Ayrshire cows, and the sheep are the Leicesters. The best system of agriculture is followed, and the improvements lately made in every department have been considerable, especially in the liberal application of bone-dust manure, which has greatly advanced turnip husbandry. The annual value of real property in the parish is £4495. The rocks almost throughout consist of red sandstone, which is easily wrought, and durable, and is used for many purposes. At Glencaple-Quay, the chief village, large vessels bound for Dumfries unload when unable from their burthen to reach their place of destination. There is a salmon-fishery connected with the parish, valued at £100 per annum, and a white-fishing is valued at £40.

Ecclesiastically the parish is within the bounds of the presbytery of Dumfries and synod of Dumfries; patron, the Marquess of Queensberry. The stipend of the minister is £177, with a manse, rebuilt in 1838 by the heritors, and a glebe of nearly twenty acres, valued at £32 per annum. The church, built in 1781, contains 470 sittings. There is a parochial school, in which mathematics, the classics, and all the usual branches of education are taught; the master has the maximum salary, with fees, and a sum from the Hutton bequest. Two other schools are supported out of bequests, and there is a parochial library, instituted in 1823. Dr. John Hutton, first physician to Queen Anne, was born here, and after realizing a handsome fortune by his profession, became a munificent benefactor to his native parish. He built a manse for the minister, and left £1000, the interest to be bestowed in educational and charitable purposes by the minister and elders: this money was invested in land, and now produces a rental of £500 a year. He also left a valuable library to the presbytery of Dumfries, comprising the prayer-book used by the unfortunate King Charles when on the scaffold. This prayer-book, however, was some time ago abstracted, and sold at an auction in London for a large sum: it is supposed to have been originally lent from the presbytery library, and then passed from friend to friend, the interesting relic being at length sold by auction.

CAIRNBEDDIE, a hamlet, in the parish of ST. MARTIN'S, county of PERTH; containing 44 inhabitants. It is situated a very short distance north of the village of St. Martin's.—See MARTIN'S, ST.

CAIRNBULG, a village, in the parish of RATHEN, district of DEER, county of ABERDEEN, 3 miles (N. N. E.) from Rathen; containing 406 inhabitants. This is a fishing-village, situated on the north-eastern coast of Fraserburgh bay, called Cairnbulg Point. It closely adjoins Inverallochie, another village, the inhabitants

of which are also fishers. Here are the ruins of an old castle, which seems to have been of considerable strength, and was the seat of the predecessors of Lord Saltoun. It was called Philorth, until sold by Sir Alexander Fraser in 1613 to Fraser of Durris, when its name was changed to Cairnbulg, Sir Alexander transferring that of Philorth to another mansion, about a mile westward, which has ever since been the residence of the Lords Saltoun.

CAIRNEY-HILL, a village, in the parish of CARNOCK, district of DUNFERMLINE, county of FIFE, 3 miles (W. S. W.) from Dunfermline; containing 516 inhabitants. This village, which is pleasantly situated on the banks of the burn of Pitdennies, consists of one long street of neat houses, on the road leading from Dunfermline to Alloa. It is inhabited chiefly by persons employed in the manufacture of table-linen, and of table-covers, for the wholesale houses at Dunfermline, which is carried on by hand-loom weaving at their own dwellings; a considerable number are also engaged in the adjacent collieries. A library has been established many years, and is supported by subscription. There is a place of worship for the United Presbyterian Synod.

CAIRNIE, a parish, chiefly in the district of STRATHBOGIE, county of ABERDEEN, but partly in the county of BANFF, 4 miles (N. W.) from Huntly; containing 1638 inhabitants. This place formed part of the lordship of Strathbogie, which was granted to Sir Adam Gordon, by King Robert Bruce, after the defeat and attainder of Cumin, Earl of Badenoch. It was the original estate of the family of Gordon, whose property afterwards became greatly extended. The surface is hilly, and comprehends an area of forty-eight square miles, of which extent 8000 acres are in tillage, and 2600 acres were planted in the year 1839 with nearly seven million trees by the Duke of Richmond, who is proprietor of almost the whole parish. The soil in the vicinity of the streams is fertile, and the husbandry on a respectable footing. Extensive limeworks are in operation at Ardonald, which, in the twenty-three years previous to 1842, produced a revenue of £69,770, and gave employment to forty workmen for nine months annually. The mosses supply part of the fuel consumed, the remainder of which consists of coal brought from the coast, eighteen miles distant; the substrata comprise granite, hornblende, greenstone, clay-slate, and a few other varieties. The annual value of real property in the parish is £5145. Grain, black-cattle, and dairy-produce, which are the principal marketable commodities, are taken for sale to Huntly, or sent to the coast. Facilities of communication are afforded by the road from Aberdeen to Inverness, which passes through the parish. Cairnie is ecclesiastically in the presbytery of Strathbogie, synod of Moray, and in the patronage of the Duke of Richmond; the minister's stipend is £210, with a manse, and a glebe valued at £25 per annum. The church, which occupies a central situation, was built at the beginning of the present century. There is a place of worship for members of the Free Church. The parochial schoolmaster has a salary of £18. 16., with sixteen bolls of meal, and £15 fees; he also shares in the Dick bequest.

CAIRNIE-HILL, in the county of PERTH.—See CARNIE-HILL.

CAIRNRYAN, a village, in the parish of INCH, county of WIGTOWN, 6 miles (N. by E.) from Stranraer; containing 196 inhabitants. It is seated on the east side of Loch Ryan, and has a safe harbour, with good anchorage, affording shelter in adverse weather to vessels entering into, or coming from, the Firth of Clyde. The village is well situated for foreign trade, and also adapted for ship-building. It has a chapel in connexion with the Establishment, and also a place of worship for members of the Free Church.

CAITHNESS-SHIRE, a county, in the north-east of Scotland, bounded on the north by the Pentland Firth; on the east and south-east, by the North Sea; and on the west and south-west, by the county of Sutherland. It lies between $58^{\circ} 10'$ and $58^{\circ} 40'$ (N. Lat.), and 3° and $3^{\circ} 65'$ (W. Long.), and is about forty-three miles in length, and thirty miles in breadth; comprising an area of 618 square miles, or 395,520 acres; 6965 inhabited houses, and 216 uninhabited; and a population of 36,343, of whom 17,135 are males, and 19,208 females. On account of its remote situation, Caithness had little intercourse with the principal parts of the country, and is consequently connected with few historical events of importance, except occasional hostilities with the Danes and Norwegians, of which there are some memorials in various monumental relics. From ancient records, it appears to have been erected into an earldom in 875; the title, after being for a long period in abeyance, was revived in favour of William Sinclair, a descendant of Robert II., in 1455. Many of the men of Caithness attended James IV. at the battle of Flodden Field, under the Earl of Caithness; and scarcely an individual of the number survived that fatal conflict. Before the abolition of episcopacy, this county, with Sutherland, constituted a diocese, of which the cathedral and episcopal palace were situated at Dornoch; it is at present in the synod of Sutherland and Caithness, and comprises one presbytery and ten parishes. For civil purposes it is divided into the districts of Wick and Thurso, where the quarter-sessions and other courts are held alternately, Wick being the seat of the sheriff court. It contains the royal burgh of Wick, which is the county town; the town of Thurso; and a few inconsiderable villages.

The SURFACE is generally level, with the exception of some mountainous tracts on the borders of Sutherland, and a few eminences in other parts. The chief mountains are, the Ord of Caithness, which has an elevation of 1250 feet; the Scarry hills, 1876 feet; and the Maiden Paps, an elevation of 2000 feet, above the sea. One of the principal valleys is that of Berriedale, at the base of the last ridge of mountains; and the plain of Caithness, extending to the Pentland Firth, comprises about four-fifths of the lands: it is interspersed with detached hills, some of which are of considerable height. There are numerous lakes, but none of any great extent; and of the streams which intersect the county in many parts, only the Forrs and Thurso waters in the north-west, and the Wick and Berriedale waters in the south-east, approach the resemblance of rivers. The coast is bold, rocky, and precipitous, indented with numerous bays, and marked by lofty promontories. Along the shore of Pentland Firth are caverns in the rocks, from which the agitated waters, ascending with prodigious force, overspread the neighbourhood with incessant foam; and about four miles to the north of the coast, and nearly in

the centre of the Firth, is the island of Stroma, which forms part of the county. The bays are those of Sand-side, Thurso, Dunnet, and Gills, on the north; and Duncans, Freswick, Sinclair, and Wick, on the east: the most prominent headlands are Holburn, Dwarrick, Dunnet, Duncans, Skirsa, Noss, and Wick. A little more than a fifth part of the land is in cultivation, consisting chiefly of tracts near the rivers, and the slopes of the various eminences; the remainder is mostly moor, some parts of which are nearly 300 feet above the sea. During the last thirty or forty years, the county has made extraordinary progress in agricultural and all public improvements. The annual value of the real property in the county is £66,572, of which £57,982 are returned for lands, £6870 for houses, £1035 for fisheries, and £685 for quarries. The principal seats are Barogill Castle, Thurso Castle, Dunbeath, Freswick, Hempriggs, Ackergill, Barroch, Forrs, and Sandside. The herring-fishery off the east coast is extensive and lucrative, indeed the most important in Britain. There is a spacious harbour at Wick, besides several other small harbours for the vessels engaged in the fisheries; and considerable quantities of grain, cattle, and wool are shipped. The county gives the title of Earl to the ancient family of Sinclair.

CALDER, INVERNESS and NAIRN.—See CAWDOR.

CALDER, county of LANARK.—See CADDOR.

CALDER BANK and BRAES, a village, in the parish of OLD MONKLAND, Middle ward of the county of LANARK; containing 1064 inhabitants. It is seated on the banks of the river Calder, and south of the high road from Airdrie to the city of Glasgow. The Calder here, flowing on the south, separates the parish from that of Bothwell.

CALDER, EAST.—See KIRKNEWTON.

CALDER, MID, a parish, in the county of EDINBURGH; containing, with the villages of Mid-Calder and Bells-Quarry, 1456 inhabitants, of whom 550 are in the village of Mid-Calder, 12 miles (W.) from Edinburgh. This place, which was in the extensive district of Calder, obtained the appellation of Calder-Comitis, from its having been the property of the Earls of Fife, in the twelfth century. In the sixteenth century the barony was part of the possessions of Sir James Sandilands, whose descendant, Lord Torphichen, is the present proprietor. The large parish of Calder-Comitis was divided by the presbytery of Linlithgow, in 1645, into the two parishes designated Mid and West Calder. Mid-Calder is about seven miles in length, and from two to three miles in breadth, comprising 12,339 acres, of which about 200 acres are woodland and plantations, and of the remainder about one-third arable and two-thirds meadow and pasture. Its surface is generally an extensive plain, bounded on the south by a ridge called the Cairn Hills, forming a continuation of the Pentland range, and of which the highest has an elevation of about 1800 feet above the sea, commanding an unbounded view of the Firth of Forth, with the adjacent country towards Stirling, the coast of Fife, and the Ochils. The principal streams are, the river Almond, and the Murieston and Linhouse waters, which latter unite their streams, and flow into the Almond a little to the north of the village. The scenery is pleasingly varied, and enriched with wood; the ancient forest of Calder has been greatly diminished in the progress of cultivation, but there are still considerable remains of stately timber, and also extensive

modern plantations, consisting of common and spruce firs, larch, oak, ash, beech, and elm.

The SOIL, along the banks of the river and its tributary streams, is a rich, dry, and fertile loam, and in some parts clay, which has been greatly improved by draining and the use of lime. The arable lands produce favourable crops of grain; but the principal reliance of the farmers is on the dairies, which are well managed; and on many of the farms a considerable number of sheep are pastured. The annual value of real property in the parish is £7667. The substrata are chiefly freestone, limestone, and whinstone, all of which have been extensively wrought. A quarry of limestone has long been in operation, on the lands of Easter Murieston. In Calder Wood is a quarry of freestone excellent for every kind of building; and there are quarries of freestone underneath the Cairn hills. Ironstone is found in the beds of the rivers, but not in sufficient quantity to remunerate the labour of working it. Lead-ore has been discovered on several parts of the Harburn estate, but it has not been wrought; and seams of coal have been met with in the upper districts of the parish, one of which is nearly four feet in thickness. *Calder House*, the seat of Lord Torphichen, is a spacious and elegant mansion, beautifully situated on the bank of the Murieston water near its confluence with the river Almond, in an ample demesne richly embellished with stately timber. In the more ancient part of the structure the walls are seven feet in thickness; and in the old hall, now the drawing-room, John Knox, for the first time after the Reformation, publicly administered the sacrament of the Lord's Supper, according to the protestant form: in this room are portraits of the Reformer, and Mary, Queen of Scots. In the centre of the kitchen is a deep draw-well, from which is a subterraneous passage to the village. *Murieston Castle*, another seat, has been repaired and partly rebuilt by the proprietor; and the ancient mansion of Linhouse, now *Burnbrae*, is an embattled structure, with towers in good preservation. There are other mansions in the parish. The village is pleasantly situated on the road from Edinburgh to Glasgow, on an eminence between the Almond and the Linhouse water, and under the shelter of Calder Wood. There are two paper-mills; and fairs are held on the second Tuesday in March, and the Friday after the second Tuesday in October, for the sale of cattle and horses, and for hiring farm servants. Great facility of intercourse is afforded by the Caledonian railway.

Ecclesiastically the parish is in the synod of Lothian and Tweeddale and presbytery of Linlithgow. The minister's stipend, including £8. 6. 8. for communion elements, is £158. 6. 8., of which £88. 17. 10. are paid by the exchequer; with a manse, and a glebe of forty-three acres, valued at £64 per annum: patron, Lord Torphichen. Mid-Calder church, an ancient structure in the pointed style, contains 438 sittings. There is a place of worship for the United Presbyterian Synod. The parochial school is well attended: the master has a salary of £34, with a house and garden, and the fees, &c., average £65; he also receives the proceeds of a bequest for teaching music, amounting to £11. The ancient castle of Cairns, of which there are some remains, consisting of a tower, is supposed to have been founded by Sir William Crichton, lord high-admiral of Scotland, in 1440. In the south-west part of the parish, on the

summit of an eminence called Castle Grey, are tolerably perfect remains of a Roman camp, in which various Roman coins have been found. There are also numerous tumuli on the banks of the river Almond, and artificial mounds, four of which, on its south bank, point out the field of a battle between the Picts and Scots. John Spottiswood, Archbishop of St. Andrew's, was a native of the parish.

CALDER, WEST, a parish, in the county of EDINBURGH, 16½ miles (W. S. W.) from Edinburgh; containing 1666 inhabitants, of whom 434 are in the village. This parish is of triangular form, situated in the southwestern extremity of the county, and bounded on the north by Linlithgowshire, from which it is separated by the Breich water, a stream tributary to the river Almond, and for a short way by the Almond itself: on the east it is bounded by the parish of Mid-Calder; on the southwest and south, by Lanarkshire; and at one point on the south, by Peeblesshire. It is about ten miles in length, comprising about 20,000 acres. The surface bordering on Lanark is elevated and hilly, attaining a height of 700 feet above the sea, and, though greatly improved by recent plantations, having still a bleak and cold appearance. At the southern extremity of the parish, the three counties of Edinburgh, Lanark, and Peebles meet in a point; and near the western extremity is a point where the counties of Edinburgh, Lanark, and Linlithgow meet. The soil is chiefly a black mossy earth, naturally moist, lying on a till bottom; and there are some extensive tracts of moor, interspersed with arable land of moderate fertility. The system of agriculture has of late been much improved, and the soil, which in many parts is very wet, has been rendered much more productive by draining. The crops raised here are oats, wheat, barley, flax, peas, turnips, and potatoes. The hills afford good pasture for sheep and cattle, of which large numbers are reared; great attention has been paid of late years to the management of dairy-farms, and excellent butter and cheese are sent to the Edinburgh market. In general the farms are of moderate extent; and most of those which are chiefly arable, contain a considerable portion of moorland. The plantations, principally of fir, and which were formerly confined to the lands around the houses of the proprietors, have been much extended; indeed, a general improvement in the appearance of the district has recently taken place. The annual value of real property in the parish is £7090.

The chief substrata are limestone and coal, the former more adapted for building purposes than for manure; a scam for burning into lime is wrought on the estate of Handexwood, where there is a regular lime-work, producing good lime: limestone for burning into lime is also wrought at Baads-mill, on the estate of Baads, but the lime is not so good. A small coal is wrought along with the limestone at Baads-mill, and good coal is worked on another part of the same estate, and on the Woodmuir and Loganlee estates. Ironstone has for many years been wrought at Handexwood, by the Wilsontown Iron Company, and for the last few years on the estate of Muldren, by the Shotts Company, though not to any very great extent. The principal houses are, Hermand, erected by the late Lord Hermand, in 1797; Limefield and Harburn, in 1804; and Hartwood, in 1807. The Caledonian railway, and the high road from Edinburgh to Ayr, pass through the parish. Ecclesiastically the parish is with-

in the bounds of the synod of Lothian and Tweeddale and the presbytery of Linlithgow; patron, John Drysdale, Esq. The minister's stipend, by augmentation from government, is £158. 6. 8., of which above two-thirds are received from the exchequer; the manse, rebuilt in 1837, is a handsome residence, and the glebe comprises twenty-four acres, valued at £24 per annum. West Calder church was built in 1643. In 1844 a place of worship in connexion with the Free Church was erected, and there is a meeting-house for the United Presbyterian Synod. The parochial school is attended by about eighty-five children; the master has a salary of £34, with an excellent house and a good garden, and the fees average about £16. On the lands of Harburn, at the south-eastern extremity of the parish, are vestiges of an ancient castle, said to have been fortified by Oliver Cromwell to check the depredations committed by the moss-troopers: these lands are partly in the parish of Mid-Calder. Upon the summit of a hill called Castle Craig are the remains of a Roman camp of small extent, near which several Roman coins have been found.

CALE, an island, in the parish of KILNINIAN and KILMORE, district of MULL, county of ARGYLL. This island, which is of extremely small extent, lies off Tobermory, in the north-eastern part of the parish, and in that portion of the Sound of Mull which borders on Loch Sunart. Its length is about three times as great as its breadth, and it stretches in a direction parallel to the coast of the main land.

CALLANDER, a parish, in the county of PERTH; containing, with the villages of Callander and Kilmahog, 1665 inhabitants, of whom 1107 are in the village of Callander, 6 miles (N. N. E.) from Port of Monteith. This place derives its name, of Gaelic origin, from an ancient ferry across the river Teith, the principal road to which lay within its limits. The parish is about eighteen miles in length, and varies greatly in breadth, being in some parts scarcely a mile, and in others full ten miles. It is bounded on the north and north-west by a branch of the Grampians, and the scenery is boldly varied by hills and mountains, the most prominent of them being Ben-Ledi, which has an elevation of 2863 feet above the sea, and forms a boundary of the valley that contains the village. A hill near the village is likewise a very interesting feature in the landscape, being richly clothed with flourishing plantations, formed some years since by Lady Wiltoughby de Eresby. The hill called the Crag of Callander bounds the vale on the north, and the Teith, with its wooded banks, adds materially to the beauty of the scenery. This river proceeds from the union of two streams which run, respectively, on the east and south sides of Ben-Ledi; and over it is a bridge at the village, from which the view in every direction is strikingly picturesque. The stream that runs on the east side of Ben-Ledi issues from the mountain lake denominated Loch Lubnaig, and flows rapidly through the narrow pass of Leny, an opening which affords access from the low country into the wild recesses of the Highlands: this pass is skirted with waving woods, and bound in by lofty mountains, the whole forming a scene of great sublimity. Another river, named the Kelty, forms a boundary to the parish on the eastern side, and after a devious course falls into the Teith; across it is a rustic foot-bridge at Brackland, which is an object of great interest, and much admired on account of the grand view it

commands of the fine falls of Brackland. There are various lakes, some of which are caused by the natural obstructions that the rivers find in their course; Loch Venachoir, on the south of Ben-Ledi, is about four miles in length, and connected with it are the lakes of Auchray and Katrine, both rich in picturesque beauty, and which are described in the article on Aberfoyle, an adjoining parish. Glenfinlas, wholly in the parish, forms a tract ten miles in extent, at one time a royal hunting-forest; it is destitute of the smallest symptom of habitation or of cultivation, and any one may be recommended to traverse it who desires to gain a complete notion of an Ossianic desert, in all its sterile and lonely wildness.

The lakes, as also the rivers, abound with trout and other fish, among which are eels, pike, perch, char, and salmon; and the lakes are frequented by different kinds of aquatic fowl. The parish is well wooded, and extensive plantations have been formed: the timber is principally oak, ash, alder, birch, fir, larch, hazel, and willow; the oak is much cultivated, and a considerable quantity of bark is sold to the tanners. In this parish the soil varies greatly; and little more, even of the low lands, is cultivated than is sufficient for the supply of the inhabitants, who are chiefly attentive to the rearing of cattle and sheep, for which the hills and vales afford excellent pasturage. The system of agriculture, as far as it is practised upon the few arable farms in the parish, is improved; and the crops are oats of various kinds, barley, potatoes, and turnips. The breed of black-cattle is much attended to; the Cheviot and Leicestershire breeds of sheep are pastured on the low lands, and the black-faced on the hills. The annual value of real property in the parish is £7200. The substrata are limestone, slate, freestone, and pudding-stone. Of these, the limestone is of good quality, and is worked not only for the supply of this parish, but for many others, and considerable quantities of lime are sent to distant parts. The slate is of a brownish colour, and not very durable, but was formerly quarried on several lands; the freestone, which is grey, is excellent, and extensively quarried for building. The proprietor of Gart has erected a spacious and handsome residence on the north bank of the Teith; the grounds are tastefully embellished, and command some highly interesting views.

The village, which is on the great road from Stirling to the Western Highlands, consists chiefly of one spacious street; the houses are well built of stone, and roofed with slate, and the inhabitants are amply supplied with water, which is conveyed by leaden pipes. There is a subscription library. A considerable trade is carried on, and great quantities of wool are sent to Bannoekburn, Glasgow, and Liverpool, for the use of carpet manufacturers. A daily post has been established under Stirling, and here is an agency for the Bank of Scotland. A market is still held; fairs occur in March and May, for black-cattle, sheep, and horses, and some smaller fairs are holden for lambs, the hiring of farm servants, and other business. There is also a spacious inn, for the accommodation of the numerous parties who frequent this place to view the many interesting spots in the neighbourhood. In 1846 an act of parliament was passed for the construction of a line of railway from the Scottish Central railway at Dunblane to Doune and Callander. Ecclesiastically the parish is

in the presbytery of Dunblane and synod of Perth and Stirling: the minister's stipend is about £198, with a manse, and a glebe valued at £38 per annum; patron, the Crown. The church, a neat edifice with a tower and spire, was erected in 1773, and is adapted for a congregation of 800 persons. A place of worship has been erected in connexion with the Free Church. The parochial school affords a liberal education; the master has a salary of £34, with £36 fees, and a house and garden.

About a mile from the village is a hill rising perpendicularly 300 feet, and having on the summit the remains of an ancient fortification from which the height takes the name of "Dun-bo-chaistil". The gateway, and several traces of ditches and mounds, are distinctly visible; and within the inclosure is a well, which has been filled in to prevent accidents to the cattle that feed there. In the plain immediately around is a mound of earth, strengthened with stones, which may probably have been an outpost; but the history of this relic of ancient times is not known. Near the manse are the remains of Callander Castle, once a square building of great strength; and on the lands of Auchinlaich are those of an ancient fort, in good preservation, and nearly entire. There is a circular mount of considerable height near the churchyard, called the Hill of St. Kessaig; and a fair is held there annually in March, called the festival of St. Kessaig. About half a mile to the west of it is a similar tumulus, called Little Leny, where was anciently a chapel.

CALTON, a manufacturing district and for a time a quoad sacra parish, in the parish of **BARONY**, county of **LANARK**; included within the parliamentary boundary of Glasgow, and comprising Old and New Calton. These villages, formerly part of the barony of Barrowfield, were, by royal charter in 1817, erected into a burgh of barony, containing about fifty-four acres, of which twelve are attached to Old and forty-two to New Calton. The houses are neatly built of brick, and roofed with tiles, for the manufacture of which clay of good quality abounds in the immediate vicinity; and the streets, especially those of the latter village, are regularly formed. At the last census the number of inhabitants in Calton and Mill-End was 25,060. A handsome mechanics' institution has been erected, and there are branches, in good buildings, of the Western Bank of Scotland and the City of Glasgow Bank. The population is chiefly employed in the cotton manufacture, and in hand-loom weaving, which are carried on to a very considerable extent; the manufacture of thread affords employment to several hundreds of men and women, and there are numerous shops for the supply of the inhabitants with groceries and other articles of merchandise. The government of the burgh is vested in a provost, three bailies, a treasurer, and eleven councillors, one of whom acts as dean of guild; they are chosen by the burgesses, and are all elected annually, with the exception of the elder baillie, who holds office for two years. The burgesses have no exclusive privileges, nor can any inhabitant be compelled to be a burgess; those who choose to become burgesses pay a fee of £2. 2. on admission. There are 168 burgesses on the roll, of whom twenty-seven are resident, and qualified in respect of property, and five as tenants of £15 dwelling-houses, so that the council of fifteen is chosen out of a body of

thirty-two persons only. Application, however, has been made by the authorities to parliament, for the passing of an act to alter the charter, and enlarge the bounds of the burgh. The magistrates and council have the privilege of a weekly market, which is held on Saturday, and of which they receive the tolls and customs. Their jurisdiction extends, in civil cases, over the territory of the burgh, and in criminal cases over the whole of the police district; they hold a court for the recovery of debts not exceeding 40s., and a police court, in which a town-clerk, appointed by the superior of the burgh, acts as assessor. The late quoad sacra parish of Middle Calton, containing 7185 inhabitants, and comprised within the presbytery of Glasgow, and synod of Glasgow and Ayr, was formed in 1834. The church, built in 1793, at an expense of £1495, and since repaired and enlarged, is a neat structure, and contains 1400 sittings: the minister is appointed by the managers and subscribers, and his stipend is £250. Calton also comprised the late quoad sacra parishes of St. Luke's and Greenhead. There are places of worship for members of the Free Church, the United Presbyterian synod, and Wesleyans. A burgh school, in which are 140 children, is taught by a master who has a schoolroom rent-free, and a salary of £10 in addition to the fees; and there are numerous other schools, with a savings' bank under the patronage of the magistrates.

CAMBUS, a village, in the parish of **ALLOA**, county of **CLACKMANNAN**, 2 miles (W.) from Alloa; containing 287 inhabitants. This village, which is pleasantly situated on the west bank of the river Devon, is inhabited chiefly by persons who are employed in an extensive distillery. A small fishery for salmon, in the Devon, is carried on with considerable success; it is the property of Lord Abercromby, under whom it is held on lease, at £20 per annum. Michael Stirling, who lived in the village, invented the threshing-mill, upon which many improvements have been subsequently made.

CAMBUS, OLD.—See **COCKBURNSPATH**.

CAMBUSBARRON, a village, in the parish of **ST. NINIAN'S**, county of **STIRLING**, 1½ mile (S. W.) from Stirling; containing 676 inhabitants, who are chiefly engaged in wool-spinning, and in the manufacture of tartans and shawls. A small school here has an endowment of £10 per annum, arising from a bequest.

CAMBUSKENNETH, or **ABBEY**, a village, in the parish of **STIRLING** and county of **CLACKMANNAN**, 1 mile (E.) from the town of Stirling; containing 227 inhabitants. This place, which is situated on a peninsula formed by the winding of the river Forth, takes its name, signifying "the field of Kenneth", from some ancient event not distinctly recorded, in which one of the Scottish kings of that name is supposed to have been concerned. A monastery for canons regular of the order of St. Augustine was founded here in 1147, by David I., who richly endowed it with lands in various parts of the kingdom; and the endowment was augmented by many of his successors. This establishment, the abbots of which were frequently styled abbots of Stirling, continued to increase in importance; it was the place of interment of James III. and his queen, and the scene of many transactions connected with Scottish history. The buildings were extensive and magnificent, but soon after the Reformation they were demolished by the lords of the congregation, who had taken posses-

sion of Stirling; and of the once splendid structure only one solitary tower is remaining. The church was dedicated to St. Mary, from which circumstance the street leading to it from the town of Stirling was called St. Mary's Wynd. On the dissolution of the monastery, the lands were granted to the Earl of Mar, with whose descendants they remained till the year 1737, when they were purchased by the corporation of Stirling on behalf of Cowan's hospital. The village is chiefly inhabited by persons employed in agriculture, and in the woollen manufactures in the vicinity; there is a ferry here over the river Forth; and a school is supported.

CAMBUSLANG, a parish, in the Middle ward of the county of LANARK, $4\frac{1}{2}$ miles (S. by E.) from Glasgow; including the villages of Bushyhill, Chapclton, East and West Cotes, Cullochburn, Howieshill, Kirkhill, Lightburn, Sauchiebog, Silverbanks, and Vicarland; and containing 3022 inhabitants. This place is supposed to have derived its name from its situation on the banks of the Clyde, which here takes a circuitous course, and forms the northern boundary of the parish. The barony in which the greater portion is included, and which was anciently called Drumsargart, belonged in the reign of Alexander II. to Walter Olifard, justiciary of Lothian, and subsequently became the property of the Morays of Bothwell. It afterwards passed into the possession of the Earl of Douglas, who had married the daughter of Sir Thomas Moray, and remained in that family till 1452, when the property was transferred to James, Lord Hamilton, in the possession of whose descendants it still continues. Its name was changed in the seventeenth century from Drumsargart to Cambuslang, the name of the parish. There are no other remains of the ancient castle of Drumsargart than the mere site, from which it is supposed to have derived its name, significant of its situation on a circular mount at the extremity of a long ridge of ground about thirty feet above the surrounding plain. This plain, from its extent and undulating surface, has been said to bear a striking resemblance to the Field of Waterloo.

The PARISH is bounded on the east by the river Calder, which is a tributary of the Clyde; and comprises an area of 3507 acres, all arable and pasture land, with the exception of about 200 in plantations, roads, and waste. Its surface, though generally level, is varied with rising grounds and ridges, the principal of which are Turnlaw and Dechmont, in the south-west. The latter, having an elevation of 600 feet above the level of the sea, commands an extensive prospect, comprehending in the distance the Tweeddale and Pentland hills, Ben-Lomond, and several of the hills of Cowal and Breadalbane. The adjacent scenery is beautifully picturesque, embracing the windings of the Clyde in its course from Lanark to Dumbarton, with its richly-wooded banks interspersed with villages and gentlemen's seats, the plantations of Hamilton, the romantic ruins of Bothwell Castle, and the cathedral and city of Glasgow, which are here seen with peculiar and striking effect. Of the rivers, the Clyde is about 250 feet in breadth; and the Calder, the banks of which are ornamented with pleasing villas, and finely wooded, is about forty feet wide.

The soil is generally good, and, in the low lands near the Clyde, extremely rich and fertile. The principal crops are oats and wheat, of which latter the culti-

vation has been for some time progressively increasing under an improved system of agriculture; peas, beans, and potatoes are also raised in considerable quantities, and a small proportion of barley. There are several large dairy-farms, the produce of which is chiefly butter, of excellent quality, sent to the Glasgow market, where it finds a ready sale; the cows are the Ayrshire. The annual value of real property in the parish is £11,555. The substratum is mainly argillaceous freestone, limestone, ironstone, and coal, all of which are wrought, affording employment to many of the population. The freestone is of good quality, and much esteemed for ornamental building; and the limestone, which is peculiarly compact, and susceptible of a high polish, is wrought into mantel-pieces of great beauty under the appellation of Cambuslang marble. The ironstone is found in several places, but is worked only to a very limited extent. The coal lies at various depths, and in some few places rises nearly to the surface; the field in which it is found forms part of the coal district of the Clyde, and the seams vary from three to five feet in thickness: the mines in this parish are the property of the Duke of Hamilton, and are partly held on lease. The weaving of muslin for the Glasgow manufacturers, formerly carried on to a much greater extent, at present affords employment to about 500 males and females. There are corn-mills on the Clyde and Calder rivers. Great facility of intercourse is afforded by the lines of the Caledonian railway company. The principal seats are, Newton, a handsome modern mansion; Calder Grove, also lately erected; and Gilbertfield, an ancient turreted edifice.

Ecclesiastically the parish is in the presbytery of Hamilton and synod of Glasgow and Ayr; patron, the Duke of Hamilton: the minister's stipend is £281. 11. 11., with a manse, and a glebe valued at £10 per annum. The church, erected in 1743, a plain building much dilapidated, has been rebuilt on a larger scale, for a congregation of 1000 persons; it is a handsome structure in the Norman style, with a lofty spire. There are places of worship for members of the Congregational Union and the United Presbyterian Church. The parochial school affords education to nearly 100 pupils: the salary of the master is £34, with £40 fees, and a good house and garden. On the summit of Dechmont Hill, the foundations of ancient buildings have been discovered; and within the last fifty or sixty years considerable remains existed there, but they have been removed for the sake of the materials, which have been employed in repairing the roads, and for other purposes. Among them were the remains of a circular building about twenty-four feet in diameter, the site of which is supposed to have been occupied anciently as a signal station, and as a place of security in case of irruption from an enemy. At Kirkburn was formerly a chapel dedicated to the Virgin Mary, which appears to have subsisted till the Reformation; but the only memorial preserved of the building is the name of the land on which it stood, still called Chapclton. Spittal Hill was the site of an hospital that has long since disappeared. Dr. Claudius Buchanan, author of *Researches in India*, was a native of the parish.

CAMBUSNETHIAN, a parish, in the Middle ward of the county of LANARK; including the villages of Bunkle, Stane, and Stewarton and Wishawton; the whole

containing 5796 inhabitants: the church is $4\frac{1}{2}$ miles (N. W.) from Carluke. The name is derived from the Gaelic word *Camus*, signifying a "bay" or "curve", applicable to the remarkable windings of the river Clyde; and from *Nethan*, the name of the celebrated saint whom Archbishop Ussher styles "*religiosissimus et doctissimus Nethan*", and to whom the church was dedicated. The history of the place is chiefly connected with the families of Stewart, Sommerville, Hamilton, and Lockhart, all of whom have been long located here as large landed proprietors. The most remote occupation of the soil, however, of which we have any account, was by a family of the name of Baird, to whom the valuable barony of Cambusnethan belonged at a very early period. This parish is about twelve miles long, from east to west, and a little more than four miles broad, containing 26,000 acres. The surface is tolerably level in the western extremity, near the banks of the Clyde, but gradually rises eastward to an elevation of about 120 feet, forming a tract about a mile in breadth, consisting of a rich and fertile soil, which is well cultivated, and celebrated for the number and quality of its hares. Another acclivity succeeds this, rising to a height of about 250 feet, the larger part of which is covered with orchards; and still further to the east, the lands in many parts attain an elevation of 900 feet, and command some very extensive views of the surrounding country. The castle of Edinburgh, Loudoun hill, Dumbarton Castle, Ben-Lomond, and the hills of Argyllshire may be distinctly seen from Knownowton; and from the church, the prospect embraces the cathedral of Glasgow, with at least fifteen country churches.

Besides the *Clyde*, there are several streams running through the parish and along its boundaries, the peculiar character and flexures of which greatly improve its interesting scenery. The *South Calder*, rising in Linlithgowshire, forms about nine miles of the boundary line between this parish and Shotts; and for some miles before its approach to the Clyde, into which it falls, its banks are steep, exhibiting specimens of highly ornamental scenery, and adorned with several beautiful varieties of wood and garden. The *Water of Auchter*, which rises in the parish of Carluke, after flowing for more than a mile on the boundary of that parish and Cambusnethan, enters the latter, and passing for about three miles in a meandering route, falls into the South Calder at Bridgend. Of these rivers, the Clyde is said to contain twelve different species of fish; the chief is salmon, which latterly has been abundant.

The prevailing soil is clayey, resting upon a stiff and tenacious subsoil of till; in the more elevated parts it is much mixed with gravel and dark sand, and in the vicinity of the Clyde the haughs are a moist alluvial compost, yielding, when well cultivated, very fine crops. About 10,000 acres are cultivated, or occasionally in tillage; about 6000 are in woods, roads, quarries, &c.; 160 acres in orchards, and a very considerable quantity waste. Good grain of all kinds is raised, and fruit forms a prominent article in the produce. Numerous improvements have been made in agriculture within the last few years, especially in draining, which is required to a large extent on account of the wet clayey nature of the soil. Thriving hedges and plantations have been raised in many parts; and dells and ravines, formerly the beds of broom, furze, and heath, have been planted with larch,

or formed into productive orchards. The annual value of real property in the parish is £32,016. The subterraneous productions are chiefly ironstone and coal, which may be procured in very large quantities; the district is included in the great coal-field of Lanarkshire, and the coal is extensively wrought. In the neighbourhood of Headlecross, in the eastern part of the parish, and on the grounds of Coltness and Allanton, black-band ironstone is found of superior quality; and in various places good sandstone is met with. In several directions, also, plentiful supplies are obtained of excellent clay, which is found in beds about ten feet in thickness, and used for the manufacture of drain and roof tiles. The population are extensively employed in manufactures. Large iron-works have been built at Newmains by Thomas Houldsworth, Esq., and two tile-works are in operation upon the estate of Wishaw, and one at Coltness. The Shotts iron-works, on the borders of the parish, caused an increase of population to the amount of about 2000, one-third of whom reside at the village of Stau, and the rest in Shotts; and near Wishawton, in the western quarter of the parish, a very extensive distillery has been erected by Lord Belhaven. A road from Edinburgh to Ayr traverses the parish; and the Wishaw and Coltness railway also intersects it, affording great facility of intercourse: an act was passed in 1849 authorizing the sale of this railway to the Caledonian railway company.

Among the principal seats is *Cambusnethan House*, an elegant structure on the model of a priory, erected about twenty or thirty years ago, upon the site of a mansion which had been accidentally destroyed by fire. It stands in a romantic situation, and the grounds have been much improved within the last few years, especially the orchards. *Wishaw House*, in the north-west corner of the parish, upon the bank of the Calder, is an extensive structure in the castellated style. The front is noble and commanding, varied by a number of different-sized and well-proportioned towers. The apartments are enriched with several portraits, among which are, one of John, Lord Belhaven, who so zealously opposed the Union; and a very costly portrait by Vandyrke, of Sir James Balfour, Lord Lyon king-of-arms in the reign of Charles I. The *House of Coltness* is an elegant and commodious building, between the dining-room and drawing-room of which runs a gallery nearly 200 feet long, hung round with ancient portraits of the family of Stewart. It stands in the midst of very extensive and well laid-out grounds. *Allanton House* is a majestic structure, wrought up, by various additions and improvements, from the old castle of Allanton. It is ornamented with an artificial lake of large dimensions, containing several islands so covered with wood that, from no part of the lake, is its extent capable of being seen. *Muirhouse* is also an old structure, in a commanding situation.

The monks of Kelso anciently held the tithes and other ecclesiastical rights of Cambusnethan, by grant in the twelfth century from William Finemund, lord of the manor. In the following century the church was transferred to the bishops of Glasgow, with whom it continued till the Reformation. The parish is now in the presbytery of Hamilton and synod of Glasgow and Ayr; patron, Robert Lockhart, Esq., of Castlehill: the stipend is about £278, with a manse, built in 1827, and a glebe of four acres, planted by the late incumbent with the choicest kinds of fruit-trees. The old church, part of

which is still standing, was situated at the southern verge of the parish, on a very romantic spot, close to the river Clyde: the date of its erection is unknown. In 1640 this was abandoned as a place of worship, and a very mean structure was erected about three miles further up the parish, which remained unslated for seven years, and which never was a commodious or comfortable place of worship. In 1837 that church was condemned, and another, with a handsome tower, afterwards erected close beside it; but owing to the dissensions of the heritors, this new edifice has not been completed or opened for public worship. There are places of worship for the United Presbyterian Synod and Reformed Presbyterians; also a parochial school, at which all the usual branches of education are taught, the master receiving the maximum salary, and about £20 fees. Two subscription libraries are supported, the books in which are chiefly historical and religious.

CAMELON, a village, in the parish of FALKIRK, county of STIRLING, $1\frac{1}{2}$ mile (W.) from Falkirk; containing 1340 inhabitants. This village, which is situated on the turnpike-road to Glasgow, is sometimes called New Camelon, in contradistinction to the ancient city of the same name, supposed to have been a Roman station, and at one time a very considerable sea-port town. The probability of this supposition is corroborated by numerous vestiges of Roman antiquity that may still be traced on the line of the Roman road leading from the Wall of Antonine, and by the discovery of foundations of buildings, and the traces of various streets which not many years since were distinctly apparent. There is also sufficient evidence that the river Carron was formerly navigable for vessels far above the site of the ancient city, where, in 1707, several antique boats and the fragment of an anchor were found embedded in the soil; and the name of the adjacent district called the *Carse*, implying lands reclaimed from the sea, and their slight elevation above the level of the Firth of Forth, by which, within the last fifty or sixty years, they have been inundated, afford strong confirmation of the truth of that opinion. The inhabitants are partly employed in the Carron iron-works, and in the ironstone and coal mines connected with those works; also in the manufacture of nails, which was originally introduced here by Mr. Cadell of Carron Park, and for which there are now two establishments, affording occupation to 250 persons. Two distilleries are carried on, one of them situated upon the north, and the other upon the south, bank of the Forth and Clyde canal. This line of navigation, and also the Union canal, are on the south side of the village: Port-Downie is at its western extremity. The Edinburgh and Glasgow railway passes about a quarter of a mile to the south, where it has a station. A handsome church has been built by subscription, near the western extremity of the village, on ground given by Mr. Forbes of Callendar, who also contributed largely towards the expense of its erection; it was opened on the 23rd of August, 1840, and contains 660 sittings. Camelon is a quoad sacra parish. A school, for which an appropriate building has been erected, is also supported, by subscription.

CAMERON, a parish, in the district of ST. ANDREW'S, county of FIFE, 4 miles (S. S. W.) from St. Andrew's; containing 1167 inhabitants. This place was formerly included in the parish of St. Andrew's, and appears to have derived its name from the lands on part

of which the church was erected on its separation, by act of parliament, in 1645. The parish is nearly six miles in length from east to west, and about four miles in breadth, comprising 9000 acres, of which 5904 are arable, 2226 meadow and pasture, 600 woodland and plantations, and 270 rough pasture and waste. Its surface rises in gentle undulations, from north to south, but not to any considerable height; and an eminence to the north-west, called Drumcarro Craig, is the only hill. The general scenery is agreeably diversified with wood and water. Between the rising grounds are small intervals of level land, in which flow some pleasing streams; and the various plantations, consisting chiefly of larch, spruce, and Scotch firs, add greatly to the appearance of the district. In some places the soil is clay; in others, a rich black loam, varying in depth from two inches to more than two feet; and in other parts of the parish, light and dry, resting upon gravel and whinstone rock. The chief crops are wheat, oats, barley, potatoes, and turnips, with the usual green crops; the system of agriculture is in a highly improved state, and the lands have been well drained and inclosed. Considerable attention is paid to the rearing of live stock; the cattle are principally of the Old Fifehire breed, which has lately been introduced, and is found to be better adapted than the Teeswater, formerly prevalent. The annual value of real property in the parish is £8219. The substrata are mostly whinstone, trap, freestone, limestone, and coal. The limestone is quarried on the lands of Radernic and Winthank, and from the former place a tramroad has been constructed for conveying the limestone to the kilns. Coal of good quality is wrought on the lands of Drumcarro; the whinstone is quarried for repairing the roads, and at Hazzleden is a quarry of freestone. Mount Melville, the only seat, is a handsome mansion with a well-planted demesne. Ecclesiastically the parish is in the presbytery of St. Andrew's, synod of Fife, and in the patronage of the Crown; the minister's stipend is £199. 12. s., with a manse, and a glebe valued at £10 per annum. The church, situated nearly in the centre of the parish, was built in 1808, and is adapted for 600 persons. There is a place of worship for the United Presbyterian Synod. The parochial school is under good regulations; the master has a salary of £34, with £12. 10. fees, and a house and garden.

CAMLACHIE, for a time a quoad sacra parish, including the village of Parkhead, in the parish of BARONY, suburbs of the city of GLASGOW, county of LANARK; containing 3654 inhabitants, of whom 2152 are in the village of Camlachie, $1\frac{1}{2}$ mile (E.) from Glasgow. Camlachie parish comprised, besides the two villages, a rural district containing a few acres of well-cultivated land. On the bank of the river Clyde are the handsome mansions of Belvidere and Westthorn, both of modern erection, and commanding fine prospects. The village is in general indifferently built, the houses being mostly in the old style, with low ceilings and small windows. The art of letter-fonuding was introduced, and brought to great perfection, by Mr. Alexander Wilson, afterwards professor of astronomy in the university of Glasgow, who, removing from St. Andrew's to this place, established a foundry here, which was subsequently transferred to Glasgow. The population are almost exclusively employed in handloom weaving, and the manufacture of muslins; and in the immediate vicinity are several coal-mines, of which,

however, one only is in operation, for the supply of the district. In the village of Parkhead is a post-office, under that of Glasgow. The parish was formed in 1838; the church is a neat structure, erected by the Church-Building Society of Glasgow, who now let it to a Free Church congregation.

Seal and Arms.

CAMPBELLTOWN, a burgh and parish, in the district of CANTYRE, county of ARGYLL; the parish containing, with the villages of Dalintober and Drumlemble, 9634 inhabitants, of whom 5028 are in the burgh, 60 miles (W. S. W.) from Glasgow. The name of this place was once *Dalruadhain*, from its being the seat of the ancient Celtic Scots; and sub-

sequently *Lochhead*, from its situation at the inland extremity of the loch of Kilkerran. Prior to the commencement of the eighteenth century, it was merely an inconsiderable fishing-village; it was erected into a royal burgh through the interest of the Duke of Argyll, in 1700, and then assumed its present name in compliment to the family of its patron. The town, which since that period has greatly increased in extent and importance, is beautifully situated on the southern shore of the above-mentioned loch or inlet, now called Campbeltown bay, along which it extends in the form of a crescent. It comprises several spacious and well-formed streets, diverging to the east and west from the central or main street, which leads from the old quay to the Castle hill, formerly the seat of the ancient Lords of the Isles, and now the site of the church. Parallel with these, to the south, are various streets, of which Argyll-street, leading to the grounds and mansion of the duke, is intersected at right angles by several others, one of which extends from the new pier to the Gaelic church. The streets are well paved, and lighted with gas; and the inhabitants are supplied, though scantily, with excellent water, conveyed from a spring in the neighbourhood at the expense of the burgh. There are two circulating libraries, furnished with journals and periodical publications. The immediate environs abound with handsome seats and villas, the residences of numerous respectable families, ranged along the north and south shores of the bay, which is nearly two miles in length, and about one mile in breadth, and is enlivened with gentlemen's pleasure-boats, and by the frequent arrival and departure of steamers navigating the Clyde.

The TRADE of the town arises chiefly from its distilleries and its fisheries, which are carried on to a very great extent. There are not less than twenty-five distilleries, which together, in 1842, consumed 303,711 bushels of barley, and 79,508 bushels of bear; producing 747,502 gallons of whisky, of which 12,978 gallons were shipped for England, 3413 to Ireland, 4346 to foreign parts, and the remainder, 58,760 gallons, principally to Glasgow. In the immediate neighbourhood is a mill, lately built, for the manufacture of farina from potatoes. The trade of the port consists mainly in the exportation of whisky, malt, black-cattle, sheep, horses, beans, potatoes, turnips, and other agricultural produce, with butter, cheese, and fish; and in the importation of

barley, yeast, coal, timber, iron, and general merchandise. The fish taken off the coast are of the usual variety of white fish, and till lately were caught by single lines, in large numbers; but the quantity has been much increased by the introduction of lines of great length, floated on the surface of the water by buoys, and to which are appended numerous single lines, of length sufficient to reach the depth at which the fish are most generally found. About 500 families are employed in the fishery: cod, haddock, and ling are taken in abundance, and are partly sent in a fresh state to Glasgow, whence they are conveyed to the neighbouring towns; and partly dried for exportation to distant markets. The herring-fishery is extensively carried on during the mouths of June, July, and August; and in 1843 about 150 boats, of four men each, were engaged in this fishery in the sound of Kilbrandon.

The number of vessels registered as belonging to the port is thirty-three, chiefly sloops and schooners in the coasting-trade; this is exclusive of the number of fishing-boats, which is very considerable, and there is also a vessel of 515 tons employed in the timber-trade with Canada. In 1842, 646 vessels entered inwards, and 365 cleared outwards, two of which were in the foreign trade. The custom-house department is under the superintendence of a collector, comptroller, and two tide-waiters; and the excise-office has a collector, two clerks, three supervisors, and fifty officers. The harbour is sheltered on the north and south by lofty hills, and on the south-east by the isle of Devar, with which it is joined on the south side by a bar of sand nearly half a mile in length, visible at low water, and which, by intercepting the violence of the waves, renders the anchorage peculiarly safe. The entrance is from the north, by a narrow channel of great depth; and the harbour, which generally contains from three to fifteen fathoms water, has two boldly projecting piers: the eastern of these, called the new pier, is of recent formation. The quays are well adapted for the loading and unloading of vessels, and every requisite accommodation has been provided for facilitating the trade of the port. In 1846 an act was passed for improving the harbour; for paving, lighting, and watching the town, supplying it with water, and better levying the dues and customs. The market, held weekly on Thursday, is amply supplied with grain and other agricultural produce; and fairs are held for cattle, horses, and various kinds of merchandise, at Whitsuntide, Lammas, Michaelmas, and Candlemas. In the market-place, which is in the centre of the main street, is an ancient cross, richly sculptured with foliage, and supposed to have been brought from Iona.

By a charter of William III., the town, which was previously a burgh of barony, was erected into a ROYAL BURGH, and the government vested in a provost, two bailies, a dean of guild, a treasurer, and twelve councillors, who are now elected under the provisions of the Municipal Reform act. The burgesses have no privileges beyond the freedom of carrying on trade within the burgh; the fees of admission are, to a stranger, as a merchant burgess, £3. 3., and as a craftsman, £2. 2., and to the sons, sons-in-law, or apprentices of burgesses, one-half of those sums. The magistrates hold courts for civil matters to any amount; in criminal cases their jurisdiction is confined to misdemeanors and offences

against the police, in determining which they are assisted by the town-clerk, who acts as their assessor. The town-house, situated in the central part of the town, is a neat building with a handsome spire, and contains two council-chambers for the transaction of public business, and a spacious hall in which the courts are held. Above this is the prison for debtors, consisting of two apartments; and on the ground-floor are three cells for criminals, all badly ventilated and lighted, and two of which are damp. Campbelltown is associated with Ayr, Irvine, Inverary, and Oban, in returning a member to the imperial parliament. Its parliamentary boundaries extend beyond those of the royalty of the burgh, including the populous villages of Dalintober and Dalairuin. The number of householders of the rent of £10 and upwards, within the royalty, is 165, of whom seventy-four are burgesses; and beyond the royalty, but within the parliamentary boundary, forty.

The PARISH forms a portion of the peninsula of Cantyre, and includes the ancient parishes of Kilkivan, Kil-michael, and Kilhousland, which were united to the ancient parish about the time of the Reformation. It is bounded on the east by the sound of Kilbrandon, and on the west by the Atlantic Ocean, and is about thirteen miles in length and from six to ten in breadth, comprising an area of eighty-seven and a half square miles. Two-thirds of the land are arable, and the remainder pasture, heath, and waste. The surface is diversified with hills, rising both from the north and south shores of the bay of Campbelltown, and varying from 800 to 1000 feet in height. Of these the highest is Bengaillin, about a mile from the town, commanding an extensive prospect, embracing, to the north-west, the islands of Isla, Jura, and Gigha; to the north-east, the isles of Arran and Bute, and the district of Cowal, with the Firth of Clyde; to the south, the lowlands as far as Loch Ryan, with Ailsa Craig; and to the south-west, the coast of Ireland, with the isle of Rathlin. Between the town and the bay of Machrihanish, which indents the western shore, is a tract of level ground, about four miles in length and nearly three in breadth, called the Laggan of Cantyre, having an elevation of nearly forty feet above the sea, and the soil of which has the appearance of being alluvial. The soil of the parish is extremely various, but in many parts of considerable fertility; the principal crops are bear, oats, barley, potatoes, which are raised in large quantities, and beans. The system of agriculture is improved, and much of the waste land has been drained. The hills, some of which are cultivated on the acclivities, afford pasturage for black-cattle and sheep. The rocks are chiefly mica-slate, ironstone, porphyry, sandstone, limestone, grey-wacke, and trap; some beautiful varieties of green, brown, and other porphyry occur on the island of Devar. Coal of inferior quality is found within three miles of the town, and there are several mines in operation (formerly wrought by a company) for the supply of the town, to which the coal is conveyed by a canal. Several plantations, chiefly of ash, elm, plane, larch, and Scotch and spruce firs, are in a very thriving state.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Cantyre, of which Campbelltown is the seat, and the synod of Argyll. There are two ministers, one of whom officiates in the Gaelic, and the other in the English language; patron, the

Duke of Argyll. The minister of the first charge, which is the Gaelic, has a stipend of £146. 15. 10., whereof about one-third is paid from the exchequer; with a manse, and three glebes, valued at £92 per annum: the minister of the second charge has a stipend of the same amount, with a glebe valued at £26. 10. per annum. The Gaelic church, which had been for some time in a dilapidated condition, was rebuilt in 1803, and contains 2000 sittings; the English church, which occupies the site of the ancient castle of the Lords of the Isles, was built in 1780, and contains 1200 sittings. There are places of worship for members of the Free Church, the United Presbyterian Synod, Independents, and Roman Catholics. The parochial school is consolidated with that of the burgh, and the master, who is appointed by the town-council subject to the approval of the presbytery, has a salary of £34. 4. 4., paid by the heritors and the burgh, together with a house adapted for the reception of boarders, and an excellent garden; his fees average about £150 per annum, out of which he has to pay an assistant. Miss Campbell, of Govan Bank, built two schools at Dalintober, at an expense of £1150; and for their endowment she bequeathed to the Kirk Session the sum of £4600. The same lady left £600 to the female school of industry, £300 towards the support of a parochial missionary, £300 to the Sabbath schools, £600 to the Female Benevolent Society, and £500 to the poor of the parish.

CAMPBELTON, a village, partly in the parish of PETTIE, but chiefly in the parish of ARDERSIER, county of INVERNESS, 6 miles (W.) from Nairn, and 10 (N. E.) from Inverness; containing, with the garrison of Fort George, 1200 inhabitants, of whom 944 are in the village. This place, which is indebted for its origin to the establishment of the garrison, takes its name from the Campbells, Earls Cawdor, upon whose lands it is built, on the eastern shore of a bay in the Moray Firth, remarkable for its picturesque beauty, and frequented as a bathing quarter. The houses are neat, and there are numerous well-stored shops, containing wares and merchandise of all kinds for the supply of the garrison; a subscription library has been established, and the village contains several good inns. From the base of a hill called Cromal or Crombal, which flanks the village on the east, there issues in a continued jet a strongly chalybeate spring, having a high character as a tonic, and which is resorted to by invalids: the summit of the hill commands a very extensive view, embracing parts of seven or eight counties. Campbelton proper, or that part of the village in Ardersier, contains 716 inhabitants; the back street of the village, which is in the parish of Pettie, contains 228, making in all 944, exclusive of the garrison of Fort George. Many of the inhabitants are employed in the herring-fishery, which is carried on with spirit and success; not less than sixteen boats, of twelve tons' burthen, sail to the fishing-stations of Helmsdale and Burgh-Head, each boat taking during the season about 200 barrels, valued at thirteen shillings each. The fishermen of Campbelton are also employed in the white-fishery off the coast, the fish usually taken being haddock, cod, skate, whiting, flounders, and occasionally turbot, halibut, and soles; the produce, after supplying the parish, is sent to Inverness, for which purpose, during the summer, there are lightly-built and fast-sailing vessels. A small coasting-trade is also

carried on, in which three vessels of 100 tons, belonging to a family in the village, are employed, chiefly in the trade with Sunderland. The post-office has a regular delivery; and facility of communication is afforded by the great road from Inverness to Aberdeen, and the military road from Fort George to Perth, which pass through the village; and by a ferry from Fort George to Chanonry Point, in the county of Ross. A court for the recovery of small debts is held every month; and there is a fair, called the Lammis Market, annually on the 12th of August, for lambs, sheep, milch cows, a few horses, cheese, and various wares, and for the hiring of servants.

Fort George, in the parish of Ardersier, was erected soon after the rebellion in the year 1745, with a view to keep the Highlanders in subjection, being founded in 1748 under the direction of General Wade, and completed at a cost of more than £160,000. It is situated on the point of Ardersier, which projects far into the Firth, and commands the entrance of that channel. The buildings, which occupy an area of fifteen acres, form an irregular polygon, defended by six bastions, each named after some distinguished general of the time, and mounting, respectively, 18 twenty-four pounders, 25 eighteen, 22 twelve, and 4 six pounders. On three sides, the ramparts rise almost to the sea, which at any time may be let into the ditch; and on the land side, the fortress is defended by a broad ditch, a covered way and glacis, two lunettes, and a raveline mounting 8 twelve-pounders. The north and south curtains are bomb-proof, and contain each twenty-seven apartments, fifty-two feet in length and twelve feet wide; the grand magazine, which is also bomb-proof, will hold 2472 barrels of gunpowder, and at the eastern extremity are two smaller magazines, containing ammunition for immediate use. The barracks, which are towards the land point, comprise apartments for a governor, lieutenant-governor, fort-major, chaplain, eight field-officers, twenty-two captains, fifty-six subalterns, and 2090 non-commissioned officers and privates. There are also a chapel, brewhouse, bakehouse, and an inn, within the walls. The fortress is now garrisoned generally by depôts of foreign regiments, and at present contains only about 256 inhabitants.

CAMPMUIR, a hamlet, in the parish of **KETTINS**, county of **FORFAR**; containing 45 inhabitants.

CAMPSIE, a parish, in the county of **STIRLING**, $3\frac{1}{2}$ miles (E.) from Strathblane; containing, with the villages of Birdstone, Haugh-head, Lennoxtown, Milton, Torrance, and the Clachan, 6402 inhabitants. This parish, previously to the year 1649, was much larger than at present; and on account of its isolated situation, arising from its natural boundaries, it was distinguished by many peculiarities and singular customs. At the period named, its southern extremity was erected into a new parish called **Baldernock**, and its eastern extremity united to **Kilsyth**. It now extends in length about seven miles, and six miles in breadth, comprising an area of 17,000 acres, of which about 7550 are hills, 7550 arable, 500 wood and plantations, and the remainder lakes, &c. The surface consists of two ranges of hills, and the intermediate valley, running nearly from east to west. The highest eminences are those forming the northern boundary, called **Campsie fells**, rising at their greatest elevation 1500 feet above the sea, and

intersected with numerous glens of exquisite beauty, exhibiting a profusion of romantic scenery on their rocky sides. In the glen called **Kirkcoun glen** artificial terraces have been cut, shrouded with ferns, lichens, and all kinds of wild flowers; and numbers of persons resort to it in fine weather, on account of its attractive scenery, and to witness the variety and grandeur of the prospect from the neighbouring heights. The southern range, called the **Brae**, is a continuation of the braes of **Kilpatrick**, and rises about 700 feet. The valley is covered throughout with a succession of undulations, reaching to the precipitous sides of the northern fells, whence several burns pour down, three of which, uniting their streams, form the river **Glassert**, which, after traversing a considerable extent of ground in the parish, falls into the **Kelvin** near **Kirkintilloch**.

Near the base of the fells, which are clothed to their summit with rich verdant pasture, the soil is chiefly a light clayey earth, and the subsoil tilly, and exceedingly tenacious; the hillocks and undulations in the strath are frequently a light earth, resting on sand and gravel, and in several places loamy. The southern brae is all under tillage, with the exception of about 500 acres of heath, and 250 of wood, and has a clayey soil on its side towards the **Kelvin**, which is succeeded by lower grounds of a sandy, gravelly, alluvial, and mossy character, reaching to the neighbourhood of the river. On account of the proximity of the parish to **Glasgow**, dairy produce forms a leading object; other branches of husbandry, however, share much attention, and all kinds of grain, pulse, and green crops are raised, under the best system of management, and of excellent quality. The **Ayrshire** breed of cows, without any admixture, is kept for the dairy; the cattle grazed on the hills are mostly **West Highlanders**, and the sheep the **black-faced** breed. The annual value of real property in the parish is £18,140. The mineral contents of the district are extensive and valuable, consisting of most of the varieties of the trap rocks, and coal, with the layers of which latter, beds of freestone, aluminous clay-slate, ironstone of the argillaceous kind, and limestone, are found alternating. About 35,000 tons of coal, and large quantities of lime, are every year produced. Alum is obtained from a schist found in the coal strata, and ironstone has been partially wrought lately, and is abundant. The plantations, comprising larch, Scotch fir, spruce, sycamore, oak, and ash, have been much increased since the close of the last century, especially in the vicinity of **Woodhead**. In the same neighbourhood stands **Lennox Castle**, on the acclivity of the south brae, 500 feet above the level of the strath, and commanding extensive views. This splendid mansion was finished in 1841, in the **Norman** style; and nearly opposite is situated the mansion of **Craigbarnet**, and a little eastward that of **Balancleroch**; besides which, the parish contains those of **Kincaid**, **Antermony**, **Glorat House**, and **Auchinreoch**.

The inhabitants are partly employed in weaving, and in mills for cotton-printing, and bleachfields, the operations of which have been greatly extended on account of the large supply of coal and of water. At **Lennoxmill**, employing 700 persons, every description of cotton fabrics is printed, from the coarsest to the finest, and about 250,000 pieces are every year finished, partly for home use, and partly for exportation. The other establishments are, **Clachan bleachfield**, commenced in 1819,

for preparing various kinds of muslins for exportation ; Kincaid, established in 1785, for bleaching and printing cottons ; Lillyburn, commenced in 1831, for the printing of linen and calico shawls and handkerchiefs ; and Glenmill, begun in January 1831, chiefly for bleaching book-muslins. There are also works for the manufacture of alum, copperas, prussiate of potash, Prussian blue, &c. A turnpike-road from Strathblane to Kilsyth passes through the parish from east to west, and another crosses this, and runs over the fells, from Glasgow to Fintry and Kippen ; the Glasgow road, also, to Stirling, by Kilsyth, passes the south-east corner, and the Forth and Clyde canal on the southern extremity. Great facility of intercourse is afforded by the Campsie branch of the Edinburgh and Glasgow railway.

Ecclesiastically the parish is in the presbytery of Glasgow, synod of Glasgow and Ayr, and in the patronage of the Crown ; the minister's stipend is about £285, with a manse, and a glebe valued at £18 per annum. The church formerly stood at the Clachan, but the present edifice was built in 1829, on a far more convenient spot, at Lennoxton ; it is a handsome structure, capable of accommodating 1550 persons, and cost nearly £8000. There is a place of worship for the United Presbyterian Synod. The parochial school affords instruction in all the ordinary branches of education ; the master has a salary of £30, with £18 fees, and the interest of £270 left by Robert Blair, Esq., of Glasgow. Two other parochial schools are supported by the heritors, at Craighead and Torrance, the master of the former of which, in addition to the salary of £41. 5. 11., receives £20 per annum from Messrs. Inglis, who, in connexion with Mr. Lennox, have rebuilt the premises on a much larger scale. There are also two subscription libraries. The remains of two forts of native construction are visible at the base of the Campsie fells ; and Roman urns, and coins of Elizabeth, James I., and Charles I., have occasionally been dug up.

CANISBAY, a parish, in the county of CAITHNESS ; including the island of Stroma, a small part of the former quoad sacra parish of Keiss, and the detached places or townships of Auckingill, Brabster, Duncansbay, Freswick, Gills, Huna, and East and West Mey ; and containing 2306 inhabitants. The name of this place has generally been supposed to be a corruption of the term *Canute's bay*, from some Norwegian chief who arrived here ; but others think it comes from *Canna*, the name of a plant once abundant in the district. In ancient times the parish was portioned into several parts, in each of which there was a religious edifice ; and at Freswick are the ruins of an old castle, called Bucholie Castle, which is of great antiquity, and is said to have been inhabited in the twelfth century by a Danish nobleman of the name of Sucus Asteilf. From certain entries in the session records, it is probable that Oliver Cromwell, or some of his officers, were in the parish in the year 1652.

CANISHAY is situated in the north-east corner of Scotland, and is the most remote parish in the country. It measures about eight miles in length, from east to west, and its mean breadth is about six miles, the whole containing upwards of 32,000 acres. The parish is bounded on the north by the Pentland Firth, and on the east by the German Ocean ; the coast on the north side is in general level, but on the east bold and preci-

pitous. The chief headlands are Grey-head, Skirsa-head, St. John's or Mey head, and the beautiful promontory of Duncansbay head, which last is about two miles in circumference, and is indented with several large ravines. Near it are two rocks surrounded by the sea, called the Stacks of Duncansbay ; they are of oval form, and rise fantastically to a great height, attracting swarms of sea-fowl in the spring and summer : on the top of the larger stack the eagle has its habitation. The bays are, Freswick bay, on the east, and Duncansbay and Gills bay, on the north, the beaches of which consist principally of sand and shells. In the interior the land is remarkably level, the Ward or Watch hill being the only considerable elevation, rising about 300 feet above the sea ; the loch of Mey, in circumference about a mile and a half, is the sole loch in the parish, and among the few small streams the burn of Freswick is the principal.

Heath and deep moss, with a little coarse grass, cover nine-tenths of the surface ; in the cultivated grounds the soil consists in general of a light black loam, with an intermixture of moss. The moor and pasture comprehend about 28,800 acres in a state of undivided common, and open to the cattle and sheep of all the parishioners ; the arable land consists of about 3200 acres, the produce of which is bear and oats, with potatoes, turnips, &c. The sheep and cattle, with the exception of a few reared by the large proprietors, are of the native breeds in their worst and most deteriorated state. Agriculture is at a very low ebb ; the rotation system is unknown among the people in general, and the crops, for want of manure and good husbandry, are of a very inferior kind. The annual value of real property in the parish is £3675. The prevailing rock is red sandstone ; there is also some greywacke, and a tolerable supply of limestone is obtained. The three chief proprietors have all good mansions ; that of the Earl of Caithness is Barrogil Castle, an ancient and venerable pile, and the two others are the Houses of Freswick and Brabster. Several boats are regularly engaged in obtaining lobsters for the London market, and there are thirty large boats employed in the herring-fishery, the value of the fisheries being estimated at £1650 per annum. Cod are plentiful on the coast ; and coal-fish, or, as they are provincially called, *cuddens*, are at some seasons of the year caught in immense quantities, and are of great use to the poorer inhabitants, as they not only serve for food, but supply plenty of oil for light. The people rely principally upon fishing for their subsistence. There are post-offices at Mey and Huna, the latter of which is seventeen miles and a quarter from Wick ; and a turnpike-road runs from Thurso to Huna. Two small fairs for the sale of horses, cattle, and swine are held yearly, one in February, at Freswick, and the other in December, at Canisbay.

Ecclesiastically the parish is within the bounds of the presbytery of Caithness, synod of Caithness and Sutherland ; patron, William James John Alexander Sinclair, Esq., of Freswick : the stipend is £205, and there is a manse, with a glebe worth £6 per annum. The church was thoroughly repaired in 1832, and accommodates 512 persons. A parochial school is supported, the master of which has the maximum salary, with the legal accommodations, and £5 fees. There are also two schools maintained by the Society for Propagating Chris-

tian Knowledge, a General Assembly's school, and a parochial subscription library. About a mile and a half to the west of Duncansbay-head stood the celebrated John o' Groat's House, of which nothing but the site remains.

CANNA, an island of the Hebrides, forming part of the parish of SMALL ISLES, in the district of MULL, county of ARGYLL; and containing 255 inhabitants. This island is about thirty miles distant from that of Eigg, and is computed to be four miles in length and one in breadth, containing about 1900 acres; it is partly high and rocky, but affords excellent pasture, and tolerable tillage. The harbour is accounted one of the best among the Hebrides, though difficult of approach in stormy weather, owing to the narrowness of the entrance, and the sunken rocks that lie near it. On the south-east side of Canna is Sand Island, separated by a channel which is dry at low water.

CANNESBURN, a hamlet, in the parish of NEW KILPATRICK, county of DUMHARTON, 1 mile (S. by E.) from New Kilpatrick; containing 33 inhabitants. It is seated on the road from Glasgow to Drymen.

CANONBIE, or CANOBIE, a parish, in the county of DUMFRIES, 6 miles (S.) from Langholm, and the same distance (N.) from Longtown; containing 3032 inhabitants. An ancient priory that was situated here is supposed to have given name to this place, Canonbie probably signifying "the residence of the canons". How long this religious establishment existed before the year 1165, when a grant of land was made by William the Lion, is uncertain. In the year 1533 Henry VIII. claimed it as having belonged at one time, as well as the whole parish, to England; upon which pretence he ordered hostilities to be commenced on the Scottish borders. About the end of the reign of James V., in 1542, after the surrender of the Scottish army at Solway Moss, the English soldiers, upon the same pretext, pillaged and laid in ruins both the monastery and church. The church was dedicated to St. Martin, and was often called the Church of Liddel or Liddal, from the river near which it stood: in the reign of David I., Turgot de Rossedale founded a canonry in connexion with it, which afterwards came into the hands of the monks at Jedburgh, but was dissolved at the Reformation. Canonbie is called *debatable* land; and on account of its exposure to the English borderers, many places of defence were formerly erected, the vestiges of some of which still remain. At a place called Gill-knocky, eastward of Hollows bridge, stands the tower of Hollows, the reputed castle of Johnnie Armstrong, a famous chieftain in the reign of James V., and styled John of Gill-knocky; he was the terror of the western marches of England, and forced the inhabitants of Cumberland, Westmorland, and a great part of Northumberland, to become his tributaries, or annually pay him blackmail. Not far from Penton Linns, on the banks of the Liddel, was the strong tower of Harelaw, the residence of Hector Armstrong, the famous freebooter, who, by bribery, betrayed the Earl of Northumberland into the hands of the regent Murray.

THE PARISH is nine miles long and six broad, and contains an area of 23,177 acres, 2 roods, 14 perches, of which 11,774 acres are in tillage, 10,522 in pasture, and 881 in wood. It is bounded on the south and east by the county of Cumberland, from which it is divided by

the river Liddel and the river Esk, and by a plantation of above five miles reaching from the Esk to the Sark, which then becomes the boundary. On the north the parish is divided from the parish of Langholm by the Tarras, a very rocky stream with well-wooded banks, anciently a favourite haunt of the freebooters, or moss-troopers. The district may be considered as the low grounds of Eskdale; the surface, however, is uneven, and diversified by a variety of ridges, with the exception of the land on the banks of the Esk, which is generally level. The Esk river, flowing through the middle of the parish from north to south, receives the Liddel nearly at the southern boundary, and falls, at the distance of about seven miles from the parish, into the Solway Firth. Along its course, parallel with which passes the great road from Edinburgh to London by Langholm and Carlisle, is a succession of some of the most varied and beautiful scenery to be met with in any part of Scotland. The Liddel runs between banks adorned with natural wood and plantations, and in several places the channel of the river is much contracted, and, flowing over a bed of limestone, broken into fantastic masses, exhibits a scene of striking interest and beauty when the stream is a little swollen. The soil, on the holm-land in the neighbourhood of the rivers, is chiefly light loam, and produces early and rich crops of all kinds, being much favoured by the shelter of a profusion of wood. On the higher grounds it is mossy, wet, and clayey, but, if well limed, produces good crops of oats in dry seasons. This land has been much improved within the last fifteen years by tile-draining, and a large part of it is now capable of bearing crops of all descriptions. The sheep are the Cheviots, the largest of which are often crossed with the Leicester; some of the cattle are the Teeswater, but the Galloway breed is preferred. The annual value of real property in the parish is £9095. Limestone, sandstone, and coal abound, the last in hollows of the transition rocks. In 1847 an act was passed authorizing the construction of a colliery branch of nine miles, to Canonbie, from the Caledonian railway. There are extensive corn-mills at Hollows, near the Esk.

For ecclesiastical purposes, the parish is within the bounds of the presbytery of Langholm and synod of Dumfries; patron, the Duke of Buccleuch: the stipend is £236. 12. 6., with a manse, and a glebe of twenty acres, valued at £20 per annum. The church is an elegant sandstone building with a tower, erected in 1822, at an expensé of £3000, and containing sittings for upwards of 1000 persons. There is a parochial school, in which Greek, Latin, French, and all the usual branches of education are taught; the master has a salary of £31. 6., with the legal accommodations, and fees amounting to about £30. A subscription library, two friendly societies, and a savings' bank are also supported. Among the numerous ruins of defence-towers, the most perfect and the most famed is that of Johnnie Armstrong, sixty feet long, forty-six broad, and seventy-two high; it has two round turrets, with loop-holes at the east and west angles, and was in former times a place of great strength. About one mile to the east of this are the remains of a Roman station, supposed to be the first in the chain from Netherbie to Castle-Over, the upper camp, in the parish of Eskdalemuir. There are also vestiges of a Roman road having passed through the parish of Canonbie, in a direction nearly from north to south. Dr. Russell, au-

thor of the *History of Modern Europe*, who died in 1793, and Mr. Benjamin Bell, the celebrated surgeon, were natives of the parish.

CANONGATE.—See EDINBURGH.

CAOLVALLOCK, a hamlet, in the parish of WEEM, county of PERTH; containing 50 inhabitants.

CAPUTH, a parish, in the county of PERTH; containing, with the villages of Craigie, Fungarth, Kincairnie, Meikleour, and Spittalfield, 2317 inhabitants, of whom 178 are in the village of Wester Caputh, 5 miles (E. S. E.) from Dunkeld. This place, called in ancient records *Keapoch*, is said to have been in former times the site of a Pictish town of great strength, named, according to Boetius, *Tuline* or *Tulina*, and the inhabitants of which, who were very numerous, burned and deserted it on the approach of the Romans. It is said to have been situated at a place called at present Inchtuthil, "the island in the flooded stream", and is supposed to be the station described by Tacitus, to which Agricola led his troops after the famous battle with Galgacus. Caputh is mentioned in Mylne's *Lives of the Bishops of Dunkeld* as originally forming a portion of the parish of Little Dunkeld, and as having been erected into a distinct parish, in the year 1500, by Bishop Brown, who at his own cost built a choir, with painted ceiling and glazed windows, and for the support of the minister gave a vicarage which had been formerly united to his see, with four acres of glebe land; and also some rising ground, called the Mute hill, for the erection of a church. This author also informs us, that the parish of Dowally was once a part of Caputh, and that the same bishop built and endowed a church in honour of St. Anne, among the woods of the church lands of that district, in consequence of having heard that the Irish language was spoken in the Highland parts of Caputh.

The PARISH is situated on the northern bank of the river Tay, which forms its boundary for ten miles, from the bridge of Dunkeld, on the west, to the confluence of the Tay and the Isla, on the east; the latter river forms its boundary on the south-east, and the Lunan separates it on the north-east from Blairgowrie. It measures about thirteen miles in length from east to west, and varies in breadth from two to seven miles, comprising 16,000 acres, which form the principal part of the plain of Stormont, a continuation of the vale of Strathmore. The surface is considerably diversified; the portion towards the south-east is nearly level, and consists of rich and well-cultivated tracts, while the northern and north-western parts are hilly, and present many beautiful varieties of Highland scenery, enlivened by refreshing streams traversing the verdant dales. The river Tay, on which and also on the Isla are several fishing-stations, varies in width in this part from 150 to 200 yards, and is distinguished for its striking scenery. Towards the northern boundary, the burn of Lunan, which rises in the Grampians, falls down a precipitous and thickly-wooded glen two or three miles long, and reaches the loch of Craiglush; adjoining this is the fine piece of water called Lows, about two miles north-east of Dunkeld, and not far off is the loch of Butterstone. After passing through all these waters, and connecting them in a chain, the Lunan runs eastward, and falls into the Isla about seven miles from Caputh church.

The SOIL, near the rivers, is a rich alluvial earth, and is much indebted for its fertility to deposits conveyed by

the frequent overflowing of the streams. In the lower and level grounds it is in general light and dry, and in the higher parts cold and wet, though, where well cultivated, very fertile. The husbandry is on a superior footing, and excellent crops are raised; bone manure has been extensively applied, and, in some parts, very beneficially as a top-dressing to the pasture. The cattle formerly bred were the Angus dodded sort; but these have been latterly much improved by crosses with the Teeswater and the Ayrshire, and the sheep, which are of various kinds, are gradually improving by the intermixture of Leicester stock. The annual value of real property in the parish is £14,426. The chief rocks are limestone and clay-slate, and the former, which is of good quality, has been extensively quarried for some years, and burnt in kilns the construction of which obtained a premium from the Highland Society some time since. At Newtyle, a quarry of dark-blue slate of firm texture has long been in operation, and the material is in great demand. The mansions are, Delvine House, a plain but pleasant residence, nearly three miles east of the church; Meikleour House, beautifully seated on the north bank of the Tay; Snaigow House, an elegant mansion in the old baronial style, two miles north of the church; and Glendelvine, a modern residence, similar in style to Snaigow. Cattle-fairs are held at Meikleour on the fourth Friday in June, on July 2nd, the third Friday in August, and the fourth Friday in October.

Ecclesiastically the parish is in the presbytery of Dunkeld, synod of Perth, and in the patronage of the Crown; the minister's stipend is about £200, with a manse and glebe valued together at £47. 10. per annum. Caputh church, built in 1798, and situated on an eminence near the southern border, is a plain commodious edifice, containing sittings for 800 persons; it has lately been extensively repaired, and improved by the erection of a new porch at each end. The parochial school is in the village of Spittalfield, and affords instruction in the usual branches; the master has a salary of £34, with a house and garden, and £30 fees. A savings' bank was established in 1815, which is now a branch of the National-Security Savings' Bank, and in a flourishing condition. Remains exist of a Roman camp at Inchtuthil, supposed to have been the station of Agricola. It is situated on the north-eastern part of a piece of table-land covering upwards of 200 acres, steep on all sides, and elevated about sixty feet above the plain. It measures about 500 yards square, and the walls, now almost levelled by the plough, were nine feet and a half thick, and built with stones brought from a quarry two miles distant; on the south-eastern side are two tumuli, and a redoubt. There are also in the parish numerous Druidical circles, and cairns, one of the latter of which, called Cairmure, or the Big Cairn, is the largest in the county, being 456 feet in circumference and fourteen feet in height.

CARA, ARGYLL.—See GIGHA AND CARA.

CARDROSS, a parish, in the county of DUMHARTON; including the villages of West Bridgend and Renton, and the hamlet of Geilstone-Bridge; and containing 4416 inhabitants, of whom 51 are in the hamlet of Cardross, $3\frac{2}{3}$ miles (W. N. W.) from Dumbarton, on the road to Helensburgh. The name was derived from a compound word in the Celtic language, signifying "the point of the moorish ridge"; the ancient site of the church was on the point formed by the rivers Leven and Clyde, and the

term was probably not inappropriate to the original aspect of the place. Cardross appears to have escaped those bloody feuds which were so common in the surrounding country, not from any security in its position, but from the peaceful disposition of its inhabitants, who, though sometimes visited by predatory bands, furnished no pretext by a sanguinary resentment for the renewal of hostilities. It was the seat of the retirement of Robert Bruce, King of Scotland, during the last years of his life, when he frequently indulged in the pleasures of the chase. At the first milestone from Dumbarton along the Cardross road, is a wooded knoll that still bears the name of Castlehill; and though no remains are now to be seen of any building, it is probable that Bruce resided in a castle once standing here. He ended his days at Cardross in 1329.

The PARISH, which is situated on the northern bank of the Clyde, is eight miles in extreme length, and varies in breadth from one and a half to three miles. It contains about 9600 acres, of which one-half are cultivated, and about 150 acres are under plantation. The surface rises from the Clyde by a gentle ascent till it reaches its highest elevation, at the summits of the Kiliter and Carman, in the northern extremity of the parish, about 900 feet above the sea. The shore is marked by the prominent headland of Ardmore, which rises in the Clyde to a height of forty feet, and is connected with the parish by an isthmus running from the flat piece of land by which the rock is surrounded. On the banks of the river Clyde, which is between one and two miles in breadth, and in the interior, the soil is generally a light thin mould; on the higher grounds the soil has a greater depth, and rests chiefly on a tilly subsoil. In the vicinity of the vale of the river Leven, in the south-eastern part of the parish, there is a rich loam, with alluvial deposits. Upon the estates of Dalquhurn and Camis-Eskan are plantations of larch, fir, and oak, in a flourishing state; and the lands of Mildovan, Kilmahew, Kipperminshock, and Ardoch have infant plantations of promising appearance. The progress of agricultural improvement, during the present century, has been very considerable; much waste land has been reclaimed, and the land under cultivation has been benefited by draining and manuring. The live stock consists principally of cattle and sheep, purchased in the Highlands, and which graze upon the extensive tracts of moorland. In the lower parts of the parish, tillage and dairy-farming are to a great extent united, the latter branch having been much encouraged by the introduction of the best Ayrshire cows, and by the cultivation of the most approved bulbous-rooted green crops. The annual value of real property in the parish is £14,375. The prevailing rock is freestone, which in the eastern district is reddish and crumbling, but in other places of a light grey cast and better consistence, and mixed with breccia. The promontory of Ardmore is dark red breccia, with pebbles of quartz; and in the neighbourhood of the Kiliter range are beds of jasper, lying between breccia and sandstone. In some of the glens limestone is found; but the sand and magnesia with which it is mixed render it unfit for agricultural use, although it has been occasionally wrought and burnt to a small extent. The mansions in the parish include the ancient houses of Ardoch and Kilmahew, both now abandoned, and Camis-Eskan; the more modern structures are Keppoch, Ardmore, and Bloomhill. At Dalquhurn

works, in the vicinity of Renton, calico-printing, bleaching, and dyeing are carried on, affording employment to between 250 and 300 persons. There is an considerable salmon-fishery on the river Leven, and trout and salmon are taken at Ardmore and Colgrain; but the Yair fisheries on the Clyde, once so celebrated, and confirmed by several royal charters, are now almost unproductive. A fair is held on the first Wednesday in June, for black-cattle, horses, and sheep.

Ecclesiastically the parish is within the bounds of the presbytery of Dumbarton and synod of Glasgow and Ayr: the minister's stipend is £155. 8. 9., with a manse, and a glebe of the annual value of £30; the patronage is in the Crown. Cardross church, a very neat structure, was built in 1827, and accommodates above 800 persons. There is a missionary station at Renton connected with the Established Church, and places of worship are maintained in the parish in connexion with the Free Church and United Presbyterian Synod. A parochial school is supported, in which Latin is taught, with the usual branches of education: the master has a salary of £34, about £20 fees, and £15 from a piece of ground granted in the seventeenth century by the family of Napier; also five and a half bolls of barley, and the interest of £100. There are two public subscription libraries, one in Renton, containing 1000 volumes, and the other at Geilstone, with 400 volumes; also a Sunday-school library of 200 volumes. The poor have about £250 a year, the proceeds of a bequest left by Mrs. Jane Moore. Near Renton stands the ancient house of Dalquhurn, the birthplace of Dr. Tobias Smollett; and near the house a Tuscan column has been erected, which bears an elegant Latin inscription in memory of the novelist, who died at Leghorn in 1771.

CARESTON, a parish, in the county of FORFAR, 4 miles (W.) from Brechin; containing 218 inhabitants. This place, originally *Caraldstone*, of which its present appellation is simply a contraction, derived that name from a stone erected over the grave of Carald, a Danish leader, who was slain here in his flight from the battle of Aberlemno, in the reign of Malcolm III. The parish is about three miles in length, and one mile in average breadth, comprising 2056 acres, of which 1422 are arable, 250 woodland and plantations, and the remainder meadow and pasture. The surface rises in gentle undulations, from its southern boundary, towards the north, and, near its termination in that direction, declines gradually to the confines of the parish of Menmuir. The Noran rivulet, which has its rise in the Grampians, flows with a rapid current through the lands, and near the southern limits of the parish falls into the river South Esk, which also intersects the parish, and forms part of its southern boundary. This rivulet passes over rock or gravel, and is remarkably limpid. The soil is chiefly a rich black loam, interspersed with some small tracts of moor; and the chief crops are oats, barley, wheat, potatoes, and turnips: the system of agriculture is improved, and draining has been extensively practised. The farm-buildings are generally commodious, and on two of the farms are threshing-mills, one of which is driven by water. The lands are inclosed partly with stone dykes, and partly with hedges of thorn. In general the cattle are of the native black breed; there are few sheep pastured on the lands: considerable attention is paid to the dairy, and large quantities of butter and cheese are sent

to the Brechin market. The annual value of real property in the parish is £2717. The principal substrata are of the old red sandstone formation, interspersed with beds of what is by some considered to be lias; in the higher lands large blocks of trap rock are to be met with, with boulders of granite, basalt, and greenstone.

The plantations, which are in a thriving state, are chiefly pine and larch, with birch, elm, beech, and Scotch and spruce firs; and on the demesne of Careston Castle are lime, ash, poplar, plane, and Spanish and horse chestnut, some of which have attained a considerable growth. Careston Castle, mainly erected by one of the Earls of Crawford in the fifteenth century, is a spacious mansion, with two boldly projecting wings connected by a corridor in front; the west wing, which is the more ancient, is supposed to have been added by one of the Carneggy family, and the eastern by Major Skene soon after he purchased the property. The mansion has a stately grandeur of appearance, and contains numerous elegant apartments, elaborately decorated. Above the mantel-piece in the drawing-room is a representation of the royal arms of Scotland, which appear to have been granted to the first Earl of Crawford; in the dining-room are the armorial bearings of the Earl of Airlie, and over what was formerly the grand entrance to the castle are those of Carneggy of Balnamoon. Ecclesiastically the parish is within the bounds of the presbytery of Brechin and synod of Angus and Mearns. The minister's stipend is £158. 7. 6., of which one-half is paid from the exchequer; with a manse, and a glebe valued at £12 per annum: patron, the Earl of Fife. Careston church, erected in 1636, and repaired in 1808, is a plain old structure, and although partially repaired at different times, is cold and uncomfortable during winter; it is conveniently situated, and contains 200 sittings. The parochial school affords instruction to about sixty children; the master has a salary of £34, with a house and garden, and the fees average about £12. The late David Skene, Esq., bequeathed £250 in aid of the funds of the Kirk Session.

CARGILL, a parish, in the county of PERTH, $7\frac{1}{2}$ miles (N. by E.) from Perth; containing, with the villages of Burrelton, Wolfhill, and Woodside, 1642 inhabitants. This place, the name of which, of Celtic origin, signifies a village with a church, originally formed a portion of the parish of Cupar-Angus, from which, according to ancient records, it was separated prior to the year 1514. It was for many generations the chief seat of the family of Drummond, of whom Annabella, daughter of Sir John Drummond, was married to Robert III., King of Scotland, and crowned with that monarch at Scone in 1390; she was the mother of James I., from whom descended the royal family of Stuart. Stobhall, the seat of the Drummonds, now almost in a ruinous state, came into the possession of the family by the marriage of Sir John Drummond with Lady Mary, eldest daughter of Sir William de Montifex, lord justiciary of Scotland. The ancient mansion, which appears to have been built at different periods, is romantically situated on a narrow tongue of land, on the banks of the river Tay.

The PARISH, which is in the valley of Strathmore, is about six miles in length, and four in average breadth. Its surface is diversified, and the parish is bounded on the west and north-west by the Tay, and on the north by the river Isla, which flows into the Tay about half a

mile above the village of Cargill. The land rises by a gradual ascent, from the margin of the river Tay, for nearly a mile, till it attains an elevated plain, varied with occasional eminences interspersed with small glens; the Sidlaw hills form the eastern boundary. The scenery is pleasingly enriched with plantations, chiefly of Scotch fir, with coppices of birch and oak; the native woods, which were formerly extensive, and afforded secure concealment to Sir William Wallace and his adherents from the pursuit of their enemies, are greatly diminished. The soil, along the banks of the river, and on the other low lands, is a humid clay, but fertile, producing abundant crops of grain, and gradually inclines, as the ground ascends, to a rocky marl; towards the base of the hills it is a light dry gravel, and, on the summit of the elevated plain, partly loam and moorland. The system of agriculture is in an improved state, but much yet remains to be done. The annual value of real property in the parish is £7786. The Tay abounds with salmon, of which there is a valuable fishery, and with trout and pike, and is a favourite resort for anglers. Near the west end of the parish it flows over a rugged basaltic dyke, where it forms a fine cascade called the Linn of Campsie. In another part it is crossed by the Perth and Forfar railway, which thence intersects the parish, on its way to Cupar-Angus. The substratum of the parish is chiefly freestone, of good quality, and of excellent colour, which has been extensively wrought: limestone is also found, but it is not much in operation; and rock marl of a reddish colour is abundant, and might be rendered available to the improvement of the moorlands in the upper parts. The only manufacture carried on is the weaving of linen for the Dundee manufacturers, which affords employment to a few families.

Ecclesiastically the parish is within the bounds of the presbytery of Dunkeld, synod of Perth and Stirling; the patronage is in the Crown, and the minister's stipend is £224. 16., with a manse, and a glebe valued at £14 per annum. Cargill church is a neat and well-arranged structure, erected in 1832, and situated on the sloping bank of the river Tay. There is a place of worship for members of the Free Church. The parochial school is well attended; the master has a salary of £34, with a house and garden, and the fees average about £15, to which Lady Willoughby de Eresby adds £10 for teaching the poor gratuitously. There were traces, till within the last few years, of a Roman station and road; but under the extension and improvements in agriculture, they have been almost entirely obliterated. Near the Linn of Campsie was an ancient cell dependent on the abbey of Cupar-Angus; but only very slight vestiges of it can be traced. Stobhall gave the title of Baron to the Earls of Perth, who were Lords Drummond and Stobhall, till the forfeiture in 1746.

CARLAVEROCK, in the county of DUMFRIES.—See CAERLAVEROCK.

CARLOPS, a village, in the parish of LINTON, county of PEEBLES; containing 153 inhabitants. This village is irregularly built on the banks of a rivulet falling into the North Esk. It is chiefly inhabited by persons employed in weaving cotton for the manufacturers of Glasgow and Paisley, and coal and limestone are wrought in the immediate neighbourhood. Carllops is a popular abbreviation of *Carlins' Loups*, localities in the vicinity, so named in allusion to acts of a witch of former times,

who is said to have furnished to Allan Ramsay the character of Mause in the *Gentle Shepherd*, the scenery of which poem is in the neighbourhood. Near the village is a rock of freestone, impending over a narrow glen; it is called Harbour Craig, and, in this sequestered place, has a strikingly romantic appearance.

CARLUKE, a parish, in the Upper ward of the county of LANARK; including the villages of Braidwood, Kilcadzow, and Yieldshields; and containing 4802 inhabitants, of whom 2090 are in the village of Carluke, 5 miles (N. N. W.) from Lanark. The name appears to have been derived from the word *Caer*, signifying "a hill", and *Luac*, "Luke", in reference to the dedication of the church, and to the elevated site of the parish. The first historical traces of the district are connected with the reign of David I., when the founder of the Lockhart family, whose descendant is still the principal heritor, came into Scotland with some other Norman families and settled here. The lands of Kirkton, in the parish, anciently belonged to the abbey of Kelso, and were erected into a barony in 1662, by Charles II., in favour of Walter Lockhart, a cadet of the family of Wicketshaw, at that time the proprietors. By a charter of Robert I., that monarch granted to the monks of Lesmahagow ten merks yearly from the revenue of his mills at Mauldslic, in Carluke, for supporting the expense of lights at the tomb of St. Macute; and in a subsequent charter of the 8th of March, 1315, ten merks yearly were bestowed upon the same monks, from the mills, to supply eight wax lights for the tomb on Sundays and festivals. In this reign, also, the church, with all its rights, was given by the king to the monks of Kelso, who performed its duties by a curate, and continued in the possession of its revenues till the Reformation.

The PARISH is about eight miles long, from east to west, and about four and a half broad, containing 15,360 acres. It is bounded on the south-west by the Clyde, and on the west by Garrion Gill. The surface is considerably diversified, consisting of level ground, acclivities, hills, and valleys, clothed in many parts with luxuriant pasture, and ornamented with picturesque scenery, interspersed with numerous neat and comfortable cottages, and elegant mansions, and enlivened and irrigated by the beautiful meanderings of the Clyde. Close to this river is a long narrow tract of sloping ground of rich quality, after which the land rises in an eastern direction, 400 or 500 feet above the sea. From the highest point of this land, along which runs a ridge of sandstone, a level is continued as far as the village, terminating in an extensive hill called the Law of Mauldslic; and at the back of the village, the surface again rises towards the east, and terminates in a wild moor. The principal hills are Kilcadzow, Lee, King's, and Mauldslic, the last of which is the most lofty, rising upwards of 800 feet above the level of the sea. The most interesting view of the district is from the Lanark and Glasgow road, on the opposite side of the Clyde, from which point are seen the banks of the river, adorned with fruit and forest trees, and the numerous rills issuing from the concealed and romantic glens and ravines, and eventually falling into the Clyde.

In the neighbourhood of the river, the soil is a rich loam; generally, it is various; in some parts, light and sandy, and famed for its large crops of apples and pears. The whole rests on a subsoil of clay, of widely different

appearance and quality; grain to a large amount is produced, and potatoes, turnips, and hay are likewise raised. The system of husbandry here followed, on account of the peculiar character of the soil and other circumstances, is somewhat different from that generally used in other districts. A rotation of crops is not much approved; the course preferred, except on the rich tracts near the Clyde, is to convert the land into permanent pasture, breaking it up only every fifth or sixth year for a crop of oats. The annual value of real property in the parish is £13,437. The rocks consist of limestone, sandstone, and ironstone, which, with various kinds of coal and clay, are found in large quantities. The limestone, with one exception, all lies under the coal, which latter is quarried to a very great extent, and is of excellent quality. Between the coal and limestone the beds of sandstone occur, which, with numerous layers of freestone, supply the best materials for building. A ridge of trap runs eastward from Hillhead to Bashaw, and quartz and agate are both found in the old red sandstone. One of the chief mansions is *Mauldslic Castle*, built in 1793 by the Earl of Hyndford, an elegant structure ornamented with turrets, and situated in a well-wooded park, through which the Clyde flows for about a mile. The mansion of *Milton-Lockhart*, lately built, stands upon a point of land projecting into the valley of the Clyde, and beautifully skirted with deep glens and thick woods; the proprietor has built a bridge of three arches over the river, after the model of Bothwell bridge. *Braidwood House* occupies an eminence above the same vale, and is a handsome and commodious structure. Carluke was erected in 1662 into a burgh of barony, under the name of Kirkstyle, with the privilege of holding a weekly market, and a fair twice in the year: a tax of sixpence in the pound, on house-rent, is levied for the support of constables, and for cleaning and lighting the streets. The population of the town, a few years ago, was insignificant; but there is now a variety of good shops, and a post-office has been established under Lanark. The inhabitants of the parish are chiefly employed in agriculture, and in quarrying freestone, limestone, ironstone, and coal. Fairs are held, one on the 21st May, and another on the 31st October, at which there is a very considerable traffic in milch-cows. The Stirling and Carlisle turnpike-road, and the road between Glasgow and Carnwath, run through the parish; as does also the Caledonian railway, which presents great facility of intercourse.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Lanark, synod of Glasgow and Ayr; the patronage belongs to the Lockhart family of Lee and Carnwath, and the minister's stipend is £262, with a manse, and a glebe valued at £30 per annum. Carluke church, which is a substantial building containing 1000 sittings, was built in 1799, at an expense of £1000. There are places of worship for the United Presbyterian Synod and the Synod of United Original Seceders; also a parochial school, in which Latin is taught, with all the usual branches of education, and the master of which has a salary of £34, and £50 fees, with a house and garden. A parochial library was founded in 1827, and a society for the promotion of useful knowledge in 1836; there is also an agricultural society, instituted in 1833, for the purpose of encouraging improvements in the breed of cattle. The great

Roman road, through Clydesdale, to the wall of Antoninus, passed through the parish; not far from it, at Cairney Mount and at Law, several coffins have been found, constructed of large stones, and containing urns and ashes. Flint arrow-heads, hatchets, and numerous coins of both silver and gold, of Roman origin, have been also found, at Burnhead and Castlehill. In a dell in the parish is a very ancient tower called Hallbar, fifty-two feet high, and twenty-four feet square on the outside, having a vault beneath, and three apartments, the uppermost of which has an arched roof; it is supposed, from mention of it in a deed dated 1685, to have been attached to the barony of Braidwood. At Hanghill, near Mauldslie Castle, is an old burying-ground several acres in extent, covered with large trees sixty or seventy feet high, and in which the two last Earls of Hyndford were interred. On the estate of Milton-Loekhart part of an ancient fort still remains, in which the celebrated William Wallace once found refuge from the pursuit of his enemies. Major-General Roy, the celebrated engineer, and author of a standard work on Roman Antiquities, was a native of Carluke.

CARMICHAEL, a parish, in the Upper ward of the county of LANARK, 5 miles (S. E.) from Lanark; containing 874 inhabitants. This place derives its name from St. Michael, to whom its first church was dedicated. The remains of antiquity of which historical use can be made, are very few; in the south-west corner of the parish are vestiges of a camp and military station, and a few years ago a large coffin constructed of sandstone was found, but destitute of any mark to guide opinion as to its probable origin. On the summit of the lofty mountain of Tinto is a cairn, or heap of stones; and in some parts are stone crosses, all of which point out the places of military occupation and engagement, concerning the particular facts of which nothing determinate is on record. The ancient and illustrious family of Carmichael occupy the most prominent place in the civil history of the parish: one of its members, John, second Lord Carmichael, born in 1672, was created Earl of Hyndford in 1701, and filled a succession of honourable and important offices to the time of his death, which took place on his estate here.

The length of the parish, from south-west to north-east, is six miles, and its extreme breadth nearly five miles; containing about 11,630 acres. It is bounded on the north by the Clyde river, from its confluence with Douglas water to Mill-hill, and is intersected by the roads from Carlisle to Stirling, and Edinburgh to Ayr. The surface presents numerous irregularities, consisting of hill and valley, breaks, and sweeping undulations, crowned in the south-eastern part by the celebrated mountain of Tinto, rising to an elevation of about 2400 feet. This majestic hill, the name of which is said to signify "the hill of fire", from the fires formerly kindled upon it, commands an interesting and extensive view of the lower elevations of Carmichael, Drumalbin, Whitecastle, Crossridge, and Stonehill hills, all in the parish, the ground gradually sinking to the northern extremity. The climate is cold; the surface is covered in many parts with poor pasture, and only in the highly cultivated grounds has an agreeable aspect. In the vicinity of the Clyde the soil is thin and sandy; in other parts a good deep loam; but in the arable districts generally, damp and clayey, resting upon an impervious till or ferruginous

clay, with a considerable mixture of marine stones. The number of acres under cultivation is, 5924 arable, and 4807 pasture; 926 acres are occupied by plantations, which consist of oak, ash, elm, plane, beech, alder, poplar, birch, and horse-chestnut. The crops generally raised are oats, barley, bear, peas, potatoes, turnips, rye-grass, and meadow hay, the first of which greatly predominates; the cattle are of the Ayrshire breed, and the sheep are the black-faced, with a few Cheviots. The system of agriculture is excellent, numerous improvements having been introduced of late years. The annual value of real property in the parish is £5280.

The prevailing rock is the old red sandstone, which is good for building houses or fences, and is abundant in the hills of Carmichael, Whitecastle, and Drumalbin; felspar porphyry, in some places, lies near the sandstone, and in the Crossridge hill is a stratum of clay-slate, passing into greywacke slate. Blocks of quartz are sometimes to be seen, exposed by the action of the streams; and blocks of gneiss have been found, deposited in alluvial soil, whither it is supposed they were carried by the violence of the rivers. There are quarries of limestone and sandstone. Carmichael House, an ancient and magnificent baronial residence, now deserted, for many generations the seat of the family of the same name, is encompassed by aged and lofty trees, and extensive grounds and plantations, which were greatly improved by John, Earl of Hyndford. The mansion of Eastend, comparatively a modern structure, is elegant and commodious. There is a tan-work in the parish, in a prosperous state; also an establishment for the currying of leather, which is carried on with considerable profit. At Carmichael Mill is a foundry, which supplies most of the iron-work for threshing-mills and other machinery used in the parish; and there are thirty hands employed as weavers. Ecclesiastically the parish is within the bounds of the presbytery of Lanark, synod of Glasgow and Ayr; the patronage is exercised by Sir W. Carmichael Anstruther, Bart., and the minister's stipend is £225. Carmichael church, a cruciform building erected in 1750, is in good repair, and accommodates between 400 and 500 persons; the manse was built at the same time, and considerably enlarged some years ago. The glebe is valued at £20 per annum. There is a parochial school, in which the classics, French, and mathematics are taught, with all the usual branches of education; the salary is £32, with more than the legal accommodations, and about £26. 8. fees. Another school, at Ponfeigh, is supported partly by the heritors; and there is a savings'-bank, established in 1814.

CARMUNNOCK, a parish, in the Lower ward of the county of LANARK; containing 717 inhabitants, of whom 390 are in the village, 5 miles (S.) from Glasgow. The name of this place is supposed to have been derived from the compound Gaelic word *Caer-mannock*, signifying "the monk's fort". The remains of antiquity here bear testimony to the settlement and military operations of the Romans; vestiges of a military road and camp are still to be seen on the estate of Castlemilk, and pieces of ancient armour, with a variety of utensils, have been found. In the reign of William the Lion, the manor was held by Henry, son of Anselm, who assumed the name of Henry of "Cormanoek". Some time before the year 1189, he granted the church to the monks of Paisley, with half a carucate of land, and a right of

common, and directed that his remains and those of his wife should be interred in the monastery. The church was held by the monks till the Reformation.

The PARISH is about four miles long, from north-east to south-west, and averages about two miles and a half in breadth. It contains 3540 acres, of which 3025 are arable, and under a regular system of cultivation, 315 wood, and 135 pasture, the remainder being roads, &c. The surface is considerably elevated, and exhibits a succession of hill and dale, varied with extensive and flourishing plantations, and enlivened by the beautiful meanderings of the river Cart, on the western boundary of the parish, which here borders on Renfrewshire. From the summit of Cathkin-hill, near the eastern boundary, at an elevation of nearly 500 feet above the sea, the prospect embraces parts of sixteen counties, the nearer view consisting of the city of Glasgow, with its surrounding villages, the towns of Rutherglen and Paisley, and the vale of Clyde from Hamilton to Dumbarton. The parish abounds with springs, and there are five public wells of good water in the village: the only river running through the parish is a small stream called the Kittoch. The soil, which is generally uniform, consists of good earth, about six or seven inches deep, and resting upon a superior whinstone rock, which extends throughout the parish. In some spots, it is more moist and clayey, with a retentive bottom, yet yielding excellent crops when well drained and manured; in a few places it is considerably mixed with sand. Crops of all kinds are raised, which, on account of the highly cultivated state of the soil, are of the first description; and the greatest encouragement is given to dairy-farming, both for the superior profit it brings to the tenant, and for the manure: the cows are all of the Ayrshire breed. Many improvements have taken place in agriculture within the last few years, and furrow-draining with tiles has been extensively practised. The annual value of real property in the parish is £5511. There is a considerable quarry of freestone of good quality; and on the estate of Castlemilk excellent limestone and ironstone are found, the latter of which has been partially wrought. The village population are chiefly hand-loom weavers: an annual fair was formerly held.

Ecclesiastically the parish is within the bounds of the presbytery of Glasgow and synod of Glasgow and Ayr; patron, J. S. S. Stuart, Esq. The stipend is £152. 17. 6., of which £39. 10. 10. are received from the exchequer. The church, which is situated in the middle of the village, was built in 1767, and repaired in 1838; it is a neat structure, considering the date of its erection, and seats about 450 persons. An excellent manse has been lately built, and there is a glebe valued at £19 per annum. There is a parochial school, in which the usual branches of a plain education are taught; the master has the maximum salary, and about £32 fees, with a house and garden. An old thorn-tree here is much regarded, as marking out the spot from which Mary, Queen of Scots, was a spectator of the defeat of her army at the battle of Langside.

CARMYLE, a village, in the parish of OLD MONKLAND, Middle ward of the county of LANARK, $4\frac{1}{2}$ miles (S. E. by E.) from Glasgow; containing 238 inhabitants. This village, which is remarkable for its beautiful situation, and fine southern aspect, is seated on the north side of the Clyde, and owes its origin to the establish-

ment of a muslin manufactory, about the year 1741, by Mr. Mackenzie, a merchant of Glasgow.

CARMYLIE, a parish, in the county of FORFAR, 6 miles (W. by N.) from Arbroath; containing, with the hamlet of Graystone, 1107 inhabitants. The name is supposed to be derived from a Celtic word, signifying "the top of a high rocky place", which description answers to a castle formerly standing here. At Carbuddo, not far from the parish, are the remains of a camp, indicating the occupation of the ground in ancient times by the Romans, who are said to have reduced the forts of Carmylie and Carnegie in the year 139. At one period the lands belonged to the abbey of Aberbrothock, whence the monks came to perform divine service at a chapel here, more ancient than the abbey, dedicated to the Virgin Mary, and called in old writings "Our Lady's chapel of Carmylie"; its site is occupied by the present church. The PARISH is about six miles long, and its mean breadth three miles. It is bounded by portions of eight parishes, and includes part of the range of the Sidlaw hills, exhibiting a series of acclivities, which are cultivated throughout, and rise 200 feet above the lowest ground in the parish. These hills are nearly all of equal height, and are about 580 feet above the sea, commanding on one side a beautiful and extensive prospect of the Grampian mountains, and on the other, of the German Ocean, the coast of Fife, and, sometimes, the Lammermoor hills. The only stream of any note is the Elot, or Elliot, which rises in a moss called Dilytymoss, and after a course of about eight miles falls into the sea at Arbilot.

The soil most prevalent is a dark rich-looking mould, which receives its hue, partly from a mixture of moss, and partly from moisture; a light dry soil is found on some of the higher slopes, and in the valleys near the streams is a rich fertile mould, with alluvial deposits. There are about 200 acres of moss, many hundred acres of moor, and 355 acres of plantation, consisting of Scotch and spruce fir, larch, and the ordinary kinds of hard-wood. The crops are wheat, barley, oats, turnips, potatoes, hay, and peas. Great improvements have been effected within the last half century, by the conversion of pasture into arable land, by draining marshes and mosses, and reclaiming wastes; also by inclosures, the erection of good farm-buildings, and the introduction of the best system of cultivation. The annual value of real property in the parish is £8928. The subsoil in many parts is a stiff retentive clay, requiring frequent and deep draining. The rock most common, especially in the higher lands, is the red or grey sandstone, covered with the whinstone called scurdy. At Conansythe a large quantity of steatite has been found, of red hue, variegated with white veins. There are several good quarries in the parish, regularly worked, the stone and slate of which are suited for pavement, and for columns, balusters, and various other ornaments in buildings: the produce is sent to the large towns in Scotland, and to London; the slate is of every size, colour, and texture, and many pieces of it, beautifully variegated with spots, when polished resemble a fine marble. The parish contains two convenient and elegant mansions, built of the native sandstone. That of Guynd is situated on the north bank of the Elot river, and ornamented with several beautiful plantations; the other, Conansythe, stands on high ground, and com-

mands an interesting view of the vales of the Lunan and the Brothock. The population has greatly increased within the present century, an increase arising from the manufacture of coarse linen, such as sheetings, dowlas, Osnaburghs, &c., and from the large number of hands employed in the quarries above referred to: these quarries, however, are not so much wrought as they were, owing to the great quantity of useless stone that lies above the valuable kind. A yearly cattle-market is held about the end of the month of April, or the beginning of May.

Ecclesiastically the parish is within the bounds of the presbytery of Arbroath, synod of Angus and Mearns. The minister's stipend is £158. 6. 8. or upwards, of which a portion is received from the exchequer; there is a good manse, built in 1820, and the glebe is valued at £30 per annum: the patronage is in the Crown. Carmylie church, which is conveniently situated, is a substantial building of ancient date, accommodating 500 persons. A congregation has been formed here in connexion with the Free Church. There is a parochial school, in which Latin and all the branches of an ordinary education are taught; the master has the maximum salary, with about £18 fees, and a house and garden. A library was instituted in 1828, and is under the direction of the Kirk Session, and a committee appointed by the subscribers. At the Den of Guynd are the remains of a fort called Dunhead, supposed to be of Caledonian origin, and afterwards to have been occupied by the Danes; it is of triangular form, and appears to have been encompassed by a ditch and wall. Urns and human bones have been found in the neighbourhood, the bones supposed to be the remains of Danes who fell in the battle of Barrie, when the Danes were defeated by Malcolm II. There are several chalybeate springs, the strongest of which is one in the den of Guynd.

CARNBEE, a parish, in the district of ST. ANDREW'S, county of FIFE, 2 miles (N. N. W.) from Pit-tenweem; containing 1043 inhabitants. This parish, which is situated in the south-eastern part of the county, is about four miles and a half in length, and nearly of equal breadth, comprising about 5600 acres, of which more than 3000 are arable, and the remainder, with the exception of a moderate proportion of woodland and plantations, good meadow and pasture. Its surface is diversified with hills of conical form, the most conspicuous of which is Kellie Law, rising to the height of 810 feet, and commanding from the summit a fine view of the Firth of Forth, the German Ocean, and the coasts of Haddington and Mid Lothian, with the city of Edinburgh in the distance. Nearly one-half of this hill is arable, and the remainder is covered with verdure to the summit. The hills of Carnbee Law, Cummer, and Gelland are of similar form, rising to a considerable height, and affording excellent pasturage. The lands are watered by several small burns, which flow in various directions. The soil is mostly fertile; in some parts a clayey loam, in others a rich black mould of great depth. The chief crops are wheat, barley, oats, peas, beans, potatoes, and turnips; and the pastures generally are luxuriant: the system of husbandry is greatly improved. Around the mansions of the principal proprietors may be seen the remains of some fine specimens of ancient timber, and the plantations that have been formed are in a thriving state. The annual

value of real property in the parish is £11,390. The substrata are chiefly coal, which is generally prevalent throughout the parish, and of which two mines are in operation; and limestone and freestone of excellent quality, which are both extensively quarried.

Kellie Castle, for many generations the baronial seat of the Earls of Kellie, and now the property of the Earl of Mar and Kellie, was once a noble mansion, containing many stately apartments: it is situated near the base of Kellie Law, in a richly-wooded demesne. Balcaskie House, near the southern boundary of the parish, is surrounded with grounds tastefully laid out; and Pitcorthie House and Gibleston are also handsome residences. The village, which is small, is chiefly inhabited by persons employed in the coal-works. Ecclesiastically the parish is within the bounds of the presbytery of St. Andrew's and synod of Fife: the minister's stipend is about £238, with a manse, and a glebe valued at £30 per annum; patron, Sir Ralph Abercromby Anstruther, Bart. The ancient church has been replaced by a neat structure, erected in 1794. The parochial school is well attended; the master has a salary of £34, with a house and garden, and the school fees average £25. Among distinguished persons connected with the parish, have been Thomas, the musical Earl of Kellie; Dr. George Sibbald; Sir William Bruce, the architect; Hugo Arnot, author of *State Trials*; and Archibald Constable, the eminent publisher, who was a native of Carnbee.

CARNIE-HILL, a village, in the parish of AUCHTERGAVERN, county of PERTH, $5\frac{1}{2}$ miles (S. E. by S.) from Dunkeld, on the road to Perth; containing 133 inhabitants. This village, which is situated on the summit of an elevated ridge, at whose base is the village of Bankfoot, is almost identified with that place. It is of recent origin, having, like Bankfoot, been built within the present century, on land belonging to Mr. Wylie. The houses are neat, and, from their elevated site, command extensive and finely-varied prospects of the adjacent country, which is well cultivated, and abounds with interesting scenery. The inhabitants are chiefly employed in weaving for the manufacturers of Dundee, Arbroath, and other towns.

CARNOCH, or STRATHCONON, a quoad sacra parish, 20 miles (W.) from Dingwall; consisting of parts of the parishes of CONTIN, FODDERTY, and URRAY, county of Ross and CROMARTY; and containing 563 inhabitants. The district is about eighteen miles in length, and ten in breadth; it takes its second name from the river Conon, and wholly consists of moor pasture, with the exception of a few patches of arable land. The estate of Strathconon, which forms nearly the entire parish, consists of 69,896 acres; of these, 68,005 are hills and moor, 972 arable land and green pasture, and the remainder lochs. The population is agricultural, and the farmers forward their produce to the Inverness sheep and wool market, and the Moor of Ord cattle-markets. Ecclesiastically, Carnoch is within the bounds of the presbytery of Dingwall and synod of Ross. The church is a plain building, erected in 1830 by the Parliamentary Commissioners, and contains 330 sittings. The stipend of the minister is £120, and he has a manse, a glebe of the annual value of £2, and grazing for two cows and a horse: the patronage is in the Crown. There is a school, endowed by the Society for the Propagation of Christian Knowledge.

CARNOCK, a parish, in the district of DUNFERMLINE, county of FIFE, 3 miles (W. N. W.) from Dunfermline; containing, with the villages of Carnock and Cairney-hill, and the hamlet of Gowkhill, 1270 inhabitants, of whom 184 are in the village of Carnock. This place originally included only the barony of Carnock, and the lands of Blair, and Easter and Wester Camps; but in 1650, the Pitdenies, the lands of Luscar, and those of Clune, which formed part of the parish of Dunfermline, were annexed to this parish by act of the presbytery. The barony formerly belonged to Lieut.-Col. John Erskine, whose eldest son, a distinguished member of the bar, and professor of Scottish law in the university of Edinburgh, built the old mansion of Newbigging, now a farm-house. Mr. Erskine, after residing at this place during the intervals of his professional avocations, and having here composed his *Institutes of Law*, removed to Cardross, where he died in 1767. The parish, which is situated at the western extremity of the county, is about three miles in length, and measures nearly the same in average breadth, comprising about 2260 acres, of which 1060 are arable, 450 woodland and plantations, and the remainder meadow and pasture. Its surface is pleasingly undulated, in some parts having a considerable elevation. Camps Hill and Carnie Hill form a continuous range of rising ground, embracing a prospect of the Firth of Forth, with the adjacent country from Stirling on the west to Edinburgh on the east. The Luscar Know and the Clun of Newbigging are the most elevated points, and command views of the Ochils, Ben-Lomond, and the Pentland hills. The streams are small; the Ink Craig, near the village of Carnock, is remarkable for the black colour of its water, which for ordinary purposes is sometimes used as ink.

The soil is extremely various, but generally productive, and in some parts richly fertile; the system of agriculture is in an improved state, and the crops are oats, barley, wheat, and beans, with potatoes and turnips. A considerable number of sheep are pastured; the cattle are chiefly of the Fifeshire and Teeswater breeds, but few are reared, though great numbers are fattened for the markets. The annual value of real property in the parish is £3126. Coal is diffused throughout, and formerly there were five mines in operation; the only one at present wrought is on the lands of Blair, consisting of four separate seams, the uppermost of which is a blind coal, three feet in thickness, and is used chiefly by brewers and maltsters. The other seams are household coal of different qualities, and the lowest is found at a depth of twenty-three fathoms. Sandstone, limestone, and varieties of trap, are among the rocks, and freestone is quarried in several places; in some, susceptible of a high polish. Seams of ironstone, varying in quality and thickness, are to be met with in several parts. The plantations are in a thriving state, and are chiefly larch, spruce, and Scotch firs, oak, beech, elm, chesnut, and ash; of these, the firs, oak, and beech, of which there are many stately trees in the plantations formed by Mr. Erskine, seem best adapted to the soil.

The principal seats are, Carnock House, a small but handsome mansion; Blair House, a neat substantial building, erected about the year 1815; and Luscar House, a handsome mansion in the Elizabethan style, lately erected. The village of Carnock is pleasantly situated on a rivulet of that name, over which is a bridge, sup-

posed from an inscription on one of the stones to have been first erected about 1638: a post-office, subordinate to that of Dunfermline, was established in 1838. The manufacture of table-linen, and table-covers of cotton and worsted, affords employment to more than 200 of the inhabitants, in hand-loom weaving for the wholesale houses at Dunfermline. A fair for cattle and for general business is held on the 26th of May, or, when that day falls on Sunday, on the preceding Saturday. Facility of communication is afforded by the Stirling and Dunfermline railway. Ecclesiastically, Carnock is in the presbytery of Dunfermline and synod of Fife: the minister's stipend is about £155, with a manse, and a glebe valued at £24 per annum; patron, John A. Stuart, Esq., who is also the proprietor of a third part of the parish. The church, erected in 1841, is a handsome cruciform structure in the Norman style, with a graceful spire, and contains 400 sittings, with arrangements for the erection of a gallery, if requisite, for 200 more. In the churchyard are considerable remains of the ancient church. There is a place of worship for members of the Free Church; also, in the village of Cairney-hill, a meeting-house in connexion with the United Presbyterian Synod. The parochial school is attended by about sixty children; the master has a salary of £34, with a house and garden, and the fees average about £16. In the village is a parochial library containing 250 volumes. Some Roman coins, and fragments of urns, were discovered in the parish by the plough about the year 1820; and it is supposed from the name of a farm in the parish, called Camps, that there may have been a military station.

CARNOUSTIE, a village, and for a time a quoad sacra parish, in the parish of BARRY, county of FORFAR, 2 miles (E.) from Kirkton of Barry; containing 1268 inhabitants. This place is on the eastern coast, about three miles north of Buddon Ness at the mouth of the river Tay. For some years past it has been resorted to for bathing, and its smooth, sloping, sandy beach renders it peculiarly adapted to the purpose; the number of visitors has latterly increased, owing to the facility afforded by the Dundee and Arbroath railway, which passes through. The village itself formed the parish, and the inhabitants, both male and female, are for the most part employed in hand-loom weaving in their own dwellings; their manufacture is principally brown and white linen, for the markets of Dundee and Arbroath. Carnoustie has lately been made a post-town. It contains places of worship for members of the Free Church, the United Presbyterian Synod, and the Synod of United Original Seceders. There are, a subscription school, with a dwelling-house for the teacher attached; a school in connexion with the Free Church; a Free Church library, and a savings' bank. In the immediate vicinity of Carnoustie, a name signifying "the cairn of heroes", are vestiges of a camp, and several tumuli, where it is said the remains were deposited of the Danes who fell under their leader Camus, when vanquished by the Scottish army commanded by Malcolm II.

CARNWATH, a parish, in the Upper ward of the county of LANARK; including the villages of Braehead, Forth, Newbigging, and Wilsontown; and containing 3550 inhabitants, of whom 766 are in the village of Carnwath, 26 miles (S. W.) from Edinburgh. This place is supposed to have derived its name from an ancient

cairn, situated to the west of the present village, and near a ford (*wath* in Saxon) across the burn now called Carnwath, which stream, previously to the construction of the bridges, was passable only here. The castle of Cowthalley, in the parish, was for many years the baronial residence of the Sommervilles, one of the most opulent and powerful families of the country in the twelfth century, and of whom William, the first baron, was the firm adherent of Robert Bruce during the disputed succession to the crown. It was burnt in one of those inroads of the English which so frequently occurred; but at what time, or by whom, it was rebuilt, is not distinctly recorded. This castle was often the temporary residence of James VI., while pursuing the diversion of hunting, for which the neighbourhood was peculiarly favourable. The foundations only can now be traced, from which it appears to have been a fortress of considerable extent, surrounded by a deep fosse, and accessible by a draw-bridge on the western side.

The PARISH is about twelve miles in length, from north to south, and about eight miles in breadth, comprising an area of about 31,750 acres, of which about one-third are in cultivation, upwards of 20,000 acres uncultivated, about 500 acres in wood, and ninety undivided common. Its surface is varied, consisting partly of level and partly of rising grounds, the former having an elevation of 600 feet above the sea, and the latter of 1200 at the highest point; but there are no mountains or detached hills in any part. The principal rivers are the Clyde and the Medwin, which form part of the southern boundary. There are numerous springs of excellent water, affording an abundant supply; and also some possessing mineral properties, which have not attracted much notice. The only lake of any consideration is Whiteloch, to the west of the village: it covers about thirty acres of ground, and is of great depth in some parts; the shores on the south and west are richly wooded, and the surrounding scenery is diversified. In one part of the parish the soil is a strong wet clay; in another, a deep rich loam; and in other parts, light and gravelly, intermixed with portions of moss. The chief crops are barley, oats, potatoes, and turnips, with a little wheat; the rotation system of husbandry is practised, and bone-dust has been extensively introduced as manure, and with much success. Great attention is paid to the management of the dairy, on most of the farms, under the encouragement of the Highland Society of the district; the cheese made is mostly of the Dunlop kind, and the greater part is sent to Edinburgh. The cattle are of the Ayrshire breed; there are but comparatively few sheep, and these are of almost every variety. The annual value of real property in the parish is £14,207.

The SUBSTRATA are principally coal, ironstone, and limestone, all of which are extensively wrought. The coal and limestone are found in superincumbent strata, on the lands north of the rivulet of Dippool; the limestone occurs at a depth of nearly thirty feet from the surface, in seams about six feet thick, and the coal, under it, in seams of about eighteen inches, wrought for burning the lime. On the other side of the Cleugh burn is a very extensive coal-field, reaching to the northern boundary of the parish, and containing an inexhaustible mine: this mine, till within the last fifty or sixty years, was only partially explored; but on the establishment of a company here for the manufacture of iron, a steam-engine

was erected for drawing off the water, and mining operations were conducted on a very extended scale. To the west of this district, at Climpy, is another field of coal, which has also been worked by the company. The ironstone is found in strata of various thickness and quality; in some parts occurring in the form of tessellated pavement, and in others in small detached masses.

The village of Carnwath, in the southern part of the parish, is neatly built, and contains several regular streets, with some handsome houses of recent erection; most of the old houses have been much improved in appearance, and the whole has an air of great cheerfulness and comfort. It is inhabited chiefly by persons employed in weaving for the manufacturers of Glasgow and Paisley. A public library is supported by subscription. A weekly market is held, mostly for the sale of meal and barley; and there are fairs in July, for cows and horses, and for hiring servants; in the middle of August, for lambs and young horses; and in October, and also in February, principally for the hiring of farm-servants. On the day after the August fair, a foot-race and various other sports are celebrated. Great facility of intercourse is afforded by the Caledonian railway.

Ecclesiastically the parish is in the presbytery of Lanark, synod of Glasgow and Ayr, and in the patronage of the Lockhart family: the minister's stipend is £250. 17. 6., with a manse, and a glebe valued at £20 per annum. Carnwath church, erected in 1798, and thoroughly repaired in 1833, is a plain neat edifice, adapted for a congregation of about 1100 persons, but almost inaccessible to a great portion of the population. Chapels in connexion with the Established Church have been built at Wilsontown and Climpy; but the latter is fast falling into a state of dilapidation. There is a place of worship for New Light Burghers on the road to Wilsontown, and the parish also contains a place of worship in connexion with the Free Church. The parochial school is well conducted; the master has a salary of £34, with £34 fees, and a house and garden. The ancient cairn from which the parish takes its name is of elliptical form, and on the summit is an opening, from which was a descent by a flight of steps to the bottom. It is surrounded by a deep fosse and high mound, and is supposed to have been formed as a place of security in time of war, and for concealment of treasure. The late Sir N. M. Lockhart planted it with hard-wood trees. Among the few other remains of antiquity in the parish is the beautiful aisle of the old church, which was founded in 1386, and was endowed and made a collegiate church for a principal and six prebendaries in 1424 by Lord Somerville, who also connected with it a provision for the maintenance of eight poor aged men. The aisle is in good preservation, and displays some interesting details in the decorated English style. It has been the sepulchral chapel of the Sommerville and Dalziel families, and of the Earls of Carnwath, and is now the burying-place of the family of Lockhart.—See WILSONTOWN, &c.

CAROLINE-PLACE, a village, in the parish of St. MARTIN, county of PERTH; with 99 inhabitants.

CARRIDEN, a parish, in the county of LINLITHGOW, $1\frac{1}{2}$ mile (E.) from Borrowstonness; containing, with the villages of Blackness, Bridgeness, Cuffabouts, Grangepans, and Muirhouses, 1208 inhabitants. It derived its name either from the specific character of the locality, or from its being a military station in connexion

with the wall of Antonine, which extended into this parish, nearly to Carriden House. There are now no remains of the wall, but several Roman antiquities have been discovered at different times, including a gold coin of the Emperor Vespasian, a Roman altar without inscription, a brass sword, several vases, and other relics. Few events of historical importance have occurred in connexion with the parish, except such as are closely identified with the castle of Blackness, which, with the village, is noticed in a separate article. The parish extends for three miles along the southern shore of the Firth of Forth, and is about two miles in breadth, comprising an area of 2719 acres, of which 2550 are arable, with some fine tracts of meadow and pasture; 113 woodland and plantations; and the remainder roads and waste. The surface is varied, rising from the shore for nearly a mile in bold undulations, which, as they approach the south-west, near Linlithgow and Borrowstounness, attain an elevation of 519 feet above the sea, and form part of the Irongath hills; towards the east they gradually subside into gentle acclivities. At high water the shore is a narrow margin of sand, gently sloping, and at low water expanding into a considerable tract of soft sleschy matter, a mixture of alluvial soil and sand; the sandy margin is gradually becoming firmer and more stony, from the encroachment of the sea.

The soil varies from a light sand to a rich and fertile loam, and, in some parts, to a heavy clay; the system of agriculture is in a highly improved state, and the crops are grain of all kinds, potatoes, and turnips. Some attention is paid to the rearing of live stock: the sheep, small numbers of which are pastured on the grass-lands, are generally of the black-faced kind; the cattle are the short-horned, occasionally intermixed with others from the north. The annual value of real property in the parish is £4510. The plantations consist of oak, ash, elm, beech, plane, lime, and larch, for all of which the soil is tolerably well adapted. There are several quarries of freestone for building, and whinstone for the roads, which are worked for use in the parish. Coal is every where abundant, and has been wrought from a very remote period: within the present century, not less than ten collieries have been opened, at a short distance from each other; but only four, of which two belong to the Duke of Hamilton and two to John Cadell, Esq., of Grange, are at present in operation. Ironstone, also, is wrought to some extent. Carriden House is an ancient mansion with modern additions, situated in grounds tastefully laid out, and embellished with the windings of the Carriden burn, the banks of which, though of small extent, are beautifully picturesque. At the village of Grangepans, the making of salt is carried on; there were formerly six pans, but only four are now in operation. Near Blackness is a valuable field of clay, twelve feet in depth, affording materials for the making of bricks and tiles; the produce amounted in 1834 to 150,000 bricks, 200,000 roofing-tiles, and the same number of draining-tiles, since which time the demand has much increased. At Bridgeness is a pier for the shipping of coal and salt, and the landing of lime and manure; it has been enlarged by the proprietor, and with it is connected a tramway, about a mile in length, from the collieries. Facility of communication is afforded by the road from Linlithgow to Queensferry, which passes through the south-eastern portion of the parish. On the lands of Capt. Hope,

some stake-nets were laid down a few years since; and more recently similar nets have been laid down from the point of Blackness: the quantity of salmon taken has occasionally been considerable.

Ecclesiastically the parish is within the bounds of the presbytery of Linlithgow, synod of Lothian and Tweeddale: the minister's stipend is £249. 17., with a manse, and a glebe valued at £25 per annum; patron, the Duke of Hamilton. The church is a neat plain structure, erected in 1766, about half a mile from the old church, the burying-ground of which is still used; it contains 458 sittings. The parochial school is well conducted; the master has a salary of £34, with a house, and an allowance in lieu of garden, and the fees average about £8 per annum. There is a good parochial library. Col. Gardiner, who was killed at the battle of Prestonpans in 1745, was a native of this parish; Dr. Roebuck, of Sheffield, the original founder of the Carron iron-works, and associated with the celebrated Watt in some of his improvements on the steam-engine, is buried in the churchyard; and the late Rear-Admiral Sir George J. Hope was proprietor of Carriden House.

CARRINGTON, or PRIMROSE, a parish, in the county of EDINBURGH; containing, with the villages of Carrington, Thornton, and Whitefaugh, 616 inhabitants, of whom 161 are in the village of Carrington, 6 miles (S. by W.) from Dalkeith. A very large part of the lands, at an early period, was the property of William, Lord Ramsay, who was created Earl of Dalhousie and Lord Carrington in 1633, and from whom the estate was purchased by Sir Archibald Primrose, ancestor of the Earls of Rosebery. James, the successor of Sir Archibald, was created Viscount Primrose in 1703. The parish measures about three miles and a half in extreme length, from east to west, and two miles in extreme breadth, from north to south. On the north-east it is bounded by the parish of Cockpen, on the north and west by Lasswade, on the west by Penicuik, and on the south and east by the parishes of Temple and Borthwick, where the boundary is formed by the South Esk river winding along the romantic and finely-wooded grounds of Rosebery and Arniston. Numerous rivulets flow through the lands into the South Esk, but none of them are of sufficient importance to require particular description. The soil is generally fertile: the number of acres cultivated is about 3360, and in wood about 400. Of late years, the lands have undergone great improvement; much attention has been given to furrow-draining, and other agricultural improvements have been introduced. There are two proprietors of land, the Earl of Rosebery, and Robert Balfour Wardlaw Ramsay, Esq., the latter of whom is resident in the parish: Robert Dundas, Esq., also, of Arniston in the neighbouring parish of Temple, possesses part of the lands in this parish along the banks of the South Esk, including Carrington mill and lands. The annual value of real property in the parish is £4617. Whitehill, the seat of Mr. Ramsay, a splendid mansion of recent erection, is situated towards the northern boundary of the parish, in the vicinity of Roslin and Hawthoruden. It is in the style of architecture that prevailed in the reign of James VI.; the building is of noble dimensions, and forms at once a monument of the refined taste of its proprietor, and the eminent architectural abilities of Mr. William Burn. The parish is within the bounds of the presbytery of Dalkeith, synod

of Lothian and Tweeddale, and in the patronage of the Earl of Rosebery. The minister's stipend is about £160, of which about one-third is payable from the exchequer; with a manse built in 1756, and a glebe worth about £20 a year. Carrington church, a neat structure, was erected in 1711. The parochial school is well conducted; the master has a salary of £34. 4. 4., with a house and garden, and the fees average £10 per annum.

CARRON, a village, and the seat of extensive iron-works, in the parish of LARNERT, county of STIRLING, 2 miles (N. N. W.) from Falkirk. This village, which is situated on the north bank of the river Carron, about three miles from its influx into the Forth, and has every facility of obtaining water-power, and an easy transit for produce, became in 1760 the seat of the iron-works so well known as the most important and extensive in the kingdom. These works were originally established by a company consisting of Messrs. Roebuck, formerly of Sheffield, and afterwards of Birmingham, Mr. Garbet, merchant of the latter place, and Messrs. Cadell, of East Lothian. The company was incorporated by charter, in 1773, with a capital of £150,000, raised in shares of £250 each; and having engaged workmen from Sheffield and Birmingham, it carried on operations under the superintendence of Mr. Gascoigne, son-in-law of Mr. Garbet, on a very extensive scale. The smelting of iron-ore, and the manufacture of cast-iron goods of every description, are carried on to a great extent; about 10,000 tons of pig-iron are annually made, and the manufacture of malleable iron from scraps, which is of more recent introduction, is also extensive. Among the articles produced are cannon, mortars, howitzers, and carronades, which last derived their name from this establishment; shot, shells, and other implements of war; steam-engines, sugar-mills, sugar-pans, agricultural implements, with various articles for domestic use, anchors, anvils, and axles. There are four blast furnaces (two of them adapted to the use of the hot blast) and four cupola furnaces, all of which have water-wheels for propelling the machinery. A steam-engine, also, of gigantic power, is incessantly at work, day and night, for the production of blast; and fifteen air furnaces are in operation. There are mills for boring cylinders and pipes, and the various reservoirs for the supply of the works cover about 100 acres of ground; the entire number of persons employed is more than 1000. The foundry is connected with the collieries of Kinnaird and Carron Hall, by a substantial tramway of two lines; and, by another, with the shipping wharf on the Forth and Clyde canal, at Bainsford, whence produce is sent to Glasgow, Liverpool, and other places. Goods for London are sent to Grangemouth in barges down the river Carron, which is navigable up to the works during the flow of the tide. In 1846 an act was passed for the construction of a line of railway from the Edinburgh and Glasgow line near Polmont to the Scottish Central railway near Larbert, with branches to the Falkirk iron-works and the Carron iron-works.

CARRONBRIDGE, a village, chiefly in the parish of MORTON, and partly in that of DURISDEER, county of DUMFRIES, 2 miles (N. by W.) from Thornhill; containing 254 inhabitants. This place takes its name from its bridge over the Carron water, which separates the parishes of Durisdeer and Morton. It is situated in the southern extremity of the former parish, and on

the western boundary of the latter, a short distance east of the river Nith.

CARRONSHORE, a village, partly in the parish of LARNERT, but chiefly in that of BOTHKENNAR, county of STIRLING, 3 miles (N.) from Falkirk; containing 838 inhabitants, of whom 453 are in Bothkennar parish. This village is situated on the north bank of the river Carron, about a mile below the Carron foundry. Ironstone, limestone, and other materials for the Carron works, are landed here, and also lime and manure for the neighbouring farmers. Goods from the foundry are occasionally shipped here, but the greater part of the produce is shipped at Grangemouth and at the Forth and Clyde canal. There is a dry dock at Carronshore for repairing vessels. The inhabitants are chiefly connected with the iron-works, in which many of them are employed, and also in the collieries in the neighbourhood, belonging to the company.

CARSEBURN, a village, in the parish and county of FORFAR, 1½ mile (N. E.) from the town of Forfar; containing 108 inhabitants. It lies on the northern extremity of the parish, and on the borders of that of Rescobie. The road from Forfar to Brechin passes a short distance on the east.

CARSETHORN, a village, in the parish of KIRKNEAN, stewartry of KIRKCUDBRIGHT, 13 miles (S.) from Dumfries; containing 157 inhabitants. This place is situated on the shore of the bay of Carse, on the eastern coast of the parish, and is inhabited chiefly by persons engaged in the coasting-trade, in which three small vessels are employed, averaging about fifty tons' burthen. The exports are mostly grain and other agricultural produce, to Glasgow, Cumberland, and Liverpool, and the imports are principally coal. A pier of wood has lately been constructed, for the accommodation of the farmers in the neighbourhood, in sending their live stock by the Liverpool steam-packet, which makes two voyages weekly during the summer, and one during the winter. The bay affords good anchorage to vessels in unfavourable weather; many from Dumfries, in contrary winds, take shelter, and others, bound for that port, wait in the bay for the spring tides.

CARSPHAIERN, a parish, in the stewartry of KIRKCUDBRIGHT, 12 miles (N. W. by N.) from New Galloway; containing, according to the census of 1841, 790 inhabitants, of whom 103 were in the village of Carsphairn. This parish, which was separated from the parishes of Kells and Dalry in 1627, is supposed to have derived its name from the erection of the church and village on a small level plain, at that time overgrown with fern. The parish is bounded on the east by the river Ken, and on the north and west by Loch Doon and the county of Ayr; it is nearly circular in form, about ten miles in length, and nearly nine in breadth, comprising about 56,000 acres. With the exception of a small tract of arable land around the village, the surface is mountainous and hilly. The highest of the mountains is Cairnsmuir, which has an elevation of 2696 feet above the sea, commanding an unbounded view in every direction except the south-west, where the prospect is obstructed by the mountain of Carlines Cairn, nearly equal in height. The lower hills are covered with heath; but those of greater elevation are clothed with verdure to their summits, affording excellent pasturage for sheep and black-cattle. The river Deugh, which descends from

the northern heights with great rapidity, takes a south-eastern course, and flows into the Ken; and the parish is also intersected by numerous mountain streams, some of which abound with trout. For the most part the scenery is wild, with few old trees, and but very small patches of modern plantations. The lands are principally sheep-walks, which have been improved by surface-draining, and the parish is almost entirely pastoral. About 30,000 sheep of the black-faced breed are regularly pastured, and a very considerable number of cattle of the Highland breed are kept during the winter, and in summer sent to the English markets. The annual value of real property in the parish is £5414.

The substrata are chiefly greywacke and granite. A rich vein of lead-ore has been discovered on the lands of the Honourable Col. M. Cathcart, who has spared no expense in bringing it into successful operation, for which purpose he has employed a number of miners, chiefly from Wanlockhead and Leadhills. Ironstone has also been found on the same estate. Buildings have been erected for crushing, washing, and smelting the lead-ore, on the most approved plans, and for separating the silver from the lead, under the superintendence of the skilful overseers. Cottages for the workmen have been built on the spot, with a schoolmaster's house, and spacious schoolroom for the instruction of their children; and the proprietor gives a liberal salary to the master and mistress. Since the last census, the population of the parish has increased from 790 to not less than 1000, owing to the success of the lead-mining works. There is a post-office, a branch of that of Ayr, and facility of communication is afforded by the road from Ayr to Dumfries and Kirkeudbright. Ecclesiastically the parish is within the bounds of the presbytery of Kirkeudbright and synod of Galloway. The minister's stipend is £182. 10., with a manse, and a glebe valued at £27 per annum; patrons, the Crown and the Forbes family of Callendar. Carsphairn church, which is nearly in the centre of the parish, is a plain structure, erected within the last twenty or thirty years, and containing 400 sittings, to which Col. Cathcart has added a gallery for the accommodation of his miners. The parochial school is well conducted; the master has a salary of £34, with a house and garden, also the interest of £500 bequeathed by the late Mr. McAdam of Castle-dykes, and the fees average about £15. The poor have the proceeds of various bequests amounting to £800, of which £500 were left by Mr. McAdam. The chief remains of antiquity are cairns, in some of which, on their removal, stones in the form of coffins were found, containing human bones; there are also remains of a Druidical circle. The late Dr. Jackson, professor of natural philosophy in the university of St. Andrew's, was a native of the place.

CARSTAIRS, a parish, in the Upper ward of the county of LANARK; including the village of Ravens-truther, and containing 950 inhabitants, of whom 350 are in the village of Carstairs, $4\frac{1}{2}$ miles (E. by S.) from Lanark. The name is most probably derived from the word *Car*, or *Caer*, signifying "a fort", and *stair*, or *stairs*, "a possession"; descriptive of an estate or possession in a fortified place. The ancient occupation of the district by the Romans is evinced by many remains of antiquity, such as coins, baths, &c., but chiefly by the military station called Castle-dykes, and a Roman

camp on the farm of Corbie Hall. Castle-dykes is situated on the right bank of the river Clyde, the southern boundary of the parish; and from it a road ran across Clydesdale, passing the Clyde near Lanark, and running over Stonebyre hill, after which it crossed the Ne-than. A road to and from Corbie has been distinctly traced for many miles; and from the concurrent opinions of antiquaries, this station is identified with the ancient *Coria*, a town of the *Damnii*, through which ran the great road from Carlisle to the wall of Antoninus. In the twelfth century, the manor and church belonged to the Bishop of Glasgow, whose right was confirmed by bulls from several popes. After the death of Alexander III., Bishop Wishart, with the consent of Edward I. of England, who had come to the north to settle the dispute between Bruce and Baliol, built a stone castle near the church; and the manor and parish continued the property of the see of Glasgow till the Reformation.

The PARISH, which is of an oblong form, is six miles in length, from north to south, and its average breadth is about three miles. It contains 11,840 acres. The surface is irregular, and is conspicuously marked in some parts by sand-knolls, which rise from fifteen to sixty feet above the general level, and inclose numerous mosses, formed from old woods, vegetable remains carried thither by winds, and the decomposition of plants, with an accumulation of stagnant water. The southern part is picturesque and beautiful, and ornamented by the expansive stream of the Clyde, the banks of which are enriched with fine pasture. On a slope embosomed in forest scenery, and surrounded with plantations, lawns, and shrubberies, stands the magnificent structure of Carstairs House, the approach from which to the village furnishes one of the most interesting prospects in this part of the country. The village itself is remarkable for its neatness, and for the taste exhibited in its little gardens. The river Mouse flows in a western direction through the centre of the parish, amidst dreary tracts of moss, among which it forms many deep pools; trout, pike, and various other kinds of fish are taken by angling.

Near the Clyde the SOIL is an alluvial deposit, bearing very superior crops. Between this and the passage of the Mouse is a continuous bed of sandy earth, chiefly in the form of knolls, on a subsoil of sand and stones; and beyond the Mouse, the soil in the western district is clayey, and in the eastern chiefly a flat moss. The number of acres cultivated, or occasionally in tillage, is 9936; in waste or pasture, 1509; and in wood and plantation, 400: of those which are waste, 500 are supposed to be capable of profitable cultivation. The produce consists of oats, barley, potatoes, turnips, and hay; the cattle are of the Ayrshire kind: all the modern improvements in agriculture have been adopted, and the growth of turnips has been particularly attended to. The annual value of real property in the parish is £6465. The prevailing rock is grey sandstone; there are considerable quantities of whinstone, and some limestone, and in the north-west is a bed of fine clay, near which a tile-work has been erected, where drain-tiles are made. The road from Lanark to Edinburgh, by Carnwath, and also that by Wilsontown, and the road from Glasgow to Peebles, all run through the parish; as also does the Caledonian railway, which affords great facility of intercourse. Carstairs is within the bounds of the presbytery of Lanark

and synod of Glasgow and Ayr; patron, Henry Monteith, Esq. The minister's stipend is about £234, and there is a manse, a well-built structure, with a glebe of the annual value of £35. The church, which was built in 1794, is situated in the centre of the village, on an eminence; it has a handsome spire, and contains 430 sittings. There is a parochial school, in which the classics, practical mathematics, and all the usual branches of education are taught; the master has the maximum salary, with a house and garden, a bequest of £1. 10. a year, and £27. 13. fees.

CARTLAND, a village, in the parish of **LANARK**, Upper ward of the county of **LANARK**, 2 miles (N. W.) from Lanark; containing 112 inhabitants. It is situated in the north-western part of the parish, and to the west of the high road between Lanark and Carluke. In the village is a small school, to the master of which the heritors allow £5 per annum, with a house and garden; his fees are about £15. The romantic rocks called Cartland Crags are in this vicinity; they form a deep chasm, supposed to be the effect of an earthquake, and through which the Mouse water finds its way to the Clyde. A bridge of three arches is thrown across the chasm, which is of considerable height; and below is an old narrow bridge with a semicircular arch, said to be of Roman structure. The scenery of the place is finely described in Miss Porter's well-known story of the *Scottish Chiefs*.

CARTSDYKE, for a time a quoad sacra parish, in the **EAST** parish of **GREENOCK**, burgh of **GREENOCK**, Lower ward of the county of **RENFREW**; containing 3651 inhabitants. This place is situated on the Firth of Clyde, and adjoins the town of Greenock, of which it has become a suburb, on the east side. It is also called Crawforddsyke, from the erection of a small quay by its proprietor, Thomas Crawford, Esq., who obtained from Charles I. a charter erecting his lands here into a burgh of barony. There is a good roadstead, in which ships ride at anchor, and the place has two or three small quays: it was of considerable importance for shipping, before the town of Greenock existed. A mechanics' library here contains nearly 1500 volumes. The parish was separated from Greenock in 1839, for ecclesiastical purposes, and was in the presbytery of Greenock and synod of Glasgow and Ayr. The church, originally in connexion with the Secession Synod, was rebuilt on the same site in 1828, at a cost, including a school-house, of £1052, defrayed by private subscription; it passed from the Established Church to the Free Church, at the time of the Disruption, and contains 906 sittings. Besides the school attached to the church, there are several other schools, affording instruction to a considerable number of children.—See **GREENOCK**.

CASTLE, a village, in the parish of **NEW CUMNOCK**, district of **KYLE**, county of **AYR**; containing 155 inhabitants.

CASTLECARY, a village, in the parish of **FALKIRK**, county of **STIRLING**, 8 miles (W. S. W.) from Falkirk. This hamlet, which is situated at the western extremity of the parish, and on the bank of the Forth and Clyde canal, takes its name from an ancient castle on the line of the Roman road, of which the tower, now inhabited by the Earl of Zetland's forester, is the only remaining portion. On the bank of the canal is a small landing-place for goods and passengers; and in the immediate

vicinity are some saw-mills driven by water, in which about sixteen persons are employed, and some freestone quarries which are extensively wrought. Great facility of intercourse is afforded by the Edinburgh and Glasgow, the Caledonian, and the Scottish-Central railways.—See **FALKIRK**.

CASTLE-DOUGLAS, a market-town and burgh of barony, in the parish of **KELTON**, stewartry of **KIRKCUDBRIGHT**, 10 miles (N. N. E.) from Kirkeudbright, and 89 (S. S. W.) from Edinburgh; containing 1848 inhabitants. This place, which is situated on a gentle acclivity rising from the margin of Loch Carlinwark, originally consisted only of a few cottages called "Causeway End", and subsequently "Carlinwark". It derives its present name from the ancient castle of Threave, formerly the baronial seat of the Douglasses, and the last of the numerous fortresses which held out for that family, about the middle of the fifteenth century. The rapid increase of the present town, and its former manufacturing importance, arose from the introduction of the cotton manufacture by its proprietor, Sir William Douglas. This source of employment continued for a time, and added greatly to its population; but the subsequent introduction of the power-loom rendered it impracticable to carry on the works with advantage, in a locality destitute of an adequate supply either of coal or of water, and the manufacture was consequently abandoned. The place, notwithstanding, from its situation in the centre of the county, and its facilities of intercourse, continued to acquire an increasing degree of agricultural and commercial importance; and became, in a very short time, the principal mart of the surrounding districts.

The town is situated on the great road from Carlisle to Portpatrick, and consists of several spacious streets, intersecting each other at right angles, and forming handsome squares, the internal areas of which are laid out in gardens. The houses are well built; and there are several villas in the immediate vicinity, which abounds with pleasing scenery. Gas was introduced into the town by a company in February 1844. A public library is supported, containing about 1200 volumes; and there is also a circulating library. The shops are remarkably elegant, and are well stored with various kinds of merchandise; the post-office is one of the most important in the south of Scotland, and has fourteen branch offices under its control, all of which have a daily delivery. There are three branch banks in the town, namely, of the British Linen Company, the National Bank, and the Bank of Scotland. A savings' bank was opened in 1841, and has now deposits to a considerable amount. The market is on Monday, and is abundantly supplied with grain of all kinds, and other agricultural produce; large numbers of black-cattle, sheep, and pigs are constantly exposed to sale. Fairs are held on the 11th of February if on Monday, otherwise on the Monday following, for horses; on the 23rd of March, for horses and for hiring servants; the first Monday in April, for hogs; the Monday before the second Friday in August, for lambs; the

Burgh Seal.

23rd of September, for horses and for hiring servants; and the Monday after the 13th of November (O. S.), for horses. The fairs were formerly held at Kelton Hill, from which place they were all removed to the town, with the exception of one still held there, in June.

In 1790 the town was erected into a burgh of barony by a royal charter, which was confirmed and extended by a charter dated 1829, and under which the government was vested in a provost, two bailies, and seven councillors, who are elected triennially, on the first Wednesday in September. The magistrates, whose jurisdiction extends over the whole of the burgh, hold courts for the adjudication of civil causes to any amount every Tuesday, and for cases of petty delinquency, and matters connected with the police, as occasion may require; they are assisted by the town-clerk, who acts as assessor. The number of burghesses is about ninety, and their qualification is by a perpetual feu right, or by having a lease, for a hundred years, of a piece of ground within the burgh on which a house has been built. The town-house is a modern building, with a tower and a clock, and was presented to the burgh by the late Sir William Douglas. There is a place of worship for Reformed Presbyterians; and the recent seceders from the Establishment have erected a Free church here.—See KELTON.

CASTLETON, a parish, in the district of MELROSE, county of ROXBURGH; containing 2135 inhabitants, of whom 1030 are in the village of New Castleton, 9 miles (E. by N.) from Langholm. This place derived its name from an ancient castle here, which stood on the east bank of the Liddel, upon a perpendicular precipice upwards of 100 feet in height, and was defended on the west and south by two strong ramparts, and a deep fosse, which are still entire. The parish was anciently denominated Liddesdale, from the river, which runs through it from the north-east to the south. Camps, forts, cairns, and castles remain in various places; and on account of its situation directly along the English border, it was formerly the scene of violent contentions. Hermitage Castle, a building about 100 feet square, protected by a strong rampart and ditch, and standing on the bank of a river of the same name, is said to have been built by Sir Ranulph de Soules, warden of the Border in the reign of David I. One of his descendants, Lord Soules, and also governor of the castle, according to the current tradition, was burnt near the site of a Druidical temple, on a hill here, called Nine-Stone Ridge; and in 1342, Sir Alexander Ramsay of Dalhousie was starved to death in the castle by Sir William Douglas, lord of Liddesdale. The castle was visited in 1561 by Mary, Queen of Scots, who travelled from, and returned to, Jedburgh in the same day, over mountains, and through marshes almost impassable. Near it stood the chapel of Hermitage, now a ruin, in the middle of a burying-ground, which is still in use, and in the wall of which is fixed the ancient font. The lauds of Liddesdale were annexed to the crown in 1540, by act of parliament, and in 1648 were granted to Francis, Earl of Buccleuch, whose descendant, in 1747, upon the abolition of heritable jurisdictions, was allowed £600 as a compensation for the regality. In January 1649 Castleton kirk sustained considerable injury from the adherents of Cromwell.

The PARISH is the largest and most southern in the county, measuring about eighteen miles long and twelve

broad, and containing 65,200 acres. It is bounded on the east by Northumberland, and on the south-east by Cumberland: the southern extremity is nearly of triangular form. The surface is diversified in a high degree; the lower part of the parish is hilly, and in the upper part the country is entirely mountainous, rising abruptly in many instances to a great elevation, and affording excellent pasture for numerous flocks of sheep. The principal mountains are Greatmoor, Millenwood Fell, Tudhope, Windhead, and Tinnis Hill, which last is seen as a landmark from the Solway Firth and Irish Sea: some of these rise as much as 2000 feet above the level of the sea, and give a wild and romantic appearance to parts of the parish. The part inhabited consists of two valleys, one of which, bordering on the river Hermitage, is about ten miles long, from the source of that stream until it loses itself in the Liddel; the banks of the water are clothed with natural wood, which, with the scenery generally, enlivened by the beautiful current, exhibits a rural picture of the most attractive kind. The other valley is that lying along the sides of the Liddel, which river, as well as the Tyne, rises near the head of the parish, on the north-east. The Liddel runs directly west for a few miles, after which it turns to the south; the Tyne takes its course to the east, slowly winding through Northumberland. The country through which the former passes is wild, bleak, and mountainous, and for ten miles the banks are entirely naked; where it is joined by the Hermitage, however, they are covered with trees, and flourishing plantations there constitute prominent features in the improving and beautiful landscape. In addition to these streams are the Tinnis, Blackburn, Tweeden, Kershope (which divides the two kingdoms), and several others, all famed for their supply of trout. There are numerous mineral springs, and several beautiful cascades and waterfalls on the various streams.

The SOIL varies considerably, that in the neighbourhood of the rivers being soft and rich, while the higher grounds exhibit a poorer mould; in some parts it is of a mossy character. Most of the arable land lies on the banks of the rivers; wheat of average quality has been produced, but the ordinary crops are barley, oats, potatoes, and turnips. The mossy ground is esteemed for pasturing black-cattle and sheep; the cattle are chiefly of the Galloway, Dutch, and Highland kinds, many of which last are brought by the farmers from the Falkirk and Doune markets, and supported during the winter upon coarse hay and other fodder, then fattened on the pastures, and sold towards the end of summer. The annual value of real property in the parish is £12,126. Several plantations have been made of Scotch fir, spruce, larch, oak, ash, and beech, which are for the most part in a flourishing condition; and the natural wood consists of some of the same species, with a considerable quantity of alder. There is a large supply of limestone of various qualities, which is wrought to a great extent on the estates of Lariston and Thorlieshope: coal is obtained on the estate of Liddelbank; and there are quarries of freestone in every direction, except at the head of Hermitage, where is nothing but blue whinstone.

The village, the building of which was commenced in 1793, by the Duke of Buccleuch, consists principally of two streets, named the Liddel and the Hermitage. Several other streets cross these at right angles, and in the centre is a market-place called Douglas-square, the

buildings round which consist of two stories. There are also smaller squares near each extremity of the main street. Fairs for the sale of sheep are held twice a year, and three for hiring servants in April, May, and November, respectively; and the Eskdale and Liddesdale Farmers' Association meet once in every three years at Castleton. Sheriff circuit small-debt courts, for the recovery of sums not exceeding £8. 6. 8., are holden in the village on the first Tuesday of April, of August, and November. Ecclesiastically the parish is within the bounds of the presbytery of Langholm, synod of Dumfries, and the patronage is exercised by the Duke of Buccleuch; the minister's stipend is £250, with a good manse, and a glebe of twenty-five acres. Castleton church, built in 1808, accommodates between 600 and 700 persons, and occupies a convenient situation, at the junction of the Liddel and the Hermitage. The United Presbyterian Synod have a place of worship. There is one principal parochial school, with three auxiliaries: the salaries of the masters amount to £51, of which the head master receives £30, leaving the remaining sum to be equally divided among the other teachers; the fees of the four schools are about £70. A good subscription library has also been established in the village. Dr. Armstrong, author of the *Art of Preserving Health*, was a native of Castleton.

CASTLETOWN, a village, in the parish of CRATHIE and BRAEMAR, district of KINCARDINE O'NEIL, county of ABERDEEN, 57 miles (W.) from Aberdeen; containing 124 inhabitants. This village is situated on the southern bank of the Dee, and on the great military road leading from Blairgowrie to Fort George and Aberdeen. It is usually termed Castletown of Braemar. The ancient castle of Braemar, from which the village has its name, standing on a gentle acclivity below the village, in a pass between two hills, was formerly the seat of the Earls of Mar, who possessed the neighbouring lands, and was converted after the Revolution into a garrison for the intimidation of the Highland chieftains. It was leased to government in 1748, for ninety-nine years, for barracks, and was afterwards occasionally occupied by soldiers. The spot is shewn here where, in 1715, the Earl of Mar raised the standard of the Pretender; and about a mile and a half down the valley is a steep rock called "Charters' Chests", so named from a cave in it, of difficult access, where the charters which pertained to the Invercauld property were deposited during the rebellion of the earl. There is a post-office, with a daily post to and from Aberdeen; and three fairs are held annually, two of them chiefly for cattle, and the other for cattle and sheep. An ordained missionary, supported by the Royal Bounty, regularly officiates in this district; there is also a chapel for Roman Catholics. Near the village are the ruins of an old castle said to have been built as a hunting-seat for King Malcolm Canmore, who erected a bridge here over the Cluny water, which stream falls into the Dee at a short distance to the north.

CASTLETOWN, a village, in the parish of OLRICK, county of CAITHNESS, 5 miles (E. by S.) from Thurso; containing 477 inhabitants. This is a remarkably neat and thriving village, situated near the south coast of Dunnet bay. It owes its advancing prosperity to its proximity to the valuable quarries of Castlehill, of which the stone is known by the name of Caithness pavement. A church has been built at the east end of the village, in

which, also, is the parochial school; and a female school has been partially endowed.

CATHCART, a parish, partly in the Lower ward of the county of LANARK, but chiefly in the Upper ward of the county of RENFREW; including the villages of New and Old Cathcart, Clarkston, Crosshill, Crossmyloof, Hangishaw, Langside, Millbridge, and Netherlee; and containing 2349 inhabitants, of whom 174 are in Old Cathcart, 3 miles (S.) from Glasgow. This place, which is supposed to have derived its name, of Celtic origin, from the situation of its castle on the river Cart, is of remote antiquity. It appears at an early period to have formed part of the possessions of Walter, lord high steward of Scotland, who in 1160 granted the church, together with all its dependencies, to the abbey of Paisley, which he had founded. The remainder of the lands became the property of the ancient family of Cathcart, of whom Sir Alan, in 1447, was raised to the peerage by James II. under the title of Lord Cathcart; the estates were alienated by Alan, the third lord, in 1546, and then belonged to the Semples for several generations. Of the Cathcart family, who have again become owners of the castle, three was killed in the battle of Flodden Field in 1513, and another in the battle of Pinkie in 1547; the fourth Lord Cathcart distinguished himself at the battle of Langside, and the eighth lord, as colonel of the Scots Greys, contributed to the victory obtained over the rebel army at Sheriffmuir. William, the tenth lord, who commanded the British forces at the taking of Copenhagen in 1807, was on that occasion created Viscount Cathcart, and in 1814 Earl Cathcart: he died in 1843.

The PARISH, which is about five miles in length, and from one and a half to two miles in breadth, is bounded on the north and east by the county of Lanark. Its surface is beautifully diversified with gentle undulations, and detached hills of greater elevation, cultivated to their summits; and the lands are intersected with the windings of the river Cart, in some parts flowing with gentle course through verdant meadows, and in others forcing its way between rugged and precipitous banks thickly wooded. The number of acres is 2950, of which, with the exception of about 90 in woodland and plantations, and about 60 in lawns and pleasure-grounds, the whole is arable and in cultivation. In general the soil is fertile: the system of agriculture has been greatly improved; the rotation plan of husbandry is prevalent, and the lands have been rendered more productive by furrow-draining. The chief crops are oats, potatoes, wheat, and hay, in regular succession, for which ready sale is found in the markets of Glasgow and other towns. The annual value of real property in the parish is £8925. The substratum is part of the coal basin which extends from the hills of Campsie, on the north, to those of Cathkin, on the south; there are several coal-mines in the parish, but none at present in operation. Limestone and freestone are also abundant, and a large quarry of the latter, at Crosshill, is extensively wrought. In the channel of the Cart are numerous minerals, of which a valuable collection was presented by Lord Greenock, now Earl Cathcart, to the Hunterian museum of Glasgow. Cart-side Cottage, the residence of Earl Cathcart, is a handsome seat, near the remains of the ancient castle, which, from its strength, has resisted all attempts to remove it, and still forms an interesting ruin, defended on two sides by the precipitous banks of the river. Aikenhead

is also a handsome and spacious mansion, consisting of a centre and two wings, finely situated, and surrounded by a large demesne tastefully embellished with wood and plantations. The principal manufacture is hand-loom weaving, in which about one hundred families are employed at their own dwellings for the manufacturers of Glasgow and Paisley. On the river Cart is an extensive paper-mill, originally established by a French refugee in 1685, and on the same stream is a mill for the manufacture of snuff. There are also extensive corn-mills; and on the river, just before it enters the parish of Eastwood, is a bleachfield, at Newlands, but the persons employed in it mostly belong to Pollockshaws.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Glasgow, synod of Glasgow and Ayr: the minister's stipend is £276, with a manse, built in 1818, and a glebe valued at £16. 10. per annum; patron, John Gordon, Esq. Cathcart old church, which contained only 150 sittings, and was greatly dilapidated, was taken down, and the present church erected, in the year 1832, at an expense of £2500, by the heritors; it is a handsome structure in the later English style, with a square embattled tower, and contains 1000 sittings. The parochial school was built in 1830, at a cost of £500; the master has a salary of £30, with a house and garden, and the fees average about £15. The Cathcart Club, which holds its annual meetings in Glasgow, generally distributes about £25 per annum among such of the needy families in the parish as do not apply for parochial aid. On the hill of Langside are some remains of what is supposed to have been a Roman camp, and which, from its having been occupied by Mary, Queen of Scots, while an anxious spectator of the battle of Langside, is called by the people Queen Mary's camp. A Roman vase of elegant workmanship was discovered about the commencement of the present century, by the late minister of the parish, when digging for the foundation of a house at Wood-End, and is now in the Hunterian museum. On the farm of Overlee, on the north bank of the Cart, numerous subterranean buildings have been found; the sides were from four to five feet in length, faced with undressed stone, and in the floors, which were paved with thin flags, were excavations as if for fire-places, in which ashes were found. The Rev. Principal Carstairs was a native of the parish, of which his father was minister.—See CLARKSTON, LANGSIDE, &c.

CATHCART, NEW, a village, in the parish of CATHCART, county of RENFREW, $\frac{1}{2}$ a mile (W.) from Old Cathcart; containing 280 inhabitants. This village is of very modern date, and is indebted for its origin to the opening of a new line of road into the county of Ayr, which is carried over the river Cart, near this place, by a neat bridge, erected in 1800. The inhabitants were greatly increased in number by the opening of a coal-mine in the immediate vicinity, in which the greater portion of them were employed; but this work has been suspended in its operation.

CATRINE, a manufacturing village, and formerly a quoad sacra parish, in the parish of SORN, district of KYLE, county of Ayr, $2\frac{1}{2}$ miles (E. by S.) from Mauchline; containing 2659 inhabitants. This place, which, prior to the year 1786, contained only the two families of the miller and the blacksmith of the parish, is indebted both for its origin and progress to the establishment of the cotton manufacture, at that time, by the late Claud

Alexander, Esq., of Ballochmyle, and David Dale, Esq., a merchant of Glasgow. The works, after being carried on for a few years, were purchased from the original proprietors by Messrs. Finlay and Company, of Glasgow, who enlarged the concern, and brought it to its present flourishing condition. The buildings are spacious, and replete with machinery of every kind. Two water-wheels, each fifty feet in diameter, estimated at 200-horse power, have been erected for giving motion to the machinery; and two steam-engines, of sixty-horse power each, have been added, to secure the continuance of the work under any failure of water. In the bleaching-works, also, the requisite machinery is propelled by a water-wheel of thirty-two feet diameter, and by a steam-engine of twenty-eight horse power. Every process of the cotton manufacture is carried on, with the utmost regularity; the raw material sent from Glasgow is spun, woven, bleached, and finished, either for home consumption, or for exportation to foreign markets. In the bleaching-works, which were established in 1824, in addition to the goods produced in the cotton factory of this place, all the cloth manufactured at the other works of the company are bleached; the process is carried on within the walls, at all seasons of the year, and from 150 to 200 acres of land, which would be requisite for the exclusive purpose of a bleachfield, are thus appropriated to agricultural uses. The number of persons employed in both the works is 960.

The village, which alone constituted the parish, is pleasantly situated in an extensive and picturesque vale, through which the river Ayr pursues its winding course, and is neatly built on the north bank of the river, over which is a handsome stone bridge. It is lighted with gas, from a work belonging to the inhabitants, which is considered by competent judges the best constructed of any in Ayrshire, both in regard to the quality of the gas manufactured, and the economy of its production. There are two public libraries, containing each a collection of from 600 to 700 volumes, and supported by subscribers; a philosophical library; and a library in connexion with a Sunday school. Many of the inhabitants are employed in hand-loom weaving for the manufacturers of Glasgow and Paisley, and several in the various trades requisite for the supply of the population; a sub-post has been established, and there is an excellent market on Saturday for provisions of all kinds. The ecclesiastical parish was in the presbytery of Ayr and synod of Glasgow and Ayr. A chapel of ease was built by Mr. Alexander, in 1792, at an expense of £1000; and was purchased sixteen years ago by the feuars of the village, who are bound by their feu disposition to erect a church, and inclose a piece of land for a burying-ground. It is a substantial edifice, and, by the addition of galleries about twelve years since, is adapted for a congregation of 1160 persons. A convenient place of worship has been built for members of the Free Church, which is calculated to contain 978 persons; and there is also a neat church belonging to the United Presbyterian Synod, affording accommodation for 650. Here are three public schools, and a school for the young persons employed at the works is supported by the proprietors. A friendly society was established in 1829; it has a fund of £300, and has proved very beneficial in obviating necessity for parochial aid. In 1834 a female society was established, under the act of George IV. and William IV.; this possesses a fund of

£120, and has been of great benefit to many families. The late Dugald Stewart, the eminent professor of moral philosophy at Edinburgh, had a summer residence here, which still remains in the possession of the family, but is let to a tenant, his son Colonel Stewart having built an elegant mansion about a mile distant from the village, where he resides.

CATTERLINE, a village, in the parish of **KINNEF** and **CATTERLINE**, county of **KINCARDINE**, 5 miles (N. by E.) from Stonehaven; containing 79 inhabitants. This village is situated on the eastern coast, and chiefly inhabited by fishers, who have two boats, and take cod, ling, skate, haddock, and various kinds of shell-fish. A small harbour has been formed by the erection of a pier, at the expense of Viscount Arbuthnott, which affords facilities for the landing of coal, lime, and other necessary supplies; and from the natural advantages of the situation, there is great probability of its further extension. A coast-guard station has also been established here.

CAULDHAME, a hamlet, in the parish of **KIPPEN**, county of **PERTH**; containing 70 inhabitants.

CAUSEWAYHEAD, a village, in the parish of **LOGIE**, counties of **CLACKMANNAN** and **STIRLING**, 1 mile (N. by E.) from Stirling. It takes its name from its situation, being the head of the long causeway of Stirling. In the neighbourhood is a sandstone quarry, the material of which is used for ordinary purposes.

CAUSEYSIDE, a village, in the parish of **OLD MONKLAND**, Middle ward of the county of **LANARK**; containing 367 inhabitants.

CAVA, a small islet, in the parish of **ORPHIR**, county of **ORKNEY**; containing 23 inhabitants. It is situated about two miles south from Pomona, and is about a mile in length, and a quarter of a mile in breadth. There is a ruinous chapel here, and around it a church-yard.

CAVERS, a parish, in the district of **HAWICK**, county of **ROXBURGH**, 2 miles (N. E. by E.) from Hawick; containing, with the village of Denholm, 1709 inhabitants. The name of this place is supposed to be derived from a compound British word signifying "a short field" or "inclosure," applied originally to a part of the parish. There are several camps of Roman and Saxon origin, and also a defence-ditch, about seven miles long, constructed by the Picts, all indicating the character of those who in remote antiquity occupied or visited the locality; but no information remains as to any transactions of so distant a period. The lands were granted in 1398 with the sheriffdom of Roxburghshire to George, Earl of Angus, and in 1402 came to Isabel, Countess of Mar, who, without consent of the king, transferred them to the Earl of Douglas, then a prisoner in England. This neglect of the royal consent appears to have vitiated the assignment, and the property consequently escheated to the king, Robert III., who in 1405 gave it to Sir David Fleming, of Biggar, as a reward for his loyalty and eminent services. Sir David, a short time afterwards, was assassinated by James, son of Archibald, Earl of Douglas; after which, the lands, with the sheriffdom of Roxburghshire, remained in the family of Douglas till the abolition of heritable jurisdictions. The town of Cavers was taken and laid waste by the English in 1596, and appears not to have been rebuilt. The advowson of the church once belonged to Melrose Abbey,

having been granted to that establishment by William, first Earl of Douglas, who was interred at Melrose in 1384.

The **PARISH** is about twenty-four miles long, and from two to eight miles in breadth, containing about 76,000 acres. Its outline, like its surface, is altogether irregular, intersecting, and being intersected by, several other parishes. The scenery comprises hill and dale, pasture and arable land, wood and water, all uniting to produce an agreeable landscape. The lower part of the district consists of a series of continuous undulations, well cultivated, inclosed with neatly-trained hedge-rows, and occasionally ornamented with choice plantations; the upper division is of a different character, being altogether pastoral, and diversified chiefly with verdant hills and woody brakes, which relieve the uniformity of its wild and spreading tracts of grazing land. The numerous hills, the peculiar features of which are their graceful and well-rounded summits, are covered in summer with a rich verdure, and embrace some very fine views. The loftiest mountain is the Wisp, which rises 1830 feet above the level of the sea, and commands a prospect, eastward, of the sea at Berwick-upon-Tweed; and to the south and west, of the Solway Firth, and, in a clear day, the Isle of Man. There are several other mountains of nearly the same elevation, which exhibit almost every diversity of position, form, and surface, and combine to produce a powerful impression on the admirer of this description of scenery. The principal river is the Teviot, which rises in the parish, and forms its north-western boundary; the Slitrigge also rises in the parish, and after winding through a great variety of interesting scenery, is lost in the Teviot at Hawick. All the streams in these parts abound in trout, and are annually visited, in the principal spawning season, about Martinmas, by salmon from the sea.

The **SOIL** is very various; rich and fertile near the confluence of the Teviot and Rule; in the lower division, generally a good productive mould; but in the more elevated lands, of inferior character, and occasionally bare and rocky. The higher grounds are employed chiefly for the pasturage of sheep, the total number of which is about 11,500, all of the pure Cheviot breed: the cattle are chiefly the Teeswater. The annual value of real property in the parish is £12,493. The principal mansions are, Cavers House, the seat of the Douglas family; and Stobs Castle, the property of Sir William F. Elliott, Bart.: Lord Heathfield, the gallant defender of Gibraltar, was sprung from the family of Stobs, where he was born in 1718. There are several good turnpike-roads, of which that between Edinburgh and Carlisle passes through the upper part of the parish; another runs through the lower part to Jedburgh, Kelso, and other places, and a third, along the Slitrigge, communicates with the English border counties.

Ecclesiastically the parish is within the bounds of the presbytery of Jedburgh, synod of Merse and Teviotdale; patron, James Douglas, Esq. The stipend of the minister is £250, with a manse, built in 1813. Cavers church is an elegant and substantial edifice, situated in the lower division of the parish; it was built in 1821, with sittings for about 400 persons, and is in very good repair. There is also a chapel at Caerlaurig, in the upper part of the parish, erected by the inhabitants about forty or fifty years ago, and supposed to have succeeded several others, which stood on the same site: the Duke of

Buccleuch, who supplied the ground, and materials for the building, allows £25 per annum to the minister, who receives several other contributions, making up a sum of about £50 as a salary, and also has a manse. There are three parochial schools, situated at Denholm, Stobs, and Caerlanrig; the master at Denholm has a salary of £30, with about £25 fees, and the other masters each receive from £12 to £15 salary, and about £20 fees. Some time ago, a large stock of gold coins was found at Priest-haugh, supposed to have been hidden by the attendants of Queen Mary, when she visited Bothwell at Hermitage Castle, in Liddesdale, in 1561. At Caerlanrig, the celebrated border robber, Johnnie Armstrong of Gilknockie, with several of his companions, was executed by order of King James V.

CAVERTON, a village, in the parish of ECKFORD, district of KELSO, county of ROXBURGH, $4\frac{1}{2}$ miles (S. by E.) from Kelso; containing 50 inhabitants. It is in the vicinity of an extensive common, on which is a race-course, where the Kelso races are held.

CAWDOR, a parish, partly in the county of INVERNESS, but chiefly in that of NAIRN; containing 1150 inhabitants, of whom 146 are in the village of Cawdor, $5\frac{1}{2}$ miles (S. S. W.) from Nairn. This place was anciently called Barewan, or Barivan, partly from the situation of the original church, of which there are some remains in the braes or hilly parts of the parish; and partly from its patron saint, Ewan. It has for several centuries, however, been distinguished by the appellation of Calder, or Cawdor, the name of a tributary stream flowing through it into the river Nairn, and the banks of which, richly wooded, and crowned with a stately baronial castle, have long been celebrated for their romantic beauty. Connected with the fortress, for the erection of which a royal license was obtained in 1393, are some highly interesting historical allusions. The murder of Duncan, King of Scotland, has been traditionally referred to this place, and the room is still shewn in which it is said to have occurred; but the date of the building sufficiently contradicts this opinion, which may have been erroneously derived from the circumstance of Macbeth's inferior title being Thane of Cawdor. During the rebellion in 1745, Lord Lovat, who had taken an active part in that transaction, found refuge from his pursuers in a retired apartment of this castle, in which he lay concealed for a considerable time.

THE PARISH, which is bounded on the north by the river Nairn, is about four miles in length, and of very irregular form, varying from one mile to five miles in breadth, with a narrow strip extending southward for nearly sixteen miles, and crossing the river Findhorn. It comprises 35,313 acres, of which more than 3000 are arable, upwards of 5000 acres woodland and plantations, and the remainder pasture and moor. The surface, for nearly a mile from the bank of the Nairn, is a continued plane, rising towards the south into hills of considerable elevation, of which the acclivities near the base are in excellent cultivation, the higher portions richly planted, and the summits covered with heath. In the plains the soil is a loam of moderate fertility, resting on sand and gravel, and the hills afford tolerable pasture for cattle; the lower hills are composed chiefly of old red sandstone, and in the higher are beds of gneiss, interspersed with veins of granite. The system of agriculture has been greatly improved, under the auspices of the Nairnshire

Farming Society, who hold annual meetings here, at which they award premiums for the best specimens of stock; the crops consist of grain of every kind, potatoes, and turnips, and the rotation plan of husbandry is predominant. The annual value of real property in the parish is £2370. Timber attains a luxuriant growth; oak, ash, fir, alder, and birch are indigenous to the soil, and the plantations consist mostly of beech, larch, lime, sycamore, and elm. The prevailing character of the scenery is beautifully picturesque.

Cawdor Castle, the seat of Earl Cawdor, and his occasional residence, is a stately structure in good preservation, and of much strength; the walls, which are of great thickness, and crowned with battlements, are defended by a lofty tower, which is the most ancient portion of the building, and the whole presents a fine specimen of baronial grandeur. The village, which is neatly built, obtained a charter of incorporation in the reign of Charles I.; but it never exercised any of the privileges conferred upon it, or rose into any importance. The only manufacture carried on is that of whisky, in the well-known Brackla distillery; a sub-post has been established under the office at Nairn, and the roads are kept in good repair. This parish, which has been augmented with portions of those of Nairn and Auldearn, is ecclesiastically within the bounds of the presbytery of Nairn and synod of Moray. The minister's stipend is £156, with a manse, and a glebe valued at £7; patron, Earl Cawdor. The church, built in 1619, and repaired and improved in 1830, is a neat structure containing 681 sittings; the service is performed alternately in the English and Gaelic languages. There is a place of worship for members of the Free Church. The parochial school is well attended; the master has a salary of £34, and the fees average about £10. A school, lately established, is supported by the Society for Propagating Christian Knowledge, who also support a school for females; and another female school is endowed by the Countess Cawdor.

CERES, a parish, in the district of CUPAR, county of FIFE; containing, with the villages of Ceres, Chance-Inn, and Craigrothie, 2944 inhabitants, of whom 1079 are in the village of Ceres, $2\frac{1}{4}$ miles (S. E.) from Cupar. This place, the name of which is of very uncertain derivation, appears to have consisted originally of several distinct baronies, belonging to various families of importance. It is about eight miles in length, and of extremely irregular form, ranging from about half a mile to four miles in breadth. The surface is pleasingly diversified with hills and level plains, and intersected by different streams, of which the principal is the Eden, winding along the north-western limit of the parish for nearly a mile and a half. This beautiful river formerly abounded with trout of excellent quality, but since the erection of some manufactories on its banks, they have greatly diminished in number. Two rivulets, flowing respectively from the south and west, unite their streams in approaching the village of Ceres, and form the small river of that name, which, after passing through the village, falls into the Eden; it is subject to violent inundations, which have destroyed one stone bridge of great strength, and occasionally do much damage to the lands. The general scenery is varied; and the ruins of several ancient baronial mansions, occupying commanding situations, and retaining much of their original

grandeur, give an air of romantic interest to the landscape.

The soil is various : along the banks of the Eden, it is of a light sandy quality ; in other parts, a fine loose mould, interspersed with clay ; and in others, consists of moss and moorlands, which, by the recent improvements that have taken place in agriculture, have been rendered fertile. The number of acres in the parish is estimated at about 8000, of which 3200 are arable, about 4000 in pasture, and 800 in plantations and moor. The system of husbandry is in a very advanced state. Great numbers of cattle of various breeds are fed for the neighbouring markets, and large quantities of pork are sent hence to the London and other markets. The annual value of real property in the parish is £12,562. The plantations are well managed and flourishing, and on the lands belonging to several of the proprietors is some stately timber. The substrata are chiefly freestone, whinstone, and limestone, with portions of columnar basalt ; and coal is found in some parts of the parish. The freestone and whinstone are extensively quarried for building and other purposes, and large quantities of the latter are employed in the construction of drains and fences ; the limestone is very abundant, of various qualities, and also wrought to a great extent. The coal, which is likewise of various quality, has been extensively wrought, but the workings have been discontinued some years ; the seams of coal are found in a direction parallel with the limestone, from which it is separated by masses of trap. Edenwood, the property of Sir George Campbell, is a splendid modern mansion, beautifully situated in grounds tastefully laid out. Teasses is also a handsome mansion, commanding a fine view of the Firth of Forth.

A considerable number of the inhabitants are employed in the spinning of flax, tow, and yarn, the raw materials being brought from Dundee, to which town, and also to the manufacturers of Fife, the yarn is sent. Two mills for these purposes were erected in 1827, on the lands of Pitscottie Easter ; they are usually propelled by water, but in dry seasons, when the supply of water is insufficient, are driven by steam, and they afford employment to a considerable number of persons. There is likewise a spinning-mill at Tarvet, which was erected in 1799, and is driven partly by water and partly by steam : it also comprises machinery for sawing timber. A bleaching establishment was opened at Duraden in 1825, which, from a well in the vicinity of the works, is called the St. Ann's Bleaching Company ; and which affords employment to about forty persons. The articles woven in the parish were formerly confined to brown Silecias, but since the erection of the mills, and the establishment of the bleachfield, sheetings and dowlas have been chiefly manufactured ; about 900 persons are thus employed, and the average value of their produce amounts to £60,000 per annum. The village is pleasantly situated, and surrounded by scenery containing many highly interesting features ; the river Ceres flows through the centre of it, and a good bridge of stone has been erected. The houses are chiefly inhabited by persons engaged in weaving and in the various manufactures carried on in the parish ; it has been considerably extended by the erection of numerous houses beyond the bridge, and the church, which was formerly at one extremity of it, is now, by that addition, almost

in its centre. Fairs are held on the 24th June and 20th October, for the sale of wool, grain of all kinds, cattle, and horses, and are numerous attended.

The church formerly belonged to the religious establishment of Kirkheugh, at St. Andrew's, and was afterwards under the direction of the presbytery of St. Andrew's ; the parish is now in the presbytery of Cupar, synod of Fife. The stipend of the incumbent is about £230 ; the manse was built in 1788, and the glebe comprises about seven acres : patron, the Earl of Glasgow. Ceres church, erected in 1806, near the site of the former, is a neat and substantial edifice, adapted for a congregation of 1100 persons. There are places of worship for members of the Free Church, the United Presbyterian Synod, and Associated Antiburghers. The parochial school affords a liberal course of instruction, including the classics and mathematics ; the master has a salary of £34, and £38 fees, with a house. In the old church was an aisle belonging to the family at Craighall, which, previously to the Reformation, was a chapel dedicated to St. Ninian. There are some interesting remains of the seat of Craighall, about half a mile from the village of Ceres ; they are situated on the bank of a deep, sequestered, and richly-wooded dell, and still present a striking memorial of ancient grandeur. The remains of Struthers, the seat of the Earls of Crawford, situated in a park of 200 acres inclosed with a stone wall, have been reduced to a mere ruin ; the venerable and stately timber on the lands has either perished or been cut down, and of the once splendid castle, with its lofty embattled towers, one solitary tower alone is left. There is also in the parish a tower about twenty-five feet square and sixty feet high, built of hewn freestone, and situated on an eminence commanding an extensive prospect over the surrounding country : about two centuries ago it was the residence of the Scotstarvet family. Lindsay of Pitscottie, author of a History of Scotland, was a native of this parish ; and Thomas Haliburton, professor of divinity in the university of St. Andrew's, was minister of Ceres in the beginning of the last century.

CESSFORD, a village, in the parish of ECKFORD, district of KELSO, county of ROXBURGH, 6 miles (N. E.) from the town of Jedburgh ; containing 150 inhabitants. It is situated in Teviotdale, and near the Teviot stream, which here runs on the west, and immediately afterwards takes a south-western direction. Near the village are the remains of the ancient castle of Cessford, which gives the title of Baron to the Duke of Roxburgh.—See ECKFORD.

CHANCE-INN, a village, in the parish of CERES, district of CUPAR, county of FIFE, 2 miles (S. by W.) from Cupar ; containing 132 inhabitants. It is in the western part of the parish, and on the borders of the parish of Cults.

CHANCE-INN, FORFAR.—See INVERKEILLOR.

CHANNELKIRK, a parish, in the county of BERWICK, 6 miles (N. N. W.) from Lauder, and on the road between Edinburgh and Kelso ; containing 780 inhabitants. The name is said to have been originally *Childerkirk*, signifying "the children's kirk", some supposing the place to have been so called from the dedication of its church to the Innocents. It has also been written *Childin-kirk*, meaning, according to others, "the church at the fort", on account of the church and village standing within the area of a Roman camp. The numerous

Pictish encampments, traces of which yet remain in the parish, shew it to have been in ancient times the scene of military commotion, of the particulars of which no information is recorded. The monks of Melrose Abbey were accustomed to pass along a road running through this district, in their way to and from Edinburgh, and rested and refreshed themselves at a house a few miles west from the church, called the "Resh Law" or "Restlaw Haw", which was about half way between Melrose and Edinburgh, and the ruins of which still remain.

The PARISH is of circular figure, measuring about six miles in diameter, and containing upwards of 17,000 acres. Its surface is marked by hills and valleys, having but a small portion of level ground. Towards the north and west, the lofty hills, which all form part of the Lammermoor range, separate the counties of East and Mid Lothian from the shire of Berwick, and are for the most part bleak, and covered with heath: the highest is Soutra, which attains an elevation of 1000 feet above the sea. The vale of the Leader commences here, stretching out to the east, and having the Lammermoor hills for its northern boundary; on the south is a moory ridge which separates it from the valley of Gala. There are numerous springs of good water, descending from the hills: and the Leader, after receiving several mountain streamlets in the principal valley through which it glides, flows onwards for about seventeen miles, and falls into the Tweed below Melrose.

The soil, near the banks of the river, is a light dry earth, resting upon a deep subsoil of sandy gravel: a deep layer of peat is found on the hills wherever the surface is level to any extent, and frequently there are, under this, considerable quantities of fine sand and gravel. About one-half of the land is under a regular rotation of crops; the other half is permanent hill pasture. There is no natural wood; but about 100 acres are occupied by plantations, consisting principally of larch and Scotch fir, with some elm and ash, which are for the most part in a thriving condition. A very small quantity only of wheat is produced, the soil and climate being uncongenial to its growth; the system of husbandry is the five years' rotation, which is usually applied to light soils suited to the growth of turnips. On the hills the sheep are generally of the old Scotch black-faced breed; but in the lower grounds, the Cheviots, and sometimes the Leicesters, are preferred. The annual value of the parish is £6053. The rocks on the hills are all of the trap formation, and in the bottom of the river Leader are beds of red sandstone, which is used for building; some whinstone quarries in the parish supply materials of the best quality, and in great abundance, for building and road-making. Ecclesiastically the parish is within the bounds of the presbytery of Lauder, synod of Merse and Teviotdale; patron, Sir Hugh Campbell, Bart. The minister's stipend is £190, with a manse, and a glebe valued at £15 per annum. The church is situated in the hamlet of Channelkirk, nearly in the middle of the parish, but somewhat inconveniently, being too distant for the bulk of the population, and seated on a hill about 800 feet above the level of the sea. It was built in 1817, in the Elizabethan style, and accommodates 300 persons. There is a parochial school, the master of which has a salary of £30, about £40 fees, and a house and garden. There is also

a good parochial library, established about fifty or sixty years since.

CHAPEL, a village, in the parish of ABBOTSHALL, district of KIRKCALDY, county of FIFE, 2 miles (N. W.) from Kirkcaldy; containing 159 inhabitants. It lies in the northern part of the parish, and nearly on the borders of the parish of Dysart.

CHAPEL OF GARIOCH.—See GARIOCH.

CHAPELHALL, a village, in the late quoad sacra parish of HOLYTOWN, parish of BOTHWELL, Middle ward of county LANARK; containing 1431 inhabitants. This village is chiefly inhabited by persons employed in the collieries and mines of the immediate vicinity, and in the extensive iron and steel works of the Monkland Company, which have been long established in the neighbourhood. There is a place of worship for the United Presbyterian Synod; and schools for the instruction of children are supported by the proprietors of the several works.—See HOLYTOWN.

CHAPELHILL, a hamlet, in the parish of MONZIE, county of PERTH; containing 77 inhabitants.

CHAPELTON, a hamlet, in the parish of BORGUE, stewardry of KIRKCUDBRIGHT, 1 mile (S. W.) from Borgue; containing 31 inhabitants.

CHAPELTON, a village, in the parish of CAMBUSLANG, Middle ward of the county of LANARK; containing 367 inhabitants, almost exclusively employed in weaving.

CHAPELTON, a village, in the parish of GLASFORD, Middle ward of the county of LANARK, 3½ miles (N. by E.) from Strathaven; containing 602 inhabitants. This village derived its name from the occasional performance of divine service here, previously to the erection of the present church. It is pleasantly situated, and the inhabitants are generally employed in agriculture. There are three friendly societies, consisting in the aggregate of about 200 members; and a temperance society of forty members. Two endowed schools have been established, both of which are branches of the parochial school, and so situated as to be easily accessible to children from all parts of the parish. There is also a Sabbath school, supported by subscription.

CHAPELTON OF BOYSACK, a hamlet, in the parish of INVERKEILLOR, county of FORFAR, 5 miles (N. by W.) from Arbroath; containing 52 inhabitants. It is situated to the south of the Lunan water, and on the road from Brechin to Arbroath. Here is a school, endowed with a small bequest, and the master of which has a house and garden.

CHARLESTON, a village and small sea-port, in the parish and district of DUNFERMLINE, county of FIFE, 3 miles (S. W. by S.) from Dunfermline; containing 772 inhabitants. This village, which is situated on the north shore of the Firth of Forth, was founded for the accommodation of the persons employed in the extensive collieries and lime-works of the Earl of Elgin, in the immediate neighbourhood. It is well built, and has a neat and pleasing appearance; the surrounding scenery is enlivened by the well-planted demesne of Broomhall, the seat of the earl. The inhabitants are generally in easy circumstances. The manufacture of various articles of cast-iron and brass, for which a foundry has been established, is carried on to a moderate extent; and there are some extensive limekilns, in which the limestone obtained from the quarries is burnt. The

produce of the Elgin collieries, and the limestone from the quarries, are conveyed by tramways from the mines, to the harbour here, for exportation; the quantity of coal shipped annually is estimated at 120,000 tons, of limestone 15,000 tons, and of shell-lime about 400,000 bushels. Charlestown harbour is spacious, and has been deepened and greatly improved within the last few years. A school is supported by the Earl of Elgin.

CHARLESTON, a village, in the parish of **GLAMMIS**, county of **FORFAR**, $1\frac{1}{2}$ mile (S.) from Glammis; containing 348 inhabitants. This is a new village, fast increasing in extent and population.

CHARLESTOWN, a village, in the united parish of **ABOYNE** and **GLENTANNER**, district of **KINCARDINE O'NEIL**, county of **ABERDEEN**, 5 miles distant (W.) from Kincardine O'Neil; containing 260 inhabitants. This thriving place, formerly called **Bunty**, is pleasantly situated on the western bank of the burn of **Coull**, near **Aboyne Castle**, and is a burgh of barony, of which the Marquess of **Huntly** is superior. The tollbooth was destroyed towards the close of the last century, and the traces of the pot and gallows are now scarcely visible. There are an excellent inn, several good shops, and some flour, barley, and malt mills; and numerous persons are employed in various handicraft trades: a post-office has been established, and the mail-coach to and from **Aberdeen** passes through daily. A weekly market is held, and there are five fairs annually. Here is the parochial school, and not far distant stands the church.

CHARLESTOWN, a village, in the parish of **ABERLOUR**, county of **BANFF**, 5 miles (N. W. by W.) from **Dufftown**; containing 328 inhabitants. This village was founded in the year 1812 by **Charles Grant, Esq.**, who erected it into a burgh of barony, by the name of **Charlestown of Aberlour**; it is about half a mile in extent, comprising nearly all the holm lands of the district, and is neatly built. The inhabitants are chiefly employed in agricultural pursuits; there is a good inn, and fairs are held on the first Thursday in April, the Thursday before the 21st of May, and the second Thursdays in July and November. The female school for the parish is situated in the village, and affords instruction chiefly in sewing and English reading.

CHARLESTOWN, a hamlet, in the parish of **KNOCKBAIN**, county of **ROSS** and **CROMARTY**; containing 87 inhabitants.

CHERRY-BANK, a village, in the **EAST** parish of the city of **PERTH**, county of **PERTH**; containing 157 inhabitants.

CHESTERHILL, with **SAUCHENSIDE**, a village, in the parish of **CRANSTON**, county of **EDINBURGH**, 1 mile (S. W.) from **Cranston**; containing 284 inhabitants.

CHESTERS, a village, in the parish of **SOUTHDEAN**, district of **JEDBURGH**, county of **ROXBURGH**, 6 miles (S.) from **Jedburgh**; containing 82 inhabitants. The village is seated between the **Rule** and **Jedburgh** waters, from which it is equidistant; and on account of its central situation it contains the church. On the adjacent heights are the ruins of some strong fortifications or camps; their form is circular, and in general they are quite distinct. Each is apparently within view of **Southdean Law**, which, according to tradition, was a place of observation, where fires were lighted on the approach of an enemy.

CHIRNSIDE, a parish and a burgh of barony, in

the county of **BERWICK**, $4\frac{1}{2}$ miles (S. W. by W.) from **Ayton**; containing 1203 inhabitants. The name of this place is interpreted "the sepulchral tumulus on the side of the hill". The parish is about three miles in length, and the same in breadth, containing upwards of 5000 acres. Its surface is flat, with the exception of **Chirnside hill** in the northern part, from which some beautiful prospects are obtained. The **Whitadder** river runs along the southern boundary of the parish, and is here a fine expansive stream, being but a small distance from its junction with the **Tweed** near **Berwick**. There is no waste land; the soil is good, and in a high state of cultivation. About 370 acres are occupied by plantations, which are in a thriving state, especially those on the banks of the **Whitadder** at **Ninewells**; about one-half of the rest of the land is in tillage, and the other in grass. All kinds of grasses and of grain are produced, of good quality, but oats form the most considerable crop; potatoes and turnips are also raised, and the latter are very fine and plentiful. About 2500 sheep are usually kept; they are the large **Leicesters**, and the cattle are of the short-horned breed. Draining has been practised to a great extent, and large sums have lately been expended in embankments on the river **Whitadder**. The annual value of real property in the parish is £8891. The rocks consist of freestone, which is abundant, and of which several quarries are wrought.

The village is in the south-western part of the parish; it has a fair on the last Thursday in November, for the sale of sackcloth, linen-yarn, and pottery-ware. The road from **Dunse** to **Ayton** runs through the centre of it, and the western boundary of the parish is skirted by the **Dunse** branch of the **North-British railway**. The principal mansions are **Whitehall**, **Ninewells**, and **Mains**. Ecclesiastically the parish is within the bounds of the presbytery of **Chirnside**, synod of **Merse** and **Teviotdale**; patron, **Mitchell Innes, Esq.** The minister's stipend is £247, with a manse, and a glebe valued at £29 per annum. **Chirnside church** is very ancient; the western door is Saxon, and on one of the walls, evidently of later erection, is a tablet dated 1572, with the inscription *Helpe the Pur*: the edifice was enlarged some years ago, and now affords accommodation for 500 persons. The **United Presbyterian Synod** have a place of worship, as have also the **Reformed Presbyterians**. There is a parochial school, in which the classics, mathematics, and French are taught, with all the usual branches of education; the master's salary is £34, with about £30 fees, and a house and garden. The celebrated historian, **David Hume**, was brought up from his infancy at **Ninewells House**; and the **Rev. Henry Erskine**, father of the **Rev. Ebenezer** and **Ralph Erskine**, leaders of the **Secession**, was the first minister here after the **Revolution**: a handsome monument has lately been erected to his memory in the churchyard.

CHRYSTON, for a time a quoad sacra parish, in the parish of **CADDER**, Lower ward of the county of **LARNARK**, including the villages of **Mollensburn**, **Moodiesburn**, **Muirhead**, and **Auchinloch**, and containing 2670 inhabitants, of which number 555 are in the village of **Chryston**, 7 miles (E. by N.) from **Glasgow**. The district was formed of the eastern half of the parish of **Cadder**, and comprised about eleven square miles, its greatest length being four and a half, and its greatest breadth three and a quarter miles. The face of the

country is level, and the soil is generally thin, on a sub-soil of hard, blue till, which would be very unproductive, if it were not for the liberal application of manure, which is readily procured from the city of Glasgow. It is remarkable that the district is intersected by no fewer than three railways, namely, the Monkland and Kirkintilloch, the Glasgow, Garnkirk, and Coatbridge, and the Edinburgh and Glasgow. On these lines many public works have been erected. Limestone is wrought in twelve different places, by which the numerous iron-works in the neighbouring parish of Old Monkland are almost wholly supplied with this material. Two different works for the manufacture of articles from fire-clay have been raised, one of which is on a scale that is said not to be surpassed by any similar work in the kingdom: a work has also been established for making house-tiles, common bricks, and draining-tiles. Many attempts have been made by boring, sinking, &c., to discover coal in the district; but none has yet been found that can pay the expense of working. The village is handsomely built and pleasantly situated; and but for the want of water, which is obtained only from the well of Bedlay, nearly a quarter of a mile distant, and difficult of access, it might become a more populous and flourishing place. A fair, chiefly for the sale of fat-cattle, was formerly held here at Martinmas; but it has been some time discontinued. Chryston is ecclesiastically in the presbytery of Glasgow, synod of Glasgow and Ayr. The church is a handsome structure, built by subscription of the inhabitants; the stone for its erection was quarried by the labourers, and hauled, together with the lime and other materials, by the farmers without any charge. It will accommodate 564 persons, and the stipend of the minister is £90, derived from seat-rents, with a manse and garden, valued at £10 per annum. A piece of land has been purchased, and is now appropriated to interment. There is a place of worship for members of the Free Church. One of the parochial schools is situated here; a female school has been built, and a library has been established. The ancient tomb of the family of Gray, former proprietors, from whom the place takes its name (originally Grays-ton), is here crossed by the line of road leading to Cumbernauld.

CLACHAN, a village, chiefly in the parish of CAMPSIE, and partly in that of FINTRY, county of STIRLING, 2 miles (W.) from Lennoxton; containing 191 inhabitants. This village, called the Clachan of Campsie, is romantically situated in the vicinity of copse woods and secluded valleys, which are much resorted to in summer. The hills above it bend in the form of an amphitheatre, and numerous streams pour down the winding glens into the Glassert, a rivulet which rises in Campsie fells, and falls into the Kelvin above Kirkintilloch. A bleachfield, for the preparation of various kinds of muslin, was established here in 1819. The village formerly contained the parochial church.

CLACHAN, ST. JOHN'S, a village, in the parish of DALRY, stewartry of KIRKCUDBRIGHT, 15 miles (N. N. W.) from Castle-Douglas; containing 574 inhabitants. This village, which is situated on the banks of the river Ken, was built upon lands leased for the purpose by the Earl of Galloway. The houses, to each of which is attached a portion of land for a garden, are neatly built; the village is spacious, and has a pleasingly rural aspect.

A branch post-office, under the office of Castle-Douglas, has been established; and a pleasure-fair, called the Clachan Race, is held annually. Coaches pass through daily, between Ayr and Kirkcudbright. An ancient stone named St. John's Chair, formerly in the old church, dedicated to St. John, is still preserved here; and also a stone with the inscription "P. G. VII.", supposed to have been the foundation stone of a chapel erected in the time of Pope Gregory VII.

CLACHNAHARRY, a village, in the parish and county of INVERNESS, 1 mile (W.) from Inverness; containing 260 inhabitants. This place is situated on the shore of Beauuly loch, a continuation of the Moray Firth. It takes its name from a rocky eminence now called the Watchman's Stone: on this eminence sentinels were anciently placed, to give intelligence of the approach of any hostile forces of the neighbouring clans; and in commemoration of one of the numerous conflicts that occurred here, a lofty column was erected on the spot by the late H. R. Duff, Esq., of Muirtown. The village forms a suburb to the burgh of Inverness, and is much resorted to for the wildly romantic scenery, and the numerous interesting features, in its immediate vicinity. The inhabitants are chiefly employed in fishing, and in the building of boats, for which its situation near the union of the Caledonian canal with the Firth renders it peculiarly appropriate. A small pier has been constructed near the sea-lock of the canal, greatly to the benefit of the place and neighbourhood.

CLACKMANNAN, the county town, and a parish, in the county of CLACKMANNAN, 2 miles (E. S. E.) from Alloa; containing 5145 inhabitants, of whom 1077 are in the town. This place, the name of which, in the Gaelic language, signifies "the church town of Annan", anciently belonged to the Annandale family, of whom the last heiress, Agnes, conveyed it by marriage to the ancestor of the royal family of Bruce, on his first settling in Scotland, in the twelfth century. The Tower of Clackmannan is said to have been built by King Robert Bruce, on the site of the baronial residence of the family, soon after his accession to the throne; and it appears to have been the residence of several of his successors, kings of Scotland, till 1330, when it was granted by David II. to his kinsman, Robert Bruce, first lord of Clackmannan. The lordship continued in the possession of the descendants of that family, till the male line became extinct by the death of Henry Bruce, the last lord, in 1772, after which, on the decease of his lady, the lands became divided among various proprietors.

The town is beautifully situated on an eminence rising gently from the Forth to a height of 190 feet, and chiefly consists of one street. In the centre are the remains of the ancient tollbooth, of which only the steeple is standing; the gaol and court-house formerly attached are now in ruins, and a county-hall has lately been erected to the north of the town, though the courts are held, and the public business transacted, at Alloa. The houses are irregularly built, and of very mean appearance; in addition to those in the principal street are several rows of cottages, mostly inhabited by persons employed in the collieries. There are two public subscription libraries. Several of the inhabitants are engaged in various handicraft trades, and there are numerous shops for different wares; but from the proximity of Alloa, very little business is transacted. Two markets are held yearly, and

there is a post-office subordinate to that of Alloa : facility of intercourse is afforded by good roads, by the Stirling and Dunfermline railway, and by the steamers that ply between Granton Pier and Stirling, which call at Alloa, and at Kincardine in the parish of Tulliallan.

The PARISH is bounded on the south-west by the river Forth for about two miles and a half, and thence stretches towards the river Devon, by which it is bounded on the north. It is nearly six miles in length, and comprises an area of about 8000 acres, of which 6000 are arable and pasture, 1700 woodland and plantations, and the remainder waste. For more than a mile from the bank of the Forth the surface is level carse land, beyond which it rises in gentle undulations to the vale through which the Black Devon flows, and thence, more precipitously, to the vale of the Devon. The Black Devon has its source in the hills of the parish of Saline, on the east, and, after sweeping round the western base of the hill on which the Tower of Clackmannan is situated, flows into the Forth about two miles from the town. The Forth is about one mile in breadth opposite the parish, having been considerably contracted by an embankment, by which a considerable portion of land has been gained from it. Though various, and resting chiefly on a cold tilly subsoil, the soil is not unfertile ; the chief crops are oats, barley, wheat, turnips, and potatoes. The system of husbandry has been improved under the auspices of the Clackmannanshire Agricultural Society ; the lands have been well drained and partly inclosed, and the farmhouses and offices are generally substantial and commodious. The cattle are mostly of a mixed description, but there are also several of the Teeswater, and many of the Ayrshire breed. The annual value of real property in the parish is £13,704. The plantations are principally oak, larch, and Scotch and spruce firs ; they are well managed, and in a thriving state.

The *SUBSTRATA* are ironstone and coal, which are very abundant, and sandstone, of which there are several quarries. The coal-field contains eleven workable seams, varying from two to nine feet in thickness, and the lowest of which is found at a depth of 110 fathoms ; the most important collieries are those of the Clackmannan, the Devon, and the Alloa Companies. The seams principally wrought are, the upper and under five feet, the nine feet, and the three-and-a-half feet seams, which are all of the best quality ; and the upper two feet seam, which is found only in the northern part of the parish. The upper five, the nine, and two feet seams are wrought by the Devon Company, chiefly for their smelting-works ; and the others, by the Clackmannan and Alloa Companies. In the aggregate the quantity raised daily is about 500 tons, of which 200 are consumed in the parish, and the remainder conveyed by tramroads from the mines, to be shipped to various parts of Scotland, for which purpose facility is afforded by the harbour of Kennetpans, and the construction of extensively-projecting piers, at the mouth of the Black Devon. The collieries give employment to about 700 men. The Devon Company's iron-works in the parish are situated on the banks of the river Devon, and employ three furnaces, for the making of pig-iron, of which about 6000 tons are annually produced ; and connected with the works is an extensive foundry, in which large quantities of cast-iron goods are made. At Kilbagie is a distillery, which has been long established, but at present no operations are carried on.

The buildings occupy an area of nearly seven acres, inclosed with a high wall, and for their supply with grain 850 acres of land were formerly expressly cultivated. The works were carried on upon a very extensive scale, and 700 cattle were fed upon the premises ; the whisky was chiefly for the London market. There is also a distillery near the town, upon a smaller scale, chiefly for the home market. A large brick and tile work has been established, and there are three saw-mills, the machinery of which is propelled by water.

The principal mansions in the parish are, Schaw Park, a spacious ancient house, containing many handsome apartments, and finely situated in grounds tastefully embellished ; Kennet House, situated on rising grounds overlooking the Forth ; Aberdona, in a beautifully secluded spot ; Brucefield ; Kennetpans, commanding a fine view of the Forth ; and Kilbagie, pleasantly situated about a mile from the river. Ecclesiastically the parish is within the bounds of the presbytery of Stirling, synod of Perth and Stirling. The minister's stipend is £284, with a manse, and a glebe valued at £16 per annum ; patron, the Earl of Zetland. Clackmannan church, erected about the year 1820, is a handsome structure, with a tower of lofty elevation, and contains 1300 sittings. An additional church has been erected in the north-west district of the parish, which contains 620 sittings. There is a place of worship in the town for the United Presbyterian Synod. The parochial school is well attended ; the master has a salary of £34, with a house and garden, in addition to the fees. The ancient Tower of Clackmannan is still tolerably entire ; it is eighty feet high, containing several apartments, and from the summit, to which is an ascent by a spiral staircase, a truly interesting prospect is obtained. On the banks of the Devon are the remains of Sauchie Tower, formerly the seat of the Cathcart family, and now the property of the Earl of Mansfield ; this tower is in a still better state of preservation than that of Clackmannan.

CLACKMANNANSHIRE, a small county in the interior of Scotland, bounded on the north and north-west by Perthshire, from which it is separated by the Ochil Hills ; on the east, by the county of Fife ; and on the south and south-west, by the river Forth. It lies between 56° 5' and 56° 14' (N. Lat.), and 3° 33' and 3° 56' (W. Long.), and is about ten miles in length, and eight miles in extreme breadth ; comprising an area of fifty-two square miles, or 33,280 acres ; 3517 dwelling-houses, of which 3406 are inhabited ; and a population of 19,155, of whom 9386 are males, and 9769 females. This county is in the synod of Perth and Stirling, and comprises four entire parishes, with part of another. For civil purposes it is associated with the county of Kinross, under one sheriff, who appoints a sheriff-substitute for each county. It contains the towns of Clackmannan and Alloa, in the latter of which the sheriff-substitute resides, and holds his courts, though the quarter-sessions are occasionally held at Clackmannan. Under the act of the 2nd of William IV., the county, jointly with that of Kinross, returns a member to parliament.

For a considerable breadth from the shore of the Forth the surface is level, but towards the north rises rapidly, forming part of the Ochil range of hills, of which Benclough, the highest, has an elevation of 2000 feet above the sea. The principal rivers are, the Forth ; the Devon, which, after a western course through a beauti-

fully romantic district, falls into the Forth to the west of Alloa; and the Black Devon, which, after traversing the county in a direction nearly parallel with the Devon, flows into the Forth not far from Clackmannan. There are some small lakes, and an artificial sheet of water called Gartmorn Dam, which is 160 acres in extent. About two-thirds of the land are arable, and the remainder hill pasture; the soil in the lower districts is exceedingly rich and fertile, producing crops of grain of every kind, and the higher lands afford good pasturage for sheep and cattle. The system of agriculture is in a highly improved state. The annual value of real property in the county is £52,923, of which £35,249 are returned for lands, £7608 for houses, £9699 for mines, and the remainder for other kinds of real property. The chief minerals are ironstone and coal, both of which are extensively wrought; of the former, more than 200,000 tons are annually raised: silver-ore has been also found in some places. Among the manufactures are those of flint and crown glass, steam-engines and all kinds of machinery, the woollen manufacture, which has been latterly much extended; large potteries, and brick and tile works, various distilleries, breweries, and tanneries. Ship-building, and the making of ropes and sails, are likewise carried on. The Stirling and Dunfermline railway intersects the county. There are several remains of antiquity, among which are the Towers of Alloa and Clackmannan, the latter of which was the residence of Robert Bruce; Roman coins have been found, and some sepulchral urns, and various other relics.

CLAIRTOWN, ST., a village, in the parish of DYSART, county of FIFE, $\frac{1}{2}$ a mile (N. N. E.) from Kirkcaldy; containing 1511 inhabitants. This village is part of that of Pathhead, of which it forms the more modern portion, being separated only by the great road to Dundee. It is built upon the estate of St. Clair, or Sinclair, the property of the Earl of Rosslyn, extending in one continued line for about a mile northwards. The inhabitants are chiefly weavers. Great facility of intercourse is afforded by the Edinburgh, Perth, and Dundee railway.—See **PATHHEAD**.

CLAREBRAND, a hamlet, in the parish of CROSSMICHAEL, stewardry of KIRKCUDBRIGHT; containing 54 inhabitants.

CLARENCEFIELD, a village, in the parish of RUTHWELL, county of DUMFRIES, $6\frac{1}{2}$ miles (W. by N.) from Annan; containing 86 inhabitants. It is situated near the road between Dumfries and Cummertrees, and a short distance west of Ruthwell church. On each side of the village is a stream which discharges itself, at the distance of about a mile, into the Solway Firth.

CLARKSTON, late a quoad sacra parish, formed of the south-eastern portion of the parish of NEW MONKLAND, and the north-western portion of that of BERTRAMSHOTS, in the Middle ward of the county of LANARK, $1\frac{1}{4}$ mile (E.) from the town of Airdrie; containing, according to the last census, 4526 inhabitants, a number which has since considerably increased. The parish measured about seven miles in length from east to west, and three miles in breadth, presenting no lofty hills, yet running along the south side of a pretty high dorse. In general the soil of the district is a cold clay: there is deep moss in some parts, and on the lands of Auchingray, Arden, Brownieside, and Moffat are considerable plantations, Auchingray alone containing upwards of 300 acres under plantation. Agricultural improvement has

in this quarter been much neglected, owing, in some measure, to the distance from which lime can be obtained, but chiefly to the attention of the proprietors having been turned to successful searches after minerals, by which large fortunes have been realized. Within the last few years, however, more than 100 acres have been furrow-drained on the Arden estate, and in several other parts the example has been followed to a considerable extent. The district abounds in blackband ironstone, which, after being taken out of the pit, is calcined, and conveyed by railway to the furnaces around Coathridge, a distance of from three to four miles, where it is smelted into foundry-iron. Numerous iron-mines are now in operation, and the whole district abounds with coal. It contains the villages of Clarkston, Ballochney, Gartness, Hillend, Blackstone, three others of considerable size, and many of smaller extent of more recent erection, for the accommodation of miners and other work-people. Contiguous to the first-mentioned village are the Clarkston cotton-mills and Moffat paper-mills, and at the village of Gartness is an iron-rolling mill. The Carlisle and Stirling road runs along the west boundary of the district, or late parish; and on the north, the Ballochney, Whiterigg, and Slamannan railway passes for about five miles: it is also intersected by the road from Edinburgh by Bathgate and Airdrie to Glasgow, which is crossed by a branch of the Ballochney railway at the village of Clarkston. At the east corner of the district is the great reservoir for supplying the Forth and Clyde canal; and in various places are handsome seats and modern residences. Ecclesiastically the district is within the bounds of the presbytery of Hamilton and synod of Glasgow and Ayr. The church, which stands at the east entrance of the village, is of plain rubble workmanship; it was erected in 1836-7, at a cost of about £1480, will accommodate 730 persons, and is surrounded by a neat burying-ground. The stipend of the minister by bond is £70, which is made up from the rent of sittings and collections, and after paying other expenses, the surplus is receivable by the minister, who is appointed by the male communicants. There are four schools, built by masters of public works, and for the support of the teachers every miner, whether married or not, pays twopence a week.

CLARKSTON, a village, in the parish of CATHCART, Upper ward of the county of RENFREW, 2 miles (S. by W.) from Cathcart; containing 180 inhabitants. It lies on the south-western confines of the parish, and on the road from Eaglesham to Cathcart. In the village is a good school, chiefly frequented, from its contiguity to Busby, in the parish of Mearns, by the children of that place; the master has an endowment of £10 per annum, from the proprietors of the public works at Busby.

CLASHNESSIE, a village, in the late quoad sacra parish of STOER, parish of ASSYNT, county SUTHERLAND, 13 miles (N. W. by W.) from Assynt; containing 194 inhabitants. This place is seated at the head of a small bay bearing its own name, and on a promontory in which are several lakes, and numerous indentations round the coast. On the north-east are Oldernay bay and island.

CLATHY, a village, in the parish of FINDOGASK, county of PERTH, $4\frac{1}{2}$ miles (N. N. E.) from Auchterarder; containing 120 inhabitants. It is situated on the road from Dunning to Balgowan, and is the only village in the parish.

CLATT, a parish, in the district of ALFORD, county of ABERDEEN, 10 miles (S.) from Huntly; containing 524 inhabitants. The Gaelic word Cleith, or Cleit, signifying "concealed", appears to have given the name to this place, in consequence of its secluded situation, it being hidden from view on all sides. The parish lies in the western extremity of the Garioch district, and measures about four miles in length, and from two to three in breadth, comprising 5130 acres, of which 2800 are under cultivation, 250 pasture, 200 wood, and the remainder waste and undivided common. It consists of an uninterrupted plain, with the exception of a portion of hilly ground on the north-west, and some rising grounds on the declivity of the Suie and Coreen hills, which bound it on the south, and belong to a mountain range extending from east to west for more than twenty miles. The Water of Bogie separates the parish on the north from that of Rhynie; and it is also indebted, for a considerable relief to its generally uninteresting aspect, to the meandering course of the Gady stream, which receives numerous mountain rivulets. This stream turns twelve threshing-mills and a meal-mill, within the distance of two miles, and after traversing a well-cultivated country falls into the Urie. The land which has been longest in cultivation consists of a rich, deep, loamy soil, lying on a bed of sand or rock; and the basis of most of the remaining portion of the best land is clay, appearing under various modifications, according to the manures that have been applied. The other parts comprise alluvial matter, with sand and clay, especially on the lands recovered by draining; light earth on sand or rock, in the higher grounds; and heath, moor, and peat-moss. A serious obstacle is presented to the farmer by the deficiency of shelter, the parish having an elevation of 600 feet, and being in the vicinity of a mountain 1300 feet high. Agriculture is carried on, however, with all the modern improvements, and the quality of the soil generally is favourable to the production of rich and heavy crops. Great and successful efforts have been made to advance the husbandry to a high state of excellence, and within the last twenty years more than 300 acres of moss and moor have been reclaimed by extensive drainage. Larch and Scotch fir have lately been planted on the hills along the southern boundary, and there are some on the lower grounds that present an agreeable appearance. The breed of cattle, which has been greatly improved, is a cross between the native and the short-horned. The annual value of real property in the parish is £2940. Granite, whinstone, and serpentine are the principal rocks, and in many parts they are so near the surface as to render the expense of quarrying unnecessary: there is also a mine of rock composed of hornblende, quartz, and felspar. The mansion-house of Knockepoch is the residence of the principal heritor.

The village of Clatt, beautifully ornamented with many old ash and plane trees, is a decayed burgh of barony, containing only a few houses. It received its erection from James IV., in 1501, with power to appoint bailies and other officers, and to hold fairs every year, and a weekly market, which latter has long since fallen into disuse, though some of the inhabitants remember the ancient cross. There are fairs still held at Whitsuntide and Martinmas, the former for the sale of sheep and black-cattle, and the hiring of servants, and the latter for grain, and as a feeing-market. Ecclesiastically the

parish is in the presbytery of Alford, synod of Aberdeen, and in the patronage of the Crown: the minister's stipend is £158. 11. 4., of which about a seventh part is received from the exchequer; with a manse, and a glebe valued at £9 per annum. Clatt church, which is a very ancient edifice, was thoroughly repaired and re-seated in 1828, and contains sittings for 290 persons. The parochial school affords instruction in Latin, book-keeping, mathematics, and all the usual branches; the master has a salary of £25. 13. 4., with a house, an allowance from Dick's bequest, and the fees. This parish was the scene of a fray in 1572 between the rival clans of Forbes and Gordon, in which the latter slew Arthur Forbes, son of Lord Forbes, and commonly called Black Arthur from his dark complexion, and carried the pursuit to the gates of Castle-Forbes, now Druminnor, the family seat of the clan Forbes. Near the village is an eminence called "Gallows Knoll", the ancient place of execution.

CLAYBARNS, a village, in the parish of NEWTON, county of EDINBURGH, $\frac{1}{4}$ of a mile (E. by S.) from Newton; containing 187 inhabitants. It lies east of the high road from Dalkeith to Edinburgh.

CLAYHOUSE, a village, in the parish of BORTHWICK, county of EDINBURGH, 2 miles (E. by N.) from Carrington; containing 84 inhabitants. It is in the northern part of the parish, a short distance east of the high road from Middleton to Cockpen, and derives its name from an ancient inn, built of clay, which stood by the way-side, and of which a part still remains, though materially altered. The village borders on a detached portion of Temple parish, and several cottages have lately been erected in the neighbourhood.

CLAYSLAP, a village, in the BARONY parish, and within the jurisdiction of the city of GLASGOW, in the county of LANARK. The inhabitants are chiefly employed in the several works in the immediate vicinity.

CLEISH, a parish, in the county of KINROSS, 3 miles (S. S. W.) from Kinross; containing, with the villages of Keltly and Maryburgh, 681 inhabitants. This place, the name of which is of uncertain derivation, is distinguished by its having formed part of the route taken by Mary, Queen of Scots, on her flight from the castle of Lochleven, which circumstance is commemorated by the insertion of a stone in a bridge at the eastern extremity of the parish, recording that event, and marking out the road. The parish is about six miles and a half in length, and one mile and a half in average breadth. Its surface is diversified with hills, which form a continuous range between this parish and Dunfermline, and the highest of which is Dumglow, rising 1215 feet above the sea; the summit is flat, commanding an extensive view over the surrounding country, from almost every part of which it is a conspicuous object. The next in height are the hills called the Ingans, all of them more than 1000 feet in elevation. The largest stream is the Gairney, which, after forming the boundary of the parish for nearly five miles, falls into Loch Leven; it abounds with trout of a small size, and there are some smaller streams issuing from the lakes, and numerous springs of excellent water, affording an abundant supply. Of the several lakes, Loch Glow is two miles and a half or three miles in circumference, and the others of very inferior extent; the fish found in them are pike, perch, cels, and a few trout. The scenery has been much improved by recent plantations, and there are some fine specimens of stately timber,

some of them of extraordinary growth; the slopes of several of the hills, and the summits of others, are finely planted. Blair-Adam, the seat of Sir Charles Adam, is a handsome residence, pleasantly situated: here Sir Walter Scott composed many of his works.

The soil is varied; in the lower grounds, clay and deep alluvial soil, with portions of deep moss, which, when brought into cultivation, is extremely rich. The chief crops are oats, harley, wheat, potatoes, and turnips, with various grasses, which grow luxuriantly in many parts; and the hills afford good pasture for sheep and cattle. Very important improvements have been made, by which a large extent of unprofitable land has been brought into cultivation; draining has been carried on with great spirit, and the system of husbandry is in a very forward state. Considerable attention is paid to the rearing of stock: the sheep pastured on the hills are generally of the black-faced breed, and those on the lower lands of the Leicestershire breed; the cattle are the Kinross-shire, Angus, and Fifeshire. The annual value of real property in the parish is £5535. Among the substrata are whinstone, grey-wacke, and sandstone, of which the hills are mostly composed; limestone is quarried to a great extent, and coal is found in seams upwards of thirty feet thick. Whinstone is wrought for mending the roads, and there are extensive quarries of freestone; from one of the quarries, about 14,000 cubic feet are raised annually. At Blair-Adam is a post-office, a branch of that of Kinross; and facility of communication with the neighbouring towns is maintained by good roads, of which the turnpike-roads from Queensferry and from Dunfermline to Kinross pass through the parish. Cleish is ecclesiastically in the presbytery of Dunfermline, synod of Fife, and in the patronage of Harry Young, Esq.: the minister's stipend is £156. 15. 4., of which about a half is paid from the exchequer; with a manse, and a glebe valued at £14 per annum. The late church, erected in 1744, was accidentally destroyed by fire in 1832, and the present church erected in its place; it is a handsome edifice, adapted for a congregation of 500 persons. The parochial school is well attended; the master has a salary of £34, with £26 fees, and a house and garden. Two other schools in the parish are also well attended.

CLETT ISLE, in the parish of ASSYNT, county of SUTHERLAND. It is situated on the western coast of the county. Clett is a high rock, considerably above the greatest tide and surge, and, except in one or two places, is of difficult access. Its form is somewhat round, and on its summit is excellent herbage.

CLEUGHBRAE, a hamlet, in the parish of MOUSEWALD, county of DUMFRIES, 6 miles (E. by S.) from Dumfries, on the road to Annan; containing 53 inhabitants.

CLIFTON, a village, in the late quoad sacra parish of STRATHFILLAN, parish of KILLIN, county of PERTH; containing 159 inhabitants. It stands in the north-western portion of the parish, near Tyndrum, and is a small place, formerly occupied by miners employed in working a lead-mine in the vicinity.

CLIMPY, a small hamlet, in the parish of CARNWATH, county of LANARK, 7 miles (N.) from Carnwath. This place, situated in a coal district, in the northern part of the parish, is inhabited by persons employed in the collieries. There was formerly a chapel, which is fallen into decay, and the cottages are in a ruinous state.

CLOSEBURN, a parish, in the county of DUMFRIES; containing 1530 inhabitants, of whom 123 are in the village, $2\frac{1}{2}$ miles (S. S. E.) from Thornhill. This place was anciently called *Kill-Osburn*, from *Cella Osburni*. It was formerly remarkable for its very ancient castle, which for many centuries, together with the greater part of the parish, belonged to the family of Kirkpatrick. The parish of Closeburn was annexed to the abbey of Holyrood, and the parish of Dalgarno, now included within the limits of Closeburn, to the abbey of Kelso; but the family of Kirkpatrick possessed the patronage of both churches, as well as the larger part of the lands. In the year 1606, these churches were united by the General Assembly held at Linlithgow, in which union they continued till 1648; they were then disjoined, and so remained until 1697, when Dalgarno was again annexed to Closeburn. The PARISH is ten miles in extreme length, and seven and a half in extreme breadth, containing 30,189 acres. One of its principal features is the valley of Closeburn, situated in the mountain range, composed chiefly of transition rock, which runs across the island from the German to the Atlantic Ocean. The surface of the parish gradually rises from the western extremity, till it attains its highest elevation at the north-eastern boundary, at which part is Queensberry hill, one of the loftiest heights in the south of Scotland, and sometimes called the Queen of Hills, rising 2140 feet above the level of the sea. The land in the western and midland districts is chiefly in tillage; there are considerable plantations towards the east and north, and in this direction the high grounds consist of extensive moors, unfit for the plough, but affording good pasture for sheep. The river Nith runs along the south-western and western, and the Cample along the north-western and western, boundaries of the parish. Among the numerous smaller streams the most distinguished is the Crickup, which, falling over a precipice ninety feet high, forms the celebrated cascade known by the name of "Grey mare's tail". The course of this stream is beautified by much bold and romantic scenery; and at Crickup Linn, a second fall, the stream runs through old worn massive rocks, and is shrouded from the eye in its passage by rich and varied foliage, presenting a singularly interesting scene, which the author of *Waverley* has compared to the retreat of Balfour of Burleigh, in Lanarkshire.

Along the river Nith the soil is a fine rich loam: higher up, it is a sandy gravel to the depth of twenty feet, well adapted for barley and turnips; and as the ground further rises, it is of the same nature, but strong and deep, with a mixture of clay, which feature it retains till the high land is reached. About 5683 acres are under tillage, and 23,006 in pasture; the natural woods and the plantations cover about 1500 acres. All kinds of grain are produced, with the usual green crops: the cattle are of the Galloway and Ayrshire breeds, and great attention is paid to them; the sheep are of the short black-faced breed. A limestone rock of great extent was discovered many years ago, of which advantage was taken by the proprietor of the parish, who burnt and applied the contents of it so plentifully that large tracts of sterile ground, much of which was moor, were brought into cultivation. From this period the inhabitants date the rise of their present flourishing system of husbandry. A plantation of ninety acres, consisting of Scotch fir sixty years old, was lately cut down, and disposed of for £10,000;

the soil upon which it grew was poor and sandy, and not worth sixpence per acre when the trees were planted. The annual value of real property in the parish is £11,873. The rocks consist of greywacke, limestone, and old red sandstone. The limestone-quarry above referred to consists of two distinct beds of different qualities, separated from each other by about eighteen feet of impure limestone; the upper bed is of too caustic a nature for the soil, but the under bed is wrought, and supplies an immense quantity of lime. Closeburn Hall, the seat of Sir Charles Stuart Menteth, Bart., is a spacious structure in the Grecian style, situated in one of the most beautiful valleys in the south of Scotland. There are two turnpike-roads, one of which connects Annandale with Nithsdale; the other forms a part of the great road from Glasgow to Dumfries and Carlisle, and, at a distance of four miles northward, has a branch to Edinburgh. Great facility of intercourse is also afforded by the Glasgow, Dumfries, and Carlisle railway.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Penpont and synod of Dumfries; patron, Sir Charles Menteth. The minister's stipend averages £240, and there is a substantial and commodious manse, with a glebe of eleven acres, valued at £19 per annum. Closeburn church was built in 1741, and has within these few years been thoroughly repaired; it is a handsome building, conveniently situated, and will accommodate 650 persons with sittings. The principal school, which is of some eminence, is a free school, conducted by a rector and two assistants. It was endowed in 1723, by John Wallace, Esq., a native of the parish, and a wealthy Glasgow merchant, who left £1600, part of which was to be appropriated to the erection of premises, and the remainder to be invested in land for the master's salary, which at the present time amounts to £500 a year. In this institution the children of the parish are taught gratuitously all the branches that constitute a polite education. The chief relic of antiquity is the castle, a vaulted quadrilateral tower about fifty feet high, thirty-three long, and forty-five broad; the walls of the ground-floor are twelve feet thick, and from the general style of the building it is conjectured that it must be eight centuries old. There are several large cairns in the parish.

CLOVA, county of FORFAR.—See CORTACHY.

CLUNIE, a parish, in the county of PERTH, 5 miles (W. by S.) from Blairgowrie, and 15 (N. by E.) from Perth; containing 763 inhabitants. This place, which is of remote antiquity, is said to have been the scene of the famous battle between the Caledonians and the Romans under Agricola. In a field near the Hill of Gourdie are still remaining several mounds, in a parallel direction, separated by trenches of equal length, called the "Steeds Stalls"; and here the advanced guard of the Caledonian army is supposed to have been posted to watch the movements of the Roman army, said to have been encamped on the plains of Inchtuthill, about two miles to the south. There are also in several places numerous cairns and tumuli, which are generally supposed to have been raised over the bodies of those who fell in the engagement. On the summit of an eminence to the west of the loch of Clunie, called the Castle Hill, are some vestiges of a very ancient structure, said to have been a summer palace of Kenneth Mc Alpine, King of the Scots. He conquered the Picts, and united the two kingdoms,

the respective boundaries of which are pointed out by two immense heaps of stones, one in the north-west, and the other in the north-east of the parish. The barony anciently belonged to the see of Dunkeld; and in the year 1500, an episcopal palace was erected upon the ruins of a monastery on an island in the loch of Clunie, formerly called St. Katherine's island, by Bishop Brown, who died in 1514. This palace, together with the barony, now the property of the Earl of Airlie, was granted by Bishop Crichton about the time of the Reformation to his brother, Sir Robert Crichton, of Elliock Castle, in the county of Dumfries, whose son, the Admirable Crichton, is supposed to have been born here.

The PARISH, which is intersected by an intervening portion of that of Caputh, is about nine miles in length and four in extreme breadth, and is supposed to contain about 8000 acres, of which nearly 3000 are arable, and the remainder moss, heath, and mountain pasture. Its surface is mountainous, interspersed with considerable tracts of low ground, watered by numerous small streams. The highest of the mountains is Benachally, which in a clear state of the atmosphere commands extensive and beautifully varied prospects; on its north side are the remains of the forest of Clunie, said to have been a royal forest, and at its base is the loch of Benachally, about a mile in length and half a mile broad. Higher up among the hills is the small lake of Lochnach, which, like the former, abounds with excellent trout; and about four miles to the south is the beautiful loch of Clunie, about two miles and a half in circumference, and eighty-four feet in extreme depth. In this lake are found trout from two to ten pounds in weight, pike from twelve to twenty-four pounds, and perch and eels of large size and excellent quality. Near its western shore is the island whereon the ancient palace was built, the walls of which are nine feet in thickness; it is in good preservation, and occasionally the residence of the Earl of Airlie. The island is a fine verdant plain, embellished with plantations, among which are some ash, plane, and walnut trees of venerable growth. It is mostly artificial; and in addition to the palace, now Clunie Castle, are some slight remains of an ancient chapel on the isle.

The SOIL is various, and, though light and gravelly in many parts, produces abundant crops of oats, barley, and wheat, with peas and potatoes of excellent quality; the system of agriculture is improved, and the annual value of real property in the parish is £5706. The plantations have been greatly increased in extent, and are generally thriving; they consist chiefly of larch, spruce, and Scotch firs, and many of the lands previously covered with heath and furze are now embellished with well-grown trees. Limestone is found on the lands of Gourdie, and is wrought for agricultural purposes; there are also some quarries of freestone and slate. Forneth, a seat in the parish, on the north-west side of the loch of Clunie, is beautifully situated on an eminence, at the base of which the Lunan flows into the lake. Gourdie is a spacious mansion on high ground a little to the south of the lake, commanding a rich prospect over the surrounding country. Williamsburgh is the only village of any importance; the inhabitants are partly employed in handloom weaving during the winter.

Ecclesiastically the parish is within the bounds of the presbytery of Dunkeld, synod of Perth and Stirling. The minister's stipend is £173, with a manse, and a glebe

valued at £6 per annum; patrons, the Duke of Atholl and the Earl of Airlie, alternately. Clunie church, erected in 1840, at the expense of the heritors, is a handsome structure in the later English style, with an embattled tower crowned by turrets at the angles, and contains 600 sittings. A place of worship has been erected in connexion with the Free Church. The parochial school is attended by about forty children; the master has a salary of £34, with a house, and an allowance in lieu of garden. There is a parochial library, supported by subscription. On the eastern acclivity of the mountain of Benachally is a large cavern called the Drop, from the roof of which water is perpetually dropping; and at the base of the mountain is a sepulchral cairn, to the south of which are numerous smaller cairns. To the north of a hill named Stanley Know is a rising ground called Gallow Drum; and near the glebe land is another, styled Gibbet Know: both are supposed to have been places of execution during the feudal times.

CLUNY, a parish, in the district of KINCARDINE O'NEIL, county of ABERDEEN, 15 miles distant (W. by N.) from Aberdeen; containing 959 inhabitants. The name of this place, signifying in Gaelic "meadows interspersed with rising grounds", is descriptive of the appearance of the locality. The parish is about ten miles in length from east to west, and about two in breadth; the soil is mostly warm and dry, and the lands are intersected by several rivulets, some of them of considerable size, descending from the surrounding hills in different directions, and sometimes overflowing the adjacent low grounds. In the western part is a mountain called the Forest of Corranie, forming the boundary of the parish in that direction, and which, though now destitute of wood, was formerly, it is said, remarkable for a profusion of it. The rent of land averages thirteen shillings per acre; agricultural improvements have been for a considerable time steadily advancing, and the generally level surface is favourable to the operations of husbandry. The annual value of real property in the parish is £4425. The gentlemen's seats comprise the Castle of Cluny, erected in the beginning of the fifteenth century, and lately rebuilt in a superior style; Castle-Fraser, erected also in the beginning of the fifteenth century; and the lately built mansion-house of Linton. The produce of the parish is usually sent to Aberdeen, the Skene and Alford turnpike-road passing through, and affording facility for its transit. Many of the inhabitants were formerly employed in the knitting of stockings. Ecclesiastically the parish is in the presbytery of Kincardine O'Neil, synod of Aberdeen; and the Crown, the proprietor of Cluny, and the proprietor of Castle-Fraser, are patrons in turn, the first exercising patronage on account of half the old parish of Kinnerny having been annexed to Cluny in 1743. The minister's stipend is £173. 16. 7., with a manse, and a glebe valued at £20 per annum. The church is a plain substantial edifice, erected in lieu of the former building, which had become ruinous, in 1789. There is a place of worship for members of the Free Church. The parochial school affords instruction in the ordinary branches: the master has a salary of £25. 13. 4., with an allowance for a garden, and £14 fees; he also shares in the Dick bequest, and receives the interest of £200, left by Mr. Robertson, for teaching eight poor children.

CLYDESDALE.—See LANARKSHIRE.

CLYNE, a parish, in the county of SUTHERLAND, 6 miles (N. E.) from Golspie; containing, with the village of Brora, 1765 inhabitants. This parish is about twenty-four miles in length, from north-west to south-east, and from six to eight miles in breadth, comprising 65,000 acres. It is bounded on the south-east by the German Ocean. In the well-cultivated district along the coast the surface is tame, but in other parts greatly diversified, presenting the most prominent and characteristic features of Highland scenery. The glens and lakes, adorned with natural wood and plantations, as seen from the vicinity of Killean, which also commands a prospect of the abrupt precipices overhanging Loch Brora, and the lofty mountains of Ben-Clibrig, Ben-Ormin, and Ben-Horn, are among the finest portions of this secluded district. Beyond Strath-Brora, however, about nine miles from the coast, the general aspect of the scenery becomes bleak and beathy, with extensive tracts of moor and moss, intersected by numerous rivulets, and lofty ranges of hills. In general the coast is low and sandy, and marked by a ridge of sand hills, covered in the more abrupt parts with bent, and in the others with tolerably good pasture. The river Brora, the principal stream, is celebrated for salmon of a superior size and flavour; it has its source in the forest of Ben-Clibrig, and after a winding course of thirty miles within the parish, discharges itself into the sea at Brora. The largest sheet of water is Loch Brora, which is about four miles long, and varies from a quarter to half a mile in breadth: its banks are clothed with several clumps of natural wood, and extensive plantations of fir; and the bold and precipitous Carrol rock, with the mansion-house of Kilcalmkill, contributes to its interesting and beautiful scenery.

The principal part of the parish consists of high and irreclaimable hill-pasture, and is laid out in extensive sheep-walks; the sheep are pure Cheviots, to the breed of which great attention is paid, and the total number kept is nearly 11,000. The land in tillage is supposed to comprehend no more than about 1400 acres, of which 300 acres are of a sandy loam, forming an excellent turnip soil, and 1100 acres a poor sharp gravel, and unfit for the production of wheat. Between 200 and 300 acres are under plantation. The annual value of real property in the parish is £2910. The rocks consist chiefly of sandstone, two quarries of which are wrought to a considerable extent; the material found in one of these is remarkably hard, compact and durable, and contains numerous petrifications of trees, fishes, and shells, which attract the notice of scientific tourists. Coal was wrought near the mouth of the river Brora so far back as 1573, and at several subsequent periods, but the works were discontinued many years ago. The late Duke of Sutherland sank a new pit, and erected the necessary buildings, at a cost of £16,000, and the coal was conveyed to the harbour on a tramroad 800 yards long. Four large salt-pans were also erected, from which salt of a very superior quality was obtained. On the Brora is a salmon-fishery, rented at £300 per annum; and there are several boats regularly employed in the season in the herring-fishery, which supply the neighbourhood with all the ordinary kinds of fish at a very cheap rate.

Ecclesiastically the parish is within the bounds of the presbytery of Dornoch and synod of Sutherland and

Caithness; patron, the Duke of Sutherland, who is proprietor of the whole parish. The stipend is £144. 15. 7.; and there is a handsome and commodious manse, with a glebe valued at £12 per annum. Clyne church, a plain structure, was built about the year 1770; it was repaired and enlarged about 1827, and will accommodate nearly 1000 persons with sittings. A place of worship has been erected in connexion with the Free Church. There is a parochial school, where the ordinary branches of education are taught; the master has the maximum salary, a house and garden, and a small sum from fees. There is an Assembly's school in the village of Brora: two-thirds of the teacher's salary are paid by the Duke of Sutherland. The chief relic of antiquity is the celebrated Pictish tower called "Castle Cole", which is the most entire specimen of this kind of tower in the country, excepting that of Dornadilla, in the parish of Durness. It is protected on three sides by the river, and has on the other side a precipice of seventy feet; the structure is oblong in form, with walls eleven feet thick, without lime or mortar, and appears to have been a place of great strength.

COALHILL, a village, in the parish of CAMPBELLTOWN, district of CANTYRE, county of ARGYLL, 3 miles (W.) from Campbelltown. The village is situated in the western part of the parish, and is inhabited chiefly by persons employed in coal-mines, from which a canal has been constructed, for conveying the produce to the town. A school is supported by the inhabitants.

COALSNAUGHTON, a village, in the parish of TILlicoultry, county of CLACKMANNAN, 3 miles (N. E.) from Alloa; containing 691 inhabitants. It lies on the road to Stirling, not far from the river Devon, and is inhabited chiefly by colliers.

COALTON, a village, in the parish of KETTLE, district of CUPAR, county of FIFE, 1 mile (S. E.) from Balmacollm; containing 84 inhabitants. This village is situated in the hilly part of the parish, and appears to have derived its name from the coal-works which are still carried on here, though not to so great an extent as formerly. The present seam in operation is a kind of blind coal, which is solely used for burning lime; the produce, amounting in value to no more than about £70 per annum, is chiefly sent to the lime-works at Pitlessie. A quarry of freestone has also been opened, and is worked to a limited extent, being used for building purposes, and for the inclosures of several farms in the parish.

COALTOWN OF BALGONIE, in the parish of MARKINCH, district of KIRKCALDY, county of FIFE, 1 mile (S.) from Markinch; containing 415 inhabitants. This village, which is situated to the west of Balgonie, consists chiefly of cottages, inhabited by persons employed in the collieries from which it takes its name, and in the spinning-mills, bleachfields, and other works in the vicinity. The Edinburgh, Perth, and Dundee railway passes by.

COALTOWN, EAST, a village, in the parish of WEMYSS, district of KIRKCALDY, county of FIFE, 4 miles (N. E.) from Kirkcaldy; containing 165 inhabitants. This village is in the mining district of the parish. It is neatly built, and principally inhabited by persons engaged in collieries, which are extensively worked, and afford an abundant supply of fuel for the neighbourhood.

COALTOWN, WEST, a village, in the parish of WEMYSS, district of KIRKCALDY, county of FIFE; ad-

acent to East Coaltown, and containing 372 inhabitants. It is chiefly inhabited by persons employed in the extensive coal-works on the estate of Captain Wemyss, and for whose accommodation it has been built.

COALYLAND, a village, in the parish of ALLOA, county of CLACKMANNAN, 2 miles (N. by W.) from Alloa; containing 234 inhabitants. It is situated a little south of the road between Aberdonie and Menstry, and derives its name from being the seat of an extensive colliery. The river Devon flows on the north of the village.

COATBRIDGE, a village, in the late quoad sacra parish of GARTSHERRIE, parish of OLD MONKLAND, Middle ward of the county of LANARK, 1½ mile (N. W.) from Airdrie; containing 1599 inhabitants. This is a very thriving place, which has more than doubled in extent and population within the last twenty years, owing to the extension of the iron trade in the district, and to its being in the vicinity of valuable coal-mines. The Dundivan and Summerlee iron-works in the neighbourhood are conducted on a large scale, and afford employment to a great part of the population. The village is on the road from Airdrie to Glasgow, and the Monkland canal also affords facilities of conveyance. The Garnkirk and Coatbridge extension of the Garnkirk and Glasgow railway was formed under an act passed in 1844, and was opened to the public the following year: it is rather more than a mile long. Ready intercourse is likewise afforded by the Caledonian, the Kirkintilloch, the Ballochney, and the Wishaw and Coltness lines. A post-office is established here, and there is a place of worship for members of the Free Church. A most elegant institution has been erected for educational purposes by W. Baird, Esq., of Gartsherrie: it has about 300 scholars, under the care of three teachers, two of them male teachers for reading, writing, and arithmetic, geography, Latin, Greek, and French, and one a female teacher to instruct in needlework plain and ornamental.

COATDYKE, a village, in the late quoad sacra parish of GARTSHERRIE, parish of OLD MONKLAND, Middle ward of county LANARK; containing 459 inhabitants. This place participates largely in raising the mineral products of the district, iron and coal; and in the neighbourhood are several quarries, including one of white freestone, the thickness of which is in some parts seventy feet.

COATS or COTES, EAST and WEST, villages, in the parish of CAMBUSLANG, Middle ward of the county of LANARK; one containing 140 and the other 146 inhabitants, chiefly weavers and colliers. They are seated in the north-western part of the parish, a short distance from the village of Cambuslang.

COCKBURNSPATH, with OLD CAMBUS, a parish, in the county of BERWICK, 8 miles (S. E.) from Dunbar; containing 1149 inhabitants, of whom about 230 are in the village. This place was anciently called *Colbrandspath*, from Colbrand, a Danish ebieftain who is said to have established himself in this part of the country, and subsequently *Cockburnspath*, from its having at a very early period been the baronial seat of the family of Cockburn. It comprises the united parishes whose names it bears, and of which the latter, Old Cambus, was annexed to the former at a period not distinctly known. The castle, whether founded by Colbrand or by Cockburn, appears to have formed part of the possessions of Patrick Dunbar, afterwards Earl of Dunbar

and March, who, when this district was infested by a daring band of robbers, mustered his retainers, and, attacking them in a body, killed 600 of their number. For this service, the king created him Earl of March, and conferred upon him the lands of Colbrandspath, together with the castle, which, and that of Dunbar, were the most important fortresses in this part of the kingdom. The lands appear to have subsequently been included in the demesnes of many successive kings, and to have been given as part of the dowry of several of their daughters. They afterwards became the property of the Earl of Home, from whom, about 200 years since, they passed to the Halls. Little more of historical importance is recorded in connexion with the place than the passage through the parish of the English army, under the Earl of Hertford, on his invasion of Scotland in the year 1544, and of that under the Earl of Somerset, in the year 1548.

The PARISH is bounded on the north-east by the German Ocean, and on the north-west by the county of Haddington, and comprises 9800 acres, of which 5200 are arable, 600 in woods and plantations, and the remainder hilly pasture and waste. Its surface is greatly diversified with hill and dale, and, in many parts, with narrow deep glens through which small rivulets flow in rugged channels into the sea; the hills are generally of spherical form, and the highest of them are not more than from 500 to 600 feet above the sea. The scenery is in some parts highly romantic; the glens are distinguished by a great variety of features, combining rocks and woods, and streams which, frequently obstructed in their progress, form some beautiful cascades. On the precipitous ridge that incloses the Tower glen, are the remains of the ancient castle. The coast is bold and precipitous, and is indented with several small bays, of which the most important and the most picturesque is that named the Cove; it is completely inclosed, except at the entrance, by precipitous rocks rising to the height of 100 feet, and, by the recent construction of a breakwater, has been formed into a very commodious harbour for fishing-boats. Numerous excavations formed by nature in the rocky shores of the bay, have been appropriated as warehouses; and one of them has been wrought into a tunnel, sixty yards in length, serving as a means of communication with the shore, and affording a facility for landing goods on the quay.

The SOIL is various; extremely rich in the immediate vicinity of the sea, and becoming lighter at a greater distance from the coast, till it degenerates into hilly pasture. The chief crops are grain of all kinds, potatoes, and turnips; the system of agriculture is in an advanced state, and the rotation plan of husbandry generally practised. Considerable attention is paid to the management of live stock: the sheep are, nearly in equal numbers, of the Leicestershire and Cheviot breeds, the former on the lower lands, and the latter on the higher; some are of a cross between the two. The annual value of real property in the parish is £8648. The woods and plantations are mostly of oak; for which the soil appears to be peculiarly favourable, beech, Spanish chesnut, ash, Scotch fir, larch, and sycamore. The substrata are greywacke, greywacke-slate, and sandstone, the last of which is quarried; it is of a coarse quality, and of the old red formation, being chiefly valuable for its property of withstanding the action of heat.

The VILLAGE, which had fallen into a state of neglect, was some time ago greatly improved under the patronage of Lady Helen Hall; it is partly inhabited by persons employed in the fishery, and contains a subscription library of considerable size. Great facility of communication is afforded by the road from Edinburgh to London, and by the North-British railway, which both pass through the parish. There are several handsome and picturesque bridges over the deep ravines. The Pease bridge, of four arches, about a mile and a half from the village, is strikingly romantic in its appearance; it is 300 feet in length, and nearly 130 feet above the bottom of the ravine. Another bridge, over the Dunglass glen, of modern construction and of great beauty, has one spacious arch, spanning the ravine at an elevation of ninety feet above the stream that flows beneath it: from the battlements of the bridge is obtained a prospect almost unrivalled for extent and beauty. A few hundred feet further down the glen, another bridge, of great elegance, having one magnificent arch, with five land arches, and exceeding the Pease bridge in height, carries the line of the North-British railway over the ravine. A fair, chiefly for toys, is held on the second Tuesday in August. A considerable fishery is carried on at Cove, the fish taken being cod, haddocks, whiting, ling, skate, halibut, and turbot. Lobsters and crabs are taken in abundance in the season, and are sent, by shipping from the port of Dunbar, to London. Herrings, also, were formerly caught in profusion, but of late years few have appeared on this part of the coast. A convenient harbour was constructed in 1831, for the accommodation of the fishing-boats, and capable also of affording shelter to vessels of larger burthen, several of which, laden with coal, and bone-dust for manure, frequently put in here, and deliver their cargoes. The expense of completing the harbour, which was very considerable, was defrayed partly by government, and partly by Sir John Hall, Bart.

Ecclesiastically the parish is in the presbytery of Dunbar, synod of Lothian and Tweeddale, and in the patronage of the Crown; the minister's stipend is £245. 13. 3., with a manse, offices, and garden, and the glebe is valued at £27 per annum. The church, a very ancient structure with a round tower, and apparently built in the twelfth century, was fully repaired in 1807, and re-seated in 1826. There is a place of worship in the parish for the United Presbyterian Synod. The parochial school affords instruction to about ninety scholars; the master has a salary of £30, with £45 fees, and a house and garden. Here are several vestiges of ancient fortifications, the chief of which are on Erveside hill, and on the ridge of Dunglass Den. Many urns also, of Roman pottery, have been at various times discovered by the plough. In the centre of the parish are the ruins of the castle of Cockburnspath, apparently erected to defend the pass of the ravine at the entrance of which it is situated; and in the Old Cambus district are the ruins of an ancient church formerly connected with the priory of Coldingham, seated on a lofty precipice overlooking the sea. It was dedicated to St. Helen, and is said to have been erected, in gratitude for their preservation, by three Northumbrian princesses, who, fleeing into Scotland for refuge, were wrecked on this part of the coast.

COCKENZIE, late a quoad sacra parish, including the villages of Meadowmill and Portseaton in the parish of TRANENT, and part of the parish of PRESTONPANS,

in the county of HADDINGTON; the whole containing 1061 inhabitants, of whom 570 are in the village of Cockenzie, 1 mile (N. E.) from Prestonpans. This village, which is situated on the shore of the Firth of Forth, is almost wholly inhabited by fishermen, who during the winter are chiefly employed in procuring supplies for the markets of Edinburgh and Glasgow, and in the spring engage in the whale-fisheries of Greenland. The fish taken here are cod, whittings, flounders, and oysters, of which last there are beds of excellent quality; and in summer those who have not engaged themselves in the whale-fishery go to Caithness for herrings, which they take in large quantities, and sell to the eners. In autumn, they are employed in dredging oysters, and catching such herrings and other fish as appear in the Firth. The number of boats belonging to the fishery is thirty, of which ten are of sixteen tons' and twenty-one of seven tons' burthen; they are all without decks, but well and strongly built, and capable of enduring a very heavy sea. A considerable foreign and coasting trade is also carried on, in which two vessels, of 100 and 120 tons respectively, belonging to this place, are regularly employed; the number of other ships annually entering and leaving the harbour averages from 250 to 300, of the aggregate burthen of 20,000 tons. The harbour was constructed in 1835, by Messrs. Cadell, at an expense of £6000; it is easily accessible at all times of the tide, and affords great security to numerous vessels driven in by stress of weather. It has sixteen feet depth of water at spring, and ten feet at neap, tides; and though formed more especially for shipping the produce of the collieries, from which an iron tramway has been laid down to the port by the proprietors, it has been of great benefit to the fishery of the place. In 1846 an act of parliament was passed authorising the construction of a branch of nearly a mile and a quarter, to Cockenzie harbour, of the North-British railway. A mill for grinding bones and rape-cakes, chiefly brought from Germany, for manure, is driven by steam, and employs a small number of the inhabitants not engaged in the fisheries; there are also some salt-works in the district. A fair, formerly of some importance, but now chiefly for toys, is held in November. The church was erected in 1838, by subscription, chiefly through the instrumentality of H. F. Cadell, Esq., aided by grants from the General Assembly's and East-Lothian Church-Extension Societies, and a contribution of £150 raised by the Rev. A. Forman, of Innerwick. It is a neat edifice, built at an expense of about £600, adapted for a congregation of 450 persons, and capable of being enlarged by the erection of galleries. A school is supported by subscription.

COCKPEN, a parish, in the county of EDINBURGH, 3 miles (S. by W.) from Dalkeith; containing, with the villages of Bonnyrigg, Dalhousie, Gowkshill, Hillhead, Hunterfield, Polton-Street, Prestonholme, Skiltie-muir, Stobhill-Engine, and Westmill, 2345 inhabitants, of whom 709 are in the rural districts. This place, which is on the river South Esk, is supposed to have derived its name from the situation of the church upon an eminence, and the prevailing colour of the soil. It comprises chiefly the barony of Dalhousie, the property of the ancient family of Ramsay, of whom William, Lord Ramsay, was created Earl of Dalhousie by Charles I. in 1633. There are still some remains of the ancient

baronial residence of Dalhousie, which was a quadrangular structure with angular towers, and one of the strongest fortresses in this part of the country; and though altered into a slightly castellated mansion as a family residence, it still retains some vestiges of its ancient character. The PARISH is about three miles and a half in length, and two and a half in extreme breadth. Its surface is pleasingly undulated, and the prevailing scenery abounds with interesting features. The banks of the South Esk, which intersects the southern part of the parish, are crowned with ancient wood; and the various other streamlets that flow through the lands, add greatly to the beauty of the landscape. The soil is generally a strong clay, well adapted to the growth of grain, and, under good cultivation, yielding crops of wheat, barley, oats, and peas, with a few potatoes and turnips. The annual value of real property in the parish is £8801. The plantations, which are extensive, abound with every variety of trees and ornamental shrubs, and are in a highly flourishing condition. In this parish the substrata are chiefly coal, which is very abundant, and limestone and freestone of excellent quality, which are extensively quarried: copperas, also, has been obtained.

The ancient castle of Dalhousie is beautifully situated on an eminence overlooking the river Esk; it was modernised by the late earl, and the pleasure-grounds have been tastefully laid out in walks, and embellished with shrubs and plantations. On the opposite bank of the river was the ancient mansion-house of Cockpen, purchased, within the last few years, by the earl, from Mr. Baron Cockburn, by whom the adjacent lands had been greatly improved; only some of the walls are now standing, which give a truly romantic character to the scenery. The village of Cockpen lies upon the western bank of the South Esk, over which is a handsome bridge of stone, affording facility of communication; and the Edinburgh and Hawick railway skirts the eastern boundary of the parish. In the several villages are various works. Ecclesiastically, Cockpen is within the bounds of the presbytery of Dalkeith and synod of Lothian and Tweeddale. The minister's stipend is £157, of which £24 are paid from the exchequer; with a manse and a glebe valued at £21 per annum: patron, the Marquess of Dalhousie. The church, erected in 1820, is a neat plain structure, containing 625 sittings. There is a place of worship for the Free Church. The parochial school is well conducted; the master has a salary of £34, with a house and garden, and the fees average £28.

COLDINGHAM, a parish, in the county of BERWICK; including the late quoad sacra district of Houndwood; and containing about 2830 inhabitants, of whom a considerable portion reside in the village of Coldingham, 3 miles (N. N. E.) from Reston, which is on the London and Edinburgh road and the North-British railway. This place, the name of which is of doubtful derivation, has a claim to remote antiquity, and seems to have originally acquired distinction from the erection of a nunnery, in the seventh century, by Ebba, daughter of Ethelfrith, King of Northumbria. To escape from the solicitations of Penda, King of Mercia, who sought to obtain her in marriage, she resolved to leave her father's kingdom, and, embarking for that purpose, was driven by a storm on the promontory of this coast, which from her derived its name of St. Abb's Head.

The convent that she founded here, appears to have subsisted till the year 837, when it was plundered and burnt by the Danes, who inhumanly massacred the whole sisterhood. Some slender remains of its chapel existed till about the middle of the last century; but, the cemetery surrounding it being again appropriated as a burying-place, they were soon afterwards destroyed.

The MONASTERY of Coldingham is said to have been founded by Edgar, King of Scotland, about the year 1100, though other writers refer its foundation to a period anterior to that of the nunnery of St. Ebba, in the destruction of which by the Danes they say it participated, and that it was only rebuilt by Edgar. That monarch, being driven from his throne, fled to England, where he obtained from William Rufus an army of 50,000 men, for the recovery of his dominions, and from the abbot of Durham the consecrated banner of St. Cuthbert, to aid him in reducing his rebellious subjects to obedience. Having succeeded in re-establishing his kingdom, Edgar founded or refounded the monastery, which he dedicated to the Virgin Mary, and made a cell to the abbey of Durham, from which establishment he placed in it a prior and brethren of the order of St. Benedict. The priory continued to flourish in uninterrupted prosperity from this time, with the munificent patronage of Edgar's successors, till the reign of Robert III., under whose weak government, and during the regency of the Duke of Albany, the monks placed themselves beneath the protection of the family of Douglas, of whom the laird of Home became its sub-prior. Not long afterwards, James III. obtained the concurrence of the parliament for the suppression of the priory, the revenues of which he wished to appropriate to the endowment of the chapel royal of Stirling, which he had founded; but their proceedings excited an insurrection of the Homes, which terminated in the defeat and death of that monarch, who was killed in battle, near Stirling, in 1488. The priory, in 1509, was separated from Durham by a decree of the pope, and annexed to the abbey of Dunfermline, whose abbot, Alexander Stuart, a natural son of James IV., and also archbishop of St. Andrew's, who fell fighting by his father's side at the battle of Flodden-Field, became prior. After the death of Alexander Stuart, David, brother of Lord Home, was made prior of Coldingham. In 1544 the priory was seized by the English, who fortified and retained possession of it, against all the efforts of the Earl of Arran, regent of Scotland, for its recovery; and in the following year it was plundered and burnt by the Earl of Hertford, after which calamity it never regained its ancient wealth and importance. During the usurpation of Cromwell, it was defended against the assaults of his troops, by a party of royalists who had intrenched themselves within the walls, and who vigorously repulsed the first detachment sent against them. Cromwell, however, bringing up in person a stronger force, with several pieces of cannon, shook it to its foundation, and compelled the royalists to capitulate; and to prevent it from again becoming an obstacle to his success, he blew up the church with gunpowder, leaving only one of the walls standing.

The PARISH, which is about twelve miles in extreme length, and nine in breadth, is bounded on the north and north-east by the sea and the Firth of Forth. Its surface is diversified with hills and valleys: a portion

of the range of the Lammermoor hills traverses it, in a direction from east to west, and the highest elevation, Wardlaw Bank, is 640 feet above the sea. The valleys are watered by various streams, the most important being the river Eye, which, after flowing with a gentle current through the whole extent of the parish, falls into the ocean at Eyemouth. The only lake is that of Coldingham, about a mile west of St. Abb's Head, a fine expanse of water covering thirty acres of ground, within 300 yards of the coast, and having an elevation of 100 yards above the sea; it is circumscribed by sloping banks of barren rocky aspect, incapable of plantation, and abounds with perch, the only kind of fish it contains. The coast, near St. Abb's Head, is rocky and precipitous, and indented with numerous caves excavated in the rock, some of them of large extent, and with natural fissures, inaccessible from the land, and only to be entered from the sea at low water, and in calm weather.

The SOIL is various, and, in some parts of the parish, fertile; but there are large tracts of barren land, incapable of being brought into cultivation. The whole number of acres is estimated at about 57,000, of which 6000 are moor and waste, about 500 in woods and plantations, and the remainder, in nearly equal portions, arable and pasture. The chief crops are grain of various kinds, potatoes, and turnips, and the system of agriculture is improved; many cattle are fattened here, and driven south, and great numbers of sheep are reared. The annual value of real property in the parish is £19,770. The natural woods consist mostly of oak, elm, and birch; and the plantations of the various kinds of fir, intermixed with the usual forest-trees. Throughout the parish the rocks are of the transition formation, and the principal substrata are greywacke and greywacke-slate; the promontory of St. Abb's Head is one mass of trap rock, composed mainly of trap tuffa, amygdaloid, and porphyritic felspar. A lucrative fishery is carried on, for which purpose a small harbour was constructed in 1833 at Northfield, about a mile from the village, at an expense of £1200, of which sum about one-fourth was raised by subscription, and the remainder was granted by government. The fish taken off the coast are cod, haddock, turbot, and lobsters; and about seven boats are regularly employed, affording support to thirty-six families, of which number twenty-nine live in the hamlet of Northfield. The cod is pickled, the haddocks smoked, and the turbot and lobsters sent alive to the London market. The village of Coldingham is pleasantly situated, and contains many neatly-built houses; a library is supported by subscription, forming a collection of more than 400 volumes of standard works. The weaving of cotton affords employment to above thirty persons. At Reston, in the parish, the Dunse branch of the North-British railway quits the main line.

FOR ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Chirnside, synod of Merse and Teviotdale; patron, the Crown. The stipend of the incumbent is £267; the manse was built in 1801, and enlarged in 1828, and the glebe is valued at £25 per annum. Coldingham church, which is a portion of the ancient monastery, was repaired in 1662, and is well adapted for a congregation of 827 persons. There is a place of worship for the United Presbyterian Synod. Two parochial schools are held; the masters have each a salary of £25, with a house and garden, and fees.

The remains of the priory, though dreadfully mutilated, still display some memorials of original magnificence; they contain fragments of the richest details in the Norman style, from its earliest period to its transition into the early English. The north wall of the church was formerly covered with series of intersecting arches, springing from corbels enriched with canopies; but the shafts of the intercolumniations have been cut away, and the whole wretchedly disfigured. The triforium, however, of five elegantly-designed windows, separated by alternate ranges of plain and clustered columns, supporting richly-moulded arches of graceful form, is still tolerably entire; and various other portions, of elaborate design, may still be traced. Upon a peninsular rock projecting into the sea, about two miles to the west of St. Abb's Head, are the ruins of Fast Castle, connected with the mainland by a narrow isthmus, which, for greater security, was cut away, and in its place a draw-bridge substituted. By whom it was originally founded is not clearly ascertained: it belonged to the family of Logan of Restalrigg, one of whom, proprietor at the time of Gowrie's conspiracy, was, several years after his death, tried and condemned for the part he took in that transaction, and his estates were forfeited to the crown, and subsequently conferred upon the Earl of Dunbar. It is visited chiefly for the grand prospect it embraces over the German Ocean. There were numerous other strongholds in the parish, of which the names of Langton Tower, Heughhead, Renton, and Houndwood (the hunting-seat of the prior of Coldingham) only are recorded. On the hill to the west of St. Abb's Head are vestiges of a Roman camp, and on another the remains of a British camp, defended on three sides by lofty ramparts; and on the summit of Wardlaw Bank are traces both of a Roman and a British camp, now nearly obliterated by the plough.

COLDSTREAM, a burgh of barony, a market-town, and parish, in the county of BERWICK, 14 miles (S. W.) from Berwick; containing 2857 inhabitants, of whom 1913 are in the town, and 150 in the village of New Coldstream. The parish was originally called Leinal, or Lennel, a name of Saxon etymology, signifying "a great hall", and supposed to have been derived from the foundation of a Cistercian nunnery by Cospatrick, Earl of March, in the early part of the twelfth century. The small village of Lennel, which soon afterwards arose round the priory, being exposed from its situation to hostile incursions during the wars of the Border, suffered continual depredations, and was ultimately destroyed by the English; not a vestige of it is left, nor can even the site be distinctly pointed out. The monastery flourished till the general dissolution, when its revenues amounted to £201 in money, three chalders, eleven bolls, two firlots, three and a half pecks of wheat, the same quantity of bear, and also of meal. It was beautifully situated near the confluence of the river Leet with the Tweed, and was of considerable importance, but only one solitary vault is now remaining. During the interregnum, General Monk, who had fixed his head-quarters at this place, raised a regiment of infantry here, which accompanied him on his return to England for the restoration of the exiled monarch, and which is still distinguished as the Coldstream regiment of guards. After the decay of the village of Lennel, a new church was erected, in 1716, at Coldstream, in the more populous

district of the parish; and to this circumstance may be attributed the increase of the town.

The town is pleasantly situated on the river Tweed, over which is a handsome stone bridge of five arches, that connects it with England; and affording an approach to it on the west, is a bridge of one arch over the river Leet. It is neatly built; the streets are lighted and cleansed, and the inhabitants are supplied with water, under the regulations of the Police act. A public library is supported by subscription, containing a good collection of works on general literature; and there are two other subscription libraries, for the use of mechanics and the working classes. No manufactures are carried on in the town: the principal trade of the place consists in furnishing coal and various other articles for the neighbourhood. The market, which is well supplied with grain, is on Thursday; and there is also a monthly market, for the sale of cattle and sheep, which is numerously attended. A salmon-fishery on the Tweed here was formerly extensive; but the fish have within the last few years very much diminished, and the whole rental at present is scarcely £100 per annum. The town is governed by a baron-bailie, appointed by the superiors of the two baronies of Coldstream and Hirsell, in which it is situated. His jurisdiction extends to civil and criminal cases, for the determination of which he holds courts at stated periods: the average annual number of civil causes determined is about thirty, and of criminal cases, about six; but the latter are chiefly offences against the police of the town, to which the bailie confines himself, referring important matters to the procurator-fiscal for the county. There is a small prison for the confinement of persons previously to their committal.

The PARISH, which is situated nearly at an equal distance between the Cheviot and the Lammermoor hills, is from seven to eight miles in length, and rather more than four in average breadth. Its surface is generally level, diversified only by some gentle elevations; the scenery is pleasingly varied, and richly embellished with woods and plantations. The only streams that have their source here, are the Gradenburn and Shiellsburn, which, after traversing the parish, fall into the river Tweed, its southern boundary; the only lake is one of artificial construction, in the pleasure-grounds of Hirsell. In this parish the soil is mostly rich, especially near the rivers, in proportion to the distance from which is its tendency to clay. The number of acres in tillage is 8000, and the chief crops are, grain of all kinds, for which the soil is well adapted; potatoes; and turnips, which last are extensively cultivated. The system of agriculture is in a highly advanced state; bone-dust is applied as manure, and all the more recent improvements in husbandry are in use. Great attention is paid to live stock; the cattle, with the exception of a few of the Highland breed, are all the Teeswater or short-horned, and the sheep are of the Cheviot and Leicestershire breeds. The annual value of real property in the parish is £15,317. The woods are chiefly of oak, birch, beech, ash, and elm; and the plantations, Scotch and spruce firs, intermixed with the usual forest-trees: larch is not found to thrive in the soil, and consequently very few trees of that sort are planted; but all the other kinds seem well adapted to the land, and are in a prosperous state. The substrata are white sandstone, clay-marl, reddish sandstone, limestone, and gypsum. Of these, the white sandstone

or freestone is of very excellent quality for building, and is extensively quarried in several parts of the parish. The red sandstone is also quarried, but not to any great extent; the limestone is of inferior quality, and, though quarried in some places for the roads, is not burnt into lime. The gypsum is found chiefly on the banks of the Leet, where it occurs in nodules of a reddish hue, and at Milne-Graden, where, in boring for coal some years since, it was discovered in thin veins of a whitish colour. Among the minerals are crystals of quartz, calcareous spar, phrenite, and sulphate of lime; and the strata of the district contain various fossil remains. Of the seats in the parish are, Lennel House, the property of the Earl of Haddington, lord of the barony of Coldstream, a handsome mansion of modern character; and Hirsell, the seat of the Earl of Home, lord of the barony of Hirsell, an elegant mansion of white stone, erected with materials from a quarry in the parish. In the grounds of the latter is a lake of considerable dimensions; and at the base of an acclivity rising from the bank of the Leet, and richly wooded, a monument was erected by a late Lord Home to the memory of his eldest son, who died in America, of his wounds in the battle of Camden; the design is a reduced imitation of the obelisk of Mattheus at Rome. The seats of the Lees, Milne-Graden, and Castlelaw are also mansions of white freestone.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Cbirnside, synod of Merse and Teviotdale; patron, the Earl of Haddington. The stipend of the incumbent is £233; the manse is a comfortable residence, erected in 1830, and the glebe comprises eleven acres of land, valued at £40 per annum. The church, erected in the year 1795, is a substantial edifice, adapted for a congregation of 1100 persons. There are places of worship for the United Presbyterian Synod. The parochial school affords instruction to about 120 children; the master has a salary of £34, with a house and garden, and the fees average £75 per annum. The late John Bell, Esq., bequeathed £500 for the instruction of poor children of the town, and also £300 for supplying them with clothing on their leaving school. Stone coffins have been found, and quantities of human bones, in the grounds of Hirsell, and near the junction of the Leet and Tweed, where the ancient abbey was situated. The bones thus found are supposed to be the remains of warriors slain in the battle of Flodden-Field, the most illustrious of whom were conveyed to Coldstream by order of the abbess, and interred in the abbey cemetery. Several ancient coins also, of the reigns of the Jameses, have been discovered in the grounds of Milne-Graden. Patrick Brydone, Esq., author of a *Tour in Sicily and Malta*, and for many years resident in the old mansion of Lennel House, was buried in the ancient church of Lennel, of which there are still some vestiges.

COLINSBURGH, a market-town, in the parish of KILCONQUHAR, district of ST. ANDREW'S, county of FIFE, 10 miles (S. by E.) from Cupar, and $28\frac{1}{2}$ (N. E. by N.) from Edinburgh; containing 482 inhabitants. This place is pleasantly situated in the south of the parish, and on the great road from the eastern to the western part of the county along the southern coast. It is neatly built, and inhabited chiefly by persons employed in trade for the supply of the parish with various articles of merchandise, and in weaving for the manufacturers of Dundee, Kirkcaldy, and other towns. The currying

trade is also carried on, by a company who are proprietors of the tannery at Kilconquhar, and who manufacture leather to the amount of £15,000 per annum, and afford employment to about twenty-four persons. The market, which is a large mart for grain, is held on Wednesday, and is numerously attended by farmers and dealers from the neighbourhood; the corn is sold by sample, and considerable quantities are forwarded to Edinburgh, Glasgow, and other ports, for exportation. Fairs are held in June and October, for cattle; and in March, when the East Fife Agricultural Society hold their meeting in the town, there is a public market at which great numbers of cattle are exposed for sale. Colinsburgh is a burgh of barony under the family of Lindsay, Earls of Balcarres, from whose ancestor, Colin, third earl, the place derived its name. In the immediate vicinity is the elegant residence of Balcarres House; and overhanging it, appears the Crag of Balcarres, which confers the title, and is a rock of considerable altitude. The present earl is the acknowledged chief of the very ancient house of Lindsay, many of the members of which have been interred in the old chapel near the mansion. A school has been established.

COLINTON, a parish, in the county of EDINBURGH, including the villages of Hailes-Quarry, Juniper-Green, Longstone, Slateford, and Swanston; and containing 2195 inhabitants, of whom 120 are in the village of Colinton, 4 miles (S. W.) from Edinburgh. The name of this place, sometimes written Colington, was formerly Hailes, a word signifying "mounds" or "hillocks", and accurately descriptive of the appearance of the surface of the parish. About the close of the 17th century the designation Colinton chiefly prevailed, having for some time previously been used in honour of a family of that name, who had come into possession of the greater part of the parish. The district appears to have been in remote times the scene of important military operations; there were remains of a large encampment lately existing on the lands of Comiston, and in the same vicinity were until lately some extensive cairns, whence fragments of old implements of war had been taken. The *Kel Stone*, "the stone of the battle", which is a large upright stone, from time immemorial also called *Camus Stone*, renders it probable that this spot was originally the encampment of some Danish forces. In the barony of Redhall formerly stood a strong castle, which, in 1572, was garrisoned by the regent Mar, and the king's party. In 1650, it was defended vigorously against Cromwell and his army, by the laird and his veteran band, and upon the castle being taken, the laird was commended by Cromwell for his bravery, and set at liberty. The ecclesiastical memorials of the parish reach back to the 11th or 12th century; the lands were then granted to the monks of Dunfermline by Ethelred, son of Malcolm Canmore, and confirmed to them by his brother David I., and in 1234 by Pope Gregory. The vicarage, however, was taken from the monks, and given first to the canons of Holyrood, and afterwards to the canons of St. Anthony at Leith, by Kennedy, Bishop of St. Andrew's, in the 15th century. The superiority of the lands of Wester Hailes remained with the canons till the Reformation, and that of Easter Hailes continued with the monks of Dunfermline till the same period.

THE PARISH is of an irregular form, about three and a half miles in length from north to south, and about

three miles in breadth from east to west, and containing 5070 acres. The surface and scenery are richly diversified, presenting on the south-eastern boundary the northern range of the Pentland hills, rising 1600 feet above the sea, and from the skirts of which the ground slopes gradually to the level of the Water of Leith, which flows through the lower part of the parish. Colinton dell, on the banks of the Leith, is remarkable for its beauties. In the direction of the north-east, the elevations of the Fir hill and Craig-Lockhart hill form an interruption to the general declivity, and supply romantic features in the landscape, which is enriched by elegant mansions surrounded by gardens and plantations. The distant views from the higher lands embrace the capital with its numerous spires and romantic castle, the Firth of Forth and the coast of Fife, the Ochils, and the celebrated Grampians, which last bound the prospect in the north-west. The Water of Leith, which is the principal stream, though subject to repeated sinkings and swellings, is used to a great extent for the purposes of commerce and domestic convenience, turning no less than sixteen mills, and having a considerable bleachfield on its banks. There is also a variety of copious and excellent springs, from which, for a very long period, water was conducted in a regular and uniform manner for the supply of Edinburgh.

About 3436 acres are either in tillage or fit for tillage; 1356 are hilly grounds under pasture, and 278 are in plantations. The arable lands lie from 250 to 600 feet above the level of the sea, and produce good crops of all kinds of grain, potatoes, turnips, beans, peas, &c. Few sheep are kept, except on the Pentland hills and on Craig-Lockhart, consisting chiefly of Cheviots, with a few Leicesters; the number of cattle reared is likewise small. Very considerable improvements in husbandry have been made of late years, chiefly by deep draining, and a proper system of cropping. As, however, a large proportion of the ground rests upon a subsoil of stiff clay, the furrow drain and deep plough are still requisite, to facilitate the productive powers of the land. The annual value of real property in the parish is £12,314. The great abundance and variety of the subterraneous contents of the parish give it altogether an interesting geological character. The Pentland hills consist of claystone, porphyry, and felspar-porphry; the crags of Caerketan are clayey felspar, strongly mixed with black oxide of iron. Among the Pentlands are also found boulders of granite, gneiss, &c., with jaspers and malacite. Craig-Lockhart hill is basaltic rock, and the bed of the Leith Water abounds with highly interesting mineral productions, among which are fossil remains of fishes and vegetables. There are two freestone-quarries, large quantities of the contents of which have at different times been conveyed to Edinburgh for building materials; the value of one of the quarries to the lessor, some years ago, was £9000 a year, but at present it is not more than £1500.

Several beautiful mansions adorn the parish. Colinton House was built in the beginning of the present century, and is agreeably situated, commanding extensive prospects to the north and east. Dreghorn Castle, built about the same time, stands encompassed by plantations, and is also adorned with some ancient beech-trees, conferring a venerable and majestic appearance. Comiston House and Craig-Lockhart House were both built but a

few years ago, and are pleasantly situated, especially the latter, having for its site a wooded bank gently declining to the margin of the Leith Water. In a hollow which commands the pass through the Pentland hills stands a Peel tower, in the midst of beautifully romantic scenery: it was built by Lord Cockburn as an addition to the small house at Bonally, and forms a very interesting feature. The villages of Colinton and Slateford have each a post-office. Facility of communication is afforded by the road from Edinburgh to Lanark; by the Caledonian railway, which has a station at Slateford; and by the Union canal. Of the mills ten are meal-mills, one is for sawing wood, another for beating hemp and lint, one for grinding magnesia, and the others are employed in the paper manufacture, which has existed in Colinton for upwards of a century. Ecclesiastically the parish is within the bounds of the presbytery of Edinburgh and synod of Lothian and Tweeddale; patrons, the whole communicants in the parish who belong to the Established Church. The minister's stipend is about £221, with a manse, and a glebe let at £27 per annum. The church, which is very ancient, is beautifully situated in the vicinity of Colinton House; it was rebuilt in 1771, in 1817 was new-roofed, and in the year 1837 was enlarged and re-seated. There is a place of worship for members of the Free Church near Juniper-Green, and at Slateford is a meeting-house for the United Presbyterian Synod. A parochial school is supported, in which the ordinary branches of education are taught, and classical and mathematical instruction, with French, may be obtained; the master's salary is £34, exclusively of fees, &c., and a house and garden. There are two libraries; and a gardeners' society awards small premiums for the superior cultivation of vegetables, fruits, and flowers.

COLL ISLE, ARGYLLSHIRE.—See TREE.

COLLACE, a parish, in the county of PERTH; including the villages of Kinrossie and Saucher, and containing 702 inhabitants, of whom 191 are in the village of Collace, 7 miles (N. E.) from Perth. Collace is chiefly celebrated as having been the residence of the well-known Macbeth, Thane of Glamis, who had a castle in the parish, on the hill of Dunsinnan, a lofty and insulated eminence rising 1024½ feet above the level of the sea, and the oval summit of which is 169 yards in length, and eighty-nine in mean breadth. Here this usurper of the Scottish crown held his court; but on the approach of Malcolm (whose father Duncan he had murdered), with the English army commanded by Siwald, Earl of Northumberland, he fled northward, and was overtaken and slain at Lumphanan, in Aberdeenshire. His castle was immediately razed, and the remains of it destroyed by fire. The parish lies in the vale of Strathmore, on the north side of the Sidlaw ridge of hills; it is about two miles long, of nearly the same breadth, and contains about 3000 acres. The surface in general is flat, except towards the hills, where it is too steep for the plough. From Dunsinnan hill fine prospects are commanded of the surrounding country in every direction, and the long-stretched-out and lofty Grampians are seen to rear their heads in apparently endless succession. The soil mostly consists of a light dark-coloured loam, mixed in some places with clay, and resting upon a heavy red sand. The number of acres under tillage is 1747; 100 are in pasture, and 560 are under wood, consisting chiefly of Scotch fir and larch. Potatoes and oats are the chief produce,

but all kinds of grain and green crops are cultivated, of good quality, improvements in husbandry having been commenced at a very early period, and carried on with great success. Much attention has been given to the breed of cattle and horses, many of which are kept, and the farm-houses and buildings vie with those of the best parishes. The prevailing rock is sandstone, from two quarries of which an abundant supply is obtained for the whole parish. The annual value of real property in the parish is £2751.

The chief mansion is Dunsinnan House, which has lately been much enlarged and improved: it formerly belonged to Lord Dunsinnan, a senator of the college of justice and member of the high court of judicary, who died in 1812. The manufacture of yarn into cloth is carried on to a considerable extent, upwards of a hundred looms being in full operation: the raw material is obtained from Dundee by persons whose business it is to purchase it in large quantities; and when worked up into webs, it is returned to the same place, where it meets with a ready market. The Perth turnpike-road traverses the parish for about two miles. Ecclesiastically the parish is within the bounds of the presbytery of Perth, synod of Perth and Stirling; patron, the Crown. The stipend, of which £87 are received from the exchequer, is about £150: the manse and offices are commodious, and there is a glebe worth about £12 per annum. The church, built in 1813, is a handsome Gothic structure, with a square tower, surmounted by minarets, and contains 400 sittings; it is surrounded with venerable trees, and is much admired for its commanding locality. A place of worship and a school have been erected in connexion with the Free Church. There is a parochial school, in which every branch of instruction may be obtained; the master has excellent accommodations, with the maximum salary, and £27 fees. A parochial library has also been established.

COLLEGE OF ROSEISLE, a hamlet, in the parish of DUFFUS, county of ELGIN; containing 53 inhabitants. It is situated on the east side of Burgh-Head bay, about a mile and a half west of Duffus, and south of the road from Burgh-Head to Elgin.

COLLESSIE, a parish, in the district of CUPAR, county of FIFE; including the villages of Edenton, Giffordton, Kinloch, Ladybank, and Monkston; and containing 1346 inhabitants, of whom 210 are in the village of Collessie, $5\frac{1}{2}$ miles (W.) from Cupar. This place, which is situated on the road from Cupar to Auchtermuchty, is supposed to have derived its name from the position of its village at the bottom of a glen; of which, in the Gaelic language, the term Collessie is significant. The parish is about eight miles in extreme length, and four in average breadth, and is bounded on the south by the river Eden. It comprises about 16,540 acres, whereof 5000 are arable, 10,000 in pasture, about 1200 woodland, and nearly 300 marsh and uncultivated waste, the whole of which might without difficulty be reclaimed and rendered fertile. The surface is varied; in some parts rising into hills of moderate height, whose sloping sides are richly cultivated, and in others spreading into open vales intersected by the river Eden and various other streams, the principal of which is the Keilour, separating the eastern portion of the parish from the parish of Monimail. The scenery throughout is pleasingly diversified, and embellished with natural wood and

flourishing plantations. A tract of common comprising nearly 1000 acres has been divided and inclosed within the last fifty or sixty years, and is now covered with plantations, chiefly of fir; and the hills in general are crowned with ornamental timber.

The soil is various; in the north and north-western portions, extremely fertile; in others, light and sandy, and in some parts a sterile marsh. Extensive improvements have been made by draining. The Rossie loch, which covered nearly 300 acres, was partly drained towards the close of the last century, but remained little better than a morass till 1806, when Captain Cheape completed the undertaking. This gentleman, at an expense of £3000, reclaimed 250 acres, which now produce excellent grain; and left only about fifty acres in the centre, which, though affording good crops of hay, are still marshy. The lands have been also benefited by an embankment of the river Eden, and by deepening the bed of the Keilour. The system of agriculture has been greatly improved under the auspices of an agricultural society, supported by most of the landed proprietors in the district, and which holds annual meetings for the distribution of prizes. The principal crops are barley, oats, wheat, potatoes, and turnips; and the species of barley called Chevalier, and Italian rye grass, have been introduced by the members of the society. Here the pastures are very extensive, and many of them luxuriantly rich; the cattle are of the black Fifeshire breed, crossed occasionally with the Teeswater and the Angus breeds. The annual value of real property in the parish is £8032. The substratum is chiefly whinstone, which is quarried for building purposes, and is much esteemed; sandstone is also found in some parts, but it is not worked to any great extent. The mansion-houses, with their well-planted and tastefully laid-out demesnes, add greatly to the beauty of the scenery. In the house of Kinloch are preserved some of the earlier pictures painted by Wilkie, one of which is "Pitlessie Fair", containing an admirable group of more than 150 figures, chiefly portraits, and which he presented to the late Mr. Kinnear out of gratitude for the kindness he had experienced at Kinloch. Great facilities of communication are afforded by the Edinburgh, Perth, and Dundee railway.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Cupar and synod of Fife; patron, William Johnstone, Esq. The stipend of the incumbent is £223. 4. 9.; the manse is a comfortable residence, having been enlarged and nearly rebuilt within the last twenty years, and the glebe is valued at £15 per annum. The former church, an ancient edifice, being ill adapted for public worship, and too small for the parish, another was lately erected, a handsome building with a low square tower, and capable of seating 550 persons. There is a place of worship for members of the Free Church. Collessie parochial school is attended by nearly seventy scholars; the master, who, in addition to the ordinary branches, teaches Latin and the mathematics, has a salary of £35. 12., with £25 fees, and a house and garden. There is also a parochial library.

A little to the south of the village, is a cairn called the Gask Hill, consisting of loose stones overgrown with turf, about twelve feet in height. Near this spot, an ancient sword about eighteen inches in length, and several fragments of human bones, covered with a few flat stones, were dug up some years since. On the lands of

Melville, and near the site of Hall Hill, the ancient mansion of the Melville family, is an upright block of whinstone, about six feet in circumference and nine in height. In the hamlet of Trafalgar are two spots, supposed to have been the sites of military stations erected to secure the pass from Newburgh to the interior of the county of Fife, from which circumstance a small lake between this place and Newburgh is called Lindores, from the Gaelic *Linne-Doris*, "the loch of the pass". The eastern fort, called Agabatha, was seated on an eminence surrounded with a moat; and relics of antiquity have been discovered near the spot, among which were a quern or hand-mill of mica-slate, and a number of coins of the date of Edward I. Maiden Castle, the western fort, is said to have derived that name from the daughter of the governor, who, concealing the death of her father during a siege, continued to give, herself, the necessary orders for its defence, till the assailants were compelled to abandon the attempt. The site of this fort is pointed out by some trees planted there by the late proprietor of the land. In the interval between the forts numerous coffins, urns, and human bones have been discovered; the urns, one of which is still preserved at Kinloch, were of Celtic origin, about eighteen inches in height, fifteen inches in diameter at the base, and extremely conical in form. Among the eminent persons connected with the parish, was Sir James Melville, proprietor of the lands of Hall Hill in the time of Mary, Queen of Scots; there are no remains of the mansion, and even the site of it has disappeared since the inclosure of the lands. Dr. Hugh Blair was incumbent of this parish, to which he was ordained in 1742.

COLLIESTON, a village, in the parish of SLAINS, district of ELLON, county of ABERDEEN, 6 miles (E. by S.) from Ellon; containing 357 inhabitants. This is a maritime village, situated on the eastern coast, and inhabited chiefly by fishermen, who obtain a comfortable livelihood by taking various kinds of white-fish, but especially haddock and cod, which are cured and sent in large quantities to Leith, Glasgow, and London.—See SLAINS.

COLLIN, or **COLLYN**, a village, in the parish of TORTHORWALD, county of DUMFRIES, $2\frac{1}{2}$ miles (E. by S.) from Dumfries; containing 283 inhabitants. It is on the western borders of the parish, and on the high road from Dumfries to Annan. From Collyn House, the elevated residence of the late Mrs. Janet Coulthart, are obtained picturesque views of the country around, especially in the northern and southern directions. There is a school, the master of which has a salary of £20, for teaching the ordinary branches of education, and derives as much more from fees.

COLLISTONMILL, a hamlet, in the parish of St. VIGEAN'S, county of FORFAR; containing 61 inhabitants.

COLLOCHBURN, or **CULLOCHBURN**, a village, in the parish of CAMBUSLANG, Middle ward of the county of LANARK; containing 166 inhabitants. The greater part of the population is employed in the manufactures of the district.

COLMONELL, a parish, in the district of CARRICK, county of AYR, 5 miles (N. E.) from Ballantrae; containing 2801 inhabitants. This parish, the name of which is of very uncertain derivation, is about nineteen miles and a half in length, and seven miles in extreme breadth. It is bounded on the north by the Firth of

Clyde, and comprises 56,800 acres, of which 4000 are arable, 2000 fine meadow land, 800 in woods and plantations, and the remainder moor and rough pasture. The surface is beautifully varied with hills of gentle elevation, inclosing fertile valleys, and with gradually-rising grounds and level meadows. The chief river is the Stinchar, which has its source in the parish of Barr, and, in its winding course of nearly nine miles through this parish, receives the waters of the Dhuisk, or Blackwater, a river of almost equal breadth, over which are three bridges of stone, and several of wood. The banks of the Stinchar and the Dhuisk are clothed with wood, chiefly oak, ash, elm, birch, alder, and larch. There are also several lakes; the principal are Loch Dornal and Loch Mabiery, which both abound in romantic scenery. The higher grounds command prospects of the surrounding districts, but none of the hills have an elevation of more than 700 feet above the sea, and the views, though interesting, are not very extensive: the finest prospect is that from the hill of Knockdolian, embracing the whole extent of the vale of the Stinchar, from Penmore to Knockdolian.

On the banks of the Stinchar the soil is extremely fertile; the higher lands are chiefly a stiff clay resting upon gravel, and a considerable portion is poor moorland affording scanty pasturage. The chief crops are oats, wheat, barley, potatoes, and turnips; the system of agriculture is in a very advanced state, and all the most recent improvements are in general practice. Great attention is paid to the management of the dairy, and about 4000 stone of cheese are annually produced for the neighbouring markets; the Cunningham breed of cows is yearly increasing, and many of that kind are pastured on the several dairy-farms. The cattle reared for sale are chiefly of the Galloway breed, and some hundreds of them are annually sold to the cattle-dealers from the south. About 9000 sheep of the black-faced breed, and 200 of the Cheviot and Leicestershire breeds, are on the average pastured. The annual value of real property in the parish is £12,425. Limestone is extensively quarried, and there are five kilns, at which about 20,000 bolls of lime are burnt for manure every year. A fishery on the coast is carried on with success; the chief fish found here are cod, whittings, haddocks, turbot, skate, and herrings, and lobsters are taken in abundance, and sent by steam to Dublin, where they are in great demand. Salmon is also found, in the river Stinchar; and there are several salmon pools, the rents of which in the aggregate amount to £30 per annum. The chief seats of the parish are, Penmore and Dalgerrock, which are of some antiquity; and Knockdolian, Dhuisk Lodge, Corwar, Ballochmorie, and Drumlamford, of recent erection. Colmonell village, formerly consisting only of a few thatched cottages, has been almost entirely rebuilt in a regular style; and, since the passing of the Reform act, has been a polling-place for the election of a member for the county. A post-office is established. Fairs are held on the first Monday in February, May, August, and November (O. S.); and three cattle-markets at Barhill, a small hamlet of recent origin, on the river Dhuisk, on the fourth Friday in April, September, and October (O. S.).

Ecclesiastically the parish is in the presbytery of Stranraer, synod of Galloway, and in the patronage of the Duchess de Coigny. The minister's stipend is £256.

18. 9., with a manse, and a glebe valued at £15 per annum. Colmonell church, erected in 1772, and repaired in 1832, is a neat substantial edifice, adapted for a congregation of 500 persons. A chapel of ease has been erected, in which the incumbent officiates every fourth Sunday during ten months of the year; and there are places of worship for Reformed Presbyterians, Original Seceders, and members of the Free Church. The parochial schoolmaster has a salary of £34, with £26 fees, a house and garden, and the half of £21. 15., the rent of the farm of Little Dungart, bequeathed by Dr. Kennedy, for the gratuitous instruction of six poor scholars. There are some remains of the ancient castles of Knockdaw, Carleton, Craigneil, Kirkhill, Penwherry, and Knockdolian. The most interesting of these are the ruins of Craigneil, supposed to have been erected in the thirteenth century, and to have been frequently visited by Robert Bruce; they are situated on a rock, and the castle was anciently a prison, and a place of execution for criminals.

COLONSAY and ORONSAY, two islands, in the parish of JURA, district of ISLAY, county of ARGYLL, 15 miles (N. N. W.) from Portaskaig; containing about 840 inhabitants. These islands, which are situated in the Atlantic Ocean, about twenty miles to the west of the isle of Jura, are supposed to have derived their names from St. Columba and St. Oran, respectively. The former saint is said to have founded a monastery for Culdees, prior to his settlement at Iona; and a priory of canons regular was founded by one of the Lords of the Isles, as a cell to the abbey of Holyrood. The islands are separated from each other only by a firth, in some parts scarcely a hundred yards wide, and which, being dry at the reflux of the tide, gives them the appearance of one continuous island. Together they are about twelve miles in length, varying from one mile to nearly four miles in breadth, and comprising about 11,300 acres, of which one-third is arable and meadow, and the remainder hill pasture, moorland, and moss. The soil is various, and has been much improved by the proprietor, who has also reclaimed considerable tracts of unprofitable heath and moor, and introduced the best system of husbandry. The chief crops are potatoes and barley, of which large quantities are sent to Islay for the distilleries, and to Ireland. Great numbers of black-cattle and sheep are reared on the pastures, and from the attention paid to the improvement of the breed, they obtain a high price in the markets of Doune and Dumbarton, to which they are mostly sent. The plantations consist principally of elm, ash, sycamore, and alder. The house of Killoran, situated in Colonsay, was built in 1722, on the site of the ancient Culdee establishment; it is a spacious mansion, to which two wings have since been added. At Oronsay a handsome residence was built in 1772.

There is no village. Kelp is still manufactured here, affording employment to about 100 persons during the summer, and the produce being sent to Liverpool. There are several fishing-stations on the coast, but they are so exposed to the swell of the Atlantic that comparatively little benefit is derived from them; the fish taken are cod, haddock, ling, skate, turbot, flounders, eels, and lobsters of large size and excellent quality. The harbour of Portnafeamain affords secure shelter, and a substantial quay has been erected by the proprietor, near which is

a good inn. There is a church, built by the heritors in 1802, a neat structure containing 400 sittings. The minister, who is appointed by the incumbent of Jura, has a stipend of £50, and a house and garden, with some land given by the proprietor of Colonsay. A parochial school for teaching English and Gaelic exists here; the master has a salary of £11. 2., with £1. 10. fees. There is also a school upon the establishment of the Society for Propagating Christian Knowledge; the teacher receives a salary of £15, and £3 fees, with accommodation from the proprietor. Some portions remain of the ancient priory of Oronsay, situated close to the mansion-house, and forming a venerable feature in a scene of wild beauty. The ruins are by far the most interesting in the West Highlands, with the exception only of those of Iona; they consist chiefly of the church, in which are still preserved the tombs of the ancient Lords, with a portion of the cloisters and conventual buildings, and an ancient cross with an inscription, of which the words *Hæc est Crux Colini Prior. Orisoi* are still legible. There are also the ruins of a castle on an island in a lake near Colonsay House, which is supposed to have been a stronghold, or place of retreat in times of danger. Sir John M'Neill, G. C. B., late envoy extraordinary and minister plenipotentiary to the court of Persia; and Duncan M'Neill, Esq., late lord-advocate for Scotland, were born in Colonsay, sons of John M'Neill, Esq., proprietor of the two islands.

COLONSAY, LITTLE, an isle, in the parish of KILNINIAN, county of ARGYLL. It lies between the islands of Staffa and Gometra, and has a very few inhabitants, who feed some sheep on the verdure it affords. In many places are specimens of basaltic pillars, similar to those of Staffa.

COLSAY ISLE, in the parish of DUNROSSNESS, county of SHETLAND. This is a small islet, lying west of the mainland of the parish, about a mile south of the island of St. Ronan's, and nearly double that distance north of Fitfull Head. It is wholly uninhabited.

COLTFIELD, a hamlet, in the parish of ALVES, county of ELGIN, 3 miles (W. by N.) from Elgin; containing 42 inhabitants. It lies near the south-eastern corner of Burgh-Head bay, and on the road between Kinloss and Duffus.

COLVEND and SOUTHWICK, a parish, in the stewartry of KIRKCUDBRIGHT; containing 1495 inhabitants, of whom 875 are in Colvend, 18 miles (E.) from Dumfries. The former of these places is supposed to have derived its name from John de Culwen, its proprietor in the fifteenth century; and the latter from the position of its ancient church, now in ruins, with reference to a small river that flows through the parish into Solway Firth. After the dilapidation of the church of Southwick, that parish was annexed to Colvend, with which it has been united from the time of the Reformation. In old records Southwick is spelled *Siddick*. The united parish extends about eight miles from north-east to south-west, and is partly bounded on the south-east by the Solway Firth; the breadth of the parish is nearly four miles, and the river Urr forms its south-western limit. The surface is extremely irregular, and is so broken into detached portions by intervening masses of rock and impenetrable copses of furze and briars, as to render it impracticable to ascertain, with any degree of correctness, the probable number of acres under cul-

tivation. In some parts the ground rises into hills of moderate height, and in other parts into mountainous elevation, forming towards the north a chain of heights skirting the lofty and conspicuous mountain of Criffel. For nearly two miles along the eastern coast the surface is tolerably level, and divided into several fields of good arable land. The coast is bold and rocky, and in many places presents lofty and precipitous cliffs, which overhang the Firth, and from which, at low water, the sea retires, leaving a broad tract of level sands: in the crevices of these rocks is found abundance of samphire, and considerable quantities of it are collected with great hazard. The Firth is about nine leagues in breadth at this place; the river Urr is navigable for eight miles from it, for vessels of not more than eighty tons, and the Southwick burn, which is not navigable, joins the Firth on the boundary of the parish. A salmon-fishery is carried on upon a small scale, and during the season smelts are also found; cod is taken with lines during the winter, and in the year 1834 flounders were taken in such numbers that cart-loads were distributed throughout the neighbouring parishes.

In general the soil is a thin light loam, and, though warm and fertile, better adapted for pasture than for tillage; the chief crops are oats and barley, with potatoes, turnips, and clover. The system of agriculture is improved, and much of the previously unprofitable waste land has been reclaimed. The cattle are principally of the Galloway breed; the sheep are the black-faced, and about a thousand of that kind are pastured on the hills. The annual value of real property in the parish is £6006. On the estates of Fairgirth and Barnhourie are considerable tracts of ancient wood; and the plantations, of more modern date, are also extensive, and consist chiefly of oak and Scotch fir, both which are in a thriving state. The prevailing rocks are granite, of which there are quarries; stone of good quality for millstones is also raised, and there are evident indications of copper and iron, but no attempt has yet been made to work either of the veins. At the mouth of the river Urr small vessels are built, and there is a landing-place for unloading cargoes of lime and other articles, and for shipping the agricultural produce to Liverpool, Glasgow, and other ports.

Eclesiastically the parish is within the bounds of the presbytery and synod of Dumfries. The minister's stipend is £234. 14. 6., with a manse, and a glebe valued at £20 per annum; joint patrons, the Crown and the Duke of Buccleuch. The church is a plain structure, erected in 1771, and inadequate to the population. Parochial schools are supported at Colvend and Southwick, the masters of which have each a salary of £26. 13.; the former receives fees averaging £15, and the latter has a house and garden, with fees amounting to £36. There are numerous caverns on the shore, and in one of them, about 120 yards in length, is a well twenty-two feet deep, into which a piper is supposed to have fallen while attempting to explore the interior of the cavern. Near it is a detached portion of rock, formed naturally into an arch forty feet in height, called the Needle's Eye. In one of the clefts of the rocks is a strong chalybeate spring. At Auchenskeoch, in Southwick, are the remains of a large castellated building of which the history is unknown. In the Colvend portion of the united parish, at the mouth of the river Urr, are vestiges of what ap-

pears to have been a place of defence, called the Castle-hill of Barclay, with a ditch round it on the side next the land, and on the other a precipice descending into the sea: and about a mile up the river, at a place called the Moat of the Mark, are the remains of a vitrified fort, where some fine specimens of vitrified granite are sometimes dug up.

COMBS, ST., a village, in the parish of LONMAY, district of DEER, county of ABERDEEN, 5 miles (S. E.) from Fraserburgh; containing 305 inhabitants. It lies on the eastern coast, about two miles to the south-south-east of Cairnbulg point, and is also called St. Colm, a name at different times borne by the parish, from the saint to whom the old church was dedicated. The inhabitants are chiefly fishermen, who have about thirteen boats for the herring, and the same number for ordinary white, fishing. On the sea-side near the village, originally stood the church. There is a parochial school here, the master of which has a salary of £28, with £25 from Dick's bequest, and the school fees.

COMELY-BANK, a village, in the parish of MELROSE, forming part of the late quoad sacra parish of LADHOPE, county of ROXBURGH, and containing 157 inhabitants.

COMRIE, a parish, in the county of PERTH; including the villages of Dalginross, St. Fillan's, and Ross, and containing 2471 inhabitants, of whom 803 are in the village of Comrie, $6\frac{1}{2}$ miles (W.) from Crieff. The name of this place is derived from a Gaelic term signifying "confluence", used in reference to the junction of the rivers Earn, Ruchill, and Lednock near the site of the church of Comrie. The present parish consists of the ancient parishes of Dundurn and Tullichetal, with parts of Monivaird, Strowan, and Muthill. Several traces of camps and fortifications, some of which have been recently obliterated by the operations of husbandry, connect the district with the military enterprises of the Romans. One of these relics of antiquity was visible in the last century at Dalginross; and from another which still remains there, and the well-known Roman road that formerly existed in the locality, it is supposed that the battle described by Tacitus as fought between Agricola and Galgacus, took place on the plain of Dalginross.

The PARISH is about thirteen miles long and ten broad, and contains an area of 67,122 acres. It is bounded on three sides by lofty mountains, the principal range of which is the Grampians: the east opens on the valley of Strathearn. The land is throughout diversified with mountains and valleys; the mountain of Benhonzie is 2900 feet above the level of the sea, and BenVorlich, which is seen from Perth, from Edinburgh, and Ayrshire, rises to the height of 3300 feet. Besides the vale of the river Earn, there are Glenartney and GlenLednock; they are considerably above the sea level, and open on the village of Comrie. The dryness of the soil, and the protection afforded from the winds by the surrounding mountains, render the climate mild and salubrious; and the scenery is little, if at all, inferior to those parts most distinguished for the union of the picturesque and the romantic with the majestic and sublime. The loch and river of Earn, the banks of which are dressed in luxuriant verdure, and crowned with wood, afford some of the beautiful views in the district.

The fine scenery connected with Loch Earn may be said to commence at the village of Comrie, near the

eastern boundary of the parish. Here, and even lower down, the vale of the Earn is full of natural and acquired beauty; and passing upwards towards the lake, the scenery becomes more interesting at every step. At that part of the valley which adjoins to the lower end of the lake, its character is similar to that of the Trosachs, at the corresponding extremity of Loch Katrine, though less minutely rugged and picturesque. Loch Earn extends nine miles in length, and generally about one mile in breadth; it is remarkable for the beauty of its scenery, and though small in its dimensions, compared with some other lakes, yet it possesses a variety of character not found in many of far greater magnitude and extent. The hills that bound it are lofty, bold, and rugged. They terminate in various and rocky outlines, and the surfaces of the declivities are equally bold and striking, being enriched with precipices and masses of protruding rock, with deep hollows and ravines, and with the courses of innumerable torrents which pour from above, and, as they descend, become skirted with trees till they lose themselves in the waters of the lake. Wild woods also ascend along their surface, in all the irregularity of distribution so peculiar to these rocky mountains. At the upper extremity of this beautiful lake are the village and inn of Lochearnhead, in the parish of Balquhiddel.

The SOIL is for the most part somewhat gravelly, but well cultivated and fertile; clay is sometimes found mixed with sand, and in several of the glens the soil is loamy. There are 7097 acres cultivated or occasionally in tillage; 55,571 pasture or waste; in wood, 3139 acres; and common or disputed, 1315. No wheat is grown; but oats, barley, and potatoes are produced in very heavy crops, especially if the land has been well manured. The improvements in husbandry are considerable; a whole farm has lately been reclaimed by the proprietor of Dalginross, and yields a profitable return. The chief breed of sheep is the black-faced, which has been greatly improved by crossing it with that of Crawford-Muir in Dumfries-shire: Cheviots and Leicesters are also common. The cattle are partly of the Highland breed, and Ayrshire cows have been generally introduced. There are extensive natural woods of oak, ash, birch, alder, and hazel, for the two first of which the soil is especially adapted; fir and larch have been planted to a considerable extent, and thrive well. The annual value of real property in the parish is £11,700. The predominating rock is mica-slate; in Glen-Lednock granite is found, and in Glenartney a considerable quantity of clay-slate. In the lower grounds, as well as in Glenartney, there is old red sandstone; at Ardvorlich marble has been discovered, and in some places lead has been seen in small veins. Iron-ore is plentiful, and from the numerous remains of furnaces for smelting, it appears to have been wrought to some extent. There are three slate-quarries, and several quarries of whinstone; also a limestone-quarry, from which large supplies are obtained for burning into lime for agricultural purposes. The chief mansions are Dunira, Ardvorlich, Dalhousie, Aberuchill, and Comrie House.

The village of Comrie is a burgh of barony, under a bailie, and there are several constables, one of whom has the charge of a small lock-up house. The inhabitants are employed to a very considerable extent in manufactures; there is a woollen-mill, and many persons are engaged in weaving cotton for firms in Glasgow and

Perth. A distillery for whisky has also been established. Salmon, trout, and other fish are found in the rivers. Five fairs are held annually in March, May, July, November, and December; there is a post-office in the village, and the turnpike-road from Perth to Lochearnhead passes through the parish. Ecclesiastically the parish is within the bounds of the presbytery of Auchterarder, synod of Perth and Stirling; the patronage is exercised by the Crown, and the minister's stipend is £250, with a manse, and two glebes, valued together at £22 per annum. Comrie church, erected in 1804, principally at the instance of Viscount Melville, is conveniently situated in the village; it is a handsome and commodious edifice with a spire, and contains 1250 sittings. At Dundurn is an ancient chapel, in which the parish minister occasionally, and his assistant regularly, officiates; it was nearly rebuilt in 1834, by subscription, and will contain about 400 persons. The members of the Free Church and the United Presbyterian Synod have places of worship. There is also a parochial school; the master receives the maximum salary, with about £45 fees, a house and garden, and teaches Greek, French, mathematics, and the usual branches of education. The village contains a parochial library of about 500 volumes; there is a small circulating library, and two friendly societies have been established. Among the remains of antiquity in the parish are the ruins of several Druidical temples; and a highly venerated relic, also supposed to be Druidical, is still preserved, which is said by antiquaries to be one of those stones that were used as the official badge of the Arch-Druids. On the hill by the village is a handsome monument to the memory of the first Lord Melville, who erected the beautiful mansion-house at Dunira, and made it his favourite residence during the parliamentary recess. The late Mr. Drummond, under-secretary, was born in the parish, and was heir to the estate of Comrie, which was sold to Lord Melville during his minority. The estates both of Dunira and Comrie are now the property of Sir David Dundas. Some severe shocks of earthquake have been felt in the parish.

CONANBRIDGE, a village, in the parish of URQUHART and LOGIE WESTER, county of ROSS and CROMARTY, 3 miles (S. by W.) from Dingwall; containing 342 inhabitants. This is a prosperous village, situated in the vicinity of a bridge over the river Conan or Conon, and on the road between Inverness and Dingwall. The bridge is of five arches, with 265 feet of water-way, and was erected under the auspices of the parliamentary commissioners, by whom it was approved in Oct. 1809.

CONDORAT, a village, in the parish of CUMBERNAULD, county of DUMBERTON, $2\frac{1}{2}$ miles (S. W.) from Cumbernauld; containing 709 inhabitants. It is situated on the north side of the river Logie, and on the high road from Glasgow to Stirling. Part of the population is employed in weaving and other manufactures of the district. A school is aided by an annual allowance from the heritors.

CONNAGE, a village, in the parish of PETTY, county of INVERNESS, a few miles (N. E.) from Inverness; containing 97 inhabitants. This is a small fishing-place on the east side of the Moray Firth, and on the road from Inverness to Ardersier.

CONTIN, a parish, in the county of ROSS and CROMARTY, 8 miles (S. W. by W.) from Dingwall; including part of the quoad sacra districts of Carnoch and Kin-

loch-Luichart, and containing 1770 inhabitants. The origin of the name of this place, which is involved in considerable obscurity, is said to be Gaelic, the word expressing the confluence of two streams of water. The Druids appear to have had a settlement here in ancient times; and from its strong places, the remains of which are still visible, we may conclude Contin to have been in after ages the theatre of several bloody encounters: the spot *Blar' na'n Ceann*, or "the field of heads", derived its name from a sanguinary engagement between the Mackenzies of Seaforth and the Macdonells of Glen-garry. The parish is thirty-three miles long, and nearly of the same breadth; the surface is mountainous, and the scenery about the valleys and lakes, especially Loch Achilty, is highly picturesque. The chief streams are, the Conon or Conan, the Meig, and the Rasay, which all unite at Moy, and form one large river that takes the name of Conon, and empties itself into Cromarty Firth not far from the town of Dingwall. The lakes are numerous, the two most interesting being Achilty and Kinellan, the former of which is famed for its trout and char, and the latter for its artificial island, based on piles of oak, and for a distinct echo: the scenery of both is delightful.

The mountainous districts are used only for pasture, but the valleys, in which the soil is rich and productive, are chiefly arable. There are several farms of 150 acres each, all cultivated upon the most improved system of husbandry; a large part of the low land is covered with wood, and a few tracts are planted with larch and fir. The land has considerably increased in value during the last half century; in 1792 the rental scarcely reached £1400, whereas the annual value of real property in the parish now is £6406. The sheep are the black-faced and the Cheviots, and some of them have obtained competition prizes; the cattle are of the black Highland breed. In this parish the strata are formed of gneiss, and sometimes red sandstone is found. The principal mansion is at Coul; it is surrounded by grounds tastefully laid out. Craigharroch is also an elegant residence, commanding a view of Loch Achilty and the interesting scenery around. The parish abounds with game. There is a fishery in the rivers Conon and Rasay, in which the finest salmon is taken; the profits are estimated at £40 a year. The road to Lochcarron passes through the parish, and there are several other roads for particular districts. Fairs were until lately held here three times in the year, but they have been discontinued. Ecclesiastically the parish is within the bounds of the presbytery of Dingwall, synod of Ross: the patronage is exercised by the Crown; and the stipend of the minister is £265, with a manse, and a glebe valued at £16 per annum. Contin church, the date of which is uncertain, has strong marks of having been built long prior to the Reformation; it underwent considerable repairs some years ago, but is still an inconvenient and uncomfortable building. There is a parochial school, in which the ordinary branches of education are taught, with the classics and mathematics if required; the master's salary is £30 a year, with from £8 to £10 fees. Another school is supported by the Society for Propagating Christian Knowledge, and a third by another society. There are the remains of a Druidical temple at the border of Loch Achilty. On the estate of Hilton are several chalybeate springs of strong power.

COPAY ISLE, in the parish of HARRIS, county of INVERNESS, 2 miles (S. W.) from the Isle of Lewis. It lies in the sound of Harris, and is of small extent, and uninhabited.

COPINSHAY, an island, in the parish of DEERNESS, county of ORKNEY; containing 13 inhabitants. It is about three-quarters of a mile in length and half a mile in breadth, lying about three miles directly eastward of the mainland, and comprising some good ground, both arable and pasture. The island is accessible on the west side only. The height of the east side, forming a perpendicular rock, is 300 feet, and about three-quarters of a mile to the north of the island, is a large rock called the Horse of Copinshay, about 200 feet high, and covered on the top with grass, to which a few sheep are sometimes taken to graze. Both of these rocks are resorted to by immense numbers of sea-fowl in the spring and summer months; and at the period when they deposit their eggs and hatch their young, if a gun be fired from a boat below, the birds, alarmed by the report, fly from their nests in such myriads as to darken the air for some extent around. They are principally maws, nories, scarfs, auks, and kittyaüks.

CORNCAIRN, a village, and a burgh of barony, in the parish of ORDIQUHILL, county of BANFF, 6 miles (S.) from Portsoy; containing 94 inhabitants. This place is situated in the neighbourhood of Cornhill, a village on the road from Huntly to Banff, where several annual fairs and cattle-markets are held, the latter well known as the "Cornhill markets".

CORRIE, a village, in the parish of KILBRIDE, Isle of ARRAN, county of BUTE; containing 222 inhabitants. It is situated on the eastern shore of the island, about three miles and a half north of Brodiek bay and castle. There is a small harbour, with a quay, but it is only accessible to vessels at high water. A school has been established in the village.

CORRIE, county of DUMFRIES.—See HUTTON and CORRIE.

CORSOCK, a hamlet, in the parish of PARTON, stewartry of KIRKCUDBRIGHT, 9 miles (E. by S.) from New Galloway; containing 38 inhabitants. It lies in the eastern confines of the parish, near the Urr water, and south of the high road from New Galloway to Dumfries.

CORSTORPHINE, a parish, in the county of EDINBURGH; including the village of Gogar, and containing 1551 inhabitants, of whom 372 are in the village of Corstorphine, 4 miles (W.) from Edinburgh, on the road to Glasgow. This place, the name of which is of uncertain origin, appears to have been from a very early period the property and residence of families of distinction. David le Mareschall held possession of it in the reign of Alexander II. The estate subsequently became the property, in 1376, of Adam Forrester, ancestor of the Lords Forrester, who in 1373 was provost of Edinburgh, and in 1390 was made keeper of the great seal by Robert III., who employed him in frequent embassies to England. In 1446 the castle of Corstorphine was destroyed, and the lands laid waste, by Chancellor Crichton and his military vassals, in retaliation of a similar outrage on his castle of Brankstoun by Sir John Forrester and Sir William Douglas. In 1572 the castle was garrisoned by the Earl of Mar, regent of the kingdom, with a view to prevent the sending of supplies to

the castle of Edinburgh, at that time held for Mary, Queen of Scots, by William Kirkcaldy of Grange. In 1650 General Leslie drew up his forces on the meadows to the east of the village, to check the proceedings of Cromwell, whose army was posted on the Pentland hills. The latter, in order to force him to an engagement, advanced for the purpose of interposing a body of men between him and Linlithgow; but Leslie, marching westward from his former position, intrenched his forces on the field of Gogar, and his opponent, finding it impracticable to dislodge him in consequence of the marshy nature of the ground, retreated, after a sharp skirmish, to Musselburgh. Cromwell, however, afterwards took possession of this place; and his forces, in retaliation of the opposition they had experienced from Lord Forrester, mutilated the tombs and monuments of the Forrester family in the church, the interior of which they nearly destroyed, and utterly laid waste the surrounding lands.

The PARISH, which includes part of the ancient parish of Gogar, with the lands of Ravelston and Saughton, detached from the parish of St. Cuthbert in 1633, contains about 2650 acres, exclusively of plantations, roads, and waste. Its surface, which is generally level, is diversified with a gentle elevation near the village, and, towards the north-east, by the beautiful hill of Corstorphine, which rises to a height of 474 feet above the sea, and is clothed to its very summit with rich plantations. The streams in the parish are the Leith water and Gogar burn; the former flows through the eastern portion of the lands, and the latter into the river Almond. In general the soil is fertile, producing abundant crops, and the meadows and pastures are luxuriant; the system of agriculture is in a highly improved state, and around the village are large tracts of garden-ground, from which great quantities of fruit are sent to Edinburgh. The annual value of real property in the parish is £9964. On Corstorphine Hill are several quarries of fine freestone, from which materials were taken for the erection of the Parliament House, Heriot's Hospital, and various other public buildings in Edinburgh: but they have for many years been abandoned, with the exception of one lately drained. There are also some quarries of blue whinstone in the parish.

Upon the acclivity of Corstorphine Hill is Ravelston House, and around its base are many noble mansions, among which are Beechwood and Belmont. Within the parish are also Saughton House, Clermiston, and Gogar. The village is beautifully situated at the base of the hill, on a slight elevation above the meadows on either side, and is a favourite resort of the citizens of Edinburgh. Near it was till lately a slightly sulphureous spring, which in 1749 was in such high repute that a stage-coach was established for the conveyance of visitors, making nine journeys daily between this place and Edinburgh. A small pump-room was erected over the well, by one of the Dick family; but it was suffered to fall into decay, and by the sinking of a ditch near the spot within the last few years the spring has entirely disappeared. The village of Stanhope-Mills, on the lands of Saughton, contains an ancient house, over the doorway of which are the armorial bearings of Patrick Elphinston, with his initials and the date 1623; and one of the rooms, the roof of which is highly ornamented, has on the wall the royal arms, with the initials

C. R. II. The parish is intersected by the Edinburgh and Glasgow railway, and by various roads.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Edinburgh, synod of Lothian and Tweeddale. The minister has a stipend of £242, with a manse, and a glebe valued at £30 per annum; patron, Sir William Hammer Dick Cunyngnam, Bart. The church, which was formerly collegiate, was founded in 1429, under the invocation of St. John the Baptist, by Sir John Forrester, who endowed it for a provost, five prebendaries, and two choristers. It is a venerable cruciform structure in the later English style, with a handsome tower and spire, and, notwithstanding the mutilation it suffered from Cromwell's soldiers, retains much of its original character and beauty. The roof is plainly groined, and is supported by ranges of clustered columns with richly-moulded arches and ornamented capitals; there are numerous monuments of the Forrester family, whose recumbent effigies are finely sculptured, and various other ancient tombs. A small portion of the church of Gogar is still remaining, and has been converted into a sepulchral chapel by the proprietor of the lands. At the east end of Corstorphine church, a lamp was formerly kept burning to guide the traveller, for the maintenance of which an acre of land near Coltsbridge, thence called the Lamp Acre, was allotted: this now forms an endowment for the parish schoolmaster. There is a place of worship for members of the Free Church. The parochial school is attended by about seventy scholars: the master has a salary of £34, with a house and garden, and the acre of land before noticed; the fees average about £20. The permanent poor's fund is about £450, arising from bequests. On taking down the remains of Corstorphine Castle, towards the close of the last century, a large number of gold and silver coins were found; and on the erection of Gogar House in 1811, several remains of Roman antiquity were discovered, consisting of a dagger with part of the scabbard, a fibula, and a gold ring of very slender substance. Numerous stone coffins have been found at various times on the lands of Gogar, and the spot is supposed to have been the original place of sepulture of the ancient parish, or not improbably the site of General Leslie's encampment, where bodies of the slain were interred.

CORTACHY and CLOVA, a parish, in the county of FORFAR, 4 miles (N.) from Kirriemuir; containing 867 inhabitants. The former of these ancient parishes, which were united in 1608, is supposed to have derived its name, anciently Quartachie, from a Gaelic term descriptive of the situation of its church and castle in a small valley surrounded with elevated lands. Of the latter parish the name is of very uncertain derivation. The barony of Cortachy belonged at a very early period to the family of Ogilvy, ancestors of the Earls of Airlie, and whose baronial castle here has for many generations been their chief seat, and is still the residence of the present earl. The district of Cortachy is about ten miles in length and nearly four in average breadth, of somewhat triangular form, narrow at the southern extremity, where it is bounded by the confluence of the rivers South Esk and Prosen, and comprising about 23,700 acres. Clova, which is nearly of equal length, and varies from two to almost four miles in breadth, is situated to the north-west of Cortachy, and comprises an

area of 19,000 acres; making a total in the whole parish of nearly 43,000 acres, of which about 3540 are arable, 1000 woodland and plantations, and the remainder mountain pasture and waste.

The surface of the parish is boldly diversified, and embellished with features of picturesque beauty and majestic grandeur in striking contrast. The south-western portion embraces part of one of the Grampian ranges, extending nearly through the entire length of the district, and declining on the south and south-west towards the river Prosen, and on the north and north-east towards the South Esk. Opposite to this mountainous range is another of greater elevation, stretching through the whole of the parish; and between them are the beautiful and richly-cultivated vales of Wateresk and Clova. The latter vale is divided on the north by a lofty mountain into two narrow glens, one of which takes a north-western, and the other a south-western direction. From these glens the adjacent mountains appear in all their towering grandeur, varying in height from 1500 to more than 3000 feet, and presenting a combination of bold and precipitous masses of barren rock, immense heights covered to their very summits with various kinds of grasses, and hills of stupendous elevation, affording excellent pasturage for both cattle and sheep. The river *South Esk* has one of its sources in Loch Esk, and others, of still greater power, in the stream of Falfearnie, &c.; it flows through the parish for nearly twenty miles, receiving in its course numerous tributary streams, among which is the Whitewater. *Loch Esk*, situated among the mountains, six miles north-west of the vale of Clova, is about half a mile in circumference, of comparatively inconsiderable depth, and surrounded with scenery rather of bleak and rugged character. *Loch Wharral*, in the heart of the mountainous district at the north-eastern boundary of the parish, and about 1000 feet above the level of the Esk, is a mile in circumference, and of very considerable depth. About two miles to the north-east of Loch Wharral is *Loch Brany*, on the same side of the mountain range, and nearly at a like elevation; it is about a mile and a half in circumference, and in some parts of great depth. These lakes abound with trout, and many trout are also found in the river, of large size and good flavour, as are sea-trout during the summer. Salmon, too, are found in the Esk, towards the middle of September.

The soil is very various. The greater portion of that in the arable lands is sharp and gravelly, inclining in some parts to a fertile loam, and in others to a thin stony sand. In the southern districts of the parish it is much mixed with clay; and along the bases of the hills, partly a fine deep mould, and partly hard and stony, alternated with moss. In the valleys there is a rich deposit of alluvial soil, inclining to sand, with alternations of moss, and in other parts a deep sandy loam. The principal crops are oats, barley, wheat, turnips, and potatoes; the system of agriculture is improved, and the rotation plan of husbandry is generally practised. Great attention is paid to the management of live stock. The cattle chiefly reared are the Angus breed; they are of middling size, and generally disposed of when two or three years old. The mountains afford pasture for great numbers of sheep, mostly of the black-faced and Cheviot breeds; and in addition to those reared in the parish, numbers are bought when young, and fed till three or four years old,

when they are sold at high prices. In this parish the woods consist of oak, ash, mountain-ash, elm, plane, beech, chesnut, alder, and birch; and the plantations, of larch, Scotch, spruce, white and black American, and silver firs. Much attention is paid to pruning and thinning at proper times, especially on the lands of the Earl of Airlie, to whose father the gold medal of the Highland Society was adjudged in 1830, for his extensive improvements. The rocks are of red sandstone, pudding-stone, whinstone, serpentine, mica-schist, gneiss, clay-slate, quartz, and granite; limestone is also found, but unless taken from a considerable depth, it is not of very good quality. The annual value of real property in the parish is £3887.

Cortachy Castle, a seat of the Earl of Airlie's, is a spacious and ancient structure with modern additions, beautifully situated in a small valley on the south side of the river Esk: the date of the more ancient part, and the name of the original founder, are both unknown. Of the castle of Clova but little remains; it is said to have been destroyed by Cromwell, during the parliamentary war. Facility of communication with the neighbouring towns is afforded by good roads, of which that to Strathmore passes through the whole length of the parish. Fairs for cattle and sheep are held on the farm of Collow, on the last Friday in April, and fourth Monday in October; the latter is one of the largest sheep-markets in the country, and the number of sheep sold is generally from 8000 to 12,000. For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Forfar, synod of Angus and Mearns. The minister's stipend is about £173, with a manse, and a glebe valued at £15 per annum; patron, the Earl of Airlie. The present church of Cortachy, situated near the southern extremity of the parish, was erected on the site of the former edifice, in 1829, by the then earl, at an expense of more than £2000; it is a handsome structure, containing 550 sittings, all of them free. Clova church, about ten miles distant from the church of Cortachy, is an ancient structure, repaired and enlarged by the erection of a gallery in 1731, and lately repewed. It contains 250 sittings, all of which are free, except the gallery, which is let for the benefit of the poor. Near it is a good house for a missionary, who officiates alternately in this church and the chapel of Glenprosen, and who has a regular stipend of £30 from Royal Bounty, £30 from the inhabitants of the districts, and £21 from the Earl of Airlie. The parochial school is situated near Cortachy church; the master has a salary of £34, with a house and garden, and the fees average £15. The parochial library has a collection of 200 volumes, chiefly the gift of the Ogilvy family.

COT-TOWN, a hamlet, in the parish of ST. MADDOES, county of PERTH; containing 62 inhabitants. It is one of the only two hamlets or villages in the parish.

COTES, county of LANARK.—See COATS.

COTTACK, a village, in the parish of DUNSCORE, county of DUMFRIES, 9 miles (N. W.) from Dumfries; containing 252 inhabitants. This village is built on elevated ground, and is very centrally situated, being nearly equidistant from the two extremes of the parish; the population consists of agricultural labourers and a few artisans and mechanics. The Cairn, a considerable stream, tributary to the Nith, and in which fine trout are obtained, passes to the west of the village. Here is the parish church, and one of the three parochial schools.

COTTON OF LOWNIE, a village, in the parish of DUNNICHEN, county of FORFAR, 3 miles (E. S. E.) from Forfar; containing 100 inhabitants. It is seated a little south of the road from Forfar to Dunnichen, and about a mile south-west of the latter village.

COULL, a parish, in the district of KINCARDINE O'NEIL, county of ABERDEEN, $2\frac{3}{4}$ miles (E. S. E.) from Tarland; containing 744 inhabitants. This place is supposed to have taken its name, which signifies a "corner", from its situation in the south-eastern extremity of the district of Cromar. It measures six miles in average length and three in breadth, comprising about 7620 acres, of which 2300 are arable; 5000 are uncultivated pasture, nearly 100 of these, however, being capable of profitable cultivation; and 320 acres are occupied by wood, chiefly planted within the last twenty or thirty years. The surface is to a considerable extent level, especially in the centre, where is a marshy tract called Bogmore. There are, however, several portions of high land, and between this parish and those of Aboyne and Lumphanan stretches a mountain range containing the peaks called the hill of Gellan, Mortlich, Leadhlich, and the hill of Corse. The soil in the low grounds is generally of good quality, and comprehends a large portion of rich loam, resting on a gravelly subsoil; but on the hills it only affords indifferent pasture. Great improvements in agriculture have been effected during the last thirty years, particularly on the estate of Corse, where almost every thing has been done that could contribute to change its neglected appearance, and increase the value of the property, which is now one of the most beautiful and desirable of its size in the county. Much land in the parish has been brought into cultivation; draining and inclosing have been successfully practised, and the larger part of Bogmore, formerly so prejudicial to the climate of the locality, has been partly converted into pasture, and partly into arable land. In the process of draining the ground, which was an alluvial deposit incumbent on moss, fragments of immense oaks were found embedded. The rocks in the hills are chiefly red and white granite. The annual value of real property in the parish is £2197. The knitting of stockings is carried on, and there is a wool-carding mill, at which blankets and coarse woollen-cloths are manufactured.

This parish was formerly attached to the abbey of Arbroath. It is now in the presbytery of Kincardine O'Neil, synod of Aberdeen, and in the patronage of Sir John Forbes, Bart., of Craigievar. The minister's stipend is about £161, of which about half is received from the exchequer; with a manse, built in 1832, and a glebe of four acres, valued at £7 per annum. The church is a plain building, erected in 1792; it has a good-toned bell, of considerable size, cast in Holland in the year 1644, and presented to the church by Mr. Ross, of Mill of Coull. A large portion of the parish has long been annexed, for ecclesiastical purposes, to the parish of Leochel and Cushnie. The parochial school affords instruction in the usual branches; the master has a salary of £26, with about £15 fees, and £40 from the Dick bequest. The ruins of the castle of Corse, erected in 1581 by William Forbes, father of Bishop Patrick Forbes, are still to be seen; and the remains of that of Coull are also visible, on a rocky eminence near the church. This latter structure, the seat of the Durwards, a family of great power, was of quadrangular form, with large hex-

agonal towers at the angles, the whole surrounded by a fosse; and it appears to have been a fortification of considerable extent and strength. On the summit of a small hill is a Druidical circle, and traces of a chapel called Turry Chapel yet remain on the lands of Corse.

COUPAR-ANGUS, in the county of FORFAR.—See CUPAR-ANGUS.

COVE, a village, in the parish of NIGG, county of KINCARDINE, 5 miles (S. S. E.) from Aberdeen; containing 421 inhabitants. This place, which is situated on the shore of the German Ocean, derives its name from one of those numerous small bays or coves with which the coast is here indented; and is inhabited by persons employed in the fisheries. The fish taken are chiefly salmon, white-fish of various kinds, and lobsters, crabs, and other shell-fish. The salmon are caught in bag-nets, are packed in ice, and sent to the London market; and during the season, nine boats, varying from ten to fourteen tons' burthen, with crews of six men each, are engaged in the herring-fishery off the north coast. The cove, which forms a small natural harbour, affords sufficient shelter for the boats belonging to the place. The Aberdeen railway passes here. A school has been established for the accommodation of this distant portion of the parish; the master has a house and garden, with £7 from a bequest, in addition to fees averaging £15.

COVINGTON and THANKESTON, a parish, in the Upper ward of the county of LANARK, 4 miles (W. by N.) from Biggar; containing 523 inhabitants. Of these ancient parishes, which were united about the beginning of the eighteenth century, the former derives its name, anciently *Colbanstoun*, from its proprietor Colban in the twelfth century; and the latter, from a Flemish settler named Tankard or Thankard, who obtained a grant of lands here during the reign of Malcolm IV. The parish is about four miles in length from south to north, and nearly three in average breadth. It is bounded on the east by the river Clyde, which separates it from the parish of Libberton. The number of acres is about 5500, of which nearly 2000 are arable, eighty acres woodland and plantations, and the remainder sheep-pasture. The surface is varied, and the scenery in many parts of pleasing character. Along the banks of the Clyde, the soil is rich and fertile, and the lauds occasionally subject to inundation; in the higher grounds are some portions of barren heath, but they generally afford good pasturage to numerous flocks of sheep. The system of agriculture is in an improved state; the chief crops are oats, barley, peas, potatoes, and turnips. The lands have been much benefited by furrow-draining; considerable progress has been made in inclosing the several farms, and the farm-buildings and offices are in a very superior condition. In this parish the cattle are chiefly of the Angus breed, and the sheep of the black-faced kind. There is but little wood, and much improvement might be made, both in the appearance of the lands and in affording shelter, by a judicious increase of plantation. The Clyde abounds with trout and pike of considerable size. The villages of Covington and Thankeston are pleasantly situated, and at the latter is a bridge over the Clyde, erected by subscription in 1778. There is also a station at Thankeston of the Caledonian railway, affording great facility of intercourse. For ecclesiastical purposes the parish is within the bounds of the presbytery of Biggar, synod of Lothian and Tweeddale. The minister's stipend is £208.

13. 7., with a manse, and a glebe valued at £17. 10.; patrons alternately, the Lockhart family, of Lee and Carnwath, and Sir Windham Carmichael Anstruther, Bart. The church of Thankeston has been suffered to fall into ruins, and that of Covington has been enlarged for the population of the whole parish. The parochial school is in the village of Covington; the master has a salary of £28, with a house and garden, and the fees average about £16 per annum.

COWCADDENS, a village, in the late ecclesiastical district of **ST. STEPHEN'S**, within the jurisdiction of the city of **GLASGOW**, county of **LANARK**, $\frac{1}{2}$ a mile (N.) from Glasgow. This is a populous village, and formed, with **Port-Dundas** and **Woodside**, one of the divisions that were ecclesiastically separated from **Barony** parish. It is chiefly occupied by persons employed in hand-loom weaving, and in the various factories in the vicinity of Glasgow. There are five schools, of which one is in connexion with the Roman Catholics, and two are female schools.

COWDEN-BEATH, a village, in the parish of **BEATH**, district of **DUNFERMLINE**, county of **FIFE**, $\frac{1}{2}$ a mile (S. E.) from Beath; containing 127 inhabitants. It is in the south-eastern part of the parish, a short distance west of the road from **Aberdour** to **Kinross**; and has a station on the **Dunfermline** branch of the **Edinburgh, Perth, and Dundee** railway. South of the village is a bleachfield.

COWIE, a village, in the parish of **FETTERESSO**, county of **KINCARDINE**, 1 mile (N.) from Stonehaven; containing 174 inhabitants. This village is situated at the mouth of the river **Cowie**, which falls into a bay of that name, forming a small and commodious harbour; and is chiefly inhabited by fishermen, who, during the season, are also engaged in the herring-fisheries on the coast. The principal fish taken here are haddocks, of which great numbers are cured, and sent by the **Aberdeen** steamers to the **London** market; cod, ling, and various other fish are likewise found in abundance. Eight boats are employed, each having a crew of five men. On the summit of a rock overlooking the bay are the remains of an ancient castle which, upon very doubtful authority, is supposed by some writers to have been originally built by **Malcolm Canmore**.

COWPITS, a village, in the parish of **INVERESK**, county of **EDINBURGH**; containing 116 inhabitants. It is one of a few small villages in the parish chiefly occupied by colliers.

COWSLAND, a village, in the parish of **CRANSTON**, county of **EDINBURGH**, 3 miles (E. N. E.) from **Dalkeith**; containing 226 inhabitants. It is a neat village, situated in the northern part of the parish, on the road from **Dalkeith** to **Ormiston**. In the neighbourhood are some limestone-quarries; and to the east of the village is **Cowsland Park**. A school-house is furnished to a teacher by the families in the vicinity.

COYLTON, a parish, in the county of **AYR**, 5 miles (S. E.) from **Ayr**; containing, with the villages of **Craig-hall**, **Gadgirth-holm** and **Bankfoot**, **Joppa**, and **Knock-shaggle-holm**, 1484 inhabitants. This place, the name of which is of uncertain derivation, was augmented about the beginning of the eighteenth century by the quoad sacra annexation of a portion of land, lying on the north and east sides of the river **Coyl**, and then included in the parish of **Ochiltree**. It measures twelve miles in extreme length, and nearly two in average breadth, and comprises

11,515 acres, of which more than 8000 are cultivated, nearly 800 in wood, consisting chiefly of forest-trees, and the remainder in pasture. The river **Ayr** flows for nearly four miles along its north-west boundary, separating it from **Tarbolton** and **St. Quivox**; and from this stream the surface rises south-eastward, in a series of undulations, to the heights called the **Craigs of Coyl**, attaining an elevation of 750 feet above the level of the sea. After this, the land advances to a loftier ridge, forming the boundary line in this direction, and commanding, from an elevation of 1100 feet, an extensive and richly diversified prospect on all sides. The scenery is much improved by the lochs of **Martnaham**, **Fergus**, and **Snipe**, which are partly in the parish. Of these, the first-mentioned, partly in the parish of **Dalrymple**, is a mile and a half long and about a furlong broad, abounding in pike, perch, and eels, and much frequented by wild-ducks, geese, widgeon, teal, and other water-fowl. **Loch Fergus**, a fine piece of water extending over about twenty-five acres, contains a well-wooded island, said to have been in ancient times the seat of a monastery; and is supposed by some to have taken its name from **King Fergus**, who defeated **Coilus**, king of the Britons, in the adjacent fields. There is also a lake called **Loch End**, covering about three acres; and in most of the lakes fish of the usual kinds are found, as well as in the rivers, which are also well stocked with yellow trout. The river **Coyl**, which rises in the parish, displays a beautiful cascade in the vicinity of **Sundrum Castle**, where the river is about twenty-five feet wide; the fall is about thirteen feet in depth, and on the swelling of the stream is greatly increased in its picturesque effect.

The SOIL in general is a retentive clay, producing chiefly oats, but wheat and barley are also grown, and beans, potatoes, turnips, and the various grasses. The husbandry of the parish is not so much advanced as that of many other parts, but improvements are in progress, especially furrow-draining, and subsoil ploughing is practised to a limited extent. The dairy is much regarded; and what is called **Dunlop** cheese is made in large quantities, frequently of excellent quality, and, with the butter, milk, and other dairy produce, is relied on for the payment of nearly half the rent. The cattle are mostly of the pure **Ayrshire** breed, but a few of the **West Highland** or **Galloway** are kept on the higher grounds; the sheep were formerly the **black-faced**, but these, for several years, have been crossed with the **Cheviots**, and the latter stock now generally prevails. The annual value of real property in **Coylton** is £8144. The working of the subterraneous contents of the parish occupies a considerable portion of the manual labour of the district. Coal, limestone, ironstone, plumbago, clay-slate, basalt, several varieties of freestone, and fire-clay are all found here; and several of them are wrought to some extent. Three coal-mines, a limestone-quarry, and three quarries of sandstone are in operation; and black-lead obtained from this part supplied an article of traffic for many years, but its quality not allowing a competition with the **Cumberland** and foreign lead, the mine has been abandoned. Clay-slate, celebrated for sharpening iron instruments, was also once extensively quarried; but the material being found in abundance, and of superior quality, in the adjoining parish of **Stair**, the works have been discontinued. The value of the mineral produce is averaged at £6000 annually. The plantations are chiefly

in the lower part of the parish, and, being in a thriving condition, especially in the vicinity of the rivers, add greatly to the agreeable character of the scenery; they are mostly of larch and Scotch fir, but oak, beech, ash, elm, birch, and several other kinds are plentiful.

The mansion of Sundrum, pleasantly situated on the bank of the Coyl, and commanding extensive views, is partly ancient and partly modern; the old walls are in some portions twelve feet thick, and have castellated summits. Gadgirth House, another seat, is a plain oblong modern structure, on the bank of the Ayr river; it occupies the site of Gadgirth Castle, once a place of note, and the residence of the family of Chalmers, who, being friendly to the Reformation, warmly patronized the celebrated John Knox, and allowed him to preach in the castle. The great road from Ayr to Dumfries, through Nithsdale, traverses the centre of the parish. Coylton is ecclesiastically in the presbytery of Ayr, synod of Glasgow and Ayr, and in the patronage of the Crown; the minister's stipend is £254. 8. 4., with a manse, and a glebe valued at £12 per annum. The old church, the ruin of which is still partly standing, belonged in ancient times to the bishopric of Glasgow; the present edifice, which is small but handsome, was built in 1836, and is a cruciform structure, with a square tower sixty feet high, containing a good bell. The parochial school affords instruction in the ordinary branches, the classics, and mathematics; the master has a salary of £30, with a house, and £20 fees. A few years since, several silver coins of the reigns of Elizabeth, James VI., and Charles I., were dug up. The Rev. John Black, LL.D., author of the *Life of Tasso*, and who died in the year 1825, was minister of Coylton for fifteen years; he was a native of the parish of Douglas, in the county of Lanark.

CRAGGANESTER and CRAGGANTOUL, hamlets, in the parish of WEEM, county of PERTH, 7 miles (S. W.) from Fortingal; containing respectively 23 and 20 inhabitants. These are neighbouring places, situated in one of the detached portions of the parish, and on the western border of Loch Tay. The road from Fortingal to Killin passes in the vicinity of both hamlets.

CRAICHIE, a village, in the parish of DUNNICHEN, county of FORFAR, $1\frac{1}{2}$ mile (W. S. W.) from Letham; containing 70 inhabitants. It stands on one of the roads between Forfar and Letham, and about a mile south of Dunnichen church. The parochial church is in the village.

CRAIG, a parish, in the county of FORFAR, $\frac{1}{2}$ mile (S. by W.) from Montrose; containing, with the villages of Ferryden, Usan, and Rossie, 1945 inhabitants. This place was formerly called Inchbrayock, "the island of trout", by which name an island of forty-three acres within the parish is still known. Craig was at that time only the designation of one of the chief estates, and it is supposed that, when the place of worship was transferred from the island to the property of Craig on the continental part of the district, the name of Craig, which is naturally derived from the rocky nature of the shore, was extended to the whole of the parish. The parish comprehends two distinct titularities, viz. Craig and St. Skeoch, which were united in the year 1618, and the latter of which, pronounced St. Skay, is said to have received its name from one of the northern saints. The site of an ancient religious edifice on the coast is still called the chapel of St. Skay; a small burying-place

round the spot is occasionally used for interments, and the site of the manse is pointed out in a neighbouring field. Craig appears to have been a feudal barony, a field behind the house being still called Law-field; an adjoining farmstead is styled Balgovie, that is *Withie*, or prison-house, and a rising ground on the property bears the name of Govan-hill, *the Withie-hill*, or place of execution.

The PARISH is about six miles long, and two miles and a half in extreme breadth, comprising 5138 acres, 2 roods, 37 perches of land. It is partly bounded by a basin about nine miles in circumference, through which the river South Esk flows into the sea, and which is filled with the tide at high water. This basin separates the parish on the north from the town and harbour of Montrose, and on the south-east is the German Ocean. The surface gradually rises from the north and east towards the south-west, where it attains a height of 400 feet above the level of the sea. The coast is rocky, and towards the south quite precipitous; it forms about five miles of the boundary line of the parish, and has Montrose bay and ness on the north, and Lunan bay and Boddin point on the south. The shores abound in all kinds of fish, which are taken in great numbers in the respective seasons. In the middle of the parish the soil is a strong rich loam; towards the eastern quarter it is sandy, and in some places, especially in the western portion, it is damp and moorish. About 3509 acres are cultivated, 331 waste or pasture, 757 undivided common belonging to the parishes of Craig, Marytown, Farnell, and Kinnell, and 291 acres are in wood, comprising almost all the kinds of trees usually grown. Grain of every kind, and the principal green crops, are cultivated in the parish; and as the husbandry adopted comprehends all the most approved usages, the crops, both as to quantity and quality, are in general of a superior character. The cattle are the Angusshire black, without horns, and the sheep are chiefly the black-faced Highland breed. The annual value of real property in the parish is £9645.

The rocks consist of the old red sandstone and limestone, intermixed with several varieties of trap, in which very fine specimens of the Scotch pebble are often found embedded. There are some quarries of the trap formation, and the produce is in considerable demand for building, but requires, for facings, the more ornamental material of sandstone. The mansions are, the house of Rossie, built in 1800; the villa of Inchbrayock, built in 1813; the house of Usan, in 1820; and that of Dunningald, in 1825. A few of the inhabitants are employed in manufactures; but the principal attention of the population is divided between agriculture and fishing, the produce of the latter of which amounts in value to about £7000 annually: the salmon taken are mostly packed in ice, and sent to the Edinburgh and London markets. The turnpike-road from Montrose to Arbroath passes through the parish, and during the summer the steamboat from Aberdeen to Leith touches at the village of Usan. There are harbours at Ferryden and Boddin, large enough for the use of small sloops with coal and lime, and piers and warehouses are expected shortly to be built at Ferryden: the dues belong to the town of Montrose. Facility of intercourse is afforded by several bridges, the chief of which is a magnificent suspension-bridge over the South Esk, opening up an immediate communication with Montrose.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Brechin, synod of Angus and Mearns; patrons, the College of St. Mary, in St. Andrew's. The stipend is £257, and there is a good manse, built in 1805, with a glebe valued at £24 per annum. Craig church, which is an elegant structure, with a square tower eighty feet high, was built in 1799 at the expense of the late Mrs. Ross of Rossie, and for many years after its erection was the only church in the county possessed of any architectural beauty: it contains 800 sittings. A place of worship has been erected in connexion with the Free Church. There is a parochial school, in which the classics, mathematics, navigation, and all the usual branches of education are taught; the master has a good house and garden, with a salary of £34, and about £17 fees. The parish also contains three libraries, to which the inhabitants have access gratis; two of these are small, but the third, instituted in 1809, consists of nearly 600 volumes, and has proved of great utility. Among the chief remains of antiquity is the Castle of Craig, situated on the northern side of the parish, and formerly a place of considerable strength; it has a square tower and gateway, apparently of great age, but in good preservation, and a part of it, bearing the date of 1634, is still occupied as a dwelling-house. Near Boddin, on the south coast, are the remains of an old castle called Black Jack, supposed to have been thus named in comparison with Red Castle on the opposite side of the bay. A strong earthen fort, also, with out-works, and accommodation within for men and ammunition, was to be seen a few years ago, at the point where the South Esk falls into the sea; it is said to have been used in Cromwell's time, but it is not known by whom it was built: cannon were placed at it in 1745. The eloquent and pious Archbishop Leighton was descended from a family of some celebrity in former times, who were proprietors of the lands of Usan; and the well-known Andrew Melville was born at Baldovie, in the northern part of the parish.

CRAIG OF MADDERTY, a burgh of barony, in the parish of MADDERTY, county of PERTH; containing, with the village of St. David's, 181 inhabitants. The estate of Craig, on which the village is built, was erected in 1626 into a free burgh of barony, through the instrumentality of Lord John Madderty, by charter conferring power to hold a market every Friday, with four fairs yearly. Courts have been held occasionally within the barony, for settling disputes; but the village has latterly very much declined, and in its place has risen that of St. David's, in which is a school.

CRAIGDALLIE, a hamlet, in the parish of KINNAIRD, county of PERTH; containing 52 inhabitants.

CRAIGEND, a village, in the late quoad sacra parish of CROSSHILL, parish of OLD MONKLAND, Middle ward of the county LANARK, $4\frac{1}{2}$ miles (E. S. E.) from Glasgow; containing 80 inhabitants. It is situated on the bank of the river Clyde, which here makes a considerable bend, and on the road from Glasgow to Bellshill in the parish of Bothwell.

CRAIGEND, a hamlet, in the EAST parish of the city and county of PERTH; containing 47 inhabitants.

CRAIGHALL, a village, in the parish of COYLTON, district of KYLE, county of AYR; containing 100 inhabitants. A coal-mine of some extent has been in operation at this place for a number of years, and is one of three large coal-mines of the parish.

CRAIGHALL and NEW CRAIGHALL, villages, the former wholly in the parish of INVERESK, the latter chiefly in INVERESK parish, and partly in that of LINNERTON, in the county of EDINBURGH; containing respectively 501 and 336 inhabitants. Craighall is situated about two miles south-south-west of Musselburgh. Coal is abundant, and in the vicinity are extensive coal-mines. Close to the village is Pinkie House, the seat of Sir John Hope, Bart.; it was originally a country seat of the abbots of Dunfermline, and after the Reformation became private property. Although still a large structure, it is evidently only part of a magnificent design.

CRAIGIE and BARNWEILL, a parish, in the district of KYLE, county of AYR, 4 miles (S.) from Kilmarnock; containing 779 inhabitants. Craigie was disjoined from the parish of Riccarton in 1647, and in 1673 it received an increase of boundary by the annexation of the suppressed parish of Barnweill, the larger part of the stipend of which, however, was transferred to the minister of the newly-erected parish of Stair. The parish is about seven miles long, and one and a half broad. Its scenery is pleasingly varied; the hills near the church rise about 500 feet above the level of the sea, and are covered with verdure to the summit, excepting where a craggy rock occasionally protrudes. The views presented from the heights are extensive and beautiful, and the lands are ornamented with several lochs, some of which, however, are partly in adjoining parishes; Loch Brown covers nearly 100 acres, and is about half in this parish, the remaining part being in those of Mauchline and Tarbolton. The parish comprises 6300 acres of land, almost entirely under cultivation. The principal kind of grain raised, and nearly the only kind, is oats; the pastures are extensive; several tracts are under rye-grass and meadow-grass, and the remainder of the green crops consist of beans, potatoes, and a few turnips. In this parish the farms average about ninety acres; and besides a tolerable proportion of sheep, of a mixed breed, between 700 and 800 milch-cows are kept, and upwards of 400 young cows and calves: the milk is chiefly used for cheese, and the stock sold at Kilmarnock. A corn-mill is turned by the waters of one of the lochs. Various improvements have taken place in agriculture, but what has been most beneficial is furrow-draining, which has been carried to a great extent; the farm-houses are substantial and well fitted-up, and about half of them are slated. The plantations cover 170 acres. Three limestone-quarries, and a tile-work lately erected, are in operation; and coal of several kinds was formerly wrought. The annual value of real property in the parish is £8058.

There are three mansions, Cairnhill, Barnweill, and Underwood; the first consists of an ancient tower, still strong, and in very good repair, with a modern portion attached. Barnweill is a neat residence, built towards the latter part of the last century; and Underwood, a commodious house, was erected about the same time. Ecclesiastically the parish is in the presbytery of Ayr, synod of Glasgow and Ayr, and in the patronage of James Campbell, Esq., of Craigie; the minister's stipend is £247, with a manse, and a glebe of five acres, valued at £10 per annum. The church, formerly called the Kirk in the Forest, is a neat plain edifice, built in 1776, and will accommodate 600 persons. The paro-

chial school affords instruction in the usual branches, and in the classics, practical mathematics, and book-keeping; the master has a salary of £34, with a house, and £18 fees. The ruins of the church of Barnweill are still standing, and also those of Craigie Castle, a very ancient building, at one time inhabited by the Wallaces of Craigie, a collateral branch of the family of Sir William Wallace, the Scottish patriot. There are several artificial mounds called "law hills," on which culprits are supposed to have been formerly tried.

CRAIGIE, a village, in the parish of **DALMENY**, county of **LINLITHGOW**, $2\frac{1}{4}$ miles (E. N. E.) from Kirkliston; containing 75 inhabitants. It stands in the eastern part of the parish, and in its vicinity is Craigie Hall, formerly the residence and estate of the Craigies, an ancient and considerable family. One of them was a witness to the original charter granted to the first laird of Dundas in the year 1120. In 1387 the heiress of the family married Sir John Stewart, who took the name, and his posterity continued here until 1640, when the estate of Craigie Hall was sold. It subsequently became the seat of the Hope family.—See **DALMENY**.

CRAIGIE, a hamlet, in the parish of **CAPUTH**, county of **PERTH**, $2\frac{1}{2}$ miles (N. N. E.) from Caputh; containing 67 inhabitants. It lies in the eastern part of the parish, and adjoins the village of Cluny on the east side.

CRAIGIE, a village, in the **EAST** parish of the city of **PERTH**, county of **PERTH**; containing 219 inhabitants. It is situated on the west side of the river Tay, and a little south of the city, of which it forms a suburb. Craigie is a pleasant village, and in its vicinity is the site of the old castle of Craigie, which belonged to the Ross family.

CRAIGIELANDS, a hamlet, in the parish of **KIRKPATRICK-JUXTA**, county of **DUMFRIES**, $2\frac{1}{4}$ miles (S. by W.) from Moffat; containing 84 inhabitants. It is about a mile north-west by west from Kirkpatrick, and a short distance south of the Evan water. The hamlet is small and scattered.

CRAIGMILL, a hamlet, in the parish of **LOGIE**, county of **CLACKMANNAN**, 2 miles (N. E.) from Stirling; containing 78 inhabitants. It is situated at the southern base of the Abbey Craig, in a detached portion of the county, about a mile south of Logie, and on the north side of the Forth river, which here is very devious in its course. The place was chiefly known, before the duty on spirits was lowered, as an abode of smugglers.

CRAIGNEUK, a village, in the parish of **DALZIEL**, county of **LANARK**. Near this village is an excellent quarry of flagstone, which affords employment to several of the inhabitants. The stone is of a very fine grain, and of a reddish colour; it varies from one quarter of an inch to five inches in thickness, and is much used for pavements, and occasionally substituted for slate in the roofing of buildings.

CRAIGNISH, a parish, in the district and county of **ARGYLL**, 16 miles (N. N. W.) from Lochgilphead; containing 873 inhabitants. This place, though known in modern times only by its present appellation, was anciently called both Craignish and Kilmhorie. The former name, which is a compound Gaelic term signifying a rocky peninsula, is descriptive of the southern portion of the parish; and the latter, meaning a chapel dedicated to the Virgin Mary, was applied in reference

to an ancient structure, the ruins of which yet remain in the principal burying-ground. The parish is washed by the Atlantic on the west and south; it is bounded on the north by the parish of Kilniver and Kilmelford, and is separated on the east, by Loch Craignish, from the parishes of Kilmartin and Dalavich. Craignish measures a little more than eleven miles in length and about two in average breadth, comprehending, for a Highland district, a considerable portion of land under cultivation. The coast, on account of its numerous indentations, is supposed to form a line of sixteen or seventeen miles in extent; it is exceedingly rocky on the south and west, and also marked in the latter direction by several small bays with fine white sandy shores. Loch Craignish is about three miles wide at a small distance from the entrance; in other parts it varies considerably in breadth, and towards its head narrows itself to less than a mile, the depth averaging about twelve fathoms. On each side of the loch, at the distance of about half a mile from the land, is a chain of verdant islets, some of them ornamented with oak, ash, birch, and fir trees; and at the northern extremity the water expands into a spacious harbour, with good anchorage, and secured by the surrounding hills from the violence of winds. There is also a very convenient harbour in a creek called Little Loch Craignish, on the west of the parish, about a mile from the southern extremity of the peninsula; it is much frequented by vessels in stormy weather, or when waiting for a favourable tide. The most considerable of the islands just alluded to, within the parish, are those of McNiven and McLarty, so named from their old proprietors: the largest and most fertile of the islands in the loch is Island Righ, or "king's island", attached to Kilmartin parish. Near the southern point of the peninsula, in a south-western direction, are five islands, of which that called Garrarissa forms the sound of Dorus-mor.

The surface of the parish in the interior is much diversified. Lofty hills covered with heath are alternated with tracts of flat land, ornamented in some parts by verdant declivities and valleys, interspersed with lochs, and shrouded with beautiful foliage. The northern extremity of the parish is marked by a chain of rugged hills, rising about 700 feet above the sea; they are mostly covered with a kind of heathy pasture, and skirted at the base with a belt of level land about a quarter of a mile broad. The surface along the eastern boundary of the peninsular portion of the parish is distinguished by a series of verdant eminences, attaining in some parts an elevation of 300 feet; at the base is a narrow strip of land stretching to the margin of the loch, and forming a variety of interesting points and bays on a flat clayey shore. A range of hills, covered principally with heath, also characterises the peninsula, reaching from north to south, and commanding from the chief heights beautiful views of Loch Craignish and its islets, the hills of Knapdale, the sound and island of Jura, the far-famed Corrybreckan, the islands of Colonsay, Scarba, &c., and the mountains of the isle of Mull, and Morvern. There are likewise twelve lochs in the parish, besides numerous rivulets; trout is abundant, and char is found in one of the lochs.

The **SOIL** in general is fertile; that under tillage chiefly consists of two distinct kinds, one of them a hazel mould resting on rock, and the other a darker earth

incumbent on clay, and the whole is interspersed with sandy tracts. Though small in extent, the cultivated lands are of average fertility, producing chiefly crops of oats and potatoes. The rearing of cattle is also much attended to. Husbandry has made comparatively but few advances; the lands are mostly under the old system of cultivation, the tenantry in general hold their farms at will, and many tracts of good quality are suffered to lie waste for want of draining. A superior state of things is observable on a few farms held on lease, which are inclosed and well drained. The sheep are the black-faced, with a few of the Leicester and Cheviot breeds; and of cattle the West Highland breed prevails, with a small proportion of Lowland milch-cows. The prevailing rock in the peninsular district is clay-slate, assuming frequently a sandy character, and sometimes running into a hard inferior sandstone. The annual value of real property in the parish is £3207.

Castle Craignish, situated in the south, is an ancient structure with modern additions, and within the last few years has been repaired and greatly enlarged by its proprietor, Colin Campbell, Esq., of Jura. In the lower portion of this fine mansion is a vaulted apartment said to have been formerly used as a dungeon. The house of Barbreck, in the north-eastern quarter, a commodious mansion, and that of Dail, on the western coast, are both modern residences: these and the castle have demesnes ornamented with clumps of plantations, covering together about 300 acres, which comprehend nearly the whole wood in the parish. In the centre of the parish is the house of Ardlarich. The population are employed in agriculture, except those occasionally engaged in fishing. Ecclesiastically the parish is in the presbytery of Inverary, synod of Argyll, and in the patronage of the Duke of Argyll. The minister's stipend is £169. 10., of which about a quarter is received from the exchequer; with a manse, and a glebe of about fifteen acres, valued at £18 per annum. Craignish church is a neat structure, erected in 1826, and conveniently situated on the eastern side of the parish. The parochial school affords instruction in all the elementary branches of education; the master has a salary of £25. 13., with a house, £20 fees, and £2. 10. derived from funded property. The remains of numerous Danish forts are still visible in the parish. The ruins of a religious house, supposed to have been an oratory, and of another, formerly, it is said, the parish chapel, may yet be traced; and there is a small bay called the Port of the Athollmen, which received its name from the circumstance of several of the Marquess of Atholl's men having been drowned there, after a defeat by the natives, in the seventeenth century.

CRAIGO, a village, in the parish of LOGIE-PERT, county of FORFAR, $5\frac{1}{2}$ miles (N. N. W.) from Montrose; containing 359 inhabitants. It is pleasantly seated on the south bank of the North Esk river, and has a large manufacturing establishment, comprising a flax-spinning mill, a bleachfield, some cloth-finishing machinery, and an alkali manufacture. About 280 hands are employed in these works, which belong to a London firm. Craigo House, built by the Carnegie family about fifty or sixty years since, stands a mile south of the village, and the grounds around are well planted: on the estate is a good freestone-quarry. The North Esk is crossed in the neighbourhood of the place by substantial bridges, one of

which, of three arches, was erected by the celebrated John Erskine of Dun at the time of the Reformation.

CRAIGROTHIE, a village, in the parish of CERES, district of CUPAR, county of FIFE, 1 mile (W.) from Ceres; containing 308 inhabitants. It is situated on the road from Kennoway to Cupar, and near Struthers, the old seat of the Earls of Crawford. It has a baillie and council, and its rural corporation was greatly patronized by the last earl. A school has been built by subscription.

CRAIGTON, a village, in the parish of MONIKIE, county of FORFAR, $\frac{1}{2}$ a mile (S. W.) from Monikie; containing 162 inhabitants. It lies on the road from Dundee to Brechin; and its population is chiefly employed in weaving linen-cloth for the manufacturers in the surrounding districts. There is a small school in the village.

CRAIGTON-FIELD, a village, in the parish of NEW KILPATRICK, county of DUMBARTON; containing 69 inhabitants. It is situated in the northern part of the parish, on the road from Kilpatrick to Drymen, and about three miles north-north-west of the parochial church.

CRAIL, a royal burgh, a sea-port, and parish, in the district of St. ANDREW'S, county of FIFE, 10 miles (S. E. by E.) from St. Andrew's, and 40 (N. N. E.) from Edinburgh; containing 1737 inhabitants, of whom 1221 are in the burgh. This place anciently bore the name of *Carrail*, afterwards contracted into *Cryle*, *Crail*, and now *Crail*; probably from

Burgh Seal.

caer, "a town", and *isle*, "a wing or corner", the town being situated in the corner of the county that is commonly called the East Nook. It is of remote antiquity, and had a royal castle, the date of which is not clearly ascertained, but which was occasionally the residence of David I. A priory and a collegiate church were founded here at an early period, and richly endowed. Of the former, which was suppressed previously to the Reformation, there remain only some vestiges of the chapel, dedicated to St. Rufus; and the latter, in which were eight altars, was at that time stripped of its rich ornaments, and is now the parish church. Mary of Guise, afterwards consort of James V., landed on this coast after a severe storm, and was hospitably entertained in the ancient mansion of Balcomie Castle, whence, accompanied by the king, she proceeded to St. Andrew's.

The town is situated at the mouth of the Firth of Forth. It consists principally of two parallel streets, extending along the shore from east to west, and intersected nearly at right angles by others of inferior note. The houses in the main street are spacious, and of ancient appearance; and though, from the loss of the herring-fishery, of which the town was a principal station, it has been long declining in prosperity, it still retains many vestiges of its former importance. The harbour is both inconvenient and unsafe; but about a quarter of a mile to the east is Roome Bay, which might be converted into an excellent haven capable of affording secure shelter to 200 sail of vessels, and might be rendered available to the increase of the trade of the Forth, and of the eastern coasts of England and Scotland. There

are no manufactures carried on, nor any trade of importance, except what is requisite for the supply of the neighbourhood. The government of the town, which was erected into a royal burgh by charter of Robert Bruce, confirmed by Mary, Queen of Scots, by James VI., and Charles I. and II., is vested in a chief magistrate, two bailies, a treasurer, and a council of seventeen, chosen under the regulations of the Municipal act of William IV. There are seven incorporated trades or companies, the blacksmiths, wrights, weavers, tailors, shoemakers, coopers, and bakers, the fees of admission into which vary, for sons of freemen, from £1. 5. to £3. 19., and for strangers, from £3 to £6. 2. The magistrates, whose jurisdiction extends over the whole of the royalty, hold bailie courts for civil actions and the trial of petty offences, but very few cases come under their decision. Crail is associated with St. Andrew's, Anstruther Easter and Wester, Cupar, Kilrenny, and Pittenweem, in returning a member to the imperial parliament; the number of qualified voters is about fifty. The town-hall, a neat building, is situated in the principal street.

The PARISH, which is bounded on the south and east by the Firth of Forth and the German Ocean, is about seven miles in length, extending to Fifeness, the eastern extremity of the county, and about three miles in extreme breadth; but from its irregularity of form, the precise number of acres has not been ascertained. Its surface, near the shore, has an elevation of about eighty feet above the sea, and rises gradually towards the west, without forming any considerable hills. The soil comprehends every variety of character, from the deepest black loam to a thin wet clay, and the chief crops are wheat, oats, beans, barley, and potatoes, of all which great quantities are sent to London, Leith, &c. In this, as in other parishes, the system of agriculture has been much improved: all the modern implements of husbandry are in use; the farms are of moderate size, and on most of them threshing-mills have been erected. The lands near the town obtain a very high rent, generally from £6 to £8 per acre, and the pastures are luxuriantly rich. Coal is found in the parish, and a considerable work was carried on within a few years; limestone of good quality is also abundant, and is obtained for burning into lime for agricultural use. The annual value of real property in the parish is £10,240. The only plantations are around the mansions of the principal landed proprietors. The ancient houses of Newhall and Balconie have been demolished; of the latter, which was one of the noblest mansions in the county, a small portion still remains, forming a commodious dwelling-house for the farmer, and a good landmark for mariners. The principal houses at present are those of Airdrie, a handsome mansion embosomed in thriving plantations; Wormiston, in the grounds of which there are some trees of stately growth; and Kirkmay. For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of St. Andrew's, synod of Fife. The minister's stipend is £280, with a manse, and a glebe valued at £64 per annum; patron, the Earl of Glasgow. Crail church, formerly collegiate for a provost, sacrist, and prebendaries, still retains some vestiges of its ancient grandeur. The parochial school, with which the burgh grammar school has been incorporated, is well conducted; the master has a salary of £34, with a house and garden, and the fees average about £40. When the number of

scholars exceeds ninety, an assistant is appointed, who receives from the corporation £12 per annum, the salary formerly paid to the burgh schoolmaster. The remains of the priory, near the sea-shore, are almost obliterated; the eastern gable, which was the chief portion left, having been destroyed by the sea about forty or fifty years ago. Near Fifeness is a long ridge of stones called the Danes' Dyke, with a cave in which Constantine II. is said to have been murdered by the Danes about 874.

CRAILING, a parish, in the district of JEDBURGH, county of ROXBURGH; including the village of East and West Nisbet, and containing 667 inhabitants, of whom 74 are in the village of Crailing, 4 miles (N. N. E.) from Jedburgh. This place, the name of which is of uncertain derivation, comprehends the ancient parish of Nisbet, annexed to it by act of the presbytery prior to the year 1713. The whole parish comprises 6000 acres, of which about 300 are woodland and plantations, and the remainder arable land in good cultivation. Its surface is varied, in some parts rising to a considerable elevation; the highest point, called Piniel Heugh, is a hill covered with verdure, presenting a pleasing object in the landscape, and rendered more conspicuous and interesting by the erection on its summit of a monument to commemorate the victory at Waterloo. This monument is a circular column of whinstone, 150 feet in height, rising from a massive pedestal, on the face of which is the inscription, "To the Duke of Wellington and the British Army, William Ker, VIth Marquess of Lothian, and his tenantry, dedicate this monument, 30th of June, 1815." It has within the shaft a spiral staircase, leading to the summit, which commands an extensive and richly-varied prospect, embracing the windings of the Teviot to the west, the range of the Cheviot hills to the south, Tweeddale to the north, and the whole of the Merse to the sea on the east. The Teviot flows through the parish, and, a little below the village, receives the Oxnam water.

The SOIL is dry and fertile, and extremely favourable to the growth of all kinds of grain. About the year 1800, very profitable crops of tobacco were raised on some of the lands, by way of experiment. The present crops are oats, wheat, barley, potatoes, turnips, and peas; the system of agriculture is highly improved. The plantations are well managed, and in a flourishing state; and on the road passing through the village are some stately rows of beech, ash, and elm. The principal substrata are whinstone and sandstone: the latter is found near the river, of a light colour, and of excellent quality for building; two quarries have been opened, and blocks of twelve feet in length have been raised. The annual value of real property in the parish is £7379. Monteviot House, the seat of the Marquess of Lothian, is situated at the western extremity of the Nisbet district: the ancient mansion is small, and uninteresting in its architectural details; a new mansion was projected and commenced, but after the erection of a small part, consisting merely of the servants' apartments, &c., the work was suspended many years before the late marquess's death. Crailing House is a handsome mansion, on rising ground overlooking the winding stream of the Oxnam; the demesne is laid out with great taste, and embellished with rich plantations. The village of Crailing was formerly more extensive than at present; it has facility of intercourse with Jedburgh and Kelso by the great road from Carlisle to Berwick.

Ecclesiastically the parish is in the presbytery of Jedburgh, synod of Merse and Teviotdale: the minister's stipend is £251. 10., with a manse, and a glebe valued at £32. 10. per annum; patrons, the Crown and the Marquess of Lothian. The church, situated in the Crailling district of the parish, is a neat plain edifice, adapted for a congregation of 300 persons. Of the ancient church of Nisbet scarcely any remains exist, but the churchyard is still used. There is a place of worship for members of the Free Church. The parochial school at Crailling is well conducted; the master has a salary of £30, with £22 fees, a house and garden, and £3. 15., the interest of a bequest by one of the Lords Cranston. A school at Nisbet is supported by the marquess, who gives the master a salary of £20, with a house and garden rent-free, in addition to the fees. The old mansion-house at Monteviot is said to be part of an ancient hospital dependent on the abbey of Ancrum. Near the site of the mansion are traces of the cemetery belonging to the establishment; a considerable number of tombstones have from time to time been dug up, and the inscriptions on some of them were tolerably legible, but none appear to have been of any importance.

CRAMOND, a parish, chiefly in the county of EDINBURGH, and partly in that of LINLITHGOW; including the village of Davidson's-Mains, and containing 1981 inhabitants, of whom 167 are in the village of Cramond, 5 miles (W. N. W.) from Edinburgh. This place derived its name, originally *Caer Amon*, from the erection of a fortress on the river Amon or Almond at its influx into the Firth of Forth; and from the discovery of coins and other relics of antiquity, it is supposed to have been a Roman station, and the port through which that people obtained supplies of grain for their army. Among the antiquities found here are, the remains of a bath and several altars, and the military road leading from the village to the south. About half way between Queensferry and Edinburgh is Cramond Brig, where, according to ancient tradition, one of the Scottish kings was rescued from a band of robbers by the ancestor of the Howisons of Braehead and Crawfordland. That family is said to hold these lands on condition of attending at Cramond Bridge with a basin of water and a towel, for the king to wash his hands, when passing here; and this ceremony was performed by Mr. Howison Crawford in 1822, at the banquet given to George IV. by the corporation of Edinburgh.

The PARISH is situated on the south shore of the Firth, and that part of it which is in the county of Linlithgow is separated from the other portion by the river Almond. The whole is from six to seven miles in length, and from one mile to two miles in breadth; and including the small islands of Cramond and Inch-Mickery, it comprises about 4900 acres. Its surface is beautifully diversified, containing part of the Corstorphine hill; and the surrounding district abounds with interesting features, and with every variety of picturesque and romantic scenery. The island of Cramond, which at low water is accessible on foot, contains about nineteen acres, affording excellent pasturage for sheep, and has two or three cottages for the accommodation of sea-bathers: towards the centre it rises to a considerable height, and on the east are some precipitous cliffs of granite. It anciently belonged to the bishops of Dunkeld, and subsequently to the Balmerino family. Be-

tween this island and Inch-Colm, nearly in the centre of the Firth, is the small rocky islet of Inch-Mickery, covered with mosses and sea-weed. The soil is fertile, and the lands are in a high state of cultivation, producing crops of every kind. There are several seams of coal in the parish, which have been occasionally wrought; but the quality is not such as to encourage the continuance of the mines. Excellent freestone is found on the lands of the Duke of Buccleuch, and from quarries here were raised the materials for the construction of the harbour and pier of Granton. The annual value of real property in the Edinburgh portion of the parish is £16,100. Among the numerous seats and mansions are, Barnton, Lauriston, Cramond House, Caroline Park, Muir House, New Saughton, Braehead, and Craigcrook: the first mentioned was a hunting-seat of one of the kings of Scotland. The village of Cramond lies in a romantic valley on the east side of the Almond, and opposite to the pleasure-grounds of Dalmeny Park on the west bank of that river; it is neatly built, and is a favourite resort of the inhabitants of Edinburgh during the summer months. Near it are some iron and paper works, established in 1771, which are still carried on with spirit, and afford regular employment to a considerable number of the population.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Edinburgh, synod of Lothian and Tweeddale. The minister's stipend is £271, with an excellent manse, and a glebe valued at £20 per annum; patrons, the family of Ramsay, of Barnton. The church was erected in 1656, since which time it has been frequently enlarged and repaired. There is a place of worship for members of the Free Church at Davidson's-Mains, the largest village in the parish. The parochial school is attended by a considerable number of children; the master has a salary of £34, with a house and garden, and the fees average about £30. There are upwards of £3000 in charitable bequests, the interest of which, besides the legal assessment, is distributed amongst the poor; also funds for the distribution of coal and meal, and for education. Altogether the parish contains eight schools, three of which are conducted by female teachers. Cramond has given birth to several eminent and remarkable men. Of these, may be mentioned, John, Lord Balmerino, the opposer of Charles I. and friend of the Covenanters; Sir Thomas Hope, the celebrated lawyer of the Scottish bar; Sir George Mackenzie, first Earl of Cromarty, an able writer; Dr. Cleghorn, professor of anatomy in the university of Dublin, who may be considered as the founder of the school of medicine there; and John Law, of Lauriston. This last-named extraordinary character raised himself to the dignity of comptroller-general of the finances of France, upon the strength of a scheme for establishing a bank, an East India, and a Mississippi, company, by the profits of which the national debt of France was to be paid off. In 1718, his bank was declared a royal one, and the shares rose to upwards of twenty-fold the original value, so that, in 1719, they were worth more than eighty times the amount of all the current specie in France. But the following year this great fabric of false credit fell to the ground, almost overthrew the government, and ruined tens of thousands of families. Craigcrook, in the parish, was the residence of Lord Jeffrey, the distinguished critic: he was

born at Edinburgh in 1773, and died here on the 26th January, 1850.—See GRANTON.

CRANSHAWES, a parish, in the county of BERWICK, 9 miles (N. W.) from Dunse; containing 120 inhabitants. The derivation of the name of this place is doubtful, some supposing it to have been applied in consequence of the number of cranes or herons by which the district was originally visited, while others trace it to the *cranberry* bush, which is a native of the hills and mosses. In the fourteenth century the barony was possessed by the family of Douglas; and in 1401, Archibald, the fourth Earl of Douglas, assigned the estates to Sir John Swinton, of Swinton, whom he calls in the deed *dilectus consanguineus noster*. The family of Swinton held the property for a considerable period; and in June 1640 an act was passed by the parliament, confirming to them the baronies of Swinton and Cranshaws, with the teinds, and the patronage of the church. In the times of the border warfare, the district was involved in the general commotions, and Cranshaws Castle appears to have been a place of refuge from the sudden incursions of the English, as well as the old castle of Scarlaw, which was used by the inhabitants of another division of the parish.

THE PARISH, which is pastoral, is divided into two distinct portions by the intervention of the parish of Longformacus. The part in which the church stands is a pentagon in form, containing about six square miles, and bounded by the Whitadder river on the north and east: the other part of the parish is about five miles long, two in mean breadth, and is bounded on the north and north-east by the Dye Water, a tributary of the Whitadder. The surface consists chiefly of lofty hills, covered to a great extent with heath, and best suited to pasture, although most of the farms have each a portion of arable land. The highest ground is Manslaughter-Law, so called, as tradition reports, from a bloody engagement which took place near it, in 1402, between the Earl of Dunbar and Hepburn of Hailes. There are numerous springs in the parish, one of which is chalybeate. About 350 acres only are under tillage, the produce consisting of oats, barley, peas, turnips, potatoes, and sown grasses; the grain is sent to Haddington and Dunbar. There are about 4400 sheep kept; they are all Cheviots, and are sent to Gifford, Dunse, and Edinburgh: the black-cattle are a mixture of several kinds. The annual value of real property in the parish is £1132. The principal substrata are greywacke and greywacke-slate. Boulders of granite, sienite, and porphyry are washed down from rocks of conglomerate in the parishes of Stenton and Whittingham; and in Cranshaws Hill is a fine conglomerated rock, with an intermixture of iron-ore. Near this occurs sandstone of the secondary formation, coloured by grains of iron, and of good quality for building; and from the same hill wherein this is found, large quantities of yellow-ochre issue, which are used by the people in colouring the walls of houses.

Ecclesiastically the parish is within the bounds of the presbytery of Dunse, synod of Merse and Teviotdale. The minister's stipend is £158. 6. 8., of which more than three-fourths are received from the exchequer, and there is a manse, with a glebe valued at £17 per annum; patroness, Lady Aberdour. Cranshaws church, a very plain edifice, was built in 1739, and will contain 120 persons. A parochial school is supported, in which all

the usual branches of education are taught; the master's salary is £34, with about £10 fees, and the allowance of house and garden. There is also a parochial library, consisting of 200 volumes. The chief relic of antiquity is the Castle of Cranshaws, an oblong structure of forty feet by twenty-four, with walls forty-five feet high, and a modern battlement. Upon a hill on the south-west side of the parish are two immense heaps of stones, said to have been collected to commemorate the death of twin-brothers of the name of Edgar, who fell while commanding different portions of an army which had mutinied: these stones are called the Twin-law Cairns. (See the article on Westruther.) In the back wall of the church, and opposite the pulpit, are figures, cut in stone, of two unicorns supporting a crown, with a lion between them. The traditional tale with respect to these figures is, that a king of Scotland, returning from a hunt on Saturday, arrived at Cranshaws Castle, and went next day to the then existing church; that, when the congregation was dismissed, he complimented the clergyman on his performance, but reminded him of one omission, the not praying for the king; and that, to prevent similar neglects in future, his majesty ordered the above arms to be placed before the pulpit.

CRANSTON, or CRANSTOUN, a parish, in the county of EDINBURGH, 1 mile (N. by W.) from Ford; containing, with the villages of Chesterhill, Cowsland, Preston, and Sauchenside, 1128 inhabitants. The name is said to be derived from an Anglo-Saxon word, signifying "the crane's district", and applied on account of the number of cranes that resorted to this part. In the twelfth century, the parish was divided into two manors called Upper and Nether Cranston, in the latter of which the church was situated. Early in the reign of William, Upper Cranston was possessed by Elfric de Cranestun, who derived his surname from the manor, and whose descendants retained the property till the time of Charles II., when William, the third Lord Cranston, sold it to Sir John Fletcher, the king's advocate. Nether Cranston, which was the larger of the two manors, was granted by Earl Henry to Hugh Ridel, from whom it obtained the name of Cranston-Ridel, which it retained till recent times. The church, with its tithes and other pertinents, was bestowed by Hugh Ridel upon the monks of Kelso, for the sake of the soul of David I. and that of Earl Henry; and with them it continued till 1317. During this period they enjoyed the revenues of the rectory, a minister serving the cure, and receiving the vicarial tithes. The manor and chapelry of Cousland were annexed to the parish of Cranston at the Reformation: the chapel was burnt by Somerset, when he invaded Scotland with a large army to coerce Queen Mary into a marriage with the young king of England.

THE PARISH, which is entirely agricultural, is five miles in length and three in breadth, and contains an area of about 6000 acres; including the lands of Cake-muir, separated from the main portion of Cranston by the parish of Crichton. The surface is varied by continued inequalities; and the undulations, adorned with fine seats and flourishing woodlands, and the well cultivated and verdant fields, render the general aspect interesting and beautiful. The prospects from the more elevated grounds are commanding; and the picturesque valley through which the Tyne river here pursues its

course from south to north, adds greatly to the scenery. The soil, consisting partly of clay and partly of light earth, is generally fertile, and the whole of the land is arable, with the exception of about 300 acres in Cakemuir, and about the same quantity occupied by wood. Every kind of crop is raised, of good quality; but the staple commodity is corn, which is sent to the Dalkeith market, about four miles distant. All the modern improvements in husbandry have been introduced, and the farm-buildings and inclosures are in good order. There are several quarries of freestone and limestone, from which an abundant supply is obtained, and splint-coal is also wrought to a very considerable extent. The annual value of real property in the parish is £6813.

The chief mansions are, Oxenford Castle, the seat of the Earl of Stair, a magnificent building, situated on the west bank of the Tyne, and surrounded by beautiful grounds; and Preston Hall, on the east bank of the river, the splendid residence of W. B. Callender, Esq. The mansion-house of Cakemuir is likewise a remarkable building; the ancient part is of great age, consisting of a square tower, with boldly projecting battlements and walls of extraordinary thickness. An apartment here is called Queen Mary's room, and it is supposed that the name has arisen from the circumstance of that princess having occupied it shortly after her flight from Borthwick, in the vicinity. Chesterhall House, a rather old structure, was lately taken down. The parish is crossed by two good turnpike-roads, and facility of communication is afforded by two new and excellent bridges on one of them. That at Cranston Dean is forty-six feet high, and consists of three arches, each of seventeen feet span: Lothian Bridge is eighty-two feet high, and consists of five arches, each of fifty feet span, surmounted by ten segment arches, each of fifty-four feet span and eight feet rise. On the same line of road an embankment has been formed over the Cotty burn, at the height of fifty-four feet, by which the distance is diminished 1200 yards. For ecclesiastical purposes the parish is within the bounds of the presbytery of Dalkeith, synod of Lothian and Tweeddale; patron, the Earl of Stair. The stipend of the minister is about £260, with an elegant manse, built in 1830, at the expense of Mr. Callender, and a glebe let at £29. 10. per annum. Cranston church is a neat edifice of freestone, built in 1825, at the cost of Sir John Dalrymple, and will accommodate about 350 persons. There is a parochial school, where the usual branches of education are taught; the master's salary is £34, with £21. 10. fees, and the allowance of house and garden. A good parish library was instituted in 1830, and the poor have the interest of £357 left by some charitable persons. Many petrifications are found.

CRATHIE and BRAEMAR, a parish, in the district of KINCARDINE O'NEIL, county of ABERDEEN, Crathie being 22 miles and Braemar 32 miles (W. by S.) from Kincardine O'Neil; and the whole containing 1712 inhabitants. The word Crathie is supposed to be of Gaelic origin, and derived from the words *crag* and *tir* or *thir*, which signify "stony or rocky land," and are descriptive of the general appearance of the surface. The ancient parish of Braemar (a name expressive of the highest land in the three districts, Buchan, Garioch, and Mar, into which the county was once distributed) was in early times called St. Andrew's, and subsequently Bridg-

end, the latter name in consequence of a bridge having been built over the Cluney at Castletown by Malcolm-Ceann-Mor, who had a hunting-seat here. It received its present designation towards the end of the reign of Mary, when the lands about Castletown became the property of the Earl of Mar; but at what time it was united to Crathie is uncertain. The united parish extends about forty miles in length and twenty in breadth, and is situated in the heart of the Grampian range. The principal part was in ancient times covered with wood; it was included in the great Caledonian forest, and has always been celebrated for its abundance of superior timber, and the number of fine deer which traverse it. This district was the rendezvous of the inhabitants of the country in the time of the Romans, and afterwards a stronghold of the Highland clans. On the lands of Monaltry, on the north bank of the river Dee, in a narrow pass, is *Carn-na-Cuimhne*, "the cairn of remembrance", so named on account of the chieftains, in times of danger, marching with their followers through the pass, and causing each man to lay down a stone, by which they might ascertain, on their return, how many had followed them to battle, and what number had been lost in the conflict. The castle of Braemar was built as a seat of the ancient Earls of Mar, but was subsequently used as a garrison to keep in awe the lawless chieftains, and in 1748 was let to government for barracks, the great military road from Blairgowrie to Fort-George and Aberdeen passing through the district, close by *Carn-na-Cuimhne*. In the vale of the Dee, near the castle, the Earl of Mar, in 1715, first erected the standard of the Pretender, as noticed in the article on Castletown.

The PARISH comprises 199,658 acres, of which, in comparison with the extent of the district, but few are under cultivation; between 10,000 and 11,000 are occupied by wood, natural and planted, and the remainder is arable land, hill pasture, mountains, and moor. The scenery of the whole is highly diversified, and can scarcely, for grandeur and sublimity, be surpassed by any in the county. Braemar, which is especially mountainous, and the forests of which are well stocked with deer and game, is said to be the highest land above the sea in all Scotland, and the furthest removed in every direction from the coast. The principal lochs are those of Callader and Bhrodichan, in the midst of hills on the estate of Invercauld; the former contains salmon, and the latter red trout. The Dee, which rises in the mountain of Breriach, from a well or fountain 4060 feet above the level of the sea, flows through the parish in a serpentine course, augmented by numerous tributaries, and displays several beautiful cascades, especially one called the Linn of Dee. It falls into the German Ocean after a course of more than ninety miles from its source, at Aberdeen, where it forms the harbour of that city. There are also cascades, which are much admired, on the Quoich, the burn of Corymulzie, and the Garrobhalt: that at Corymulzie is particularly striking. The most lofty mountain is Ben-Macdhui or Bennamuickduidh, rising to an elevation of 4390 feet, and which, by a recent survey, has been found to be twenty feet higher than Ben-Nevis, previously reputed the highest mountain in Britain. Cairntoul and Bennabuird are respectively 4220 and 3940 feet above the sea, and, with Bennamuickduidh, are the principal elevations, all situated on the north-west boundaries of Braemar: Lochnagar, on the

south-eastern side of the parish, rises 3815 feet. These imposing mountains, covered to a great extent with wood of almost every kind and hue, and exhibiting in many places their boldly-shelving cliffs, with the grassy plains and winding streams ornamenting the lower grounds, form a rich assemblage of natural beauties which can scarcely fail to charm the tourist.

The SOIL in some places is shallow and sandy, and in others loamy and dry, incumbent on clay or gravel. Oats and bear are raised, and the green crops comprise turnips, potatoes, peas, and hay. Live stock is much attended to; the black-faced sheep and small black-cattle are the prevailing breeds, and the large quantity of hill pasture attached to each farm affords a fine range for their support. Agriculture has much advanced within these few years; and among other improvements, many stone dykes have been constructed as inclosures, and several secure embankments have been raised against the overflowings of the river Dee. The rocks, which are covered with a thin mossy soil of dark hue, are chiefly pure granite, of different colours, and of so close and firm a texture that, when highly polished, it resembles marble. Limestone is also abundant in the district, masses of which protrude in many places; and there is a species of very hard flinty stone or rock found, which is supposed to contain a portion of iron-ore. The proprietors of the parish are, the Earl of Fife; the Farquharson family, of Invercauld; and the Gordon family, of Abergeldie. The annual value of real property in the parish is £6600. The natural wood consists principally of Scotch fir, birch, mountain-ash, poplar, and alder; the plantations contain the various firs, but chiefly larch, which is of quick growth, and is much esteemed as a substitute, in many cases, for hard-wood, to the growth of which the climate is not suited. Some of the firs in the forest of Mar are supposed to be between 300 and 400 years old, and exhibit specimens rarely, if ever, equalled in any other part of Britain.

The mansion of *Invercauld* is situated in the noble valley of the Dee, in the midst of some of the grandest scenery in the Highlands: in front of it is a spacious lawn, formed of the eastern extremity of the haughs of Castletown, and behind the mansion rises a finely-wooded mountain. Within the parish are also the seats of Balmoral and Abergeldie in Crathie, and Mar Lodge and Corymulzie in Braemar. Of these, BALMORAL forms the Highland residence of Her Majesty the Queen, the reversion of the lease formerly held by the late Rt. Hon. Sir Robert Gordon having been purchased by His Royal Highness Prince Albert in 1848. The first royal visit was paid in the month of September of that year: Her Majesty and the Prince, the Prince of Wales, Prince Alfred, and the Princess Royal, arrived here with their attendants from Aberdeen on the 8th of September, and quitted Balmoral on the 28th for Montrose, thence proceeding by railway to London, where they arrived on the 1st of October. A second visit was paid the next year: after their visit to Ireland, the royal family, consisting of Her Majesty, the Prince, and four of the royal children, proceeded by way of Glasgow and Perth, to Balmoral, where they arrived on the 15th of August, and remained until the 27th of September. Since the first visit the house had been much improved, and the pleasure-grounds newly laid out. A third royal visit was paid in the year 1850. The neighbourhood of this royal retreat

presents some of the most majestic natural features in the whole country. Here the south bank of the Dee forms a fine peninsula and verdant lawn, encircled by a belting of luxuriant birch-trees. The foreground is occupied by the slope of Craigoun, a hill that rises from the valley, by a gentle acclivity, to the height of 1000 feet above the level of the sea. The face of the hill is covered with wood, and forms part of the forest of Mar. Over the left shoulder, when seen from the north side of the river, appears the summit of "dark Lochnagar", a mountain celebrated for its "steep frowning glories"; while a noble range of heath-clad mountains, disposed in a curve within a radius of ten miles, constitute a background grand in the extreme. In the centre of the peninsula, within this magnificent amphitheatre, and just at the base of Craigoun, stands the castle of Balmoral. *Abergeldie Castle* has been taken for a term by H. R. H. the Duchess of Kent. *Mar Lodge* forms the shooting-quarters of the Duke of Leeds: opposite to it, on the south side of the valley, is a hill called Craig Nich, a term said to signify "the rock or hill of the eagles". *Corymulzie*, situated about a mile from Mar Lodge, is another Highland retreat, and, for quiet loveliness, has no equal on all Deeside: it is the shooting-box of General Sir Alexander Duff. The parish contains the villages of Castletown and Auchindryne, both in the Braemar district; and at the former place, which is the more important, three annual fairs are held, two of them principally for cattle, and the other for sheep and cattle: an annual fair is also held at Clachnarn, in Crathie. There are two excellent inns in Braemar, where post-horses are kept; and also a daily post from Aberdeen. Messrs. Begg have a distillery for whisky in the parish, called the Lochnagar distillery.

Ecclesiastically, the parish is in the presbytery of Kincardine O'Neil, synod of Aberdeen, and in the patronage of the Crown; the minister's stipend is £233. 10., with a manse, and a glebe valued at £8 per annum. The church, built in 1806, stands on a foundation bewn out of a rocky terrace, which juts out at the base of Craigoun, on the north side of the new Deeside road. It is a plain structure, of no pretensions in point of architecture, but commands a very fine view of the valley of the Dee. Nearly opposite, only a little to the west, the river makes a noble sweep round a fair and spacious haugh, on which stands the castle of Balmoral, surrounded by ancient and stately trees. The sacred building contains 1400 sittings. An ordained missionary regularly officiates at Castletown, and there is a Roman Catholic chapel at the same village; also a place of worship for members of the Free Church in the parish. The parochial school affords instruction in the usual branches; the master has a salary of £26, with a house and garden, and £8 fees. There are two schools for boys, and three for girls, supported by the Society for Promoting Christian Knowledge; a school is supported also by the General Assembly, and two schools are kept in Braemar, during the winter, by the Roman Catholics. A friendly society was established in 1815, and remodelled in 1830, under the title of the Braemar Highland Society: its annual meeting is held in August, when many gentlemen attend; and its funds are appropriated partly to the relief of sick and aged members, and the purchase of annuities for widows and orphans, and partly to the encouragement of ancient games. A

savings' bank was instituted in 1816, and has now a capital of upwards of £2000. The ruins of the castle built by Malcolm-Ceann-Mor are still standing.

CRAWFORD, a parish, in the Upper ward of the county of LANARK; including the village of Leadhills, and containing 1684 inhabitants, of whom 236 are in the village of Crawford, 3 miles (S. E.) from Abington. This place has claims to a considerable degree of antiquity. In the year 943, or about that time, a church was founded here, and dedicated to Constantine, King of Scotland; and the lands appear to have been subsequently divided into two portions, of which the larger was bestowed on the monastery of Newbattle, and the smaller on that of Holyrood. It seems to have been exposed to incessant attacks during the border warfare and the feuds of rival clans, and many of the ancient farm-houses were constructed as well for the purpose of defence against an assailing foe as for domestic use. The population was formerly much greater than it is at present, and the lands were divided among a larger number of tenants, the practice of joining together several small farms having for the last century been very prevalent in this part of the country. The PARISH is situated in the south-east portion of the county; it is about eighteen miles in length, and from fourteen to fifteen in breadth, and comprises 75,500 acres, of which 74,150 are pasture, chiefly sheep-walks, 1200 arable, and 150 in wood and plantations. Its surface is mountainous, and broken into glens and spreading valleys in almost every direction; the highest of the mountains are the Lowthers, which are chiefly in this parish, and have an average elevation of about 2450 feet above the sea. The hills in general rise gradually from their bases, and afford good pasturage for sheep; and the valleys between them, especially such as have been improved by draining, are fertile. The river Clyde has its source in the parish, on a hill 1400 feet above the level of the sea, and flows in a gentle stream till it receives the river Daer and numerous other tributaries in its course through the parish. There are springs of excellent water, affording an abundant supply.

The soil of the arable land is rich on the banks of the Clyde, and also near the streams which fall into that river, especially at their influx. In the other parts of the parish it is very various, though great improvements have been made by the use of lime and the introduction of green crops. The chief crops are oats, which thrive well; and the few dairies are profitably managed, affording, besides the produce of the dairy, excellent opportunities of rearing young cattle, of which, however, not many are reared, sheep being more profitable. The sheep are mostly of the Cheviot breed, to which the former stock of short and black faced sheep has given place. Wood does not now flourish; but there are several trees of great age, which are supposed to be the remains of an ancient forest; and a charter is still extant, in the possession of the Marquess of Lothian, in which the inhabitants of the parish of Crawford are invested with liberty to cut wood in the forest of Glengonner, where there are now only two or three solitary trees. The substratum of the soil is partially transition rock, and greywacke in all its various formations. Slate, though not of very good quality, is found, and a quarry has been opened on the lands of the Earl of Hopetoun, which gives employment to a few men throughout the year. The

mining district of Leadhills is extensive, comprising an area three miles in length, and of nearly equal breadth, and is rich in a great variety of produce: a populous village has been erected within this district, which is described under the appellation of Leadhills. The annual value of real property in the parish is £12,341. The principal mansion-houses are the Hall, belonging to the Earl of Hopetoun; and Newton House, the seat of the late Lord Newton, by whom it was erected, in a substantial and handsome style.

The village of Crawford is of considerable antiquity, and formerly enjoyed numerous privileges, being anciently governed by a bailie of barony, and in later times having a court called a Birley court; it is situated on the road from Carlisle to Glasgow, and the inhabitants are chiefly employed in agriculture. A handsome chain-bridge was constructed over the Clyde at this place, in 1831, at the expense of the heritors; and over the same river, at Newton, is an elegant stone bridge, erected in 1824. Great facility of intercourse is afforded by the Caledonian railway, which passes through the parish, along the vale of the Clyde. Ecclesiastically the parish is in the presbytery of Lanark, synod of Glasgow and Ayr: the minister's stipend is £233. 13., with a manse, and a glebe valued at £13. 10. per annum; patron, the Crown. Crawford church, an ancient structure in good repair, is conveniently situated, and affords accommodation to about 300 persons. There is a chapel in connexion with the Established Church at Leadhills, the minister of which has a stipend of £70, with a house, provided by the Earl of Hopetoun and the Mining Company. The parochial school affords a good education; the master has a salary of £34, with £16 fees, and a house and garden.

There are several mineral springs, two of which resemble in their properties those of Moffat; and near the boundary of the parish, at Campshead, is a petrifying spring, in which many beautiful specimens are found. Among the principal remains of antiquity is the castle of Crawford, which was surrounded by a moat, and strongly fortified; and there are still preserved memorials of ecclesiastical edifices formerly existing in the parish, one of which is an ancient cemetery on the banks of a stream called Chapel Burn. There are also several Roman camps, the most perfect of them being one on Boadsberry hill, and another on a farm called Whitecamp; the two Roman roads by Moffat and Dumfries united in this parish, and formed one great road towards Lamington. An urn of baked earth, containing fragments of bones, was discovered some years since on the Castle farm. The celebrated poet Allan Ramsay was born at Leadhills, where he resided till his removal to Edinburgh; and James Taylor, to whom is attributed the first discovery of the application of steam to the propelling of vessels on the sea, and who assisted Mr. Miller of Dalswinton in making some successful experiments in 1788, was the son of one of the overseers in the mines at Leadhills.

CRAWFORDJOHN, a parish, in the Upper ward of the county of LANARK; including the post-village of Abington, and containing 993 inhabitants, of whom 137 are in the village of Crawfordjohn. This place, the name of which is supposed to have been derived from some proprietor of lands within the district, appears to have been originally a chapelry in the parish of Wiston. It

was granted, together with the church of that place, to the monastery of Glasgow, and subsequently to that of Kelso, which retained it till about the year 1450, when it became a separate and independent parish. The lands coming into the possession of two co-heiresses, were for a considerable time held in moieties, till, in the reign of James V., Sir James Hamilton of Finart obtained them. After his decease, they descended to the Hamiltons of this place and Avondale, from whom, with the patronage of the church, they were purchased by James, Marquess of Hamilton, about the year 1620. In the reign of Charles II., the village of Crawfordjohn was, by charter granted to Anne, Duchess of Hamilton, made a burgh of barony, and the inhabitants were endowed with the privilege of a weekly market and several annual fairs, which have long been in disuse. Few events of historical importance are recorded as connected with the place: part of the rebel forces passed through it on their march to Glasgow, in the year 1745.

The PARISH is for the most part pleasantly situated on the banks of the river Duneaton, which partly separates it on the north from the parish of Douglas. It is bounded on the south by the river Glengonner. On the east flows the river Clyde; while on the west are the counties of Dumfries and Ayr, which unite with that of Lanark on the border of the parish, at a point where a stone has been erected called the Three-shire stone. The length of the parish is nearly twelve miles, as seen upon Forrest's map; and its breadth, which may be averaged at nine, varies from two to ten miles; comprising an irregular area of 26,600 acres, of which 4200 are arable, about 60 plantation, and the remainder pasture for sheep. The surface is flat only upon the borders of the rivers, and sometimes for a very short distance; the general aspect of the greater portion of it is that of one beautiful glen, inclosed by gently sloping hills of various elevation, and along which the river Duneaton winds its course for many miles, receiving in its progress the waters of the Snar, Blackburn, and other streams. The rivers abound with trout, and the Blackburn is celebrated for a dark-coloured species, which excels in quality, and is in great request, and also for eels, some of which are of large size.

The SOIL is extremely various. On the banks of the river it is a rich black loam, except in those parts which are subject to inundation, where it becomes mixed with sand and gravel. The sides of the hills are in some places a deep red clay, capable under proper management of producing excellent crops; and in several parts is a deep moss, which, after judicious draining, has in many instances been converted into fertile arable land. The principal crops are oats, bear, potatoes, and turnips. The pastures are very rich; the meadows afford excellent hay and in large quantities, the crops of clover and ryegrass are abundant, and the hills present good pasturage for sheep, of which the permanent stock in the parish exceeds 10,000. There are several large dairy-farms producing butter and cheese which are of excellent quality, and find a ready market at Edinburgh and Glasgow. In a few dairies, the curds of cows' and ewes' milk have been wrought separately, and then put the one upon the other into the same vat, and pressed: this cheese, having two sides of different qualities, has brought a high price, and is in great demand. The number of cows and heifers exceeds 1000, chiefly of the Ayrshire breed, to

the improvement of which much attention has been paid; the sheep are of the black-faced kind, except a few of a mixed breed between the Cheviot and the Leicester. The plantations, which are chiefly at Glespin, Gilkerscleugh, and Abington, are Scotch fir, spruce, beech, lime, chestnut, and oak. Some advance has been made in draining and inclosing the lands; and a society for encouraging the improvement of live stock has been established by the farmers of this and the parish of Crawford, which has been sanctioned by many of the heritors in both. The annual value of real property in the parish is £6329. The substratum of the soil and the bases of the hills are mostly whinstone and freestone, of which several quarries are worked; limestone is also prevalent, and works have been established at Whitecleugh and Wildshaw, the latter on the borders of Douglas parish. There are indications of coal in several parts of the parish, though no works have been opened; lead-ore has been found at Craighead, and near the source of the Snar, at which latter place it is wrought. Some vestiges remain of a work opened at Abington for the discovery of gold; and in repairing a road some years since, several pieces of spar, in which copper was embedded, were found among the rubbish. There is also a tradition that silver-mines were formerly wrought in the parish: probably it originated in finding small portions of that metal in combination with the lead-ore. Through the lower part of the parish the road from Glasgow to Carlisle passes for about five miles, and in a neighbouring parish is the Abington station of the Caledonian railway, presenting great facility of communication. A subscription library has been established in the village of Crawfordjohn, and there is likewise one supported at Abington. Ecclesiastically the parish is in the presbytery of Lanark, synod of Glasgow and Ayr: the minister's stipend is about £235, with a manse, and a glebe valued at £16 per annum; patron, Sir T. E. Colebrooke. Crawfordjohn church, which is conveniently situated, was enlarged in 1817, and will accommodate 300 persons. The parochial school is attended by about seventy scholars; the master has a salary of £32. 10., with about £26 fees, and a house and garden.

There were formerly the remains of the castles of Crawfordjohn, Boghouse, Mosscastle, Glendorch, and Snar, the last of which was celebrated for the exploits of its proprietor during the border warfare. On the bleak hill opposite Gilkerscleugh are traces of a circular encampment consisting of two concentric circles, the innermost of which is about thirty yards in diameter, and has between it and the outer an interval of ten yards. There are vestiges of a similar intrenchment near Abington; and on the bank of the Clyde is the appearance of a moat, within which is a mound fifty yards in circumference at the base, and thirty feet higher than the surface of the water. In the peat-bogs have been frequently discovered alder-trees and hazel in a prostrate position, and, at various times, coins of Antoninus, and others of the reign of Edward I.

CRAWFURD'S-DYKE, in the county of RENFREW.—See CARTSDYKE.

CRAWICKBRIDGE and CRAWICKMILL, villages, in the parish of SANQUHAR, county of DUMFRIES, 1 mile (N. N. W.) from Sanquhar; the one containing 71, and the other 144 inhabitants. These places are situated on the beautiful stream of the Crawick, which separates the parish from Kirkconnel, and, after a south-west course

of about nine miles, falls into the Nith near the manse of Sanquhar. At Crawickmill is an extensive carpet manufactory, in which upwards of a hundred persons are employed in the various processes of dyeing, spinning, and weaving the materials.

CRAWTON, a village, in the parish of **DUNNOTAR**, county of **KINCARDINE**, $3\frac{1}{2}$ miles (S.) from Stonehaven; containing 77 inhabitants. It is situated in the south-eastern part of the parish, and chiefly inhabited by persons employed in fishing. There is a small harbour well adapted for the purpose. The fish taken off this part of the coast are haddock, whiting, cod, ling, skate, halibut, flounders, and a few turbot; and lobsters of good quality are also found in abundance.

CREAN-MULL ISLES, two of the Hebrides, in the parish of **BARRA**, county of **INVERNESS**. They are of very small extent, and are uninhabited: both lie in the Sound of Pabbay, between the islands of Pabbay and Saundray, and a little east of Lingay.

CREEBRIDGE, a village, in the parish of **MINNIGAFF**, stewartry of **KIRKCUDBRIGHT**, a short distance (E.) from Newton-Stewart; containing 262 inhabitants. This place consists of a street of good houses, lately built near a bridge over the Cree, and about a quarter of a mile below the village of Minnigaff. The bridge, from which it takes its name, is a handsome structure of granite, of five arches, connecting the village with the town of Newton-Stewart. The Cree rises on the border of Ayrshire, and for several miles of its course is inconsiderable, but, increased by tributary streams, it changes its appearance, and pursuing its way through a beautiful valley, empties itself into the bay of Wigtown. It is navigable for some miles.

CREETOWN, a burgh of barony, and a port, in the parish of **KIRKMABRECK**, stewartry of **KIRKCUDBRIGHT**, 6 miles (S. E.) from Newton-Stewart; containing 984 inhabitants. This place, which takes its name from its situation on the river Cree, is of some antiquity, and under the name of "Creth" was the rendezvous of the English army in 1300. It appears to have been of considerable extent, and, from a ferry over the river, obtained subsequently the name of the Ferry-Town of Cree. It is probable that the ancient village had fallen into decay before the erection of the present town, which was commenced in 1785, and in 1792 contained only fifty houses. The town is situated at the mouth of the river, on the eastern shore of Wigtown bay, and consists of several streets, irregularly formed, but containing well-built houses; the surrounding scenery in every direction is beautifully picturesque, and enlivened with handsome mansions and pleasing villas. A cotton-factory, a tannery, and a mill for making patent-shot, were for some years in active operation, but they have been long discontinued; the manufacture of carpets, affording employment to about thirty persons, is carried on in the buildings of the old cotton-factory, and the shot-mill has been lately adapted to the purpose of a cast-iron foundry. The trade of the port is mainly in the shipping of granite for Liverpool, in which several schooners are employed; there is a small coasting-trade, chiefly with Whitehaven, and foreign vessels occasionally land cargoes of timber and tar. A few fishing-whelries belong to the port. There is no harbour, and the vessels are moored upon the beach. Creetown was crected into a burgh of barony by charter granted to its proprietor, John Mc Culloch,

Esq., of Barholm, in 1791, and is governed by a bailie and four councillors, elected triennially by the tenants. A town-hall with a small prison has been lately built. There is a post-office, and every facility of communication is afforded by good roads, and by the ferry across the Cree to Wigtown.

CREICH, a parish, in the district of **CUPAR**, county of **FIFE**, 5 miles (N. W. by N.) from Cupar; containing, with the villages of Brunton and Luthrie, 430 inhabitants. This place is supposed to have derived its name, signifying in the Gaelic language rocky or rugged ground, from the general appearance of its surface. It was at an early period the property of the Bethune family, who had a baronial castle here, of which there are still some inconsiderable remains. The parish is about three miles in length from north to south, varies from one mile to nearly two miles in breadth, and comprises about 2324 acres, of which 1803 are arable, 204 woodland and plantations, and the remainder pasture and waste. Its surface is greatly broken by numerous hills, forming part of the Ochil range, but few of which have an elevation of more than 550 feet above the sea: the acclivities of some of these hills are cultivated from the base to the summit; others are covered with heath, and partly with thriving plantations. Several small streams rise in various parts, and uniting near the village of Luthrie, form the river Motray, which after flowing through this and other parishes falls into the Eden. The surrounding scenery is beautifully varied, and from the hills are fine views of the river Tay, the Carse of Gowrie, the Sidlaw hills and the Grampian mountains, the town of Dundee, and the distant heights of Ben-Ledi and Ben-Lawers.

The soil, which has been much improved by draining, is mostly fertile; the best system of husbandry has been long in use, and the lands are generally under excellent cultivation. The crops are wheat, barley, oats, peas, potatoes, and turnips. Of the live-stock, the cattle are chiefly of the old Fifeshire breed, with a few of the Teeswater upon one of the farms; they are usually fattened when three years old, and sent to market. The sheep, which are of various breeds, are bought in when young, in August, and sold when fat, in the June following. The annual value of real property in the parish is £3323. The substrata are principally amygdaloid, resting on claystone, felspar, and greenstone: basaltic clinkstone is found in the northern extremity of the parish, and extensively quarried for building purposes, and for the roads; there is also a quarry of sandstone in operation. The plantations are chiefly larch, Scotch, and spruce firs, interspersed with various hard-woods; and on the demesne of Luthrie are some fine elms, planes, and horse-chesnuts of stately growth. Luthrie House is a handsome mansion, situated in a well-planted demesne. A considerable number of the inhabitants are employed in the hand-loom weaving of Osnaburghs, sheetings, and dowlas, for the manufacturers of Cupar, who have two agents here. Facility of communication is afforded by the road from Cupar to Perth, and by a turnpike-road between the ferries of Pettycur and Newport.

Ecclesiastically the parish is within the bounds of the presbytery of Cupar and synod of Fife. The minister's stipend is £227. 14., with a manse, and a glebe valued at £8 per annum; patrons, the family of Grant. Creich church, erected in 1832, is a handsome structure containing 252 sittings; it has a marble monument to Mrs.

Baillie, widow of the late Col. Baillie, of Luthrie. The communion-plate was purchased with the proceeds of a bequest left by Mr. George Davidson, parochial schoolmaster, who died in 1745. There is a place of worship for members of the Free Church. The parochial school is attended by about seventy children: the master has a salary of £34, with a house and garden, and the fees average about £18; he also receives the yearly interest of 2000 merks Scots. Some Druidical remains, consisting of portions of concentric circles, have been discovered on one of the hills in the parish; and on the hill called the Greencraig were found the remains of what is supposed to have been a Danish camp. Two sepulchral urns and two stone coffins were found in the vicinity of Parbroath, containing human bones; and near the remains of the ancient house of Parbroath was formerly a chapel, not far from the site of which several graves were discovered, while digging for the foundation of a wall, a few years since.

CRICHIE, ABERDEEN.—See STUARTFIELD.

CRICHTON, a parish, in the county of EDINBURGH; including the village of Pathhead, and part of Faladam, and containing 1384 inhabitants, of whom 122 are in the village of Crichton, 2 miles (S.) from Ford. This place is of considerable antiquity, and was known to the Romans. Upon the property of Longfaugh are the remains of a Roman camp, the lines and intrenchments of which are well defined; and there is no doubt as to the ancient occupation of the place by armies, of the particulars of whose operations in these parts we have no information. Crichton was anciently remarkable for its church, which was made collegiate in 1449 by Sir William Crichton, chancellor of Scotland, with the consent of James, his son; and a provost, eight prebendaries, and two singing boys were supported out of the rents of Crichton and Locherworth. It was a men-sal church, belonging to the archbishop of St. Andrew's; but the bishop had the patronage of the prebends of Vogrie, Arniston, Middleton, and Locherworth. After the Reformation, Sir Gideon Murray, the last provost, obtained a license to convert the church lands of Crichton, with the tithes formerly belonging to the rectory, into a temporal estate. He was treasurer-depute to James VI., and died in 1621, leaving the estate to his son Patrick, who in 1643 was created Lord Elibank: the lands are now possessed by William Burn Callender, Esq.

The celebrated CASTLE of Crichton, which is supposed to have been partly erected in the fourteenth century, was formerly the residence of Chancellor Crichton already mentioned, joint guardian with the Earl of Callender of James II. during his minority, and the promoter of the vigorous measures against the powerful Douglas. While Crichton held the castle, it was besieged and partly demolished by William, Earl of Douglas, after a resistance of nine months; but it was restored with great splendour, and received additions at various times, until it at length assumed the appearance of one of the most magnificent structures of this kind in the country. Though now in ruins, it is a solid massive building, of extremely venerable and imposing appearance. The oldest part of the castle is a narrow keep or tower; but so many additions were made subsequently to the erection of this part that there is now a large court-yard, surrounded by buildings of different ages. The eastern

front of the court is raised above a portico, and decorated with entablatures bearing anchors. The stones of this front are cut into diamond facets, of rich appearance; and within this portion of the edifice, there appears to have been a gallery of unusual size and elegance.

The PARISH, which is situated in the eastern part of the county, is about five miles and a half long, and four and a half broad, containing an area of about 4900 acres. Its surface consists of a continued succession of undulations and hollows throughout; a considerable part, in the higher grounds, is covered with wood, and about 560 acres are moorland and outfield. The river Tyne rises in the upper district of the parish, and after running towards the north for two or three miles, makes a bend to the east, passes through the county of Haddington, and falls into the sea near Dunbar. The soil in the lower grounds is mostly a deep rich mould, producing heavy crops; in some other places it is dry and sharp, well adapted to the growth of turnips, which are cultivated to a considerable extent. On the high lands it consists of thin moss resting upon a wet sand or clay, unsuited to husbandry, but congenial to the growth of trees, some of which thrive very well. About 4160 acres of land are in tillage, and all kinds of grain of good quality are produced, as well as potatoes, turnips, and hay. Several hundreds of acres, before considered intractable, have been brought into profitable cultivation within the present century, and improvements in this branch of husbandry are still in progress. The annual value of real property is £5610.

The rocks consist chiefly of limestone of a superior description, large quantities of which have been for many years sent to Edinburgh for the purposes of building; much of it is also sent southward, for agricultural use. Coal is found in different parts of the parish, in thin seams, but no pits have been opened. The great road to the south, by Lauder, passes through Pathhead, where a splendid bridge has been erected over the Tyne, consisting of five arches, each eighty feet high by fifty feet span. The Edinburgh and Hawick railway skirts the south-western boundary of the parish; it there crosses the river Tyne by a great viaduct with corresponding embankments, and has a station called the Tyne-head station. Ecclesiastically the parish is within the bounds of the presbytery of Dalkeith and synod of Lothian and Tweeddale; patron, Mr. Callender: the minister's stipend is £264, with a manse, and a glebe valued at £15 per annum. The parish church, which is a fine ancient structure in the form of a cross, was the collegiate church; it was thoroughly repaired about thirty years ago, and will accommodate 600 persons. At Pathhead is a place of worship for dissenters. There is a parochial school, in which the usual branches of education are taught; the master has a salary of £34, with a house, and £26 fees. A good circulating library is supported at Pathhead, and the parish has two friendly societies.

CRIECH, a parish, in the county of SUTHERLAND, 11½ miles (W. N. W.) from Tain; containing, with the village of Bonar, 2582 inhabitants. This place is famed for a contest which happened in the eleventh or twelfth century between the Scots and the Danes, at Drumbleah, near Bonar-Bridge, whence the invaders, after being completely routed, retired to their ships at Portnacoulter, at present called the Meikle Ferry. It is an ex-

tensive parish, in length about forty miles, and six miles in average breadth, and contains about 150,000 acres. The general appearance of the surface is hilly, approximating in many parts to the character of a mountainous district, and a small proportion only of its area is under cultivation, the rest being covered with natural wood and heath. At Ledmore is a fine oak-wood of about 150 acres; and in several other parts is a considerable quantity of natural wood, as well as of plantations. A large extent of ground on the estates of Skibo and Pulrossie was planted with fir and larch about forty or fifty years ago, to which about 1500 acres have been added by the present proprietor, with an intermixture of oak and other forest-trees. Other plantations have been made within the last few years, and the extent of the whole of them throughout the parish is now calculated at 2500 acres. The rivers are, the Shin, the Oyke, a considerable stream, and the Cassley: the two last join at the southern extremity, and form the Firth of Dornoch; they all contain salmon, which are regularly taken, and sturgeons are also sometimes seen in the Shin. There are likewise several lakes, the most considerable of which are Migdol, Gour, and Elst, all abounding with small good-flavoured trout.

The prevailing soil is the gravelly peaty kind usual in mountainous districts. At Pulrossie, Flode, Rosehall, and some other places near the Firth, there is an admixture of clay, and the hills in the vicinity of Rosehall form a fine natural pasture, and are covered with sheep. The largest corn-farm produces a rent of about £300 per annum, and there are half a dozen others returning from £50 to £200: the only sheep-farms are at Auchindoch and Inverchasy, and the breed on each is the Cheviot. Great improvements have been made within these few years, particularly on the two estates just named, consisting chiefly in the reclaiming of waste lands, in draining, and irrigation. The annual value of real property in the parish is £4811. There are two quarries of whinstone, but both very hard to work; and at Rosehall is a vein about five inches wide of fine-grained, solid, bluish-grey manganese, perfect and free from iron, but which, though valuable for its quality, is of too inconsiderable extent to repay the expense of working. A village and a cotton-manufactory were established at Spinningdale by Mr. Dempster, of Dunnichen, in the latter part of the last century; but the factory being destroyed by fire in 1809, the village has since fallen to decay. The neighbouring village of Bonar has, however, increased in extent and importance, especially since the erection of the great iron-bridge in 1812, and vessels of from thirty to sixty tons' burthen now trade to it, importing meal, coal, and lime, and exporting fire-props, wool, oak-bark, corn, and salmon. Newton is also a shipping-place for articles of the same kind.

For ecclesiastical purposes the parish is within the bounds of the presbytery of Dornoch, synod of Sutherland and Caithness; patrons, the Crown and the Duke of Sutherland. The minister's stipend is £209, with a manse, and a glebe valued at £5 per annum. Crieich church, a plain structure, built in 1790, is in good condition, and accommodates 500 persons with sittings. A place of worship has been erected in connexion with the Free Church. There is a parochial school, for which a new school-house has been built; the master has a salary of £30, with some small fees. The relics of antiquity

comprise numerous tumuli, a vitrified fort on the summit of the Doune or Hill of Crieich, and an obelisk near the church, measuring eight feet by four, erected, according to tradition, in memory of a Danish chief who fell near the spot. There are also various chalybeate springs in the parish.

CRIEFF, a parish, in the county of PERTH; containing 4333 inhabitants, of whom 3584 are in the town of Crieff, 17 miles (W. by S.) from Perth, and 56 (N. W.) from Edinburgh. This place, whose name, of Gaelic origin, is derived from its situation on the side of a hill, appears from various old documents to have been the spot where, at a very remote period, the thane of the district usually held his court in the open air, and dispensed justice to the inhabitants. It was from an early date regarded as the chief town of Strathearn, and was the seat of an earldom until the heiress of Malise the last earl, marrying the English Earl de Warren, was led into rebellion against Robert I., in 1320. It continued, however, to be the capital of that district, and was the seat of the jurisdiction of the king's steward of Strathearn, which office became hereditary in the family of Drummond, with whom it remained till the abolition of hereditary jurisdictions in 1748. About half a mile to the east of the town, is a spot till of late surrounded with a low wall of earth and stone, now hardly to be traced: here the courts were held; and a little to the west of the town is a rising ground where criminals were executed, and which still retains the appellation of Gallow Hill. The town was occupied by the army of Montrose during some of the disturbances of the great civil war; it was burnt by the Highlanders for its loyalty in 1715, and in the rebellion of 1745 was saved from destruction only by the interposition of the Duke of Perth. On the 10th of September, 1842, the town was visited by Her Majesty, in the course of her tour in Scotland; she was rapturously received by the inhabitants of the place, by whom a triumphal arch had been erected at the entrance of the town, and the Queen passed on to Drummond Castle, in the vicinity. The town was illuminated the first night the Queen was at the castle.

CRIEFF is beautifully situated on the sloping acclivity of an eminence near the base of the Grampian hills, commanding an extensive and richly-varied prospect of the country towards the south, which is in a state of high cultivation, and thickly studded with the residences of the gentry. It consists of one principal or high street, in the centre of which is St. James's square, a handsome range of building; and of several other well-built streets, one of which leads to a bridge over the river Earn, affording a communication with the parish of Muthill. The inhabitants are amply supplied with excellent water from springs in the immediate vicinity, from which it is conveyed into a reservoir in the centre of St. James's square, where a handsome building of stone has been erected, which, surrounded with some lime-trees of great beauty, forms an interesting and picturesque ornament in the town. There is a gas company. Nearly in the centre of the high street is the ancient cross, of rude workmanship, consisting of a block of stone raised on a plinth of hewn stone: it is about six feet three inches high, about two feet in breadth, and little more than six inches in thickness; the front is embellished with a cross, carved in relief, and there are traces of a legend, the characters of which

are so obliterated by time as to be altogether illegible. A subscription library has been established, and is well supported; the number of volumes at present is above 1000, and it is supposed that the number will soon be greatly extended. A circulating library is kept; and two reading-rooms are supported by subscription. Assemblies are held in the ball-room of the chief inn, and also in the large rooms of St. Michael's Lodge and the Weavers' Hall.

The principal TRADE carried on is the weaving of cotton for the manufacturers of Glasgow, in which nearly 500 persons are employed at their own homes, in producing checks and handkerchiefs. The quantity of yarn annually sent to this place from Glasgow is valued at £15,000; the average value of the goods when manufactured is about £20,000. About 400 looms are engaged regularly at this work, which forms the staple manufacture of the town. The manufacture of woollen-stuffs is also carried on to a moderate extent, in a factory lately erected on the banks of the river Turret, and affords employment to about forty persons: the articles are, blankets, plaiding, shawls, and various coloured stuffs; and all the processes are performed with machinery propelled by water, of which the river affords an abundant supply. Several other persons are occupied in the manufacture of linen-cloth, chiefly for home consumption, and a considerable number of females in tambour-work, and in working figured-muslins. There are three tanneries, employing a considerable number of hands, and producing a very large quantity of leather; likewise two distilleries, which produce about 73,000 gallons of whisky annually, and pay duties to the excise of more than £7000. Five malting establishments are also conducted, yielding in the aggregate nearly 7000 quarters of malt, and paying a duty of £5420 per annum. An oil-mill has been established, which is in constant operation; and there are corn, flour, and barley mills, all belonging to one proprietor, who disposes of the produce at the Glasgow and Dundee markets. The trade is principally with Glasgow, but certain portions of it are carried on with Edinburgh, Perth, Stirling, Dundee, and several towns in England. Great facility of communication with the neighbouring towns is afforded by good roads which pass through the parish, and of which the Tay-bridge road, traversing Glenalmond, is one of the best in the country. Mail and stage coaches pass daily through the town, and an act of parliament was obtained in 1846 for the construction of a branch to Crieff of the Scottish Central railway. The market, held on Thursday, is well attended by the farmers, and abundantly supplied with provisions of all kinds for the supply of the inhabitants. From its central situation, the town has been made the seat of numerous fairs previously held in the neighbouring parishes; and nine fairs, for which a commodious situation has been provided by Lady Willoughby de Eresby, are now regularly held. They are on the first Thursday in January, the third in February, the second in March, the first in April, the first and last in June, the second in July, the third in August, and that preceding the October Falkirk tryst. There are three branch banks.

The GOVERNMENT of the town, which is a burgh of barony, is vested in three baron-bailies and a committee, appointed by the three proprietors of the lands

on which the town is built, of whom Lady Willoughby de Eresby is the chief. The common funds, amounting to about £100 per annum, are appropriated by the committee in watching and lighting the streets, and supplying the inhabitants with water. A court is held quarterly by the sheriff of the county for the recovery of small debts and the determination of minor offences. There is neither a regular magistracy nor police, and the whole management is vested in the committee of the inhabitants. The Masons' Hall, or St. Michael's Lodge, was built in 1816, at an expense of £2000, under the direction of a committee of the society; it is a handsome edifice, containing a good assembly-room, and the requisite offices. The Weavers' Hall, a neat building also containing an assembly-room, was erected by that company in 1786. The old Tolbooth was built in 1665, for the accommodation of the officers of the steward's court, after the proceedings ceased to be conducted in the open air. It contained a prison in the lower part, in which offenders were temporarily confined; a courtroom where the small-debt and other courts were held; and above, a room for the use of the public library. The building has been demolished by the County Prison Board, and a larger edifice occupies its site.

The PARISH is separated into two divisions by the intervening lands of the parish of Monzie. The Highland division comprises the larger portion of the district of Glenalmond, through which the river Almond has its course, and abounds with every variety of mountain scenery, in its wildest and most romantic features. The Lowland division, which may properly be regarded as the parish, is about four miles in length, and three in breadth, and comprises 3800 acres; it is bounded on the north-west by the river Shaggy, on the east by the Pow, on the south by the Earn, and on the west by the Turret. The surface is generally level, being broken only by the Knock of Crieff and Callum's Hill, the former of which has an elevation of 400 feet above the sea. These eminences are both richly wooded, and add greatly to the diversity and the beauty of the scenery. The Earn, which issues from the lake of that name, forms the boundary of the parish for nearly three miles, and at Crieff receives the waters of the Turret. It is crossed by a good stone bridge of four arches, one of which was broken down by the Highlanders in 1715 to arrest the pursuit of the royalist forces, and has been replaced by one that does not harmonize with the others. The rivers generally abound with trout, and the Earn with salmon, eels, perch, and pike, which are taken in great numbers, and are of superior quality.

The SOIL in the north, west, and south is light and sandy, intermixed with gravel; nearer the town, a rich loam; and in the east and south-east portions, a stiff reddish clay. Of the 3800 acres in the parish quoad sacra, all, with the exception of about 600 in plantations, are under cultivation; the system of agriculture is in a highly improved state, and draining has been extensively practised in the most efficient manner. The chief crops are oats, barley, potatoes, and turnips, of which great quantities are grown, of excellent quality; wheat is also raised, but to a very limited extent, the soil not being so well adapted for it. Cattle are grazed here for the supply of the south-country markets, and for home consumption; and about 1500 are annually fed by the various distillers in the neighbourhood. Few sheep are

pastured, except for the use of the parish. The woods, occupying little more than ten acres, consist of oak (of three kinds, the common, the scarlet, and the Turkey), ash, elm, beech, sycamore, chesnut, plane, walnut, and poplar; and the plantations, to which considerable attention is paid, are chiefly larch, spruce, Scotch, and silver firs. There are not many trees remarkable for their growth: at Inchbrakie is an ancient yew of extraordinary size, in which the Marquess of Montrose is said to have concealed himself. The substrata of the hills are mostly mica and clay slate, with quartz, hornblende-slate, and some portions of granite; the lower lands are partly sandstone of a reddish hue, alternated in some places with trap-dikes of limited extent, and partly greenstone, which is wrought for the roads. Quarries of freestone are worked in several parts, the stone possessing great durability, and being susceptible of a high polish; but the veins have not yet been wrought to a sufficient depth to produce the best specimens. The annual value of real property in the parish is £7600.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Auchterarder and synod of Perth and Stirling; patron, Lady Willoughby de Eresby. The stipend of the incumbent is £182. 14., with a manse, built in 1701, and a glebe valued at £10 per annum. Crieff church, built in 1756, and thoroughly repaired in 1827, affords accommodation for 966 persons. An additional church was erected in 1837, at an expense of £1533, and for a time had a quoad sacra parish annexed to it, containing 2177 inhabitants, and called West Church: the minister is appointed by the subscribers and heads of families, communicants. There are places of worship for members of the Free Church, the United Presbyterian Synod, Episcopalians, and Roman Catholics. The parochial school affords a useful education; the master has a salary of £34, with a house and garden. There are some friendly societies, of which the Masons', instituted by the Duke of Perth in 1737, and the Weavers', instituted in 1770, are the chief.

On taking down the old parish church, which was a very ancient building, about forty gold coins of the reign of Robert I. were found in a niche in one of the walls; on the obverse was a head of the king, with the legend *Robertus Rex Scotorum*, and on the reverse, a figure of St. Andrew with his cross. There are some traces of a Roman road, which is supposed to have connected the camp at Strageath with that at Dalginross, passing through the lands of Broich; and in forming the present road through Burrel-street, a Roman pavement was discovered, in tolerable preservation, and at a considerable depth below the surface. Near the field where the stewards of Strathearn were accustomed to hold their courts, is a large upright stone with a sharp summit, the history of which is not clearly ascertained. From the well-known fact that many Druidical remains existed in the neighbourhood, it is supposed to have been one belonging to a circle, of which the others may have been removed at various times, and applied to agricultural uses. According to another account, it seems to answer the description of the *blot stein*, stone of sacrifice, or stone of fear, on which human victims were offered, previously to the introduction of Christianity into the northern countries. Here, it is thought, victims were immolated to Thor, the Scandinavian deity;

around were circular ranges of stone, dug deep in the ground, but now almost covered by the soil, and within these ranges sat the judges, with the accused, their advocates, and the witnesses, convened in solemn trial, and the people assembled beyond the ranges. On the summit of the stone were broken the backs of the victims offered as expiatory sacrifices to appease the wrath of the offended deity, and to purge the community from the guilt rendering them obnoxious to that wrath. This spot was the scene of a sanguinary conflict in 1413 between Graeme, Earl of Strathearn, and Drummond of Conraig, steward of that district, in which the former was slain. It was also chosen by Sir John Cope for his head-quarters, in the rebellion of 1745; and there is still a fine spring called "Cope's well," near which an old sword was lately found. Some slight remains exist of the ancient house of Inchbrakie, the strongly-fortified residence of Patrick Graeme, colonel of the Posse Comitatus of the county of Perth, and cousin of the celebrated Marquess of Montrose, in whose cause he took a decisive part. He is said to have defeated the Duke of Argyll, and to have taken Aberdeen, in retaliation for which his house at Inchbrakie was burnt by Cromwell. A short time since, some workmen employed in the moat found, embedded in the eastle, one of the cannon-balls that had been fired at the house by the besiegers.

Mallet, the poet, and Dow, the historian of Hindostan, are said to have received their early education in the school of this parish; and Dr. William Wright, a physician and natural philosopher of eminence, and Dr. Thomas Thomson, the distinguished professor of chemistry in the university of Glasgow, were born in the place. Sir David Baird, Bart., passed the later years of his life at Ferntower, in the parish; and the sword of Tippoo Saib, presented to the general after the storming of Seringapatam, is still preserved there. A marble tablet on the wall of the parish church records his decease, and the deep sympathy which it excited in the minds of the people of Crieff, by whom his memory is held in veneration.

CRIMOND, a parish, in the district of DEER, county of ABERDEEN, 9 miles (N. N. W.) from Peterhead; containing 767 inhabitants. This place once contained a castle belonging to the celebrated Cumyn, Earl of Buchan; it stood on a small hill called Castlehill, and was suffered to fall into ruins after his fatal defeat at the battle of Inverury by Robert Bruce. Near this castle, the remains of which are completely covered over with sand blown from the sea-shore, are the walls of a chapel in good preservation, supposed to have been the private family chapel; and in the immediate vicinity stood the ancient town of Rattray, which in the sixteenth century possessed all the privileges of a royal burgh, except that of sending members to parliament. The Earl of Errol was superior of the burgage lands, of which, though originally extensive, there is now only one feu remaining.

The PARISH is situated in that part of the county called Buchan, and on the coast of the German Ocean, about midway between Peterhead and Fraserburgh. It comprises nearly 6000 acres, of which 4093 are arable, 707 pasture, 109 plantation, and the remainder moor, moss, bent, and waste. The coast measures about two miles, and consists of flat beach and sand-hills, except at the famous promontory of Rattray head, where it runs into a ridge of low rocks, stretching into the sea,

in an eastern direction, for a distance of between one and two miles, and concealed at full tide. There were formerly numerous shipwrecks; but these have become far less frequent, chiefly in consequence of a lighthouse having been erected at Kinnaird's head to the north, and another at Boddom, near Peterhead, on the south. The surface along the shore rises to the height of nearly 200 feet, but slopes towards the interior, which is only slightly elevated above the sea. Afterwards, however, the land rises to the south and south-west boundaries, uniting with the higher grounds of Lonmay and St. Fergus. The loch of Strathbeg, one-tenth of which is situated in Crimond, and the remainder in Lonmay parish, covers several hundred acres. The water is now fresh, but it formerly communicated with the sea, and was entered by vessels of small burthen till the year 1720, when a strong east wind blew the sand into the channel, and effectually choked up the entrance. Towards the sea the banks present nothing but a succession of sand-hillocks covered with bent, and the other side is lined with bogs and marshes. The loch, however, has many attractions to the botanist and the sportsman, from the variety of the productions growing near its banks, or on the margin of its tributary burns; from its numerous wild-fowl, comprehending most species usual in the country; and from its supply of different sorts of fish. The upper part of the parish contains the loch of Logie, or Kininmonth, which covers about twenty acres, and is surrounded by low tracts of moss, of a dreary and barren appearance.

The prevailing SOIL is a light loam, incumbent on clay; near the shore the soil is sandy, and other parts contain a great extent of moss. The land produces good crops of all kinds of grain, potatoes, turnips, and hay; the system of farming is of a superior kind, and considerable improvements have been effected by draining, although much yet remains to be done in this respect. On account of the facilities of communication by steamers between Aberdeen and London, much attention has been given of late years to the rearing and fattening of cattle for the market: of the several kinds, a cross between the Teeswater and Buchan is in general preferred. But few sheep are kept; and cows for the dairy, now numbering between 250 and 300, have been less regarded since the increase in the sale of cattle. The annual value of real property in the parish is £3424. The rocks comprise whinstone, which is abundant, and a darkish-blue granite of very good quality; red granite is also found, but chiefly in a decomposed state, and limestone was formerly worked near Bilbo. There is an ancient seat called Haddo, and an elegant modern mansion has been built on the estate of Rattray. The population of the parish is mostly agricultural; but some are engaged in fishing, and besides the perch, trout, eels, and flounders taken in Loch Strathbeg and its burns, the neighbouring seas afford herrings, mackerel, skate, haddock, and other fish, especially the famous cod known as the Rattray-head cod. The turnpike-road from Peterhead to Fraserburgh runs through the parish. Fairs are held in February, September, and October, for horses, cattle, and sheep.

Ecclesiastically the parish is in the presbytery of Deer, synod of Aberdeen, and in the patronage of the Earl of Fife; the minister's stipend is between £200 and £300, with a manse, and a glebe valued at £6 per annum. Crimond church is an elegant structure, built in 1812,

and surmounted by a lofty spire, containing a good clock and bell. The parochial school affords instruction in the usual branches; the master has a salary of £35, with a house erected in 1816, and from £15 to £20 fees, in addition to which he receives a portion of the Dick bequest, and the interest of £400 left by the Rev. Mr. Johnston, a former minister of the parish. There is also a parochial library, containing about 400 volumes. Arthur Johnstone, a Latin poet of the sixteenth century, is said to have been born in the parish; and Mr. Farquhar, of Fonthill, who amassed an immense fortune in India, and was generally known by the name of "rich Farquhar", was also a native.

CRINAMAIL, an isle, in the parish of BARRA, county of INVERNESS. It is one of the Hebrides, situated in the roads of Ottervore, and is of very small extent, and uninhabited.

CROCKETFORD, a village, partly in the parish of KIRKPATRICK-DURHAM, and partly in that of URR, stewartry of KIRKCUDDRIGHT; containing in the Kirkpatrick-Durham portion 117, and in the Urr portion 122, inhabitants. A road branches off from the village to New Galloway and the Glenkens. There is a small school.

CROFTHEAD, a village, in the parish of NEILSTON, Upper ward of the county of RENFREW, $\frac{3}{4}$ of a mile (W. S. W.) from Neilston; containing 297 inhabitants. This place, which is situated a little east of the road from Irvine to Barrhead, owes its origin to the introduction of the cotton manufacture. In 1792 an extensive spinning and weaving mill was built, around which the village has arisen. In addition to the cottages of the work-people employed in the factory, and in the printing and bleaching establishments connected with the cotton trade, there are some neat houses inhabited by persons occupied in superintending and conducting these extensive works.

CROICH, or CROICK, formerly a quoad sacra parish, in the parish of KINCARDINE, county of ROSS and CROMARTY, 9 miles (W.) from Kincardine; containing 316 inhabitants. This place, the name of which signifies a nook or corner, is situated on the Carron water, and is the head of a remote pastoral district of the civil parish. It was formed into a quoad sacra parish in 1827, and is within the bounds of the presbytery of Tain, synod of Ross: the church was erected in the same year. The stipend of the minister is £120, with a manse, and a glebe of the annual value of £10; the patronage is in the Crown. There is a small school.

CROLIN, an island, in the parish of APPECROSS, county of ROSS and CROMARTY; containing 40 inhabitants. It is situated near the entrance into Loch Carron, on the western coast, and is the most southern of a small group. Crolin is about a mile in length and of nearly equal breadth. There is some good pasturage.

CROMARTY, a burgh of barony, a sea-port, and parish, in the county of ROSS and CROMARTY, 175 miles (N. by W.) from Edinburgh; containing 2662 inhabitants, of whom 1938 are in the burgh. This place, whose Gaelic name, *Crom Ba*, signifying the crooked bay, is derived from the winding shore of the Firth of Cromarty, appears to have attained to some importance at an early period, though few details of its ancient history are recorded. It is identified in some degree with the usurper Macbeth, to whom it gave his earliest title of Thane of

Cromarty. It also seems to have been the scene of various disastrous battles, in commemoration of which are numerous tumuli in different parts of the parish, raised over the bodies of the slain. The hill behind the town is distinguished by tradition as the site of one of the victories gained by William Wallace over the English, during the disputed succession to the Scottish throne in the reign of Edward I. of England; and the opinion is confirmed by some artificial hillocks still discernible among the trees which crown that eminence. The district appears to have been originally inhabited by the Lowland Scots. Prior to the reign of Robert II., the town, which carried on a considerable trade in the exportation of wool and salmon to Flanders and France, was erected into a royal burgh, and united with that of Inverness.

The inhabitants were constantly subject to the predatory incursions of the Highlanders of the surrounding district; and in the reign of James IV., a combination of the Highland clans assaulted the town, and carried off nearly the whole of the property, even to the household furniture, for the restitution of which a decree was enacted by the lords of the council. Nearly the whole of the lands in the old county of Cromarty belonged to Sir John Urquhart, who was hereditary sheriff; and on his petition, the town was disfranchised as a royal burgh, and erected into a burgh of barony under his own jurisdiction. The prosperity of the place was subject to great fluctuation prior to the Reformation; but at that time it began to revive, and in the reign of Anne it had regained much of its previous importance, and had five vessels engaged in the herring-fishery. At the period of the Union it experienced considerable depression, and in 1730 had so far declined that scarcely a single shop-keeper was to be found in the town. In 1765, however, the lands of Cromarty were purchased by George Ross, Esq., who, at his own cost, added greatly to the revival and prosperity of the town by the construction of a pier, the introduction of an extensive manufacture of hempen-cloth, the erection of a public brewery, and the establishment of a lucrative trade in pork for the English market. Among his other beneficent measures, was the erection and endowment of a Gaelic chapel for the accommodation of Highland inhabitants.

The town is pleasantly situated in the eastern part of the parish, upon a low promontory between the Moray Firth on the east, and the Firth of Cromarty on the west. It consists of several streets of irregularly-built houses, which, notwithstanding the antique appearance of the more ancient, have an air of cheerful neatness. The herring-fishery, which was formerly carried on to a great extent, and, within the last twenty years, produced annually not less than 20,000 barrels that were shipped from the port, has lately been almost discontinued. The manufacture of hempen-cloth introduced by Mr. Ross is, however, still carried on in an extensive factory, in which about 150 persons are employed, in addition to nearly half that number in collateral branches; the brewery is a ruin. The principal trade of the port is, the exportation of pork for the supply of the English market, of which the average quantity annually shipped is valued at from £15,000 to £20,000; and the importation of coal from Sunderland, and other produce from different parts of the coast. The harbour has a commodious pier, and is accessible to vessels of 400 tons, which can come up to the quay; and should the population and the trade

of the district require it, this might be made one of the best harbours on the coast.

The entrance into the bay of Cromarty, from the North Sea, is between two lofty and precipitous promontories called the North and South Souters, of which the former is in the county of Ross, and the latter in that of Cromarty. The passage is about a mile and a half in width, and the bay is about seven miles in length, five miles in breadth, and from nine to twelve fathoms in depth, affording secure shelter to vessels in the severest gales. Towards the south-west it contracts into a firth about two miles in breadth, across which is a good ferry to Invergordon, where no accident has occurred within the memory of man. The market, which was weekly, has long been discontinued; and of the several fairs that were formerly held here only one remains, on the third Tuesday in November (O. S.). The government of the burgh, since the late act for municipal reform, has been vested in a provost, two bailies, and six councillors; but they have no funds. Cromarty is associated with Dingwall, Dornoch, Kirkwall, Tain, and Wick, in returning a member to the imperial parliament. The number of qualified voters is about forty. The town-hall, a neat substantial building, was erected by Mr. Ross, and contains in the upper story a spacious hall surmounted by a dome, and on the ground-floor a prison. The internal intercourse is impeded by the numerous inlets from the sea with which the parish is indented; but a road has been formed to Inverness, that passes through Chanonry, Rosemarkie, and Avoch, and the regular sailing-packets from London, Leith, and Inverness touch at the port.

The PARISH extends from five to seven miles in length, and from two to three in breadth, comprising about 7100 acres, of which 2047 are arable, 1850 woodland and plantations, and the remainder meadow, pasture, and waste. Its surface is strikingly diversified. Towards the Moray Firth it is precipitous and abrupt, attaining, at a small distance from the shore, an elevation 470 feet above the sea. On the north and west, it declines gently towards the Firth of Cromarty for some distance, and then subsides, more abruptly, into a continuous extent of table-land overhanging the beach. In the eastern portion of the parish is the hill of Cromarty, having an elevation of 300 feet, and richly crowned with wood; and about two miles to the east of the town is a natural arch in the cliff, affording a passage to a peninsulated rock rising to the height of 100 feet from the beach. The small burn of Ethie, which forms the extreme southern boundary of the parish, flows for nearly two miles through a deep ravine in a bed of sandstone, the banks of which rise precipitously to an elevation of 250 feet. In its course it forms numerous cascades of romantic character, and in one part, flowing between banks crowned with flowers and foliage of every hue, falls from a height of thirty feet into a dark mossy basin, shaded with plantations of hazel, birch, and hawthorn, intermixed with ivy and wild honeysuckle. The SOIL of the arable land is of a clayey quality, and in other parts are large tracts of moor and moss. The system of agriculture is in an improving state; the chief crops are, wheat, which was first raised about forty or fifty years since, and the various other kinds of grain. The substrata are mostly sandstone and granitic gneiss. The annual value of real property in the parish is £3847. Cromarty House, a handsome modern mansion, beautifully situated in a

richly-planted demesne, and Udale, are the principal residences.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Chanonry and synod of Ross. The minister's stipend is £251. 12., with an allowance in money in lieu of a manse, and the glebe is valued at £15 per annum : patron, the Crown. Cromarty church is a plain structure in very bad repair. The Gaelic chapel erected in 1783 by Mr. Ross, for the accommodation of the Highlanders employed in his factory, has an endowment of £150 per annum from government, for the support of its minister. To this chapel, containing 580 sittings, of which 300 are free, Gaelic people may come from all parts of the parish. There is also a place of worship for members of the Free Church. The parochial school is well conducted ; the master has a salary of £40, with a sum for house and garden, and the fees average £10. The poor have bequests producing £75 per annum. There are some very slight remains of ancient chapels, the most perfect being those of St. Regulus ; and among the ruins of the chapels of St. Duthac and St. Bennet, are two springs of excellent water. Of the distinguished persons connected with the place, may be named, the eccentric Sir Thomas Urquhart, celebrated for his *Genealogy* and *Universal Language*, and the late Dr. James Robertson, librarian of the university of Edinburgh, and professor of the Oriental languages ; who were both natives. The town formerly gave the title of earl to the Mackenzie family ; but George, the third earl, was attainted for his participation in the rebellion of 1745, and the title became extinct.

CROMARTY, COUNTY OF.—See ROSS and CROMARTY.

CROMBIE-POINT, a village, in the parish of TORRYBURN, district of DUNFERMLINE, county of FIFE, 3 miles (E.) from Torryburn ; containing 54 inhabitants. This village, which is situated on the north shore of the Firth of Forth, was formerly a place of considerable trade. It was, indeed, the principal depôt for the transit of the manufactures of Dunfermline, which were shipped hence to Borrowstounness, at that time the chief port on the Firth. The harbour, which is dry at low water, is inclosed by a pier of stone, now in great want of repair. A very considerable portion of the coal found in the neighbourhood, and of agricultural produce, is still shipped from this place ; and the Edinburgh and Stirling steamers still land, and take in, passengers and goods at the pier.

CROMDALE, a parish, partly in the county of ELGIN, but chiefly in that of INVERNESS, 18 miles (S. W.) from Rothes ; containing, with the village of Grantown, 3561 inhabitants. It is supposed to have derived its name from the Gaelic words *crom*, signifying crooked or curved, and *dail*, a plain or meadow, a portion of land being made semicircular by the winding course of the river Spey. This district, consisting of the three ancient parishes of Cromdale, Inverallan, and Advie, has from an early period been possessed by the Grant family, who were very powerful in Scotland in the thirteenth century, and the first of whom mentioned in old records was Gregory de Grant, sheriff-principal of Inverness, Ross, Sutherland, and Caithness, in the reign of Alexander II. Among the many sanguinary conflicts in the neighbourhood, a battle fought on the haughs of Cromdale, on the 1st May, 1690, is the most celebrated. It took

place between General Buchan, with a large party from different clans, on the side of the Stuarts, and Sir Thomas Livingstone, who commanded the royalists ; and the Highlanders, after fighting bravely, were routed with considerable slaughter. The castle of Lochindorb, situated in the parish, on an island in a loch of the same name, afforded a retreat for the lady of the Earl of Athol, when the latter had been killed in an engagement with the Earl of March, in 1335, at Kilblair : Sir Alexander Gordon shortly laid siege to the fort, but was obliged to withdraw in the following year.

The PARISH is very irregular in its outline. It is about twenty miles in length, and ten miles at its greatest breadth, comprising, according to a survey made in 1810, an area of 54,744 acres, of which 5306 were arable, 3283 in wood, 396 in lakes, and the remainder hill, moor, and moss. The lands are separated into two distinct portions by the Spey. Those on the northern side are much varied by slopes, stretching down to the river, and covered with thick forests of pine, oak, and larch ; on the south the most prominent feature is Cromdale hill, a lofty mountain ridge about seven miles long, covered with heath, extending to the east and west, and separating this parish from that of Kirkmichael. Most of the high grounds abound with grouse and different kinds of game, and with brown and white hares ; and ptarmigan have been shot in some places : the Spey is well stocked with salmon. The SOIL is in general favourable ; but the vicissitudes of the climate, the site of the parish being 600 feet above the level of the sea, often expose promising crops to ruin from cold and frost. Agriculture is, however, on a very respectable footing ; the rotation of crops and other approved usages of modern farming are followed, and lime is prepared on almost every allotment of land, however small. The sheep are mostly the black-faced, with a few Cheviots ; and the black-cattle, which are very superior, are of the West Highland breed. The annual value of real property in the parish is £5849. Primitive limestone of excellent quality is abundant, and is extensively wrought by nearly all the tenants : granite of a superior kind is also found, with various other rocks of the primitive class.

The parish is famous for its large and flourishing plantations, which are said to exceed those of any other parish in this part of the country : above 5000 acres are covered with larch, fir, and various other trees, half of which have been planted within the last thirty or forty years. Many trees among the older plantations are of great bulk and value, especially in the vicinity of Castle-Grant, whence very large cargoes have been and continue to be taken to Garmouth. The natural wood comprises a considerable extent of oak, birch, and alder ; and in the churchyard is a magnificent beech-tree, the branches of which are capable of overshadowing more than 1000 persons. The mansion of Castle-Grant is situated on an eminence on the northern side of the Spey, about two miles from the river, and is encompassed with forests of ancient and noble trees. This splendid edifice, the seat of the Grant family from remote ages, is now the property of the Earl of Seafield, sole proprietor of the parish, who is directly descended from the family of Grant, and chief of that clan. The house was built in the fourteenth century, but has since been frequently altered and improved, especially within

the last few years. It consists of a quadrangular pile of several stories, with lower wings; and the apartments, which are spacious and handsomely furnished, contain many valuable paintings by the ancient masters, and one by Hamilton, of superior merit, representing the Death of Patroclus. In the front hall are placed between thirty and forty portraits of different members of the Grant family; and there is also an extensive armoury. Ecclesiastically the parish is in the presbytery of Abernethy, synod of Moray, and in the patronage of the Earl of Seafield; the minister's stipend is about £250, with a manse, and two glebes, one at Cromdale, and the other at Advie, valued at £22 per annum. The church, situated on the southern bank of the Spey, was built in 1809, and will accommodate about 900 persons. There are four parochial schools affording the usual instruction; the masters receive each £12. 16. per annum, with fees, and the master of the school at Advie also shares in the Dick bequest. The chief relics of antiquity are, the ruin of the castle of Lochindorb, already mentioned; and that of Muckerach Castle, built by Patrick Grant, about the year 1598. Sir James M'Grigor, Bart., the head of the medical department of the army, was born here in 1771.

—See GRANTOWN.

CROMWELL-PARK, a village, in the parish of REDGORTON, county of PERTH; containing 124 inhabitants. It is situated on the Almond river, and is the seat of extensive cotton-works and a bleachfield, which employ the greater part of the population. The Almond turns several spinning-mills near this place, and has some fine waterfalls at short distances from the village.

CRONAY, an isle, in the parish of ASSYNT, county of SUTHERLAND. This is a small flat islet with a shallow shore, lying in Oldernay bay, on the western coast of the county, and a short distance westward of Oldernay island.

CROOK, a hamlet, in the parish of ALVES, county of ELGIN; containing 73 inhabitants.

CROOK OF DEVON, a village, in the parish of FOSSOWAY and TULLIEBOLE, county of KINROSS, 5 miles (W. N. W.) from Kinross; containing 61 inhabitants. It is situated in the western part of the parish, and at an angle of the Crook-water, which here turns suddenly. The vicinity is very romantic: the Devil's Mill is about a mile and a half, the Rumbling Brig two miles, and the Cauldron Linn three miles, below the village.

CROSS and BURNES, a parish, in the island of SANDA, county of ORKNEY; containing, exclusively of the isle and parliamentary parish of North Ronaldshay (*which see*), 983 inhabitants, of whom 515 are in Cross, and 468 in Burness. These two ancient parishes, now united, include about one-half of the island in which they are situated; the former occupying the south-west, and the latter the north-west, portion, together about nine miles and a half in length, and from half a mile to three miles in breadth. They are bounded on the north by the Firth of North Ronaldshay, which is about seven miles broad, and on the west by the Atlantic Ocean. CROSS comprises about 4600 acres, of which one-fourth is moorland, and nearly an equal quantity sandy downs. Its surface is diversified with hills, rising in some parts to an elevation of more than 300 feet above the sea. One of these, called the Brae of Fea, terminates on the west in an abrupt precipice, washed by the sea, and fretted by the action of the waves into numerous fantastic

caverns; it slopes gradually on the east to the margin of Ben-Loch, the declivity being richly covered with pasture, and enlivened with a pleasing variety of field flowers. The district of BURNES, anciently St. Colmes, comprises about 2500 acres, of which a considerable portion is under profitable cultivation. Its surface is nearly an uninterrupted level, and being almost surrounded by the sea, it is abundantly supplied with seaweed for manure, and also for the manufacture of kelp. The lands of the district are generally fertile and in good cultivation, and its scenery is enlivened with fields of luxuriant pasture, except near the junction with the district of Cross, where there is an extensive tract of barren moor. It is bounded on the west by the Atlantic, from the violent surges of which it is sheltered by the Holms of Ire; and on the east by the bay of Otterswick, formerly Odinswick, by which it is separated from the parish of Lady. There is a fresh-water lake of considerable extent and depth, which is a favourite resort of ducks and other aquatic fowl during the winter and spring; and both this loch and the more extensive one of Bea, in the Cross district, are occasionally visited by flocks of wild swans, as they pass north or south in their vernal and autumnal migrations.

The substrata of the parish, in common with those of the whole island, are principally of the old red sandstone formation, with sandstone flag and a little limestone. In Burness is an isolated mass of gneiss, about fourteen tons in weight, resting upon the surface, and to which there is no rock of similar formation nearer than Stromness, about thirty miles distant. On the west shore of Cross is a singular rock of breccia, consisting of rounded nodules of sandstone, with a few specimens of quartz and calcareous nodules intermixed. The bays of Stove and Otterswick abound with shell-fish of various kinds, particularly cockles and the razor-fish; and a large accumulation of shells reduced to powder, and heaped on the beach by the action of the waves, seems to have been blown inland over the parish at different periods. The system of agriculture is inferior to that of many of the other islands of Orkney, from the neglect it suffered during the almost general attention of the inhabitants to the more profitable pursuit of manufacturing kelp, vast quantities of sea-weed being thrown upon the shores. It has, however, been considerably improved under the auspices of Mr. Laing of Papdale, and Mr. Traill of Westove. The soil is well adapted for turnips, of which large quantities are raised; and the abundant use of sea-weed as manure has greatly benefited the lands, which now produce excellent oats and bear, potatoes, grass, and various green crops. The cattle are of the common breed, to the improvement of which much attention is paid. The native breeds of sheep are similar to those of Shetland and the Hebrides; some Merinos, introduced by Mr. Laing, have been crossed with sheep of the Cheviot breed, and subsequently with sheep of the Orkneys.

The manufacture of kelp was formerly very extensive, about 480 tons of a very superior quality being produced annually, and readily obtaining a market at £9 per ton; but this source of profit has been almost annihilated. As a substitute, considerable attention has been paid to the improvement of the fisheries off the coast, which are now conducted with activity and success. The lobster-fishery affords employment to fourteen

boats, and fifteen sloops and boats are engaged in the herring and cod fisheries; the average quantity of cod cured and dried here may be stated at fourteen tons annually. Otters are frequently seen in the caverns of the rocks on the western coast, and large shoals of what are called bottle-nosed whales are occasionally embayed here. These fish, which vary from five to twenty-five feet in length, and in numbers from fifty to five hundred, are on their appearance surrounded by the boats, and driven into the shallow water on the sandy shore, where they are easily taken. Ecclesiastically the parish is within the bounds of the presbytery of the North Isles, synod of Orkney. The minister's stipend, including an allowance for communion elements, is £210, with a manse situated in Cross, and a glebe in each of the districts, together valued at £19 per annum; patron, the Earl of Zetland. The churches are both old and inconvenient structures; that of Cross contains 248, and the church of Burness 262, sittings. Divine service is performed at each on alternate Sundays. There is a place of worship for members of the Free Church. The parochial school is well attended; the master has a salary of £46. 14., with a house and garden, and the fees average £10. Several of those ancient buildings called Piets' houses are scattered along the shores; and in Cross was formerly a small but handsome structure of stone erected by James Fea, of Claistron, about the beginning of the last century, as a family chapel and burying-place. This was taken down when the property was in the possession of Mr. Malcolm Laing, the historian of Scotland.

CROSS, or NESS, for a time a quoad sacra parish, in the parish of BARVAS, county of ROSS and CROMARTY, 27 miles (N. W.) from Stornoway; containing 1810 inhabitants. The district is about ten miles in length, and seven in breadth, and surrounded on all sides by the Atlantic, except on the south, where it is bounded by Barvas and Stornoway. It forms the most northern part of the island of Lewis, and its shores are bold and wild: in many parts it is hilly, abounds in lakes, and its large moors are deep and wet. The population is employed a good deal in cod and ling fishing. The parish was in the presbytery of Lewis, synod of Glenelg: the stipend of the minister was £120, with a manse, and a glebe of the annual value of £3; patron, the Crown. The church, situated about two miles from the Butt of Lewis, was erected in 1829, by the Parliamentary Commissioners, and is a good and substantial, but plain edifice. All the population adhered in 1843 to the Free Church of Scotland. There are two or three schools. Here are the ruins of a place of worship, supposed to have been a chapel before the Reformation.

CROSS, an isle, in the parish of DUNROSSNESS, county of SHETLAND. It lies a short distance west of the mainland of the parish, at the entrance of Quendal bay, and is one of the smallest of the Shetland isles.

CROSS-ARTHURLEE, in the county of RENFREW.—See ARTHURLEE, CROSS.

CROSSFORD, a village, in the parish and district of DUNFERMLINE, county of FIFE, 2 miles (S. W. by W.) from Dunfermline; containing 443 inhabitants. This village, which is situated on the road to Kincardine and Alloa, is built on the lands of Pitferrane, the property of Sir C. Halket, Bart. It is chiefly inhabited by persons employed in agriculture, and in works near the village.

CROSSFORD, a village, in the parish of LESMAGHAW, Upper ward of the county of LANARK, 5 miles (N. W. by W.) from Lanark; containing 431 inhabitants. It is situated in the northern part of the parish, and on the high road from Lanark to Hamilton. The river Clyde, which bounds the parish on the east, passes close to the village.

CROSSGATES, a hamlet, in the parish of CULTS, district of CUPAR, county of FIFE; containing 20 inhabitants.

CROSSGATES, a village, chiefly in the parish of DUNFERMLINE, and partly in that of DALGETY, district of DUNFERMLINE, county of FIFE, 3 miles (E. by S.) from Dunfermline; containing 646 inhabitants. This village is situated at the junction of the parishes of Dunfermline, Inverkeithing, and Dalgety, and takes its name from the intersection of the roads from Edinburgh to Perth and from Dunfermline to Kirkcaldy, which cross each other here. It is well built, containing several neat houses, and a good inn, where an agricultural association of the neighbouring gentry hold their meetings for the annual distribution of prizes. A post-office has been established under that of Inverkeithing; and fairs are held on the last Tuesday in April, the fourth Wednesday in May, the third Tuesday in July, the second Thursday in September, and the Friday before Hallowtide. To the north of the village is the Crossgates station on the Dunfermline branch of the Edinburgh, Perth, and Dundee railway. There is a place of worship for the United Presbyterian Synod.

CROSSHILL, a village, in the parish of KIRKMICHAEL, district of CARRICK, county of AYR, 2 $\frac{3}{4}$ miles (S. E.) from Maybole; containing 1163 inhabitants. This village, which is pleasantly situated on the river Girvan, has arisen within the last fifty or sixty years, and is partly built on lands let for that purpose by the proprietor of the barony of Dalhoan. There are also houses built on the estates of Kilkerran and Kirkmichael, forming part of the village. The inhabitants, a large majority of whom are settlers from Ireland, are chiefly employed in the cotton manufacture established by the wholesale houses of Glasgow, who have agents residing on the spot. A considerable number of the females, both here and throughout the parish, are employed in working and flowering muslin for the Glasgow and Paisley manufacturers, and their work is much admired for its elegance. In the village is a post-office, under that of Maybole. A chapel of ease has been erected; it is a neat and substantial edifice, adapted for a congregation of more than 450, and is so arranged as to admit of future enlargement by the addition of galleries when requisite. A spacious schoolroom was erected in the village by a former proprietor, for the instruction of the children of this part of the parish, and in addition to the use of the schoolroom, the master receives a salary of £10 from the General Assembly's Education Scheme, the school having lately been taken into connexion with the schools of the General Assembly. There is also an infants' school, commenced a few years ago, the mistress of which has £10 per annum, and fuel, besides a house and the schoolroom, from the bounty of Sir Charles Dalrymple Fergusson, Bart., of Kilkerran.

CROSSHILL, for a time a quoad sacra parish, in the parish of OLD MONKLAND, Middle ward of the county of LANARK, 4 $\frac{1}{2}$ miles (E. by S.) from Glasgow; containing,

with the villages of Baillieston, Barachnie, Broomhouse, Craigend, West Merrystone, and Swinton, 2591 inhabitants. This district is for the most part beautifully situated, the land rising considerably above the vale of the Clyde, and commanding, on the south, an interesting view of all the hills and heights from the western shore to the ridge of Tinto on the east, and on the north from Ben-Lomond all along the Campsie and Kilsyth hills. It is about eighteen square miles in extent, and the whole under cultivation, with the exception of a few acres of plantation. The soil is chiefly sandy, but towards the north of a stiff clayey nature, and the farms have been latterly very much improved by tile-draining: the average rent is now about £2. 5. per acre. The freestone and coal formations prevail, and there are seven coal-mines, of which six are at present in operation. The road between Glasgow and Edinburgh, and the Monkland canal, pass through the parish, the latter affording great facilities for the conveyance of coal to Glasgow, and of manure and other heavy articles to the farmers along its line. Among the chief mansions are Mount Vernon, Blairtummock, Easterhouse, Baillieston House, and Garrowhill, the last the residence for some time of a former Duchess of Atholl. The principal village is Baillieston, *which see*. The district is within the bounds of the presbytery of Hamilton, synod of Glasgow and Ayr. Its church was erected in 1833, by subscriptions from the neighbouring heritors, aided by £50 from the university of Glasgow, and is a neat plain edifice with a belfry, containing 494 sittings, of which twenty-six are free. The stipend of the minister is £70, raised by seat-rents; patrons, the Subscribers and Pew-holders. The United Secession had a place of worship here for several years, but it has been converted into dwelling-houses. There is a branch parochial school, with an annual endowment of £7 from the heritors of Old Monkland, and a school-house rent free from the congregation of Crosshill; also another school, supported by subscription, the master of which has a free house, school-house, and garden. Besides these, are schools connected with some of the coal-works, and a female school at Broomhouse.

CROSSHILL, a village, in the parish of CATHCART, Upper ward of the county of RENFREW, 2 miles (S.) from Glasgow; containing 63 inhabitants. It lies in the northern part of the parish, and on the eastern confines of the county; the road from Glasgow to Cathcart runs a short distance westward of the village. There is a valuable quarry of freestone, which is extensively wrought for the erection of buildings in Glasgow.

CROSSHOUSE, a village, in the parish of KILMAURS, district of CUNNINGHAME, county of AYR, $2\frac{1}{2}$ miles (W. by N.) from Kilmarnock; containing 255 inhabitants. This place is situated on the western side of the Carmel water, and on the roads between Irvine and Kilmarnock, and Dundonald and Kilmaurs, which here form a junction. In the village is a small school, the master of which is allowed £6 per annum and a dwelling by the heritors.

CROSSLEE, a village, in the parish of HOUSTON, Upper ward of the county of RENFREW, $\frac{1}{2}$ a mile (S. by E.) from Houston; containing 711 inhabitants. This village lies in the southernmost extremity of the parish, and on the banks of the Gryfe water, which is here very devious in its course. It is a seat of the cotton manufacture, and there is an extensive mill, which employs a

great part of the population. In the vicinity is Crosslee House. A school has been established for the use of the work-people and their children.

CROSSMICHAEL, a parish, in the stewartry of KIRKCUDBRIGHT; containing, with the village of Clarebrand, 1321 inhabitants, of whom 222 are in the village of Crossmichael, $3\frac{1}{2}$ miles (N.) from Castle-Douglas. This place, which is of remote antiquity, derived its name (in old documents *Corse-Michael*) from the dedication of its church, which was granted to the abbey of Sweetheart in the year 1275 by Dervorgille, wife of Allan, Lord of Galloway, and mother of John Baliol, King of Scotland. The parish is situated nearly in the centre of the stewartry, and is bounded on the east by the river Urr, and on the west by the Dee. It is about four miles and a half in length, and nearly three and a half in breadth, comprising 9700 acres, which, with the exception of a small proportion of pasture land and a few acres of woodland and plantations, are all arable. The surface is beautifully diversified. Along the banks of the Dee the lands form part of an extensive valley in rich cultivation; but both from the Dee on the west and the Urr on the east the ground rises gradually, towards the centre, into a ridge whose acclivities are marked with gentle undulations, all in tillage. Towards the north-east are several hills affording only pasture for sheep and cattle, but some of which have been planted with larch, adding greatly to the beauty of the scenery. There are three lakes in the parish, of which Loch Roan, situated in the highest district, is about fifty acres in extent, and of very considerable depth; it is supplied with water from no visible source but the clouds, and by two outlets it sends a plentiful supply into Loch Encrogo. This latter loch, in which are two small islands, where sea-gulls formerly built their nests, is smaller than Loch Roan; and if the water were not necessary for driving a corn-mill, it might easily be drained. Loch Smaddy is still smaller in extent. All these lakes abound with trout, perch, pike, and eels.

The soil is partly a fertile loam alternated with gravel and sand, producing favourable crops of grain of all kinds, with potatoes and turnips; and the pastures are luxuriantly rich. The system of agriculture is improved, and some of the lands have been drained, though much still remains to be done in that respect. The cattle are generally of the Galloway breed; the cows upon the dairy-farms are the Ayrshire: large numbers of sheep are fed, and many small tenants pay a great part of their rent by feeding pigs, which they sell at Dumfries. The annual value of real property in the parish is £8827. The plantations, which are well managed and in a thriving condition, are chiefly larch. The substrata are mostly greywacke and slate. In this parish the seats are, Greenlaw, Mollance, Danevale, Hillowton, Cullgruff, and Ernespie. Crossmichael village has a post-office under that of Castle-Douglas; and facility of communication is afforded by good roads, of which those from Kirkcudbright to Ayr, and from Dumfries to Portpatrick, pass through the parish. There is a bridge over the Dee at Glenlochar; also a ferry nearly opposite the manse.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Kirkcudbright, synod of Galloway. The minister's stipend is about £270, with a manse, and a glebe valued at £28 per annum; patron, Mrs. Gauld. Crossmichael church, situated in the

western portion of the parish, is a plain structure erected in 1751; it was repaired and enlarged in 1822, and contains 650 sittings. There is a place of worship for the United Presbyterian Synod adjoining Castle-Douglas. Two parochial schools are supported; the master of one has a salary of £31, with a house and garden, and his fees average nearly £30. The other school was built, and endowed with £11 per annum, by William Gordon, Esq.; the master has also a salary of £20, with a house and garden, but no fees. Another school is held, to which the heritors give £10 a year, making, with the fees charged, but a small income for the teacher. All these schools are strictly examined once a year by a committee of presbytery, and prizes given to the most deserving scholars. A Sabbath-morning school is taught by the clergyman of the parish and the Ringanwey schoolmaster, and prizes given to the scholars twice a year. There is also a parochial library. The parish formerly contained numerous tumuli, in which were found human bones of large size; and there are still several remains of ancient forts. Roman urns and weapons have been discovered by the plough; also, the head of a war-horse in bronze, and other Roman relics. On a steep crag overhanging Loch Roan, are some remains of a hill fortress still called the Kirk of Loch Roan.

CROSSMILL, a village, in the ABBEY parish of the town of PAISLEY, Upper ward of the county of RENFREW; forming part of the late quoad sacra parish of Levern, and containing 265 inhabitants.

CROSSMYLOOF, a village, in the parish of CATHCART, Upper ward of the county of RENFREW, $2\frac{1}{2}$ miles (S. S. W.) from Glasgow; containing 587 inhabitants. It is situated on the road from Glasgow to Pollockshaws, and a short distance north-eastward of the latter town. The White Cart water passes in the vicinity, on the south. There is a small dissenters' school.

CROVIE, a village, in the parish of GAMRIE, county of BANFF, 6 miles (W. by N.) from Aberdour; containing 164 inhabitants. This is a small fishing-station, situated on the coast of the Moray Firth, about a mile east of the village of Gardenstown. It is supposed to have been founded in the early part of the last century. Nine boats belonging to it are engaged in fishing for haddock, whiting, and other small fish, which produce as much as £1215 per annum; and a revenue of nearly £400 per annum is obtained from cod and ling.

CROY and DALCROSS, a parish, partly in the county of NAIRN, but chiefly in that of INVERNESS, 7 miles (W. by S.) from Nairn, and about 10 (E.) from Inverness; containing 1684 inhabitants. The etymology of the name of Croy is altogether uncertain: the word Dalcross is derived from a Gaelic term signifying "the dale at the end of the ravine", and this description is strikingly applicable to the locality. The date of the union of the two ancient parishes cannot now be ascertained; but upon the authority of charters still extant, the event appears to have taken place some time between the middle and the close of the fifteenth century. In the year 1128, Dalcross, which anciently formed part of the lordship of Lovat, was annexed to the priory of Urquhart, founded in 1125 by David I.; and the vicar of Dalcross, by order of the prior, also officiated in the private chapel of Kilravock. A large part of the moor of Culloeden is situated in the parish: here was fought, on the 16th April, 1746, the celebrated battle that de-

cided the fate of the Stuarts. This parish, the outline of which is of the most irregular description, is about twenty-one miles in length, and three miles and a half in average breadth, comprising 44,800 acres. Its surface partly consists of a long continuous vale, watered by the river Nairn, and the lands of which are in some places wooded, and in others rich and well cultivated. An extensive tract of upland moor reaches from the river to the north and north-western boundaries, and is here and there interspersed with cultivated portions, but is in general bleak and barren, and of wild appearance.

The soil on the southern bank of the river is light and gravelly, but, if well farmed, fertile. In the eastern part of the parish it comprises all the varieties of sand, lime, fine vegetable mould, and cold, wet, and sometimes ferruginous earth. In the centre of the district it is a very fine mould; and between this and the western portion called Leys is the moor, covering about 1700 acres, the soil of which exhibits sand, lime, and clay, with various admixtures. The Leys district is chiefly a siliceous or gravelly earth incumbent on red sandstone. Some of the larger proprietors have set an example to the tenants, in the formation of inclosures, and the reclaiming of large tracts of waste ground, which have been sheltered with belts of plantations, and are so well cultivated as to produce fine crops of wheat, oats, and barley. The general husbandry is improved. More extensive improvements have taken place here of late than in any other parish in this part of Scotland; and the farmers, and even the cottars, follow the example of the landlords, to the extent of their ability. The annual value of real property in the parish is £3917. The rocks comprise granite, gneiss, and the old red sandstone: several quarries of the last are in operation. Some of the trees of the plantations are of great age and stature; and 400 acres have been lately set apart for larch, oak, and other wood, in addition to the extensive plantations already existing. The castle of Kilravock, situated upon a bold rugged rock, and which has been the residence of the Roses since the year 1460, is the property of Hugh Rose, Esq., the chief, and the twenty-fourth in lineal descent. Dalcross Castle, built by Lord Lovat in 1621, stands in the midst of imposing scenery, and commands extensive views of the most interesting character. Leys Castle, recently built, is a strikingly beautiful edifice, and also commands views embracing every description of picturesque scenery. The mansion of Holm is an elegant modern structure, situated on the banks of the Nairn; and that of Cantray, also a modern edifice, is nearly encompassed on the south by the same river. A market is held for the sale of cattle and sheep, on the Saturday immediately following the great Beaulay market.

Ecclesiastically the parish is in the presbytery of Nairn, synod of Moray, and in the patronage of Earl Cawdor and Mr. Rose, who present alternately; the minister's stipend is £239, with a manse, and a glebe valued at £11 per annum. The remains of Dalcross church have almost disappeared: the present parish church, containing sittings for 527 persons, was built in 1767, and repaired in 1829. The parochial school affords instruction in the usual branches; the master has the maximum salary, with a house, and about £20 fees. The parish contains several Druidical circles; and to the west of the church is a large grey stone called

Clach na Seanaish, or "the listening stone", at which, in ancient times, secret communications were made relating to the movements and designs of hostile clans.

CRUDEN, or INVERCRUDEN, a parish, in the district of ELLON, county of ABERDEEN, 7 miles (S. S. W.) from Peterhead; containing, with the villages of Finnyfold or Whinnie-Fauld, Bullers-Buchan, and the Ward, 2349 inhabitants. This place was the scene of a memorable battle fought in the year 1005, upon a plain near the bay of Ardenraught, between Malcolm II. and the Danes under Canute, in which the latter, who had a castle in the neighbourhood, were totally defeated. The parish is situated on the shore of the German Ocean; it is eleven miles in length, and varies in breadth from four to seven miles, mostly comprising cultivated land. The sea forms the southern boundary, and the coast is marked by bold and lofty rocks of red granite from the east end to Slains Castle, close to which is the Ward, a small fishing-village affording occasionally a landing-place for coal and lime. Beyond this, to Sand End, a distance of about two miles, stretches a fine sandy beach called the Bay of Cruden, from the south extremity of which runs a ridge of sunken rocks named the Scares of Cruden; and from this place the shore is exceedingly abrupt and majestic all along the south, the rocks consisting of black basalts. The climate is bleak; and when the wind is high the grandeur of the ocean is so striking that Dr. Johnson, who visited this spot in his celebrated tour, declared that Slains Castle was the place from which he should wish to behold a storm. To the east of Slains Castle are the rocks known far and wide as the Bullers (bulwarks) of Buchan, Buchan being the name of this part of Aberdeenshire: they are much visited in the summer by strangers, in boats, the rocks presenting some fine natural arches, one in particular leading into a pool of water, surrounded by high cliffs, and called the Pot. Husbandry is on a respectable footing, great improvements having been made, especially in draining; and the farmers, who in general have commodious houses, live comfortably. The annual value of real property in the parish is £8792. Quarries of red granite were in operation some time since, and supplied a material for several of the London bridges; but they have all been closed.

Very little wood is to be seen: what there is, is chiefly in the vicinity of Slains Castle, already mentioned, a remarkably strong edifice, built on the margin of the sea, and the residence for generations of the Earls of Erroll. A carding and spinning mill was lately erected on the estate of Aquabarney, and is conducted on a somewhat extensive scale: the thread manufactories formerly employing so many hands have become totally extinct. The parish is situated on the public road between Aberdeen and Peterhead, and to the latter place and Newburgh the produce is sent for sale, except that part of the cattle disposed of at various other markets. A small cattle-fair is held in April, and another in May; and some business is done in the sale of fish, there being a salmon-fishery near the Ward, and stations at the other villages for the fish common to the coast. Ecclesiastically the parish is in the presbytery of Ellon, synod of Aberdeen, and in the patronage of the Earl of Erroll; the minister's stipend is £204, with a manse, and a glebe of six acres of arable land and pasturage ground. Cruden church was built in 1776, and lately enlarged.

A place of worship has been erected in connexion with the Free Church, and there is also an episcopal chapel. The parochial school affords instruction in the usual branches; the master has a salary of £26, with £18 fees, and participates in the Dick bequest. A parochial library was established a few years since.

CUFFABOUT, a hamlet, in the parish of CARRIDEN, county of LINLITHGOW; containing 16 inhabitants. This is a very small place, situated on the shore of the Firth of Forth, a short distance east-south-east of Bridge-ness, and close to the parochial church.

CULBOKIE, a village, in the parish of URQUHART and WESTER LOGIE, county of ROSS and CROMARTY; containing 107 inhabitants. It is situated a short distance eastward from the shore of the Firth of Cromarty, and about two miles and a half east-north-east from the town of Dingwall. Four fairs are holden in the course of the year.

CULCABOCH, a village, in the parish and county of INVERNESS, 1 mile (S. E.) from Inverness; containing 279 inhabitants. This village, which is pleasantly situated to the west of the Castle Hill, is inhabited chiefly by persons employed in agriculture, and by a few wrights and masons.

CULLEN, a burgh, seaport, and parish, in the county of BANFF, 5 miles (W. by N.) from the town of Portsoy, and 170 (N. by E.) from Edinburgh; containing 1564 inhabitants, of whom 712 are in the town of Cullen, 711 in the Sea-town of Cullen, and 141 in the rural district. This place, the origin of the name of which is altogether uncertain, was originally called Inverculan, being bounded on the north and west by the water of Cullen, which falls into the sea on the western side of the parish. In ancient times it formed part of the parish of Fordyce. Its early history is for the most part involved in obscurity; but there appears to be no reason to doubt the truth of the tradition, that a severe conflict took place here between the Danes and the Scots under Indulfus, in the year 960. The Scottish king was killed by an arrow at the head of his troops; but the enemy were completely routed, and this battle is supposed to have been among the last fought with the Danes before their expulsion from the kingdom in the beginning of the eleventh century. It is known by the name of "the battle of the Baads", on account of the field of action (which was the moor of Rannachie) being called the Baads of Cullen; tumuli abound in every direction, and the decayed bones and fragments of arms contained in them are concluded to be deposits of the remains of the defeated army. The lands have from a remote period been the property of the ancestors of the Earl of Seafield, the present proprietor, who traces his descent from Gilchrist Ogilvie, created Earl of Angus by King Malcolm Canmore. A bede-house was erected, most probably by one of this family, and endowed for the support of eight decayed farmers and eight farmers' widows; but the hospital system was abolished about sixty or seventy years since, and the funds are now applied by the Earl of Seafield, who has the management,

Burgh Seal.

in the distribution of meal to poor families belonging to his estates in the parishes of Cullen, Rathven, Deskford, and Fordyce. The church of Cullen, originally dedicated to St. Mary, was founded by Robert I., whose queen, Elizabeth, is supposed to have been buried in it, and who appointed a chaplain, with an endowment, to offer up prayers for her soul. It had a provost, six prebendaries, and two singing boys, whose offices were founded in 1543, by one of the Ogilvies, aided by several eminent persons of both the clergy and laity: the foundation was endowed with considerable property and many privileges, and was subsequently confirmed by William, Bishop of Aberdeen, and John, Archbishop of St. Andrew's. The town was much exposed in turbulent times to the violence of party commotions. It was repeatedly plundered by the Marquess of Montrose; on one occasion, in May 1645, he sent troops to the place, who first plundered it of every thing valuable, and then burnt it to the ground.

The town is situated on the coast of the Moray Firth, and consists of two parts, entirely separated, called respectively the New-town and the Sea or Fish town. The former of these received its distinguishing appellation from its recent erection in place of the old town, which was meanly built, and entirely demolished about the year 1822 to make room for the improvements of Cullen House. It stands nearer to the sea than the old town, being close to the eastern extremity of the Sea-town, and is on a much higher site. There are many good houses, regularly and tastefully disposed; and it has altogether a neat and interesting appearance, forming a striking contrast to the miscellaneous collection of fishermen's tenements below, constituting the Sea-town. All the buildings contemplated in the plan are not yet completed; but the favourable situation of the place for fishing and agricultural occupations, and the agreeable character of the surrounding district, afford every promise of future advancement. Its contiguity to the beautiful bay of Cullen, and the picturesque grounds of Cullen House, with the traffic of the post-road from Banff to Fochabers, which runs through it, invest the immediate locality with a lively and pleasing aspect; while the highly diversified scenery around, comprising hill and dale, wood and water, with well cultivated fields, and the precipitous and majestic rocks along the shore, unite to render the environs attractive. Some of the eminences command fine views of the sea, enlivened with trading-vessels and fishing-boats, with the lofty headland of Scarnose at the western extremity of the bay, and the Castle hill, the site of an old fortification, overhanging the Sea-town; and over the Firth, in the distance, are seen the sable mountains of Sutherland and Caithness. The Bin hill, bordering upon the parish, and rising 1076 feet above the sea, and which is planted with trees of various kinds, is also a prominent object in the surrounding scenery, and affords an excellent landmark to mariners. The town contains numerous good shops, and has every convenience calculated to render it a desirable place of residence: many of the houses are lighted with gas, supplied by a company established in 1841 with a capital of £1000. Among the public buildings the most conspicuous is the hotel, erected in 1822, at a cost of £3000, by the Earl of Seafield. It is situated in the public square, and has attached to it an elegant ball-room, forty-three feet long and twenty-three broad;

a spacious room in which the sheriff and justice-of-peace courts are held; and the council-room of the burgh, an elegant circular apartment, twenty-three feet in diameter and sixteen feet high.

The inhabitants were formerly much engaged in manufactures. In 1748 the Earl of Findlater and Seafield introduced the manufacture of linen, and subsequently sixty-five looms were constantly at work, some of them for weaving damask, besides seven stocking-looms. In addition to this, a great number of webs were given out to be woven by country-people in their own houses; but these sources of employment have now all ceased, and the inhabitants are almost exclusively occupied in agriculture and fishing. There are about thirty boats belonging to the place which are engaged in fishing for cod, skate, ling, and haddocks: the herring-fishery, on account of some recent failures in the quantity of fish, has been given up, and the men and their boats are hired every season by the curers at Wick, Macduff, Fraserburgh, and Peterhead. The average annual value of the several fisheries carried on in the bay is £7543, including £750 for the salmon-fishery. About twenty persons are employed in boat-building, and complete above forty boats each year; and recently, five vessels varying in burthen from 40 to 110 tons have been built here in three years. The harbour, which is small but convenient, was constructed by the Earl of Seafield in 1817, and enlarged in 1834 with an additional quay, the cost of the whole work amounting to more than £10,000; the water at neap tides is eight feet and a half deep, and at spring tides twelve feet. There are four vessels belonging to the port of from 40 to 100 tons each, the aggregate burthen being 270 tons. Coal, salt, staves, and barley for distillation, constitute the chief imports; and the exports are herrings, dried-fish, timber, oats, and potatoes. A distillery was erected in 1824, and considerably enlarged in 1828; it produces upwards of 25,000 gallons of proof spirits annually, and on the water of Cullen are a lint-mill, a saw-mill, and a meal-mill. Steam-boats plying between Inverness and Leith visit the bay. A weekly market is held during the spring months for the sale of grain; and there are fairs, principally for the hiring of servants, on the third Friday in May, the second Friday in November, and the 7th of January.

Cullen is a ROYAL BURGH of considerable antiquity, as appears from a charter of James I., dated 1455, ratifying one of Robert I., by which the usual liberties and privileges had been granted. It was at one time a constabulary, of which the Earl of Findlater was hereditary constable, by virtue of an ancient right; but the council now consists of a provost, three bailies, a dean of guild, treasurer, and thirteen others, the jurisdiction extending over a district of about three miles from east to west and two from north to south. The parliamentary boundaries are much less extensive than those of the royalty: the burgh is united with Elgin, Banff, Inverury, Peterhead, and Kintore, in sending a member, and of the constituency of the whole about thirty-eight belong to Cullen. A sheriff small-debt court, for sums not exceeding £8. 6. s., is held on the second Thursday in February, June, and October; and a justice-of-peace court on the first Tuesday in every month, for sums not exceeding £5. A lock-up house containing three apartments is used for the punishment of delinquents, and for the custody of persons to be afterwards sent to the county gaol.

The PARISH is about a mile and a half in length from north to south, and one mile in breadth. It comprises an area of 684 acres, of which 34 are occupied as the site of the town, 425 are arable, 110 park-ground belonging to Cullen House, and the remainder waste pasturage and moor, along the sea-shore. The land in general is of superior quality, consisting of a rich loam incumbent on clay or gravel, and yielding crops of wheat, barley, oats, potatoes, and turnips; the soil on the higher grounds is thin, resting on gravel, but tolerably productive, and most of the land owes its abundant returns, in a great measure, to the profusion of fish-refuse applied as manure. About 200 acres of land are let to the inhabitants of the town in small allotments, each being sufficient for the support of a cow. The towns-people usually keep Banffshire cows; the cattle on the farms are mostly a cross between the Banffshire and the Tees-water: the sheep are chiefly of the Cheviot kind. The annual value of real property in the parish is £2243. Cullen House, situated at a small distance from the town, is an ancient structure with many splendid apartments elegantly furnished. It is embosomed in plantations covering about thirty acres, and comprising all the trees, both useful and ornamental, found in the country. At the base of the rock on which the mansion stands flows the water of Cullen, here crossed by a stone bridge of one arch; and the numerous winding walks and drives also contribute to the beautifully picturesque appearance of the pleasure-grounds. Ecclesiastically the parish is in the presbytery of Fordyce, synod of Aberdeen, and in the patronage of the Earl of Seafield. The minister's stipend is £156, of which about a fourth is received from the exchequer; with a manse, and a glebe valued at £27 per annum. Cullen church, accommodating 800 persons, is a cruciform structure of great antiquity, but still in very good condition. It is situated in the centre of the old burying-ground, nearly encompassed by the lands of Cullen House; and the interior contains many elegant monuments to members of the Findlater and Seafield family who were buried here. A portion of the parish of Rathven has long been attached to Cullen quoad sacra, and a church was erected in that district in 1839, chiefly by the assistance of the Earl of Seafield. A place of worship has been erected in connexion with the Free Church. The parochial or grammar school affords instruction in the usual branches; the master has a salary of £36, with a house and garden, between £10 and £15 fees, and a share in the Dick bequest. A parochial library was established in 1830. Of the eminent characters connected with this parish may be mentioned, James, fourth Earl of Findlater and first Earl of Seafield, the distinguished lawyer and statesman, who died in 1730; and James, sixth Earl of Findlater and third Earl of Seafield, who introduced into the north of Scotland those improvements in agriculture and manufactures which raised it so considerably in civilization; he died at Cullen House in 1770. Sir James Clark, Bart., first physician in ordinary to Her Majesty, was born in the parish in 1788.

CULLICUDDEN, in the county of ROSS and CROMARTY.—See KIRKMICHAEL and CULLICUDDEN.

CULLOCHBURN, or COLLOCHBURN, a village, in the parish of CAMBUSLANG, Middle ward of the county of LANARK; containing 166 inhabitants. The greater part of the population is employed in manufactures.

CULROSS, a royal burgh and a parish, in the county of PERTH, 7 miles (W.) from Dunfermline, and 21 (W. N. W.) from Edinburgh; containing, with the villages of Blairburn and Low Valleyfield, 1444 inhabitants, of whom 603 are in the burgh. This place, which is of remote antiquity, derives its name from its situation in a detached portion of the county, forming part of the peninsula of Fifeshire. It was anciently the property of the Macduffs, of whose baronial residence of Dunnemar Castle there are still some remains on Castle Hill, on the banks of the Forth, to the west of the town. Here, according to tradition, was perpetrated the murder of Lady Macduff and her children by the usurper Macbeth. A monastery was founded in 1278 by Malcolm, Thane of Fife, for brethren of the Cistercian order, and dedicated to the Virgin Mary and St. Serf or Servanus. It continued to flourish till the Reformation, at which time Alexander, son of Sir James Colville, was abbot; and to his brother Sir James, the revenues, amounting to £768. 16. 7½. in money, besides considerable payments in kind, were granted in 1604 by James VI., who also raised him to the peerage by the title of Lord Colville of Culross. The abbey and lands attached to it subsequently became the property of the Earl of Dundonald, from whom they were purchased by Sir Robert Preston, Bart., whose representative is the present proprietor.

The TOWN, which is situated on the north shore of the Firth of Forth, consists of one principal street extending from the Firth by a precipitous acclivity towards the north, and of several detached portions along the coast. The houses are generally of ancient character, and to most of them is attached a portion of garden-ground; presenting, as seen from the Firth, a picturesque and interesting appearance, which is heightened by numerous handsome seats and pleasing villas in the immediate vicinity. A very considerable trade was formerly carried on in the export of coal, of which a mine had been excavated, reaching for some distance under the waters of the Firth; and also in the manufacture of salt. The produce of the mine was chiefly sent to Holland, whence various kinds of merchandise were imported, and distributed from this town to different parts of the country; but the mine was long since exhausted, and the trade has been discontinued. The manufacture of girdles for baking oatmeal cakes, for which the town had patents from James VI. and Charles II., was also pursued for some time; but since the establishment of the Carron iron-works, where they are made at a very reduced price, that manufacture has ceased. The only trade now carried on is the weaving of linen for the manufacturers of Dunfermline, and of cotton-cloths for those of Glasgow, in which about seventy persons are employed. Fairs are held on the 2nd of July and the third Wednesday in November; and there are two good inns.

Culross was erected into a ROYAL BURG in 1588, by charter of James VI., under which it is governed by a chief magistrate and nineteen councillors. There are seven incorporated trades, the weavers, wrights, shoem-

Burgh Seal.

makers, bakers, smiths, tailors, and butchers, into which only burgesses are admissible; the fees for admission vary, for sons of freemen, from 13s. 6d. to £1. 1., and for strangers from £2. 5. to £3. The magistrates have the usual civil and criminal jurisdiction, but no cases have come under their notice since the year 1828. Culross is associated with Dunfermline, Inverkeithing, Queensferry, and Stirling, in returning a member to the imperial parliament; the number of qualified voters is twenty-five. The town-house is an ancient building, to which is attached a small prison containing two apartments, one for debtors, and the other for criminal offenders. Facility of communication is afforded by a turnpike-road that passes through the centre of the parish to Dunfermline; and a pier has been constructed at the old harbour, from which there is a ferry to Borrowstounness, on the opposite shore of the Firth. The Stirling and Dunfermline railway, also, intersects the parish.

The PARISH formerly included the barony of Kincardine, which was separated from it in 1672, and added to the parish of Tulliallan. It is about four miles in length, and nearly of equal breadth, comprising about 10,000 acres, of which nearly 4000 acres are arable, 2000 woodland and plantations, and the remainder pasture, garden-ground, and waste. The surface rises in bold undulations from the shore of the Firth for some distance towards the north and north-west, forming a ridge of low hills, beyond which it subsides into a fertile valley watered by a rivulet called the Bluther. Along the shore the soil is a deep black loam of great fertility; towards the middle of the parish, of a clayey nature, but under good management producing favourable crops; and towards the north and north-west, of poorer quality. The crops are wheat, oats, barley, peas, beans, potatoes, and turnips; the system of husbandry is in a very advanced state. The annual value of real property in the parish is £5600. The plantations, which are very extensive, and in a thriving condition, contain every variety of firs and hard-wood trees, of which latter oak and beech seem best adapted to the soil. The principal substrata are clay-slate and sandstone: clay of good quality for pottery and for fire-bricks may be procured in abundance; and limestone and ironstone are also found, but not in sufficient quantities to remunerate the labour of working. In this parish the mansion-houses are, Culross Abbey, formerly the seat of the Bruce family, and afterwards of the Earl of Dundonald, beautifully situated on the shore; Valleyfield, lately the seat of Sir Robert Preston, an elegant mansion in a demesne tastefully laid out, and embellished with plantations; Castle Hill, a handsome modern seat, near the site of the castle of the Macduffs; and Blair Castle, built on the site of an ancient seat erected by Hamilton, Archbishop of St. Andrew's.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Dunfermline, synod of Fife. The living is collegiate; the minister of the first charge has a stipend of £156, with a manse, and a glebe valued at £20, and the minister of the second charge £116, with an allowance in money in lieu of manse, and a glebe valued at £25. Lady Keith and Lady Baird Preston are alternate patrons. Culross church is a portion of the ancient abbey church, originally a venerable cruciform structure, with a lofty tower rising from the centre: this tower, and the choir now appropriated as the parish church, and containing 700 sittings, are the only parts

remaining. On the north side is the burying-place of the Bruce family, containing a monument on which are figures of Sir George Bruce and his lady recumbent, and, beneath, of their seven children in a kneeling posture, beautifully sculptured in white marble. Upon one side of this aisle is a projecting piece of masonry containing in a silver case the heart of Edward, second Lord Bruce of Kinross, who fell in a duel near Bergen-op-Zoom in 1614. The parochial school is well attended; the master has a salary of £34, with a house and garden, and the fees average £30, in addition to which he receives £10 from a bequest. There is also an endowed school for boys and girls, the master of which receives a salary of £36, and has a house and garden, for gratuitously teaching twenty children, and superintending a Sunday school.

Dr. Bill, a native of the parish, who died in London in 1738, bequeathed £1000 for the payment of small sums quarterly to four decayed tradesmen and two tradesmen's widows, for apprenticing young persons, and for the foundation of a bursary in one of the universities. Sir George Bruce of Carnock, in the year 1639, founded an hospital, which he endowed for the maintenance of six aged widows of the parish; the building has long since fallen into decay, but the income from the endowment is distributed among eight widows. The late Sir Robert Preston and his lady bequeathed an endowment for the distribution of meal and money, weekly, to six aged men and six aged women who have lived for ten years in the parish. Connected with this charity is a building in which soup is given, two days in the week, during the winter, to families in this and the adjoining parish of Torryburn. Miss Halkerston, of Carskerdo, in the county of Fife, lately left a sum of money to be invested in land, for the relief of industrious persons not receiving parochial aid. At the east end of the town are the remains of St. Mungo's chapel, near which, according to tradition, that saint was born, and educated by Serf, the patron saint of the parish; and to the west of the abbey are some remains of the ancient parish church.

CULSAMOND, or CULSALMOND, a parish, in the district of GARIOCH, county of ABERDEEN, $2\frac{1}{2}$ miles (N. W.) from Old Rain; containing 1104 inhabitants. This place is said to have derived its name from the Gaelic term *Cul-Sal-Mon*, signifying "the end of the hill lands". It is about four and a half miles in length, from north to south, and three in breadth; comprising 7400 acres, of which 4000 are in tillage, 300 in pasture, 900 in plantations, and the remainder uncultivated. The surface is level, with the exception of one or two moderate elevations, of which Culsamond hill commands a fine view of Belrines on the west, and, on the north-west, of the Caithness hills, and part of the Moray Firth and of the Buchan district in the distance. The river Urie passes through the whole length of the parish, and after flowing for about nineteen miles from its source in the parish of Gartly, and drawing into its channel many minor streams, empties itself into the Don at Inverury. The soil is various, but in general consists of a dark loam partly on a sandy and ironstone bottom; clay in some places forms a subsoil, and the land is for the most part fertile, and the crops usually early. In the hill of Culsamond are several quarries of valuable slate of a fine blue colour, from which large quantities are raised. Ironstone is found in the parish, lying in detached

masses on or near the surface; and bog-iron ore has been discovered in combination with decomposed oak-wood, about eight feet below the surface. A bed of coarse sand is spread a little below the ground on the estate of Pulquhie, supposed to be the debris of granite belonging to the hill of Benochee (five or six miles distant), and to have been brought hither by the action of water. In the northern portion of the same farm, about three feet below the surface, is a bed of moss, in some parts above eight feet deep, and reaching from north to south between thirty and forty yards; over which a soil composed chiefly of gravel and stones has been deposited by some casualty. The annual value of real property in the parish is £4602. The plantations, which were commenced about seventy or eighty years since, though not very extensive, yet being dispersed, and often appearing in the form of clumps and belts, give a picturesque appearance to the district. On the hill of Culsamond, 250 acres have been planted within the present century; and the vicinities of Williamston House and Newton House, both modern mansions pleasantly situated on the east bank of the Urie, have been much improved and beautified by the tasteful arrangement of their surrounding plantations. The turnpike-road from Aberdeen to Inverness, by Inverury, Old Rain, and Huntly, passes through the parish. St. Sair's fair is held here, in June, for cattle, horses, sheep, and wool.

Ecclesiastically the parish is in the presbytery of Garioch, synod of Aberdeen, and in the patronage of Sir John Forbes: the minister's stipend is £150, of which above a third is received from the exchequer; with a manse, and a glebe of ten acres, valued at £30 per annum. Culsamond church is in good condition. The parochial school affords instruction in the usual branches; the master has a salary of £34, with a house, erected in 1823, an allowance in lieu of a garden, and about £19 fees. Among the numerous vestiges of military works, are those of a British encampment on the north-east side of the hill of Culsamond. There are also some remains of Druidical temples and ancient cairns, in one of the latter of which, on the farm of Mill of Williamston, an immense wooden coffin of very rude construction was found in 1812, containing an urn, and supposed to have been deposited anterior to the Christian era. Stone axes and other warlike instruments have been found; and some years since a gold coin of James I. was dug up, in fine preservation. A highway called the Lawrence road, thought to be some hundreds of years old, and to have been constructed for the avoidance of the swamps and floods on the lower grounds, and for security against wild beasts, crosses the hill of Culsamond, and was formerly used by persons travelling to St. Lawrence fair, at Old Rain.

CULTER, a village and parish, in the Upper ward of the county of LANARK, $2\frac{1}{2}$ miles (S. W.) from Biggar; containing, exclusively of Kilbucho, 536 inhabitants, of whom 197 are in the village. This village takes its name from its situation in the rear of the district of which it forms a part. The parish was originally of less extent than it is at present, having in 1794 been much enlarged by the addition of part of the parish of Kilbucho, in the adjoining county of Peebles. It is now seven miles in length, and rather less than three in average breadth; it is bounded on the west by the river Clyde, and comprises 11,547 acres, of which 4000 are

arable, 7000 meadow and pasture, and 500 woodland and plantations. The surface is pleasingly undulated, and towards the south rises into hills of considerable eminence, increasing into mountains, the highest of which, called the Fell, has an elevation of more than 2300 feet above the sea. The lower part of the parish is diversified with spreading vales and narrow glens. The former are enlivened by the course of the river Clyde, whose banks are ornamented with handsome seats and pleasure-grounds; and of the latter, the glen of Culter Water, which derives its name from its rivulet, is beautifully picturesque and romantic. The wider portion of this glen is richly cultivated and wooded, and the narrower part gradually diminishes till it scarcely affords room for the passage of the stream, which, after flowing through the whole length of the parish, falls into the Clyde a little below the village. At a point called Wolf-Clyde, the river Clyde makes a remarkable curve towards the north-west, approaching very nearly to the bank of the Biggar Water, which runs into the Tweed; and in high floods, uniting with that stream, a considerable portion of the Clyde waters is carried into the Tweed.

The soil varies considerably, but is generally dry and fertile. The lower lands consist of a sandy loam, which under good management is very productive; on the hills the soil is of much lighter quality, and on the summits mostly a sterile moss; towards the eastern part of the parish, on the lands of Kilbucho, it inclines to clay. The hills are of the greywacke formation; and little variety is found in the substrata, except the occasional occurrence of conglomerate or pudding-stone. In this parish the system of agriculture has been much improved under the auspices of the chief landed proprietor, who has greatly promoted the plantation of timber, the draining and inclosure of the lands, and the raising of wheat crops, to which previously little attention was paid. The rotation plan of husbandry is now generally prevalent, and green crops are found to answer well; the chief produce is oats. Barley and wheat are sparingly produced. The sheep are the short black-faced breed, which are found to be the best adapted to the hilly pastures; the cows are the Ayrshire. The annual value of real property in the parish, exclusively of the Kilbucho portion, is £5231. The plantations are principally of Scotch fir; but though it thrives well for a few years, it soon falls into decay, and consequently little timber of any growth is produced. At Culterallers, however, are some acres of natural trees, among which are the alder, birch, hazel, mountain-ash, and willow; and in other parts of the parish are remarkably fine specimens of ancient timber. The mansion-houses, most of which are beautifully situated on the banks of the Clyde, add greatly to the scenery. The village is pleasantly situated on the banks of the Culter Water, along which, at irregular distances, a range of neatly-built houses with intervening trees of fine growth, extends for a considerable way. It is intersected by the turnpike-road from Dumfries to Edinburgh, which is carried over the stream by a neat bridge of modern erection.

The parish, which is of some antiquity, belonged in the reign of David II. to Walter Byset, who held the half barony of Culter of the king *in capite*, and in 1367 granted the lands, with the advowson of the church, excepting only the lands of Nisbet, to William Newbiggin

of Dunsyrc. They subsequently came into the possession of William, Earl of Douglas, by whose descendant, James, they were in 1455 forfeited to the crown. Sir David Menzies, who afterwards obtained possession of the half barony, gave the lands of Wolf-Clyde to the abbey of Melrose, and they now pay annually a small sum to the Duke of Buccleuch as lord of that manor. For ecclesiastical purposes the parish is in the presbytery of Biggar, synod of Lothian and Tweeddale, and in the patronage of the families of Baillie of Lammingtonne, and Dickson of Kilbucho, alternately. The minister's stipend is £217, with a manse, and a glebe valued at £30. 12. per annum. Culter church, erected in 1810, a plain edifice beautifully situated, commodious, and accessible to the parishioners, is adapted to a congregation of nearly 400 persons. A place of worship has been erected in connexion with the Free Church. The parochial school affords education to all the children of the parish except those of the part formerly in the parish of Kilbucho, the original school of which is still retained; the salary of the master of Culter school is £34, with £20 fees, and a dwelling-house and garden.

Remains exist of four circular encampments, which seem to have been formed for the protection of the inhabitants, and the security of their cattle, during the periods of the border warfare. There are also two circular moats, one at Wolf-Clyde and one at Bamflat, which appear to have been raised as signal stations; and along the vale between the Clyde and the Tweed is a continuous chain of similar mounds, most probably employed for the same purpose. About half a mile from the lands of Nisbet, is an oval mound in the midst of a deep morass; the longer diameter is about forty yards, the shorter about thirty, and the mound rises above the surface to the height of nearly three feet. It is called the Green Knowe, and consists of heaps of loose stones, compacted together by stakes of hard oak, sharpened at the points and driven into the ground. Around the base is a causeway of larger stones; and the whole is surrounded by a soft elastic moss, impervious to the approach of an enemy. The mound has for many years been used as a quarry.

CULTS, a parish, in the district of CUPAR, county of FIFE; including the village of Pitlessie, and the hamlets of Crossgates, Cults-Mill, Hospital-Mill, and Walton; and containing 889 inhabitants, of whom 36 are in the hamlet of Cults-Mill, 4 miles (S. S. W.) from Cupar. This parish, the name of which (in ancient documents *Quilts* or *Quilques*) is of Celtic origin, and supposed to be descriptive of its situation, lies nearly in the centre of the county, and is about two miles and a quarter in length, and one mile and a half in breadth. It comprises 2250 acres, of which 1900 are under cultivation, 140 in meadow and pasture, 115 woodland and plantations, thirty-five acres garden, and about sixty in roads, fences, and waste. The surface, though for the greater part flat, is diversified with hills, of which the chief in height is that of Walton, near the south-eastern boundary of the parish; and from some of the hills are fine views over the rich valley of Strath-Eden, embracing the Lomond heights in the distance. The scenery is in some places embellished with wood, and in others enlivened by the course of the river Eden, which is joined on the west side of the parish by the Ballomill burn.

The SOIL varies considerably in quality. In some parts it is light and sandy; in others, a rich black loam about twelve inches in depth; and on the higher grounds, a strong clay which under good management produces excellent crops. The system of agriculture is vastly improved; the surface has been rendered more productive by draining, and considerable progress has been made in the inclosure of the lands: all the recent improvements in farming have been introduced. The crops are, grain of all kinds in abundance, turnips, and potatoes. Few sheep are either reared or fed; what there are, are generally of the Cheviot breed: the cattle, to the improvement of which much attention is paid, are of the Fifehire breed. The annual value of real property in the parish is £3208. The substrata comprise yellow sandstone, limestone, and in some places coal; the hills, towards their summits, are generally trap or whinstone, partly of amygdaloid, and partly of greenstone. Limestone is procured in abundance from quarries on the Pitlessie hill; the principal vein is about fourteen feet in thickness, and of a blue colour, and above it is another stratum two feet thick. Both, when wrought, produce lime of excellent quality, of which 30,000 bolls are annually burnt, the greater part whereof is shipped at Newburgh for Dundee and Perth, and the remainder used in the parish and adjacent districts. Coal was formerly worked, of which there were pits on the southern declivity of the Pitlessie hill; the seams are superincumbent on the strata of limestone, and one of them is about twelve inches in thickness. There are several quarries of freestone of good quality, affording an abundant supply for building and other purposes; and boulder limestone is also procured for mending the roads. The only house of any importance is Crawford Priory, a handsome castellated mansion, erected by Lady Mary Lindsay Crawford in 1813, when the ancient family seat in the adjoining parish of Ceres, having become dilapidated, was abandoned. The Earl of Glasgow is now proprietor of the whole parish with the exception of one farm, having a short time ago purchased the Pitlessie estate.

The weaving of linen affords employment to about 165 persons, of whom nearly one-half are females; the number of the webs produced, which are 140 yards in length and thirty inches wide, may be reckoned to average 1800 per annum. The linen chiefly woven is dowlas, for the manufacturers of Kettle, Leslie, and Newburgh, who furnish the materials. The spinning of tow is also carried on at Hospital-Mill, where an old corn and flax mill has been converted to this purpose; the machinery is propelled by a water-wheel of fourteen-horse power, and the quantity of yarn spun annually is from 175 to 190 tons, sent principally to Dundee. This work affords employment to about fifty persons, the greater number of whom are women and children. There are also mills for flour, barley, malt, and oatmeal. The high road from Edinburgh to Dundee passes through the parish. An annual fair is held for the sale of agricultural stock and implements of husbandry, on the second Tuesday in May (O. S.), and is numerously attended. Ecclesiastically the parish is in the presbytery of Cupar, synod of Fife, and in the patronage of the United College of St. Andrew's; the minister's stipend is £162, with a manse, an arable glebe valued at £13 per annum, an allowance of £8 for a grass glebe, and £7 for communion elements. Cults church, which is situated about a mile from the

village, and nearly in the centre of the parish, is a neat plain edifice, erected in 1793. It contains a handsome monument in marble, by Chantrey, erected by Sir David Wilkie to the memory of his parents; and a monument erected by Miss Helen Wilkie (now married to Dr. William Hunter, of the Coldstream guards) to the memory of her distinguished brother: this latter consists of a medallion likeness of Sir David, of considerable size, executed by Mr. Joseph, sculptor, from the same block of marble as the statue in the British Museum. There is likewise a timepiece in the front gallery, made by Thomson of London, a present from Miss Wilkie. Here is a place of worship for the United Presbyterian Synod. The parochial school affords education to about 100 children; the master has a salary of £34, with about £30 fees, and a good house and garden. On the sides of Walton Hill are several ramparts, supposed to have been a Roman encampment; and urns and other relics have been discovered on and near the spot. Sir David Wilkie, the eminent painter, was born in the manse on the 18th November, 1785, while his father, the Rev. David Wilkie, was incumbent. The latter was the author of a treatise on the Theory of Interest and Annuities; the former, who had been appointed limner for Scotland to George IV., was knighted by his Majesty William IV. in 1836, and died in 1841, leaving an imperishable name. Dr. Thomas Gillespie, professor of humanity in the university of St. Andrew's, and author of sermons on *The Seasons contemplated in the Spirit of the Gospel*, was for fifteen years incumbent of the parish of Cults.

CUMBERNAULD, a parish, in the county of DUM-BARTON; including the village of Condorat, and containing about 3500 inhabitants, of whom part reside in the village of Cumbernauld, 10 miles (W. S. W.) from Falkirk. This place derives its name of Cumbernauld from a Celtic term signifying a confluence of streams, in reference to the junction of several small streams just below the village. It originally formed a part of Kirkintilloch, or Leinzie, parish, and was disjoined from it in 1649, and erected into a distinct parish, called Easter Leinzie, or Cumbernauld, as distinguished from Wester Leinzie, or Kirkintilloch: the name of Leinzie has been long disused. The Roman wall called Graham's Dyke, with other ancient relics, connects its history with that of the Roman invaders, but nothing is recorded to supply us with any particulars concerning their proceedings in these parts. There was formerly a castle here, and at the close of the thirteenth century the castle and barony belonged to John Cumyn, Earl of Buchan; but they afterwards fell to the crown by the forfeiture of that nobleman. In the fourteenth century they passed to the Flemings, of Biggar and Cumbernauld, who were subsequently created Earls of Wigtown, and rose to considerable importance in the transactions of Scottish history. The barony formerly belonged to Stirlingshire; but in the reign of David II., Malcolm Fleming, sheriff of Dumbarton, obtained its annexation to Dumbartonshire, and the disjunction of several parishes from Dumbarton, and their annexation to Stirling. This arrangement was afterwards disturbed by an act of parliament, in 1503; but the act was repealed, and the settlement effected by Malcolm Fleming permanently established.

The PARISH is situated at the eastern extremity of the shire, and is about eight miles long and from three to

four broad, containing about 11,520 acres. Its surface is diversified by a succession of ridges and slopes, and the whole sweep being very considerably above the level of the sea, the climate is sharp and cold. The highest part, called Fannyside-muir, is a deep moss covered with heath, where grouse and black-cock are found; the remainder of the surface is arable and wood, among which game of all kinds is abundant, and in spring the roebuck is frequently to be seen, and sometimes the squirrel. The stream of the Luggie divides the parish from New-Monkland, Lanarkshire, and that of the Kelvin from Kilsyth, Stirlingshire; but they are both of inconsiderable size. They formerly abounded in good fish, but a few trout only are now to be found. The lakes, which were numerous, have been drained, and converted into arable land: the only remaining one is the loch of Fannyside, which covers about seventy acres, and is but a few feet deep; pike and perch are taken in it, and it is visited by flocks of wild-duck and teal. The soil is chiefly a deep clayey loam, tolerably fertile; about 7770 acres are arable, 2700 pasture and moss, 730 in plantations and woods, and the rest roads and water. Within the last thirty years, many improvements have taken place in husbandry by draining and levelling, the use of lime and good dung-manure, and the introduction of green crops. The breed of cows and horses has lately been much attended to; the dairy-farms are very superior, and their chief produce is butter, which is sold at Falkirk and Glasgow. The annual value of real property in the parish is £15,430.

The subsoil is an impervious till, much of which has been advantageously drained. The rocks are whinstone and trap, which mainly compose those numerous ridges whereby the surface is marked. Freestone and limestone are found in large quantities, and a quarry of the former is wrought at Netherwood, near the Forth and Clyde canal; where also, as well as at Cumbernauld, limestone of excellent quality is obtained. The freestone is chiefly used in building. Coal is found in several places, especially near the freestone-quarry at the Hirst; and on the farm of Westerwood is a mine of ironstone, let to the Carron Company. The mansion of Cumbernauld, the ancient seat of the Flemings, is surrounded by fine plantations, some of the trees of which are holly of a large size and imposing appearance. Here and in many other parts, oak, ash, lime, chesnut, elm, beech, and plane diversify the scenery, and are in a flourishing condition. The village of Cumbernauld, which contains nearly one-half the population of the parish, was created a burgh of barony in 1649; it has a fair in May, at which there is a considerable traffic in cattle. About one-fifth of the population is employed in cotton-weaving, 560 looms being at work in the parish; but during the fluctuations to which the trade is exposed, many of the hands obtain support by labouring in the coal and iron mines. There is a post-office under Glasgow; and the mail by Crieff, and coaches to Perth, Edinburgh, Alloa, and Stirling, formerly passed daily to and from Glasgow. Great facility of intercourse is now afforded by the Edinburgh and Glasgow and the Caledonian railways.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Glasgow, synod of Glasgow and Ayr. The minister's stipend is under £230, and John Elphinstone Fleming, Esq., is patron: there is

a manse, built in 1827, with a glebe valued at £17. 10. per annum. Cumbernauld church is situated in the village, in the centre of the parish, and is an old, inconvenient, and uncomfortable building; it contains 650 sittings. There are also places of worship for members of the Free Church and the United Presbyterian Synod. A parochial school is held, the master of which has a salary of £25, with house and garden, and £26 fees. The village has a good subscription library, consisting of 1200 volumes; a savings' bank, established in 1815; and a society of masons. The late Viscount Keith bequeathed £90, the interest to be divided among the poor on the 1st of January. The chief relic of antiquity is Graham's Dyke, part of which runs through the parish. Traces of an old Roman road may be seen in the moss of Fannyside; and in the vicinity of Cumbernauld House is an elevation called the Towe Hill, where in ancient times the feudal baron held his court. In the formation of the Forth and Clyde canal, which runs through the bog of Dullatur, many warlike instruments were found, with the bodies of men, among which was a trooper, completely armed, and sitting upright on horseback, exactly in the position in which he had perished. He is thought to have belonged to Baillie's army, when that general fought the Marquess of Montrose, 15th of August, 1645; and in his flight is supposed to have ridden accidentally into the bog.

CUMBRAY, GREAT, an island and parish, in the county of Bute, 2 miles (W.) from Largs; including the villages of Millport and Newton, and containing in summer about 1400, and in winter about 1000, inhabitants. Its name is derived from a Gaelic term signifying a bold or steep coast rising abruptly from the sea, and this description corresponds with the natural appearance of the island, which presents a steep and precipitous coast all round. The isle is supposed formerly to have been in the possession of the Norwegians, concerning whose occupancy, however, no particulars are known. They are said to have been dispossessed of the territory after many successive encounters with the Scots, by the decisive battle of Largs, when they were completely routed and driven from the coast. A cathedral once stood here, which was dedicated to St. Columba, but no remains of it are now visible. The island was formerly distributed into a number of small baronies, the owners of the principal of which were the families of Hunter, Stuart, and Montgomerie. The barony of Kames, belonging to the Hunters, has given name to one of the finest bays in the island, and on this property, also, stood the village of Kames, some vestiges of which may still be traced. Ballykellat, which appears to have been the most considerable of all the baronies, belonged to the Montgomeries, who possessed the patronage of the parish, and part of whose mansion-house was until lately standing, having in it a stone with the family arms sculptured.

The island is of very irregular figure, extending about three miles and a half in length, from north-east to south-west, and about two miles in breadth: its circumference is ten miles, comprehending an area of 5120 acres. It is situated on the Firth of Clyde, and is separated from Little Cumbray, on the south, by a strait three-quarters of a mile in breadth; from Ayrshire, on the east, by Fairley Road, about one mile and a half broad; and from the isle of Bute, on the west, by a part of the Firth, which is about four miles wide. Numerous

hills rise, with a gradual ascent, from the extremities of the island to its centre, and merge in one continuous range called the Shough-ends, which runs from north to south nearly throughout the whole length of the island; it attains an elevation of about 500 feet above the sea, and commands one of the most beautiful views on the coast of Scotland. The shores and bays abound with fish of various kinds, and oysters are found in some parts. A stream of inconsiderable dimensions, taking its rise from two small lochs that communicate with each other, in the highest part of the island, receives the waters of several springs, and at length becomes sufficiently large to form a mill-dam, which the people use for grinding their corn. The soil varies in different places. On the coast it is light and sandy, lying on rock or clay; on the higher grounds it is gravelly and thin, tending to moss, bedded on rock and covered with heath; in some of the valleys it is a deep rich loam, incumbent on clay, and producing good crops. About 3000 acres are arable; upwards of 1400 are waste, a considerable part of which, however, affords pasture for cattle; thirty acres are common, and 120 are planted. Grain and green crops of all kinds are produced; the cattle are of the pure Ayrshire breed. The annual value of real property in the parish is returned at £1845.

The rocks consist of several varieties of whinstone, of limestone, and sandstone. The limestone is not wrought, on account of the expense of fuel; but the sandstone, which is plentiful, is wrought by about six men: during the formation of the Ayrshire railway, about eighty men were employed in quarrying for the purposes of that undertaking. There is a regular communication with the land by steam-boats, and the island is much resorted to by strangers in the summer season. Ecclesiastically the parish is in the presbytery of Greenock, synod of Glasgow and Ayr; patron, the Earl of Glasgow. The stipend is £159, and there is a good manse, with a glebe of six acres, valued at £8. 10. per annum. Cumbray church, which was built in 1837 to meet the exigencies of a largely augmented population, is situated on rising ground, immediately behind the village of Millport; it is a commodious and elegant structure, ornamented with a handsome tower, and capable of accommodating 750 persons. A place of worship has been erected for Baptists; likewise a Free church. There is a parochial school, where, in addition to the usual branches, Latin, mensuration, and navigation are taught; the master has the legal accommodations, and a salary of £30, with £15 from fees. A parochial library is supported, and also a library in connexion with the parish church.

CUMBRAY, LITTLE, an island, in the county of Bute, ecclesiastically annexed to the parish of West Kilbride, in the county of Ayr, and containing 8 inhabitants. This island is situated in the Firth of Clyde, between the island of Bute and the promontory of Portincross, from each of which it is distant about two miles and a half. Little Cumbray anciently formed part of the domains of the Stuart family, ancestors of the kings of that line; and, on the erection of the principality of Scotland, by Robert III., in 1404, in favour of his son, was included within its limits. It was for many years retained as a royal preserve, and in 1515 was conferred upon Hew, Earl of Eglinton, whose descendants are its

present proprietors. The island is composed entirely of trap-rock, resting on the sandstone formation of the opposite coast; it is about a mile long and half a mile in breadth, and has an elevation of 600 feet above the sea. The surface comprises about 700 acres; but with the exception of a few potato-gardens, it does not appear to have been cultivated. There are a few ash-trees growing near the south-east extremity, but it is otherwise perfectly destitute of wood, and the rocky pasture only affords food for a few sheep and young cattle; the island is, indeed, chiefly a rabbit-warren at present, and about 500 dozens of rabbits are taken annually on the average, and sent for the supply of the neighbouring markets. Nearly in the centre is a circular tower, thirty feet in height, once appropriated as a lighthouse, and still forming a very conspicuous object from all parts of the channel; it has long been neglected, and a lighthouse has been built upon the edge of a precipice overhanging the sea, on the west side of the island. This newer building, with the keeper's house and garden, romantically contrasting with the rugged crags among which it is situated, has a truly picturesque appearance; it is twenty-eight feet in height, and shews a clear fixed light to the distance of fifteen miles in fair weather. In the southern extremity of the island are several natural caverns, formed by fissures in the rock; the largest, on the east side, is called the King's Cave.

Near the old lighthouse are the remains of an ancient square fort, the walls of which, six feet in thickness, thirty-five feet in height, and nearly entire, inclose an area twenty-eight feet in length and fifteen feet wide, formed into two apartments, the lower of which has a vaulted stone roof. By whom, or at what time, it was erected is not known; but being in the possession of the Montgomerie family at the period of Cromwell's invasion of Scotland, it was surprised and burnt by his soldiers. To the north of the castle are the remains of an ancient chapel dedicated to St. Vey, who was buried here, in a tomb a little to the north of the chapel. These remains consist chiefly of portions of the walls of the chapel, which appears to have been a dependency of the monastery of Iona; the walls are about three feet in thickness, and rudely built, inclosing an area thirty feet in length and fifteen in width. Of the tomb, which seems to have been comprised within four walls of stone, two square stones only are left, one of which is broken into two pieces; they are ornamented with tracery, but no inscription of any kind is to be discovered. At Shanwilly point, on the north of the island, are several tumuli, some of which were opened a few years before his death by the late Earl of Eglinton, when sepulchral urns and various fragments of weapons were found.

CUMINESTOWN, a village, in the parish of **MONQUHITTER**, district of **TURRIFF**, county of **ANERDEEN**, 6 miles (E. by N.) from Turriff; containing 477 inhabitants. This place took its name from Joseph Cumine, Esq., an enterprising landowner, who founded it about the middle of the last century. The present proprietor of Auchry, who purchased the mansion and principal part of the estate from Mr. Cumine's family in 1830, has actively pursued the plans partially carried out by the Cumines, for the improvement of his property in the parish, and the promotion of the agricultural interest. A post-office has been established in the village.—See **MONQUHITTER**.

CUMMERTREES, a parish, in the county of **DUMFRIES**; including the village of Powfoot, and containing 1277 inhabitants, of whom 124 are in the village of Cummertrees, 4 miles (W.) from Annan. The parish is supposed to have derived its name, anciently written *Cumbertres*, from its having been formerly covered with timber, considerable tracts of which still remain, besides subterraneous forests of oak, fir, and birch, with which the mosses are every where filled. It is remarkable as containing the farm of Bruce, in which there is a field called Broom Acres, where it is said that Robert Bruce, through the treachery of a blacksmith, sustained a severe repulse from the English. The inhabitants of Priest-side, a district partly in Cummertrees and partly in Ruthwell, along the Solway Firth, hold a charter from Robert Bruce to make salt duty-free, said to have been granted on account of their hospitality to Bruce after the above repulse; and they continued to reap the benefit of the charter, until the removal of the salt-duty in the reign of George IV. It may also be mentioned that there is a descendant of the butler of Robert Bruce, Matthew Wilson, still farming at Cockpool, in the parish of Ruthwell, under the Earl of Mansfield. The most conspicuous family with which the ancient history of Cummertrees stands connected, is that of Herries. Their residence of Hoddam Castle, which is situated on the south bank of the river Annan, is said to have been built with the stones of a more ancient castle of the same name, between the years 1437 and 1484, by John, Lord Herries, of Herries. The older castle had been inhabited, in the beginning of the fourteenth century, by a branch of the family of Robert Bruce, and destroyed some time afterwards by a border law. The family of Herries was very powerful, and acquired a large extent of country; but about the year 1627, the barony of Hoddam was obtained by Sir Richard Murray of Cockpool.

The parish comprehends the ancient chapelry of Trailtrow, which was annexed to it at the Reformation; and is about seven miles in extreme length, and four in extreme breadth, containing about 10,000 acres. It is bounded by the Solway Firth on the south, on the east by Annan, on the north by Hoddam, and on the west by Ruthwell and Dalton. A part of the surface is level, forming an inclined plane which rises gently from the south towards the north, the highest point being not more than 200 feet above the sea; but after this there is a descent, from the Tower of Repentance to the river Annan, which is somewhat rapid. The coast is flat, sandy, and uninteresting. Salmon, sea-trout, flounders, codlings, and occasionally turbot and soles, are taken in the Solway, and considerable quantities of cockles and muscles along its shores: in the Annan river salmon, common trout, and herling are plentiful. The soil in some places is sandy, and in others gravelly; in a few instances deep rich loam is met with; but in general the soil is a thin wet clay, resting upon a hard tilly subsoil, and requiring much skill to render it productive. About 6000 acres are occasionally under tillage, and 800 are moss, of which 300 are capable of cultivation; about 1000 acres are occupied by wood, consisting chiefly of plantations. The crops are nearly the same as in other parishes where the modern improvements in husbandry have been introduced. Cattle are reared in large numbers; the few sheep kept are generally a cross between the Cheviots and South-Downs. Many hun-

dreds of acres that were waste thirty or forty years ago, are now in flourishing plantations, or under cultivation, and inclosed with good hedges; indeed, the successful application of the best system of husbandry has entirely altered the face of the parish within the present century. The rocks consist of limestone and sandstone, the former of which, quarried at Kelhead, is celebrated as among the finest in the country, and brings an annual revenue of about £1000; there are also two sandstone-quarries. The annual value of real property in the parish is £6022.

The most interesting residence is the ancient castle of Hoddam, remarkable for its strength and the thickness of its walls, and which has received several additions from its respective proprietors, of whom the late proprietor, General Sharpe, built a large wing, in keeping with the other parts of the edifice. The parish also contains the modern mansion of Kinmount House, built by the Marquess of Queensberry, at a cost of £40,000. The turnpike-road from Portpatrick to Carlisle, and the old Dumfries and Annan road, intersect the parish; as also does the Glasgow, Dumfries, and Carlisle railway, which has a station here. Cummertrees is included within the bounds of the presbytery of Anuan, synod of Dumfries: patron, the Crown. The minister's stipend, including a government grant of £37, is £158, and there is a manse, with a glebe of the annual value of £18. The church, which was founded by Robert Bruce, has frequently been rebuilt and enlarged, the last time about sixty years since, and contains 550 sittings. There is a parochial school, in which, besides the ordinary branches, the classics, geography, and navigation are taught; the master has a salary of £30, with £25 fees, besides house and garden, three-quarters of an acre of land, and £10 other emoluments. In the north-east district of the parish is another school, the teacher of which has a salary of about eight guineas, and £16 other emoluments. Among the relics of antiquity is the Tower of Repentance, said to have been built in the fifteenth century by Lord Herries, who, having used the stones of an old chapel in building Hoddam Castle, of which he afterwards repented, erected this tower to pacify his conscience, and to make his peace with the Bishop of Glasgow, diocesan of the chapel. It is twenty-five feet high, and stands on an eminence, which is seen at a distance of thirty miles on all sides.

CUMMINGSTON, a village, in the parish of DUFURUS, county of ELGIN; containing 155 inhabitants. This place is situated on the coast of the Moray Firth, a short distance for Burgh-Head, which is the post-town. It is chiefly inhabited by seamen, and the families of persons dependent on the fisheries of the district.

CUMNOCK, NEW, a parish, in the district of KYLE, county of AYR, 6 miles (S. E. by S.) from Old Cumnock; containing, with the villages of Castle, Pathhead, Mausfield, and Afton-Bridgend, 2382 inhabitants. This parish, which was separated from that of Cumnock in the year 1650, is situated at the south-east extremity of the county. It is about twelve miles in length from east to west, and nine in breadth from north to south, and comprises about 75,000 acres, whereof 15,000 are arable, 300 woodland and plantations, and the remainder, of which about 3000 acres might be reclaimed and brought into cultivation, is a very elevated tract of moss. The surface is in general hilly, and towards the south

mountainous, but is varied with the two fine valleys of the Nith and the Afton. Of these, the former extends through nearly the whole length of the parish, having a mean elevation of about 500 feet above the sea; and the latter valley, which is about fifty feet higher, intersects the parish from north to south. The highest of the mountains, called Blackcraig, has an elevation of 1600 feet; the Knipe, a little to the south, has an elevation of 1260 feet, and the Corsancone is 870 feet above the level of the river Nith. From all these heights extensive views are obtained of the surrounding districts, and the prospect from the Corsancone is singularly rich and beautiful. The river Nith rises in the south-west of the parish, and after a course of about twelve miles, flows by the base of Corsancone Hill, into the Dumfriesshire parish of Kirkconnell. The river Afton rises near the southern boundary of the parish, and after a course of about eight miles, falls into the Nith near the village. The surface is further diversified by three lakes, little more than half a mile in circumference; they are of no great depth, but abound with perch and pike, and are frequented by varieties of aquatic fowl.

In some parts the soil is of a light gravelly quality, and in others a tenacious clay; but by judicious management and a liberal use of lime, it has been much improved, and a tolerable quantity of unproductive land has been brought into profitable cultivation. The crops are oats, barley, wheat, potatoes, and turnips. Surface-draining is rapidly growing into practice, and all the more recent improvements in husbandry, and in implements of agriculture, have been adopted. Considerable care is bestowed on the management of live stock. About 3500 cows are pastured on the various farms, nearly half of which number are milch-cows, and the value of cheese and butter annually produced is estimated at above £7000. More than 20,000 sheep are fed on the mountain pastures. There is very little wood in the parish; the plantations are chiefly larch and spruce fir, for which the soil appears to be very favourable, and some larches planted on the banks of the Afton have attained a very stately growth. The annual value of real property in the parish is £14,117. The SUBSTRATA are carboniferous limestone, coal, sandstone, and ironstone, and the hills of transition rock and greywacke. The limestone is found in abundance in many parts, occurring in beds of great thickness: it is of excellent quality, and the lime is much used for cement, from its property of acquiring hardness under water; there are several kilns on improved principles, for burning the limestone, and the produce annually is averaged at 200,000 bushels. The coal is likewise very abundant, and of good quality; the quantity annually raised is about 10,000 tons. In the coalfield at Craigmans, plumbago is found in irregular masses, embedded in basalt, and has been wrought for a long time. The sandstone is generally of a yellowish-white tint, but of coarse texture, and contains various fossil impressions; the ironstone occurs in detached masses and veins in several parts of the coal formation, but has not yet been worked. The villages are chiefly inhabited by persons employed in agriculture and in the mines and quarries; there is a post-office under that of Old Cumnock, and a library which has a collection of more than a thousand volumes is supported by subscription. A fair for cattle is held on the Thursday before Whitsunday, and considerable business is transacted at it.

For ecclesiastical purposes the parish is in the presbytery of Ayr, synod of Ayr and Glasgow, and in the patronage of the Marquesses of Bute. The minister's stipend is about £212, with a manse, and a glebe valued at £24 per annum. The church, which is situated between the villages of New Cumnock and Afton-Bridgend, is an elegant and substantial structure in the later English style, erected in 1834 by the heritors, and adapted for 1000 persons. There are places of worship for members of the Free Church and Reformed Presbyterians. The parochial school affords education to about 100 scholars; the master has a salary of £34, with £50 fees, and a house and garden. On the summit of a knoll are some traces of the ancient castle of Blackbog, of which all the masonry has been removed to furnish materials for building, but of which the fosse may be still distinctly seen. This castle was at one time the residence of the Dunbars of Mochrum, and was frequently visited by Sir William Wallace. On the lands of Sir John Cathcart are also the ruins of an ancient baronial castle, near the source of the river Nith. Upon the farm of Whitehill, an earthen jar was dug up a few years since, containing a great number of small silver coins of Edward I. of England and Alexander of Scotland; they were all in excellent preservation, and about the size of a groat. On the farm of Polquhaise, a tumulus was lately removed, in which a sarcophagus of large stones was found, containing fragments of human bones and a small quantity of black earth.

CUMNOCK, OLD, a manufacturing town and a parish, in the district of KYLE, county of AYR, 10½ miles (S. W.) from Muirkirk, and 61 (S. W. by W.) from Edinburgh; containing 2836 inhabitants, of whom two-fifths are in the town. This place derives its name of *Cumnock* from its situation in the bosom of a hill, and its adjunct *Old* by way of distinction from that part of the parish which, more than a century since, was erected into a separate parish. The town appears to owe its origin to a charter granted to Sir Thomas Campbell, prebendary of Cumnock, by James IV., making the church lands a free burgh of barony, and empowering him and his successors to let the glebe, in burgage tenure, for building. After passing through several hands, the barony came ultimately, in the reign of Charles II., into the possession of the Earl of Dumfries, and is now the property of the Stuart family, Marquesses of Bute. The town is beautifully situated in a deep recess, at the confluence of the rivers Glasnock and Lugar, and consists chiefly of three streets, and a spacious quadrangular area now the market-place, the sides of which form ranges of good houses, and in the centre of which is the church. The houses are regularly built, with the exception of those in some narrow lanes, which are of inferior order. The whole has an air of cheerful neatness; and, combined with the interesting banks of the Lugar, and the rich woodlands immediately surrounding, it presents a pleasing appearance. Gas-works have been constructed for lighting the town; and there are two public libraries supported by subscription, each of which has an extensive and well-selected number of volumes. A post-office is also established.

The manufacture of wooden snuff-boxes resembling those originally made at Laurencekirk, is extensively carried on here, and has been brought to a state of great perfection. These boxes are made from the wood of the

plane-tree, as being closest in its texture; and at the original prices paid for them, a solid foot of wood worth three shillings, could be manufactured into boxes that would sell for £100. From the great reduction in the price since the extension of the manufacture, however, they are sold for less than a tenth part of the original value; and the painting of the boxes in devices has been nearly superseded by the introduction of chequering, which is performed in great variety by machinery, producing brilliancy of colour and elegance of pattern. The number of persons employed in this manufacture is about fifty. Weaving is carried on for the manufacturers of Glasgow and Paisley, and more than 120 looms are in constant operation; a considerable number of females, also, are employed in working and embroidering muslins, which are much admired. There is a large manufactory for threshing-mills and cheese-presses, some of the former of which are sent to Ireland; also a pottery for brown earthenware, for which purpose clay of good quality is found in the parish. Fairs are held on the first and sixth Thursdays after Candlemas, the Wednesday after the last Tuesday in May and first Tuesday in July, and the Wednesday after the third Tuesday in October (O. S.). Great facility of intercourse is afforded by the Glasgow, Dumfries, and Carlisle railway. A baron-bailie is appointed to superintend the police of the town, by the Stuart family.

The PARISH is about ten miles in length and two in average breadth, and comprises 16,400 acres, of which about 630 are woodland and plantations, 2500 moorland pasture, and the remainder arable. Its surface is pleasingly undulated, rising in some parts into hills of gentle elevation; and along the banks of the Lugar are fine tracts of level ground. In this parish the whole of the lands have an elevation of some hundred feet above the sea, but they are finely sheltered by the still higher lands of the district adjoining. The river Lugar, which has its source in the eastern extremity of the parish, is formed by the union of the streams of Glenmore and Bella, and after constituting the northern boundary of the parish, flows with a western course into the river Ayr. Its scenery is boldly varied; in some parts the banks are richly wooded, whilst in others the stream runs between perpendicular ramparts of barren rock and projecting crags. The river Glasnock issues from a lake on the southern confines of the parish, and after flowing through the town, falls into the Lugar. The lake just referred to abounds with trout, pike, and eels; trout are found also in the Lugar, and salmon were formerly often taken in its waters, but, since the construction of a dam on the river Ayr, none have ascended so high. The soil is chiefly clayey, intermixed with portions of a light and sandy quality, and occasionally a rich loam. The crops grown are oats, with a little wheat, barley, and bear, also potatoes, peas, beans, and turnips; the system of agriculture is in an advanced state. A great degree of attention is paid to the management of the dairies, and considerable quantities of cheese are made, and sent to the neighbouring markets, where it is much esteemed. About 1000 milch-cows, of the Ayrshire breed, are kept on the several farms; and the number of sheep, chiefly of the black-faced kind, averages about 1200. The annual value of real property in the parish is £9724. The substrata are limestone, coal, and freestone. The limestone is of very superior quality; and the lime, which is

distinguished by the appellation of Benston lime, is in great demand for cement, and, from its property of acquiring hardness when under water, is much used in the erection of bridges. The freestone on the banks of the Lugar has a light-blue tint, and is susceptible of a very high polish; a white freestone is also found, which is in repute for millstones, and sent off in great quantities for exportation. The coal is alternated with strata of trap, but is on the whole of good quality. The woods consist of oak, ash, elm, beech, plane, lime, chesnut, and birch; and the plantations, of silver, spruce, and Scotch firs, poplar, mountain-ash, holly, and evergreens of almost every variety: many of the trees are of stately growth, and all are in a flourishing condition. *Dumfries House*, one of the seats of the Stuart family, Marquesses of Bute, is a very spacious and handsome mansion, built of the blue freestone found in the parish, and containing stately apartments; the walls of the drawing-room are hung with some fine old tapestry, presented to one of the Earls of Dumfries by Louis XIV. of France. This house is beautifully situated on the bank of the Lugar, which flows through the pleasure-grounds, and over which an elegant bridge has been erected near the mansion. *Glasnock House*, situated on the bank of the Glasnock, is an elegant mansion of recent erection, built with the white freestone found near the Lugar. *Logan and Garrahan* are likewise good houses.

Ecclesiastically the parish is in the presbytery of Ayr, synod of Glasgow and Ayr, and in the patronage of the Stuart family. The minister's stipend is £218, with a manse, and a glebe valued at £20 per annum. Cunnock church, erected in 1754, is adapted for 900 persons: the cemetery has been removed to a rising ground called the Bar Hill, east of the town. There are places of worship for members of the Free Church and the United Presbyterian Synod. The parochial school affords instruction to about 130 scholars: the master has a salary of £34, with £15 fees, and a house and garden; he also receives one-half of the interest of a bequest of £1000 by Mr. Duncan, the other half of the interest being distributed among poor persons not on the parish list. There is a savings' bank with a fund of about £1000; and three friendly societies are supported. Within the grounds of Dumfries House are the ruins of the ancient castle of Terringzean, anciently the residence of the Loudoun family; and in the south side of the parish are some slight ruins of Boreland Castle.

CUNNINGSBURGH, in the county of SHETLAND.

—See SANDWICK.

Seal and Arms.

CUPAR, a burgh, market-town, and parish, in the district of CUPAR, county of FIFE; including the villages of Gladney and Springfield, and containing 6758 inhabitants, of whom 3567 are within the burgh, 9 miles (W.) from St. Andrew's, and 32 (N. by E.) from Edinburgh. This place is of considerable antiquity, and was noted at an early period for

of Edward Baliol, this castle was taken by the English, who retained possession of it till, having exhausted their provisions, and being unable to procure supplies, they were compelled to abandon it, and to return to their own country. There are no remains of the castle, but the site of it is still called Castle Hill. Under this hill was a Dominican convent, the founder of which is not known, and which, after subsisting for a long time as a cell to the monastery of that order on the island of May, was granted to the abbey of St. Andrew's. No vestiges of the building remain, and the site is now occupied by an episcopal chapel. Few events of historical importance are recorded in connexion with the place: the town was erected into a royal burgh by David II., in 1363, and in the *Magna Britannia* is designated by Camden the *Burgus Insignis*, which character it still retains as the county town.

The town is situated on the high road from Edinburgh, through Fife, to Dundee, and has a station on the Dundee line of the Edinburgh, Perth, and Dundee railway. It stands at the confluence of the river Eden and the Ladyburn, over the former of which are three handsome bridges, facilitating the intercourse between the north and south portions. From its situation, it is the great thoroughfare between the ferries of the Forth and the Tay, and consequently, in addition to its trade and well-frequented markets, derives much traffic from the frequent influx of strangers. It is well built, and consists of several principal streets, some of which are of recent formation, originating in the modern improvements of the town, and of several smaller streets; they are cleansed, paved, and watched from the common funds of the corporation, and lighted with gas by assessment upon the inhabitants under the Police act. The town has been considerably enlarged by the addition of the suburbs of Brae-Heads, Newtown, and Lebanon; and the whole has a cheerful and very respectable appearance. A public library has long been established, and is supported by subscription; it contains more than 6000 well-chosen volumes, among which are many scarce and valuable books selected by Dr. Gray, who bequeathed his library to the subscribers. There is also a public reading-room, well supplied with periodicals. A pack of fox-hounds for the Fifeshire hunt is kept here, as the chief place of the meeting of its members; the environs are pleasant, and afford much interest to the sportsman. The principal manufacture is that of linen, which gives employment to about 900 persons in the town and parish, who work with hand-loom at their own dwellings. The linen made is of various qualities, and is mostly exported to the East and West Indies, to the continent, and to America. Connected with this manufacture are three mills in the parish, two of which are for spinning flax, and one for thread. Of the former, one is set in motion by water, and the other partly by water and partly by steam, and the latter mill entirely by steam; they employ in the aggregate nearly 240 persons. There are two mills for grinding oatmeal and barley, and two flour-mills, all of which were held under the corporation until lately, when the feu-duty was sold. There are also a fulling-mill and two tanneries in constant use, to the latter of which has been added a manufacture of glue; three public breweries have been established, and there is an extensive manufactory of coarse earthenware, the clay found in the parish being well

the strength of its castle, erected at the extremity of a high mound extending along the bank of the Ladyburn rivulet. During their invasion of Scotland in the reign

adapted for making it, and also for bricks and tiles, of which great numbers are made. The market is on Thursday; it is a large market for corn (sold by sample), and is numerously attended by dealers from the neighbouring districts. A number of fairs are also held, for the sale of live stock, of agricultural implements, and various other articles.

The inhabitants received their first charter of INCORPORATION from David II. It bestowed many privileges, which were extended by Robert II., who also granted the burgesses considerable property in lands; and all the gifts were confirmed by subsequent charters down to the reign of James VI., who conferred upon the burgesses additional immunities, and the lands of the burgh at a fee-farm rent, by charter dated at Edinburgh in 1595. By these charters the government was vested in a provost, three bailies, a dean of guild, treasurer, and a council of thirteen, a convener, and seven deacons of trades, assisted by a town-clerk, and other officers; but the present town-council, composed of twenty-six members, is elected in accordance with the provisions of the Municipal act of 1833. The provost and bailies, and all other officers, are chosen by the council; the town-clerk alone holds office for life. There are eight guilds of trade, the hammermen, wrights, weavers, tailors, shoemakers, waulkers, bakers, and butchers, who hold their exclusive privileges under a modifying charter of Queen Anne; each of these guilds elects its own deacon, and the deacons make one of their number convener, to preside over all the guilds. The freedom is inherited by patrimony, by marriage with a freeman's daughter, by apprenticeship, or by purchase, the amount of which varies in the different guilds from £20 to £50. The magistrates hold burgh courts for the determination of pleas to any amount, but the sheriff's courts for small debts have nearly superseded the practice, and their criminal jurisdiction, also, though by charter extending to all offences not capital, is by custom limited to misdemeanors and cases of petty assaults, all graver offences being referred to the county magistrates. By the act of the 2nd and 3rd of William IV., the burgh unites with St. Andrew's, Crail, the two Anstruthers, Kilrenny, and Pittenweem, in returning a member to the imperial parliament. The right of election is vested in the householders of the annual value of £10 and upwards, resident within the limits of the parliamentary boundary, which is more extensive than the municipal. St. Andrew's is the returning burgh. The county-hall is very spacious, and affords suitable accommodation for the county meetings, the sheriff and justice-of-peace courts, and for keeping the public records of the county: it contains a portrait of General John, Earl of Hoptoun, finely painted by Raeburn, and one of Thomas, Earl of Kellie, lord lieutenant of the county, by Wilkie. There is also a town-hall. The old town and county gaol, situated on the opposite side of the river Eden, was badly arranged, and has been superseded by a large county prison built to the north-east of the town, under the Prison act of the year 1839.

In 1618, the PARISH of Cupar was augmented by the union of that of Tarvit on the opposite bank of the Eden. At present it extends five miles in length, and nearly the same in breadth; it comprises 5545 acres, all of which, with the exception of a moderate proportion of woodland and pasture, are arable land in the highest

state of cultivation. The surface is in some parts gently undulating, in others rising into hills of moderate elevation, and, near the banks of the rivers by which it is intersected, forming extended plains; the scenery is enriched with woods of natural growth, and thriving plantations. Of the two streams, the river Eden, which rises in West Lomond, about fifteen miles distant, flows through the parish from west to east, in the centre of a broad and fertile vale; and the Ladyburn, which intersects the parish from north-west to south-east, flows into the Eden at the eastern extremity of the town. The soil is various, in some parts a light sand, in others a stiff clay, and in the valleys rich and fertile; but even the poorer soils are rendered abundantly productive by diligent cultivation, and a liberal use of manure, which is plentiful. The system of husbandry is in the most improved state; the crops are oats, barley, wheat, potatoes, of which large quantities are grown for the London market, and turnips, with the other usual green crops. Much attention is also paid to the rearing of live stock: the oxen are mostly of the old Fifeshire breed, and at the great cattle-shows have obtained prizes awarded by the agricultural societies; some of the Teeswater breed have been introduced, but they are not generally approved. The substratum of the soil is various. White sandstone is prevalent along the banks of the Eden: on those of the Ladyburn, a conglomerate sandstone is found, in which are embedded quartz and flint; and at a short distance from the confluence of the two streams, is an extensive mound consisting of gravel. Greenstone, trap-rock, and clinkstone are likewise found, above the gravel and sandstone along the banks of the Eden, and are quarried, as is also the white sandstone, for road-making and for building. The annual value of real property in the parish is £18,715. The ancient mansion of Carslogie, for many ages the family seat of the Clephanes, was erected about four centuries since, and, with the grounds, is still kept up. Wemyss Hall was built about the commencement of the last century, and has been lately enlarged. Kilmaron is a modern mansion in the castellated style, after a design by Gillespie. Tarvit, Springfield, Dalzell, Hilton, Carnie Lodge, Pitblado, Preston Hall, Middlefield, Balas, Ferrybank, Bellfield, Blalowne, and Westfield are also within the parish, and are neat residences, pleasantly situated.

Ecclesiastically the parish is in the presbytery of Cupar, synod of Fife, and in the patronage of the Crown. There are two benefices: the minister of the first charge has a stipend of £259, with a manse, and a glebe valued at £21 per annum; the minister of the second charge has the same amount, but neither manse nor glebe. Cupar church was erected in 1785, and has been altered and enlarged from time to time. Another church, called St. Michael's, was lately built, at an expense of about £1800, partly raised by transferable shares, which entitle each subscriber to the choice of a seat. There is an episcopal chapel, a very handsome building; also places of worship for members of the Free Church, the United Presbyterian Synod, Old Light Burghers, Baptists, and Glassites. The grammar and English schools formerly supported by the burgh have been discontinued, and an academy, for which an appropriate building has been erected on the Castle Hill, has been substituted in their place, the patronage and management

being vested in the trustees of the late Dr. Andrew Bell, of Madras, who bequeathed some property called Eggmore, in Dumfriesshire, worth between £400 and £500 per annum, for the purposes of education in the town. The late Dr. Gray, of Middlesex, bequeathed £500 for the establishment of a female school here, the management of which is vested in the provost, clergy, and schoolmaster of Cupar. An almshouse for ten or twelve poor persons is under the management of the Kirk Session; it is of very ancient date, and the origin of its foundation is not distinctly known. There is also an asylum for females above fifty years of age, erected under a legacy of £3000 bequeathed by David Knox, Esq., of London, for its foundation and endowment. The poor likewise have the interest of £450 left by Dr. Gray for their benefit. On the bank of the Eden, on the Tarvit side of that river, is a small conical eminence, anciently the site of the parish church of St. Michael, Tarvit, which ceased to exist long previously to the union of Cupar and Tarvit; and in making some improvements in the road near the spot, many of the graves were thrown open, and the remains of the dead exposed to view. Upon the summit of a hill near Wemyss Hall, are the remains of the cross of Cupar, which, on its removal from its ancient site in the town, in order to the formation of a new street, was set up in its present situation by the late Col. Wemyss. It consists of a circular shaft, placed on a massive pedestal hewn from the rock on which it stands; and above the capital are the ancient arms of the town. Lord Campbell, lord chief justice of the court of queen's bench, is the second son of the late Dr. George Campbell, minister of Cupar.

CUPAR-ANGUS, or COUPAR-ANGUS, a market-town and parish, partly in the county of FORFAR, but chiefly in that of PERTH; including the villages of Balbrogie, Longleys, and Washington, and containing 2745 inhabitants, of whom 1868 are in the town, 12 miles (N. N. E.) from Perth, and 55½ (N.) from Edinburgh. It derives the affix, distinguishing its name from that of Cupar in Fifeshire, from the more ancient part of the town, which is within the county of Forfar or Angus. An abbey of Cistercian monks was founded at this place in 1164, by Malcolm IV., who amply endowed it with lands in the parish, and various other estates in different parts of the country. Among its possessions here were, Cupar grange, the home-farm of the monastery, where the abbot had a country residence; and the lands of Keithick, Arthursstone, Denhead, Balgersho, and Cronan. The endowment was augmented by the Hays of Errol, and other benefactors; and the establishment continued to flourish till the Dissolution, when its revenue was valued at £1239 in money, and large payments in wheat, oats, barley, and other produce. The buildings had begun to fall into a state of dilapidation some few years before the Reformation, and their ruin was completed by a body of reformers from Perth. The only vestiges now remaining of this once magnificent structure are in the south-west angle of the present churchyard, on the side of the road to Dundee. A portion of the building with a beautiful arch was taken down in 1780, to furnish materials for the erection of the parish church, of which the north wall rests upon part of the foundation of the ancient edifice. The lands belonging to the monastery were erected, after its dissolution, into a temporal lordship by James VI., and granted

to the Hon. James Elphinston, second son of Lord Balmerino, who was created Lord Coupar in 1609. On his decease without issue the title and estates merged in the Balmerino family, and, on the attainder of Arthur, Lord Balmerino, in 1745, became forfeited.

The town of Cupar, which was an ancient burgh of regality, is pleasantly situated on the banks of a stream that flows into the river Isla about three miles to the west. It consists principally of four streets, formed by the lines of the Perth and Dundee roads, which intersect each other in the market-place. The houses are generally neat and well built, and some, of more recent erection, are of elegant appearance; the streets are paved, and lighted with gas by a company established within the last few years, and the inhabitants are amply supplied with water. A public news and reading room, well furnished with the London and provincial journals, is supported by subscription; and an agricultural society formed about twenty or thirty years since, for awarding premiums to the best breeders and feeders of cattle, hold their meetings here twice every year. There are two branch banks. The post-office has a good delivery, and facility of communication with Perth and other towns in the vicinity is afforded by excellent roads, and by the Perth and Forfar railway, which has a station here. The principal employment pursued is the hand-loom weaving of the coarser kinds of linen; there is also a tannery. A salmon-fishery is carried on in the river Isla, which likewise abounds with trout. The market is on Thursday. Fairs are held on the third Thursday in March, for horses and cattle; on the 26th of May, if on Thursday, otherwise on the first Thursday after, for cattle and sheep, and for hiring servants; on the third Wednesday in July, and the first Tuesday in October, for horses, sheep, and cattle; and on the 22nd of November, if on Thursday, or on the first Thursday after, for cattle and for hiring servants. Cattle-markets are also held on the first Thursday in December, and every succeeding Thursday till May. The Steeple was erected by subscription in 1767, on the site of the ancient prison of the burgh of regality, and the lower part of it is used as a place of temporary confinement.

The PARISH is bounded on the north by the river Isla, and is intersected by the great north road through the vale of Strathmore. It is about five miles in length, and from one mile and a half to two miles and a half in breadth, comprising 2800 acres. The surface is varied; and from a high ridge which intersects the parish, is obtained a splendid view of the Sidlaw mountains on the south, the lower range of the Grampians on the north, with the distant summits of Ben-More, Schihallion, and Ben-Voirlich. The soil is various; in some parts a rich alluvial loam; in others a stiff retentive clay, alternated with sand and gravel, and with peat-moss. The system of agriculture is improved, and the rotation plan of husbandry is in general use; the chief crops are wheat, oats, barley, and turnips. The lands have been well drained, and much soil of inferior quality has been brought into profitable cultivation; the buildings on the larger farms are substantial and commodious, but on the smaller of a very inferior description. The cattle, generally of a mixed breed, have been much improved under the encouragement afforded by the agricultural society. The annual value of real property in the Perthshire portion of the parish is £9324, and in the Angus portion £591,

making a total of £9915. Keithick and Arthurstone are handsome residences. There were formerly populous villages at Keithick and Caddam, but both have disappeared. Ecclesiastically the parish is within the bounds of the presbytery of Meigle, synod of Angus and Mearns: the minister's stipend is about £240, with a manse, and a glebe valued at £25 per annum; patron, the Crown. Cupar church, a plain structure, was built in the year 1780, and enlarged in 1832, now containing 800 sittings. There are places of worship for members of the Free Church, the United Presbyterian Synod, Original Seceders, and Episcopalians. The parochial school is well attended; the master has a salary of £34, with a house and garden, and the fees average above £70. A savings' bank was opened in 1839, and has deposits to the amount of £2600; there are also two friendly societies, and a ladies' society for visiting and assisting indigent and aged women. To the east of the churchyard are the remains of a Roman camp, supposed to have been that of Lollius Urbicus, and within the area of which the abbey was founded.

CURRIE, a parish, in the county of EDINBURGH, 6 miles (S. W.) from Edinburgh; containing, with the villages of Balerno and Hermiston, 2000 inhabitants, of whom 297 are in the village of Currie. This place, anciently called *Kil-Leith* from a religious establishment on the Water of Leith, is supposed to have derived its more general appellation from the remains of the Roman station *Coria*, which some antiquaries have identified with the immediate vicinity. The lands appear to have been the property of the Lennox family, of whose baronial residence of Lennox Tower there are still considerable remains on an elevated situation on the bank of the river, commanding a fine view of the Firth of Forth. This castle, which was the occasional residence of Mary, Queen of Scots, and afterwards of the Regent Morton, was a place of great strength, surrounded by a rampart, and inaccessible on all sides. A subterraneous passage afforded communication with the river, but it has recently been closed, to protect the cattle that graze on the site.

The PARISH is skirted on the south by the Pentland hills, and is about six miles in mean length, though its extreme points from east to west are eight miles distant. It is four miles in average breadth, and comprises an area of 11,000 acres, of which two-thirds are arable, and the remainder hill pasture and moss. The surface is generally elevated, and broken into numerous hills, of which Ravelrig, nearly in the centre of the parish, is 800 feet above the sea. There are also Currie hill and various others, some of which rise to a still greater height. The lower grounds are watered by the river of Leith, which has its source in three copious springs near the western extremity of the parish, and, after a course of fourteen miles, in which it turns numerous mills, flows into the Firth of Forth at the harbour of Leith. The SOIL is mostly a stiff retentive clay, and, though difficult to work, is fertile, producing favourable crops of grain of all kinds, notwithstanding that the harvests are usually late. The system of husbandry is in a very improved state; the lands are inclosed, and the farm-buildings substantial and commodious. Considerable numbers of black-cattle are reared in the pastures, and sent to Edinburgh; and during the spring and summer months, many sheep are purchased by the farmers, and fattened for the neighbouring markets. The annual value of real property in

the parish is returned at £12,164. The principal substrata are limestone and freestone of excellent quality; and along the banks of the river, ironstone is found in abundance. The limestone is not wrought for agricultural use, from the want of coal to burn it; but near the village of Balerno are extensive quarries of freestone, from which materials have been taken for many of the buildings of the New Town of Edinburgh. In the lower parts of the parish, towards the north, are considerable remains of ancient woods; but on the higher lands, except on the demesnes of the landed proprietors, there are very few plantations. The seats are Riccarton, Malleny, Baberton, Ravelrig, Currie-Hill, Glen-Darroch, Larch Grove, Bankhead, West Brook, and Glen-Brook. The village of Currie is situated on the banks of the Water of Leith, and on the road to Lanark. The manufacture of paper was introduced here about the year 1790, by Messrs. Nisbet and Macniven, who erected extensive mills for that purpose; and there are also numerous corn and other mills in the parish. Facilities of communication are afforded by the roads to Lanark and Glasgow, by the Caledonian railway, the Glasgow railway, and the Union canal.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Edinburgh, synod of Lothian and Tweeddale. The minister's stipend is £264, with a manse, and a glebe valued at £16 per annum; patrons, the Town Council of Edinburgh. Currie church, a neat structure erected about the year 1790, is situated on an eminence on the south bank of the river; and its spire, rising above the foliage around, forms a pleasing feature in the scenery of the village. There is a place of worship for the United Presbyterian Church. The parochial school is well attended; the master has a salary of £34, with a house and garden, and the fees average £42. Opposite to Lennox Tower, on the other side of the river, are the ruins of the ancient mansion of the Skenes, of Currie Hill; and on the summit of Ravelrig are some remains of a Roman exploratory camp. Among the distinguished persons connected with the parish have been, Sir George Skene, lord registrar in the reign of James VI., and his son, Sir James, president of the court of session; Sir Thomas Craig, lord advocate in that reign; and the Scotts of Malleny, eminent lawyers of the same period. Sir Archibald Johnston of Warriston, uncle of Bishop Burnet, and whose son was envoy to Brandenburg in the reigns of King William and Queen Anne, was a large landholder in the parish.

CUSHNIE, county ABERDEEN.—See LEOCHEL.

CUTHBERT'S, ST.—See EDINBURGH.

CUTHILL, or CUTTLE, a village, in the parish of PRESTONPANS, county of HADDINGTON; containing 172 inhabitants. This place is on the shore of the Firth of Forth, and in the western part of the parish, adjoining the village of Prestonpans. Some salt-works, a pottery, and a magnesia manufactory were formerly carried on here.

CYRUS, SAINT, or ECCLESCRAIG, a parish, in the county of KINCARDINE; including the villages of Lochside, Milton, Roadside, and Tangleha, and containing 1600 inhabitants, of whom 207 are in the village of St. Cyrus, $5\frac{1}{2}$ miles (N. by E.) from Montrose. This place, which is now generally known by the former of the two names, is supposed to have derived the latter, in the Gaelic language *Eaglais-Creag*, from the situation of its

church at the base of a rocky promontory projecting into the North Sea. The name of St. Cyrus, which, till the close of the last century, was limited to a portion only of the parish, is derived from a saint who lived in retirement on the adjacent lands of Criggie, where there is a well still called after him. At an early period, this parish was distinguished for a castle named the Fortress of Lauriston, situated near the eastern boundary. It was erected about the tenth century, and, in the reign of Edward III. of England, sustained repeated assaults from the troops of that monarch, by whom, in 1336, it was taken and garrisoned; but towards the close of that year it was recaptured by the regent Murray, and dismantled. The castle, and the lands belonging to it, were for more than four centuries in the possession of the Straton family, but in 1695 were sold to Sir John Falconer. From his descendants they were purchased about the year 1689 by Mr. Brand, who incorporated the remains of the ancient building, consisting of a square tower and a portion of the chapel, into a spacious modern mansion.

The PARISH, which is bounded on the south-east by the sea, and on the south and south-west by the North Esk river, is about five miles in length, and from two and a half to three in breadth. It contains 8477 acres, of which 6234 are arable, 300 in woods and plantations, and the remainder meadow, pasture, and waste. The surface is diversified with hills, the principal of which are, Bridgeton and Jackston in the east, and Morphy and Pitbeadly in the west, averaging about 500 feet in height, and Brands hill and Woodston hill, having an elevation of 630 feet above the sea. These hills are intersected with deep valleys and narrow glens, watered by various rivulets, one of which, in its progress towards the sea, forms a picturesque cascade. The coast, which is indented with several small bays, is a level beach of fine sand for about a mile from the mouth of the North Esk, beyond which it is lined by precipitous cliffs of limestone, worn by the action of the waves into caverns of fanciful appearance. At the village of Milton-Mathers, where lime-works had been long established, the quarrymen had so undermined the elevated ledge which defended that part of the coast, that, in 1795, the village was swept away by an irruption of the sea, which encroached 150 yards upon the land.

The SOIL is generally a rich and fertile clay, well adapted for grain of every kind; and the crops are oats, barley, wheat, beans, peas, turnips, and potatoes, of which last great quantities are raised. The system of agriculture is improved; the dairy-farms are productive, and a kind of sweet-milk cheese is made, which is in high estimation. The annual value of real property in the parish is £14,034. The woods mainly consist of ash, plane, elm, beech, and birch, and the plantations of larch, Scotch, and silver firs; they are well managed, and are for the most part thriving. A great variety of other trees have been plauted on the lands of Lauriston with entire success. The prevailing rocks in the parish are of the old red sandstone and trap formations. There are quarries of a durable white sandstone used chiefly for ornamental building, on the lands of Kirkside; and sandstone which is easily wrought, and very durable, is extensively quarried at Woodston and Lauriston, yielding a return of £1000 per annum. Tilestones were formerly obtained at Morphy, for roofing; but from

their insufficiency to resist the influence of the atmosphere, the use of them has been discontinued. Lime-works were also once carried on, to a great extent; and at Sea-Greens, on the coast, in the immediate vicinity of the works, is a small harbour accessible to boats of 50 or 60 tons' burthen, by which the produce of the works was conveyed to its destination. Among the seats in the parish is *Lauriston*, a handsome mansion erected by the late proprietor, and including portions of the ancient castle; it is romantically situated on the verge of a precipitous height rising from a deep and richly-wooded dell. *Mount Cyrus* occupies an eminence to the north-west of the village, with beautiful lawns, and extensive plantations; and *Kirkside House*, a substantial modern mansion, stands near the southern extremity of the parish, in grounds tastefully laid out, and commanding some fine views of the bay and town of Montrose. *Bridgeton* is also pleasantly situated, on rising ground near the eastern extremity of the parish. The manufacture of coarse linen is carried on, affording employment to about thirty persons. There are some valuable salmon-fisheries, together producing a rental of nearly £3000 per annum, and giving occupation to about sixty persons; the fish are for the most part packed in ice, and conveyed to the Edinburgh and London markets. Facility of communication is afforded by good roads, of which the great north road has on its line two handsome bridges, one built in 1775, at an expense of £6000, and the other in 1817, at a cost of £600.

FOR ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Fordoun, synod of Angus and Mearns. The minister's stipend is £247. 17., with a manse, and a glebe valued at £11 per annum; patron, the Crown. St. Cyrus church, erected in 1783, on a site nearly a mile to the north of the ancient church, and enlarged in 1830, is a neat substantial structure with a spire, and contains about 850 sittings. From its situation on an eminence 250 feet above the level of the sea, it forms a conspicuous landmark for mariners. There is a place of worship for members of the Free Church. The parochial school is well attended: the master has a salary of £33, with a good house and garden, and the fees average £30. The parochial library contains nearly 750 volumes, chiefly on religious subjects. Sir Joseph Straton, of Kirkside, bequeathed £500 for promoting education in the parish, the proceeds of which sum are applied to the payment of school fees for the children of the poor. Among the relics of antiquity is the Kaim of Mathers, a camp on those lands, situated on a rocky peninsula connected with the main land by a narrow isthmus, defended by battlements on each side: on the peninsula are the remains of a square tower, said to have been the residence of the ancestors of the Barclays of Ury. The castle of Morphy, supposed to have been the baronial seat of the Graham family, has totally disappeared, and the site has been effaced by the plough. On the lands, however, is still an upright stone, erected, according to tradition, to commemorate the defeat of the Danes in a battle that took place near the spot; it has the form of an obelisk, about thirteen feet in height, and the number of stone coffins containing human bones which have been found in an adjoining field, strengthens the probability of its supposed origin. Upon the hill of Pitbeadly are some remains of a circular camp.

D

DAILY, a parish, in the district of CARRICK, county of AYR, 6 miles (S. by W.) from Maybole; containing 2272 inhabitants, of whom 591 are in the village. The parish is about seven miles in length, from east to west, and varies from four to six miles in breadth. Its surface is chiefly one extended valley, bounded on both sides by hills of moderate elevation, and enlivened by natural woods and thriving plantations; and the prospect from the hills, including the winding course of the Girvan for nearly seven miles, in a direction parallel with the boundary of the parish, and meandering through large and beautiful domains, is extremely picturesque. The well-known Rock of Ailsa, which lies out between ten and fourteen miles from the Girvan shore, and is the abode of vast flocks of solan geese, forms part of the parish of Dailly: it is described under its own head. The soil near the river is light, but very productive. On the south side of the valley it is incumbent on a bed of gravel, and is peculiarly favourable for pasture; on the north side it is intermixed with clay. The whole number of acres is estimated at 17,000, whereof about 9000 are arable, 2500 in woods and plantations, and the remainder pasture and moorland, of which not more than about 300 appear capable of being brought into cultivation. The crops are wheat, oats, barley, potatoes, and turnips; the system of agriculture is greatly improved, and much of the moorland has been reclaimed. Great attention is paid to live stock: the cattle are of the Ayrshire breed, with a few of the Galloway, and some crosses between the Ayrshire and Teeswater breeds; the sheep are of three varieties, the black-faced, the Cheviot, and a cross between these two breeds. Embanking has been practised with success: to prevent the inundation to which the lands were subject from the river Girvan, and to shorten its course, a new channel about 210 yards in length was some time since formed, and on both sides of it a double embankment was raised. The woods consist of oak, ash, plane, elm, and birch, and the plantations are principally Scotch, larch, and spruce firs; they are well managed, and in a very thriving state. The annual value of real property in the parish is £10,695.

The substrata are chiefly coal, limestone, and freestone. The coal occurs in a large tract of elliptic form, about six miles in length, and 600 yards in breadth, forming part of the great coalfield extending from Edinburgh into the county of Ayr. It is of excellent quality; the quantity annually raised averages about 20,000 tons, and a great portion of it is shipped at Girvan for the coast of Ireland. The limestone, which is also of good quality, is extensively quarried at Craighead, on the Bargany estate, and at Blairhill, on the lands of Kilkerran; the quantity of lime annually produced is 100,000 bolls, each boll containing two Winchester bushels. The freestone is found in numerous places, but the most valuable occurs on the bases of the hills south of the coal basin, on the estate of Kilkerran, and the whitest and most compact lies near the centre of that tract. The materials for building the mansions of Kilkerran and Dalquharran, in this parish, and of Blair-

quhan, in the parish of Straiton, were raised from the freestone-quarries here. Kilkerran and Dalquharran are handsome houses, pleasantly situated in demesnes richly embellished with plantations; and further down the river, in grounds laid out with exquisite taste, stand the mansion-house of Bargany and the castle of Killochen. The village has been greatly enlarged and improved within the last few years; the new parts of it are regularly built, and the houses of neat appearance. It has a post-office under that of Maybole.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Ayr and synod of Glasgow and Ayr: patron, the Crown. The stipend of the incumbent is £348; the manse, built in 1801, is a comfortable residence, and the glebe comprises seven acres of land, valued at £15. 10. per annum. Dailly church, which is in the village, is a substantial edifice erected in 1766, and adapted for 600 persons. The members of the Free Church have a place of worship. The parochial school, which is also a grammar school, is well conducted; the master has a salary of £30, with a house and garden, and the fees average £25. A parochial library has been established, and is supported by subscription; it has nearly 200 volumes, chiefly on religious subjects. At Machry-Kill was formerly a small church or chapel dedicated to St. Macarius, from which circumstance that place took its name; and at the extremity of a wild and romantic dell near Kilkerran, abounding with picturesque features, was a chapel dedicated to the Virgin, from which the place still retains the appellation of the Lady Glen. At the western extremity of the ridge of hills that intersects the parish, are the remains of an ancient encampment of oval form, about 100 yards in length, and sixty-five in breadth at the centre. It is surrounded by a double intrenchment, of which the inner rampart is the more entire. It commands a most extensive view, and is supposed to have been connected with the history of Robert Bruce.

DAIRSIE, a parish, in the district of CUPAR, county of FIFE, 2 miles (E. N. E.) from Cupar; containing, with the village of Osnaburgh, or Dairsie-Muir, 669 inhabitants. This place is of some antiquity, and appears to have belonged to the see of St. Andrew's till the year 1520, when it was granted by charter of Archbishop Foreman to the family of Learmonth of Clatto, in whose possession it remained till the year 1616. It then became the property of Archbishop Spottiswood, from whose descendant, Sir John Spottiswood, it was conveyed to Sir George Morrison, Knt.; and it was subsequently purchased by Thomas, Earl of Kincardine. The estate was sold by the earl in 1772 to General Scott of Balcomy, whose daughter conveyed it by marriage to the Duke of Portland, by whom it was afterwards disposed of; and it is now divided among several proprietors. Dairsie Castle, the residence of Archbishop Spottiswood, and in which it is said he wrote his *History of the Church of Scotland*, though now a ruin, is in good preservation; it is situated on an eminence near the banks of the river Eden, and has an air of venerable antiquity. It was selected as a place of security and retirement, during the minority of David II., by the regents of Scotland, who held a parliament in the castle in the year 1335.

The PARISH, which is bounded on the south and south-east by the Eden, is of irregular form, nearly

three miles in length, and of almost equal breadth, comprising an area of 2300 acres, of which, except about fifty acres in woodland and plantations, the whole is arable. Its surface rises gently to a considerable elevation, and, towards the centre, into two conspicuous hills called respectively Foodie and Craigfoodie, the latter of which is 500 feet above the sea. Both these hills are cultivated to their summit; and Foodie, which is the less elevated, is crowned with plantations. The river, over which is a handsome bridge of three arches, erected by Archbishop Spottiswood, abounds with salmon and trout; and the Middlefoodie burn, a fine trout-stream, intersects the parish, and eventually flows into the Eden. The soil is mostly fertile, in many parts of great depth, and the system of agriculture is excellent, the parish being one of the best cultivated in Fifeshire; the crops are wheat, oats, barley, potatoes, and turnips, with the various grasses. The substrata are chiefly whinstone and freestone; the former is quarried on the hill of Foodie, and the latter is found in abundance on the lands near the river. The annual value of real property in the parish is £4752.

In this parish the principal mansion-houses are Craighoodie, Pitormie, and New-Mill, all modern buildings. Woodend Cottage, a small but handsome residence, surrounded with wood, was occupied for some time by Lord William Russell, who was inhumanly murdered in London by his valet Courvoisier. The manufacture of dowls is carried on under the direction of Mr. Inglis, in whose establishment about thirty-five persons are engaged; and there are two mills for the spinning of flax, one belonging to Mr. Annan, in which 5200 spindles, and one to Mr. Michael Smith, in which 31,250 spindles, are employed. Great facilities of intercourse are afforded by the Dundee section of the Edinburgh, Perth, and Dundee railway. Ecclesiastically the parish is in the presbytery of Cupar and synod of Fife: the minister's stipend is about £250, with a manse, and a glebe valued at £11 per annum; patron, Captain McDonald. Dairsie church, situated near the remains of the old castle, was erected by Archbishop Spottiswood, about the year 1621, and was originally an elegant structure in the later English style, of which it is said to have been one of the most beautiful specimens in the country. It underwent much mutilation, however, in the time of the Covenanters, who, in their zeal for the demolition of idolatrous monuments, in 1645 destroyed most of its richest details. The members of the Free Church have a place of worship. The parochial school is attended by about sixty children; the master has a salary of £34, with a house and garden, and the fees average £25 per annum.

DALAROSSIE, county INVERNESS.—See MOY.

DALAVICH, ARGYLL.—See KILCHRENAN.

DALBEATTIE, a village, in the parish of URR, stewardry of KIRKCUBBRIGHT, $3\frac{1}{2}$ miles (S. E.) from Castle-Douglas; containing 1430 inhabitants. This place is of modern erection, and is built on the estates of the Copland and Maxwell families. It is seated on both sides of the Dalbeattie burn, and is admirably situated for trade, the river Urr being navigable so far from the Solway Firth for small vessels, and the burn, which is a considerable stream, being well adapted for driving machinery. The manufacture of paper is carried on. A large portion of the population is Irish, for whose

labour, in the present state of the district, there is not a sufficient demand; and hence much poverty exists among them. A post-office is established under Castle-Douglas. There is a place of worship in connexion with the Free Church; and a Roman Catholic chapel was built here about thirty or forty years since.

DALCROSS, county of INVERNESS.—See CROY.

DALGARVAN, a village, in the parish of KILWINNING, district of CUNNINGHAME, county of AYR, $1\frac{1}{2}$ mile (N. by W.) from Kilwinning; containing 107 inhabitants. It is situated on the road from Irvine to Dalry, and on the west side of the Garnock river, which runs here in a direction nearly from north to south.

DALGETY, a parish, in the district of DUNFERMLINE, county of FIFE, 2 miles (W. S. W.) from Aberdour; containing, with the villages of St. David and Fordel-Square, and part of the villages of Crossgates and Hill-end, 1265 inhabitants. This place, which is on the Firth of Forth, appears to have been indebted for its growth and importance to its situation in the heart of a district abounding in mineral wealth, and to the facilities it possessed of exporting the produce, from its proximity to the sea. The abundance and superior quality of the coal in the parish seem to have attracted attention at a very early period, and the mines are supposed to have been worked for nearly three centuries: none, however, are at present in operation. The parish is about five miles in length, and in some places not more than one mile in breadth. Its surface rises gently from the Firth towards the more inland parts, where the land attains an elevation of nearly 440 feet above the sea; and the higher grounds command an extensive and interesting view over the opposite shores of the Firth. The scenery is enlivened by the loch of Otterston, about three-quarters of a mile in length and a quarter of a mile in breadth, the shores of which, enriched with plantations and with natural wood, and having a pleasing alternation of hill and valley, form a very picturesque and varied landscape. A rivulet descending from the higher grounds flows through a deep-wooded dell, and, meeting with the stream of water from the drainage of the collieries at Fordel, is precipitated in its course from a rock, forming a strikingly romantic fall of nearly fifty feet.

The soil, especially in the southern part of the parish, is a deep black loam, mixed with clay; in the higher grounds, lighter; and in some of the lower, wet and swampy, with moss and heath. From the abundance of lime used, the lands are in general fertile. The system of agriculture is in a very advanced condition; draining has been carried on successfully, and the wet lands in the northern part have been greatly improved. The chief crops are oats, barley, potatoes, and turnips; there are rather more than 1000 acres under cultivation, and about 240 in wood and plantations. The annual value of real property in the parish is £10,573. The substratum mainly consists of secondary rock; and sandstone, whinstone, bituminous shale, limestone, and coal are abundant. The sandstone is found in various parts, but of better quality in the southern portion of the parish. The limestone lies about fifty fathoms below the coal, the beds of which are very extensive, and in many places intersected with dykes of sandstone, interspersed with limestone and quartz. The principal coal-works are on the estate of Fordel, and were in operation at a very early period, though not carried on to any

great extent till within the last forty or fifty years. The quantity of coal raised annually at these works was latterly about 70,000 tons, a great part of which, from its superior quality, was exported to the continent and to America; it was conveyed from the pits to the coast by a tramroad, in waggons containing from two to three tons each. The number of persons employed, including women and children, was about 550, for whose accommodation 130 houses were built on the estate, with neat gardens; and there were many others regularly engaged in shipping the coal at the port of St. David. The great north road runs through a remote part of the parish.

Donibristle Park, the splendid domain of the Earl of Moray, extends nearly the whole length of the parish, along the shore, with perpetually varying views: the fine old mansion is beautifully placed at the western extremity of Dalgety bay, conspicuous, among the rich woods, from the water. Fordel House is a handsome residence in extensive grounds embellished with plantations, and comprehending much interesting scenery. Cockairney is an ancient mansion, situated near the eastern extremity of the lake of Otterston; and on the northern bank of the loch is the old house of Otterston. St. Colme House, a modern edifice, is pleasantly situated opposite to the island of Inchcolm in the Firth of Forth. Ecclesiastically the parish is within the bounds of the presbytery of Dunfermline, synod of Fife: the stipend of the incumbent is £227; the manse is the finest in Scotland, and the glebe is valued at £20 per annum. Dalgety church, a very handsome edifice in the later English style, was erected in 1830, on a site about a mile northward of the ancient church, which was close to the sea; it is adapted for 500 persons. The parochial school is well managed; the master has a salary of £34, with a house and garden, and the fees on the average amount to £18. On the lands of the Earl of Moray are the remains of the ancient church, which previously to the Reformation was an appendage of the monastery on Inchcolm. Within the area is the tomb of Chancellor Seaton, who was created Earl of Dunfermline in 1605; and in front of one of the remaining galleries are the arms of the Earls of Dunfermline, a title that is now extinct.

DALGINROSS, a village, in the parish of COMRIE, county of PERTH, $6\frac{1}{2}$ miles (W.) from Crieff; containing 317 inhabitants. This place is situated in the eastern part of the parish, and on the road from Crieff to Lochearnhead: the Earn water and Ruchill rivulet pass in its immediate vicinity. The village adjoins that of Comrie, and partakes of its trade, which is chiefly cotton-weaving. On the contiguous plain of Dalginross is a large Roman camp, of which Mr. Pennant has given a plan and description in his *Tour*.

DALHOUSIE, a village, in the parish of COCKPEN, county of EDINBURGH, 1 mile (W.) from Cockpen; containing 99 inhabitants. It is a small and straggling place, situated south of the road between Cockpen and Lasswade. The neighbourhood is distinguished as having been the seat, for many generations, of the noble family of Ramsay, whose baronial mansion of Dalhousie Castle stands on the banks of the South Esk, which flows at a few yards distance from the walls. It is of great antiquity, but has lost much of its former venerable aspect, having undergone many alterations from time to time, and been much modernised by the late Earl of

Dalhousie. This illustrious nobleman and gallant officer, who rendered important services to his country through a brilliant military career in various parts of the globe, died at the castle in March 1838, in his sixty-eighth year, and was succeeded by his only surviving son, James Andrew, the tenth and present earl, governor-general of India, created Marquess of Dalhousie of Dalhousie Castle and of the Punjaub in 1849.

DALINTOBER, a village, in the parish of CAMPBELLTOWN, district of CANTYRE, county of ARGYLL, 1 mile (N. W.) from Campbelltown; containing 1762 inhabitants. This place forms a pleasant suburb to the burgh of Campbelltown, and is beautifully situated on the opposite shore of the loch of Kilkerran, now Campbelltown bay, at its north-western extremity. From the freedom the proprietors possess of granting long leases for building, from which the superior of Campbelltown is restricted, Dalintober has rapidly increased to an extent rivalling that of the burgh. It consists of one spacious street extending along the water-side, and has a substantial little pier.—See CAMPBELLTOWN.

DALKEITH, a market-town, burgh of barony, and parish, in the county of EDINBURGH; containing, with the villages of Lugton and Whitehill, 5830 inhabitants, of whom 4831 are in the town, 6 miles (S. E. by S.) from Edinburgh. This place, at a very remote period, was the property of the ancient family of Graham, whose baronial castle, together with the lands, passed in the reign of David II., by marriage with the daughter and heiress of the last lord, to Sir William Douglas, ancestor of the Earls of Morton. In the reign of James II., the castle was besieged by the Earl of Douglas, in consequence of the firm attachment of its proprietor to the cause of that monarch, against whom the Douglas family had rebelled. It was, however, vigorously and successfully defended; and after the disastrous battle of Pinkie, in 1547, became the asylum of many of the Scots who fled to it for refuge, till, from want of provisions, the garrison was compelled to surrender to the English. The castle was afterwards the chief residence of the Regent Morton, on whose attainder for the murder of Lord Darnley, it was forfeited with the barony to the crown. Upon his execution, the lands were in part restored to his family; but the castle was still held by the crown, and, under the designation of the Palace of Dalkeith, was reserved for the residence of Prince Henry, son of James VI. During the visit of Charles I. to Scotland, in 1633, the palace was the chief residence of that monarch; and in 1638 it was occupied by the Marquess of Hamilton, who had been appointed by the king as commissioner to treat with the Covenanters, and who, for greater security, removed into it the ancient regalia of Scotland, which were subsequently deposited in the castle of Edinburgh. In 1642 the castle and barony were purchased by the family of Scott, who are the present proprietors; and in the time of the parliamentary war, the castle became the residence of General Monk, Cromwell's governor of Scotland, by whom the grounds are said to have been considerably improved.

The town is beautifully situated between the rivers North Esk and South Esk, and is handsome and well built, consisting of several regular streets, of which the High-street is spacious, and increases in breadth, from its entrance on the west, till it terminates on the east at the principal lodge of the palace. The streets are paved,

and lighted with gas; and the inhabitants are amply supplied with water. A public subscription library was established in 1698, and has now a collection of nearly 2500 volumes; there is also a circulating library, containing 3000 volumes. A scientific association was instituted in 1835, for the delivery of lectures on scientific subjects. In the High-street are numerous substantial houses, and handsome shops stored with every kind of merchandise; and in various parts of the town are several iron-foundries, tanneries, a brewery, soap and candle manufactories, extensive brick and tile works, and other establishments; with some hotels and inns of a very superior description. There are also several branch banks, and offices for the agents of different insurance companies. The market for grain, which is amply supplied, is on Thursday, and is numerously attended by dealers from distant places. From Martinmas to Whitsuntide, a very large market for oatmeal is held weekly, on Monday, which is one of the most frequented in the kingdom; and a customary market, abundantly supplied with butchers' meat, poultry, and vegetables and provisions of all kinds, is held every Saturday. Fairs, chiefly for horses and black-cattle, are held on the first Thursday in May and the third Tuesday in October. Facility of communication is maintained by good roads in various directions, and by the Edinburgh and Hawick railway, which has a short branch to the town. Dalkeith is partly governed by a baron-bailie, appointed by the Duke of Buccleuch; but he exercises civil jurisdiction only in actions not exceeding £2, and jurisdiction in criminal cases only for petty offences punishable by a small fine or a night's imprisonment, referring all more important causes to the sheriff of the county. There are six incorporated trades, the hammermen, bakers, weavers, shoemakers, dyers, and butchers; but they possess no exclusive privileges, and are scarcely to be regarded as any thing more than so many friendly societies. The paving, lighting, and watching of the town, with the regulation of the markets and police, are under the direction of a board of trustees, who are invested with power to levy taxes for these purposes. The court-house, containing also a small prison, is an ancient building, without any pretension to style, situated in the High-street.

From the beauty of the surrounding scenery, and the numerous attractions of its palace and other objects of interest, the town is a favourite place of residence, and the resort of visitors from Edinburgh. The PALACE, which was the residence of George IV. during his visit to Scotland in 1822, and had also the honour of a visit from her present Majesty, attended by Prince Albert, in 1842, is situated at the eastern extremity of the town. Though not remarkable for the style of its architecture, it is a spacious and magnificent structure. It was erected on the site of the ancient castle, on the precipitous and richly-wooded banks of the North Esk, about the close of the seventeenth century, by Anne, Duchess of Buccleuch and Monmouth, who, after the execution of her husband the Duke of Monmouth, resided here in all the pomp and splendour, and with all the appendages, of royalty. The interior comprises numerous state apartments: the grand staircase, the throne-room, the conservatory, the picture-gallery containing an extensive collection of paintings by the most eminent masters of the various schools, and the whole of the in-

ternal arrangements, are costly and superb. The demesne attached to the palace comprises more than 1000 acres, and abounds with variety and beauty of scenery. The rivers North and South Esk, whose banks are precipitous and richly wooded, flow in graceful windings through the demesne, and unite their streams, over which are many picturesque bridges, within its limits. The pleasure-grounds are tastefully laid out in lawns, shrubberies, and plantations; and the park, which is well stocked with deer, is finely ornamented with venerable timber.

The PARISH is about three miles in length, and nearly two in breadth, comprising an area of which about one-half is arable, and the other half woodland and pasture. Its soil is rich, and the lands are divided into farms of moderate extent, in the highest state of cultivation; the chief crops are wheat, barley, oats, beans, potatoes, and turnips, and much of the surface is garden-ground, producing abundance of fruit for the Edinburgh market. The substratum is generally coal, which is found at a very considerable depth, and of which extensive mines are in operation at Cowden, about a mile south-eastward of the town. The annual value of real property in the parish is £16,713. Ecclesiastically the parish is within the bounds of the presbytery of Dalkeith, synod of Lothian and Tweeddale; patron, the Duke of Buccleuch. The minister's stipend is £316, with a manse, and a glebe valued at £40 per annum. Dalkeith parish church, on the north side of the High-street, is an ancient structure in the early English style, with a square embattled tower; it is partly dilapidated, and the interior is but indifferently arranged, containing 1130 sittings: the churchyard is extensive. A new church was erected by the Duke of Buccleuch in 1840; it is a handsome cruciform structure in the later English style, and is beautifully situated in the north-west of the town, overlooking the vale of the North Esk. There are places of worship for the United Presbyterian Synod, Independents, members of the Free Church, and Episcopalians. The parochial or grammar school, which has long maintained a high degree of reputation, is conducted by a rector and two assistants; the rector's salary is £34, with a house and garden, and the fees average about £75. The course of studies includes the classics, the French and Italian languages, the mathematics, and the usual branches of a liberal education; and many eminent literary characters have received the rudiments of their education in the establishment. Dalkeith confers the title of Earl upon the Duke of Buccleuch.

DALLAS, a parish, in the county of ELGIN; including the hamlet of Edinville, and containing 1179 inhabitants, of whom 187 are in the village of Dallas, 8 miles (S. E.) from Forres. This place takes its name from the two Gaelic words *dale*, a vale or plain, and *uis*, contracted from *uisge*, water. It was formerly the seat of the sub-dean, and comprehended the parish of Altyre; but that district was disjoined and annexed to the parish of Rafford in 1657, and Easter Kelles, a part of the parish of Elgin, was joined to Dallas; an arrangement which was ratified by act of parliament in 1661. The barony of Dallas was at an early period in the possession of the Cummings of Altyre, whose castle of Dallas, or Torcastle, was built by Sir Thomas Cumming, in the year 1400; and the Cummings are still, with the Earl of Fife, and James William Grant, Esq., of Wester El-

chiefs, the proprietors of the parish. In shape the parish is like the section of an oblate spheroid; it measures about fifteen miles in length, and nine in breadth, and consists mainly of valleys and rising grounds. The chief valley is watered by the Lossie, which rises here, in Loch Trevie, and after contributing to form much beautiful scenery, and taking its course through the parishes of Birnie, Elgin, and Drainie, falls into the Moray Firth at the port of Lossiemouth. The summits of the hills skirting this valley on each side are covered with heath, but their slopes are highly cultivated, yielding heavy and luxuriant crops, down to the banks of the stream, which in many places are ornamented with alder-trees, supplying bark frequently used by the people for preparing a black dye. Besides the Lossie river, numerous burns greatly enliven the scenery, which in general is highly interesting; and all of these, rising among the hills, run into the Lossie. That called the burn of Glen Latterach, or Angry burn, forms a beautiful cascade, surrounded by nearly perpendicular rocks 100 feet in height; and on the burn of Auchness is another picturesque fall, though less striking than the former. All the lochs are well stocked with excellent trout; the chief are the lochs of Dallas, Noir, Rheninver, and Trevie.

The soil along the banks of the Lossie is a fertile alluvial earth, resting on gravel; at the base of the mountains the land has a tilly subsoil, and partakes of the character of the mosses, which, higher up, towards the south, spread out in extensive tracts. Most of the inhabitants are employed in the cultivation of the land. The annual value of real property in the parish is £2913. The rocks comprise granite, felspar, mica, freestone, and grey slate, and there are quarries of the two last, but not in operation. Of the plantations, the most conspicuous are those on the hills of Melundy and Wangie, and that on the estate of Craigmill: the first-mentioned hill has lately been replanted with silver-fir, spruce, larch, and birch, and part of the second with fir and larch, the other part being covered with natural oak; Craigmill, adjoining Melundy, has a thriving plantation of fir and larch. The village, which is pleasantly situated on the northern bank of the Lossie, about a quarter of a mile from the church, was feued about half a century since by Sir Alexander Penrose Cumming. The woollen manufacture is carried on in the parish, employing ten or twelve hands. There are county roads to Elgin and Forres, in good condition; and a new road called the Knockando road, extending from Forres to the Spey, is of great advantage to the more hilly parts of the district. Ecclesiastically the parish is in the presbytery of Forres, synod of Moray, and in the patronage of Sir William Gordon Gordon Cumming, of Altyre and Gordonstown, Bart. The minister's stipend is £158. 6. 8., of which part is received from the exchequer; with a manse, and a glebe valued at £12 per annum. Dallas church, situated about the centre of the parish, will accommodate 400 persons, but, never having been properly finished, is inconvenient and uncomfortable. The parochial school affords instruction in all the necessary branches; the master has a salary of £34, with a house, and fees, and also participates in the Dick bequest. The chief relic of antiquity is the ruin of the castle, situated on a plain about a mile from the church, on the north bank of the Lossie. In the churchyard is a stone cross,

twelve feet high, at the foot of which lies an effigy of St. Michael, the patron saint of the parish, in ruins. There is also a large oblong stone at the east end of the parish, occupying the site of an old chapel and burying-ground.

DALMALLY, a village, in the parish of GLENORCHY and INISHAIL, district of LORN, county of ARGYLL, 13 miles (S. E.) from Bunawe, 16 (N. E.) from Inverary, and 99½ (W. by N.) from Edinburgh. It is a small village, pleasantly situated on the southern bank of the river Orchy, and contains an excellent inn, and a post-office. About a quarter of a mile eastward is the Well of St. Conan, the tutelary saint of the country, remarkable for the lightness and salubrity of its water.

DALMELLINGTON, a parish, in the district of KYLE, county of AYR, 14 miles (S. E. by S.) from Ayr; containing 1199 inhabitants. This place derived its name, signifying in the Gaelic language "the town of the valley of the mill", from the particular local features which distinguished it at the time. The parish is about ten miles in length and three in average breadth, and is bounded on the south and south-west by the lake and river Doon, which separate it from the parish of Straiton, in Carrick. It comprises 20,000 acres, of which 1304 are arable, 17,800 pasture and waste (whereof 1200 might be brought into profitable cultivation), 750 in woods and plantations, and about 300 undivided common. The surface is extremely varied. The upper portion of it is intersected by three ridges of moderate elevation, two of which are nearly parallel, and the third crosses them obliquely. The lower part of the parish is one continued ridge of heights, the principal of them being Benwhat, Benbraniachan, and Benbeoch, which last terminates the ridge, to the east, in a splendid range of basaltic columns nearly 300 feet in height, and about 600 feet in breadth. Between this ridge and the river Doon is a plain, about three miles in length and one mile broad, on which the village is situated. Several deep and precipitous defiles are formed by the approach of the ridges towards each other; and on the Dumfries road they approximate so closely as, in some parts, to leave only a sufficient passage for the road and a small burn that flows by it. On the side of the Loch Doon range of heights, where the river issues from the lake, the precipitous rocks approach within thirty feet of each other for nearly a mile, rising perpendicularly to the height of 300 feet above the bed of the river, and presenting a magnificent combination of features. This pass, called the Glen or Craigs of Ness, forms the entrance to the vale of Doon, which afterwards expands into rich and luxuriant meadows. The river issues from the lake through two tunnels excavated in the solid rock, and, pursuing a north-western course along the boundary of the parish, intersects a level plain, in part of which, near the village, its waters expand into a wide lake. This lake is called Bogton, and is frequented by aquatic fowl of various kinds; and near the south-east of the parish is Loch Muck, in the form of a crescent, covering about thirty acres in the middle of a heathy moor; a lake of great depth, and abounding with black trout.

The SOIL on the banks of the river is a deep rich loam; along the bases of the hills in the lower part of the parish, a moist clayey loam, resting on sandstone; and behind the ridge, moss. In the higher part the soil

is light and dry, interspersed with peat resting on greywacke rock, with some portions of heath. The principal crop of grain is oats, and the green crops are chiefly potatoes: the system of agriculture is advancing; tile-draining is on the increase, and spade husbandry has been adopted with success upon the mossy lands, on a limited scale. About 8000 sheep, mostly of the black-faced breed, are pastured in the course of the year, with a small number of the Cheviot and Leicestershire breeds; about 300 Ayrshire cows, and about 500 head of young cattle, partly of the Galloway breed, are also annually pastured. The annual value of real property in the parish is £3679. The plantations are principally larch and Scotch fir, which appear to be well adapted to the soil, and are in a thriving condition, with ash, and birch, some oak, and other hard-woods. The substrata are chiefly sandstone and greywacke, with coal, ironstone, and limestone. The coal has been worked in several places, in some of which, especially in the lower parts of the parish, it has been found at little more than two fathoms from the surface. Pits have been opened, and are now in operation, at Camlarg, about a mile from the village; and at the extremity of the parish, about five miles distant.

Ulagh - The village, which was a burgh of barony, is pleasantly situated in the vale, sheltered in the rear by hills of various elevation. There are, a library supported by subscription, which has a collection of 800 volumes; and a reading-room, which has also a library of more than 600 volumes, bequeathed to it some years since by a shopkeeper of the village. A penny-post has been established here; and there are some inns for the reception of the numerous visitors whom the interesting scenery of the neighbourhood attracts to the spot, and of the shooting and fishing parties who resort hither during the season. In 1847 an act of parliament was passed for the construction of a railway, about 6 miles in length, from Dalmellington to Smithstown; to be called the Ayrshire and Galloway railway. The woollen manufacture is carried on to a small extent: two mills are in operation, employing a moderate number of hands, in spinning woollen-yarn, which is here manufactured into plaiding, tartans, carpets, blankets, and packing-cloths. Several of the inhabitants, also, are employed in weaving cotton-cloth; and there was formerly an extensive bleachfield, which, since the substitution of cottons and the increased importation of Irish linens, has been discontinued, and, in lieu, a thread-mill substituted on the premises. Fairs are held on Easter Eve, the first Friday after Whitsunday, and on Hallow E'en (all O. S.), chiefly for wool and for hiring servants. Ecclesiastically the parish is in the presbytery of Ayr, synod of Glasgow and Ayr, and in the patronage of the Crown: the minister's stipend is £158, with a manse, and a glebe valued at £20 per annum. The parochial school is well conducted; the master has a salary of £34, with £10 fees, and a house and garden.

There was formerly a castle near the village, the site of which only is now remaining, the materials having been removed for the erection of a house in the village, from that circumstance called the Castle House. It appears to have been but of small dimensions; it was traditionally styled Dame Helen's Castle, and between it and the village is a mound, once the place for dispensing justice. There was another castle, apparently of larger

dimensions, and of greater strength, situated on the projecting side of a deep glen, and called Laght Alpine; nothing, however, but the site remains. A Roman road passed through the whole length of the parish, but it has been destroyed to furnish materials for making dykes; it has been traced through the parish of Dalrymple to its termination at a ford on the river Ayr. Several cairns, also, have been removed for a similar purpose, one of which, on the summit of a hill above the village, was 115 yards in circumference.

DALMENY, a parish, in the county of LINLITHGOW; including the village of Craigie, and containing 1393 inhabitants, of whom 118 are in the village of Dalmeny, $1\frac{1}{4}$ mile (S. E.) from Queensferry. This place, in ancient records styled *Dumanie*, is supposed to have derived that name, of Celtic origin, signifying "black heath", from the appearance of the greater portion of its surface at the period. The barony, including the lands and castle of Barnbogle, once belonged to the family of Mowbray, who came over from Normandy with William the Conqueror, and of whom Philip de Mowbray was lord of Dalmeny in the reign of Alexander II. It remained in the possession of his descendants till the year 1615, when it was sold by Sir Robert Mowbray to Sir Thomas Hamilton, subsequently Earl of Haddington, whose grandson in 1662 disposed of it to Sir Archibald Primrose, Bart., of Carrington, afterwards justice-general of Scotland, and who was ancestor of the Earl of Rosebery, the present proprietor.

THE PARISH is bounded on the north by the Firth of Forth, along which it extends for about four miles, from a rivulet separating it from the parish of Cramond, on the east, to Abercorn on the west. It is about two miles and a half in breadth, and includes the ancient parish of Auldcaithie, which was annexed to it in 1618, and is the property of the Earl of Hopetoun; the whole comprising an area of 5850 acres, of which 650 are in Auldcaithie. The number of acres under tillage is about 4000; about 1000 are meadow and pasture, and 850 woodland and plantations. The surface is finely undulated, rising in some parts into hills of considerable height, of which the principal are Dundas hill, the Mons, and Craigie hill, having an average elevation of 380 feet above the sea. The view from the summit of Mons hill is almost unrivalled for beauty and extent, commanding a range over sixteen counties, and comprising a rich variety of picturesque and romantic features. The shore of the parish is indented with numerous small bays and inlets; and though in some parts the beach is rendered unsafe, from the quantities of moss carried down by the river, yet it is pleasingly alternated with tracts of white sand, in which a great variety of shells is embedded. The Linmill burn flows into the Firth near the western extremity of the parish, and in its course, falling from a precipitous rock of whinstone, nearly seventy-five feet high, near Springfield, forms a pleasing cascade. The SOIL of the higher grounds is chiefly clay, improving gradually towards the lower lands into a rich loam, producing abundant crops, in some places almost without manure. The system of agriculture is in a very advanced state, and the lands have been well drained; the crops are oats, barley, and wheat, with turnips and potatoes; the pastures are rich, and a considerable number of sheep and cattle are fed on turnips. In this parish the plantations consist of oak, ash, elm, beech, plane, and fir, of which there are

many trees of long growth. The substrata are limestone, freestone, and whinstone; and on the acclivity of Dundas hill is a range of columnar basalt, about seventy feet in height, at the base of which was formerly a loch, now drained and consisting of a deep bed of moss lying on shell marl, in which oak-trees have been found embedded, in a very perfect state. The freestone is of the finest quality, and has been extensively wrought near Queensferry. Ironstone is also found, and there are some indications of coal, but no attempts have been made to work it.

Dalmeny House, the seat of the Earl of Rosebery, is a noble mansion built by the present earl, and surrounded by an extensive and richly-wooded park, in which are the remains of the ancient castle of Barnbogle, overhanging the Firth. The grounds gradually rise from the shore in beautiful undulations, commanding diversified prospects over the Firth and the adjacent country, and combining much variety of scenery. Her Majesty visited this seat during her stay at Edinburgh in Sept. 1842. *Craigie Hall* stands near the south-eastern extremity of the parish, in the vale of the Almond, and sheltered by rising grounds clothed with stately timber. The river Almond winds through the demesne, and, flowing by the mansion, forms a picturesque cascade, falling perpendicularly from its rocky bed, shortly after which the stream runs beneath a rustic bridge of one arch, forty-eight feet in span, erected in the year 1757, and covered with ivy. Near the cascade is a grotto, in which are a bath, supplied and emptied by sluices from the river; and a saloon. *Dundas*, an elegant modern mansion built in connexion with an ancient baronial castle, is situated on the steep acclivity of a craggy hill, in a picturesque demesne of 1600 acres. The castle is supposed to have been originally erected in the eleventh century, and several additions were made to it in the early part of the fifteenth century, when its proprietor obtained a license from Robert, Duke of Albany, to convert it into a fortress, which license was confirmed by James I., in 1424. Its walls, which are of great thickness, were raised to the height of seventy-five feet; the various rooms are all vaulted, and a circular staircase leads to the roof, which is flat, and defended by a battlement. In the grounds, in front of the castle, is a fountain of singular design, formerly occupying the centre of a quadrangular area inclosed with massive stone walls twelve feet in height. Within these walls were flights of steps, leading to a banquet-room at each of the angles; and the whole is said to have been constructed in 1623, by Sir Walter Dundas, who appropriated to that purpose the funds he had set aside for the purchase of the barony of Barnbogle, in which he was anticipated by the Earl of Hadington. The village of Dalmeny is pleasantly situated on the road to Dundas, and consists of a few cottages built round a green, with the church and manse.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Linlithgow, synod of Lothian and Tweeddale. The minister's stipend is £264, with a manse, and a glebe of five acres and a half; patrons, the Earl of Rosebery and the Earl of Hopetoun, alternately. Dalmeny church is ancient, and forms a very elegant specimen of early architecture. The interior is eighty-four feet long, and twenty-five feet wide, with a semicircular chancel, divided from the nave by a deeply-recessed and richly-moulded arch with zigzag ornaments; and

the capitals of the columns that support the vaulted roof, are also embellished with sculpture. It was repaired in 1816, and contains 350 sittings. At the entrance is a large stone coffin, formed of one entire stone, and inscribed on the sides and on the lid with hieroglyphic characters. The church of Auldathie is in ruins. There is a place of worship for the United Presbyterian Synod. The parochial schoolmaster has a salary of £34, and the interest of £300 bequeathed by Lady Semple in 1723, and vested in the Earl of Rosebery and the minister. The poor receive the rent of lands held by the Earl of Rosebery, producing about £30 a year. James Davidson, Esq., bequeathed £200 to the poor not on the parish list; and such of them as live in that small part of the town of Queensferry which is within this parish, participate in the proceeds of Mr. Meek's bequest of £5000 to the town of Queensferry. About a mile to the west of Barnbogle Castle, on the summit of an eminence, is an ancient cairn called Earl Cairney: it appears to have been originally 500 feet in circumference at the base, and is now twenty-four feet in height. At Springfield were lately discovered a skeleton of large size, and a trench filled with human bones; and near Queensferry, on the lands of Dundas, a brass vessel in which was a pagan idol was found in 1738, but was destroyed by the workmen. Several silver medals of Marcus Antoninus, having on the reverse a figure of Victory; the carved handle of a copper vessel; and part of an earthen urn, have been found near Dundas Castle. The parish gives the title of Baron to the Earl of Rosebery.—See QUEENS-FERRY.

DALMUIR and DALMUIR-SHORE, villages, in the parish of OLD KILPATRICK, county of DUMBARTON, the one 2 miles (E. S. E.) and the other $2\frac{1}{2}$ miles (S. E. by S.) from Old Kilpatrick; containing respectively 526 and 187 inhabitants. These places are in the vicinity of the Forth and Clyde canal and the road from Glasgow to Dumbarton, and on the south flows the river Clyde. They each partake in the manufactures of the parish, and there is a quay for domestic traffic, of very ancient date. Among the works are a paper-mill, a bleachfield, and a soda-factory; the last, established by the grandfather of the present Earl of Zetland, stands on the margin of the river, its furnaces and chimneys contrasting remarkably with the surrounding scenery, which is very pleasing. The principal stream of the district, supplied by two lakes, falls here into the Clyde.

DALROSSIE.—See MOY and DALROSSIE.

DALRY, a manufacturing town and parish, in the district of CUNNINGHAME, county of AYR, 5 miles (S. W.) from Beith, and 7 (N. N. E.) from Saltcoats; containing, according to the last census, 4791 inhabitants. This place derives its name, in the Gaelic language signifying the "king's valley", from its situation in the vale of Garnock, which formed part of the royal demesnes. Previously to the year 1608 the town was an inconsiderable village, consisting only of five or six decent houses and a few straggling cottages, and containing scarcely one hundred inhabitants. It owes its origin and increase to the erection of the parish church at this place, towards the commencement of the seventeenth century, when the two ancient churches, becoming dilapidated, were abandoned. The town is beautifully situated on a gentle eminence rising from the right bank of the river Garnock, and between the rivers Rye and Caaf,

village

which flow into the Garnock above and below the town. It consists principally of five streets, three of which terminate in an open area nearly in the centre. The houses are regularly and well built, and many of them are of handsome appearance; the streets are lighted with gas by subscription of the inhabitants, for which purpose a company was formed, and works erected, in 1834. There are two good bridges of stone across the Garnock, of two and three arches respectively; and bridges of one arch each have been erected over the rivers Rye and Caaf.

The weaving of silk for the manufacturers of Glasgow and Paisley is the principal occupation of the inhabitants of the town, 500 persons being constantly thus engaged; and as they are employed chiefly in the superior description of articles, they have not been subjected to the depression occasioned by the introduction of power-looms, which are not adapted to the finer kinds of work. A great number of females, also, are employed in sewing and embroidering muslins, for the Glasgow and Paisley markets, which are celebrated for Ayrshire needlework; and a mill originally erected for spinning cotton has been enlarged, and converted to the spinning of woollen-yarn for the making of carpets. There is likewise a manufactory for wooden plates, bowls, ladles, and other articles of the kind, the machinery of which is driven by a steam-engine of two-horse power. The town contains numerous handsome shops, amply supplied with every requisite for the supply of the inhabitants and of the neighbourhood. A public library is supported by subscription, and has more than 1000 volumes: a church library, also supported by subscription, in connexion with the parochial school, contains 600 volumes; and there is a library belonging to the congregation of the United Presbyterian Synod. The Ardrossan Farmers' Society hold their annual exhibitions occasionally in the town, and the Ayrshire Agricultural Association meet alternately here and at Kilmarnock. Six fairs are annually held, but one only is of any importance, which takes place on the last day of July, and was formerly one of the most extensive horse-fairs in the west of Scotland; it is chiefly for horses and cattle, but comparatively little business is transacted.

The PARISH is ten miles in length and from three to eight in breadth, and comprises 19,046 acres, of which 12,287 are arable, 6089 pasture and waste, and 670 woodland and plantations. Its surface is pleasingly varied. A rich and fertile valley, along which the river Garnock pursues its winding course, intersects the parish nearly in the centre. On the western side of this valley the grounds rise by a gradual ascent towards the north-west boundary, and terminate in a ridge of hills, the highest of which has an elevation of 1200 feet above the sea. The lands on the eastern side are interspersed with hills of various height, of which Baidland and Caerwinning are the chief, the former having an elevation of 946, and the latter of 634 feet. The river Garnock rises in the parish of Kilbirnie, flows for seven miles through this parish, and after receiving in its course numerous tributary streams, of which the Rye and the Caaf are the principal, falls into the sea at Irvine. The Rye has its source in the parish of Largs, and runs through a deep and richly-wooded dell into this parish. The Caaf rises on the confines of Kilbride and Largs, and forcing its way through a basaltic rock, in which it

has worn for itself a passage, enters a deep and rocky glen, where, its course being obstructed by huge blocks of stone, it forms a romantic cascade, falling from a height of twenty-four feet, in one unbroken column about twenty feet in breadth, between two large masses of rock. There are numerous springs of excellent water in the parish, and also some possessing mineral properties, one of which, at Loans Bridge, is a strong chalybeate, and one at Maulside powerfully efficacious in scorbutic affections. The vale of the Garnock is thought to have been anciently an extensive lake, reaching from this place to Johnstone in the county of Renfrew, and of which the lochs of Kilbirnie and Castle-Semple formed a part; a supposition in some degree rendered probable from the number of trees that have been found embedded in the soil of the valley.

The SOIL is generally a thin cold retentive clay, with a portion of rich loam along the banks of the Garnock; in some parts, of more adhesive clay, with a large extent of moss; and in the uplands, of a light and dry quality. The progress of the plough is impeded by vast numbers of boulders, of which, though great quantities have been removed at various times, many still remain. Some of the mosses are of great depth, and in all of them oak, birch, and hazel trees are found prostrate. The crops are wheat, oats, barley, beans, potatoes, and flax: the system of agriculture is in an advanced state, and much waste land has been brought into cultivation. The dairy-farms are extensive and well managed; about 1400 milch-cows are kept, mostly of the Cunninghame breed, and the average quantity of cheese, to the making of which particular attention is paid, exceeds 35,000 stones annually. In general the sheep are of the black-faced Linton breed, with a few of a breed between the Cheviot and Leicestershire. The annual value of real property in the parish is £16,314. The plantations, especially those on the lands of Blair, which have been chiefly formed on steep rocky banks within the last forty or fifty years, are in a very thriving condition, and consist of oak, ash, beech, chesnuts, and willow, and of silver and spruce firs, and larch. Those around the house of Blair contain several fine specimens of luxuriant growth, among which are a Spanish-chesnut tree and some plane-trees; and in the grounds are various kinds of evergreens, including Portugal laurels and rhododendrons of unusual size. The plantations on the lands of Maulside are also remarkably fine. The substrata of the parish comprise sandstone, limestone, and coal, and the hills are mostly claystone-porphry, greenstone, and basalt; jasper is found in the porphyry, hornstone in the bed of the Caaf, and agate in that of the Rye. In the hill of Baidland, a vein of cannel coal has been discovered of the thickness of six feet, exceedingly inflammable, and, when burnt, emitting a strong sulphureous smell. Coal is wrought in various parts of the parish. Limestone is extensively quarried, not only for the supply of the parish, but for that of the adjoining districts; and there are three lime-kilns, at which great quantities of lime are burnt, and sold at a very moderate price. But more valuable than these minerals is the ironstone discovered since the opening of the Ayr railway, and which is now wrought to a great extent; iron-works have been erected on the estate of Blair, and others are contemplated. The discovery of most valuable strata of clay and blackband-ironstone has increased

the value of property, and infused a spirit of enterprise that was previously altogether unknown here. Blair House is a spacious mansion, situated in a richly-embellished demesne; a handsome residence has been erected at Swinridgemuir, and there is also a good house on the lands of Pitcon. Facility of intercourse is afforded by excellent roads; and the railway from Glasgow to Ayr, Kilmarnock, &c., has a station at Dalry.

For ecclesiastical purposes the parish is in the presbytery of Irvine, synod of Glasgow and Ayr, and in the patronage of W. Blair, Esq.: the minister's stipend is £231. 10., with a manse, and a glebe valued at £24 per annum. Dalry church, erected in 1771, and thoroughly repaired in 1821, is a plain edifice adapted for 870 persons. There are places of worship for the Free Church and United Presbyterian Synod. The parochial school affords a good course of education; the master has a salary of £32, with £65 fees, and a house and garden. There are considerable remains of an ancient fortification on the summit of Caerwinning hill, consisting of three concentric circular ramparts of stone, inclosing an area about two acres in extent, and surrounded by a fosse which may still be traced. The walls, about ten feet in thickness, have been nearly destroyed by the removal of the stones, at different periods, for fences and other uses. The Scottish forces are said to have been encamped here previously to the battle of Largs. There were formerly some remains, also, of a square fort on a precipitous rock called Aitnach Craig, on the bank of the Rye; but it has been totally destroyed. An artificial mound near the town, named Courthill, of conical form, and grown over with grass, was once the place for dispensing justice; and various tumuli have been discovered, in some of which were human bones. Four urns containing human bones have been found on the lands of Linn, near the site of an ancient chapel. An urn, also, containing calcined bones and ashes, has been discovered near Blair House.

Ⓞ DALRY, a parish, in the stewartry of KIRKCUDBRIGHT, 15 miles (N. N. W.) from Castle-Douglas; containing 1215 inhabitants, of whom 574 are in the village of St. John's Clachan. This parish, the name of which, signifying the "Royal Dale", is derived from a level and fertile plain called the Holm, is about fifteen miles in length, and seven miles in breadth, comprising 33,000 acres. Its surface is diversified with hills, of which some are green to their summit, and others are covered with barren heath; the proportion of arable land is very small, nearly four-fifths of the area being pasture. The river Ken, which rises in the northern extremity of the parish, forms the western boundary between it and the parish of Kells, and after a beautifully-winding course, flows through Loch Ken into the river Dee. The smaller streams are the Blackwater, the Earlston, and the Stronrigan, which run through the parish into the Ken; they all abound with trout, and in the Ken are found also pike and salmon. The chief lakes are Lochinvar, Boston, Knocksting, and Knockman, of which Lochinvar, about fifty acres in extent, is the most important; the others are all of very small dimensions, and undistinguished by any features requiring notice. In Lochinvar are the remains of the ancient castle of the Gordons, Knights of Lochinvar, and afterwards Viscounts Kenmure; and near it is a cairn, raised as a trophy on a spot where the first knight killed a wild boar that in-

festes this part of the country. The scenery along the banks of the Ken is enriched with ancient woods of considerable extent, of which the largest is that of Earlston, formerly a hunting-seat of the Earl of Bothwell, and in which are some plantations of stately fir.

The SOIL on the Holm lands is tolerably fertile, yielding favourable crops of barley, oats, turnips, potatoes, and rye; and the hills and higher lands afford excellent pasture. The system of agriculture is improved; and the surface has been drained, and inclosed with stone dykes of sufficient height to afford shelter to the cattle. Great numbers of sheep and black-cattle are reared in the pastures. In the village is a post-office under that of Castle-Douglas; and facility of communication is maintained by good roads, of which those leading from Kirkcudbright to Ayr and Glasgow, and from Newton-Stewart to Dumfries and Edinburgh, intersect the parish. The annual value of real property in Dalry is £5768. For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Kirkcudbright and synod of Galloway. The minister's stipend is £217. 12., with a manse, and a glebe valued at £20 per annum; patron, William Forbes, Esq., of Callendar. Dalry church, erected in the year 1832, is a neat structure containing 700 sittings: in the churchyard is an aisle of the old church, quite detached from the present building, and which is the burying-place of the Gordon family. There is a place of worship for members of the United Presbyterian Church. Two parochial schools, the masters of which have a yearly salary of £25 each, with a house and garden, in addition to fees, are supported by the heritors, and together attended by more than forty children. A grammar school was founded by Dr. Robert Johnson, of London, who endowed it with £1000 for the gratuitous instruction of the children of the parish; it is under the management of two masters, who have salaries of £15 a year each, and is attended by nearly 120 children. The building, erected in 1658, comprises a good dwelling-house and schoolroom, with eight acres of land attached to it. There are remains of ancient buildings on the adjoining farms of Benbreck and Manquhill, supposed to have been the residence of a branch of the Galloway family; and in various parts of the parish are intrenchments for the security of cattle during the times of the border warfare.—See CLACHAN, ST. JOHN'S.

Ⓞ DALRYMPLE, a parish, in the district of KYLE, county of AYR, 5 miles (N. E.) from Maybole, and 6 (S. E.) from Ayr; containing 909 inhabitants. This place derives its name, in the Celtic language signifying "the dale of the crooked water", from the situation of its village on a bend of the river Doon. The barony, which in ancient times was held by a family who took their name from the lands, was, in the reign of David II., divided into two portions, and held by two families named Dalrymple, descended from one common ancestor. In 1371, on the resignation of one of the portionists, John Kennedy of Dunure obtained from Robert II. a charter granting him that half of the barony, and in 1377 another charter, conferring upon him the other half; and the whole continued in the possession of his descendants till 1684, after which the barony passed into the hands of various proprietors. The PARISH is about seven miles in length, from east to west, and three miles in extreme breadth, and is bounded on the south and west by the river Doon. It comprises 6700 acres,

village.

of which 4200 are arable, 1900 meadow and hill pasture, 500 woodland and plantations, and about 100 water. The surface, with the exception of that part in which the village is situated, is exceedingly uneven, being interspersed with rising grounds and small detached hills of various elevation. Woodland, the most southern height, commands a fine view of the surrounding country, including the isles of Bute and Arran, the Mull of Cantyre, Ailsa Craig, and Ben-Lomond; and from the summit of Kirkmien, the highest of the elevations, the north coast of Ireland may be distinctly seen in fair weather. There are numerous springs in the parish, and several of them possess mineral properties, though one only, on the lands of Barbieston, is a chalybeate of moderate strength.

Of the lakes, the only one of much importance is that of Martinham, which is about a mile and a half in length, and less than a quarter of a mile in breadth; its greatest depth is about twenty-six feet. On a beautifully-wooded island in this lake, are the ruins of an ancient building supposed to have been the mansion-house of the Martinham estate; they are 100 feet long and thirty in breadth, and the walls, which are the chief remains, are thickly overspread with luxuriant ivy. The other lakes are Loch Snipe, Loch Kerse, and Loch Lindston. All of them abound with pike, perch, and eels, and are frequented by wild-duck, teal, widgeon, and other aquatic fowl. From the loch of Martinham, which extends a considerable way into the parish of Coylton, a small burn flows into the river Doon. This river, celebrated by the poet Burns, falls, after a course of about thirty miles, into the Firth of Clyde. Salmon are found in its stream, though in less number since the laying down of stake-nets at its mouth, and some are taken which weigh from ten to twenty pounds: sea and yellow trout, par, eels, and pike are also found in its waters.

The soil is principally clay, though alternated with sand, gravel, and loam: the clay is of various kinds, of a red, blue, and whitish hue; the loam is found chiefly near the river and around the lochs. There is very little mossy land. The crops are oats and wheat, barley, bear, potatoes, turnips, beet, and a small quantity of flax for domestic use; the system of agriculture is in an advancing state, and all the more recent improvements have been introduced. There are several large dairy-farms, all of which are well managed; about 4000 stones of cheese are annually produced, of which a considerable part is sent to market, and the remainder sold for the supply of the immediate neighbourhood. The annual value of real property in the parish is £5615. The woods consist of oak, elm, ash, alder, birch, plane, and lime; and the plantations, of larch, spruce, and Scotch firs. In the old gardens at Skeldon are six stately oaks, supposed to be more than 300 years old, and some remarkably fine larches; and in the village are to be seen a sycamore and horse-chestnut tree of extraordinary dimensions. The substrata are limestone, red sandstone, and conglomerate: the limestone occurs in masses not more than a foot in thickness, and of great hardness; the sandstone is of good quality for building, but not extensively worked. Large boulders of trap and granite are scattered over the surface of several of the lands. Coal is found in the upper parts of the parish, and there are two mines, but not at present in operation. The seats are Skeldon and Hollybush, both of them handsome residences seated in richly-planted demesnes.

The village is beautifully situated, and is uniformly and neatly built on lands belonging to the Marquess of Ailsa. A subscription library, a musical society, a curling club, and a club in honour of the poet Burns, have been established here, and are well attended. Several of the inhabitants are occupied in the various trades requisite for the wants of the neighbourhood; and a woollen manufactory, employing about thirty persons, has been erected on the bank of the Doon. Ecclesiastically the parish is in the presbytery of Ayr, synod of Glasgow and Ayr, and in the patronage of the Crown: the minister's stipend is £229. 17., with a manse, and a glebe valued at £12. 10. per annum. Dalrymple church, situated near the village, was rebuilt on the foundation of the ancient edifice, in 1764, but in a very insufficient manner. The parochial school affords education to about sixty scholars; the master has a salary of £30, with £25 fees, and £8 in lieu of a house and garden. There are some remains of the ancient castles of Kerse, Skeldon, Barbieston, and others; that of Barbieston was converted into a dwelling-house about fifty or sixty years since. Part of a Roman road, supposed to be that from Solway Firth to the Firth of Clyde, may be traced through this parish into that of Ayr. A tripod of Roman bronze was found in Lindston loch, near the line of this road, about half a century since; and a flagon of earthenware of Roman workmanship was found at Perclewan, on the same line of road, in 1833. On the road from Ayr to Maybole are three ancient circular forts, situated on an elevated ridge, and all surrounded with trenches, in which human bones and the horns of deer have been discovered. A stone coffin, containing a skeleton of large stature, was dug up in cutting through a hillock of gravel to form a new approach to Skeldon House; and in the meadows of Barbieston, not far from the same spot, were several cairns, on the removal of which, human bones, heads of pikes, and spears were found. In a grave in the churchyard, several silver coins of James I. were found a few years since; and silver coins of Edward I. and Edward III. were discovered by the plough, in a field near the village, in 1835. The poet Burns, alternately with his brother, attended the parochial school of Dalrymple.

DALSERF, a parish, in the Middle ward of the county of LANARK; including the villages of Millbeugh, Larkhall, and Rosebank, and containing 3205 inhabitants, of whom 112 are in the village of Dalsersf, 7 miles (S. E. by E.) from Hamilton. This place has been supposed to derive its name from the Gaelic *Dal*, signifying "a holm" or "flat field", and *Sarf*, "a serpent", making together the term "the field of serpents". The parish was anciently called Machanshire, but assumed the name of Dalsersf, as is generally thought, about the time of the Reformation, through the removal of the church from the former site, at Chapelburn, to a new site on the banks of the Clyde. It was originally an appendage and chapelry to Cadzow, now Hamilton, parish, and during a long period was the property of the crown. The celebrated family of the Cumyns had for some time possession of it; but it reverted to the crown in the reign of Baliol, and in 1312 Robert Bruce made a grant of it to Sir Walter, son of Gilbert, ancestor of the Hamilton family, who have retained the principal estates in the parish to the present time. In the fourteenth century the district was made a barony, called the barony of

Machane or Machanshire. The Hamiltons prominently appear in Scottish history; they warmly espoused the cause of Mary, Queen of Scots, and several of them were engaged in her wars, and afterwards suffered severely for the part they had taken in them.

The PARISH is six miles and a half in extreme length, and varies in breadth from two miles to four and a half, containing 7219 acres. It is bounded on the east and north-east by the river Clyde, and on the west and the south-west by the Avon and the Cander respectively. In the centre of the parish the surface is tolerably level; but on the east towards the Clyde, and on the west towards the Avon, the fall is considerable, and in many places somewhat abrupt: the slope towards the north is continuous, and far more gradual than the falls on the eastern and western sides. The view on the north and north-west is terminated by the Campsie hills and the mountains of Dumbartonshire and Argyllshire; the view on the south is bounded by Tinto, of which, with its circumjacent scenery, a very fine prospect may be had from the high lands in this parish. Large numbers of pheasants and woodcocks, and some black-cocks, are to be seen here; and at the close of autumn, many flocks of plovers from the moorlands visit the wheat-fields. The chief rivers are the Clyde and the Avon; the Cander, which is the next in size, falls into the Avon, and gives the name of the district of Cander to that part of the parish inclosed by it, where there are some superior farms. Numerous burns rise in the parish, and breaking forth from the high ridge on the western side of the river Clyde, dash in many places with great impetuosity over the abrupt sandstone rocks, making several beautiful cascades. After this they run on till they fall into the Clyde river. The ravines formed by these waterfalls, which are swollen in some parts of the year and frequently dry in others, are clothed with foliage, and stretching across the country obliquely to the two great rivers, diversify the scenery, and add considerably to the striking views on the Clyde. The river Avon, also, has clusters of verdant knolls and many clumps of rich plantation on its precipitous sides. The principal streams contain salmon, trout, salmon-fry, and par, which, however, bear at present no proportion to their former numbers, owing to the machinery erected on the banks of the Clyde, from which the residuum of chemical and dyeing operations runs into the waters; the drainage of lime manure from contiguous lands; and other causes.

The SOIL varies considerably throughout the parish. The low ground in the neighbourhood of the rivers is mostly rich alluvial deposit, consisting chiefly of sand and mud of great depth, resting upon a subsoil of sand and gravel. In the higher lands near the Glasgow and Carlisle road, and above the village of Dalsersf, which stands about 120 feet above the level of the sea, the soil is a strong heavy clay, lying upon a compact tenacious subsoil of till. In some places are strips of sandy earth; and in others, especially near the Avon, the grounds are chiefly loam. The southern part contains a few acres of moss; but, with this exception, the whole parish is cultivated. The chief crops are wheat and oats, the soil in general not being considered suited to green crops, though in some parts very good potatoes, turnips, carrots, and beet-root are produced. Great attention is paid to dairy-farming; the cows

are chiefly of the Ayrshire breed, and about 500 are kept. Much competition exists in the improvement of every description of live stock, for which premiums have been awarded to some of the farmers by the Highland and Agricultural Society of Scotland. The cultivation of orchards also forms an important part of the rural occupations, the parish being situated in about the centre of the great range of fruit plantations in Clydesdale. A few acres of fruit-trees are cultivated on the banks of the Avon; but the chief plantations are near the Clyde, among the acclivities overlooking the river, which are too abrupt and rugged to admit the approach of the plough. Apples, pears, and plums of every kind grow luxuriantly, the plum range, however, only extending a distance of three or four miles along the river. The annual value of real property in the parish is £7704. The rocks consist of sandstone and freestone, of the latter of which several excellent quarries are wrought. Large quantities of coal, also, are obtained in every direction, the district forming a part of the great coal basin stretching from near Glasgow in the north, for a distance of about thirty miles, to the water of Douglas in the south. The produce of the collieries, some years ago, was about 16,000 tons annually, but it is now much more considerable.

The chief mansions are Dalsersf, Millburn, and Broomhill, all of which are respectable structures, standing in the midst of beautiful scenery. The villages are considerable, and together contain about two-thirds of the population of the parish. Some of the inhabitants are engaged in the manufacture of cotton, the weaving of which is superintended by agents employed by Glasgow firms; and many females are occupied in the manufacture of lace, for the houses at Hamilton. Among the roads that intersect the parish are, one from Glasgow to Carlisle, another from Glasgow to Lanark, and a third from Edinburgh to Ayr, which crosses the river Clyde at Garion Bridge. For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Hamilton, synod of Glasgow and Ayr. The stipend averages about £264, and the Duke of Hamilton is patron: there is an old manse, with a glebe worth £37. 10. per annum. Dalsersf church, which is beautifully though somewhat inconveniently situated on the bank of the Clyde, was built in 1655, and repaired in 1721; it contains 550 sittings. There are two parochial schools, one of which is in the village of Dalsersf, and the other at Larkhall; the classics, mathematics, French, with all the usual branches of education, are taught, and the master of the Dalsersf school has a salary of £34, with a house and garden. A good subscription library has been established at Larkhall, and another at Dalsersf with 120 volumes. The chief relics of antiquity are two tumuli, in one of which, situated at Dalpatrick, some workmen a few years ago found a stone coffin, about two feet and a half long and a foot and a half wide, in which was deposited an urn containing a human jaw with the teeth, and other bones. Another urn was also found, of very superior materials and construction, near which was a lamp of baked clay. The remains of mounds with fortifications, and cairns, may still be faintly traced; and some years ago an earthen pot was dug up at Millheugh, containing coins of Elizabeth, James I., and Charles I. There are several chalybeate springs, and one or two springs impregnated with sulphur.

DALSHOLM, a village, in the parish of NEW KILPATRICK, county of DUMBARTON; containing 111 inhabitants.

DALSWINTON, a village, in the parish of KIRKMAHOE, county of DUMFRIES, $4\frac{1}{2}$ miles (N. N. W.) from Dumfries; containing 94 inhabitants. It is situated in the western part of the parish, and though a small, is an improving village, of recent origin. Here stood the ancient castle of Dalswinton, long the chief seat of the family of Cumming, and on the site of which an elegant and commodious mansion was erected by the late Patrick Miller, Esq., to whose taste and judgment the neighbourhood is indebted for its rapid improvement. Mr. Miller, about the year 1780, introduced the culture of the Swedish turnip. It was first sown by him on his estate at Dalswinton, and propagated from his original plants through the Lothians and elsewhere; and to his example is owing the successful cultivation of this valuable esculent throughout the empire. The first application of the steam-engine to the purposes of navigation, was made by Mr. Miller in 1788, on a piece of water in his own grounds here. A vessel twenty-five feet long and seven broad, with two wheels, and propelled by a small engine constructed by Mr. Symington, was employed for the purpose; and the success of the experiment led to the well-known exhibition, under the same auspices, of a full-sized vessel, on the Forth and Clyde canal, in the following year. The fine estate of Dalswinton is now in the possession of Captain Miller, son of this gentleman, and formerly M.P. for the county.

DALTON, a parish, in the county of DUMFRIES; containing 658 inhabitants, of whom 54 are in the village, 6 miles (W. by S.) from Ecclesfechan. The name is derived from the Anglo-Saxon term *Dal-ton*, or *Dal-dun*, signifying "the fort in the dale", and appears to have been applied on account of a fort in the immediate neighbourhood of the village of Dalton, at which village baronial courts were held in ancient times. The parish is seven miles long from north to south, and three broad, and contains 6753 acres. It is bounded on the north-east by the river Annan, in which great quantities of salmon, grilse, sea-trout, and whiting are taken, though they are far from being so numerous as formerly, in consequence of stake-nets having been placed at the mouth of the river, in the Solway Firth. There is much variety of hill and dale in the parish, and extensive views are obtained from the more elevated situations: on the south are seen the Solway Firth, studded with vessels, and, in the distance, the Cumberland hills. The soil to a great extent is alluvial, consisting chiefly of gravel and sand, spread over the lowlands, and formed into ranges and groups of little hills. In the higher lands the soil is mainly composed of the waste and debris of the transition rocks, but is tolerably fertile, and the transported soil on the banks of the river is exceedingly productive. The whole is cultivated, with the exception of 600 acres which are waste or pasture, and 517 acres in wood; all kinds of crops are raised, and the improved system of husbandry is adopted, though varied by different farmers in the rotation of crops. The cattle are of the black Galloway breed, and the few sheep that are reared consist of Cheviots and Leicesters. The produce of the soil is usually sent to Annan, seven miles distant, where is a weekly market. The annual value of real property in the parish is £4031.

The chief mansion is that of Dormont, an elegant and commodious structure built in the year 1823, situated on the bank of the Annan, and ornamented with beautiful grounds and plantations. Another mansion, that of Rammerscales, occupies a romantic site upon a hilly range, surrounded with overhanging wood, and commanding the whole vale of Annan. A third house, called Kirkwood, and which, like both of the preceding, is of modern erection, is also entitled to notice. The principal village is Dalton, the communication of which with the nearest market-towns is convenient, not only by the parish roads, but by the great turnpike-road from Carlisle to Portpatrick, which passes through the south end of the parish.

Ecclesiastically the parish is within the bounds of the presbytery of Lochmaben and synod of Dumfries; patron, David Sandeman, Esq. The stipend of the minister is £171. 12., and there is a manse, with a glebe of ten acres, valued at £10 per annum. Dalton church, situated in the village, was built in 1704, and will accommodate 300 persons. In the churchyard is a handsome sepulchral monument to the Rosses of Halkhead, in the county of Renfrew, who were resident in the parish for a considerable period. There is a parochial school, at which French, the classics, and practical mathematics, with the usual branches of education, are taught; the master has a salary of £34, with a house and garden, and about £20 fees. The only relics of antiquity are, the ruins of a castle at Holmains, formerly the residence of the Carruthers; and a camp of circular form on the Almagill hills, now named Range Castle. The latter stands upon a transition rock of greywacke, and is a beautiful specimen of this class of military works; its diameter is 102 yards, and the fosse which encompasses it is nine feet deep, and twenty-seven broad. The late Sir Andrew Halliday, physician to the Duke of Clarence, afterwards William IV., was a native of the parish.

DALVATT, a village, in the parish of BONHILL, county of DUMBARTON; containing 71 inhabitants.

DALZIEL, a parish, in the Middle ward of the county of LANARK, $2\frac{1}{2}$ miles (E. N. E.) from Hamilton; containing, with the villages of Motherwell and Windmill-Hill, 1457 inhabitants. The parish of Dalziel is by some writers supposed to have derived that appellation, signifying "the white meadow", from the peculiar appearance of the lands before they were brought into cultivation. It is said to have given name to the family upon whom the barony of Dalziel was bestowed at a period which cannot now be accurately determined. In 1365, Sir Robert Dalzell obtained a grant of the barony of Selkirk from David Bruce, whose firm adherent he had been in his troubles, and to whom he manifested the truest loyalty during the king's captivity in England. He appears to have subsequently incurred the displeasure of his sovereign, and the estate of Dalziel was given to the family of Sandilands, or, as some say, that of Fleming. By the marriage, however, of a member of the new family to the heir-male of Sir Robert Dalzell, the estate returned to the original proprietors, and continued in their sole possession until the death of an owner who left two daughters. One of these conveyed her share by marriage to the nearest heir of the family, and eventually the whole estate was once more held by the Dalzells, till a branch of the Hamilton family came in the place of these ancient owners.

The PARISH is bounded on the north and west by the river Calder, and on the south-west by the river Clyde. It is about four miles in length and three in breadth, comprising an area of about 2880 acres, of which about one-tenth is pasture, 520 acres woodland and plantations, and the remainder arable. The surface rises gradually from the Clyde and the Calder towards the centre, where it forms a flat ridge, averaging 200 feet in elevation above the sea; and the parish is diversified with several glens of romantic appearance, one of which, called Dalziel glen, is about two miles in length. The river Clyde is subject to great inundations, to prevent which an embankment has been constructed. The Calder is here about sixty feet in breadth; it takes its rise in the neighbouring parish of Shotts, and falls into the Clyde near the extremity of this parish. The Dalziel burn has its source in the parish of Cambusnethan, and, flowing through the glen of Dalziel, falls into the Clyde. In general the soil is a stiff clay, but on the banks of the rivers a rich loam; the crops are oats, wheat, beans, and peas. There are several large dairy-farms; the cows are chiefly of the Ayrshire breed, and a few horses and sheep are reared. On the banks of the Clyde are some orchards, the principal of which produces on an average about £600 per annum; an improved method of pruning has been introduced with success, and great attention is paid to the cultivation of the trees. The plantations consist of fir, larch, oak, ash, elm, lime, and plane; a fine avenue nearly a mile in length extends along the banks of the Clyde, and near the mansion-house of Dalziel is a venerable oak, measuring twenty-one feet in girth at a distance of nearly five feet from the ground. The annual value of real property in the parish is £4983.

The substratum of the lands is principally clay-slate, interspersed with freestone of various quality, among which is found a seam of flagstone. A quarry of hard-grained freestone has been opened near Windmill-Hill, which is wrought into mantel-pieces, and is susceptible of a high polish; and near the village of Craigneuk is a valuable quarry of flagstone, the stone of a reddish colour, and varying from one-quarter of an inch to five inches in thickness. Coal abounds in the parish, which is situated nearly in the centre of the coal district of the Clyde; the only mine in operation is near Coursington. Dalziel House, erected in 1649 by an ancestor of the present proprietor, is beautifully situated on the north side of the Dalziel burn, and in the most picturesque part of the romantic glen to which that stream gives name. The building has all the character of an ancient baronial residence, and attached to it is a tower about fifty feet high, the walls of which are eight feet thick; the several apartments are commodious, and in the dining-room are numerous family portraits, including portraits of Sir John Hamilton, of Orbiston, and Lord Westhall, one of the senators of the College of Justice. There is a small foundry for the manufacture of spades, in which about fifteen persons are employed. Means of communication with the neighbouring market-towns are afforded by good roads, among which is one from Glasgow to Lanark; the Wishaw and Coltness railway passes for nearly three miles through the parish, and is joined at Motherwell by the Clydesdale Junction railway. Both the lines of railway are in connexion with the great Caledonian company.

Ecclesiastically the parish is in the presbytery of Hamilton, synod of Glasgow and Ayr, and in the patronage of J. G. C. Hamilton, Esq. The minister's stipend is £155. 11., with a manse, and a glebe valued at £50 per annum. Dalziel church, dedicated to St. Patrick, was in the twelfth century granted with its revenues to the abbey of Paisley, and subsequently to the dean and chapter of Glasgow, in whose possession it continued to the Reformation. The ancient building, which was of the same date as the cathedral of Glasgow, was taken down about ten years after the erection of the present church, which was built in 1789, and is a neat cruciform structure. The members of the Free Church have a place of worship. The parochial school affords a good education; the master has a salary of £34, with £18 fees, and a house and garden.

The western branch of the Roman Watling-street entered this parish at Meadowhead, and passed through it in a direction from east to west. Till within the last twenty or thirty years a considerable portion of it remained, in a high state of preservation; but it has been obliterated by the construction of the modern road from Glasgow to Lanark, and no trace of it can be at present discerned. Near the north-west boundary of the parish is a very ancient bridge over the river Calder, still called the Roman bridge; it consists of a single arch of great height, is about twelve feet in breadth, and without parapets. This bridge is supposed to have formed a continuation of the Roman road into the parish of Bothwell. Close to it was a Roman camp, which has for many years been destroyed; and nearly in the centre of the parish, on the steep bank of the river Clyde, are the remains of another, of which portions of the ancient fosses may still be traced. On the site of this camp, about a century since, the proprietor erected a summer-house, round which he formed terrace-walks and plantations, and from the summit of which a fine panoramic view of the surrounding country is obtained, combining many of the most interesting features of Scottish scenery. Near the site of Nisbet House, is one of the stones at which the ancient barons dispensed justice to their vassals; it is of heptagonal form, and one of the faces is ornamented with the representation of a sword. There were formerly two others in the parish, near the site of the Roman road; they have both been removed.

DAMHEAD, or JAMETSON, in the county of DUMHARTON.—See JAMETSON.

DAMHEAD, a village, in the parish of ARNGASK, counties of FIFE, KINROSS, and PERTH, 5 miles (S. W.) from Abernethy; containing 138 inhabitants, of whom 56 are in the Fifeshire, 24 in the Kinross-shire, and 58 in the Perthshire, portion. This village is situated in the central part of the parish, and in the vale through which the great north road passes, leading from Edinburgh to Aberdeen by way of Perth. A sub-post-office was established here in 1838, in connexion with the post-offices of Kinross and Bridge-of-Earn.

DANESHALT, county FIFE.—See DUNSHALT.

DARGIE, a hamlet, in the parish of LIFF, county of PERTH, 3 miles (W.) from Dundee; containing 32 inhabitants. It is in that portion of the parish which formed the ancient parish of Invergowrie, now united, with Benvie, to Liff; and is about a mile west-by-south of Invergowrie church.

village
DARLINGSHAUGH, a village, in the late quoad sacra parish of LADHOPE, parish of MELROSE, county of ROXBURGH, 4 miles (W.) from Melrose; containing 1116 inhabitants. This village is beautifully situated on the Gala water, and, though within the parish of Melrose, may be regarded as an appendage to Galashiels, in the manufactures of which a considerable number of the population is employed. Great facility of intercourse is afforded by the Edinburgh and Hawick railway. A school-house has been built by the heritors.

village
DARNICK, a village, in the parish and district of MELROSE, county of ROXBURGH, 1 mile (W. by N.) from Melrose; containing 280 inhabitants. It is pleasantly seated in the vale of Melrose, and the population is chiefly employed in agriculture. The Edinburgh and Hawick railway passes here. A school-house has been built by the heritors for the instruction of the poorer children.

village
DARVEL, a village, in the parish of LOUDOUN, district of CUNNINGHAME, county of AYR, 1½ mile (E.) from Newmilns; containing 1362 inhabitants. This is a considerable place, and it would seem that several lands here formerly belonged to the Knights Templars, as many of them still bear the name of Temple, and do not hold of any superior, not even of the crown. A large part of the population is engaged in hand-loom weaving, the children assisting in the minor branches of the manufacture. The Reformed Presbyterians have a place of worship; and there is a school partly supported by the noble family of Hastings, and the master of which is allowed a dwelling-house and garden. Near the village is a place called Glen Chapel, but there remains no vestige of a religious edifice; and in the vicinity are the ruins of an ancient castle.

village
DAVID, ST., a village and sea-port, in the parish of DALGETY, district of DUNFERMLINE, county of FIFE, 1 mile (E. N. E.) from North Queensferry; containing 155 inhabitants. This little sea-port, which is situated on the Firth of Forth, owes its origin to the Fordel collieries, in the parish, belonging to Admiral Sir P. H. Durham, G.C.B., by whom great improvements were made in it, for the more expeditious and convenient shipping of the coal so largely obtained. The harbour, which, from what remains of the original works, seems to have been badly constructed, was improved by the proprietor at an expense of £2000, and now affords safe anchorage to ships of 500 tons' burthen, which may load and deliver their cargoes on the beach. There are extensive salt-works: the salt water, at flood-tides, is forced by a steam-engine into a capacious reservoir, whence, after depositing its residuum of sand, it is conveyed in a purified state into large pans, producing annually about 30,000 bushels of salt. The Fordel collieries are now closed.

village
DAVID, ST., a hamlet, in the parish of MADERTY, county of PERTH; containing 65 inhabitants.

village
DAVIDSON'S-MAINS, a village, in the parish of CRAMOND, county of EDINBURGH, 2½ miles (N. N. W.) from Edinburgh; containing 470 inhabitants. This place, also called Muttonhole, is situated on the road from Edinburgh to Cramond; and in its vicinity is Muirhouse, the seat of Dr. Davidson, who allows the teacher of a school a salary of ten guineas per annum.

village
DAVIOT, a parish, in the district of GARIOCH, county of ABERDEEN, 4 miles (N. W.) from Old Meldrum; containing 643 inhabitants. This parish is sup-

posed to derive its name from the Gaelic term *dabhoch*, which signifies a piece of land sufficient for the pasture of a certain number of cows. Its length is about three miles, and the average breadth two; but it was augmented ecclesiastically by act of assembly at the close of the seventeenth century, by the annexation of parts of the parishes of Fyvie and Chapel of Garioch, and, including this addition, it covers about eight square miles. The civil parish comprises 5250 acres, of which the whole is in tillage, with the exception of a few acres in wood, and a little moss. Its surface is agreeably diversified by a ridge of gentle undulations, passing through the centre, from north to south, and accompanied on each side by a ridge of inferior elevation, also slightly undulated. The soil exhibits several varieties; that on the higher grounds is thin and gravelly, and on the descent a rich loamy earth rests on a clayey subsoil, while the lower parts are to a considerable extent covered with a shallow peaty soil, incumbent on a bluish clay. The several sorts of grain, with the exception of wheat, are raised, of good quality; but the soil is best adapted to oats, and various kinds of them are cultivated, especially those denominated Scotch barley and the early Angus. Green crops of all descriptions likewise grow luxuriantly. Very few sheep are reared, but much attention is paid to cattle, in consequence of the facilities afforded by steam navigation for sending them to the London market: the breed was formerly the Aberdeenshire, but a great improvement has been made of late years, by crossing this with the short-horned. A seven years' rotation is generally practised, and other modern usages of husbandry have been introduced; much waste land has been drained and cultivated, and there is now very little waste remaining. The annual value of real property in the parish of Daviot is £3250.

The substrata comprise whinstone and inferior granite, and ironstone exists in considerable quantities, but the distance from coal-mines renders the working of it impracticable. The plantations consist chiefly of Scotch fir and larch, which, however, rarely attain to a great size, manifesting symptoms of decay at about the age of forty years. Beech, elm, and ash are in some parts interspersed with the fir; trees of this description appear to be better suited to the soil, and grow in some places in a very thriving manner, especially around the mansion of Glack. Besides this residence there is a handsome mansion in the parish on the estate of Fingask, built in 1834. The inhabitants are engaged in husbandry, with the exception of a very small number who work at a manufactory for carding and spinning wool, which was some time since established here by an enterprising individual to whom the board for the encouragement of manufactures granted a premium for his exertions. There is considerable facility of communication: a road runs past the church from north to south, and in the latter direction forms two branches, one leading to Old Meldrum, and the other to Inverury five miles distant. A turnpike-road, also, traversing the east and north sides of the parish, was formed in 1835, to connect the east and west branches of the great north road from Aberdeen to Inverness; it runs from Old Meldrum to Sheelagreen, in the parish of Culsamond. Another road was finished in 1839, on which a coach travels daily between Aberdeen and Huntly.

Ecclesiastically the parish is in the presbytery of Garioch, synod of Aberdeen, and in the patronage of the Crown. The minister's stipend is £159, of which about a sixth is received from the exchequer; with a manse, and a glebe valued at £12 per annum. Daviot was formerly a prebend in the diocese of Aberdeen, and is said to have been assigned to the bishop as an alms-gift by Malcolm Canmore; the present church was built in 1798, and accommodates 400 persons. The parochial school affords instruction in the classics, mathematics, and book-keeping, in addition to the elementary branches: the master has a salary of £30, with a house, and £20 fees; he also shares in the Dick bequest. The principal relic of antiquity is a Druidical temple in fine preservation, on the lands of Mounie, near the church. A battle-axe was dug up in 1833, supposed to have been used at the battle of Harlaw, fought in 1411, in the adjoining parish of Chapel of Garioch; and some years since, a silver coin of the reign of Elizabeth, a little larger than a shilling, was found in a garden, on the site of the old manse.

DAVIOT and DUNLICHTY, a parish, chiefly in the county of INVERNESS, and partly in that of NAIRN, 5 miles (S. E.) from Inverness; containing 1681 inhabitants. These two ancient parishes were united about the year 1618: the former received its appellation, as is supposed, from David, Earl of Crawford, who built a fort here; and the latter, which is by far the larger division, derives its name from the *dun-le-catti*, or "hill of the Catti", which bisects the territory formerly held by the Catti, whose descendants now possess nearly the whole lands. At Tordarroch, in the district of Dunlichty, the Earl of Moray caused 200 men of the clan Chattan to be hanged in a barn in one day, about the year 1532, for various acts of spoliation committed in his territory. They had been captured by stratagem, the earl having assembled them under pretence of holding a feudal court; and to each, while being led to the gallows, pardon was offered upon condition of their betraying Hector Mackintosh, under whose command they had acted. The greater part of Drummoissie moor, where the celebrated and decisive battle of Culloden was fought on the 16th of April, 1746, is situated in this parish, as well as the spot on which the prince stood during the engagement: the prince afterwards, with a few friends, crossed the river Nairn above the Mains of Daviot, and passing by Tordarroch, advanced to Gorthleck in Stratherrick.

The PARISH of Daviot and Dunlichty, the boundary line of which is very irregular, stretches along each side of the river Nairn, from north-east to south-west, for about twenty-five miles, and varies in breadth from one and a half to four or five miles. It comprises about 4000 acres under cultivation, 1500 natural pasture, 830 of natural wood, and above 2270 of plantations. The surface is for the most part wild and dreary. It consists principally of the valley of Strathnairn, extending from Wester Aberchalder on the south-west to the bridge of Daviot on the Highland road, where the vale contracts itself almost to a point, and terminates in a steep narrow glen. The hills on the south-eastern boundary are a continued chain, forming the northern range of the Munadh-Leagh mountains, and attaining an elevation of from 1000 to 2000 feet above the level of the sea. On the west and north-west the boundary

consists of an abrupt ridge 1500 feet high, containing a series of lakes, some of them celebrated for their delicious trout; while on the north and north-eastern limit is the sandstone ridge called Drimmashie or Drummoissie moor, at the eastern end of which the battle of Culloden was fought. The scenery is generally uninteresting, though occasionally romantic; the mountains are either bare rock, or covered with coarse grass, and the lower grounds are to a considerable extent mossy tracts, shaded by sombre woods and plantations. The stream of the Nairn, however, introduces some variety, and in its course to the town of Nairn, where it falls into the Moray Firth, after a course of thirty-six miles from its source at Cairn-Gregor, in the south-west part of Dunlichty, renders the aspect of the country in many places agreeable and interesting.

The SOIL exhibits several varieties, being in some parts light and sandy, in others wet and spongy, with a clayey bottom; and frequently black mossy earth is to be seen, with different admixtures and modifications. The crops which succeed best are oats and barley; but since the recent improvements in husbandry, comprising draining on an extensive scale, liming, inclosing, and the rotation system of cropping, wheat of good quality has been grown, and the agricultural character of the parish has attained a respectable footing. Many earthen embankments have been raised along the river, as a security against floods, which have sometimes done much damage to the lands. The rock in the hills bounding the valley consists chiefly of grey gneiss, and large blocks of white granite are found loose upon the tops and sides of most of them: conglomerate, red and grey granite, and limestone are also to be seen in the parish. A bed of marl, which has been successfully used as manure, was lately discovered on the south bank of Loch Bunachton, about seven feet below the surface, and having a depth of from five to six feet. The old plantations are of common Scotch fir, with a few larches, and cover about 1020 acres; there are others of Scotch fir, larch, ash, oak, and beech. The annual value of real property in the parish is £5288. The seats are, Daviot, a commodious modern structure; the house of Farr, which has lately received some elegant additions; and Aberarder, also a modern mansion. The road from Edinburgh to Inverness passes through the parish, and with the latter town the inhabitants carry on their chief traffic.

Ecclesiastically the parish is in the presbytery of Inverness, synod of Moray, and in the alternate patronage of the Crown and Earl Cawdor: the minister's stipend is £187, with a manse, and a glebe valued at £10 per annum. There are two churches, about seven miles distant from each other, in which public worship is usually performed alternately. The church at Daviot is about four miles from the eastern, and that at Dunlichty twelve miles from the western, boundary: the former, with seats for 500 persons, was built in 1826, at a cost of nearly £1000; and the latter, containing seats for 300 persons, was built in 1759, and repaired in 1826. There are also an episcopal chapel, and a place of worship for members of the Free Church. A parochial school is situated in each of the districts, and affords instruction in the ordinary branches; the salary of each master is £25, with £11 and £9 fees respectively. The poor receive the interest of £400 left by William Mac-

gillivray in 1833. Near the mansion of Daviot, is the ruin of a seat which appears to have been originally of great strength; and there are remains of Druidical temples in several places.

DEAN, formerly a quoad sacra parish, partly in the parish of CORSTORPHINE, but chiefly in that of ST. CUTHBERT, EDINBURGH, county of EDINBURGH; containing 2262 inhabitants, of whom 108 are in Corstorphine, and 2154 in St. Cuthbert's. This place, now somewhat decayed, is situated on the north bank of the Water of Leith, and forms a western suburb of the city of Edinburgh, from which it is distant about three-quarters of a mile. The village stands on the Edinburgh and Queensferry road, on both sides of which it once stood. In its vicinity is Dean bridge, a superb and stupendous structure, thrown over the ravine of the Water of Leith, and having four arches, each ninety feet in span, and of corresponding height from the stream; it was completed in 1831, and from it is presented one of the finest views in the neighbourhood of the city. Deau House here, is a venerable mansion surrounded with fine old trees, which failed not to attract the notice of Sir Walter Scott. The parish was in the presbytery of Edinburgh, synod of Lothian and Tweeddale. Dean church, erected in 1836, and intended chiefly for the inhabitants of the village of Water-of-Leith, and the surrounding population, is in the later English style, and contains 1030 sittings, of which thirty are free: the stipend of the minister is £80, arising from seat-rents and collections. There are also an episcopal chapel, and a place of worship for members of the Free Church.

DEAN, a village, in the parish of WILTON, district of HAWICK, county of ROXBURGH, 1 mile (W.) from Hawick; containing 129 inhabitants. It is seated in the southern part of the parish, and on a small stream, a tributary to the river Teviot, which latter bounds the parish on the south-east.

DEANBURNHAUGH, a village, in the parish of ROBERTON, county of ROXBURGH, 8 miles (W. by S.) from Hawick; containing 86 inhabitants. This place is of very recent origin; it is pleasantly situated on the road from Eskdalemuir to Hawick, and on the west side of the Borthwick water. The surrounding scenery is agreeably diversified.

DEANSTON, formerly a quoad sacra parish, in the parish of KILMADOCK, county of PERTH; including the hamlet of Murdochston, and containing 1050 inhabitants, of whom 982 are in the village of Deanston, 1 mile (W.) from Doune. This place appears to have originated in the establishment of some cotton-works on the south bank of the Teith, for which that copious and powerful stream afforded ample advantages, and in the consequent erection of a spacious village for the residence of the men employed in the concern. The village, which consists of one wide street parallel to the river, is regularly built: the houses are two stories high, with attics; they are roofed with slate, and whitewashed, having a cleanly and cheerful aspect, and attached to each of them is a neat garden. The works were established about the year 1786, by Messrs. Buchanan, of Carston, brothers, the eldest of whom was the first agent of Sir Richard Arkwright in Glasgow for the sale of cotton-twist; and under his superintendence the works soon rose into importance for the spinning of yarn, equal to the finest which has since been produced at

Manchester. In 1793 the works became the property of Mr. Flounders, of the county of York, and subsequently of James Finlay and Co., of Glasgow, under whom they were remodelled by Mr. Smith (the well-known agriculturist), a nephew of Mr. Buchanan; and in 1822 the company made arrangements with the neighbouring proprietors, and obtained an additional quantity of water-power. These extensive works are at present driven by four water-wheels, of eighty-horse power each, and afford employment to 800 persons; the whole of the establishment is lighted with gas, and thoroughly ventilated. Attached is a schoolroom, erected by the company, by whom a master is kept to instruct the children employed in the factory, who attend the school for three hours daily. Midway between Deanston and Doune, the Teith is crossed by a substantial bridge, upwards of two centuries old, from which one of the finest views in this part of the country may be obtained.

DEE, BRIDGE OF, a village, in the parish of BALMAGHIE, stewartry of KIRKCUDBRIGHT, 3 miles (S.W.) from Castle-Douglas; containing 243 inhabitants. It derives its name from a bridge over the Dee, which river bounds the parish on the east, and separates it from the parish of Kelton. The lands in the neighbourhood are the property of the Society for the Propagation of Christian Knowledge.

DEER, NEW, a parish, in the district of DEER, county of ABERDEEN, 6 miles (E. S. E.) from Cumines-town; containing, with the village of Kirktown of New Deer, 3756 inhabitants. This parish originally formed a part of Old Deer, and was separated from it about the beginning of the seventeenth century; it was at first termed Auchreddy, from the land on which the church is built, and this name is engraved on the communion-plate, with the date 1694. The remains of castles and various tumuli prove that it was once the scene of military operations. Edward, brother to Robert Bruce, is said to have encamped after the battle of Inverury on a large moor about a mile westward of the village, and thence to have gone in pursuit of the Cumyns to Aikey-Brae, near Old Deer, on which spot a fair has long been kept in commemoration of a battle fought between them. The old castle of Fedderate, at present in ruins, is believed to have been the retreat of some followers of James II., who, being driven from Fyvie Castle, which they had taken after the battle of Killiecrankie, sought a refuge in this fortress, whence they were expelled by King William's troops.

The PARISH, which is one of the largest in the county, is upwards of fourteen miles long, and upwards of eight miles and a half broad, containing 29,020 acres. With the exception of Mormond hill, it is the highest ground in Buchan, its elevation being from 200 to 300 feet above the sea. On a fine day, the spire of Peterhead church, about eighteen miles to the east, may be seen from the hill of Culsh; and in a western direction, Bennachie, which is nearly twenty-eight miles distant, the Foudland hills, the Binhill near Cullen, with the Knock Hill, Benrinnes, and others, are distinctly visible. The surface is in general flat, and the elevation of the land renders the climate cold, the operations of husbandry being frequently delayed by the snow remaining on the ground. Three branch streams rise in the northern quarter of the parish, one of which flows eastward, passing Old Deer, and falling into the river Ugie;

another, running in a western direction, forms a confluence with a stream that falls into the Doveron, while the third, flowing towards the south-west, joins the Ythan near Gight. The soil is light, and rests partly on a subsoil of coarse clay, in other places on granite, but chiefly on a bed from six inches to two feet thick, altogether rocky and impervious, and holding the water that falls upon the land till evaporated by the heat of the sun. Almost the whole of the parish is arable, and the chief grain cultivated is oats; potatoes and hay are grown in large quantities, as are also turnips. The number of acres under tillage is 18,183; 1957 are in pasture, 3587 heath, 4164 moss and moor, and 825 acres occupied by wood. The system of cultivation differs in the several parts of the parish, a five years' rotation of crops being adopted in some places, and in others a seven years' course. The Buchan breed of cattle is much esteemed, especially when crossed by the Teeswater. Considerable improvements have been made by several of the large farmers, chiefly by reclaiming extensive tracts of wet ground; great improvements have been made by Mr. Gordon of Nethermuir, and the farm-houses, though still in some parts indifferent, are much better than formerly. The rocks consist of coarse granite and inferior limestone, which latter the farmers excavate for themselves, and burn into lime for the purposes of building or of agriculture. The annual value of real property in the parish is £10,905. The village, which is situated on the summit of a hill, contains upwards of 100 houses. Seven fairs are held in it, viz., one in January, one in April, a feeing-market in May, markets in June, August, and October, and a feeing-market in November, at all of which cattle, sheep, horses, and country produce are sold. The grain is chiefly sent to Peterhead, Fraserburgh, and Banff. There is a good road to Ellon, thirteen miles distant, and the turnpike-road from Peterhead to Banff crosses the parish.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Deer and synod of Aberdeen; patron, the Crown. The stipend of the minister is £219, with a manse, and a glebe valued at £20 per annum. The old church, now entirely removed, was built in 1622, and an aisle was added to it in 1773. In 1838 another church was erected, at a cost of about £3000; it is a neat edifice in the later English style, and affords accommodation for 1600 persons. At Savock is a chapel of ease, built in 1834 at a cost of £819, and which contains 700 sittings. The parish contains three meeting-houses belonging to the United Presbyterian Synod, but the number of communicants in each is very small: there is also a place of worship in connexion with the Free Church. There are three parochial schools, situated respectively at Kirktown, Savock, and Whitehill, in which the classics, mathematics, and all the usual branches of education are taught; the salary of each master is £24, and the amount of their fees collectively about £60: between £20 and £30 are also received by each from the Dick bequest. A bursary at Marischal College, of the value of £9, for a scholar of the name of Cruickshank or Topp, is in the gift of the incumbent. The relics of antiquity in the parish consist of the remains of castles, Druidical temples, and tumuli; and urns of baked clay, containing human bones and ashes, have been found. About a mile from the village, in the northern quarter, formerly stood a circular heap

called the Standing Stones of Cnlsh, and the place still retains the name, though the stones were taken away seventy or eighty years ago, to supply materials for building. A little farther in the same direction are the ruins of the castle of Fedderate, the best stones of which have also been removed for the purpose of building. The floors of this structure were arched with stone; and water was conveyed to it by means of pipes, pieces of which have been found at different times in turning up the ground. It stood in the midst of a morass, now drained and cultivated, and the only access to it was by a drawbridge across a moat. It is supposed to have been a place of great strength, and was in various hands at the time of the Revolution in 1688. Dr. Mavor, the compiler of travels, &c., was born in the parish.

DEER, OLD, a parish, 10 miles (W.) from Peterhead; partly in the district of DEER, county of ABERDEEN, including the villages of Stuartfield and Old Deer; and partly in the county of BANFF, including the village of Fetterangus; the whole containing 4453 inhabitants. The name appears to be derived from a Gaelic word signifying the worship of God, perhaps applied on account of the first Christian church in Buchan having been erected here. The remains of antiquity in the parish throw considerable light upon its primitive history; vestiges of four or five Druidical temples are still visible, and numerous others were removed at no very remote period, in order to facilitate the extended operations of agriculture. On the north side of the hill of Parkhouse there were until lately the remains of a small village, supposed to have been occupied by the Druids, but usually called "the Piets' houses" by the neighbouring peasantry. Upon the summit of Bruixie steep, and at Den of Howie, near Fetterangus, are traces of fortifications and encampments, affording evident proof of military operations in ancient times; and in the vicinity of Aikey-Brae are several tumuli said to have been the burying-places of warriors who fell in a sanguinary conflict between Edward, brother of Robert Bruce, and Cumyn, Earl of Buchan. Deer is also remarkable as the site of a distinguished abbey, founded about the beginning of the thirteenth century by the then Earl of Buchan, and first held by a company of Cistercian monks from the abbey of Kinloss in Moray. This establishment was suppressed at the time of the proscription of religious houses, and erected into a temporal lordship in favour of Robert, the earl-marshal's second son, created Lord Altrie; but that nobleman dying without issue, the title became extinct, and the estate passed into the hands of the head of the family. A very considerable demesne was attached to the abbey, and its revenue amounted to £572. 8. 6. in money, with sixty-five chalders, seven bolls, one firloft, and three pecks of meal, fourteen bolls of wheat, and fourteen chalders and ten bolls of bear.

The PARISH, or rather the main portion of it, in Aberdeenshire, measures in mean length about nine miles and a half, and about four miles and a half in breadth, containing upwards of 25,000 acres, of which about three-fourths are under tillage or in pasture, 2000 acres are occupied by growing wood, and the remainder is peat-moss, moor, and waste. It is bounded on the west by the parish of New Deer. The surface is altogether undulated, being marked by a succession of hills and valleys of various extent and form, many of which are

clothed with verdure, or ornamented with clumps of wood. Deer, wild geese occasionally in spring, ducks, partridges, woodcocks, and snipes, and large numbers of rabbits are to be met with in different parts. The chief streams are two tributaries of the Ugie, which form a confluence in the parish of Longside, and fall into the sea about a mile north-west of Peterhead; the black trout with which they abound supply abundant sport to the lovers of angling. The soil differs to a considerable extent; the crops consist chiefly of oats and turnips. Large tracts of pasture are occupied by herds of cattle; there are very few sheep kept, the only flock of any consequence being on the Pitfour estate, where from two to four hundred of various breeds are generally pastured. The cattle are mostly the native black, rather above the middle size, with which the Teeswater has been crossed during the last few years; they are fattened upon turnips, and many of them are sent for sale to the London market. Husbandry is well understood in the parish, and considerable improvements have been made by laying out land for pasture, by draining, and inclosing. The annual value of real property in the parish is £13,165. The prevailing rocks are granite and limestone, the latter of which is frequently found with veins and blocks of gneiss, and often so loaded with magnesian earth as to render it more useful for building than for agricultural purposes. Near the lime-quarry on the lands of Annochie are blocks of pure white quartz, and in other parts of the parish varieties of siliceous stone occur. Particles of granite, felspar, quartz, and mica are found in gravel-pits. The large tracts of peat-moss formerly to be seen are for the most part exhausted by the continual demand upon them for supplies of fuel, and very little peat-moss is now to be found. The chief seat is the Mansion-House of Pitfour, the character of which may be conjectured from the fact, that the expenses incurred by the proprietor in erecting and furnishing the house, and improving the contiguous grounds, have amounted to nearly £80,000: it has fine gardens and plantations. On the Kenmundy and Aden estates are also elegant and commodious mansions with good gardens and well laid-out plantations. Upon the estate of Dens is a plantation of about eighty acres, consisting chiefly of Scotch fir and larch. Fair specimens may be seen in different places of ash, elm, silver-fir, larch, and pine; but beech and spruce-fir appear to be the kinds more particularly adapted to the soil and climate.

The inhabitants of the villages are to a considerable extent engaged in some branch of manufacture. In Stuartfield about thirty persons are employed in weaving linen-yarn for the Aberdeen houses, and at Millbrake and Aden some sorts of woollen-cloth are made. There are also two flax-mills in the parish, and to the larger of the two woollen-mills a dye-house and a fulling-mill are attached. Six fairs are held in the course of the year, of which Aiky fair on the Wednesday after the 19th of July, and St. Dunstan's on the corresponding day of December, are chiefly for the sale of cattle, sheep, and horses. Another is held on the Thursday after the 25th of January, one on the Thursday after the 18th of March, one (lately established) on the Monday after the 17th of September, and one about the beginning of November. Several others formerly held have been discontinued, and the four last mentioned are of inferior

note. The turnpike-road from Fraserburgh to Aberdeen runs in a direction north and south, and that from Peterhead to Banff east and west, through the parish.

For ECCLESIASTICAL purposes the parish is within the bounds of the presbytery of Deer and synod of Aberdeen; patron, the Crown. The minister's stipend is £219, and there is a manse, built in 1823, with a glebe worth between £40 and £50 per annum. The church, which was built in 1788, and repaired a few years since, contains 1200 sittings. There is an episcopal chapel; and the members of the Free Church, the Original Secession, the United Presbyterian Synod, and the Independents have places of worship. Three parochial schools are supported: the master of the chief establishment, situated at Old Deer, and in which, besides the usual instruction, Greek and mathematics are taught, has a salary of £31, with a house, and about £30 from fees; the other masters have a moderate salary each, with fees, and all of them have a considerable allowance from the Dick bequest. The principal remains of antiquity are the ruins of the abbey, surrounded by the high wall belonging to the fruit and kitchen garden of Pitfour. The larger part of the ruins has been taken, at different times, for the purpose of forming stone dykes and erecting dwelling-houses; but what now remains is carefully preserved by the proprietor of the estate. A church of cruciform design once stood on the north side; its length from east to west was 150 feet, the breadth ninety feet, and the nave, which was thirty-eight feet and a half wide, was supported by a row of pillars, whose bases may yet be seen, about seventeen feet distant from each other. The most interesting Druidical temple is that on the top of Parkhouse Hill, the chief stone of which, called the Altar Stone, is fourteen and a half feet long and five and a half broad; the stones are placed about fourteen feet asunder, and inclose a circle forty-eight feet in diameter. There are several chalybeate springs in the parish.

DEERNESS, for a time a quoad sacra parish, in the parish of ST. ANDREW'S, county of ORKNEY, 12 miles (S. E.) from Kirkwall; containing, with the island of Copinshay, 777 inhabitants. This place, the name of which is supposed to have originated in the number of deer frequenting it in ancient times, is a peninsula about four miles in length, and from one to three miles in breadth, connected with the rest of the Mainland by a narrow isthmus. It is bounded on the west and north-west by the harbour of Deer Sound, which separates it from the remainder of the parish of St. Andrew's, and on the south and east by the North Sea. According to tradition, the whole of the peninsula was one wide forest; and roots and trunks of trees, and the antlers of deer, have from time to time been dug up at a considerable depth. The surface is varied with gentle elevations, and towards the north-east rises into a lofty promontory called the Mull head, about 200 feet above the level of the sea: the soil is not unfertile, and considerable improvement has taken place in the system of agriculture, and in the construction of implements of husbandry.

Deer Sound is more than four miles in length, and from one to two miles and a half in breadth; the bottom is clay mixed with sand, and the depth of water sufficient to render it accessible to vessels of considerable burthen, to which it affords safe anchorage and shelter from the winds. The situation of this place is peculiarly favour-

able for a fishing-station; and in addition to the various kinds of fish taken off the coast, the herring-fishery is carried on to a very considerable extent, affording during the season full employment to fifty boats, each having four men and a boy. Facility of communication with Kirkwall and other parts of the Mainland, is afforded by one of the best roads in this part of the country. Cattle and grain are sent to Leith, to which place there are regular packets, and a steamer in summer. The district was separated from the parish of St. Andrew's for ecclesiastical purposes in May 1830; it is in the presbytery of Kirkwall, synod of Orkney, and in the patronage of the Crown. Deerness church is a plain building, erected about the close of the last century, and affords sufficient accommodation for the inhabitants. The stipend of the minister is £120, with a manse, and about three acres of glebe land. A school is supported by the Society for Propagating Christian Knowledge, who pay the master a salary of £12 per annum, to which £3 are added by the heritors. Near the summit of Mull head was formerly an ancient chapel of very difficult access, to which numerous pilgrims were accustomed to resort; there are also some tumuli and remains of Picts' houses in the district. In the north-east end of the parish is an excavation, or *gloupe*, as it is here called, about 150 paces in length and sixty in breadth, the entrance into which is below ground, and admits of a boat sailing into it.—See COPINSHAY.

DELTING, a parish, in the county of SHETLAND, 25 miles (N. N. W.) from Lerwick; containing, with the islands of Muckle Roe and Little Roe, 2019 inhabitants. This parish, the name of which is said to be of Danish or Norwegian origin, is situated about the centre of the Mainland, and is separated on the west from the parish of Northmavine by a long narrow harbour called Sulom Voe, and from the island of Yell on the north by Yell Sound. It is so indented by fissures and intersected by narrow bays, no part of it being above two miles from the sea, that an estimate of its superficial extent cannot be given with accuracy. Its length is about fourteen miles, and its mean breadth from three and a half to four miles. The surface, in its general appearance, is hilly, bleak, and dreary, ornamented occasionally with a few small lochs, and the quantity of land under tillage is not more than 600 or 700 acres, attached to which is pasture of nearly the same extent; the remainder of the parish is hilly pasture ground abounding in peaty soil, which affords abundance of excellent fuel. The arable land has been lately much improved by draining, and a considerable number of Scotch ploughs have been introduced, as well as carts, which before were very scarce here. The annual value of real property in the parish is £1777. The principal rocks are gneiss and syenite, with which also are found limestone and hornblende. There are three mansion-houses, namely, Busta, Ullhouse, and Garth. The inhabitants are mostly employed in fishing; and in the month of May, the whole of the fishermen meet at the stations in Northmavine and Papa-Stour, to commence operations for the taking of ling and cod, upon which they chiefly depend: in a recent year 528 barrels of herrings and sixty tons of ling, cod, tusk, and saith were cured in Delting, and these were only a part of what had been taken. Piltocks and sillocks, called also coal-fish, are likewise caught to a considerable extent, and supply the inhabitants with a large portion of their food, and frequently with a quantity of oil.
