2 miles we reach Slateford station, the first from Edinburgh. The line then passes over the Water of Leith, by a magnificent viaduct alongside the aqueduct of the Union canal. This is a most substantial work, and one of the most imposing on the line. It consists of 14 arches, 30 feet span each, and 42 feet above the bed of the stream. The railway then passes over the canal by a girder-bridge, which is an object well worthy of remark. The line runs on an embankment of considerable extent, passing Colinton and Baberton on the left, and Kiercarton on the right. It skirts the celebrated Haile's quarry, and commands a striking view of the bold crags of Craiglockart, with the Pentlands in the distance. We reach Currie station at 5½ miles from Edinburgh, but the village itself is about a mile from the line, and beautifully situated. On the left are seen the richly wooded grounds of Dalmahoy, the seat of the Earl of Morton; and a little beyond, on the rising ground, is the village of Ratho. On the left we rapidly pass Kaimes and Meadowbank, well known as the seats of two eminent Scotch judges. To the south-west the tower of Lennox castle, once occupied by Queen Mary, forms an interesting object. Passing Ormiston we come at 9 miles to Kirknewton station. The gradient of the line is here 1 in 220. Passing the mansions of Belfield and Calder Hall, on the right, we soon reach one of the most magnificent works on the line, the Linthouse viaduct. This bridge stretches across a deep and wide ravine, and consists of 6 arches of 60 feet span, rising from the bed of the stream to the level of the rail, 100 feet. It is equally substantial in its structure, and elegant in its proportions. Mid Calder is to the right, and Calder House, the seat of Lord Torphichen, is near. We next, at 15 miles, reach West Calder station. The village of West Calder is some distance from the line; and passing Torphim as we ascend we behold most magnificent views, the whole range of the Lothians with Arthur's Seat, the frith of Forth, and the Ochils. We next reach a very fine sheet of water, the Cobbenshaw reservoir. Here the gradient for several miles is very severe, being 1 in 100 till the summit level is attained, when the incline varies for several miles from 1 in 100 to 1 in 176 and 1 in 200. The ground is upon an elevation above the level of the sea about 500 feet. The country around is bleak and wild. After passing Woolfords and Mossflat, there is a branch to the Wilsontown ironworks and coalfields, one of the richest mineral districts in Scotland. At 21 miles is the Anchingray station. The line from this point presents no feature of interest, till it crosses the Carnwath Moss, which is of considerable extent, and which formed a work of great difficulty, having swallowed up a large sand hill through which the line runs, and which fortunately afforded an ample supply of ballasting. At 26 miles is the Carnwath station, and half-a-mile beyond occurs the junction of the main line and branches, sweeping over the low lying grounds through which the Clyde runs, and forming a triangle, at one end of which, on the Glasgow fork, are engine-sheds and offices, &c. The main line to the south strikes off at this point, the east and west traffic being carried over a bend, which unites the Edinburgh and Glasgow forks.

The Glasgow terminus is as yet a large temporary shed at the north end of Bnelhan Street, in the vicinity of Cowcaddens. A short distance thence, a brief branch goes to St. Rollox, where was the original terminus of the Glasgow and Garnkirk railway. The country all along that railway is devoid of any particular interest. At 5 miles is the Stepsroad station; at 6½ miles is the Garnkirk station, in the vicinity of the most celebrated fire-brick works in

the kingdom, where every kind of ornamental and useful manufactures in clay is carried on with the utmost ingenuity; and afterwards, at short intervals, occur Gartcosh station, Gartsherrie station, and Coatbridge junction. "The wealth of the country" here and for some distance onward "is not upon the surface. We are now in the heart of the mineral district; and many even of its towns and villages, at least of its excavated areas, acres in extent, may be said to be under ground. The scene which salutes the gaze at Coatbridge (10 miles) the centre of the combined influences of soot, smoke, and flame, railway transit, and the hot blast, is to the stranger most astounding. The very noise of the incessant locomotion, with the tremendous din of the iron works for an accompaniment, is greatly calculated to enhance the effect of the perpetual day maintained throughout these regions by the blaze of the Gartsherrie, Langloan, Drumpeller, Dundyvvan, and Whiffat furnaces." In this tract occur the junction of the MONKLAND AND KIRKINTILLOCH RAILWAY and the junction of the WISHAW AND COLTNESS RAILWAY—the former taking on the branch toward Castlecary, and the latter forming now the main line to the south. The Castlecary branch is about 10 miles in length, passes Glenhög, Condorrit, and Cumbernauld on one side, and New Monkland and Greengnards on the other, has gradients of 1 in 100 over about 2 miles, from 1 in 644 to 1 in 660 over about other 2 miles, and an average of about 1 in 200 over the rest of the distance, goes under the Edinburgh and Glasgow railway in the vicinity of Castlecary, and then forms a junction with the Scottish Central railway. On the main line, which is here the Wishaw and Coltness, at the distance of 13 miles from Glasgow, is the Holytown station, and at the distance of 16 miles is the Motherwell station. Here is the connecting point of the CLYDESDALE JUNCTION RAILWAY, which forms a shorter route to Glasgow than the line we have been tracing, and at the same time leads continuously there into the Glasgow and Greenock railway. Proceeding onward from Motherwell, we leave Wishawtown to the left, pass at 18½ miles the Morningside or Cambusnethan branch, and arrive at 23 miles at the Carluke station, and the commencement of the works expressly formed for the Caledonian railway. At 24 miles we reach the Braidwood station. The gradients on this part of the line are 1 in 120, 1 in 255, 1 in 100, and over the next six miles 1 in 132. At 28 miles is the Lanark station; and passing Cleghorn House on the right, we come at 30 miles to the village of Ravenstruther. Next we pass Carstairs on the left, and Carstairs House on the right, and then reach the Carstairs Junction station, where the Glasgow fork and the Edinburgh fork converge into the main trunk.

The railway now crosses the Clyde at a very low level, and afterwards crosses it three times at Hardington, Crawford, and Newton. The first station from the junction is Thankerton, 31½ miles from Edinburgh; the next is Symington, 33½ miles, having communication with Biggar; the next is Lamington, 35 miles; the next is Abington, 42½ miles; the next is Crawford, 44 miles; the next is Elvanfoot, 45½ miles; and the next is Beattock, on the further side of the summit, 60½ miles from Edinburgh. The route from the Float Junction, up the valley of the Clyde, out at its head, and down the vale of Evan, is one of great beauty and interest, and one of a character which no other railway in Britain presents. It was something of a feat to carry a good road through such a country; but a railway, with its avoidance of curves and steep inclines, seemed a very few years ago an impossibility and absurdity;

and prophecies that such a line would never be made, or at best never worked, were freely made by persons accredited as possessing perfect knowledge of the subject. Nevertheless, the thing is done, and well done; though the passenger, as he threads the valley and climbs the hill, will not wonder so much at the prophecies, as at their having been falsified. Till near Abington, the country, though principally pastoral, presents comparatively few difficulties, the vale being straight and of a considerable though varying width between the two ranges of hills. A look ahead, however, at the mountains standing right across the path, will not fail to raise the wonder of the passenger, as to how such a tremendous barrier is to be passed. As he goes on and nears the mountains, his curiosity as to the difficulties will increase, rather than diminish, while his admiration will be arrested by the peculiar character of the scenery, so different from that through which a railway generally leads. There are here no busy towns, thickly sown villages, tall chimneys, or even rich fields. Nothing but mountain and moor are to be seen on every side, and no signs of population, save, at long distances, a sheep-farmer's steading, or shepherd's shealing, and a shepherd with his dog, gazing from the hill side at the strange invader that has come to "disturb his ancient solitary region." The wildness of the country increases as we ascend the stream; but the view becomes frequently obstructed by the great depth of the cuttings, which, however, are of themselves sufficient matter for wonder and admiration. Here too, occur the steepest gradients,—1 in 75 for 7 miles, and 1 in 100 for about 10 miles. Another of the things which attract the traveller's attention on this part of the route, is the gradual and rapid diminution of the river towards whose source he is climbing. At Carnwath the Clyde is a broad and stately stream: it grows less and less as we get above the numerous tributaries it receives from the hills on either side; till at last at the summit, we could empty with a bucket the river, which at Glasgow, only two hours before, we beheld a sea covered with masts. We are here on the table-land of the south of Scotland,—in the very heart of

"The upland moors, where rivers, here but brooks,
Dispart to different seas."

Within 3 or 4 miles, and within sight, are the fountains of the rivers, which empty themselves into the Solway on the south, the frith of Clyde on the west, and the German ocean on the east—the Annan, the Clyde, and the Tweed. Not five minutes after the Clyde becomes invisible in the moss, we are going down the tiny source of Evan, one of the tributaries of the Annan, and see it growing as fast as we had seen the Clyde dwindling. Very soon after coming on the sources of the Evan, we see it carried over in an aqueduct 20 feet above our heads, and a little farther on we cross it 70 feet below us; and afterwards, when it becomes a large stream, rolling over linn, and fringed with trees, we keep close by its side till we reach Beattock. At this point the prospect is splendid—a lonely vale hemmed in by mountains, and offering fine glimpses of glens and straths on both sides, and especially up Moffatdale, where the vista is closed, 8 or 9 miles to the east by the White Coomb, which overhangs Loch Skene and Yarrowhead.

Leaving Beattock, a fine view of the gorge of Moffat Water is obtained; and soon after, the line passes over Annan Water by a wooden-topped viaduct, 350 feet in length. At 65½ miles from Edinburgh is the Wamphray station; and here Annandale, so widely famed for its rich soft scenery, opens to the view, with the princely woods of Raehills and

the noble mass of Queensberry Hill in the distance. The next station is Netherleugh, 71 miles from Edinburgh, and in the neighbourhood of the wooded demesnes of Diuwoodie and Jardine Hall. About $2\frac{1}{2}$ miles beyond it, the railway crosses Dryfe Water, on a splendid viaduct of 5 arches, 30 feet span, and built of white sandstone. At 75 miles from Edinburgh, it reaches Lockerby, which it traverses on the street level. Soon after it crosses the Milk on an elegant bridge of 6 arches of 40 feet span. On approaching Ecelefechan station, 80 miles from Edinburgh, the Solway frith, overhung by Cliffel, bursts upon the view; and Hoddam Castle and the town of Annan are seen in the valley. Between Ecelefechan and the Kirtlebridge station, a distance of 3 miles, the railway passes along a viaduct of 30 arches over the Mein; and at the latter station, it crosses the Kirtle on a splendid bridge of 9 arches, 36 feet in span. For $\frac{1}{2}$ mile the line now runs romantically along the ridge of the steep high bank of the Kirtle. At $91\frac{1}{2}$ miles from Edinburgh, it reaches the Kirkpatrick station; and 5 miles farther on, leaving behind Graham's Hill and Knot Hill, it comes to the station of Greta. Adjacent to this it passes from Scotland to England by a fine bridge of 2 arches, 40 feet span, and 36 feet high, over the Sark. The works and scenery throughout the remaining distance present many points of interest; and the terminus at Carlisle is a magnificent and very spacious structure, a chief ornament of the city, and connecting the Caledonian railway with the Carlisle and Lancaster, the Carlisle and Newcastle, and the Carlisle and Maryport railways.

CALF, or CALVE, a small island lying nearly across the entrance of the barbour of Tobermory, in the north end of the sound of Mull, Argyleshire.

CALF OF EDAY. See EDAY.

CALFA, a small island of the Hebrides, near Tiree.

CALLADER (LOCH), a lake of about 2 miles in circumference, on the southern border of the parish of Crathie, Aberdeenshire. It sends off its surplus waters by the rivulet Eith, 5 miles northward to the Dee at Castletown-Braemar. It abounds with trout, and contains salmon of delicate flavour, and 6 or 7 pounds weight.

CALLANDER, a parish, containing a small post-town of its own name, and also the village of Kilmahog, in the Menteith district of Perthshire. It is bounded on the west by the Benlomonid wing of Stirlingshire, and on other sides by the parishes of Balquhider, Comrie, Kilmadock, Port-of-Menteith, and Aberfoil. Its length eastward is about 18 miles, and its greatest breadth is 6 miles. Lochs Katrine, Achray, and Venachoir lie along the southern boundary. Loch Lubnaig projects far into the interior from the north; and, together with the river Teith which issues from it, divides the parish into two unequal parts, placing about one-third on the east and about two-thirds on the west. The whole parish belongs to the infant system of the Teith, and is ent into sections by that river's head-streams and early feeders. The appearance of the country towards the west and north is mountainous and gloomy from the extent of bleak heath. The higher grounds are here and there clad with oak-woods and thriving plantations; and a bold stupendous rock, called the Craggs of Callander, diversifies the scene, and forms a striking contrast to the valley and the meanderings of the rivulets below. That branch of the Teith which issues from Loch Lubnaig, unites, a few hundred yards above the village, with the branch issuing from Loch Venachoir, and forms a fine peninsula. The soil of the arable land is a rich loam, in some places capable of high culti-

vation; but in general it is a light gravel. The fields are mostly enclosed either with stone-dikes or hedge-rows. The parish is remarkable for the wild and romantic scenery of its prospects. Benledi and other lofty mountains raise their rocky heads in the interior; while the valleys everywhere exhibit beautiful expanses and falls of water over perpendicular precipices. Near Loch Lubnaig the scenery is very grand, and finely ornamented by the woods and heights of Ardehullery, once the residence of Bruce, the Abyssinian traveller. Other tracts, particularly along all the southern border, and along the principal vales of the interior, present some of the most superb landscapes of Scotland. See the articles KATRINE, (LOCH), ACHRAY (LOCH), VENACHOIR (LOCH), TROSACHS, BENLEDI, LENY (THE PASS OF), LUBNAIG (LOCH), BRACKLIN, and TEITH (THE). The valued rental of the parish is £3,278 10s. Scots. There is on the estate of Leny a quarry of limestone, or rather marble, the ground of which is a deep blue, with streaks of white. Slate is wrought in many places. In Benledi, a vein of lead ore was wrought; but the expense was found to be greater than the produce, and it was given up. There are several remains of supposed fortifications on the hills; and near the manse are some relics of a castle, which was built or repaired, in 1596, by the Earl of Linlithgow, but mostly taken down in 1737. The parish is traversed by the road from Stirling to Killin, and by that from Stirling to Inversnaid. Population in 1831, 1,909; in 1861, 1,676. Houses, 320. Assessed property in 1843, £7,200.

This parish, formerly a chapelry dependent on Inehmahome, is in the presbytery of Dunblane and synod of Perth and Stirling. Patron, the Crown. Stipend, £197 14s. 11d.; glebe, £20. Schoolmaster's salary, £34 4s. 4½d., with about £40 fees. The parish church was built in 1733, and contains 638 sittings. There is a chapel of ease, of recent erection, at the Trosachs, with an attendance of 150. There is a Free church at Callander, with an attendance of 450; and the yearly sum raised in connexion with it in 1853 was £282 7s. 4½d. There are two Society's schools, and a Free church school.

The VILLAGE OF CALLANDER stands on the road from Stirling to Inversnaid, a little below the deflection of the road to Killin, 14 miles south of Loebearnhead, $16\frac{1}{2}$ north-west of Stirling, and $51\frac{1}{2}$ north-west by west of Edinburgh. It is beautifully situated on both sides of the Teith, over which there is here a bridge of three arches. It is built on a regular plan, and the houses are good and slated. The surrounding scenery is remarkably beautiful. A settlement for the soldiers discharged after the German war was established here by Government in 1763; and since that time Callander has been gradually increasing. The introduction of the cotton-manufacture also gave it a new impetus; in the weaving of muslin, about 100 looms used to be employed in Callander and the adjoining village of Kilmahog. The parish church stands on one side of a sort of square; it has a pavilion-roof, with a spire over the pediment. There are four inns, one of which is large and excellent. A weekly market is held on Thursday, and fairs are held on the 10th of March, old style, on the 16th of May, on the third Tuesday of July, on the 9th of October, and on the first Thursday of December, old style. The village has a branch office of the Bank of Scotland. Regular communication is maintained with Stirling by public coach, at hours to suit the transit there of the railway trains. Facilities also are afforded in the village to tourists visiting the Trosachs and other famous localities in the neighborhood. The village enjoys an ample supply of excellent water, and is kept in a clean

state. At the east end is a neat villa belonging to Lady Willoughby D'Eresby. Population of the village, 884.

CALLANDER, in Strathearn. See **CRIEFF**.

CALENDAR, an estate in the parish of Falkirk, Stirlingshire. The mansion is situated $\frac{1}{4}$ of a mile south-east of the town of Falkirk. The estate having been confiscated immediately after the rebellion in 1715, was sold about the year 1720; and such tithes as were not conveyed with it, were disposed of by the commissioners and trustees of the forfeited estates in Scotland, to Hamilton of Ditchmond, under the express stipulation that they should be subject to the stipend of a minister for the new parish of Polmont. The mansion is a fine old building with walls of great thickness. It is surrounded by a park of about 400 acres in extent, containing some fine wood. Among these, the Dool tree, on which the old barons of Callendar caused delinquents to be hanged, stood in front of the mansion-house; until, owing to the total decay of its roots, it fell in 1826. It was a huge ash, and at least four centuries old. Callendar formerly gave the title of Earl to the family of Livingstone, attained in the person of James, fifth Earl of Lintithgow, and fourth of Callendar, in 1715. On the forfeiture of that family, the estates were purchased by the York Buildings company, whose estates were afterwards sold for the benefit of their creditors. Callendar and Almond were bought, in 1783, by William Forbes, Esq., the father of the present proprietor. During the time that Lord Errol held the lease of Callendar estate, nearly 500 acres were totally covered with furze and broom. His lordship offered a long lease of this land to a smith in Falkirk at 2s. 6d. per acre, on condition that he would clear it from all encumbrance, and render it arable; but the offer was rejected from a conviction that it would be a losing concern! The land now lets at from £3 to £5 per acre. About 50 years ago, Lord Errol paid a rent of about £780 for the whole estate of Callendar, with power to cut down and sell as much timber as he pleased; at the present day, this estate draws at least £20,000 yearly.—Callendar-house has been the scene of important events; it was frequently visited by Queen Mary; and was stormed and taken by Cromwell, on his march to the Tor-wood to give battle to Charles II.—Nearly opposite to the house an earthen wall, of considerable height and thickness, branches off from Graham's dike, towards the old castle of Almond. From thence towards the east, there are few or no certain traces of it to be seen; but it may be presumed that it was extended to Lintithgow, where a Roman camp existed on the spot on which the palace was afterwards built. It has no fosse; and being broad at the top, was probably intended to be a road, as well as a line of defence. See **FALKIRK**.

CALLERNISH. See **UG**.

CALLIEVAR, a mountain on the western boundary of the How of Alford, Aberdeenshire. Its altitude above sea-level is 1,480 feet.

CALLIGRAY, or **KILLIGRAY**, a small island, nearly in the middle of the sound of Harris, in the Outer Hebrides. It is about two miles long and one broad. The southern end is a deep moss, almost entirely uncultivated; the northern is an early soil, which is cultivated with care. The inhabitants are chiefly supported by fishing. In the north end of the island are faint traces of a very ancient building, called *Teampull na h' Annait*, 'the Temple of Annait'—a goddess of Saxony, mythology who presided over young maidens.

CALNADULACH, a village in the Muckairn district of the parish of Ardechiattan, Argyleshire.

CALTON, a suburb of Glasgow. See **GLASGOW**.

CALTON, a suburb of Edinburgh. See **EDINBURGH**.

CALTON-HILL, a rounded eminence in Edinburgh, rising abruptly from the southern termination of the ridge on which Prince's-street is built, and forming, on the south-western side, the continuation of the northern side of the valley by which the ridge of the High-street is separated from that of the New town. Between it and the Prince's-street ridge, a deep and narrow hollow is formed, which winds eastwards round the base of the hill, and is lost in the plain that extends to Leith. From the summit, it slopes gently toward the south-east. To the north-west it exhibits an abrupt and rounded face, in the same manner as the Castle-rock. Its elevation above sea-level at Leith is 344 feet. Its great mass is composed of claystone-porphry and trap-tufa. With its fissured, cracked, and crumbled appearance, the Calton-hill would present an emblem of instability and desolation, were it not partly covered with buildings, and placed in the midst of a city unrivalled for its beauty. According to Professor Henderson, the latitude of the Calton-hill observatory is 55° 57' 33" north; but in the Calton-hill Observations [Vol. I. Introd. p. xxxviii] it is stated at 55° 57' 23" north. The latitude of Greenwich observatory is, according to Mr. Airy, 51° 28' 38" north. See **EDINBURGH**.

CALVE. See **CALF**.

CALWATLIE. See **ROSENEATH**.

CAM-, or **CAMBUS**, a prefix in a few Scottish descriptive topographical names. It denotes a bending, curve, or bay in the course of a stream; but is used in combination to designate objects or traits in the vicinity of such a bending.

CAM, or **CAMA** (**LOCH**), a beautiful lake, about 3 miles in length and of very irregular outline, in a sequestered situation among the mountains on the south side of the parish of Assynt, Sutherlandshire.

CAMBRAV. See **CUMBRAY**.

CAMBUS. See **CAM-**.

CAMBUS, a village in the parish of Alloa, Clackmannanshire. It stands at the confluence of the Devon with the Forth, 2 miles west of the town of Alloa. It has thrashing mills, an extensive distillery, and a small harbour with some shipping-trade. See **ALLOA**. Population, 287.

CAMBUS (**OLD**). See **COCKBURNSPATH**.

CAMBUS-BARRON, a village in the parish of St. Ninians, Stirlingshire. It stands about $1\frac{1}{2}$ mile south-west of Stirling, and about the same distance west-north-west of St. Ninians, on the road from the latter to Gargunnoch. Many of its inhabitants are employed in wool-spinning and in the tartan and shawl manufacture. Population, 535.

CAMBUS-BURN. See **KILMADOCK**.

CAMBUSCURRY, a hill, about 600 feet high, in the east of the parish of Eddertown, Ross-shire.

CAMBUSKENNETH, an abbey, founded by David I. in 1147, on a low peninsula on the left bank of the Forth, about a mile east-north-east of Stirling. The tract around it is within Clackmannanshire, and is in dispute between the parish of Stirling and the parish of Logie. See **ABBEY**. This tract is supposed to have been the scene of some transaction in which one of those Scottish monarchs who bore the name of Kenneth was concerned; and hence the place received the name of *Canus-kenneth*, which signifies 'the Field or Creek of Kenneth.' The situation was both pleasant and convenient, in the midst of a fertile country, where the community could be supplied with all sorts of provisions, and plenty of fish from the neighbouring river. As soon as the house was fit to receive inhabitants, it was planted with a com-

pany of monks of St. Augustine, or canons-regular, who were translated from Aroise, near Arras, in the province of Artois in France: an order afterwards so numerous in Scotland as to possess no less than twenty-eight monasteries in the kingdom. This abbey was sometimes called the Monastery of Stirling, from its vicinity to that town; and the abbots are often designed, in the subscriptions of old charters, "abbates de Striveling." The church which belonged to it was dedicated to St. Mary. Hence a lane leading from the High-street in Stirling to the monastery still goes by the name of St. Mary's wynd. The first abbot of Cambuskenneth was called Alfridus; but of him and his successors, for 3 centuries, we have nothing memorable on record. In 1326, the clergy, earls, and barons, with a great number of an inferior rank, having couvened in this abbey, swore fealty to David Bruce, as heir apparent to the crown, in presence of Robert his father; as also to Robert Stewart, grandson of the King, as the next heir, in the event of David's death without issue. A marriage was, at the same time, solemnized between Andrew Murray of Bothwell, and Christian Bruce, sister of King Robert. During the wars with England, in the reign of David Bruce, the monastery was pillaged of all its most valuable furniture. The hooks, vestments, cups, and ornaments of the altar, were carried off. In order to the reparation of this loss, William Delandel, bishop of St. Andrews, made a grant to the community of the vicarage of Clackmannan. From the beginning of the 15th century, we find the abbots of this place frequently employed in important national transactions, or advanced to the highest civil offices. Henry, abbot of Cambuskenneth, after having given proofs of his political abilities in an embassy to England, was, in 1493, raised to the office of high treasurer of Scotland, which he held only a short time. He died in 1502, having held the abbotsip above thirty years. He was succeeded by David Arnot, formerly archdeacon of Lothian; who, after having been six years at the head of this abbey, was, in 1509, preferred to the bishopric of Galloway, to which the deanery of the chapel-royal of Stirling was annexed. The next abbot was Patrick Panther or Panter, who was reckoned one of the most accomplished scholars of that age, as well as an able statesman. He was secretary to James IV., who also raised him to the dignity of a privy-councillor. To his pen, the Latin epistles of that monarch were indebted for that purity and elegance of style which distinguished them from the barbarous compositions of the foreign princes with whom he corresponded. He was also appointed preceptor to the King's natural son, Alexander Stewart, afterwards archbishop of St. Andrews, whose uncommon progress in literature is so much celebrated by Erasmus, under whose tuition he sometime was. David Panther—said to have been a nephew or some other near relation of the above Patrick—was commendator of this abbey in the latter end of the reign of James V. and the minority of Queen Mary. His first office in the church was that of vicar of Carstairs, near Lanark; he was afterwards prior of St. Mary's isle in Galloway; next, commendator of Cambuskenneth; and, last of all, he was raised to the see of Ross in 1552. He was an accomplished scholar, and admirably skilled in the Latin language.—In 1559, the monastery was spoiled, and a great part of it cast down by the reformers, who, however laudable their intentions were, proceeded, in some instances, to the execution of them in a tumultuary manner. Several of the monks embraced the Reformation; and, on that account, had their portions withdrawn by the Queen-regent. David Panther

was the last ecclesiastic who possessed the lucrative abbotsip of Cambuskenneth. John Earl of Marr, afterwards Regent, had the disposal of the revenues of Cambuskenneth. He had, during the reign of James V., been appointed commendator of Inchmahome. After the Reformation had taken place, one of his nephews, Adam Erskine, was commendator of Cambuskenneth. In 1562, by virtue of an order from Queen Mary, and the privy council, an account was taken of all the revenues belonging to cathedrals, abbeys, priories, and other religious houses, that stipends might be modified to the reformed clergy, who were to have a third of the benefices. According to that account, the revenues of Cambuskenneth were: £930 13s. 4½d. Scots money; 11 chalders, 11 bolls, 2 firlots of wheat; 28 chalders, 12 bolls, 3 firlots, 3 pecks, 2 lippies of bear; 31 chalders, 6 holls, 3 firlots, 3 pecks, 2 lippies of meal; 19 chalders, 15 holls, 3 firlots, 3 pecks, 2 lippies of oats. In whole, 91 chalders, 15 bolls, 1 firlot, 2 pecks, 2 lippies. The barony of Cambuskenneth, in which the monastery stood, was settled by the Earl of Marr upon Alexander Erskine of Alva, whose posterity continued in possession of it till the year 1709, when it was purchased by the town-council of Stirling for the benefit of Cowan's hospital, to which it still belongs. The fabric of the abbey was once large and extensive; but nothing of it now exists, except a few broken walls, and a tower which was the belfry. Some remains of the garden are to be seen; and the burial-place, where James III. and his Queen are interred. There is no vestige of the church. Tradition reports that one of the bells was for some time in the town of Stirling, but that the finest was lost in its passage across the river.

CAMBUSLANG, a parish containing the connected villages of Kirkhill, Vicarland, East and West Coats, Cullochburn, Bushyhill, Chapelton, and Sauchiebog, and also the isolated villages of Dalton, Lightburn, and Silverbanks in Lanarkshire. It is bounded by the parishes of Old Monkland, Blantyre, East Kilbride, Carmunnock, and Rutherglen. Its length and breadth are each about 3½ miles. The Calder or Rotten Calder traces all the eastern boundary; the Clyde traces all the northern boundary; and the Kirk burn and Newton burn run down the interior to the Clyde. The surface of the parish is beautifully diversified with hill and dale. A ridge, crowned by the summits of Dechmont and Turulaw, occupies a breadth of about ½ a mile and a length of about 2 miles in the south-west, and is part of a long range extending westward along the mutual border of Lanarkshire and Ayrshire into Renfrewshire. From this the ground declines in a gradual manner, with heauteous swells and undulations, to the romantic glen of the Calder and low flat banks of the Clyde. The latter river is here from 200 to 250 feet broad, and generally overflows part of the low grounds several times in the year, and has been known to rise here 20 feet above its mean level. The principal landowners are the Duke of Hamilton, J. Graham of Westburn, Jackson of Spittal-Hill, and a few others. The laud rental is about £6,000. The annual value of farm-produce was estimated in 1853 at £25,000; and the annual produce of minerals at £22,732. Assessed property in 1843, £11,555 5s. Coal is abundant in the parish, and has been worked here for upwards of 300 years. The present output is about 68,200 tons per annum. In 1750, a cart of coals of 9 cwt. cost 9d.; on the coalhill in this parish the same quantity at present costs 6s. 8d. Vast beds of excellent sandstone are also found in every part of the parish. The strata of which, as well as those of the coal, dip

towards the river; it is singular that, on the north side of the Clyde, the dip is also towards the river. A stratum of limestone, usually called Cambuslang marble, is found in some of the coal-pits at the depth of 200 feet; it is of a beautiful dark grey or dark brown colour, with whitish streaks and spots, and receives a very high polish.—Dechmont-hill seems to have been anciently a place of strength, and must have been well-adapted for a watch-tower. Rising from a comparatively level country, to an altitude of 600 feet, it commands an extensive and varied prospect—the numerous beauties of which have been celebrated in a descriptive poem, entitled ‘Dychmont,’ by John Struthers, the author of ‘The Poor Man’s Sabbath,’ and other pieces of much poetical merit. Upon the summit of Dechmont are some traces of ancient buildings. About a mile east of the church was the castle of Drumsargard, to which an extensive barony was at one time annexed. This was the property successively of several families of great name, the Oliphants, the Murrays, the Douglasses, and the Hamiltons; and it at present makes a part of the entailed estate of Hamilton. On the south side of Dechmont, stands Lattrick, which, about the beginning of the 17th century, was the seat of a Sir John Hamilton, whose family is extinct. On the north side of the same hill, stands the turreted house of Gilbertfield, long the residence of a family of the name of Cunningham: about the beginning of the 18th century, this estate was purchased by the laird of West-Burn. Lieutenant William Hamilton, the friend and poetical correspondent of Allan Ramsay, lived many years, first at Gilbertfield, and then at Lattrick, where he died on the 24th of May, 1751, at an advanced age. Upon the banks of the Kirk burn, about a quarter of a mile below the church, there was a chapel, founded in 1379, and dedicated to the Virgin Mary, to which belonged 4 acres of land which still retain the name of Chapel-land: there was also an hospital 2 miles east from the church, to which about 130 acres, called Spittal and Spittal hill, seem to have been annexed; but the persons by whom, and the time when, these religious houses were founded, are equally unknown. The parish is traversed by the south road from Glasgow to Hamilton, and by the south branch of the Glasgow fork of the Caledonian railway; and it has a station on the latter. The eight connected villages of Cambuslang have a post-office, and stand on the Hamilton road, about 6 miles from Glasgow. Many of the inhabitants, as also those of the three isolated villages, are mullin-weavers, in the employment of the manufacturers of Glasgow. Population of the villages in 1851, 1,659. Population of the parish in 1831, 2,697; in 1861, 3,647. Houses, 489.

This parish is in the presbytery of Hamilton, and synod of Glasgow and Ayr. Patron, the Duke of Hamilton. Stipend, £281 11s. 11d.; glebe, £10. Unappropriated tithes, £469 19s. 5d. Schoolmaster’s salary, £34 4s. 4½d., with about £40 fees. The parish church was built in 1841, and contains 1,000 sittings. An Independent chapel in the village of Chapelton was built in 1801, and contains 200 sittings. There are four non-parochial schools. Cambuslang is famous among the religious public as the scene of a remarkable revival in 1742. The following narrative of this is given in the ‘New Statistical Account:’—“The religious phenomenon, commonly called ‘the Cambuslang work,’ seems to have originated in circumstances apparently accidental. The kirk of Cambuslang being too small and out of repair—as is too often the case in the present day—the minister in favourable weather frequently conducted the public devotional services

of the parish in the open fields. The place chosen was peculiarly well adapted for the purpose. It is a green brae on the east side of a deep ravine near the church, scooped out by nature in the form of an amphitheatre. At present it is sprinkled over with broom, furze, and sloe-bushes, and two aged thorns in twin embrace are seen growing side by side near the borders of the meandering rivulet which murmurs below. In this retired and romantic spot Mr. McCulloch, for about a year before the ‘work’ began, preached to crowded congregations, and on the Sabbath evenings after sermon, detailed to the listening multitudes, the astonishing effects produced by the ministrations of Mr. Whitefield in England and America, and urged with great energy the doctrines of regeneration and newness of life. The effects of his zeal soon began to evidence themselves in a striking manner among the multitudes who waited on his ministry. Towards the end of January, 1742, two persons, Ingram More, a shoemaker, and Robert Bowman, a weaver, went through the parish, and got about ninety heads of families to subscribe a petition, which was presented to the minister, desiring that he would give them a weekly lecture. This request was immediately complied with, and Thursday was fixed upon as the most convenient day of the week for that purpose. These meetings were crowded with multitudes of bearers, and at length from weekly were extended to daily exhortations, which were carried on without interruption for seven or eight months. Many people came to the minister’s house under strong convictions of sin, calling themselves ‘enemies to God, despisers of precious Christ,’ and saying ‘what shall we do to be saved?’ The first prominent symptoms of the extraordinary effects produced by these multiplied services were on the 8th February. Soon after, the sacrament was given twice in the space of five weeks; on 11th July and on 15th August. Mr. Whitefield had arrived from England in June, and many of the most popular preachers of the day hastened to join him at Cambuslang, such as Messrs. Willison of Dundee, Webster of Edinburgh, McKnight of Irvine, McLaurin of Glasgow, Currie of Kinglassie, Bonner of Torphichen, Robe of Kilsyth, &c. The sacrament on the 15th August was very numerously attended. One tent was placed at the lower extremity of the amphitheatre above alluded to, near the joining of the two rivulets; and here the sacrament was administered. A second tent was erected in the churchyard, and a third in a green field a little to the west of the first tent. Each of these was attended with great congregations, and it has been estimated that not less than 30,000 people attended on that occasion. Four ministers preached on the fast-day, 4 on Saturday, 14 or 15 on Sunday, and 5 on Monday. There were 25 tables, about 120 at each, in all 3,000 communicants. Many of these came from Glasgow, about 200 from Edinburgh, as many from Kilmarnock, and from Irvine and Stewarton, and also some from England and Ireland. The Cambuslang work continued for six months, from 8th February to 15th August 1742. The number of persons converted at this period cannot be ascertained. Mr. McCulloch, in a letter to Mr. Robe, dated 30th April 1751, rates them at 400, of which number 70 were inhabitants of Cambuslang. The 18th of February, the day on which this extraordinary work began, was, long after, observed in the parish partly as a day of humiliation and fasting for misimprovement of mercies, and partly as a day of thanksgiving for the season of grace to many in the British colonies, and particularly in this small corner in 1741 and 1742.” The judicious writer of these remarks adds, “When

the present venerable and learned incumbent of Cambuslang entered on the charge of the parish, a number of the converts of 1742 still lived, and gave evidence, by the piety and consistency of their conduct, of the reality of the saving change that had been wrought on their hearts. So late as July 1818, the writer of this note heard an aged clergyman of a neighbouring parish allude in the church of Cambuslang, on a Monday after a communion, to the revival in the following terms: He had been speaking of the time and place in which God had been pleased to afford extraordinary manifestations of his power and grace in the conversion of sinners, and in comforting and strengthening his people, and he added, 'Such was Bethel to the patriarch Jacob, Tabor to the three disciples, and such was this place about seventy-six years ago, of whom I am told some witnesses remain to this present hour, but the greater part are fallen asleep.' If any one is still so bold as to allege that the work at Cambuslang was 'a work of the devil,' he will find no countenance from the serious part of the inhabitants of the district in which it took place. No one ever attempted to justify every thing that was said or done at that memorable period; but, on the other hand, it is hoped that the warmth of party spirit will no longer prevent good men from admitting what even the correspondent of Mr. Wishart of Edinburgh was constrained to acknowledge in regard to the revival in New England at that time, 'that an appearance so much out of the ordinary way, and so unaccountable to persons not acquainted with the history of the world, was the means of awakening the attention of many, and that a good number settled into a truly Christian temper.' The centenary of the Cambuslang revival was commemorated on the 14th of August, 1842, by tent-preaching in the glen behind the parish church-yard, when it was computed that from 10,000 to 12,000 persons were present.

CAMBUSMICHAEL. See MARTIN'S (St.).

CAMBUSMORE. See KILMADOCK.

CAMBUSNETHAN, a parish, containing the post-office village of Wishawton, and also the villages of Stewarton, Cambusnethan, Kirk, Bonkle, and Stone, in the middle ward of Lanarkshire. It is bounded on the north by Shotts parish; on the east by Linlithgowshire; on the south by Carnwath, Carstairs, Carluke, and Dalserf parishes; and on the west by Dalserf, Hamilton, and Dalziel. It extends in a north-east direction from the Clyde on the west, nearly 12 miles in length; and is on an average about 3 miles in breadth. Its superficies is about 26,000 acres, of which nearly one-third is cultivated, and about 160 acres are laid out as orchard-grounds. The haughs on the Clyde are extensive and beautiful. On the bank which rises above the hangh-grounds, the soil is clay, covered with extensive orchards, which are well-sheltered from the north and east winds by coppice-woods and regular plantations. Farther up the soil becomes mossy, or mixed with a black sand peculiarly unfavourable for vegetation. The highest grounds are on the eastern side of the parish, where they attain an elevation of about 900 feet. The South Calder traces all the northern boundary; and the Garrion burn, a beautiful little tributary of the Clyde, traces part of the southern boundary. The banks of the South Calder, for a considerable way above its confluence with the Clyde, are very finely wooded. Abundance of excellent coal is wrought here; also ironstone and freestone. The Shotts iron company have two blast-furnaces at Stane. There are extensive tile-works at Wishaw and at Coltness. One, near Castlehill, turns out 8,000 tiles

daily, or 2,504,000 in the year. There is an extensive distillery at Wishawton. Many of the village population are weavers, in the employment of the Glasgow manufacturers. The mansion-houses of Cambusnethan, Wishaw, Coltness, Allanton, and Muirhouse are all very handsome structures. The parish is traversed by the road from Carluke to Glasgow, by the road from Ayr to Edinburgh, by the Glasgow fork of the Caledonian railway, and by the Coltness and Wilsontown railway; and it has stations on the former of these railways at Wishaw and Overtown, and a station on the latter at Morningside. Population in 1831, 3,824; in 1861, 14,601. Houses, 2,362. Assessed property in 1843, £32,016 9s. 9d.

This parish is in the presbytery of Hamilton and synod of Glasgow and Ayr. Patron, Lockhart of Castlehill. Stipend, £278 15s. 8d. Unappropriated tithes, £469 19s. 5d. Schoolmaster's salary, £34 4s. 4½d., with about £20 fees. The parish church was built about 12 years ago, and contains about 800 sittings. There is also a chapel of ease, of similar capacity, at Wishawton. There is a Free church preaching-station, whose total yearly proceeds in 1853 amounted to £115 1s. 2½d. There are two United Presbyterian churches,—the one at Bonkle and the other at Wishawton,—the former built in 1818 and containing 560 sittings, the latter built in 1822 and containing 740 sittings. There is a Reformed Presbyterian church at Wishawton, which contains 350 sittings. There is a Congregational chapel at Wishawton, with an attendance of 200. There is also a place of meeting called the Christian church, with an attendance of between 25 and 30. There are eight non-parochial schools.

CAMBUSNETHAN-KIRK, or KIRKNOX, a village in the parish of Cambusnethan, Lanarkshire. It stands on the road from Ayr to Edinburgh, about a mile east of Wishawton. Fairs are held on the 2d Thursday of May and the 4th Thursday of October. Population, 485.

CAMBUS-VIC-HUSTAN, a small hut safe harbour, in the parish of Assynt, Sutherlandshire.

CAMBUS-VIC-KER-CHIR, a safe and well-sheltered harbour, except from the north-east gales, in the parish of Assynt, Sutherlandshire.

CAMBUS-WALLACE, a locality in the parish of Kilmadock, 1 mile north-west of Doune, Perthshire. Some years ago, several ancient graves were discovered at Rosshall near this place; and tradition relates that a battle was once fought near this spot between the families of Rosshall and Craigton.

CAMBUS-WALLACE, in Lanarkshire. See BIGGAR.

CAMELON, a village with a post-office in the parish of Falkirk, Stirlingshire. It stands on the north side of the Forth and Clyde Canal, and on the road from Falkirk to Glasgow, about 1 mile west of Falkirk. A neat church, in connexion with the Establishment, and containing 660 sittings, was built at the west end of the village in 1840. A large number of the inhabitants are employed in nail-making. Old Camelon, situated about 5 furlongs without the gate where the Roman road issued from the wall of Antoninus, about half-a-mile to the north-west of the present village, was a Roman town, and a sea-port; and an anchor was dug up here in 1707. There are many circumstances which authorize us to conclude, not only that the river Carron has been navigable farther up than the site of Old Camelon, but also, that the sea at one time came very near to Falkirk, and covered the whole of that district which is now called the Carse. General Roy has given a plan of Old Camelon in the 29th plate of his 'Military Antiqui-

ties; he supposes it to be the Roman station Ad Vallum. Boece, and some others, strangely confound this place with the Camelodunum of Tacitus, now known to be St. Maldeu in Essex. Population of Cameron, 1,308.

CAMERON, a parish in the east of Fifeshire. It approaches within a mile of the city of St. Andrews, and is bounded by the parishes of St. Andrews, Denino, Cambee, Kilconquhar, and Ceres. Its length eastward is between 5 and 6 miles; and its breadth is about 4 miles. The surface is undulating, and has a general declination to the east, but is drained only by small burns, most of which rise within itself. The only hill is Drumcarro Craig, a rugged mass of whinstone situated in the north-west. About 66 parts in a hundred of the whole parish are regularly or occasionally in tillage, about 25 are permanent pasture, rather more than 6 are under wood, and rather less than 3 are waste. The total yearly produce, inclusive of £500 from quarries, and £2,000 from coal-mines, was estimated in 1837 at £24,600. Assessed property in 1843, £8,219 3s. 6d. There are ten principal landowners; but the only considerable mansion is Mount Melville. Limestone is extensively worked; and sandstone and whinstone are quarried. The parish is traversed by the road from St. Andrews to Largo, and by that from Crail to Cupar. Population in 1831, 1,207; in 1861, 1,362. Houses, 272.

This parish is in the presbytery of St. Andrews and synod of Fife. Patron, the Crown. Stipend, £199 12s. 8d.; glebe, £10. Unappropriated tithes, £149 13s. 10d. Schoolmaster's salary, £34 4s. 4½d., with about £10 fees. The church is situated nearly in the centre of the parish, about 3½ miles south-west of St. Andrews. It was built in 1808, and contains 495 sittings. There is an United Presbyterian church at Lathones, on the St. Andrews and Largo road, about 1½ mile south-west of the parish church. There are two private schools. The parish of Cameron was separated from the parish of St. Andrews in 1645.

CAMERON-BRIDGE, a hamlet on the river Leven, in the south-east corner of the parish of Markinch, Fifeshire. Here is a very extensive distillery.

CAMERON-BRIDGE, a hamlet in the parish of Liberton, 1½ mile south of Edinburgh, on the road thence to Dalkeith, Edinburghshire.

CAMILLA. See **AUCHTERTOOL**.

CAMISENDUN. See **DURNES**.

CAMLACHIE, a suburban village in the Barony parish of Glasgow, Lanarkshire. It stands chiefly along the north road from Glasgow to Hamilton, from a point about 1¼ mile east of the cross of Glasgow, and connects the outskirts of that city with the village of Parkhead. It is a dingy disagreeable place, inhabited principally by weavers. Here are an Extension church and a Free church; the former in the patronage of the Church Building Society, and the latter yielding, in 1853, an annual amount of £217 6s. 1½d. Population of the village in 1851, 2,152.

CAMPBELL (CASTLE). See **CASTLE-CAMPBELL**.

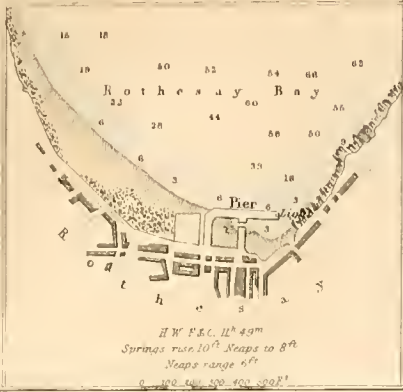

CAMPBELTON, a parish, containing a royal burgh of the same name, and also the villages of Dalintober and Drumclembe, in the Kintyre district of Argyleshire. It is bounded on the north by the parishes of Killcan and Saddell; on the east, by the frith of Clyde; on the south, by the parish of Southend; and on the west by the Atlantic ocean. Its length southward is 12½ miles; its greatest breadth is 6 miles; and its superficial area is about 43,750 acres. It is narrowed in the middle by the bay of Machirhanish on one side, and the loch of

Kilkerran, or harbour of Campbelton, on the other. These bays run inland a considerable way, leaving between the two oceans on the east and west a large plain of 4 miles in length, by 3 in breadth, and not 40 feet above the level of the sea. From this plain both ends of the parish gradually rise into hills, which attain the height of 1,200 feet. Bear, barley, and potatoes, are the principal crops. There is abundance of coal at Dalvaddy, a hamlet at the distance of 3 miles from the town of Campbelton, on the road to Machirhanish bay; and a canal has been cut to convey it to the town; but it is of an inferior quality, so that a large quantity of the coal used in the town is imported. Porphyry, and fuller's earth or soap-rock, exist in this parish. The Duke of Argyle is the most extensive landowner; but there are eleven others,—nine of whom reside in the parish, mostly in pleasant mansions, amid beautifully wooded grounds. The total real rental, exclusive of the burgh, is about £18,570. The rent of arable land is from £2 to £4 near the town, and from £1 to £3 in other parts; but only about two-thirds of the entire area are arable, the rest being pasture and heath. Population in 1831, 9,472; in 1861, 8,149. Houses, 1,121. Assessed property in 1815, £2,800.

This parish is in the presbytery of Kintyre, and synod of Argyle. It consists of four original parishes united: viz., Kilkerran, Kilkivan, Kilchusland, and Kilmichael. The charge is collegiate; and there are two parish churches, both situated in the town of Campbelton; in one of which, accommodating 1,525 persons, Gaelic is always preached; and in the other, seating 1,083, English. The two ministers officiate in the two churches, taking the forenoon and afternoon alternately. The Duke of Argyle is patron of both livings. The stipend of each minister is £146 15s. 11d.; but the annual value of the glebe, belonging to the 1st charge, is £89; that of the second £26 10s. There is a Free church in the town; and the yearly sum raised in connexion with it in 1861 was £825 1s. 11d. The other places of worship are an United Presbyterian, an Independent, a Baptist, a Methodist, an Episcopalian, and a Roman Catholic; and all are situated in the town. Sittings in the United Presbyterian church, 1,200; in the Independent chapel, 300; in the Roman Catholic chapel, 200. Attendance at the Episcopalian chapel, from 80 to 130. The parochial schoolmaster is also the burgh schoolmaster, and has a salary of £34 4s. 4½d., with house and garden and about £140 fees. There are also in the town schools of industry with two teachers, a female school of industry with two teachers, a Free church grammar school with two teachers, and a school of the Society for Propagating Christian Knowledge with one teacher, and in the village of Dalintober a Free church school with two teachers. There are also several private schools.

The tract which constitutes this parish, together with the contiguous parts of Kintyre, was at an early period the seat of a crowded population, and the theatre of great events. The Dalriads who founded the Scottish monarchy set their earliest footing on this tract; and here, as well as in Lorn, they matured the great social strength which conquered the kingdoms of Pictavia and Strathclyde, and made the Scottish name commensurate with Caledonia. See the article **DALRIADS**. St. Kieran, a preacher of high fame, who enjoyed the special esteem of St. Columba, the founder of the Culdees, and who afterwards figured in history as the apostle of Kintyre, followed early in the wake of the Dalriadan colonists, and took up his abode in a cave which is still called after him Cove-a-Chiaran situ-

TROON

CAMPBELLTOWN BAY AND HARBOUR

ated four miles from Campbelton, and having in its centre a small circular basin, which is always full of pure water dropping into it from the roof. A church was soon founded at the head of what is now called Campbelton harbour, and took the name of Kilkerran, after St. Kieran, and gave that name also to the harbour or loch. Churches and chapels were speedily multiplied in all parts of the district, to correspond to the density of the population, and the deep devotion of the age; and though all were originally of frail structure and perishable material, in keeping with the rude architectural condition of the period, all seem to have been succeeded, in due time, by substantial stone edifices, with, in very many instances, the status of parochial churches. There are still within the parish of Campbelton the ruins of the parish churches and part of the walls of several small chapels, some or all of them probably belonging to the 12th century, besides names, traditions, and vestiges of others of apparently earlier dates. Great must have been the changes which the early edifices witnessed during the struggles which preceded the ascendancy of the Scottish power; and greater still must have been the changes which followed that ascendancy; for when Kenneth removed the seat of his government from the bleak western Highlands to the blooming eastern Lowlands, Kintyre, in common with Lorn and the Hebridean Islands, assumed the character of a remote province, and began to be an easy and frequent prey to Danish and Norwegian invaders. But the Maedonalds, the Lords of the Isles, who maintained contests for centuries both with these invaders and with the Kings of Scotland, had their origin in this district, from the famous Somerled the Great; and they restored it for a long time to much of its former consequence, rebuilt and multiplied its churches, and erected on the site of the present town of Campbelton a castle and a village under the name of Ceannloch Chille Chiaran, or Head of Loch Kilkerran, or, abbreviatively Loch-head,—a name which the place still retains among the natives of the surrounding country. “James IV. held a parliament in Kintyre, where he emancipated part of the vassals of the M'Donalds, and granted them *de novo* charters, holding of the Crown; and, in 1536, to curb the license, and subdue the haughty spirit of the chieftains and their vassals, James V. found it necessary to make a voyage to the Isles. During this expedition, the King repaired the fortalice of Kilkerran, and left in it a garrison to overawe M'Donald of Kintyre; but the bold chieftain and his followers were not to be thus intimidated. Before the King had got clear of the harbour, they added insult to rebellion, took possession of the fortalice, and hung the governor from the walls as a signal of their conquest. The policy of a weak government was then adopted,—that of commissioning one tribe to subdue and chastise the other. With this view, the lordship of Kintyre, then in possession of Sir James M'Donald, was granted to the family of Argyle.” The castle of Loch-head became then one of the seats of that family; and it was the place from which the famous Earl of Argyle, in 1685, issued his declaration of hostilities against James II. The contiguous village probably soon took the name of Campbelton, or unabbreviatedly Campbelltown, from the new proprietor, yet does not appear on record under that name till 1680, when a circuit court of justiciary was held in it, and perhaps did not even then confer that name on the parish,—which long after the consoli-

dation of the four ancient parishes comprised in it, was officially called the parish of Loch-head. The site of the old castle is now occupied by the English parish church.

The ROYAL BURGH OF CAMPBELTON is situated 10 miles north-east by north of the Mull of Kintyre, 35 west-south-west of Ayr, 49 south by west of Lochgilphead, and 71½ south-south-west of Inverary. It is a large and flourishing town, extending in a semicircular form around the head of the harbour, and having a number of villas scattered at either end along the declivities. The harbour is about 2 miles long and 1 broad, in the form of a crescent; with from 5 to 13 fathoms water, and excellent anchorage. “Fertile as is the west coast in harbours,” says M'Culloch in his Highlands and Western Isles, “there is not one that excels this; which, besides being spacious enough to contain a large fleet, is perfectly landlocked, easily entered, and has the best possible holding ground. The high and bold rock, Devar, covers it from the sea completely; being attached to the land on the south side by a spit of shingle, which has probably in later times rendered that a peninsula which was once an island. The rock produces some beautiful varieties of green as well as of brown porphyry, easily wrought, to be obtained of any size, and extremely ornamental when polished, but as yet neglected. To the south, the harbour of Campbelton is bounded by the high and bold mountain-land which forms the Mull of Kintyre; but, northward, the country is merely hilly. This latter boundary is bare and without beauty; but the southern one is not only bold and various, but is tolerably wooded, in a country where much wood is not expected. The hurrying ground of Kilkerran, named after Saint Kieran, is a very pleasing and not an unpicturesque spot. The castle of Kilkerran, which once stood here, is said to have been built by James V.; but it is imagined that there was a castle long before that, which was taken by Haeco in his expedition against Scotland. Campbelton is a place of considerable but variable commerce. It occupies the end of the bay on both sides, and is a town not only of a very reputable appearance, but of considerable extent and population. Some extensive piers serve for receiving the smaller class of shipping; and as it is always swarming with fishing-boats and vessels of different kinds, it forms one of the gayest and liveliest scenes imaginable. Detached villas and single houses, scattered about the shore and the sides of the hills, not only add much to the ornamental appearance of the bay, but give an air of taste and opulence to the whole. A more picturesque and beautiful situation for a maritime town could not well be found; and, from different points, it presents some fine views,—uniting all the confusion of town architecture with the wildness of alpine scenery, the brilliancy of a lake, and the life, and bustle, and variety incidental to a crowded harbour and pier.”

The town of Campbelton, previously a fishing-village and a burgh of barony, was erected into a royal burgh in 1700. The charter recites the statute 15th James VI., c. 267, by which it was statute and ordained, “for the better entertaining and continuing of civility and policy within the Hielaudes and Isles,” “that there be erected and builded within the bounds thereof, three hurches and hurrowetowns, in the maist convenient and commodious partes meet for the samen; to wit, one in Kintyre, another in Loehaber, and the third in the Lewis;” —and gives as reasons for the erection that Inverary, distant about 60 miles, was then the only royal burgh in Argyleshire; that the burgh of Campbelton was a very fit and convenient place to

be erected into a royal burgh; and that the Earl of Argyle, to whom the same belonged in fee, was anxious for the erection. The boundaries of the burgh, under said charter, are the loch of Campbelton, formerly called the loch of Kilkerran, on the east; the lands of Kilkerran and Corshill on the south; the lands of Moy on the west; and the lands of Ballingregau and Drumore on the north. The royalty of the burgh lies within the above bounds, and still belongs wholly in property to the Duke of Argyle, with the exception of certain feus held under him, and granted previous to the charter. It is stated that there have been no feus granted since the date of the charter. The sixth Duke and his predecessors were formerly in the practice of granting building leases to the inhabitants for the term of three or four nineteen years; but latterly it has been considered that such leases are precluded by the terms of the Argyle entail. Accordingly, since 1828, no leases have been granted for a longer period than nineteen years; and it is stated, that even when existing leases, originally for a longer endurance, fall in, no renewal is now granted for more than nineteen years. No part of the territory within the burgh is held in burgage. The parliamentary boundaries of the burgh, for the election of a member of parliament, extend considerably beyond the royalty, and include the adjoining lauds of Daliutobier, Lochend, and Dallaruin. The proprietors of these lands are in nowise fettered, and are in the practice of selling and feuing portions of their lands. The consequence is, that the town of Campbelton has been greatly extending beyond the royalty in the direction of these lands.

Lord Teignmouth, in his 'Sketches of the Coasts and Islands of Scotland,' gives us the following amusing piece of gossip relative to this thriving town: "The trees which adorn the shore of the bay were planted about 150 years ago by a Duchess of Argyle, who was extremely partial to Kintyre, fixed her residence chiefly at Campbelton, and inhabited a house on a site now occupied by a small farm-house, to which, however, it was much inferior. This lady was mother of the great Duke John; and she is said to have adopted the following singular method of acquiring, for the Duke, possession of the estates of the different proprietors. Campbells, to whom Argyle, after his conquest of Kintyre, had granted them:—On pretence of revising, as the story goes, she got into her hands and destroyed, the charters of these unsuspecting people. Thus the Argyle family revoked their original grants. Campbell of Kildalloig, ancestor of the present proprietor of this estate, pleasantly situated on the outside of the bay, owed the preservation of it to the shrewdness of a servant, who, suspecting the intentions of the Duchess, ran off, carrying away his master's charter, and restored it not to him, till the fraud became apparent. The family of this man were, till within few years, employed, in grateful recollection of his services, by the family at Kildalloig. The Duchess is said to have associated with herself, in her retreat, several young ladies of rank, whom she watched with Argus-eyed vigilance, lest they should stoop to alliance with the lairds of Kintyre. Impatient of restraint, they eluded her observation, and are said to have preferred humble freedom to splendid chains."

The public buildings of the town do not challenge any particular remark. But in the centre of the main street is an object of high artistic and antiquarian interest,—a very handsome granite cross, richly ornamented with sculptures in relief. It bears on one side this inscription in Saxon letters:

"Hæc: est: crux: Domini: Yvari: M: K:

Eachyrna: quondam: Rectoris: de Kyregan: et Domini: Andre: uati: ejus: Rectoris: de Killeoman: qui hanc crucem fieri faciebat." That is, "This is the cross of Mr. Ivar M'Eachran, formerly Rector of Kyregan, and of Mr. Andrew, his son, Rector of Killeoman, who caused this cross to be erected." Gordon—by report only—mentions this as a Danish obelisk, but does not venture its description, as he never saw it. The tradition of the town, however, is, that it was brought from Iona, or from Oronsay; although it has been stated in a lately published work, that the cross had probably not been removed far from where it was originally placed. A well of pure spring-water issues from a fountain in the cross; and around it, in general, the fish-market is held. A lighthouse, with a revolving bright white light visible 15 miles off, was erected on the rock Devar, in 1854, at a cost of £4,916.

A chief employment in Campbelton is the distilling of whisky. There are 25 distilleries, which consume annually about 304,000 bushels of barley, and 80,000 bushels of bear, and produce annually about 748,000 gallons of whisky. The consequent demand for barley and bear has occasioned these grains to be a staple produce of Kintyre. The whisky is in great repute for good quality, and is exported to the Scottish Lowlands, to England, to Ireland, and to foreign countries. The excise establishment comprises nearly 60 persons. The herring fishery in connexion with Campbelton was at one time of vast extent, but fell almost completely away on the withdrawal of the government bounty, and has again revived. The number of boats employed in it in 1842 was 150, and the number of barrels salted 1,897, besides great quantities sent off fresh to the Glasgow market. The cod and the ling fisheries also are considerable. The general commerce of the town in 1744 employed only two or three small vessels belonging to the port, but in 1843 employed 29, of aggregately 1,488 tons, besides two large steamers. The arrivals of sailing-vessels with cargoes in 1842 were 646, and the departures 365. The vessels belonging to the port in 1860 were 43 sailing ones of aggregately 1,525 tons, and 2 steamers of jointly 279 tons; and the commerce of that year was all coastwise, and comprised a tonnage of 45,479 inward and 35,835 outward. The principal imports are barley, timber, iron, coals, and general merchandise; and the principal exports are whisky, malt, draff, fish, black cattle, sheep, horses, potatoes, turnips, beans, and dairy produce. The town has a custom-house, a jail, two excellent inns, ten insurance offices, branches of the Royal, the Commercial, and the Clydesdale Banks, two circulating libraries, four friendly societies, a total abstinence society, and several charitable institutions. A weekly market is held on Thursday; and fairs are held on the first Thursday and last Wednesday of February, on the second last Wednesday of May, on the second Thursday of August, on the Wednesday before the third Tuesday of August, on the Friday before Kilmichael fair in October, and on the third Thursday of November. A regatta is held in September.

The burgh of Campbelton was formerly governed by a provost, two or three bailies, a dean of guild, a treasurer, and 12 councillors. Under the new municipal act it has 17 councillors. It has no incorporated trades with exclusive privileges. The corporation revenue in 1833 was £668, of which £282 were from ladle and causeway customs, and £120 from anchorage and shores dues. The debts were under £500; and the annual revenue generally left a balance for public improvements. The revenue, including the harbour, in 1860-1, was £1,790. The

annual value of real property in 1861-2 was £14,083. Campbelton joins with Ayr, Irvine, Inverary, and Oban in sending a member to parliament. Constitution in 1861, 224. Population in 1831, 4,869; in 1841, 5,028; in 1861, 6,085. Houses, 775.

CAMPBELTON, a village in the parishes of Ardersier and Petty, Inverness-shire. It stands on the coast of a picturesque bay, and on the old road from Inverness to Elgin, and also on the military road from Fort-George to Perth, $1\frac{1}{2}$ mile south-east of Fort-George, and $11\frac{1}{2}$ miles north-east of Inverness. It is a burgh of barony on the Earl of Cawdor's property, and takes its designation of Campbelton from his lordship's family name. The back street is the part belonging to the parish of Petty; and though quite dovetailed into the rest of the village, sometimes bears the separate name of Staartown or Stewarton. The whole village has a poor appearance, and suffers serious detriment from the want of a harbour; yet it occupies a sheltered situation, possesses a strong chalybeate spring, and is much frequented as a watering-place. A community of fishermen also inhabit its west end. On a high bank behind it are vestiges of an ancient British hill-fort,—supposed by some to have been a station of Oliver Cromwell's troops; and the view here is very extensive, embracing parts of 8 or 9 counties. The village has a small subscription library, several schools, and an United Presbyterian church. A great annual fair is held on the 12th of August. Population in 1861 of the entire village, 842; of the Ardersier section, 716.

CAMPERDOWN. See LIFE and BERVIE.

CAMP-KNOW. See BLANTYRE.

CAMPLE (THE), a stream in the county of Dumfries, which has its rise in Wedder law, in the parish of Morton, and running a south-west course of about 8 miles, falls into the Nith at Kirkbog. It flows principally on the boundary between Morton and Closeburn. It is an excellent trout-stream.

CAMPUIR, a hamlet in the parish of Kettins, about 2 miles south of Cupar-Angus, Forfarshire. In its vicinity are the outlines of an ancient camp, supposed to be Roman.

CAMPUIR, in Berwickshire. See LANGTON.

CAMPSAILE. See ROSENEATH.

CAMPSIE, a parish, containing the post-office villages of Lennoxtown, Haugh-Head, Milton, and Torrance, also the villages of Antermony, Birdston, and Clachan of Campsie, on the southern border of Stirlingshire. It is bounded on the south by Lanarkshire and Dumbartonshire, and on other sides by the parishes of Baldernock, Strathblane, Fintry, and Kilsyth. Its length southward is about 7 miles, and its breadth is about 6 miles. The water-shed of the Campsie Fells forms most of the northern boundary; and the river Kelvin, here a small sluggish stream, traces most of the southern boundary. Part of the Campsie Fells, rising to an extreme altitude of about 1,500 feet above sea-level, and cut into sections by deep romantic ravines and glens, constitutes the northern district; the South Brae, an eastern prolongation of the Kilpatrick Hills, with an extreme altitude of about 700 feet above sea-level, constitutes the western part of the southern district; and the strath of Campsie, not more than half-a-mile broad in the extreme west, but gradually expanding till it becomes lost in the great strath of the Forth and Clyde canal toward the south-east and the east, constitutes all the remaining district. Three principal burns, and upwards of a dozen smaller ones, come down from the fells, and form Glazert Water; and this runs across the low country to the Kelvin, at a point nearly opposite Kirkintilloch. The chief glens are famous for their

romantic picturesqueness,—comparatively long and very elaborate,—presenting at some points striking miniature resemblances to the Trosachs,—their bottoms strewn with fallen blocks, and their precipitous sides shaggy with wood, and at the same time shelved with artificial terrace-paths; and in addition to all their witchery and wild beauty, they are one of the best haunts for naturalists within easy reach of Glasgow; so that, altogether, they form a powerful attraction to every class of tourists from the great metropolis of the west. The Kirkton glen is the one most commonly frequented; but the Fin glen, on the whole, is little inferior, and for at least its volume of water and its cascades is superior. About 7,050 Scotch acres in the parish are upland, about 6,000 are arable, about 400 are under wood, and about 50 are covered with ponds and lochlets. The valued rental is £6,437. The most extensive landowner is Lennox of Woodhead,—whose mansion, Lennox Castle, a recently erected structure in the boldest style of the old Norman architecture, situated on the brow of the South Brae, nearly 500 feet above the level of the adjacent valley, is one of the most striking artificial features in a range of several parishes. There are seven or eight other considerable landowners, most of whom are resident. Coals and a very excellent limestone are extensively worked. Alum, copperas, Prussian blue, prussiate of potash, and some kindred substances are manufactured in an alum work which employs about 180 hands. Lennox-mill printfield, for almost every description of cloth and calico-printing, employs about 690; Kincaidfield, for bleaching and calico-printing, about 375; Lillyburn printfield, for linen and calico-printing, from 150 to 190; Glennill bleachfield, about 90; and Clachan bleachfield, about 35. There formerly was a distillery at Milton. The road from Rippen to Glasgow passes through the parish, and a branch of the Edinburgh and Glasgow railway, called the Campsie branch, leaves that railway at a point about $6\frac{1}{2}$ miles from Glasgow, passes by Kirkintilloch and Milton, has stations at these two places, and terminates at Lennoxtown. Several trains run daily on this branch; and coaches run between its Lennoxtown terminus and Stratblane, Balfon, and Aberfoyle. The parish of Campsie, previous to 1649, when one portion of it was annexed to the parish of Kilsyth, and another portion to the parish of Baldernock, extended from Garrel Glen to Craigmaddie Moor, and was fringed along the south by a morass impassable in winter; and it then formed a very sequestered district—the eastern division of the ancient thaneship of the Lennox—and was not a little marked by peculiar manners and customs. So late as the year 1744, the payment of Black mail was here made to Macgregor of Glengyle, for protection against the depredations of the Highland freebooters. The last instance in this district of a baron of regality exercising the jurisdiction of pit and gallows over his dependents, is said to have been exerted by the Viscount of Kilsyth, in the year 1743; when one of his own servants was hanged for stealing silver-plate from the house of Banaloich, upon a hill on the barony of Banaloich styled the Gallow hill. Mr. Bell of Antermony, well-known by his Travels in China and Persia, was a native of this parish; where he inherited a considerable paternal estate, and died in 1780, at the venerable age of 89. Mr. James Bell, a man of very considerable literary attainments, and well-known for his extensive and profound knowledge of ancient and modern Asiatic geography, spent the latter years of a retired and unostentatious life in a small cottage in this parish; and his ashes now rest in the beautifully sequestered burying-ground at the clachan of Campsie.

Here are traces of two ancient Caledonian forts, called the Meikle Reive, and the Maiden Castle, both of them placed directly opposite the Roman wall called Grahams Dyke, near which several urns containing ashes and burnt bones have been discovered. Population of the parish in 1831, 5,109; in 1861, 6,483. Houses, 665. Assessed property in 1843, £18,140.

This parish is in the presbytery of Glasgow, and synod of Glasgow and Ayr. Patron, the Crown. Stipeud, £285 3s. 7d.; glebe, £13 15s. Unappropriated teinds, £720 18s. 2d. There are three parochial schoolmasters, at respectively Clachan, Craighhead, and Torrance, who have amongst them salary to the amount of £51 6s. 6³/₄d., besides other emoluments. The parish church stands at Lennoxtown, is a handsome Gothic structure built in 1828, and contains 1,550 sittings. An United Presbyterian church at Lennoxtown was built in 1784, and contains 593 sittings. There is also a Roman Catholic place of worship at Lennoxtown. There are missionary stations at Torrance and Milton, each served by an assistant minister, supported by the congregation of the parish church. There are several private schools, a public library, a mechanics' institution, and several friendly societies.

THE CLACHAN OF CAMPSIE stands at the opening of the Kirkton glen, 1½ mile north-west of Lennoxtown, and 3½ miles east of Strathblane. Here stood the old parish church; and here are still the heltry of that building, the burying-ground, and the manse. Population, 138.

CAMPSIE FELLS, a range of hills in Stirlingshire, extending from the vicinity of the town of Stirling to the vale of the Blane. But after being briefly interrupted by that vale, it is prolonged through Dumbartonshire to the Clyde at Dumbuck by the Kilpatrick Hills. It may therefore be understood as including these; and thus understood, it forms the south screen of all the part of Strathmore between the Forth and the Clyde; and at the same time from its other face overlooks most of the great strath of the Forth and Clyde canal, and commands on that side very extensive and magnificent views of the Lowlands. Its general direction is from east-north-east to west-south-west. Its extreme length may be about 25 miles; its average breadth 8 miles. The face of the hills is broken with erags and glens; and on the summit and back part, is a deep moor-ground interspersed with moss. The hills have the appearance of volcanic or igneous origin; and in many parts rude basaltic pillars are seen, particularly on the road from Campsie, near the village of Fintry. In many places the hills appear stratified; but the strata dip much, and are sometimes nearly perpendicular to the horizon. The secondary or stratified tracts abound with coal, limestone, freestone, ironstone, indurated clay, and marl. In one place a dozen or more strata of ironstone, with alternate layers of argillaceous schist, may easily be counted. In several places there are appearances of copper and of lead. The highest ridge of the Campsie Fells occurs between the sources of the Carron and the Endrick, where they are elevated 1,200 feet from its base, the elevation of which is about 300 feet above the level of the sea, making the height in all 1,500 feet.

CAMPSIE LINN. See CARGILL.

CAMPSTER, a locality in the south-west of the parish of Wick, Caithness-shire, where fairs are held on the second Monday of January, and on the Tuesday in March after St. Patrick, old style.

CAMPTOWN, a post-office station in the parish of Jedburgh, Roxburghshire. The place takes its name from the vestiges of an ancient camp.

CAMSTRADDEN, an estate in the parish of Luss, now annexed to the estate of Luss, Dumbartonshire. The hay of Camstradden, in Lochlomond, is situated a little south of the village of Luss, and opposite Inch-Taavanich; and Camden describes this as containing an island, with the house and orchard of the proprietor of this estate; but the place of that island is now marked only by a heap of stones, seen when the lake is low.

CAMUSTOWN, a small village in the parish of Mouikie, about ¼ of a mile south of the church of that parish, Forfarshire. Camus cross, a large upright stone, is said to point out the place where Camus, a Danish general, was slain and buried after the battle of Bartie, in 1010. See MONIKIE.

CANAAN. See BLACKFORD-HILL, and MORNINGSIDE.

CANAL. See articles ABERDEEN CANAL, ARBROSSAN, CALEDONIAN CANAL, CRINAN CANAL, FORTH AND CLYDE CANAL, MONKLAND CANAL, and UNION CANAL.

CANDAR (THE), a rivulet of Lanarkshire, which rises in the parish of Lesmahagow, and runs about 6 miles northward to the Avon, at a point about 1½ mile north-east of the village of Stonehouse.

CANDIDA CASA. See WHITHORN.

CANDLE-HILL. See RUTHVEN.

CANDREN-WELL. See PAISLEY.

CANISBAY, a parish, containing the post-office stations of Houna and Mey, and the detached places or townships of Duncausby, Freswick, Gills, Houna, East Mey, and West Mey, in the north-east of Caithness-shire. It has a triangular outline, and is bounded on the north by the Pentland frith, on the east by the German ocean, and on the inland side by the parishes of Dunnet, Bower, and Wick. The island of Stroma, in the Pentland frith, also belongs to it. See STROMA. The area of the whole parish is about 50 square miles. The coast line of the mainland district is about 18 miles in extent. Duncausby Head abuts at its great angle between the German ocean and the Pentland frith. See DUNCAUSBY. For about 5 miles south of that promontory, the Wart or Warth hill extends its base to the sea brink. The coast is in this quarter exceedingly bold, and the wild and varied magnificence of the rocks is peculiarly striking to the eye of a stranger. Beyond this, for about a mile, the coast subsides into a beautiful sandy beach winding around the bay till it reaches the mansion-house of Freswick, where it resumes its rocky and picturesque boldness, which continues with little variation till it reaches the southern boundary of the parish. The lands adjacent to the shore, for the last 3 miles, are all under cultivation, and the soil is luxuriant and productive. The northern coast has little of that stupendous boldness for which the eastern one is so remarkable. Westwards from the Head, for 2 miles, the walk is extremely pleasant, and great luxuriance of growth prevails, from the shore to about a mile inland. The beach itself consists wholly of shells and shell sand of the purest white. In the middle of this delightful walk, you approach the celebrated residence of John O'Groat [see article JOHN O'GROAT'S HOUSE]; but, although his name be still illustrious here, and has been bequeathed to certain shells, called Johnny Groat's buckies, with which the beach is here strewn, the spot is scarcely distinguishable where he dwelt. Westward from the burn of Duncausby to Houna, moss prevails to the sea brink; but from Houna to Gills is one of the most fertile districts in the parish. The parish-church is situated in the middle of this latter district, on a green rising ground within 200 yards of the shore, the manse being about a quarter of a mile inland from the church. Mey, part of the pro-

perty of the Earl of Caithness, terminates the parish on the west. This is a populous and fertile district. The bays upon the coast are those of Gills, Duncansby or Dungsby, and Freswick; in all of which, if the weather be moderate, vessels can lie in safety and take in their cargoes, but none of them are eligible stations in rough weather. Gills bay is preferable to the rest. A celebrated tide runs near Barrogill castle, called 'The Merry men of Mey,' very noisy and obstreperous indeed, but no subject of merriment to vessels, as they have to go off their track many leagues sometimes to avoid the vortex, and, when caught, are swept back on a stream, like the rapids of a great river. This is said to have been the scene of Grey's 'Fatal Sisters,' translated from the Norse tongue.

Now the storm begins to lower,
(Haste, the loom of hell prepare!)
Iron sleet of arrowy shower
Hurries in the darken'd air.

All the inland districts are low and level. The Warth hill, on the eastern coast, is of considerable height and magnitude, but is the only one in the parish deserving the name. The loch of Mey, in the north-west corner of the parish, is about 2 miles in circumference. There is no river, and only a few rivulets, in the whole parish; but there are chalybeate mineral and fresh water springs in abundance. The valued rent amounts to £3,855 3s. 6d. Scotch. The total yearly value of raw produce was estimated in 1840 at £9,250. The Earl of Caithness, Sinclair of Freswick, and Sinclair of Brabster, are the only landowners. Brabster is an inland property; all the other cultivated lands stretch along the coast, extending, at an average, about half-a-mile from the shore. There are three popish chapels mouldering into desolation, one at Freswick, another at Brabster, and a third at St. John's Head. Some superstitious rites, now in total disuse, were wont to be performed by the ignorant vulgar, on particular days, at these ruins. St. John's Head, upon the north coast, is one of the pleasantest spots in the parish. It affords evident tokens of having been, in former ages, a residence of respectability; from a burying-ground and the vestiges of an old chapel in the neighbourhood—now in total ruins—as well as from the name it bears, it would seem to have been consecrated to religious purposes. The vestiges of a ditch and drawbridge defending it on the land side, show it to have been occupied as a place of strength and security. Betwixt Brabster and Freswick there is a deep hollow, called, in the dialect of the parish, the Wolf's geo, which must have derived its name from being the haunt of wolves in former times. There are other circumstances handed down by tradition, which tend to prove, that this ravenous animal was once an inhabitant of Canisbay. Barrogill castle, belonging to the Earl of Caithness, is an old aristocratic pile. It has, says Miss Sinclair, "all the internal elegance of a house in London, and all the exterior dignity of an ancient Highland residence. Some admirable improvements have been recently made by Burn; and the staircase, which was formerly outside, as high as the drawing-room floor, is now thrown into the house, while several windows have been thrown out, which were greatly wanted. In these peaceful times, when there is no longer any necessity for a castle to be fortified, it is pleasing to see the gloomy strength of former days exchanged for a more smiling aspect; and here we found some first-rate pictures by the best masters, a haunted apartment, abundance of interesting family portraits, and a forest of the very best trees that Caithness can produce." The ruins of three ancient towers or castles are still to be

seen,—one in Mey, another south of the present mansion-house of Freswick, and a third on the west side of the island of Stroma,—all built upon rocks rising out of the sea, and formerly occupied as places of defence. The principal public roads in the parish are those from Houna southward to Wick, and westward to Thurso. From Houna the ferry-boat crosses with the mails to South Ronaldshay in Orkney. The distance—being the shortest betwixt Caithness and Orkney—is reckoned 12 miles. Although the Pentland frith is deservedly accounted the most tempestuous piece of sea around Britain, it is remarkable how few accidents happen in crossing it. The danger it threatens suggests the means of preventing it. The time of tide is observed to a minute in putting out to sea; the boats are strong and of good construction; and the boatmen perfect masters of their business, and acquainted from their infancy with every circumstance respecting the variation of the tides they have to go through. See PENTLAND FRITH. Sometimes, however, the communication even with the adjacent island of Stroma, is suspended for weeks. In the summer-season there is almost a continued communication betwixt Caithness and Orkney in the traffic of horses. Colts from the highlands of Caithness, from Sutherland and Strathnaver, are sold to Orkney; and these very colts, when past their prime, are again brought from Orkney, and re-imported into Caithness. By far the greater number of these cross to and from the shores of Canisbay, on account of the shortness of the passage. Population in 1831, 2,364; in 1861, 2,730. Houses, 528. Assessed property in 1843, £3,674 12s. 8d.

This parish is in the presbytery of Caithness and synod of Sutherland and Caithness. Patron, Sinclair of Freswick. Stipend, £205 10s. 1d.; glebe, £6. Unappropriated tithes, £151 7s. 2d. Schoolmaster's salary, £34 4s. 4½d. The parish church is an old cruciform building, repaired in 1833, and contains 512 sittings. There is a Free church, with an attendance of 500; and the yearly sum raised in connexion with it in 1853 was £227 5s. 1d. The Independents have a place of worship at Freswick; and the Baptists a small one at the mill of Mey. There are five non-parochial schools.

CANISP. See ASSYNT.

CANNA, one of the four islands of the Hebrides which form the parish of Small Isles in Argyleshire. It is 3 miles north-west of Rum, and 12 south-west from the nearest point of Skye. It is about 4½ miles long and 1 broad; containing, with the contiguous island of Sanda, 429 arable acres, and 1,794 acres of green pasture. The gross rental in 1826 was £540 12s. 10d. Its surface is partly high and rocky, but in no place rising more than 800 feet above sea level; and partly low, and tolerably fertile. The land is higher towards the west end; about the middle it subsides into a flattish neck, from which it rises again towards the east. The horned cattle of Canna grow to a larger size than any in the neighbouring islands, owing to the fineness of the grass. There is little heath. Potatoes chiefly are cultivated. Cod and ling abound on the coast; and the harbours are conveniently situated for the fishing-grounds. On the south-east side of Canna lies Sanda, or Sanday, separated by a channel which is dry at low water. See SANDA. Between this island and Canna lies the well-known and much frequented harbour of Canna, 30 miles distant from that of Eigg. A great many basaltic pillars are to be seen in Canna, particularly on the southern side, where the basaltic structure appears in different ranges rising in a succession of terraces. One of the hills to the north-west of the harbour, called the Compass hill, is re-

markable for its effects on the magnetic needle. When Dean Monroe wrote, Canna belonged to the abbot of Icolmkill. It is now the property of Mr. Macneill, who has done much for the amelioration of its population, by encouraging emigration, preventing subletting, and not allowing any public-house upon it. All the inhabitants are Roman Catholics; and they have among them a resident Roman Catholic clergyman. Population in 1831, 264; in 1861, 127. Houses, 28.

CANNICH (THE), a small river partly of Ross-shire, but chiefly of Inverness-shire. It rises in Ross-shire, about 9 miles north-east of the head of Lochcarrou, runs about 4 miles southward to Inverness-shire, soon expands there into Loch Moyley, and runs altogether about 14 miles north-eastward and eastward in that county, to a confluence with the Affarie, where it and that stream form the Glass. The glen traversed by the Cannich, and partly occupied by Loch Moyley, is called Glen-Cannich.

CANNISBURN, a hamlet in the parish of East Kilpatrick, Dumbartonshire.

CANNOR (LOCH), a lake in the parish of Glenmuick, Aberdeenshire, about 3 miles in circumference, and containing several small islands; on the largest of which—about an acre in extent—there formerly stood a small fortress occasionally occupied as a hunting-seat by Malcolm Canmore.

CANONBIE, or CANOBY, a parish, containing a post-office village of its own name, on the eastern border of Dumfriesshire. It is bounded on the south by England, on the east by Roxburghshire, and on the other sides by the parishes of Ewes, Langholm, and Half-Morton. Its length east-north-eastward is 9 miles; its greatest breadth is 6 miles; and its area is 36½ square miles. It may be considered as the low lands of Eskdale; for its highest grounds—which rise gradually to the east and north-east—as contrasted with the elevated peaks in the contemprinous parishes cannot be called mountains. At the same time, the surface is very uneven, and diversified by ridges and flats, excepting the haughs on the banks of the Esk. The central part is intersected southward by the Esk; and the great road from Edinburgh to Carlisle runs through this district in the same direction, amidst beautifully picturesque scenery. The soil is a light loam, sheltered by a profusion of wood in every part. Besides the Esk, this parish is watered by the LIDDEL, which divides it from England, and the TARRAS, remarkable for its rugged channel and romantic scenery, which divides it from Langholm: see these articles. The Archerbeck and Rowanburn are tributaries of the Liddel. The number of acres occupied by wood cannot be less than 1,500, of which oak is the chief. A number of orchards were formed here about 55 years ago by the Duke of Buccleuch, and have all succeeded well. Freestone, limestone, and coal, are abundant. At Rowanburn an excellent seam of coal, 9 feet thick, is wrought; and another seam of 7 feet has recently been discovered. There are extensive lime-works at Harelawhill and Halhouse. There is a strong chalybeate spring at Heathet, on the Cumberland side of the Liddel; and a spring on the banks of the Tarras which has a petrifying quality. A branch railway is in contemplation from this parish to the Caledonian railway, at Lennox-town, a short way south-east of the Greta station. The Duke of Buccleuch is the only landowner.

Some ruins of a convent or priory, built before the year 1165, are still to be seen at Halgreen—or, perhaps, rather Haly or Holy-green—about half-a-mile to the east of the parish church. The convent and

its church are said to have been demolished by the English, after the battle of Solway Moss; which is not improbable, as the reason assigned in King Henry's manifesto for committing hostilities upon the Scottish borders, not long before that event, was a pretended claim to the parish of Canonbie, as part of the English territory. Part of the old wall of the church still remains; and in this is a small circular arch which belongs to the 11th or 12th century, and probably marks the place of sepulchre of some prior, or person of distinction. This parish, in consequence of having been exposed to the incursions of the English borderers, presents many vestiges of strongholds; although there is only one whose walls are yet entire, namely, the tower of Hollows, once the residence of the famous border chieftain, Johnnie Armstrong, in the reign of James V. It is a roofless strength, built of red sandstone, in the form of an oblong square, about 60 feet by 46. "Amongst the clans on the Scottish side, the Armstrongs were formerly one of the most numerous and potent. They possessed the greater part of Liddesdale and of the debateable land. All along the banks of the Liddel, the ruins of their ancient fortresses may still be traced. The habitual depredations of this border-race had rendered them so active and daring, and at the same time so cautious and circumspect, that they seldom failed either in their attacks or in securing their prey. Even when assailed by superior numbers, they baffled every assault by abandoning their dwellings, and retiring with their families into thick woods and deep morasses, accessible by paths only known to themselves. One of their most noted places of refuge was the Terras-moss, a frightful and desolate marsh, so deep that two spears tied together could not reach the bottom. Although several of the Scottish monarchs had attempted to break the chain which united these powerful and turbulent chieftains, none ever had greater occasion to lower their power, and lessen their influence, than James V. During his minority, the kingdom was torn by their dissensions, the laws were disregarded, and even the rights of the sovereign were deeply infringed. But no sooner did this gallant young prince free himself from the vassalage in which he had been held by Douglas Earl of Angus, and his brother, than he began to reform the abuses in his kingdom with such spirit and zeal, as manifested a determined resolution to suppress them. After banishing the Douglasses, and restoring order and tranquillity to the interior, he next directed his attention to the due administration of justice on the Border. He accordingly raised a powerful army, chiefly composed of cavalry, 'to danton the thieves of Teviotdale, Annandale, Liddesdale, and other parts of the country.' Aware, however, that these depredators could never be effectually crushed, unless the chieftains who protected them were properly secured, he took the necessary precaution of forfeiting, or committing the whole of them to ward, with the exception of Cockburn of Henderland, and Scott of Tushielaw commonly called the king of the Border, who were publicly executed. About the beginning of June 1529, the King departed from Edinburgh at the head of his army, and marched rapidly through Ettrick Forest, and Ewesdale. During this expedition, John Armstrong of Gilnockie, the hero of the ballad, presented himself before the King with thirty-six of his followers, in expectation of obtaining pardon. This Armstrong, as we are told by Pitscottie, 'was the most redoubted chieftain that had been for a long time on the borders either of Scotland or England. He ever rode with twenty-four able gentlemen, well-horsed; yet he never molested any Scottish man.' It is said

that, from the borders to Newcastle, every Englishman, of whatever state, paid him tribute. Glenockie came before the King with his foresaid number, (thirty-six,) richly apparelled, trusting that, in respect of this free offer of his person, he should obtain the King's favour. But the King, seeing him and his men so gorgeous in their apparel, frowardly turned himself about and had them take the tyrant out of his sight, saying, 'What wants that knave that a King should have?' John Armstrong made great offers to the King, that he should sustain himself with forty gentlemen ever ready at his service, on their own cost, without wronging any Scottish man. Secondly, that there was not a subject in England, duke, earl, or baron, but, within a certain day, he should bring him to his majesty, either quick or dead. At length he, seeing no hope of favour, said very proudly, 'It is folly to seek grace at a graceless face; but, had I known this, I should have lived on the borders in despite of King Henry and you both; for I know that King Harry would down-weigh my best horse with gold to know that I were condemned to die this day.' (Lindsay of Pitseottie's History, p. 145.)—This execution is also noticed by Hollinshead, who says, that, 'In the month of June, 1529, the King, with an army, went to the borders, to set order there for better rule to be kept, and to punish such as were known to be most culpable. And hereupon, he caused forty-eight of the most notable thieves, with their captain, John Armestrang, to be apprehended; the which, being convicted of murder, theft, and treason, were all hanged on growing trees, to the example of others. There was one cruel thief among the rest, who had burned a house with a woman and her children within it; he was burned to death. George Armestrang, brother to John, was pardoned, to the end he should impeach the residue, which he did; so they were apprehended by the King's commandment, and punished for their misdoings, according as they had deserved.' (Hollinshead's 'Scottish Chronicle,' vol. ii. p. 182.) This historian appears, however, to have confounded John Armstrong and his party with the whole other depredators who were executed during the march. The place where John Armstrong and his followers suffered, was at Ceardenig chapel, about 10 miles above Hawick, on the high road to Langholm. They were buried in a desert churchyard, where their graves are still pointed out. The peasantry in these districts hold the memory of John Armstrong in high estimation, and scruple not to affirm, that the growing trees mentioned by the historians withered away as a manifest sign of the injustice of the execution. They likewise assert, that one of Armstrong's attendants, by the strength and swiftness of his horse, forced his way through the ranks of the surrounding host, and carried the tidings of the melancholy fate of his master and companions to Gilnockie castle. Although George Armstrong of Mangertou had received a pardon from the late sovereign, the death of his brother John was neither to be soon forgotten, nor the descendants of the sufferers easily to be pacified. Indeed the hostile and turbulent spirit of the Armstrongs was never broken or suppressed, until the reign of James VI., when their leaders were brought to the scaffold, their strongholds razed to the ground, and their estates forfeited and transferred to strangers. So that, throughout the extensive districts formerly possessed by this once powerful and ancient clan, there is scarcely left, at this day, a single landholder of the name. The death of this redoubted border hero is noticed by Buchanan. It is likewise frequently alluded to by the writers of that age. Sir David Lindsay of the

Mount, in his 'Satyre of the Three Estates,' introduces a pardoner, or knavish dealer in reliques, who, in enumerating his halie wares, is made to say,

Here is ane coird baith grit and lang,
Quik hangit John the Armestrang,
Of gude hemp saft and sound;
Gude Haillie peopill, I stand ford,
Quha ever beis hangit with this coird,
Neids never to be dround!

In the 'Complaynt of Scotland,' John Armstrong's dance is also mentioned as a popular tune. The celebrated ballad of 'Johnie Armstrang' was first published by Allau Ramsay, in his 'Evergreen,' in 1724, who tells us, that he copied it from the mouth of a gentleman of the name of Armstrong, who was the sixth generation from the above John." [Stenhouse's Notes to the 'Musical Museum,' vol. iv. pp. 328—332.] See GILNOCKIE. Near Penton Linns, a romantic spot on the Liddel, was another Border stronghold, called Harelaw tower, once the residence of Hector Armstrong, who betrayed his guest, the Earl of Northumberland, to the Regent Murray.—The village of Canonbie stands on the right bank of the Esk, and on the road from Edinburgh to Carlisle, amid beautiful scenery, $5\frac{1}{2}$ miles south-south-east of Langholm. The parish church, an elegant building, stands, in its vicinity, on the opposite bank of the river. Population of Canonbie parish in 1831, 2,997; in 1861, 3,219. Houses, 593. Assessed property in 1843, £9,098 8s. 7d.

This parish is in the presbytery of Langholm, and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend, £236 12s. 6d.; glebe, £20. Unappropriated teinds, £1,066 7s. 6d. Schoolmaster's salary, £31 6s. 6d., with £35 fees. The parish church was built in 1822, and contains 1,000 sittings. There is a Free church, with an attendance of from 400 to 450; and the yearly sum raised in connexion with it in 1853 was £99 1s. 8½d. There are four non-parochial schools. The original church of Canonbie stood on the banks of the Liddel, and was often called the church of the Liddel. A subsequent church stood on the peninsula between the Liddel and the Esk, and was for several centuries till the Reformation a cell of the abbey of Jedburgh. In 1703, the half of the old parish of Morton was annexed to the parish of Canonbie.

CANONGATE, a large and ancient suburb of Edinburgh, constituting all the eastern part of the Old Town, and possessing the separate jurisdiction of a burgh of regality. The parish of Canongate also comprises Holyrood and Arthur's Seat. See the articles EDINBURGH, HOLYROOD, and ARTHUR'S SEAT.

CANONMILLS, a small old suburb of Edinburgh—formerly a mile distant from the city, but now contiguous with the northern outskirts of the New Town—situated on the right bank of the Water of Leith, on the road to Trinity and Granton. Here are extensive flour-mills, and tan works. Here also are a tunnel and engine-houses of the Edinburgh and Northern railway. See EDINBURGH.

CANT HILLS. See SHOTS.

CANTY BAY. See BASS (THE), and BERWICK (NORTH).

CANTYRE. See KINTYRE.

CAOLSPORT, a sea-board district of the parish of South Knapdale, Argyleshire. It comprises the point of Knap, and a fine loch on the Atlantic ocean, which abounds with fish of various kinds. It has also a commodious harbour.

CAOLVALLOCH, a hamlet in the parish of Weem, Perthshire.

CAPEHOPE. See HOUNAM.

CAPELAW, one of the Pentland hills, with an

altitude of 1,550 feet above sea-level, in the parish of Colinton, Edinburghshire.

CAPE HILLS. See NEWHILLS.

CAPE WRATH, a celebrated head-land, in the parish of Durness in Sutherlandshire, forming the north-west point of Scotland, in 58° 37' N. lat., and 5° W. long. It is a fine promontory of granitic gneiss, towering up in a pyramidal form to the height of 300 feet, and standing boldly out into the waves. "Nothing," says Maculloch, "can exceed the elegance and majesty of its form, declining towards the sea in a second and much lower pyramidal rock; the whole forming an outline as graceful as it is unexpected, and as grand as it is appropriate. No vessels approach this shore, as the rapidity and turbulence of the tide are extreme; and as this is esteemed both a difficult and a dangerous point to double. The captain therefore thought fit to haul off and stand further out to sea; when, perceiving an aperture through the pyramid, by means of the spying glass, I proposed to the men to take the boat and stand in shore to examine it more nearly. As we approached the cape, an arched passage appeared through each pyramid; the largest being in the highest rock, and appearing to be about seventy or eighty feet high. Nothing could now be more magnificent; the lofty cliffs on our right hand being broken into a thousand rude forms, and the cape itself, with its double pyramid, towering above them and projecting far out from the land, like a gigantic wall,—a triumphal arch worthy of Neptune. The green sea was foaming all round the foot of the rocks; and, as we drew nearer, the low sullen roar increased, adding awfulness to a scene already terrific. We were soon sensible that we had been fast falling into the most rapid stream of the tide; and could now perceive that it was running with the velocity of a torrent, through both the passages and round the point. The men held their oars in the water, for they were now useless, and there was a dead silence. I saw that they were alarmed, and uncertain what to do; but it was plain, in less than a minute, that retreat was out of the question, and that if we attempted to weather the point, we might probably fail, and be lost upon it. I proposed to the boatswain to go through the arch; since a minute's hesitation would have carried us into the breakers, and left the history of Cape Wrath untold. To propose a choice where there was none, was mere matter of policy; but it served its purpose. Not a word was answered; and as the helm in my hand was now useless, all the oars were kept in the water, to steady and steer by through the boiling current; when, almost before we had time to think what was to follow, we were whirled through, I know not how, and, in an instant, found ourselves lodged in an eddy in a deep fissure of the cliff; the first, assuredly, who had ever performed this feat. Here, with the flood, there is some smooth water; out of which it is just possible to scramble up, on a ledge of rocks within, a deep fissure, and thus to study the scene at leisure. This situation too is very fine; the green waves surging with a hollow noise into this recess, which is only illuminated partially from without, and extends perpendicularly upwards the whole height of the cliffs, to an altitude of five or six hundred feet; just affording a glimpse of the sky. The aspect of the cape is here tremendously striking; as, from its proximity, it now towers over head, to an imaginary and unlimited height; while the turbulence and roar of the stream of tide through the arches, and the foaming of the sea against the cliffs, added indescribably to the effect. Nor was it a small addition, that this situation was attended with some anxiety, if not danger; as the rising of the wind, or the shifting of

the tide from the flood to the ebb, might have rendered it impossible to get off again." In 1828, a lighthouse was erected here at an expense of £14,000. It shows a white revolving light, which is elevated 400 feet above high water, and is seen at the distance of 24 miles in clear weather. In 1838, the expense of maintaining this light was £604 16s. 1½d. The Butt of Lewis on the south-west, and the Hoy-head of Orkney towards the north-east, can be seen in clear weather from the top of this lighthouse. See DURNESS.

CAPUTH, a parish partly in Forfarshire, but chiefly in Perthshire. It consists of a main body and several detached districts, and contains the post-office villages of Meikleour and Spittal-field, and also the villages of Caputh-Wester, Craigie, Fungarth, and Kincairn. The main body lies wholly within the Stormont district of Perthshire, and comprises the greater part of the rich plain of that district, together with picturesque tracts of upland on its western and northern skirts. It is bounded by the parishes of Dunkeld, Cluny, Lethendy, Blairgowrie, Kinclaven, Auchtergaven, and Little Dunkeld. Its length eastward is about 13 miles; and its breadth varies from 2 to 7 miles. The Tay forms its southern boundary for 10 miles; and the Lunan, with a chain of beautiful lakes formed by expansion of its water, drains and adorns the north. The soil along the Tay is a rich loam, extensively alluvial; that of all the other low arable grounds is light and dry; and, though that of the uplands is cold and wet, even it yields excellent crops. Clay-slate is extensively quarried for roofing-slates. Limestone also is abundant, but is only partially worked on account of dearth of coals. The most extensive landowner is Sir John Muir Mackenzie of Delvine, and there are about thirty others. The principal mansions are Delvine House, Meikleour House, Glendelvine, Snaigow, Stenton, Kincairn, and Hillhead. There are several antiquities, as cairns, druidical circles, Pictish forts, and Roman camps. A cairn lately removed, called Cairnmore, and situated about 1½ mile north-east of the church, measured 14 feet in height and 456 feet in circumference, and was believed to be the largest in the county. The detached districts belonging to Caputh are Batholmie, locally situated in the parish of Cargill; West and Middle Gormack, in Kinloch; East and West Logie, Raemore, Cairns, Chapelton, Meadows, and Crofty, in Clunie; and Craigtown of Dalrulzeon, in Kirk-Michael; all in the shire of Perth. And, South Bandirran, in Col-lace; Balbeuchly, in Auchterhouse; Broughty castle and fishings, and a small piece of ground at Mylnfield, near Dundee; and Fofarty in Kinnettes, where there is a field of about 4 acres, called, from time immemorial, the Minister of Caputh's glebe, and believed to belong to him, though not hitherto occupied; all in the shire of Forfar. These remote portions—with the exception of Dalrulzeon and Raemore—are now considered as belonging, *quoad sacra*, to the parishes in which they are respectively situated. Population of Caputh in 1831, 2,303; in 1861, 2,373. Houses, 462. Assessed property in 1843, £14,425 12s. 2d.

This parish is in the presbytery of Dunkeld, and synod of Perth and Stirling. Patron, the Crown. Stipend, £232 15s. 11d.; glebe, £22 10s. Schoolmaster's salary, £34 4s. 4d., with about £30 fees. The church crowns an eminence near the Tay, about midway between the two ends of the parish. It was built in 1798, and repaired in 1839, and contains 800 sittings. There are five private schools.

CAPUTH-WESTER, a village in the parish of Caputh, Perthshire. Population, 178.

CAR-. See CAER.

CARA, an island in the parish of Gigha and Cara, Argyllshire. It lies about a mile south of Gigha, and $3\frac{1}{2}$ miles west of Kintyre. It is about a mile in length, and half-a-mile in breadth. The shore is high and rocky, except at the north-east end, where there is a landing-place. The south end, called the Mull of Cara, which is the highest part of the island, is a perpendicular rock 117 feet in height. From the shore to the foot of this precipice there is a steep ascent, equal to 50 feet perpendicular, which makes the whole 167 feet. This rock contains a great deal of iron-ore, and in one place—which was struck with lightning about the year 1756—large pieces of metallic-ore were thrown down, which seemed to be a mixture of copper and iron. Close by this part of the rock is a cave 40 feet long, 5 high, and 5 broad, which communicates with another 37 feet in length, 9 in breadth, and 9 in height. The north-east part of the island abounds with rabbits. Adjoining the house of the farmer is an old chapel, 26 feet long, and 12 broad, with a Gothic arched door. See **GIGHA**.

CARADELL. See **SADDEL** and **SKIPNESS**.

CARALDSTON, or **CARESTON**, a small parish near the centre of Forfarshire,—bounded by Fearn, Menmuir, Brechin, Aberlemno, and Tannadice. Its post town is Brechin, 4 miles to the east. The parish is about 3 miles long southward, and about 1 mile broad. The surface is well-cultivated, with a gentle slope from north to south. The soil is deep and fertile; and the banks of the South Esk and the Noran, which unite in this parish, are beautifully ornamented with plantations. The estate of Careston formerly belonged to the Earls of Crawford, and after passing through various hands became the property of the Earl of Fife. The castle of Careston is a stately edifice,—mainly built about the beginning of the 15th century. The parish is traversed by the roads from Brechin to Kirriemuir and Forfar. Population in 1831, 252; in 1861, 225. Houses, 47. Assessed property in 1843, £2,717 6s. 10d.—This parish is in the presbytery of Brechin, and synod of Angus and Mearns. Patron, the Earl of Fife. Stipend, £158 7s. 6d.; glebe, £8. Schoolmaster's salary, £34 4s. 4d., with about £12 fees. The church was built in 1636, and repaired in 1808, and contains about 200 sittings. There is a private school.

CARBERRY HILL, a gently rising ground, in the parish of Inveresk, in Mid Lothian; 2 miles south-east of Musselburgh, and 7 from Edinburgh. Here Queen Mary surrendered herself to the confederated lords, June 15, 1567, prior to her imprisonment in Lochleven castle. The hill flanks the right side of the vale of the Esk, and forms part of a very beautiful landscape. See **INVERESK**.

CARBETH. See **KILLEARN**.

CARBETT. See **MOREBATTLE**.

CARBOST, a post-office station, subordinate to Broadford in the Hebrides.

CARBUDDO, or **KIRKBUDDO**, the southern portion of the parish of Guthrie, Forfarshire.

CARBYHILL. See **CASTLETON**.

CARCART. See **CAER** and **CATHCART**.

CARDAN'S WELL. See **MONMAIL**.

CARDEN, a hill in the south-west of the Kilbucho district of Broughton parish, Peeblesshire; elevated about 1,400 feet above the level of the Tweed.

CARDEN-DEN, a wide, fertile, unwooded glen of about a mile in length, also a station on the Dunfermline branch of the Edinburgh and Northern Railway, in the south of the parish of Auchterdernan, Fifeshire. See **AUCHTERDERRAN**.

CARDONALD. See **PAISLEY**.

CARDONESS. See **ANWOTH**.

CARDRONA. See **TRAQUAIR**.

CARDROSS, a parish containing a suburb of Dumbarton, the post-office villages of Cardross and Renton, and the village of Geilstone-Bridge, in Dumbartonshire. It is bounded along the south-west by the upper part of the frith of Clyde, and on other sides by the parishes of Row, Luss, Bonhill, and Dumbarton. Its length along the Clyde is 8 miles; and its breadth varies from $1\frac{1}{2}$ to 3 miles. The Leven traces the boundary with Dumbarton. The surface rises, with a gradual ascent, from the Clyde and the Leven, and terminates in a ridge, which passes on to the north-west, and whose highest point on the boundary of Cardross has an altitude of 943 feet above the level of the sea. Most of the parish forms the whole north screen of the Clyde from Dumbarton to Helensburgh, and stands full in the view of passengers in the Clyde steamers. A large and striking feature is the promontory of **ARDMORE**: see that article. The Clyde between Dumbarton and Ardmore is from 1 to 2 miles in width; but a considerable tract of land might be redeemed by embanking, the river having evidently contracted its limits in this quarter. The gains on salmon-fishings in the Clyde here were very valuable in former ages, but are now of little value. The fishings in the Leven belong to the corporation of Dumbarton. On the shore of the Clyde, the soil is gravelly and thinly covered with mould; at a short distance, it becomes clay; the lands adjacent to the Leven are of the nature of carse. The natural wood and plantations cover about 300 acres. The printfields and bleaching-fields on the Leven employ a number of hands; and the village of Renton, founded in 1782, is rapidly increasing. Near Renton, in the old mansion-house of Dalquhurn or Bonhill, was born Tobias Smollett, the well-known author of 'Roderick Random.' After a chequered life of 51 years, he died at Leghorn, whither he had gone for the recovery of his health, in 1771. Adjacent to the place of his nativity, Smollett of Bonhill, his cousin, erected a lofty Tuscan column to his memory, with a Latin inscription. A little west of the Leven, upon a small wooded eminence called Castlehill, at the first milestone from Dumbarton, stood a residence of King Robert Bruce. In this castle—of which no vestige is now discernible—that favourite prince, as history and tradition inform us, breathed his last on June 7, 1329, at the age of 55. The principal modern mansions are Bloomhill House, Keppoch, Ardmore, and Camus-Eskan. It appears from a register of the weather kept at Keppoch, from 1826 to 1832, that the average highest range of the barometer during these seven years was $30\frac{3}{100}$, and the lowest $28\frac{7}{100}$; while the highest range of the thermometer was 84° , and the average 78° . There is preserved at Keppoch an original portrait of Principal Carstairs. The road from Dumbarton to Balloch passes up the Cardross side of the Leven, and that from Dumbarton to Helensburgh goes along the shore of the Clyde. The village of Cardross, the site of the parish church, stands on the latter road, $3\frac{1}{2}$ miles from Dumbarton, and $4\frac{1}{2}$ from Helensburgh. Ferry boats used formerly to ply regularly between this place and Port Glasgow. Population of the village in 1851, 51. Population of the parish in 1831, 3,596; in 1861, 6,325. Houses, 523. Assessed property in 1843, £14,374 18s. 6d.

This parish is in the presbytery of Dumbarton, and synod of Glasgow and Ayr. Patron, the Crown. Stipend, £155 8s. 9d.; glebe, £25. Schoolmaster's salary, £34, with about £60 fees and other emoluments. The parish church was built in 1826.

and contains 800 sittings. There are two Free churches,—the one at the village of Cardross and the other at Renton. The yearly sum raised in connexion with the former in 1853 was £99 13s. 8d.,—with the latter, £348 4s. 5½d. There is also a Free Church Gaelic preaching-station at Renton, the proceeds of which in 1853 amounted to £11 3s. 5d. There are likewise a Reformed Presbyterian church at Renton, and an United Presbyterian church at Bridgend. There are five non-parochial schools, and two public libraries.

CARESTON. See CARALDSTON.

CARFRAE MILL, a stage on the Lauder and Edinburgh road, in the parish of Channelkirk, 5½ miles north-north-west of Lauder, Berwickshire.

CARGEN (THE), a small sluggish stream of the east side of Kirkeudbrightshire. It issues from a lake in the parish of Loehrutton, and goes eastward to the Nith at a point about 3½ miles below Dumfries. Adjacent to it, in the parish of Troqueer, are the mansions of Cargen and Cargenhalm.

CARGHIDOUN. See WHITHORN.

CARGILL, a parish, containing the post-office village of Burrelton and the villages of Cargill, Woodside, and Wolfhill, in the Strathmore portion of the eastern border of Perthshire. It is bounded by the parishes of Cupar-Angus, Lethendy, Kinlaven, St. Martin's, and Coliace. Its length eastward is about 6 miles; and its average breadth is about 4 miles. The Isla traces the northern boundary, and the Tay traces the north-western and the western boundary. The surface of the parish is finely diversified with wood and water, and variegated by gentle ascents and declivities. Rising gradually for about a mile from the Tay, it then forms a plain of nearly 4 miles in breadth, extending to the Sidlaw hills, which form the south-eastern boundary. The soil, on the banks of the river, is a deep rich clay; towards the middle, it is loamy; at the foot of the hills, it becomes gravelly and unproductive. Near the west end of the parish, the Tay forms what is called the Linn of Campsie, by falling over a rugged basaltic dyke which crosses the bed of the river at this place, and extends in a right line many miles to the north and south of it. Most romantic and magnificent views occur along the Tay. The salmon-fisheries on both this river and the Isla are of considerable value. In former times this parish abounded with wood: at present, there are only about 100 acres of natural coppice, and 400 of plantation. Several freestone quarries of excellent quality and colour have been wrought here to a considerable extent. Limestone also is found, and might be wrought to good account. There is also abundance of rock marl. Near the confluence of the Tay and Isla are vestiges of a Roman encampment: the fossæ are yet distinct, and the aqueduct by which they were filled from a neighbouring river is in a state of high preservation. A Roman road, about 20 feet broad, composed of rough round stones rudely laid together, passes along the high grounds.—Stobhall, formerly a seat of the Perth family, now belonging to Lord Willoughby D'Eresby, is an old fabric fancifully situated on a narrow peninsula on the banks of the Tay. It came into the possession of the family of Perth, in 1360, when Sir John Drummond, by marrying Lady Mary, the eldest daughter and co-heiress of Sir William de Montifex, justiciar of Scotland, and chief of a most ancient family, obtained with her the lands of Cargill and Stobhall, which then became promiscuously the designation of the family.—Upon a romantic rock which rises perpendicularly over the Linn of Campsie, are the ruins of an ancient religious house, said to have been dependent on the abbey of Cupar.

Next to the Kings of Scotland, the Hays of Errol were the principal benefactors to this monastery. The abbey of Cupar was supplied with fuel from the wood of Campsie; and the road which the abbots and monks made use of to convey it thither, is still called the Abbey road. A considerable manufacture of linen is carried on in this parish, and there are some bleaching-works. The Scottish Midland Junction railway traverses the parish, and has a station in it. The village of Cargill stands near the Tay, about ¼ a mile below the influx of the Isla, but is a small place. Population of the parish in 1831, 1,628; in 1861, 1,647. Houses, 339. Assessed property in 1843, £7,785 17s. 9d.

This parish is in the presbytery of Dunkeld, and synod of Perth and Stirling. Patron, the Crown. Stipend, £224 16s. 9d.; glebe, £14. Unappropriated tithes, £4 16s. 6d. Schoolmaster's salary, £34 4s. 4½d., with about £15 fees. The parish church was built in 1831. There is also a Free church, the yearly sum raised in connexion with which in 1853 was £116 8s. 7½d. There are two private schools. Cargill was formerly called the West parish, and is said to have been only a part of the parish of Cupar-Angus; but it was considered a distinct parochial district as far back as 1514.

CARINGTON. See CARRINGTON.

CARINISH, a mission and post-office station on the east side of the island of North Uist, in the Outer Hebrides.

CARITY (THE), a rivulet of Forfarshire, rising in the parish of Lintathen and running about 9 miles eastward, across the parishes of Kingoldrum and Kirriemuir, to the South Esk in the vicinity of Inverquhar.

CARLAVEROCK. See CAERLAVEROCK.

CARLANRIG. See CAERLANRIG, TEVIOTHEAD, and CANONBIE.

CARLETON HILL, a hill in the parish of Colmonell, in Ayrshire, which rises with a steep ascent to an elevation of about 520 feet above the level of the sea. It is situated so near the sea, at the bottom of a bay of the same name, that at full tide there is little more than room for the traveller to pass without danger.

CARLIN SKERRY, an insulated rock, in Orkney, about 2½ miles south of Pomona island, well-known to seamen by the name of the Barrel of Butter.

CARLIN-TOOTH, one of the Cheviot mountains on the mutual border of the parishes of Southdean and Castletown, Roxburghshire. The Jed rises on the north side of it, and one of the headstreams of the Liddel on the south side.

CARLINWARK. See CASTLE-DOUGLAS and KELTON.

CARLONAN LINN. See ARAY (THE).

CARLOPS, a village in the parish of Linton, Peeblesshire. It stands on the northern verge of Peeblesshire, on the right bank of the North Esk, and on the road from Edinburgh to Dumfries, 14 miles south of Edinburgh. It was founded in 1784, and is inhabited principally by cotton-weavers. Here is a Free church preaching station, whose yearly proceeds in 1853, amounted to £46 0s. 3½d. In the neighbourhood, on the south side of the Esk, is a lonely glen in which the Covenanters are said to have found a temporary refuge after the defeat at Rullion-Green on the Pentlands, in November 1666. On the north side of this glen are some precipitous rocks—probably the "craggy beild" of Allan Ramsay's 'Gentle Shepherd'—from one of which, called the Harbour Craig, the covenanting preachers are said to have addressed their adherents. Farther up the glen, at a place called the Howe, is a beautiful

little linn, [see *HABIE'S HOWE*,] which seems to furnish further proof that these are the very scenes

"that taught the Doric muse
Her sweetest song,—the hills, the woods, the streams,
Where beautiful Peggy stray'd, list'ning the while
Her gentle shepherd's tender tale of love."

James Forrest, the author of some pleasing poems in the Scottish dialect, died at Carlups in 1818, aged 43. He was a weaver by trade. Population in 1851, 153.

CARLOWAY, a district of the parish of Uig, in the island of Lewis. See *UIG*. Here is a Free church, whose yearly proceeds in 1853 amounted to £36 5s. 8d.

CARLUKE, a parish, containing a post-town of its own name, and the villages of Braidwood, Kildadzow, and Yelishields, in the upper ward of Lanarkshire. It is bounded by Cambusnethan, Carstairs, Lanark, Lesmahagow, and Dalsert. Its length south-westward is 8 miles; and its greatest breadth is $4\frac{1}{2}$ miles. The Clyde traces all the south-western boundary; and several rivulets drain the interior to it along deep romantic ravines, locally called gills. The immediate banks of the Clyde are low, rich, warm haugh; the central district is a sort of table-land, averaging perhaps about 450 feet in height; and the north-eastern district rises gradually from the table-land into a tract of wild bleak moor. Several rounded hills, of the form called laws, swell up from the high grounds, and give variety to the landscape, the loftiest of which, Kildadzow law, has an altitude of about 895 feet above sea-level. Nearly the whole parish is, in some way or other, under cultivation. The soil near the Clyde is light and fertile; farther up it becomes a rich mellow clay, excellently adapted for trees, and generally covered with woods and orchards; but in the more distant fields, it is in general shallow, poor, and unproductive. The banks of the Clyde are here famous for fruit; inasmuch that apples and pears are produced in more abundance in this parish than perhaps in any other district in Scotland. The orchards extend in length 5 miles, and are supposed to comprehend nearly 130 acres. In 1822 they produced £3,043; in 1833, £4144. Coal abounds everywhere. Freestone, limestone, and ironstone are also abundant; and metallic calces and calcareous petrifications are sometimes met with. There are 10 or 12 principal landowners, and upwards of 40 others. The present rental is nearly £30,000, exclusive of the mineral produce, which may amount to £20,000. Assessed property in 1843, £13,436 13s. 9d. Maudslie castle, built in 1792-3, the elegant seat of the late Earl of Hyndford, is situated near the village of Carluke. Milton-Lockhart is a fine building in the manorial style, very beautifully situated. Hallbar, an ancient square tower in this parish, situated in a romantic dell, in a deed dated 1685, is called the 'Tower and Fortalice of Braidwood.' Ha'-hill, or Haugh-hill—an elevated mound near Maudslie castle—rises to the height of between 60 and 70 feet, and contains the remains of the last two Earls of Hyndford. Various remains of antiquity have been dug up in the neighbourhood. This parish gave birth, in 1726, to Major-general Roy, whose abilities as a mathematician and antiquarian are well-known. The road from Lanark to Airdrie and the western fork of the Caledonian railway traverse the parish; and the latter has stations in it at Carluke and Braidwood. Population in 1831, 3,288; in 1861, 6,176. Houses, 895.

This parish—anciently called Kirk-Forest, probably from its situation in Maudslie forest—is in the presbytery of Lanark, and synod of Glasgow and

Ayr. Patron, Sir N. M. Lockhart, Bart. Stipend, £231 19s. 6d.; glebe, £30. Unappropriated tithes, £429 16s. 11d. Schoolmaster's salary, £34, with about £55 of fees. The parish church was built in 1799, and contains 1,000 sittings. There are four other places of worship,—a Free church, an Original Secession church, an United Presbyterian church, and a Morrisonian Independent chapel. The Free church has an attendance of 205; and the yearly sum raised in connexion with it in 1853, was £106 9s. 1d. The Original Secession church was built in 1797, and contains 470 sittings. The United Presbyterian church was built in 1833, and contains 770 sittings. The Independent chapel has an attendance of from 95 to 130. There are six private schools.

The TOWN OF CARLUKE stands on the table-land of the parish, and on the road from Lanark to Airdrie, 2 miles east of the Clyde, $5\frac{1}{2}$ north-west of Lanark, and $19\frac{1}{2}$ south-east of Glasgow. It was not long ago an inconsiderable village, but is now a neat, large, thriving place, with numerous streets of comfortable, substantial houses. It formerly subsisted in a considerable degree by weaving, but now it owes all its main prosperity to the work and traffic of the circumjacent mineral field. It is well supplied with shops in all the ordinary departments of retail trade. It contains all the churches of the parish, a number of schools, several inns, a parochial library, several benevolent institutions, a savings' bank, and branch offices of the British Linen Company's Bank and the City of Glasgow Bank. Ample communication is enjoyed with places far and near by the Caledonian railway. Fairs are held on the 21st of May and the 31st of October. A cattle show also is held on the last Wednesday of July; and a chartered power exists, but has never been acted on, to hold a weekly market. Carluke, under the name of Kirkstyle, was erected into a burgh of barony in 1662. Population in 1841, 2,090; in 1861, 3,111. Houses, 367.

CARMEL WATER, a small river of Ayrshire. It rises on the eastern border of Cunningham, a little west of Kingswell's inn, and runs about 10 miles south-westward, through the parishes of Fenwick and Kilmaurs, to a confluence with Irvine Water about 3 miles above the town of Irvine. See *KILMAURS*.

CARMICHAEL, a parish about 6 miles in length, and from 3 to 4 in breadth, situated on the banks of the Clyde and of Douglas Water immediately above their confluence, in the upper ward of Lanarkshire. It is bounded on the north by Lanark and Pettinain, on the east by Covington, on the south by Wiston, and on the west by Douglas and Lesmahagow. The post-town is Lauark. The superficial area is about 11,500 acres, of which more than a third part is arable. The surface is very unequal. There are several hills of considerable height, covered for the most part with short heath. The famous Tinto is partly within the southern boundary: see *TINTO*. The soil towards the Clyde is thin and gravelly; in the higher parts it is clayey and wet. Coal and limestone, of excellent quality, are found here. The real rental of the parish is about £4,600; and the yearly value of raw produce about £10,900. The late Earl of Hyndford, who was the chief proprietor, enclosed and planted a great part of the parish. Upon his death, in 1817, his estates here reverted to Sir John Carmichael Anstruther of Elie, Baronet. The celebrated John, third Earl of Hyndford, who was born in 1701, and died in 1767, was a great benefactor to this parish. The period of his lordship's political life was during the troublous days of Scotland, when the last of the exiled house of Stuart made an unsuccessful struggle

to regain the British throne. Devotedly attached to the house of Brunswick, the Earl was always high in favour with his Majesty, George II., by whom he was appointed envoy-extraordinary to the court of Russia, upon a special mission; and upon the accession of George III., he was nominated Vice-admiral of Scotland. Some idea may be formed of his lordship's assiduity, from the fact that, in the library in Westraw, there are 23 manuscript volumes of his political life, in his own handwriting. Besides, during the whole of his stay abroad, he kept up a regular correspondence with his factor at Carmichael, in which he evinces an accurate knowledge of architecture, agriculture, and rural affairs in general. A few years before his death, he granted leases of 57 years' duration, in order to improve his lands; and even at that early period—when the rudest agricultural practices were transmitted from sire to son, and the most slovenly habits, both in the field and in the dairy, were in general use—the Earl introduced clauses into the new leases which have since been adopted as the most approved mode of farming. The greater part of the beautiful plantations which adorn the now deserted family-mansion of Carmichael house, and which are excelled by none in Scotland, were reared from seeds which the ambassador selected when abroad, but particularly from Russia. His remains rest in the family burying-ground in this parish.—Carmichael gave the title of Baron to the ancient and noble family of Carmichael. James Carmichael, the first Lord Carmichael, was created a Baronet by Charles I. He was also, by that monarch, promoted to be justice-clerk, deputy-treasurer, and one of the judges in the court of session; and, in the time of the civil war, having lent His Majesty considerable sums of money, he was created Baron Carmichael, in 1647. His grandson was created Earl of Hyndford in 1701. Population in 1831, 956; in 1861, 836. Houses, 152. Assessed property in 1843, £5,279 11s. 9d.—This parish is in the presbytery of Lanark, and synod of Glasgow and Ayr. Patron, Sir W. C. Anstruther, Bart. Stipend, £225 2s. 7d.; glebe, £20. Schoolmaster's salary, £32, with about £30 fees. The church was built in 1750, and contains about 450 sittings. There is a private school.

CARMOUNT, a moor and a hill on the mutual border of the parishes of Dunnottar and Glenbervie, Kincardineshire. The moor is a flat tabular heath of from 400 to 500 acres; and the hill has an altitude of about 800 feet above sea-level.

CARMUNNOCK, a parish, containing a village of the same name, in the south-west corner of the lower ward of Lanarkshire. An annexation to it, quoad sacra, by regular decret of the competent court in 1725, comprises portions of the parishes of East Kilbride and Cathcart, and contains part of the post-office village of Busby. But the proper quoad civilia parish measures about 4 miles north-eastward, and about 2½ miles in mean breadth, and is bounded by Renfrewshire and by the parishes of East Kilbride, Cambuslang, and Rutherglen. The greater part is elevated, and commands an extensive prospect, particularly from the summit of Cathkin braes, about 500 feet above sea-level; from which, in a clear day, Arthur's seat in the neighbourhood of Edinburgh, Benedil in Perthshire, and the peaks of Arran, are all discernible. The soil is partly a light mould, and partly a strong deep clay, which, when properly drained and manured, produces excellent crops. Of the whole extent, which is about 2,800 Scotch acres, nearly 2,400 are enclosed and cultivated. The White Cart runs along the western boundary. Its banks are here high, and in most

parts covered with wood, which, together with its meanderings and the rapidity of its current, renders the scenery very picturesque and romantic. The road from Glasgow to Muirkirk passes through the eastern district. In many places there are coal, ironstone, and limestone, none of which, however, has been here wrought to any extent. There is also freestone. The principal landowners are M'Lea of Cathkin and Stirling of Castlemilk. Many tumuli, or sepulchral cairns, are to be met with here, which, when opened, have always been found to contain human bones and instruments of war. On the estate of Castlemilk are the remains of a Roman military road, near which have been found various Roman antiquities. In the house of Castlemilk—which is noted for its fine situation—Mary Queen of Scots is said to have lodged the night before the battle of Langside. The village of Carmunnoch stands nearly in the centre of the parish, 3½ miles south-south-west of Rutherglen. Many of its inhabitants are hand-loom weavers. A fair used to be held in it on the first Friday of June, but has gone into disuse. Population of the village in 1851, about 400. Population of the parish in 1831, 692; in 1861, 734. Houses, 110. Assessed property in 1843, £5,511 4s. 4d.—This parish, formerly a vicarage, is in the presbytery of Glasgow, and synod of Glasgow and Ayr. Patron, Stirling of Castlemilk. Stipend, £152 17s. 6d.; glebe, £19. Schoolmaster's salary, £34 4s. 4½d., with about £32 fees. The church stands in the middle of the village, was built in 1767, and repaired in 1838, and contains 470 sittings.

CARMYLE, a village in Old Monkland parish, in Lanarkshire. It is noted for the beauty of its situation, having a fine southern exposure, watered by the Clyde. This village originated in a muslin manufactory, erected about 1741, by a Glasgow merchant. Population, 506.

CARMYLIE, a parish among the south-eastern Sidlaws of Forfarshire. It contains no other village than the small one of Graystone; and its post-towns are Muirtown, 4 miles to the south-south-east, and Arbroath, 7 miles to the east-south-east. It is bounded by Kirken, Inverkeillor, St. Vigeans, Arbirlot, Panbride, Monikie, Guthrie, and Dunnichen. Its average length is 4 miles, and its average breadth 3 miles. It is a hilly tract of country, with an extreme height of perhaps about 600 feet above sea-level, and commanding extensive prospects; but the hills are capable of cultivation to their summits. Almost the whole district shows a cold wet soil, on a till or gravelly bottom. There are several moors and marshes. A part of Dilty-moss lies on the western skirts. There are inexhaustible quarries of grey slate and pavement stones, which have been wrought for centuries, and supply the neighbourhood, besides being exported to Perthshire, Fifeshire, Leith, London, Aberdeen, and Glasgow. The stone lies in level beds, which are about 18 inches in thickness, and are found close to the surface; and it is susceptible of a beautiful polish, and can be raised in very large slabs, so as to be well adapted for billiard tables. The little river Elliot issues from Dilty-moss, and drains the parish in a south-easterly direction. The landowners are Lord Panmure, Ouchterlony of Guynd, and Smail of Conansythe, and the two latter are resident. The total yearly value of raw produce was estimated in 1836 at £16,634. Assessed property in 1843, £8,928. The parish is traversed by the road from Broughty Ferry to Brechin. Population in 1831, 1,153; in 1861, 1,286. Houses, 271.

This parish, erected in 1609, is in the presbytery of Arbroath, and synod of Angus and Mearus.

Patron, the Crown. Stipend, £151 8s. 3d.; glebe, £30. Schoolmaster's salary, £34, with about £20 fees. The parish church seems to be upwards of two centuries old, and contains about 500 sittings. There is a Free church, and the yearly sum raised in connexion with it in 1853 was £269 17s. 8½d. There are two private schools. A fair is held at Carmylie on the third Tuesday of April, old style.

CARN. See CAIRN.

CARNA, a small inhabited island, in the parish of Morvern, Argyleshire. It lies in Loch Sunart, a short way north-east of Oransay. It is rather high, and has a rocky broken summit, but is verdant and fertile on some of the slopes.

CARNACH, a chapelry in the parishes of Contin, Fodderty, and Urray, Ross-shire. The church was built in 1830, chiefly at the expense of government, and contains 320 sittings. Patron, the Crown. Stipend, £120, with a manse and glebe. The inhabited tract of country assigned to the chapelry is a narrow valley about 14 miles long by one-sixth of a mile broad. In 1830, the population was 1,056; in 1836, only 711,—a decrease attributed to the introduction of sheep-farming. The population is composed of small tenants of from £5 to £10 a-year, and shepherds. The post-town is Dingwall.

CARN-A-MAIRCE, a mountain in Glenlyon, Perthshire, elevated about 3,390 feet above sea-level.

CARNAN (THE), a small tributary of the Etive, in the parish of Ardochattan, Argyleshire.

CARNBEE, a parish in the south-east of Fifeshire. It is entirely inland, and does not contain any post-office, yet reaches within 1½ mile or less of the frith of Forth, and of the post-towns of Anstruther, Pittenweem, St. Monance, and Colinsburgh. It is bounded by the parishes of Cameron, Denino, Craill, Kilrenny, Anstruther, Pittenweem, Aberrombie, and Kilconquhar. Its length and breadth are each about 4 miles. A ridge of hills runs east and west through the middle of it, and rises in different places into fine green hills of a conical outline, one of which, Kellie Law, has a height of 810 feet above sea-level, and commands a fine view. On the south side of these high grounds, all the way down to the coast of the frith of Forth, is an extent of rich fertile soil. North of the hills the ground is much more adapted for pasture, though, in dry seasons, even there the crops are abundant. There are 16 landowners, and the valued rental is £10,202 8s. 5d. Kellie castle, formerly the seat of the Earl of Kellie, now belonging to the Earl of Mar, was a large building, with stately apartments, and pleasure-grounds laid out with great taste, but is now used as a farm-house. Balcaskie, the seat of Sir R. A. Anstruther, Bart., is a fine old building. Piteorthie, the seat of James Simpson, Esq., is a magnificent modern house. There are some excellent lime and freestone quarries, and coal is extensively wrought. The parish is traversed by the road from Pittenweem to St. Andrews, and by that from Craill to Ceres. Population in 1831, 1,079; in 1861, 1,157. Houses, 249. Assessed property in 1843, £11,989 17s. 11d.

This parish is in the presbytery of St. Andrews, and synod of Fife. Patron, Sir R. A. Anstruther, Bart. Stipend, £238 17s. 8d.; glebe, £30. Unappropriated tithes, £236 13s. 8d. Schoolmaster's salary, £34 4s. 4½d., with about £25 fees. The parish church was built in 1793, and contains about 500 sittings. There is a Free church at Ameroach; and the yearly sum raised in connexion with it in 1853 was £116 14s. 9d. There are two private schools.

CARN-CHAINICHIN. See MONVAIRD and STROWAN.

CARN-DEARG, a mountain in the parish of Fortingal, Perthshire, elevated about 3,140 feet above sea-level.

CARNETHY. See PENTLANDS.

CARNIBURG, or CAIRNBURG, (GREATER and LESSER), two of the Treshinish isles, lying west of Mull. There are some remains of a fort on Carniburg More, said to have been constructed by a party of Macleans, who here held out for some time against a detachment of Cromwell's forces.

CARNEHILL. See CAIRNEYHILL.

CARN-NAN-GABHAR. See BLAIR-ATHOLE.

CARN-NA-CUIMHNE. See BRAEMAR.

CARNOCK, a parish, containing a post-office village of the same name, and also the villages of Cairneyhill and Gowkhal, on the south-western border of Fifeshire. It is bounded by the Culross district of Perthshire, and by the parishes of Saline, Dunfermline, and Torryburn. Its length and breadth are each about 3 miles. The surface is level towards the east, but has a gentle declivity towards the south and west, and rises on the north and north-east into the hills of Craighuscar. The soil is partly a black loam, and partly clay or till, having in several places a mixture of gravel. The rivulets of Carnock and Pittenies have their banks covered with plantations of fir, larch, and ash; and present very pleasing scenery in several parts, particularly at Luscar-den near Carnock. There are several excellent coal-mines. Ironstone and freestone are also found. From the Ink-craig of Carnock there continually drops a fluid resembling ink, which was analyzed by Dr. Black, and found to contain coal, siliceous, and pure clay. The principal landowners are Stuart of Carnock, Sir Peter A. Halket of Pitfirrane, and three others. The principal residences are Carnock-House, Luscar, and Newbigging,—the last formerly a place of note, but now only a farm-house. The total yearly value of raw produce was estimated in 1843 at £11,454. Assessed property in 1843, £3,126 4s. 8d. The Dunfermline and Stirling road, and the Dunfermline and Stirling railway, pass through the parish. John Erskine, of Carnock, professor of Scots law in the University of Edinburgh, and author of the well-known *Vade mecum* of young lawyers, the 'Institutes of the Law of Scotland,' was born in Newbigging house. The famous Thomas Gillespie, the father of the Relief body in Scotland, was minister of this parish, but was deposed by the General Assembly in 1752, for refusing to preside at the induction of a minister who was obnoxious to the people. The village of Carnock stands nearly in the centre of the parish, 3½ miles west-north-west of Dunfermline. A fair is held here on the 26th of May. Population of the village in 1851, 184. Population of the parish in 1831, 1,202; in 1861, 2,925. Houses, 588. The increase of population has arisen from the erection of the Forth iron-works.

This parish is in the presbytery of Dunfermline, and synod of Fife. Patron, Stuart of Carnock. Stipend, £155 7s. 7d.; glebe, £24. Schoolmaster's salary, £34 4s. 4½d., with about £16 fees. The old parish-church at Carnock was built in 1602. It is a very small building, seating only 240; but it is interesting as the church in which Row the historian, son of the Reformer, ministered. His tomb, with a Latin inscription and a Hebrew title, adjoins. It is interesting also as the church in which, at an after-day, Mr. Hog, and Mr. Gillespie, whose deposition—as already noticed—was the origin of the Relief, both successively laboured. A neat new church, in the Saxon style, cruciform, and with a spire, was built in 1840, and contains 400 sittings. There is a Free

church in Carnock, whose yearly proceeds in 1853 amounted to £68 0s. 6d. There is an United Presbyterian church in Cairneyhill, containing 400 sittings. Attendance at the Free church, 200; at the United Presbyterian church from 220 to 250. There are a ladies' boarding-school, and two other schools.

CARNOCK, Stirlingshire. See NINIAN'S (Str.).

CARNOCK (The), a rivulet of the western border of Stirlingshire. It rises among the Kilpatrick Hills, and runs about 6 miles northward and north-eastward, partly along the boundary with Dunbartonshire, but chiefly within the border of Stirlingshire, to a confluence with the Blane, a little above the point of that river's confluence with the Endrick. It has in one place worn a romantic chasm, 70 feet deep, through red sandstone.

CARNOUSTIE, a large village, with a post-office, in the parish of Barry, Forfarshire. It stands near the sea, 3 miles north of Buddon-ness, and $6\frac{1}{2}$ miles south-west of Arbroath. The Dundee and Arbroath railway has a station for it. About nine-tenths of the inhabitants are supported, poorly and fitfully, by the weaving of brown and white linen. The village has a chapel of ease, a Free church, an United Presbyterian church, an Original Secession church, a good subscription school, and a savings' bank. Population in 1841, 1,268; in 1861, 1,488.

CARNSALLOCH. See KIRKMAHOE.

CARNWATH, a parish, containing the post-office villages of Carnwath and Wilsontown, and also the villages of Braehead, Forth, and Newbigging, on the north-east border of the upper ward of Lanarkshire. It is bounded on the north and north-east by Edinburghshire, and on other sides by the parishes of Dunsyre, Libberton, Pitteuain, and Carstairs. Its length northward is 12 miles; its breadth is 8 miles; and its area is about 25,193 Scots acres. The South Medwin and the Clyde, flowing westward, trace the southern boundary; and the North Medwin, the Dippool, and the Mouse, all flowing south-westward, drain the interior. The parish has a general elevation of 600 feet above sea-level, but rises in some parts to 1,200. About one half of it is uncultivated, and looks very wild and bleak. The soil of the several districts is very different; the holms or meadows on the Clyde being of a deep clay, while on the Medwins it is inclined to sand. There is a great extent of moor land, of which the soil is a cold stiff clay mixed with moss. About 400 acres are under wood. The Medwins and the Dippool contain trout and pike. There is a small lake, called the White loch, about a mile west from the village of Carnwath, nearly a mile in circuit, containing perch, and well-known to curlers as the frequent scene of their manly and invigorating pastime. Two brothers of the name of Wilson, merchants in London, in 1779, erected an extensive iron-foundry in the northern district, and built there the village of Wilsontown, for the accommodation of the workmen and their families. These works were peculiarly happy in their situation, as ironstone, coal, limestone, and clay, are found in the greatest abundance in the immediate neighbourhood; but the failure of their projectors in 1812, was a severe blow to the prosperity of the district. In 1821, the works were purchased by Mr. Dickson of the Calder iron-works, and were again put into vigorous operation.—The ruins of the ancient castle of Cowthally, or Cowdailly, a seat of the noble family of Somerville, about a mile to the north-west of Carnwath, on the edge of the moor, show it to have been of great extent and strength. The Somervilles settled here about the middle of the 12th century. Sir John Somerville of Carnwath and Linton was the steady adherent of Robert Bruce. In 1603, the

family of Mar purchased the barony of Carnwath, but sold it in 1634 to Robert Lord Dalziel, created Earl of Carnwath in 1639. The title was attained in 1715, but restored, in 1826, in the person of General Dalziel. The road from Edinburgh to Lanark passes through the parish; the Edinburgh fork of the Caledonian railway also traverses all its length, and has stations in it at Auehlingray and Carnwath, together with a branch to Wilsontown; and the junction of the Glasgow fork occurs at its southern extremity. See CALEDONIAN RAILWAY. Population in 1831, 3,505; in 1861, 3,584. Houses, 730. Assessed property in 1843, £14,206.

This parish is in the presbytery of Lanark, and synod of Glasgow and Ayr. Patron, Sir N. M.D. Lockhart, Bart. Stipend, £250 7s. 6d.; glebe, £20. Unappropriated tithes, £140 17s. 8d. Schoolmaster's salary, £34 4s. 4d., with £30 fees. The parish church was built in 1798, and repaired in 1833, and contains 1,021 sittings. It stands contiguous to a part of the ancient church, which was founded in 1424, and was, previous to the Reformation, a provostry with six prebendaries. The aisle of the old building has been successively the burying-place of the Somervilles, the Dalziels, and the Lockharts. There is a chapel in connexion with the Establishment at Wilsontown, but it is seldom used. There is a Free church at Carnwath, whose annual receipts amounted in 1853 to £183 8s. 11d. There are two United Presbyterian churches,—the one at Carnwath and the other at Braehead; and the latter was built in 1798, and contains 500 sittings. There are eight non-parochial schools.

The VILLAGE OF CARNWATH stands on the road from Edinburgh to Ayr, adjacent to the Caledonian railway, 6 miles east-north-east of Lanark, 7 north-west of Biggar, and 25 south-west of Edinburgh. It consists chiefly of one street, nearly half-a-mile in length, in which a number of new houses have recently been built, and to which a parallel street has been added. Its general appearance, as to both buildings and cleanliness, has of late been greatly improved. A weekly market is held for meal and harley; and fairs are held on the last Friday of February, on the first Wednesday of April, on the first Wednesday of May, old style, on the first Thursday of July, on the second Wednesday of August, old style, and on the Friday before the 13th of October. The August fair is chiefly for the sale of lambs; and on the day after it a footrace is run for a pair of red hose given by the Lockhart family, and a variety of games are practised. The village has a subscription library, and a branch office of the Commercial Bank of Scotland. Most of the inhabitants are weavers. Population, 895.

CAROLINE-PLACE, a village in the parish of St. Martin's, Perthshire.

CAROLSIDE. See EARLSTON.

CARPOW. See ABERNETHY.

CARRADALE (The), a rivulet of Kintyre, Argyshire. It rises in a central part of the peninsula, and runs about 7 miles south-south-westward, past Saddell church, to Carradale bay in Kilbrannan Sound. It has a considerable volume, and is an excellent angling stream. Remains of an old fort, which must once have been a place of some importance, crown a rocky sea-cliff at the Aird of Carradale; and the ruins of a vitrified fort, of an oval form, and 150 yards in circumference, stand on a small peninsula in the bay.

CARR-BRIDGE, a hamlet with a post-office in the parish of Duthil, Morayshire. It stands on Dalnain Water, and on the Highland road from Inverness to Perth, 8 miles north of Aviemore, and $2\frac{1}{2}$ south-east of Inverness. Here is a comfortable

small inn. Here also is a Free church, whose yearly receipts in 1853, amounted to £24 2s. 9d.

CARRICK, CRAG, or CRAIG, any rocky locality, either a single mass of rock, or a tract of country, small or large, which has a rocky surface. The word, especially in the form of Craig, is often used also as a prefix in Scottish descriptive topographical names,—as Craignish, 'the rocky peninsula.'

CARRICK, the southern district of Ayrshire. It is bounded on the north by Kyle, or Ayr proper; on the east by Kirkeudbrightshire; on the south by Wigtownshire; and on the west by the Atlantic ocean. It comprehends the parishes of Ballantrae, Barr, Colmonell, Dailly, Girvan, Kirkmichael, Kirkoswald, Maybole, and Straiton. Its extent is about 32 miles in length, by 20 in breadth; its superficial area may be estimated in round numbers at 300,000 acres. Its surface is hilly; and corresponds in numerous places to the name Carrick, 'a rock.' The mountains, especially on the north-west, seem to be a continuation of that great ridge which, extending from the confines of England, through the counties of Selkirk, Peebles, Lanark, and Dumfries, meets the western ocean on the mutual border of Ayrshire and Galloway. In the valleys between the hills, and along the sea-shore, are many stripes of level ground of a fine clay or loamy soil. The chief rivers are the Girvan and the Stinchar. The Doon forms the northern boundary. There are several lakes, and a great part of the country is still covered with natural wood.

Our old historian, Boece, with his usual fertility of imagination, has discovered, in this district, a large city totally unknown to every other historian. Bellenend thus abridges his account of it: "In Carrick wes sum time ane riche cieté vnder the same name, quahis ruynus wallis schawis the gret magnificence thairof." Boece calls this city Carretonium; but acknowledges his hesitation whether this was the origin of the name Carrick or not. In a manuscript quoted by Dr. Jamieson, we have the following curious statement:—"No monuments of batells to be seen in this country, except uerr the villidge of ancient Turnehurrey, alonge the coste, betwixt a litell promontorey and the sea. Ther is 3 wery grute heapes of stounes, callid vulgarly *the Kernes of Blackinney*, being the uauie of the village and ground. At the suthermost of thir 3 Cairnes ar ther 13 gret tale [tall] stounes, stauding vpright in a perfyte circle, aboute some 3 ells ane distaunt from ane other, with a grate heighe stonne in the middle, wich (sic) is weryly esteemid be the most learned inhabitauts to be the byriall place of King Caractacus; heing most probable, in so far as Hector Boetius sayes, that the King wes interr'd in Carricke, quherein he remained duriug the most part of his rainge [reign]; and that from him this country wes named Carricke; and that thir stounes, his monument, are as yet standing nerr the toune of Turnberrey, wich was questionles the ancient Carrictionium. This same conjecture is so muche the more probable in that, that King Galdus, that succeedit him, (I meane Carractake,) his buriall place is yet knawin, within 3 mylles to the toune of Vigtoun, in Galloway, which is after the same forme, being 19 stounes in compas, and 3 in the middle, wich then hes heine the most honorable forme of buriall, befor churches and church yairds wer designed places of sepulture. Ther is found and obserued this yeir 1632, within a myle to the castle of Turnburrey, some sandey landes, newly discovered, wich formerly had beine ouerblouen. Yet the new discovery reaches, in the ancient ground, downwards above ane elle and a halffe, as the ther standinge knowes cleirly demonstrate, ex-

posing to the beholders numbers of coffins neatly hewin of fivo stounes, with oute couer or bottoime, beinge 7. foote longe, and 3. vyde, all laying east and weste, with an equal proportiome of distance ane from ane vther."

Carrick fell into the hands of the father of Robert Bruce, by his marriage with Margaret, Countess of Carrick, daughter of Neill, the Earl of Carrick. See article TURNBERRY. King Robert granted the earldom to his brother David. It afterwards reverted to the Crown; and the title is still retained in the royal family, the Prince of Wales, as prince and steward of Scotland, being born Earl of Carrick. John Stewart is not only designed 'Comes de Carryk,' but the first-born of King Robert II. This can be no other than that prince who, on his accession, changed his name to Robert, and thence obtained the ludicrous soubriquet of John Fairyear, i. e., 'John of the last year,' or 'formerly John.' David, the first-born of this King Robert, is designed 'Comes de Carrie,' A. D. 1397, when, with some others, nominated for settling disputes about the marches with Richard, "our adversary of England." This was that unfortunate prince who was afterwards starved to death by his inhuman uncle, who is named, in the same deed, as one of his associates, under the designation of 'Robertus Comes de Fyf, Frere du Roy.' The "lands and barony of Turneberrie" are mentioned as part of the hereditary property of the Earl of Cassillis, A. D. 1616. The Duke of Argyll is hereditary keeper of the palace of Carrick, as well as of those of Dunstaffnage and Dunoon. It may be viewed as a vestige of the ancient honours of this palace, although now in ruins, that one of the pursuivants (*signiferi*) employed in making royal proclamations, and in summoning those accused of treason, bears the name of Carrick. Among the original Melrose charters are several of the old Earls of Carrick. Their seals bear a winged griffin, but no armorial charge. There is an interesting one, by 'Margeria, Comitissa de Karriek,' and her husband, 'R. de Brus, Comes de Karriek.' Both seals are entire, and identical,—only the Countess's is a great deal larger than her lord's. This Bruce's father, the competitor, bore the arms of Ammandale, a saltier, with a chief, plain. Marjory and her husband bear the saltier and chief; but the latter charged with what might perhaps be considered as the Carrick griffin, though its wings are rather scanty,—and it is very like a lion passant. Population of Carrick in 1831, 25,536; in 1861, 27,224. Houses, 4,401.

CARRICK CASTLE. See LOCH-GOLL.

CARRICTONIUM. See CARRICK.

CARRIDEN, a parish, containing the villages of Blackness, Bridgeness, Cuffabouts, Grangepans, and Muirhouses, on the coast of Linlithgowshire. It is bounded on the north by the frith of Forth, and on other sides by the parishes of Borrowstownness, Linlithgow, and Abercorn; and it approaches within $\frac{1}{2}$ of a mile and 1 mile respectively the post-towns of Borrowstownness and Linlithgow. Its length along the coast is 3 miles; and its breadth is nearly 2 miles. The surface is very unequal, rises rapidly from the shore, declines again to the south, comprises part of the Irongath or Glour-o'er-em hills, and has there an extreme altitude of 519 feet above sea-level, yet is all arable and enclosed. The soil is light and early, producing plentiful crops. There is plenty of excellent sandstone; and the whole parish lies on coal of the best quality. The chief landowners are the Duke of Hamilton, the Earl of Hopetoun, Sir John G. Dalryell, Bart., Hope of Carriden, and two others. The total yearly value of raw produce was estimated in 1843 at £19,379.

Assessed property in 1843, £4,510 5s. 3d. There are tolerable harbours at Blackness and Bridgeness. There is a large tilery at Brickfield. Salt-making was formerly carried on to a great extent at Grangepans, but has much declined. Three chemical works, formerly in operation on the coast, are now defunct. The wall of Antoninus is supposed to have had its termination in this parish. Several years ago, when digging stones to build a park-wall, a number of axes, pots, and vases, evidently of Roman workmanship, were discovered at a place called Walltoun, and sent to the Advocate's library in Edinburgh. In the reign of William the Lion, Carriden was the property of William de Vetereponte, with baronial rights. David II. conveyed this barony to Alexander de Cockburn; because John de Vetereponte had alienated his rights, without the King's license first obtained. Colonel James Gardiner, who was killed at the battle of Prestonpans, in 1745, was a native of this parish. Population in 1831, 1,261; in 1861, 1,821. Houses, 226

This parish is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Parishes, the Duke of Hamilton. Stipend, £249 17s.; glebe, £25. Unappropriated tithes, £137 17s. 5d. Schoolmaster's salary, £34 5s. The parish church was built in 1766, and contains 458 sittings. There is a Free church jointly for Borrowstownness and Carriden. There are three private schools.

CARRINGTON, a parish in the south of Edinburghshire, about $3\frac{1}{2}$ miles in length, measured from north-east to south-west, by about 2 in breadth. Its post-town is Lasswade, 4 miles to the north-north-west; and it is bounded by the parishes of Lasswade, Cockpen, Borthwick, Temple, and Penicuik. The South Esk separates it from Temple and Borthwick. The surface is hilly, and the soil generally moorish. The landowners are the Earl of Roseberry, Ramsay of Whitehall, and Dundas of Arniston. Whitehall House, on the northern verge of the parish, within $1\frac{1}{2}$ mile of Roslin and Hawthornden, is a large and very splendid building, erected in 1844. The village of Carrington, or Primrose, stands near the South Esk, on the road from Dalkeith to Peebles, 5 miles south by west of Dalkeith. Population of the village in 1851, 161. There are two other small villages, Thoraton and Whitefaugh. Population of the parish in 1831, 561; in 1861, 681. Houses, 124. Assessed property in 1843, £4,617 7s. 8d.

This parish is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patron, the Earl of Roseberry. Stipend, £158 7s. 5d.; glebe, £15. Schoolmaster's salary, £34 4s. 4 $\frac{1}{2}$ d., with about £10 fees. There is a Free church for Carrington and Temple; whose yearly proceeds in 1853 amounted to £108 14s. 3 $\frac{1}{2}$ d.

CARROL ROCK. See BRORA (THE).

CARRON. See CARRON-WORKS.

CARRON (THE), a small but remarkable river in Stirlingshire. It rises in or near the Carron bog, and falls into the Forth at Grangemouth, about 3 miles north-east of Falkirk, after a course of 14 miles. The Carron bog is a meadow of about 500 acres, partly in the parishes of St. Ninian and Kilsyth, but chiefly in Fintry. Its length is about 4 miles, and its breadth is between 1 mile and 2 miles. Considerably elevated above the ocean, it occupies part of the table-land between the east and west coasts. The Carron, passing through the eastern end, flows to the frith of Forth; while a stream tributary to the Endrick, issuing from the west, has its waters conveyed by the last-mentioned river to Lochdomond, which discharges itself into the frith of Clyde. The

bog has probably been a lake at no very distant period, and gradually filled by the brooks washing down earth from the hills. Part, indeed, is a swamp, hardly passable in summer; and the whole is nearly inundated by every heavy rain. [See article FINTRY.] The Carron, after leaving the bog, flows for one-half of its course amongst bleak hills and rocks; and on emerging from these, rushes over a fine cascade called the Auchinlilly linn spout. From this it continues its course eastward, giving motion to several paper-mills above Denny, and watering some large printfields below it; and then, winding through "the bonny banks of Carron water," long since famed in song, it passes near the hill of Dunipace, and the site of the ancient Roman structure called ARTHUR'S OVEN: see that article. At Larbert a dam is built across the river, which, with the lead, supplies the great reservoir at the Carron works; into this reservoir almost the whole water of the river goes in summer.

The Carron is a small stream; yet there is no river in Scotland, and few in Britain, whose banks have been the scene of so many memorable transactions. When the Roman empire was in its glory, this river—according to some antiquaries—formed the boundary of its conquests in Britain; for the wall of Antoninus runs parallel to it for several miles. Hence Buchanan in his 'Epithalamium,'

—"Gentesque alias cum pelleret armis
Seditus, aut victas viles servaret in usum
Servitii, hic contenta suos defenderet fines
Roma securigeris præterit mœnia Scotis:
Hic, spe progressus posita, Carronis ad undam,
Terminus Ausonii signat divortia regni."

Nennius derives the name of this river from Carausius, who is commonly styled the usurper. The translator of Ossian's poems informs us, that it is of Gaelic origin, and that *Carraon* signifies 'the Winding river.' This fully expresses one quality of its stream, which, in former times, before it had forced a new channel to itself in some places, and been straightened by human industry in others, fetched many serpentine sweeps in its passage through the carses. Nevertheless, if we say that the original name was *Caeravon*, that is, 'the River upon the Caers, or Castles,' alluding to the Roman fortifications upon its banks, we shall perhaps give an etymology just as probable, though equally uncertain. Historians notice a bloody battle fought upon this river between the Romans and the confederate army of the Scots and Picts, about the beginning of the 5th century. About half-a-mile from the river, and the same distance from Falkirk, lies the field where a battle was fought between Sir William Wallace and the English, under Edward I., in 1298. Not far distant from the same spot, the second battle of Falkirk was fought in 1745, betwixt Prince Charles Edward and the troops of the family of Hanover, in which the latter were defeated. [See FALKIRK.] The Carron is famed in ancient Celtic song. Dyer alludes to this circumstance in the following lines:

"Where is the king of songs? He sleeps in death;
No more around him press the warrior-throng;
He rolls no more the death-denouncing song;
Calmed is the storm of war, and hushed the poet's breath,
Yes! Anderson, he sleeps; but Carron's stream
Still seems responsive to his awful lyre."

Hector Macneil, a native poet of Stirlingshire, has thus expressed himself in the Doric strain:

"Round Carin's stream, O classic name!
Whar Fingal fought, and ay ow'rae me;
Whar Ossian wak'd, w' kindling flame,
His heaven-taught lays,
And sang his Oscar's deathless fame
At Duin-na-bais."

The river Carron, though it has ceased to roll its stream amidst the din of arms, yet preserves its fame by lending its aid to trade and manufactures. The great canal enters from the Forth at this river, which is navigable for a few miles near its mouth. During the heavy rains in September 1839, the Carron suddenly rose 12 feet above its usual level; and scaling its shelving banks, converted into a watery plain the circumjacent pasturage. At Dorrator, the Carron is bounded by eminences on its eastern bank, which it is impossible to overtop; but taking here a circling course, a great expanse lying between, made a double stream; a rising ground in the distance curving with the river on the same side, obstructed the gush, and joining with the waters on the opposite side, formed a beautiful bay.

CARRON (THE), a fine rivulet in Nithsdale. It rises at the foot of the Lowther hills, and, after a southerly course of about 9 miles through the parish of Durrisdcer, and along the boundary between that parish and Morton, falls into the Nith, in the vicinity of the village of Carronbridge. The Glasgow and South-western railway is carried over it near the foot by a very noble viaduct.

CARRON (THE), a small river in Ross-shire, which flows about 16 miles in a south-west direction through a chain of small lakes, and falls into the head of Loch-Carron. It used to abound with salmon; but they are now scarce in it. See article **LOCH-CARRON**.

CARRON (THE), a rivulet in Kincardineshire, which rises in the parish of Glenberrie, runs about 7 miles eastward, and falls into the sea at the town of Stonehaven, forming a fine natural harbour. See **STONEHAVEN**.

CARRON (WEST), a village in the parish of Larbert, Stirlingshire. Population in 1851, 400. See **CARRON-WORKS**.

CARRON-BOG. See **CARRON (THE)**, Stirling-shire, and **FINTRY**.

CARRON-BRIDGE, a village in the parishes of Morton and Durrisdcer, Dumfries-shire. It stands on the rivulet Carron, and on the road from Sanquhar to Dumfries, $1\frac{3}{4}$ mile north-west of Thornhill. It has a station on the Glasgow and South-western railway. Population in 1851, of the entire village, 254; of the Morton section, 199.

CARRON-HALL. See **LARBERT**.

CARRONSHORE, a village with a post-office in the parishes of Bothkennar and Larbert, Stirlingshire. It stands on the left bank of the river Carron, $\frac{1}{4}$ mile below Carron-Works and 2 miles above Grangemouth. It is connected with Carron-Works by a double line railway, and was formerly the port of the Carron Company, but has declined under the influence of Grangemouth, yet is still used for the landing of lime and ironstone, and for dry-dock repairs. Vessels of 150 tons can be tracked up to it in ordinary tides. Population in 1861, of the entire village, 1,035; of the Bothkennar section, 528.

CARRON-WORKS, a seat of vast iron manufacture, with a post-office station called simply Carron, in the parish of Larbert, Stirlingshire. It is situated on the left bank of the Carron, 2 miles north-east of Falkirk, and $3\frac{1}{2}$ east by south of Grangemouth. It is celebrated as the most extensive iron-foundry in Europe; though, of late years, a greater quantity of pig-iron has been manufactured at some other works. These works employ about 2,000 workmen. There are 5 blast or smelting furnaces, 4 cupola-furnaces, and 20 air-furnaces; with mills for grinding fire-clay, boring cylinders, and grinding and polishing cast metal; and besides the machinery which is driven by water, there is a steam-engine of 90 horses power, which is used

entirely in the production of blast. All kinds of cast-iron goods are manufactured here; not only instruments of war, such as cannon, mortars and carronades, shot and shells, but implements of agriculture, of the arts, and for domestic use, pipes, hoilers, ovens, vats, pots, grates, and smith-work and machinery of all kinds. To a stranger, the approach to the works is very curious and striking, especially if made under the shade of night. The perpetual illumination of the atmosphere,—the roaring of the immense bellows,—the rushing of water,—and the noise of the weighty hammers striking upon resounding anvils,—suggest to the imagination the idea of Vulcau and his Cyclops occupied in preparing thunder-bolts. Two kinds of ore are employed in these works together, in regular proportions. The first is a species of decomposed hematites brought from Cumberland, which stains the hand of a blood-red colour; the second is the common argillaceous iron-stone, of a yellowish brown colour, and of a rocky hardness. From the proper proportions of these ores, an iron is procured, equal, if not superior, to the sable iron imported from Russia. The Carron-works were first projected by Dr. Roebuck of Sheffield, in 1760; and are carried on by a chartered company, with a capital of £150,000 sterling, divided into 600 shares, which are now in a few hands. The company hold and work for themselves extensive mines of iron, coal, and lime, besides possessing an immense stock of all materials requisite for carrying on the establishment. There are two large collieries immediately adjoining the works. The company have about 20 vessels for exporting their manufactures to London and other ports, and for conveying ironstone and limestone to their works. The several villages of West Carron, Carron-shore, Stenhousemuir, Cuttyfield, and Larbert, are all dependencies of either Carron-Works or their collieries.

CARROY (LOCH), a small sea-arm projecting north-eastward from Loch Bracadale in Skye.

CARR-ROCK (THE), the outer extremity of a reef of sunken rocks, which extend, in an almost continuous ridge, for about a mile and three quarters from Fifeness, on the northern side of the entrance of the frith of Forth. It is in lat. $56^{\circ} 17'$, and long. $2^{\circ} 35'$ west of Londou; bearing by compass S.W. by W. from the Bell-rock, distant 11 miles; and from the Isle of May lighthouse N.N.E. $\frac{1}{4}$ E. distant 6 miles. From a calculation made in 1809, it appeared that, from 1802 to that period, no fewer than 16 vessels had been lost or stranded on this dangerous reef, which forms a turning-point in the course of all northern bound ships to or from the frith of Forth. An old fisherman, who had been resident at Fifeness for above sixty years, stated that there had been, within his recollection, at least 60 vessels lost upon the Carr: "For, if she missed her mark one year, she was sure to hit twice the year following." Under these circumstances, the commissioners of the northern lighthouses were induced to erect a beacon of masonry on this rock. The rearing of this was a business of great difficulty, from the smallness of the foundation afforded by the rock, and the agitation of the waves on all half-tide rocks. The length of the beacon rock, from south to north, is only 72 feet; but its greatest breadth, at low water of spring-tides, is only 23 feet; and it was found impracticable to obtain a base for a foundation-course of greater diameter than 18 feet; whence the impossibility of erecting any building of sufficient height to be above the reach of very weighty seas, which would at once be fatal to the effect and apparatus of a lighthouse. From the necessity of having to cut down the rock

under tide-mark, a moveable cofferdam had to be used, out of which the water was pumped every tide. The building of the base of masonry alone occupied three years, so difficult was the undertaking; the operation being conducted only in good weather, and at the return of spring-tides. A year's work in such circumstances did not exceed 130 hours' working. It was eventually completed in 1818, after six years' labour. The lower part is a circular building of masonry, 18 feet in diameter, from the top of which spring six pillars of cast-iron, terminating in a point, with a hollow ball of that metal, which measures 3 feet across, and is elevated 25 feet above the medium level of the sea. The works cost altogether about £5,000.

CARRUTHERS. See MIDDLEBIE.

CARSAIG. See KILFINICHEN and KILVICELEN.

CARSE BAY. See KIRKBEAN.

CARSEBURN, a village in the parish of Forfar, Forfarshire. Population, 105.

CARSE-GRANGE, a small village in the parish of Errol, Perthshire.

CARSE OF CLACKMANNAN, the part of the Carse of Forth, lying on the left bank of the river Forth, within the county of Clackmannan. It is of the same character as the part lying opposite to it within the county of Stirling, but of very much smaller extent.

CARSE OF FALKIRK, the part of the Carse of Forth, lying along the right bank of the river Forth, from Airth in Stirlingshire to Borrowstownness in Linlithgowshire. It is all very nearly a dead level, and is the richest portion of the whole carse—particularly within the parishes of Bothkennar and Falkirk,—seeming everywhere the bean ideal of luxuriance.

CARSE OF FORTH, a great tract of low, flat, alluvial land, along both banks of the river Forth, in the counties of Perth, Stirling, Clackmannan, and Linlithgow. It extends from the foot of the Grampians, in the neighbourhood of Gartmore, away through the opening between the Lennox and the Ochil Hills, on to the low country in the vicinity of Borrowstownness. "If," says Dr. Graham, "all the carse lands, which skirt the Forth on both sides, be taken into the account, it may be computed at the average length of 34 miles, by 6 in breadth; amounting to 204 square miles, or 103,800 Scots acres nearly, and unquestionably constituting the richest and most important district of Scotland, in an agricultural point of view. This soil is evidently alluvial; and the substances which are found in it, as well as the aspect of the higher grounds by which it is bounded, indicate that, at some former period, it was covered by the sea. The soil itself consists of the finest particles of earth, without the smallest stone or pebble except what may have been accidentally carried thither. The soil of the best quality, when first taken up from its bed, is of a bluish colour, and of a soapy or mucilaginous consistence. That which has been long exposed to the sun, and to the elements, by cultivation, assumes a darker hue, or hazle colour; and in point of friability, approaches to the character of loam. Beds of shells, particularly oysters, and others which are usually found in the frith, occur from time to time, from a few inches to four feet in thickness. Throughout the whole of these carses, patches of till occur, especially in the district to the westward of Stirling. Indeed, as we ascend the Forth towards the west, this soil becomes gradually of inferior quality. These carses are elevated from 12 to 20 or 25 feet above the level of the sea at high-water. At the same time it is evident that this soil is alluvial, there seems to be room to question whether this

deep and extensive tract of clay, stretching along both sides of the Forth, is to be attributed solely to the deposit of that river through the course of ages. The carse appears to be altogether inadequate to such a prodigious effect. The Clyde, which runs through a course at least as long, and carries an equal body of water to the sea, has formed no alluvial land at its embouchure; and it will probably be found that no river that runs westward has, by its alluvion, formed any considerable deposit of soil. The quantity of earthy particles that are carried down by rivers and streams from the mountains is much less than has been generally imagined. It would seem, that at some distant period, the waters of the German ocean had regurgitated to the westward, and covered, for a considerable time, those plains, depositing there the rich particles of soil with which they were, in consequence of some revolution of nature, copiously impregnated. If any stress could be laid on the universal tradition of the country, it would lead to the belief that this whole plain, as far west as Gartmore, was formerly covered by the sea."

CARSE OF GOWRIE, a low, flat, alluvial district, extending along the north bank of the Tay, from the base of Kinnoull Hill in Perthshire to the vicinity of Dundee in Forfarshire. It measures about 15 miles in length, and from 2 to 4 in breadth, lies at an elevation of from 24 to 40 feet above sea-level, and is flanked along the north by the Sidlaw Hills. Excepting a moor of about 8 square miles extending eastward from Kinnoull Hill, it is all rich arable land, cultivated like a garden, cut into fields only by drain-ditches or low hedge-rows, and looking in summer like a sea of corn, thickly yet proudly sited with houses and trees. It contains a few villages, and about 20 proprietorial mansions, but otherwise is farmed with the utmost parsimony of space. All of it evidently was at one time under water; much perhaps was so even at the time when the surrounding country became first inhabited; and some parts which at this day are very fine arable land, were an extensive morass within the recollection of several persons still or recently alive. The Tay is supposed to have formed a circuit round the carse, washing the foot of the Sidlaw hills, and entering its present channel at Invergowrie. Staples for holding cables have been found at the foot of the Sidlaw hills, to the north of the flat land; and the parish of St. Madoes, now in the carse, is said to have been once on the southern side of the river. Several swells or very low eminences diversify the general level of the plain, and seem to have been islands at a time when all the rest was still under water. They bear the name of inches,—the Gaelic name for islands,—such as Inchyre, Inchmichael, Inchconans, Inchtyre, and Megginch. The soil on them is very different from that of the low ground, being a red till, approaching the nature of loam, while that of the low ground is a blue clay of a very rich quality. Previous to 1760, the carse was disfigured with many large pools of water; but these have been all drained. Lying on the banks of the Tay, the Carse of Gowrie possesses a few tolerable harbours, the chief of which is at Errol, nearly in the centre of the district.

CARSE OF KINNEIL. See BORROWSTOWNNESS.

CARSE OF STIRLING, the part of the Carse of Forth which extends along the right bank of the Forth, from Craigforth to Airth, in Stirlingshire; or according to some persons, the parts also on the left bank of the river, from the moss of Kincardine to the mouth of the Devon, within the counties of Perth, Stirling, and Clackmannan. See CARSE OF FORTH.

CARSETHORN, a village in the parish of Kirkcubright, Kirkcudbrightshire. Population in 1851, 157. See KIRKBEAN.

CARSKEY, a small bay, where vessels may occasionally anchor, about 3 miles east-north-east of the Mull of Kintyre, Argyleshire.

CARSLOGIE. See CUPAR-FIFE.

CARSPHAIRN, a parish, containing a post-office village of its own name, on the northern border of Kirkcudbrightshire. It is bounded on the west and north by Ayrshire, and on other sides by the parishes of Dalry and Kells. Measured from the Gallowrigg, on the north-east, to the head streams of Dee water on the south-west, it is upwards of 15 miles in extent; and its greatest breadth is about 10 miles. The Dugh water intersects it from north-west to south-east, and after receiving numerous tributaries, joins the Ken—which separates Carsphairn from Dalry—at the south-east extremity of the parish. Loch Doon lies partly on the western boundary. The surface of the parish is mountainous, with the exception of a small plain towards the centre, on which the village is situated, and a few spots on the sides of the rivulets. The hills are in general green, interspersed with moss. The highest ground is CAIRNSMUIR: which see. Formerly there were extensive forests of natural wood, and iron mines are said to have been wrought in this district. About 1839, the Hon. Colonel Macadam Cathcart began to work a lead-mine at Woodhead. See WOODHEAD. Many of the springs contain iron dissolved by means of carbonic acid, and are esteemed for their tonic quality. The landowners are Cathcart of Craiggillan, Clarke of Knoekgray, McMillen of Holm, and eight others. Sir Loudon McAdam, the celebrated engineer and road-constructor, was born at Waterhead in Carsphairn. His father shortly afterwards sold the greater part of his estate, and went to live at Lagwine, a few miles farther down the river Dugh. His residence there was unfortunately consumed by fire, and he left Scotland at the time his son was about six years old, for America, where he embarked in mercantile speculations. He was succeeded in his business by his son. On what account he returned to Britain we are not informed; but, in consequence of some chemical discoveries, he made an advantageous government contract, which ultimately led him—perhaps accidentally—to suggest the improvements upon the roads to which he is principally indebted for celebrity. The parish is traversed along the glen of the Dugh by the road from Ayr to Dumfries. The village of Carsphairn stands on that road, about 12 miles north-west of New Galloway. Population of the village in 1851, 103. Population of the parish in 1831, 542; in 1861, 553. Houses, 98. Assessed property in 1843, £5,414.

This parish is in the presbytery of Kirkcudbright, and synod of Galloway. Patrons, the Crown and Forbes of Callender. Stipend, £182 10s., with glebe of the value of £27. Unappropriated tithes, £94 7s. 7d. The sum of £9 19s. 6d. of the Crown lands of this parish is paid to the minister of Kells, out of which parish Carsphairn was formed. Schoolmaster's salary, £34 4s. 4½d., with about £14 fees. The parish church was built about 1815, and repaired in 1837, and contains about 400 sittings. There is a Free church for Carsphairn and Dalmellington, with an attendance of 250; and the yearly sum raised in connexion with it in 1853, was £116 11s. 5d.

CARSTAIRS, a parish, containing the villages of Carstairs and Ravenstruther, whose post-town is Lanark, in the upper ward of Lanarkshire. It is bounded by Cambusnethan, Carnwath, Pettinain, Lanark, and Carluke. Its length south-eastward is 6 miles;

and its breadth is about 3 miles. The Clyde traces the southern boundary, and the Mouse runs across the interior. The superficial area is about 12,000 acres; of which about 10,000 are under cultivation. It is divided into two districts by a ridge of rising ground so uniform that it appears from the public road to have been artificially formed. The higher ground is a mixture of clay and mossy earth, and the lower a sharp sandy soil. Both divisions are of good quality, and capable of producing excellent crops. Near the village is the magnificent mansion of Carstairs, the seat of Robert Monteith, Esq., the principal heritor. There was a Roman camp on a rising ground near the Clyde, at Corbiehall, now completely effaced by the plough,—though a few years ago, the prætorium and walls of circumvallation were still very visible. Several Roman antiquities, as coins, instruments of war, and culinary utensils, have been dug up here. The road from Lanark to Edinburgh and the Glasgow fork of the Caledonian railway traverse the parish, and the latter has a station east of Ravenstruther, where also is the junction with the Edinburgh fork. See CALEDONIAN RAILWAY. The village of Carstairs stands on the Lanark and Edinburgh road, 2½ miles west of Carnwath. It has of late years been greatly improved in appearance. The parish church—which was built in 1794, has a spire and clock, and contains 430 sittings—stands on a rising ground in its centre. Population of the parish in 1831, 981; in 1861, 1,345. Houses, 240. Assessed property in 1843, £6,464 11s. 5d.

This parish is in the presbytery of Lanark, and synod of Glasgow and Ayr. The patron is J. Struthers, Esq. Stipend £233 18s. 7d., with glebe of the value of £35. Unappropriated tithes, £305 7s. 4d. Schoolmaster's salary, £32, with above £30 fees. There are two private schools.

CART (THE), a river of Renfrewshire, formed by the union of the Black Cart and the White Cart. That union takes place at Inchinnan bridge, which consists properly of two bridges, across the two rivers immediately above their junction. See INCHINNAN. The Cart has a course of less than a mile northward, along the boundary between the parishes of Renfrew and Inchinnan, to a confluence with the Clyde about a mile below Renfrew ferry. Its banks are low and wooded; and in its mouth lies a wooded islet which is said to have been formed by a sunken raft of timber.

CART (THE BLACK), a river of Renfrewshire. It issues from Castle-Semple loch, and may therefore be regarded as a continuation of the Renfrewshire Calder. It runs about 9 miles north-eastward, past Johnston and Linwood, dividing the county into nearly equal parts, receiving the Gryfe on its left bank at Walkinshaw, and unites with the White Cart at Inchinnan Bridge. Its whole course lies along a valley very slightly elevated above sea-level; and its current in consequence, is sluggish and dark.

CART (THE WHITE), a river of Renfrewshire. It rises in the moors of Eaglesham, near the point where the counties of Renfrew, Ayr, and Lanark meet,—flows 9 miles northward, partly in the parish of Eaglesham, partly on the boundary between Renfrewshire and Lanarkshire, and partly in the parish of Cathcart,—then runs 7 miles westward by Pollockshaws and Crookston castle to Paisley, receiving the Levern on its left bank, near Crookston castle,—and then runs 2½ miles northward to the junction with the Black Cart at Inchinnan Bridge. In its course it gives motion to a vast quantity of machinery, particularly at Pollockshaws and Paisley; and it is navigable to the latter place for vessels of 80 tons burden,—the navigable communication with

the Clyde being completed by a canal, by which the shallows at Inchinnau Bridge are avoided. On the 29th of May, 1840, a branch canal from the Forth and Clyde canal, to the Clyde opposite the mouth of the Cart, was opened under the name of the Cart and Forth Junction canal. It is about three-fourths of a mile in length. A great deal of the scenery along the course of the White Cart, particularly within the parish of Cathcart, and thence to the neighbourhood of Paisley, is very beautiful. See CATHCART.

CARTER FELL, one of the Cheviot mountains, on the southern boundary of the parishes of Jedburgh and Southdean, Roxburghshire, forming there the boundary between Scotland and England. Its altitude above sea-level is 2,020 feet. Some of the headstreams of the Jed rise on its north side, and some of the headstreams of the Northumbrian Tyne on its south side. The road from Jedburgh to Newcastle, which is the principal pass through the Cheviots, goes over the east shoulder of Carter Fell, there called Carter Bar.

CARTERHAUGH, a fine green holm lying in the angle formed by the junction of the Ettrick and Yarrow, the scene of the fairy ballad of 'Tamlane.'

CARTHUR. See HUTTON and CORRIE.

CARTLAND, a village in the north-west of the parish of Lanark, Lanarkshire. Population in 1851, 112.

CARTLAND CRAGS, a vast chasm in the sandstone rocks forming the bed of the Mouse, immediately above Lanark; formed by the lower part or projecting shoulder of a great mountain-mass, detached from the body or upper part, and extending more than three quarters of a mile in a curved line from south-west to north-east, with a depth of several hundred feet,—

"Wall above wall, half-veiled, half-seen,
The pendent folds of wood between;
With jagged breach, and rift, and scarr,
Like the scratched wreck of ancient war."

To ascertain how this wonderful fissure has been produced is a curious geological problem; the more interesting, as the phenomena of Cartland crags are such as to furnish a remarkable test for trying the merits of the two theories which long divided the geological world. According to the principles of the igneous theory, a vein of trap, which traverses the strata in a direction almost perpendicular to the course of the chasm near its centre, renders it an example on a great scale of disruption and dislocation by explosion from below. On the other hand, Cartland crags evidently possess all the data requisite to form a case of what is called in the aqueous theory, subsidence; an explanation which Dr. Mac-knight inclined to prefer, because the trap, from the smallness of its mass, seems totally inadequate, as a mechanical power, to the effect produced. The direction of the rent, instead of following the course of the vein—which it must have done had it owed its existence to this cause—is very nearly at right angles to that course; and it appears that the trap itself had been originally a part of the formation or mountain-mass, previous to the time when the rent took place. The Cartland sandstone belongs to the oldest of the floetz rocks. In the under part of this formation, it alternates with greywacke, and contains lime in calcspar veins. Some varieties are good specimens of what Mr. Jameson considers as chemical depositions. The trap consists of compact greenstone; basalt including olivine and augite; and a substance intermediate between basalt and clinkstone. At the lower part of the ravine, the road from Glasgow to Lanark is carried across on a bridge of three arches. A few yards above this

bridge is Wallace's cave, whose name is attached by tradition to various localities here; and a little below, there is an old bridge of one arch, supposed to be of Roman construction.

CARTLEY-HOLE. See ABBOTSFORD.

CARTSDYKE, or **CRAWFURDSIKE**, the eastern suburb of Greenock, in Renfrewshire,—originally quite distinct from that place, a rival of it, and erected into a free burgh of barony in 1633, by charter from Charles I., but now strictly one town with Greenock, and included within its parliamentary boundaries. See GREENOCK.

CARTY, a harbour on the right bank of the river Cree, and eastern verge of Wigtownshire, about 1½ mile below Newton-Stewart. It has commonly about 12 feet water in spring tides, and is regularly frequented by vessels of from 35 to 45 tons burden.

CARVY (THE), a small tributary of the Don, in the lower district of the parish of Strathdon, Aberdeenshire.

CARWINNING. See DALRY, Ayrshire.

CARY. See ABERNETHY.

CASH. See STRATHMIGLO.

CASSILIS CASTLE, a noble mansion, romantically situated on the left bank of the Doon, and on the north-west verge of the parish of Kirkmichael, about 1½ mile south-west of the village of Dalrymple, Ayrshire. The body of it seems to belong to the middle of the 15th century, and a fine addition was made to it in 1830. It is one of the seats of the Marquis of Ailsa, who also is Earl of Cassilis. David, 3d Lord Kennedy, was created Earl of Cassilis in 1510. About a quarter of a mile to the south of the castle are three or four small green hills, known as Cassilis Downans, and long regarded as the frequent scene of fairy revelry.—There is a well-known ballad of which the first stanzas run thus:

"The gypsies they came to my Lord Cassilis' yett,
And O! but they sang bonnie;
They sang sae sweet, and sae complete,
That doon cam our fair lady.

She cam tripping doon the stairs,
Wi' a' her maids before her;
As soon as they saw her weel-far'd face,
They coost their glamourie owr her."

Of the transactions suug in this ballad the following account is usually given. John, 6th Earl of Cassilis, commonly termed "the grave and solemn Earl," married as his first wife, Lady Jean Hamilton, daughter of Thomas, 1st Earl of Haddington. It is said, that this match took place contrary to the inclinations of the young lady, whose affections had been previously engaged by a certain Sir John Faa of Dumbar—in the neighbourhood of which was her paternal seat of Tynninghame—who was neither grave nor solemn, and moreover, much handsomer than his successful rival. While Lord Cassilis was absent on some mission from the Scottish parliament to that of England, Sir John, with his followers, repaired to Cassilis, where the young lady then resided, and persuaded her to elope with him to England. As ill luck would have it, the Earl returned home before the lovers could cross the Border,—pursued and overtook them,—and in the conflict all the masquerade gypsies were slain save one, and the weeping Countess brought back to her husband's mansion, where she remained till a cell was prepared for her in the family castle of Maybole, wherein she languished for the short remainder of her life in humble sorrow and devotion. This is one edition of the story, still very current in the county where the elopement took place; but it is not supported by the tenor of the ballad, which was composed by the only surviving ravisher, and is contra-

dicted by a number of those who still recite the verses. Indeed, a very numerous jury of matrons, "spinsters and knitters in the sun," pronounce the fair Countess guilty of having eloped with a genuine gypsy, though compelled in some degree to that low-lived indiscretion by certain wicked charms and philtres, of which Faa and his party are said to have possessed the secret. It is not now possible to fix the precise date of Lady Cassilis's elopement with 'the Gypsy laddie;' or the identity of the frail one herself. Lady Jean Hamilton, of the Haddington family, was born in the year 1607, and died in 1642. Moreover there is a letter extant from her husband to the Rev. Robert Douglas, written shortly after her death, in which he expresses a respect and tenderness for his wife's memory quite inconceivable had she been guilty of such a misdemeanour as that supposed. It is alleged that she lived long enough in her confinement at Maybole to work a piece of tapestry, still preserved at Colzean House, in which she represented her unhappy flight, but with circumstances unsuitable to the details of the ballad, and as if the deceits of 'glamouric' had still bewildered her memory; for she is mounted behind her lover, gorgeously attired, on a superb white courser, and surrounded by a group of persons who bear no resemblance to a herd of gypsies.

CASSLEY (THE), a small river of Sutherlandshire. It rises among the mountains in the south of the parish of Edderachyllis, and flows about 15 miles south-eastward, past the eastern skirt of Benmore-Assynt, and along the upper district of the parish of Creich, to a confluence with the Oikell, in the vicinity of Rosehall. It is an excellent angling stream.

CASTLE, a village in the parish of New Cumnock, Ayrshire.

CASTLE-BAY. See **BARRA** and **PORTPATRICK**.

CASTLE-CAMPBELL, a noble relic of feudal ages, in the parish of Dollar, and in the neighbourhood of the village of Dollar, Clackmananshire. It surmounts a round insulated mound, which seems to have been partly formed by the hand of Nature, and partly finished by art. On each side is a deep ravine or glen, clothed in thick wood, and down which run streams that unite immediately below, and form a considerable brook. The mound is nearly perpendicular on the side next Dollar, and was formerly disjoined from the surrounding hills by a ditch shelving down to the bottom of the glen on each side, which rendered the castle inaccessible except by means of a draw-bridge; so that it was a place of very great strength. Though the castle stands upon an eminence, it is surrounded on all sides by higher hills, many of which are wooded to their summits, which gives to the whole scenery a very picturesque but, in certain states of the weather and sky, a somewhat gloomy effect. The buildings still existing form a quadrangle. It is not known when or by whom this venerable pile was erected. It was formerly called the Gloume, or Castle-Gloom; and the Celtic names of the two brooks which encircle it are supposed by some to signify the burns of Care and of Sorrow. About the year 1493—when it probably first came into the possession of the noble family of Argyle, whose property, however, it no longer is—it was called Castle Campbell, by which name it has ever since been known. This castle, with the whole territory belonging to the family of Argyle, suffered by the calamities of civil war in 1645; for the Marquis of Montrose, the enemy and rival of the house of Argyle—or rather his fierce allies the Macleans and Ogilvies—carried fire and sword through the whole estate. During this commotion the castle was de-

stroyed; and its magnificent ruins only now remain,—a sad monument of the miseries of civil war.

CASTLE-CARY, an ancient fortress on the southern verge of Stirlingshire, on the line of Antoninus' wall, and in the vicinity of the Stirling and Glasgow highway, the Edinburgh and Glasgow railway, and the Forth and Clyde canal, $1\frac{1}{2}$ mile north-east of Cumbernauld, and 7 miles west-south west of Falkirk. Castle-Cary, according to General Roy, was one of the *præsidia* or principal stations on the wall of Antoninus, as is evident from its dimensions, and the number of antiquities discovered there. A Roman way led out from it towards the south; and it seems probable that this place was the *Coria Damniorum* of Ptolemy, and the same which Nennius calls *Caer Ceri*. General Roy has preserved a plan of the ancient fort, and of the antiquities discovered here. The fort itself is now nearly effaced by agricultural operations; and only the tower or keep remains in any state of repair. A station on the Edinburgh and Glasgow railway, $6\frac{1}{2}$ miles from Falkirk and $15\frac{1}{2}$ from Glasgow, takes name from Castle-Cary. A stage on the Forth and Clyde canal in communication with the Stirling stage-coaches, also took name from it. The junctions of the Caledonian railway with the Scottish Central, and of the Scottish Central with the Edinburgh and Glasgow, are within 2 miles of this place.

CASTLE-CLANYARD. See **KIRKMAIDEN**.

CASTLE-CLUGGY, an ancient fortalice on a peninsula in the north of the Loch of Monivaird, in the parish of Monivaird and Strowan, Perthshire. Only a low square tower, with walls 5 or 6 feet thick, and as hard as iron, now remains; but the original structure was more extensive and very strong, and was spoken of four centuries ago as then an ancient building. Tradition says that it belonged to the Red Comyn, the competitor of Robert Bruce.

CASTLE-COLE. See **COLE'S CASTLE**.

CASTLE-CRAIG. See **KIRKURD**.

CASTLE-CRAIG, or **CRAIGHOUSE**, an old ruin on the brow of a precipice, overhanging the Cromarty frith, in the west end of the parish of Kirkmichael, Ross-shire. Only one wing of the original building now stands; but this is very old, about 50 feet high, and has a stone roof and arched apartments. Tradition says that the castle was erected by the Urquharts, barons of Cromarty; and history records that it was the principal residence of the Bishops of Ross.

CASTLE-CRAIGNISH. See **CRAIGNISH**.

CASTLE-DONNAN, a picturesque ruin, amid magnificent scenery, near the village of Dornie, in the parish of Kiutail, Ross-shire. It was given by Alexander III., after the battle of Largs, to Coliun Fitzgerald, as a reward for military services.

CASTLE-DOUGLAS, a post and market town on the northern border of the parish of Kelton, Kirkcudbrightshire. It stands on the road from Dumfries to Kirkcudbright and Portpatrick, $1\frac{1}{2}$ mile east of Thrieve Castle, 10 miles north-west by north of Kirkcudbright, 18 south-west of Dumfries, and 89 south-south-west of Edinburgh. Its site is a gentle acclivity, ascending from the bank of Carlinwark Loch. The town is modern, neat, and regular. The streets are wide and airy, and cross one another at right angles; and the spaces within the rectangles are laid out in gardens, one of which is attached to every feu. The shops are numerous, showy, and well furnished. The town-house is a modern edifice with a tower and clock. The whole place in fact has a tasteful, handsome, prosperous appearance, and is second to no town in the south of Scotland, excepting Dumfries.

Castle-Douglas is the great mart for the produce

of the larger part of Kirkcudbrightshire. A weekly market is held on Monday, at which a surprising amount and variety of business is done. The fairs also which used to be held on Kelton hill, have, with one exception, been transferred to its bounds, and have added a good deal to its consequence. These fairs are held for horses on the 11th of February if a Monday, or if not on the Monday after; for horses and hiring, on the 23d March, or the Monday after; for hoggets, on the first Monday of April; for lambs, on the Monday in August before Minihive; for horses and hiring, on the 23d of September, or the Monday after; and for horses, on the Monday after the 13th of October, old style. A cotton manufactory was at one time set agoing in the town, but did not succeed. Coaches run through daily to Kirkcudbright and to Stranraer, in communication with the trains of the Glasgow and South-western railway at Dumfries. A line of railway which was projected some years ago for connecting Ayr with Galloway and the Solway, was proposed to touch Castle-Douglas, and to pass on thence to Kirkcudbright. The town has branch offices of the Bank of Scotland, the National Bank, the Union Bank, and the British Linen Company's Bank. It has also a savings' bank, a subscription library, a circulating library, a good hugh school, and several other schools. A mechanics' institute was recently established. A sum now worth £41 a-year was left by Sir William Douglas, in 1831, to the magistrates and council to be divided among six schools, and the poor of the parish, according to a scale of proportion pointed out in the deed. An United Presbyterian church stands in the vicinity of Castle-Douglas, but within the parish of Cross-michael; and a Reformed Presbyterian church and a Free church—the latter with an yearly income of £242 6s. 5½d. in 1853—stand within the town. The post-office of Castle-Douglas is the key-office to a larger number of sub-offices than any other in Scotland, except that of Glasgow.

Castle-Douglas was called originally Causeway-end, and afterwards Carlinwark; and did not get its present name till 1792. This name alludes to the Castle of Thrieve, the old feudal stronghold of the Douglasses. See THRIEVE. The place also, at the instance of Sir William Douglas, and by royal charter, was erected into a burgh of barony at the time when it began to be called Castle-Douglas, yet was then a very trivial seat of either trade or population; for—says the New Statistical Account in 1844—"men are yet living who remember the time when *Causewayend* was only a small cluster of cottages, the population of which did not amount to more than twenty." The town owes its prosperity to the fostering care of Sir William Douglas, and to the advantageousness of its position as a central market for the county. A new and extended charter was obtained in 1829. The magistracy and council consist of a provost, 2 bailies, 17 councillors, who are elected triennially on the 1st Wednesday of September. All persons resident within the boundaries of the burgh, and having right by feu to a piece of ground within the same, are entitled to elect or be elected. The property of the burgh, in 1833, was £573 15s. 11d.; the debts, £167 10s. 7d.; the average annual revenue, £20; the expenditure, £13 5s. Justice of peace small debt courts are held on the first Monday of every month; and steward (sheriff) small debt courts on the second Wednesday of January and April, and the first Wednesday of July and October. Population in 1841, 1,847; in 1861, 2,261. Houses, 369.

CASTLE-DRUMMIN. See AVEN (THE).

CASTLE-DUART. See DUART CASTLE.

CASTLE-FEATHER. See WHITHORN.

CASTLE-FORBES. See KEIG.

CASTLE-GIRNIGOE. See WICK.

CASTLE-GLOOM. See CASTLE-CAMPEBET.

CASTLE-GRANT. See CROMDALE.

CASTLE-HAVEN. See TARBAT.

CASTLE-HILL, any eminence either now or formerly crowned by a castle. At least forty-six localities in Scotland, perhaps a good many more, bear this name.

CASTLE-HUNTLY. See LONGFORGAN.

CASTLE-ISLAND, a small island near the south-east side of the island of Eigg, Inverness-shire. It is inhabited only during part of the summer months by persons tending cattle.

CASTLE-ISLAND, an island in Loch-Leven, Kinross-shire, famous in history for its castle. See LEVEN (LOCH).

CASTLE-KENNEDY. See INCH.

CASTLE-KILCHURN. See KILCHURN CASTLE.

CASTLE-LACHLAN. See STRACHUR.

CASTLE-LAW, one of the most northerly range of the Lammermuir hills, in the parish of Gifford or Yester, in Haddingtonshire; rising to the height of 940 feet above sea-level. On the summit of this hill there is a circular camp, the circuit of which contains nearly 4 Scots acres. It measures, within the ramparts, 370 feet from east to west, and 337 feet from south to north. About three quarters of a mile to the east of this hill, is another hill, 860 feet in height, on the top of which also is an ancient camp called the Castles, of somewhat smaller dimensions; and about two furlongs south of the Castle Law, on a smaller hill called the Witches' Knowe, is a third camp. See also ABERNETHY.

CASTLE-LEOD. See FODDERTY.

CASTLE-LOCH. See LOCHMABEN.

CASTLE-LYON. See LONGFORGAN.

CASTLE-MENZIES. See WEEM.

CASTLE-MILK. See CARMUNNOCK and MUNGO (ST.).

CASTLE-O'ER. See ESKDALEMUIR and WESTERKIRK.

CASTLE-POINT, a low wooded headland, projecting eastward from the promontorial parish of Roseneath, in Dumbartonshire. It is situated nearly midway between Helensburgh and the Battery-Point of Greenock, at the forking of the frith of Clyde into the main-channel and the Gare-Loch. It takes its name from Roseneath-Castle. See ROSENEATH.

CASTLEPHEAIRN. See GLENCAIRN.

CASTLE-RANKINE BURN, a rivulet of Stirlingshire, rising near the south base of Darrach Hill, on the mutual border of the parishes of Kilsyth and Denny, running about 4½ miles north-eastward through the latter parish, and falling into the Carron near Denny Bridge. It contributes to the processes of an extensive dye-work and a chemical work.

CASTLE-SEMPLÉ LOCH, a lake, sometimes called Loch-Winnoch, in the parish of Lochwinnoch, Renfrewshire. The Calder is its chief feeder; and the Dubbs connects it with Kilbirnie loch. Castle-Semple loch was originally between 4 and 5 miles in length, and rather more than 1 in breadth; but it has been considerably lessened by draining. It would appear, from the description of Hamilton of Wishaw, that Lord Semple, then proprietor of this lake and the adjoining lands, commenced to drain it in 1680 or 1700. The estate was sold by Hew, Lord Semple, in 1727, to Colonel M'Dowall, a younger son of M'Dowall of Garthland, who continued the plan of draining the lake, and, in 1735, had made great progress in doing so. Subsequent

proprietors have directed their attention to the same object; and the effect has been the recovery of a great extent of fine rich meadow land. In 1773, and in 1774, a canal was constructed of nearly 2 miles in length, at an expense of £2,000, by which above 400 acres of a very deep rich soil was recovered. The loch still covers about 200 acres; but considerably extends itself when flooded, and during winter. The family of Semple was very early in possession of the lands around this loch. Robert Sympil was vassal in Elziotstoun on the south side of the lake, under the high-steward of Scotland, about 1220; and previous to 1309, Robert Sympil of Elziotstoun was seneschal of Strathgryfe. In 1474, Sir William Sympil, Lord of Elziotstoun, obtained a charter of the baronies of Elziotstoun and Castleton—now Castle-Semple—from James III. Sir John Sympil was raised to the dignity of the peerage, with the title of Lord Sympil, by James IV., in 1488. Elliotstoun and Castle-Semple continued in possession of this ancient family till sold, as above-mentioned, in 1727, after having been their property for about 500 years. In 1813, William M'Dowall of Garthland and Castle-Semple, sold his estate of Castle-Semple to John Harvey, Esquire, of Jamaica. Eastward of the lake, and on the south side, are the remains of the old tower of Elliotstoun, the residence of the Semple family previous to 1550. Its length is 42 feet, and its breadth 33 feet over the walls. Between 1547 and 1572, Robert, commonly called the great Lord Semple, built a tower, called the Peel—the ruins of which still exist—on a small island on the lake, now forming part of the mainland. This tower was in the form of an irregular pentagon, having a sharp end towards the head of the loch. "It was built," says Dr. Caldwell, "over a strong arch, with bulwarks, gun-ports, &c., and is environed with an immense cairn of stones round all its foundations, to a considerable height above high water.*" The castle at Castleton, or Castle-Semple, near the eastern end of the lake, was erected or more probably rebuilt by the first Lord Semple, who died in 1513. He changed its name from Castleton to Castle-Semple. In Blean's Atlas, published in 1654, this castle is represented by a mark denoting the largest size of castles. Crawford—who wrote in 1710—says, "Upon the brink of the loch stands the castle of Sempill, the principal messuage of a fair lordship of the same denomination, which consists of a large court, part of which seems to be a very ancient building, adorned with pleasant orchards and gardens." In 1735 this ancient house was demolished by Colonel M'Dowall, who erected an elegant modern house on its site. Some workmen repairing drains in 1830 found part of the foundations of the castle still existing below ground. In 1504, John Lord Semple founded a collegiate church near the lake, having a provost, six chaplains or prebendaries, two boys, and a sacristan. A stone in the outer wall bears the letters R. L. S., and the arms of Sempill and Montgomery. It was found, about 25 years ago, near the site of the castle of Semple, and was placed in its present situation by the late Mr. Harvey. The church is 71 feet 6 inches in length; 24 feet 3 inches in breadth; and 15 feet 6 inches in height. A portion at the east end, separated from the rest, was used as a place of burial by the Semple family, as it now is by Colonel Harvey the present proprietor. Dr. Caldwell describes its walls as

being covered with ivy, and surrounded by a fine tall hornbeam hedge. The roof was taken off about forty years ago, and the ivy has penetrated into the interior. In ancient times there appears to have been a village at this place, and a chapel in its neighbourhood dedicated to St. Bride. A small burn, which here falls into the lake, is still named St. Bride's burn; and the residence of Colonel Harvey's factor, St. Bride's mill. On the hill of Kenmure, which is of secondary trap rock, there is an imitation of a Chinese temple, from which a very fine view of the lake and surrounding scenery can be obtained. It is supposed to have been erected about the middle of last century by one of the family of M'Dowall who succeeded the Semples.—The Glasgow and Ayr railway passes through the estate of Castle-Semple, and in the immediate neighbourhood of the loch.

CASTLE-STUART. See PETTY.

CASTLE-SWIN, a ruined, ancient, strong fortalice, in the parish of North Knapdale, Argyshire. It stands on a rock on the east shore of Loch Swin, about 2 miles from its mouth, and commands an extensive view of the surrounding country. It is about 35 feet high and 105 feet long; and its walls are about 7 feet thick. It is said by tradition to have been built near the beginning of the eleventh century by Sweno, Prince of Denmark; but it comprises parts which must have been built much later. It was long regarded as the military key of the districts of Knapdale and Glassary.

CASTLE-TIORAM. See ARDNAMURCHAN.

CASTLETON, a parish, containing the post-office village of New Castleton, in the southern extremity of Roxburghshire. It has a somewhat triangular outline; and is bounded on one side by England, on the west by Dumfriesshire, and on the north by the parishes of Teviothead, Hohlkirk, and Southdean. Its area is greater than that of any other parish in the south of Scotland. Its greatest length, from Fanna hill, or from Needs Law, on the north-east, to its southern extremity at the confluence of Mare burn with the Liddel, is about 20 miles; and its greatest breadth, from Peel fell on the east to Tudhope hill on the west, is 14 miles. In history and poetry, and very frequently still in conversation, its name is Liddesdale, from the river Liddel, which runs through it from east to south.† The upper or northern part is mountainous and bleak; but is generally dry, and affords good sheep-pasturage. Some of the mountains both here and along the western and eastern boundaries, are very high and precipitous. Millenwood Fell, and Windhead, are each nearly 2,000 feet in height; and Tudhope hill is 1,830, and, being seen from a great distance at sea, serves as a landmark for ships. The lower extremity of the parish, and all parts of it distant from the streams, are wild and bleak. Along the banks of the Hermitage and the Liddel, however, it is luxuriant, full of rural beauty, and occasionally picturesque. The valley of the Hermitage, stretching from the rugged mountains on the north-west, 10 miles eastward till the junction of the stream with the Liddel, is tufted with natural wood, and

† In the old histories and geographical descriptions of Scotland, it is called 'The County of Liddisdale'; and, in old writs, it is styled 'The Lordship' of that name. In December 1540, the lands and lordship of the forest of Jedburgh, with the lands and lordship of Liddisdale, were annexed to the Crown, by Act of Parliament. And, on the 2d of January, 1648, the lands and dominion of Liddisdale appear to have been granted to Francis, Earl of Buccleuch.

* A very fine copper cannon, having the arms of Scotland, and J. R. S. engraved on it, was found in the loch near the Peel. This relique is preserved at Castle-Semple. Tradition reports that other six guns were lost at the place where this one was found.

abounds in the rich scenes of pastoral life. Near the head of the parish on the east, the rivers Tyne and Liddel take their rise in the midst of a vast bog, which, on account of its stagnant appearance, is called Dead Water. For 10 miles, the banks of the Liddel are entirely naked; but on its junction with the Hermitage, it is fringed with plantation; and, throughout the rest of its course, it flows through a valley opulent in the beauties of landscape. Its tributaries, besides the Hermitage, are the Tweeden, the Tinnis, the Blackhorn, and the Kershope, the last of which forms the honorary with England. All these streams abound in trout; on some of them are fine cascades; and all, through the Liddel, send their waters—in a direction different from all the other streams of Roxburghshire—toward the Solway frith. Limestone is abundant in this district; coal is obtained to some extent on the estate of Liddel hank; and excellent freestone is everywhere found, except at the head of the Hermitage. Mineral springs, possessing medicinal properties, and in considerable repute for their virtues, exist at Thorlieshope, in the morass called the Dead Water,—at Lavston,—at Flat,—and on the Tweeden. The last of these is petrificative, and exhibits, in an interesting manner, the various stages of the petrifying process,—fog or moss, at the edge of the spring, about 8 inches high, soft and flourishing at the top, half-petrified at the middle, and converted into solid stone at the root. The climate, owing to the attraction of the mountains and the coldness of the soil, is very moist; yet, compared with that of many other districts, it is exceedingly salubrious. Toward the close of last century, one native attained, in the full possession of all her faculties, the advanced age of 113. The soil of the holm land is occasionally of a light hut often a very deep and fine loam, and, when judiciously cultivated, bears luxuriant crops. Land under tillage, however, is found chiefly on the banks of the rivers; many hundred acres, which were formerly subject to the plough, having been thrown into pasture in consequence of the high price of sheep and wool. Even mossy ground, though apparently useless, affords considerable nourishment for both black cattle and sheep. Different species of grass rise in constant succession in their respective seasons; and the particular plant called 'the moss,' which springs before any other at the close of winter, is carefully sought after by the flocks.—This secluded district was, at a former period, inhabited by tribes of freebooters, the chief of whom were the Elliotts and the Armstrongs, who acknowledged the civil authority of neither Scotland nor England, and maintained a precarious but very abundant subsistence by predatory excursions upon all the districts around. Their castles, or peel-houses, where they stored their booty and rallied at a moment of danger, still, in some quarters, lift their ruined heights before the eyes of a traveller as memorials of a lawless age.*

Castleton derives its name from a village—no longer in existence, though some of its hearthstones were at a recent date dug up—which was built under the shelter of one of these strongholds.

* There is a minute inserted in the session-records of date 17th January 1649, which mentions that "the English army, commanded by Colonels Bright and Pride, and under the conduct of General Cromwell, on their return to England, did lie at the kirk of Castleton several nights, in which time they brake down and burnt the communion tables, and the seats of the kirk, and at their removing carried away the minister's books to the value of 1,000 marks and above, and also the books-of-session—with which they lighted their tobacco-pipes—the baptism, marriage, and examination rolls, from October 1612 to September 1648, all which were lost and destroyed."

This castle, which stood on the summit of a precipice 100 feet in height, on the east bank of the Liddel, and the rampart and fosse of which still remain entire, is said to have been founded by Ranulph de Soulis in the reign of David I. In the village of Castleton stood a church which was dedicated to St. Martin, and was a vicarage of the priory of Jedburgh. Besides this, there were in the district two other churches, three chapels, and a monastery; the men of lawlessness and general plunder, attempting, in the superstitious spirit of their times, to atone for the injuries which they pertinaciously inflicted on their fellow-men, by liberally building, endowing, or supporting sacred edifices. Ruins of the religious structures may still be seen in sequestered spots where now the human foot rarely treads, and where undisturbed repose invites the solitary sheep to luxuriate on the wild pasturage. One of the churches was called the Wheel church; because it stood in the vicinity of a Roman causeway, which was the only path in that part of Scotland admitting the passage of wheeled carriages. But the most celebrated antiquity of the parish is Hermitage castle, which consists of a tall, massive, gloomy-looking, double-tower, protected by a ditch and strong rampart, and rising aloft from the centre of an extensive waste, overlooking the limpid, murmuring waters of the Hermitage river, amid a scene of barrenness and desolation. This fortress was one of the largest and strongest on the border; and, remaining entire in its walls, was lately put into a state of nearly complete repair. Within a few yards of it, are the ruins of the baronial chapel, surrounded by a burying-ground still partially in use. The castle was built in the 13th century, by Comyn, Earl of Menteith. It afterwards became the property of the once potent family of Soulis; it next, by forfeiture, went into the possession of the Douglasses; it was then made over by Archibald, the sixth Earl of Angus, and the representative of the Douglasses, to Hepburn, Earl of Bothwell, in exchange for the castle and lordship of Bothwell in Clydesdale; and, the possessions and title of the Heplurns having become the property of Francis Stewart, it passed, on the forfeiture of the latter, into the hands of the Buccleuch family, who still possess it. When Hermitage castle was in the possession of the Douglasses, the brave Sir Alexander Ramsay of Dalhousie was starved to death within its walls; and, when in the possession of the storied Earl of Bothwell—who had been severely wounded in an attempt to seize Elliot of the Parke, a desperate freebooter—it was visited by Queen Mary. In order to attain her purpose, she penetrated the mountainous and almost trackless region which lies between Teviotdale and Liddesdale, attended by only a few followers; returning on the same day to Jedburgh whence she started, and performing a journey of upwards of 48 miles through almost all conceivable varieties of difficulty and obstruction. Other antiquities of the parish consist chiefly of cairns, Picts works, and camps. The most remarkable is a camp, entirely circular, about 100 feet diameter, and consisting of a series of concentric walls, all penetrated by a door or opening toward the east. This camp occupies the whole summit of Carly hill, which stands detached from other elevations, and commands an extensive view of part of Cumberland. At Milnholm there is an ancient cross of one stone, 8 feet 4 inches high. A sword 4 feet long is cut out on the south side of the cross, and immediately above several letters. The tradition concerning it is this:—One of the governors of Hermitage castle—some say Lord Soulis, others Lord Douglas—having entertained a passion for a young woman then

residing in the lower part of the parish, went to her house, and was met by her father, who, wishing to conceal his daughter, was killed by the governor. The murderer was pursued, and took refuge with Armstrong of Mangerton, who had influence enough to prevail upon the people to desist from the pursuit, and by this means saved his life. Seemingly with a view to make a return for this favour, but secretly jealous of the power and influence of Armstrong, the ungrateful wretch invited him to Hermitage castle, where he was basely murdered. The governor himself, in his turn, was killed by Jock of the Side, of famous memory, brother to Armstrong. The cross was erected in memory of this transaction, near to Ettleton churchyard, where he was buried, and almost opposite to Mangerton. Liddesdale has been much improved by its intersection with new roads. Population in 1831, 2,227; in 1861, 3,688. Houses, 568. Assessed property in 1843, £12,125 12s. 1d.

This parish is in the presbytery of Langholm and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend, £249 19s. 11d.; glebe, £20. Unappropriated tithes, £150 8s. 11d.—There are four parochial schools. The salary of the four schoolmasters amounts to £51 6s. 6 $\frac{1}{2}$ d., of which the principal one has £30, and the remaining sum is equally divided among the other three. The fees of the four schools amount to £72 annually. The parish church stands at the confluence of the Liddel and the Hermitage, $\frac{1}{2}$ mile north-north-east of New Castleton. It was built in 1808, and contains about 750 sittings. There are in New Castleton an United Presbyterian church, with an attendance of 350; an Independent chapel, with an attendance of about 75; and a Free church preaching station, with an attendance of about 70. The yearly receipts of the last of these in 1853 amounted to £116 1s. 8 $\frac{1}{2}$ d. There are three private schools, two subscription libraries, and a friendly society. This parish gave birth to the celebrated John Armstrong, M.D., whose father and brother were ministers of it; and who has sung the beauties of his native vale, in his highly finished Poem on Health, Book III.:

—————“Such the stream,
On whose Arcadian banks I first drew air,
Liddel, till now—except in Doric lays,
Tun'd to her murmurs by her love-sick swains—
Unknown in song; though not a purer stream
Through meads more flow'ry,—more romantic groves,
Rolls toward the western main. Hail, sacred flood!
May still thy hospitable swains be blest
In rural innocence; thy mountains still
Teem with the fleecy race; thy tuneful woods
For ever flourish, and thy vales look gay,
With painted meadows, and the golden grain!”

CASTLETON (New), a village with a post-office in the parish of Castleton, Roxburghshire. It stands on a haugh on the right bank of the Liddel, and on the east road from Jedburgh to Longtown, 10 miles north-east of Canonbie, 20 south by west of Hawick, and 26 south-west by south of Jedburgh. It owes its origin to Henry, Duke of Buccleuch, and was commenced in 1793. It has entirely superseded the ancient Castleton, situated a little further up the river. It consists of two principal streets, running parallel to each other, and bearing the names of Liddel and Hermitage. Its houses and gardens are held on lease of 99 years; but the land attached to them, and a right of commonage, only from year to year. A general market is held weekly; hiring markets in April, May, and November; sheep fairs on the Friday before the second Wednesday of September, and on the Thursday before the second Tuesday of October; and cattle fairs on the last Friday of October, and on the third Fri-

day of November. The village is alternately with Langholm the meeting-place of the Eskdale and Liddesdale Farmers' Association. Population in 1861, 1,124.

CASTLETON OF BORTHWICK, a small village in the western extremity of the parish of Borthwick, Edinburghshire.

CASTLETON OF BRAEMAR, a village with a post-office, in the district of Braemar, Aberdeenshire. It stands on the road from Glenshee to Aberdeen, in a romantic situation on the east bank of the rapid Clunie, a little above its confluence with the Dec, 15 miles north of the Spittal of Glenshee, and 57 west-south-west of Aberdeen. It contains a chapel of the Royal Bounty, a Free church, a Roman Catholic chapel, and two excellent inns; and is well known to tourists as head-quarters for visiting the Cairngorm mountains, the Linn of Dee, Mar forest, or the localities around the autumnal residence of the royal family. Population in 1851, 124. See AUCHENDRYNE, BRAEMAR, and CRATHIE.

CASTLETON OF KINCARDINE, a farm, containing the ruins of an ancient royal palace, in the parish of Fordoun, 4 miles west-south-west of Auchinblae and the same distance north-west of Laurencekirk, Kincardineshire. “There are no records,” said the New Statistical Account in 1837, “stating the period when Kincardine castle was built, or when it was last occupied. It was a royal palace previous to the death of Kenneth III., in 994, for it was occupied by that monarch at the time of his murder by Finella. This palace or castle seems to have been a place of considerable strength. A morass surrounded it, a great part of which has been drained within the last thirty years. It stands on the termination of a small ridge, at an elevation of about sixty or eighty feet above the adjoining meadows, and has a very commanding view of the most beautiful part of the How o' the Mearns. It appears to have been of a quadrangular shape, of which little now remains except the foundations of some walls, built with all the solidity common in former ages. It was in Kincardine palace, as Lord Hailes says, that John Baliol resigned his crown to Edward I. of England, July 2, 1296. As this is the last event of importance on record connected with the history of this palace, it is not improbable that it was destroyed in the wars betwixt the Scotch and English which followed that event.” The ancient town of Kincardine, the quondam capital of the county, now represented by a small decayed village, stood adjacent to the castle. See KINCARDINE.

CASTLETON OF MUCKART, an estate in the parish of Muckart, Perthshire, on which are some vestiges of a mansion built in 1320 by Archbishop Lamberton.

CASTLETON OF OLRICK, a village with a post-office in the parish of Olrick, Caithnessshire. It stands at the head of Dunnet bay, on the road from Thurso to Wick, 5 miles east of Thurso. It is a modern thriving place, and contains some handsome houses. Extensive quarries of paving-stone are worked in the vicinity; and a considerable commerce is carried on at the adjacent little harbour of Castlehill, in the exportation of paving-stone and the importation of coal. Population of the village 758.

CASTLE-URQUHART. See URQUHART

CASTLE-VARRICH. See TONGUE.

CASTLEWIGG. See WHITHORN.

CASTRAMOUNT. See GIBTRON.

CATACOL, a beautiful valley, about 3 miles long, less than a mile broad, opening upon Kilbrannan Sound, about 2 miles south of Loch Ranza, in the

north-west of the island of Arran. A burrow or small green mound stands on the beach at the foot of it, and is said to cover the grave of a famous ancient sea-king of the name of Arin, slain by Flouu.

CAT-CASTLE. See STONEHOUSE.

CATCUNE-CASTLE. See BORTHWICK.

CATERLINE, an ancient parish and a modern fishing-village on the coast of Kincardineshire. The parish is now united to KINNEFF: which see. The village is situated about 5 miles north-north-east of Bervie. A pier was built here a few years ago by Lord Arbuthnott, and is very serviceable for landing coals and lime. The locality presents good advantages for more extended harbourage. There is an Episcopalian chapel in the village. Population, 79.

CATERTHUN, a hill in the parish of Menmuir, 5 miles north-west of Brechin, Forfarshire; so called from the British *cader*, 'a fortress;' and *dun*, 'a hill.' It is remarkable for a strong fortification on its summit. This building consists of an immense quantity of loose stones ranged around the summit in an oval form. Round the external base is a deep ditch; and 100 yards below are the vestiges of another surrounding the hill. The area within the first or highest mound is flat; the length of the oval is 436 feet, and the transverse diameter 200. This area is covered with a fine soft grass, while, without the ring, the surface of the hill is covered with heath and moss. Within the area is a spring of the coldest water; and near the east side are the remains of a rectangular building, of which the dyke and ditch are yet to be easily traced. The ascent of the hill is very steep, and the summit can only be approached in one direction. There is another fortification of inferior strength in the neighbourhood, on a lower hill, to the northward, called Brown Caterthun, from the colour of its ramparts which are composed of earth; that previously described being known as White Caterthun. It is of a circular figure, and consists of several concentric circles. As White Caterthun at a distance has a resemblance to the frustum of a cone, from the heap of stones at its summit, it has been considered by some to have been a volcano, the crater of which is extinct. But there neither is the appearance of lava, nor of any other volcanic matter, in the neighbourhood; and there is evidently a systematic arrangement of the stones which compose its fortification. Peunant thinks that these hill-forts may have been occupied by the Caledonians, previous to their engagement at the foot of the Grampians with Agricola.

CATHCART, a parish partly in Lanarkshire, but chiefly in Renfrewshire, and reaching within a mile of the southern suburbs of Glasgow. It has a post-office station of its own name, and contains the villages of Old Cathcart, New Cathcart, Clarkston, Crosshill, Crossmyloof, Hangingshaw, Langside, Millbridge, and Netherlee. It is bounded by the parishes of Govan, Gorbals, Rutherglen, Carmunnock, Mearns, and Eastwood. Its length northward is 4 miles, and its greatest breadth is about 2 miles. The surface is very agreeably diversified with hill and dale, presenting to the eye those alternate risings and falls which constitute picturesque beauty. Many of the hills bear the marks of the plough to the very summit; and all, in every part, are in some way or other under cultivation. Through these hills the White Cart winds its romantic course. Towards the south, the country is more bleak and barren, and the hills of greater height. Mr. Ramsay says: "Sluggish and unadorned though the river White Cart be in the lower part of its course, it exhibits much beauty in its progress through the parish of

Cathcart, the banks being frequently elevated and clothed with a rich drapery of wood. Such is the warmth and shelter in some of the sequestered spots on its banks, that an almost perpetual verdure is to be found. In the midst of this scenery 'the Bard of Hope,' and the amiable author of 'The Sabbath,' were, in their childhood, accustomed to pass their summer-months and feed their young fancies, removed from the smoke and noise of their native city. The latter, in his 'Birds of Scotland,' says:

'Forth from my low-roofed home I wandered blythe
Down to thy side, sweet Cart! where, cross the stream,
A range of stones, below a shallow ford,
Stood in the place of the now spanning arch.'

And Campbell, in his 'Lines on revisiting Cathcart,' thus tenderly apostrophizes the pleasant fields which he had so often traversed 'in life's morning march, when his bosom was young:'

'Oh! scenes of my childhood, and dear to my heart,
Ye green waving woods on the margin of Cart,
How blest in the morning of life I have stray'd
By the stream of the vale and the grass covered glade!''

The climate is salubrious; and many families of Glasgow citizens retire to this parish in summer for the benefit of the air. Agriculture has undergone more extensive improvement than in many similar districts, and is now in an excellent condition. The landowners amount to about thirty; the chief of whom are Gordon of Aikenhead, Brown of Langside, Graham of Dripps, Clark of Crosshill, and Thomson of Camphill. Aikenhead House is a splendid modern mansion; and some of the other residences give fine features to the landscape. Coal and limestone were worked formerly, but not now. Ironstone is abundant, and promises to be in request. Handloom weaving employs many of the parishioners; and there are a paper-mill, a snuff-mill, and two print-fields on the Cart. The parish is traversed by two great lines of road from Glasgow into Ayrshire. A chief object of historical interest is the field of Langside, the scene, on the 13th of May, 1568, of the last fruitless effort of the unfortunate Mary to regain her crown. An eminence is yet pointed out, near the old castle of Cathcart, called the Court knowe, where the queen stood during the engagement; and a hawthorn bush—commonly known by the name of 'Queen Mary's Thorn'—marks the spot. See LANGSIDE. Cathcart gives name, and the title of Earl, to the ancient family of Cathcart, whose hereditary estates here were alienated by Alan, 3d Lord Cathcart, in 1546. The family within the present century, repurchased the lauds on which the castle of Cathcart stands, and another portion named Symshill. The castle of Cathcart, $1\frac{1}{2}$ mile south-east of Langside, has been a very strong building. "The time when it was reared," says Mr. Ramsay, "is unknown. From the remains it appears to have been a place of great strength. Two of its sides are completely defended by the river, to which there is an almost perpendicular descent of tremendous height. The access on the other side—except by a narrow entry which might have been secured by a ditch and draw-bridge—is pretty steep and difficult; so that, in times when the art of attack was not so well understood, it might have made a considerable defence. The original edifice consisted of a square tower, 'to which,' says Hamilton of Wishaw, writing about the year 1710, 'several new buildings have been added.' This more modern portion was 'completely removed' by the end of that century. From Wishaw we also learn that the castle 'had fruitful gardens about it. This edifice was inhabited till about the year 1750, when it was given up for demolition by the proprietor of that day, Maxwell of Williamwood, upon his

removing to another dwelling. The materials were sold to a tradesman in Glasgow, who, having taken off the roof, was proceeding to demolish the rest of the building, when he found himself obliged to stop by the resistance he met with from the strength and thickness of the walls. Since that time the edifice has remained in a dismantled state, without, however, suffering much further injury from the influence of the weather. Upon the bank of the river, and adjacent to the castle, stands Cathcart House, the modern mansion of the family. Upwards of twenty years ago there was built into the front wall of this house a stone, on which are sculptured the arms of Cathcart, quartered with those of Stair, indicating the connection of these families through the marriage of Alan, 7th Lord Cathcart, to a daughter of Viscount Stair, the eminent lawyer." Population of the Renfrewshire portion of the parish in 1831, 2,082; in 1851, 2,734. Houses, 307. Population of the whole parish in 1831, 2,282; in 1861, 3,782. Houses, 398. Assessed property in 1843, £11,955.

This parish is in the presbytery of Glasgow, and synod of Glasgow and Ayr. Patron, Gordon of Aikenhead. Stipend, £274 4s. 1d.; glebe, £16. Unappropriated tithes, £15 19s. 5d. Schoolmaster's salary, £34, with about £60 fees. The parish church is an elegant edifice, built in 1832, and containing about 1,000 sittings.

CATHCART (New), a village in the parish of Cathcart, Renfrewshire. It stands on the White Cart, 2½ miles south of Glasgow, on the east road thence to Kilmarnock. It was founded about the commencement of the present century, and promised for a time to become a place of some consequence, but eventually lost its chief means of prosperity, and sat down as a mere quiet neighbour of Old Cathcart. Population, 749.

CATHCART (Old), a village in the parish of Cathcart, Renfrewshire. Population, 174.

CATHERINE (Loch). See **KATRINE**.

CATHERINE'S (Sr.), a ferry on Loch Fyne, opposite Inverary, and equidistant from the northern terminations of the Strachur and Arduce roads. There is a small pier here 90 yards in length. There is also a comfortable inn.

CATHERINE'S (Sr.), Edinburghshire. See **LIBERTON**.

CATHKIN. See **CARMUNNOCK**.

CATLAW, one of the Grampians, in the northern part of the parish of Kingoldrum, in the county of Forfar; the elevation of which by barometrical mensuration has been found to be 2,264 feet above the level of the sea. At the base towards the north-east is a chalybeate spring. See **KINGOLDRUM**.

CATRAIL (The), a remarkable trenched fortification which may be traced from near the junction of the Gala and Tweed to the mountains of Cumberland. Its general breadth is from 20 to 24 feet, and it is supported by hill-forts scattered in the line of its course. "It is known in the country," says Chalmers in his 'Caledonia,' [vol. i. pp. 239-242.] "by the several names of the Catrail, and of the Pietsworkditch. The *Catrail* is the British name of ancient times; and signifies, in the British language—what distinctly intimates the purposes for which it was made—the Dividing fence,' or 'the Partition of defence.' The name of the Pietsworkditch was applied to this remarkable fence, in more modern times, by the same people who called Severus's wall the Pietswall, and other objects by the same well-known name. The Catrail, consisting of a fosse, and a double rampart, runs through the shires of Selkirk and Roxburgh, from Galashiels on the north, to the Peel fell, at the eastern extremity of Lidsdale,

on the south. The Pietsworkditch first appears, on the north, at a farm called Mosalee, a mile westward from Galashiels, near the obvious remain of a British fort. From Mosalee, it runs, southward, by the west side of Boghall; and, at the end of 2 miles, arrives at the Rink-hill, on the summit of which there are the remains—as the name implies—of a British hill-fort, that is of an elliptical form, and defended by two ditches, and two ramparts of earth and stone. From the Rink-hill, the Pietsworkditch proceeds, in a south-west direction, across the Tweed, near the influx of the Howdenpot-burn; and continues its course to a British fort on the west side of this stream. From this fort, the Pietsworkditch passes Cribshill; and is again discovered several miles, westward, passing along the south-east declivity of Minchmoor, whence it passes Hen-hillhope, where it is distinctly seen, in its obvious course, for a quarter of a mile. It afterwards clearly appears as it ascends the Swinebraehill above Yarrow kirk; and passing the Yarrow river, near Redhawse, it is again observable several miles southward, near Delorain burn, on the south side of Ettrick river. From this position, it has been traced across Coplaw; and thence, southward, by the base of Stanhopelaw, where its singular remains are pretty distinct. For some distance southward of Stanhopelaw, it cannot now be traced, owing to the swampiness of the country; but the Pietsworkditch again appears on Hendwoody common; whence it proceeds, in a south-west direction, across Borthwick water, past a farmstead called Broadlec, where the remains of it become very distinct for the course of a mile-and-a-half, till it reaches Slate-hillmoss. From this position, it proceeds forwards, in a south-east direction, across Teviot river, through the farm of North-house to Dockcleugh-hill, where its remains are very distinct: from Dockcleugh-hill it continues a south-east course, in a slanting form, across Allan Water, to a place named Dod, passing two hill-forts on the left. From Dod, where its remains are distinct, the Pietsworkditch proceeds eastward, past another British fort called Whitehillbrae; and it there ascends the Carriage-hill, on which its remains are very perfect. From Carriage-hill it proceeds across a rivulet, called Langside burn; and here, says Gordon, the tourist, 'it becomes the landmark betwixt the Duke of Buccleuch's estate, and Sir Gilbert Elliot of Stobs.' From Langside burn its remains appear very distinct, as they pass along the northern base of the Maiden Paps to the Leapsteel; and thence passing Robertslin, it traverses a tract of boggy ground called Cockspart. Crossing the hills into the upper parts of Lidsdale, the remains of it again appear on Dawstane-burn; and thence passing the abbey, it goes on to Dawstane-rig. From this position, faint vestiges of it were traced nearly to the Peel-fell, which is one of the chain of mountains that forms a natural barrier between Northumberland, on the south, and Teviotdale and Lidsdale, on the north. Gordon—who has the merit of having first brought this curious remain into notice—absurdly supposes it to have been a *lines*, or boundary, which the Caledonians established after their peace with the Emperor Severus. He ought to have recollected that this work is in the country of the Romanized Britons of Valentia, and lies far from the land of the Mæatae and Caledonians. Maitland, with equal absurdity, has converted the Catrail into a Roman road. If he had only examined it, he would have seen that it is as different from a Roman road as a crooked is from a straight line, or as a concave work is from a convex. The able and disquisitive Whitaker was the first who

applied the Catrail to its real purpose, by referring it to its proper period. There can hardly be a doubt whether the Catrail was once a dividing fence, between the Romanized Britons of the Cumbrian kingdom, and their Saxon invaders on the east. It cannot, indeed, be fitly referred to any other historical period of the country, which is dignified by the site of this interesting antiquity. The Britons and the Saxons were the only hostile people whose countries were separated by this warlike fence, which seems to have been exactly calculated to overawe the encroaching spirit of the Saxou people."

CATRINE, a small manufacturing and post town in the parish of Sorn, Ayrshire. It is very pleasantly situated on the right bank of the river Ayr, 2 miles east-south-east of Mauchline, and 15 east-north-east of Ayr. It is of a regular form, having in the middle a square of 300 feet, with streets leading from it on the east, south, and west; these are intersected with other cross streets at right angles. In 1787, Claude Alexander, Esq. of Ballochmyle, the proprietor, in partnership with the well-known Mr. David Dale of Glasgow, established extensive spinning machinery here, and built the town for the accommodation of their work-people. In 1801, Messrs. James Finlay and Company of Glasgow purchased the cotton works, and afterwards greatly enlarged them; and in 1824, they erected an extensive bleaching work and three very large water-wheels. Both the town and the factories have a very high character in the manufacturing world,—the former for its neatness, and the latter for the superior quality of their productions. The dwelling-houses of the work-people are substantial and slated,—generally two stories high,—mostly arranged in occupancies of two rooms to a family,—and many of them the property of the occupants. A committee is appointed annually by the proprietors of houses to superintend all matters of police. In 1838, the cotton mills in the town employed 750 hands and 290 horse power. A chapel of ease with 754 sittings was built here by Mr. Alexander, in 1792, which was purchased in 1829 by the feuars of Catrine for £400; but ever since the disruption in 1843, this place of worship has been without an ordained minister. There are likewise in the town a Morrisonian Meeting-house of recent erection, a Free church, whose yearly proceeds in 1853 amounted to £264 13s. 8½d., and an United Presbyterian church which contains 580 sittings. The town has a large public library, several friendly and benevolent institutions, and a branch-office of the Royal Bank of Scotland. The river Ayr in the vicinity revels amid beautiful romantic scenery, and is spanned by a viaduct of the Glasgow and South-western railway about 190 feet in height. Some spots in the neighbourhood also are associated with the poetry of Burns. See **BALLOCHMYLE** and **MAUCHLINE**. Population in 1841, 2,659; in 1861, 2,484.

CATSTANE (THE). See **KIRKLISTON**.

CATTER. See **KILMARONOCK**.

CATTERLINE. See **CATERLINE**.

CAULDCLEUGH, one of the chain of mountains on the mutual border of Teviotdale and Liddesdale in Roxburghshire. It is situated 3½ miles east-north-east of Mosspace inn, and has an altitude of about 1,800 feet above sea-level.

CAULDHAME, a hamlet in the part of the parish of Kippen which belongs to Perthshire. Population, 70.

CAULDSHIELDS, a lake in the part of the parish of Galashiels which belongs to Roxburghshire. See **GALASHIELS**. On a hill adjacent to the lake is an ancient British fort which appears to have been connected by a rampart and fosse with the work on the middle Eildon hill, 2 m. to the east. See **EILDON**.

CAUSEA. See **COVESEA**.

CAUSEWAYHEAD, a village partly within the parish and burgh of Stirling, and partly within the Clackmannanshire portion of the parish of Logie. It stands about a mile north of the town of Stirling, or rather terminates the Long Causeway of Stirling, on the road to Dunblane. Population, 309.

CAUSEWAYSIDE, a village contiguous to Tollcross, in the parish of Old Moukland, Lanarkshire. Population in 1851, 367. See **TOLL-CROSS**.

CAVA, a small island of Orkney, 2 miles south of Honston Head in Pomona, and belonging to the parish of Orphir. It is about a mile long, and a quarter of a mile broad. There is a ruined chapel on it. Population in 1841, 23; in 1851, 24. Houses, 4.

CAVERS, a parish, containing the post-office village of Denholm, in Roxburghshire. It formerly consisted of two parts, separated from each other by Hawick and Kirktown parishes,—the one part lying on the southern border of the county, contiguous to England and Liddesdale, and the other lying nearly in the centre of Teviotdale. The former was recently erected into the separate parish of **TEVIOT-HEAD**,—which see; and only the latter constitutes the present parish of Cavers. This is bounded by the parishes of Hawick, Kirktown, Hobkirk, Bedrule, Miuto, and Wilton. Its length north-eastward is nearly 8 miles; and its greatest breadth is less than 2 miles. The Teviot skirts all its north-west side, and the Rule all its north-east end. The surface near the streams comprises much flat rich land; farther up, comprises a beautiful variety of undulation, hill, dale, ravine, beautiful fields, and well-set woods; and on the upper border, goes boldly aloft to the rough shoulders and frowning forehead of Rubberslaw. The scenery, from end to end, along the lower side, is exquisitely beautiful, and in some parts borrows splendour or romance from the opposite side of the Teviot. See **RUBBERSLAW**, **TEVIOT** (THE), and **MINTO**. The only mansion of note is Cavers House, the seat of Mr. Douglas. The parish is traversed by the road from Hawick to Kelso, and enjoys ready access to the Hawick branch of the North British railway. Population in 1861, 1,824. Houses, 249. Assessed property in 1843, £12,492 15s. 8d.

This parish is in the presbytery of Jedburgh, and synod of Merse and Teviotdale. Patron, Douglas of Cavers. Stipend, £250 6s. Unappropriated tithes, £1,134 12s. 7d. Schoolmaster's salary, £30. The parish church was built in 1822, and contains 500 sittings. There are a Free church and an independent chapel in Denholm; and the yearly receipts of the former in 1853 amounted to £73 8s. There are two public libraries. Denholm was the birth-place, in 1775, of Dr. John Leyden, the poet of Teviotdale; and Cavers church was the scene of some of the earliest stated ministrations of Dr. Chalmers.

CAVERTON, a village in the parish of Eckford, Roxburghshire, 4½ miles south-south-east of Kelso, near which is an extensive moor, called Caverton Edge, on which the Kelso races were formerly held. It was burnt by the English in 1544, and again in 1553. The vicinity of Moss tower, an important border-stronghold, about a furlong to the north-east, seems to have drawn upon it these visitations. The barony of Caverton belonged to the Lord Soullis, who, according to tradition, was boiled alive at the Ninestane rigg in the parish of Castleton, near his castle of Hermitage. There is a sub-parochial school in the village, with £17 2s. 2½d. salary, and about £17 fees.

CAWDOR. See **CALDER**.

CAWELA LOCH. See **NEILSTON**.

CAYLE (THE). See **KALE**.

CEANNABIN. A mountain in the middle division of the parish of Durness, Sutherlandshire.

CEANNAMHARA. See TIRRE.

CEANNARD (Loch), a lake, nearly a mile long and about a quarter of a mile broad, in the hill of Grandtully, surrounded and overlooked by bleak, barren mountains, in the parish of Dull, Perthshire. The ruins of an old shooting-lodge stand on an islet near its middle; and a neat modern villa, in the cottage style, stands on its north bank.

CEANNARD (Tue), a rivulet traversing a beautiful vale, to which it gives the name of Strathceannard, in the Coigach district of the parish of Lochbroom, Cromartyshire.

CELLARDYKES, a large fishing-village in the parish of Kilrenny, Fifeshire. It adjoins Anstruther-Easter, and forms part of the burgh of Kilrenny. See KILRENNY. It took its name from the circumstance of containing cellars or storehouses for lodging fish. The principal trade is fishing for the Edinburgh market; and the Cellardykes fishermen are proverbial for their dexterity and hardihood. The take of herrings by the fishermen of this place, in 1839, was 25,000 barrels. The number of boats was 80, of an average burden of 16 tons each. Cod and haddocks are also extensively exported from this place in a fresh, dried, and pickled state. There are two boys' schools here, a female school, an infant school, and a savings' bank. Population in 1811, 805; in 1861, 1,893.

CERES, a parish, containing a post-office village of the same name, and also the villages of Chance-Inn, Craigothie, Croftdyke, and Bridgend, in the interior of Fifeshire. It is bounded by the parishes of Cupar, Kemback, St. Andrews, Cameron, Kilconquhar, Largo, Scoonie, Kettle, and Cults. Its length north-eastward is $7\frac{1}{2}$ miles; and its breadth varies from $\frac{1}{2}$ a mile to 4 miles. The river Eden skirts a wing of it for $1\frac{1}{2}$ mile on the north-west. Five streamlets run into the interior from respectively the west, the south, and the east, and unite a little above the village of Ceres to form Ceres burn; and this passes through the village, runs $1\frac{1}{2}$ mile to the north-east, enters there the beautiful den of Dura, and soon after falls into the Eden. The surface of the parish is pleasantly and even picturesquely diversified, but on the whole consists of a beautiful valley, screened by Tarvet hill and Magus moor. Its superficial area amounts to about 8,000 acres, of which four-tenths are in tillage, five-tenths in pasture, and one-tenth is planted as moorland. The average rent is £1 10s. per acre; and the valued rental is £8,248 1s. 1d. Scots. The landowners are the Earl of Glasgow, Wilson of Craigothie, Stark of Teasses, Sir John Hope of Craighall, and about twenty others. Limestone abounds and is extensively wrought. Coal and sandstone are also found. There are 500 looms within the parish employed in the manufacture of linen; and there are three spinning-mills for the manufacture of linen yarn, and also a bleachfield establishment. Teasses House and Edenwood House are beautiful modern mansions; the former so situated as to command a brilliant view of the frith of Forth. The ruins of Craighall House, built by the celebrated Scottish juriconsult Sir Thomas Hope, are situated about a mile to the south-east of the village of Ceres; and to the south-west are the ruins of Struthers' house, now the property of the Earl of Glasgow. Upon the estate of Scotstarvet, is a beautiful tower of jointed freestone, 24 feet square, and about 50 feet high. The walls are very thick, and the windows small; the whole is surmounted by a battlement. The parish is traversed through the middle by the

road from Cupar to Pittenweem and Crail, and across the north-west wing by the road from Cupar to Kirkealdy. Lindsay of Pitcottie, author of a well-known history of Scotland, was a native of this parish. Population in 1831, 2,762; in 1861, 2,723. Houses, 627. Assessed property in 1843, £12,561 19s. 11d.

This parish is in the presbytery of Cupar, and synod of Fife. Patron, the Earl of Glasgow. Stipend, £229 13s. 4d. Unappropriated teinds, £5 9s. 4d. Schoolmaster's salary, £34 4s. 4 $\frac{1}{2}$ d., with about £40 fees. Prior to the Reformation, there was a chapel in this parish dedicated to St. Ninian; and the schoolmaster of Ceres receives a presentation to be chaplain of the chapel of St. Ninian, within the church of Ceres, and to be reader of that parish. A small salary of £3 Scots was formerly payable to the chaplain, from certain houses in Cupar; but these houses cannot now be discovered, and the chaplainry has become a title without a benefice. The parish school-house is a handsome building. The parish church stands on an eminence in the centre of the town. It was built in 1806, and contains 1,100 sittings. There is a Free church; and the yearly sum raised, in connexion with it in 1853, was £155 19s. 4 $\frac{1}{2}$ d. There are two United Presbyterian churches,—called the First and the East, each with an attendance of between 200 and 300. There are five non-parochial schools, and several friendly societies. The Springfield station of the Edinburgh and Northern railway is adjacent to the west end of the parish.

The Town of CERES stands $2\frac{1}{2}$ miles south-east of Cupar, on the road thence to Pittenweem. It contains several streets and some good houses, and has a neatly-kept rivulet-bordered green. Its places of worship make it conspicuous; and the burial vault of the noble family of Crawford-Lindsay, containing the remains of several persons of great historical note, give it considerable antiquarian interest, yet has no artistic attraction, but is merely a small tile-covered building, once the wing of an old church, and now contiguous to the present parish church. The town consists of a town proper and a suburb,—Ceres and the Bridgend of Ceres—the former old and the latter new. The town proper is a burgh of barony, holding of the Hopes of Craighall, with obligation on the feuars to attend the head courts; but it has no charter. The whole place carries on a considerable trade in brown linen. Fairs are held on the 24th of June and 20th of October. Population in 1861, inclusive of Bridgend and Croftdyke, 1,216.

CESSFORD, a village in the parish of Eckford, Roxburghshire. It stands $6\frac{1}{2}$ miles north-east of Jedburgh, on the road thence to Yetholm. A rivulet, called Cessford burn, rises in Jedburgh parish, and runs 4 miles northward past the village to the Kail. The ancient castle of Cessford, which gives the title of Baron to the Duke of Roxburgh, stands near the village on the south. The first proprietor of this castle, mentioned in history, was Andrew Ker of Attouburn, who obtained the title of Baron Cessford, and got a charter of confirmation from Archibald, Earl Douglas, dated 1446. In 1570, the laird of Cessford was made warden of the Scottish middle marches. Cessford castle, being only 4 or 5 miles from the English confines, was necessarily rendered a place of security; and according to tradition, there was a subterraneous vault for concealing both persons and goods within its walls, to which access was only got by one aperture which was opened or shut by a large stone with an iron ring in it. "This stone and ring," says the writer of the Old Statistical Account, "have been seen by some persons still alive; but the entrance to the

peel or dungeon is now choked up with rubbish." In the New Statistical Account it is stated that this vault is about 17 feet long, 10 broad, and 9 deep. No date is discernible to fix the period of the erection of this castle; but from those parts of the walls yet entire, it appears to have been a place of considerable strength, both from the thickness of the walls, which are 12 feet at an average,—the vestiges of the battlements on the top,—the embrasures on the sides,—and the remains of a surrounding moat which was probably furnished with water from a spring above the present farm-house, about 2 furlongs distant. The roof is entirely gone. The area within the walls is 39 feet in length, and 20 in breadth. See ECKFORD. Population of the village 160.

CESSNOCK (THE), a small river of the district of Kyle, Ayrshire. It rises about Distincthorn Hill, on the eastern border of the county, runs about 5 miles south-westward to within a mile or so of Mauchline, and then runs about 9 miles north-north-westward, yet with great sinuosities, to a confluence with the Irvine, about 2 miles below Galston. It is an excellent angling stream, and flows in many parts through varied and picturesque scenery. See GALSTON.

CHANCE-INN, a village in the parish of Ceres, Fifeshire. It stands on the west side of the parish, at about equal distances from Ceres and Cupar. Population, 132.

CHANCE-INN, an inn and post-office station near Inverkeilor church, on the road from Arbroath to Moutrose, Forfarshire.

CHANLOCH. See PENPONT.

CHANNELKIRK, a parish in the north-west corner of Berwickshire,—bounded by Edinburghshire, Haddingtonshire, and the parish of Lauder, and containing the head-streams of Leader Water. It has a somewhat circular outline, with a diameter of $5\frac{1}{2}$ miles. Its post-town is Lauder, $2\frac{1}{2}$ miles beyond its southern limit. The parish is chiefly pastoral. On the banks of the streamlets are about 3,000 acres in tillage, having a light thin soil on a bed of sandy gravel. The hills are mostly bleak, and covered with heath. There are eleven landowners, and the real rental is £5,400. A great many Pictish or Scottish military encampments are to be seen in this neighbourhood. They are called rings by the common people. General Roy has preserved a plan of a Roman camp here. About a quarter of a mile west of the kirk is a fine spring called 'The Well of the Holy Water cleugh.' The Girthgate, or road by which the monks travelled from Melrose to Edinburgh, passes through the western border of the parish; and on this road, a few miles due west of the church, are the ruins of an old building commonly called Restlaw Ha', at which, tradition says, the monks and pilgrims used to stop for refreshment. The road from Edinburgh to Kelso passes through the centre of the parish; and on this road, just before it leaves the parish, is the stage of Carfrae-mill, while a little to the west stands the village of Oxtou, which in 1834 had 213 inhabitants. Population of the parish in 1831, 841; in 1851, 728. Houses, 134. Assessed property in 1843, £6,053 8s. 11d.

This parish, formerly a rectory, with the chapels of Glengelt and Carfrae annexed, is in the presbytery of Lauder, and synod of Merse and Teviotdale. Patron, Sir H. P. H. Campbell, Baronet. Stipend, £190 5s. 6d.; glebe, £15. Schoolmaster's salary, £30, with about £40 fees. The church stands on the top of a hill nearly in the centre of the parish. It was built in 1817, and contains 300 sittings. There are a parochial library and a friendly society.

CHANONRY, a town in the parish of Rosemarkie, Ross-shire, situated about half-a-mile south-west of the burgh of Rosemarkie, to which it was united by a charter granted by James II., under the common name of Fortrose. It was called Chanonry, from being the canony of Ross, and the residence of the bishop. It is now the seat of a presbytery. See FORTROSE and ROSEMARKIE.

CHAPEL, a village in the parish of Abbotshall, Fifeshire. Population, 159.

CHAPEL, Renfrewshire. See CHAPELLE.

CHAPEL, any locality which is or was the site of an ancient chapel. There are places of this name in the parishes of Bothwell, Dirleton, Kelso, Lauder, Lilliesleaf, and Tynron.

CHAPEL-DONAN. See GIRVAN and MAYBOLE.

CHAPELFIELD. See ABBEY ST. BATHANS.

CHAPEL-FINAN. See MOCHRUM.

CHAPELHALL, a large village in the vicinity of Holytown, parish of Bothwell, Lanarkshire. Here the Monkland Iron and Steel Company have works which produce about 1,100 tons of pig-iron per month. Adjacent also are extensive collieries. The village is of quite recent growth, and consists of well-built, comfortable houses of one and two storeys, nearly one half of which are the property of the workmen. Population of the village, 1,990.

CHAPELHILL, a village in the parish of Monzie, Perthshire.

CHAPELHILL, any eminence on which has stood, or stands now, an ancient chapel. There are places of this name in the parishes of Culter, Douglas, Dundonald, Kirkmahoe, Logie, Kirkpatrick, West Kilpatrick, Monadie, Muthil, Robertson, Rothesay, Trinity-Gask, Rothes, and Tarbat.

CHAPELHOPE. See MARY'S (ST.) LOCH.

CHAPELKNOWE. See HALF-MORTON.

CHAPEL-OF-GARIOCH, a parish, containing the post-office station of Piteaple, in the Garioch district of Aberdeenshire. It is bounded by Rayne, Daviot, Bourtie, Keithhall, Inverury, Monymusk, Kennay, Oyne, and the hill of Benochie. Its length southward is 10 miles; and its breadth is from 2 to 5. The Don runs on the southern boundary; and the Ury intersects the northern and broadest district. The surface is uneven, but not mountainous or holdly hilly. There is a considerable extent of plantation. The rocks are principally granite and trap. There are twelve landowners, and the real rental is about £4,722. The mansions are Logie, Elphinstone, Pittrodie, Fetternear, and Piteaple. There are eight or nine corn and barley mills, three saw-mills, two mills for carding and spinning wool, and a lint mill. The castle of Piteaple on the south bank of the Ury is an ancient building with a considerable modern addition. The ruinous castle of Balquhain about half-a-mile south-east of the church is a place of great but unknown antiquity, and is said to have been burnt to the ground in 1746 by the Duke of Cumberland. Near this is a Druidical temple; a remarkably fine echo is observable here. About half-a-mile west of the church is a large upright stone, 10 feet high, 4 broad, and 1 foot thick, called the Maiden stone. Pennant has given an engraving of the hieroglyphics cut upon it. Near the kirk-town, in 1411, was fought the battle of Harlaw, between Alexander, Earl of Mar, and Donald, Lord of the Isles. See HARLAW. The parish is crossed by the road from Aberdeen to Inverness. Population in 1831, 1,873; in 1861, 2,023. Houses, 415. Assessed property in 1843, £7,335.

This parish is in the synod of Aberdeen, and Garioch is the seat of a presbytery. It was formerly called Logie-Durno, but about the beginning of the 17th century was united to the parsonage of Fetter-

near, and erected into the present parish. The lands of Letbinty are annexed *quoad sacra* to Daviot. Patron, Sir J. D. H. Elphinstone, Bart. Stipend, £217 11s. 8d.; glebe, £22 10s. Unappropriated tithes, £173 19s. 9d. Schoolmaster's salary, £27, exclusive of the Dick bequest, with about £20 fees. The parish church was built in 1813; and contains 722 sittings. There are a chapel of ease and a Free church at BLAIRDAFF, which sec. There is also another Free church, bearing the name of the parish, with an attendance of 350; and the yearly sum raised in connexion with this in 1853 was £207 8s. 11d. There are five non-parochial schools,—two of them girls' schools, aided by salaries of respectively £20 and £10. There is also a parochial library.

CHAPEL OF KEILLOR, a small village in the west of the parish of Newtyle, Forfarshire.

CHAPEL-PARK. See LILLIESLEAF and LADY-KIRK.

CHAPEL-ROSAN, a hamlet, with a post-office, at the northern extremity of the parish of Kirkmaiden, 11 miles south-south-east of Stranraer, Wigtonshire.

CHAPELTON. See RERRICK and INVERKEILLOR.

CHAPELTON OF BORGUE, a hamlet in the parish of Borgue, Kirkcudbrightshire. Population 31.

CHAPELTON OF BOYSACK. See BOYSACK.

CHAPELTON OF CAMBUSLANG. See CAMBUSLANG.

CHAPELTON OF CAPUTH. See CAPUTH.

CHAPELTON OF GLASSFORD, a village in the parish of Glassford, Lanarkshire. Here are a chapel of ease, a Free church preaching station, two schools, and three friendly societies. Population in 1861, 634.

CHAPELTON OF GLENLIVET, a locality in the Braes of Glenlivet, parish of Inveraven, Banffshire. Here is a Roman Catholic chapel, containing about 300 sittings.

CHAPPELL, a village contiguous to Gateside, in the parish of Neilston, Renfrewshire. See GATESIDE.

CHARLESTON, a village in the parish of Knockbain, Ross-shire.

CHARLESTON, a village in the parish of Rathen, Aberdeenshire.

CHARLESTON, a village in the parish of Pitsligo, Aberdeenshire.

CHARLESTON, a sea-port village, with a post-office, in the parish of Dunfermline, Fifeshire. It is pleasantly situated on the frith of Forth, adjacent to the west end of Limekilns, $3\frac{1}{2}$ miles south-west by south of Dunfermline, and 4 miles west of Inverkeithing. It was founded by the Earl of Elgin in 1778, for the accommodation of the workmen at the extensive lime-works on his estate. It is in the form of a square, enclosing an area containing a bleaching green. It has a tolerable harbour. The number of vessels belonging to Limekilns and Charleston, in 1828, was 75, averaging 80 tons burden. Coal is conveyed to the works from the Earl of Elgin's collieries by a railroad about 6 miles in length. There are 9 drawkilns here. In 1811 there were sold at these works 132,563 holls of lime, 2,400 chalders slacked, 77,200 tons limestone; and 600 tons of ironstone. The present export is about 400,000 bushels of shells, and about 15,000 tons of raw stone. The working of ironstone has been discontinued of late years; but the export of coals is immense. The Earl of Elgin's mansion of Broomhall is in the vicinity. Population of Charleston in 1861, 701.

CHARLESTON OF ABERLOUR. See ABERLOUR.

CHARLESTON OF ABOYNE, a village with a post-office in the parish of Aboyne, Aberdeenshire. It stands on the north bank of the Dee, and on the road from Aberdeen to Castleton of Braemar, 31 miles west by south of Aberdeen. The Dee is here crossed by a suspension-bridge. In the neighbourhood is Aboyne castle, the seat of the Marquis of Huntly. The surrounding scenery is very magnificent. The village is a burgh-of-barony. It has six fairs in the year, viz. on the 3d Wednesday in February, the 2d Wednesday in April, the 3d Wednesday in June, the Friday of Paldy fair week, the 1st Tuesday in October, old style, and the 2d Wednesday in November. Here are a branch-office of the North of Scotland Bank, and an excellent inn, the Huntly Arms. Population in 1841, 260; in 1851, 187. Houses, 38.

CHARLESTON OF GLAMMIS, a village at the foot of the gleu of Ogilvie, in the parish of Glammis, Forfarshire. It has been all built since 1833. Population, 344.

CHARLESTON OF NIGG, a village in the parish of Nigg, Kincardineshire. It originated about the year 1810, and stands on a hill which was then nearly all a waste, but is now all cultivated.

CHARLESTON OF PAISLEY, a suburb district of the south side of the town of Paisley, Renfrewshire. See PAISLEY.

CHARLOTTE (FORT), a small fortification near the north end of the town of Lerwick, in Shetland, said to have been built in the days of Oliver Cromwell. It commands the entrance to Bressay sound, and was repaired in 1781.

CHARLOTTE (PORT). See PORT-CHARLOTTE.

CHARTERS. See SOUTHDEAN.

CHARTERS-HALL, a hamlet in the parish of St. Ninians, near the right bank of the Bannock, $3\frac{1}{2}$ miles south of Stirling. Here is a distillery which annually consumes about 24,000 bushels of barley.

CHATELHERAULT. See AVON (THE) and HAMILTON.

CHEESE BAY, a natural harbour on the north-east of the island of North Uist. It is of easy access from the south-east, and gives full protection to vessels of any size at all times of the year.

CHEESE WELL. See MINCHMOOR.

CHERRYBANK, a village in the East Church parish of Perth. Population, 157.

CHESTER, any locality which contains the site or remains of an ancient military camp. The name is derived from the Saxou *ceaster*, signifying a camp; and is of frequent occurrence in British topography. There is a Chesterhall in the parish of Gladsmuir, Haddingtonshire; another Chesterhall in Cranston, Edinburghshire; a Chesterhill in Wester-Anstruther, Fifeshire; and a Chesterpark in Newtyle, Forfarshire.

CHESTERHILL AND SANCHENSIDE, a conjoint village in the parish of Cranston, eastern verge of Edinburghshire. Population, 284.

CHESTERS, a village in the parish of Southdean, 7 miles south of Jedburgh, Roxburghshire. Population in 1841, 82. See SOUTHDEAN.

CHESTERS. See KILSYTH, MANOR, and ANCRUM.

CHEVIOT-HILLS, a broad range, or rather circular group, of mountains on the mutual border of Roxburghshire and Northumberland. Cheviot Hill, the highest of the range, is situated in north latitude $55^{\circ} 29'$, 19 miles from Sunderland Point, and has an altitude of 2,684 feet above sea-level. A circle of 60 miles in circumference comprises all the proper or characteristic Cheviots, to the exclusion of adjacent heights which run into the general uplands of the North of England, and into the great

broad range of greywacke mountains which are sometimes called the Southern Highlands of Scotland; and this circle comprehends the highest portions of the parishes of Eisdon, Alwinton, Alnham, Ingram, Hlderton, Wooler, and Kirknewton in Northumberland, and of the parishes of Yetholm, Morebattle, Hounam, Oxnam, Jedburgh, and Southdean in Roxburghshire. The principal pass in the range is that called Carter bar, which the road from Jedburgh to Newcastle traverses. The hills have generally a dome-shaped or sugar-loaf outline, and are grouped skirt to skirt or shoulder to shoulder like clustering cones, or like the bubbles of a boiling cauldron, or as if they were strings of beads from the girdle of the everlasting mountains. The geological features of the entire district, clearly indicate a volcanic origin, being wholly formed of what is termed Cheviot porphyry and whinstone trap. It is this peculiarity which constitutes their excellence for sheep pasturage; for the best criterion whereby strangers can judge of the soundness of the flocks in the border districts is that they are reared on the whinstone swards of the Cheviots. Numerous streams, radiating from the central upheaving of the range, form the sources of the Reed, the Coquet, the Breamish, the Wooler water, the Bowmont, the Kale, and the Jed. The highest portions of the Cheviots are covered with heath; and large tracts of peat-bog extend from the summits of the principal mountain southward. The lower hills are mostly steep and broken in their acclivities, and covered with abundance of fern, a plant which always indicates by its presence the porosity and fertility of the sub-soil. The beautiful sheets of green sward, covering their very tops, are composed of most of the nutritive sorts of indigenous grasses. All the district was for centuries a chief scene of the Border raids, and is now more famous for its breed of mountain sheep than any other tract in the entire country,—thus affording a striking contrast, alike economical and poetical, between warfare in the past and peacefulness in the present. Hence does Mrs. Sigourney beautifully apostrophise the flocks of sheep on the Cheviots:—

“Grazed on, grazed on,—there comes no sound
Of Border warfare near;
No slogan-cry of gathering clan,
No battle-axe, no spear;
No belted knight in armour bright,
With glance of kindled ire,
Doth change the sports of Chevy Chase
To conflict stern and dire.

Grazed on, grazed on; there's many a rill
Bright sparkling through the glade,
Where you may freely slake your thirst,
With none to make afraid:
There's many a wandering stream that flows
From Cheviot's terraced side,
Yet not one drop of warrior's gore
Distains its crystal tide;

For Scotia from her hills hath come
And Albion o'er the Tweed
To give the mountain breeze the feud
That made her noblest bleed;
And like two friends around whose hearts
Some dire estrangement run,
Love all the better for the past,
And sit them down as one.”

CHIRNSIDE, a parish, containing a post-office village of the same name, in the eastern part of the Merse district of Berwickshire. It is bounded by Coldingham, Aytou, Foulden, Hutton, Edrom, and Bunclie. Its length is about $2\frac{1}{2}$ miles, breadth about $\frac{3}{4}$ miles, and area about 5,000 acres. Bilymire burn traces the northern boundary; and the Whitadder traces the south-western and the southern boundary. Among the several eminences which

project from the Lammermoor hills into the Merse, Chirnside hill is a remarkable one. It is distinguished by its elevation and semicircular aspect to the south, joined with the great expansion of its summit, and its gradual declination to the Whitadder. It commands the view of a country, the richest perhaps in soil—with the exception of the Carse—of any in Scotland. The landscape is that of a plain, waved with long ridges, running chiefly in one direction, and of more than 25 miles extent, from the bay of Berwick to the Teviotdale hills, on the west; while directly south, and at almost the same distance, the famed hills and chaces of Cheviot form a very striking boundary. “About 60 or 70 years ago,” says the writer of the Old Statistical Account, in 1794, “this prospect, although striking and noble, was a naked one, and had little or nothing of the beauty arising from extensive agriculture, enclosed fields, or plantations. If some groves or strips of trees marked, here and there, the seats of the gentry or nobles, besides these, and a few enclosures joined with them, hardly anything but waste land, or the poorest culture, was discoverable. Nature, indeed, wore a robe that indicated a deep soil. The uncultivated grounds produced immense tracks of heath, overspread with thick furze, or tall whins, and, in some drier places, with broom; which, in the spring, and through the summer, shed the golden gleam of their flowers, and their fragrance all around. The eye of a spectator, on Chirnside hill, now has in prospect a country, of the extent described, all of it in remarkable cultivation; the corn-fields and pasture-lands, almost everywhere, enclosed and divided by hedges and ditches. Large plantations not only appear around the gentlemen's seats, but reach in several places, to the extremities of their lands; so that they seem to be conjoined to each other.” The progress of agriculture has added greatly to this richness of prospect since the commencement of the present century. There are five principal landowners of Chirnside. The real rental in 1834 was £8,504. Sandstone is wrought in several quarries. The total yearly value of the raw produce of the parish was estimated in 1834 at £14,580. Assessed property in 1843, £8,890 15s. 3d. The Dunse branch of the North British railway passes through the parish, and has a station in it. The Rev. Henry Erskine, father of the well-known founders of the Secession, was the first minister of this parish after the Revolution. He died in 1696. In 1586, the Earl of Dunbar and March, along with Lord Douglas, met the English warden of the marches, Lord Neville, at Bilymire, for the purpose of concluding a truce. See BILYMIRE. Population in 1831, 1,248; in 1861, 1,502. Houses, 265.

This parish is the seat of a presbytery in the synod of Merse and Teviotdale. Patron, William M. Innes of Parsonsgreen. Stipend, £247 8s. 6d.; glebe, £29 8s. Unappropriated tithes, £509 2s. 3d. Schoolmaster's salary, £34 4s. 4½d., with £30 fees. The parish church is a building of several centuries old, comprising a western Saxon door of a previous church, and containing 500 sittings. There is a Free church at Allanton beyond the southern boundary of the parish; and a presbytery of the Free church bears the name of Dunse and Chirnside. There are in the village of Chirnside an United Presbyterian church, with an attendance of 450, and a Reformed Presbyterian church with an attendance of from 160 to 200. There are in the parish two private schools, a circulating library, and two friendly societies.

The VILLAGE OF CHIRNSIDE stands a little west of the middle of the parish, on the road from Dunse to Eyemouth, $1\frac{1}{2}$ mile north-north-east of Allanton, 5

miles south-west of Ayton, 6 east-north-east of Dause, and 9 north-west by west of Berwick. It consists of two streets nearly in the form of the letter T; the longer of which runs from west to east, about three quarters of a mile. At the junction of the two streets is an open space, called the Cross-hill, where a fair is held, chiefly for the sale of sack-cloth and linen yarn, on the last Thursday of November. Population in 1841, about 600; in 1861, 901.

CHISHOLM, an extensive highland estate, eminent for picturesque scenery, in the parish of Kilmorack, north-west border of the mainland of Inverness-shire. "Between the bridges of Invercannich and Fasnakyle," says Anderson's Guide to the Highlands, "the tourist will find an excellent road striking off to the right, which was made for the conveyance of wool from the Chisholm's sheepfarms in the interior, and which terminates at the nearer end of Loch Benneveian, four or five miles distant. It ascends rapidly and then becomes level, and it commands fine views of the strath it has left, and of the river above whose course it conducts, on which are a series of beautiful cascades from ten to thirty feet high, occurring in the course of a rapid upwards of a mile long. The opening through which this road leads is called the Chisholm's pass. The scenery is somewhat similar to the celebrated birken bowers of Killiecrankie and the Trosachs, but on a much ampler and grander scale; and to the beauty of the birch, and of many large native ashes and elms, the intermixture of tall fantastic pines, here superadds the sober and imposing majesty of the Rothiemurchus and Mar forests. In ascending the shelving opening, a prolonged vista in one general mantle of foliage ascending high on either side, forms a woodland picture of incomparable beauty, threaded by the rocky channel of the river. The path is prolonged westward from the termination of the good road through the Chisholm's pass, and is daily becoming more passable for horses as well as foot passengers."

CHON (Loch). See CON (Loch).

CHRIST'S KIRK, an ancient parish, now annexed to the parish of Kinnethmont, in the shire of Aberdeen. The church is in ruins, but the burial-ground is still in use. It is 4 miles east of Clatt. A fair was formerly kept here on the Green, in the month of May, and in the night; from which circumstance, it was commonly called Sleepy market. A good many years ago, the proprietor, General Hay of Rannes, changed it from night to day; but so strong was the prepossession of the people in favour of the old custom, that rather than comply with the alteration, they chose to neglect it altogether. The scene of the celebrated poem of 'Chryst's-Kirk on the Grene,' commonly ascribed to James I., is supposed by some antiquaries to have been here.

CHROISY (Loch). See CONTIN and CONAN (THE).

CHRYSTON, a village in the eastern district of the parish of Cadder, Lanarkshire, on the road from Glasgow to Cumbernauld. It is a neat place and might soon become large, were it not repressed by scarcity of water; for it is dependent on a well, a furlong distant, down a very steep descent. The village has a chapel of ease, a burying ground, a Free church, a parochial school, and a public library. The chapel was built in 1780, and has 564 sittings. The annual receipts of the Free church in 1853 amounted to £169 10s. 10d. Population, 582.

CILLCHUIMAN. See AUGUSTUS (FORT) and BOLESKINE.

CILLIECHRIST, or KILCHRIST, an ancient chapelry in the parish of Urray in Ross, the scene of one of the bloodiest acts of Highland ferocity and revenge that history has recorded, commonly known

as the Raid of Cillichris. In the early part of the 17th century, a party of Glengarry's men surprised a numerous body of the Mackenzies, while assembled at prayer within the walls of Cillichris chapel, on a Sunday morning; shut them up within the building, and then set fire to it; whilst the piper of the Macdonalds marched round the church, playing a pibroch, until the shrieks of the miserable victims were hushed in death. The Macdonalds returned home in two bands, one of which was overtaken by the Mackenzies near the burn of Altsay, and nearly extirpated; while a still more severe retribution overtook the other party, who, having fled by Inverness, were overtaken near Torbreck, and shut up in a public-house in which they had been refreshing themselves, which was set fire to, and the whole party, 37 in number, perished by the same death they had inflicted on the hapless Mackenzies. The solitary and beautiful burying-ground of the chapelry is still in use.

CLACHAN, a village with a post-office, in the parish of Kilcalmonell, northern part of Kintyre, Argyshire. Here is an Independent chapel.

CLACHAN, a village in the parish of Lismore, Argyshire.

CLACHAN (Loch), a lake in the eastern part of Inverness-shire, whose superfluous forms some of the head-streams of the river Nairn.

CLACHAN OF BALFRON. See BALFRON.

CLACHAN OF CAMPSIE. See CAMPSIE.

CLACHAN OF DALRY. See DALRY, Kirkcudbrightshire.

CLACHAN OF FARR, the kirktown of the parish of Farr, Sutherlandshire; also the vale in which the Kirktown stands.

CLACHAN OF LUSS. See LUSS.

CLACHAN OF ROSENEATH. See ROSENEATH.

CLACHAN SOUND, a strait of only a few yards in breadth, separating the island of Seil from the mainland of Lorn, Argyshire. Its shores are highly picturesque. See SEIL.

CLACHARRY. See PENNINGHAM.

CLACHNABANE, a mountain, 2,370 feet high, in the parish of Strachan, Kincardineshire. It is one of the eastern Grampians, and is situated 16 miles west of Stonehaven. Its summit commands a view of the east of Scotland from Peterhead to East Lothian. A mass of bare granite, about 100 feet high, surmounts it and serves as a landmark to mariners off the mouth of the Dee. This rock presents a very imposing appearance, somewhat like the ruins of an ancient castle, to a person ascending the east side of the mountain.

CLACHNAHARRY, a fishing village in the parish of Inverness, at the mouth of the Caledonian canal, about a mile to the west of the town of Inverness, so called from the vicinity of a rock—in Gaelic *Clach-na-herry*, that is, 'the Watchman's stone,'—on which sentinels used to be placed to give notice to the burghers of Inverness of the approach of any body of marauders from Strathglass or Ross-shire. In 1333, according to Sir Robert Gordon, but according to Shaw in 1454, and according to Anderson in 1378, John Monroe, the tutor of Foulis, in travelling homeward, on his journey from Edinburgh to Ross, stopped on a meadow in Stratherdale that he and his servants might get some repose. While they were asleep, the owner of the meadow cut off the tails of their horses. Being resolved to wipe off this insult, he, immediately on his return home to Ross, summoned his whole kinsmen and followers, and, after informing them how he had been used, craved their aid to revenge the injury. The clan, of course, complied; and, having selected 350 of the best and ablest men among them, he returned to

Stratherdale, which he wasted and spoiled; killed some of the inhabitants, and carried off their cattle. In passing the isle of Moy, on his return home, Mackintosh, the chief of the clan Chattan, being urged by some person who bore Monroe a grudge, sent a message to him demanding a share of the spoil. This was customary among the Highlanders when a party drove cattle which had been so taken through a gentleman's land, and the part so exacted was called a *Staoig rathaid*, or *Staoig creich*, that is, 'a Road collop.' Monroe, not being disposed to quarrel, offered Mackintosh a reasonable share; but this he was advised not to accept, and demanded the half of the booty. Monroe refused to comply with such an unreasonable demand, and proceeded on his journey. Mackintosh, determined to enforce compliance, immediately collected his clansmen, and went in pursuit of Monroe, whom he overtook in the vicinity of Clachnaharry. As soon as Monroe saw Mackintosh approaching, he sent home five of his men to Ferrindonald with the cattle, and prepared for action. But Mackintosh paid dearly for his rapacity and rashness, for he and the greater part of his men were killed in the conflict. Several of the Monroes also were slain, and John Mouroe himself was left for dead in the field of battle, and might have died if the predecessor of Lord Lovat had not carried him to his house in the neighbourhood, where he was cured of his wounds. One of his hands was so mutilated, that he lost the use of it the remainder of his life, on which account he was afterwards called John Bac-laimh, or Ciotach. The Monroes had great advantage of the ground by taking up a position among rocks, from which they annoyed the Mackintoshes with their arrows. Mr. Duff of Muirtown erected on the highest pinnacle of the rock a large neat pillar, commemorative of this battle, and visible all over the surrounding country. The village of Clachnaharry is a straggling place, and owes all its modern interest to the fisheries carried on at it, and to the works and traffic at the entrance of the canal. See CALEDONIAN CANAL. Population in 1861, 260.

CLACH-NA-OSSIAN. See ALMOND (THE), Perthshire.

CLACKSHANT. See STONYKIRK.

CLACKMANNAN, a parish, containing the post-town of Clackmannan, the post-office village of Sauchie or Newtownshaw, and the villages of Kennet, Westfield, and Forest-Mill, in Clackmannanshire. It is bounded on the west by Alloa; on the north by the Devon, which divides it from Tillicoultry and Dollar; on the east by the detached district of Perthshire; and on the south by the upper part of the frith of Forth, here about a mile broad, which divides it from Stirlingshire. Its length south-westward is 6 miles; its breadth at the Forth is 2½ miles; and its greatest breadth is about 4 miles. The South Devon intersects it, and sometimes rises so high as to do considerable damage. The surface for about 1½ mile from the Forth is rich carse land, almost level, and elsewhere is undulated and diversified, rising at the intervals between the rivers to low hilly height. About 1,600 Scotch acres are under plantations; about 400 are waste land or pasture; and all the rest, amounting to about 5,000, are either regularly or occasionally in tillage. Coal has been extensively worked for upwards of two centuries, and is at present mined to the amount of about 500 tons a-day. Ironstone also is extensively mined; and the Devon iron-works, situated on the northern verge of the parish, turn out on the average about 6,000 tons of pig-iron annually, and at the same time convert a considerable portion of it into cast-iron goods. Sandstone of various quali-

ties is worked in several quarries. The total yearly value of the raw produce of the parish was estimated in 1841 at £75,100,—of which £36,000 were for coals and £8,000 for ironstone. Assessed property in 1843, £13,704 2s. 10d. The principal landowners are the Earl of Mansfield, the Earl of Mar, the Earl of Zetland, Lord Abercromby, Bruce of Kennet, and Erskine of Aberdona. The principal mansions are Schaw-Park, Kennet House, Kennetpau, Aberdona, Brucefield, and Kilbagie. There are in the parish a distillery-work occupying about seven acres at Kilbagie, two saw-mills on the South Devon, and a very extensive brick and tile work. The parish is traversed southward by private railways from the Devon iron-works to Clackmannan Pow and the harbour of Alloa, and westward by the public railway from Dunfermline to Stirling; and it has a station on the latter for Clackmannan. Population in 1831, 4,266; in 1861, 4,425. Houses, 779.

This parish is in the presbytery of Stirling, and synod of Perth and Stirling. Patron, the Earl of Zetland. Stipend, £284 0s. 9d.; glebe, £16. Unappropriated tithes, £241 16s. 3d. Schoolmaster's salary, £34 4s. 4½d., with £11 fees. The parish church was built in 1815, and contains 1,250 sittings. There is a chapel of ease at Sauchie, which was built in 1841-2. There are at Clackmannan a Free church with an attendance of 120, and an United Presbyterian church, with an attendance of 100. The yearly receipts of the former in 1853, amounted to £173 11s. 4d.; and the latter was built in 1790, and contains 450 sittings. There are six non-parochial schools.

THE TOWN OF CLACKMANNAN stands on the ridge to the south of the South Devon, 2 miles east by south of Alloa, 3½ north-west of Kiucardine, and 29 north-west by west of Edinburgh. This place was for many generations the seat of the chief of the Bruces. The earliest family known to record who inherited the lordship of Annandale bore the name of Annan; the last heiress of it, Agnes Annan, was married to one of the first of the Bruces who settled in Scotland; and John de Bruce, third son of Robert, one of the Earls of Annandale, came, at some date which has not been precisely recorded, into the possession of the lands around the site of Clackmannan. Hence the probable origin of the name Clackmannan, which may be a corruption of "the Clachan of Anuan, or "Clachan-Annan," the kirk-town of Annan. King David II. probably resided here during the first part of his reign; and he made a chartered gift of it, a short time before his death, to his kinsman Robert Bruce. King Robert Bruce also resided here some time previous to the battle of Bannockburn, and is said to have built a tower or keep which still remains, and is now the property of the Earl of Zetland. This tower is 79 feet high, has a spiral stair leading to its summit, contains a variety of apartments, and was formerly protected by a strong encompassing wall and by a fosse on the side next the town. Till lately the sword and helmet of King Robert Bruce were kept here, but they are now at Broomhall, in the possession of the Earl of Elgin, the most direct existing representative of the ancient Bruces. Adjoining the tower stood the old mansion, the residence of the lineal descendants of these Bruces till toward the close of the last century, when the direct line became extinct. Here resided the old Jacobite lady, Mrs. Bruce of Clackmannan, who knighted the poet Burns with the sword of King Robert Bruce.

The town of Clackmannan is situated on an eminence gently rising out of the carse plain to the height of 190 feet above the level of the Forth. On

each side of the town the ground has a gradual descent; but, towards the west, where the old tower is placed, it is bold and rocky. The surrounding scenery, as beheld from the tower, is exceedingly picturesque and beautiful. To the west are seen Alloa, Stirling, St. Ninians, and all the country as far as Benlomond; on the north the prospect is bounded by the Ochils; on the south and east are the fertile fields of Stirlingshire, and the towns of Falkirk, Linlithgow, and Kincardine; while the foreground is filled by the Forth, gradually expanding into a wide sheet of water like a large inland lake. The principal street of the town is broad and spacious; but many of the houses are mean. In the middle of the street stands a ruin which was once the prison and town-house. The present county-hall is of modern erection, and stands immediately north of the town. The parish church is a handsome structure, with a tower of considerable height, and occupies so commanding a position as to be visible and conspicuous at a great distance.

Clackmannan is but partly the county town of Clackmannanshire, all the law courts being held at Alloa; and it is also thrown greatly into the shade by that town, so as to be made quite subordinate in almost all matters of trade. The town pays fealty to the proprietor of the estate of Clackmannan. Fairs are held in June and September. Ample facilities of communication are enjoyed by the Dufferline and Stirling railway, and by means of the vicinity of Alloa. Population in 1841, 1,077; in 1861, 1,151.

CLACKMANNAN POW, a harbour on the north side of the Forth, at the boundary between the parishes of Clackmannan and Alloa, Clackmannanshire. It is formed by the mouth of the South Devon, and was much improved in 1772 by Sir Lawrence Dundas. Its mean depth of water is 10 feet at the usual shipping-place, and 20 feet at the meeting with the Forth. See ALLOA (TOWN of) and CLACKMANNAN (Parish of).

CLACKMANNANSHIRE, the smallest county in Scotland. It is bounded, on the north, by Perthshire, and by the detached portion of Stirlingshire which forms the parish of Alva; on the east, by Perthshire, Fifeshire, and the detached district of Perthshire which forms the parishes of Tulliallan and Culross; on the south, by the upper part of the frith of Forth, which divides it from Stirlingshire; and on the west, by Stirlingshire and Perthshire. Its length from east to west is 10 miles; its breadth from north to south is 8 miles, and its area is about 48 square miles or 30,720 acres,—of which 22,000 are cultivated, 5,000 are uncultivated, and 3,720 are nearly unprofitable.

The surface rises from the Forth to the parts of the Ochil hills around the sources and the southern headstreams of the Devon. The banks of the Forth are flat and rich; and the Ochils afford pasturage for sheep not to be surpassed in Scotland. The Forth upon the south, and the Ochil hills upon the north, run in a direction diverging from each other. To the southward of the mountains lies the beautiful vale of the lower Devon. Betwixt this and the foot of the mountains, the soil is in general light and of a fine quality, but not very deep, being of a gravelly bottom. The haughs of the Devon are rich and fertile; of a deep soil, but with a mixture of sand. South of the Devon the country begins to rise, and the soil is less valuable, as it possesses much of that clay scarcely penetrable by water which is so generally found in districts containing coal and freestone. The country descends gradually thence to the flat tract along the Forth; and all this is a most enchanting level of rich carse lands

of the finest sort of alluvial soil, and lying within the most beautiful part of the foreground in the extensive view from Stirling castle towards the east.

No county in Scotland is better supplied with water than Clackmannan. The Devon, from its source in the parish of Blackford in Perthshire, to where it falls into the Forth, at the village of Cambus, presents a succession of delightful scenery. After running a course of more than 26 miles, it mingles its pure and limpid waters with the Forth, not more than 6 miles in a straight line from its source. See DEVON (THE). In the lower part of the county is another river called the South Devon, and sometimes the Black Devon, from the gloomy density of its waters. This stream rises in the hills of Salve, in the county of Fife, and flowing westward, in a direction nearly parallel to the Devon, falls into the Forth between Alloa and Clackmannan. There is a small stream which runs into the Devon, called Gloomingside burn, in which no trouts have ever been discovered, although it has fine streams and pools. Live trouts have been put into it; but it does not appear that they were capable of living there.

There is rather a deficiency of wood in the county. The ancient forest of Clackmannan has long since disappeared. About seventy years ago, attempts to cover the hills to a considerable height were made, which, in time, may probably succeed, and prove a great ornament to the country; but, on account of its elevated situation, the progress of vegetation is here remarkably slow.

The low country of Clackmannanshire abounds with coal in every part; freestone and whinstone are also abundant. In the Ochils have been wrought at various times valuable ores of silver, lead, copper, cobalt, ironstone, and antimony. Many rich specimens of septaria have also been found. Coal is very extensively wrought. Pebbles, agates, and a few topazes, are sometimes discovered amongst the rubbish which is washed from the hills.

The climate of Clackmannanshire is various. Snow seldom lies on the low grounds of Logie, or in the vale of Devon; although the case is very different upon the hills. There is a remarkable spot in the Ochils, above the house of Alva, so much shaded that snow sometimes lies on it until the month of June. The rain that falls is seldom copious, and, on account of the gravelly bottom in the parishes of Tillicoultry and Dollar, does little hurt. The climate of the high lauds is considerably colder and wetter than that of the valleys; and the moisture is likewise more severely felt, as the bottom is a retentive till. In the parishes of Alloa and Clackmannan, the climate is pleasant and dry as well as warm.

Every modern improvement in agriculture has been adopted here; and the high state of cultivation over the whole face of the country is a proof of the skill and industry of the farmers. Beans are much cultivated, and are generally planted in drills; sometimes they are sown broadcast, with a mixture of pease. In this district and its neighbourhood are a considerable number of small feus held in perpetuity. About the time of the reformation from popery, it became, in many parts of the country, a sort of fashion for great proprietors to grant feus of considerable portions of their estates. Some proprietors did this to conciliate the attachment of their vassals; others, from generosity, were willing to deprive their successors of the power to expel from around them the faithful adherents to the fortunes of their family; while a third class were tempted by a considerable pecuniary payment which the vassals had found means to accumulate. The

family of Argyle, in particular, possessed property in this neighbourhood, and made perpetual grants to their vassals in the manner alluded to. One feu in the parish of Dollar, extending to no less than 200 Scottish acres, is held under this condition, that the feuar or tenant shall be bound to slaughter all the cattle that may be wanted for the use of the family of Argyle in their residence of Castle-Campbell. About the end of the 16th, or beginning of the 17th century, Lord Colvil, then proprietor of the estate of Tillicoultry, divided about four-fifths of the arable land into 40 feus, each of which contained, on an average, about 30 Scotch acres. Most of these tenures were converted into feus in the year 1605. What was called the Mains of Dollar was divided into 8 oxengates, each of which contained from 30 to 45 Scotch acres. In the carse, the farms are not large, containing only about 80 or 100 acres each.

The towns of Clackmannanshire are Clackmannan, Alloa, Tillicoultry, and Dollar. The chief villages are Newtonshaw, Sauchie, Kennet, Tullibody, Hotton-Square, Coalyard, Cambus, Coalsnaughton, Devonside, Menstrie, Craigmill, and Abbey. The principal mansions are Alloa Park, the Earl of Mar; Shaw Park, the Earl of Mansfield; Tullibody House, Lord Abercromby; Kennet House; Tillicoultry House; Harvieston; and Dollarfield. The principal feudal remains are Clackmannan tower, Alloa tower, and Castle-Campbell. The chief muniments of trade are collieries, iron-works, tileries, distilleries, breweries, and woollen factories.

Clackmannanshire contains only the four parishes of Clackmannan, Alloa, Dollar, and Tillicoultry, part of the parish of Logie, and perhaps also part of the parish of Stirling. See ABBEY. Two of these six parishes are in the presbytery of Dumblane, four in the presbytery of Stirling, and all in the synod of Perth and Stirling. There are in Clackmannanshire seven Free churches, four United Presbyterian churches, two Independent chapels, and one Episcopal chapel. In 1837, there were in the county 4 parochial schools, attended by 187 scholars, 15 non-parochial schools, attended by 905 scholars, and 16 other schools, the attendance at which was not reported.

The Stirling and Dunfermline railway passes right through the county, and the Scottish Central railway impinges on its northern border. The other means of communication by roads and by the frith of Forth are abundant. See ALLOA. All the law courts are held at Alloa,—the sheriff's court every Wednesday during session, the sheriff small debt court every ordinary court day, the commissary court as required during session, and the quarter sessions on the first Tuesday of March, May, and August, and last Tuesday of October. The jail of Stirling is also the jail of Clackmannanshire. The prison assessment in this county is 2½d., the rogue-money 2d., and the police assessment 1½d. per pound on the real rent. The valued rent in 1674, was £26,482 Scots; the annual value of real property as assessed in 1843, was £51,522; and the real rent of heritable property as valued in 1850, was £48,714 16s. Clackmannanshire unites with Kinross-shire in sending one member to parliament; but for this purpose, by provision of the Reform bill, it comprises also the Stirlingshire parish of Alva, the Perthshire portion of the parish of Logie, and the detached district of Perthshire, comprehending the parishes of Tulliallan and Culross. Parliamentary constituency in 1853, 1,149. Population in 1801, 10,858; in 1811, 12,010; in 1821, 13,263; in 1831, 14,729; in 1841, 19,155; in 1861, 33,543. Inhabited houses in 1861, 2,996; uninhabited, 143;

building, 22. In 1849 the number of criminal offenders was 80; the number of persons on the poor roll was 673; and the amount of money raised for the poor was £2,809 10s. 5d.

CLADISH, an inn on the banks of Loch-Awe, 7 miles from Inverary, Argyleshire.

CLAIR INCH, a small island on the south side of Inch-Cailleach, in the Stirlingshire part of Loch-lomond.

CLAIRTOWN (St.). See SINCLAIRTOWN.

CLANYARD. See KIRKMAIDEN.

CLAONAIG. See SADDLE.

CLAONARY, a village in the parish of Inverary, Argyleshire.

CLARENBAND, a village in the parish of Crossmichael, Kirkcudbrightshire. Population in 1851, 54.

CLARENCEFIELD, a village with a post-office in the parish of Ruthwell, Dumfries-shire. Population, 86.

CLARKSTON, a village in the parish of Cathcart, Renfrewshire. It stands on the road from Glasgow to Eaglesham, near the left bank of the White Cart, 4 miles north of Eaglesham. Population, 180.

CLARKSTON, or CLERKSTON, a thriving village in the vicinity of Airdrie, parish of New Monkland, Lanarkshire. Here is a chapel of ease, to which formerly was attached a quoad sacra parochial territory, comprising the villages of Arden and Ballochney, and containing a population of 4,526.

CLASHBENNIE. See ERROL.

CLASHCARNOCH, a small harbour on the north coast of the parish of Dumess, 3 miles east of Cape Wrath, Sutherlandshire. It has a slip for boats, and is a point of communication with the neighbouring lighthouse, but lies much exposed to the north.

CLASHMORE, a hamlet with a post-office in the parish of Dornoch, in Sutherlandshire. It is the nearest point to the Mickle ferry, which, before the existence of Bonar bridge, was the only practicable mode of reaching Sutherland and Caithness from the south. The mail-coach here leaves the Skibc road for Dornoch. There is a good inn here. A fair for cattle is held on the Monday after the first Wednesday of May.

CLASHNESSIE, a bay and a village in the parish of Assynt, Sutherlandshire. The bay indents the north coast of the parish; and the village stands at the head of the bay, 5½ miles north-west of Lochbinver. Population, 194.

CLATCHARD CRAG. See ABBIE.

CLATHEY, a village nearly in the centre of the parish of Gask, Perthshire. Population, 120.

CLATT, a parish, containing a village of its own name, in the western extremity of the district of Garioch, Aberdeenshire. Its post-town is Old Rayne; and it is bounded by the parishes of Kinnetmont, Leslie, Tullynessle, Auchindoir, and Rhynie. Its length eastward is about 4 miles; and its breadth is from 2 to 3 miles. The north-west boundary is traced by the Bogie; and most of the interior is drained eastward by the bead-streams of the Gadie. Part of the Suie and Corcen range of hills occupies the southern border; some rising-grounds occur in the north-west; and all the rest of the surface is a plain lying at an elevation of about 600 feet above sea-level. About 1,800 acres are undivided common; about 250 are in pasture; about 200 are under wood; and most of the remainder, amounting to about 2,800, are regularly or occasionally in tillage. The only landowners are Gordon of Knockespoch, who has a mansion in the parish, and Sir A. Leith Hay of Rannes. Granite abounds, but only

one quarry is worked. Real rental in 1854, £3,015. The military road from Edinburgh to Huntly traverses the parish. The village of Clatt stands 10 miles south of Huntly. It was made a burgh of barony in 1501 by James IV., and had once a market-cross and a weekly market, but is now little better than a hamlet, with two annual fairs on the 3d Tuesday of May, and the 3d Wednesday of November. Population of the village in 1842, about 90. Population of the parish in 1831, 535; in 1861, 511. Horses, 86. Assessed property in 1860, £3,333.—This parish—formerly a rectory, and a prebend belonging to the chapter of Aberdeen—is in the presbytery of Alford, and synod of Aberdeen. Patron, the Crown. Stipend, £134 16s. 6d.; glebe, £9. Schoolmaster's salary now is £50. See HARDGATE.

CLATTO. See KETTLE and ANDREWS (St.).

CLAUCHIAN. See CLACHAN.

CLAVA. See CROY.

CLAVEN HILLS. See DUNDONALD.

CLAVERHOUSE. See MAINS and STRATHMARTINE.

CLAYBARNS, a village in the parish of Newtown, Edinburghshire. Population, 187.

CLAYHOLE, a village in the parish of Leyswalt, Wigtonshire, separated from the town of Strauraer only by an ideal line, and included within that town's parliamentary boundary. Population in 1851, 462.

CLAYHOUSE, a village in the parish of Borthwick, Edinburghshire.

CLAYSHANK. See STONYKIRK.

CLEARBURN, a quondam village in the parish of Duddingston, Edinburghshire, once famous for its breweries, but now quite extinct.

CLEGHORN. See LANARK.

CLEISH, a parish, containing the post-office station of Blairadam, the post-office village of Cleish, and two other villages, in Kinross-shire. It is bounded on the north by Fossaway and Kinross parishes; on the east by the parishes of Portmoak and Ballingray; on the south by the parishes of Beath and Dunfermline; and on the west by the parish of Saline. It is of an oblong form, stretching nearly due west from the low heights on the east which divide Kinross-shire from Fifeshire; and is $6\frac{1}{2}$ miles in length, by about 1 in average breadth; and contains about $7\frac{1}{2}$ square miles. A range of green but moorish hills, bearing the name of the parish, and of considerable elevation, divide it from Dunfermline. Dumglow, the highest, is 1,215 feet above the level of the sea, and commands a very extensive and beautiful prospect; and three others, called the Ingaws, are respectively, 1,060, 1,048, and 1,030. The higher lands are in pasturage; and the lower, though of only middle-rate soil, and from 380 to 500 feet above the level of the sea, are in tillage. Springs and rills are abundant and good, pouring their grateful treasures past the door of nearly every dwelling. Four lakes, the largest about $1\frac{1}{2}$ mile in circumference, enrich the hill-country with a store of perch, pikes, and eels, and with a few trouts. The Gairney carries the waters of these lakes to Loch Leven. It flows along the northern boundary of the parish for about $2\frac{1}{2}$ miles, separating it from Fossaway and Kinross. Excellent freestone exists in great plenty, and affords material for the best houses and bridges in Kinross-shire and its contemuous districts. Limestone is quarried at Scarhill. Whinstone suitable for dykes and roads is abundant. Coal was formerly wrought to a considerable extent on the estate of Blairadam; but for many years past has been neglected. On the top of Dumglow, and of other hills, are traces of ancient forts or camps, which are sup-

posed to have been part of a chain of posts for defending the Roman conquests; and near these fortifications have been found several urns containing human bones and pieces of charcoal. A short distance from the parish-church stood a rock called 'The Lecture stane,' which was used, in the days of popery, as a support for the coffin during the reading of the burial-service at funerals. At the east end of the parish, a stone, inserted in a bridge, bears an inscription indicating the road beneath it to have been that by which Queen Mary fled from Lochleven castle. Formerly, on what is now the farm-stead of Gairney-bridge, stood the school-house in which Michael Bruce, the Kirke White of Scotland, taught a school; and within a few yards of the same spot stood the public-house in which the fathers of the Secession held their first meeting. The parish has railway stations at Blairadam and Cleish-Road. There are thirteen estates; but the chief are Cleish and Blairadam. See BLAIRADAM. Population in 1831, 681; in 1861, 649. Horses, 134. Assessed property in 1865, £6,857.

This parish is in the presbytery of Kinross and synod of Fife. Patron, Young of Cleish. Stipend, £156 16s. 4d.; glebe, £14. Schoolmaster's salary now is £55. The church was built in 1832, and is remarkably neat, and in a beautiful situation, embosomed in plantations at the base of the southern hills, and looking down over sylvan slopes upon the vale of Kinross. There are two private schools.

CLELAND. See BOWWELL.

CLERKINGTON. See HADDINGTON.

CLERKSTON. See CLARKSTON.

CLERMISTON. See CORSTORPHINE.

CLETT (THE). See THURSO.

CLEUGH (THE). See SORN.

CLEUGHBRAE, a hamlet in the parish of Mousewald, Dumfries-shire.

CLIFF LOCH. See UNST.

CLIFF SOUND. See SHETLAND.

CLIFTON, a village near Tyndrum, in the parish of Killin, Perthshire. There is a lead mine, belonging to the Marquis of Breadalbane, on the top of a bill in its vicinity; and in 1839, after this had been for some time worked, for some time abandoned, and again resumed, there were employed in it upwards of 100 men under the direction of a few German miners. Population, 159.

CLIFTON, a quondam village, formerly a chapelry, in the parish of Morebattle in Roxburghshire; 10 miles south-east of Kelso. Clifton hill is a beautiful eminence on the east side of the Beaumont.

CLIFTON HALL, an estate in the parish of Kirkliston, and on the western border of Edinburghshire, 2 miles west of Ratho. The Union canal passes through it. A mammoth's tusk and a good many old coins have been dug up in it. Here also is the hamlet of Clifton with about 40 inhabitants.

CLINT HILL. See BERWICKSHIRE.

CLINTWOOD. See ROXBURGHSHIRE.

CLISHEIM, a mountain in the northern division of the isle of Harris, the loftiest in the Outer Hebrides. Dr. Macculloch calls it Clisseval, and estimates its height at 2,700 feet, which is certainly too low, if his estimate of the altitude of Langa, in its neighbourhood, at 2,407 feet, be correct; for Clisheim is, apparently at least, 800 feet higher. Mr. Maegillivray, in the second volume of the Highland Society's Prize Essays, has finely described the view from this mountain.

CLOCHNABANE. See CLACHNABANE.

CLOCHODRICK STONE. See KILBARCHAN.

CLOCH POINT, a small promontory in the parish of Innerkip, $2\frac{3}{4}$ miles south-west of Kempoch Point, Renfrewshire. The firth of Clyde suddenly

assumes here a southerly direction. The jurisdiction of the Glasgow water bailie terminates here. A regular ferry is maintained between this point and the village of Dunoon. A lighthouse was built here in 1797, and is one of the most important beacons on the Clyde. It is a circular tower rising to the height of 76 feet above the water, and displaying a white fixed light. The view from Cloch point is very brilliant, embracing a great range of the frith, together with the Cowal mountains, Dunoon, and the wooded peninsula of Roseneath.

CLOCKSBRIGGS, a station on the Arbroath and Forfar railway, between Auldbar and Forfar.

CLOFFIN BURN. See **MOFFAT**.

CLOLA. See **DEER**.

CLONCAIRN CASTLE. See **KIRKMICHAEL**.

CLOSEBURN, a parish, containing a post-office village of the same name, in Nithsdale, Dumfriesshire. It is bounded on the north by Lanarkshire, and on other sides by the parishes of Kirkpatrick-Juxta, Kirkmahoe, Keir, and Morton. Its length southward is 10 miles, and its greatest breadth is $7\frac{1}{2}$ miles. The Nith runs on the south-western boundary; the Cample on most of the western boundary, and the Ae on part of the eastern boundary; and a number of indigenous streams run severally to these rivers. The surface near the Nith is low valley-ground, with a fine rich loamy soil; farther up, it is higher, yet but slightly diversified, and has a light dry soil; and farther still it expands drearily in a great tract of moorland, partly reclaimed and partly irreclaimable, until it terminates among the mountain-masses of the Southern Highlands, at the watershed between Nithsdale and Clydesdale. The highest summit is **QUEENSBERRY**: which see. In 1834 there were 5,683 acres in tillage, 1,500 under wood, and 23,006 in pasture,—4,428 of which were arable. The grandest architectural feature in the parish is the baronial mansion, Closeburn-Hall, a large splendid Grecian edifice, figuring beautifully in the landscape. The most remarkable of the indigenous streams—one noted for its romantic features—is the Crichup. This rises in a moss near the northern extremity of the parish. Not far from its source, it forms a very beautiful cascade, called 'the Grey Mare's tail,' by falling over a precipice of about 80 or 90 feet in height, and almost perpendicular. About half-a-mile below this, the water has, in the course of ages, hollowed out to itself a strait passage through a mass of red freestone, forming a peculiarly romantic linn. This linn, from top to bottom, is upwards of 100 feet; and though 20 deep, it is yet so strait at the top, that one might easily leap across it, were it not for the tremendous prospect below, and the noise of the water running its dark course, and by its deep murmurings affrighting the imagination. "Inaccessible in a great measure to real beings," says the Old Statistical Account, "this linn was considered as the habitation of imaginary ones; and at the entrance into it, there was a curious cell or cave, called the Elf's kirk, where according to the superstition of the times, the imaginary inhabitants of the linn were supposed to hold their meetings. This cave proving a good free-stone quarry, has lately been demolished, for the purpose of building houses, and from being the abode of elves, has been converted into habitations for men. In the times of persecution, the religious flying from their persecutors, found an excellent hiding-place in Crichup linn; and there is a seat in form of a chair, cut out by nature in the rock, which having been the retreat of a shoemaker in those times, has ever since borne the name of 'the Sutor's seat.' Nothing can be more striking than the appearance of this linn

from its bottom. The darkness of the place, upon which the sun never shines,—the ragged rocks, rising over one's head, and seeming to meet at the top, with here and there a blasted tree, bursting from the crevices,—the rumbling of the water falling from rock to rock, and forming deep pools,—together with some degree of danger to the spectator, whilst he surveys the striking objects that present themselves to his view,—all naturally tend to work upon the imagination. Hence many fabulous stories are told, and perhaps were once believed, concerning this curious linn." Sir Walter Scott has taken this place for the prototype of the haunts of Balfour of Burly while under hiding. Sandstone and limestone are extensively worked. The sandstone is laminated, and serves for paving and slating. The limeworks were begun by Sir James Kirkpatrick in 1772, and prosecuted with vigour by the present proprietors, and have proved most beneficial to the district, although the nearest coal-pits are at Sanquhar, 14 miles distant, and the coal generally used is brought a distance of 30 miles. Four kilns are in operation; and the average yearly turn-out from them is about 320,000 bushels. The total yearly value of the whole produce of the parish, agricultural and mineral, was estimated in 1834 at £40,300. The castle of Closeburn, formerly belonging to the family of Kirkpatrick, but which passed from them in 1783, when the estate was purchased by Mr. Menteath, is an ancient building, surrounded by a fosse which formerly communicated with a small lake now drained. This very ancient fortalice is a square tower about 50 feet high, consisting of a ground floor, and three series of vaulted apartments. It is still inhabited. Grose has given a drawing of it. Near this castle is a mineral well which has been of service in scrofulous cases. It is impregnated with sulphur. Upon the farm of Kirkpatrick were the remains of an old chapel and burying-ground. There is also near the village of Closeburn a chalybeate spring of considerable strength. The road from Glasgow to Dumfries and the Glasgow and South-western railway traverse the lower part of the parish; and the latter has a station in it. The village of Closeburn stands on the Glasgow and Dumfries road $2\frac{1}{2}$ miles south-south-east of Thornhill. Population of the village in 1851, 123. Population of the parish in 1831, 1,680; in 1861, 1,651. Houses, 285. Assessed property in 1860, £12,881.

This parish, with which that of Dalgarno was incorporated in 1697, is in the presbytery of Penpont, and synod of Dumfries. Patron, Douglas Baird of Closeburn. Stipend, £234 19s. 3d.; glebe, £19. The principal school of the parish is one which, in honour of its founder, is called the school of Wallacehall. John Wallace, merchant in Glasgow, a native of Closeburn, in the year 1723, mortgaged £1,600 for the purpose of erecting this school. The presbytery of Penpont were appointed trustees for the management of the fund, judging of the qualifications of the teachers, and watching over the interests of the school. The only hereditary patron is Wallace of Kelly. But originally five patrons were appointed to nominate the rector of the school, viz., John Wallace of Elderslie, Thomas Wallace of Cairnhill, and Michael Wallace, merchant in Glasgow, three brothers, the minister of Closeburn, and the town-clerk of Glasgow, for the time being. In the election of a rector, it is recommended to the patrons to give a preference to one of the name of Wallace if equally qualified. Of the money mortgaged by Mr. Wallace, £200 was laid out in building a school-house and dwelling-house for the rector, and in purchasing 5 acres of ground con-

figuous to the school, for the rector's use; £1,145 was laid out in purchasing lands at some distance; and the remainder was applied towards enclosing the land and enlarging the rector's house. The branches of education which the deed of mortification requires to be taught at this school are, English, writing, arithmetic, book-keeping, Latin and Greek. But besides these, mathematics, French, German, and Italian are taught. The rector is likewise obliged to pay £5 a-year to a person named by the minister, to teach English in a remote part of the parish. These schools are free to the children of parishioners. There are also four private schools. The parish church was built in 1741, and repaired about 1832, and contains 500 sittings. There is a Free church; and the yearly sum raised in connexion with it in 1865 was £111 7s. 7d.

CLOUDEN (THE). See CLUDEN (THE).

CLOUP-VOE. See YELL.

CLOVA, an ancient parish, now annexed to the parish of Cortachy in Forfarshire. The church was rebuilt in 1730, and is about 9 miles distant from the church of Cortachy. The inhabited part of Clova is about 4 miles in length, and its greatest breadth is little more than a mile. It is surrounded on three sides by the Banchuan branch of the Grampian mountains, which are here of great height, and exhibit a scene of much beauty and grandeur, especially when contrasted with the delightful valley at their base. Loch Brandy is about $1\frac{1}{2}$ mile in circumference, and abounds with pike and trout. On a little eminence near the church are the remains of an ancient castle, formerly the residence of a family of the name of Ogilvy. See CORTACHY.

CLOVEN CRAGS. See BEGLIE (WICKS OF).

CLOVENFORDS, or WHYTANKLEE, a hamlet in the parish of Stow.

CLOVEN STONE. See MOY and DALAROSSIE.

CLOWBURN. See PETTINAIN.

CLUANADH. See CLUNIE (THE).

CLUANY (LOCH), a featureless sheet of water, about 6 miles long, lying across the boundary between Inverness-shire and Ross-shire, on the road from Invermorriston to Kyle-Rhee, about 25 miles from the former place, and 23 from the latter. There is a small inn here.

CLUDEN, a small village in the parish of Holywood, Dumfries-shire, 3 miles from Dumfries. There are large flour-mills here.

CLUDEN (THE), a small river of Dumfries-shire and Kirkcudbrightshire. It is formed by the confluence of the Cairn and the Glenisland about $1\frac{1}{2}$ mile south-west of Dunscore church; and it flows about 8 miles east-south-eastward, partly across Dunscore and Holywood, but chiefly along the boundary between Dumfries-shire and Kirkcudbrightshire; and falls into the Nith at Lincluden Abbey, $1\frac{1}{2}$ mile north of Dumfries. It figures in our pastoral poetry as "lonely Cluden's hermit stream;" but nevertheless has a soft and ornate character, connected far more with fields and woods and lawns than with sheep-walks. The Old Water of Cluden which falls into its right side $5\frac{1}{2}$ miles above Lincluden, and is a finely picturesque stream with a small romantic cascade, perhaps lives in the imagination of poets much more than the true Cluden. The latter is an excellent trouting-stream.

CLUNES, a station on the Highland railway, $7\frac{1}{2}$ miles west of Inverness.

CLUNIE, a parish, containing the post-office station of Forneth, in the district of Stormont, Perthshire. It is bounded by Kirkmichael, Blairgowrie, Kinloch, Lethendy, Caputh, and Dunkeld. Its length southward is 9 miles; and its breadth is

4 miles. The surface is very diversified, comprises part of the lower Grampians and a small part of Strathmore, ranges from about 1,800 to about 150 feet of altitude above sea-level, and comprehends between 2,000 and 3,000 acres of arable land, and upwards of 8,000 acres of entire area. The highest ground is Benachally, which is partly in Caputh. Hundreds of acres not long ago waste are now covered with thriving plantations of larch and pine. The soil of the arable grounds, though generally light and gravelly, yields very good crops, not only of oats and barley, but also of wheat. A romantic mass of trap, about 600 feet in height, is called the Craig of Clunie. A grand feature of the parish is Loch Clunie, which will be described in next article. The parish is drained by some considerable burns, as the Loruty, the Droothy, the Buckny, and the Lunan. The Lorny flows from the loch of Benachally; runs about 6 miles east-south-east through the hilly parts of the parishes of Clunie, Kinloch, and Blairgowrie; and falls into the Erich above the Caith, a curious fall of the river, a little above the village of Blairgowrie. The Droothy rises from the moss of Benachally, separates the barony of Lighthwood from the forest of Clunie and the barony of Forneth, and after a rapid course of about three miles to the south-east, empties itself into the Lunan. The Buckny takes its rise from Loch-nahat, and falling to the south-east between the mountains of Benachally and Duchray, forms the Dow loch; thence, increased by the springs of the Dow loch, it thunders down a deep, narrow, rocky den, covered with wild wood, called the Den of Ryechip, and separating the parishes of Caputh and Clunie, enters the latter in the park of Lighthwood, where it unites with the Lunan. The Lunan is by far the most considerable stream in the parish. Collected from different sources in the Grampians, a little to the north of Dunkeld, it proceeds eastward, and forms the lochs of Craighash, of Lows, of Butterstone, of Clunie, and of Drumellie. From this last, it directs its course to the south-east, and passing by the Roman camp at Craighill in Caputh, it joins the Isla, at a point about 2 miles north-east of the junction of the Isla and the Tay. The course of the Lunan is about 12 miles, and somewhat resembles a bended bow. The trouts of the Lunan are excellent; in point of size, form, and flavour, they are much superior to those of the hill-streams described above. This is doubtless owing to its waters being deeper, warmer, and better sheltered, and to its passing over rich, clayey, and marly bottoms. It is difficult, however, to angle upon the Lunan in many places, particularly above the loch of Clunie, on account of the natural wood overhanging the stream. The district is well-adapted to the researches of the botanist. There were formerly great natural forests, on tracts which are now moors. There are two mineral springs,—one at Milton of Clunie, and the other a little to the east of Bogmile,—valued for their antiscorbutic qualities. The minerals already known are quartz, whinstone, granite, freestone, and bar-ytes. Limestone is found in one place, but the want of fuel prevents its being quarried. There is a vein of fine blue slate interspersed with large quantities of copper pyrites; and a deep peat-moss on the very summit of Benachally. There are vestiges of 5 religious houses, and of several military stations and fortified places, and a number of cairns and tumuli, which are said to mark the places where the Romans under Agricola and the Caledonians engaged, as described by Tacitus. Forneth, on the north-west side of the loch of Clunie, and 4 miles from Blairgowrie, and Gourdie, about $1\frac{1}{2}$ mile

south-east of Clunie castle, are elegant seats. The parish is traversed by the road from Blairgowrie to Logierait. Population in 1831, 944; in 1861, 534. Houses, 138. Assessed property in 1843, £7,785 17s. 9d.; in 1866, £7,695 6s. 11d.

This parish, formerly a vicarage, and to which certain portions of Caputh parish were annexed, quoad sacra, in 1728, is in the presbytery of Dunkeld, and synod of Perth and Stirling. Patrons, the Duke of Athole and the Earl of Airlie. Stipend, £173 0s. 2d.; glebe, £6. Schoolmaster's salary now is £45, with about £12 fees. The parish church is a Gothic building with a handsome tower. It was erected in 1840, and contains about 600 sittings. There is a Free church, with an attendance of from 350 to 400: sum raised in 1865, £123 1s. 1½d. There is also a Free church school.

CLUNIE (Lochn), a lake in the above parish, about 4 miles south-east of a small loch on the northern side of Benachally, and 700 feet lower in elevation. It is 2½ miles in circumference, and 84 feet in depth. About 200 yards from its western shore is a beautiful little island on which is an old castle, formerly the residence of the Earls of Airlie, built by George Brown, Bishop of Dunkeld, in the 16th century. The walls are 9 feet thick; and around the verge of this island are sprinkled a few old ash-trees and planes, which have withstood the storms of some hundred years, yet still continue to vegetate. These trees have something venerably grotesque in their appearance. The trunk of some of the planes separates and unites again; as do also some of the larger branches. The trees in some places diverge considerably from the land, leaning across the water, over which their aged arms embrace; and the roots of the planes are incorporated with those of the ashes, as if they were determined to stand and fall together. In the sultry heats of summer these trees throw a cool refreshing umbrage over the island. The island itself is a plain carpet of green, interspersed with a few flowering shrubs, where the fairies, in the times of superstition, were thought to hold their moonlight assemblies. In the loch there is plenty of pike, perch, trout, and eel. The eels caught here are of a considerable size. In bright sunny days, when they come out near the shore, and are distinctly seen at the bottom of the shallow water, they are sometimes struck with the eel-spear. The trouts grow from 4 lbs. to 12 lbs. weight, but are seldom taken except on the set line, or in the net. The perches are numerous, but generally small; they are caught in the usual manner with the rod. They take very well here in June, July, and August. The pike-fishing begins about the end of March. Pikes have been killed in this loch of from 12 to 24, or even 30 lbs. weight; but the ordinary size is from 2 lbs. to 6 lbs.

Clunie castle contends with one in Dumfriesshire for the honour of having given birth to the celebrated James Crichton, better known by the epithet of 'The Admirable,' who died in 1581. The island itself is mostly artificial, if not altogether so. It must have been formed with great labour, and in some very distant period, as there is neither record nor tradition with respect to its formation. In papers dated 360 years ago, it is termed 'The Island of the loch of Clunie.' The people in the neighbourhood affirm that it was once joined on the south-east side to the mainland; but this is not at all probable, as the land there lies at a very considerable distance, with deep water intervening. Its surface is a circular plain, of about half-an-acre, raised a few feet above the ordinary level of the loch, and surrounded with a strong barrier of stones thrown carelessly together, and sloping into deep water all

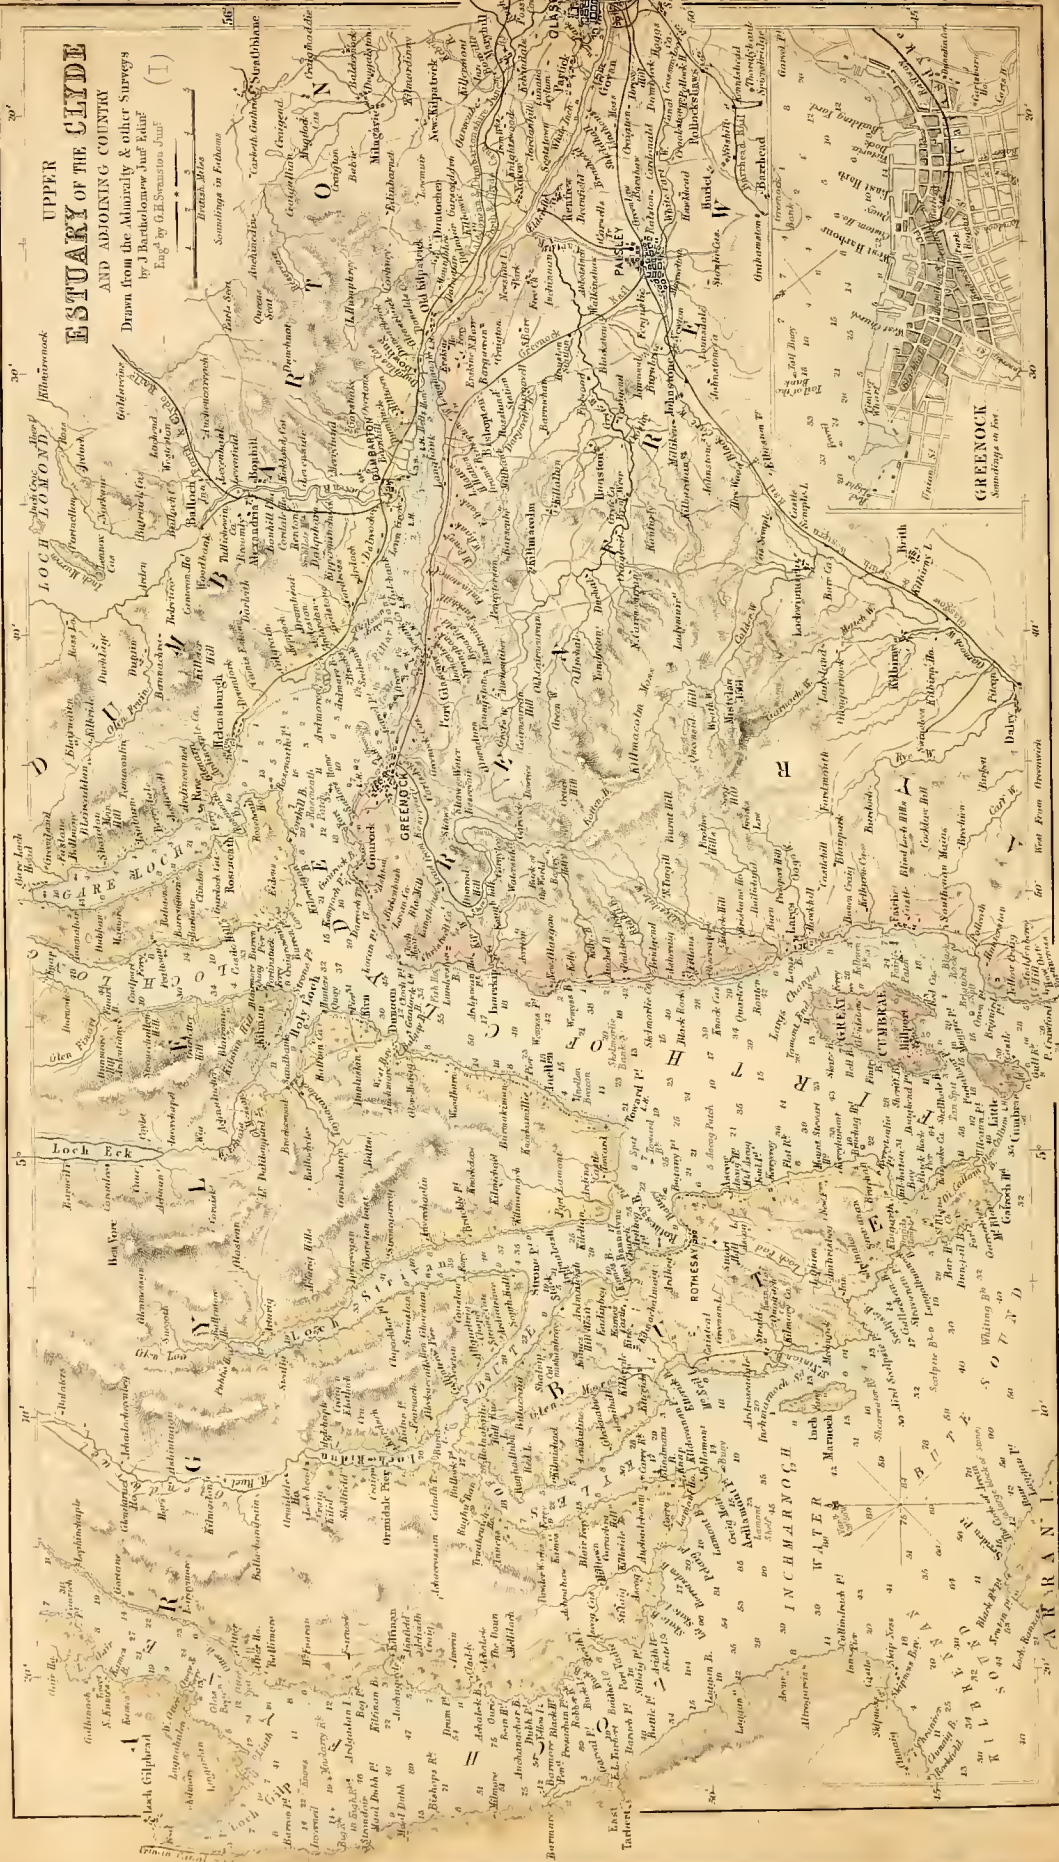

around, like the frustum of a cone. That this island has been formed principally by human art seems demonstrable from this, that the ground of which it is composed is evidently factitious; and in digging to the depth of 7 feet, near the centre of the island, nothing like a natural stratum of earth appeared. The foundation of the castle-wall is several feet below the surface of the water, and in all likelihood rests on piles of oak. On the western shore of the loch stands the old castle-hill,—a large green mound, partly natural and partly artificial, on the top of which are the ruins of a very old building. "Some aged persons still alive," says the Old Statistical Account, "remember to have seen a small aperture, now invisible, at the edge of one of the fragments of the ruins, where, if a stone was thrown in, it was heard for some time, as if rolling down a stair-case. From this it seems probable that were a section of the hill to be made, some curious discoveries might be the consequence. The castle-hill is of an elliptical form, extending in length from north to south about 190 yards at its base, and rising about 50 feet above the level of the loch. A green terrace surrounds the hill; and on the north side one terrace rises above another. The area of the summit approaches to an elliptical plain, a little inclined towards the east; of this plain, the longitudinal diameter, from north to south, is about 90 yards, and the transverse about 40. The old castle has stood on the south end of the summit, commanding a distinct view of the neighbourhood, so as not to have been easily taken by surprise. Some vestiges of it still remain; but neither its form nor dimensions can be traced with any degree of precision. The principal fortifications seem to have run along the land side, and the loch and the declivity of the hill appear to have defended it on the east, where it is probable there has been an easy communication with the island by means of boats; so that, in case of the castle being taken, the island might afford a refuge to the besieged. Concerning this piece of antiquity no written record can be found. According to the tradition of the neighbourhood, it was a summer-palace or hunting-seat of Kenneth Macalpin, who conquered the Picts, and united the Scottish and Pictish kingdoms; and if we suppose this tradition to be well-founded, it is not unlikely that it was he who first formed the island in the loch, as a place of retreat in time of danger."

CLUNIE (THE), or CLUANADH, a stream in the parish of Crathie, Aberdeenshire. It rises in several head-streams in the mountains which separate Braemar from Perthshire, flows about 10 miles northward through Glen Clunie, and falls into the Dee near Castleton of Braemar. About 3 miles above its confluence with the Dee, it receives its chief tributary, Calater or Calader burn, flowing from Loch Calater.

CLUNY, a parish, containing a post-office station of its own name, in the district of Kincardine O'Neil, Aberdeenshire. It is bounded by Monymusk, Kenmay, Skene, Echt, Midmar, Kincardine O'Neil, and Tough. Its length eastward is about 10 miles; and its breadth is about 2 miles. The surface comprises about 7,000 acres,—of which four-fifths are under cultivation; and is intersected by the burn of Torr, flowing northward to the Don. The soil in general is warm and dry. The principal residences are Cluny castle, a large edifice founded in the 15th century by Sir Alexander Gordon, and Castle-Fraser, an edifice of the same date. There are five land-owners; and the average rent of land is 13s. per acre. The parish is traversed by the road from Aberdeen to Alford. Population in 1831, 959; in

UPPER ESTUARY OF THE CLYDE
 AND ADJOINING COUNTIES
 Drawn from the Admiralty & other Surveys
 by J. Bartholomew, Junr Esqr
 Eng^r by G.E. Stevenson, Junr

1861, 1,254. Houses, 240. Assessed property in 1843, £4,425; in 1860, £5,691.

This parish is in the presbytery of Kincardine O'Neil, and synod of Aberdeen. Patrons, the Crown, and Gordon of Cluny, and Fraser of Castle-Fraser, alternately. Stipend, £173 16s. 7d.; glebe, £20. Schoolmaster's salary now is £50, with £14 fees. The parish church is situated nearly in the centre of the parish. There is a Free church, with an attendance of above 200; and the yearly receipts of it in 1865 amounted to £99 7s. 0½d. There is a girls' school, supported by the Castle-Fraser family.

CLUNY, an estate in the parish of Laggan, Inverness-shire. It belongs to Cluny Macpherson, the chief of the Macphersons. Cluny castle, that gentleman's seat, is a massive two-storeyed, turreted, granite building, 8½ miles south-west of Pittmain; and the grounds around it contain extensive gardens, a large model farm, and several objects of historical interest. Ardverrick Lodge stands on the Cluny estate; and the royal family while rusticiating there in the autumn of 1847, made a visit to Cluny castle. See ARDVERKIE and LAGGAN.

CLUNY HILLS. See FORRES.

CLYDE (The), a noble river traversing a large part of the western lowlands of Scotland. It is formed by many rills and torrents in a region of mountains. The reputed parent stream rises about five miles south-west of Elvanfoot, at an elevation of 1,400 feet above the level of the sea; but several of the head-waters have a much longer run, and descend from elevations at least twice as high. The streams are numerous, and come together from many directions. They are all rapid, noisy, and wildly frolicsome,—differing as much from the broad, calm, useful river at Glasgow as the most capering and crowing baby differs from the gravest sage. The district which cradles them is part of the great alpine region, sometimes called the Southern Highlands, comprising also the sources of the Tweed and the Aunan; and it contains within the drainage of the Clyde, most of the Lowther mountains, and some of the summits or shoulders of Leadhills, Queensberry, and Hartfell. It consists principally of the lower members of what the old Wernerians called "transition rocks," and was formed at a geological epoch long prior to the sandstones, coal-beds, and iron bands of the middle Clyde. Its general surface is high, bare, rolling moorland, sliced into pieces by the courses of the streams,—bleak, tame, and hoydenish,—a weary wild of heath and churlishness,—with scarcely a dash of either the soft verdure of pastoral hills, or the stern grandeur of precipitous mountains; and it offers relief to the sickened eye only in some choice declivities which are clothed with flocks, or along some wide dells which are dressed out with culture. But this dreary country is now enlivened up the vale of the Clyde, and on to the head of Aunandale, with the rattling traffic on the Caledonian railway; and in former times it was occasionally startled from its solitude by the hymn of the persecuted Covenanters,—and anciently by the war-cry of our savage forefathers, in their conflicts with the Romans,—and oftener by the roar of wild beasts ranging the Caledonian forest. All was at no very remote date waving with wood; and the tracts which at present know only "the whistling of plovers and bleating of sheep," were then vocal with the boundings of hart and hind, and the loud tallyho of their ardent hunters.

The progress of the Clyde from the centre of the mountain district till the commencement of the open country, is very diversified, and presents many interesting features. Between Elvanfoot and Crawford, the river sweeps round the base of several pictur-

esque hills. Below Crawford it washes the skirt of a romantically situated Roman camp. Between Abington and Culter, it flows now beneath wooded banks, now among heathy uplands, and now through pleasant pastures and charming corn-lands. In the vicinity of Biggar, it traverses an outspread morass, in such curious position and elevation on the very edge of its basin, that in every high freshet it sends off an overflow down the head-streams of Biggar Water to the Tweed. From the morass to the vicinity of Libberton, it alternates between heathy uplands and luxuriant haughs; and thence to the influx of the Douglas Water, a little above the commencement of the famous falls, it bids farewell to the mountains and greywacke rocks, and meanders in many a fold over a rich, flat, meadowy country, superincumbent upon sandstone. But in this part of its course, it often does great mischief by tumbling abroad in desolating floods over wide expanses of holm; and in various places, it has left broad vestiges of disasters done at former periods by changes of its bed. Yet in spite of every evil of the past, and every menace for the future, it wears every where a smiling face, and is every where essentially benign.

"And, O how fair the rural scene!
For thou, O Clyde, hast ever been
Beneficent as strong;
Pleased in refreshing dews to steep
The little trembling flowers that peep
The shelving rocks among."

The greater portion of the course between Abington and the Douglas Water is a vast sweep round the eastern skirts of Tinto, so circuitous that a distance of about 20 miles, exclusive of sinuosities, is run between two points which are not farther asunder in a direct line than 7½ miles. That remarkable isolated mountain, therefore, gives a bird's-eye view of all this part of the vale of Clyde; and, at the same time, it commands a clear prospect both of the uplands around its head, and of the outspread expanses around Hamilton and Glasgow. A person on its top sees the infant river winding like a silver thread along the bottom of a narrow dell,—follows it down to a broad and splendid band of crystal, through a diversified country at his feet,—and traces it on till it becomes a glittering line of beauty, along a great valley of fields and woods and gardens. The summit of Tinto has an altitude of 2,312 feet above the level of the sea, and of 1,740 above the Clyde at Thankerton. It is a wondrous mixture of volcanic products—a museum of minerals—overcapping a huge mass of transition rocks. It probably bubbled into being in a series of red-hot upheavals, at an epoch when all what is now the low country of Lanarkshire was a muddy torrid sea. It became much frequented by our heathen ancestors, and perhaps blazed often with both their fires of idolatrous worship and their signal fires of war; for its name signifies "the hill of fire." And now it appears, on a clear day, from vantage-grounds about Glasgow and in other distant parts of the valley, like an isolated dome, which a very ordinary imagination can regard at one moment as a mausoleum of "the world before the flood," and at another as a magnificent natural watch-post over the great rich region which spreads away from its base.

The Clyde is about doubled in volume by the influx of Douglas Water; and it immediately prepares to leave the upheaved country which it has hitherto been traversing, to fling itself down the descents of its celebrated falls. Hard crystalline rocks suddenly cease to appear in its path; and horizontal sandstones, with some beds of shales, lying almost in the state in which they were deposited in the

early epochs of organic existence, form all its bed, and have allowed it to plough its way into a series of romantic gorges and stupendous leaps. Its flanks also are no longer either pastoral hills or meadow plains, but bold or mural screens of sandstone rock, tufted with wood, intricate with character, and overlooked by outspread or undulating surfaces of the richest valley. The river all at once ceases to be a placid stream, and becomes a turbid, boisterous, frantic torrent, tumbling tumultuously down gloomy defiles, or vaulting headlong over perpendicular precipices—achieving altogether a descent of about 230 feet within the region of its falls, and laying open a magnificent section of the earth's crust for the study of geologists, and the admiration of all lovers of romantic scenery.

The first fall is Bonniton Linn, about 2½ miles above Lanark. It is a sheer leap of the whole river over a precipice of 30 feet; and has a projecting break in the middle of the breadth, which splits the descending mass of waters, and gives double power to their scenic effect. The fall becomes an abyss, the abyss a river-torrent, and the river-torrent a rock-excavator along a perpendicular chasm, of from 70 to 100 feet in depth. This awful chasm continues for about half a mile from Bonniton; and everywhere jams in the roaring river to twilight darkness and the limits of a mill-race; and consists of such mural right-up precipices, that one of the earliest graphic writers on Scottish scenery aptly characterised them as stupendous natural masonry. At the end of the chasm, amid a sublime theatre of overhanging cliffs, salient rocks, and densely-wooded surfaces, occurs the Corra Linn, the grandest of the falls. The river descends 84 feet, but is twice caught by ledges of rock, so that it makes three bounds, and becomes a vexed and weltering flood of foam. Its previous roar has now increased to thunder; its clouds of spray sometimes sparkle in all the hues of heaven; and its blendings of character with the crags and woods and witchery around it present a combination of sublimity and beauty which makes the imagination dizzy.

About a quarter of a mile below Corra Linn is a small but very romantic fall, of only a few feet in depth, called Dundaff Linn; and in its vicinity is a rock called Wallace's chair, which the hero of Scotland is said to have frequented as a hiding place. The banks of the river now assume a more soft and sloping character; and this they maintain over all the distance of about three or four miles which intervenes to the last fall, sometimes bosky and luscious with wood, and sometimes cultivated to the water's edge. But about a mile below Lanark they are cloven by the influx of the romantic stream of the Cartland Crags, descending through a tremendous gorge of about 400 feet in depth, with vertical cliffs and projecting crags of awful savageness, and pierced in one place with a famous cavern which figures in many a song and story as Wallace's Cave. About two miles from Lanark occurs the last fall, the Stonebyres Linn. The walls of the river-bed are once more all rock and precipice, garlanded with wood; the descent is a leap of about 80 feet, twice broken by shelvings of the precipice; the action of the falling flood is a compound of plunge and tumble, with circumstances of foaming uproar and deafening tumult; and the effect of the scene upon eye and fancy is very similar to that of the Corra Linn, but less confounding and more thrilling and ecstatic,—less replete with images of power, but fuller of magnificence and grace. And the heart of a wise observer, who has looked on all the falls, adores profoundly at the feet of the Creator, and feels that the impressions it has received from

this one spangle of the raiment with which he has clothed the earth, must glitter gloriously upon it for ever, and may serve well as a reminder of the unutterable and infinite things which exist in the beatific regions unknown to mortals.

"O! I have seen the Falls of Clyde,
And never can forget them;
For Memory, in her hours of pride,
'Midst gems of thought will set them,
With every living thing allied:—
I will not now regret them!"

And I have stood by Bonniton,
And watched the sparkling current
Come, like a smiling wood-nymph, on—
And then a mighty torrent!
With power to rend the cliffs anon;
Had they not been before rent.

And I have gazed on Corra Linn,
Clyde's most majestic daughter;
And those eternal rainbows seen,
That arch the foaming water;
And I have owned that lovely Queen
And cheerful fealty brought her.

And I have wandered in the glen,
Where Stonebyres rolls so proudly;
And watched and mused, and watched again,
Where cliff and chasm, and cloud lie.
Listening, while Nature's denizen
Talks to the woods so loudly.

Yes! I have seen the Falls of Clyde,
And never can forget them;
For Memory, in her hours of pride,
'Midst gems of thought will set them,
With life's most lovely scenes allied:—
I will not now regret them!"

The tract from Stonebyres Linn, or from a mile above it, to the vicinity of Bothwell, a distance of about 16 miles, with an average breadth of nearly 6, is lusciously gardenesque,—austly beautiful, and has been aptly designated the Orchard of Scotland. Along the banks of the river lie bands of haugh or meadow, very fertile in soil, and seldom higher than about 120 feet above the level of the stream; behind the haughs rise acclivities, of various height and steepness, but commonly with a stiff ascent to an altitude of about 250 feet, and generally carpeted with clay soil, and waving with luxuriant orchards; and behind these "banks and braes," along the upper skirts of the tract rise hills and tableaux of rolling outline and diversified character, to an occasional height of from 300 to 1,000 feet. The district is thus an oblong hollow, with graduated sides, and has sometimes been called the trough of Clyde; but it is superly the reverse of "troughy" in its features and embellishments, and may vie in these with both the most intricate glens and the most finely wooded parks in the kingdom. Its surface is a profuse series of level and undulation and escarpment; and its garniture is a sumptuous compound of parks, corn-fields, orchards, coppices, and groves. A ride through it when the orchards are in blossom or in fruit gives all the delights, without any of the oppressions, of the palm-groves of the tropics. A view of it from any vantage-ground near the river has the richness, and even looks as if it had also the design, of a boundless landscape-garden. And a ramble into its recesses, in search of minute beauties, is rewarded by many a fairy nook and splashing cascade, particularly in the romantic, bosky, cavernous ravines which come laterally down through the sandstone hills to the Clyde, and are here called gills.

About 3½ miles from Stonebyres, adjacent to the handsome modern villa of Clydegrove, is the mouth of the pretty rivulet Nethan; and a short way up its vale, towards Lesmahago, on the brow of a great rock, stand the famous ruins of the once

strong castle of Craignethan. See **NETHAN (THE)**, and **CRAIGNETHAN**. Two miles below the Nethan, on a charming peninsula of the Clyde, is the beautiful Tudor mansion of Milton; and two miles to the east of this, on a tableau above the orchard braes, and in the vicinity of some most romantic "gills," stands the village of Carluko. A little below Milton, on a high peninsula, commanding a long sweep of gorgeous scenery along the river, and contributing in its own architecture and policies very fine features to the landscape, is the massive, tower-flanked, modern edifice of Maudslie Castle. A little further on, encircled among orchards, is the village of Dalsarf; and in its vicinity are the interesting objects of Brownlee, Milburn-House, and Garrison-Bridge. Between Dalsarf and Hamilton, on the right bank of the river, occur the fine mansions of Cambusnethan and Dalziel, the former castellated, and both reciprocating brilliant beauty with the surrounding country.

But one of Clyde's affluents has been flowing parallel to it, and rivaling it in attractions, all the way from Maudslie Castle, at the average distance of about two miles to the left. This is the **AVON**: which see. The tract around its influx is a great expanse of luxuriant meadow, flanked upon the left by the town of Hamilton, and feathered all over by the woody decorations of the ducal demesne. The palace in the midst of this is a princely pile, with one of the grandest Corinthian porticos in the world, but unhappily stands too low to contribute any of its magnificence to the general landscape. The vale of the South Calder, which terminates on the opposite bank of the Clyde a little below the palace, invites a tourist to a charming ramble among groves and coppices, past the aristocratic seats of Wishaw Castle, Coltness, Murdieston, and Allanton. Bothwell Bridge, about a mile farther down the Clyde, and carrying over the old highway from Hamilton to Glasgow, is the scene of the disastrous rout inflicted on the army of the Covenanters in 1679 by the Duke of Monmouth. The neighbouring levels of hill and haugh continue the same as on the day of the battle, but all their characteristic features, and those of the bridge also, are completely changed. See **BOTHWELL**.

The river, below this point, is broad and majestic. The banks are lofty, finely contoured, and profusely wooded; and the flanking ground for upwards of a mile along the right is a promontorial tabular hill, whose south-east end near the bridge commands a most gorgeous view of the orchard districts of the Clyde, and whose other end at the village of Uddingstone commands a scarcely inferior though altogether different one of the country around Glasgow. On the verge of the tableau, overlooking the river, stand the magnificent ruins of Bothwell Castle, with its red walls and circular towers, which often changed proprietors in the eventful times of the Scottish wars; and on the opposite bank, crowning the verge of a perpendicular rock, and appearing almost to blend with the crags, are the picturesque ruins of Blantyre Priory. Smiling charms are given to the outspread landscape by the noble plantations on both sides of the river; and an interesting feature is derived from the Blantyre factories, half-hid in a snug retreat, with their industrious bustle and rushing machinery, like the hum of a bee hive in a garden.

The banks begin to decline below Uddingstone; and they soon expand into a broad level of luxuriant haughs and arable plains. The river scenery now looks flat and English, yet continues to be rich and merry, and has many appurtenances of power, which are all unknown on most of the great levels

of England. The flow of the stream is pleasant; the immediate banks are tidy and gay; the adjacent surfaces are undulating and well-dressed; some little affluents, especially the North Calder, the Rotten Calder, and the Kirk burn of Cambuslang, come down through small lateral vales in a rush of romance; a thousand seats of industry look up from nooks and knolls, with a dirtiness and drollery which resemble fun on the face of beauty; and a fine ridge of hill, about 600 feet high, with flowing summit and wooded skirts, extends along the left at the best possible distance for good scenic effect, and gives relief to the valley as a frame does to a picture. And in this pleasing style do the Clyde and its banks make their approach, and contribute their resources, to the second city of the empire.

A splendid view of this latter stretch of the valley, together with vast back-grounds, is obtained from Dechmont, the chief summit of the flanking ridge, in the parish of Cambuslang, about five miles from Glasgow. At your feet are the broad strath and the winding river, with a profusion of mansions, factories, and villages; a little to the left is the mighty metropolis of Scottish industry, with its spires, its cathedral, its picturesque masses of architecture, and its far-spreading suburbs, lying altogether like a massive brooch on the bosom of the valley; in front is a great champaign district, the broad depression between the Clyde and the Forth, undulating off to the horizon, or overhung in the distance by the Campsie Hills and the frontier Grampians; on the right extends the region of the orchards, from a vivid foreground about Bothwell and Hamilton, up all the superb valley, and all the tract of Lanark and the Falls, away to a flowing back-ground over Tinto and on to the Lowther mountains and the Pentland hills; and on the left wends away the sumptuous lower Clyde, with its stir of traffic and pomp of opulence, past Paisley and Renfrew, to the bold barrier of the Kilpatrick hills, overtopped by the dome of Benlomond and the peaks of the Breadalbane and the Cowal mountains. This is truly a series of grand views; and a similar one, with some abatements toward the right, but with fine additions over Renfrewshire and athwart Ayrshire away to Arran, is obtained nearer Glasgow, behind the old burgh of Rutherglen, from the top of Cathkin, another summit of the same ridge,

"From whose fair brow
The bursting prospect spreads around."

The verdant banks of the Clyde, along several sweeping curves in their approach to Glasgow, are open to the public, and serve as a charming promenade; and when they come abreast of the eastern suburbs, they expand into Glasgow Green, one of the finest public parks in the world. The Green has an area of 140 acres, is level and well-drained, and has a luxuriant sward. It derives much embellishment, in the upper part, from clumps and rows of old timber,—in the middle, from the lofty Nelson obelisk,—on part of the right side, from the regularity and terraced form of the nearest street,—at the foot, from the grand Grecian front of the County Buildings,—and along all the left side, from the majestic river and the picturesque diversity of the opposite bank. And on every fine day it is all astir with life and glee, and performs well its invigorating function as "the lungs of Glasgow." The march of the Clyde past the main body of the city, from the foot of the Green downward, is one of the most picturesque things of its kind in the empire. The buildings which confront it stand finely arranged in the terraced manner, with spacious carriage way,

between them and the banks. The flanking masses of architecture, composed of these terraces and of structures overtopping them, exhibit a rich mixture of styles, with a good proportion and effective grouping of spires, churches, and other public edifices. All the bridges are elegant; and the lowest, in particular, is such a model of beauty, that, had not the title been pre-occupied in another way, it might well have won for the designer of it the name of *Pontifex Maximus*, "bridge-maker-in-chief." And the shipping and wharves, from the last bridge onward, the forest of masts, the evolutions of steamboats, the movements of ship and wherry, the maze of crowds and vehicles, the smoke and roar and whirl of all the space between the terraces, form a compound of colours and objects which neither poet nor painter can adequately depict. The entire scene, from the Green downward, considerably resembles the course of the Liffey through Dublin,—to which that city owes more than one-half of all its boasted beauty; but the central or strictly urban part is shorter and less diversified, while the maritime part is incomparably richer. What a contrast to the state of things only 165 years ago, just before the construction of the first rude quay at the Broomielaw! The main body of the town then still stood about the old hill, around the Bell o' the Brae and the Drygate; sending off only a long tortuous tail down the High Street, towards the Clyde at Bridgegate. Much of the low tract near the river was broken, spouty meadow, more or less similar to the puddles which must have given rise to the name of Goosedubs. The upper part of the navigation was a labyrinth of pool and shallow, practicable only by flat-bottomed boats. And the only bridge was the original Stockwell one, 12 feet wide, rising with a rapid curvature from a hollow at the end of Bridgegate. See GLASGOW.

The deepening of the Clyde for navigation between Glasgow and the frith, is one of the grandest achievements ever done by human art, and has not been equalled on any other river in the world. The recent extension of the harbour, by such great excavations as to make ships float where factories stood, has justly seemed a mighty matter in the eyes of youths who have witnessed it, but in reality is only a small part of one magnificent work, reaching from the top of the Broomielaw to Dumbarton. Eighty years ago, at the mouth of the Kelvin, the Clyde had only a depth of 18 inches at low water, and 44 inches at high water; and over great stretches there and downward, it splashed abroad in shallow lagoons, interspersed with low islets and margined with morasses. The labours which worked it into its present condition, making it as uniform as a canal, and as navigable as a sea-loch—the dredgings, cuttings, straightenings, and stone-embankings of its bed, the raising and levelling of its banks, and the removal of all obstructions to a full sweep of the tide and a free descent of river-silt—were probably not inferior to those expended by the ancient Egyptians in building the world-famed pyramid of Cheops. And how immeasurably grander are they in their *morale*—not things of idle show, but all superlatively useful! They have done something, also, for the landscape,—at least quite as much as all the pyramids together have done for the flat green valley of the Nile; for though the immediate banks are too formal to look well in a picture, they are not more so than pyramidal outlincs, and have superseded the hideous surfaces of the fens and shallows; and what grace and ever-shifting brilliance do all the banks derive from the constant transit of canvassed sea-craft, reeking steamers, and

tug-drawn ships, rich with the produce of all climes, or mantled over with human beings!

The Clyde, for upwards of a mile from the top of the Broomielaw, is practically a great dock, with vessels on both sides from two to four a-breast, but strikes the eye more pleasingly than any dock in Liverpool or London, on account of its picturesque intermixture of every class of craft. The banks over the next mile have on both sides a band of verdure open to the public, and often thronged by pedestrians; and are thickly set with yards and structures for the building and repairing of ships, and for the iron-work of steamers, and always make a grand display of vessels rising into form or preparing for the launch. Kelvin water now comes in on the right, but has bidden farewell to its gleesome glen, and steals away heart-broken from among the wheels of the great flour-mills at Partick. The tract around its mouth exhibits, on a mimic-scale, the same sort of wondrous change which has metamorphosed the Clyde at the Broomielaw, having passed from a state of low islet and sprawling strand to one of deep channel and firm ship-yard. Opposite to it, on the left bank of the Clyde, stands the lower part of the village of Govan, with a church-steeple which gives it a striking resemblance to Stratford-upon-Avon, the birth-place of Shakspeare. The remarkable height to which the freshets of the Clyde sometimes rose in the old period of half savage-husbandry, previous to the modifying of rainfall by land drainage, is incidentally shown by an extant record of the year 1454, which says, "Ther wes ane right gret spit in Clyde, the quilke brocht down haile housis, bernis and millis, and put all the town of Govane in ane flote, quile thai sat on the housis."

The lauds along both sides of the Clyde, for a number of miles below Govan, continue low and flat, and were evidently formed by deposits from the river within the human epoch. They are trim and tidy, and contain fine mansions and broad embellishments, but have no bold feature, and are rather languishingly pretty than really beautiful. But on the right, coming down at about a mile's distance from the banks of the Kelvin, and passing behind Partick diagonally, to the vicinity of the Clyde, is a picturesque sweep of soft low hill,—gay with decoration, gemmed with villas, and commanding rich prospects over the plains of Renfrewshire, down the valley of the Clyde, and through vistas west and north to the Highland mountains. And this hill is succeeded by a series of conical knolls and waving swells, which pleasingly relieve the alluvial flats along all the north. Three chief features on the opposite bank, within four miles from Govan, are the elegant mansions of Elderslie and Blythswood, and the ancient burgh of Renfrew. But how changed is all the ground around them since the time when Clyde rioted at will! An intricate maze of land and water has become a uniform plain, bisected by a single river-course; a quondam island called the King's Inch, and once graced with a royal castle and royal residence, is now a main part of Elderslie Park; broad channels which conveyed the Clyde through long curves, and had the old burgh on their immediate banks, have been obliterated; and large spongy patches of marsh and strand are now an expanse of emerald lawn, as smooth as a pavement, and embossed with wood.

A mile below Renfrew, along the skirts of Blythswood, comes in the tranquil Cart. A wooded little isle immediately within that affluent's debouchure, appearing like a clump of trees floating on the water, is a contradiction to the history of the surrounding tract, and has been tricked by popular waggery into a satire upon the Paisley lawyers.

It looks to be of modern formation; and the story told about it says that a vessel was stranded at the spot, and became the subject of a law-plea, and that before a decision could be obtained, silt and soil and a growth of shrubs had completely entombed the vessel, and made it a permanent monument of property destroyed by litigation. Three streams unite a short way above the isle, bringing thither the drainage of all the plains and most of the hills of Renfrewshire; and they effect their confluence amidst scenery of much sweetness and general amenity. A vista-view, sylvan and lovely, lies up their course from the Clyde to the hill of Paisley, which is covered with buildings and crowned by a cloud-piercing spire; and that hill in its turn commands a map-like view of the great straths of Clyde and Cart, set in a glorious frame of many-featured uplands. Hundreds of storied spots, rife with incident and legend, lie within this zone of vision,—some, such as Paisley Abbey, Knox, Ellerslie, Gleniffer, and Crookston, very near at hand, and all more or less known to many frequenters of the hill, who are scarcely more famous in their feats of the loom than for their love of flowers and song and traditionary lore, and for the keen eye with which they study this gorgeous panorama. And here, as fervently as anywhere, may we exclaim, in the beautiful lines of Mary Howitt,—

“Oh! wild traditioned Scotland,
Thy briery burns and braes
Are full of pleasant memories
And tales of other days.
Thy story-haunted waters
In music rush along,
Thy mountain glens are tragedies,
Thy heathy hills are song!”

The low tracts on the left side of the Clyde, after the influx of the Cart, are diversified by flowing diluvial eminences, arable or wooded. At the distance of about $3\frac{1}{2}$ miles, opposite to Old Kilpatrick, they put on the patrician decorations of Erskine Park, the seat of Lord Blantyre; and a little farther down, they begin to be flanked and superseded by the commencement of a large sweep of trap-rock hill, which is soon pierced by the tunnel of the Glasgow and Greenock railway, and lifts up superh vantage-grounds for viewing the combined scenery of the Clyde and the Leven. The tracts on the right bank have more character, and eventually attain great magnificence. Opposite Blythswood, the foreground is flat but fertile, the middle ground is a hanging plain, and the back ground is pastoral npland, part of the ridge of the Kilpatrick Hills, which extends diagonally from Strathblane, in the centre of Stirlingshire, to Dumbuck on the Clyde above Dumbarton. A mile or two down, the front is a mingled marking of factory and country, and the middle is a green, undulated, rolling brae, sinuously ploughed by a ravine, and merrily enlivened by the manufacturing industry of Duntocher. There is now Dalnotter Hill, narrowing the low ground near the river, and commanding a scene which serves as a fit vestibule to all the gallery glens of Loch-lomond and the sea-lochs; and at its west base stands the village of Old Kilpatrick, the alleged birth-place of the apostle of Ireland, partially hid among trees, but lifting its small, square, pinnacled tower modestly into view. A little lower down, the ridge of the Kilpatrick Hills begins to press close upon the river; and thence till it terminates in Dumbuck, it either descends in a rapid declivity almost to the water's edge, or makes a curving recess to admit a sweep of narrow luxuriant vale. It here immediately overlooks the policies of Erskine House, which expand and undulate along

the opposite bank, in a luscious mixture of lawn and grove; and it presents on its own sides, running up to the height of 1,200 feet above sea-level, a magnificent combination of scenic features,—at first villas and gardens and arable fields,—next smooth and grassy ascents,—next broken and diversified acclivities; here a scaur or crag or precipice, and there a feathery mass of coppice or plantation,—now the stern savageness of a Highland mountain, and then the luxuriant growth and flowing curves of Lowland knolls. Almost every swell upon its skirts lifts the eye over a long stretch of the Clyde, with its brilliant banks and its nautical stir; its middle acclivities, particularly behind Old Kilpatrick, command a prospect of all Renfrewshire, and of Strathclyde to Tinto; and various heights on its broad summits, give majestic views of the hill-locked upper frith, the tempest surfaces of the Cowal mountains, the alpine-girt Loch-lomond, and the intervening mazes of all wondrous things along the collusion of Lowlands and Highlands.

Here terminates the coal-country of the Clyde, which extends from the vicinity of Stonebyres to Bishopton on the south bank, and to the Kilpatrick Hills on the north. About a mile and a half below the village of Old Kilpatrick is Bowling Bay, with wharves, shipping, and the commencement of the Forth and Clyde canal. A furlong farther on are another quay, and the Bowling station of the Dumbarton railway. About a mile from Bowling Bay is the little promontory of Dunglass, with its wild rocks, its old castle ruins, its obelisk in memory of Henry Bell, and its reminiscences of might and moment in the times of the Romans, who used it as a military station, and made it the western terminus of their great wall across Scotland to the Forth. The river is now widening into an estuary; and the band of low ground between its right bank and the hills, from Bowling Bay downwards, has a luxuriant aspect, and is thickly set with villas and villages. Dumbuck stoops precipitously down, with stern, brown, and basaltic sides; and a range of trap crags extends away behind and above it, terminating the back parts of the Kilpatrick ridge, and exhibiting a confused resemblance to a lofty pedestalled colonnade. A broad depression now comes laterally down to the Clyde, along the flank of these hills, opening from its waters an impressive view of the Luss mountains and the dusky, massive shoulders of Benlomond. This depression is the bland and beautiful vale of the Leveu, modernly studded with towns and printfields, but formerly all rural, and for ever embalmed among pastoral things in one of the sweetest odes ever penned. At the mouth of the vale, or rather the lip of the mouth, washed on two sides by the last sweep of the Leven, and rising sheer up on another from the Clyde, is Dumbarton Castle, a cleft cone, a mitred rock, an isolated, mural, biforked hill of naked whinstone, about a mile in circumference, and 560 feet high. The Clyde abreast of it, and westward, looks like a great lagoon, and has been said to resemble the sea of Galilee; but, though possessing none of the moral glory of that lake of miracles and favoured retreat of the Divine Redeemer, and unfit to be named in the same age with it for power upon all the holiest associations of the mind, it is far superior as a piece of mere scenery, has richer margins, grander foils, nobler back-grounds, and a myriad-fold husier stir of life, and may be accepted by any stranger as a fair type of the land and water scenery of all Scotland and its isles.

“The glorious Scottish fatherland
Where the gowan bright is growing,

Where the loch is softly flowing,
Where Benlomon's height is glowing,
Where the brave waves sweep the strand,
Our own, the Scotchloved fatherland!"

This lagoon extends about nine miles in the same general direction in which the river had run from Lanark, and widens from six furlongs to about four miles. Most of the floor of it is very shallow, and becomes either bare or shoaly at low water; and all this has been forming by deposits of silt, in the same manner as the tracts which are now dry alluvial land between Govan and Dumbuck, and has the same relation to the Clyde which deltas have to large rivers, such as the Nile, the Ganges, and the Mississippi, whose low flat territory is making continual encroachment on the sea. But marvellously little alluvium of the Clyde's lagoon, or indeed of any part of the frith, has yet risen permanently above the dominion of the tide; and the sea-boards generally rise from the water's edge, with a rock-bed of similar character to that about the region of the falls, and ascend in various gradients, but commonly with much boldness, to a high acclivity. A large proportion of the braes and mountains is hard trap, more or less basaltic; but a large proportion, also, is either conglomerate or old red sandstone or greywacke; and the two classes of rocks are so capriciously related to each other, or rather related in such different ways and with such striking alternations, as to produce one of the most grandly-featured landscapes in the world.

About a mile from Dumbarton is the site of the ancient castle of Cardross, the frequent residence and the death-place of King Robert Bruce. A mile or two farther on, surrounded by rich amenities of country, is the pretty little village of Cardross. Behind this, at the culminating point of the ridge which flanks all the north side of the lagoon, is a summit, which, on the one side, gives a bird's-eye view of the lagoon, and on the other commands superb prospects of the basius of Lochlomon and the Endrick. Two miles below Cardross, the low, broad-headed peninsula, called the Hill of Ardmore, brings down a bold invasion of forest upon the frith. Two miles or so farther on is the long, handsome, happy, little town of Helensburgh, spread out like an embroidered garment in the sun, and fringed at both ends with wood and villas. Nearly in front of it, but a little to the right, is the end of the noble peninsula of Roseneath, nearly two miles broad, sheeted over with beauty and grandeur, much adorned with a park and palace of the Duke of Argyle, and forming the west screen of the lagoon. Between Helensburgh and this enters the Gareloch, an oblong bay of eight miles in length, a direct continuation of the stretch of waters from Ardmore, perfectly pompous with groves and mansions, and sublimely overhung with variously characterized mountain summits. All this tract is a very favourite bathing retreat of the Glasgow citizens.

The south flank of the lagoon consists chiefly of a narrow band of low ground, and of a single range of steep, regular, heathy hill, and is therefore comparatively tame. But it sports upon its skirts many adornments of wood and cultivation; it exhibits in two places the broad, brilliant points of Port-Glasgow and Greenock; it is enlivened along its edge by the whirl and whistle of the railway traffic, and along much of its base by the rush and foam of the frith navigation; and it looks gaily out, from three-fourths or more of all its surface, upon the splendid scenery of the north flank, and of Roseneath and Gareloch, with peeps, in some places, at the upper heights on the farther screen of Lochlomon. The horizon north and north-west of it is

one of the grandest things in Scotland, and equals some of the most admired in Switzerland. The right hand part of this is a mountain summit line of several curves, all as flowing and regular as in diagrams of ideal beauty; and the left hand part is a great group of alpine crags, of most rugged outline, with freakish peaks and wild projections, huddled together like a chaos, yet chiselled and contoured like statuary, and popularly called, in wild waggery, the Duke of Argyle's Bowling Green. This sublime scene is especially impressive as seen from Greenock. Where else, indeed, can a picture be obtained with so mighty a back-ground, looming behind a centre of stirring sea, and a front of busy town? The quay of Greenock itself, also, with its Doric custom-house, its gay esplanade, its dance of life, and its splash and tumult of navigation, is powerfully picturesque; and all the connected thoroughfares are but too full of the intoxication of present things,—the sight-seeing and hilarity which have dismissed serious reflection to "a more convenient season." And a curious circumstance is, that the churlish MacCulloch, who could feel no pleasure in some of the grandest glens of the Highlands, was struck, "all of a heap," with the scenery of Greenock; while the bland Wordsworth, who commonly smiled and sang amidst all sorts of tolerable landscapes, became pensive and sad at sight of the giddy gaiety of Greenock's crowds.

A close array of handsome villas lines the shore for about a mile below Greenock. An outcropping hill rises slowly to the west of the town, and terminates in a precipitous crown, which commands a superb view of the frith from Duglass to Dumoon. A graduated promontory goes out from this hill, and has on its point a small battery. A pretty curving bay commences a little further on, and is zoned by the blythesome village of Gourock, and overlooked by true "step-stair" trap hills. The Point of Kempoch—infamous in days of yore for tricks of Popish jugglery and devil-craft—terminates the bay; and an elegant continuation of Gourock, under the name of Ashton, extends a good distance along the skirts of a bold sea-board, looking right across to the bleak masses of the Cowal mountains. We are now at the region of heath; for three-fourths or more of all the laud within view downward are clothed in russet. But we are also at a very distinctive part of the frith, where it is making its rapid bend from a westerly to a due southerly direction, and whence its direct or main channel is only one of many stretches of its magnificent complexity of waters. A sketch of its scenery from this point downward, on any such scale as the one we have been following, would form a series of articles, and these not properly on the Clyde itself, but on the Clyde's islands and sea-lochs, the tracks of steam-boat tours, and the scenes around the watering villages. In tracing the Clyde from Ashton to the sea, therefore, we shall do little more than make a few general indications.

Just after rounding Roseneath, or at a point north-west of Gourock, the frith sends away to the north the long, mountain-screned wild sea-arm of Loch Long; and this in its turn soon sends off to the north-west the deep grand bay of Loch Gail. Opposite Ashton, and separated from the mouth of Loch Long only by the russet mountain of Kilmun, is the sombre Highland bay of Holy Loch. Adjacent to the entrance of Loch Long, though on opposite sides of it, and in one case within Holy Loch, are the pleasant new villages of Strone and Kiltreggan, and the famous old village of Kilmun. The frith, for ten miles down from Roseneath, rarely exceeds three miles in width, and has a somewhat uniform char-

acter,—picturesquely hilly along the left, and doddily mountainous along the right. Below Ashton, on the crown of a lofty eminence, stands the old tower of Leven; farther on, upon the tongue of a small headland, stands the pretty lighthouse of Cloch; and still farther on, upon the same shore, are the elegant mansions of Ardgowan and the beautiful ravine of Innerkip. Along the Cowal shore, for nearly two miles from the mouth of Holy Loch, extends a brilliant array of villas connected with the landing-place of Kirn and with the village of Dunoon. About six miles below Dunoon, round the Point of Toward, overlooked within by the splendid mansion and park of Toward Castle, is the commencement of the Kyles of Bute, the magnificent belt of marine waters which encircles half of Bute island, and sends off two romantic ramifications into the interior regions of the Cowal mountains. A little within its mouth, on the left side, is the beautiful bay of Rothesay, half embraced by the beautiful town, and environed with all sorts of beautiful things, for Bute is all round it, and all Bute is beautiful. See BUTE.

The stretch of the frith between Bute and Ayrshire has an average width of about five miles. The upper part of this is open, has pleasant shores, and terminates on the left at the picturesquely situated town of Largs,—famous for the defeat of Haco of Norway by Alexander III. of Scotland,—and the lower part is bisected by the two Cumbray islands,—the greater containing the pretty town of Millport, and the lesser remarkable for its lighthouse and its soaring terraced cliffs. The frith now suddenly expands into a gulf, averaging about 32 miles in width, and from 45 to 48 miles in length, merging at its farther end into identity with the Irish channel. Its west side is screened by the undulating surfaces of Kintyre, and terminating at the Mull, where the Irish Channel passes out to the Atlantic. A portion of the gulf's area, 26 miles long, and 12 broad, about 6 miles from Kintyre and $4\frac{1}{2}$ from Bute, is occupied by the mountainous island of Arran, with stupendous peaks and savage glens, wonders of geology, and marvels of tradition. See ARRAN. North from the north-west of Arran, and west from the middle of Bute, goes off the flammingly long and picturesquely varied sheet of Loch Fyne, leading up to gigantic scenery, and to spots teeming with history, at Tarbert, Lochgilphead, and Inverary. All the east of the gulf is screened by the coast of Ayrshire, with its varied sea-board, its array of towns, and its many mementos of the Norsemen and Cruithne and Feudal Barons of the ancient times. The part of the gulf between Arran and Ayrshire measures about 14 miles across; and all this, as well as the entire expanse beyond, is overlooked by Ailsa Craig, a conical mass of columnar trap, similar to Dumbarton Castle, but uncloven, and about twice as high, rising from the bosom of the waters boldly and clearly, with all the force and twice the bulk of an Egyptian pyramid. See AILSA CRAIG.

How noble a rank, then, does the Clyde hold among the rivers of Scotland,—“the land of the mountain and the flood,” whose fame is as great for beauty of lakes and streams, as for grandeur of glens and hills! It is but the fourth, indeed, in volume of fresh water,—the third in length of course,—and inferior to many in Highland sublimity or in pastoral loveliness, and to some in soft witchery and wild romance; but it is far the first in utility and aggregate attraction,—and greatly superior to all in artificial improvement, in industrial enterprise, in commercial traffic, in steam-boat fame, in sea-loch ramification, and in the variety and blending and general effect of all styles of landscape, from

the tame to the savage, and from the simply pretty to the elaborately magnificent.

“Majestic Clutha! as a princess moving
From the pavilion of thy morning rest,
To where the Atlantic sits, with smile approving,
And folds his daughter to his ample breast,
Throned in the sunset, monarch of the west,
On thee he pours the treasures of his reign,
And wreaths Columbia's riches round thy crest.
The Indies love thy name; and the long train
Of myriad golden isles that gem the azure main.”

CLYDESDALE, or STRATHCLYDE, either the entire basin of the Clyde, or the immediate valley of the river, or the part of that valley within Lanarkshire. The first and the second of these senses of the word are ancient; and only the third is now in use. The topographical features of the valley have been sketched in the preceding article, and the agriculture and statistics of it will be noticed in the article on LANARKSHIRE. But two things for which it is famous—its orchards and its breed of horses—may be noticed here.

The orchards of Clydesdale lie mostly between the bottom of the lowest fall of the river, and the mouth of the South Calder; or perhaps, from the foot of the Mouse water to Bothwell Castle, a distance of 16 miles. At the upper end of this district, the bed of the river is about 200 feet above sea-level; at the lower end it does not exceed 50. This region is well-protected against the cold easterly *haars*, which are so injurious to vegetation; and hoar-frosts or mildews are seldom felt here. The orchards are chiefly of apple-trees, with a mixture of pears and plums. Cherries are more rarely cultivated, being so much subject to the depredations of birds. Few of the orchards are large: many of them are mere cottage-orchards. They were stated in the ‘Agricultural Report’ of 1793, to amount to 200 acres; and in that of 1806, to be upwards of 250 acres; while the total extent of orchards in the county exceeded 340 acres. At present they amount to 1,200 acres, including in this estimate the small gardens and cottage-orchards in and around Hamilton. The produce is very precarious, the fruit being frequently destroyed in the blossom by spring-frosts and caterpillars. In some years, such as 1818, the whole value of the orchards betwixt Lanark and Hamilton has amounted to upwards of £6,000. Even in the years 1801 and 1804, the value of the fruit from the different orchards exceeded £5,000 each year; but this was not so much owing to an increase of fruit from orchards lately planted—few of them having arrived at any perfection of fruit-bearing—as to a gradual rise in the price of fruit, and both those years being very productive ones. A remarkable instance is mentioned of the fruit produced on half-an-acre of ground, in the former year, bringing £150 to the dealer who carried it to market. The value of the fruit is not always in proportion to the number and size of the trees. Those who cultivate the ground around the trees, taking care not to injure the roots, and giving manure from time to time, have finer fruit, and a much greater quantity in proportion than those who do not. Much also depends on adapting the trees to the soil and exposure. Though the different kinds of apples, &c. are generally engrafted on the same kinds of stocks, each assumes the habits peculiar to the scion. Those who have been attentive in observing this, and choosing the kinds best adapted to their situation, have found their account in it. But it ought not to be understood that the choice of the stock is of no importance. Native crabs are the hardest, and prove the most durable trees. Codling stocks, and

those raised from the seeds of good fruit, generally produce also finer fruit; but the trees seem to be more subject to disease. The causes which produce the phenomena occurring in the orchard are so intricate and incomprehensible, that the most attentive and acute cultivator can neither avert the injuries and maladies to which the trees are liable, nor cure those that are diseased. There is, indeed, no general principle to direct the cultivator of the orchard; all must depend on a long course of topical experience, by which the kinds of fruit-trees which have been found to thrive and bear best in any particular spot may be known and selected.

The Clydesdale orchards are mostly planted on steep hanging-banks; on such they have been found to succeed better than on plains. The abrupt banks of the Clyde, especially on the north side, are ill-adapted for any other agricultural purpose, as the expense of labour and manure would hardly be repaid by the crop. On the other hand, the excellent exposure, and general sharpness of the soil, render these banks an object of importance in the eye of the cultivator of fruit. Most of the orchards are on cohesive soils, and on such the trees have been supposed to be surer bearers than on open sandy soils; yet there are instances of very productive orchards on friable and gravelly soils. The apple-tree in general succeeds on a pretty hard soil, provided the bottom be dry; but when the roots penetrate a subsoil holding stagnant water, or greatly charged with the oxide of iron, the tree fails. The pear-tree requires a soil of greater depth, and more soft and moist; and will thrive in a subsoil where the apple fails. It also yields fruit earlier, lives to a greater age, and arrives at a greater size and more towering height than the apple-tree. A single pear-tree has been known to yield 60 sleeks of fruit, at 50 lbs. per sleek;* and there is a Longucville pear-tree at Milton-Lockhart, said to be 300 years old. The plum-tree does not succeed in the very stiff cohesive soils; it requires a considerable depth of dry friable mould. Its district extends to about 3 miles on either side of Dalsersf. All the fruit-trees which have been engrafted are more delicate than those in a natural state, and require a more attentive culture. Plum-trees are generally planted round the verge of the orchard, and are profitable, not only for the fruit they bear, but from the shelter they afford the other trees. All fruit-trees require shelter, and do best when they are embosomed in woods.

"Considerable diversity of opinion," says the Journal of Agriculture, "prevails in Lanarkshire as to how far the fruit-trees should stand from each other; and errors have been run into both in planting too near and too sparse. In the Dalziel orchards, and some others, the rows of trees are 22 feet apart, and 11 feet distance in the rows. The trees in the orchard at West-Brownlee are closer. In the new orchard on the estate of Wishaw, the rows are at 30 feet distance, and the trees 15 feet from each other in the rows. On the Coltness estate the rows are 27 feet, and the trees 10½ feet from one another in the rows. Some, however, are sparser; and in some of the oldest orchards the trees are irregularly planted. In general, however, they are planted closer than is usually done in the English orchards. It is a common practice in the Clydesdale orchards to plant an early bearer alternately with other trees in the rows; and some plant gooseberry and currant bushes between the trees; while others raise only

potatoes, oats," &c. Upon the whole, though the produce of the orchard is precarious, when the original insignificance of the grounds on which fruit-trees succeed is considered, and the ready sale and high price which the manufacturing towns afford for fruit, an orchard planted with judgment and carefully cultivated is certainly a profitable possession. On the other hand, the depredations committed on the orchards have become more frequent and daring as the manufactures and population of the county have increased, and are a great discouragement to this species of cultivation, particularly that of small orchards, which cannot defray the expense of watching during the night. Besides the larger fruit, great quantities of gooseberries and currants are here cultivated, and, when well-managed, are said to pay very well. The gooseberry and currant trees are dug round annually, kept on a single stem, and dunged every second year. Many new varieties of small fruit have been introduced; and vast quantities are every year brought to market, in Glasgow, Paisley, Hamilton, and Lanark, to the value, it is supposed, of one-third of the large fruit. The principal orchards are in the possession of their respective proprietors. The Cambusnethan priory orchard extends to 26 acres, and generally fetches on an average £300 per annum. In some years, before the reduction in the prices of fruit, it has brought £1,000. Mauldslie castle orchard, extending to 8 acres, averages £150; in 1822 it brought £500; in 1833 only £38. One of the Brownlee orchards, of 12 acres, has sometimes yielded fruit to the value of £600, and in other years has brought only £10. The glebe of Dalziel has sometimes yielded £250. The importation of fruit from Ireland has tended greatly to reduce the prices of the Clydesdale fruit; but some proprietors have recently established cyder-presses, which may improve the prices. The total sum realized from the Clydesdale orchards in 1852 was £2,648. Orchard ground lets at from £6 to £10 per acre.

The superlative animal known all over the Lowlands of Scotland under the appellation of Clydesdale horse, is not of a pure breed, but is of a kind improved by crossing. This improvement, Mr. Wallace of Kelly says, can readily be traced to the importation of black mares from Flanders, which were much in fashion, and put to very frequent use in the coaches of the gentry of Scotland, soon after the use of such carriages became pretty general. There is little doubt of this having been extensively practised in Lanarkshire, and that breeding from black Flanders mares was paid great attention to in that district about 120 years ago. Mr. Wallace thinks that the breed of draught-horses in general, over the West of Scotland, has degenerated; and that the want of proper care, in respect of the qualities of the mares bred from, is the main cause of this. "Of late years," he says, "the breeding of draught-horses has greatly extended over the West of Scotland, including portions of the counties bordering on or in the Highlands, where very useful but small-sized mares have been bred from; and to this inferior crossing, may not only fairly be in part attributed the colour complained of, but that want of bone and strength, and of fine broad shape, which any accurate observer will but too generally discover at our horse-markets."

The Duke of Hamilton was created Marquis of Clydesdale in 1643. His eldest son bears the title of Marquis of Douglas and Clydesdale.

CLYDESDALE JUNCTION RAILWAY, a railway in Lanarkshire, connected at one end with the Glasgow and Greenock railway at Glasgow, at the other with the Wishaw and Coltness railway at

* A sleek of plums weighs 60 lbs.; and of apples, 40 lbs. The fruit boll contains 20 sleeks. The present average market price of Clydesdale fruit is 50s. per boll.

Motherwell, and sending off a branch or fork due south-east to Hamilton. The line of it from Glasgow to Rutherglen, a distance of 2 miles and 58 chains, is the quondam POLLOCK AND GOVAN RAILWAY: which see. A branch of 37 chains, a small part of it horizontal, and the rest with gradients varying from 1 in 100 to 1 in 240, unites this to the Glasgow and Greenock railway. The line of the Pollock and Govan has no bad curve, and for the most part varies in gradient from 1 in 230 to 1 in 880. The line from Rutherglen southward passes Rossethall and Cambuslang, reaches a place called Parkfarm, and there splits into the two forks toward respectively Hamilton and Motherwell. The Hamilton fork passes the Blantyre cotton works, and terminates in a very convenient station near the county buildings at Hamilton. From Rutherglen to Hamilton the distance is 8 miles 9 chains, with the following gradients,—1 mile 3 chains 25 links, horizontal; 4 miles 70 chains, rising 1 in 220; 26 chains 75 links, horizontal; 1 mile 53 chains 33 links, rising 1 in 220; and 15 chains 67 links horizontal. The smallest radius of a curve is one mile. Near the point of divergence there is a tunnel of 230 yards in length. The Motherwell fork, after leaving Park farm, crosses the Rotten Calder, and about $\frac{3}{4}$ of a mile farther on, the Clyde. Thence it runs through an open country, passes Uddingstone, crosses the North Calder, and joins the Wishaw and Coltness railway, at Motherwell; the total length from Parkfarm being 6 miles 49 chains. The gradients on this portion are—20 chains, rising 1 in 220; 7 chains, horizontal; 70 chains, falling 1 in 180; 63 chains, horizontal; 4 miles 19 chains 50 links, rising 1 in 132; 13 chains 70 links, horizontal; 15 chains 80 links, rising 1 in 132. With regard to the chief works, the course of the Rotten Calder is diverted, a tunnel of 110 yards is there cut through the rock, the Clyde is crossed by an arch of 54 yards, of an average height of 53 feet, and the North Calder is crossed by arches 90 yards long, and varying from 50 to 100 feet high. The total length of the main line and branches is 15 miles 15 chains.

The project of this railway was originally a project of the Caledonian Railway Company for an approach to the south side of Glasgow, but was abandoned by them with the view of reducing their capital, and was then adopted and carried out by other parties, and was afterwards, on a change of views, purchased by the Caledonian Company for the purpose of connecting their system, not only with the south side of Glasgow but with the Glasgow and Greenock and Glasgow and Barrhead railways. The terms upon which it was acquired were a guaranteed dividend of 6 per cent. on a capital of £450,000, with a further right for the proprietors to have their shares bought up by the Caledonian Company at a premium of 50 per cent. By new arrangements under an act of 1851, however, the guaranteed dividend was reduced to $4\frac{1}{2}$ per cent., the right to demand the redemption of stock was relinquished, and the proprietors became entitled to £135,000 of Caledonian stock.

CLYNE, a parish, containing the post-office village of Brora, on the east side of Sutherlandshire. It is bounded on the south-east by the German ocean; and on other sides by the parishes of Loth, Kildonan, Farr, Rogart, and Golspie. Its length south-eastward is 24 miles; and its breadth varies from 4 to 8 miles. Its north-west district is part of the wild, bleak, lofty, central mountain range of the county. Its central district is a picturesque mixture of glen and mountain, wood and water, comprising in the lower end the meeting of Strathbeg

and Strathbrora, and the debouch of the latter upon the beautiful sheet of water called Loch Brora. The south-eastern district subsides into lowland, yet is very diversified and not a little attractive,—comprising the banks and hill-screens of Loch Brora, the interesting environs of the village of Brora, a considerable proportion of arable land, and at last a low sandy sea-beach with a belt of sand-hills, partly verdant, partly bent-covered, and a quarter of a mile broad. The total area amounts to about 65,000 acres,—not more than 1,400 of which are arable, most of the remainder being sheep-pasture. The sole landowner is the Duke of Sutherland. The inhabitants on the coast are mostly fishermen. There is plenty of excellent freestone and limestone, and coal was formerly wrought. There are several Pietish antiquities; in particular, a strongly fortified hill on the south side of Loch Brora, called Craighar. Upon a rock in the Blackwater of Strathbeg, about $1\frac{1}{2}$ mile north from the junction of that water with the Brora, stand the ruins of COLE'S CASTLE; which see. The road from Inverness to Wick goes along the coast, and a road goes up the interior. Population in 1831, 1,711; in 1851, 1,933. Houses, 410. Assessed property in 1843, £2,910 3s. 10d.; in 1860, £2,758.

This parish, formerly a vicarage, is in the presbytery of Dornoch, and synod of Sutherland and Caithness. Patron, the Duke of Sutherland. Stipend, £144 15s. 7d.; glebe, £12. Schoolmaster's salary, £50; fees, £15. The parish church was built about the year 1770, and contains about 900 sittings. There is a Free church; the yearly receipts of which in 1865 amounted to £171 5s. There are three non-parochial schools,—one of them a girls' school at Brora, endowed by the Duke of Sutherland.

CLYTH-NESS, a small promontory in the parish of Latheron, $13\frac{1}{2}$ miles south-west of Noss Head, Caithness-shire. There is a small bay, which serves as a harbour, called the harbour of Clyth, on the south-west side of it. The castle of Easter Clyth, which was formerly of great strength, is situated upon a rock overhanging the sea near this point. It is commonly called Cruner Gunn's castle. Gunn was Coronator or Justiciary of Caithness, and was basely murdered, with several gentlemen of the same name, in the kirk of St. Teay near Castle-Sinclair, by Keith, Earl Marischal, in 1478. At the hamlet of Clyth is a neat little inn.

CNOC. See KNOCK.

COALSAUGHTON, a thriving village, inhabited chiefly by colliers, in the parish of Tillicoultry, Clackmannanshire. Here is a school-house which was built and endowed by Mr. Wardlaw Ramsay. Population, 795.

COALSTON, an ancient seat of the family of Brown—now represented by the Marquis of Dalhousie—in the parish and shire of Haddington; about 2 miles south of Haddington. There is a curious incident connected with the family of Coalston. One of its ancestors married the daughter of his neighbour, the famous warlock of Gifford, described in *Marmion*; and as they were proceeding to the church, tradition says, the wizard-lord stopped the bridal procession beneath a pear-tree, and plucking one of the pears, gave it to his daughter, telling her that he had no dowry to give her, but that as long as she kept that gift, good fortune would never desert her nor her descendants. The pear is still preserved in a silver box.

COALTON, a village, once thriving and inhabited by colliers, but now in a state of decay, in the parish of Ceres, Fifeshire.

COALTON (EAST AND WEST), two mutually adjacent villages in the parish of Wemyss, 1 mile

north of West Wemyss, and 4 miles north-east of Kirkcaldy, Fifeshire. They are inhabited chiefly by colliers. Population in 1861, of East Coalton and of West Coalton, 408.

COALTON OF BURNTURK, a village $1\frac{1}{2}$ mile south-east of Kettle, in Fifeshire.

COALYBURN, a station on the Dolphinton railway, 4 miles south-west of Leadburn junction.

COALYLAND, a coal-field and a collier village in the parish of Alloa, Clackmannanshire. Population of the village in 1851, 234. See ALLOA.

COATBRIDGE, a post-town in the parish of Old Monkland, Lanarkshire. It stands on the middle road from Glasgow to Edinburgh, on the Monkland canal, and contiguous to the Glasgow fork of the Caledonian railway, $1\frac{1}{2}$ mile west-south-west of Airdrie, and $9\frac{1}{2}$ miles east by north of Glasgow. It is situated between Gartsherrie and Dundyvan, in the very centre of the coal-fields and iron-works of Monkland, amid a region of railways, furnaces, din, and smoke. Property all around it has, in recent times, risen amazingly in value; and the town itself has suddenly swollen from the condition of a village to the character and appearance of a hustling suburb of a commercial city. It contains malleable iron-works, tube-works, foundries, and other manufactories; and it is the centre of a circle of only about a mile in diameter, within whose circumference stand the large iron-works of Gartsherrie, Summerlee, Dundyvan, Calder, and Langloan, with aggregately forty-three smelting furnaces. Its shops display as grand windows and as gaudy finery as those of any second-rate streets in either Glasgow or Edinburgh. It is the seat of a miscellaneous, energetic, and enormous retail and local trade; and perhaps owes a considerable breadth of peculiarity to the reckless, spendthrift habits of many of the miners. It has offices of the Royal, National, Clydesdale, and Union Banks, fourteen insurance offices, a police commission, a gas-light company, a mechanics' institution, a public library, religious and benevolent institutions, an academy, other public schools, a quoad sacra parish church, a Free church, a United Presbyterian church, an Evangelical Union chapel, an Episcopalian chapel, and a Roman Catholic chapel. All these places of worship are of quite recent erection; and the yearly receipts of the Free church in 1865 amounted to £265 10s. 1d. Very abundant facilities of communication are enjoyed by means of the Monkland canal to Glasgow, by means of omnibuses to Airdrie, and especially by means of the Caledonian railway to places north, west, and south. Population in 1831, 741; in 1841, 1,599; in 1861, 10,501. Houses, 1,541. See MONKLAND (OLD).

COATDYKE, a thriving village in the Gartsherrie and Coatbridge district of the parish of Old Monkland, Lanarkshire. Population, 842.

COATS (EAST AND WEST), two of the connected villages of the parish of Cambuslang, Lanarkshire. They are inhabited principally by labourers and weavers. Population in 1851 of East Coats, 140; of West Coats, 146.

COBBLER (THE). See ARROCHAR.

COCHRANE. See PAISLEY.

COCHRANEMILL, a station on the Glasgow and Ayr railway, $1\frac{1}{2}$ mile south-west of Johnstone, Renfrewshire.

COCHRIDGE. See LETHENDY AND KINLOCH.

COCKBURNLAW, a mountain in the parish of Dunse, Berwickshire. It rises from a base of at least 6 miles in circumference, to a conical top, which is elevated about 912 feet above the level of the sea. It is encircled by the Whitadder on three sides. On the north side, a little below the middle of the hill, are the ruins of a very old building,

called Woden's or Edwin's hall, or Edinshall. It consists of two concentric circles; the diameter of the innermost being 40 feet, the thickness of the walls 7 feet, and the spaces between the walls 7 and 10 feet. The spaces have been arched over, and divided into cells of 12, 16, and 20 feet. The stones are not cemented by any kind of mortar; they are chiefly whinstone, and made to lock into one another with grooves and projections. It is supposed to have been a building similar to Cole's castle, and Dun-Dornadilla, in the county of Sutherland. The rock composing this hill is, according to Mr. Milne, an extremely compact trap, consisting of felspar, quartz, and hornblende.

COCKBURNSPATH, a parish, containing a post-office village of the same name, on the coast of Berwickshire. It presents angles to the cardinal points of the compass; and is bounded on the north-east by the German ocean; on the south-east by the parish of Coldingham, and part of Oldhamstocks; on the south-west by Abbey St. Bathans parish; and on the north-west by the shire of Haddington. Its greatest length, from its eastern angle on Redheugh shore, to its western angle near the source of Eye water, is $7\frac{1}{2}$ miles; and its greatest breadth, from its northern angle at Dunglass-bridge, to its southern angle at the point where Eye water ceases to bound it, is $4\frac{3}{4}$ miles. At a former period, it was a small parish, but was afterwards—though at what particular date cannot be ascertained—incorporated with the parish of AuldCambus. Cockburnspath consists of two sections; the one bleak and mountainous, and the other cultivated and comparatively low and level. The higher or southern section is a continuation of the elevated region of the Lammermoor hills, which, sweeping down upon the parish from the north-east, passes away to meet the sea, a little beyond its boundaries, in the bold promontory of St. Abb's. This elevated tract is, in general, soft in its features; the hills being almost all rounded and broad, and never rising higher than 500 or 600 feet. Between these hills, and onward toward the ocean, are various ravines or deep gullies, threaded with mountain-streams, and wearing in many places—from the mingling of rock and wood and mimic cascade—an aspect highly picturesque. The lower or northern section of the parish, is, for the most part, well-cultivated; and, intersected with the cleaving and sylvan-fringed streamlets from the south, rises slowly and wavily toward the hills. The coast is uniformly, but especially toward the east, of a rocky, bold, precipitous character; and presents some striking scenes. A beautiful insulated cliff, bored through by the billows, and a towering and magnificent rock, presenting an outline closely similar to that of a cathedral or ancient tower, are fine foils to the general view; and the vast expanse of ocean beyond, the various forms of the bold headlands in the distance, and the dottings of the waters with vessels of every form and size leaving or entering the frith of Forth, present a general picture of no ordinary attraction. Of the several deep gullies of the parish the most remarkable, jointly for its picturesqueness and its other attractions, is Pease dean,—which has an average depth of 150 feet for about 2 miles of its length, with sides formed of stratified rocks, generally vertical and of a smooth surface. Over the stream which flows through it, called the Pease burn, is a remarkable bridge, reckoned a masterpiece of architecture, which carries the public road, high aloft in the air, onward from the north-east toward Berwick-on-Tweed. This bridge was built in 1786: it is 300 feet in length, 15 feet between the parapet walls, and 120 feet above the stream which

flows beneath; and it consists of four arches, two of which both rest their inner limbs upon a tall, slender pier, rising from the bottom of the deep ravine. The bridge is visited by many a tourist, and often examined with a curious eye,—the fame attaching to it, of its being one of the tallest bridges in Scotland. See PEASE.—The Cove, about $1\frac{1}{2}$ mile from Dunglass-bridge at the north-eastern limit of the parish, is another object of unusual interest. This is a little bay surrounded by precipices upwards of 100 feet high, and looking out upon the cliff and cathedral-like rock and extended sea-view which constitute the chief attractions of the coast-scenery. At one part of this romantic bay, the coast is accessible only by a sloping tunnel, hewn out of the soft rock, passing under ground for the space of 60 or 70 yards, and merely wide enough to admit a horse and cart; and here, at the termination of this remarkable approach to the sea, a pier has been erected for the accommodation of fishing-boats.—At Redhugh, somewhat less than a mile from the south-eastern angle of the parish, a spot called Siccar-point also possesses unusual attractions. Celebrated for geological phenomena—especially for the remarkable junction which it presents between the greywacke and the more modern rocks—it is, at the same time, rich in natural beauty. Scrambling down a lofty headland, which juts suddenly into the sea, or descending a winding footpath which has been erected for his accommodation down the slopes of the precipitous sea-bank, the tourist arrives at a cavern of considerable capaciousness as to both height and area, walks beneath a fretted roof of glittering and variform calcareous stalactitic incrustations, and sees himself guarded in by ranges of cliffs and isolated rocks which so vex and tumultuate and dash into spray the rolling billows as to manufacture a watery veil of no common beauty, suspended over an expanded and interesting sea-view. At the eastern extremity of the Lammermoors, in the high valleys through which the road passes to Ayton, Dr. Buckland discovered, in 1839, traces of moraines disposed in terraces at various elevations. The only stream, except the rills which rise in its own heights, is Eye water, which rises about a mile to the west of it, in Haddingtonshire, and forms its boundary on the south-west as long as it is coterminous with the parish of the Abbey of St. Bathan. During the whole of this part of its course, the river's banks are bare and unattractive. There are several plantations,—patches of forest on the sides of the narrow valleys, the wooded portion of the demesne of Dunglass, and Pemesheil wood, which covers about 300 acres. In 1834, there were in the whole parish 550 acres under wood, 5,200 under cultivation, and 3,838 never cultivated or constantly in pasture; and the total yearly value of raw produce was estimated at £19,580. Sir John Hall, Baronet, is the most extensive landowner; and there are four others.—Remains of military forts and encampments are numerous in the district,—particularly in the vicinity of the ravines, which, in the unsettled times of early history and of the Border raids, were formidable passes. Several of the fortifications are of British origin,—particularly a very interesting one on the summit of Ewieside hill; and others, if not erected by the Romans, are in the vicinity of some traces of their presence,—many urns and other articles obviously of Roman workmanship, having, in various localities, been unearthed by the plough. In addition to these military vestiges of an early period, this parish contains not a few interesting relics of more recent feudal times,—

—“the mouldering halls of barons bold.”

Dunglass castle, immediately beyond the north-eastern boundary of the parish, and the seat of Sir John Hall, Baronet, was originally a fastness of the Earls of Home. See DUNGLASS.—A more interesting place is Cockburnspath tower, which stands on the edge of a strong pass or ravine nearly in the centre of the parish, nodding, in venerable ruin, over the great road from Berwick to Edinburgh. Though never, apparently, a place of great extent, this tower, owing to its commanding position, was esteemed one of the keys of the kingdom of Scotland; and possessed so early as 1073 by the Earls of Dunbar and Mareh, it figured prominently in the tumultuous scenes of the international wars.—On the coast, about 2 miles from the eastern angle of the parish, stand the ruins of the old church of the incorporated parish of Auldcaumbus; surmounting a high, overhanging precipice, and commanding an extensive and fascinating view. The building is a specimen of simple Saxon architecture; is supposed to have been erected so early as the seventh century; and was dedicated to St. Helena, the mother of Constantine the Great. It is surrounded by a small relinquished cemetery. Near this ruin there were found, a few years ago, an ancient rosary and numerous coins,—some of the coins comparatively little defaced, and of the reign of Athelstan or Edelstan the Great, grandson of Alfred the Great. The North British railway traverses the parish, passing between the village of Cockburnspath and the sea, having a station there, curving thence inland toward the valley of the Eye, crossing the Tower dean by an embankment 136 feet high, and passing through a tunnel at the head of Pease dean. The village of Cockburnspath stands on the Edinburgh and Berwick road, about $\frac{3}{4}$ of a mile from the north-east limit of the parish, $8\frac{1}{2}$ miles south-east of Dunbar, and 20 north-east of Berwick. An antique cross stands in the middle of its streets. A fair is held here on the second Tuesday of August. Population of the village in 1851, about 250. Population of the parish in 1831, 1,143; in 1851, 1,196. Houses, 224. Assessed property in 1843, £8,648 3s. 6d.; in 1860, £10,002.

This parish is in the presbytery of Dunbar, and synod of Lothian and Tweeddale. Patron, the Crown. Stipend, £245 13s. 3d.; glebe, £27. Unappropriated tithes, £76 11s. 5d. Schoolmaster's salary, £35, with about £30 fees. There is a subscription school in the village of Cockburnspath, and an endowed one in the district of Auldcaumbus. The parish church is a very ancient structure, dating as far back at least as 1163; but it has recently had repairs, and contains sittings for about 400 persons. There is a Free church for Cockburnspath, whose yearly receipts in 1865 amounted to £134 15s. 1d. There is an United Presbyterian church at Stockbridge, about a mile south of the village of Cockburnspath. There are likewise in the parish a subscription library, and a friendly society. Auldcaumbus or Old Cambus anciently belonged to the monastery of Coldingham, as a cell of Durham; the Scottish Edgar having granted to St. Cuthbert's monks of Durham its manor, with the appertaining lands, tithes, shipwrecks, and other customary dues.

COCKENZIE, a village and small sea-port in the parish of Tranent, Haddingtonshire. It stands on the shore of the frith of Forth, on the coast-road from Edinburgh to Aberlady and North Berwick, in the western vicinity of the village of Portseaton, and about a mile north-east of Prestonpans. The harbour is a private one, constructed in 1834, at a natural basin on the west side of the village, at a cost of about £6,000, by the proprietors of adjacent collieries for the purpose of shipping coal. It has an

area of three acres, with an entrance of 90 feet in width, and a depth of 15 feet between the piers. It is of easy access, and may be taken at tide-time in any weather. It is an excellent small harbour, and, if required, is capable of great improvement. The arrivals in 1846 were 144 vessels in cargo, of 12,811 tons; of these, 54 vessels were from the colonies or foreign. The dues levied by "mutual consent" were £50. About 35 fishing-boats also belong to the port, all open, without any deck, but of the best construction and largest class. A private railway, about 3 miles long, connects the harbour with collieries on the south side of Tranent. A chapel of ease, containing 450 sittings, and capable of interior enlargement, was built in the village in 1838. There was also a Free church, whose yearly receipts in 1853 amounted to £102 9s. 4d. A fair was formerly held on the first Thursday of November, but has gone nearly into disuse. Population, 649.

COCKLAW, one of the Cheviot Hills, on the mutual border of Scotland and England, at the source of Beaumont Water, 8 miles south-south-east of Yetholm. This name is borne also by several other hills in Scotland.

COCKLERUE, or CUCKOLD LE ROI, a hill, about 500 feet high, on the mutual border of the parishes of Linlithgow and Torphrig, $1\frac{3}{4}$ mile south-south-west of the town of Linlithgow. It commands a very brilliant and very extensive prospect of the basin and screens of the Forth, from Benlomond to North Berwick.

COCKPEN, a parish, containing the villages of Bonnyrigg, Dalhousie, Gowk's-Hill, Hillhead, Hunterfield, Polton-Street, Prestonholm, Skiltiemuir, Stobhill-Engine, and Westmill, in Edinburghshire. It is bounded by the parishes of Lasswade, Newbattle, and Carrington. Its length northward is $3\frac{1}{2}$ miles; its greatest breadth is $2\frac{1}{4}$ miles; and its area does not exceed 4 square miles. Its post-town is Lasswade, situated immediately beyond the north-west boundary. The South Esk enters the parish from the south, intersects it for nearly $1\frac{1}{2}$ mile, and afterwards forms its boundary with Newbattle. The banks of this river are here steep, bold, and beautifully fringed with natural wood. The surface of the parish is prevalently flat, yet somewhat uneven. The soil is a strong clay, and is highly cultivated, abundantly luxuriant, and everywhere shaded by enclosures and plantations. Coal is plentiful, and successfully worked; good freestone abounds; and a sort of moss is found whence copper has been obtained. There are seven landowners, the chief of whom is the Earl of Dalhousie. The parish has consisted, since the 12th century, of the barony of Dalhousie, originally written Dalwolsie. On the left bank of the South Esk, near the point where that river is crossed by a fine bridge, stood the old baronial castle of Dalhousie. This was anciently an imposing edifice, of a square form and turreted; and, encompassed by a strong wall, as well as supplied with other means of defence, was a place of very great strength. Latterly it has been denuded of its fortified dress, and, with some traces of antique appearance, has assumed a modern garb. The ancient family of Ramsay, possessing since 1633 the title of Earls of Dalhousie, have for ages been its proprietors. Sir Alexander Ramsay of Dalhousie, who lived in the 14th century, is celebrated as one of the bravest warriors of that age. His gallant behaviour at the battle of Otterburn is recorded by Froissart. He was appointed by his sovereign warden of the borders; and, out of envy, was treacherously murdered by Douglas of Liddesdale. See CASTLETON. The mansion of Cockpen belongs also to the noble family of Ramsay; and is situated

among romantic scenery. There is a paper-mill at Westmill; and there was formerly a flax-yarn factory at Prestonholm. The Hawick branch of the North British railway traverses the east side of the parish, and has a station at Dalhousie. Population in 1831, 2,025; in 1851, 3,228. Houses, 541. Assessed property in 1843, £8,801 8s. 5d.; in 1860, £12,582.

This parish is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patron, the Earl of Dalhousie. Stipend, £157 5s. 3d.; glebe, £21. Unappropriated tithes, £133 0s. 5d. Schoolmaster's salary has been raised to £68. The parish church is an elegant structure, built in 1820, and containing 625 sittings. There is a Free church in Bonnyrigg, whose yearly income in 1865 was £435 14s. 0 $\frac{1}{2}$ d. There is likewise one at Stobhill, whose yearly income in 1865 was £126 10s. 9 $\frac{1}{2}$ d. During the Scto-Saxon period Cockpen was a rectory, the patronage of which belonged, as at present, to "the Ramsays of Dalwolsie." In 1296 Malcolm de Ramsay, the rector, swore fealty to Edward I., who commanded the Sheriff of Edinburgh to restore him to his rights. The church of Cockpen seems to have afterwards been granted to a fraternity of Cistercian monks, who held it till the overthrow of popery at the Reformation.

COCKPOOL. See RUTHWELL.

COE (THE), a rivulet running along Glencoe, and falling into Loch Leven at Invercoe, in the north-east corner of Argyleshire. See GLENCOE.

COGTEL BURN. See PEPPER.

COICH (THE), or QUOICH, a tributary rivulet of the Dee, in the parish of Crathie, Aberdeenshire. It descends from the southern and western slopes of Benabaird, and pursues a south-easterly course, through the forest of Braemar, till its junction with the Dee, between Mar lodge and Allamore.

COIGACH (THE AIRD OF), a district in the shire of Cromarty, though surrounded by the shire of Ross. It stretches along the eastern coast of Loch-Broom into the Western ocean, and is comprehended in the parish of Loch-Broom. It contains the beautiful vales of Strathearn and Kidorch. The population of the district is about 2,000.

COILA (THE). See COYL (THE).

COLLEBHOINE. See VENACHOIR (LOCH).

COLLINTOOGLE. See VENACHOIR (LOCH).

COLSFIELD. See TARBOLTON.

COLTIE (THE), a romantic rivulet of the parish of Urquhart and Glenmoriston, Invernessshire. It rises among the north-western acclivities of Mealfourvounie, at a height of perhaps 1,500 feet above the level of the sea, and descends north-eastward, by way of the south-eastern margin of the vale of Urquhart, to Loch Ness. Its length of course, measured in a straight line, is not more than 7 miles; yet it sometimes comes down with such force and volume as to do great damage, even to the destroying of houses and bridges. A little tributary of it, called the Divach, displays, amid fine dense groves of birch, nearly as high and picturesque a waterfall as that of Foyers.

COINNEAG. See ROSSKEEN.

COIR-NAN-URISKIN. See KATRINE (LOCH).

COIRUISK. See CORRISKIN (LOCH).

COLBARN. See KATRINE (LOCH).

COLBRANDSPATH. See COCKBURNSPATH.

COLDINGHAM, a parish, containing the post-office villages of Coldingham and Reston, and also the village of Auchincraw, on the coast of Berwickshire. Except a detached portion, about 5 furlongs long and $3\frac{1}{2}$ broad, which is imhosomed to the east in the parish of Eyemouth, it is bounded on the north by the German ocean; on the east by the German ocean and the parishes of Eyemouth and

Ayton; on the south by the parishes of Chirnside and Buncllo; and on the west by the parishes of Abbey St. Bathans, Oldhamstocks, and Cockburnspath. Its extreme measurement, from east to west, is about $8\frac{1}{2}$ miles, and, from north to south, about 8 miles; and, including its detached section, it embraces an area of about 57,600 imperial acres. Its surface is, for the most part, very uneven. Several ranges of hills, constituting part of the Lammermoor chain, run through it in parallel lines from west to east, and file off to the north to form the celebrated headland called **St. Abb's Head**: which see. The hills, however, are of inconsiderable elevation, the highest, Wardlaw bank, being only 640 feet above the level of the sea; and they are cloven into ridges by intervening valleys of considerable extent, watered by the Eye, the Ale, their respective tributaries, and five minor streams, which all, with two unimportant exceptions, traverse the parish from west to east, and generally, near their embouchure, turn northward to fall into the ocean. Most of the flat lands are enclosed and arable; but a large portion of what is called Coldingham common continues wild and waste. There is a tract of between 5,000 and 6,000 acres,—anciently a mixture of moor, moss, and forest, but afterwards denuded of all its trees. Pennant, in passing through the district in 1769, was chilled with the sight of “the bleak, joyless, heathy moor of Coldingham.” But of late years several portions of this dismal tract have been fenced, and laid out in small farms, with cottages on them, to the great relief of the general landscape. The landed property of the parish is divided among eleven principal owners and forty-eight lesser ones. The total yearly value of raw produce was estimated in 1834 at £52,550. The assessed property in 1860 was £22,715. The road from Edinburgh to Berwick passes through the centre of the parish; and the North British railway passes along its south-west side, down the valley of the Eye, and has one station on its northern verge at Grant's House, and another at the village of Restou. The Dunse branch of that railway also goes off at Reston station, and runs some distance in the parish.

A mile south-west of St. Abb's Head is Coldingham loch, 30 acres in superficial area, and 300 feet above the level of the sea, though only about 300 yards distant from the shore, and so bleakly situated that an attempt to turf its sloping banks with plantation has proved abortive. This lake is of a triangular form, pellucid in its waters, several fathoms in depth, and, though neither fed by any rill, nor discharging itself by any outlet, is not observed to be subject to fluctuation. The extent of sea-coast in the parish is $6\frac{1}{2}$ miles in a direct line; but, along its wide and numerous windings, is $8\frac{1}{2}$ or 9 miles. A considerable part of the shore, particularly at Coldingham sands, and the farm of Northfield, is smooth and of easy access, and, though nowhere imposing a harbour, is rife with fishing-boats. But, in the neighbourhood of St. Abb's Head, the coast is rocky and dangerous, abounding in caves and fissures, once the retreat of smugglers, which are inaccessible by land, and can be approached by sea only at low water, and in the calmest weather. On the hills to the west and south of it, about a mile distant, are remains of ancient camps; two of these are of British origin,—the one on Ernshench, surrounded on three sides by lofty precipices,—and the other on Wardlaw bank, encompassed with four trenches. Three miles to the west of St. Abb's Head, on a peninsular rock, stand the ruins of **FAST CASTLE**: which see. At Renton, at Houndwood, at West Preston, and at East Preston, were fort-

alices or castles, belonging to Logan of Fast castle, all of which were demolished during the last century, to afford building materials for other purposes.

On the south side of the village of Coldingham, are some remains of the celebrated priory of Coldingham. Not many years ago, the ruins were very extensive; but they were rapidly dilapidated by the peasantry carrying away the stones for the erection of their cottages. Only those parts of it now remain which form the north wall and east gable of the present parish church; and these are remarkable for chasteness of design, and impart a flattering idea of the style of architecture during the transition from the Norman to the early English period. At a short distance from the vestiges of the south wall are an ancient building called Edgar's walls,—some fragments of what were known as ‘the King's stables,’ and a fountain, called St. Andrew's well, which supplied the priory with water; in various places in the vicinity formerly stood stone crosses, the sites of which are still known by the names Cairncross, Friarscross, Crosslaw, Whitecross, and Applincross. The priory of Coldingham was founded in the year 1098 by Edgar, king of Scotland, who, aided by William Rufus to regain his kingdom, and fighting under the banner of St. Cuthbert, gifted to him by the monks of Durham, believed himself indebted more to the saint's influence than to the swords of Rufus' soldiers, and knew not how munificently to express his gratitude by the donation of lands and the erection of religious houses. In the fervour of his superstitious piety, he built the church of St. Mary of Coldingham, gave possession of it to a colony of monks from Durham, attended in person the ceremony of its dedication, and opulently endowed it with mulets upon the villagers of Swinton, with the lands of Fishwick and Horndean, and with the lands, the waters, and “the men” of Paxton. Malcolm IV., William the Lion, and Alexander II., severally confirmed the privileges bestowed by Edgar, and added others. In 1127 Robert, Archbishop of St. Andrews, within whose diocese the priory was situated, importuned by David I., and probably influenced by Archbishop Thurston, and other dignitaries of the English and the Scottish churches, granted to this priory exemption from the exactions and interference of the ministers of prelatic authority; and this privilege, as powerfully perhaps as opulence and greatness of monastic influence, contributed, in the circumstances of the period, to exalt the inmates of the priory to a high place among the agents who moulded the interests of the nation. Subsequent diocesans, however, abridged or attempted to revoke the exemption, and made demands or inroads upon the priory, which frequently placed the monks in ambiguous and embarrassing positions, and occasioned disastrous appeals to the popes and to conciliar interference. The priory was enthralled, too, by its colonial connexion with the monks of Durham; the latter wielding the power of electing its prior, and exercising a right concurrent with that of its own inmates over its possessions. So arrayed in the trappings of worldly glory was the office of its prior, that, unlike any other ecclesiastic in the kingdom, he maintained a retinue of seventy functionaries, who bore titles, sustained appointments, and shared a curious division of labour more befitting the magnificence of a princely court than the mortified retirement of a cloister. The priors of Coldingham mingled much in the political intrigues of their country, and figure somewhat flauntingly on some pages of its history; yet, they could not prevent the rebound upon themselves of detrimental and even devastating interferences from at once freebooters, nobles, kings, and popes. Their priory,

on account of its patron saint being venerated highly and alike on both sides of the Border, suffered less from the raids of its vicinity than other establishments of its class in a similar position. But it was devoted to plunder by King John, as unappreciated by slaughter and unsatiated with prey, he retired from Lothian in 1216; and in 1305, it was handed over, as to all its revenues and immunities, by Pope Benedict XI., to Hugh, bishop of Biblis, who had been expelled by the Saracens from the Holy Land. Escaping, through the interference and protection of the English crown, the strangely intended infliction of the Pope, the priory, during the regency of the Duke of Albany, in the feeble reign of Robert III., passed, by the act of its own inmates, under the surveillance of Alexander, the laird of Home, as underkeeper of it for the powerful family of Douglas; and it, in consequence, soon became limited in its resources and shorn of its authority, and eventually acknowledged the family of Home as the lords of all its possessions. James III. attempted to suppress the priory, and to annex its property to a chapel at Stirling; and he not only obtained his parliament's sanction to the project, but, with their concurrence, sent envoys to Rome to procure the assent of the Pope. But the Homes, enraged at the attempt, conspired with the Hepburns, under the auspices of the Earl of Angus, to dethrone the King, and eventually, on the 11th of June, 1488, achieved his death in a fray near Stirling. During the reign of James IV. the priory continued to be oppressed or rather appropriated by the Homes. In 1509 it was, by the Pope's authority, detached from the superiority of the monks of Durham, and placed under the abbey of Dunfermline; but it was now lorded over, first by Alexander Stewart, the King's natural son, who already held the archbishopric of St. Andrews and the abbacy of Dunfermline, and who soon after fell in Flodden, fighting by the side of his father,—next by David Home, Lord Home's seventh brother, who continued to be prior till he was assassinated by James Hepburn of Hailes,—next by Robert Blackadder, who, with six domestics, was assassinated by Sir David Home,—next by William Douglas, Lord Angus' brother, who seized the office by mere intrusion, and successfully resisted all efforts to expel him,—next by Adam, who, in 1541, was removed to Dundrennan, to make way for John Stewart, the infant and illegitimate son of James V. During John Stewart's infancy, the King enjoyed the revenues; but found his possession of them less undisputed and luxurious than any of his ecclesiastical predecessors. In November, 1544, the church and tower, after being seized by the English, were successfully held against the regent, Arran; and in September, 1545, the abbey, during the devastating incursion of the Earl of Hertford, was set on fire and partially consumed. After the death of John Stewart, who now in his maturity drew the revenues, John Maitland was appointed to the commendatorship, and retained its rich endowment till 1568, when he was created a senator of the College of Justice. James VI. then bestowed it on Francis Stewart, the eldest brother of the former commendator, and, with his usual imprudence, afterwards created him Earl of Bothwell, abbot of Kelso, constable of Haddington, sheriff of Berwick, bailie of Lauderdale, and high-admiral of Scotland, giving him at the same time vast estates, and receiving in return no expression of feeling but accumulated vexations and treasons, which at last, in 1595, occasioned the turbulent ingrate to be expelled the country. The possessions of the priory were now bestowed first on the Earl of Home, and next—after the former's death in 1619

—on John, the banished Earl of Bothwell's second son, who was the last commendator of Coldingham. Tradition says that, when the abbey was destroyed, the sonorous bell of the church was carried to Lincoln, and that it still loads the breezes around that city with its powerful tones.

The village of Coldingham stands in a vale, on the east side of the parish, 1 mile west of the nearest part of the shore, 2 miles east of the Edinburgh and Berwick road, 3 north-east of Reston, and 11 north-west by north of Berwick. A little rivulet of excellent water washes its northern and southern sides. The village consists of a few rows of inconsiderable houses, and is a burgh of barony under the Earl of Home. It is surrounded with rising fields of gentle ascent; none of which, however, commands a view of more than half-a-mile distant. Several of the adjacent crofts appear from old writings, and from vestiges of the foundations of old buildings, to have been once the sites of houses and gardens; so that the village must anciently have been much more extensive than at present; though we know that in 1561 it contained only 32 houses. Two yearly fairs are held here, but have long been little more than nominal. The village has a small subscription library and a total abstinence society. About twenty families of the inhabitants are fishermen; and this circumstance closely connects the place with the picturesquely situated fishing-village of Northfield, a mile distant at the shore, all whose inhabitants are simple, unsophisticated fishers. A boat harbour was erected there in 1833, by the Fishery Board, aided by subscription, at an expense of £1,200. Population of Coldingham village in 1861, 655. Population of Northfield in 1844, about 150. Population of the parish in 1831, 2,746; in 1861, 3,241. Houses, 622.

This parish is in the presbytery of Chirnside, and synod of Merse and Teviotdale. Patron, the Crown. Stipend, £267 2s. 11d.; glebe, £25. Unappropriated tithes, £492 15s. 5d. Two parochial schoolmasters have each £35 salary, and about £20 school fees; and one has about £60 or £70 from endowed sources. The parish church is supposed to have been built about the 11th century, and has been frequently repaired, but never enlarged; sittings, 827. There are a quoad sacra parish church and a Free church at HOUNWOOD. There is a United Presbyterian church, with 609 sittings, in the village of Coldingham. There are six non-parochial schools. The district of Laverock, or Leveret-Law, which was returned as a separate parish in 1821 and 1831, and was returned as part of the parish of Ayton in 1841, has been decided by the Court of Session to belong to the parish of Coldingham. The population of this district in 1841 was 91.

COLDINGHAMSHIRE, an ancient jurisdiction in the east of Berwickshire, comprehending the parishes of Coldingham, Eyemouth, Ayton, Lambert, and Auldcomb, and parts of the parishes of Mordington, Foulden, Chirnside, Bunclae, and Cockburnspath, amounting altogether to about one-eighth of the superficies of Berwickshire. The nature of the jurisdiction is ill-defined, but seems to have been chiefly if not wholly ecclesiastical, and connected with Coldingham priory.

COLDROCHIE. See RENGORTON.

COLDSTONE. See LOGIE-COLDSTONE.

COLDSTREAM, a parish, containing a post and market town of the same name, on the southern border of Berwickshire. It is bounded on the east and south by the river Tweed, which divides it from England; and on other sides by the parishes of Eccles, Swinton, and Ladykirk. Its length north-eastward is nearly 6 miles; and its greatest

breadth is $3\frac{1}{2}$ miles. The rivulet Leet flows on part of the western boundary, and through a wide part of the interior to the Tweed at the town; and two indigenous burns, Graden and Shiells, flow to the Tweed in the north-east. The general appearance of the country is flat. The soil for the most part is rich and fertile; near the Tweed it is light; but it inclines to clay as it falls back from the river. A broad tract, from east to west, was naturally barren moor, but is now nearly all reclaimed. Coldstream is situated at nearly equal distance from the Cheviot and Lammemoor hills; and when the weather is showery, especially if the wind be westerly, the clouds usually take the direction of one or other of these ranges of hills, pour down their contents upon them, and leave this district untouched. Much more rain falls at Dunse and Wooler than at Coldstream. The elevation of Coldstream bridge is 61 feet above Berwick pier. The river Tweed here produces trouts, red fish, grilse, salmon, and all other kinds of fish common to the rivers in the south of Scotland. The gross rent of the parish, in the end of last century, was about £6,000 sterling; the rent of the fishings, £93. The gross rent in 1834 was about £12,000; the rent of the fishings about £100; the estimated value of growing timber, the greater part of which is on the Hirsell estate, £18,000; and the estimated total yearly value of raw produce, £28,182. The assessed property in 1860 was £17,780. Excellent sandstone is worked in several quarries. The principal mansions are Lennel-House, the seat of the Earl of Haddington, where Patrick Brydone, Esq., author of the well-known Tour in Sicily, spent the latter years of his long life; the Hirsell, the seat of the Earl of Home; Lees, the seat of Sir John Marjoribanks, Bart.; Milne-Graden; and Castlclaw. But there are altogether ten principal landowners. The road from Kelso to Berwick passes along the southern border of the parish, to a point about a furlong east of the town, and there crosses the Tweed by a very handsome bridge of five arches. The view from almost every part of it, but especially from the bridge, is exceedingly brilliant. Population of the parish in 1831, 2,897; in 1851, 3,245. Houses, 465.

This parish is in the presbytery of Chirnside, and synod of Merse and Teviotdale. Patron, the Earl of Haddington. Stipend, £233 7s. 2d.; glebe, £40. Schoolmaster's salary, £34 4s. 4d., with £75 fees, and £30 10s. other emoluments. The parish church was built in 1795, and contains 1,100 sittings. There are in the town a Free church and two United Presbyterian churches. The yearly contributions of the Free church there in 1865 amounted to £280 17s. The attendance at the East U. P. church in 1851 was 500; at the West U. P. church, 550. There are several non-parochial schools,—one of them with the rank and reputation of an academy. Previous to the Reformation there was in the town a rich priory of Cistercian nuns, founded by Cospatrick, Earl of Dunbar; but of this building not a fragment now remains. In clearing, in 1834, a piece of ground said to have been formerly part of the burying-ground of the priory, a trench was discovered full of human bones, probably the remains of persons of note who fell in the battle of Flodden, whose corpses were brought in carts to Coldstream by order of the lady prioress for burial in consecrated ground. The ancient name of the parish was Lennel or Leinhall; and the ruins of Lennel church stand on the north bank of the Tweed, $1\frac{1}{2}$ mile distant from Coldstream. Eastward from this church, there was formerly a village called Lennel, which was so entirely destroyed in the Border wars, that the site of it is not now known. According to

Chalmers, the parish of Leinhall appears in charters as early as the year 1147. When Cospatrick, Earl of Dunbar, founded the Cistercian monastery at Coldstream, he gave it the church of Layn-cl, with half a carucate of land at Layn-cl, and another half carucate at Birgham. And Derder, his Countess, granted to the same monastery the church of Hirsell, and a carucate of land, which the Earl confirmed. In this manner were the churches of Leinhall and Hirsell invested in the same religious house; but the church of Hirsell came afterwards to be considered only as a chapel, subordinate to the church of Leinhall. The church of Hirsell stood on the lands of Hirsell, which form the south-western part of the parish. The church of Leinhall continued in the possession of the prioress of Coldstream till the Reformation; and it preserved its ancient name for a century and a half after that epoch. In 1716 a new parish-church was built at the village of Coldstream, and the designation of the parish was afterwards taken from the kirk-town.

The TOWN OF COLDSTREAM stands on the Kelso and Berwick road, in a pleasant situation, adjacent to the high steep bank of the Tweed, $9\frac{1}{2}$ miles north-east by east of Kelso, $10\frac{1}{2}$ south-south-west of Dunse, and $14\frac{3}{4}$ south-west of Berwick. The river Leet skirts it on the south-west. The town formerly derived consequence from a ford over the Tweed, the first of any importance which occurs in following the stream upward from Berwick. By this passage, Edward I. entered Scotland in 1296; and many other, both Scottish and English armies, before the union of the crowns, made their way by it to ravage the country of their respective enemies. It was last used by a Scottish army, as an entrance into England, in 1640. The town is noted in history also for a truce concluded in 1491 between Scotland and England, and for having been the head-quarters of General Monk before he marched into England to restore Charles II.—and the place where he raised the remarkable regiment which is still called the Coldstream Guards. "The town of Coldstream," says an old writer, "hath given title to a small company of men, whom God made the instruments of great things; and, though poor, yet honest as ever corrupt nature produced into the world by the no-dishonourable name of Coldstreamers." They were formed by Monk from the two regiments of Fenwicke and Heselrige. They were chiefly Borderers,—tried and hardy men, who cared little for the cause of either King or Commons, but loved their leader, and followed him with blind and obstinate obedience through all his changes of opinion and fortune. It was, however, the fashion of the soldiers of the Commonwealth to be austere and addicted to praying and preaching; and in this the men of the Coldstream corps, it appears, were not backward, for we have the undeniable testimony of Bishop Burnet in their favour. "I remember well," said he, "these regiments coming to Aberdeen; there was an order and discipline and a face of gravity and piety amongst them, that amazed all people." At the head of these soldiers Monk went up one side of Scotland and down another; storming castle after castle, town after town, discomfiting and dispersing all enemies of the Commonwealth, from Berwick to Dundee, and from Dundee to Dumfries. The Coldstream guards remained, on the whole, ten years in Scotland; and during that period they were recruited chiefly by Scottish republicans. When confusion ensued on the death of Cromwell, Monk marched at their head, dispersed the army of Lambert, entered London, dissolved the Commonwealth, and restored King Charles. Macpherson relates, that Monk reviewed his men on

the arrival of the King; desired them to ground their arms, and consider themselves disbanded; then he commanded them to take them up and consider themselves no longer the soldiers of the Commonwealth, but of the Crown. The history of the Coldstream Guards has been recorded in a recent publication by Colonel Mackinnon.

The town is irregularly built, but contains many excellent houses, and has a cleanly agreeable appearance. The parish church is a neat edifice. The dissenting churches are commodious buildings. There are two good inns, the Newcastle Arms and the Commercial. There is a small lock-up house. The town is lighted with gas. There are an excellent public library, several benevolent and friendly societies, a savings' bank, a branch office of the Bank of Scotland, and a branch office of the British Linen Company's Bank. There are also a town-hall and reading-room,—the gift of the Earl of Home. The inhabitants are well supplied with water, through the bounty of Sir John Marjoribanks, Bart., and have expressed their gratitude by the erection of an obelisk. A cattle market is held on the last Monday of every month, and a corn market on every Thursday. The town suffered serious injury to its marketing interests by the Kelso and Berwick line of railway being projected along the south side instead of the north side of the Tweed, yet has access to it at the Cornhill station, less than two miles distant. It also suffered a serious recent loss by the failure of the Coldstream Bible Free Press scheme,—which arose out of the noble successful efforts of the Rev. Dr. Adam Thomson of Coldstream to abolish the Scottish Bible monopoly, and promised to give permanent advantage and celebrity to the town, but unhappily proved uncomensating. Coldstream is a burgh-of-barony. The two superiors, the Earl of Haddington and the Earl of Home, appoint the bailie, and give him a salary of £21. Coldstream, like Gretna-Green, had long a bad fame for irregular marriages; and among others Lord Brougham was married here in the principal inn. Population in 1841, 1,913; in 1861, 1,834. Houses, 281.

COLDSTREAM (New), a village in the parish of Coldstream, Berwickshire. Population, 150.

COLE'S CASTLE, an ancient and remarkable fortification upon a rock in the Blackwater of Strathbeg, about $1\frac{1}{2}$ mile north from the junction of that river with the water of Brora, in Sutherlandshire. It is a circular building, 54 yards in circumference round the base on the outside, or 18 in diameter; 27 yards in circumference, and 9 yards diameter within; the walls are $4\frac{1}{2}$ yards, or $13\frac{1}{2}$ feet thick in the base, built of large stones, well-connected, without any cement. The building has a batter or inclination inwards of 9 inches in every 3 feet in height. The door on the south-east side is $3\frac{1}{2}$ feet high, and $2\frac{1}{2}$ feet broad. In the middle of the wall, on each side of the passage by the door to the interior, is a small apartment, about 6 feet square and 5 feet high, as if intended for a guard to watch the entry. It has been greatly injured by the wantonness of cow-herds throwing the materials off the walls into the river. Beyond this building, and 6 feet from the wall, are the remains of an outer wall which surrounded the castle, and an oblong garden of 27 yards long and 13 yards broad. This wall seems to have been joined by large flags to the wall of the castle, leaving a passage of 6 feet broad by 7 feet high between the two walls, where it is said the inhabitants kept their cattle in the night time. The building altogether is one of the most entire of what are called Pictish towers; and must have been the stronghold of a

chieftain or a tribe. In the face of the rock is an oblong seat, where tradition says, Cole used to rest himself, fronting the meridian sun, and that there he was slain with an arrow from the bow of an assassin. When Cole felt the wound, he struck his hand upon the rock, which made such an impression that it remains there to this day.

COLEIN, a railway station in Wigtonshire, 3 miles north-east of Portpatrick.

COLGRAVE SOUND. See YELL.

COLINSBURGH, a small post and market town in the parish of Kilconquhar, Fifeshire. It stands on the road from Elie to Cupar, and on that from Largo to Anstruther, $2\frac{1}{2}$ miles north-north-west of Elie, 4 east of Largo, and 10 south-east by south of Cupar. The Commercial Bank has an agency here; and justice-of-peace and circuit small debt courts are held here five times in the year. The town has a weekly corn-market on Wednesday, and two annual fairs on the 2d Friday in June and October. It is a place of considerable thoroughfare; and has a good inn and posting establishment. It is a burgh-of-barony under the Balcarres family, and received its name from Colin, 3d Earl of Balcarres. Balcarres house is in the vicinity; near it rises Balcarres craig, a rock of 200 feet altitude. There is an United Presbyterial meeting-house in the village. Colinsburgh is a remarkably healthy place. Not long ago there were 18 individuals in its small population whose united ages amounted to 1,552 years. Population, 438.

COLIN'S-ISLE. See INCHINNAN.

COLINTON, a parish, containing the post-office villages of Colinton, Slateford, and Juniper-Green, and also the villages of Hailes-Quarry, Swanston, and Longstoue, in Edinburghshire. It is bounded by the parishes of Corstorphine, St. Cuthberts, Liberton, Lasswade, Glencross, Penicuik, and Currie. Its greatest length from north to south is about 4 miles; and its greatest breadth from east to west about $3\frac{1}{2}$ miles. The surface is beautifully varied, descending from the northern range of the northern Pentlands toward the plain of Corstorphine, in diversified and occasionally bold undulations. Along its southern limit the Pentlands rise in the different summits 1,450, 1,550, and 1,700 feet above the level of the sea; and toward the north-east are the picturesque heights of the Fir hill and Craig-Lockhart hill. There is an extensive sandstone quarry at Redhall, which a few years ago paid £1,100 of yearly rent. There is also an extensive paving sandstone quarry at Hailes. Over a distance of 3 miles the parish is intersected by the water of Leith, ploughing its way through well-wooded and romantic banks, and turning the wheels of numerous water-mills. Three rivulets or rills also enrich it with their waters,—Murray-burn, Braid-burn, and Burdiehouse-burn. Many excellent springs exist on the lands of Comiston, Swanston, and Dreghorn, from which the city of Edinburgh long received its chief artificial supply of water. In the 17th century this parish appears to have been a wild and uncultivated tract; and so late as 1709, it contained only 318 examinable persons. Now, however, it is in general in a state of high cultivation, its lands beautifully enclosed with hedge-rows, and tufted with plantation; and even on the acclivity of the Pentlands, at an elevation of 700 feet above the level of the sea, some lands have recently been rendered arable. The real rental is about £13,250. There are eleven landowners. The principal mansions are Colinton House, Bonally Castle, Craig-Lockhart House, Comiston House, and Dreghorn Castle. The Union canal and the Edinburgh fork of the Caledonian railway go across the northern district of the

parish; and the latter has a station in it at Slateford. The Roman road from York to Carriden, near Abercorn, passed along a section of the parish. In 1666 the Covenanters, marching from the west, spent the night of the 27th November in the village of Colinton; and next day marched toward the Pentlands, and fought in the skirmish of Rullion-Green. The village of Colinton is situated on the water of Leith, near the centre of the parish, 4 miles south-west of Edinburgh. Here are two flour mills; and in the neighbourhood are two paper manufactories. The poet Ballantyne, in his tale of the Miller of Deanhaugh, speaks of Colinton "with its romantic valley, its long rows of cottages embedded in the hollows, its shoals of rosy urchins, its myriads of white ducks, its kail yards, and their rows of currant hushes, its cheerful old matrons, with their close-cared caps, and its healthy old earles, with their broad blue bonnets, seated on door-stones sunning themselves." He also alludes beautifully to the sylvan pathway, threading the mazes of wood, "deep, deep, down in the beautiful dell of Colinton." Population of the village in 1851, 120. Population of the parish in 1831, 2,232; in 1861, 2,656. Houses, 465. Assessed property in 1860, £15,714.

This parish is in the presbytery of Edinburgh, and synod of Lothian and Tweeddale. Patrons, the Communicants. Stipend, £207 11s. 3d.; glebe, £40. Unappropriated teinds, £207 11s. 3d. Schoolmaster's salary now is £50, with about £25 or £30 of other emoluments. The parish church was built in 1771, repaired in 1817, and enlarged in 1837, and contains about 660 sittings. There is a Free church in Colinton, whose yearly receipts in 1865 amounted to £142 17s. 8½d. There is an United Presbyterian church at Slateford, erected in 1784, and containing 520 sittings. There are six private schools and one or two friendly societies.

COLIPOLE, a village in the island of Luing, parish of Kilbrandon, Argyshire.

COLL, a Hebridean island, forming part of the parish of Tiree, in Argyshire. It lies seaward of Mull, and extends north-eastward in a line between Tiree and Muck. Its distance from Tiree is two miles, from Mull 7 miles, and from Ardnamurchan Point 9 miles. Its length is about 14 miles, and its average breadth about 2½ miles. Two-thirds of it are hills, rocks, shifting-sands, lakes, and morasses; the other third is pasture, meadow, or corn land. Its surface is diversified with eminences, and covered with a very thin stratum of earth, which in many places is wanting, so that a grey, stony, surface, without herbage of any kind, presents itself to the eye; but in other quarters the sandy soil is covered during spring and summer with an enamelled carpet of brilliant and odorous plants. None of the hills have a greater elevation than about 300 feet above sea-level. The lakes are numerous and shallow; and several of them contain trouts and eels. The coast in general is rocky and bold. A hay called Loch Breacacha runs about a mile into the south side of the island, and affords a tolerable anchorage in summer. At the head of this stands the mansion of the principal landowner, and in its mouth lies the small verdant islet of Soay. Many bloody conflicts were fought in the old times between the Macleans of Coll and the Macneils of Barra for the possession of Coll, terminating eventually in the complete triumph of the former. The old castle of Breacacha, formerly the residence of the chiefs of the Macleans, was probably built before their time by some of the Lords of the Isles. There are on the island vestiges of eight Danish forts and three ancient religious houses. There are also two ancient standing-stones about six feet high. Rabbits are

very numerous in Coll. A great many black cattle are fed on the island, insomuch that about 300 head of them are annually exported. A vast number of pigs also are reared, and are found very profitable. Sheep likewise, of both the black-faced and the Cheviot breeds, have been introduced. About 150 tons of kelp used to be annually made on the island; but about the year 1837 this manufacture totally ceased. In 1843 there belonged to Coll 2 decked vessels, 3 half-decked vessels, and 12 fishing-skiffs. The island has a post-office station of its own name, subordinate to Tobermory. It has also a village called ARINANOOR: which see. An assistant minister, appointed by the parish minister of Tiree, with consent of the proprietor of Coll, exercises a pastoral care over the island. His stipend is £62 2s. The church stands near the middle of the island, was built about the year 1802, and contains 350 sittings. There is also a Free church; and the yearly sum raised in connexion with it in 1865 was £120 0s. 11½d. Population of Coll in 1841, 1,442; in 1861, 781. Houses, 184.

COLLACE, a parish, containing the villages of Collace, Kinrossie, and Saugher, in the Gowrie district of Perthshire. It is bounded on the north east by Forfarshire, and on other sides by the parishes of Cargill, St. Martin's, Kinnaird, and Abernyte. The post-town nearest it is Burrelton or Balbeggie. The parish is somewhat upwards of 2 miles in length, and about the same in breadth; and contains an area of nearly 5 square miles. The northern division is flat, and consists, in some parts, of a light black loam, and in others of sandy and mossy tracts. The southern division is a rapid acclivity, and rises into a section of the Sidlaw hills of considerable elevation. These hills, with the exception of Dunsinnan, are covered with heath; yet, in their northern declivity, they, in some places, are under culture, and in others, afford tolerable pasturage. All the ground in the lowlands of the parish is in a state of the highest cultivation. The principal mansion and the most noted antiquities are on the estate of Dunsinnan. See DUNSINNAN. About 560 acres are under wood. Two quarries of excellent sandstone are worked. The total yearly value of all the raw produce of the parish was estimated in 1837 at £8,314. Assessed property in 1866, £3,394 16s. 2d. Many of the inhabitants are linen weavers. The parish is traversed by the road from Perth to Cupar-Angus, and has easy access to the Woodside station of the Scottish Midland Junction railway. The village of Collace stands near the centre of the parish, 8 miles north-east of Perth. Population of the village in 1851, 191. Population of the parish in 1831, 758; in 1861, 534. Houses, 134.

This parish is in the presbytery of Perth, and synod of Perth and Stirling. Patron, the Crown. Stipend, £155 15s. 1d.; glebe, £15. Unappropriated teinds, £68 11s. 5d. Schoolmaster's salary now is £45, with about £30 10s. of other emoluments. Collace was formerly a rectory. The present church is a fine Gothic structure, erected in 1813, standing on an elevated spot, surrounded with plantation, and containing upwards of 400 sittings. There is a Free church, with an attendance of 410; and the yearly sum raised in connexion with it in 1865 was £88 18s.

COLLEGE LOCH. See TERREGLES.

COLLEGE OF ROSEISLE, a hamlet in the parish of Duffus, Morayshire.

COLLEGE PARISH. See GLASGOW and EMBURGH.

COLLESSIE, a parish, containing a post-office village of its own name, and also the villages of Edenton, Giffordton, Kinloch, Ladybank, and Monk-

ston, in the north-west of Fifeshire. It is bounded by Abdie, Monimail, Cults, Kettle, Falkland, Auchtermuchty, Abernethy, and Newburgh. Its western boundary is near the town of Auchtermuchty. Its greatest length south-eastward is 8 miles; and its greatest breadth is 5 miles. The southern division is remarkably flat, very various in soil, and entirely free from stones, great or small. The northern and north-western divisions slope upwards toward a range of heights which form the boundary, and having a fine southern exposure and a good deep soil upon a whinstone bottom, are in a state of high cultivation, and extremely fertile. The central division is in general light and sandy, and is covered to the extent of several square miles with fir-plantations; and though on account of its timber, far from being valueless, has resisted assiduous attempts to bring it into an improved state. In 1740, Rossie loch, a sheet of water covering upwards of 300 acres, was drained; and its bed is now excellent meadowland and pasturage. The river Eden runs for about 3 miles along the southern boundary of the parish. It abounds with fine trout, but is never here more than 25 feet broad. Both here and farther on its course, it gives name to the strath which forms its basin, and glides noiselessly along through 'the Howe of Fife.' Formerly, in spring and autumn, it used to overflow its banks, and do considerable damage; but about 1787, it was diverted into a straight channel, so as to offer no repetition of injury to the adjacent property. Excellent whinstone is found in the parish, and extensively used in building. Sandstone, though found, is not worked; and marl, both shell and clay, is abundant. The climate is remarkably salubrious. The mansions inhabited by landowners are Rankeilour, Pitlair, Kinloch, Lochie-Head, and Rossie. The total yearly value of raw produce was estimated in 1836 at £24,745. Assessed property in 1866, £10,847 8s. 6d. The road from Auchtermuchty to Cupar traverses the parish eastward; and the Perthward branch of the North British railway traverses it north-west ward, and has stations in it at Ladybank and Collessie. Not far from Collessie, on the west, are the remains of two castles, supposed to have been erected for securing the pass from Newburgh to central Fifeshire. Near the eastern one, which was anciently encompassed by a ditch, have been found coins of Edward I. of England, struck in mints at London, Canterbury, and York, as well as an urn containing human bones and various relics of antiquity. Among the eminent men connected with Collessie, were Sir James Melville, who figured as a courtier in the reign of Mary, and was the proprietor of an estate in this parish,—and Dr. Hugh Blair, who commenced his ministry here, and was inducted to it in September, 1742. The village of Collessie is situated about a mile south of the northern angle of the parish, a little northward of the road from Auchtermuchty to Cupar. It is a confused collection of thatched houses, and a place of small importance. Population of the village in 1851, 210. Population of the parish in 1831, 1,162; in 1861, 1,530. Houses, 343.

This parish is in the presbytery of Cupar and synod of Fife. Patron, Johnstone of Lathrisk. Stipend, £223 4s. 9d.; glebe, £15. Unappropriated tithes, £367 18s. 4d. Schoolmaster's salary, £35 12s. 10½d., with about £50 of other emoluments. Collessie was formerly a vicarage. The parochial church is a very old building, and does not contain more than 400 sittings. There is a Free church, with an attendance of 300; and the yearly sum raised in connexion with it in 1865, was £183 15s. 1d. There are two non-parochial schools.

COLLIN, a village in the parish of Torthorwald, Dumfriesshire. It stands 3½ miles east of Dumfries, on the road thence to Annan. Population in 1861, 318. See TORTHORWALD.

COLLINTON. See COLINTON.

COLLISTON, a fishing village in the parish of Slains, adjacent to Oldcastle, and within a short distance of Newburgh, Aberdeenshire. The fishers take cod and turbot in winter at a distance from the coast, and haddocks and whittings at other times. Great quantities of haddocks are smoked with turf, and small ones dried into speldings. The place is prosperous; and the manners of the inhabitants superior to those of many of the peasantry. Population, 410.

COLLISTON, a hamlet in the parish of St Vigean, 3 miles north-west of Arbroath, Forfarshire. Here is a Free church, whose yearly receipts in 1865 amounted to £16 8s. 9d.—Here also is a small flax mill. The Arbroath and Forfar railway passes adjacently, and has a station here. Colliston house, in the vicinity, is an old mansion belonging to the family of Chaplin, and is said to have been built by Cardinal Beaton for his son-in-law.

COLLOCHBURN, one of the connected villages of Cambuslang, Lanarkshire. It is inhabited principally by weavers and non-agricultural labourers. Population, 166.

COLLUTHIE. See MONZIE.

COLLYLAND. See COALYLAND.

COLMKILL. See SKYE.

COLMONELL, a parish, containing the post-office villages of Colmonell and Barrhill, in the district of Carrick, Ayrshire. It stretches across the county, from Galloway to the frith of Clyde, between Ballantrae on the south, and Barr and Girvan on the north. Its length is about 19½ miles; and its greatest breadth 7. It comprises a series of valleys and hill-screens, watered by the Stinchar and its tributaries; the valleys containing a good deal of fertile holm, and none of the hill-screens rising higher than about 700 feet above the level of the sea. There are several small lakes. One of the hills, called Knockdolian, rising in a conical shape to a considerable height, is a conspicuous landmark to vessels when they enter the frith of Clyde. A great part of the parish is enclosed, and agriculture is now in a highly improved condition. The hills on both sides of the Stinchar consist for the most part of mountain limestone. The Duchess de Coigny is the most extensive landowner; and there are numerous others. If the whole area of the parish be classified into 57 parts, 51 of these are moorland or pasture, 3, or a little more, are subject to the plough, 2 are meadow-land, and nearly 1 is under wood. The total yearly value of raw produce was estimated in 1838 at £16,200. The assessed property in 1860 was £17,308. The principal mansions are Drumlamford, Ballochmorie, Penmore, Dalgerrock, and Knockdolian. Craigniel is a fine ruined fortalice of the 13th century. There are a number of ancient forts and cairns, concerning the erection of which tradition itself does not even hazard a conjecture. The parish is traversed by the several roads from Girvan to Galloway. The village of Colmonell stands on the most westerly of these roads, and on the right bank of the Stinchar, 5 miles north-east of Ballantrae. It was not long ago little else than a row of thatched houses; but it now consists chiefly of recently-built, slated houses, and has a neat, tidy, thriving appearance. It is one of the polling-stations of the county. Fairs are held in it on the first Monday, old style, of February, May, August, and November. Population of

the village in 1861, about 362. Population of the parish in 1831, 2,213; in 1861, 2,588. Houses, 440.

This parish is in the presbytery of Strathrao and synod of Galloway. Patron, the Duchess de Coigny. Stipend, £256 18s. 9d.; glebe, £15. Unappropriated tithes, £260 16s. 11d. Schoolmaster's salary now is £35, with about £20 fees, and 463 other emoluments. The parish church was built in 1850, and contains 500 sittings. There is a chapel of ease at Arnshen, whose minister is appointed by the male communicants. There are two Free church congregations,—the one at Colmonell, and the other at Barrhill; contributions of the former in 1865, £78 11s. 6d.,—of the latter, £103 14s. 9d. A new place of worship for the latter was built in 1854. There is also a United Original Secession church at Colmonell. And there is a Reformed Presbyterian church at Poundland. There are in the parish six non-parochial schools.

COLONSAY, a Hebridean island, in the parish of Jura, Argyshire. It is separated from Oronsay only by a narrow sound which is dry at low water; so that the two islands may be considered as one. They extend lengthwise nearly north and south,—Colonsay on the north and Oronsay on the south; and the southern extremity of the latter lies 4 miles north-west of the northern extremity of Islay, and 7 miles west by north of the south-western extremity of Jura. They are 12 miles long, and from 1 to 3 broad. The surface is unequal, having a considerable number of rugged hills covered with heath; but none of the eminences deserve the name of mountains. They contain about 9,000 acres, of which 3,000 are arable. The soil is light, and along the shore it inclines to sand, producing early and tolerable crops. "The first sight of Colonsay," says Maedonald in his General View of the Hebrides, "is very unpromising, and would not lead a traveller to expect the fertile and pretty extensive valleys which he meets with in traversing the island. Although there are no hills of any consequence, or which exceed an elevation of 800 feet above the level of the sea, yet their tops are bare and weather-beaten, and convey the idea of hopeless barrenness and desolation. These hills are scattered irregularly over the island; and, in fact, it is from the decomposition of their materials that the soil of the valleys is formed, and it is their shelter which affords warmth and fertility to the cultivated grounds. The soil is various. In some parts, especially at the two extremities, and in some bays on the west side, it is light and sandy; then alternates with moorish or mossy ground, clay, gravel, loam, or till; but, as Dean Monroe says, it is 'ane fertile isle' upon the whole, and has of late years by good management made a conspicuous figure among the improved Hebrides. Black tale—the *Mica lamellata*, *Martialis nigra* of Cronsted—is found here, both in large detached flakes, and immersed in indurated clay; also rock-stone formed of glimmer and quartz; and an imperfect granite is not unfrequent. The dip of the rocks is from south-west to north-east, as is very often the case in the adjacent isles." The breed of cattle is excellent. Near the centre of Colonsay is a fresh water loch called Loeh Fad. The only landowner is Maeneil of Colonsay; but there are two mansions, the one in Colonsay and the other in Oronsay. A considerable extent of ground has been planted; and a variety of great general improvements have been made. The remains of several Romish chapels are to be seen in Colonsay, where was also a monastery of canons regular of St. Augustine, founded by the Lord of the Isles, who brought the monks from Holyroodhouse. The remains of the abbey were taken down some years ago in erecting a farm-

house. The priory of this monastery, the walls of which—about 60 feet by 18—are still standing, is in Oronsay; and, next to Icolmkill, is esteemed the finest relic of religious antiquity in the Hebrides. The remains of these ruins are very interesting, but no accounts are remaining of their revenues or establishments. Martin says: "There is an altar in this church, and there has been a modern crucifix on it, in which several precious stones were fixed; the most valuable of these is now in the custody of Mac-Duffie, in Black Raimused village, and it is used as a catholicon for diseases. There are several burying-places here, and the tombstones, for the most part, have a two-handed sword engraven on them. On the south side of the church within, lie the tombs of Mae-Duffie, and of the cadets of his family; there is a ship under sail, and a two-handed sword engraven on the principal tombstone, and this inscription, 'Hic jacet Maleolubus Mae-Duffie de Colonsay: his coat-of-arms and colour-staff is fixed in a stone, through which a hole is made to hold it. There is a cross at the east and west sides of this church, which are now broken; their height was about 12 feet each: there is a large cross on the west side of the church, of an entire stone, very hard; there is a pedestal of three steps, by which they ascend to it; it is 16 feet high, and a foot-and-a-half broad. There is a large crucifix on the west side of this cross; it has an inscription underneath, but not legible, being almost worn off by the injury of time; the other side has a tree engraven on it. About a quarter of a mile on the south side of the church there is a cairn, in which there is a stone cross fixed, called Mae-Duffie's cross, for when any of the heads of this family were to be interred, their corpses were laid on this cross for some moments, in their way toward the church. The natives of Colonsay are accustomed, after their arrival in Oronsay isle, to make a tour sunways about the church, before they enter upon any kind of business." A good harbour, called Portnafeamin, exists in Colonsay. It has a substantial quay, and is one of the best places in the Hebrides for repairing vessels. Near it is a small neat inn; and a good road leads from it to the interior. Extensive fishing is carried on for cod and flat fish. A church for Colonsay and Oronsay was built in 1802, contains 400 sittings, and is served by a permanent assistant minister, who has a stipend of £50. An old tradition, fully credited by some ecclesiastical historians, asserts that Columba, the famous founder of Culdeism, had an establishment in Colonsay before he went to Iona. Population of Colonsay and Oronsay in 1831, 893; in 1861, 581. Houses, 102.

COLONSAY (LITTLE), a small island of the Argyshire Hebrides, lying off the west side of Mull, in the mouth of Loeh-na-Keal, between Ulva and Staffa. It in many places exhibits specimens of basaltic pillars similar to those of Staffa, and is inhabited by one family, who look after a few sheep.

COLQUHALZIE. See TRINITY GASK.

COLSAY, a small island, off the west side of the southerly peninsula of the mainland of Shetland, about 8 miles north-north-west of Sumhurgh-Head. It pastures a good many sheep of an English breed.

COLTFIELD, a hamlet in the parish of Alves, Morayshire.

COLTSTON, a thriving village in the parish of New Monkland, Lanarkshire.

COLVEND, a parish, containing the post-office stations of Southwick and Loehend in Kirkeudbrightshire. It is of an irregular elliptical figure; and forms on the south a sort of peninsula, protruding, from the boundary waters of the Urr and the Southwick, onward into the sea. It is bounded on the

north by the parishes of Kirkgunzeon and New-abbey; on the east by the parish of Kirkbean; on the south-east, south, and south-west, by the sea; and on the west by the estuary and the parish of Urr, and the parish of Kirkgunzeon. Its greatest length, from Thorter-fell on the north to Castle-Hill Old Fort on the south, is nearly 9 miles; and its greatest breadth, from Torrie meeting-house on the east to the confluence of Shennan creek and Urr water on the west, is $7\frac{1}{2}$ miles. The surface is extremely rough and irregular; and is in general wild, hilly, and merely pastoral. Much labour has been employed to overcome the obstacles of heath and rock; and, meeting occasionally with a good substratum of soil, it has been rewarded in the subjugation of valuable patches to the plough. But a constant undulation of rugged hills puts a material limit to improvement. Along the northern verge the heights are considerably elevated, and from summits of the range which terminates in the far-seeing mountain of Criffel, at the northern limit of the conterminous parish of Kirkbean. The sea-coast is extremely bold and rocky, rising up in almost perpendicular precipices, and presenting a variety of grand and magnificent views. The sea or Solway frith, which intervenes between it and Cumberland, is here 9 or 10 miles wide. When the tide ebbs, it leaves dry a large tract of flat sand, from which may be viewed along the coast, high and pointed spires, perforated at the base with natural tunnels; there may also be seen spacious amphitheatres, and entrances to caverns so spacious as to have been hitherto unexplored. Toward the east, however, approaching the mouth of Southwick water, the coast becomes entirely flat. Urr water, so far as it bounds the parish, is an estuary; being 3 furlongs broad where it comes in contact with it, and 2 miles where it leaves it for the sea. Shennan creek rises within the limits of the parish, and, near its source, begins to form the boundary line, for one mile, till its confluence with the Urr. Southwick water, receiving a number of tributaries which flow from the northern heights of the parish, and traversing its central district, forms, for a considerable way, its boundary on the east. Other streams, of small size and local origin, intersect the district from north to south, and flow into the sea. There are, in the western division, 5 lakes, 3 of which are severally about half-a-mile in length. A copper mine and two mill-stone quarries were formerly worked. The chief landowners are McKenzie of Anchensheoch, Hilton of Fairgirth, Stewart of Southwick, and Oswald of Anchernivie. Colvend, according to tradition, was once a continuous forest; and it is still tufted, in some spots, with natural wood, as well as with recent plantation. At Fairgirth, near the centre of the parish, is a copious spring of excellent water, arched over, and called St. Laurence well; and near it are the vestiges of a chapel, surrounded by a burying-ground, now occupied as a ham-yard. At the south-west corner of the parish, on a lofty promontory, are traces of what appears to have been a Danish fort, the fosse of which is still very apparent. Population in 1831, 1,358; in 1861, 1,366. Houses, 274. Assessed property in 1860, £7,930.

Colvend is one of 10 parishes which, though within the shire of Kirkcudbright, are in the presbytery and synod of Dumfries. Patrons, the Crown and the Duke of Buccleuch. Stipend, £234 14s. 6d.; glebe, £20. The tithes were exhausted in 1824. There are 2 parochial schools. The first schoolmaster's salary is now £40, with about £20 fees; and that of the second is also £40, with about £34 additional emoluments. There is also a private

school. The suppressed parish of Southwick is incorporated with Colvend, and sometimes occasions the united parishes to be designated Colvend and Southwick. It formed the eastern division of the district. Though the ruins of its church still exist in a very romantic small strath about a mile north-west of the embouchure of Southwick water, not a tradition remained, even before the close of last century, of any circumstance relating to it as a separate charge. The present parochial church is situated about a mile from the south-west limit of the parish, and was built about 83 years ago. An United Presbyterian church stands at the other extremity of the parish. Colvend was formerly a vicarage; but Southwick church belonged to the Benedictine nunnery of Lincluden.

COLZEAN CASTLE, a noble castellated edifice, the seat of the Marquis of Ailsa, in the parish of Kirkoswald, Ayrshire. It stands on a basaltic cliff projecting into the sea, of about 100 feet in height, and almost perpendicular. The plan and design were by Robert Adam; and such is the style of the architecture, the execution of the work, and the beauty of the stone, that, more than any other building in Ayrshire, it impresses the mind with ideas of elegance, order, and magnificence. At a short distance from the castle stand the stables and farm-houses, planned by the same architect, and executed upon the same scale. The entire buildings, with the bridge of approach to the castle, cover four acres of ground. The castle commands, from the principal apartments, a delightful prospect of the frith of Clyde, with a full view of the rock of Ailsa. On the land side, and immediately below the castle, are the fine gardens belonging to the old house of Colzean, formed in three terraces, and long celebrated for their beauty and productiveness. The remainder of the old gardens has been formed into pleasure-grounds and gravel walks, which are kept with great care. Round the castle, and the adjoining buildings, lies an extensive policy of about 700 acres, interspersed with ancient trees and thriving plantations. Near the castle, and immediately under some of the buildings, are the Coves of Colzean. These coves or caves are six in number. Of the three towards the west, the largest has its entry as low as high water mark; the roof is about 50 feet high, and has the appearance as if two large rocks had fallen together, forming an irregular Gothic arch. It extends inward about 200 feet, and varies in breadth. It communicates with the other two, which are both considerably less, but of the same irregular form. Towards the east are the other three coves, which likewise communicate with each other. They are nearly of the same height and figure with the former. It has been matter of dispute whether these coves are natural or artificial. The largest of the three westmost has a door, or entry, built of freestone, with a window three feet above the door, of the same kind of work; and above both these, there is an apartment, from which stones and other missiles might be hurled on the assailants of the door. This last circumstance seems to indicate that at least this part of the coves has been at one period or another the abode of man.

COMBS (Sr.), a fishing-village in the parish of Lonmay, 6 miles south-east of Fraserburgh, Aberdeenshire. The yearly value of the fisheries here is about £1,600; and the yearly rental paid to the proprietor of the village is about £62. The fishermen go with their herring-boats to Fraserburgh. Population, 305.

COMELY-BANK, a village in the parish of Melrose, Roxburghshire.

COMERAICH. See APPLECROSS.

COMGILL. See REAY.

COMISTON. See COLINTON.

COMLONGAN. See RUTHWELL.

COMMONHEAD, a station on the Monklands railway, $\frac{1}{4}$ a mile north-east of Airdrie.

COMRIE, a parish, containing the post-office village of Comrie, and also the villages of Ross, Dalginross, and St. Fillans, at the head of the Strathearn district of Perthshire. It is bounded by Killin, Weem, Kenmore, Dull, Monzie, Monivaird, Muthil, Callander, and Balquhider. Its length eastward is 13 miles; and its greatest breadth is 10 miles. Three glens converge at the village of Comrie, Strathearn from the west, Glenlednock from the north-west, and Glenartney from the south-west; and these, together with their hill-screens, and some minor lateral glens, constitute nearly all the parish. The boundary line on all sides except the east, and except in the defile at the head of Loch Earn, is a water-shed of the frontier Grampians. The loftiest summits are Benchozie and Benvoirlich, respectively 2,923 and about 3,300 feet above the level of the sea. The principal waters are Loch Earn, the river Earn, and the rivulets Ruchill and Lednock. The scenery of the parish comprises every style, from the delicately beautiful to the rudely savage,—from the softest valley ground to the most rugged mountain. The scenery of the Strathearn district, in particular, displays mixtures of wood and rock, of witchery and romance, of wildness and lusciousness, which almost rival those of the Trossachs and Loch Katrine, and at the same time possess beauties peculiarly their own. A view from Lord Melville's monument, and some other views from the Strathearn vantage-grounds, are among the richest in Scotland. The proportion of arable land, as compared to the waste or pastoral land, is but a trifle more than as one to eight. The soil of the arable land is generally light and gravelly, but in some places deeper and swampy. About 3,150 acres are under wood. Mica slate is the predominant rock; but granite, primitive limestone, clay slate, whinstone, and old red sandstone also occur. One limestone quarry, two slate quarries, and a number of whinstone quarries are worked. Iron ore abounds, and was at one time extensively smelted. The principal landowners are Lord Willoughby D'Esresby, Sir David Dundas, Bart., and four others. The real rental is about £13,000. The principal mansions are Dunira, Ardvoirlich, Aberuchill, Dalhonzie, and Comrie-House. The chief antiquities are remains of three Druidical circles, and the distinct profile of a Roman camp of 16 acres in extent,—the latter situated in the plain of Dalginross, in the vicinity of the village of Comrie, and supposed by some antiquaries to mark the site of the battle fought between Agricola and Galgacus. For other matters in the parish see the articles EARN (LOCH), EARN (THE), LEDNOCK (THE), RUCHILL (THE), GLENLEDNOCK, and GLENARTNEY. Population in 1831, 2,622; in 1861, 2,226. Houses, 394. Assessed property in 1866, £13,401.

This parish is in the presbytery of Auchterarder, and synod of Perth and Stirling. It comprises the old parishes of Comrie and Dundurn, the greater part of Tulliekettle, and portions of Muthil, Monivaird, and Strowan, which were annexed in 1702 by the commission of teinds. At the same time a portion of the parish was annexed, *quoad sacra*, to Balquhider. Patron, the Crown. Stipend, £250 9s. 1d.; glebe, £15 10s. Schoolmaster's salary is now £45, with about £45 fees. The parish church was built in 1804, and contains 1,026 sittings. There is a Free church, whose yearly receipts in 1865 amounted to £281 2s. 0 $\frac{3}{4}$ d. There is in the village

of Comrie an United Presbyterian church, which was about to be rebuilt in 1866.

The VILLAGE OF COMRIE stands on the north bank of the Earn, near the influx of the Lednock, on the road from Crieff to Tyndrum, $6\frac{1}{2}$ miles west of Crieff, and $12\frac{1}{2}$ east of Lochearnhead. It consists principally of a street above two-thirds of a mile in length. It formerly had a large distillery, and still has a woollen manufactory, and carries on a considerable trade in cotton weaving. The parish church is a handsome building, with a lofty conspicuous spire. Lord Melville's monument, about $1\frac{1}{2}$ mile distant, on a site overhanging the Lednock, is a well-proportioned granite obelisk, 72 feet high. The village has an office of the Commercial Bank, an office of the City of Glasgow Bank, a subscription library, an industrial school, and gas-works. Fairs are held on the third Wednesday of March, on the second Wednesday of May and July, on the eighth day of November, and on the first Wednesday of December. Comrie is a burgh of barony under Sir David Dundas; but the baron-bailie resides in Perth, and local duty is done by a number of constables, one of whom perambulates this village, and also the neighbouring villages of Ross and Dalginross. Population of Comrie in 1841, 803; in 1861, 789.

The village of Comrie and its neighbourhood enjoy the unenviable distinction of being more frequently visited by earthquakes, and subterranean noises and convulsions, than any other spot in the British isles. The greatest shock ever experienced here occurred on the evening of October 23d, 1839, about 14 minutes past 10 o'clock. It was felt over a great part of the island, but nowhere so violently as at Comrie and the adjacent districts. A reporter at Monzie—a gentleman's seat a few miles from Comrie—thus describes what was experienced at that place and its neighbourhood:—"At thirteen minutes past ten in the evening, we heard a sound like that of a numerous body of cavalry approaching at full gallop along a grassy sward. When this had continued a few seconds, we felt two or more abrupt concussions, as if a solid mass of earth had struck against a body more ponderous than itself, and rebounded. The rattling of furniture combined with the subterranean thunder, and the reeling of what we had hitherto deemed *terra firma*, communicated at this moment a feeling of the terrific that must have made the stoutest heart quail. The sound passed off as before, far to the east, carrying fear into other districts. In a number of houses the bells rang; one house of three stories, situated in Crieff, has been rent from the chimney-top half-way down the gable; and we have heard that a number of corn-stacks have been thrown down. At Comrie the consternation was such that the people ran out of their houses, and, late as was the hour, many assembled for prayer in the Secession meeting-house, where religious exercises were continued until 3 in the morning. There was a second shock at 20 minutes to 11 o'clock, and a third somewhat later, but both inferior to the first." A great deal of discussion has taken place, in all sorts of periodicals, as to the probable cause of these phenomena; but this as yet is all mere theory—as applicable to earthquakes anywhere else as to earthquakes at Comrie—and much more suitable to be noticed in works on natural science than in any work on topography.

COMYN'S CASTLE. See KIRKMAHOE.

CON (LOCH), or CON, a lake in the parish of Aberfoyle, Perthshire, forming one of the series of lochlets, in the vale of Aberfoyle, which discharge their waters into Loch Ard. It is about 2 miles to the west of Upper Loch Ard. Its length is somewhat more than 2 miles; and its breadth about 1

It is bounded on the south by a precipitous mountain, finely fringed towards the west with aged birches, and on the north with woods of ash and oak. There is a herony on a small island in this lake.

CONA WATER. See GLENCOB.

CONACHAN. See KILDA (St.).

CONAN (THE), a river of Ross-shire. It issues from Loch Croisg, a lake 5 miles in length, at the western extremity of the parish of Contin, about 15 miles east-north-east of the head of Loch Torridon. It flows eastwards from its source through Strathbrann; and after receiving the Gradie from Loch Fannich, flows into Loch Luichart or Lichart. Issuing thence through a deep gorge, interesting alike to the geologist and the lover of the picturesque, it is precipitated over a ledge of rock, and flows in a south-east direction, and receives the Meig or Meag flowing from Loch Benachan north-eastwards through Strathcoran. Five miles below this it receives, on the north side, the Garve, which rises on the confines of Lochcross, and flows east-south-east. Two and a half miles east of its junction with the Garve, while sweeping in a semicircular form round the finely-wooded grounds of Castle-Brachan, it receives the Orrin from the south-west; and then turning north, at Conan house, it flows into the western extremity of the frith of Cromarty. Its length of course is about 35 miles. Its breadth at its mouth is about 50 yards; but it is comparatively shallow here, although throughout much of its course it is a deep dark-coloured stream. It is a fine trouting-stream, and there are valuable salmon-fisheries upon it. All the Strathbrann lakes—which are very numerous—are celebrated for the sport which they afford to anglers. In the Conan is found the river-mussel, the *Mya margaritifera* of Linnæus; and fine pearls have occasionally been obtained from them.

CONAN-BRIDGE, a village with a post-office in the Ross-shire district of the parish of Urquhart and Logie-Wester. It stands on the right bank of the Conan, $2\frac{1}{2}$ miles south-south-west of Dingwall, on the road thence to Beauly. It takes its name from a stone bridge of five arches, with a water-way of 265 feet, which was here erected over the Conan by the Parliamentary Commissioners in 1809, at an expense of £6,854. The village has a station on the Highland railway, and a good inn; and is prosperous. Population in 1861, 501.

CONANSIDE. See URQUHART and LOGIE-WESTER.

CONDORAT, a village in the parish of Cumbernauld, Dumbartonshire. It stands on the road from Glasgow to Stirling, $2\frac{3}{4}$ miles south-west of the village of Cumbernauld. It is inhabited principally by cotton-weavers, and has a slightly endowed school. Population, 559.

CONINGSBURGH, an ancient parish, now annexed to Dunrossness, in the southern part of the mainland of Shetland. The hamlet of Coningsburgh stands on the east coast, 9 miles south-south-west of Lerrick. The Free church of Coningsburgh had in 1853 a total yearly receipt of £94 3s. 11d.

CONNAGE, or FISHERTON, a fishing-village in the parish of Petty, Inverness-shire. The fishermen dispose of their produce at Inverness. The timber of woods cut down in the eastern parts of the parish is shipped at the beach here.

CONNAL FERRY, a strait in Loch Etive, 3 miles east of Dunstaffnage, Argyleshire. A ridge of rugged and uneven rocks here runs across two-thirds of the channel, and occasions, at certain periods of the ebbing or flowing tide, such a rapid current that no vessel even with a fresh breeze can

stem it. In the beginning of the flood, the tide runs up with great rapidity, and Loch Etive being at once swelled with the spring-tide from the ocean, and the water of Loch Awe, as soon as the former begins to ebb, discharges itself with a violence and noise unequalled by the loudest cataract, and which may be heard at the distance of many miles. This celebrated fall of salt water seems to be alluded to by Ossian:—

“These are not thy mountains, O Nathos!
Nor is that the roar of thy climbing waves.”

The ferry of Connal, though in appearance very formidable, is safe, owing to the skill of the boatmen.

CONNEL (Loch). See KIRKCOLM.

CONNICAVAL. See EDENKELLIE.

CONON-BRIDGE. See CONAN-BRIDGE.

CONTENT. See QUIVOX (St.) and WALLACETOWN.

CONTIN, a parish in the centre and south-east of Ross-shire. The post-towns nearest it are Dingwall and Strathpeffer. The parish is bounded on the north by Lochbroom; on the east by Urray and Fodderty; on the south by Kilmorack and Urray; and on the west by Gairloch and Lochearron. It measures, along the parliamentary road which passes through it, 33 miles; and it is supposed to be little less in breadth; so that, as to extent of area, it is one of the largest parishes in Scotland. It is, in general, mountainous and barren; yet imbosoms numerous glens and valleys, which are well-watered, and, though of light and shallow soil, are in good cultivation. The principal streams are the Conan, the Meig, and the Rasay, which rise near the western or north-western verge of the parish, and all traverse it eastward, to make a junction, and fall, under the name of the Conan, into Cromarty frith, a few miles from the town of Dingwall: see CONAN. Perennial springs are abundant; and several are strongly impregnated with iron. Lakes are numerous,—most of them mossy in their waters, but all abounding with fish. Loch Fannich is 12 miles long, and 1 broad; Loch Croisg, 5 miles long, and 1 broad; Loch Luichart, 6 miles long, and $\frac{1}{2}$ mile broad. Loch Achilty is about 2 miles in circumference, pure in its waters, very deep, and discharging its surplus contents by a subterranean canal into the river Rasay, about a mile to the north-east. In this lake is an artificial island, accessible by a drawbridge, and formerly the site of a house and garden, which were used as a retreat from danger. Loch Kinellan has also an artificial or floating island, buoyant on a timber base, where formerly the family of Seaforth had a fortified residence; and it contrasts the green cultivated field on one of its sides very picturesquely with the wild upland scenery on the other. At one period, natural plantation appears to have covered the greater part of this parish; and even yet it exists in considerable patches. All the straths are subject to wasteful inundations; and the climate, though generally mild and dry, is insalubrious. On the eastern bank of Loch Achilty is a Druidical temple, or circle of stones; and a quarter of a mile to the east of Loch Kinellan is a place called *Blar' na'n Ceann*, or ‘the field of heads,’ where there was a fierce conflict between the Mackenzies of Seaforth and the Macdonnells of Glengarry,—the Macdonnells having made an inroad to revenge some old quarrel, and being routed and pursued with great slaughter by the Mackenzies, and eventually driven headlong into the water and drowned at the confluence of the Conan and the Rasay. On the farm of Kinellan is an echo which repeats distinctly an entire sentence, and is believed to be unequalled,

except by an echo in Wales, and another in Staffa. At Conl, in the eastern section of the parish, is an elegant mansion, the seat of Sir George Mackenzie, Bart., built in 1821, and surrounded by a beautiful well-wooded demense. At Contin inn, on the Rasay, fairs are held on 13th January, old style; on 23d May, old style; and on 23d August, if a Wednesday, if not, on the Wednesday after. And here there is a ferry across the river; and about 3 miles to the west, at a place called Little Seatwell, is a ferry across the Conan.—Population, in 1861, 1,509. Houses, 317. Assessed property in 1843, £6,405 19s. 7d.; in 1860, £10,014.

Contin, formerly a vicarage, is in the presbytery of Dingwall, and synod of Ross. Patron, the Crown. Stipend, £265 6s. 7d.; glebe, £16. Schoolmaster's salary, £50, with about £10 fees. The parochial church, situated about 2 miles from the extreme verge of the parish, is an antiquated, comfortless structure, repeatedly repaired, but continuing to be inconvenient. Two parliamentary churches are in the parish,—one at Ceanloch-Luichart, erected in 1825,—and the other in Strathconan. There is a Free church for Contin and Fodderty, with an attendance of 700; and its yearly receipts in 1865 amounted to £131 4s. 11½d. There is also a Free church preaching station at Strathconan, whose yearly receipts in 1865 amounted to £9 2s. 6d. There are three non-parochial schools.

CONVAL. See BENMORE.

CONVETH. See KILTARLITY.

COOKNEY, a locality 4½ miles north of Stonehaven, where is a chapel-of-ease to the parish church of Fetteresso, Kincardineshire. The chapel is of modern erection, and contains about 700 sittings.

COOK'S CAIRN. See MORTLACH.

COPAY, one of the Hebrides, in the shire of Inverness. It constitutes part of the parish of Harris, and is situated in the sound. It is uninhabited.

COPENSAY, or COPINSHAY, one of the Orkneys, and part of the parish of Deerness. This island is about a mile long, and half-a-mile broad. In the summer months, its lofty rocks are covered with wild fowl of various kinds, which, with their eggs and feathers, constitute the principal article of its traffic.

COPPERSMITH. See COCKBURNSPATH.

COQUET (THE), a river, whose sources, course, and embouchure, are all in England, but which forms, for about a mile, the south-east boundary line of the parish of Oxnam in Roxburghshire. It rises a little to the south of this parish, in the heights which divide Scotland from England, and afterwards glides along the margin of its southern wing; but it then bends away eastward into Northumberland, and after traversing that county and receiving numerous tributaries, falls into the sea at Alnwick.

CORBELLY. See DUMFRIES and TROQUEER.

CORBIE HALL. See CARSTAIRS.

CORBIE-HILL, a hamlet at the west end of the parish of Balmerino, Fifeshire.

CORBIE-POT, a romantic glen, notable for its botanical specimens, on the boundary between the estates of Maryculter and Kingcausie, parish of Maryculter, Kincardineshire.

CORCHINNAN BURN. See BOGIE (THE).

CORE (THE), the remotest head-stream of the Tweed, in the parish of Tweedsmuir, Peebles-shire. It rises near one of the loftiest watersheds of the Hartfell mountains, on the property of Earlsbaugh, and runs 3½ miles north-westward to a confluence with the smaller burn, which has the reputation of being the true Tweed, about a mile below Tweedshaws.

COREEN HILLS, a range of high hills along the northern boundary of the district of Alford, Aberdeenshire. Its highest ground, in what are called the Points of Coreen, on the boundary of the parish of Tullynessle, has an elevation of about 1,350 feet above sea-level.

COREHOUSE. See ÚLYDE (THE).

COREMILLIGAN. See TYNNON.

CORGARF, a wild mountainous district around the sources and head-streams of the Don, Aberdeenshire. It measures 8 or 9 miles in length, and forms the upper part of the parish of Strathdon. A missionary minister on the Royal Bounty, with a salary of £60 and some other advantages, has long been stationed here. The church was built in 1836, and contains 350 sittings. Here also is a small Roman Catholic chapel, served by the same clergyman who has charge of the chapel at Glengairn. Corgarf castle, supposed to have been originally built by one of the Earls of Mar, is a military station on the road from Edinburgh to Fort George; 2½ miles distant from Castleton of Braemar. The present erection is a small oblong building of four stories, with wings, and surrounded by a wall. It was purchased by Government from Forbes of Skellater, in 1746. The old castle of Corgarf, which stood on the same site, was burnt by Sir Adam Gordon in 1551, when 27 persons, among whom were the wife and children of Alexander Forbes, perished in the flames. "Subsequent to this tragical affair," says Picken's *Traditionary Stories of Old Families*, "a meeting for reconciliation took place between a select number of the heads of the two houses, in the hall of an old castle in these parts, probably Drimminor. After much argument, the difference being at length made up, and a reconciliation effected, both parties sat down to a feast in the hall, provided by the Forbes's chief. The eating was ended, and the parties were at their drink—the clansmen being of equal numbers, and so mixed, as had been arranged, that every Forbes had a Gordon seated at his right hand. 'Now,' said Gordon of Huntly to his neighbour chief, 'as this business has been so satisfactorily settled, tell me if it had not been so, what it was your intention to have done.' 'There would have been bloody work—bloody work,' said Lord Forbes—'and we would have had the best of it. I will tell you: see, we are mixed one and one, Forbeses and Gordons. I had only to give a sign by the stroking down of my beard, thus, and every Forbes was to have drawn the skein from under his left arm, and stabbed to the heart his right hand man;' and as he spoke, he suited the sign to the word, and stroked down his flowing beard. In a moment a score of skeins were out, and flashing in the light of the pine-torches held behind the guests. In another moment they were buried in as many hearts; for the Forbeses, whose eyes constantly watched their chief, mistaking this involuntary motion in the telling of his story, for the agreed sign of death, struck their weapons into the bodies of the unsuspecting Gordons. The chiefs looked at each other in silent consternation. At length Forbes said, 'This is a sad tragedy we little expected—but what is done cannot be undone, and the blood that now flows on the floor of Drimminor will just help to sloaken the auld fire of Corgarf!'"

CORIA DAMNIORUM. See CASTLE-CARY.

CORKINDALE-LAW. See NEILSTON.

CORNCAIRN, a village in the north end of the parish of Ordiqhill, 8 miles south-west of Banff, and 12 north-east of Keith, Banffshire. It is a burgh of barony. Six markets in the year, commonly called the Cornhill markets, are held in its vicinity.

CORNCOCKLE MOOR. See **LOCHMABEN.**

CORNER HOUSE, a post-office station subordinate to Stranraer, Wigtonshire.

CORNHILL, a post-office station subordinate to Keith, Banffshire. See **CORNCALRN.**

CORPACH, a village with a post-office, in the parish of Kilmalie, Inverness-shire; 2½ miles north of Fort-William; at the southern extremity of the Caledonian canal. The parish church is situated here; and there is a school supported by the General Assembly. See **CALEDONIAN CANAL.**

CORRABHAIN. See **JURA.**

CORRA LINN. See **CLYDE (THE).**

CORRAH. See **KIRKGUNZEON.**

CORRAN-ARDGOUR, a ferry across the lower part of Loch-Eil, between the district of Ardgour in Argyleshire and the district of Lochaber in Inverness-shire. Here is a post-office station, subordinate to Bunawe. Loch-Eil at this place has a strong current.

CORRENIE FOREST, an undivided district, occupied by free settlers, in the parish of Cluny, Aberdeenshire.

CORRICHIE. See **FARE and KINTORE.**

CORRIE, a village on the east coast of the island of Arran, 4½ miles north of Brodiek. Here is a small harbour with a quay, accessible to vessels only at high water. In the vicinity limestone and sandstone are extensively quarried; and the latter is exported in large quantities to various parts of the Clyde and to Ireland. Population of the village 222.

CORRIE, an ancient parish in Dumfries-shire, now united to **HUTTON:** which see.

CORRIEHABBIE. See **MORTLACH.**

CORRIEMONY. See **URQUHART and GLENMORISTON.**

CORRIEMUCKLOCK. See **CRIEFF.**

CORRIEMULZIE. See **BRAEMAR.**

CORRIEVARLICH. See **ALMOND (THE).**

CORRIEVREKIN, a narrow strait and a dangerous whirlpool between the island of Searba and the north point of Jura, Argyleshire. The whirlpool is occasioned partly by the rapidity of the tidal current through the narrow, irregular strait, and partly by the resistance to it of a pyramidal rock which shoots up to within 15 fathoms of the surface from a depth of about 100 fathoms. The vicinity of this rock is carefully shunned by small craft; but it is only during high and strong tides, or violent gales, that it is at all formidable to large vessels. The name, we are informed by Campbell in his notes to 'Gertrude of Wyoming,' signifies 'the whirlpool of the Prince of Denmark.' And there is a tradition that a Danish prince once undertook for a wager to cast anchor in it. He is said to have used woollen instead of hempen ropes for greater strength, but perished in the attempt. "On the shores of Argyleshire," the poet adds, "I have often listened with great delight to the sound of this vortex, at the distance of many leagues. When the weather is calm, and the adjacent sea scarcely heard on these picturesque shores, its sound—which is like the sound of innumerable chariots—creates a magnificent and fine effect." The lines in Campbell's noble poem in which allusion is made to this whirlpool are as follows:

"But who is he, that yet a dearer land
Remembers, over hills and far away?
Green Albyn! What though he no more survey
Thy ships at anchor on the quiet shore;
Thy pellocks rolling from the mountain-bay;
Thy lone sepulchral cairn upon the moor;
And distant isles that hear the loud Corbrechtan roar!"

The superstition of the islanders has tenanted the

shelves and eddies of this whirlpool with all the fabulous monsters and demons of the ocean. Among these, according to a universal tradition, the mermaid is the most remarkable; and there is a Gaelic legend—versified by Leyden, in the 'Border Minstrelsy'—which relates how Maephail of Colousay, while passing the Corrievrekin, was carried off by one of these sea-maidens, and detained for several years in a pleasant kind of captivity, in a grotto beneath the sea. Therefore, mariners,

"As you pass through Jura's sound
Bend your course by Scarba's shore,
Shun, O shun! the gulf profound
Where Corrievrekin's surges roar."

So sings the poet; couching his advice, however, in somewhat ambiguous language, for the sea generally exhibits a state of greater turbulence on the Searba than on the Jura side of the gulf.

CORRISKIN (LOCH), CORRISK, or **CORRISK,** a deep, dark, lonely sheet of water imbosomed in the Cuchullin mountains, on the western coast of Skye, discharging itself by a rapid stream into Loch Selavig. It is about 2 miles in length, and half-a-mile broad, and is said to be of profound depth. Sir Walter Scott has described it in 'The Lord of the Isles;' and the accomplished artist, Mr. J. W. Turner, whose pencil was employed in delineating the scene for the last edition of Sir Walter's works, declares, "No words could have given a truer picture of this, one of the wildest of Nature's landscapes."

A while their route they silent made.

As men who stalk for mountain-deer,

Till the good Bruce to Ronald said,

"St. Mary! what a scene is here.

I've traversed many a mountain-strand,

Aboard and in my native land,

And it has been my lot to tread

Where safety more than pleasure led;

Thus, many a waste I've wander'd o'er,

Clombè many a crag, cross'd many a moor,

But, by my halidome!

A scene so rude, so wild as this,

Yet so sublime in barrenness,

N'er did my wandering footsteps press,

Where'er I happ'd to roam."

No marvel thus the monarch spake;

For rarely human eye has known

A scene so stern as that dread lake,

With its dark ledge of barren stone.

Seems that primeval earthquake's sway

Hath rent a strange and shatter'd way

Through the rude bosom of the hill,

And that each naked precipice,

Sable ravine, and dark abyss,

Tells of the outrage still.

The wildest glen, but this, can show

Some touch of Nature's genial glow;

On high Benmore green mosses grow,

And heath-bells bud in deep Glenroc,

And copse on Cruachan-Ben;

But here,—above, around, below,

On mountain or in glen,

Nor tree, nor shrub, nor plant, nor flower,

Nor aught of vegetative power,

The weary eye may ken.

For all is rocks at random thrown,—

Black waves, bare crags, and banks of stone

As if were here denied

The summer sun, the spring's sweet dew,

That clothe with many a varied hue

The bleakest mountain-side.

And wilder, forward as they wound,

Were the proud cliffs and lake profound.

Huge terraces of granite black

Afforded rude and cumber'd track;

For from the mountain hoar,

Hurl'd headlong in some night of fear,

When yell'd the wolf and fled the deer,

Green crags had toppled o'er;

And some, chance-poised and balanced, lay,

So that a stripling arm might sway

A mass no host could raise,

In nature's rage at random thrown,

Yet trembling like the Druid's stone

On its precarious base

The evening mists, with ceaseless change,
 Now clothed the mountain's lofty range,
 Now left their foreheads bare,
 And round the skirts their mantle fur'd,
 Or on the sable waters curl'd,
 Or on the eddying breezes whirl'd,
 Dispersed in middle air,
 And oft, condensed, at once they lower,
 When, brief and fierce, the mountain-shower
 Pours like a torrent down,
 And when return the sun's glad beams,
 Whiten'd with foam a thousand streams
 Leap from the mountain's crown.

"This lake," said Bruce, "whose barriers drear
 Are precipices sharp and sheer,
 Yielding no track for goat or deer,
 Save the black shelves we tread,
 How tern you its dark waves? and how
 You northern mountain's pathless brow,
 And yonder peak of dread,
 That to the evening sun uplifts
 The grisly gulfs and slaty rifts,
 Which seam its sliver'd head?"—
 "Corriskin call the dark lake's name;
 Coolin the ridge, as bards proclaim,
 From old Cuchillin, chief of fame."

Macculloch, in his "Western Islands," has described the lake with great beauty:—"Passing the river which runs foaming over a sheet of smooth rock into the sea, a long valley suddenly opens on the view, enclosing the beautiful lake Corriskin, on the black surface of which a few islands covered with grass appear with the vividness of emeralds amid the total absence of vegetable green. On every side the bare rocky acclivities of the mountains rise round, their serrated edges darkly projected on the blue sky or entangled in the clouds which so often hover over this region of silence and repose. At all seasons and at all times of the day darkness seems to rest on its further extremity: a gloom in which the eye, discerning but obscurely the forms of objects, pictures to itself imaginary recesses and a distance still unterminated. A remarkable contrast is here produced in viewing alternately the two extremities from any central point. The entrance, less obstructed by mountains, presents the effect of morning rising to illuminate the depths of the opposite extremity, which appears as if perpetually involved in the shadows of night. Silence and solitude seem for ever to reign amid the fearful stillness and the absolute vacuity around. At every moment the spectator is inclined to hush his footsteps and suspend his breath, to listen for some sound which may recall the idea of life or of motion. If the fall of a cascade is by chance heard, it but serves by its faint and interrupted noise to remind him of its distance, and of the magnitude of the mountain boundary; which, though comprehended by a glance of the eye, and as if within reach of the hand, is everywhere too remote to betray the course of the torrent. The effect of simplicity and proportion in diminishing the magnitude of objects is here distinctly felt, as it is in the greater efforts of architecture: those who have seen the interior of York Cathedral will understand the allusion. The length of the valley is nearly four miles, and its breadth about one; while the mountains that enclose it rise with an acclivity so great, that the spectator situated at their base views all their summits around him; casting his eye over the continuous plane of their sides, as they extend upwards in solid beds of rock for nearly a mile, and present a barrier over which there is no egress. Yet on entering it he will probably imagine it a mile in length, and fancy the lake, which occupies nearly the whole, reduced to the dimension of a few hundred yards. It is not till he has advanced for a mile or more, and finds the boundary still retiring before him unchanged, and his distant companions becoming invisible, that

he discovers his error, and the whole force and effect of the scene becomes impressed on his mind. He who would paint Corriskin must combine with the powers of the landscape-painter those of the poet: it is to the imagination, not to the eye, that his efforts must be directed."

CORYARRICK, a wild and lofty ridge of mountains on the south-east flank of the great glen of Scotland, forming a vast natural barrier between the central part of that glen and the upper part of Strathspey. A military road was constructed over it from Fort Augustus to Garvimore, but has been allowed to fall into disrepair, and is now used only by pedestrians and drovers. The ascent on the south-east side is by seventeen traverses, like the wormings of a corkscrew, and passes over several brook-cuts and gullies by means of bridges; and the descent on the other side is not much dissimilar. The tortuosities of the road, rendered absolutely necessary by the nature of the ground, greatly increase the real distance, which from base to base does not exceed 5 miles. Skrine, speaking of this pass, says: "Our road soon growing inexpressibly arduous, wound round the rocky hills overhanging Fort-Augustus and Loch-Ness; and elevated us to a height truly terrific,—springing sometimes from point to point over alpine bridges,—and at others pursuing narrow ridges of rock, frightfully impending over tremendous precipices. With a perpetual succession of these laborious inequalities, and their corresponding scenery, we passed the mountain Corryuragan, crossed the two sources of the Tarff, and began to ascend the mightier base of Corryarrick. The wildest and most dreary solitude of Siberia cannot display a scene more desolate than that which extended round us, as far as the eye could reach on either side; no vestiges of living creatures or their habitations enlivening the desert, and nothing appearing but disjointed rocks, broken torrents, and the tops of more distant mountains. The road alone bore the form of being a human work; and as it began to ascend the furrowed side of Corryarrick, high stakes placed at equal distances marked its progress, to prevent the inevitable destruction which must await those hardy travellers, who venturing over this pass in times of snow, might deviate from the regular track. The unusual display of their high points, bleached with perpetual storms, sometimes extending in a long line of ascent athwart the mountain, and at others rising in a zigzag direction over terraces almost parallel, could not fail to astonish and confound a stranger, with the height before him to be surmounted. The road grew more laborious, and the precipice more tremendous, as we approached the summit, broad patches of snow filling the clefts and hollows around us on each side. The weather also, which had gradually declined from its morning splendour, assumed now a tempestuous aspect; the rain beat furiously against us, with terrific gusts of wind; and a thick fog, still more alarming, whirling round the summit of the mountain, frequently enveloped us in a temporary obscurity. Drenched with the wet, as we did not dare to continue in our carriages, at length we reached a circular spot, traced out on the highest point of the mountain, and immediately began to descend, by a dangerous and rapid zigzag, from terrace to terrace, with incessant turnings, so short and so narrow as to require the utmost circumspection in compassing them. It may easily be imagined how wonderfully precipitate this singular descent is, when I add, that in the progress of little more than two painful miles, we unravelled the whole labyrinth of that eminence, which it cost us so much labour, and

nine miles of tedious ascent to attain. At the bottom, however, we rested a while from our labours; and the fog in some measure dispersing, though the rain was unahated, we were able to survey the country into which we were translated as it were from the clouds. Behind us the great mountain from which we had escaped rose like a perpendicular bulwark, on which we were unable to trace the angular course by which we had worked our passage; and the only track we could distinguish on its front was the chain of cataracts, tumbling in successive falls, which forms the source of the great river Spey. Other mountains, capped with eternal snows, and inferior only in height to that which we had passed, frowned over us on each side; while a long channel appeared worked by the impetuous stream between their bases, through a hollow valley, over which the road hung suspended on a narrow shelf. A broader glen succeeded to this, and the torrent became a rivulet, which after a variety of stages increasing in magnitude, swelled at length into a river, ravaging the little plain it formed, and fretting with furious impetuosity over the numberless asperities with which the feet of the precipices were strewed. With such violent convulsions was the birth of this mighty river attended amidst its native mountains, whose impetuous stream, emerging from the chaos it has created, desolates a vast tract of country in its descent to the sea, which it falls into near Fochabers, where we first crossed it. Relieved from many of the horrors which attended the former part of our course, we pursued the declivity on a road rendered inexpressibly rough by the broken fragments of rock with which it was strewed, till crossing the Spey, we arrived at the solitary inn of Garvimore, after traversing a desert of 18 long miles, which it cost us eight hours to surmount. During this whole course our eyes had not encountered a single human being, or even the vestiges of an animal; those quadrupeds which are the natural inhabitants of mountains shunning these barren deserts, where there is nothing to sustain them; and no birds, except the eagle, being hardy enough to frequent their cliffs."

When General Cope marched north from Stirling to meet the advancing forces of Prince Charles, in the latter end of August, 1745, he hesitated to attempt the passage of Corryarrick in the face of the Highland forces, then 3,000 strong, whom he understood to be in possession of the summit. As the mountain was peculiarly fitted for the operations of Highlanders, it is evident that, in attempting to cross Corryarrick, Cope, if attacked, would labour under every disadvantage; for while his men could not leave the road in pursuit of their assailants, the latter could keep a running fire from numerous positions, from which it would be impossible to dislodge them. Cope was warned by President Forbes of the dangers he would run; and his fears were not a little increased by a report that, on arriving at the bridge of Snugborough, a dangerous pass on the north side of the mountain, he was to be opposed by a body of Highlanders; and that, while this party kept him employed, he was to be attacked in his rear by another body, which was to be sent round the west end of the hill. Alarmed at the intelligence he had received,—distracted by a variety of reports as to the strength of the enemy, and disgusted by the apathy of those on whose support he had relied,—Cope called a council of war at Dalwhinnie, on the morning of the 27th of August, to which he summoned every field-officer, and the commanders of the different corps of his little army. He would have acted more judiciously had he convened a council at Dalnacardoch, when he first re-

ceived intelligence of the advance of the Highlanders. At this meeting, Cope laid before his officers the orders he had received from the Secretary of State to march to the north, which were too positive to be departed from without the most urgent necessity. After some deliberation, the council were unanimously of opinion, that the original design of the general of marching to Fort-Augustus over Corryarrick, was, under existing circumstances, quite impracticable. Having abandoned the design of crossing Corryarrick, the council next considered what other course should be adopted. The wisest course certainly, if practicable, would have been to have marched back to Stirling, and to have guarded the passes of the Forth; but against this proposal it was urged that the rebels, by marching down the side of Loch Rannoch, would be able to reach Stirling before the King's troops, and that, by breaking down the bridges, they would intercept them in their retreat. As it was impossible to remain at Dalwhinnie, no other course therefore remained, in the opinion of the council, but to march to Inverness. This opinion, which was reduced to writing, and signed by all the members of council, was delivered to Sir John Cope, who, acquiescing in its propriety, immediately issued an order to march.

CORRYAUR. See MUTHILL.

CORS-, or Cross-, a prefix in Scottish topographical names, alluding in some instances to the Christian cross, as in Corstorphine, 'the cross of Torphine,' and in others to local intersecting lines, as in Crossgates, 'the intersecting roads.'

CORSAIG. See SADDLE and SKIPPNESS.

CORSANCON. See CUMNOCK (New).

CORSE, a hill at the meeting-point of the three parishes of Coull, Lumphanan, and Leochel, Aberdeenshire. Near its summit are two or three long treuches, together with many small tumuli; and on its south-eastern slope, in Lumphanan, is a long earthen rampart, with a ditch, confronting a similar rampart on the brow of the hill Milnad. Tradition ascribes these antiquities to the closing scenes of the career of Macbeth. The old castle of Corse in Leochel was built in 1581, and is now a ruin.

CORSE-DARDAR. See BIRSE.

CORSEMILL, or CROSSMILL, a village in the Abbey parish of Paisley, 3 miles south-east of the town of Paisley, Renfrewshire. Most of its inhabitants are employed in the bleachfields and printfields on the banks of the Levern. Population, 265.

CORSEWALL POINT, a headland on the north-west coast of Wigtonshire, near the entrance of Loch-Ryan; in N. lat. 55° 1', and W. long. 5° 10'. A lighthouse was erected upon this point in 1817. It shows a bright and red light alternately every two minutes, which is seen in clear weather at the distance of 15 miles. The building is 92 feet in height; and the lantern is elevated 112 feet above high-water.

CORSKIE. See GARTLY.

CORSOCK, a small village, with a post-office, on the east margin of the parish of Parton, Kirkcubrightshire. It stands on the Water of Urr, 10 miles north of Castle Douglas. A place of worship, now a quoad sacra parish church, was erected here by subscription in 1839. The Castle of Corsock, now a ruin, was the residence of Robert Nelson of Corsock, who acted a prominent part among the persecuted Covenanters.

CORSTORPHINE, a parish, containing a post office village of the same name, and also the small villages of Gogar, Stanhope-Mills, and Four-Mile-Hill, in the north-west of Edinburghshire. It is bounded by Cramond, St. Cuthberts', Colinton, Currie, Ratho, and Kirkliston. Its length westward

is about 4 miles; and its greatest breadth is about 2½ miles. The surface is in general level, and, over a great part of its extent, spreads into a smooth plain. The grounds of greatest elevation are those which go by the name of Corstorphine-hill,—an appellation they hardly could have gained unless from being in a manner insulated in the midst of rich valleys. This hill, or rather ridge, on the south and west sides, rises from the plain to the height of 474 feet above sea-level, by an easy ascent; on the east side, it is more precipitate, and runs north, in an indented crusted form, into the borders of Cramond. There are no metals or coals mined in this parish; but there are very fine quarries of freestone, which was formerly much in request for buildings in Edinburgh. There are also, on the lands of Clermiston, inexhaustible quarries of trap or blue whinstone. The parish is watered by the Gogar, and by the water of Leith. There is a sulphureous mineral spring near Corstorphine, which once conferred on that village considerable celebrity. When it was in repute, about the middle of last century, the village was a place of fashionable resort for the citizens of Edinburgh, and had its balls and other amusements common to watering-places. The place was then famous also for a peculiar delicacy called 'Corstorphine cream.' The mystery of preparing this is thus described in the Old Statistical Account:—"They put the milk, when fresh drawn, into a barrel, or wooden vessel, which is submitted to a certain degree of heat, generally by immersion in warm water; this accelerates the stage of fermentation. The serous is separated from the other parts of the milk, the oleaginous and coagulable; the serum is drawn off by a hole in the lower part of the vessel; what remains is put into the plungeturn, and after being agitated for some time, is sent to market as Corstorphine cream." There is growing near the village a sycamore tree, one of the largest in Scotland, which, in the end of May and beginning of June, exhibits an appearance of the most striking beauty. That side which is exposed to the sun is of the richest vivid yellow hue; hence this tree is easily distinguished at a great distance. Ships which have been taken from it have thriven very well in other parts of the country. A considerable extent of land around the village is rich garden ground, and produces great quantities of strawberries, tree-fruit, and pot-vegetables for the Edinburgh market. Much of the parish also is adorned with fine residences; and a large aggregate of it, including the greater part of Corstorphine hill, is covered with wood. There are fourteen landowners. The real rental is between £13,000 and £14,000. The middle road from Edinburgh to Glasgow, and the Edinburgh and Glasgow railway traverse the parish; and the latter has stations for Corstorphine and Gogar. The village of Corstorphine is situated on the Edinburgh and Glasgow road, 3½ miles west of Edinburgh. It stands at the commencement of the slow ascent of Corstorphine hill, slightly above a great expanse of rich alluvial country; and commands a brilliant view across that expanse to the Craig-Lockhart and Pentland Hills. It has a sheltered, pleasant, prosperous appearance, and requires nothing but draining to make it one of the most agreeable summer retreats near the metropolis. It for some time lost its attractions for visitors, and was going into decay; but in 1832 it began to renew its youth by the erection of a number of neat cottages; and since then it has continued to improve, so as once more to get into fame among the summer-retirers of Edinburgh; and now it enjoys communication with that city many times a-day by the railway trains and by an omnibus of its own.

Population in 1841, 372; in 1861, 688. Population of the parish in 1831, 1,461; in 1861, 1,579. Houses, 289. Assessed property in 1843, £9,954 0s. 3d.; in 1860, £13,118.

This parish is in the synod of Lothian and Tweeddale, and presbytery of Edinburgh. It includes part of the ancient parish of Gogar, and also a part of St. Cathbert's united to it in 1633. Patron, Sir W. H. D. Cunyngham, Bart. Stipend, about £200; glebe, £30. The church is an ancient building, of Gothic architecture, in the form of a Jerusalem cross. The present church was founded near the parish-church of this place, by Sir John Forester of Corstorphine, Lord-high-chamberlain of Scotland, in 1429, and dedicated to St. John the Baptist, for a provost, 5 prebendaries, and 2 singing-boys. It was a collegiate church, to which belonged those of Corstorphine, Dalmahoy, Hatton, Cramond, Colliuton, &c. The teinds of Ratho, half of the teinds of Ad-derton, and of Upper-Gogar, were appropriated to the revenues of this college. The first provost was Nicholas Bannatyne, who died in 1470, and was buried in the church, where his epitaph still remains. The coat-of-arms of the family of Forester is everywhere dispersed over the building; and within the church, in niches, are several monumental remains of this family, with effigies cut in stone as large as life. The male figures are covered with complete armour, and the female appear richly ornamented according to the fashion and dress of the times. The roof is supported by strong arches; and the whole building seems to have suffered little by the waste of time. The number of sittings in it is 470. The stipend of the parish-schoolmaster is £50, with about £31 fees. He has amongst other emoluments, a small piece of ground or glebe, near the extent of an acre, contiguous to the village; and besides this, an acre of ground upon the side of the water of Leith, near Coltbridge, which is called the Lamp-acre; its proceeds having been destined for defraying the expenses of a lamp which hung in the east end of the church of Corstorphine. There are various conjectures concerning the use this lamp was intended to serve. Some say that it was in honour of the Virgin, before whose statue it was lighted up; others, and with more probability, think that it served as a beacon to direct travellers from Edinburgh, along a road which, in those times, was swampy, difficult, and dangerous. A small ancient chapel stands at Gogar, but it does not appear to have been used as a place of worship since the Reformation. A burying-ground around it is still in use. There is a Free church in the village of Corstorphine; attendance, 300; the yearly sum raised in 1865 was £256 9s. 11½d. There is one private school.

CORTACHY and CLOVA, an united parish in the north-west of Forfarshire; bounded by Aberdeenshire, and by the parishes of Lochlee, Lethnot, Tannadice, Kirriemuir, Kingoldrum, and Glenisla; and stretching south-eastward, Clova uppermost and Cortachy lowermost, from the sources of the South Esk along the course of that river to within 3 miles of Kirriemuir, which is the post-town. Clova is nearly 10 miles long and 7 broad; and Cortachy is about 13 miles long and from 2 to 8 broad. The South Esk rises in a multitude of small streams in the north-west of Clova; flows south-east through that district, and enters Cortachy about 1½ mile below the kirk-town of Clova; receives numerous tributaries, chiefly on the northern side, while flowing through Cortachy; and from Cross Bog till its junction with the Prosen water, divides Cortachy from Tannadice. The soil is in general poor with a wet and cold bottom. A part, however, of the bough-

ground on the banks of the Esk, is a light early soil, interspersed with frequent patches of moss. The united parish lies almost wholly among the Grampians, and therefore is calculated principally for pasture. Some of the mountains, especially those in Clova, are of great height; and many places are beautifully romantic and picturesque. There are three small lakes which abound with trout and pike. Whinstone is found in great quantity; but no freestone or any valuable mineral has been yet discovered. The bridge of Cortachy, at the issue of the South Esk from the Grampians, is founded on mica-schistose rock, exhibiting masses of jasper varying in colour from a bright yellow to a deep red, and susceptible of a fine polish. Behind the bridge, a remarkable vein of indurated claystone is seen to intersect the schistose rocks. It is generally of a white or greyish colour, and contains thin scales of lime spar. Cortachy castle, a favourite seat of the Earl of Airlie, is the only mansion; and that nobleman and a near relative of his are the only landowners. The total yearly value of the raw produce of Cortachy was estimated in 1842 at £6,632; and that of the raw produce of Clova at £3,166. A good line of road leads through the whole inhabited portion of the parish into Strathmore. Population in 1831, 912; in 1861, 653. Houses, 141. Assessed property in 1843, £3,887 1s.; in 1866, £6,752 12s.

This parish, formerly a vicarage, is in the presbytery of Forfar, and synod of Angus and Mearns. Patron, the Earl of Airlie. Stipend, £172 19s.; glebe, £15. Unappropriated tithes, £184 8s. 2d. Schoolmaster's salary now is £50. The church of Cortachy is an elegant structure, built in 1829, and containing 650 sittings. The church of Clova is an old building, with 250 sittings, and is served by a missionary minister on the Royal Bounty, who serves likewise a church in the Glenprosen district of Kirriemuir, and has a salary of £81. There are three private schools.

CORTES, an estate in the parish of Rathen, Aberdeenshire. The mansion is a modern structure, surrounded by fine plantations. On the estate is a Druidical temple. Here also the road from Aberdeen to Fraserburgh is joined by the road from Peterhead to Frasersburgh. And here is a post-office station, subordinate to Mintlaw.

CORUISK. See CORRISKIN.

CORYREKAN. See CORRIEVREKIN.

COURSANS. See GLAMMIS.

COTHAL. See FENTRAY.

COTTACK, a village in the parish of Dunscore, Dumfries-shire. It stands on the road from Minnyhive to Dumfries, 7 miles south-east of Minnyhive, and 9 north-west of Dumfries. Three vales, with their respective hill-screens, diverge from it, westward, eastward, and northward. Its site is somewhat elevated; and the parish church, being situated here, is seen a good way off in all directions. Population, 252.

COTTON. See ABERDEEN.

COTTON OF LOWNIE, a village in the parish of Dumnichen, Forfarshire.

COTTON OF ST. MADDOES, a village in the parish of St. Maddoes, Perthshire. Population in 1851, 62.

COTTS LOCH. See URQUHART.

COUFFURACH, a village in the Enzie district of the parish of Rathven, Banffshire. Here is a school, variously aided by extrinsic support; and in the immediate vicinity is a church, which was built in 1785, and contains 404 sittings.

COUL. See CONTIN.

COULARD HILL. See STOTFIELD.

COULBEG. See ASSYNT.

COULL, a parish in the district of Kincardine O'Neil, Aberdeenshire, at the head of Strathcromar; bounded on the north by Tarland and Leochel, on the east by Lumphanan, on the south by Ahoyn, and on the west by Logie-Coldstone. Its shape is somewhat triangular; the longest side measuring about 5 miles, and the others about 3½. The post-town is Ahoyn. The strath of Cromar is flat, but is sheltered by high hills on each side. None of the hills rise to a great height. A considerable portion of the strath, called Bogmore, was formerly a disagreeable unhealthy swamp, but has, for the most part, been recently converted into good meadow and arable land. The heritors are the Earl of Aberdeen, the Marquis of Huntly, Forbes of Corse, and Farquharson of Finzean. The real rental is nearly £3,000. The antiquities are a Druidical circle on one of the hills, the traces of an ancient chapel on the lands of Corse, the ruinous walls of Corse castle, and the vestiges of the castle of Coull,—the last the ancient fortified seat of the once powerful family of Durward. See CORSE. Population in 1831, 767; in 1861, 792. Houses, 149. Assessed property in 1843, £2,197; in 1860, £2,850.

This parish is in the presbytery of Kincardine O'Neil, and synod of Aberdeen. Patron, J. O. Forbes of O'Neil Corse. Stipend, £161 5s. 7d.; glebe, £7. Schoolmaster's salary, £52, with £8 fees, and the Dick bequest, which, in 1832, amounted to £29 3s. The parish church is a plain building, erected in 1792. There is a parochial library.

COULTER, a station on the Symington and Peebles railway, 1¼ mile south-west of Biggar.

COULTER (Loch), a small lake in the parish of St. Niuian's, Stirlingshire. It is about 2 miles in circumference, and discharges its water into the Bannoek burn. During the great earthquake at Lishon, in 1756, its waters were violently agitated, and sank about 10 or 12 feet.

COUNTESSWELLS. See PETERCULTER.

COUPER-ANGUS. See CUPAR-ANGUS.

COURANCE, a post-office station, in the parish of Kirkmichael, subordinate to Lockerby, Dumfriesshire.

COUR-HOUSE. See SADDLE AND SKIPNESS.

COURSTON. See STRATHMIGLO.

COURTHILL. See DALRY, PETTY, and ROSE-MARKIE.

COURTHILLOCK. See KIRRIEMUIR.

COURTKNOWE. See CATHICART.

COUSLAND, a post-office village in the parish of Crauston, 3 miles east of Dalkeith, Edinburghshire. The chapel of Cousland was annexed to the parish of Cranston about the time of the Reformation. The chapel stood on the south side of the village of Cousland, where its remains may still be traced, with its almost forgotten cemetery; it was probably dedicated to St. Bartholomew. In 1547, Cousland was burned by the Duke of Somerset, when he invaded Scotland with a powerful army to enforce the marriage of the Princess Mary with Edward, King of England. Population, 226.

COVE, a fishing-village in the parish of Nigg, Kincardineshire, 4 miles south by east of Aberdeen. Here is a natural harbour, very slightly improved by art, affording suitable accommodation to the fishermen, and often serving as a place of refuge to boats in high north-easterly winds. In the vicinity is a large cavern entering from the sea, and terminating in a beach. The fishermen engage in various kinds of fishery, and have acquired some reputation in the drying and smoking of haddocks. The village has a slightly endowed school, and two deposit societies. The Aberdeen railway has a station for this place. Population, 355.

COVE, Berwickshire. See COCKBURNSPATH.

COVE, Dumfriesshire. See KIRKPATRICK-FLEMING.

COVE-A-CHIHARAN. See CAMPBELTON.

COVESEA,—popularly CAUSEA,—a small village on the coast of the parish of Drainsy, 6 miles north of Elgin, Morayshire. The adjacent shore is rocky, precipitous, and strikingly picturesque. In one place, a gently sloping road leads through a natural arch, with stately pillars and lofty alcoves, to a piece of fine natural meadow on the heath, enclosed landward by smooth mural precipices from 60 to 100 feet high; while all around are caves, fissures, pinnacles, and fantastic forms of rock, various and romantic as the ruins of a vast city, and far too numerous to suffer appreciable loss to their interest from any possible despoliation by man. Perhaps the most curious object is an isolated rock of the appearance of an inverted pyramid, measuring 70 feet in height, about 30 across the top, and only 8 at the base. On the west side of the piece of meadow is a cave which was once the abode of a hermit, and which Sir Robert Gordon of Gordonston used as a stable during the rebellion of 1745. A very dangerous reef or chain of skerries extends parallel to the coast, about a mile from the shore, and has been fatal to very many vessels within the recollection of the present generation. A lighthouse was recently erected here. The light is a revolver, appearing in its brightest state once every minute. From west by north quarter north to south-east by east quarter east, it is of the natural appearance; but from south-east by east quarter east to south-east quarter south it has a red colour. It is visible seaward at the distance of 18 nautical miles.

COVINGTON AND THANKERTON, a parish containing the villages of Covington and Thankerton, in the upper ward of Lanarkshire. Two of the nearest post-towns are Symington and Biggar. The parish is bounded by Petytnain, Lihberton, Symington, Wiston, and Carmichael. Its length northward is 4 miles, and its breadth is about 2½ miles. The Clyde traces the eastern and north-eastern boundary. Tinto is partly within the southern corner. The land adjacent to the Clyde is well cultivated arable and meadow ground; and the rest of the surface is principally pastoral upland, extensively clothed with heath. About 2,000 acres are subject to the plough; about 3,500 are sheep pasture; and about 80 are under wood. There are four principal landowners; but the only mansion is St. John's Kirk. The real rental is about £3,800. The chief antiquities are four circular camps, and a fine ruin of a fort or castle, built in 1442 by Lindsay of Covington. The celebrated Covenanter, Donald Cargill, was taken prisoner at Covington mill. The Caledonian railway passes along the parish, and has a station in it at Thankerton. The village of Covington is a small place near the Clyde, 5 miles north-west of Biggar. Population of the parish in 1831, 521; in 1861, 532. Houses, 116. Assessed property in 1843, £2,880 5s. 6d.; in 1860, £3,755 3s. 8d.

This parish is in the presbytery of Biggar, and synod of Lothian and Tweeddale. Patrons, Sir N. M. Lockhart, and Sir W. C. Anstruther. Stipend, £208 13s. 7d.; glebe, £17 10s. Schoolmaster's salary, £50, with about £16 fees. The parishes of Covington and Thankerton were united some time between 1702 and 1720; when the church of Thankerton was allowed to go to ruin, and that of Covington was enlarged.

COWAL, a district of Argyllshire, forming a peninsula or point of land stretching north-east and south-west, between the frith of Clyde and Loch Fyne; and comprehending the parishes of Dunoon,

Inverchaolain, Kilfinan, Kilmoran, Kilmorich, Lochgoilhead, Strachur, and Strathlachlan. The north-east part of the district, which borders with Perthshire, presents a rugged and broken surface. The mountains become gradually lower and the surface less rugged, as you advance to the south-west; and towards the extremity, comparatively speaking, the land is low and level. The hills afford excellent pasture for sheep and black-cattle. This district is intersected by three arms of the sea, Loch-Ridden, Loch-Streven, and Loch-Eck, and is watered by the rivers Cur and Eachaig. The coast is partly flat, and partly bold and rocky, presenting numerous creeks and small harbours. Here are the ruins of the royal castles of Dunoon and Carrick. Campbell of Strachur, Campbell of South-hall, and Lamont of Lamont, have extensive estates in this district. Population in 1831, 7,943; in 1861, 9,783. Houses, 1,804.

COWCADDENS. See GLASGOW.

COWCASH, a small natural harbour in the parish of Nigg, Kincardineshire, about a mile south of the harbour of Aberdeen, suitable for the site of a fishing village.

COWDAILLY. See CARNWATH.

COWDENBEATH, a post-office village in the parish of Beath, and a station of the Dunfermline branch of the Edinburgh and Northern railway, between Lochgelly and Crossgates. Fife. Pop. 1,148.

COWDENKNOWS, an estate and barony on the east bank of the river Leader, in the parishes of Earlstoun and Melrose, 32 miles from Edinburgh, 12 from Kelso, 3 from Melrose, and 1 from Earlstoun. Every one has heard of

—“the broom, the bonny, bonny broom,
The broom o' the Cowdenknows.”

But the broom-sprinkled braes and haughs of Cowdenknows have been sadly stripped of their golden adornments of late years by the progress of the turpentine bushandry; and of the song to which the ancient and beautiful little air of one strain, known as ‘The Broom of Cowdenknows,’ was here united, only four lines of the chorus remain; but the air itself is fortunately still preserved, an object of less poetical associations. The ancient ‘Hanging tree’ of Cowdenknows is also to be numbered now only amongst the things that were. This venerable relic of ancient days and vanished customs, whose dark and knotted trunk, and fantastically twisted boughs, threw a gloomy kind of feeling over every spectator who knew its history in the days of feudal barbarism, has been cut down. It had been called, time out of mind, ‘the Hanging tree;’ and the local tradition—without any probability of right foundation—is, that it was employed, in the “persecuting times,” to hang the covenanters in the days of Charles and James. The persecution was not very fierce over the Merse, and little more than fines were inflicted upon the conventiclers. There may be less doubt, however, of its having been employed by the older Border-chief to assert his authority over his vassals, or to inflict his vengeance upon his enemies.

COWEY'S LINN. See EDDLESTONE.

COWIE, a fishing village in the parish of Fetteresso, 1½ mile north-north-east of Stonehaven, Kincardineshire. On the top of a coast-rock in the vicinity are vestiges of a small ancient fortalice called the castle of Cowie, said to have been built by Malcolm Canmore. On the south side of the harbour, within high-water mark, is a bed of clay slate connected with sandstone. On a common 2½ miles to the north-west, called Cowie Common, there was recently dug up a collection of Roman coins. Cowie was anciently a free burgh,—so con-

stituted by Malcolm Canmore,—and a chapelry, first for the private convenience of the proprietors of the place and their retainers, and afterwards belonging to Marischal College, Aberdeen. The ruins of the chapel still stand, contiguous to a recently erected dead-house; and form a picturesque object from the Stonehaven road. The burying-ground also is still in use. Population of the village in 1851, 174. See FETTERESSO.

COWIE (THE), a small river of Kincardineshire. It rises among the frontier Grampians, in the extreme north-west of the parish of Glenbervie, and runs eastward through that parish and the parish of Fetteresso to the sea at Stonehaven. It is subject to high freshets, and has often done injury to the property on its banks. The Aberdeen railway crosses it by a stupendous viaduct of 14 arches, the central one of which is upwards of 190 feet high. The view from this bridge is remarkably fine, comprehending the deep wide ravine below, the vale and town of Stonehaven, the castle of Dumottar, and a variegated expanse of country.

COWLAIRS. See EDINBURGH AND GLASGOW RAILWAY.

COWPITS, a village in the parish of Inveresk, Edinburghshire. Population, 116.

COWSHAVEN. See ABERDOUR, Aberdeenshire.

COWSRIEVE. See PETERHEAD.

COWTHALLY. See CARNWATH.

COXTON TOWER, a small square fortalice with angular turrets, to the south-east of Elgin, Morayshire. It belonged anciently to the family of Innes of Invermarkie, but now to Lord Fife.

COYL, or COILA (THE), a rivulet of Ayrshire. It rises in the upper end of the parish of Coylton, on the confines of Dalmellington, and pursues a winding course of about 10 miles north-westward to the Ayr, at a point 4 miles east of the town of Ayr. There is a cascade on it, about 25 feet wide and about 15 feet in fall, under the beautiful ridge on which Sandrum Castle stands. Millmannoch, the scene of Burns' "Soldier's Return," is on the banks of this stream.

COYLTON, a parish, containing a post-office village of its own name, and also the villages of Craighall, Gadgirthholm, Bankfoot, Joppa, and Knockshoggleholm, in the district of Kyle, Ayrshire. It is bounded by Dalmellington, Dalrymple, Ayr, St. Quivox, Tarbolton, Stair, and Ochiltree. Its greatest length, north-westward, is about 12 miles; and its average breadth is nearly 2 miles. The river Ayr flows nearly 4 miles along its north-west boundary; the Coyl flows along its interior; and the Doon drains part of its upper or south-eastern end. The surface of its lower districts is partly flat and partly undulating; that of its middle district rises into trap hills, called the Craigs of Coyl, which have an elevation of about 750 feet above the level of the sea; and that of its upper district is hilly and pastoral, with a summit ridge which has an elevation of upwards of 1,100 feet above the level of the sea, and commands magnificent extensive prospects. About 70 per cent. of the whole area is in tillage, about 23 in pasture, and about 7 under wood. There are nine landowners. The real rental is about £9,290. Coal is mined to the extent of about 8,400 tons a-year. Limestone, sandstone, and whinstone are extensively quarried. The total yearly value of raw produce was estimated in 1841 at £22,587. The assessed property in 1860 was £10,481. There are two tile-works. The chief mansions are Sandrum, Gadgirth, and Rankinston. There are three lakes, the largest of which, Martnahaim, is a mile in length. The parish, and the stream which intersects it, are said, by tradition, to derive their name

from a fabulous king, called Coilus, or Coil, who is reported to have been slain in battle, at Coylefield, 5 miles south of Coylton, and buried at the parish-church. A large stone is still regarded as monumental of 'Auld King Coil.' The parish is traversed by the road from Ayr to Dumfries. The village of Coylton is a small place 6 miles east-south-east of Ayr. Population of the parish in 1831, 1,389; in 1861, 1,604. Houses, 263.

This parish, formerly a prebend, is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Crown. Stipend, £254 8s. 4d.; glebe, £12. Schoolmaster's salary, £52 10s., with considerable other emoluments. The church is a handsome Gothic edifice, with a tower, built in 1836, and containing 744 sittings. There are three private schools.

CRABSTONE (THE). See ABERDEEN.

CRAIG. See CARRICK.

CRAGGACH. See WIGTONSHIRE.

CRAGGANESTER, a hamlet in the parish of Weem, Perthshire.

CRAGGANTOUL, a hamlet in the parish of Weem, Perthshire.

CRAGGIE (LOCH), a fresh water loch in the parish of Tongue, in Sutherlandshire, lying immediately to the north of Loch Loyal, which discharges its waters into it, while itself flows into Loch Slam, whence the Borgia conveys the united waters of the three lochs to Torrisdale bay. All these lochs abound in trout, pike, and char.

CRAIG-ROMAN. See STORMONT.

CRAICHIE, a village in the parish of Dunnichen, Forfarshire.

CRAIG. See CARRICK.

CRAIG, a parish, containing the post-office village of Ferrydar and the village of Usan, on the coast of Forfarshire. It is bounded by Montrose basin, the German ocean, and the parishes of Maryton, Lunan, Kinnell, and Farnwell. Its eastern division forms a peninsula between Montrose basin and the sea. The extreme length of the parish, from the guard-house on the north-east to its south-west angle near West Coteton, is nearly 6 miles; and its extreme breadth, from Baldovie on the north-west, to the promontory of Boddin lime-works on the south-east, is 3 miles. The island Inchbrayock, in the embouchure of the basin, or of the river South Esk, belongs to this parish. See INCHBRAYOCK. On the coast, Dunninald is the highest ground; in the centre, Govanhill; and on the west, Pittarishill and Mountboy,—all of which overlook expansions of beautiful scenery, though the loftiest of them is only about 400 feet high. The surface of the parish is undulating, well tufted with plantation, and, in several places, dotted with small lakes. The coast is rocky, slightly romantic, and, toward the south, precipitous. About 3,510 acres of the entire area are in cultivation, about 1,090 are in pasture or commonage, and 291 are under wood. Limestone was long extensively quarried, but has become nearly exhausted. A coarse building-stone, locally called scurdy-stone, is worked in several quarries. The fisheries, both of salmon and of white fish, are very extensive. The total yearly value of raw produce was estimated in 1835 at £27,626,—of which £7,388 were for the fisheries. Assessed property in 1843, £9,645 3s. 8d., but in 1866, £9,494 9s. 10d. There are five landowners. The mansions are Rossie House, Dunninald House, Usan House, and Inchbrayock villa. The chief antiquities are some remains of Craig Castle, which is frequently mentioned in Scottish history, the site of another old castle on the south coast, and the site of a fort in the north-east, traditionally said to

have been used by Oliver Cromwell. The parish is traversed by the road from Montrose to Arbroath. Population in 1831, 1,552; in 1861, 2,177. Houses, 349.

This parish, formerly a vicarage, is in the presbytery of Brechin, and synod of Angus and Mearns. Patron, St. Mary's college, St. Andrews. Stipend, £257 6s. 3d.; glebe, £24. Unappropriated tithes, £101 8s. 9d. Schoolmaster's salary, £60, with about £30 other emoluments. There is a school in Ferryden, endowed by the late Miss Rossie of Rossie; and there are four other schools in the parish, supported by the resident landowners. Craig comprises two titularities or parishes, Inchbraycock or Craig, and Dunnald or St. Skeoch, which were united in the year 1618. The parish church is a beautiful structure, with a square tower, situated about a mile from the basin, commanding from a gentle acclivity an extensive view of watery and sylvan landscape, looking down upon the smiling town of Montrose begirt with its lagoon, and seeing away northward over scenery exquisitely diversified, to the eminences beyond the North Esk. It was built in 1799, and contains 800 sittings. There is a Free church in the parish, with an attendance of from 350 to 430; and the yearly sum raised in connexion with it in 1865 was £190 17s. 0½d. There have been several libraries and benefit institutions.

CRAIG, or CRAIG-OF-MADDERTY, an estate in the parish of Madderty, Perthshire, containing the moderate village of St. David's, and enjoying the privilege of a burgh of barony, erected in 1626. It formerly contained a village of Craig,—to which that privilege was attached. Population in 1841, 181; in 1851, 227. Houses, 47. See DAVID'S (St.).

CRAIGANFHIACH, or RAVEN'S ROCK, a precipitous crag in the parish of Fodderty, Ross-shire, giving off from its bold mural front a loud echo. Near it is a very strong chalybeate called Saint's well.

CRAIGANROY, a commodious and safe harbour at the south corner of Loch Duich, parish of Glen-shiel, Ross-shire.

CRAIGBAR. See CLYNE.

CRAIGBEG, a mountain, nearly 1,200 feet high, in the parish of Durris, Kincardineshire.

CRAIGBENYON, a mountain, 3 miles north-east of Callander, district of Monteth, Perthshire.

CRAIGBILL. See TROQUEER.

CRAIG BURN, a small tributary to the right side of Douglas Water, in the parish of Douglas, Lanarkshire.

CRAIG BURN, a head-stream of the BOGIE: which see.

CRAIGCAFFEL. See INCH, Wigtonshire.

CRAIG-CLUNY, a precipitous rocky height, overhanging the public road, about 2 miles east of Castleton-Braemar, Aberdeenshire. It carries a mass of pine forest farther aloft than the eye can individualize the trees, and terminates in a bare granite peak. The vestige of an old tower, called the Laird of Cluny's Charter Chest, occurs about third way up, in a situation which looks almost inaccessible to human foot. Farquharson of Cluny lay concealed here during several months after the overbrow of the Jacobites' hopes at Culloden. A fragment of rock as large as a three-storey house has fallen from the crag, and lies on the opposite side of the public road.

CRAIGCROOK. See CRAMOND.

CRAIGDAIMYE, an inlet lying off the Point of Keils in Knapdale, Argyleshire.

CRAIGDALLIE, a village in the parish of Kin-naird, Perthshire.

CRAIGDAM. See TARVES.

CRAIGDARROCH. See BALLATER and GLENCAIRN.

CRAIG-DAVID. See BERVIE-BROW.

CRAIGDIU. See BLACK CRAIG.

CRAIG-DHULOCH, a stupendous cliff overhanging the south side of a small, dark, cold sheet of water called Dhuloch, in the south-west corner of the parish of Glenmuick, Aberdeenshire, adjacent to the boundary with Forfarshire. This cliff soars aloft to the height of upwards of 1,000 feet, and is thought by some observers to be more sublime than the famous rocks of Lochnagar.

CRAIGDAW. See KIRKOSWALD.

CRAIGELLACHIE, a picturesque mountain on the mutual border of Strathspey and Badenoch, or of Morayshire and Inverness-shire, in the southern vicinity of Aviemore. See DUYHIL and ROTHIE-MURCHUS; see also AVIEMORE.

CRAIGELLACHIE, a lofty, picturesque, quartz rock on the left bank of the Spey, and on the mutual border of the parishes of Knockando and Rothes, Morayshire. A handsome iron bridge, of one arch of 160 feet in span, with a round embattled tower at each corner, here bestrides the Spey, and connects Morayshire with Banffshire. It was erected in 1815 at an expense of £8,000. The reach of the river in the vicinity and for four miles below is eminently beautiful. Craigellachie is 1 mile from Charlestown of Aberlour, and 3 miles from the village of Rothes; and here are a head post-office and a station at a junction of railways. See ABERLOUR.

CRAIGEND, a village in the East Church parish of Perth. Here is an United Presbyterian church, built in 1780, and containing 413 sittings. Population, 47.

CRAIGEND, a village in the Crosshill district of the parish of Old Monkland, Lanarkshire. Population, 80.

CRAIGEND, a small lake, beautifully fringed with wood, in the north-east of the parish of New-abbey, Kirkcudbrightshire. Near it, on the farm of Craigend, is a rocking-stone about 15 tons weight, which may be put in motion by a child.

CRAIGENDS. See KILBARCHAN.

CRAIGENGILLAN. See CARSPHAIN.

CRAIGENGOWER, a hill, 1,300 feet high, immediately behind the manse of the parish of Straiton, Ayrshire.

CRAIGENSCORE. See GLENBUCKET.

CRAIGFOODIE. See DAIRSTE.

CRAIGFORTH. See STIRLING.

CRAIG-GIBBON, a summit among the frontier Grampians, surmounted by an obelisk, in the parish of Auchtergaven, Perthshire.

CRAIG-GRANDE. See AULTGRANDE.

CRAIGHALL, a village on the Auchencruive estate of the parish of Coylton, Ayrshire. There is a coal-mine in its vicinity.

CRAIGHALL, Fifeshire. See CERES.

CRAIGHALL (NEW and OLD), two villages in the parish of Inveresk, but the former partly also in the parish of Liberton, 2 miles south-south-west of Musselburgh, near the Musselburgh branch of the old Dalkeith railway, Edinburghshire. They are inhabited principally by colliers. An engine of no less than 140 horse-power, works off the water from the coal-mines in their vicinity. See INVERESK. Population in 1861, of New Craighall, 336; of Old Craighall, 318.

CRAIGHALL-RATTRAY. See BLAIRGOWRIE.

CRAIGHEAD. See DAILLY.

CRAIGIE, a parish, containing a post-office station of its own name, in the district of Kyle, Ayrshire. It is bounded by Dundonald, Riccarton,

Galston, Mauchline, Tarbolton, Monkton, and Symington. Its extreme length is 7 miles, and its average breadth $1\frac{1}{2}$ mile. Most of the surface is level, arable, fertile, and well-enclosed. The eminences are not high, and afford fine pasturage. From a hill 500 feet above the level of the sea, a spectator looks round on a richly cultivated beautiful expanse of 100 square miles, and sees Benlomond and several of the Grampians raising their lofty summits toward the north, and the ridges of Jura serrating the horizon on the west, and the hills of Ireland dimly merging from the sea on the south. Tilclay exists, and limestone abounds. Much attention is paid to the dairy. There are cleveu landowners. The real rental is about £9,100. The mansions are Cairnhill, Barnwell, and Underwood. The chief antiquity is the ruin of the old castle of Craigie. The parish is traversed by the road from Kilmarnock to Tarbolton. Population in 1831, 824; in 1861, 730. Houses, 104. Assessed property in 1843, £8,057 13s. 5d.; in 1860, £9,108.

This parish, formerly a vicarage, is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, Campbell of Craigie. Stipend, £247 7s. 10d. Unappropriated tithes, £360 4s. 1d. Schoolmaster's salary now is £50, with £18 school-fees. The church was built in 1776. Craigie includes part of the suppressed parish of Barnwell; and there was formerly a school there.

CRAIGIE, a village in the East Church parish of Perth, $\frac{1}{2}$ a mile south of the city of Perth, around the site of the old castle of Craigie, and divided into Upper and Lower Craigie. Population, 220.

CRAIGIE, a village in the parish of Caputh, Perthshire.

CRAIGIE, a village in the east of the parish of Dalmeny, Linlithgowshire. Population in 1841, 75. Craigie-Hill in the vicinity consists of erupted rock, and commands an extensive brilliant prospect. Craigie-Hall, also in the vicinity, is a very beautiful policy on the Almond,—which river here forms a picturesque cascade beneath a rustic bridge.

CRAIGIEBARNES, a hill in the vicinity of Dunkeld, Perthshire. Its height is upwards of 1,000 feet above sea-level. Its outline is picturesque, and its sides are richly clothed with wood. It is the chief feature in the splendid landscape seen from Dunkeld bridge. The top of this hill commands a prospect extremely rich and diversified. To the south is the vale of the Tay as far as the Ochils, with the hill of Birnam in the foreground. On the left hand, to the eastward, is the valley of Stormont, with a beautiful chain of lochs, six in number. To the west and north is seen the Tay flowing in majestic grandeur through a narrow vale, with the high mountains of Athol, Schihallion, and Bengloe, on the north.

CRAIGIEHALL. See CRAIGIE, Linlithgowshire.

CRAIGIELANDS, a post-office village in the parish of Kirkpatrick-Juxta, Dumfries-shire. Population in 1841, 84. See KIRKPATRICK-JUXTA.

CRAIGIEVAR, an estate in the parish of Leochelshnie, Aberdeenshire. The mansion is a castellated structure in the Flemish style, built in the early part of the 17th century, and well-repaired in 1826. It has a grim appearance; and over the heavy doorway of the keep is the inscription, "Do not waken sleepin dougs." Fairs are held at Craigievar on the day in March after Huntly, on the Friday in April before Brechin, on the day in May after Wartle, on the Thursday after the last Tuesday of June old style, on the day in July after St. Sairs, on the day in August after Huntly, and on the day in September after Keith.

CRAIGLEITH, a small island in the frith of

Forth, about a mile north of North Berwick, to which it belongs. It supports a few rabbits.

CRAIGLEITH, the largest freestone quarry in Scotland. It is the property of Ramsay of Barnton, and is situated about 2 miles north-west of the New town of Edinburgh, on the Queensferry road. When first opened, it was rented at about £50 per annum; during the great building years in Edinburgh, from 1820 to 1826, it yielded £5,500 a-year. A cubic foot of Craigieith stone weighs 148 lbs. It is of two kinds; one of a fine cream colour, called liver-rock, of which the south front of the Register office in Edinburgh is built; the other of a greyish white, called 'feak-rock.' Stones are raised from the strata in this quarry chiefly by means of wedges. The monolithic columns in front of the College of Edinburgh, each 23 feet high, and 3 in diameter, were obtained from this quarry.

CRAIGLIOCH. See BLAIRGOWRIE.

CRAIG-LOCKHART, a hill in the parish of Colinton, about 2 miles south-west of Edinburgh. It is beautifully wooded. Towards the north-west the rock exhibits lofty basaltic columns; and on the south-east side another range appears in which the columns are still more distinct than in the former, but of smaller diameter. The summit of the hill is elevated 540 feet above sea-level.

CRAIGLUSCAR, a hill in the north-west of the parish of Dunfermline, $2\frac{1}{2}$ miles north-west of the town of Dunfermline, Fifeshire.

CRAIGLUSH (Loch), a small lake in the parish of Caputh, Perthshire, traversed by the river Lunan, and adjacent to the beautiful Loch of Lows.

CRAIGMILL, a village at the southern base of the Abbey Craig, in the Clackmannan district of the parish of Logie. It was formerly notorious for the smuggling of whiskey.

CRAIGMILLAR CASTLE, a fine old ruin in the parish of Liberton, about 3 miles south of Edinburgh, crowning a gentle eminence on the left of the road from Edinburgh to Dalkeith, and commanding a noble view of the south side of the city, the frith and opposite coast, and Aberlady bay. It consists of a square keep or tower, several stories high, encompassed by a square embattled wall, which has had circular towers at each angle, and the whole surrounded by another rampart wall, and in some places with a deep moat. On the principal gate is the date 1427. Whether this is meant to record the time that part was built, or an after-repair, is uncertain. There are a great variety of apartments. The great hall is large and well lighted, considering the mode of ancient times; it has a semicircular ceiling, and measures in length 36 feet, in breadth 22; and, at the east end, has a chimney 11 feet wide. The ascent of the keep is by an easy flight of broad stone stairs. On the east side of the outer walls are the arms of Cockburne of Ormiston, Congalton of that ilk, Mounbray of Barnbungle, and Otterbaru of Redford, with whom the Prestons of Craigmillar were nearly connected. Over a small gate, under three unicorns' heads couped, is a wine press and a tun, a rebus for the word Preston. There are a variety of armorial bearings all over the outside of this building. The apartment shown as Queen Mary's, is in one of the upper turrets; it measures only 5 feet in breadth, and 7 in length; but has, nevertheless, two windows and a fire-place. The name of this place occurs pretty early in the national records, in a charter of mortification, in Haddington's collections, granted in the reign of Alexander II. A. D. 1212, by William, son of Henry de Craigmillar; by which he gives, in pure and perpetual alms, to the church and monastery of Dunfermline, a certain toft of land in Craigmillar, in

the southern part, which leads from the town of Nidreif to the church of Liberton, which Henry de Edmonton holds of him. Craigmillar afterwards became the property of John de Capella, from whom it was purchased by Sir Simon Preston in 1374. William, a successor to Sir Simon, was a member of the parliament which met at Edinburgh June 1, 1478. He had the title of Domine de Craig-Miller. This castle continued in the possession of the Prestons almost three hundred years; during which time that family held the highest offices in the magistracy of Edinburgh. In 1477, the Earl of Mar, younger brother to King James III., was confined here a considerable time. It was also the residence of King James V. during his minority, when he left Edinburgh castle on account of the plague; and here the queen dowager, by the favour of the Lord Erskine, his constant attendant and guardian, had frequent interviews with the young monarch, whilst the Duke of Albany, the governor, was in France. A.D. 1554, this castle, with that of Roslin, and the town of Leith, were burned and plundered by the English. Probably most of the present buildings were erected since that time; at least, their style of architecture does not seem much older than that period. Queen Mary, after her return in 1561, made this castle her residence. Her French retinue were lodged at a small village in the neighbourhood, which, from that circumstance, still retains the appellation of Petit France. In the month of November, 1566, Queen Mary was residing here when the celebrated 'Conference of Craigmillar' was held, in which a divorce between her and Darnley was projected by the ambitious and daring Bothwell. About the time of the Restoration, this castle came into possession of Sir John Gilmour, lord-president of the court of session, who made some additions to it, and whose descendants are still in possession of it. Grose has preserved two views of it, taken in 1788.

CRAIGMONY, a very prominent rocky hill, about 2 miles west of the old castle in Glen Urquhart, Inverness-shire, partly crowned with rude stone walls, and traditionally said to have been used in the olden time as a beacon hill and a gallows hill.

CRAIG-NA-CAILLIACH. See BALQUHEDDER.

CRAIGNEIL. See COLMONELL.

CRAIGNETHAN-CASTLE, the archetype of Sir Walter Scott's castle of Tullietudlem, a magnificent ruin in the parish of Lesmahago, Lanarkshire. It surmounts a steep promontory, encircled by the Nethan on the east, and by a craggy turbulent torrent on the west. Tradition relates that it was built by one of the early forefathers of the present family of Hamilton, but that the strength of the fortifications having awakened the suspicions of the Scottish King, the builder was apprehended, and, according to the summary proceedings of ancient times, immediately executed, upon suspicion of meditated rebellion. The site is naturally very strong, and before the invention of artillery, the bulwarks must have been almost impregnable. A high and solid wall of hewn stone, great part of which is still standing, flanked with massy towers, and perforated with loopholes pointing in all directions, surrounded the principal building, enclosing within its ample compass a court-yard, intersected with a deep moat faced on each side with hewn stone, over which was thrown a drawbridge, defended by two parallel vaults, which are still accessible, though deeply buried in the rubbish where the moat is filled. The buildings are much dilapidated, great part of the wall being entirely swept away, having been used as a quarry for the

neighbouring farm-houses. The two towers which remain are crowned with a thick coppice of rowan-tree, bourn-tree, hazel, ash, brier, and hawthorn; and — what will tend to convey some idea of the extraordinary massiness of the structures—several bushes of sauch flourish in great luxuriance on the top of the walls, and are cut every third or fourth year by the coopers, as excellent hoops. A large vaulted ball is still shown, called the Queen's room, wherein it is said the ill-used Mary lodged a few nights, about the period of the disastrous battle of Langside; and in a subterraneous vault, there is a circular well, beautifully built of polished stone, which one tradition reports to have descended to a level with the bed of the Nethan, and communicating with that rivulet, to have supplied the garrison with water during a siege; while, according to another, it formed the entrance of a tier of lower vaults, in which those wretches who incurred the displeasure of their feudal tyrant were hopelessly confined. Be these accounts as they may, the well is now almost choked up, several of the large-stones of its mouth have been thrown in, while every visitor to the castle takes the liberty of throwing down the well a blazing bunch of broom, or some other combustible substance, that he may see the depth and construction of this curious remnant of antiquity. Over the entrance to the principal building is seen a much effaced escutcheon, in which it is still possible to trace the armorial supporters of Hamilton; and the arms of the Hays, and of some other families which formerly had possession of this castle, are yet to be seen on various places of the walls. The Nethan, after leaving the castle, forces its way through a deep ravine, on one side clothed with hanging wood, and on the other side presenting wavy broom-clad slopes.

CRAIGNISH, a parish on the west coast of Argyshire, bounded by Loch Craignish, the Atlantic ocean, and the parishes of Melfort, Dalavich, and Kilmartin. Its post-town is Lochgilthead, 15 miles to the south-south-east. The length of the parish north-eastward is fully 11 miles; and the average breadth is about 2 miles. Loch Craignish is an arm of the sea, opening from the north end of the Sound of Jura, and penetrating the land about 6 miles north-eastward, with a width which variably diminishes from 3 miles at the mouth to less than 1 mile near the head. Part of the parish is peninsular, stretching between Loch Craignish and the sea, and terminating in Craignish point. The total extent of coast is not less than 16 miles. Abreast of it, chiefly in the south and within Loch Craignish, are upwards of 20 islands, and numerous rocks and islets, serried round with romantic cliffs, washed with the spray and tintured with the hues of the vexed waters in their narrow channels, bearing aloft picturesquely situated trees, and commanding, as well as contributing to form, brilliant and diversified expanses of scenery. In the channel to the west the tide, pouring along from the Sound of Jura, and obstructed by the peninsula of Craignish and its neighbouring islands, dashes itself into impetuosity and foaming violence, and, even in the calmest weather, makes chase upon the life of any fisherman or tourist who has been tardy to anticipate its approach. The surface is much diversified, partly flat and partly rugged, partly a strath lying very slightly above sea-level, and partly a congeries of moors and hills, with an extreme elevation of about 700 feet. There are twelve lakes and many rills. The soil of the arable grounds is principally a loamy mould, which promises abundance to the cultivator, yet is cold, subject to destructive storms, and on the whole unproductive. The real rental, exclusive of some servitudes which are still exacted, is about

£2,646. The total yearly value of raw produce was estimated in 1843 at £7,457. The assessed property in 1860 was £3,305. The landowners are Campbell of Barbreck, M'Dougall of Lunga, and C. F. T. Gascoigne; the first of whom resides here in Barbreck House, the second in Dail House, and the third in Craignish Castle. The last of these mansions consists of a handsome modern edifice conjoined to extensive remains of an ancient strong fortalice, principally a square tower and a vaulted dungeon. Remains of another old stronghold of similar character stand in the north-west. Fortified eminences, rude in construction, and supposed to be of Danish origin, are numerous; and two farms bear evidently Danish names. The strath of this parish is traditionally reported to have been the scene of an engagement between the Danes and the natives, in which Olaus, a royal prince of Denmark, was slain; and it contains, among numerous cairns and other artless monumental records of former times, a mound or tumulus, now modernized into a burying-ground, which is still called Dunan Aula, or the Little mount of Olaus. The parish is traversed for two miles by the road from Lochgilphead to Oban; and it enjoys valuable communication with the Clyde by means of the Glasgow and Inverness steamers. Population in 1831, 892; in 1861, 618. Houses, 129.

This parish, formerly a vicarage, is in the presbytery of Inverary and synod of Argyle. Patron, the Duke of Argyle. Stipend, £169 10s.; glebe, £18. There are no unappropriated tithes. Schoolmaster's salary now is £35, with £12 10s. other emoluments. The church was built in 1826, and contains 500 sittings. There is a private school.

CRAIGO, an estate, a village, a seat of manufacture, and a station on the Aberdeen railway, in the parish of Logie-Pert, Forfarshire. See LOGIE-PERT. Population of the village, 359.

CRAIGOWL, one of the Sidlaw hills, in the parish of Tealing, Forfarshire. It rises to 1,600 feet above sea-level, and is the highest summit in the range.

CRAIG-PHADRIC, a steep but finely-wooded hill in the neighbourhood of Inverness; rising 420 feet above the level of the Ness, which flows at its foot. It is noted for the remains of one of those fortifications, which, from the vitrified appearance of the stones, and the marks of fusion which they exhibit, have received the name of vitrified forts. That on Craig-Phadric is by far the most complete and extensive in Britain. The summit of this hill is flat, and has been surrounded by a wall in the form of a parallelogram, the length of which is about 80 yards, and the breadth 30 within the wall. The stones are all firmly connected together by a kind of vitrified matter resembling lava, or the scoræ or slag of an iron-foundry; and the stones themselves in many places seem to have been softened and vitrified. The greater part of the rampart is now covered with turf, so that it has the appearance of an earthen mound; but, on removing the earth, the vitrified matter is everywhere visible, and would seem to have been in some places of great height. On the outside there is the appearance of a second rampart, but not so regular as the first. Considerable masses of vitrified matter are also found in this second structure, under which is the natural rock, chiefly a fine granite, with some breccia or pudding-stone, in a cement of argillaceous and quartzose matter. Within the area is a hollow, with a small spring of water.

CRAIGROSSIE. See AUCHTERARDER.

CRAIGROSTAN. See BENLOMOND.

CRAIGROTHIE, a village in the parish of Ceres, 2 miles west of the town of Ceres, Fifeshire. It is

a burgh of barony, and is governed by a bailie and councillors, who are elected by the inhabitants. It has a subscription school and a Friendly society. In its vicinity is a quarry of good building stone. Population, 308.

CRAIGS-BLEBO. See BLEBO CRAIGS.

CRAIGS-OF-KYLE. See COULTON.

CRAIGS OF MADDERTY. See CRAIG and DAVID'S (St.).

CRAIGSPARROW. See NEWBURGH.

CRAIGSTON CASTLE. See KING-EDWARD.

CRAIGTON, a village in the parish of Monikie, Forfarshire. Population, 162.

CRAIGTON FIELD, a village in the parish of New Kilpatrick, Dumbartonshire. Population in 1851, 69.

CRAIGWARD. See ALLOA.

CRAIGY-BARNS. See CRAIGIEBARNS.

CRAIKMOOR. See ROBERTON.

CRAIL, a parish, containing a royal burgh of its own name, in the south-east angle of Fifeshire, commonly called 'the East Neuk o' Fife.' It is bounded on the north by Denino and Kingsbarns; on the east by the sea; on the south by the sea and Kilrenny; and on the west by Kilrenny and Carnbee. It is of very irregular outline, varying in breadth from 2 furlongs to 2½ miles, and stretching westward from Fifeness to a length of 6½ miles. The surface is, in general, flat, naked, and uninteresting. It rises abruptly at the coast to an elevation of from 20 to 80 feet; and it thence swells gently to the west, with hardly a hedge to frill its thin dress, and without an acclivity or a lake or stream to relieve the monotony of its aspect. Coal-mines, which formerly enriched the country, have long been exhausted. Limestone is abundant, but lies too deep to admit of being very extensively worked. Good sandstone for all ordinary purposes occurs in almost every quarter. Ironstone is worked for exportation. Clays are dug for the supply of a local manufacture of bricks, tiles, and chimney-caus. The real rental of the parish, exclusive of the burgh and its pendicles, is about £10,500. There are seven principal heritors, and seventeen smaller ones. The mansions are AIRDRIE [which see], Kingsmuir House, Wormistone, Kirkmay House, and Balcolmie Castle. The last is situated a little east of the burgh. It was at one time a mansion of great size and splendour, but is now reduced to one wing which is inhabited by a tenant, and serves as a landmark to mariners. It was anciently the residence of the Balcomies of that ilk. During the reign of James IV. it was acquired by the Learmonth's of Dairsie. In 1705, the estate was purchased by Sir William Hope; and afterwards successively by Scott of Scotstarvet and the Earl of Kellie; and now it belongs to Sir Thomas Erskine, the Earl's great-grandson. Below Balcolmie is a small cave, where tradition says, King Constantine was beheaded by the Danes in 874. There is a curious dike, or perhaps natural ridge of stones, about half-a-mile in length, and stretching from the frith of Forth on the south-west, to the German ocean on the north-east, so as to enclose a triangular space of ground forming the Ness. Tradition attributes this work to the Danes. A few years ago several rude stone coffins were discovered on the farm of East Wormiston, within view of the place where the skirmish between the Scots and Danes took place in 874; and, from its being without 'the Dane's dyke,' it is supposed these coffins may have contained the relics of the Scottish warriors who fell in this engagement. They were 25 in number, and were arranged side by side, the skeletons being divided by only a single stone, which thus formed

the side of two coffins. Population in 1831, 1,824; in 1861, 1,931. Houses, 389. Assessed property in 1843, £10,240 6s. 9d.; in 1866, £13,458 11s. 3d.

This parish is in the presbytery of St. Andrews, and synd of Fife. Patron, the Earl of Glasgow. Stipend, £280 11s.; glebe, £30. Unappropriated teinds, £624 3s. Schoolmaster's salary now is £40, with upwards of £30 school-fees. When the scholars exceed 90, an usher is employed, who receives £12 from the burgh, and from one-fourth to one-third of all the fees. Two schools, not parochial, are partially endowed or encouraged by the town-council. The parish church is so old that many persons believe it to be the one in which David I. worshipped when he lived in Crail; and it was repaired in 1828, and contains nearly 1,000 sittings. There is a Free church, whose yearly proceeds in 1865 amounted to £166 4s. 4d. There is also an United Presbyterian church, with an attendance of from 150 to 350. There are three private schools. This parish claims Kingsmuir and the island of May; the former as bearing its proportion of parochial burdens, and the latter as sharing its ecclesiastical privileges.

THE TOWN OF CRAIL stands on the coast 2 miles west-south-west of Fifeness, 4 east-north-east of Anstruther, 10 south-east by south of St. Andrews, 19 south-east by east of Cupar, and 29 east-north-east of Kinghorn. It was anciently called Caryle or Carraile, and is mentioned by old historians as a town of considerable note, as early as the middle of the 9th century. Ada, mother of Malcolm IV., gave to the monks of Dryburgh a toft of houses in her burgh of Crail. The ancient church, still entire, is a fine specimen of pointed architecture. It consists of a central nave, with aisles, divided by two rows of pillars, one on each side. This church belonged to the Cistercian nunnery of Haddington, and was made collegiate, in 1517, at the desire of the prioress of Haddington, for a provost, a sacrist, and 10 prebendaries. John Knox preached here on Sunday the 19th May, 1559, and next day marched off with a mob at his heels, to destroy the monuments of idolatry at St. Andrews. The celebrated James Sharp, archbishop of St. Andrews, was once minister of this church. There are some vestiges of a chapel which was dedicated to St. Rufus. A little to the east of the harbour, on the top of the cliff are some traces of an old castle in which David I. occasionally resided. The town consists of two parallel streets extending along the shore, and two or three small intersecting lanes. The northmost street is broad and spacious, and contains some good houses of a massive and antique description; but the whole place bears evident marks of having "seen better days." The streets, however, are kept very clean, and lighted with gas. The ends of the streets in old times were closed with strong gates; and they still bear the name of ports. In the centre of the town are a very neat town-hall and a small jail. The town has a banking-office.

The harbour of Crail is small, difficult of access, and not very safe. But Room, or the old harbour, about a quarter of a mile to the east of the present harbour, could, at a comparatively small expense, be converted into an excellent harbour, capable of containing 200 sail of vessels; having, in ordinary tides, from 20 to 22 feet water, and at high spring-tides 29 feet; which would admit ships of war. This harbour is sheltered from all winds but the south; and may be entered, with the wind at any point, at 1½ hour's flood, by vessels drawing 10 feet water. It would also be of the most essential service to the trade in the frith, and the whole eastern and northern coast of England and Scotland, as,

from its central situation, it would always be a place of safety during storms from the north and east; and in case of strong westerly winds, vessels might run in here so as to avoid being blown out of the frith. Only about twelve sailing vessels at present belong to the town, with an aggregate burden of something less than 600 tons, and employed principally in importing coals and exporting raw produce. The number of fishing-boats also is much smaller than might be expected. But at the beginning of last century, and for a long time previous, Crail was a great rendezvous for boats employed in the herring-fishery, and immense quantities of herrings were then cured here. Formerly also the fishermen used to cure haddocks in a peculiar way, without splitting them, which went by the name of 'Crail capons.' The inhabitants at the time of the eruption under John Knox are hit off as follows in "Anster Fair;":

"Next from the well-aired ancient town of Crail,
Go out her craftsmen with tumultuous din;
Her wind-bleached fishers, sturdy-limbed and hale;
Her in-kneed tailors garrulous and thin;
And some are flush'd with horns of pithy ale;
And some are fierce with drams of smuggled gin;
While to agnient his drouth, each to his jaws,
A good Crail eapon holds, at which he rugs and gnaws."

Crail received its charter from Robert Bruce, in 1306, which was successively confirmed, with new grants, by Robert II. in 1371, Mary, in 1553, James VI., and Charles I. and II. It was formerly governed by 3 bailies, a treasurer, and from 11 to 15 councillors. It is now governed by a chief magistrate, 2 bailies, a treasurer and 17 councillors. It joins with Cupar-Fife, St. Andrews, Kilrenny, East and West Anstruther, and Pittenweem, in returning a member to parliament. Its parliamentary and municipal constituencies in 1865 were 59. Its corporation revenue in 1864-5 was £254 odds. A fair was at one time held here annually in the month of March, but it has fallen into desuetude. About 1810, the magistrates feued to the late Earl of Kellie, the out-teinds and customs, anchorages, and shore dues of Fifeness, Cambo sands, and Kingsbarns, for £5 of yearly rent, which was afterwards reduced to £2. Crail once possessed an extensive common, part of which has been fenced-off. There is a golfing-club in this town, who find scope for their manly game in the adjacent links. Crail, and 'the East Neuk o' Fife,' figure conspicuously in Drummond's "Polemidiia." Population of the burgh in 1841, 1,221; in 1861, 1,211. Houses, 245.

CRAILING, a parish, containing the villages of Crailing and East and West Nisbet, in the centre of the northern half of Roxburghshire. It is bounded on the north by Roxburgh parish; on the east by Eckford; on the south by Jedburgh; and on the west by Ancrum and Roxburgh. Its extreme measurement, from north to south, is 4 miles; and, from east to west, 3½. Its post-town is Jedburgh. The Teviot divides the parish into two nearly equal parts, flowing in beautiful windings from west to east, and impressing upon the district the general feature of a rich basin, deeply stained with green, and ornamented with most of the softer forms of beauty. Oxnam water again divides its southern section into two not very unequal parts, flowing down upon it from the acclivity of the horder-moun-tains, and threading its way through verdure and plantation till it falls into the Teviot. Another streamlet, after sweeping round from the east upon its south-eastern extremity, turns northward on its touching the parish, and forms, till its confluence with the Teviot, the boundary between Crailing and Eckford. Nearly the whole of the land is arable,

rich, and well-cultivated, consisting generally of a light loam; and with the interspersions of 300 acres of plantation, the shadowing on the west of three isolated and considerable hills, and the brilliant movements and opulent dress of the intersecting Teviot, it presents to the lover of landscape pictures delightfully attractive. On the central one of the three hills, that called Piniel-heugh, which has an elevation of about 500 feet, and consists chiefly of whinstone, there rises to the height of 150 feet a fine cylindrical column, which commands a view of nearly all the richly picturesque valley of the Teviot, overlooks some of the most golden scenes on the Tweed, and lifts the eye upward among the grand acclivities and varied outlines of the Cheviots, away north-eastward over all Berwickshire to the German ocean. This column is ascended by a spiral staircase, and was built by the sixth Marquis of Lothian, in commemoration of the battle of Waterloo. It is strongly constructed of whinstone quarried on the spot, and bears this inscription: "To the Duke of Wellington and the British Army, William Ker, VI. Marquis of Lothian, and his tenantry, dedicate this monument, 30th June, 1815." On the summit of Piniel-heugh are also vestiges of two encampments which are conjectured to have belonged to the Romans. Through the west of the parish formerly passed a Roman road or causeway, the course of which can still be traced. The great road through Teviotdale traverses the southern section of Crailing, at about mid-distance between the Teviot and the boundary of the parish, passing all the way along under a delightful shading of beech, ash, and elm. The northern section—all the property of the Marquis of Lothian—is presided over by the mansion of Mount-Teviot, a recent erection in the form of three parallelograms, romantically situated on the banks of the Teviot, at the base of Piniel-heugh. The southern section formerly constituted the estate of Crailing, long the property of the noble family of Cranstoun; but it is now chiefly the property of Paton of Crailing, whose mansion stands on a gentle eminence, overlooking the meanderings and the sylvan-sloping banks of the Oxnham. The real rental of the parish in 1835 was upwards of £7,000; and the total yearly value of its raw produce was estimated in that year at £20,110. Assessed property in 1863-4, £7,994 17s. Crailing is the lowest, warmest, and most fertile portion of Teviotdale, and is remarkably salubrious. Half-a-century ago, an inhabitant attained the age of 106 years, and left behind him several healthy survivors upwards of 80. The village of Crailing was at one time considerable, but has lately been falling into decay. It is situated on the Oxnham, at the point where it is crossed by the Carlisle and Berwick road; and here an elegant bridge was erected in the summer of 1833. Population of the village 74. Population of the parish in 1831, 733; in 1861, 673. Houses, 131.

This parish is in the presbytery of Jedburgh, and synod of Merse and Teviotdale. Patrons, the Crown and the Marquis of Lothian. Stipend, £251 10s. 11d.; glebe, £32 10s. Unappropriated teinds, £1,068 15s. 1d. Schoolmaster's salary, £50, with £22 of other emoluments. Crailing is called, in the records of presbytery, the united parishes of Crailing, Nisbet, and Spital. Crailing and Nisbet were distinct parishes, the former on the south, and the latter on the north of the Teviot; and Spital is said to have been an hospital belonging to the abbey of Auerum. A few tombs overgrown with shrubs and weeds still mark the site of Nisbet church, and point out the present place of sepulture for the inhabitants on the northern side of the Teviot. Even Crailing-

proper, or the southern part of the modern parish, formed, in the reign of David I., two distinct parishes, each having its manor, church, and village. The church is situated on an eminence near the confluence of the Oxnham and the Teviot. It was built about the middle of last century, and contains 300 sittings. There is a Free church: attendance, 150; yearly sum raised in 1865, £170 16s. 10d. Crailing was the birth-place of the famous Samuel Rutherford, and the scene of the ministry of the church-historian Calderwood.

CRAMOND, a parish on the south coast of the frith of Forth, partly in Linlithgowshire, but chiefly in Edinburghshire. It contains the post-office village of Cramond, the port of Granton, and the villages of Wardie and Davidson's Mains. It is bounded by the frith of Forth, and by the parishes of Dalmeny, Kirkliston, Corstorphine, and St. Cuthberts. Its length eastward is 6 miles; and its greatest breadth is 2 miles. Almond Water runs across it, dividing its Linlithgowshire portion from its Edinburghshire portion. The sides of this river are beautifully ornamented, from about Craig-hall to where it falls into the Forth. The surface of the parish toward the north and east is flat, interspersed with gentle eminences. The neighbourhood of Edinburgh affords a ready market for the produce, and furnishes plenty of excellent manure for the farms. The southern and western districts are more hilly and broken. Corstorphine-hill is partly in this parish. To it also are annexed the two small islands of Cramond and Inchmickery; the former of which, forming part of the estate of Barnton, is accessible on foot at low-water. It contains about 19 acres, and affords pasturage for a few sheep. The road from Edinburgh to Queensferry passes through the parish, crossing the Almond at Cramond bridge, $4\frac{1}{2}$ miles west of Edinburgh, and $1\frac{1}{2}$ mile above the mouth of the river. The old bridge of Cramond is a little below this point. It consists of 3 arches, each about 40 feet; the breadth within the walls being only 14 feet. The oyster-beds on the coast of this parish, and around the islands of Cramond and Inchmickery, have been almost destroyed from over-fishing; and the Almond, which once abounded with salmon and trout, is now almost deserted by these fish. The principal manufacture carried on is the forging of iron and working of steel by the Cramond Iron company. Ironstone is found along the coast, and there are numerous seams of coal; but, though pits have been frequently sunk, they have been given up on account of the badness of the coal. There is a mineral spring on the lands of Marchfield, called the well of Spa, containing a sufficient quantity of sulphate of magnesia to render it highly purgative. The principal landowners are Ramsay of Barnton, the Duke of Buccleuch, and seven others. The real rental is about £17,950. The mansions and villas are both numerous and beautiful. The principal are Barnton House, Cramond House, Caroline Park, Muir House, New Saughton, Braehead, Lauriston Castle, and Craigercock,—the last long known to the literary and the legal worlds as the residence of the late Lord Jeffrey. Cramond has given birth to several men who have become eminent by their talents or their virtues. Of these may be mentioned, John, second Lord Balmerinoch, noted for his spirited opposition to Charles I., and for being the best friend of the Covenanters, having spent the greatest part of his fortune in support of that cause;—Sir Thomas Hope of Granton, a celebrated lawyer at the Scottish bar;—Sir George Mackenzie, first Earl of Cromarty, well-known as an able writer, and a great persecutor;—Dr. Cleghorn, professor of anatomy in

the university of Dublin, who may be considered as the founder of the school of medicine in that university. To these may be added John Law of Lauriston, one of the most remarkable characters this or any other country has ever produced. He was born at Lauriston in the year 1671. Disgusted with some treatment he had received in this country, he went over to France, where he was raised, in 1720, to the high rank of comptroller-general of the finances of France; and obtained liberty to erect a national bank, which was attended with the most beneficial effects. He afterwards planned the Mississippi scheme, which proved to France—what the South Sea company afterwards was to Britain—only a hubbub, threatening to involve the nation in ruin. Law ended his chequered life in 1729, in Italy, in a state of indigence, after having astonished all Europe with his abilities, his projects, his success, and his ruin. In the month of May 1543, the expedition under the Earl of Hertford landed at Caroline park in this parish, near the spot now occupied by Granton pier. The village of Cramond is $5\frac{1}{2}$ miles west of Edinburgh, and 1 north of Cramond bridge. It is situated on the eastern side of the Almond, where it discharges itself into the frith of Forth, opposite Dalmeny park. Its inhabitants are mostly employed in the ironworks carried on in the neighbourhood, which were established in 1771. The Almond is navigable for small vessels nearly a quarter of a mile from the Forth, forming a safe and commodious harbour—specified in the records of the Exchequer as a creek belonging to the port of Leith. To this harbour belong 8 or 10 sloops, employed by the Cramond Iron company. This village was an important Roman station. According to Beoce, and Sir John Skene, Constantine IV. was slain in battle here by Kenneth, son of Malcolm I. The bishops of Dunkeld, to whom Robert Avenel transferred one-half of the manor of Cramond, occasionally resided here. Population of the village in 1851, 167. Population of the parish in 1831, 1,984; in 1861, 2,748. Houses, 447. Assessed property in 1860, £23,078.

This parish, formerly a vicarage, is in the presbytery of Edinburgh, and synod of Lothian and Tweeddale. Patron, Ramsay of Barnton. Stipend, £271 2s. 8d.; glebe, £20. Unappropriated tithes, £237 13s. 10d. Schoolmaster's salary now is £45, with about £20 fees. The parish church is a cruciform structure, built in 1656, enlarged in 1811, and containing 958 sittings. There is a Free church at Davidson's Mains; and the yearly sum raised in connection with it in 1865 was £213 3s. 3d. There are five private schools. John Strachan, Esq. of Craigerook, in this parish, about the year 1720, mortified his estate, of above £300 per annum, to certain managers, to be applied by them in relieving the necessities of "poor old men, women, and orphans." The annual produce of this mortification has greatly increased, and the amount is dedicated to the payment of annual sums of about £8 each to a number of poor old men and women in the city of Edinburgh.

CRANE LOCH, a lake about a mile in circumference, lying 800 feet above sea-level, amid a region of moors and marshes, in the parish of Dunsyre, Lanarkshire.

CRANNICH. See WEEB.

CRANSHAW, a parish at the middle of the northern verge of Berwickshire; but consisting of two parts, the larger lying south of the smaller at the average distance of $1\frac{1}{2}$ mile. Its post-town is Dunse. The northern part is bounded on the north and west by East Lothian, and on the east and south by the parish of Longformacus; and is of

nearly a square figure, measuring from angle to angle, both southward and westward, about $2\frac{1}{2}$ miles. On the north and east, round nearly one-half of its limits, this section has for its boundary line Whitadder water. The southern section is bounded on the north and east by Longformacus, on the south by Westruther, and on the west by Lauder and Longformacus; and is of an oblong form, measuring $4\frac{1}{2}$ miles in extreme length, and $2\frac{1}{2}$ in extreme breadth. This section has for its boundary line on the north and partly on the east Dye water; and it is traversed from west to east by Watch water; which, just when leaving it, falls into the Dye. The whole parish is a sea of hills, forming part of the Lammermoor range, and is wild and pastoral. The greatest elevation is Man-slaughter-Law, situated in the northern section, which is traditionally reported to have received its name from its having been the scene of a sanguinary onslaught, and on whose summit is a mound or tumulus apparently commemorative of the event. The climate is cold, sharp, and extremely foggy, yet decidedly salubrious. Near the centre of the northern section stands the castle of Cranshaws, formerly a fastness of a kinsman of the Douglasses; and it seems to have been the original of Sir Walter Scott's pictured Ravenswood Castle, in his graphically tragic story of 'The Bride of Lammermoor.' There are three landowners. The total yearly value of raw produce, exclusive of pastures, was estimated in 1834 at £1,083. Population in 1831, 136; in 1851, 127. Houses, 21. Assessed property in 1865, £1,715.

This parish, formerly a rectory, is in the presbytery of Dunse, and synod of Merse and Teviotdale. Patron, Hon. S. G. Douglas. Stipend, £158 6s. 7d.; glebe, £17 10s. Amount from heritors, £36 19s. 5d. The church stands at the eastern verge of the northern section, in the vale or basin of the Whitadder. It was built in 1739, and contains 120 sittings. Schoolmaster's salary now is £50, with £12 other emoluments. There is a parochial library.

CRANSTON, a parish, containing the post-office village of Cousland, the villages of Preston, Chesterhill, and Sauchanside, and part of the post-office village of Ford, on the eastern border of Edinburghshire. It is bounded by the county of Haddington, and by the parishes of Inveresk, Dalkeith, Newbattle, Borthwick, and Crichton. Its length north-north-westward is 5 miles; and its greatest breadth is 3 miles. The river Tyne—here only a rivulet—intersects it from south to north, meandering its way amid groves and picturesque declivities, and overlooked by the elegant mansions and pleasure-grounds of Oxenford Castle, (Earl of Stair,) and Prestonhall. The surface is undulating, cultivated, well enclosed, and full of beauty; and from some of its higher grounds, commands prospects both rich and extensive. The Earl of Stair is the most extensive landowner; and there are three others. Coal, limestone, and sandstone are abundant. At Crichton-Dean kilns, 24,000 bolls of lime are annually sold; at Cousland quarry, 16,000 holls. A small section of the parish lies apart from the main body, imhosomed in the parish of Crichton. In this section is Cakemuir tower, square in form, four stories in height, and winged with projecting battlements, in which is 'Queen Mary's room,' an apartment said to have been occupied by her when escaping, in male apparel, from the investment of Borthwick Castle by Lord Home. Near Prestonhall stood the old manse, which is said to have been a resting-place for the religious on their way to Melrose. The parish is traversed by the road from Edinburgh to Lauder. Population in 1831, 1,030; in 1861, 1,035. Houses, 204. Assessed property in 1860, £8,022.

This parish, formerly a vicarage, is in the presbytery of Dalkeith, and synod of Lotbrian and Tweeddale. Patron, the Earl of Stair. Stipend, £260 6s. 6d.; glebe, £27. Unappropriated teinds, £260 6s. 6d. The parish church is an elegant Gothic edifice. It was built in 1826, and contains 375 sittings. There is an United Presbyterian church at Ford. Schoolmaster's salary now is £55, with about £21 10s. school fees. There are two private schools.—Cranston, in the 12th century, was written Crane-stone,—signifying the territory or resort of the crane; and it was then divided into the two manors of Upper Cranston and Nether Cranston, afterwards denominated New Cranston and Cranston-Ridel. The latter manor obtained its cognomen from Hngb Ridel, who received it as a grant from Earl Henry, and who bestowed upon the monks of Kelso the church and ecclesiastical property of Cranston, as the purchase of their prayers for the souls of Earl Henry and David I. Cranston-Ridel passed, in the reign of David II., through the Murrays to the Maegills, who were raised to the peerage under the title of Viscounts Oxenford and Lords Maegill of Cousland. Cranston gives title, from their ancient possessions in the parish, to the noble family whose ancestor, Sir William Cranston, was raised to the peerage in 1609.

CRATHES. See BANCHORY-TERNAN.

CRATHIE and BRAEMAR, an extensive, high-land, united parish, containing the post-town of Castleton-Braemar, the post-office station of Crathie, and the village of Auchendryne, in the Mar division of the Kineardine O'Neil district of Aberdeenshire. It forms a westerly projection from the south-west corner of the county, and is bounded on the south by Forfarshire and Perthshire, on the west by Inverness-shire, on the north chiefly by Banffshire and partly by the parish of Strathdon, and on the east by the parish of Glemmieck. Its length westward in a straight line is 28 miles, and its greatest breadth is 15 miles. Its boundary line all round, except on the east, is an alpine water shed, comprising many of the loftiest, most massive, and most sublimely picturesque summits in Scotland. The whole parish is simply the upper part of the basin of the Dee, commencing with the eastern masses of the Cairngorm mountains, continuing throughout with high-land magnificence of glen and crag and alpine pinnacle, and terminating at the eastern boundary in the rich river scenery a mile above Ballater, and in the far-famed Lochnagar. The Braemar district is fully described in the article BRAEMAR. Many of the most notable objects and localities in both districts, such as BENMACDHU, CAIRENTOL, BENABOURD, BRAERACH, LOCHNAGAR, CALLADER, CRAIG-CLUNY, CASTLETON, BALMORAL, ABERGELDIE, and the DEE, are also separately noticed. The Crathie district is now a region of high interest on account of containing the autumnal residences of the Royal Family and the Duchess of Kent; but is sufficiently noticed in that connexion in the articles BALMORAL and ABERGELDIE. The climate, though variable, is pure, bracing, and remarkably healthy; inasmuch that, long before the place was brought into fame by the Royal Family, many citizens of Aberdeen and other strangers were in the habit of spending the summer months in its hamlets and single houses for the benefit of health. The far-famed forest of Mar contributes something to the climate, and a vast deal to the scenery. The aggregate area under wood cannot be less than between 10,000 and 11,000 acres. The prevailing rock of the parish is granite, of various shades, generally very bard, and capable of a fine polish. Glen Callader profusely displays the granite in association with primitive schistose rocks.

and on that account is highly interesting to geologists. The soil of the low grounds is various, but principally of a loamy nature, superincumbent on either hard thirsty gravel or dry yellow clay, and produces good crops. The principal landowners are the Earl of Fife and Farquharson of Invercauld. The parish is traversed throughout by the military road from Blairgowrie to Fort-George. Population in 1831, 1,808; in 1861, 1,574. Houses, 340. Assessed property in 1843, £6,600; in 1860, £7,868.

This parish is in the synod of Aberdeen, and presbytery of Kineardine O'Neil. Patron, the Crown. Stipend, £233 10s. 8d.; glebe, £8. Unappropriated teinds, £172 19s. Schoolmaster's salary, £50, with £8 fees. The parish church was built in 1806, and contains about 900 sittings. There is a place of worship in connexion with the Establishment at Castleton, served by a Missionary of the Royal Bounty. There are a Free church preaching-station in Crathie, and a Free church organized place of worship in Castleton; and the total yearly receipts of the former in 1865 amounted to £142 19s. 2d., and of the latter to £111 10s. 10d. There is also a Roman Catholic chapel in Castleton served by a resident priest. There are eleven schools variously supported by public bodies or by private munificence. There are also a friendly society and a savings' bank. Some fine appliances for the improvement of the population also have been established on the royal properties of Balmoral and Abergeldie.

CRAWFORD, a parish, containing the village of Crawford and the post-town of Leadbills, in the southern extremity of Lanarkshire. It forms a south-easterly projection from the rest of the county, and is bounded on two sides by Dumfriesshire, on a third by Peeblesshire, and on the fourth by the parishes of Culter, Lamington, and Crawfordjohn. Its length northward is about 18 miles, and its greatest breadth is between 14 and 15 miles. It lies wholly among the Southern Highlands, comprises a main portion of the Lowther mountains, some of whose summits rise about 2,450 feet above the level of the sea, and consists throughout of irregular congeries of uplands, partly moorish and partly pastoral, with numerous intersecting vales. A small part of it in the south-east is the upper half of the basin of Evan Water, and all the rest is the gathering basin of the Clyde,—the country in which the head-streams and early affluents of that river all rise and run down to the influx of the Glengonnar. Good general views of it may be got from the commencing part of our article CLYDE, and from the portion of our article CALEDONIAN RAILWAY which describes the course of that work from the immediate vicinity of Abington to within 6 miles of Beattock. The hill pastures amount to upwards of 70,000 acres, and are chiefly occupied by sheep. The total aggregate of woodland does not comprise more than 150 acres. The arable land is various in soil, and amounts to about 1,200 acres. Gold and silver occur in minute quantities; slates are quarried; and lead mines of great value are extensively worked. The total yearly value of raw produce was estimated in 1835 at £18,392; of which £9,200 were for the produce of the sheep pastures, and £6,000 for the produce of the lead mines. The assessed property in 1843 was £12,341 4s. 11d.; in 1860, £13,774. The most extensive landowner is the Earl of Hopetoun; and there are six other large landowners, and five small ones. The only modern mansion is Newtown House, built by the late Lord Newtown. As to antiquities, Robert Heron said in 1792, "This country is well-known to have been within the limits of the Roman province of Valentia. Within this district are yet to be seen the remains of two Roman roads; and the

sites of three camps, supposed to be Roman, but so entirely effaced, that this cannot be with certainty determined. I had an opportunity of surveying the castle of Crawford, now desolate and ruinous, situate close upon the river, opposite to the village of Crawford. Its walls still stand. It is surrounded with trees; and by the structure appears to have been intended not less for protection than for accommodation. Tower-Lindsay, a more ancient edifice, built on the same site, was famous in the days of our renowned Wallace. Being occupied by an English garrison, that hero took it by storm; killing fifty of the garrison in the assault. For security, the farm-houses on Crawford-moor were anciently stone-vaults, and of these some still remain. In these strongholds, the inhabitants lurked, when invaded by the plundering rapacity of the Douglasses from Clydesdale, and the Jardines and Johnstones from Annandale. Various hills within this neighbourhood still retain the name of Watches, having been anciently the stations of scouts, who watched the approach of enemies, and in case of danger, lighted fires to spread the alarm through the country." The north-western portion of the ancient parish of Crawford was held, during the reign of Malcolm IV. by John, step-son of Baldwin de Biggar; from him, it was called Crawford-John, and afterwards formed the parish of that name. The more extensive part, forming the present parish of Crawford, was held by William de Lindsay and his successors for several centuries, from which circumstance it came to be called Crawford-Lindsay. The family of Lindsay was ennobled in 1298, under the title of Earls of Crawford. David de Lindsay, the 4th Earl, having been a supporter of James III., lost this property in 1488, when it was bestowed on Archibald, Earl of Angus, and came to be called Crawford-Douglas. Prior to the Reformation, the monks of Newbattle, by grants from the Lindsays, possessed considerable privileges in the parish of Crawford. The road from Glasgow to Carlisle and the main trunk of the Caledonian railway traverse this parish up the Clyde and down Evan Water; and the latter has stations in it at Abington and Elvanfoot. The village of Crawford stands on the Glasgow and Carlisle road and on the left bank of the Clyde, opposite the influx of Midlock and Camps Waters, 2 miles south-east of Abington and 19 south of Carnwath. It is of considerable antiquity, and consists of freedoms granted to the fours by the neighbouring proprietors. Each freedom consists of 6 acres of croft-land, besides a portion of hill which formerly existed in common, for grazing purposes, but is now divided. The houses are at such a distance from each other that they have the appearance of being dropped on the road. Here is a chain-bridge of 75 feet span over the Clyde. The village has two inns, and previous to the formation of the railway was an important resting-place for travellers. Population of the village in 1851, 236. Population of the parish in 1831, 1,850; in 1861, 1,590. Houses, 311.

This parish, formerly a vicarage, is in the presbytery of Lanark, and synod of Glasgow and Ayr. Patron, the Crown. Stipend £233 13s. 7d.; glebe £12 10s. Unappropriated tithes, £623 9s. 11d. Schoolmaster's salary is £52 10s., with about £16 fees. The parish church is an old building, repaired in 1835, and containing 320 sittings. There is a chapel of ease at Leadhills. There are five private schools. See **CULTS** and **BALCARRES**.

CRAWFORD CASTLE. See **CULTS**.

CRAWFORDJOHN, a parish, containing the village of Crawfordjohn and the post-office village of Abington, in the south-west of the upper ward of Lanarkshire. It is bounded on the south-west by

Dumfries-shire and Ayrshire, and on other sides by the parishes of Douglas, Wiston, Lamington, and Crawford. Its length is between 11 and 12 miles, and its breadth is between 9 and 10. The Clyde runs nearly 3 miles along the eastern boundary; and two chief tributaries come down to it there,—the Glegonnar on the boundary with Crawford, and the Duneaton through the whole length of the interior of Crawfordjohn. The surface of the parish is all hilly and chiefly pastoral, with the exception of small holms and hollows along the course of the streams. But much the highest ground is Caimtable, on the mutual boundary with Douglas and Ayrshire, which has an elevation of 1,650 feet above sea-level; and most of the other hills have a flowing outline, a flattish summit, and a grassy covering. About 3,200 acres are arable, and not more than 50 are under wood. The total yearly value of raw produce, with the exception of some inconsiderable items, was estimated in 1836 at £11,663. The assessed property in 1860 was £8,430. The real rental in 1854 is £6,577. There are five principal landowners; but there is no mansion except one of Sir T. E. Colebrooke. There are limestone, white freestone, and an appearance of coal in this parish; and a lead mine was commenced about 20 years ago at Snar. In other parts of the parish are the marks of former mines, which, report says, were wrought in search of gold. On the top of Netheron hill, opposite the house of Gilkersleugh, are the vestiges of an extensive encampment; and at Mosscastle, Glendorch, and Snar, are vestiges of three ancient castles. The Glasgow and Carlisle road passes up the east margin of the parish; and the Caledonian railway has a station at Abington. The village of Crawfordjohn stands on Duneaton Water, $3\frac{1}{2}$ miles above its influx to the Clyde. Population of the village 137. Population of the parish in 1831, 991; in 1861, 980. Houses, 173.

This parish, formerly a rectory, is in the presbytery of Lanark, and synod of Glasgow and Ayr. Patron, Sir T. E. Colebrooke, Bart. Stipend, £233 13s. 7d.; glebe, £16. Unappropriated tithes, £167 5s. Schoolmaster's salary is £50, with about £26 fees. The parish church was repaired and enlarged in 1817, and contains 310 sittings. There is a Free church preaching-station; and the yearly sum raised in connection with it in 1865 was £26 14s. There are three non-parochial schools.

CRAWFORD-LINDSAY. See **CRAWFORD**.

CRAWFORD PRIORY. See **CULTS**.

CRAWFURDLAND. See **KILMARNOCK (THE)**.

CRAWFURDSDIKE. See **CARTSDIKE** and **GREENOCK**.

CRAWICK (THE), a beautiful stream in the north-west wing of Dumfries-shire. It rises among the Lowther mountains on the confines of Lanarkshire, and dividing the parish of Sanquhar from Kirkconnel, after a south-west course of about 8 miles, falls into the Nith near Sanquhar manse. This river, near its head, receives two streams more copious than itself; viz. the Wanlock from the south-east, and the Spango from the north-west. It winds between pleasant green hills, till the scenery gradually changes to finely-wooded banks and cultivated lawns.

CRAWICK-BRIDGE, a hamlet in the parish of Sanquhar, Dumfries-shire.

CRAWICK-MILL, a village on Crawick Water, in the parish of Sanquhar, $\frac{1}{2}$ a mile north-west of the town of Sanquhar, but within the burgh bounds of that town, Dumfries-shire. Here is an extensive manufactory of carpets and tartans. Population in 1851, 144.

CRAWLEY SPRING. See **GIENCROSS**.

CRAWTON, a fishing village in the parish of Dunnottar, 4 miles south of Stoucheave, Kincardineshire.

CRAY. See BLAIRGOWRIE.

CREACHBEN, a mountain in the Sunart district of the parish of Ardnamurchan, Argyleshire. Its altitude above sea-level is 2,439 feet.

CREANWALL ISLES, two uninhabited islets in the Hebridean parish of Barra.

CREE (THE), a river partly of Ayrshire, but chiefly of Galloway. It rises on the south-east skirts of Carrick, in two head streams; the one issuing from Loch Dornal, and known as the Cree proper; the other rising on the southern skirts of Eldrick hill, receiving an augmentation from Loch Moan, and flowing south, under the name of the Minnock water, to a junction with the Cree proper, about $1\frac{1}{2}$ mile below the High Bridge of Cree. Thus far the streams flow through a bleak moorland country; but at this point the united river begins to move for several miles at a most sluggish pace through rich meadows; and, being at the same time considerably increased in breadth, it forms a long beautiful sheet of water, called the Loch of Cree. It is now skirted for nearly 3 miles on its left bank by an ancient forest of oak, birch, ash, and hazel, called the Wood of Cree. On leaving this, it loses its sluggishness, and for some miles goes merrily along a fertile valley; and afterwards, about a mile above the church of Minigaff, it enters a narrow gorge whose sides are richly clothed with wood. This latter reach is termed the Gill, and forms one of the finest pieces of river-scenery in the south of Scotland. At the village of Minigaff, the Cree receives the Penkill. Below Minigaff it passes Newtown-Stewart, enters an expanded valley, widens, becomes tortuous, forms a long narrow tidal estuary, receives the tribute of the Palnure, and pours its accumulated treasures into the head of Wigton bay. It has altogether a run of about 25 miles, generally in a south-eastward direction; and, while within Galloway, it wholly forms the boundary line between Kirkcudbrightshire and Wigtonshire. It is navigable for vessels of 80 tons to Carty, within 2 miles of Newtown-Stewart; and it has been a chief means of all the agricultural improvements which have been made in this part of the country. It produces excellent fish of different kinds; salmon in considerable quantities. The smelt, or spurling, a very rare fish, is also found in the Cree. It is found in only one other river in Scotland, viz. the Forth at Stirling. The sparlings make their appearance in the Cree only during a few days in March, at which time they are often caught in great quantities. They taste and smell strongly of rushes; but this flavour is to most people agreeable.

CREEBRIDGE, a village on the left bank of the Cree, in the parish of Minigaff, Kirkcudbrightshire. Here is a small tan-work. Population, 262.

CREETOWN, a small post-town and seaport in the parish of Kirkmabreck, Kirkcudbrightshire. It stands at the mouth of the Cree, where the estuary of that river becomes identified with Wigton bay, $7\frac{1}{2}$ miles south-east of Newtown-Stewart; and it has a station on the Castle-Douglas and Portpatrick railway. Its site is between two horns and four bridges, amid a great expanse of very beautiful scenery. It contains a few old houses, but is chiefly a modern place; and it has such a profusion of garden-ground, richly stocked with fruit trees that, in the time of blossom, it looks to be all sitting in an orchard. It has a town-hall, a lock-up house, a subscription library, several schools, and an United Presbyterian church; and in the near neighbourhood is the parish church. Several kinds of manu-

facture have been tried, but either with no success or very little. A sailing vessel or two belong to the town, several other vessels stately frequent it, and some more occasionally visit it; yet they have no better accommodation for loading and unloading than to lie upon the beach. A village of the name of Creth stood here in the year 1300, and was then the rendezvous of an English army. Either that village or a successor to it became nearly extinct in last century, under the name of Ferry-Town of Cree. The present town was founded in 1785, embracing however some houses which still remained of the old village; and it was made a burgh of barony in 1792. It is governed by a haillie and four councillors, who are elected triennially by the resident feuars. Population in 1841, 984; in 1861, 969. Houses, 169.

CREGGAN FERRY, a line of transit across Loch Fyne, at Strachur, Argyleshire.

CREICH. See CRECH.

CRERAN (LOCH), an arm of the sea, deflecting from the lower part of Loch Linnhe opposite the island of Lismore, penetrating the mainland eastward and north-eastward, and separating the district of Appin from the parish of Ardochattan, Argyleshire. Its length is about 10 miles; but its breadth is very variable, and nowhere more than $1\frac{1}{2}$ mile. The main coast line of road crosses it at Shean ferry, about 4 miles from Loch Linnhe. A beautiful well-wooded island, called Eriska, lies in the mouth of Loch Creran, containing pasture and arable land, and forming a pleasant farm. A stream called the Creran, of about 7 or 8 miles in length of course, runs into the head of Loch Creran, and gives the name of Glen-Creran to the mountain-vale which it traverses. It is an excellent salmon stream. A lead and copper mine is worked at Minefield in Glen-Creran, near the head of Loch Creran. It yields ores of argentiferous galena, and of copper, and brown blende. The works comprise a powerful crushing-mill, a complete set of washing apparatus, and house accommodation for miners and workmen.

CRICHTON, a parish, containing the villages of Crichton and Pathhead, part of the village of Faladam, and part of the post-office village of Ford, on the eastern border of Edinburghshire. It is bounded by Haddingtonshire, and by the parishes of Cranston, Fala, Heriot, and Borthwick. Its length northward is $5\frac{1}{2}$ miles; and its greatest breadth is $4\frac{1}{2}$ miles. "The ground in this parish and neighbourhood," says the New Statistical Account, "is remarkable for its undulating nature; hill and dale following each other in almost unbroken succession. It may be remarked that these inequalities have been becoming more strikingly apparent for some years back; in several instances, indeed, new irregularities of the surface are observable, and spaces of whole acres are visibly sinking from their former level, and forming large hollows, which but a short time ago could scarcely be noticed." The parish contains about 3,900 Scots acres, of which five-sixths are well-adapted for tillage, having a rich deep soil, capable of producing heavy crops. The remainder is overgrown with moss, on a wet soft sand of clay bottom. Belts of fir encircle the high grounds, and give a sheltered appearance to the whole district. The head-streams of the Tyne rise in the southern extremity of the parish; and the main one runs slowly along the western boundary, while the others diversify the interior. Limestone of excellent quality is very extensively quarried. Coal exists, but is not worked. William Burn Callander, Esq., is by far the largest landowner; and there are four others. The total yearly value of

raw agricultural produce was estimated in 1839 at £9,360. The assessed property in 1860 was £6,667. At Longfaugh, on a rising-ground which commands an extensive and very beautiful prospect, is a Roman camp, whose vallum is still very distinct. But the chief antiquity is Crichton Castle, a very ancient and magnificent structure, famous in Scottish story, and associated with many notable events. It overhangs a beautiful little glen through which the Tyne slowly meanders. It is a square massive building, with a court in the centre; and appears to be composed of parts built in different ages, yet upon a systematic plan. Sir Walter Scott refers the tower on the north-west angle to the 14th century. The walls of the central part exhibit diamond-shaped facets; and the soffits of the principal staircase are likewise covered with elaborate and curious work, presenting twining cordage and rosettes. Some of the rooms are still in a great measure entire in the general outline. On the forfeiture of William, 3d Lord Crichton, this castle was granted to Sir John Ramsay of Balmain; from whom it afterwards passed, by forfeiture, to Patrick Hepburn, chief of that name, and 3d Lord Hales, ancestor of the celebrated Earl of Bothwell. On the forfeiture of this last nobleman in 1567, Crichton became the property of the Crown, but was granted to Francis Stewart, Earl of Bothwell. It has subsequently passed through the hands of a dozen proprietors, from one of whom, Hepburn of Humbie, who acquired it about the year 1649, it has derived a designation by which it is not unfrequently known among the common people of the district—'Humbie's Wa's.' Sir Walter Scott, in the 4th canto of 'Marmion,' has thus minutely described this relic of feudal ages:

"That castle rises on the steep
Of the green vale of Tyne:
And far beneath, where slow they creep,
From pool to eddy, dark and deep,—
Where alders moist, and willows weep,—
You hear her streams repine.
The towers in different ages rose;
Their various architecture shows
The builder's various hands!
A mighty mass that could oppose,
When deadliest hatred fired its foes,
The vengeful Douglas bands.

Crichton! though now thy miry court
But pens the lazy steer and sheep;
Thy turrets rude, and totter'd keep,
Have been the minstrel's loved resort.
Oft have I traced within thy fort,
Of mouldering shields the mystic sense,
Scutcheons of honour, or pretence,
Quarter'd in old armorial sort,
Remains of rude magnificence.
Nor wholly yet has time defaced
Thy lordly gallery fair;
Nor yet the stony cord unbraced
Whose twisted knots, with roses laced,
Adorn thy ruin'd stair.
Still rises unimpaired below
The court-yard's graceful portico
Above its cornice, row and row
Of fair heavn facets richly show
Their pointed diamond form;
Though there but houseless cattle go
To shield them from the storm;
And, shuddering, still, may we explore,
Where oft whilom were captives pent,
The darkness of thy Massy-More;
Or from thy grass-grown battlement,
May trace, in undulating line,
The sluggish mazes of the Tyne."

The parish of Crichton is traversed along the east by the road from Edinburgh to Lauder, and along the west by that from Ford to the vale of Gala Water. The village of Crichton stands on the latter, a small distance north of Crichton Castle, and 6 miles south-south-east of Dalkeith. The chief seat

of both population and trade, however, is in the northern angle of the parish, at Pathhead and Ford. Population of the village of Crichton in 1851, 122. Population of the parish in 1831, 1,325; in 1861, 1,364. Houses, 204.

This parish, formerly a vicarage, is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patron, Burn Callander, Esq. Stipend, £264 0s. 1d.; glebe, £15. Unappropriated teinds, £43 18s. 6d. Schoolmaster's salary now is £55, with about £30 fees. The church, which is a venerable building in the form of a cross, the western end having been left unfinished, was made collegiate on the 26th of December, 1449, by Sir William Crichton, Chancellor of Scotland, with consent of James Crichton of Frendraught, Knight, his son and heir, for a provost, 8 prebendaries, and 2 singing-boys, out of the rents of Crichton and Locherworth, and a mensal church, belonging to the archbishop of St. Andrews; reserving to the bishop the patronage of the prebends of Vogrie, Arniston, Middleton, and Loeburth. After the Reformation, the church-lands of Crichton, and the parsonage-tithes which belonged of old to the rectory of Crichton, were acquired by Sir Gideon Murray, the last provost of the collegiate church, who obtained a grant converting these collegiate lands into temporal estates. Sir Gideon was treasurer-depute to James VI., and died in 1621, leaving those estates to his son, Patrick, who was created Lord Elbank in 1643. The church has been thoroughly repaired, and seats about 600. There is a Free church at Pathhead; attendance, 200; yearly sum raised in 1865, £49 3s. 0½d. There is an United Presbyterian church in the Cranston section of Ford. There are three private schools.

CRICHUP (THE). See CLOSEBURN.

CRIECH, or CREICH, a parish, containing the villages of Luthrie and Brunton, the former of which has a post-office, in the north of Fifeshire. It reaches within $\frac{2}{3}$ of a mile of the frith of Tay, and is bounded by the parishes of Flisk, Balmerino, Kilmany, Moonzie, Monimail, Dumbog, and Abdie. Its length northward is about 3 miles; and its greatest breadth is nearly 2 miles. The surface is a congeries of hills, of various forms and sizes, none higher than about 550 feet above sea-level, some cultivated to the summit, others partly covered with wood, and others rocky or moorish. Two of the summits, Black Craig and Green Craig, command superb views of the basin of the Tay, away to the Sidlaws and the Grampians. The parish is drained by the head-streams of the Motray, a tributary of the Eden. Whinstone and grey sandstone are quarried. There are eight landowners. The real rental is about £3,760. The total yearly value of raw produce was estimated in 1838 at £10,310. Assessed property in 1866, £3,768 7s. 11d. The estate and castle of Criech, on the north end of this parish, anciently belonged to the Bethunes, of which family was Janet Bethune, the Lady Buccleuch celebrated in the 'Lay of the Last Minstrel,' and Mary Bethune, one of 'the Queen's four Maries.' The Rev. Alexander Henderson, celebrated for his staunch opposition to episcopacy, and who has found an able biographer in the Rev. Dr. Aitou of Dolphinton, was born in this parish in 1583. The Rev. John Sage, the first of the post-revolution bishops, was also a native of this parish. On a little eminence near the church are the vestiges of a Roman camp, with two lines of circumvallation. There is another of the same kind on a higher hill, to the west of the former. Both are about a mile distant from the Tay. Population in 1831, 419; in 1861, 377. Houses, 83.

This parish, anciently a vicarage, is in the presbytery of Cupar-Fife, and synod of Fife. Patron, Grant of Congelton. Stipend, £227 14s. 1d.; glebe, £7. Unappropriated teinds, £18 17s. 5d. Schoolmaster's salary now is £35, with about £18 fees, and some other emoluments. The parish church, which is at Luthrie, was built in 1850-2. It is a handsome structure in the pointed style, and contains 252 sittings. The ruins of the old church near the northern extremity of the parish, indicate considerable antiquity. There is a Free church jointly for Flisk and Criech. There are also a Free church school and a subscription library.

CRIECH, a parish, containing the post-office village of Bonar-Bridge, in the south of Sutherlandshire. It extends south-eastward from Benmore-Assynt to within 3 miles of Dornoch. It is bounded by Dornoch parish on the east; by the Dornoch frith, and the Oikell river, which separate it from Ross-shire, on the south; by Assynt on the west; and by Lairg on the north. Its length is about 30 miles; and its breadth varies from 2 to 10 miles. About one-thirtieth part only is cultivated; the rest being hilly, and covered with moory ground. A vast number of sheep and black cattle are reared on the heathy grounds. The arable soil is light and thin, except at the east end, where there is a deep loam. There are some meadows on the banks of the Oikell, and the rivulets which run into it. The two rivers Shin and Cassley run across the parish, into the Oikell. There are also several lakes abounding with trout, of which the largest are Loch Migdall and Loch Ailsh. There is a great deal of natural wood, principally of oak and birch; and there are several plantations of fir. At Invershin, near the confluence of the Shin with the Oikell, is a fine cataract. The scenery along the strath and hill-flanks of the Oikell is very diversified, and comprises some highly picturesque views, but will be noticed in the article **OIKELL (THE)**. There are two quarries of very hard whinstone. The salmon-fishings of the Shin are very valuable. The real rental of the parish, exclusive of fishings, is about £3,700. There are five landowners. Near the church is an obelisk, 8 feet long and 4 broad, said to have been erected in memory of a Danish chief who was interred here. On the top of the Dun of Criech is a fortification, which is said to have been erected about the beginning of the 12th century by an ancestor of the Earl of Ross. The parish is traversed by four excellent government roads. Population in 1831, 2,562; in 1861, 2,521. Houses, 549. Assessed property in 1843, £4,811 8s. 3d.; in 1860, £5,466.

This parish, formerly a vicarage, is in the presbytery of Dornoch, and synod of Sutherland and Caithness. Patrons, the Crown, and the Duke of Sutherland. Stipend, £208 18s. 9d.; glebe, £5. Unappropriated teinds, £86 17s. 9d. Schoolmaster's salary now is £52 10s., with fees. The parish church stands near the shore of the Dornoch frith, about 3 miles south-east of Bonar-Bridge. It was built in 1790, and contains 500 sittings. There is a mission of the Royal Bounty at Rosehall. There is one Free church at Criech, with an attendance of 800, and another at Rosehall, with an attendance of 420. The yearly sum raised in 1865 in connexion with the former was £200 6s. 6d., and with the latter £95 2s. 7d. There are two Assembly's schools.

CRIEFF, a parish, containing a post-town of the same name, in the central part of Perthshire. A large division of it is separated from the rest by the intervention of the parish of Monzie. This division comprises Corriemucklook and the greater part of Glenalmond. It is highland in character, abounding in wild and romantic scenery, and full of attraction to

sportsmen. It belongs to three proprietors, and yields a real rental of about £2,300. Two other districts, belonging to other proprietors, also lie detached,—Callander, comprising several farms, to the north-west of Monzie House,—and Achalhanzie, consisting of one farm, to the east of Cultoquhey House. But all these districts are attached *quoad sacra* to the parish of Monzie. The main district, containing the town of Crieff, constituting the whole *quoad sacra* parish of Crieff, lies in Strathearn, and is bounded by Foulis-Wester, Monzie, Monivaird, Madderty, and Muthill. Its length south-eastward is about 4 miles; and its breadth is about 3 miles. The Turrit traces the western boundary; the Shaggy traces part of the north-western; the Pow traces the eastern; and the Earn, except for cutting off one farm of about 100 acres, traces all the southern. The surface exhibits the luxuriant loveliness which general fame so justly ascribes to Strathearn. The only eminences in it worth mentioning are Callum Hill and the Knock of Crieff,—the latter elevated about 400 feet above sea-level. About 560 acres are under wood. A gritty sandstone is extensively quarried. Lord Willoughby D'Eresby, Moray of Abercairney, and the proprietors of Ferntower, Broich, Inchbrackie, and Crieff, are principal landowners. The parish is traversed by the Crief Junction railway, which was amalgamated in 1865 with the Caledonian; by the Crief and Methven Junction railway, which was opened in May 1866; and by the Crief and Comrie railway, which was in progress in 1866. Pop. in 1831, 4,786; in 1861, 4,490. Houses, 672. Assessed property in 1866, £16,993 8s. 5d.

This parish, formerly a vicarage, is in the presbytery of Auehterarder, and synod of Perth and Stirling. Patrons, the Trustees of Lady Willoughby D'Eresby. Stipend, £182 14s.; glebe, £10. Schoolmaster's salary, £50. The parish church was built in 1786, and repaired in 1827, and contains 966 sittings. A *quoad sacra* parish church, called the West Church, was built in 1837, contains 1,000 sittings, and is in the patronage of the male communicants. There is a Free church; and the sum raised in connexion with it in 1865 was £590 5s. 4d. There are also two United Presbyterian churches, an Episcopalian chapel, a Baptist chapel, and a Roman Catholic chapel.

The **TOWN OF CRIEFF** stands adjacent to the Earn, on the west road from Perth to Stirling, 6½ miles east of Comrie, 10 miles south of Amulree, 17 west by south of Perth, and 21 north-north-east of Stirling. Its site is the gently elevated skirt of a beautiful, wood-crowned hill, sheltered from the east winds, overlooking a fine reach of Strathearn, and commanding a rich prospect of farms, pleasure-grounds, water, woods, hills, and mountains to the west. Any array or even sprinkling of villas and cottages-ornees, so common in the outskirts of the prosperous second and third class towns of Scotland, is here totally wanting; but great numbers of proprietorial mansions of high character adorn the environs for miles and miles in all directions,—and these environs themselves comprise a rich breadth of luxuriant strath, abundantly relieved by natural diversities, and profusely beautified by every kind of culture, till they grandly rise to the clouds at no great distance in the frontier summits of the Grampians. The view from the Knock of Crieff, and that from the top of Turluun, two miles to the south-west, are remarkably brilliant. Ferntower House in the vicinity entertains properly introduced strangers with a sight of Tippoo Saib's sword, presented to Sir David Baird at Seringapatan. Several walks of moderate length, lead through exquisite close scenery to objects of eminent interest; among

others, one of two miles southward to DRUMMOND CASTLE [see that article], and one of three miles westward to Tomnachastle, a fine wooded eminence, surmounted by an obelisk of Aberdeen granite, 84 feet high, to the memory of Sir David Baird.

The town comprises three main streets, concentrating in a neat square. It has in recent years been greatly increased by the building of new houses on its south and west sides; and it adjoins the village of Bridgend, within the parish of Muthill. It possesses gas-works, a good supply of water, three hotels, two temperance hotels, three large halls for public assemblies, an excellent academy, another large educational institution, an excellent boarding-school for young ladies, and several other schools. A hydropathic establishment, on a site of about 7 acres, on a rising-ground to the north of the academy, was projected in 1866 by the proprietors of the hydropathic establishment at Lochhead, near Aberdeen; the building for it was estimated to cost £16,000; and the water supply for it was to be drawn from a hill-stream fully two miles distant. In one of the streets, on a spot which formerly was near the middle of the town, stands on a base of hewn stone an ancient cross, curiously carved in front, 6½ feet high and nearly 2 feet broad. It was brought hither, perhaps, 100 or 150 years ago, from the neighbouring estate of Strowan; but its previous history is unknown. A little to the west of the town, adjacent to a street to which it has given name, is the Gallow Hill, a rising ground where the sentences of the Seneschals or Stewards of the King's estate of Strathearn were carried into execution. These judges were the only Counts-Palatine in Scotland; they were all of the House of Drummond,—first by individual appointment, and afterwards hereditarily; they held sway from the third decade of the 14th century till the abolition of hereditary jurisdictions in 1748; and many curious traditionary stories are told respecting the severity of their judgments. They held their courts, till 1665, in the open air; and their gibbet always stood ready for work on the Gallow Hill. This dismal implement was derisively known far and near as “the kind gallows of Crieff;” the Highlanders, when passing it, used to touch their bonnets and utter a hearty imprecation; and Sir Walter Scott, who alludes to it in Waverley, seems to think that they called it “the kind gallows,” from thinking it “a sort of native or kindred place of doom to those who suffered there, as in fulfilment of a natural destiny.” In 1665 were built a jail and covered court-house; and here was a secondary place of punishment in dismal keeping with the relentless use of the gallows. It was a small arched dungeon, secured by a strong iron door, and containing a netted iron safe, large enough to hold a man, and covered with a lid of solid metal. The jail came eventually to be a strange compound of cell, courtroom, shop, dwelling-house, and mercantile store, and was adorned outwardly with a spire and clock; but in 1842, it was pulled down, and a new one was erected on its site.

Crieff is the capital of Strathearn, the second town of Perthshire, the key of the great military road northward by Annulree, and the vestibule to the richly scenic series of glens which leads out from Locheam to Monteith, Breadalbane, and the north-western Highlands; and, on all these grounds, is a place of considerable trade and thoroughfare. It is also famous for the salubrity of its climate,—particularly for its sheltered site, its pure air, its excellent water, and its comparative freedom from epidemics; and hence has long been esteemed the Montpelier of Scotland, and is a favourite resort of invalids in quest of health. It has likewise a fair

amount of institutions for promoting the general well-being of its population and frequenters,—a subscription library, a subscription reading-room, a mechanics' institution, charitable institutions, and a horticultural association. Here also are branches of the Commercial Bank, the Central Bank, and the City of Glasgow Bank. The chief manufactures of the town are the making of leather in three tan-works, the making of coarse kind of linens and worsteds, and the weaving of cotton goods for the Glasgow manufacturers. There are about 500 weavers' looms in the parish. There are also on the Turrit, all within three-quarters of a mile, a barley mill, a flour mill, two corn mills, a bark mill, a flax mill, a linseed oil mill, a saw and turning mill, and a woollen factory. For a long time preceding the establishment of the Falkirk trusts in 1770, Crieff was the great Scottish market for the sale of black cattle; and, in consequence of being on the line of the great military road, it is still much frequented by Highland drovers. A weekly market is held every Thursday; and fairs are held on the first Thursday of January and April, the second Thursday of March and July, the third Thursday of February and August, the first and last Thursday of June, and the Thursday in October before Falkirk. Two weekly newspapers, the Strathearn Herald and the Crief Journal, are published on Saturday.

Crieff is a place of considerable antiquity; yet does not appear in record earlier than in a charter of the year 1218. During the civil wars of the 17th century, it was repeatedly the head-quarters of the army of Montrose. It was burnt by the Highlanders in 1715, and narrowly escaped the same fate in 1745. It was erected into a burgh, under the general police and improvement act, in 1862; and is governed by a provost, two other magistrates, and a body of commissioners. A sheriff small debt court is held on the first Saturday of February, May, August, and November. Population in 1841, 3,584; in 1861, 3,903. Houses, 557.

CRIEVE. See TUNDERGARTH.

CRIFFEL, a short isolated range of mountains in the parishes of Newabbey and Kirkbean, Kirkcubrightshire. It overhangs the shore of the estuary of the Nith, 9 miles south of Dumfries, and is a conspicuous background to the landscapes of most of the lower parts of Dumfries-shire. Its highest summit has an altitude of 1,895 feet above sea-level. The Criffel district of granite and syenite exhibits many interesting appearances of apparent fragments of contemporaneous veins and transitions into porphyry. The rocks which rest immediately on the granite, or syenite, are fine granular compact gneiss, slaty syenite, hornblende rock, and compact felspar rock. These rocks alternate with each other, and sometimes even with the syenite or granite; and contemporaneous veins of granite are to be observed shooting from the granite into the adjacent stratified rocks.

CRIMOND, a parish, containing a post-office station of its own name, in the district of Buchan, Aberdeenshire. It lies upon the coast, nearly at an equal distance from Fraserburgh and Peterhead. Its outline is triangular; the base being nearly 3 miles, and the height of the triangle about 5½. It contains 4,600 acres, of which 3,000 are arable; the remainder is occupied by mosses and downs. About a quarter of a mile from high-water-mark, there is a steep hill stretching along the shore, and presenting a face almost perpendicular, and nearly 200 feet in height. From the summit of this ridge, the ground gradually descends into a low flat valley, at the bottom of which is the lake of Strathbeg, partly in this parish, partly in that of Lonmay

covering 550 acres. See STRATHBEG. Near the east end of the Lake of Strathbeg is a small hill called the Castle-hill, where Cumyn, Earl of Buchan, had a castle. About a quarter of a mile south of this eminence, formerly stood the burgh of Rattray, which is said to have enjoyed all the privileges of a royal burgh, except sending members to parliament. See RATTRAY. Quarries of excellent building stone and road-metal are worked. Considerable plantations have recently been made. There are five chief landowners. The real rental is about £4,800. The total yearly value of raw produce was estimated in 1842 at £15,624. Assessed property in 1860, £4,728. Fairs are held at Candlemas, on the 4th Tuesday of August, old style, and on the Tuesday after the 18th day of October. Population in 1831, 879; in 1861, 892. Houses, 170.

This parish, formerly a vicarage, belonging to the chapter of Aberdeen, is in the presbytery of Deer, and synod of Aberdeen. Patron, the Earl of Fife. Stipend, £204 7s. 10d.; glebe, £6. Unappropriated tithes, £58 16s. Schoolmaster's salary now is £42 10s., with fees. The parish church was built in 1812, and contains 500 sittings. There are several small schools for girls. There is also a parochial library.

CRIMOND-MOGATE. See LONMAY.

CRINAMIL. See CREANMULL.

CRINAN CANAL, a work at the head of the peninsula of Kintyre in Argyshire, intended to afford a communication between Loch Gilp and the Western ocean, so as to avoid the difficult and circuitous passage of 70 miles round the Mull of Kintyre. It was undertaken in 1793, by subscription of shareholders, under an act of parliament; and was opened on July 18, 1801. The original estimate by the late Mr. Rennie, was £63,678, and the sum subscribed by the proprietors, and first expended upon it, amounted to upwards of £108,000. This sum, however, proving to be totally insufficient for its completion—chiefly in consequence of the intersection of the line by whinstone rock and peat-moss—subsequent advances were made by Government, at different periods, under the authority of Parliament, to the extent of nearly £75,000; to secure which sum, the canal was transferred on mortgage to the barons of exchequer in Scotland, whose functions have since devolved on the lords of the treasury. The latest advance was made in 1817, and the act which authorized it provided that it should be expended under the superintendence of the commissioners for the Caledonian canal, who, at the desire of the treasury, undertook to continue the management of the canal after the expenditure of the grant; and, under their direction, it has subsequently remained. The canal is about 9 miles long, and contains 15 locks,—13 of which are 96 feet long, 24 feet wide, and about 12 feet deep, and 2 are 108 feet long and 27 wide. It is navigable by vessels of 200 tons burden. Of the locks, 8 are used in ascending from Loch Gilp or Ardrishaig, at the east end; and 7 in descending to Crinan at the west end, where there is a convenient wharf and slip. It is chiefly used by small coasting and fishing-vessels, and by the steam-boats which ply between Inverness and the Clyde, which are made inconveniently narrow to pass through it. Since this canal was first opened to the public, the revenues arising from the tolls have, on an average, been scarcely sufficient to cover the annual expenses of the establishment and of the repairs; and no dividend or interest has ever been paid, either to the original proprietors, or to government. The revenue of it during 1838 was £1,903, and the expenditure £1,671, leaving a surplus of £232. As respects balance, this is a favour-

able statement compared with former years, in which, on an average, the expenditure and receipts were nearly equal. In 1839, the dues received amounted to £1,950, of which £322 arose from steam-boats; the expenditure during the same year was £1,833. The trade during the preceding fifteen years increased, but not above £200 or £300 on an average of several years; so that in the financial view, the Crinan and Caledonian canal were much upon a par. The dilapidated state of the works,—the frequent insufficiency of the depth of water,—the difficult nature of some parts of the navigation,—and the absence of many facilities which might be afforded, were believed to be the principal causes of the canal not being more frequented. But contemporaneously with the great recent repairs on the Caledonian canal, some important repairs were made on the Crinan canal. The gates of some of the locks were removed; the original depth at places where deposits had been made by burns was restored; and an additional depth of nearly two feet in the eastern entrance through the harbour of Ardrishaig was gained, thereby greatly diminishing the detention of vessels arriving from Loch Fyne at low states of the tide. A great reduction also was made on the dues and the harbour rates. The immediate consequence was a great increase in traffic. In the year ending 30th April 1851, the number of passages through the canal was 2,237, comprising 604 by steamers, 1,174 by sailing vessels, and 459 by boats; and the amount of dues was £2,152. In the year ending 30th April 1865, the number of passages was 1,887, comprising 516 by steamers, 939 by sailing vessels, and 432 by boats. The receipts in the year ending 30th April 1865 amounted to £3,450,—in the previous year, to £3,605; and the expenditure in the year ending 30th April 1865 amounted to £3,661,—in the previous year to £4,545.—In the autumn of 1847, the royal family on their way to and from Ardrverkie were conveyed through the Crinan canal.

CRINAN (Lochn), an arm of the sea, which gives name to the above canal, opening from the sound of Jura, and running in a south-east direction into North Knapdale. The scenery at the entrance is wild and beautiful; but greatly inferior to that of the neighbouring loch, on the north, Loch Craignish. There is a post-office station of Crinan.

CROCKETFORD, a post-office village in the parishes of Urr and Kirkpatrick-Dunham, Kirkcubrightshire. It stands 10 miles north-east of Castle-Douglas, on the north road thence to Dumfries. Population in 1851 of the entire village, 239; of the Urr division, 122.

CROE (THE), a short impetuous river of the south-west of Ross-shire. It rises in a number of small streams near the confines of Inverness-shire, and runs along the boundary between the parish of Kintail and the parish of Gleuskiel to the east end of Loch Dnich.

CROFTANRIGH. See DALRY.

CROFTDYKE, a suburb of the town of Ceres, Fifeshire. Population, 129.

CROFTHEAD, a village in the parish of Neilston, Renfrewshire. It stands on the Levern about $\frac{3}{4}$ of a mile south-west of the village of Neilston. A cotton factory was built here so long ago as 1792. The Glasgow and Neilston railway terminates here; and an extension of it will go hence to Kilmarnock. Population, 375.

CROFTS. See CROSSMICHAEL.

CROGO. See BALMACLELLAN.

CROICK, a quoad sacra parish within the quoad civilia parish of Kincardine, Ross-shire. It was constituted by the Court of Teinds in March 1846. The church was built, at the expense of the Govern-

ment, in 1827. It stands in a sequestered valley about 12 miles from Bonar Bridge. Stipend, £120. Population in 1851, 316.

CROLIN. See CROULIN.

CROM-, a prefix in a few Scottish descriptive topographical names, signifying curved or crooked, —as Cromdale, 'the curved or crooked dale.'

CROMAR, a division of the district of Mar, in Aberdeenshire, comprehending the parishes of Coul, Tarland, Migvy, Logie-Coldstone, and part of Tulloch.

CROMARTY, a parish, containing a post-town of the same name, in the north-east of the old county of Cromarty. It is bounded by the Cromarty frith on the north, the Moray frith on the east, and the parishes of Rosemarkie and Resolis on the south and west. Its length is 7 miles, and its breadth from 1 to 4. The burn of Ethie defines the southern boundary, and flows, for the last two miles, through a deep picturesque ravine. "On the east," says the New Statistical Account, "the parish presents to the waves of the Moray frith, an abrupt and lofty wall of precipices; and attains in this direction to its highest elevation of about 470 feet above the level of the sea, at a distance of little more than 500 yards from the shore. On the north and west it sweeps gently towards the frith of Cromarty; but sinks abruptly over the beach into a steep continuous bank, which from the shells occasionally dug up at its base, seems at some early period to have formed the coast-line. There now intervenes, however, in most places a lower terrace between it and the shore. Viewed from the north, the parish presents a bold high outline, rising towards the east, where it marks the junction of the Cromarty and Moray friths, like a huge levathan out of the sea, and descending towards the west, into a long rectilinear ridge, of the character so peculiar to sandstone districts. An irregularly edged stripe of fir wood covers, for about six miles, the upper line; a broad arable belt, mottled with cottages and farm-steadings, occupies the declivity; while the terrace below,—near the eastern extremity of which the town is situated, and which, like the upper belt, is mostly arable,—advances in some places on the sea in the form of low promontories, and is scooped out in others to nearly the base of the escarpment." All the parish, except a few small patches, is divided between two proprietors,—Ross of Cromarty and Munro of Udale. The yearly real rental is about £6,700. Population in 1831, 2,901; in 1861, 2,300. Houses, 458. Assessed property in 1843, £3,846 19s. 9d.; in 1860, £6,335.

This parish is in the presbytery of Chanonry, and synod of Ross. Patron, the Crown. Stipend, £251 12s. 6d.; glebe, £15. Unappropriated tithes, £395 18s. 5d. The parish church is described in the Statistical Account as "a true Presbyterian edifice." A Gaelic church was built and endowed about the year 1785, and the minister of it receives £50 a-year from Government. There is a Free church: attendance, 750; yearly receipts in 1865, £470 10s. 6d. There are five non-parochial schools. There were in the parish, prior to the Reformation, no fewer than six chapels; but a low broken wall and a few green mounds are now their only remains.

The TOWN OF CROMARTY stands 10½ miles north-east of Rosemarkie, 11 south-south-east of Tain, 19½ north-north-east of Inverness, and 21 north-east of Dingwall. Its site is a low alluvial promontory, washed on two sides by the sea. The hill of Cromarty behind it is celebrated for the extent and magnificence of the prospect it commands. All the foreground scenery of land and water is strikingly beautiful; and a grand feature in the background is the stupendous Ben-Wyvis. A large

rocky cavern under the South Sutor, called Macfarquhar's Bed, and a cave which contains a petrifying well, are amongst the neighbouring natural curiosities. Part of the east end of the town has been slowly eaten away by the encroachments of the sea. The beach is excellent for sea-bathers; and there is a beautiful esplanade. The harbour is neat, convenient, and one of the safest in the world, and has been provided with a fine pier. There is a lighthouse on the Point, showing a fixed red light, which is visible seaward at the distance of 9 miles. The town is irregularly built, and displays in its older parts a predominance of the plain Flemish style of architecture. Its ancient cross is still standing. Here are one or two timber yards, several cooperages, a defunct brewery originally the most extensive in the north of Scotland, a quondam hempen cloth manufactory relinquished in 1853, and a depot for pickled salmon and for country produce collected for the southward steamers and trading-vessels. Here also, for half a century past, has been a considerable trade in the curing of pork for the English market, sometimes to the value of from £15,000 to £20,000 a-year. The herring-fishery was once the only staple trade, and even so late as 1824 was so successful as to export 20,000 barrels in one season; but suddenly became almost extinct for a time, and again has considerably revived. Cromarty, too, was formerly the entrepot and depot of all the import and export trade of Ross-shire, but has been almost entirely deprived of this by Invergordon; so that many buildings which were formerly maintained by it are now deserted and ruinous. Vessels of 400 tons lie in the harbour in perfect security; many vessels currently run to it from the adjacent parts of the German ocean for shelter from storms; and the Leith and Luverness steamers make regular weekly calls at it for traffic. A weekly market on Tuesday, and two fairs in the months of April and August figure regularly in the almanacs; but they are entirely nominal. The town has branch offices of the Commercial Bank and the Caledonian Bank. Cromarty was formerly a royal burgh, but was disfranchised by an act of the privy-council of Scotland, in consequence of a petition by Sir John Urquhart, proprietor of the estate of Cromarty. It was re-enfranchised, however, by the Reform Bill; and now it unites with Wick, Dingwall, Dornoch, Kirkwall, and Tain, in returning a member to parliament. It is governed by a provost, 2 bailies, and 7 councillors. Parliamentary and municipal constituency in 1866, 32. The celebrated Macbeth makes his first appearance in history as Thane of Cromarty. Sir William Wallace is traditionally said to have won a battle against the English on Cromarty Hill. The Earls of Ross had an ancient castle on the spot now occupied by Cromarty House. And in our own day the town and neighbourhood of Cromarty have been rendered famous by the writings of Hugh Miller, the ablest geologist of Scotland. Population in 1831, 2,215; in 1861, 1,491. Houses, 293.

CROMARTY FRITH (THE), a magnificent estuary in Ross-shire and Cromartysire. It is the estuary of the Conan. It commences at Dingwall, about 7 miles north of the head of the Beaully frith, and extends about 20 miles north-eastward to a junction with the Moray frith. It has generally a breadth of from 1½ to 2½ miles, but expands for 5 miles to a point about 2 miles above its mouth into a fine bay of 6 miles in breadth, then contracts to fully less than its former average breadth, and passes out to the Moray frith between two bold promontories, two bluff wooded-hills, called the Sutors of Cromarty, looking almost like the sides of a stupen-

dous gateway. Its upper reaches are shallow, very fluviatile, and often turbid, yet at full tide are navigable to the top by vessels of considerable size; and its other reaches, to the extent of 12 or 14 miles, have for the most part a depth of from 15 to 20 fathoms. The expanded reach above the Sutors, for several miles, has fine anchoring-ground, with deep water on both sides almost close to the shore, forming the *Portus salutis* of Buchanan, and what old Stowe calls "an exceeding quiet and safe haven." Almost every part of the frith is strikingly picturesque.

CROMARTYSHIRE, a county in the north of Scotland, consisting of a compact or parent-district in the north end of Ardnacnouch or the Black Isle, and a number of detached districts scattered through Ross-shire. The best portion of the compact district, called the old shire of Cromarty, was in very early times a sheriffdom, hereditary in the family of Urquhart of Cromarty. It comprehended, 1st, The whole parish of Cromarty; 2d, The parish of Kirk-michael, with the exception of the farm of Easter Balblair, and perhaps Kirkmichael—which form a tract of nearly one mile in length, and half-a-mile in breadth, situated on the point of land at Invergordon ferry, and which is considered as a part of Ross-shire; And 3d, The farm of Easter St. Martin's, in the parish of Cullicudden. Thus, the old shire was a tract, whose greatest length was 10 miles, and average breadth $1\frac{3}{4}$. The area, therefore, was only $17\frac{1}{2}$ square miles. To the south of this district, and in the middle of the peninsula, lies the extensive common moor, named the Mullbuy, in which the county of Cromarty has an undoubted share; but, until a division be made, it is impossible to ascertain any boundary in it. Beginning on the shore of the Moray frith, at the burn of Eathie or Craighouse, about 3 miles south of Cromarty, the boundaries of the old shire follow this burn to its source, and then run westward, in the same direction, to the Fortrose road to Invergordon ferry. By this road they run so as to include the White bog, or Glen Urquhart, till we arrive at the turn towards Cromarty, and the burn of Killean or the Black stank, where we meet the Mullbuy moor, in which the boundary is uncertain. On the north of this moor, we may proceed from the junction of the Fort-George and Kessock roads to Invergordon, directly west, between Brea and Easter St. Martin's, to the bridge across the burn of Newhall, between East and West St. Martin's, then northwards, between the farms of Cullicudden and Resolis, until we arrive at the frith of Cromarty, about $1\frac{1}{2}$ mile west of the ferry of Alness. We must again cut off that piece of the ferry point of Invergordon, called Easter Balblair, as being in Ross-shire. It is nearly triangular, extending on the north-west shore about half-a-mile, and on the east about one mile from the point. "How this little patch came to be excluded from the shire of Cromarty," says Sir George Mackenzie in his General Survey of Ross and Cromarty, "I cannot explain. It is alluded to in the old valuation-roll of the county, taken in 1698, in these words;—'Sir Alexander Gordon, in vice of St. Martins, for all the lands he bought of St. Martins, except Wester St. Martins, Kirkmichael, and Easter Balblair, which is in Ross, £894 Os. Od.' From this, I am inclined to think, we should also include the farm of Kirkmichael in Ross, Wester St. Martin and Easter Balblair being confessedly so, and accordingly are so valued in the cess-books. We would thus bring the boundary of this part of Ross-shire down to the mouth of the burn of Newhall. But I believe Kirkmichael is reckoned as part of Cromarty. Had the word 'is,' in the above entry, been 'are,' we might

have supposed it decisive." The whole of the present parent district of Cromartyshire, including its fair proportion of the Mullbuy, is usually stated to have a length of about 16 miles, a breadth of about $6\frac{1}{2}$ or 7 miles, and an area of 39,690 acres. The face of it is pleasant. A long ridge of hills extends through its whole length, having a fine declivity on either side towards the shores of the friths. The higher grounds are mostly covered with heath; but towards the shores the soil is light and early.

The detached districts, scattered through Ross-shire, contain in all about 344 square miles, or 220,586 acres. George, Viscount Tarbat, afterwards Earl of Cromarty, who was secretary of state, and clerk to the parliament of Scotland, in the reign of James II., William and Mary, &c., procured an act, in 1685, annexing several lands to the shire of Cromarty. This act being afterwards repealed, another was procured in 1698, annexing some part of his lands to the shire of Cromarty. By this extraordinary annexation, the shire of Cromarty has now a territory fifteen times its former extent; and its valued rent has been increased threefold. But these annexations comprise so many detached parts, that a description of their boundaries would be exceedingly irksome. They consist of a district surrounding Tarbat House, on the northern shore of the bay of Cromarty; a district running from the south side of Dornoch frith to the Moray frith; two fragments of land on the north of the river Carron; a portion of land running northward from the town of Dingwall and including Castle Leod and part of Ben Wyvis; small portions of land to the north of Loch Fannich and to the north of Loch Nid; a district stretching along the southern shore of Little Lochbroom; the large district of Coigeach between the northern shore of Lochbroom and Sutherland; also the Summer Island in Lochbroom. It has been found necessary, in all bills relating to roads, bridges, &c., to include the whole of these annexations in Ross-shire; although, from their being thus kept in the back-ground, very great inconvenience has been often felt, both by the counties of Ross and of Cromarty.

Cromarty is the only town. Most persons in the county speak Gaelic; but many speak that broad Scottish which is commonly called the Buchan or Aberdeenshire dialect. Freestone, granite, and reddish-coloured porphyry, are almost the only minerals, if we except topazes similar to those of Cairngorm, which are found in the parish of Kincardine. Fisheries are very successfully carried on, and pearls of considerable value are sometimes found at the head of the frith of Cromarty. The district is comprehended in the sheriffdom of Ross-shire; and a sheriff-substitute holds courts every alternate Friday at the town of Cromarty. It now joins with the county of Ross in returning a member to parliament. Constituency in 1865, 48. Cromarty gave the title of Earl to a branch of the Mackenzies of Seaforth. The family came into favour in the reign of James VI., and having been raised to a baronetcy, was, in the reign of James II., elevated to the viscountcy of Tarbat. Lord Tarbat was created Earl of Cromarty in 1702; but the title was attained in the person of George, the 3d Earl, on account of his having engaged in the rebellion of 1745. He was surprised and defeated by the Earl of Sutherland's militia, near Dunrobin castle, on the day before the battle of Culloden; and being sent to London, was tried, and condemned to be executed, but by great intercession his life was spared, though his estate and honours were forfeited. His son entered the Swedish service. He was commonly known as Count-Cromarty, and died in 1789. At present the

peerage is claimed by Sir James S. Mackenzie of Tarbat, Bart. The old valued rent of Cromartyshire was £12,897 Scots; the new valuation for 1863-4 was £8,178 sterling. Population in 1801, 3,052; in 1811, 5,481. In all the more recent returns this shire is included with that of Ross: which see.

CROMBIE, an ancient parish, now annexed to that of Torryburn, in the south-west extremity of Fifeshire. See **TORRYBURN**. The ruins of the church still remain, on a commanding site overlooking the frith of Forth. The estate of Crombie and Ochiltree is the most extensive one in the united parish. There is also a small village of Crombie, containing about 50 inhabitants.

CROMBIE BURN. See **KINGOLDRUM**.

CROMBIE POINT, a small headland, a small harbour, and a village in the Crombie district of the parish of Torryburn, $1\frac{1}{2}$ mile south-east of the village of Torryburn, and $6\frac{1}{2}$ miles west-north-west of North Queensferry, Fifeshire. It is a calling-place of the Granton and Stirling steamers. Population of the village, 54.

CROMDALE, a parish in the Strathspey districts of Inverness-shire and Morayshire. It contains the post town of Grantown. It comprehends the ancient parishes of Cromdale, Inverallan, and Advie. It is bounded by Knockando on the north; by Inverven and Kirkmichael on the east; by Abernethy on the south; and by Dutbil on the west. Its extent is considerable, being in length 17 miles; while, in some places, the breadth is 10 miles. It is intersected through its whole length by the river Spey. The soil is in general dry and thin, with the exception of the haughs on the banks of the Spey, which, in point of fertility, are equal to any in the neighbourhood. A series of sloping hills, richly clothed with forest, forms the north side of the parish; and a range of lofty upland, 7 or 8 miles long, covered with heath, and called Cromdale hill, forms a chief part of the south side. About 5,800 acres in the parish are subject to the plough, about 5,800 are under wood, and about 396 are occupied by lakes. The Earl of Seafield is the sole landowner. Castle-Grant, one of the seats of his lordship, and the only mansion in the parish, is a magnificent old building, situated amid a princely forest, about 2 miles from the north side of the Spey. The Castle of Muckerrach, the earliest possession of the Grants of Rothiemurchus, is a picturesque ruin in the north-west part of the parish. At Lochindorh, a thick wall of mason-work, 20 feet high, surrounds an acre of land within the lake, with strong watch-towers at every corner. The entrance is by a magnificent gate of freestone; and the foundations of houses are to be distinctly traced within the walls. The low grounds on the south banks of the Spey have been rendered famous by a song,—‘The Haughs of Cromdale’—composed, in consequence of a skirmish which took place here, in 1690, betwixt the adherents of King William, under the command of Sir Thomas Livingston, and the supporters of the house of Stuart, under Major-General Buchan, in which the latter were defeated. Population of the Inverness-shire district in 1831, 2,537; in 1851, 3,428. Houses, 647. Population of the whole parish in 1831, 3,234; in 1861, 3,943. Houses, 701. Assessed property in 1860, £8,220.

This parish, formerly a rectory, with the ancient vicarage of Inverallan and Advie united, is in the presbytery of Abernethy and synod of Moray. Patron, the Earl of Seafield. Stipend, £249 4s. 7d.; glebe, £22. Unappropriated tithes, £315 4s. 9d. There are three parochial schools, and the salaries of the masters are £20, £16, and £16. There are also two schools in Grantown, supported by the

Earl of Seafield. The parish church stands on the south side of the Spey, in a situation inconvenient to the great majority of the parishioners. It was built in 1809, and contains 900 sittings. There is a mission church at Grantown, suitable for the old parish of Inverallan, and served by a minister who receives £20 a-year from the Earl of Seafield and £60 from the Royal Bounty. There is a Free church of Cromdale, whose attendance in 1851 was 350, and whose yearly receipts in 1865 amounted to £83 11s. 6d. There is also a small Baptist congregation at Grantown. See **GRANTOWN**.

CROMLIX. See **DUNBLANE**.

CROMWELL PARK, a manufacturing village, on the river Almond, in the parish of Redgorton, Perthshire. Population in 1851, 124. See **REDGORTON**.

CRONA. See **OLDNEY**.

CROOK, a hamlet in the parish of Alves, Morayshire.

CROOK, an inn and post-office station on the northern verge of the parish of Tweedsmuir, Peebles-shire. It stands on the left bank of the Tweed, and on the road from Edinburgh to Dumfries by way of Moffat, 12 miles south-south-east of Biggar. It is a favourite haunt of anglers; the head-streams of the Tweed affording fine trouting in the neighbourhood.

CROOK OF DEVON, a small village in the Kinross-shire section of the parish of Fossaway, on the river Devon, 18 miles east of Stirling, and 6 west of Kinross. It is a burgh-of-harony; and has a fair in May, and another in October. The village takes its name from a sudden turn or crook which the river Devon takes at this place. It has a station on the Devon Valley railway.

CROOK'S POW. See **TROQUEER**.

CROOKSTON CASTLE, an interesting relic of feudal times, crowning the summit of a wooded slope overhanging the southern bank of the White Cart, in Renfrewshire; about 3 miles south-east of Paisley. When Crawford wrote, this building consisted of a large quarter, and two lofty towers, with battlemented wings. Much of it has since crumbled into further ruin; but a portion of the walls, about 50 feet in height, yet remains, and was put into a state of repair in 1847 by John Maxwell. The moat and rampart also may be still distinctly traced. The surrounding scenery is pleasingly broken in its outline, and the view from it is very commanding. John Wilson, the author of the poem ‘Clyde,’ has these lines:—

“Here, raised upon a verdant mount sublime,
To Heaven complaining of the wrongs of time,
And ruthless force of sacrilegious hands,
Crookston, an ancient seat, in ruins stands;
Nor Clyde’s whole course an ampler prospect yields,
Of spacious plains, and well-improven fields;
Which, here, the gently-swelling hills surround,
And, there, the cloud-supporting mountains bound;
Now fields with stately dwellings throng charged,
And populous cities, by their trade enlarged.”

An anonymous poet has much more beautifully apostrophized Crookston castle in the following lines:—

Thou proud memorial of a former age,
Time-ruined Crookston; not in all our land
Romantic with a noble heritage
Of feudal halls, in ruin sternly grand,
More beautiful doth tower or castle stand
Than thou! as oft the lingering traveller tells,
And none more varied sympathies command;
Though where the warrior dwelt, the raven dwells,
With tenderness thy tale the rudest bosom swells.

Along the soul that pleasing sadness steals
Which trembles from a wild harp’s dying fall,
When Fancy’s recreative eye reveals
To him, lone-musing by thy mouldering wall,
What warriors thronged, what joy rang through thy hall,

When royal Mary—yet unstained by crime,
And with love's golden sceptre ruling all—
Made thee her bridal home. There seems to shine
Still o'er thee splendour shed at that high gorgeous time!

How dark a moral shades and chills the heart
When gazing on thy dreary deep decay!

Robert Croc, a gentleman of Norman extraction, held the barony of Crookston in the 12th century, and in 1180 founded here a hospital for infirm men, and a chapel. In the 13th century, this barony was carried by a female heiress into the illustrious family of Stewart, whose regality now comprehended Crookston, Darnley, Neilston, Inchinnan, and Tarbolton. In 1565, Henry, Lord Darnley, eldest son of Matthew, Earl of Lennox, became the husband of Mary, Queen of Scots; and some traditions say that it was at Crookston that ill-fated betrothment was arranged. "Another traditional report," says Mr. Ramsay, in his interesting *Descriptive Notices of Renfrewshire*, "represents Crookston as the place from which Mary beheld the rout of her last army at Langside. This report, and a kindred superstition which still lingers among the peasantry, have been finely embodied in the following lines by Wilson:—

'But dark Langside, from Crookston viewed afar,
Still seems to range in pomp the rebel war.
Here, when the moon rides dimly through the sky,
The peasant sees broad dancing standards fly;
And one bright female form, with sword and crown,
Still grieves to view her banners beaten down.'

The same report having been adopted by Sir Walter Scott, not only in a historical romance, [*The Abbot*,] but even in the sober pages of history itself, [*History of Scotland*, Vol. II. p. 131.] it has attained a currency almost universal. Now Crookston castle lies 4 miles west from the field of battle, and the swelling grounds which intervene prevent the one place from being seen from the other. Apart from this consideration altogether, it is quite incredible that the Queen could be at Crookston castle on the occasion in question. It will be recollected, that she had just escaped from Loch Leven, and fled to Hamilton, from whence she was proceeding, under the protection of an army, towards the castle of Dumbarton as a temporary place of safety, when her troops were confronted and utterly defeated by the Regent Murray, at Langside, which is about 2 miles south of Glasgow, and nearly parallel with that city. The belief that the Queen was at Crookston during the battle necessarily infers the supposition that she had needlessly endangered her personal safety, by proceeding 4 miles in advance of the troops, which were expressly called together for her protection. As has been mentioned in a previous notice, it was from an eminence in the neighbourhood of Cathcart castle, and rather in the rear of her army, that Mary beheld the decisive struggle; and as on its termination she fled to the south, it is evident that on that disastrous day she could not be any nearer to the castle of Crookston. Sir Walter Scott having been informed of the error into which he had been led, he at once admitted it in a note to the revised edition of *'The Abbot*;' expressing, at the same time, his unwillingness to make the fiction give way to the fact, in this particular instance, from a persuasion that the representing Mary as beholding the battle from Crookston tended greatly to increase the interest of the scene in the romance.* Unfortunately,

the error has hitherto been allowed to pass uncorrected in his popular *History of Scotland*. On the whole, having searched in vain for any contemporary authority on the subject, we are constrained to rest satisfied with the only probable form of the tradition, that, namely, which bears in general terms, that the Queen and Darnley passed some days at the castle of Crookston soon after their nuptials. This has been incidentally stated by Sir Walter Scott in his historical work; and akin to it is the statement which he represents the good Lady Fleming as making in the romance, that here the Queen held her first court after the marriage.—On a small mound, close to the east side of the castle, there stood a stately yew, called, 'The Crookston Tree,' the situation of which was such that it for ages formed a conspicuous object for many miles round. Under the ill-omened branches of this funeral tree, Mary and Darnley were accustomed to sit during the brief period of sunshine which they enjoyed. In 1710, Crawford spoke of it as 'a noble monument,' of a large trunk, and 'well spread in its branches;' and so it continued to be within the recollection of some persons yet living. In 1782, the trunk, to the height of 7 feet from the ground, measured 10 feet in circumference. Shortly before that time, the tree was unfortunately pruned, by way of experiment, in consequence of which the growth upon the top was retarded, and the tree itself gradually withered and died. Blasted and leafless, it formed a dismal, and therefore not unmeet, memorial of the unhappy pair with whose melancholy story it was connected. Its extinction was accelerated by relic-collectors, who, 'undisturbed by conscientious qualms,' cut down and carried away large portions. At length, the worthy proprietor, Sir John Maxwell, in order that he might secure his right to what was left, found it necessary to root out the stump, and take it into his own immediate possession. This he did in the year 1817. The greater part of the wood having remained sound, fragments of this celebrated tree are to be found dispersed over the country, some as female ornaments, and others in less appropriate forms, such as snuff-boxes and drinking-cups. Connected with the old tree there is a popular error, which some writers of good repute have followed. In the reign of Mary, there was struck a silver coinage of three sizes, bearing on the reverse the figure of a tree, crowned, with the motto, 'Dat Gloria Vires.' It is generally believed that this tree represents the Crookston yew, and that it was put upon the coin in order to commemorate the meeting of Mary and Darnley under its branches: accordingly, the coin of the largest size goes under the name of 'The Crookston dollar.' Now, to show the groundlessness of this story, it is only necessary to refer to the order of the Privy council for the formation of the coinage in question, dated 22d December, 1565. By that order, it is expressly enjoined, that the coinage shall bear 'on the one side, *one palm-tree, crownit*;' and, in conformity to this, the tree upon the coin is found to resemble a palm and not a yew.—After the death of Darnley, his estates underwent many vicissitudes of proprietorship, till at length they passed to the Duke of Montrose. See LENNOX. In 1757, the castle and lands of Crookston were bought from William, 2d Duke of Montrose, by Sir John Maxwell of Nether-Pollock, in whose family they have since continued.

CROSBY, an ancient chapelry in the parish of Monkton and Prestwick, Ayrshire. There are remains of a place of worship here; the burial-place surrounding which is still used by the inhabitants of Troon. Its situation is very retired and beautiful. See MONKTON AND PRESTWICK.

* The *Abbot*, edition 1831, Vol. II. p. 329. The reader who is unacquainted with the locality will be embarrassed by Sir Walter's having inadvertently said, in the note here referred to, (p. 340.) that he had "taken a liberty in removing the actual field of battle somewhat to the eastward," whereas the removal made by him was to the westward.—*Note by Mr. Ramsay.*

CROSS-. See CORS-.

CROSS, a district with a government church in Lewis. See BARVAS.

CROSS AND BURNES, an united parish in the island of Sanda, Orkney. Cross comprises the south-western limb of the island, and Burness the north-western limb. See the articles SANDA and BURNES. Population of Cross, inclusive of Burness, in 1851, 1,526; in 1861, 1,555. Houses, 284.—This united parish—with which North Ronaldsay was also united until 1831—is in the presbytery of North Isles, and synod of Orkney. Patron, the Earl of Zetland. Stipend, £210; glebe, £19. Unappropriated tithes, £27 0s. 4d. Worship is performed alternately at Cross and at Burness. Schoolmaster's salary, £45, with £10 fees.

CROSS-ARTHURLEE. See ARTHURLEE.

CROSSBASKET. See KILBRIDE (EAST).

CROSSCHAIN HILL. See FALA AND SOUTRA.

CROSSFIELD HILL. See UNST.

CROSSFORD, a village in the parish of Dunfermline, Fifeshire. It stands $1\frac{1}{2}$ mile west of the town of Dunfermline, on the road thence to Alloa. It contains a brewery, and is inhabited chiefly by table-linen weavers. Population, 379.

CROSSFORD, a village with a post-office in the north-east corner of the parish of Lesmahagov, Lanarkshire. It is inhabited chiefly by weavers, miners, and small proprietors. Here is an United Presbyterian church. The population in 1861 was 530.

CROSSGATES, a post-office village, partly in the parish of Dalgety but chiefly in that of Dunfermline, Fifeshire. It stands at the intersection of the road from Edinburgh to Perth with the road from Dunfermline to Kirkcaldy, $3\frac{1}{2}$ miles east-north-east of Dunfermline, 5 north of North Queensferry, and 10 south-south-east of Kinross. It has a station on the Thornton and Dunfermline branch of the North British railway. A United Presbyterian church, containing 531 sittings, was built here in 1802. Population in 1861 of the entire village, 1,115; of the Dunfermline section, 828.

CROSSGATES, a hamlet in the parish of Cults, Fifeshire.

CROSSHILL, a large village, with a post-office, in the parish of Kirkmichael, Ayrshire. It stands on Girvan Water, and on the south road from Maybole to Straiton, 3 miles south-west of Maybole. Its principal part is a long regular street of one-story houses, commencing at the Girvan, running, over most of its length, at right angles with the stream, and then debouching to the north. This street is winged at a little distance with shorter lines of buildings. About four-fifths of the inhabitants are either Irish or of Irish extraction; and a large proportion are handloom weavers. A quoad sacra parish church here was built in 1838, and is in the patronage of Sir James Ferguson, Bart. A Free church also is here; and its contributions in 1865 were £77 12s. 11 $\frac{3}{4}$ d. Here likewise are two schools, a savings' bank, and a friendly society. The appearance of the village is neat and pleasant far above that of most places of its kind. Population in 1861, 1,107.

CROSSHILL, a district in the north-west of the parish of Old Monkland, Lanarkshire. It is bounded on the south by the road from Glasgow to Shotts, on the west by the Barony parish of Glasgow, on the north by the parish of Cadder, and on the east by lines of road from Lushill to Bishop Loch. It includes the villages of Crosshill, Bailieston, Barachnie, Craigh, West Merrystone, and Swinton. A chapel of ease, at the first of these villages, was the earliest of the Extension churches, and was built to

contain about 600 sittings without galleries. Population of the district in 1851, 2,591.

CROSSHILL, a small village in the parish of Cathcart, Renfrewshire.

CROSSHILL, a hamlet, contiguous to the village of Aldhouse, near the centre of the parish of East Kilbride, Lanarkshire.

CROSSHOUSE, a village in the parish of Kilmaurs, Ayrshire. Population, 468.

CROSS-ISLE, one of the Shetland isles, lying at the entrance of Quendal hay, and constituting part of the parish of Dunrossness.

CROSSLIE, a post-office hamlet on the southern verge of the Gala-Water district of Edinburghshire, 4 miles south of Stow.

CROSSLIE, a village in the parish of Houston and Killallan, Renfrewshire. It stands on a small tributary of the Gryfe, $3\frac{1}{2}$ miles south-west of Erskine ferry, and 7 miles north-west of Paisley. Here is a cotton mill which was built in 1793, and employs about 300 hands. Population, 383.

CROSSMICHAEL, a parish, containing the post-office village of Crossmichael, and also the village of Clarebrand, near the centre of Kirkcudbrightshire. It is of a rectangular form, extending in length about 5, and in breadth about 4 miles. Its superficial area is 7,696 acres. It is bounded on the east by the Urr, which divides it from the parishes of Kirkpatrick-Durham and Urr; and on the west by the Dee, which divides it from Balmachie; on the north-west it has Parton parish; and on the south-east Buittle and Kelton. From the two rivers, the ground rises into a fertile ridge, beautifully diversified with gentle eminences. Towards the northern border there is a small part covered with heath. Along the rivers are extensive meadows. There are three lakes in the parish, called Emcrags, Roan, and Smaddy, abounding with pike and perch. The parish is traversed by the Castle-Douglas and Portpatrick railway, and has a station on it. The number of heritors is no fewer than twenty-eight. There are several Pictish monuments of antiquity, and the remains of ancient fortifications. Near the kirk of Crossmichael, at a place called Crofts, is a very beautiful oval camp, occupying the summit of a hill, and commanding the river immediately below. The parish impinges at its south end on the environs of Castle-Douglas, and is traversed by the road thence to New Galloway. The village of Crossmichael stands on that road 4 miles north-west of Castle-Douglas. It is a pleasing little place. Here stood, in ancient times, a cross dedicated to St. Michael, around which the peasantry of the neighbourhood were wont to assemble at Michaelmas to a fair. The cross has disappeared, but the fair is still held. Population of the village in 1861, 326. Population of the parish in 1831, 1,325; in 1861, 1,536. Houses, 279. Assessed property in 1860, £10,725.

This parish, formerly a prebend of Sweetheart abbey, is in the presbytery of Kirkcudbright, and synod of Galloway. Patroness, Mrs. Gauld. Stipend, £269 15s. 10d.; glebe, £24. There are two parochial schools. Salary of the first master now is £45, with about £18 fees; of the second, £30, with £11 11s. 3d. from a fund mortified in 1735, by William Gordon, merchant in Bristol, in consequence of which he is not entitled to school-fees. The parish church was built in 1751, and enlarged in 1822, and contains about 650 sittings. There is an United Presbyterian church on the southern border of the parish adjacent to Castle-Douglas. There are two private schools.

CROSSMILL. See CORSEMILL.

CROSSMYLOOF, a village in the north-west corner of the parish of Cathcart, Renfrewshire. It

stands about $1\frac{1}{2}$ mile south-west of Glasgow, on the road thence to Pollockshaws. It is inhabited chiefly by handloom weavers. Population, 939.

CROSSRAGUEL, a celebrated Cluniac abbey, now in ruins, in the parish of Kirkoswald in Ayrshire, 2 miles south-west of Maybole. It is situated on a broad ridge of ground which rises considerably above sea-level, but on a part of the ridge which sinks somewhat under the level of the immediate environs, and amidst marshy ground. The walls have greatly crumbled down, and it has long been unroofed, but it still presents an imposing front to the passer-by on the highway towards the east, and is one of the most entire ecclesiastical edifices of the period. This abbey was founded by Duncan, Earl of Carrick, about the year 1240. The last abbot was the celebrated Quentin Kennedy, who died in 1564. Grose has given three views of the ruins, and a minute description of them as they existed in 1796,—supplied by a gentleman resident in the neighbourhood,—of which the following is an extract:—"Entering the precincts from the north, where the principal gate stood, you have in front what I shall call the cathedral of the abbey, which stands due east and west; the walls are almost entire, about 164 feet long, and 22 feet high; the architecture in the same Gothic taste which is common in structures of the same period; the stones in general not very large. There is but one door in all this north side and front of the cathedral, which is near the west end of it, considerably ornamented, of a conic shape, 9 feet high, and at the bottom 5 feet broad. The ground along the whole of the building for about twenty paces from the wall, is enclosed with a bad stone dyke, and set apart for a burying-place; but is now seldom used.—Leaving the above-mentioned door, you turn to the west end of the cathedral, and go about thirty paces south-west, which brings you to what is called the Abbot's new house. It is an oblong tower about 30 feet high; below it there is a large arch, through which you pass before you get to the door of the house, which is immediately on the south-east side of the arch; this door leads you up a winding narrow stair built to the tower, and consisting of three flights of steps; the first flight brings you to a room 13 feet by 11, lighted by two windows, 3 feet high, and $2\frac{1}{2}$ feet broad, the one looking to the south, the other to the north. The second flight brings you to another room of exactly the same dimensions and lighted in the same manner. The third brings you to the top of the tower, which is surrounded by a parapet wall. On the top of the staircase is a small building, higher than the tower, which is said to have been a bell-house.—From the west side of this tower, and at right angles with it, there has been a row of buildings, which are now a heap of ruins. At the south end a dovecot of a very singular construction is still extant; the shaft of it is circular, and surrounds a well of excellent water; above 5 feet from the ground it begins to swell, and continues for 6 or 7 feet, then contracts as it rises, till it comes to a point at the top; in shape therefore it resembles a pear, hanging from the tree, or rather an egg standing on the thickest end. You enter it by a small door on the north, about 5 feet from the ground; the floor is of stone, and serves also as a covering to the well beneath; the sides within are full of square holes for pigeons; it is lighted from the top by a small circular opening, and is still perfectly entire, 16 feet perpendicular, and where widest 8 feet in diameter.—Returning to the door of the Abbot's house, you go about ten paces due east, along the inside of a high wall, which joins to the other buildings of the abbey; here has been a gate, now

in ruins; entering by the place where the gate stood, you find yourself on the south-west corner of a court 52 feet square. Round this court there has been a covered way; vestiges of the arches by which the covering was supported are still visible: in the midst of the court was a well which is now filled up with rubbish. Walking along the west side of the court, you find nothing but a strong wall, till you come to the north-west corner, where is a small arched door, the sides of which are much broken down; this door leads into a kind of gallery, 18 feet broad, and 72 feet long; lighted only by three narrow slips to the west.—Turning from this door, you walk 72 feet along the south wall of the cathedral, which forms the north side of the court; in this you find three doors, one almost at the north-west corner of the court, and two near the north-east. These doors are nearly of the same dimensions, 9 feet high, 5 feet broad at the bottom, and semicircular at the top. The door at the north-west corner of the court is almost opposite the door in the front or north wall of the cathedral, which we have already mentioned, and leads into the choir. This forms the west part of the cathedral, is of an oblong figure, 88 feet long, and 25 feet broad within the walls, lighted by five windows, with pointed arches, 10 feet high, and 3 feet broad at the bottom; there is but one small window to the south, at the head of the wall, which has received the light over the covering of the court; on the north wall and near the north-east corner of the choir, is a niche in the wall, semicircular at the top, 8 feet broad, and 4 feet high, where it is probable the image of the patron-saint formerly stood.—The partition which divides the choir from the church, or east part of the cathedral, is pretty entire, and has been furnished with a pair of bells. Precisely in the middle of the partition is a door, with a pointed arch, 9 feet high, and 5 feet broad at the bottom, which leads into the church; this still retains something of its ancient magnificence, is of the same breadth with the choir, but only 76 feet long; the east end of it is semicircular or rather triangular, adorned with three large windows, with pointed arches, 11 feet high and 7 feet broad at the bottom. There are six other windows to the north, and one to the south, of the same shape and height, but only six feet broad. Immediately below the south window, and near the south-east corner of the church, stands the altar, which has been greatly ornamented, but is now defaced; no vestiges of any inscription remain here, or in any part of the abbey. The altar is 7 feet broad, and 4 feet high, square, but fretted at the top a little to the left from it. Below the most southerly of the largest windows, there is a niche in the wall 4 feet high and 2 broad, concave at the top, but almost without ornament. In the bottom are two hollows made in the stone, like the bottom of a plate; this is supposed to have been a private altar, perhaps that of the family of Cassilis. A little to the right of the principal altar is a small door leading to a ruinous stair which we shall have occasion to mention immediately. Still farther to the right of the altar, on the same wall, is a larger door, 7 feet high and 6 broad, with a pointed arch, which leads into a high arched room, with a pillar in the middle, and a stone bench round the sides, 20 feet long and 15 broad, said to be the place where the consistorial court was held. It is lighted only by one window from the east; on the left hand as you enter the room from the church, there is a door which opens on the ruinous stair already mentioned. This stair has led into a room immediately above the consistory, precisely of the same length and breadth, but now level with the floor. From this room you descend a few steps

into the Abbot's hall, which is 20 feet square, lighted by two small windows to the east, and one to the west looking in the court.—Returning from the Abbot's hall into the church, by the same door, we find the door in the south-west corner of the church, the dimensions of which have been already given. Going out at this door we find ourselves in the north-east corner of the court; walking five paces from this we come to a door, semicircular at the top, 8 feet high and 5 broad, which opens into a room arched in the roof immediately below the Abbot's hall, of the same breadth and length, and lighted from the east by two small windows. Proceeding from this room to the south-east corner of the court, you find a ruinous arch, about 24 feet long, 10 feet high, and 9 broad, with a stone bench on both sides; this seems to have led to a number of cells, which are now a heap of ruins. Turning from this arch you walk along the south side of the court, where there is nothing observable but several small doors, leading into ruinous cells; what number of these there may altogether have been, it is now impossible to determine, as the greatest part of them are buried under the rubbish of their own walls. The Abbot's old house, as it is called, is the only building of the abbey we have not hitherto mentioned. This stands immediately to the south-east of the ruinous cells above described. It has been an oblong tower; but the east side, in which the stair has been built, is now fallen down, which prevents its dimensions from being accurately taken; they seem, however, to have been nearly the same with the dimensions of the Abbot's new house."

CROSSROADS, a hamlet in the east of the parish of Slamannan, Stirlingshire.

CROSTON, a hamlet in the parish of Aberlemno, Forfarshire. It takes its name from a monumental stone, sculptured with a cross, still standing in its vicinity.

CROSS-STREET, a village in the near vicinity of the town of Stornoway, Lewis.

CROSS WATER. See **LUCE (THE)**.

CROULIN ISLES, a group of little islands, in the parish of Applecross, Ross-shire. It lies off the north side of the entrance of Loch Carron. The largest, called Croulinmore, is about a mile in length. Population in 1841, 40; in 1851, 40. Houses, 8.

CROVIE, a fishing village, upwards of a mile east of Gardenstown, in the parish of Gamrie, Banffshire. It is supposed to have been built in the early part of the 18th century. Population, 164.

CROY, a parish in the counties of Nairn and Inverness. It contains a post-office station of its own name, subordinate to Ardersier. The present parish comprehends the old parishes of Croy and Dalross, which were united in the latter part of the 15th century. Its extreme length is about 21 miles; but it is so intersected by the parishes of Petty, Daviot, and Inverness, that its breadth cannot be exactly ascertained, yet reaches in some points to 9 miles. The river Nairn runs through the parish for 8 miles, and its strath, with the seats of Kilravock, Holme, and Cantray, forms a scene of true rural amenity and beauty. The remainder including Culloden moor, [see **CELLONEN**.] is indifferently cultivated, and has a bleak and naked appearance. Great improvements, however, have been made on the estates of Cantray, Kilravock, Holme, Culloden, Leys, and Inches by reclaiming and planting. There is a lake in the Nairnshire district called the Loch of the Clans. Leys Castle is a modern princely mansion, on a commanding site. Dalross Castle was built in 1621 by Lord Lovat, and commands one of the grandest views of the kingdom, extending from Mealfourvounie to the Ord of Caithness,

but has been allowed to fall into decay. A wild dismal tract called Clava, about 4 miles south of the parish church, contains a great number of cairns and Druidical circles; and a round gravel mound, on the north-west border of the parish, $\frac{1}{2}$ a mile east of Leys Castle, and within $2\frac{3}{4}$ miles of the town of Inverness, is crowned by one of the most perfect Druidical temples in the kingdom, consisting of two concentric circles of large stones set on edge, two large slabs in the interior, and an immense travelled upright mass of conglomerate a few feet west of the outer circle. Population of the parish in 1831, 1,664; in 1861, 1,873. Houses, 395. Assessed property in 1860, £8,720.

This parish, formerly a rectory with the vicarage of Dalross annexed, is in the presbytery of Nairn, and synod of Moray. Stipend, £239 3s. 10d.; glebe, £11. Unappropriated tithes, £240 4s. 10d. Patrons, the Earl of Cawdor, and Rose of Kilravock. Schoolmaster's salary now is £45. The parish church was built in 1767, and repaired in 1829, and contains 527 sittings. There is a Free church station, whose yearly receipts in 1865 amounted to £90 17s. 4d. There were three chapels in the parish prior to the Reformation; and one of these is supposed to have been built, or to have succeeded one which was built, at the dawning of Christianity on the north of Scotland.

CROY, a station on the Edinburgh and Glasgow railway, and a small village, on the west border of the parish of Cumbernauld, 4 miles west-south-west of Castle-Cary, Dumhartonsire.

CROY, an estate in Stirlingshire. See **KILLEARN**.

CRUACH, a mountain, rising to the elevation of 2,790 feet above sea-level, on the western margin of the parish of Fortingal, Perthshire.

CRUACHAN. See **BEN-CRUACHAN**.

CRUACH-LUSSA, or **CRUACH LUSACH**, that is, 'the Mountain of plants,' a mountain in the parish of North Knapdale, Argyleshire. It stretches over a great extent of country, being about 8 miles broad at the base. It has an elevation of 2,004 feet above the level of the sea. From its summit, in a clear day, a fine view may be obtained of Islay, Jura, and other islands of the Hebrides, and of the island of Rathlin off the Irish coast.

CRUCKIE HEIGHT, a hill in the parish of Parton, Kirkcubrightshire, commanding a rich view of the valleys of the Ken and the Dee.

CRUDEN, a parish, containing a post-office station of its own name, and the villages of Finnyfold, Buller's-Buchan, and Ward, in the district of Buchan, Aberdeenshire. It is bounded by Longside and Peterhead parishes on the north; by the North sea on the east; by Slanes and Logie-Buchan on the south; and by Ellon on the west. It extends about 8 or 9 miles along the coast, and about 7 or 8 miles inland. A vast quantity of peat-moss stretches along the northern boundary. A stream called Cruden Water, comes in from Ellon, runs right through the interior to the sea, dividing the parish into two nearly equal parts, and has altogether from source to embouchure, a run of about 8 miles. A series of stupendous precipices, rocks, and crevices fronts all the northern half of the coast, comprises the far-famed Bullers of Buchan, and is much admired for the awful grandeur of its scenery in storms. See **BULLERS OF BUCHAN**. A place at the southern extremity of that series, adjacent to the village of Ward, admits of vessels unloading coal and lime, and might be formed into a tolerable harbour. The bay of Cruden, with a fine sandy beach, extends thence about 2 miles; and a range of sunken rocks, running far into the sea, and called the Scares of Cruden, flanks the southern extremity of the coast.

Great georgical improvements have been made on the interior by draining. The Earl of Errol is the most extensive landowner; and there are ten others. The real rental is about £11,280. Slanes Castle, the seat of the Earl of Errol, stands on the southern part of the bold coast-line. "We came in the afternoon to Slanes castle," says Dr. Johnson, "built upon the margin of the sea, so that the walls of one of the towers seem only a continuation of a perpendicular rock, the foot of which is beaten by the waves. To walk round the house seemed impracticable. From the windows, the eye wanders over the sea that separates Scotland from Norway; and when the winds beat with violence, must enjoy all the terrific grandeur of the tempestuous ocean. I would not, for my amusement, wish for a storm; but, as storms, whether wished or not, will sometimes happen, I may say, without violation of humanity, that I should willingly look out upon them from Slanes castle." About a mile west of the church are the remains of a druidical temple.—In this parish was fought, in the beginning of the 11th century, a battle between Malcolm II. and Canute, son of Sueno, afterwards king of England and Denmark. The site of the field of battle, about a mile west of Slanes castle, has been ascertained by the discovery of human bones left exposed by the shifting or blowing of the sand. From the circumstance of a chapel having been erected in this neighbourhood dedicated to St. Olaus—the site of which has become invisible, by being covered with sand—the assertion of some writers that a treaty was entered into with the Danes—who were then Christians—by which it was stipulated, that the field of battle should be consecrated by a bishop as a burying-place for the Danes who had fallen in battle, and that a church should be then built and priests appointed in all time coming to say masses for the souls of the slain, seems very probable. Another stipulation it is said was made, by which the Danes agreed to evacuate the Burghhead of Moray, and finally to leave every part of the kingdom, which they accordingly did in the year 1014. A carding and spinning mill was erected about the year 1838 on the estate of Aquaharney. Fairs are held at Cruden on the Tuesday after the 11th of April and the Tuesday after the 4th of June. The parish is traversed by the road from Aberdeen to Peterhead. Population in 1831, 2,120; in 1861, 2,743. Houses, 527. Assessed property in 1860, £11,350.

This parish, formerly a rectory belonging to the chapter of Aberdeen, is in the presbytery of Ellon, and synod of Aberdeen. Patron, the Earl of Errol. Stipend, £204 7s. 9d. Unappropriated teinds, £651 16s. 10d. Schoolmaster's salary, £40, with £18 fees. The parish church was built in 1776, and enlarged about 1838, and is very commodious. There is a Free church; and the sum raised by it in 1865 was £232 7s. 5d. There likewise stands on a rising-ground a neat Episcopalian chapel, in the early English style of architecture, with a spire nearly 90 feet high. Sittings, 472. There is a second parochial school, with salary of £40.

CRYSTON. See CHRYSTON.

CUCHULLIN HILLS. A group of grandly picturesque mountains in the south of Skye. From the valley of Strath to a line drawn between Lochs Brittle and Sligachan, occurs the most conspicuous part of Skye, a confused assemblage of mountains from 2,000 to 3,000 feet high, and distinguishable, by striking differences in outline, feature, and colouring, into two great portions. The southern and greatly

larger portion is a segregation of tame, smooth, conoidal hills, all separate from one another, nearly all streaked with broad sheets of red rubbish, coming down from their summit to their base, and many of them rising abruptly, and without a single feature of relief, from the labyrinth of intervening low ground. The northern portion contrasts strongly, and in almost every particular, with this dismal sea of red, rounded, characterless hills. It has a leaden and murky darkness of colour, which no light appears capable of harmonizing, and which seems, even amid the blaze of a summer's sun, to cover all the region with night, so that when clouds wreath the summits, a deep and horrible abyss appears opened beneath into which the eye vainly endeavours to penetrate; and it consists of peculiarly rugged and serrated ranges and masses of mountain, whose pinnacles and projecting crags darkly indent the sky along the whole line of both summit and profile. The Cuchullin hills form the chief part of this dark group, rise with a rapid and rocky ascent from the shores of the Soa-sound and Loch-Brittle, comprise six obscurely divided summits, extend curvingly toward the north-east, and present an almost continued precipitous face deeply furrowed by torrents. Some lower but equally rocky heights, of similar composition and character, unite with them to enclose the wildly romantic lake of CORRISKIN: which see.

CUCKOLD LE ROI. See LINLITHGOW.

CUDDIES (CREEK OF). See CULLICUDDEN.

CUFFABOUTS, a hamlet in the parish of Carriden, Linlithgowshire. The name is supposed to be a corruption of Causewayfoot. Population in 1851, 16.

CUIL (BAY OF), a small expansion of Loch Linnhe, indenting the coast of Appin, about 5 miles north-east of the Sound of Shuna, Argyleshire. It has a semicircular outline, on a chord of about a mile; and is girt with a fine sandy beach. Large shoals of herrings often frequent it.

CUL-, a prefix in a few Scottish descriptive topographical names, signifying the recess or back-part, as Culross, 'the recess of the peninsula,' Culter, 'the back part of the country.'

CULAG, a rivulet in Assynt, Sutherland, which rises in a series of small lochs to the north-west of Canisp, and runs into the sea at Loch-Inver, about 1½ mile south-west of the village of Inver, where there is an excellent fishing-station, and a small village of the same name.

CULBIN. See DYKE AND MOY.

CULBIRNIE. See BANFF.

CULBLEAN. See GLENMUICK.

CULBOCKIE, a post-office village in the parish of Urquhart and Logie-Wester, Ross-shire. Fairs are held here on the third Wednesday of April, the last Wednesday of July, the last Wednesday of October, and the second Wednesday of December. Population, 107.

CULCABOCK, a village in the parish of Inverness, about a mile south-east of the town of Inverness. It is inhabited chiefly by labourers and masons. Population, 279.

CULCRUICH. See FINTRY.

CULDEES, an estate in the parish of Muthill, about 4 miles from Crieff, Perthshire. It is intersected by the Machany burn, and comprises about 1,629 acres, of which 1,232 are arable and 394 under wood. The mansion or castle stands on a commanding site, in the centre of a policy of about 170 acres.

CULFARGIE. See FARG (THE).

CULFREICH (LOCH), a lake in the north-west of the parish of Assynt, Sutherlandshire.

CULHORN. See STRANRAER.
 CULLALO. See AUCHTERFOOL.
 CULLEAN. See COLZEAN.

CULLEN (THE), a rivulet of Banffshire. It rises among the hills at the southern extremity of the parish of Deskford, and runs about 8 miles through that parish and the parish of Cullen, chiefly in a northerly direction, to the Moray frith at Cullen bay. It is a rapid stream, drives the machinery of several works, has pure clear water well suited for bleaching, and forms a series of fine features, in a deep channel of 20 feet in breadth through the noble grounds of Cullen House.

CULLEN, a parish, containing a post town of the same name, on the coast of Banffshire. It lies between the districts of the Boyno and the Enzie, and consists of Cullen-Proper, with an annexation, *quoad sacra*, from the parish of Rathven. It is bounded on the north—about a mile in extent—by Cullen bay; on the east by Fordyce; on the south by Deskford; and on the west by Rathven. From the sea, southwards, Cullen-Proper, separated from Rathven by Cullen Water, extends, inland, about 2 miles; and from east to west, 1 mile. The annexation from Rathven extends about 3 miles in length and 2 in breadth; and the whole parish is in the form of a quadrant, having straight lines on the north and east, and a segment of a circle on the west and south. The surface commences in a breastwork of bold, grand rocks at the coast,—rises gently thence athwart the ancient barony of Ogilvie, whose modern name of Seafield gives the title of Earl to the noble proprietor of the whole parish, and of many lands besides,—swells aloft near the centre into the fine high conical hill of the Bin of Cullen, to an elevation of 1,076 feet above the level of the sea,—and rolls or undulates everywhere else into a series of finely featured landscapes, richly adorned with enclosures, woods, and farm-culture. Some spots in Seafield command magnificent prospects; and the Bin serves as a far-seen strong-featured landmark to mariners. The soil near the shore, is sand with gravel; elsewhere, a few fields are stroug clay; others, light loam upon a tilly bottom; but in general the soil is a fine rich loam upon a bottom of soft clay. It is well-drained and cultivated, and is suitable to the production of any kind of crop, except perhaps flax, which, though grown here, has always been a precarious crop on the east coast of Scotland. The hills in the adjoining parishes of Rathven and Deskford so steadily attract the clouds and vapours from the sea, that the air of Cullen is dry, pure, and extremely salubrious. Most of the fields have a gentle slope towards the north and east. Previous to 1744, the Bin was covered with heath, but it was then richly planted to the very summit by the Earl of Findlater and Seafield. Cullen House, the lowland seat of the present Earl of Seafield,—an ancient but princely mansion, rich in valuable paintings—stands in the low grounds, behind the town of Cullen, having a beautiful prospect to the south, and a fine view of the Moray frith to the north. It is picturesquely elevated on a perpendicular rock, along the southern base of which, Cullen Water, which animates the beautiful landscape, passes in a hollow rocky channel 64 feet deep beneath the mansion walls. Over this stream an excellent single-arched stone-bridge of 82 feet span, connects the woods, parks, gardens, and pleasure-grounds, with the mansion. The plantations, within the umbrageous recesses of which the mansion is embowered, consist of lofty ash, and a great variety of other valuable wood, beneath the shady foliage of which a good hridle-road, besides many delightful serpentine footwalks, wind, by the easiest acclivi-

ties, to the summit of the Bin, whence the surrounding country may be viewed, to a wide extent. Great additional improvements have been made on these beautiful policies since their first formation; and in particular the gardens and parks have been extended by the literal removal of the old town of Cullen. Not far from Cullen House is the vestige of a building in which Elizabeth, queen of Robert the Bruce, is said to have died. Near the town of Cullen, and overhanging the sea, is an eminence called the Castlehill, where are the remains of an ancient fort—without historical record—whence numerous vitrified stones have been extracted. In this quarter of the parish there are three remarkable masses of flinty rock, lofty and spiring, named 'the Three Kings of Cullen,' so called from a legendary tale that a Danish king, a Norwegian king, and a Scottish king met here to decide their feuds by personal combat. Partly about the mouth of Cullen Water, but chiefly at a moorish place called the Baads of Cullen, a short distance to the west, where are a great many tumuli, a fierce battle, called the Battle of the Baads, is said to have been fought in 960 between an army of Danish invaders and a Scottish army under their king Indulfus, wherein the Danes were routed and the Scottish monarch killed. Manufactures of linen and damask, together with bleaching, were set agoing in the parish, about the middle of last century, and seemed for a time to succeed, but have entirely died out. The herring fishery off the coast has greatly fluctuated, but other fisheries are more steady. The total value of the raw produce of the parish was estimated in 1842 at £3,020 in the rural departments, and £4,523 in the fishery departments. Assessed property in 1860, £2,001. There are on Cullen Water within the parish a meal-mill, a flax-mill, and a saw-mill; and there is an extensive distillery at Tochieneal. Boat-building is always carried on to a considerable extent, and ship-building occasionally. The parish is traversed by the road from Banff to Elgin. Population exclusive of the Rathven annexation, in 1831, 1,593; in 1861, 1,975. Houses, 359.

This parish is in the presbytery of Fordyce, and synod of Aberdeen. Patron, the Earl of Seafield. Stipend, £156 5s. 8d.; glebe, £27. Schoolmaster's salary £52 10s., with fees, and a share of the Dick bequest. The parish church is a cruciform building of great antiquity, situated only 40 yards from Cullen House, and nearly a mile from the present town of Cullen, enlarged about the year 1798, and containing 800 sittings. It was founded as a chapel by King Robert Bruce, and refounded as a collegiate church, for a provost, six prebends, and two singing boys, by the ancestor of the Earl of Findlater, and other parties, in 1543. A chapel of ease, called Seafield church, was built in the Rathven district, under the impulse of the church extension movement, in 1839, and contains 450 sittings. The patron of this also is the Earl of Seafield. There is a Free church in Cullen, whose attendance in 1851 was 500, and whose receipts in 1865 amounted to £198 5s. 11½d. There are also an Independent chapel and four non-parochial schools. The parish of Cullen was disjoined at a remote period from the parish of Fordyce.

The TOWN OF CULLEN stands on the road from Banff to Elgin, near the head of Cullen bay, and adjacent to the east bank of Cullen Water, 6 miles west of Portsoy, 12½ north-east of Fochabers, 14 west by north of Banff, and 58½ north-west by north of Aberdeen. From its situation at the mouth of the Cullen or Culan Water, it was anciently called Inverculan. That part of the town nearest the mouth of the stream, however, is at present

called Fishertown or Seatown. The main part, called the old town, stood more inland; it was meanly built, and of little comparative importance, and about the year 1822 was utterly demolished, in order to make way for the improvements of Cullen House. The new town, by which it was replaced, stands close to the eastern extremity of Fishertown, on ground elevated considerably above it. It is a very neat little town. The houses are good, and the streets laid out on a regular and tasteful plan; only about one-half of which, however, has yet been executed. But the Boundary commissioners observe, that the town "being favourably situated for fishing, and in a well-cultivated district, may be expected to increase." In the middle of Seafield-street, and apparently intended as the centre of the future town, is an open market-place. Upper Castle-street, running south-west, parallel to Seafield-street, and at right angles with the street leading through the market to the hurrying-place, at the north-eastern extremity of the ground-plan of the town, is another principal street. The length of Seafield-street is about 400 yards, and of Upper Castle-street 300 yards. The street running to the hurrying-ground, though as yet built for only half its length, extends to between 500 and 600 yards, according to the plan. The Banff and Elgin road branches off through the two first streets, forming between them, at their south-eastern extremities, an angular area of ornamental ground at the entrance to the town. The principal public building is one erected in 1822, at the cost of £3,000, in the central square, disposed partly in a commodious hotel, and partly in a burgh council-room, a large court-room, and an elegant ball-room. The symmetrical form of the new town—which enjoys a circle of genteel society, consisting of persons of moderate incomes—presents a curious contrast to the contiguous unusually 'awkward squad' of fishermen's houses constituting Fishertown, and which display a total independence even of anything like partial subordination to the 'rank and file' of streets. A natural local disadvantage of Cullen is the want of a plentiful supply of good water. There is but one good spring; and to Cullen Water there is considerable difficulty of access, from the steepness of its banks. The town, however, has been supplied through pipes from the annexed district of Rathven parish. A harbour, in a situation convenient for the town, was formed in 1817; and enlarged in 1834, by the Earl of Seafield, at a cost of upwards of £10,000. It has at the pier's head a depth of 8½ feet at neap tides, and of 12 feet at spring tides, and is one of the best artificial harbours in the Moray frith. Several vessels of from 40 to 100 tons, and a great many fishing-boats, belong to the town. The chief imports are barley for distillation, coals, salt, and staves; and the chief exports are herrings, dried fish, oats, potatoes, and timber. The trade in fish is extensive, large quantities of cod, skate, ling, and haddocks being cured and dried for sale at Montrose, Arbroath, Dundee, and Leith, to which they are carried in the Cullen fishing-boats. The Edinburgh and Inverness steamers call at Cullen. Abundant supplies of peat fuel are obtained from the vicinity of the town and from Deckford parish. Cullen has offices of the Union and the North of Scotland banks, a public news-room, a public library, and a gas-light company. Fairs for cattle and horses are held on the 7th of January, the third Friday of May, the last Tuesday, old style, of September, and the second Friday of November.

Though Cullen is now principally a modern town, it is a burgh of considerable antiquity, as is proved by a charter of James I., dated 6th March, 1455;

ratifying another of Robert I., by which were granted to this burgh the usual liberties, privileges, and advantages. Similar to Banff, it was at one time a constabulary, of which the Earl of Findlater was hereditary constable, by virtue of an ancient right. He ultimately became hereditary chief-magistrate, without either the Scotch title of provost or the English dignity of lord-mayor, but merely under that of preses. Thus far the old constitution of this royal burgh was peculiar. The acting magistracy consisted of 3 bailies, a dean-of-guild, a treasurer, and 21 councillors,—in all 26; the jurisdiction extending over a district of about 2 miles from east to west, and 2 from north to south; but for many years no burgh-courts were held. There have been here no incorporations; every one being entitled to buy, sell, and manufacture as he chose. Burgess-ship was constituted simply by giving a 'Burgess act.' Merchant-councillors were chosen from the sellers of goods, trades' councillors from handicraftsmen. The burgh is now governed by a provost, and 12 councillors. Municipal constituency, in 1865, 44. The territory over which the jurisdiction of the burgh is now exercised extends from the water mouth of Cullen, along the bay to Maiden-paps; thence due south to the Loggie road; thence in straight lines, to the point at which the Deskford and the Banff roads meet; thence to the point at which the Seafield and the Slacks roads meet; and thence to the bridge over Cullen water, the boundary terminating at the water mouth. Though the sheriff-court be within a few miles, and town-courts at the door, the amity and good feeling of the inhabitants are stated in the Old Statistical report, to have been so great, that "hardly such a thing as a lawsuit was heard of among them." The only place of confinement is a lock-up house, erected about 30 years ago for the short imprisonment of petty delinquents, and, in case of need, for the safe custody of prisoners on their way to the county-jail at Banff. This lock-up house consists of 3 cells, vaulted, paved, and lighted, but without fire-place or airing-ground. The property of this burgh was in ancient times considerable; but it was alienated to the Seafield family. There were no alienations during 40 years previous to 1833. The property recently consisted of feu-duties, houses, and money. The value of the feu-duties in 1833, was nearly £411 3s. 4d., and the sums of money amounted to £325 10s., of which £250 were lent to the curator of the Earl of Seafield. The revenue of the burgh, in 1833, was £73 0s. 1½d.; expenditure £42 3s. 11d. There were no debts. In 1864-5 the revenue was only £54. The appointment, during pleasure, of the dean-of-guild, procurator fiscal, treasurer, town-clerk and town-officer, with almost nominal salaries, constitutes all the offices under the patronage of the burgh; but there are two mortifications said to be under the management of the magistrates and kirk-session. These are Lorimer's and Latta's hursaries; the first for educating a student at the university of Aberdeen; the second for educating a hoy at the school of Cullen. The permanent assessments are land-tax, stent, burgh-mail, and cess and land cess. Cullen unites with Elgin, Banff, Kintore, Peterhead, Macduff, and Inverury, in returning a member to parliament. The parliamentary constituency in 1865, was 44. The parliamentary borough-boundaries are not nearly so extensive as the royalty. Population in 1841 of the new town of Cullen, 712; of the Fishertown of Cullen, 711. Population of the municipal burgh in 1841, 2,622; in 1861, 3,543. Houses, 657. Population of the parliamentary burgh in 1861, 1,818. Houses, 331.

CULLICUDDEN, an ancient parish, now forming

the western district of the parish of Resolis, or united parish of Kirkmichael and Cullicudden, in Cromartyshire and Ross-shire. It was a rectory, belonging to the chapter of Ross, and continued to be a separate parish till after the establishment of Presbyterianism in 1688. A fragment of its church is still standing; and a small creek a little to the west of this was formerly famous, though not now, for great abundance of the small delicate fish called the cuddy. Hence the name Cullicudden, which is of Gaelic origin, and signifies the Creek of Cuddies, or Cuddy-Creek. See **KIRKMICHAEL**.

CULLIN HILLS. See **CUCHULLIN HILLS**.

CULLISAID (Loch), a lake, at the east side of Ben Laoghal, in the parish of Tongue, Sutherlandshire.

CULLIVOE, a bay and a post-office station, in North Yell, Shetland. The bay forms a pretty safe open roadstead.

CULLOCHBURN. See **COLLOCHBURN**.

CULLODEN, an estate on the north-east verge of Inverness-shire. It has a station on the Highland railway, $3\frac{1}{4}$ miles east of Inverness. Culloden moor here, where the army of Prince Charles Edward was totally defeated, on the 16th of April, 1746, by the royal troops under the Duke of Cumberland, lies near the Moray frith, from 3 to 6 miles east of Inverness. It comprises an exposed tabular ridge, in the midst of an extensive, chilling, dismal landscape. A considerable part of it has recently been brought under cultivation; but all of it previously was a wild waste, a heathy moor, utterly bleak and dreary. Its general surface was far too smooth and open to be suitable for the tactics of Highland combatants, but served proportionably well for the movements of the royal artillery and cavalry. The part on which Charles Edward drew up his army was about $1\frac{1}{2}$ mile south of Culloden House, near the commencement of the ridge's southerly declination; his right flank was covered by one of the walls of a square stone enclosure, which extended from his position downward to the river Nairn; his left flank was overlooked, rather than covered, at a considerable distance, by the woods of Culloden House; and the part of the moor immediately in his front was somewhat marshy and hollow. A vast assemblage of the graves of the slain is still indicated by two or three grassy mounds, which rise slightly above the circumjacent heath, at the distance of about 200 or 300 yards from some corn land and a cluster of cottages; a carriage road from Inverness to Nairn, made not many years ago, passes through the moor, and touches the principal line of graves at their northern extremity; and a monumental tumulus or obelisk, founded in 1850, marks the spot where the contest was fiercest.

The Highland army was drawn up in three lines. The first, or front line, consisted of the Athole brigade, which had the right, the Camerons, Stewarts of Appin, John Roy Stewart's regiment, Frasers, Mackintoshes, Farquharsons, MacLachlans, and Macleans, united into one regiment; the Macleods, Chisholms, Macdonalds of Clanranald, Keppoch, and Glengarry. The three Macdonald regiments formed the left. Lord George Murray commanded on the right, Lord John Drummond in the centre, and the Duke of Perth on the left of the first line. There had been, a day or two before, a violent contention among the chiefs about precedence of rank. The Macdonalds claimed the right as their due, in support of which claim they stated, that, as a reward for the fidelity of Angus Macdonald, Lord of the Isles, in protecting Robert the Bruce for upwards of nine months in his dominions, that prince, at the battle of Bannockburn, conferred the post of honour,

the right, upon the Macdonalds,—that this post had ever since been enjoyed by them, unless when yielded from courtesy upon particular occasions, as was done to the chief of the Macleans at the battle of Harlaw. Lord George Murray, however, maintained that, under the Marquis of Montrose, the right had been assigned to the Athole men, and he insisted that that post should be now conferred upon them, in the contest with the Duke of Cumberland's army. In this unseasonable demand, Lord George is said to have been supported by Lochiel and his friends. Charles refused to decide a question with the merits of which he was imperfectly acquainted; but, as it was necessary to adjust the difference immediately, he prevailed upon the commanders of the Macdonald regiments to waive their pretensions in the present instance. The Macdonalds in general were far from being satisfied with the complaisance of their commanders, and, as they had occupied the post of honour at Gladsmuir and Falkirk, they considered their deprivation of it, on the present occasion, as ominous. The Duke of Perth, while he stood at the head of the Glengarry regiment, hearing the murmurs of the Macdonalds, said, that if they behaved with their usual valour, they would make a right of the left, and that he would change his name to Macdonald; but these proud clansmen lent a deaf ear to him.—The second line of the Highland army consisted of the Gordons under Lord Lewis Gordon, formed in column on the right, the French Royal Scots, the Irish picquets or brigade, Lord Kilmarnock's foot guards, Lord John Drummond's regiment, and Glenbucket's regiment in column on the left, flanked on the right by Fitz-James's dragoons, and Lord Elcho's horse-guards, and on the left by the Perth squadron, under Lords Strathallan and Pitsligo, and the Prince's holy guards under Lord Balmerino. General Stapleton had the command of this line.—The third line, or reserve, consisted of the Duke of Perth's and Lord Ogilvy's regiments under the last-mentioned nobleman. The prince himself, surrounded by a troop of Fitz-James's horse, took his station on a very small eminence behind the centre of the first line, from which he had a complete view of the whole field of battle. The extremities of the front line and the centre were each protected by four pieces of cannon.

The English army continued steadily to advance till within a mile of the position occupied by the Highland army, when the Duke of Cumberland ordered a halt, and, after reconnoitering the position of the Highlanders, again formed his army for battle in three lines, and in the following order:—The first line consisted of six regiments, viz., the Royals, (the 1st,) Cholmondeley's, (the 34th,) Price's, (the 14th,) the Scots Fusileers, (the 21st,) Monro's, (the 37th,) and Barrel's (the 4th). The Earl of Albemarle had the command of this line. In the intermediate spaces between each of these regiments were placed two pieces of cannon, making ten in whole. The second line, which consisted of five regiments, comprised those of Pulteney, (the 13th,) Bligh, (the 20th,) Sempil, (the 25th,) Ligonier, (the 48th,) and Wolfe's, (the 8th,) and was under the command of General Huske. Three pieces of cannon were placed between the exterior regiments of this line and those next them. The third line, or corps de reserve, under Brigadier Mordaunt, consisted of four regiments, viz. Bataillon's, (the 62d,) Howard's, (the 3d,) Fleming's, (the 36th,) and Blakeney's, (the 27th,) flanked by Kingston's dragoons (the 3d). The order in which the regiments of the different lines are enumerated, is that in which they stood from right to left. The flanks of the front line were

protected on the left by Kerr's dragoons, (the 11th,) consisting of three squadrons, commanded by Lord Ancrum, and on the right by Cobham's dragoons, (the 10th,) consisting also of three squadrons, under General Blande, with the additional security of a morass, extending towards the sea; but thinking himself quite safe on the right, the Duke afterwards ordered these last to the left, to aid in an intended attack upon the right flank of the Higblanders. The Argyle men, with the exception of 140, who were upon the left of the reserve, were left in charge of the baggage.

The dispositions of both armies are considered to have been well-arranged; but both were better calculated for defence than for attack. The arrangement of the English army is generally considered to have been superior to that of the Highlanders; as, from the regiments in the second and third lines being placed directly behind the vacant spaces between the regiments in the lines respectively before them, the Duke of Cumberland, in the event of one regiment in the front line being broken, could immediately bring up two to supply its place. But this opinion is questionable, as the Highlanders had a column on the flanks of the second line, which might have been used either for extension or echelon movement towards any point to the centre, to support either the first or second line. In the dispositions described, and about the distance of a mile from each other, did the two armies stand for some time gazing at one another, each expecting that the other would advance and give battle. Whatever may have been the feelings of Prince Charles on this occasion, those of the Duke of Cumberland appear to have been far from enviable. The thoughts of Preston and Falkirk could not fail to excite in him the most direful apprehensions for the result of a combat affecting the very existence of his father's crown; and that he placed but a doubtful reliance upon his troops, is evident from a speech which he now made to his army. He began by informing them, that they were about to fight in defence of their King, their religion, their liberties, and property, and that if they only stood firm he had no doubt he would lead them on to certain victory; but as he would much rather, he said, be at the head of one thousand brave and resolute men than of ten thousand if mixed with cowards, he added, that if there were any amongst them who, through timidity, were diffident of their courage, or others who, from conscience or inclination, felt a repugnance to perform their duty, he requested them to retire immediately, and be promised them his free pardon for doing so, as by remaining they might dispirit or disorder the other troops, and bring dishonour and disgrace on the army under his command.

As the Highlanders remained in their position, the Duke of Cumberland again put his army in marching order, and, after it had advanced, with fixed bayonets, within half-a-mile of the front line of the Highlanders, it again formed as before. In this last movement the English army had to pass a piece of hollow ground, which was so soft and swampy, that the horses which drew the cannon sunk; and some of the soldiers, after slinging their firelocks and unyoking the horses, had to drag the cannon across the bog. As by this last movement the army advanced beyond the morass which protected the right flank, the Duke immediately ordered up Kingston's horse from the reserve, and a small squadron of Cobham's dragoons, which had been patrolling to cover it; and to extend his line, and prevent his being outflanked on the right, he also at the same time ordered up Pulteney's regiment, (the 13th,) from the second line to the right of the

royals; and Fleming's, (the 36th,) Howard's, (the 3d,) and Batareau's, (the 62d,) to the right of Bligh's, (the 20th,) in the second line, leaving Blakeney's, (the 27th,) as a reserve. During an interval of about half-an-hour which elapsed before the action commenced, some manœuvring took place in attempts by both armies to outflank each other. While these manœuvres were making, a heavy shower of sleet came on, which, though discouraging to the Duke's army, from the recollection of the untoward occurrence at Falkirk, was not considered very dangerous, as they had now the wind in their backs. To encourage his men, the Duke of Cumberland rode along the lines addressing himself hurriedly to every regiment as he passed. He exhorted his men to rely chiefly upon their bayonets, and to allow the Highlanders to mingle with them that they might make them "know the men they had to deal with." After the changes mentioned had been executed, His Royal Highness took his station behind the royals, between the first and second line, and almost in front of the left of Howard's regiment, waiting for the expected attack. Meanwhile, a singular occurrence took place, characteristic of the self-devotion which the Highlanders were ready on all occasions to manifest towards the Prince and his cause. Conceiving that by assassinating the Duke of Cumberland he would confer an essential service to the Prince, a Highlander resolved at the certain sacrifice of his own life to make the attempt. With this intention he entered the English lines as a deserter, and being granted quarter, was allowed to go through the ranks. He wandered about with apparent indifference, eyeing the different officers as he passed along, and it was not long till an opportunity occurred, as he conceived, for executing his fell purpose. The Duke having ordered Lord Bury, one of his aides-de-camp, to reconnoitre, His Lordship crossed the path of the Highlander, who, mistaking him, from his dress, for the Duke, (the regimentals of both being similar,) instantly seized a musket which lay on the ground, and discharged it at His Lordship. Fortunately he missed his aim, and a soldier who was standing by immediately shot him dead upon the spot.

In expectation of a battle the previous day, Charles had animated his troops by an appeal to their feelings; and on the present occasion he rode from rank to rank encouraging his men, and exhorting them to act as they had done at Prestonpans and at Falkirk. The advance of Lord Bury, who went forward within a hundred yards of the insurgents to reconnoitre, appears to have been considered by the Highlanders as the proper occasion for beginning the battle. Taking off their honnets, the Higblanders set up a loud shout, which being answered by the royal troops with an huzza, the Highlanders about one o'clock commenced a cannonade on the right, which was followed by the cannon on the left; but the fire from the last, owing to the want of cannoneers, was after the first round discontinued. The first volley from the right seemed to create some confusion on the left of the royal army, but so badly were the cannon served and pointed, that though the cannonade was continued upwards of half-an-hour, only one man in Bligh's regiment, who had a leg carried off by a cannon-ball, received any injury. After the Highlanders had continued firing for a short time, Colonel Belford, who directed the cannon of the Duke's army, opened a fire from the cannon in the front line, which was at first chiefly aimed at the horse, probably either because they, from their conspicuous situation, were a better mark than the infantry, or because it was supposed that Charles was among them. Such was

the accuracy of the aim taken by the royal artillery, that several balls entered the ground among the horses' legs, and bespattered the prince with the mud which they raised; and one of them struck the horse on which he rode two inches above the knee. The animal became so unmanageable, that Charles was obliged to change him for another. One of his servants, who stood behind with a led horse in his hand, was killed on the spot. Observing that the wall on the right flank of the Highland army prevented him from attacking it on that point, the Duke ordered Colonel Belford to continue the cannonade, with the view of provoking the Highlanders and inducing them to advance to the attack. These, on the other hand, endeavoured to draw the royal army forward by sending down several parties by way of defiance. Some of these approached three several times within a hundred yards of the right of the royal army, firing their pistols and brandishing their swords; but with the exception of the small squadron of horse on the right, which advanced a little, the line remained immovable. Meanwhile, Lord George Murray, observing that a squadron of the English dragoons and a party of foot, consisting of two companies of the Argyle-shiremen, and one of Lord Loudon's Highlanders, had detached themselves from the left of the royal army, and were marching down towards the river Nairn, and conceiving that it was their intention to flank the Highlanders, or to come upon their rear when engaged in front, he directed Gordon of Avochy to advance with his battalion, and prevent the foot from entering the enclosure; but before this battalion could reach them, they broke into the enclosure, and throwing down part of the east wall, and afterwards a piece of the west wall in the rear of the second line, made a free passage for the dragoons, who formed in the rear of the Prince's army. Upon this, Lord George ordered the guards and Fitz-James's horse to form opposite to the dragoons to keep them in check. Each party stood upon the opposite sides of a ravine, the ascent to which was so steep, that neither could venture across in presence of the other with safety. The foot remained within the enclosure, and Avochy's battalion was ordered to watch their motions. This movement took place about the time the Highlanders were moving forward to the attack.

It was now high time for the Highlanders to come to a close engagement. Lord George had sent Colonel Kerr to the Prince to know if he should begin the attack, which the Prince accordingly ordered; but His Lordship, for some reason or other, delayed advancing. It is probable he expected that the Duke would come forward, and that by doing so, and retaining the wall and a small farm-house on his right, he would not run the risk of being flanked. Perhaps he waited for the advance of the left wing, which, being not so far forward as the right, was directed to begin the attack, and orders had been sent to the Duke of Perth to that effect; but the left remained motionless. Anxious for the attack, Charles sent an order by an aide-de-camp to Lord George Murray to advance, but His Lordship never received it, as the bearer was killed by a cannon-ball while on his way to the right. He sent a message about the same time to Lochiel, desiring him to urge upon Lord George the necessity of an immediate attack. Galled beyond endurance by the fire of the English, which carried destruction among the clans, the Highlanders became quite clamorous, and called aloud to be led forward without further delay. Unable any longer to restrain their impatience, Lord George had just resolved upon an immediate advance; but before he had time to issue

the order along the line, the Mackintoshes, with a heroism worthy of that brave clan, rushed forward enveloped in the smoke of the enemy's cannon. The fire of the centre field-pieces, and a discharge of musquetry from the Scotch Fusiliers, forced them to incline a little to the right; but all the regiments to their right, led on by Lord George Murray in person, and the united regiment of the MacLauchlans and the Macleans on their left, coming down close after them, the whole moved forward together at a pretty quick pace. When within pistol-shot of the English line, they received a murderous fire, not only in front from some field-pieces, which for the first time were now loaded with grape-shot, but in flank from a side-battery supported by the Campbells and Lord Loudon's Highlanders. Whole ranks were literally swept away by the terrible fire of the English. Yet, notwithstanding the dreadful carnage in their ranks, the Highlanders continued to advance, and, after giving their fire close to the English line, which, from the density of the smoke, was scarcely perceptible even within pistol-shot, the right wing, consisting of the Athole Highlanders and the Camerons, rushed in sword in hand, and broke through Barvel's and Monro's regiments, which stood on the left of the first line. These regiments bravely defended themselves with their spontoons and bayonets, but such was the impetuosity of the onset that they would entirely have been cut to pieces had they not been immediately supported by two regiments from the second line, on the approach of which they retired behind the regiments on their right, after sustaining a loss in killed and wounded of upwards of two hundred men. After breaking through these two regiments, the Highlanders, passing by the two field-pieces which had annoyed them in front, hurried forward to attack the left of the second line. They were met by a tremendous fire of grape-shot from the three field-pieces on the left of the second line, and by a discharge of musquetry from Bligh's and Sempill's regiments, which carried havoc through their ranks, and made them at first recoil; but maddened by despair, and utterly regardless of their lives, they rushed upon an enemy whom they felt but could not see, amid the cloud of smoke in which the assailants were buried. The same kind of charge was made by the Stewarts of Appin, the Frasers, Mackintoshes, and the other centre regiments upon the regiments in their front, which they drove back upon the second line, which they also attempted to break; but finding themselves unable they gave up the contest, but not until numbers had been cut down at the mouths of the cannon.

While advancing towards the second line, Lord George Murray, in attempting to dismount from his horse, which had become unmanageable, was thrown; but, recovering himself, he ran to the rear and brought up two or three regiments from the second line to support the first; but although they gave their fire, nothing could be done,—all was lost. Unable to break the second line, and being greatly cut up by the fire of Wolfe's regiment, and by Cobham's and Kerr's dragoons, who had formed *en potence* on their right flank, the right wing also gave up the contest, and turning about, cut their way back, sword in hand, through those who had advanced and formed on the ground they had passed over in charging to their front. In consequence of the unwillingness of the left to advance first as directed, Lord George Murray had sent the order to attack from right to left; but, hurried by the impetuosity of the Mackintoshes, the right and centre did not wait till the order, which required some minutes in the delivery, had been communicated

along the line. Thus the right and centre had the start considerably, and quickening their pace as they went along, had closed with the front line of the English army before the left had got half way over the ground that separated the two armies. The difference between the right and centre and the left was rendered still more considerable from the circumstance, as noted by an eye-witness, that the two armies were not exactly parallel to one another, the right of the Prince's army being nearer the Duke's army than the left. Nothing could be more unfortunate for the Prince than this isolated attack, as it was only by a general shock of the whole of the English line that he had any chance of a victory. The clan regiments on the left of the line, apprehensive that they would be flanked by Pulteney's regiment and the horse which had been brought up from the corps de reserve, did not advance sword in hand. After receiving the fire of the regiments opposite to them, they answered it by a general discharge, and drew their swords for the attack; but observing that the right and centre had given way, they turned their hacks and fled without striking a blow. Stung to the quick by the misconduct of the Macdonalds, the brave Keppoch seeing himself abandoned by his clan, advanced with his drawn sword in one hand, and his pistol in the other; but he had not proceeded far, when he was brought down to the ground by a musket-shot. He was followed by Donald Roy Macdonald, formerly a lieutenant in his own regiment, and now a captain in Clanranald's regiment, who, on his falling, entreated him not to throw away his life, assuring him that his wound was not mortal, and that he might easily join his regiment in the retreat; but Keppoch refused to listen to the solicitations of his clansman, and, after recommending him to take care of himself, the wounded chief received another shot, and fell to rise no more.

Fortunately for the Highlanders the English army did not follow up the advantages it had gained by an immediate pursuit. Kingston's horse at first followed the Macdonalds, some of whom were almost surrounded by them, but the horse were kept in check by the French picquets, who brought them off. The dragoons on the left of the English line were in like manner kept at bay by Ogilvy's regiment, which faced about upon them several times. After these ineffectual attempts, the English cavalry on the right and left met in the centre, and the front line having dressed its ranks, orders were issued for the whole to advance in pursuit of the Highlanders. Charles, who, from the small eminence on which he stood, had observed with the deepest concern the defeat and flight of the clan regiments, was about proceeding forward to rally them contrary to the earnest entreaties of Sir Thomas Sheridau and others, who assured him that he would not succeed. All their expostulations would, it is said, have been vain, had not General O'Sullivan laid hold of the bridle of Charles's horse, and led him off the field. It was, indeed, full time to retire, as the whole army was now in full retreat, and was followed by the whole of Cumberland's forces. To protect the Prince, and secure his retreat, most of his horse assembled about his person; but there was little danger, as the victors advanced very leisurely, and confined themselves to cutting down some defenceless stragglers who fell in their way. After leaving the field, Charles put himself at the head of the right wing, which retired in such order, that the cavalry sent to pursue it could make no impression.

Culloden House stands on the verge of the moor, surrounded by plantations, and commanding a noble

view of the Moray frith, and of the mountains on the opposite side of the Nairn. It is the seat of the ancient and respectable family of Forbes, and has been renewed in an elegant style since 1746. Prince Charles slept in the old mansion on the night before the battle. The owner of it at that time was the celebrated Duncan Forbes, Lord President of the Court of Session, who previously gave advice to Government which might have tended almost to prevent the rebellion, and whose influence in the Highlands, powerfully felt and energetically used, after the rebellion did break out, aided very materially to suppress it. What a curious coincidence that the sudden final extinction of the rebellion, in pitched battle, after the contending forces had traversed one-half the length of Great Britain, should have occurred on that gentleman's grounds, close to his own door!

CULLOW, a place near Kirriemuir, Forfarshire, where fairs are held on the last Friday of April, and on the Monday of October before the fair of Kirriemuir.

CULLY. See GIRTHON.

CULMALLIE. See GOLSPIE.

CULROSS, a parish, containing a royal burgh of its own name, also the villages of Blairbarn and Low Valleyfield, in the detached district of Perthshire. It is bounded on the south by the frith of Forth, and on other sides by the parishes of Tulliallan, Clackmannan, Saline, and Torryburn. The barony of Kincardine formerly belonged to it, but in 1672 was annexed to Tulliallan. The parish, as at present constituted, has a somewhat square outline, of about 4 miles on each side. The surface rises abruptly from the shore,—undulates thence in gentle inequalities, on a comparatively uniform level, throughout most of the area,—and ascends to considerable elevation, but without forming anything which can be properly called a hill, in the north and north-west. The soil on the shore is a very rich black loam,—in the central districts, a very fertile clay,—and in the high grounds, naturally moorish and long a waste, but now much improved by art, and either under wood or in profitable cultivation. The little rivulets Bluther and Grange are the chief streams. Good potter's clay has been partially wrought. Excellent ironstone occurs, but not in large quantity. A bed of limestone is found in one place, but not under favourable circumstances. Coal mines were once extensive, but they can no longer yield a profitable return. These mines anciently belonged to the monks of Culross abbey. Colville, commendator of the abbey in 1575, let the coal to Sir George Bruce of Blairhall, who resumed the working of it, and was the first in the island who drained coal-pits by means of machinery. Below the house of Castlehill, about a quarter of a mile west of Culross, were not many years ago some remains of the masonry employed in the erection of an Egyptian wheel—commonly called a chain and bucket—for draining the pits. Sir George carried on the works with great spirit. A pit was sunk here, which entering from the land, was carried nearly a mile out into the sea; and there the coal was shipped by a moat which was insulated at high-water, and had a subterranean communication with the pit. This pit was reckoned one of the greatest wonders in the island, by Taylor, an English traveller, who saw it in the beginning of the 17th century. There is a tradition, that James VI., revisiting his native country after his accession to the English crown, made an excursion into Fife; and, resolving to take the diversion of hunting in the neighbourhood of Dunfermline, invited the company then attending

him to dine along with him at "a collier's house," meaning the abbey-house of Culross, then belonging to Sir George Bruce. Being conducted, by his own desire, to see the works below ground, he was led insensibly by his host and guide to the moat above mentioned, it being then high water; and, having ascended from the pit, and seeing himself, without any previous intimation, surrounded by the sea, he was seized with an immediate apprehension of some plot against his liberty or life, and hastily called out, "Treason! Treason!" But his faithful guide quickly dispelled his fears, by assuring him that he was in perfect safety; and, pointing to an elegant pinnacle that was made fast to the moat, desired to know whether it was most agreeable to His Majesty to be carried ashore in it, or to return by the same way he came; upon which the King, preferring the shortest way back, was carried directly ashore, expressing much satisfaction at what he had seen. It is certain, that at that time the King was sumptuously entertained at the abbey-house. Some of the glasses then made use of in the dessert were long preserved in the family; and the room where His Majesty was entertained retains the name of 'the King's room.' The great coal-pit of Culross was destroyed by a violent storm, which, in the month of March, 1625, washed away the stone hulwark, and drowned the coal. From this catastrophe the Culross collieries never recovered; and the stones of the rampart were afterwards sold to the magistrates of Edinburgh, who employed them in repairing the pier of Leith. The landed property of the parish is at present distributed among nine heritors. The real rental in 1839, was £6,289; and the estimated yearly value of raw produce, £14,277 10s. Assessed property in 1866, £9,106. Castle-hill, a modern mansion adjacent to the Forth, occupies the site of the ancient strong-hold of Dunamarle, the easternmost possession of the Macduffs, Thaus of Fife, where Lady Macduff and her children were murdered by order of Macbeth. Blair Castle, a handsome modern residence farther west, occupies the site of a former residence of the same name, said to have been built about the time of the Reformation by Archbishop Hamilton, of St. Andrews. Valleyfield House, in the eastern part of the parish, is a fine commodious mansion. The parish is traversed by the Stirling and Dunfermline railway, and has a station on it at East Grange. There is a small pier for the accommodation of fishing-boats. Population in 1831, 1,488; in 1861, 1,423. Houses, 279.

This parish is in the presbytery of Dunfermline, and synod of Fife. The charge is collegiate. Patrons, Lady Keith and Miss Preston of Valleyfield. Stipend of the first minister, £156 6s. 10d.; glebe, £20. Stipend of the second minister, £116 9s. 2d. Schoolmaster's salary now is £52 10s., with £10 from a charitable foundation, and £28 10s. fees. The parish church is a very ancient pile, in good modern repair, with nearly 700 sittings. There is a Free church; and the total sum raised in connexion with it in 1865 was £117 2s. 9½d. There are an endowed school and two private schools. The late Patrick Geddes, the founder of the endowed school, made provision for giving a bursary to a student, and a small pension to five indigent persons. Dr. Bill, who died in 1738, mortified a sum of money which now pensions four decayed tradesmen and two tradesmen's widows, educates and apprentices seven children, and yields a bursary to a student. Sir George Bruce of Carnock, in 1639, made a bequest which continues to give important aid to eight widows. The late Sir Robert Preston made a valuable endowment for the behoof of six aged men and

six aged women. Miss Halkerston of Carskerdo in Fife also made an important endowment for the benefit of indigent persons in Culross. Other benefactions likewise have been made for paupers. There are a parochial library and a benefit society.

The Town of Culross stands on the sea-board of the parish, 4 miles east of Kincardine, 6 west of Dunfermline, and 22 west-north-west of Edinburgh. It is situated on the face of a brae, amid gardens and fruit-trees. It has a picturesque and pleasing appearance, as seen from the frith; but it is scattered, dingy, mean, and decayed within itself, the mere skeleton of an ancient town, almost destitute of any attraction, excepting some architectural antiquities. Most of its houses are shabby, and all its streets or lanes are in disrepair. It was once a place of great thoroughfare, first as a seat of monastic power, and next as a seat of manufacture and commerce; but it now sits in loneliness, encompassed in the near distance by tumultuous traffic, yet itself scarcely ever visited by either trader or tourist. It formerly carried on a great trade in salt and coal, which is now annihilated. It had at one period upwards of 50 salt-pans, which made about 100 tons of salt weekly; and before the Union, there were occasionally 170 foreign vessels in the roads at a time, loading coal and salt. About 80 years ago, the Earl of Duudonald erected very extensive works here for the extraction of tar, naphtha, and volatile salt, from coal; but, being an unproductive concern, it was given up and went to ruin. The pier also went to ruin, and the harbour could never have been a good one. Culross, by virtue of two royal grants from James IV. and Charles II., enjoyed the exclusive privilege of making girdles, a kitchen utensil well-known in Scotland for baking cakes; but in 1727 the court of session found that no monopolies of this kind could be granted in prejudice of any other royal burgh; and in consequence of this decision, and the more general use of ovens, besides the cheaper mode of casting girdles, the manufacture has long since ceased. The chief occupation of the inhabitants now is the weaving of linen for the Dunfermline manufacturers, and of muslins for the Glasgow merchants.

Culross was erected into a royal burgh by James VI. in 1588. It is governed by a chief magistrate and 9 councillors. In 1832, the corporation revenue amounted to £118 11s. 5½d., arising chiefly from feu-duties and from shore-dues,—the expenditure amounted to £93 9s. 10½d.,—and about 80 acres of a common moor had been feued to Sir James Gibson Craig, and upwards of 500 to the Dundonald family. In 1865, the revenue was about £44. Culross joins with Dunfermline, Inverkeithing, Queensferry, and Stirling in returning a member to parliament. Constituency in 1865, 23. The burgh of Culross, by act of 1663, had the custody of the coal measures of Scotland. The great chaldron contained about 405 Dutch stones, and the small chaldron about 162 stones. Population of the burgh in 1861, 517. Houses, 109.

The town-house is a plain building, with a small attached jail. The parish church was the chapel of the ancient abbey of Culross. It stands at the head of the town, in a commanding situation, and is an elegant cruciform Gothic edifice, with a high massive, battlemented, square tower on the west. The rest of the abbey is in ruins. An aisle adjoining the north wall of the church is the burial-place of the Bruce family, and contains a fine white marble monument of Sir George Bruce, his lady, and several children. In this aisle was found enclosed in a silver box, the heart of Lord Kinloss, who was killed in a duel in Flanders, in 1613, by Sir Edward

Sackville, afterwards Earl of Dorset. At a small distance east of the church stands the abbey-house, built by Edward Lord Kinloss, in 1590, and so called, perhaps, from its being built in the vicinity and of the materials of the ancient abbey. It is a very large building, in a delightful situation, commanding an extensive prospect of the frith of Forth, Stirlingshire, and the Lothians. This house was nearly demolished after it became the property of Sir Robert Preston, but was afterwards rebuilt by him. The abbey of Culross was founded in 1217, by Malcolm, Thane of Fife, and dedicated to the Virgin Mary and St. Serf. At the Reformation, the rental of it amounted to £768 16s. 7d. Scotch, in money; 3 chalders, 3 holls wheat; 14 chalders, 10 holls, 2 firlots barley; 13 chalders, 12 holls, 3 firlots, 3½ pecks oats; 1 chalders, 2 holls salt; 10 wedders, 22 lambs, 7 dozen of capons, 28½ dozen poultry, 7½ stones of butter; 79½ stones of cheese, and 8 trusses of straw. At that time, there were in the abbey nine monks of the Cisterian order. At the east end of the town, on the sea-coast, the high road only intervening, are the remains of a chapel called St. Mungo's chapel, of which tradition relates, that it was erected on or near the place where St. Mungo, or Kentigern, was born. He is said to have been the son of Eugenius III., King of the Scots, by a daughter of Lothus, King of the Picts. His mother Thametis finding herself with child, in apprehension of her father's wrath, stole privately away; and, entering into a vessel which she found on the nearest coast, was, by the winds and waves, cast on land at the spot where the town of Culross is now situated, and there was delivered of a son. Leaving the child with a nurse, she returned home; and his parents being unknown, the boy was brought to St. Servanus, who baptized and brought him up. This Servanus, or St. Serf, lived at that time in a hermitage where the monastery was afterwards built. After various peregrinations, he departed this life at Culross, of which town he became the tutelary saint; and in honour of him an annual feast was formerly solemnized by the inhabitants. This was attended with a variety of ceremonies, particularly parading the streets and environs of the town early in the morning, with large branches of birch and other trees, accompanied with drums and different musical instruments, and adorning the cross, and another public place called the Tron, with a profusion of flowers formed into different devices. The last abbot of Culross was Alexander, son of Sir James Colville of Ochiltree. Sir James, brother to the said Alexander, was raised to the dignity of Lord Colville of Culross in 1604, at which time the King made him a grant of the dissolved abbey.

CULROY, a post-office village in the parish of Maybole, Ayrshire. It is a small, clean, rural place, 3½ miles north of the town of Maybole, on the low road thence to Ayr.

CULSALMOND, a parish in the Garioch district of Aberdeenshire. Its post-town is Old Rayne. It is bounded by Drumhlade, Fergie, Auchterless, Rayne, Oyne, and Insch. Its length southward is about 4½ miles; and its breadth is about 3 miles. The river Urie runs south-south-eastward through it, and carries off all the drainage. The surface is level, with the exception of Coisdow and Culsalmond, —two small hills about the middle of the parish. The soil is deep and fertile, especially on the banks of the Urie. The only fuel is peat and turf, of which there is no great supply. There are some quarries of a fine blue slate. Newton-house is the principal residence. But there are five landowners; and the real rental is upwards of £5,000. Assessed property in 1860, £5,373. The parish is traversed

by the road from Inverury to Huntly. Population in 1831, 1,138; in 1861, 1,165. Houses, 192.

This parish is in the presbytery of Garioch, and synod of Aberdeen. Patron, Sir William Forbes, Bart. Stipend, £166 2s. 1d.; glebe, £10. Schoolmaster's salary, £40, with share of the Dick bequest, and £21 fees. There is a Free church; originally and for 24 years a shed, but now a building of 1866, in the early English style, with a tower; yearly sum raised in 1865, £106 0s. 5d. There are also a Congregational chapel and an Episcopalian chapel.

CULSH, a hill in the parish of New Deer, Aberdeenshire, commanding views to Peterhead, Benachie, and the uplands of Morayshire.

CULTER, a parish, containing a village of the same name, in the south-east of the upper ward of Lanarkshire. Its post-town is Biggar. It is bounded on the south-east by Peebles-shire, and on other sides by the parishes of Crawford, Lamington, Symington, and Biggar. Its length northward is about 8 miles, and its average breadth is about 4 miles. A contiguous tract of the old parish of Kilhucho in Peebles-shire was annexed to it in 1794, but is not accredited to it in the Census returns. The Clyde traces the boundary with Symington. The low tract thence to the head-streams of Biggar Water forms the mutual border with Biggar. A lofty water-shed, part of the backbone of the Southern Highlands of Scotland, forms most of the boundary with Peebles-shire and with Crawford. A stream, fed by many head-rills among the mountains, and bearing the name of Culter Water, traverses the centre of the parish northward to the Clyde. The northern district varies in character between vale and plain, is partly level and partly undulating, has a fertile soil, in good cultivation, and presents to a spectator on any of the neighbouring heights a scene of fine soft heauty. The other districts display much variety of upland. "A long range of green hills, partly planted and parked, rises abruptly from the vale. These as they recede southward increase into mountains covered with heath, the chief of which is the Fell, ascertained by a late measurement to be 2,330 feet above the level of the sea, thus overtopping the neighbouring hill of Tinto by 94 feet. But neither is this mountainous district without its peculiar beauty. There is no sweeter glen than that of Culter Water. So far as Birthwood, two miles upward, it is partially cultivated and wooded. Beyond this it narrows, affording little more than room for the stream, which here has its limns, with their necessary accompaniments of 'rock and roar,' to captivate the admirer of wild and romantic beauty. The hills which border on the arable part of the parish range from south-west to north-east; but in the higher district their range is exceedingly varied. Sometimes they are lumpish and detached, and sometimes they run in chains, lying in all possible directions." [New Statistical Account.] About one third of the parish is either regularly or occasionally in tillage; and upwards of 400 acres are under wood. There are seven or eight landowners,—most of them resident. The total yearly value of raw produce was estimated in 1835 at £10,474. The assessed property in 1860 was £6,278. The chief antiquities are round mounds or moats, which seem to have been used by the aboriginal inhabitants as places of security; and the most remarkable one of them is situated in a moss. The parish is traversed by the road from Edinburgh to Dumfries. The village of Culter stands on that road, and on Culter Water, nearly 3 miles south-west of Biggar, and 17 west by south of Peebles. It is pleasantly situated, and consists principally of neat houses, emhowered among shrubs and trees.

and scattered along the stream. Population of the village in 1851, 197. Population of the parish in 1831, 497; in 1861, 665. Houses, 125.

This parish, formerly a rectory, is in the presbytery of Biggar, and synod of Lothian and Tweeddale. Patrons, Baillie of Lamington, and Dickson of Kilbucho. Stipend, £217 3s. 9d.; glebe, £30 12s. Schoolmaster's salary, £45, with £20 fees. The parish church was built in 1810, and contains 350 sittings. There is a Free church: attendance, 280; sum raised, in 1865, £179 1s. 10d.

CULTER, Aberdeenshire. See PETERCULTER.

CULTER (TUE), a stream in Aberdeenshire, which takes its rise from a lake in the parish of Skene, and, after receiving several smaller streams, falls into the Dee, about 8 miles above Aberdeen, near the church of Peterculter.

CULTS, a parish in the centre of Fifeshire. It contains the post-office village of Pitlessie, and the villages of Crossgates, Cults-mill, Hospital-mill, and Walton. It is bounded by Collessie, Monimail, Cupar, Ceres, and Kettle. Its length northward is 2½ miles; and its breadth is 1½ mile. The river Eden traces the northern boundary. The general surface is flat, declining from the south—where there are a few hills—to the Eden. The eastern part is well wooded. The soil is light, and in some places—particularly on the banks of the Eden—gravelly; but towards the south it is a strong clay. Only about 140 acres are waste land or hill pasture, and even these are reclaimable. The Earl of Glasgow is the principal landowner; and there are two others. Crawford Castle, erected in 1813 by Lady Mary Lindsay Crawford, and now the property of the Earl of Glasgow, is a magnificent Gothic edifice. There are extensive limestone quarries, and a number of good sandstone quarries. Coal was at one time extensively mined. The annual value of raw produce was estimated in 1838 at £17,540. There are in the parish a spinning-mill, several meal-mills, and two saw-mills. Many of the parishioners are linen-weavers. The parish is traversed by the road from Cupar to Leslie, and enjoys ready access to both northward forks of the North British railway. Population in 1831, 903; in 1861, 800. Houses, 188. Assessed property in 1843, £3,207 19s. 5d.

This parish, formerly a vicarage, is in the presbytery of Cupar, and synod of Fife. Patron, the United College of St. Andrews. Stipend, £162 5s. 7d.; glebe, £11. Schoolmaster's salary now is £60, with £25 fees. The parish church was built in 1793, and enlarged in 1835, and contains 430 sittings. There is a Free church for Cults and Kettle: attendance, 170; total sum raised in 1865, £162 1s. 7d. There is an United Presbyterian church in Pitlessie, with an attendance of 180. There is a Free church school at Pitlessie. Sir David Wilkie, the celebrated painter, was a native of Cults, of which his father was minister. The noble family of Lindsay-Crawford were connected for five centuries with this parish, and with the neighbouring one of Ceres, in which they had a seat. See CERES. Their Fifeshire property was obtained, in the 14th century, from the Keiths, in exchange for Dunnottar Castle. The earldom of Crawford was created in 1398, and that of Lindsay in 1633. George, the twenty-second Earl of Crawford, and sixth earl of Lindsay, died in 1808; and Lady Mary Lindsay Crawford, his sister and heiress, and the last member in the direct line of the family, died in 1833. Her remains, and those of her brother, repose in a mausoleum on Walton hill. The earldom of Crawford, with precedence of 1398, was adjudged by the House of Lords in 1848 to James Lindsay, seventh Earl of Balcarres. The earldom of Lindsay continues dormant.

I.

CULTS-MILL, a village in the parish of Cults, Fifeshire.

CULZEAN CASTLE. See COLZEAN CASTLE.

CUMBERNAULD, a parish, containing a small post-town of its own name, also the village of Condat, and the station of Croy, in the detached district of Dumbartonshire. It is bounded on the west by the parish of Kirkintilloch, and on other sides by the counties of Stirling and Lanark. Its length westward is about 8 miles; its breadth is from 3 to 4 miles; and its area is about 9,146 acres. The Kelvin traces part of the northern boundary, and the Luggie part of the southern boundary; but both are here inconsiderable streams. The surface is beautifully diversified with small hills and fertile dales. The highest part is called Fannyside moor, producing nothing but heath and furze. On the south-east side of this moor are two small lochlets; and there once were others, which have been drained. The remainder of the parish is mostly arable, with a deep clay soil, and tolerably fertile. Lime, coal, ironstone, and freestone are extensively worked. There are about fifty landowners. Some traces of Antoninus' wall occur along the northern border, and vestiges of a Roman road in the moss of Fannyside. See ANTONINUS' WALL and CASTLECARY. The Forth and Clyde canal traverses the northern border. The new road from Falkirk to Glasgow cuts the parish transversely. The Edinburgh and Glasgow railway goes through the interior to the south of the canal, and has one station at Croy, and another immediately beyond the parochial boundary at Castlecary. The Greenhill fork of the Caledonian railway, connecting the Scottish Central with the Caledonian main trunk, goes south-westward through the interior, and had formerly a station for Cumbernauld. Population in 1831, 3,080; in 1861, 3,513. Houses, 551. Assessed property in 1860, £15,204.

This parish is in the presbytery of Glasgow, and synod of Glasgow and Ayr. Patron, J. Fleming of Cumbernauld. Stipend, £264 3s. 2d.; glebe, £17 10s. Unappropriated tithes, £694 11s. 10d. Schoolmaster's salary, £40, with £26 fees. Cumbernauld parish was originally part of Kirkintilloch, but was constituted a separate parish in 1649, under the name of Easter Leinzie or Lenzie, while Kirkintilloch was called Wester Leinzie. The barony of Castlecary belonging to the parish of Falkirk was annexed quoad sacra in 1725. The parish church is an old building, repaired in 1810, and containing about 660 sittings. Here is a Free church which belonged to the Original Secession, then to the Establishment, and is still called the East church. Its income in 1865 amounted to £80 5s. 10½d. There is an United Presbyterian church, with an attendance of 150. There are in the parish five non-parochial schools, a subscription library, and a savings' bank.

A part of the ancient Caledonian forest flourished till a comparatively late date in the district of Cumbernauld; and here roamed the last unpreserved specimens of the Caledonian ox. Professor Low says,—“John Leslie, bishop of Ross, who wrote in 1598, states that the wild ox—*Bos sylvestris*—was found in the woods of Scotland; that it was of a white colour, had a thick mane resembling a lion's; that it was wild and savage, and, when irritated, rushed upon the hunters, overthrew the horses, and dispersed the attacks of the fiercest dogs. He says that it had formerly abounded in the Sylva Caledonia, but was then only to be found at Stirling, Cumbernauld, and Kincardine. Hector Boece, in his History and Chronicles of Scotland, bears testimony to the like effect:—‘At this town—namely

Y

Stirling—began the gret wod of Caledon. This wod of Caledon ran fra Striveling throw Menteith and Stratherne to Atholl and Lochquabir, as Ptolome writtis in his first table. In this wod wes sum time quhit bullis, with crisp and curlaud mane, like feirs lionis, and thought thay semit meek and tame in the remanent figure of thair bodiys thay wer mair wild than ony uthir beitzits, and had sich hatrent aganis the societe and cumpany of men, that they come nevir in the wodis nor lesuris quhair thay fand ony feit or baird thairof, and moy dayis eftir, thay eit nocht of the herbis that wer twichit or handillitt be men. Their bullis were sa wild that they were nevir tane bot slight and crafty laubour, and sa impatient that, eftir thair taking, thay deit for importable doloure. Als sone as ony man invadit thir bullis, thay ruschit with so terrible preis on him, that thay dang him to the eord, takand na feir of houndis, scharp lancis, nor uthir maist penitive wapintris. And thought thir bullis wer bred in sindry boundis of the Caledon wod, now, be continewal hunting and lust of insolent men, thay ar destroyit in all party of Scotland and nane of thaim left bot allanerlic in Cumarnald." Herc, however, they were also subjected to persecution; and "in a remarkable document written in 1570-71, the writer, describing the aggressions of the King's party, complains of the destruction of the deer in the forest of Cumbarnauld, 'and the quhit ky and bullis of the said forrest, to the gryt destructione of polecie, and hinder of the commonweil. For that kynd of ky and bullis hes bein keptit thir money zeiris in the said forest; and the like was not mantenit in ony uthir partis of the Ile of Albion.'"

The TOWN OF CUMBERNAULD stands uearly in the centre of the parish of Cumbarnauld, and on the road from Falkirk to Glasgow, 9 miles south-west of Falkirk, 13 north-west of Glasgow, and 13 south of Stirling. It occupies a pleasant site in a valley, sheltered and adorned on the south and east by the pleasure grounds of Cumbarnauld House, the Scottish seat of Lord Elphinstone. It has not an urban appearance, yet looks very picturesque. At the east end of it, on the public road, stands the Spur, a very neat and commodious inn. Many of the inhabitants are employed in weaving for the Glasgow manufacturers. The place was erected into a burgh of barony in 1649. A weekly market was for some time held in it, but has gone into disuse. A cattle market, at which a considerable business is sometimes done, is held on the second Thursday of May; and a fair, of no consequence to business, is held on the first Tuesday of August. Population, 1,561.

CUMBRAY, an insular parish, containing the post town of Millport and the village of Newton, in Buteshire. It comprises the islands of Big Cumbray and Little Cumbray. These lie between the island of Bute and the coast of Ayrshire; and, in a general view, they are two oblongs, on a line with each other, and parallel to both Bute and the mainland. Big Cumbray is 3 miles east of Kingarth in Bute, and 1½ mile west of the parish of Largs; and Little Cumbray is less than 2 miles east of the south-eastern extremity of Bute, and about ¾ of a mile south of the southern extremity of Big Cumbray. The total parochial area is about 5,120 acres,—of which about 3,000 are arable, and about 120 are under wood. The average rent of the arable land is from 15s. to 20s. per acre; but that of the rest is not more than from 2s. to 3s. The land-owners are the Earl of Glasgow and the Marquis of Bute. The total yearly value of raw produce was estimated in 1840 at £5,846. Assessed property in 1860, £6,050. Population in 1831, 894; in 1861, 1,256. Houses, 207. The population in the sum-

mer season, however, in consequence of the influx of strangers for rustication and sea-bathing, is very much greater.

This parish is in the presbytery of Greenock and synod of Glasgow and Ayr. Patron, the Earl of Glasgow. Stipend, £159 4s. 8d.; glebe, £20 10s. Schoolmaster's salary, £45, with fees. The parish church originally stood at Kirktown, a quondam village, now quite extinct, about ½ a mile from Millport, and was rebuilt there in 1802, with 380 sittings. But this being too small for the rapidly increasing population, a new church, of elegant form, with a handsome tower in front, and containing upwards of 750 sittings, was built in 1837, on a rising-ground, immediately behind Millport. There is a Free church, whose receipts in 1865 amounted to £462 19s. 5½d. There is an Episcopalian church, called St. Andrew's chapel. There is likewise an Episcopalian Collegiate church, built in 1851, situated near the Priory, a seat of the Earl of Glasgow, and founded for a provost, a canon, and five honorary canons. There is also a Baptist place of worship. There are a Free church school, an Episcopalian school, and two schools for females. See MILLPORT.

CUMBRAY (Big), the greater of the two islands of the parish of Cumbray. Its length, south-south-eastward, is about 3½ miles; its breadth is about 2 miles; and its circumference is between 11 and 12 miles. Its immediate sea-board is a low flat beach; its ground thence is a periphery of steep banks, appearing at a little distance as if rising abruptly from the sea; and its interior is a congeries of bills, ascending gradually to a culmen of about 450 feet above sea-level, with a backbone called the Shoughends extending nearly from end to end of the island, and commanding a gorgeous panoramic view of the firth and its screens, from Ailsa and Kintyre to Cowal and the Clough. Two lochlets lie in a hollow contiguous to the very culmen, and send off thence a rivulet, large enough, with the aid of damming, to drive a corn-mill. The soil varies from fertile loam on the low grounds to thiu moorish gravel on the hills. The whole island corresponds in geological structure to the old red sandstone district of Bute, and is a connecting link between that district and the adjacent mainland; and in a scientific view, it is chiefly interesting for the enormous trap-dykes with which it is traversed. "The most remarkable of these," says the New Statistical Account, "are two on the east side of the island, running nearly parallel, and from five to six hundred yards distant from each other. The one to the north-east measures upwards of 40 feet in height, nearly 100 in length, and in mean thickness from ten to twelve feet. The one to the southward is upwards of 200 feet in length, from 12 to 15 in thickness, and from 70 to 80 feet in height; and when viewed in a certain direction, exhibits the distant resemblance of a lion couching; hence it is sometimes called The Lion." These dykes are of a highly crystalline structure, and have withstood the effects of the atmosphere and of the sea; whilst the red sandstone on both sides of them, being more easily decomposed, has been wasted away. The local name of these dykes is Rippl walls. They re-appear in Ayrshire, and traverse that county and the whole of the neighbouring parts of Galloway.

Big Cumbray is very interesting to the geologist and the botanist; and it would seem from the following curious extract from the minutes of the Privy-council of Scotland, to have been at one time famous for its breed of hawks: "February 2d, 1609, —Sir William Stewart, capt. of Dumbartane castle, complains 'That Robert Hunter of Hunterston, and

Thomas Boyd, provost of Irwyn, had gone to the Isle of Comra, with convocation of the leidges, and tane away all the hawks thereon.' The lords of secret council declare, 'That all the hawks quhill bred on ye said ile do propirly belong to the king, and ocht to be furth cumand to his majeste, and that the capitane of Dumbartane castle intromet tharewith yeirlie, and deliver the same to his majeste, and discharges the said Robert Huntar, and all vtheris, from middling tharewith.'"

About the beginning of last century, according to the tradition of the island, there was a family of the name of Montgomery, who then possessed the greater part of Big Cumbray now belonging to Lord Glasgow, and had a mansion-house at Billikellet. Among the last of this family was Dame Margaret Montgomery, joint-patroness of the kirk, who, being on horseback at the green of the Largs, is said to have been thrown off amidst a crowd of people; but, being a woman of high spirit, she pursued the horse, and received a stroke of his foot, which proved instantly fatal. "The arms of this family"—it is stated in the Old Statistical Account—"are upon the end of the kirk, and were lately to be seen on a part of the ruins of Billikellet. About a quarter of a mile from Billikellet, there is a large stone set up on end: about 6 feet of it is above the ground. It appears to have been the rude monument of some ancient hero. There is also a place which the inhabitants point out as having been a Dauish camp, though no vestiges of it now remain."

CUMBRAY (LITTLE), the smaller of the two islands of the parish of Cumbray. It is about a mile in length, and half-a-mile in breadth; and is separated from the mainland of Ayrshire by a sound of about 3 miles in breadth. It lies, like the larger island, in the parallel direction to Bute. The strata of the rock of which it is composed are distinctly marked. When viewed at a distance, they seem to lie nearly horizontal; but, upon a nearer approach, they appear to incline to an angle of some elevation. They begin from the water's edge, receding and rising one above another to the height of 650 feet, like the steps of stairs. Upon the south side of the island are two dwelling-houses, and an old square tower. Concerning the antiquity of this tower, nothing can now be learned; and no date or inscription, from which it might be ascertained, has ever been discovered. It seems to have been a place of some strength, and is surrounded by a rampart and a fosse, over which there has been a drawbridge. It was surprised and burned by the troops of Oliver Cromwell. The island was then in the possession of the family of Eglinton, in which it has continued ever since. There are still the ruins of a very ancient chapel here, which is said to have been dedicated to St. Vey, who lies interred near it: and which was probably a dependency of the celebrated monastery of Icolmkill.—Upon the highest part of this island, a lighthouse was erected, about the year 1750, which proved of great benefit to the trade; but, from its too lofty situation, it was often so involved in clouds as not to be perceptible, or but seen very dimly. The commissioners therefore judged it necessary to erect another, in 1757, upon a lower station, with a reflecting lamp, which is not liable to the inconvenience attending the former, and affords a more certain direction to vessels navigating the frith in the night time. This lighthouse is in N. lat. 55° 43', and W. long. 4° 55'. The height of the building is 28 feet, and of the lantern 106 feet above high water. It shows a fixed light, to the distance of 15 miles in clear weather. Population of the island in 1831, 17; in 1851, 9. Houses, 2.

CUMBRIA, an ancient British principality, which existed till the beginning of the tenth century, and comprehended Strathclyde, Galloway, Kyle, Carrick, and Cunningham, besides the ulterior parts of the large archbishopric of Glasgow, which extended so far as through the greater part of Cumberland. Part of it was at last subdued by the English, who, in order to attach the Scottish king to their interest, made a present of it to Malcolm, prince of Scotland, to be held as a fief depending on the crown of England; and in 975, the remaining parts were subdued by the Scots. The name of the people is still preserved not only in Cumberland, but in the islands of Cumbray and in many places of Clydesdale. See historical section of GENERAL INTRODUCTION.

CUMINESTOWN, a post-office village in the parish of Monquhitter, Aberdeenshire. It stands on the road from Ellon to Banff, about 6 miles north-west of New Deer. It was founded in 1763 by Cumine of Auchry. Here is an Episcopalian chapel; and in the immediate vicinity is the parish church. Fairs are held on the day in February before Fyvie, on the Thursday after the 27th of April, on the day in June before Turriff Saturday market, on the day in August before Mintlaw, on the day in October before Turriff Wednesday market, and on the day in December after Turriff. Population in 1861, 459.

CUMLODDEN, a recently constituted parish in the Inverary district of Argyleshire. It was formed in 1853, out of the eastern part of the parish of Glassary and a contiguous portion of the parish of Inverary. It lies on the western sea-board of Loch Fyne. Its post town is Inverary. It is in the presbytery of Inverary and synod of Argyle. Patrons, the Duke of Argyll and Sir A. J. Campbell, Bart. The church was built in 1841, by the Church-extension Committee of the General Assembly, aided by the Duke of Argyll and Sir A. Campbell. Sittings, 300. There is an Assembly's school.

CUMMERTREES, a parish, containing a post-office village of its own name, and the villages of Powfoot and Kelhead, in the district of Annandale, Dumfries-shire. It is bounded, on the south, by the Solway frith, and on other sides by the parishes of Ruthwell, Dalton, St. Mungo, Hoddam, and Annan. With the exception of two considerable projections on the east, and three or four inconsiderable ones on the west, it has nearly the form of a regular parallelogram; its length being from north to south, and its breadth from east to west. It measures diagonally about 5½ or nearly 6 miles, lengthways 5 miles, and at one point, from Flish on the west to an angle eastward of Spittle-ridding-hill, 4¼ miles in breadth. Its surface is, for the most part, nearly flat, rising with a slight inclination from the Solway towards the north. The highest elevation is a hill, on which stands the Tower of Repentance, about ¾ of a mile from its northern boundary, and scarcely 200 feet above sea-level. The soil, towards the north, is a loam above freestone; in some of the central parts, is a loam above limestone, remarkably rich and fertile; along the coast, is sandy; in many parts, is a thin wet clay over hard till, requiring much manuring and cultivation; and in some, is an improved and meadowy bog, formerly flowmoss, but recently reclaimed at great expense and with much labour. Its coast-line is flat, uninteresting, and indented only with a small bay called Queensberry, in which vessels of light burden can take shelter from north and north-west winds. Into this bay, overlooked by the small village and sea-bathing quarters of Powfoot, and situated a little to the eastward of the

middle of the southern boundary line, and about 3 miles westward of the embouchure of the river Annan, a small stream, called the Pow or the Cummertrees Pow, debouches, after traversing the parish south-eastward from Flish. Over a distance of 2½ miles, the Annan washes the northern limits of the parish, dividing them from those of St. Mungo and Hoddam, and here produces salmon, salmon-trouts, and a species of small fish called birlings. The last of these are about the size of good hurn-trout, are of two kinds, red and white, and are sometimes caught in large quantities. The Solway frith suddenly widens, on the Cumberland side, opposite the south-east angle of Cummertrees, and becomes 7 miles broad; hut, at low water, or during the hours of its recess, forms one Sahara-like waste of level and naked sand, intersected by forking branches—known as the Scotch and the English channels—of the united streams of the Annan, the Sark, the Esk, and the Eden. Here the Solway tide rolls impetuously forward with its celebrated wall of waters,—tumbling headlong at the speed of 8 or 10 miles in the hour,—hoarsely roaring with a voice which is heard over all the parish, and, at times, 12 or 15 miles farther to the north,—and whirling aloft a banner of spray which glitters and undulates in the breeze to announce the march of the invincible invasion of waters. But the Solway is enriching to the inhabitants, both by its raising the temperature higher than in the parishes inland, and by its furnishing large supplies of flounders and cod, and occasional takes of soles and turbot. See SOLWAY FRITH. A mineral spring near Cummertrees-mill, at the north-west angle of the parish, is sometimes, for its medicinal properties, recommended by physicians. Nearly 1,300 acres of the parish, or about one-fifth of its area, is covered with plantation. The climate, though humid and changeable, is remarkably salubrious. Limestone is abundant, about 30 feet in thickness, and is so rich as to yield 96 per cent. of carbonate of lime. There are extensive lime-works at Kelhead. Sandstone abounds and is quarried. The total yearly value of raw produce was estimated in 1834 at £23,812. The assessed property in 1860 was £6,839. The Marquis of Queensberry is the proprietor of about five-sixths of the parish; and has here a beautiful mansion, called Kinmount, which was built at the expense of £40,000. The parish is traversed by the Glasgow and South-western railway, and has a station on it; and is traversed also by all the roads from Annan to Nithsdale and to Lochmaben. The village of Cummertrees stands on the low road from Annan to Dumfries, about 4 miles west of Annan, and is one of the most beautiful in Dumfries-shire. Population of the parish in 1831, 1,407; in 1861, 1,230. Houses, 214.

Hoddam castle, situated nearly half-way between the river Annan and the Tower of Repentance, was built in the 15th century by Lord Herries, from the stones of an ancient chapel; and stands on a site commanding one of the most beautiful views in Annandale. It is remarkable chiefly for its thickness of wall, and consequent strength; and, greatly improved with repairs and with additional buildings, is maintained in as comely a state as any edifice of its class in Scotland. The old castle is said to have been inhabited about the beginning of the 14th century by a branch of the family of Robert Bruce, and to have been demolished some time after by a border foray. The family of Herries was very powerful, and possessed a vast extent of country. About the year 1627, the barony of Hoddam was acquired from the last Lord Herries, by Sir Richard Murray, of Cockpool; which family being afterwards created Earls

of Annandale, the estate stood vested in John, Earl of Annandale, in 1637. By the Earl of Annandale the estate was conveyed to David, Earl of Southesk, about the year 1653; and, in 1690, Charles, Earl of Southesk, sold the barony and castle to John Sharpe, Esq., in whose family it has continued ever since. Grose has preserved two views of this castle. In the walls about it are divers Roman altars and inscriptions which were discovered at the station at Birrens, in the parish of Middlebie. On the hill formerly mentioned, and south of Hoddam castle, stands the erection—remarkable alike in name, in structure, and in situation—called the Tower of Repentance. This building is square, 25 feet high, extraordinarily thick in its walls, and commands a view, on all sides, over a distance of at least 30 miles. On its top is an arena where, evidently, watch-fires formerly burned, announcing to the inhabitants of the far-stretching plain which it overlooks any menacing movements which, previous to the union of the crowns of Scotland and England, occurred on the English side of the border. Various traditions are afloat respecting the origin of its name, and the motives for erecting it; the chief of which is, that Lord Herries, returning from a murderous foray in Cumberland, and, after having massacred a numerous body of prisoners, and thrown them into the sea, huilt it, to appease his conscience, and conciliate his diocesan superior, the bishop of Glasgow.—On the farm of Hurlkedale, in this parish, there was discovered, in 1833, a number of ancient silver coins, much decayed, but supposed to be of Alexander III. of Scotland, and Edward I. of England.

This parish is in the presbytery of Annan, and synod of Dumfries. Patron, the Crown. In its present form, it comprehends, in addition to the original parish, the chaplainry of Trailtrow, which was annexed to it in 1609. The parochial church is one of those which Robert de Bruce, in the 12th century, when, in an age of superstitious liberality and popish ostentation, he wished to display his munificence, conferred on the monks of Gisehurn; and after, upon the abolition of episcopacy, it ceased to be controlled by the bishop of Glasgow, it reverted, as to its patronage, to the Crown. The chapel of Trailtrow stood upon the eminence which is now surmounted by the Tower of Repentance. Minister's stipend, £153 6s. 7d.; glebe, £18. The church has often been rebuilt and enlarged, and contains about 450 sittings. Schoolmaster's salary, £55, with about £30 fees. There are two non-parochial schools,—one of them endowed.

CUMMINGSTON, or PORT-CUMMING, a village in the parish of Duffus, Morayshire. It is situated a little east of Burghead, and is a straggling dirty place. Population in 1831, 197; in 1851, 155.

CUMMIN'S CAMP. See BOURTIE.

CUMMIN'S TOWER. See BLAIR-ATHOLE.

CUMMINGSTOWN. See CUMMINSTOWN.

CUMNOCK, a post-town in the parish of Old Cumnock, Ayrshire. It stands on the road from Kilmarnock to Dumfries, adjacent to the Glasgow and South-western railway, at the confluence of Glasnock Water with the Lugar, 6½ miles south-east of Mancline, 10½ south-west of Muirkirk, and 16 east of Ayr. Its site is a sheltered hollow, completely surrounded by pleasant braes. "The name of Cumnock," says the author of 'Caledonia,' "is derived from the British *cym*, a hollow or valley, and *cnoc*, a hill, which was usually pronounced 'Cumnock.' The British *cym*, in the prefix of the name, applies exactly to the hollow or valley in which the church and village stand; but whether the *cnoc*, in the termination of the name, applies to the small

hill at the village, or to some other hill in the vicinity, is not quite certain."

The most conspicuous part of the town is a kind of square, formerly a burying-ground, but now the market-place, well edificed, and of spruce appearance. There are likewise three pretty long streets, containing many good houses; but the other thoroughfares, with slight exceptions, are narrow lanes, irregularly built. The town, in general, looks clean, agreeable, and prosperous; it has, of late years, undergone considerable re-edifications and extensions; it contains pleasant intermixtures of trees and gardens; and it blends altogether with the picturesque dell of the Lugar and the beautiful woodlands of its higher environs into one fine general landscape. The parish church stands in the centre of the square. The viaduct of the Glasgow and South-western railway across the Lugar, about a quarter of a mile above the town, "threading its airy way in elegance and daring through the foliage of the trees that fringe the high precipitous banks of the water," is a magnificent and romantic object as seen from the vicinity, and commands in its turn not a few features of interesting scenery. The bridge is 170 feet high, and has fourteen arches,—nine of them being of 50 feet span, and five of 30. On the west side are five dry arches, of unequal height, to the edge of the water-course; in the centre are three arches of maximum height over the river; and on the east side, are six other arches, diminishing in height to the end.

The town contains good shops in all departments. It is the seat of an extensive, multifarious, retail traffic; and has of late years experienced much increase of trade from the opening of the railway and the establishment of iron works in its vicinity. Its other chief means of subsistence are weaving, which, when trade is good, keeps 120 looms at work; hand-sewing, which is a common employment with both adult and young females; the manufacture of thrashing-mills, which are in high esteem throughout the west of Scotland, and are, in considerable numbers, exported to Ireland; a pottery, which, from clay of the best quality found in the parish, produces a superior brown-ware; and the manufacture of wooden snuff-boxes, which, throughout Scotland, have, for their inimitable beauty, rendered Cumnock not a little celebrated. This last trade, however, has both changed its character, and in a main degree left the town. Its first feature was a delicate construction of the snuff-box hinge; and this went on improving till a very elegant article was produced. But ornamental painting and other tasteful features eventually followed, in such a manner as to command great attention; and then snuff-boxes came to be only one of many articles of manufacture, comprising small boxes of every kind, cigar-cases, fire-screens, huttons, &c., painted in great variety of styles, checked into tartans, or ornamented with devices. And even while the snuff-box alone was predominant, the value of it fell immensely off. "A few years ago," said the New Statistical Account in 1837, "a solid foot of wood, that cost only 3s., could be manufactured into boxes worth £100 sterling, and then the workmanship increased the original value of the wood nearly 700 times; but at present a solid foot of wood, will only yield, in finished boxes, about £9 sterling."

Cumnock was made a burgh of barony in 1509 by James IV. Sheriff-courts are held in it four times a year. Justice-of-peace courts are held in it for eight parishes. It has offices of the Bank of Scotland, the Clydesdale Bank, the Royal Bank, a district savings' bank, and ten insurance-offices, and a gas-light company. Public coaches run to

Ayr; and ample communication to the north and south is enjoyed by railway. The principal inn is the Dumfries Arms. Fairs are held for general business on every Thursday of November, December, January, and February; for cattle and horses on the Thursday after Candlemas, old style; for hiring servants and for racing, on the Thursday after the 6th of March; for cattle, on the Wednesday after the 6th of June; for cattle and for hiring shearers, on the Wednesday after the 13th of July; and for fat stock on the Wednesday after the 27th of October. Population in 1831, 1,600; in 1861, 2,316. Houses, 324.

CUMNOCK (New), a parish in the district of Kyle, forming the south-eastern limb of Ayrshire. It contains a post-office village of its own name, and also the villages of Afton-Bridgend, and Pathhead. It is bounded on the east by Dumfries-shire; on the south, by Kirkcudbrightshire; and on the other sides, by the parishes of Dalmellington, Ochiltree, and Old Cumnock. It measures 12 miles in length from east to west, somewhat more than 8 in breadth, and about 30,000 acres in area. Its surface is dotted with hills, and in its southern division, is warded with mountains. Its highest elevations are Black-craig, about $\frac{1}{2}$ a mile from its eastern boundary, rising 1,600 feet above the valley of Nith, and Black-Larg-hill, on its southern boundary, which rises 2,890 feet above sea-level. But these elevations are excelled in interest by the Knipe, to the south, 1,260, and especially by the Corsancone, 872, which, owing to its position, commands a beautiful and extensive view. Indeed the whole southern division of the parish is lifted upwards by elevations, Craigdarroch, Saddlehagg, Coptaw-Caim, Benly-Cowan-hill, Chang-hill, High-Chang-hill, Enoch-hill, Blackstone-hill, Craig-hill, and several other heights. The lowest ground is the valley of the Nith,—a river which, rising in the south-west extremity of the parish, intersects it from west to east, flows here about 500 feet above sea-level, and, on leaving the parish to irrigate Dumfries-shire, begins to form, in that county, the district of Nithsdale. The Nith is here shallow and sluggish, highly tinged with moss, and about 15 feet broad. Flowing northwards, of local origin, and falling into the Nith, the small stream called the Afton, forms a beautiful valley, and is overlooked by richly sylvan banks. There are, on the northern confines of the parish, 3 small lakes, averaging about $\frac{1}{2}$ a mile in circumference, but abounding in perch, pike, and water-fowl. Carboniferous limestone occurs in abundance, lies in beds 12 feet thick, and is very extensively worked. Freestone, for the most part of a dingy white colour, and coarse in the grain, is plenteous. Ironstone is found in bands and balls. Alternate seams of smith's coal and cannel coal occur in the eastern district, and are in considerable request; the former for making gas in Dumfries and Catriue, and the latter for less chemical purposes, in Ayr, Kilmarnock, and other places. Plumbago, or black-lead, is found in the coal-formation, and has, for a considerable period, been wrought. The total yearly value of raw produce was estimated in 1835 at £30,873. The assessed property in 1860 was £17,496. There are several extensive landowners, all non-resident, and several smaller landowners, resident. The parish is traversed by several provincial roads, by the great road from Glasgow to Dumfries, and by the Glasgow and South-western railway; and it has a station on the last. The village of New Cumnock stands on the Glasgow and Dumfries road, and on Afton Water near that stream's influx to the Nith, $\frac{5}{8}$ miles south-east of Cumnock, and $7\frac{1}{2}$ west by north of Kirkconnel. A cattle fair is held on the Thursday be-

fore Whitsunday. Population of the village in 1851, 160. Population of the parish in 1831, 2,184; in 1861, 2,891. Houses, 534.

This parish is in the presbytery of Ayr, and synod of Glasgow and Ayr. It was disjoined from Old Cumnock in 1650. Patron, the Marquis of Bute. Stipend, £194 11s. 8d.; glebe, £24. Schoolmaster's salary, £55, with £36 other emoluments. The parish church stands between the villages of New Cumnock and Afton-Bridgend, was built about the year 1833, and contains about 1,000 sittings. There is a Free church: attendance, 500; receipts in 1865, £258 8s. 6½d. There is a Reformed Presbyteriau meeting-house, with an attendance of 55. There are eight non-parochial schools, and a circulating library.

CUMNOCK (OLD), a parish containing the post-town of Cumnock, in the eastern part of Kyle, Ayrshire. It is bounded on the east by Dumfriesshire, and on other sides by the parishes of New Cumnock, Ochiltree, Auchinleck, and Muirkirk. Its length east and west is about 10 miles; and its average breadth is about two miles. The surface is in part flat, and in part hilly. The soil in general is clay upon a strong till; but in some places is bog, and in the holms is a light and dry mixture of sand and gravel. A great extent of the landscapes has a finely cultivated appearance. The river Lugar runs along the boundary with Auchinleck, drinking up several rivulets in its course, and eventually emptying itself, near Barskimming, into Ayr water; and it abounds in trout, and contains some eels. On the southern confines of the parish are three lakes which jointly have an area of about 100 acres, and which, though communicating with one another, discharge their waters partly south-eastward, through the rivulet Aith into the Nith, and partly north-westward, through another rivulet into the Lugar. The uplands, hilly but not mountainous, though partly covered with heath, are in general verdant. In the beds of the rivulets are petrifications of shells and fish. In an extensive lime-quarry belonging to the Marquis of Bute, are beds abounding with a species of coral. The limestone in this quarry is, in some places, mixed with shells and spar, takes a beautiful polish, and is capable of being dressed into a pleasing bluish marble. A vein of lead ore likewise runs through it, and was found, on trial at the lead-mines of Wanlockhead, to yield 65 pounds per cwt. Freestone abounds, is of easy access, and has contributed largely to the walls of neat and comfortable dwellings. Coal is supposed to be very extensive, but has been worked chiefly in subordination to the burning of lime. Black band ironstone also occurs in considerable quantity. The total yearly value of raw produce was estimated in 1837 at £20,207. The assessed property in 1860 was £14,424. The principal proprietor is the Marquis of Bute and Earl of Dumfries, who acquires from the parish his title of Baron. Dumfries-house, the seat of the Marquis, is situated in the north-west part of the parish, near the banks of the Lugar, and is surrounded with a fine demesne which, extending on both sides of the river, is connected by an elegant new bridge at the most accessible point from the mansion. The other mansions in the parish are Garrallan, Logan, and Glasnock, the last of which, situated on the stream whence it derives its name, is an elegant edifice, built of white freestone. Within the demesne of Dumfries-house stand the ruins of Ter-ringzean castle. Some traces, in the southern division of the parish, exist of an old keep called Boreland castle, and also of a Catholic chapel, which gives to the farm on which it stands the name of Chapel-house. Hugh Logan, Esq., 'the Laird of Logan,' and celebrated wit of Ayrshire, was a na-

tive of this parish. Here also, within the precincts of the burying-ground, are the remains of the famous Alexander Peden, of covenanting, and, as the vulgar say, of prophesying memory,—remains which were originally interred in the aisle of Lord Auchinleck,—which, after forty days, were exhumed by a body of dragoons, who intended to hang them up on a gallows,—and which, in yieldance with the entreaties of the Countess of Dumfries and other influential personages, were eventually allowed to rest along with the remains of other martyrs, at the gallowsfoot of Cumnock. Around the dust of Pedeu, as well as on the estate of Logan, and on a moor which lies along the south-west border of the parish, is the dust of martyrs of the Scottish covenant. In the northern vicinity of the town also is the birth-place of William Murdoch who, though originally a weaver in Auchinleck, became intimately known by community of genius to the celebrated James Watt, and benefitted the world as the introducer of gas-light. The parish has an abundance of good cross roads and bridges, and is traversed by the Glasgow and Dumfries road, and by the Glasgow and South-western railway. Population in 1831, 2,763; in 1861, 3,721. Houses, 565.

This parish—originally a rectory, afterwards a prebend of Glasgow, and afterwards a vicarage—is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Marquis of Bute. Stipend, £218 0s. 7d.; glebe, £20. Schoolmaster's salary, £34 4s. 4½d., with £65 other emoluments. The parish-church, built in 1754, and situated in the town, at a distance of 5½ miles from the most remote limit of the parish, has from 600 to 700 sittings. There is a Free church: attendance, 400; sum raised in 1865, £238 8s. 6d. There is an United Presbyterian church, with 900 sittings, and an attendance of 600. There are also a Congregational chapel and a Roman Catholic chapel. There are seven non-parochial schools.

CUMRUE, a farm, a small lake, and an extinct hamlet in the south-east end of the parish of Kirk-michael, Dumfriesshire. The lake has been much reduced by draining.

CUMSTON. See **TWYNHOLM**.

CUNLACK, or **CUNAIG**, a lofty, romantic, peculiarly shaped mountain ridge, in the parish of Assynt, Sutherlandshire. It extends southward from Unapool to Loch Assynt. Its west side is precipitous and inaccessible.

CUNINGHAR. See **TILlicOUNTRY**.

CUNNER LAW, a hill on the west border of the parish of Carnbee, Fifeshire. It has a height of about 650 feet above sea-level, and commands a very fine prospect.

CUNNINGHAM, the northern district of Ayrshire. It is bounded, on the north and north-east, by Renfrewshire; on the east, by Lanarkshire; on the south, by Kyle, from which it is separated by the river Irvine; and on the south-west and the west, by the frith of Clyde. Its length, south-eastward, is about 25 miles; and its breadth, south-westward, about 13 miles. It comprises the parishes of Ardrossan, Beith, Dalry, Dregghorn, part of Dunlop, Fenwick, Irvine, Kilbirnie, West Kilbride, Kilmarnock, Kilmaurs, Kilwinning, Largs, Loudon, Stevcnston, and Stewarton. Its surface is pleasantly diversified with hill and dale, but cannot be said to have any mountains. It is watered by numerous streams, the chief of which are the Annock, the Caaf, the Garnock, the Irvine, and the Rye. The chief towns and villages are Ardrossan, Beith, Dalry, Irvine, Kilwinning, Largs, Saltcoats, and Stewarton. The whole district abounds with coal, limestone, and freestone. It is, however,

mostly in the hands of great proprietors, and is, of consequence, ornamented with few seats. Eglinton castle and Kelburne are the chief.

This district is celebrated for its dairy husbandry, which has reached greater perfection here than in any other quarter of Scotland. Full milk cheese was first begun to be made in the parishes of Both, Dunlop, and Stewarton, soon after the middle of last century. It was made in the parish of Kilmarnock about the year 1756, and became common in Cunningham by about 1770. Some traditional accounts, however, represent it as of much earlier introduction. See DUNLOP. About the year 1760, the cows in Cunningham were not superior to those now in Bute, Arran, or Kintyre. They were poor ill-shaped starvelings, which when fattened did not weigh more than from 13 to 15 stones, county weight. But, about 1750, the Earl of Marchmont purchased from the Bishop of Durham, six cows and a bull of the Teeswater breed,—all of them flecked brown and white, and considerably heavier than the Ayrshire cows at that period. Bruce Campbell, Esq., of Milnriggs—who was then factor on His Lordship's estate in Ayrshire—brought some of that breed to his byres at Sorbeg, and from these many calves were reared in that part of Ayrshire. John Dunlop, Esq., about the same time brought some cows of an improved breed to his estate of Dunlop; and the Earls of London and Eglinton, Mr. Orr of Barrowfield, and others, all procured such cows, and placed them on their estates in Cunningham. These were at that time called Dutch cows, and they were of the same colour as those brought to Sorbeg. The dairy-breed on the Clyde have the colour and partly the shape of the Ayrshire breed, and are upon the whole a handsome species of stock; but they are too round in the chest, too heavy in the fore-quarters, and far less capacious in their hinder parts, than the improved Ayrshire breed. They are well-fitted for the grazier, but inferior to the Cunningham breed for milkers.

The district of Cunningham was, until the abolition of feudal jurisdiction, a bailiwick under the Earl of Eglinton. Many of its leading families,—such as those of Eglinton, Glencairn, and Loudon,—took a leading part in the affairs of the kingdom during its most agitated times. The ancient family of De Morville, the constables of Scotland, were at one time proprietors of almost all the district. It was to Hugh de Morville the church owed the celebrated abbey of Kilwinning, which was endowed so amply by him and others of his family as to have a yearly revenue equal to £20,000 of our present money. Yet it is singular that there is no certainty as to their place of residence in this district. Mr. George Robertson, in his 'Genealogical Account of the Principal Families in Ayrshire, more particularly in Cunningham,' gives the names of two places supposed to have been their residence,—Glengarnock castle, in the parish of Kilbirnie, and Southannan in Largs, now in Kilbride. Glengarnock appears to have been one of the most ancient buildings in the district, and its ruins show that it was one of the most extensive, and far beyond what the proprietor of the small barony of Glengarnock would have reared for himself. When

"The castle-gates were barr'd,
And o'er the gloomy portal arch,
Tuning his footsteps to a march,
The warder kept his guard."

he could see from the tower the greater part of Cunningham lying below him, and would have a view of the frith of Clyde, thus overlooking the movements of foreign as well as internal enemies.

The fact, however, cannot be ascertained with certainty, and we may place it along with that assertion which makes Glengarnock the residence of Hardyknute. Population of Cunningham in 1831, 63,453; in 1861, 95,593. Houses, 10,979.

CUNNING-PARK. See AYRSHIRE.

CUNNINGSBURGH, a parish, containing a post-office station of its own name, in Sutherland. It comprises a part of the mainland, immediately south of the parish of Lerwick, but is included *quoad sacra* in DUNROSSNESS: which see. It was formerly a vicarage.

CUPAR, the north-western one of the four great divisions of Fifeshire. It consists principally of the upper and central parts of the basin of the Edcu, and of the parts of the sea-board of the frith of Tay from the boundary with Perthshire to a point nearly opposite Dundee. Its length, north-eastward, is about 17½ miles; and its breadth is about 10 miles. It comprehends the parishes of Balmerino, Kilmany, Logie, Dairsie, Cupar-Fife, Ceres, Cults, Monimail, Moonzie, Creich, Flisk, Newburgh, Abdie, Dunbog, Collesie, Auchtermuchty, Strathniglo, Falkland, and Kettle, and parts of the parishes of Abernethy and Arngask. Population in 1831, 30,192; in 1861, 31,937. Houses 6,482.

CUPAR-ANGUS, a parish, partly in Forfarshire, but chiefly in Perthshire. It contains a post-town of its own name; and though the greater part of even this is in Perthshire, yet the other part, having been the original one, gives the designation of Angus to the whole. The parish extends about 5 miles from north-east to south-west, with a breadth of from 1½ to 2½ miles. It lies in the centre of Strathmore. But a ridge of some height bisects it lengthwise, is traversed by the great road from Perth to Aberdeen, and commands a splendid view of the Sidlaw hills along the one side of the strath, and of the Grampian mountains in flanking ranges on the other. The river Isla traces the north-western boundary, and is here subject to frequent great freshets. A considerable extent of haugh-ground lies along the river's bank, and is protected by embankments. The soil in general is a clay loam; but wherever the surface rises into eminences, the soil is gravelly. Only about 80 acres are under wood. The principal landowners are Collinswood of Keithick, Kinloch of Kinloch, Stewart of Balmerino, and three others. The parish is impinged upon by the Scottish Midland railway, and has a station on it at the town. There were formerly villages at Keithick and Cadam; but they are extinct. There are now the villages of Balbrogie, Longleys, and Washington. Population of the entire parish in 1831, 2,615; in 1861, 2,929. Houses, 554. Population of the Perthshire portion in 1831, 2,309; in 1861, 2,612. Houses, 499. Assessed property in 1843, £9,324 0s. 9d.; in 1866, £11,747 12s. 4d.

This parish, formerly a vicarage, is in the presbytery of Meigle, and synod of Angus and Mearns. Patron, the Crown. Stipend, £239 4s. 4d.; glebe, £25. Unappropriated teinds, £139 4s. Schoolmaster's salary now is £35, with about £70 fees. The parish church was built in 1681, nearly rebuilt in 1780, and greatly enlarged in 1831. Sittings, 850. There is a Free church: attendance from 500 to 600; receipts in 1865, £281 15s. 10½d. There are likewise an United Presbyterian church, with an attendance of nearly 300; an Original Secession church, with an attendance of 130; a Morrisonian Independent chapel, with an attendance of from 170 to 250; and a small Episcopalian chapel. There are two non-parochial schools, one of them Free church.

The TOWN OF CUPAR-ANGUS stands near the Isla, on a small tributary of that river, and on the great

road from Perth to Aberdeen, 5 miles south-south-east of Blairgowrie, 15 north-west of Dundee, and 12 $\frac{3}{4}$ north-east by north of Perth. The part of it on the left bank of the rivulet is in Forfarshire; and the part on the right bank is in Perthshire. The town has of late years been much improved, and is well paved and lighted. There is a town-house and prison with a steeple. Justice of peace courts and circuit small debt courts are held here. A principal employment is the weaving of coarse linen fabrics; but here, as elsewhere, this yields a scanty subsistence. There is also in the town a considerable tannery. The town has an office of the National Bank, an office of the Central Bank, an office of the Union Bank, a savings' bank, and several friendly societies. A weekly market is held on Thursday; and fairs are held on the third Thursday of March, on the Tuesday before the 26th of May, on the third Wednesday of July, and on the Tuesday before the 22d of November. Ample communication is enjoyed by means of the Scottish Midland railway. Contiguous to the town is the site of a Roman camp said to have been formed by Agricola in his 7th expedition. On the centre of this camp Malcolm IV. in 1164, founded and richly endowed an abbey for Cistercian monks. Its vestiges show that it must have been a house of considerable magnitude. In 1561, the revenues of this house were: Money £1,238 14s. 9d.; wheat 7 ch. 13 bolls 1 fir.; bear 75 ch. 10 bolls 3 fir. $\frac{1}{2}$ peck; meal 73 ch. 4 bolls 3 fir. 3 $\frac{1}{2}$ pecks; oats 25 ch. 4 bolls 2 fir. 2 pecks. The Hays of Errol, next to the Scottish Kings, were the principal benefactors to this monastery. Its last abbot was Donald Campbell of the Argyle family. Upon the distribution made by James VI. of the lands which came to the Crown on the dissolution of the religious houses, His Majesty erected this abbey into a civil lordship, in favour of James Elphinstone, second son of James, Lord Balmerino, in 1606; but he dying without issue, in 1669, the honour descended to the Lord Balmerino who was attained in 1745. A corner of one of the abbey walls still exists, covered with ivy. Population of the town in 1861, 1,943. Houses, 368.

CUPAR-FIFE, a central parish of Fifeshire. It contains the village of Glaidney, the post-office village of Springfield, and the royal burgh of Cupar-Fife. It is bounded by Kilmany, Dairsie, Kemback, Ceres, Cults, Monimail, and Moonzie. It has a very irregular outline, and measures nearly 5 miles both in extreme length and in extreme breadth. The surface is finely undulated, and well-wooded. The river Eden flows slowly through it from south-west to north-east, between green and fertile banks of varied beauty. The town of Cupar, and about two-thirds of the parish, are on the northern side of the Eden. The Lady-burn or St. Mary's burn, a small tributary, flowing from the north-west, after fetching a circuit through the northern suburbs of the burgh, joins the Eden to the east. The soil to the north and east of the burgh is a friable loam on a gravelly subsoil; to the south and west it is more inclined to sand. There are quarries of sandstone and greenstone. The landowners are numerous. The real rental is about £24,340. There are in the parish three spinning mills, a foundry, a fulling mill, two tan works, three breweries, a rope-work, a brick-work, and several corn, barley, and flour mills. A principal employment is the weaving of coarse linens, which employs upwards of 600 looms. The parish is traversed by the Dundee fork of the Edinburgh and Northern railway, and has stations on it at Cupar and Springfield. Population in 1831, 6,473; in 1861, 6,750. Houses, 1,171. Assessed property in 1866, £25,280 6s. 5d.

Kilmaron-House, situated 1 $\frac{1}{2}$ mile north-west of the burgh, is the finest mansion in the parish. It is in the castellated style, from a plan by Gillespie. To the south of Kilmaron, and about a mile south-west of the town, is the ancient house of Carslogie, for many generations the family-seat of the Clephanes. This family, in times of feudal strife, were leagued with the neighbouring ancient family of the Scotts of Scotstarvet, who inhabited a strong tower—which is still entire—situated on a lower ridge of Tarvet hill, about 2 miles south from Carslogie. On the appearance of an enemy, tradition relates, horns from the battlements of the castle from which the hostile force was first descried, announced the approach of danger, and the quarter from whence it was advancing; and both families, with their dependents, were instantly under arms for mutual protection. The family have been in possession, from time immemorial, of a hand made in exact imitation of that of a man, and curiously formed of steel. This is said to have been conferred by one of the kings of Scotland, along with other more valuable marks of his favour, on a laird or baron of Carslogie, who had lost his hand in the service of his country. When Dr. Campbell wrote the Old Statistical Account of this parish in 1796, there still existed, in a field contiguous to the house of Carslogie, and near to the public road which leads from Cupar to the west, the stately and venerable remains of an ash which for several centuries had retained the name of the Jug tree. The iron jugs, in which the offenders on the domains of Carslogie suffered punishment, fell from the hollow body of this tree, in which they had been infixed, only in 1793. A mound of earth, rising considerably above the adjoining grounds, and extending a great length on the north side of the town, is called the Mote, or, as some write it, the Moat-hill. They who use the latter orthography contend that this rampart is formed of artificial earth, and that it originally extended as far as the castle, and was constructed to defend the town from any sudden attack from the north, as the river, in some measure, secured it on the south. There is no doubt, however, that it ought to be styled the Mote-hill, as it was probably the place where, in early times, the justiciary of Fife held his courts, and published his enactments for the regulation of the country. The Latin name, by which this hill is sometimes mentioned, seems to decide the controversy, 'Mons placiti,' which may be translated 'Statute-hill.'

"The parish of Cupar and the surrounding district," says Mr. Leighton, in his 'Fife Illustrated,' "is rich in localities connected with events, circumstances, or individuals never to be forgotten, and affording subjects of thought and reflection to even the most ordinary minds. From the top of Tarvet hill, or, as it is now called, Wemyss-hill, these objects attract our attention in every direction. In the distant west, at the bottom of the Lomond hills, we see all that remains of the royal palace of Falkland, where so many of Scotland's sovereigns of the Stewart race sought pleasant retirement from the cares of governing a turbulent kingdom, or of attempting to reconcile the differences of a still more turbulent nobility. How often have these grey walls resounded with music and dancing! How often been the scene of hospitable feast, and long protracted, yet merry wassail! Over these fields which skirt the Eden—then a royal forest—our ancient kings followed the chase with hound and horn, or flew the hawk at its winged prey. At one time the only sound heard throughout these forest-glades was the wild buck's bell, or the call of the various birds which then frequented them to their

mates; at another they were the scene of mirth and sport. There the proudest names in Scotland's history followed their prince in peaceful and animating sport. There beauty took the field, hawk on arm, and knightly valour bowed subservient to its influence. But, alas! Falkland palace was not always a scene of joy; we think on James IV., James V., and the beautiful Mary; and we think of crime, of folly, of misery, captivity, and early death! Nearer us, in the same direction, appears the manse of Cults. There the great painter of our age, the poetic yet graphic Wilkie, was born and spent his early years. Amid these gently sloping hills and sweet valleys, he studied nature, and imbibed that love of truth and simplicity which he has since, so beautifully in some instances and so grandly in others, developed. Still nearer us in the same direction is the ancient tower of Scotstarvet. There resided Sir John Scott of Scotstarvet, one of the directors of the Chancery in the reign of Charles I., 'who was,' says Nisbet, 'a hountifal patron of men of learning, who came to him from all quarters, so that his house became a kind of college.' Among others, he encouraged Pont in his survey of the whole kingdom, gave him great literary assistance, and was at the expense of the publication; and in yonder old tower he wrote his curious work,—'Sir John Scott of Scotstarvet's Staggering State of Scots Statesmen.' Along the slope of this hill, under the Duke of Chatelherault and M. D'Oysel, lay at one time the army which was intended by Mary of Guise to crush the efforts of the reformers. On the opposite bank were stationed those who had determined to die rather than that popery should longer lord it over the consciences of men; and on this hill, where we now stand, the treaty was subscribed, which, though soon broken through by the queen-regent, gave time to the reformers, and ultimately led to the establishment of the Presbyterian religion in Scotland. To the north rises the Mount, the patrimonial possession of 'Sir David Lindsay of the Mount, Lord Lyon, king-at-arms,' during the reign of James V.; and there he wrote those bitter biting satires which delighted the people, and paved the way for the Reformation. The house in which he lived has now disappeared, but the place is still interesting, and the hill is now crowned with a monument erected to the memory of the late Earl of Hopetoun, one of the deliverers of Europe from the all-grasping power of the late emperor of the French. Almost immediately below us is the school-hill of Cupar, a portion of which formed the play-field of the hurgh, and there the dramas of Sir David Lindsay were exhibited so early as 1535. At a far earlier period, however, when the castle of Cupar was the residence of Macduff, the lord or Maormore of Fife, it was the scene of that horrid tragedy, the murder of his wife and children by Macbeth, which led to the inveterate hatred of Macduff, and finally to the establishment of Malcolm Ceanmore on the throne; and of which the poet has made such a beautiful use in his play of Macbeth. To the east upon the sea-coast is the venerable city of St. Andrews, the seat of an ancient bishopric, and the earliest seat of learning in Scotland. With how many great names of Scotland are these hallowed ruins associated; and how intimately connected is its history with the early civilization and improvement of our country! To the south beyond the vale of Ceres is Craighall, the seat of Sir Thomas Hope, king's advocate to Charles I., and one of the greatest lawyers of his time. In Ceres churchyard repose in peaceful silence many of the proud race of Lindsay of the Byres, and some of the kindred race of Crawford. There is the grave—although the spot is now un-

marked—where rests that rude Lord, who, when the unfortunate Mary hesitated to sign her abdication, did not scruple to crush her gentle hand with his iron glove, nor to force her by rude speech and still ruder threats, unwillingly to execute the deed which deprived her of a crown, and consigned her for the rest of her life to a prison; and a little to the east in the same valley lies Pitcottie, the residence of Lindsay the homely yet picturesque relater of a portion of Scotland's history. In a word, we know no place more capable of calling up more varied recollections, or of elevating the mind and exciting the fancy, than the top of Tarvet hill."

This parish is the seat of a presbytery in the synod of Fife. It comprises the two ancient parishes of Cupar-Fife and St. Michael of Tarvet, which were united in 1618. St. Michael's is the part south of the Eden; though, in consequence of the course of the river having not long ago been straightened, it comprehends also a small pendicle on the north side of the river, near the County-Hall. The church belonging to it stood on a beautiful spot which was long designated St. Michael's hill. The ruins of a small chapel, situated near the eastern boundary of the lauds of Kilmaron, were to be seen near the close of last century. The parochial church of Cupar, in early times, stood at a considerable distance from the town towards the north, on a rising ground, now known by the name of the Old Kirk-yard. The foundations of this ancient building were removed in 1759; and many human bones, turned up in the adjoining field by the plough, were then collected and hurried in the earth. In 1415 this structure had become ruinous, or incapable of accommodating the numbers who resorted to it. In the course of that year the prior of St. Andrews, for the better accommodation of the inhabitants of the town of Cupar, and that the rites of religion might be celebrated with a pomp gratifying to the taste of the age, erected within the royalty a spacious and magnificent church. This church was built in the best style of the times, of polished freestone, in length 133 feet, by 54 in breadth. The roof was supported by two rows of arches extending the whole length of the church. The oak couples were of a circular form, lined with wood, and painted in the taste of the times. In 1785, this extensive building being found to be in a state of total decay, the heritors of the parish resolved to pull it down, and to erect on its site a church on a more convenient plan. This they carried into execution, at a considerable expense, in 1785. It is to be regretted that the new building was not joined to the spire of the old church, which still stands. The vestry or session-house, by intervening between the church and the spire, gives a detached appearance to both. The spire has always been considered handsome, and appears light and elegant when viewed from the east or west. It was built by the prior of St. Andrews in 1415, only up to the battlement: all above that was added in the beginning of the 17th century, by Mr. William Scott, who was for many years minister of Cupar. The church contains 1,300 sittings. Within it, in a niche in the west wall, is a monument erected to Sir John Arnot of Fernie, who fell in the last crusade. It presents the recumbent figure of a knight in armour. In the same circle is a marble tablet to the memory of Dr. Campbell, one of the ministers of the parish. In the churchyard is a plain upright stone, bearing the following inscription: "Here lies interred the heads of Laur. Hay, and Andrew Pitulloch, who suffered martyrdom at Edinburgh, July 13th, 1681, for adhering to the Word of God and Scotland's covenanted work of reformation; and also one of

the hands of David Hackston of Rathillet, who was most cruelly murdered at Edinburgh, July 30th, 1680, for the same cause."

The parochial charge is collegiate. The patron of both charges is the Crown. Each minister has a stipend of £259 7s. 9d.; and the first has also a glebe of the yearly value of £21. Unappropriated teinds, £1,016 7s. A new church, called St. Michael's, was erected in the burgh in 1837, at an expense of about £1,800, raised by subscription shares. It accommodates 810; and public worship is performed in it by the parish ministers alternately. There is a Free church, with an attendance of from 800 to 1,000, and receipts in 1865 of £1,003 5s. There are two United Presbyterian churches, called respectively Burnside and Boston churches, the one extensively repaired a number of years ago, and the other rebuilt in 1850. There is an Episcopalian chapel, which was built in 1820 at the cost of £3,000, and has an endowment from the late Dr. Bell. There is also a Free Communion Baptist chapel, with an attendance of 300. There is no parochial school. There were, however, two burgh-schools so early as the reign of Charles I., and these continued in operation till 1823, under the patronage of the magistrates, and salaried out of the burgh funds. In 1823, they were superseded by an academy. This was erected by subscription and placed under the conduct of four teachers, whose salaries were paid partly by the town, and partly out of the general subscription fund. The patronage of the academy was vested in the magistrates and in subscribers to the amount of £10, besides certain persons, *ex officio*; and the whole management was centred in the general body of the patrons, and their committee of directors. But in later years an institution, founded by bequest of the late Dr. Bell on the Madras system, was first united to the academy, and afterwards absorbed it. This institution, which is called the Madras academy, is at present conducted by six male teachers, and one female teacher, whose salaries vary from £25 to £110 a-year. The appointment of the teachers and the entire management of the seminary, are in the hands of Dr. Bell's trustees. These are the lord-lieutenant of the county, the lord-justice-clerk of Scotland, the sheriff of the county, the provost of the burgh, the dean of the guildry, and the two established clergymen of Cupar. The estate of Egnore in Galloway, with about £400 a-year, and the school fees, which are very low, supply the funds out of which the teachers' salaries and other expenses are defrayed. The late Dr. Gray of Paddington, in the county of Middlesex, left £500, the interest of which he directed to be applied in payment of a salary to a female teacher in Cupar, and the management is vested in the provost, clergymen, and schoolmaster of the parish for the time being. The proceeds of this legacy are at present divided between two female schools in the town. Beside these and the Madras academy, there are two adventure schools in the town of Cupar, and a third in the village of Springfield.

THE TOWN OF CUPAR-FIFE—a royal burgh, a seat of considerable trade, and the political capital of Fifeshire—is pleasantly situated nearly in the centre of the parish of Cupar-Fife, on the north bank of the Eden, on the great road from Edinburgh to Dundee, and on the course of the Dundee fork of the Edinburgh and Northern railway, 10 miles west of St. Andrews, 12 south-west of Tayport, 18 north-north-east of Kirkcaldy, and 32 north-north-east of Edinburgh. It contains many new houses, and presents the appearance of a thriving modern town, well-built, and cleanly kept. It contains three principal streets,—the Bonnygate, running east and west;

the Crossgate, running north and south, in a direction nearly parallel with the Eden; and St. Catherine street, which is a continuation of the Bonnygate. Several lanes and alleys branch off in various directions from these main lines; and there is a large irregular suburb on the north side of St. Mary's burn; besides a considerable line of houses on the Edinburgh road, on the south side of the Eden. All these suburbs are included within the parliamentary boundaries of the burgh. The parish-church stands in Kirkgate-street, at the entrance of the North road from Ferry bank. St. Michael's church is at the west end of the Bonnygate. The Episcopal chapel is near, or upon, the site of an ancient monastery. The town-house stands at the junction of St. Catherine-street and Crossgate. It is a plain neat building, surmounted by a cupola and belfry. The corn exchange was built in 1862, at a cost of £4,000; is an elegant edifice in the Gothic style, with a spire 130 feet high; was designed to serve also as a music hall; and contains 46 stalls for market business. The county-buildings, in St. Catherine-street, present a neat though plain facade. They contain the county-hall, sheriff-court room, and offices for the public clerks. The old county prison stood on the left hand of the middle bridge crossing the Eden, and on the south side of the river; but the new prison, on a greatly improved plan, occupies a conspicuous site on the north side of the Dundee road, a little to the north-east of the town. The railway station is worthy of the town's importance; and an extraordinary expense was incurred on this part of the line, to prevent accidents, by lowering the natural level of the railway, and elevating the public road over it on a series of high stone arches.

Cupar-Fife, in consequence of being the county town, is inhabited by numerous practitioners in the legal courts, members of banking-establishments, and persons connected with the agricultural interest. It is chiefly distinguished for its trade in corn, and the mills, brewing, and such establishments dependent on that species of market. There are, however, several extensive spinning-mills in the neighbourhood; and there is a considerable trade in the weaving of coarse linens, and in home-manufactures, such as leather, candles, and snuff. Its printing-establishments, too, have been justly celebrated for the production of some beautiful specimens of excellent typography, and the publication of many useful works. Cupar-Fife has been long known as a leading and important market-town. There is a weekly corn-market, which is held on Tuesday, and is well-attended. Fairs for farm-stock, agricultural implements, domestic utensils, and miscellaneous matters connected with agriculture, are held on the first Tuesday of every month. The fair in August is also a hiring fair; and another hiring fair is held on the 11th of November. The principal inns are the Tontine, the Royal Inn, and the Blue Bell. The town has offices of the British Linen, the Commercial, the National, the Royal, the City of Glasgow, and the Clydesdale banks, a large public library, a large museum, a lawyer's library, a public news room, a mechanics' institute and reading-room, an alms-house or female asylum, a total abstinence society, a philharmonic society, a horticultural society, an agricultural society, various charitable and religious institutions, a cricket club, a curling club, and annual games. Three newspapers are published here,—the Fife Herald every Thursday, the Fifeshire Journal every Thursday, and the Saturday Herald every Saturday. The sheriff and commissary courts for Fifeshire are held at Cupar-Fife every Tuesday and Thursday during

session; and the small debt courts every first and third Thursday of each month during session, and every first Thursday during vacation.

The earliest charter of the burgh of Cupar-Fife was granted by David II., in 1363, conferring the privileges of trade upon the burghesses, in like manner as upon the inhabitants of burghs generally. These privileges were confirmed, and various grants of lands conferred upon them, by a charter granted by Robert II., dated Dunfermline, 28th June, 1381; by a charter of James I., dated at Perth, 28th February, 1428-9; by another of the same reign, dated 30th October, 1436; by a charter of King James V., dated 13th March, 1518; by an act and warrant of James VI., dated at Holyrood house, 1573; and by a charter of feu-farm by King James VI., dated Edinburgh, 4th June, 1595. The old set of the burgh consisted of a provost, 3 bailies, a dean-of-guild, a treasurer, 13 merchant-councillors, a convener, and 7 deacons of trades. It is now governed by a provost, 3 bailies, and 14 councillors. The revenue, in 1832, was £554 13s. 11½d., of which £321 arose from land-rental, and £120 from feu-duties. The expenditure in that year was £751 12s. 9d., of which £223 was interest of money borrowed. The debt of the burgh at the same period amounted to £8,171 18s. 1d.; and the free value of property, after deducting that debt, £5,356 10s. 1d. The property consists of lands, feu-duties, customs, and market-dues. The property in land was at one time very extensive, stretching 3 miles to the westward, and extending perhaps to 1,000 acres. Compared with this its present extent is very limited. The lands seem to have been chiefly feued out upwards of a century ago, when they were in a state of nature and at very low feu-duties. The corporation revenue in 1850-1 was £150. A municipal tax is levied for the ends of lighting, cleaning, &c. The cess, or burgh land-tax, is levied upon property and the profits of trade within the royalty of the burgh. It is allocated by stent-masters chosen from among the merchants of the burgh by the council, by whom the collector is also annually appointed. The jurisdiction of the magistrates is confined to the burgh and burgh-acres. The royalty is very narrow towards the north, being bounded on that side by the Lady burn. Immediately to the north of this burn, and within the parliamentary boundary, there have arisen of late years several villages where there is no police-establishment of any kind, and which are beyond the jurisdiction of the magistrates. These villages are called Braehead and Newtown—both on the lands of Pittencreeff—and Burnside, Lebanon, and Bank street. Even more directly within the precincts of the town, and in the principal street, called St. Catherine-street, there are houses which are not within the royalty, although completely surrounded by it. In the street called the Millgate, the west side of the street holds burgage, and is within the royalty, and the east side is beyond it and holds of the Earl of Rothes. Burgh-courts are held on stated days for the despatch of business; but as the sheriff-courts, both ordinary and under the small debt act, are held within the burgh, little business is brought before the burgh-court.—Cupar-Fife is conjoined, in the election of a member of parliament, with St. Andrews, Crail, Kilrenny, East and West Anstruther, and Pittenweem. Previous to the Reform bill, it was rather anomalously associated with Perth, Dundee, Forfar, and St. Andrews. Parliamentary constituency in 1853, 242. In an ancient document styled 'A Brief View of Scotland in the Sixteenth Century,' printed by Pinkerton, in his History of Scotland, from a manuscript in the Cottonian library, it is said, "Most

borrows are at the devotion of some noblemen, as Cowper in Fife managed by the Earl of Rothes." Among those who represented this burgh in the Scottish parliament, appears Sir David Lindsay of the Mount. Population of the royal burgh in 1841, 3,567; in 1861, 4,980. Houses, 799. Population of the parliamentary burgh in 1861, 5,029. Houses, 806.

Cupar-Fife is a place of considerable antiquity. At an early period the Muceduffs, thanes of Fife, had a castle here, in the midst of the marshy grounds, which bordered the Eden and St. Mary's burn. It continued the seat of the court of the stewardry of Fife, until the forfeiture of Albany, Earl of Fife, in the reign of James I., when that court was removed to Falkland. During the darker ages, theatrical representations, called Mysteries or Moralities, were frequently exhibited here. The place where these entertainments were presented, was called the Playfield. "Few towns of note," says Arnot, in his 'History of Edinburgh,' "were without one. That of Edinburgh was at the Greenside-well; that of Cupar in Fife was on their Castle-hill." The pieces presented in the Playfield of Cupar, however, seem not, at the era of the Reformation, to have had any connection with religious subjects, but were calculated to interest and amuse, by exhibiting every variety of character and every species of humour. To illustrate the manners which prevailed in Scotland in the 16th century, and as a specimen of the dramatic compositions which pleased our fathers, Arnot, in the appendix to his History, gives a curious excerpt from a manuscript comedy, which bears to have been exhibited in the Playfield at Cupar, and which had been in the possession of the late Mr. Garrick. That part of the excerpt only, which relates to the place where the play was presented, is here transcribed:

"Here begins the proclamation of the play, made by DAVID LINDSAY of the Mount, knight, in the Playfield, in the month of _____, the year of God 1555 years."

"Proclamation made in Cupar of Fife.

"Our purpose is on the seventh day of June,
If weather serve, and we have rest and peace,
We shall be seen into our playing place,
In good array about the hour of seven.
Of thriftiness that day, I pray you cease;
But ordain us good drink against allewin.
Fail not to be upon the Castlehill,
Beside the place where we purpose to play
With gude stark wine your flaggons see you fill
And had yourselves the mirriest that you may."

"Cottager. I shall be there, with God's grace,
Tho' there were never so great a price,
And foremost in the fair:
And drink a quart in Cupar town,
With my gossip John Williamson,
Tho' all the noit should rain!" &c.

During the residence of our Kings in Scotland, Cupar-Fife often received visits from royalty. Almost all the Jameses, and the unfortunate Mary, repeatedly visited it, and were entertained within the town. The last royal visit was made by Charles II. on the 6th of July, 1650, when on his way from St. Andrews to Falkland. He was entertained at dinner by the magistrates in the town-hall; then forming part of the tolbooth or gaol. "He came to Couper," says Lamont, "where he gatt some desert to his foure houres: the place where he satte doune to eate was the tolbooth. The towne had appointed Mr. Andro Andersone, scholemaster ther for the tyme, to give him a musicke songé or two, while he was at table. Mr. David Douglisse had a speech to him at his entrie to the towne. After this he went to Falklande all night. All this tyme the most part of the gentelmen of the shyre did go alonge with him."

From an ancient plan of the town, 1642—en-

graved from the original in the Advocates' library, by the Abbotsford club—it appears that Cupar-Fife had anciently gates or ports. One of these stood at the west end of the Bonnygate, called the West port; one at the middle of the Lady wynd, called the Lady port; one below the castle, called the East port; one at the bridge, called the Bridge port; one at the Millgate, called the Millgate port; and another at the end of the Kirkgate, called the Kirkgate port. It is curious to observe, from this plan, how little alteration has since taken place in the streets of the town; and that the names of both streets and lanes are still the same they then were. The principal alteration—with the exception of buildings in the suburbs—is the taking down of the old jail and town-house at the Cross and the opening up of St. Catherine-street. Where the markets are still held, opposite the town-house, at the junction of Crossgate and Bonnygate, the ancient cross of Cupar-Fife once stood. It was an octagonal building, with a round pillar rising from it, surmounted by a unicorn, the supporter of the royal arms of Scotland. When the jail was taken down, this structure was also removed; and at the request of Colonel Wemyss, the pillar was presented to him, when he caused it to be re-erected on the top of Wemyss-hall hill, where it still remains marking the spot on which the famous treaty between Mary of Guise and the Lords of the Congregation was subscribed.

CUPAR-GRANGE, an estate in the parish of Bendochy, about 2 miles north of Cupar-Angus, on the eastern border of Perthshire. A considerable village, consisting of an assemblage of small farm-houses and their appendages, formerly existed here, but is now extinct. A famous variety of oat originated here, and is still extensively cultivated, but is now known generally as the common late oat of Perthshire and Forfarshire. There was discovered at Cupar-Grange some time last century a repository of the ashes of sacrifices which our ancestors were wont to offer up in honour of their deities. "It is," says Pennant in his Second Tour, "a large space of a circular form, fenced with a wall on either side, and paved at bottom with flags. The walls are about 5 feet in height, and built with coarse stone. They form an outer and an inner circle, distant from each other 9 feet. The diameter of the inner circle is 60 feet, and the area of it is of a piece with the circumjacent soil; but the space between the walls is filled with ashes of wood, particularly oak, and with the bones of various species of animals. I could plainly distinguish the extremities of several bones of sheep; and was informed that teeth of oxen and sheep had been found. The top of the walls and ashes is near 2 feet below the surface of the field. The entry is from the north-west, and about 10 or 12 feet in breadth. From it a pathway, 6 feet broad, and paved with small stones, leads eastward to a large free-stone, standing erect between the walls, and reaching 5 feet above the pavement, supported by other stones at bottom. It is flat on the upper part, and 2 feet square. Another repository of the same kind and dimensions was discovered at the distance of 300 paces from the former. From the numbers of oak-trees that have been dugged out of the neighbouring grounds, it would appear that this was anciently a grove."

CUPINSHAY. See COPENSAY.

CUR (THE), a river in the district of Cowal, Argyleshire. It takes its rise in the mountains which border on Lochgoilhead, between Glaslet hill and Benulei. Its course for 2 miles is rough and rapid, forming, as it descends from the mountains,

several fine cascades; but when it has reached the plains of Strachur it runs smoothly, making a number of beautiful turns. The banks are generally of a deep soil, partly of loam and clay; but the crops are frequently much damaged by the sudden rising of its waters. After a course of about 9 or 10 miles, it falls into the head of Loch Eck.

CURGARF. See CORGARF.

CURGIE, a small port in the parish of Kirkmaiden, on the western side of the bay of Luce, 3 miles north of the Mull of Galloway, Wigtonshire.

CUR-HILLS. See MONIKIE.

CURRIE, a parish, containing the post-office villages of Currie, Balerno, and Hermiston, in Edinburghshire. It is bounded by Corstonphine, Colinton, Penicuik, Mid Calder, Kirknewton, and Ratho. The most easterly point of it lies about $3\frac{1}{2}$ miles south-west of Edinburgh. Its length north-eastward is 8 miles; and its breadth is $4\frac{1}{2}$ miles. Its name seems to be a corruption of Korria or Coria, given to it by the Romans. Its surface descends very irregularly, from a height of 900 feet or more among the Pentlands, through bold undulations on a basis of from 500 to 300 feet, to an expanse of plain in some places below the level of the Union canal. The soil of the uplands is moorish; but that of the low tracts is very rich and under high culture. The Water of Leith comes in from the uplands of Mid Calder, flows through all the interior, and is joined near the middle by Bevelaw burn. The springs on the south-east border have connexion with the Edinburgh water-works. Excellent sandstone abounds, and is quarried. Limestone of a bad quality is plentiful, but is not worked. A vein of copper ore near East Mill was at one time explored, with the view of being worked, but did not promise to be compensating. The principal landowners are Lord Rosebery of Buteland, Sir William Gibson Craig, Bart. of Kiecarton, Scott of Maleny, Lord Morton, Lord Aberdour, and eight or nine others. Great georgical improvements have been effected. The rental of the Maleny property has risen in about seventy years from £300 to upwards of £2,000. There are in the parish three paper mills, a snuff mill, several flour mills, and an extensive yarn and sail-cloth manufactory. On an elevated situation, above the bank of the Water of Leith, is an old castle called Lennox Tower, said to have belonged to the family of Lennox, and to have been occasionally the residence of Queen Mary in her youth,—

"When love was young, and Darnley kind."

It became afterwards, according to the same tradition, a seat of the Regent Morton. It commands a beautiful prospect of the frith of Forth, and must have been a place of very considerable strength, being inaccessible on all sides. It had a subterraneous passage to the river. The extent of the rampart, which goes round the brow of the hill, is about 1,212 feet. Not far from this castle, on the opposite side of the river, are the ruins of another ancient edifice, the mansion of the Skenes of Currie-hill, the date of whose creation, as Baroquets of Scotland, is unknown; but they possessed very extensive property in this parish. The family of Balmorino, originally, had here also a considerable domain. On the top of Ravelrig-hill, are to be seen the remains of a Roman station, or exploratory camp, which affords a farther confirmation of the name of this parish having been originally derived from the Latin. It is on the summit of a high bank, inaccessible on three sides, defended by two ditches, and faced with stone, with openings for a gate. It is named by the country people Castle-

bank. Farther east are the appearances of another station or post, which commands an extensive view of the strath towards Edinburgh, and is styled the General's Watch. They are both very distinctly marked, in an old plan of the Ravelrig estate, but are now much defaced; former proprietors having carried off the greater part of the stones to build fences. The parish is traversed by the road from Edinburgh to Lanark, by the Union canal, by the Caledonian railway, and by the Edinburgh and Glasgow railway. The village of Currie stands on the Edinburgh and Lanark road, and on the left bank of the Water of Leith, 6 miles south-west of Edinburgh. It has a station on the Caledonian railway, and is a station of the Edinburgh county police. Its situation is pleasant, and its appearance prosperous. Population of the village in 1861, 345. Population of the parish in 1831, 1,883; in 1861, 2,248. Houses, 433. Assessed property in 1843, £12,164 1s.

This parish is in the presbytery of Edinburgh, and synod of Lothian and Tweeddale. Patron, Sir William Gibson Craig, Bart. Stipend, £264 9s. 10d.; glebe, £16. Schoolmaster's salary, £34 4s. 4½d.; fees, £52. The parish church stands at the village of Currie, was built about 70 years ago, and contains about 800 sittings. There is a Free church for Colinton and Currie. There is an United Presbyterian church at Balerno, built in 1829, and containing about 500 sittings. There are three non-parochial schools,—one of them with a commodious school-house at Balerno; and there is a parochial library. Currie district seems originally to have belonged to the collegiate church of Corstorphine, and to have been a benefice of the archdeacon of Lothian. Even so late as the reign of Charles I. it does not appear to have been a separate parish, for no mention of it is made in the royal decree of the erection of the see of Edinburgh, though all the adjoining parishes are noticed. That Currie, however, though not perhaps a separate parish, had very anciently been a place of religious worship, the writer of the Old Statistical Account thinks "is clear from this proof, that in digging for the foundation of the present church, on the site of the old one, there was discovered a round hollow piece of silver, having the remains of gilding on it, and which seems evidently either a part of the stalk of a crucifix, or of an altar-candlestick. It has a screw at each end. Its length is 7½ inches, and its diameter 1½ inch. In a spiral scroll from top to bottom, there is the following inscription:—'Jesu Fili Dei miserere mei.' The letters—which are Saxon—are very well engraved, and each ⅝ of an inch large. It is at present in the museum of the Society of Antiquaries in Edinburgh."

CURSU APRIL. See ANDREWS (St.).

CUSHNIE, a small parish, formerly a vicarage, in Aberdeenshire, which, in 1798, was annexed to the neighbouring one of Leochel, so that they now form one parochial charge. See LEOCHEL-CUSHNIE.

CUTHBERT'S (St.), a very populous parish, partly urban and partly landward, in Edinburghshire. It is bounded by the royalty of Edinburgh, and by the parishes of Canongate, Liberton, Colinton, Corstorphine, Cramond, North Leith, and South Leith. Its length, north-north-westward, is 5 miles; and its breadth is 3¼ miles. Its urban part comprises all the portions of the Old Town of Edinburgh beyond the ancient royalty and the Canongate, and all the portions of the New Town, both compact and suburban, not included in the city parishes of St. George's, St. Stephen's, St. Andrew's, St. Mary's, and Greenside. Its landward part extends in one direction from the Braid hills to Trinity; in another,

from the neighbourhood of Slateford to the Queen's Park; and in another, from the vicinity of Corstorphine Hill to the outskirts of North Leith. Its surface, therefore, is exceedingly rich and surpassingly varied, comprising a broad zone of the city of Edinburgh, in almost every variety of that city's romantic features,—the exquisite scenery of the Braid hills, Morningside, and Canaan,—the pleasant beauties of the Meadows, the Grange, and Newington,—the rich plain, arabesquely studded with suburbs, mansions, manufactories, villages, and farm-fields, extending away westward from the Lothian road,—the picturesque dell of the Water of Leith, from the vicinity of Slateford, past Coltbridge, through Stockbridge, and round the skirts of Edinburgh to Bonnington,—and the luxuriant tract, gay with decoration, laughing in beauty, rich in great gardens and nursery-grounds, and gemmed to profusion in many a part with villas and mansions, stretching from the Water of Leith on one side toward Craigleith and on another to Trinity. As a whole, however, the parish is so identified with the metropolis that an account of most things pertaining to it must be reserved for incorporation with our article on EDINBURGH.

St. Cuthbert's parish was originally of such extent as to comprise all the present parishes of the city of Edinburgh, the parish of Canongate, the parishes of Corstorphine and Liberton, the greater part of the parish of North Leith, and some part of the parish of South Leith. It took its name from the Culdee missionary Cuthbert, who itinerated from York to the Forth as a preacher, became nominal bishop of Lindisfarn, died in 687, and bequeathed his name to Kirkcudbright and to many other places in the south of Scotland. It was the oldest parish in Mid-Lothian, and soon became the richest. Its first church was probably built about the time of Cuthbert's death, or very soon after. It had several grants, known to record, before the date of the charter of Holyrood; and it was given, together with its kirktown and rights, by David I. to the monk of that abbey. Except with regard to the urban districts of the New Town of Edinburgh, whose disjunction was of quite modern date, the parish was reduced to its present limits in the Popish times. But even within these it had a number of ecclesiastical institutions. Immediately adjacent to the city wall, at the east end of Drummond Street, stood a nunnery, dedicated to St. Mary of Placentia. A corruption of its designation survives in the name Pleasance, borne by the street which sweeps past its site. On the east side of the road to Dalkeith stood a chapel and an hospital dedicated to St. Leonard. The lands belonging to them were granted by James VI. to the magistrates of Canongate as an endowment to St. Thomas' Hospital. The name survives in various localities adjacent to the site. On the east side of Newington stood a chapel of Knights' Templars. Its site, a rising-ground, or slight eminence, is called Mount Hooly, a corruption of Mount Holy, or the Holy Mount. About 120 years ago, when the ground was dug up, several bodies were found, cross-legged and accoutred with swords. South of the meadows, not far from Grange House, was a convent of Dominican nuns, founded by the lady St. Clair of Roslin, and dedicated to St. Catherine of Sienna. A low shapeless ruin still remains, and gives the name Sheens, corrupted from Sienna or Siensis, to a district around it. South-west from the Grange, on the west end of Borough-moor, stood a large chapel, dedicated to St. Roque. Around it was a cemetery which the citizens of Edinburgh used for about two centuries, and which was the chosen place of interment for

persons who died of epidemics. East of the chapel of St. Roque was another dedicated to St. John the Baptist. In the suburb of Portsburgh was a chapel dedicated to the Virgin Mary, which gave to the thoroughfare on which it stood the name of Chapel-wynd.

CUTHILL, or **CUTTLE**, a suburb of the town of Prestonpans, Haddingtonshire. It is separated from the west end of that town by a rill. It is a dingy unpleasant place. Here were formerly a saltwork, a magnesia manufactory, and an extensive pottery. Population, 172.

CUTTYFIELD, a village in the parish of Larbert, connected with the Carron Iron-Works, Stirlingshire.

CYRUS (Str.), or **ECCLESCRAIG**, a parish, containing the post-office village of St. Cyrus, and the small villages of Roadside, Burnside, Lochside, Whitehill, Milton, and Tangleha', in the southern extremity of Kincardineshire. It is bounded on the east by the German ocean; on the south, by Forfarshire; and on other sides by the parishes of Marykirk, Garvock, and Benholme. Its length north-eastward is 5 miles; and its breadth is $3\frac{1}{2}$ miles. The North Esk, describing a semicircular curve and flowing along a picturesque glen, traces the boundary with Forfarshire. Six burns, all running in romantic dells, drain the interior to either the North Esk or the sea; and the largest, traversing Den Fenella, beneath two handsome bridges, one of them 120 feet high, forms a grand cascade of 65 feet in perpendicular fall. The general surface of the parish comprises a number of hills, separated from one another by the dells, and varying in altitude from 450 to 630 feet; so that it presents many great abrupt transitions of level, and abounds in bold, romantic, and beautiful features of landscape. About a mile of the coast on the south is flanked with flat beach; and all the rest, after projecting three low rocky promontories into the sea, rises up in an almost continuous escarpment, varying in height from 50 to nearly 300 feet, everywhere steep, and in some parts a perpendicular cliff. This escarpment is believed by geologists to be the barrier of an ancient ocean. The most southerly of the three promontories forms the northern screen of the broad, low, crescent-shaped bay of Montrose. Sir Charles Lyell makes large remarks on the coast of St. Cyrus, and notices, among other matters, the destruction of a village, a little to the east of the promontory of Rockhall, in the vicinity of the present village of Tangleha'. "On the coast of Kincardineshire," says he, "an illustration was afforded at the close of last century, of the effect of promontories in protecting a line of low shore. The village of Mathers,

two miles south of Johnshaven, was built on an ancient shingle beach protected by a projecting ledge of limestone rock. This was quarried for lime to such an extent that the sea broke through, and in 1795 carried away the whole village in one night, and penetrated 150 yards inland, where it has maintained its ground ever since." About 6,250 acres of the parish are under tillage; about 350 are under wood; about 760 are improvable hill pasture; and about 850 are irreclaimable waste. The soil of the arable lands is very various, but generally rich. Limestone is not now worked; but there are sandstone quarries. There are several valuable salmon fisheries. The principal land-owners are Porteous of Lauriston, Grant of Mount Cyrus, Fordyce of Woodston, the Earl of Kintore, and seven others. The real rental is about £12,800. The principal mansions are Lauriston, Mount Cyrus, Bridgeton, and Kirkside. The chief antiquities are some remains of the ancient castle of Lauriston, incorporated with the modern mansion of Lauriston; some vestiges of a sea-girt fortalice, called the Kaim of Mathers, at least as old as the time of James I.; and an ancient obelisk, which has been variously regarded as a Druidical stone, and as a sepulchral monument. The parish is traversed by the road from Montrose to Aberdeen, and enjoys near access to the Aberdeen railway. The village of St. Cyrus stands on elevated ground, in the easterly district of the parish, $5\frac{1}{2}$ miles north of Montrose. It consists chiefly of thatched cottages, in irregular order, and without neatness, but serving as a foil to the handsome parish church, which stands grandly up from among them to display its beauty to a great extent of circumjacent country. Population of the parish in 1831, 1,598; in 1861, 1,552. Houses, 347. Assessed property in 1843, £14,034 8s. 8d.

This parish is in the presbytery of Fordoun, and synod of Angus and Mearns. Patron, the Crown. Stipend, £247 17s.; glebe, £11. Unappropriated teinds, £56 1s. 9d. Schoolmaster's salary, £33; fees, £33. The parish church is an entirely new edifice, completed in 1854, and contains 530 sittings. There is a Free church, with an attendance of about 430: sum raised in 1853, £423 3s. 6d. There are three private schools, and a parochial library. The former parish church stood at the base of a rock on the coast; and then the parish was called Eccles-craig, which either means from Gaelic "the church of the rock," or from Latin, "the church of Gregory." The district in which the present church stands was anciently called St. Cyrus, apparently from some Culdee missionary; and, after the erection of the church, it gave its name to the whole parish.

D

DAAL. See **LOCH-IN-DAAL**.

DAAN (THE), a rivulet of the parish of Eddertoun, Ross-shire. Two low tracts contiguous to it are called the Meikle Daan and the Little Daan. A coarse limestone and a refractory sandstone have been worked here.

DAER (THE), a rivulet of the parish of Crawford, and head-stream of the river Clyde, in the upper ward of Lanarkshire. It rises on the north shoulder of Queensberry Hill, contiguous to the boundary with Dumfriesshire, bears for a short distance the name of Cross burn, and runs about 12 miles north-

ward to a confluence first with the Powtrail, and next with the Little Clyde. See CRAWFORD and CLYDE (THE). It is, as to both volume of water and length of run, the real parent-stream of the Clyde. It gives the title of Lord Daer to the eldest son of the Earl of Selkirk.

DAHARICK. See MIDMAR.

DAILLY, a parish, containing a post-office village of its own name, in the centre of Carrick, Ayrshire. It is bounded by Kirkoswald, Kirkmichael, Straiton, Barr, and Girvan. It is of an irregular oblong figure, stretching from north-east to south-west; and measures, in extreme length, nearly 7 miles, and in breadth from 4 to 6. Its area probably contains upwards of 17,000 acres. The parish is intersected, in its extreme length, and along its central division, by Girvan water; which, all the way, is a beautiful pastoral stream, and here receives, on both banks, several rills of local origin. The surface, at first, rising gently and varicilly from the banks of the river, and afterwards soaring into hills of considerable height, is a basiu abounding in the beauties of landscape. The lowlands are fertile, well-cultivated, and richly wooded; and the uplands, though naturally heathy and bleak, are partly reclaimed, and nearly all afford good pasturage. The heds of the indigenous rills are, for the most part, deep, well-wooded, picturesque glens. The soil, in the holms and meadows along the banks of the Girvan, is light but very productive; on the south side, is light and dry, resting on a hed of gravel; on the north side, is clayey and retentive; and, on the hills, is thin, wet, and spongy, consisting in many places of moss. Coal, limestone, and freestone abound. The coal-bed is believed to be a wing of the great coal-field which stretches from the vicinity of Edinburgh into Ayrshire, and is here worked in 5 seams, of from 4 to 14 feet in thickness. Limestone is worked at Blairhill, near the south-eastern extremity of the parish, and at Craighead, near the north-western extremity. Argillaceous marl is found in most parts, and has been successfully employed as maure. Numerous small chalybeate springs welling up in different parts of the parish, seem to indicate the existence of strata of ironstone. The climate, in the valley, is generally dry and mild, but on the high grounds is moist and chilly; and though everywhere subject to heavy showers during westerly winds, is rarely loaded with fogs. There are seven landowners; and four of them have residences in the parish,—the Duchess de Coigny of Bargany, Sir James Fergusson, Bart. of Kilkerran, Sir John Andrew Cathcart, Bart. of Carleton, and the Right Hon. T. F. Kennedy of Dunure. At Kilkerran and Penkill are ruins of fortified castles. Near the lower extremity of a wild and romantic glen once stood a chapel dedicated to the Virgin Mary, whence the locality is still called Ladyglen. At a place called Machrykill are vestiges of a small church or chapel, probably dedicated to St. Macarius. At the southern termination of the western heights is an oval and doubly enclosed encampment, 100 yards by 65, commanding an extensive and uncommonly brilliant view, and probably raised during the wars of Robert Bruce. There are in various localities a saw-mill, two corn-mills, and a brick-work. The parish is traversed down the vale of the Girvan by the road from Ayr to Stranraer. The village of Dailly stands on that road, 6 miles north-east of Girvan, and 7 south of Mayhole. It has been greatly improved and enlarged since 1825, and makes a neat display of houses, substantially built and regularly arranged. It has had trial of a savings' bank and two friendly societies. Population of the village in

1861, 650. Population of the parish in 1831, 2,074; in 1861, 2,050. Houses, 379. Assessed property in 1843, £10,695 9s.

This parish is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Crown. Stipend, £348 7s. 9d.; glebe, £15 10s. Schoolmaster's salary, £30, with £30 other emoluments. The old church, which stood at Old Dailly, about 3 miles from the present church and village, was granted by Duncan, the first Earl of Carrick, to the monks of Paisley; but was afterwards transferred by Robert I. to the monks of Crossraguel, and remained with them till the Reformation. In 1653, an extensive tract of the original parish of Dailly, lying on the south-east among the upper branches of the Stinchar, was detached in order to form the modern parish of Barr. Dailly, however, received, at the same time, a small addition on the north-east from Kirkoswald. Though nowhere touching the sea-coast, the parish includes also the romantic rock of Ailsa, in the centre of the frith of Clyde. See AILSA CRAIG. The present church was built in 1766, and cost £600. Sittings, 650. There is a Free church: attendance, 150; receipts in 1853, £88 11s. 9d. There are five non-parochial schools. The name of the parish is probably descriptive of the central stripe or "dale." The ancient name was Daluaolkeran, signifying the Dale of St. Kieran.

DAIRSIE, a parish, containing the post-office station of Dairsie and the post-office village of Osnaburgh, in the north-east of Fifeshire. It is bounded by Logie, Leuchars, Kemback, Cupar-Fife, and Kilmany. Its west side is within $1\frac{1}{2}$ mile of the town of Cupar-Fife. Its southern boundary is traced by the Eden. Its length is about $2\frac{1}{2}$ miles, and its breadth nearly as much. Superficial area 2,306 acres, of which only 15 are waste land. Its general appearance is that of a gently rising ground; the inclination being towards the south and south-east. There are in it two hills of a moderate height, from which are very extensive prospects. The one is called Foodie, the other Craigfoodie, and both of them are remarkable for hearing crops nearly to their summit. The soil is for the most part fertile, and in many places rich and deep. There are eight landowners. The real rental is about £4,400. The mansions are Craigfoodie, Newmill, Pitormie, and Dairsie-Cottage. The parish church, which is a handsome small edifice, with a polygonal tower terminating in a spire, and also a bridge of three arches across the Eden here, were built by Archbishopp Spottiswood, when proprietor of Dairsie. In an old castle, near the church, he is said to have compiled his Church History. This castle was once a place of considerable strength, and a parliament was held in it in 1355. It is now greatly dilapidated; but a view of it is given in the edition of Sir Robert Sibbald's History of Fife, published at Cupar in 1803. There is a spinning mill at Newmill, and another at Lydiamill, both on the Eden. A part of the population is employed in weaving linens. The Dundee fork of the Edinburgh and Northern railway passes through the parish, and has a station in it. Population in 1831, 605; in 1861, 638. Houses, 153. Assessed property in 1843, £4,751 11s.

This parish is in the synod of Fife, and presbytery of Cupar. Patron, Captain Macdonald of Sand-side. Stipend, £250 19s. 5d.; glebe, £11. Unappropriated teinds, £101 13s. 3d. Schoolmaster's salary, £34 12s. 4d., with £25 fees. The parish-school is near Middlefoodie. The parish church contains 310 sittings. There is a Free church: attendance, about 270; receipts in 1853, £162 18s. 1d. There

are non-parochial schools at Osuaburgh and Foodieash.

DAL-, a prefix in names of Saxon and Celtic origin, signifying a meadow or stream-watered vale. The names compounded with it are all, in some manner or other, descriptive,—as Dalkeith, 'the narrow vale,'—Dahy, 'the King's vale' or 'King's meadow.'

DAL (THE), a small salmon-frequented stream, flowing into Balnakiel bay, in the parish of Durness, Sutherlandshire.

DALAROSSIE, or **DALFEEGUSSIE**, that is, 'Fergus's valley,' a district in the shire of Inverness, formerly a vicarage, now united to the parish of Moy. See **MOY** and **DALAROSSIE**.

DALAVICH, an ancient parish, now united to Kilchrenan, in the district of Lorn, Argyleshire. Population in 1831, 615; in 1851, 282. Houses, 57. See **KILCHRENAN**. Near Loch Avich, in this district, lay the scene of an ancient Celtic poem, translated by Dr. Smith, call 'Cath-Luina,' or 'The Conflict of Luina;' in the lake, is an island, the scene of another poem, called 'Laoi Fraoich,' or 'The Death of Fraoich;' and many places in this neighbourhood are still denominated from Ossiau's heroes. See article **AVICH (LOCH)**.

DALBEATTIE, a small post-town in the parish of Urr, Kirkcudbrightshire. It stands on Dalbeattie burn, 4 or 5 furlongs above that stream's influx to Urr Water, and about 5½ miles east-south-east of Castle-Douglas. It was commenced about the year 1780, and advanced rapidly in prosperity. It is built of a lively-coloured granite, and offers high advantages, as to both garden-grounds and the right of cutting peats, to feuers. It stands in a pleasant country, and possesses some important facilities for manufactures and commerce. On Dalbeattie burn are an extensive iron forge, two corn mills, a bone mill, a paper mill, two saw mills, two pin mills, a waulk and dye mill, and a carpet manufactory. Vessels of 70 or 80 tons can come up to the foot of the burn, at Dub of Hass harbour. Fairs are held in the town on the second Thursday of April and the second Thursday of October. Here are a quoad sacra parish church, a Free church, a Roman Catholic chapel, a parochial school, a Free church school, a branch office of the Union Bank, a savings' bank, and a mechanics' institute, with a library and a reading-room. Population in 1841, 1,430; in 1861, 1,736.

DALBLAIR. See **GLENMUIR**.

DALCHOISNIE. See **FORTINGAL**.

DALCROSS. See **CROY**.

DALGAIN, an estate in the parish of Sorn, Ayrshire. That parish itself was anciently called Dalgain. See **SORN**. The word Dalgain signifies the sandy or gravelly meadow, and is strikingly descriptive of the soil on which the old house of Dalgain stands.

DALGARNOCK, a suppressed parish in Dumfries-shire, incorporated with **CLOSEBURN**; which see. The old parish nearly surrounded Closeburn, and was annexed to it in the 17th century. There was here, in former times, a considerable village, the burgh of the barony. Though not a single house of it remains, a fair or tryst seems still to be held on its site. Says Burns,

"I gaed to the tryst of Dalgarnock,
And wha but my fine fickle lover was there?"

DALGARVEN, a village in the parish of Kilwinning, Ayrshire. It stands on the right bank of the Garnock, contiguous to the Glasgow and Ayr railway, nearly 2 miles north of the town of Kilwinning. Population, 107.

DALGENROSS. See **COMRIE**.

DALGETY, a parish, containing the villages of St. David's and Fordel-Square, and part of the post-office village of Crossgates, on the coast of the Dumfermline district of Fifeshire. It is bounded on the south by the frith of Forth, and on other sides by the parishes of Inverkeithing, Dumfermline, Beath, Auchtertool, and Aberdeen. Its length southward is nearly 5 miles; and its breadth is about 1½ mile. The coast-line is a beautiful series of curvatures, backed by a picturesque sea-board, about 3 miles in extent, immediately east of Inverkeithing bay. Upwards of 1,000 acres are in tillage, and about 250 are under wood. The arable soil is partly a light dry loam, but generally a deep strong loam. The ground, in most places, rises considerably above the level of the coast. The few hills are neither high nor rocky. The highest ground is about 450 feet above sea-level. There is a small loch at Otterston, about a mile from the coast, which is much admired. It is not quite a mile in length, nor above a quarter of a mile in breadth; but its banks are finely wooded. Near it, on the grounds of Fordel, is a fine waterfall. The house of Donibristle, a seat of the Earl of Moray, was formerly the residence of the abbot of St. Combe, but it has since been greatly enlarged and improved. Donibristle was, in 1592, the scene of the cruel murder of 'the bonny' Earl, whose personal attractions and accomplishments, it is alleged by some historians, had impressed the heart of Anne of Denmark, and excited the jealousy of her royal spouse. This at least was the popular notion of the time:

"He was a brow gallant,
And he play'd at the glove;
And the bonny Earl of Murray,
Oh! he was the queen's love."

Political reasons, according to Bishop Percy, were given for his arrest; but more than arrest seems to have been intended, for the commission was intrusted to his inveterate enemy Huntly, who, with a number of armed men, surrounding the house in a dark night, set it on fire, on Murray's refusal to surrender. He escaped the flames, but was discovered by a spark which fell on his helmet, and was slain, telling Gordon of Buckie, who had wounded him in the face, "You have spilt a better face than your awin!" "Hard by it," says Sibbald, "is Dalgatie, the dwelling of the Lord Yester; it was repaired and beautified with gardens by Chancellor Seaton, Earl of Dumfermling, who lyes interred in the church there." Little of it now remains. Opposite the eastern extremity of the parish, and within a mile of the shore, is the island of St. Combe: see **INCHCOLM**. The old parish church is a very ancient building. The exact period of its erection cannot be ascertained; but there are documents which show that a grant of the ground on which it stands, was made to the abbot of St. Combe as far back as the 14th century. Additions, however, have been made to it, which bear marks of a later date. The mansions, besides Donibristle, are Fordel-House and Cockairney. The landowners are the Earl of Moray, Lady Mowbray, Henderson of Fordel, and Mowbray of Otterston. The yearly value of raw produce was estimated in 1836 at £1,600 from salt-works, £28,000 from Fordel colliery, and £8,455 from crops. The Fordel colliery still affords the principal employment in the parish; for more than one-half of the population reside in rows of collier houses. Most of the coal is exported from the harbour of St. David's, where vessels of a burthen not exceeding 500 tons can load in safety. The distance from the pits to the shore is 4 miles, along which the coals are carried on a railway.

The annual export is about 70,000 tons; and the coal is reckoned of a very superior quality. There are also brick-works in the parish. The Dunfermline branch of the North British railway goes across the northern part of the parish, and has a station at Crossgates. Population in 1831, 1,300; in 1861, 1,569. Houses, 269. Assessed property in 1866, £7,284 14s. 6d.

This parish, formerly a vicarage, is in the presbytery of Dunfermline, and synod of Fife. Patron, the Earl of Moray. Stipend, £227 7s. 1d.; glebe, £20. Schoolmaster's salary now is £50, with £18 fees. The present parish church was built in 1830, and stands contiguous to the road from Aberdour to Inverkeithing. It contains about 500 sittings, and is a very handsome edifice in the Gothic style. There is a chapel-of-ease at Mossgreen. There are two non-parochial schools,—the one at Hillend and the other at Fordel colliery. There is an Otterston curling club.

DALGINROSS. See **COMRIE.**

DALGUISE, a post-office village in the parish of Little Dunkeld, Perthshire. It stands on the right side of the Tay, about $\frac{1}{4}$ miles north-north-west of Dunkeld; and has a station on the Highland railway. Here is a Free church: receipts in 1865, £63 15s. 0 $\frac{1}{2}$ d. Adjacent is the mansion of Dalguise, partly an old building, and partly modern, beautifully situated in the vicinity of the road from Perth to Taymouth. The estate of Dalguise was given by William the Lion to the church of Dunkeld, and granted in 1543 by Bishop Crichton to the second son of Stewart of Arntullie, in the possession of whose descendant it still remains. Springs strongly impregnated with iron occur on the lands of Dalguise.

DALHONZIE. See **COMRIE.**

DALHOUSIE. See **COCKPEN.**

DALINTOBER, a village on the north side of the head of Campbelton Loch, Kintyre, Argyshire. It is a suburb of the town of Campbelton, and included in the parliamentary houndaries. It is a thriving place, and has a substantial small pier. Population in 1851, 1,762. See **CAMPBELTON.**

DALJARROCK, a post-office station, on Stinchar Water, and on the road from Ayr to Stranraer, 4 miles north-east of the village of Colmonell, Carrick, Ayrshire.

DALKEITH, a parish, containing a post-town of its own name, also the villages of Lugton and Whitehill, in the eastern district of Edinburghshire. It is bounded by Liberton, Newton, Inveresk, Cranston, Newbattle, and Lasswade. Its greatest length is $3\frac{1}{2}$ miles, and greatest breadth $2\frac{1}{4}$ miles. The North Esk and the South Esk flow north-eastward through it, into the pleasure-grounds of Dalkeith Park, to a confluence a little before leaving it. The surface is gently undulated, but in no quarter rises into hills; indeed the whole might be considered a plain, did not the steep banks of the rivers give it an uneven and broken appearance. The soil is light on the lower grounds, and on a deep clay, well-adapted for raising either fruit or forest-trees. The parts of the surface not occupied by roads, by the town and villages, and by the pleasure-grounds of the parish, are disposed principally in corn-fields, gardens, and orchards. The whole substrata belong to the carboniferous formation, and lie in nearly the centre of the Lothian coal-field. An extensive bed of brick and tile clay occurs at Newfarm and near Gallowshall. The Duke of Buccleuch is proprietor of about seven-eighths of the parish; and there are numerous proprietors of the remainder. The yearly value of raw produce, exclusive of minerals, was estimated in 1844 at £13,893. The assessed pro-

perty in 1860, was £23,847. The parish is traversed by the Hawick branch of the North British railway, and has a station on it at Eskbank, and also has a sub-branch of it to the town of Dalkeith. Population in 1831, 5,586; in 1861, 7,114. Houses, 901.

Dalkeith Park, surrounding the palatial residence of the Duke of Buccleuch, adjoins the lower end of the town, occupies the north-east part of the parish, and extends into the contiguous parishes of Newton and Inveresk. Its total area is 1,035 acres. It derives fine natural advantages from the windings of the two Esks, which unite about half-a-mile below the palace, and has been tastefully disposed by art into every variety of close landscape decoration, with profusion of woods, walks, and carriage-ways. "It is a noble piece of ground," says Stoddart, "planted with a number of fine old oaks and other venerable trees. The South Esk, in its course within it, has a pleasing wildness, being almost entirely overshadowed by the dark hangings of the ancient wood. The North Esk comes into more open day; but has several very pleasing walks on its banks, with views of the town and church of Dalkeith."

The palace stands adjacent to the North Esk, in the upper part of the park, not far from the Dalkeith gate. It was erected about the beginning of the last century, on the site of the old castle of Dalkeith. In ancient times, Dalkeith castle appears to have been a place of considerable strength, and to have stood some sieges. It was situated on a perpendicular rock of great height, and inaccessible on all sides, except on the east, where it was defended by a fosse, through which the river is said to have formerly run. It was, for some centuries, the principal residence of the noble family of Morton; and history records, that James, last Earl of Douglas, exasperated against John Douglas, Lord of Dalkeith, for espousing the cause of James II., who had basely murdered William, Earl of Douglas, at Stirling, laid siege to the castle of Dalkeith, binding himself by a solemn oath not to desist till he had made himself master of it. It was, however, so gallantly defended by Patrick Cockburn and Clerkington, that the Earl of Douglas, and his followers, found themselves unable to reduce it, and were obliged to raise the siege. On the defeat of the Scotch army at Pinkie, in 1547, many fled to the castle of Dalkeith for refuge, among whom was James Earl of Morton, afterwards Regent of Scotland, and Sir David Hume of Wedderburn. It was besieged by the English, and defended for some time; but as it contained not a sufficient store of provisions for such a number of men as had fled to it, and as the besieged had no hopes of succour against the victorious army, it was obliged to surrender; in consequence of which, the Earl and Sir David were made prisoners. "Morton's character," says Gilpin, "is marked in history with those vices which unbounded ambition commonly ingrafts upon the fiercer passions,—cruelty and revenge,—to which we may add an insatiable avarice. Popular odium at length overpowered him, and he found it necessary to retire from public life. This castle was the scene of his retreat; where he wished the world to believe he was sequestered from all earthly concerns. But the terror he had impressed through the country during his power was such, that the common people still dreaded him even in retirement. In passing towards Dalkeith, they generally made a circuit round the castle, which they durst not approach, calling it the lion's den. While he was thus supposed to be employed in making his parterres and forming his terraces, he was planning a scheme for the revival of his power. It suddenly

took effect, to the astonishment of all Scotland. But it was of short continuance. In little more than two years, he was obliged to retreat again from public affairs; and ended his life on a scaffold."

When Morton was executed, the barony of Dalkeith was included in his attainder; and although the estate was finally restored to the Earl of Morton, yet the castle seems long to have been considered as public property, and to have been used as such. It was General Monk's residence while in Scotland. In the year 1642, the estate of Dalkeith came into the possession of the family of Buccleuch by purchase from the Earl of Morton. According to Chalmers, the Douglasses of Lothian obtained in early times a baronial jurisdiction over many lands, in several shires, which was called the Regality of Dalkeith. In 1541, James, 3d Earl of Morton, obtained a charter from James V., confirming this regality. In January 1682, George, Earl of Dalhousie, was appointed haillie of the regality of Dalkeith. After the death of the Duke of Monmouth, James, his son, was created Earl of Dalkeith. His mother, Anne, Duchess of Buccleuch and Monmouth, died, in 1732, aged 81, when she was succeeded by Francis, her grandson. On the abolition of hereditary jurisdictions, in 1747, the Duke claimed £4,000 for the regality of Dalkeith; but was allowed only £3,400.

"Dalkeith palace," says Gilpin, "stands on a knoll overlooking the North Esk. The knoll is probably in part artificial; for an awkward square hollow hard by, indicates that the knoll has been dug out of it. Beyond the river are woods; and a picturesque view of the town and church of Dalkeith. But the house fronts the other way, where it is not only confined, but the ground rises from it. It might have stood with great advantage, if it had been carried two or three hundred yards farther from the river; and its front turned towards it. A fine lawn would then have descended from it, bounded by the river, and the woods. We often see a bad situation chosen: but we seldom see a good one so narrowly missed." Stoddart says of the palace,—“The front view is by no means good, as the ground, rising from it, is soon bounded by the trees. The architecture is of the Corinthian order, and has the formal grandeur of the period when it was built. On the opposite side, it appears much more picturesquely seated, on an almost perpendicular bank, overhanging the river. It is said, that the castle was originally a place of great strength, inaccessible on all sides, except the east, where it was defended by a fosse, now filled up. The rock too has been partly covered with earth, gently sloped down to the river, and decorated with shrubberies; yet this part of the improvements has not been executed with much taste. There is a formality, both in the disposition of the ground, and in the planting, which but badly suits the rapid Esk, and the wild wood on the opposite side. To the north of the house is a stone bridge, of a single arch, 70 feet wide, and 45 high, exceedingly heavy in its effect. At its first erection, two stags—the supporters of the Buccleuch arms—were placed on it, as ornaments; but they frightened the horses which passed them so much, that it was found necessary to remove them. From this bridge the house would appear to advantage, if the shrubberies, above which it rises, were in better taste.” An anonymous poem, published in London in 1752, and entitled, ‘Dalkeith, a Poem, occasioned by a view of that delightful Palace and Park, the seat of His Grace the Duke of Buccleuch,’ says respecting the palace,—

“Clasped in the folds of two embracing floods,
Compass’d with gentle hills and rising woods,
On a green bank the beauteous palace stands,
And the subjected stream with pride commands.
What though no lofty domes project in air,
Or lengthen’d colonnades with pride appear,
Yet is the whole in single state designed—
Plain and majestic, like its Monmouth’s mind.”

Dalkeith castle and Dalkeith palace were graced with the presence of royalty,—the former in the person of Charles I. in 1633,—the latter in the person of George IV. in 1822, and in the persons of Queen Victoria and Prince Albert in 1842. Her Majesty arrived on Thursday the 1st of September, entering the grounds by the Lngton gate. She went to Edinburgh on Saturday, to make a royal progress through the city, returning to Dalkeith in the afternoon. She held a levee on Monday, in the great gallery of the palace, where there was as bright an assemblage of nobility and gentry as had ever been anywhere in Scotland in the times before the union of the kingdoms. She departed on Tuesday the 6th to make a royal progress through the Highlands of Perthshire, with sojournings at Taymouth castle and Drummond castle, but returned on Tuesday the 13th. She spent next day, and had also spent part of the previous sojourn, in visiting the noble residences and most notable scenes in the neighbourhood, particularly in the valleys of the Esks. And she took final leave on the 15th, to pass through Edinburgh and embark at Granton. The popular enthusiasm in Dalkeith, during all the period of Her Majesty’s visit, was unbounded.

Dalkeith parish is the seat of a presbytery in the synod of Lothian and Tweeddale. The original parsonage was part of the deanery of Restalrig; and seems not to have been constituted a distinct parish till 1592. The barony of Lugton was annexed to it in 1633. Patron, the Duke of Buccleuch. Stipend, £316 9s. 2d.; glebe, £40. Unappropriated teinds, £610 11s. 11d. The parish church is an old Gothic building, situated on the north side of the High-street, frequently repaired and containing 1,130 sittings. A new church was built in 1840, by the Duke of Buccleuch, on a commanding site, near the head of the town, and contains 950 sittings. This was intended as an Extension church, and bore for some years the name of Buccleuch church; but in 1853 it was constituted, by the Court of Teinds, a quoad sacra parish under the name of the West church. Patron, the Duke of Buccleuch. An Episcopalian chapel, with 250 sittings, was built in 1844 within Dalkeith park, near Dalkeith gate; and though specially intended for the accommodation of the ducal family and their dependants, is accessible to the general population of the parish. There is a Free church in the town: attendance, 550; receipts in 1865, £833 16s. 3¼d. There are three United Presbyterian churches,—the East, with 880 sittings,—the West, with 685,—and the Back, with 436. Attendance at the East and the West U. P. churches, each 600. There are also an Independent chapel, with 300 sittings, an Evangelical Union chapel, and a recently built Roman Catholic chapel. The parochial school is called likewise the grammar school, and has long held a distinguished place among the seminaries of Scotland. It affords tuition, not only in all the common and liberal branches of an English and a classical education, but also in mathematics and in French, and occasionally in Italian and in German. The master or rector draws only the maximum salary of an ordinary parochial schoolmaster, but receives large fees, and has a first-class house and garden. There are nine other schools, four of them endowed, and five unendowed.

THE TOWN OF DALKEITH stands on the peninsula between the two Esks, 2 miles east-north-east of Lasswade, 4 south-south-west of Musselburgh, and 6½ south-east of Edinburgh. The peninsula here is a low flat-backed ridge, sloping rapidly to the North Esk, and more gradually to the South Esk. The skirts of the town down to the streams are adorned with gardens and orchards; and the banks on the opposite sides are in some parts tufted, in others covered, with the woods belonging to the parks of Dalkeith palace, Woodburn house, and Newbattle abbey. The entire environs are profusely ornate and exceedingly beautiful. The town is about two-thirds of a mile long, extending from the railway depot to the Duke's gate. The High-street is the backbone and chief thoroughfare of the whole; but consists of a narrow half and a spacious half, the former next the railway and about 30 feet wide, the latter next the Duke's gate and about 85 feet wide. A street called the Back street runs parallel to the south side of the High-street, but is not all edified. The Edinburgh road, before entering the town, forks into two thoroughfares, the most easterly of which crosses the centre of the town toward Newmills, while the other speedily forks again into other two, which also cross the town,—the one in the form of a narrow street called the North and West Wynd, the other in the form of a broad street called Buccleuch street, and the two reuniting in the southern outskirts. A great many densely peopled lanes and closes occupy the intermediate spaces. The town, as a whole, is well built; and many of the houses, especially in the High-street, are modern and elegant.

The old parish church imparts an air of antiquity to the centre of the town. The part now occupied is only a nave, 35 feet high in the middle part, and 24 feet high in the aisles. The steeple also is only 85 feet high. But the choir, though now unroofed, still remains in tolerable preservation, and is in a more ornamental style than the nave; and within it are reclining statues of the Earl and Countess of Morton. A crowded burying-ground surrounds the church, with a frontage to the High-street of 180 feet. The West church is an elegant and very conspicuous edifice, in the form of a cross, surmounted by a spire. Its length from east to west is 90 feet; its width at the transepts is 75 feet, and elsewhere 50 feet; its height from floor to ceiling is 35 feet; and the height of the spire is 167 feet. The Episcopalian chapel, though within the park, groups in some degree with the architectural scenery of the town, and is a highly ornamental Gothic edifice. It consists of chapel-proper, 70 feet by 30, chancel, 25 feet by 17, and screen, and has a total length of 105 feet. The other places of worship in the town, though plain, are creditable. The town-house is a plain old building, opposite the old parish church in the High-street, containing a weigh-house, a prison, and a court-room. The bridges, on the main thoroughfares, over both rivers in the environs, are substantial stone structures; and a bridge of comparatively private character, yet of most picturesque appearance, constructed at the personal cost of the Duke of Buccleuch, spans the South Esk in the southern environs. The arches are 5 in number, of 120 feet span each, constructed of built beams of timber abutted upon stone piers of tasteful architecture, and thrown across one of the most beautiful turns of this beautiful stream. This bridge connects an extensive coal-field on the property of the Duke, at Cowden, with the Dalkeith railway.

The spacious half of the High-street is used as a public market-place, and is the scene of as much agricultural traffic as any area of equal extent in

Scotland. A great corn-market, the greatest for oats in the kingdom, is held here on every Thursday. A vast amount of business is transacted with the utmost expedition, in perfect regularity, all for ready money. The number of carts of grain on a full market-day in winter ranges from 800 to 1,000. A spacious covered market place, with a market-hall, was erected in 1855, at a cost of £3,000. Another market of considerable extent is held on every Monday for meal, flour, and pot-barley, a considerable portion of the supplies brought to which come from the more southern parts of the county, and from the neighbouring counties of Roxburgh, Berwick, Peebles, and Selkirk. Dalkeith is also remarkable for the number of its shops and the extent of business done in them. Favoured by its extensive markets and convenient situation, its shopkeepers contend successfully with those of Edinburgh in supplying with their respective commodities the inhabitants of the southern and western parts of the county, and they have thus contributed in no slight degree to the comfort and respectability of the place. "Few towns," said the writer of the New Statistical Account in 1844, "are better supplied with bread, butcher-meat, groceries, and garden produce. We have an extensive iron-foundry, a gas-work, a brewery, several curriers and tanners, builders, carpenters, and cabinet-makers in good employment, manufacturers of felt and beaver hats, straw-hats and woollen stuffs, besides extensive dealers in meal, flour, and barley, tobacco, saddlery, drapery, shoes, hard-ware, and earthenware. In short, almost every article that the present improved condition of society requires may be obtained here in abundance, and of the most approved description." There are also in the vicinity on the North Esk two extensive corn-mills and a woollen manufactory. Fairs for cattle and horses are held on the first Thursday of May after Rutherglen, and on the third Tuesday of October; and hiring fairs are held on the first Thursday of April, and the second Thursday of October. The principal inns are the Cross Keys and the Buck's Head. The town has an office of the Royal Bank, an office of the Commercial Bank, an office of the National Bank, an office of the Clydesdale Bank, a savings' bank, a circulating library, a subscription library, a total abstinence society, a charity work-house, and several benevolent institutions and friendly societies. During the summer season, Dalkeith is much resorted to by parties of pleasure from Edinburgh.

The town is governed by a baron-bailie under the Duke of Buccleuch. Originally the baronial right belonged to the family of Graham, and subsequently to that of Douglas. In 1642, it was acquired by the family of Buccleuch. Previous to 1759, Dalkeith, like other burghs of barony, was entirely regulated by the superior and his bailies; but, in that year, a statute was obtained appointing certain trustees to superintend the paving, cleaning, and lighting of the streets, and to supply the inhabitants with water; and providing a revenue for these purposes by imposing a small tax on the ale, porter, and beer consumed in the parish. The powers conferred by this act have been continued and extended by subsequent statutes, which acknowledge—and, to some extent, preserve—the influence of the feudal superior, by investing the baron-bailie, for the time being, with the powers of a trustee. The direct and proper jurisdiction of the baron-bailie is very limited, extending only in criminal affairs to the imposition of small fines, or to imprisonment for one night; and, in civil matters, to granting warrants at the instance of landlords for the sale of their tenants' furniture in order to recovery of rent. More serious cases are referred

to the sheriff of the county, and all matters of local police regulation are taken up by the trustees. Vacancies occurring in the office of trustee are filled up by the surviving members, who are understood to select for this distinction individuals who have been nominated by or are believed to be agreeable to the bailie. Being self-elected, and holding the office during life, the trustees are entirely independent of the inhabitants; yet it must be stated to their honour that, as a body, they have never interfered with politics, and that the prudence and attention with which they have discharged their gratuitous duties could scarcely have been increased by any amount of popular control. Indeed, it may be truly affirmed that Dalkeith is one of the cheapest and best governed towns in the country. The customs are leased from the superior by trustees under local acts, at a rent of £100. Their produce is about £250. The trustees administer a revenue of about £800. The town is well paved, well lighted, well provided with water, and kept remarkably clean. A night-watch is maintained by voluntary subscription. A sheriff circuit small debt court is held on the last Thursday of every month except September. The town is a station of the Edinburgh county police. Among many distinguished natives of Dalkeith, or persons who were intimately connected with it, may be mentioned John Rolland, a poet of the 16th century, Lord Polton, a lord of session in the beginning of the 18th century, Dr. Pitcairn, Principal Robertson, Lord Melville, Lord Loughborough, Dr. Hope, Mr. Mnsket, and Mr. John Kay. Population of the town in 1841, 4,831; in 1861, 5,296. Houses, 610.

DALKEITH RAILWAY. See EDINBURGH AND DALKEITH RAILWAY.

DALK'S LAW, a hill on the border of Coldingham moor, Berwickshire, rising 634 feet above sea-level.

DALLARUIN. See CAMPBELTON.

DALLAS, or **DOLLAS,** a parish, containing a post-office village of its own name, in the centre of Morayshire. It is bounded by Elgin, Birnie, Rothies, Knockando, Edenkillie, and Rafford. It extends about 12 miles from east to west, and 9 from north to south; but its mean breadth, taken across from the southern side of the hill of Melundy, measures only about 6 miles. It is surrounded by hills so as to form a valley or strath, almost equally divided from south-west to north-east by the small river Lossie, which issues from a small loch on the south-western extremity of the parish, due south of the manse. Several burns or rivulets, rushing down from the hills on both sides, join the Lossie nearly at right angles to its course. A part of Dallas, the estate of Craigmill, lies isolated in the southern end of the valley of Rafford parish. Through this estate the stream of the Lochty, a tributary to the Lossie, runs eastward through a narrow cut in the rocky hill, to loiter in the vale of Pluscarden. This cut appears as if made merely for the passage of the Lochty, and it would be easy to turn the stream northward by Rafford church, if that was not its original course. The greater part of Dallas parish, however, lies on the south side of the hill of Melundy, which is stretched between the courses of the Lochty and the Lossie. A great part of the plain on the south side of the hill of Melundy must have been a lake, when the Lossie occupied a channel about 3 feet higher than the bottom of its present bed; and, except a pool still covering a few acres, the whole of this plain is now a deep extensive bed of pure peat-earth: thence probably arose the Gaelic name Dale-Uisk, contracted into Dallas, 'the Water-valley.' The live produce is generally sent to

market for sale at Elgin and Forres, to which also excellent peats are sent from inexhaustible mosses. There are considerable plantations and coppices, particularly on the hills of Melundy and Wangie. There are also excellent quarries of freestone, with great abundance of grey slate. There are some chalybeate springs. During summer there is good fishing in the Lossie for fine small trout; and, in September and October, for finnae or white trout, and a few small salmon. The landowners are the Earl of Fife, Cumming of Altyre, and Grant of Wester Elches. The chief antiquity is the ruin of Torcastle, the ancient stronghold of the Cummings, built in the year 1400, and situated on the side of Dorrel burn, at the foot of Wangie hill. The parish is traversed up the valley of the Lossie by the west road from Elgin to Knockando. The village of Dallas is situated on that road, 9 miles south-east of Forres, and 12 south-south-west of Elgin. It was fenced about 55 years ago by Sir Alexander Penrose Cumming, and in 1842 contained 32 houses. The eastern district of the parish bears the name of Kelles. Population of the parish in 1831, 1,153; in 1861, 1,102. Houses, 206. Assessed property in 1843, £2,912 18s. 3d.; in 1860, £4,781.

This parish is in the presbytery of Forres, and synod of Moray. Upon the annexation of Altyre to the parish of Rafford—and which formerly belonged to Dallas—Kelles, and part of the parish of Elgin, were annexed to Dallas. This took place in 1657. Patron, Gordon Cumming of Altyre. Stipend, £158 6s. 8d.; glebe, £11. Schoolmaster's salary, now £52 10s., with from £10 to £12 fees, and a share of the Dick bequest. Previous to 1794, when the present church was built, the church-service was performed in a very ancient fabric, thatched with heath, and without windows, save two or three narrow slits which yawned to a very undue width within. The effigy of St. Michael, the patron, stood weather-beaten in a niche near the top of the eastern gable without. In the churchyard a neatly cut stone column, 12 feet high, terminated by a well-formed fleur-de-lis for its capital, was then used, and afterwards remained in use, as the market-cross, for the sale of bankrupts' effects, cattle, &c. The present church and manse are commodious buildings, though, being near the Lossie, both are in some danger of being swept away. There is a Free church: attendance, 300; sum raised in 1865, £98 17s. 9d. There are two non-parochial schools,—one of them endowed, at the east end of the parish, on the lands of the Earl of Fife.

DALLINTOBER. See DALINTOBER.

DALMAHOY, an estate in the parish of Ratho, Edinburghshire. It anciently belonged to the family of Dalmahoy, who figured among the great barons so early as the 13th century. It passed, in the middle of the 17th century, into the possession of the Dalrymples; and was purchased from them, about 115 years ago, by the Earl of Morton. It comprises between one-fourth and one-third of the parish, and continues to form part of the Morton estates. The mansion was built in the early part of last century, but has received several additions. The grounds within the park abound in beauty, and command some fine far-away views. Dalmahoy crags, rising to the height of 680 feet at the southern extremity of the parish, and stooping precipitously to the west, constitute a grand feature in the general landscape of the western Lothians. There is an Episcopalian chapel at Dalmahoy.

DALMALLY, a post-office village in the parish of Glenorchy, Argyleshire. It stands on the military road from Oban to Dumbarton, in the month of the glen of Orchy, at the head of Loch Awe, 12½

miles west of Tyndrum, and 16 north-north-east of Inverary. The scenery around it is grandly picturesque, with many features of the beautiful. The houses of the village are nestled among trees, and at the same time command impressive views of the landscape. Both the old church of Glenorchy and the new one are within sight,—the former surrounded by the burying-place of the Macgregors, containing many ancient gravestones with sculptured figures of armed warriors,—the latter standing with a Gothic spire in an islet of the Orehy. The village contains an excellent inn. Here also are the church and manse of the Free church of Glenorchy, and the manse of the parish church. A fair is held on the Friday of October after Kil-michael. See GLENORCHY.

DALMAOLKERAN. See DAILLY.

DALMARNOCK, a hamlet, 3 miles north of Inver, parish of Little Dunkeld, Perthshire.

DALMARNOCK, a meadow stretch of the banks of the Clyde, in the south-eastern environs of Glasgow. A timber bridge was constructed here about 25 years ago to carry over from Glasgow a short new road to the collieries of Rutherglen and Cambuslang. The Clyde at this place and its vicinity possesses considerable natural soft beauty, but is dimmed with the smoke of iron-works, collieries, and factories. Hence did John Struthers say,—

"Now through his far-famed fields of coal,
By furnace-blazing Boggleshole,
By old Dalmarnock's haughs so wide,
And Englen's royal burgh decay'd,
With dye vats chok'd, with engines heav'd,
And countless nuisances mischiev'd,
In clouds of smoke his blushes hiding,
The Clyde is seen, all silent, gliding."

DALMELLING. See DALMULLIN.

DALMELLINGTON, a parish, containing the post town of Dalmellington, and the villages of Waterside and Craigmark, in the district of Kyle, Ayrshire. It is bounded on the north by Oehiltree; on the east by New Cumnock; on the south-east by Kirkeudbrightshire; on the south-west by Loch Doon and Doon water, which divide it from Straiton; and on the west by Dalrymple. It has nearly a triangular figure, the longest side being from north-west to south-east along the Doon; and it measures, in extreme length, 10 miles,—in average breadth about 3. Along the Doon, over a distance of 3 miles, a plain or very gentle slope stretches inward, of nearly the figure of a crescent, narrowed to a point at both extremities, and measuring about a mile at its central or greatest width. Behind this plain the whole parish rises upward in continuous eminences or mountain ridges. The ridge nearest the Doon closes that river closely in at the north-western angle of the parish, extends away eastward, limiting the lowlands, and abruptly terminates to the north-east of the village, in a splendid colonnade of basalt, 300 feet in height, and 600 in length. Two other ridges run south-eastward and southward, and are connected at the north end by a ridge coming down upon them westward from the parish of New-Cumnock. Though the hills are in general easy of ascent, and in only three places are, for a short way, precipitous, yet they form gorges and mountain-passes of fascinating interest, and, in one or two instances, of peculiar grandeur. Along the road from the village of Dalmellington to Carsphairn in Kirkeudbrightshire, two ridges approach for upwards of a mile so nearly to an embrace as to leave at their bases barely sufficient space for the public road and the bed of a mountain-rill. At the extremity of the range, also, where the river Doon issues from its picturesque mountain-eroded lake, rocky, perpendicular elevations, whose summits

rise 300 feet above the level of the river, are, for about a mile, so brief a space as under as to seem cloven by some powerful agency from above, or torn apart by some convulsive heave beneath their base. The narrow, stupendously walled pass between is called the glen of Ness, and opens, at its north-western extremity, into the lowlands, or crescent-shaped plain, of the parish. The river Doon escapes from the loch by two narrow channels in the naked rock, dashes impetuously along the glen of Ness, and afterwards moves slowly forward among meadowy banks, receiving in its progress the waters of several rills, or occasionally swollen and inundating torrents, from the inland heights. The springs of the parish are pure and limpid, and flow, for the most part, from beds of sand and gravel. Nearly a mile from the south-eastern boundary, and surrounded by heathy moorland, is a small lake of about 25 or 30 acres in area, the waters of which are dark and very deep, and abound in black trout. The soil, on the plain along the Doon, is a strong, rich, clayey loam; around the town, is dry and gravelly; and behind the Doon, or lower range of hills, is moss or moorland. About $\frac{2}{3}$ of a mile below the town is a morass of about 150 acres, resting on a spongy bed, and embosoming some oaks of considerable size. Coal—the most southerly of the Ayrshire field, but prime in quality—is worked from deep seams, and affords a supply to places in Galloway even 30 miles distant. Sandstone, limestone, and ironstone abound.

Nearly the whole of the parish is the property of the Hon. F. Macadam Cathcart of Craigengillan. The yearly value of raw produce was estimated in 1837, at £8,739. But in 1847 extensive works were erected, together with the villages of Waterside and Craigmark, by the Dalmellington Iron Company; and very soon three large furnaces were in blast, and preparations were made for eight others. A railway, opened in 1856, goes to Ayr, and has stations in the parish at Dalmellington village and Waterside. The parish is also traversed by two great lines of road parallel to the Doon, one of them the direct road from Ayr to Dumfries; and by a line of road north-eastward, leading from the village of Dalmellington to that of New-Cumnock; and it is abundantly accommodated with bridges for these and for by-roads, there being 6 across the Doon, and 9 or 10 across the smaller streams. A very old house in the village of Dalmellington bearing the inscription 1003, is called Castle-house, owing, as is supposed, to its having been built of materials taken from an ancient castle in the vicinity, called Dame Heleu's castle. Between the town and the site of that castle is a beautiful moat, surrounded with a deep, dry fosse. On a precipitous cliff in a deep glen, protected on three sides by the perpendicular rock, and on the fourth by a fosse, stood formerly a fastness, which, from some storied connection with Alpine, king of Scotland, gives to its site the name of Laeth Alpine. In the uplands were, at one time, three very large cairns, one of them upwards of 100 yards in circumference, and all covering vast masses of human bones. A Roman road, coming up from Dumfries-shire and Kirkeudbrightshire, and measuring 10 or 11 feet broad, formerly traversed the parish from south-east to north-west, and passed from it into Dalrymple. Dalmellington figured largely in the affecting scenes of the persecution under the Stuarts, and abounds in traditions respecting the sufferings of the Covenanters. Wodrow represents it as having been watched and oppressed with such large bodies of troops, that, at one period, they must have been more numerous than the inhabitants; and, while

giving detailed accounts of the heavy and multi-form local grievances which they inflicted, he says, "Had materials come to my hand as distinctly from the rest of the country as from this parish, what a black view we might have had!" Population in 1831, 1,056; in 1861, 4,194. Houses, 618. The great increase of the population has arisen from the erection of the iron-works. Assessed property in 1843, £3,678 15s. 7d.; in 1860, £17,735.

This parish, formerly a vicarage of the chapel-royal of Stirling, is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Crown. Stipend, £158 6s. 8d.; glebe, £20. Schoolmaster's salary, now is £50, with £10 fees. The parish church was built in 1846, and contains 640 sittings. It is an elegant Saxon edifice, with a lofty tower. There are at Waterside and Craigmark two preaching-stations belonging to the Established church, endowed by the Dalmellington Iron Company. There is a Free church for Dalmellington and Carsphairn, a very neat building, with about 400 sittings. There are four non-parochial schools.

THE TOWN OF DALMELLINGTON is an ancient burgh of barony. It stands on the Ayr and Dumfries road, in a recess, sheltered by the hills, about $\frac{2}{3}$ of a mile north-east of the Doon. It is a thriving place, and promises to advance rapidly in prosperity. It has a woollen mill, a dye-work, and a number of private looms. Fairs are held on Eastern's E'en, Halloween, and the first Friday after Whitsunday, all old style. Here are a branch of the Clydesdale Bank, a subscription library, a reading-room and library, and several pretty good inns. Population, 1,299.

DALMENNOCK BAY. See LOCH RYAN.

DALMENY, a parish, consisting of a main body and a detached district, in the north-east of Linlithgowshire. The main body surrounds the post-town of Queensferry, except on the shore side, and contains some of that town's outskirts; and it is bounded by the frith of Forth, Cramond, Edinburghshire, Kirkliston, and Abercorn. Its extreme length, east and west, is $5\frac{1}{2}$ miles; and its extreme breadth is $3\frac{1}{2}$ miles. The detached district lies a mile south-west of the south-western corner of the main body, and one-third of a mile west of the post-town of Winchburgh; and is bounded by Abercorn, Kirkliston, and Ecclesmachan. Its greatest length is $1\frac{1}{2}$ mile, and its greatest breadth 1 mile. The surface of the main body is high in the central district, declines somewhat to the west, has a very considerable declivity to the south, and slopes still more rapidly to the north, where it terminates in a bold bank upon the Forth. Toward the east are three rocky ridges or hills, covered with wood, called Mons, Dundas, and Craigie. The summits of all these, but especially that of Mons-hill, place an observer in the midst of a vast and most beautiful and varied panorama, bounded only by the limits of vision or the hazily seen summits of the great mountain ranges of Scotland. The Forth, with its thousand attractions, glitters in nearly all its length before the view; the Lothians and the most cultivated districts of conterminous counties, are spread out with the distinctness of a map; and the spectator, delightfully perplexed with the importunings of competing beauties which everywhere demand his notice, finds no repose to his eye till it rests on the heights of Lammernoor or the far-seen cap of Benlomond. Immediately beneath him, in the parish itself, is a landscape of no common beauty. The plantations of the Earl of Roseberry, his antiquated but picturesque castle, situated within sea-mark, and his charming park of Barnboulge, with its bold undulations of height and lava, constitute, with the other attrac-

tions of the district, a truly fascinating picture. Nearly the whole parish is well-cultivated, well-enclosed, sheltered and beautified with plantation, and cheerfully productive; and it is adorned, not only by the mansion and grounds of Lord Roseberry, but by those of Craigie hall and Dundas castle. The soil of the higher grounds, and of the detached district, is, in general, a shallow clay on a cold bottom; on the declivities and the low grounds, it is a rich loam; and, in a few spots, it is what has been termed perpetual soil, requiring little manure, and exceedingly fertile. On the coast is a vast bed of prime freestone, which has been extensively worked to supply places far distant with materials for ornamental building. Limestone and ironstone also are found.

At the west end of Queensferry, close by the shore, are vestiges of a monastery, founded about the year 1330, by one of the lairds of Dundas, for Carmelite friars. Farther west, upon a high sea-bank, there were, 100 years ago, interesting ruins, consisting of a large carved window, a square pillar, and a considerable quantity of hewn stones, probably the remains of a Roman speculatorium. Here were found silver medals of Marcus Antoninus, with a Victory on the reverse. But greatly the most interesting antiquity is the parish church; which, from the Saxon or mixedly Greek and Gothic style of its architecture, seems to be 700 or 800 years old. The church of Warthwick, in England, near Carlisle, built before the times of William the Conqueror, strikingly resembles it, but is greatly inferior in richness and elaboration of embellishment. William Wilkie, D.D., the author of 'The Epigoniad,' and professor of natural philosophy at St. Andrews, was a native of Dalmeny. Queen Victoria and Prince Albert made a visit to Dalmeny Park on the day of their public progress through Edinburgh in 1842. The island of Inch-Garvey, in the frith of Forth, belongs to Dalmeny. Assessed property in 1860, £11,404; of which £340 were in fisheries and in quarries. The small village of Dalmeny, consisting of the church, the manse, the school-house, and about a dozen cottages, is delightfully situated near the centre of the main body of the parish, commanding a view of the Forth. There is also a hamlet of Craigie. Population of the parish in 1831, 1,291; in 1861, 1,274. Houses, 201.

This parish is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Patron, the Earl of Roseberry. Stipend, £264 2s. 1d.; glebe, $5\frac{1}{2}$ acres. Unappropriated teinds, £45 10s. 11d. Schoolmaster's salary, now £52 10s., with about £65 other emoluments. The church of Dalmeny was formerly a vicarage of the monks of Jedburgh; and had several altars with distinct and appropriate revenues. The detached portion of the parish is called Auldeathie, and, previous to the Reformation, was a separate parish. Its church was of small value, and has entirely disappeared. In 1636, the territory coextensive with the burghal limits of South Queensferry, was detached from Dalmeny, and constituted a separate parish. An ancient chapel stood in this territory, built by Dundas of Dundas, the ruins of which might recently have been traced by antiquarian search. The present parish church contains about 350 sittings.

DALMIGAVIE, an estate in the upper part of the strath of the Findhorn, and south-western district of the parish of Moy and Dalarossie, Invernessshire. A principal feature of it is a grandly romantic gorge, called the Dell of Dalmigavie, where steep and lofty hills rise on all sides, in regular form, with green and purple attire, while the lower end appears to be blocked by a fir-clad hill.

DALMONACH. See BONHILL.

DALMORE, an estate on the Water of Ayr, parish of Stair, Ayrshire. The whetstones, known throughout the country as Water-of-Ayr stones, have long been manufactured in large quantity here.

DALMORE, a barbour in the parish of Rosskeen, Ross-shire, where considerable quantities of fir and other timber have been shipped for Shields and Newcastle. See ROSSKEEN.

DALMUIR, a post-office village in the parish of Old Kilpatrick, Dumbartonshire. It stands about $\frac{1}{2}$ a mile from the Clyde, and has a station on the Dumbarton railway, $6\frac{1}{2}$ miles east-south-east of Dumbarton. Here are paper-works, producing all kinds of paper to the value of about £30,000 a-year. Population, 526. Houses, 89.

DALMUIR SHORE, a quondam village, till about 1860, in Old Kilpatrick parish, Dumbartonshire; on the Clyde, $\frac{1}{2}$ a mile from Dalmuir. Here was a soda-work, with furnaces, chimneys, and calcined rubbish, which formed a great blot on the beauty of the river scenery. Here also was a quay, of haggard aspect, which had been in existence beyond the memory of man. Pop., 187. Houses, 27.

DALMULLIN, or DALMELLING, a locality in the parish of St. Quivox, Ayrshire, where was a monastery of Gilbertines, founded by Walter, Lord-high-steward of Scotland; but the air of the country not agreeing with the monks and nuns—who had been brought from Sixhill, in the county of Lincoln—they returned into England, whereupon all their rents were disposed by the said Walter to the monastery of Paisley, and the buildings went to decay. Walter also founded here a convent of Black or Benedictine nuns.

DALMYOT. See DUNMEAT.

DALNACARDOCH, a stage inn in the parish of Blair-Athole, Perthshire, on the Great Highland road from Edinburgh to Inverness, 86 miles from Edinburgh, and 70 from Inverness.

DALNASPIDAL, a wild mountainous locality, with a shooting lodge, and with a station on the Highland railway, near the head of the river Garry, about 2 miles south of the water-shed of the Central Grampians, and about 5 miles north-west of Dalnacardoch, in the parish of Blair-Athole, Perthshire. "On the bleak surface of the moors here," say the Messrs. Anderson, in their Guide to the Highlands, "are numerous pillars and cairns, memorials of those who have perished in the snow, or fallen fighting for their homes and kindred. The marks of an encampment of a party of Cromwell's troops still exist at Dalnaspidal, where they received a check from the Athole men and some of the Camerons of Lochiel. Here, too, General Cope drew up his army, in expectation of being attacked by the Highlanders, in 1745, whilst they awaited him on the northern side of Corryarrick, and by his ill-advised manœuvre in quitting his post, and marching onwards, left the road open to the insurgents. And, here, early in the year 1746, Lord George Murray planned and executed a series of attacks on various posts held by the royalists. A battalion of the Athole brigade, and a body of Macphersons, commanded by their chief Cluny,—that is to say common peasants, and a few country gentlemen without military experience,—under Lord George's directions, successfully surprised and carried twenty detached strong and defensible posts, all within two hours of the night; and the different parties punctually met at the appointed place of rendezvous, though their operations lay in a rugged mountainous country. Of this exploit, General Stewart of Garth in his 'Sketches' says, 'I know not if the whole of the Peninsular campaigns exhibited a more perfect execution of a

complicated piece of military service.' Lord George had himself marched to the Bridge of Bruar, with twenty-five men and a few elderly gentlemen, when he was informed that Sir Andrew Agnew, who held the castle of Blair, was advancing with a strong force to reconnoitre. In the words of Home, 'It was daylight; but the sun was not up. Lord George, looking earnestly about him, observed a fold-dike (that is a wall of turf) which had been begun as a fence for cattle, but left unfinished. He ordered his men to follow him, and draw up behind the dike, at such a distance one from another, that they might make a great show, having the colours of both regiments flying in the front. He then gave orders to the pipers (for he had with him the pipers both of the Athole men and the Macphersons) to keep their eyes fixed on the road from Blair, and the moment they saw the soldiers appear, to strike up with all their bagpipes at once. It happened that the regiments came in sight just as the sun rose, and that instant the pipers began to play one of their most noisy pibrochs. Lord George and his Highlanders, both officers and men, drawing their swords, brandished them about their heads. Sir Andrew, after gazing a while at this spectacle, ordered his men to the right-about, and marched them back to the Castle of Blair. Lord George kept his post till several of his parties came in; and as soon as he had collected 300 or 400 men, secure of victory, and certain that his numbers would very soon be greater, he marched to Blair, and invested the castle.'"

DALNESS, a romantic water-fall, in Glen-Etive, Argyleshire.

DALQUHARRAN. See GERVAN (THE).

DALQUHOUN. See CARDROSS.

DALREE. See DALRY.

DALREOCH, a station on the Vale of Leven railway, midway between Dumbarton and Rentou, Dumbartonshire.

DALREOCH, a locality in the parish of Dunning, Perthshire, where there is an United Presbyterian church.

DALRIADA, the original principality of the Scots in the territory which afterwards became Argyleshire,—but, still earlier, the principality on the north-east coast of Ireland with which the original Scots were connected. The natives of the latter principality, who were a branch of the great Celtic family, are generally supposed to have found their way into Ireland from the western shores of North Britain. They appear to have become divided into two tribes or clans, the most powerful of which was called *Cruithne* or *Cruithnich*,—a term said to mean eaters of corn or wheat, from the tribe being addicted to agricultural pursuits. The quarrels between these two rival tribes were frequent, and grew to such a height of violence, about the middle of the third century, as to call for the interference of Cormac, who then ruled as King of Ireland; and it is said that Cairbre-Riada, the general and cousin of King Cormac, conquered a territory in the north-east corner of Ireland, of about thirty miles in extent, possessed by the Cruithne. This tract was granted by the King to his general, and was denominated Dal-Riada, or 'the Portion of Riada,' over which Cairbre and his posterity reigned for several ages, under the protection of their relations, the sovereigns of Ireland. The Cruithne of Ireland and the Picts of North Britain being of the same lineage and language, kept up, according to O'Connor, a constant communication with each other; and it seems to be satisfactorily established that a colony of the Dalriads or Cruithne of Ireland, had settled

at a very early period in Argyle, from which they were ultimately expelled and driven back to Ireland about the period of the abdication by the Romans, of the government of North Britain, in the year 446. In the year 503, a new colony of the Dalriads, under the direction of three brothers, named Lorn, Fergus, and Angus, the sons of Eric, the descendant of Cairbre-Riada, settled in the country of the British Epidii, near the Epidian promontory of Richard and Ptolemy, named afterwards by the colonists *Ceanfir* or 'Head-land,' now known by the name of Kintyre.

History has thrown but little light on the causes which led to this settlement, afterwards so important in the annals of Scotland; and a question has even been raised whether it was obtained by force or favour. In proof of the first supposition it has been observed, that the headland of Kintyre, which forms a very narrow peninsula and runs far into the Deucaledonian sea, towards the nearest coast of Ireland, being separated by lofty mountains from the Caledonian continent, was in that age very thinly peopled by the Cambro-Britons; that these descendants of the Epidii were little connected with the central clans, and still less considered by the Pietish government, which, perhaps, was not yet sufficiently refined to be very jealous of its rights, or to be promptly resentful of its wrongs; and that Drest-Gurthimoch then reigned over the Picts, and certainly resided at a great distance beyond Drum-Albyn. It is also to be observed, in further corroboration of this view, that Lorn, Fergus, and Angus, brought few followers with them; and though they were doubtless joined by subsequent colonists, they were, for some time, occupied with the necessary but uninteresting labours of settlement within their appropriate districts. Kintyre was the portion of Fergus; Lorn possessed Lorn, to which he gave his name; and Angus is supposed to have colonized Islay, for it was enjoyed by Muredach, the son of Angus, after his decease. Thus these three princes or chiefs had each his own tribe and territory, according to the accustomed usage of the Celts,—a system which involved them frequently in the miseries of civil war, and in questions of disputed succession.

There is no portion of history so obscure or so perplexed as that of the Scoto-Irish Kings and their tribes, from their first settlement, in the year 503, to their accession to the Pietish throne in 843. Unfortunately no contemporaneous written records appear ever to have existed of that dark period of our annals, and the efforts which the Scotch and Irish antiquaries have made to extricate the truth from the mass of contradictions in which it lies hurried, have rather been displays of national prejudice than calm researches by reasonable inquirers. The annals, however, of Tigernach, and of Ulster, and the useful observations of O'Flaherty and O'Connor, along with the brief chronicles and historical documents, first brought to light by the industrious Innes, in his 'Critical Essay'—a work praised even by Pinkerton—have thrown some glimpses of light on a subject which had long remained in almost total darkness, and been rendered still more obscure by the fables of our older historians. Some of the causes which have rendered this part of our history so perplexed are thus stated by Chalmers in his *Caledonia*:—"1st. The sovereignty was not transmitted by the strict line of hereditary descent. There were three great families, who, as they sprang from the royal stock, occasionally grew up into the royal stem; two of these were descended from Fergus I. by his grandsons, Comgal and Gauran; the third was descended from Lorn, the

brother of Fergus. This circumstance naturally produced frequent contests and civil wars for the sovereignty, which, from those causes, was sometimes split; and the representatives of Fergus and Lorn reigned independently over their separate territories at the same time. The confusion which all this had produced can only be cleared up by tracing, as far as possible, the history of these different families, and developing the civil contests which existed among them. 2d. Much perplexity has been produced by the mistakes and omissions of the Gaelic bard, who composed the Albanic Duan, particularly in the latter part of the series, where he has, erroneously, introduced several supposititious Kings, from the Pietish catalogue. These mistakes having been adopted by those writers whose object was rather to support a system than to unravel the history of the Scottish monarchs, have increased, rather than diminished the confusion." Although the Dalriads had embraced Christianity before their arrival in Argyle, they do not appear to have been anxious to introduce it among the Caledonians or Picts. Their patron-saint was Kiaran, the son of a carpenter. He was a prelate of great fame, and several churches in Argyle and Ayrshire were dedicated to him. The ruins of Kilkerran, a church dedicated to Kiaran, may still be seen near Campbelton in Kintyre. At Kil-kieran, in Islay, Kil-kieran in Lismore, and Kilkerran in Carriek, there were chapels dedicated, as the names indicate, to Kiaran. Whatever were the causes which prevented the Dalriads from attempting the conversion of their neighbours, they were destined at no distant period from the era of the Dalriadic settlement, to receive the blessings of the true religion, from the teaching of St. Columba, a monk of high family descent, and cousin of Scoto-Irish Kings. See IONA.

DALRUADHAIN. See CAMPBELTON.

DALRULZEON. See CAPUTH.

DALRY, DALREE, or DALRIGH, a locality near Tyndrum, on the western border of Perthshire, where a severe conflict took place between Robert the Bruce and Maedougall, the Lord of Lorn. Bruce's force was but a handful, and had just been skulking like hunted deer among the fastnesses of the Central Grampians, so far as to Aberdeenshire. Lorn's army amounted to upwards of a thousand, and were fresh and full of hope. The clash and fury of the conflict were terrible. Both sides fought with steel, and thrust and tugged in the closest encounter: and says Barbour,—

"The King's folk full well them bare
And slew and felled and wounded sare:
But the folk of the other party
Fought with axes most fellity."

Two of Bruce's chief knights were soon wounded; and the whole of his small band, though holding doggedly to the conflict, felt speedily compelled to yield ground. Bruce led them cautiously off in retreat, but conducted this with a steadiness, a dexterity, and a valour which rendered it only a moving continuation of the battle. Barbour tells a story, perhaps with some embellishment of circumstances, that three of Lorn's men, "the hardest of hand in all the country," resolved to slay Bruce in the retreat, or perish,—that they made a simultaneous attack upon him at a choking part of a gorge, where he had scarcely room to turn his horse,—and that he struck off the arm of one, clove another "on the head to the hams," and slew outright and single-handedly all the three, so as to strike awe into all their comrades who were coming on behind. "Bruce's personal strength and courage," says Sir

Walter Scott, "wore never displayed to greater advantage than in this conflict. There is a tradition in the family of the Maedougalls of Lorn, that their chieftain engaged in personal battle with Bruce himself, while the latter was employed in protecting the retreat of his men; that Maedougall was struck down by the King, whose strength of body was equal to his vigour of mind, and would have been slain on the spot, had not two of Lorn's vassals, a father and a son, whom tradition terms M'Keoch, rescued him, by seizing the mantle of the monarch, and dragging him from above his adversary. Bruce rid himself of these foes, by two blows of his redoubted battle-axe, but was so closely pressed by the other followers of Lorn, that he was forced to abandon the mantle and the brooch which fastened it, clasped in the dying grasp of the M'Keochs." This brooch became an heir-loom of the Maedougalls, and is still in their possession. It has ever been famous among antiquaries, under the name of the Brooch of Lorn, and is both one of the costliest and one of the most beautiful relics of Scottish antiquity. The bard of Lorn apostrophises it as follows in "the Lord of the Isles":—

"Whence the brooch of burning gold,
That clasps the chieftain's mantlefold,
Wrought and chased with rare device,
Studded fair with gems of price,
On the varied tartans beaming,
As through night's pale rainbow gleaming,
Fainter now, now seen afar,
Fitial shines the northern star?"

DALRY, a parish, containing a post-town of its own name, near the centre of the district of Cunningham, Ayrshire. It is bounded by Kilbirnie, Beith, Kilwinning, Ardrossan, West Kilbride, and Largs. Its extreme length, from north to south, is about 10 miles; and its breadth varies from $1\frac{1}{2}$ to 9. It is narrowest in the middle; is nearly dis severed toward the north by the parish of Largs; sends out an arm 3 miles northward from its main body; and is, in consequence, of extremely irregular outline. The surface consists principally of four vales, with their intervening and overshadowing uplands. The principal vale stretches south-westward along its eastern division, and varies from a mile to $\frac{1}{2}$ a mile in breadth. This vale is watered by the meanderings of the river Garnock, and abounds in fertility and the beauties of agricultural landscape. The other parts of the parish, though well-watered with the Rye, the Caaf, and other streams flowing south-eastward and falling into the Garnock, are in general hilly, and in some parts, especially toward the north, pretty lofty. Baidland-hill, between the Caaf and the Rye, rises 946 feet; and Carwinning-hill, to the eastward of the Rye, rises 634 above the level of the sea. At Auchinskich, 2 miles from the village, in a romantic and sylvan dell, is a natural cave, 183 feet in length, and from 5 to 12 in breadth and height, stretching away into the bowels of a precipitous limestone crag, and ceiled and panelled with calcareous incrustations which give it the appearance of Gothic arched work. Coal, at a comparatively inconsiderable depth, is, in three places, worked from seams of from $2\frac{1}{2}$ to 5 feet thick. Limestone abounds in strata of unusual thickness, and in general embosoms numerous petrifications. Ironstone of excellent quality is plentiful, and has of late years been smelted in extensive furnaces, belonging to four great iron companies,—the Ayrshire, the Glegarnock, the Eglinton, and the Blair. The iron-works began to get into extensive operation in 1845, and made great changes on the face of the landscape. A public writer in that year remarked,—“Were a visitant to clamber to one of

the heights, and take a panoramic view of the plains below, he would, if he knew the place only a few years ago, be astonished at the change and at the numerous tasks of the busy labourers. The blaze of furnaces, the smoke of coal-pits, the whiter volume emitted by limekilns, and the building of houses, are at intervals seen all over the district. Since the census in 1841, the parish has received an accession of nearly one thousand. The value of property has been greatly enhanced. The two farms which the late Dr. Smith of Pitcon sold to the Glegarnock Iron Company for about £18,000, were in a short time after sold to the Blair Iron Company for £35,000. The ironstone is very rich, and the quantity of it will ensure a supply for thirty years at least.” Agates have been found in the Rye. In the holm-lands of the parish the soil is a deep alluvial loam; along the base of the hills it is light and dry; in some districts the soil is clayey and retentive; and in others it is reclaimed and cultivated moss. The principal landowners are Blair of Blair and the Earl of Glasgow; but there are very many others. The yearly value of raw produce was estimated in 1836 at £31,345; of which, however, only £5,000 was from mines and quarries. Assessed property in 1860, £70,893; of which so much as £45,683 was in the iron-works. On the top of Carwinning-hill are vestiges of an ancient fortification, two acres in area, and formed of three concentric circular walls. Near the end of the village is a mound called Court-hill,—one of those mounds, so common in Scotland, on which justice was administered. Urns and other antiquities have, in various localities, been dug up. In this parish occurred in 1576 a particularly atrocious instance of death at the stake for imputed witchcraft. Dalry was the birth-place of Sir Bryce Blair, who resisted the usurpation of Edward I., and the home of Captain Thomas Crawford, who captured Dumbarton castle in the reign of Mary. The parish is intersected by the Glasgow and South-western railway, and is in other respects well provided with means of communication. Population in 1831, 3,739; in 1861, 11,156. Houses, 1,274.

This parish is in the presbytery of Irvine, and synod of Glasgow and Ayr. Patron, Blair of Blair. Stipend, £231 10s. 6d.; glebe, £24. Unappropriated tithes, £575 9s. 10d. Schoolmaster's salary now is £56, with £65 fees. The parish church was built in 1771, and contains 941 sittings. There are in the town and in Kersland barony two other places of worship connected with the Establishment. There is a Free church, whose receipts in 1865 amounted to £331 1s. 8d. There is an United Presbyterian church, with 508 sittings, and an attendance of 350. There are an Evangelical Union chapel and a Roman Catholic chapel. There are two Assembly schools at Burnsideplace and Kersland barony, a subscription school at Blairmains, a school at Blair iron-work, a Free church school, a female school of industry, and two private adventure schools. Before the Reformation, the church of Dalry belonged to the monastery of Kilwinning, and was served by a vicar. On a rising ground to the east of the Garnock, about a mile from the present village, formerly stood a chapel, vestiges of which have not long ago disappeared. At a greater distance from the village are still some ruins of another ancient chapel.

The TOWN OF DALRY is beautifully situated on a rising ground on the right bank of the Garnock, immediately below the confluence of the Rye with that river, and not far above the confluence of the Caaf. It commands an extensive view to the south

and the north-east; and, owing to the peculiar nature of its site, and the liability to inundation of the mountain streams by which its environs on three sides are washed, it has sometimes the appearance of lifting its head from a lake, and being seated on an island. It is 16 miles from Paisley, 14 from Kilmarnock, 5 from Beith, and 9 from Salteoats. Of no higher origin than the beginning of the 17th century, and long existing as a mere hamlet, it has eventually attained considerable prosperity. There are five streets, three of which converge, and form a sort of square or open area near the centre of the town. The streets indicate the want of police, yet are in a better condition than those of some other towns. There are many well-built houses, and some excellent shops. The principal manufacture is weaving, which employs about 500 individuals. But there are also a woollen carding and spinning-mill and a considerable variety of artificers' work. A gas-work was established so long ago as 1834. The town has offices of the City of Glasgow and Clydesdale Banks, four insurance offices, a free Gardener's lodge, and several libraries and friendly societies. The principal inns are the White Hart, the King's Arms, and the Blair Arms. Six fairs are held, or entitled to be held, in the year; but they are little more than nominal,—the largest on the last day of July. Population in 1836, about 2,000; in 1861, 4,232. Houses, 343.

DALRY, a parish, containing a post-office village of its own name, in the north-east extremity of Kirkcubrightshire. It is bounded by the counties of Ayr and Dumfries, and the parishes of Balmaelellan, Kells, and Carsphairn. It is of the form of a triangle, having a small parallelogram resting on its northern angle, and presenting its apex, or greatest angle, to the east. Its greatest length, from the confluence of Grapel burn with Ken water on the south, to a point north-eastward of Black-Larg-hill on the north, is 14 miles; and its greatest breadth, from the confluence of Deugh water and Ken water on the west, to the point where Cairn water leaves it on the east, is $7\frac{1}{2}$ miles. Over a distance of 15 miles, following the sinuosities of the stream, Ken water forms its north-western, western, and south-western boundary; and over the southern half of that distance it flows through a fine vale, richly timbered with natural woods. But even behind this vale, as well as through all the other districts, the parish is almost entirely pastoral and hilly. Toward the north, and along the eastern boundary, it is very mountainous; and it terminates northward in the towering eminence of Black Larg, which rises 2,890 feet above the level of the sea. Garpel burn, which flows south-westward into Ken water, and Cairn water, which flows north-eastward into Dumfries-shire, along with an intermediate boundary-line of only about a mile, divide the parish from Balmaelellan, or form one of the sides of its triangle. Numerous mountain-brooks rise in the interior; a few of which flow southward into Capel burn, and the most westward into Ken water. Lochinvar, near the centre of the southern division, is a sheet of water little less than 3 miles in circumference; and, as well as the smaller lakes, Boston, Knocksting, and Knockman, contains excellent trout, and is much frequented by fishers. Pike, trout, and salmon abound in the Ken. The salmon, however, except in high floods, cannot ascend higher than to a linn or cascade at Earlston, and they there often excite observation by repeated and exhausting, though generally vain leaps, to surmount the water-spouts which repel their further progress. The parish is traversed by a road along its western limit, down the

vale of the Ken; by another along its southern-western limit, chiefly on the banks of the Capel and the Cairn; and by a third, among the mountain-gorges from east to west, about midway between the northern and the southern extremities. In Lochinvar are the remains of an ancient fortified castle which belonged to the Gordons, formerly knights of Lochinvar, and recently viscounts of Kenmure. There are several moats, cairns, and curious places of defense. In the farm of Altrye, near the top of a hill, whence a distant view is commanded through the mountain-passes, is an artificial trench capable of accommodating 100 persons, reported to have been a hiding-place of the persecuted Covenanters, and—in derivation from the epithet by which that suffering people were most commonly known—bearing the designation of the Whighole. Dalry, in common with the contiguous mountain-districts, was the scene of not a few eventful occurrences under the persecutions of the Stuarts. In the churchyard of Dalry one gravestone covers the dust of Major Stewart of Ardoch, and of John Grierson, who were shot in 1684, by Graham of Claverhouse, and after being buried in the family cemetery belonging to Ardoch, were dug up, by Graham's orders, and finally reinterred in the north-west corner of the churchyard of Dalry. The landowners of the parish are Forbes of Callendar, Oswald of Ancheruive, and seven others. The assessed property in 1843 was £5,768; in 1860, £7,792. The village of Dalry, which is also called the Clachan of Dalry and St. John's Town of Dalry, is beautifully situated on a bend of the Ken, near the southern angle of the parish. The houses, though irregularly scattered over a considerable space of ground, produce a fine effect to the eye. The little crofts lying around them are all carefully cultivated; and the gardens are neatly surrounded with hedges, and sheltered by rows of trees. The great rising of the Covenanters which terminated in the battle of Rullion Green originated in a trivial accidental occurrence in this village. Population of the parish in 1831, 1,246; in 1861, 1,149. Houses, 202.

This parish is in the presbytery of Kirkcubright, and synod of Galloway. Patron, Forbes of Callendar. Stipend, £282 17s. 9 $\frac{1}{2}$ d.; glebe, £20. Unappropriated tithes, £114 18s. 10 $\frac{1}{2}$ d. The church was formerly dedicated to St. John the Baptist, and a large stone is shown to strangers as a curiosity, called St. John's chair. Before the establishment of Carsphairn parish in 1640, Dalry comprehended the mountainous and extensive tract between the Ken and the Deugh, and it anciently had several chapels, all subordinate to the mother or parochial church. During episcopal times the parson was a member of the chapter of Galloway. The present church was built in 1832, and contains 700 sittings. There is an United Presbyterian church, which was built in 1826, and contains 200 sittings. There are two parochial schools,—the one at Smeaton-bridge, and the other at Corseglass; and the salary of each of the masters is £35. There is also an endowed school, called the Dalry free grammar school, for giving poor boys a liberal gratuitous education, attended by about 120 pupils, and maintained by a large endowment of money and land.

DALRY, a locality in the parish of St. Cuthberts, about a mile west-south-west of Edinburgh, where once stood the villages of Easter Dalry and Wester Dalry, now indistinguishable as separate communities, but which is still rendered conspicuous by Dalry-house and Dalry cemetery,—the latter one of those extra-mural places of interment which have been established by modern regard to the sanitary condition of the city.

DALRYMPLE, a parish, containing a post-office village of its own name, on the southern border of the district of Kyle, Ayrshire. It is bounded by the parishes of Ayr, Coylton, Dalnellington, Straiton, Kirkmichael, and Maybole. It is of an oblong figure, measuring from east to west 7 miles, having an average breadth of 2 miles, and containing an area of about 12 square miles. Nearly its whole surface rolls or undulates in numerous cultivated knolls, or little moundish hills, around most of which is hung out the extensive, varied, and enchanting panorama of the frith of Clyde and the lowlands south of Benlomon and the Grampians. One of the elevations commands a view of even the mist-veiled coast of Ireland. Along the whole southern and western boundary the Doon moves amidst alternations of bold sylvan banks and rich fertile haughs, dividing the parish from Carrick, and fringing its verge in the softest forms of beauty. Four lakes—Martinham, Kerse, Snipe, and Linds-ton—enrich the soil and the scenery, and abound in pike, perch, eel, and waterfowls. Martinham, the largest, only protrudes into the northern division of the parish, and belongs mainly to Coylton. It is about $\frac{1}{2}$ mile in length, and a furlong in breadth, and sends off its surplus waters south-westward by a rivulet to the Doon. The soil is, on a few of the eminences, a barren clay; on others, a loamy clay; and around the beds of the streams and lakes, a sandy or gravelly loam. Plantations of almost all varieties cultivated in Scotland beautify hill and vale. At Skeldon, on the Doon, are six oaks believed to be 300 years old. The Marquis of Ailsa draws more than half of the rental of the parish, and Oswald of Auchencruive nearly a fourth. The only mansions are Skeldon and Hollybush. The yearly value of raw produce was estimated in 1837 at £13,260. Assessed property in 1860, £9,692; of which £3,480 was in recent iron-works. The parish is traversed by the Ayr and Girvan railway, and has a station on it; and it was once traversed by a Roman road. On a rising ground at the western boundary are vestiges of three small circular British forts. In various localities ancient coins and memorials of Roman civilization have been found. The barony of Dalrymple was held in ancient times by a family to whom it gave name. During the reign of David II., it was divided between two Dalrymples, who probably were the descendants of a common progenitor. In the reign of Robert II. the whole barony was acquired by John Kennedy of Dunure; and it continued to belong to his descendants till the reign of Charles II. The Dalrymples, or ancient proprietors and their off-shoots, figure largely in history as lawyers, as statesmen, and as warriors, and now number among their representatives the noble family of Stair. The castle of the original Dalrymple stood on a rising-ground in the vicinity of the Doon. Every vestige of it has long ago been removed—so long, indeed, that no one in the district knows when or by whom it was swept away; and few persons in the district are aware that it ever existed at all. Not long ago, however, there were persons in the village who remembered, when young, to have sported on the green knoll where once towered the castle walls, and rolled themselves down the grassy sides of the hollow that formed the ditch round it. This too is now filled up and ploughed over; and a slight elevation above the surrounding level alone marks where the strong house of the Dalrymples had been. The name Dalrymple signifies "the vale of the crooked pool," and it describes exactly the site of the village even as it now exists, but must have described it still more strikingly in its original condition. The Doon

here creeps along like a pool with considerable tortuosity, but anciently made a reduplicate curvature almost in the form of the letter S. The village is pleasantly situated on the dale at this tortuosity, about midway between Ayr and Maybole. It was formerly an irregular assemblage of thatched cottages, but is now a neat pleasant place, much admired by every stranger. Population of the village 261. There are a saw-mill, and a pin-mill near the village, a woollen factory at Nethermill, and meal and flour mills in other places. Population of the parish in 1831, 964; in 1861, 1,325. Houses, 229.

This parish is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Crown. Stipend, about £270; glebe, £12 10s. 4d. Schoolmaster's salary, £50, with £29 other emoluments. The parish church, situated near the village, at the south-west angle of the parish, was built in 1764. There is a Free church; amount of contributions in 1865, £219 5s. 11 $\frac{1}{2}$ d. There is a private school at Hollybush. There are a friendly society, a musical society, a Burns' club, and a curling club. A short period before the Reformation, Dalrymple parsonage was attached as a prebend to the chapel-royal of Stirling.

DALSERF, a parish in the centre of the southern border of the middle ward of Lanarkshire. It contains the post-town of Larkhall, and the villages of Dalsersf, Rosebank, and Millheugh. It is bounded by the parishes of Hamilton, Cambusnethan, Carluke, Lesmahago, and Stonehouse. The Clyde traces all the north-eastern boundary; a tributary of the Avon, and afterwards the Avon itself, trace all the north-western boundary; and the parish extends lengthwise between these streams in the form of an irregular oblong. Its greatest length is about $6\frac{1}{2}$ miles, and its greatest breadth $4\frac{1}{2}$; but in certain parts the breadth does not exceed 2 or 3 miles. It contains upwards of 5,725 Scots acres, or about 7,219 imperial acres. It is traversed by the road from Glasgow to Carlisle, the south road from Glasgow to Lanark, and the new road from Edinburgh to Ayr; it is intersected also by the Lesmahago railway; and it enjoys comparatively ready access to the Caledonian railway at the stations of Wishaw, Overtown, and Carluke. The soil is generally fertile and well-cultivated. There are different breadths of valley along the Clyde, and the banks rise often with a bold and abrupt ascent; and occasionally precipitous hollows are to be met with not devoid of a romantic character. The village of Dalsersf is situated about 120 feet above the level of the sea; and the highest land in the parish about 400 feet. Fruit cultivation is of great antiquity in this district, which lies almost in the centre of the luxuriant range of the Clydesdale orchards. From failing crops, however, and the facilities now afforded for the importation of fruit from England, Ireland, and the continents of Europe and America, the local cultivation has not been so remunerative as it used to be; so that orchard-planting is not on the increase. See CLYDESDALE. Coal abounds in every part of the parish; and there are numerous collieries in full operation, the produce of which is disposed of on moderate terms to the adjoining districts. Ironstone is known to abound on the Avon; and freestone quarries are in full activity on the Clyde, from which excellent blocks may be cut of any size. The principal resident landowner is Hamilton of Dalsersf and Millburn; but a landowner to nearly three times his extent is the Duke of Hamilton; and there are about fourteen others. The real rental is about £12,260. The yearly value of raw produce was estimated in 1840, at £15,000,—of which £1,250

were for fruit and £2,000 for minerals. Assessed property in 1860, £19,313; of which £7,000 were in mines. Many inhabitants are employed in weaving and laec-making. The village of Dalsarf is pleasantly situated among gardens, close to the mansion of Dalsarf, contiguous to the Clyde, 7 miles south-east of Hamilton. It was once a kirktown of some size and importance, but now consists merely of a few low-roofed cottages on two sides of the lane leading from the Lanark road to the parish church, and has for many years been going steadily into decay. Population of the parish in 1831, 2,680; in 1861, 4,876. Houses, 798.

This parish is in the presbytery of Hamilton and synod of Gasgow and Ayr. Patron, the Duke of Hamilton. Stipend, £264 12s. 6d.; glebe, £37 10s. Unappropriated teinds, £63 12s. 4d. The parish church was built in 1655, but has been three times repaired since, and now affords accommodation for 500 sitters. There is a quoad sacra parish church at Larkhall, built in 1836 as an extension church, with 720 sittings, and in the patronage of the Duke of Hamilton. There is also at Larkhall a Free church, whose contributions in 1865 were £308 8s. 8½d. There is likewise at Larkhall a United Presbyterian church, built about 1836, and containing 400 sittings. The parochial schoolmaster's salary is now £52 10s. There are several private schools.—Dalsarf parish was in early times a chapelry, which belonged to the ancient parish of Cadzow (now Hamilton). It was designated the chapelry of Maehan, and the district was called Maehanshire. Upon the accession of Robert the Bruce to the throne of Scotland, the territory of Maehan was forfeited by Sir John Comyn, and was granted by Bruce to Walter, the son of Gilbert, the predecessor of the Hamilton family. It was made a barony in the 14th century; and was afterwards called the barony of Maehan. The church of Cadzow with its chapel of Maehan was constituted a prebend of the cathedral church of Glasgow, and formed the benefice of the dean. The chapelry of Maehan was subsequently established as a separate parish; but the precise time when this took place has not been ascertained. A parish church having been built at the village of Dalsarf, the same name was given to the parish, probably about the period of the Reformation. As vassals of the Hamilton family, many of the gentlemen of this parish were deeply involved in the troublous scenes which alike distinguished and disturbed Scotland previous to the junction of the crowns under James VI. Gavin Hamilton of Raplock, and commendator of Kilwinning, was present at the battle of Langside, in the army of the Queen; he was also one of Mary's commissioners at York in 1570, and was included in the treaty of Perth of 1572. John Hamilton of Broomhill was wounded, and taken prisoner in the same battle; and about two years afterwards, his house of Broomholm was burned down by Sir William Drury, the governor of Berwick.

DALSHOLM, a village in the parish of New Kilpatrick, Dumbartonshire. Here is a paper-mill, with seven beating-engines. Population in 1851, 111. Houses, 22.

DALSWINTON, a post-office village and an estate in the parish of Kirkmahoe, Dumfries-shire. The village stands on the west side of the parish, near the Nith, 7½ miles north-west of Dumfries. Population in 1841, 94. Houses, 16. The estate comprises 5,132 imperial acres, or about one third of the parish. It belonged anciently to the Comyns, afterwards to the Stewarts, afterwards to the Maxwells, and was purchased in the latter part of last century, and greatly improved, by Patrick

Miller, Esq., the famous steam-boat projector, who launched on a lake here in October 1788 the first steam-boat ever tried. The ancient castle of the Comyns having gone to decay, Mr. Miller erected on its site an elegant and commodious mansion.

DALTON, a parish, containing a post-office village of its own name, in the southern part of Annandale, Dumfries-shire. It is bounded by Loehmaben, Dryfesdale, St. Mungo, Cummertrees, Ruthwell, and Mousewald. It is, on the whole, a parallelogram, stretching from north-west to south-east; but has a deep, though narrow indentation near the middle of its northern side, and thence, to its north-eastern angle, considerably protrudes. Its greatest length is nearly 6 miles, and its average breadth about 2½; and it contains an area of nearly 11 square miles. The surface in the north-western division is slightly hilly, and has two elevations,—Holmains and Almagill, rising 500 feet above sea-level; but in the other parts of the parish it is flat. The Pow, or Cummertrees Pow, rises in the uplands, and traverses the parish in a direction east of south, leaving it near Gilbrae. The northern boundary is formed for about 3 miles by the river Annan, which here abounds in salmon, grilse, sea-trout, and the fish—believed to be peenilic to the Solway rivers—called herling. The Annan is supposed, at a remote period, to have flowed through this parish, entering it at Dormont, where it at present begins to form its boundary, and pursuing its way past Dalton church, till it fell into what is now the channel or bed of the Pow. Along this course are extensive alluvial deposits, and ridges of sand and gravel, which appear to have been thrown out by a flood of waters. During a swell the Annan still breaks over its bank at Dormont, lays all the flat grounds along its supposed ancient road under inundation, and opens a communication with the Pow. In the uplands the soil is sand and gravel; along the banks of the Annan it is a light alluvial loam; along the ancient course of that river it is chiefly meadow or reclaimed bog; and in some parts of the interior it is a cold clay on a till bottom. On Almagill hill is a fine old circular camp, commanding a view along nearly the whole vale of the Annan, the ancient possession of the royal family of Bruce. Dormont-house on the Annan, and Rammerseales near the north-east angle of the parish, are fine modern mansions. The principal landowners are the proprietors of Holmains and Dormont. The yearly value of raw produce was estimated in 1835 at £10,725. Assessed property in 1860, £5,185. The parish is traversed by the northern road from Dumfries to Annan, and by the road from Loehmaben to Annan, and enjoys comparatively ready access on one side to the Caledonian railway, and on the other side to the South-western railway. The village of Dalton stands on the Loehmaben and Annan road, 6 miles north-west of Annan, and 9 east-south-east of Dumfries. It is the site of the parish church, but otherwise possesses little importance. Population of the parish in 1831, 730; in 1861, 679. Houses, 123.

This parish is in the presbytery of Lochmaben, and synod of Dumfries. Patrons, the trustees of Sandeman of Kirkwood. Stipend, £171 12s. 11d.; glebe, £10. Unappropriated teinds, £15 1s. 10d. Schoolmaster's salary now is £60, with £20 fees. The parish church was built in 1704, and contains about 300 sittings. The present parish comprehends the old parishes of Meikle Dalton and Little Dalton, which were united immediately after the Reformation. In 1609 they were both united to Mousewald; but in 1633 were disjoined from it, and erected into their present form. The church of Little Dalton

was demolished, and that of Meikle Dalton made the united parochial church. Meikle Dalton, the predecessor of the modern hamlet, was of old the seat of the baronial courts.

DALTON, a village in the east end of the parish of Cambuslang, Lanarkshire.

DALVAADDY. See CAMPBELTON.

DALVAULT, a village in the parish of Bonhill, Dumhartsouthshire.

DALVEEN, a difficult pass through the Lowther mountains, from the parish of Crawford in Lanarkshire into the parish of Durisdeer in Dumfries-shire.

DALVEY, a station on the Strathspey railway, between Advie and Cromdale.

DALWHAT WATER, a stream in the north-west of Dumfries-shire. It runs in a south-easterly direction along the parish of Glencairn, forming, in the lower part of its course, a beautiful, well-wooded dale, amidst general scenery, upland, heathy, and bleak. Having flowed $\frac{3}{4}$ of a mile past Minnyhive, it forms a confluence with the recently united waters of Castlefairn and Craigdarroch, and along with them forms, or is thence called, the Cairn. Its entire course is about 9 miles.

DALWHINNIE, an inn and a railway station in Badenoch, Inverness-shire, on the Highland railway, 99 $\frac{1}{2}$ miles from Edinburgh, and 56 $\frac{1}{2}$ from Inverness. The inn was built by Government.

DALZIEL, a parish, containing the post-town of Motherwell and the village of Windmillhill, in the centre of the middle ward of Lanarkshire. It is bounded by the parishes of Hamilton, Bothwell, Shotts, and Cambusnethan. The Clyde traces most of its south-western boundary, and the South Calder most of its north-eastern boundary. It is about 4 miles in length and 3 in breadth, and contains 2,283 Scotch acres. Its outline is extremely irregular, in consequence of a part of it lying on the south-west of the Clyde, and of the main body of it isolating two parts of the parish of Hamilton. In the old Statistical Account it is stated, "There is a tradition that this part was disjoined from the parish of Dalziel on account of the misdemeanors of a curate, who was then the incumbent. Why it was not restored to his successor is not known. It would have been convenient that it had been so; for the living is very small." The land of the parish is low, and the surface even and regular, excepting in a few parts where it is slightly varied by rising grounds. It rises very gently from the Clyde and Calder, and there is little of it more than 150 feet above the level of the sea. The soil is mostly a heavy clay, which is under the usual rotation of cropping. There are many thriving plantations in the parish; and no inconsiderable portion of it on the banks of the Clyde is formed into orchard-grounds, the produce of which in point of quality has not been surpassed by that of any of the adjacent fruit-growing parishes. See CLYDESDALE. Coal abounds, and is now extensively worked. There are also clay-slate and some excellent flag-stone; the latter is principally worked at Craigneuk quarry. A large malleable iron-work likewise is in full operation. The principal landowners are Lord Belhaven, Hamilton of Dalziel, and three others. The yearly value of raw produce was estimated in 1836 at £8,182. The assessed property in 1860 was £21,956. The parish is traversed by the road from Hamilton to Edinburgh, by the road from Glasgow to Lanark, and by the main western fork of the Caledonian railway, and has a station on the latter, at the junction with it of the Clydesdale Junction railway, in the vicinity of Motherwell. Population in 1831, 1,180; in 1861, 5,438. Houses, 775.

The most ancient family connected with this

parish were the Dalziels, who afterwards became Earls of Carnwath; but after various transferences, though principally to members of the same family, the larger portion of the Dalziel estate was sold in 1647 by the Earl of Carnwath to Hamilton of Boggs, whose descendant is still in possession. This parish was celebrated as having been intersected from east to west by the principal branch of the Great western Roman road, or Watling-street, as it has been called. The present road from Glasgow to Lanark by Carlisle, has been for a considerable way formed upon it; and the march of recent improvement has almost entirely effaced every trace of this great pathway of the Romans, although but a few years have passed away since it was plainly discernible, and even the cinders of the Roman forges remained untouched. At the north-west boundary of the parish there is a bridge of a single span over the Calder, evidently of great antiquity, and which is usually understood to have been constructed by the Romans at the time they possessed this part of the country. Upon a steep bank of the Calder, near this bridge, there were formerly situated the remains of a pretorium or Roman encampment; but here also the hand of improvement has been busy in obliterating those landmarks which, for more than a thousand years, had existed to mark the early location of the conquerors of the world. In another part, near the centre of the parish, and upon a bank overlooking the Clyde, was situated a second Roman encampment or outpost. To mark the spot, one of the predecessors of the present proprietor built a little temple or summer-house, cut terrace-walks along the bank, and planted fruit and forest trees in tasteful positions,—altogether rendering it a fairy spot, which embraces one of the sweetest views in Clydesdale. The mansion of Dalziel is situated upon the burn or brook of that name, and in one of the most beautiful parts of the glen through which it meanders. It was built by Mr. Hamilton of Boggs in 1649, two years after the estate came into his possession; and it is in verity a beautiful specimen of an old baronial residence. Hamilton of Wishaw calls it "a great and substantial house." Attached to it is an old tower or peel-house, the age of which is not known, but it is evidently of great antiquity. It is 50 feet in height, and the walls are 8 feet in thickness, having recesses which were wont to be used as sleeping-places. It is of limited extent. In an apartment used as a kitchen in this peel is suspended from the roof a lustre composed of large stag horns, connected with iron, with metal sockets for the candles.

This parish is in the presbytery of Hamilton, and synod of Glasgow and Ayr. Patron, Hamilton of Dalziel. Stipend, £155 11s. 3d.; glebe, £60. Schoolmaster's salary, now is £65, with about £36 fees, and £12 other emoluments. The parish church is a cruciform structure, built in 1789, and containing 370 sittings. There is a Free church: sum raised in 1865, £181 8s. 3 $\frac{1}{2}$ d. There is likewise a United Presbyterian church. The church of Dalziel, with its tithes, was granted to the monks and abbots of Paisley in the 12th century; and it was afterwards conveyed to the dean and chapter of Glasgow, whose common property it continued till the Reformation. Subsequent to this event the patronage and tithes of the parish were given by Queen Mary to the college of Glasgow; and they remained in their possession in 1702, when Hamilton of Wishaw wrote his account of Lanarkshire; but afterwards they came into the family of Hamilton of Dalziel.

DAMHEAD, a post-office village in the parish of Arngask, at the meeting-point of the counties of Kinross, Fife, and Perth. It stands in a vale of

the Ochil-hills, which is traversed by the road from Edinburgh to Perth. Fairs are held here on the last Tuesday of April, old style, on the first Thursday of August, and on the first Tuesday of October; and another fair is held at Lustielaw, in the vicinity, on the third Tuesday of May, old style. Population, in 1851, of the entire village, 138; of the Kinross-shire portion, 24; of the Fifeshire portion, 56. Houses in the whole, 36.

DAMHEAD, Dumbartonshire. See **JAMESTON**.

DAMHEAD OF THUK, a hamlet in the carse of Stirling, and on the north-east border of the parish of St. Ninians, midway between the town of St. Ninians and the village of Airth. A subscription school was erected here in 1842.

DAMIETT. See **DUNMYAT**.

DAMPH (Lochn), a beautiful lake, about 3 miles long and $\frac{1}{2}$ a mile broad, on the eastern verge of the Coygach district of Cromartyshire. It lies cradled among the mountains, from 8 to 11 miles east of Ullapool, and discharges its surplus waters in opposite directions from its two ends. The heights which immediately environ it have a verdant surface, a somewhat uniform summit line, and an average altitude of about 1,000 feet, and part of them are clothed over their lower half with birch-woods.

DAMSA, or **DAMSAY**, one of the Orkneys, constituting part of the parish of Firth. This is a beautiful little island, scarcely a mile in circumference, in the bosom of the bay of Firth. From the singular beauty of its appearance, it has sometimes been styled the Tempe of the islands. It formerly contained a castle reputed to be of great strength. There was also a church here, said to have been dedicated to the Virgin Mary, by whose influence—according to the credulity of ancient times—many wonders were here performed. This fabric, with all its miracles, has almost sunk into oblivion; and the island is now applied to the pasturing of a few hundreds of sheep.

DAMYAT. See **DUNMYAT**.

DANDALEITH, a beautiful haugh on the Spey, in the parish of Rothes, Morayshire.

DANE'S DYKE. See **CRAIL**.

DANESHALT, or **DUNSHALT**, a post-office village in the parish of Auchtermuchty, Fifeshire, about a mile south of the town of Auchtermuchty, and $\frac{1}{2}$ north of Falkland. It stands on the road to Falkland, Kirkcaldy, and Kinghorn, and is supposed to be the place where the Danes first halted after their discomfiture on Falkland moor. It has a school, and is lighted with gas, and partakes generally in the industry of Auchtermuchty. Population in 1861, 567. Houses, 155.

DANSKINE, an inn in the parish of Garvald, $5\frac{1}{2}$ miles south-east by south of Haddington, on the road to Dunse. There is a small loch here.

DARA (THE), a stream of the north-west of Aberdeenshire. It rises on the southern confines of the parish of Aberdour, runs about 10 miles south-westward, past New Byth and Cuminstown, makes a turn near the middle of the parish of Turriff, and runs about 3 miles north-westward thence to a confluence with the Deveron a little below the village of Turriff. In the upper part of its course, it bears the name of the Water of Idoch.

DARGAVEL. See **ERSKINE**.

DARGIE, a village in the Invergowrie district of the parish of Liff and Benzie, about 3 miles west of Dundee, surrounded by Forfarshire, but politically belonging to Perthshire. Population in 1851, 32. Houses, 9.

DARK MILE (THE), a romantically picturesque glen, about a Scotch mile in length, between Loch Archaig and Loch Lochy, in the parish of Kilmalie,

Inverness-shire. It is traversed by a dark sluggish stream, flowing to Loch Lochy, and filled along the bottom with rugged, rocky, lofty, copse-clad knolls. Its scenery is exactly similar to that of the Trosachs, but more striking and on a larger scale; yet, in spite of much thoroughfare in its immediate vicinity, along the great glen of the Caledonian canal, it continues to be very little known.

DARLINGSHAUGH, a town in the parish of Melrose, Roxburghshire, forming a suburb of the town of Galashiels, standing in compact contiguity to the main body or Selkirkshire portion of that town, and partaking generally in its industry and trade. Population in 1861, 3,631. See **GALASEIELS**.

DARLINGTON, a suburb of the town of Stewarton, Ayrshire. It was feued by the public-spirited William Deans, the introducer of woollen and carpet manufactories to the district, and is sometimes called Deanston in honour of him, but was originally called Templehouse. Population in 1851, 425. Houses, 33. See **STEWARTON**.

DARNAWAY CASTLE, a seat of the Earl of Moray, in the parish of Dyke and Moy, Morayshire. It was built about 45 years ago. It is a large oblong pile, and stands on a gentle eminence overtopping a great extent of forest, and commanding a magnificent view of rich and varied scenery. It presents a very imposing appearance, as seen from a distance. The grounds around it are finely diversified and full of beauty; and the circumjacent forest extends away into the parish of Edeukillie. Adjoining the modern edifice is a princely hall of the old castle, built by Earl Randolph, Regent of Scotland during the minority of David Bruce. Its length is 89 feet, and its breadth 35 feet. The arched oaken roof is superb, and somewhat resembles that of the Parliament-house of Edinburgh. Mary, Queen of Scots, held her court here in 1564. Among the pictures is one of 'The Fair,' or 'Bonny Earl of Moray,' as he is commonly called, who was murdered at Donibristle. See **DALGETY**. There is also a portrait of Queen Mary, disguised by way of a frolic, in boy's clothes,—in long scarlet stockings, black velvet coat, black kilt, white sleeves, and a huge ruff.

DARNICK. See **DERNOCK**.

DARNLEY, an ancient barony in the south-west of the parish of Eastwood, 2 miles south-west of Pollockshaws, Renfrewshire. It belonged for ages to a branch of the house of Stewart. Sir John Stewart of Darnley was ennobled in the 15th century,—first as Lord Darnley, and afterwards as Earl of Lennox. From this place, then, the family derived its second title, which makes so conspicuous a figure in Scottish history, as having been held by the unfortunate husband of Queen Mary. The name also occurred in the war-cry of the family, which was 'Avant-Darnlé!' In 1571, when Dumbarton castle was surprised and taken by the friends of the murdered prince, under the command of Crawford of Jordanhill, their watchword was, 'A Darnley, a Darnley!' which, as Mr. Tytler the historian remarks, had been given by Crawford, "evidently from affection for his unfortunate master, the late King." In the beginning of the 18th century, the Duke of Lennox and Richmond sold his estates in Scotland, including Darnley, to the Duke of Montrose. About the year 1757, Darnley was purchased by Sir John Maxwell of Nether-Pollock, in whose family it has since continued. Several seats of manufacture and other localities within the limits of the ancient barony, still bear its name as a prefix. See **EASTWOOD**, **CROOKSTON**, and **LENNOX**.

DARNWICK. See **DERNOCK**.

DARUEL (THE), a stream in the district of

Cowal, Argyshire, which has its rise at the hill of Barnish, and, after a course of some miles through Glendaruel, falls into the head of Loch Striven, opposite the north end of the Butc.

DARVEL, or DERVAL, a post-office village on the southern border of the parish of Loudoun, Ayrshire. It stands on the right bank of Irvine Water, and on the road from Kilmarnock to Strathaven, 1 mile east of Newmilns, and 9 miles east by north of Kilmarnock. It is a regularly built and comparatively prosperous place; yet nearly all its inhabitants depend for subsistence, either directly or indirectly, on hand-loom weaving. Here is a Reformed Presbyterian meeting-house, which was built in 1835, and has an attendance of 260. Here also are an Established Church school, a Free Church school, and a subscription library. The lands of Darvel anciently belonged to the Knights Templars, and were independent of tenure, not even holding of the Crown. Population in 1841, 1,362; in 1861, 1,544.

DAVA, a station on the Highland railway, $8\frac{1}{2}$ miles N of Grantown.

DAVAR ISLE. See CAMPBELTON.

DAVEN (LOCH), a small sheet of water in the parish of Logie-Coldstone in Aberdeenshire. It is situated on the south-western border of the parish, and is about $3\frac{1}{2}$ miles in circumference. It is formed by three rivulets, two of which partly bound the parish, and a third comes to its north-western extremity from a smaller loch than itself, and passes through. It abounds with pike.

DAVID. See DAVIOT.

DAVID'S (Str.), a village in the parish of Dalgety, Fifeshire. It stands on the coast of the frith of Forth, 2 miles east of Inverkeithing, and the same distance west of Aberdeen. It exports an immense quantity of coal. Population in 1851, 155. Houses, 32. See DALGETY.

DAVID'S (Str.), a village in the parish of Madderty, Perthshire. It stands on the estate of Craig of Madderty, and has superseded the ancient village of that name, which was a burgh of barony. It is quite modern, and promises to be prosperous. An elegant and commodious schoolhouse was erected here, and endowed a few years ago, by Lady Preston Baird.

DAVID'S (Str.), Dumbartonshire. See KIRKINTILLOCH.

DAVIDSON'S-MAINS, or MUTTINHOLE, a straggling village in the centre of the parish of Cramond, Edinburghshire. It stands on the road from Edinburgh to the village of Cramond, $2\frac{1}{2}$ miles south-west of Granton. It is a station of the Edinburgh county police. Population in 1861, 599. Houses, 50.

DAVIOT,—popularly DAVID,—a parish, containing a post-office village of its own name, in the district of Garioch, Aberdeenshire. It is bounded by Fyvie, Old Meldrum, Bourtie, Chapel of Garioch, and Rayne. Its boundaries are principally natural, being defined by the courses of rivulets, the largest one of which, on the eastern side, is joined by various tributaries from the neighbouring parishes, and runs southward to the river Urie. The form of the parish is irregular,—it tapers to a point both towards the north and south. It extends to about $3\frac{1}{2}$ miles in length, and 2 in breadth, exclusive of its *quoad sacra* limits. The soil is various, consisting partly of strong clay, partly of rich loam, but in general fertile. Its exposure is chiefly to the south and south-east; and the land is undulating, with few hills. About 500 acres were first enclosed in 1792; and now about 3,700 acres are in tillage, about 180 under wood, and about 100 are moss, which supplies the inhabitants with peat-fuel, while only about 150 are moorland or waste. There are five

landowners. The yearly value of raw produce was estimated in 1837 at £16,440. Assessed property in 1860, £3,962. There is a manufactory for carding and spinning wool. There was for very many years a distillery. There are two Druidical temples, one of which makes part of the church-yard. The village of Daviot stands nearly in the centre of the parish, 19 miles north-west of Aberdeen. The parish is traversed by the turnpike road which connects the east and west branches of the great road from Aberdeen to Inverness. Population in 1841, 691; in 1861, 614. Houses, 106.

This parish was formerly a parsonage in the diocese of Aberdeen, to the bishop of which it was given as an alms-gift by Malcolm Canmore. It is now in the presbytery of Garioch, and synod of Aberdeen. Several lands in the parishes of Chapel of Garioch and Fyvie were, towards the end of last century, annexed to it, *quoad sacra*, by act of Assembly; so that the whole under the minister's charge is nearly 5 miles in length and 4 in breadth. Stipend, £159 0s. 9d.; glebe, £12. Patron, the Crown. The Church is situated at the village of Daviot. Schoolmaster's salary, £52 10s., with £20 of fees.

DAVIOT AND DUNLICHITY, an united parish, partly in Nairnshire, but chiefly in Inverness-shire. It contains the post-office station of Daviot, and is in some parts only 5 miles distant from Inverness,—in other parts, 20 miles. It extends on both sides of the river Nairn, with a length of about 23 miles, and a breadth of from 2 to 4. It lies nearly due east and west; and is bounded on the north by Croy, on the east by Moy, on the south by Kingussie, and on the west by Dores. Its appearance is wild and romantic in the highest degree. See NAIRN (THE) and STRATHNAIRN. The heights along its south side are part of the range of the Mox-adhleagh Mountains; which see. Those on the west are a rugged chain, enclosing some lakes, and attaining an altitude of from 1,500 to 1,600 feet. Those along the north are part of the inclined sandstone ridge of Drummoissie moor, which has here an altitude of about 800 or 900 feet, and which declines to the eastward of the parish into the moor of Culloden. See CULLODEN. Two lakes, Ruthven and Dundelback, lie on the boundary with Dores; and other two, Coire and Clachan, lie in the interior. In the low grounds are large tracts of peat-moss, incapable of cultivation, but which seem, in general, well suited for the growth of forest-trees. About 4,000 acres of the entire parochial area are either regularly or occasionally in tillage; about 1,500 acres are either waste land or pasture of a kind capable of much improvement; and about 3,100 acres are under wood. The average rent of the arable land is £1. Limestone, containing many metallic cubes of galena, has been observed below the Mains of Daviot on the Nairn. An extensive bed of marl was recently discovered in the moss of Tordarroch. The landowners are Macgillivray of Dunmaglass, Forbes of Culloden, Baillie of Dochfour, and the Mackintoshes of Mackintosh, Aberarder, Farr, and Raigmore. At the Mains of Daviot are some ruins of a castle built by the Earl of Crawford in the beginning of the 15th century. It was of great extent, but most of the stones have been taken away to build a modern house near its site. Remains of Druidical temples may be seen at Daviot. Farr, Gask, and Tordarroch. The great Highland road from Inverness to Perth goes across the east end of the parish; and an excellent road, made under the auspices of the parliamentary commissioners, branches off from it near the church of Daviot, runs nearly 13 miles westward through the interior, and

passes on to Inverfarigag pier in Loch-Ness, thus furnishing a ready communication with the Caledonian canal. Population in 1831, 1,788; in 1861, 1,741. Houses, 337. Population of the Inverness-shire portion in 1831, 1,641; in 1861, 1,565. Houses, 300. Assessed property in 1860, £5,699.

This parish is in the presbytery of Inverness, and synod of Moray. The two parishes which constitute it were united in 1618; but are yet so much distinct as to have their respective glebes, churches, and parochial schools. Patrons, the Crown and Earl Cawdor. Stipend, £186 14s. 2d.; glebes, £10. Salary of each schoolmaster, £25, with 28 or £10 fees. The church of Daviot stands 4 miles from the east end of the parish, and was built in 1826, and contains 500 sittings. The church of Dunlichity stands 12 miles from the west end of the parish, and 7 miles west of the church of Daviot; it was built in 1759, and repaired in 1826, and contains 300 sittings. Service is performed alternately in the two churches every Sabbath. There is a Free church, with an attendance of about 800; receipts in 1865, £172 12s. 11½d. There is a Society's school at Croachy of Aberarder.

DAWICK, a suppressed parish in Peebles-shire. Before the Reformation it was a vicarage of the rectory of Stobo. It lay chiefly on the right bank of the Tweed; but partly also on the left bank. In 1742, its larger section was incorporated with Drummelzier, and its smaller with Stobo. In the north-east of the present parish of Drummelzier, are still places called East Dawick and West Dawick, which occupy the sites of ancient hamlets. The ruins of Dawick church stood on Scrape Burn, about ¼ of a mile south of New Posso.

DEAN, or DEN, any ravine or deep narrow vale, traversed along the bottom by a small stream. The name is Celtic. It occurs with considerable frequency in Scottish topography, both in composition and alone. In composition it occurs sometimes as a prefix, sometimes as an affix, but more commonly in a mixed capacity as "Dean or Den of——." Alone, it designates many rural localities, generally of much close mimic beauty, and sometimes very romantic; none of which, however, in themselves, apart from contiguous ground, are seats of population or otherwise of such importance as to require from us separate description. "Dean" is the form most common in the southern counties; and "Den," in the counties north of the Forth. Many of the ravines of this designation are of the character of a cul de sac, close at the upper end, opening down to a meadow at the lower end, and covered with copse-wood or strongly marked with escarpments athwart the sides.

DEAN, or LANGLANDS DEAN, a village in the south of the parish of Wilton, Roxburghshire. Population, 129.

DEAN (THE), formerly a hamlet on the Water of Leith, now a suburb of Edinburgh, remarkable for its romantic appearance, and its exquisitely beautiful bridge of 4 arches, each 96 feet in span, by which the road to Queensferry is carried across the deep ravine through which the Water of Leith here flows, at a height of 106 feet above the rocky bed of the stream. The total length of this bridge—which was erected chiefly by the enterprise of one individual—is 447 feet; breadth between the parapets 39 feet. See EDINBURGH.

DEAN (THE), a deep running river in the county

of Forfar. It takes its rise from the lake of Forfar, runs south-west, and, receiving the water of Gairie, near Glammis castle, falls into the Isla about a mile north of Meigle, after a course of about 12 miles. In its course through the parishes of Kinnettles and Glammis, it runs nearly in the line of the Newtyle and Forfar railway.

DEAN BURN, a rivulet, flowing into the Forth, about 1½ mile west of Borrowstouness, Linlithgowshire.

DEANBURNHAUGH, a modern village in the parish of Robertson, partly in Roxburghshire, and partly in Selkirkshire. Population in 1851, of the entire village, 86; of the Roxburgh section, 19.

DEAN CASTLE, a ruined ancient mansion, once the seat of the noble but unfortunate family of Boyd, in the parish of Kilmarnock, Ayrshire. It stands some distance north-east of the town of Kilmarnock, on a gentle rising-ground, on the banks of Kilmarnock Water, formerly called the Carth. A traditional rhyme says respecting it, in allusion to the last Earl of Kilmarnock, who forfeited his title and estates by participating in the rebellion of 1745,—

"The water of Carth rins by the Dean,
That ance was Lord Boyd's lodgin':
The lord wi' the loupen han',
He lost his title and his lan'."

The "loupen han'" alludes to the crest of the family, which is a dexter hand, couped at the wrist, erect, pointing with the thumb and two next fingers, the others turning down, with the motto, 'Coufido.' The castle originally consisted of a single, but strong, massive oblong tower, built about the end of the 14th century or earlier. In 1735, the pile in an enlarged and modernized form was accidentally reduced to bare walls by fire; and since that period, it has been gradually crumbling toward a total fall. The growth of an ash-tree on the top of an arch, and in the centre of the dining-room, was regarded by superstitious credulity as the fulfilment of some raudom or alleged prediction uttered during the period of the last persecution. The ruin—as seen from the south-west—has still a magnificent appearance, and suggests the melancholy idea of fallen grandeur.

DEANS, a village district of the parish of Cambuslang, Lanarkshire, containing about 60 inhabitants.

DEANSTON, a manufacturing village in the parish of Kilmadock, Perthshire. It stands on the right bank of the river Teith, about a mile west of Doune, and is connected with that place by a bridge. It is mentioned in the Lady of the Lake, and might have worthily figured there in full description, as a striking feature of the landscape; for, though contrasting totally to all the natural lineaments of the beautiful, brilliant, romantic scenery of the valley of the Teith, it is altogether as handsome a thing among seats of manufacture as that valley is among landscapes, even including the valley's gorgeous head-gear of Loch Katrine and the Trosachs. Extensive cotton-works were founded here in 1785. These formed the nucleus of the village; and they still, directly or indirectly, support all its population, and some hundreds of persons more. They were famous from the first for the excellence of their machinery and the fineness of their produce; but they eventually acquired pre-eminent reputation, and at the same time shared that reputation with the department of agriculture, under the management of Mr. James Smith, who was born at Glasgow in 1789, and died at Kingencleuch in Ayrshire in 1850,—who spent a large portion of his prime of life at Deanston in a whirl of genius as manager and in-

ventor,—and whose name now stands on the roll of fame, among the Wattses and the Arkwrights as a mechanician, among the Youngs and the Sinclairs as an agriculturist, and among the Howards and the Clarksons as a philanthropist. The works were lighted with gas so early as the year 1813. They are driven by a series of stupendous overshot wheels, each 36 feet in diameter, with a power equal to 80 horses. Their entire structure and economy are beautiful. A school-room is connected with them, capable of containing 200 children. The dwelling-houses of the work-people are on a uniform plan, white-washed, two stories high, with attics, and arranged in rows forming one wide street, with a lane behind. One of the rows is small, and several feet below the level of the street; but the other consists of four separate and equal divisions. The houses are provided also with small gardens and grass-plots; so that they present, both severally and in grouping, a very pleasant appearance. The village likewise borrows advantages of both look and substance from the vicinity of Deanston House and of Doune; and it has ready access to the latter's churches and communications. Here are a savings' bank and a circulating library. Population in 1841, 982; in 1861, 727.

DEANSTON, Ayrshire. See DARLINGTON.

DECHMONT. See CAMBUSLANG.

DECHMONT-LAW. See LIVINGSTONE.

DEE (THE), a great river, partly of Kinross-shire, but chiefly of Aberdeenshire. The name signifies "a dark stream;" and, as regards the gloom and the savage sublimity of the upper part of this river's course, though not as regards the colour of its waters, it is sufficiently descriptive. The sources of the Dee are much higher than those of any other river in Britain; they lie among the shoulders and near the summits of the Cairngorm mountains,—a group immensely grand, and in many parts inaccessible; they appear, in some instances, judging from height and copiousness and constancy, to be fed in some wondrous manner which science has never yet been able to explain; and the nascent streams which flow from them are so entangled among precipices and tunnels as to baffle all attempts at close observation. Hence do the very shepherds in the vicinity dispute as to which is the true head-stream of the Dee; while very intelligent tourists, speaking very dogmatically, have, in several instances, placed all the sources a thousand feet or more below their true position.

"Nearly as many misrepresentations," says Sir Thomas Dick Lauder, "have been made of the source of the Dee as of the springs of the Nile; and it has been kept as great a mystery as the ongoings and outgoings of the Niger; yet it should be no great secret. The summit of Benmaedhu has many charms in a clear day of summer. It is the highest land in Britain, and is president over a convocation of mountains. From its summit the crags of the Braeriach and Cairntoul to the west, the lesser Cairngorm and Benna-Main on the east, appear almost on a level with the great mountain, and grouped within a short distance of each other. On the south and west the fine outline of Ben-y-Gloe in Perthshire, forms a striking object, but not more so than the high cliffs of Lochnagar, rising over the multitude of mountains in the direction of Forfarshire. The scene is one of almost unapproachable wildness. The vast number of mountains apparently crowded together in every diversity of form, and extending far to the right and left, towards the south, cannot be forgotten by those who have watched them in their cold and stately dignity, so solemn and staid-looking in a clear day,

when the mist has entirely rolled off, and, except the echoes of the rough waterfalls, or the cry of the muir-fowl, no sound whatever breaks the heavy solitude. Far away to the south-west, the blue outline of Benlomond, dim and indistinct, running into and mixing with the sky, is pointed out. Ben-nevis to the west or north-west, is not so far away. The hills that rise around the springs of the Forth may be distinguished from those out of which the beginnings of the Tay and the Tummel are drawn. Distant hazy-looking strips of green and yellow, towards harvest-time, recall the broad lowland districts to the mind. Beyond them still—though it needs a clear eye or a good glass to comprehend the circle—are other strips of a different colour, formed by the sea, which is visible on three sides from the highest peak of Benmaedhu. On the north side, and all away toward the north, the scene is soft and inland, when compared with the savage grandeur in all other directions. Beneath the hill so far and sheer apparently to the eye that a weak head grows light to look down to it sharply, is Strathspey, smiling upwards in its mixture of many colours, telling truly that the hand of industry has been hard at work there. Above it are the little Morayshire hills; and we know that they overlook the finest farms, and some of the fairest old towns in the north. Beyond them still blue mountains rise up dimly in the sky like cloudlets. They are in Ross-shire; so Inverness must be away in that direction; and a long strip of silver running outwards to the east, and widening by the way, is the Moray Frith; and the hills over it are in Sutherland and Caithness. The outlines of all Scotland, north of the Forth, come within the picture laid out round Benmaedhu; and there is no scene in all that vast extent of land more gloomy and terrific than those great crags on its eastern side that rise round Lochaven."

Two head-streams of the Dee are manifestly higher than all the others, and yet are so nearly equal to each other in at once height, length, and volume, that they may be best regarded as joint parents of the river. The one rises near the summit of Benmaedhu, and runs southward down the west flank of that mountain, chiefly beneath prodigious masses of debris which hide it, for a thousand feet or more of its descent, entirely from the view. The other rises 160 feet from the summit of Braeriach, and descends south-eastward, chiefly down the deepest and most awful precipice in Britain, to a confluence with the former at the north-east side of Cairntoul. The springs of the two are less than four miles asunder, as the crow flies; but a tremendous gorge intervenes, sternly naked on one side, and largely occupied on the skirts and bottom of the other with fallen masses of granitic rock. The scenery is terrible. One understands here more than anywhere else in the Highlands, more even than in Glencoe, the influence of wild alpine landscape in darkening the imaginations of the Highlanders, so as to give to their traditions those aspects of gloom and superstition which have ever hung as severely upon them as if they had been the effusions of a rational faith. A graphic periodical writer, describing the approach to this gorge from the glen of the river below, says,—“Gradually what was something like a road, dies away; and you are now compelled to pick your way among the stones, and through the long heather, occasionally meeting with one of the small tracks worn by the deer, and used by such scanty travellers as may pass through that savage wilderness. There is a peculiar effect of loneliness you may never perhaps have experienced before, on entering this wilderness. The hills are

at first distant, and the glen wide and hollow; but a dead stillness reigns on every thing, except on the clattering river, which still flows on in no unstately bulk. Wandering on, mile after mile, the glen gradually narrows, and gets more savage in its aspect: great black rocks, which look like the stone walls of some antediluvian city of the giants, begin to run themselves up on each side; they approach more and more towards each other; and at last the solitary spectator feels as if they impeded his breath, although they are some miles, perhaps, from each other. It is time we should tell him exactly where he is. Yonder singular-looking peak, with shaggy precipitous sides, towards the west, is Cairntoul; proceeding from its side—as a wall seems to proceed from the angle of a turret—is a vast black mass of perpendicular rock; that is the ridge of Braeriach, said, by an eminent calculator of altitudes, to have 2,000 feet of sheer precipice; that 2,000 feet of precipice is the object which it now almost aches your eyes to look upon—a flat black mass, streaked with snow, and sometimes intruded on by a cloud, which divides the upper regions from the lower. It is probable that now, in mid-day, a hot sun gilds its black front, and mocks its streaks of snow, while a dead unearthly silence pervades the mass. It is not so at all times; for here is the workshop of storms—here the elements, when they prepare themselves to come down with destruction on the fruitful valleys below, exercise their strength and do no harm; then the scene is different from the stillness of the present; but with your leave, reader, it is a change we do not wish to witness. Returning to the description of our glen: right a-head, and almost protruding into it, is the well-known Cairngorm; and towards the east, stretched the loftier Benmacdhu, now admitted to be the highest hill in Britain. Now, after having heard the names of these mighty objects, let us request you to indulge yourself in the feeling of striking loneliness and disconnection with the world which every thing you view seems to impose on you; and if you may not have perceived it before, you will now feel the full expressiveness of the terms in those lines by Hogg, where he says,

Beyond the grizzly cliffs which guard
The infant-hills of Highland Dee,
Where hunter's horn was never heard,
Nor bugle of the forest-bee;
Mid wastes that dem and dreary lie,
One mountain rears its mighty form,
Disturbs the moon in passing by,
And smiles above the thunder storm."

The head-stream from Benmacdhu, immediately on issuing from its hidden course beneath the granitic debris, descends a series of five terraces, each looking like a ledge of masoury, and holding a deep limpid pool in its centre. These are called the Wells of the Dee. The stream thence is popularly called the Dec, but is not joined till 3 miles down by the head-stream from Braeriach, which is popularly called the Garachary or Garrochory. Another stream, called the Guisachan, descending south-eastward from Benvavrochan, falls in 2½ miles farther on, at the lower base of Cairntoul; and a fourth, called the Geanly or Gieuly, descending eastward from Cairneilar, falls in 4 miles still farther on, at Dubrach. The main river now takes a decided permanent direction toward the east; and all the way from "the Wells" hither, and also a short distance farther, it flows over a broken rocky bed, in alternate sweeps, rapids, and cascades till at length, at a place 6 miles above Castleton of Braemar, it forms a remarkable series of four small falls, called the Linn of Dee. "The Linn of Dee," says

the periodical writer already quoted, "you will hardly find to be what you probably expected—a lofty waterfall. The fall is indeed very insignificant, and it is over a sloping bank, from which there is no leap; but in no waterfall, not even in the princely Foyers, do we behold such a terrible specimen of the imprisoned power of the watery element. Here it has got itself entangled in a complete nest of impenetrable granite rocks, which alternately confine and enlarge the noble stream, sometimes allowing its waters to sweep indignantly round and round some large black basin, then again compelling them to exhaust their rage in cleaving their way betwixt two ledges, so near each other, that it is very easy—and a very common practice with those who have sound clear heads—to step across. Here the dead white of the foam contrasts strongly with the blackness of the turbulent caldrons, and the still blacker recesses of the caverns under the rocks, which an occasional commotion of the surface more violent than usual sometimes exhibits. It is said by the people in the neighbourhood, that the body of any living being which finds its way into the linn, can never be recovered, and—making allowance for generalities—we can easily imagine that in most cases they find their way into these abhorred caverns. We recollect, in the time of a flood, thinking the Linn of Dee would be a fine sight; we went, and were rather disappointed. The water had risen above the narrow broken part of the rocks, and its surface had a wider channel: it darted betwixt the banks with the velocity of the lightning, smooth and unruffled. But of what description must have been the working beneath!"

About 1½ mile below the linn, at the farm of Dallavorar, some signs of cultivation begin to appear on the banks of the Dee; but it soon after enters Mar forest, through which it flows to Castleton of Braemar, receiving in its course the Lui and the Quoich, from the north, and the Inverey and the Clunie, from the south, and passing Mar lodge on its northern bank. From Castleton it pursues its course through the Mar and Invercauld forests, and past Balmoral and Abergeldie, to the bridge of Ballater, above which it is joined by the Gairden, from the north, and the Muick from the south. Its scenery in the Braemar forests, and in Crathie, has been described in our articles BRAEMAR and BALMORAL; and its scenery around Ballater, and for some miles below, is described as follows by William Howitt,—"The hills are lofty, bare, grey, and freckled. They are, in fact, bare and tempest-tinted granite, having an air of majestic desolation. Some rise peaked and splintered, and their sides covered with debris, yet, as it were, bristled with black and sharp-looking pine forests. Some of the hills run along the side of the Dee, covered with these woods, exactly as the steep Black Forest hills in the neighbourhood of Wildbad. As you approach Ballater, ascending the river, "the valley expands. You see a breadth of green meadow, and a neat white village stretching across it, and its church lifting its spire into the clear air, while the mountains sweep round it in a fine chain of peaked hills, and close it in. All up Deeside there is well cultivated land; but, with the exception of this meadow on which Ballater stands, all is now hill, dark forest, and moorland, while below, on the banks of the winding and rapid Dee, birch woods present themselves in that peculiar beauty so truly belonging to the Highlands."

After passing Pannanich and Dee castle, the Dee flows through a gradually widening, though still narrow valley, receiving numerous small tributaries on both banks, and forcing its way through an allu-

viuum composed of rolled masses of coarse and fine granular, grey and red granite, gneiss, porphyry, primitive greenstone, and hornblende. About $1\frac{1}{2}$ mile below Kincardine O'Neil, where Potarch bridge crosses the Dee, there is a magnificent vein of red felspar porphyry, traversing gneiss, and varying in breadth from 6 to 20 feet. Below Potarch, the Dee enters Kincardineshire, through which it flows eastward for about 12 miles, receiving there, on its right bank, the tribute of the Feugh. It touches Aberdeenshire at the south-west corner of the parish of Drumoak; and thence, till its confluence with the sea at Aberdeen, it forms the dividing line betwixt Aberdeenshire and Kincardineshire. Its banks, throughout this distance, are rather tame and unpicturesque,—the hills lumpy and heath-covered, and presenting few cliffs, and the haughs narrow, except for the last 5 or 6 miles of its course. The last sweep of the river has peculiar beauties, and becomes identified at the mouth with the barbour of Aberdeen. See ABERDEEN. The Dee's total length of run is about 96 miles; and its tributaries drain nearly 1,000 square miles of country.

The waters of the Dee are remarkable for their limpid purity and their perennial flow. The drainage waters indeed are subject to the same impurities as those of all streams which receive the washings of farms and towns; but these, as to either tilled or inhabited tracts, come from a much smaller proportion of the aggregate area than in many other large basins, and have also been greatly regulated and much reduced during the last 35 years by georgical improvement. The fountain waters, however, as compared with those of most rivers, have both a large volume and an eminent purity. "The mountains of the Dee's head-streams," says Sir Thomas Dick Lauder, "abound in springs on their highest summits. How these springs are supplied, and where their inexhaustible waters are drained from, are questions not easily answered. The summer's drought or winter's rain has no influence over them. They are independent of all apparent means. Through the huge masses of granite that form the crust of these stupendous mountains, they urge their way, in utter disregard of all external influences, and seem to have selected the highest and the most inaccessible places from whence to ooze quietly out into the world. The Dee and its tributaries are largely indebted to these springs for their waters, and for their crystal clearness. Although a large body of water passes through the 'Chest of Dee'—a remarkable gorge in the river's course, about a mile or two above the influx of the Geauly—yet the whole current on to that point, is derived from the mountain springs, except immediately after heavy rains. This quality of the water may partly account for the favour shown to this river and its tributaries by skillful anglers. The valley of the Dee has never stood well in the world for fertility. Its character has been worse than its qualities. An old adage places it below its neighbouring river the Don; and it has been held for long that,

'Except it be for fish or tree,
Ae mile o' Don's worth twa o' Dee.'

The couplet is exaggerated; but, like many others of a similar kind, there is truth in its origin. The Dee was the finest wooded and the best fishing river in Scotland. Entails, manufactories, and stake-vents have partially changed all these matters; but still, for fish or wood, the Dee has few rivals amongst British rivers. The salmon contrive to force their way from the ocean, through some stormy passages, past 'the Liun' and through 'the Chest,' a still more

formidable barrier, to the foot of those terrible cliffs that hang high and stern above the infant river."

DEE (THE), a river in Kirkcudbrightshire, traversing the whole length of the stewardry, and dividing it into two nearly equal parts. Its sources are about a dozen rills, some pursuing an independent course, and some passing through Long Loch or Loch Dee, and all arising in the broad mountain-range which separates Kirkcudbrightshire from Carrick. The highest and strictly the parent-stream, rises about a mile from the boundary; and, before receiving the surplus waters of Loch Dee, flows circuitously about 6 miles, under the names of Sauch burn and Cooran lane. Assuming now the name of the Dee, it flows 17 miles north-eastward, receiving numerous rills from the uplands in its course, and dividing the parishes of Mingaff, Girthon, and Balmaghie on the south, from that of Kells on the north. Over the whole of this distance it is a petty stream, winding its way among broad flats of heath, or hills destitute both of verdant beauty and of grandeur. But at the point of leaving Kells its character is entirely changed. Falling there into Loch Ken, it usurps the titles and the tributaries of the larger and beautiful river by which that lake is formed; and thence it rolls proudly along to the sea, rich in the wealth of waters, and gay in the dress of its surrounding scenery. Over a distance of 9 or 10 miles it describes the arc of a circle, bending round from the direction of south-east to that of south-west; and the latter direction it maintains over 13 miles, till it falls into the sea. During this part of its progress, it divides the parishes of Balmaghie, Tongueland, Tvyuholm, and Borgue on the west, from those of Dalry, Crossmichael, Kelton, and Kirkcudbright, on the east. After falling into Loch Ken, it expands over a distance of 5 miles into three successive elongated lakes, of about $\frac{1}{2}$ of a mile of average breadth. Its course is afterwards rapid, chiefly over a rocky bottom, and beneath steep and rugged banks adorned with copewood and plantation. Opposite the church of Tongueland it tumbles over a declivity of rocks, and forms a series of foaming and impetuous cataracts. A little below, it is spanned by a magnificent bridge of one arch of 110 feet, whence a fine view is obtained of the falls. This bridge is constructed of huge blocks of freestone from the island of Arrau, and was built by the gentlemen of the stewardry at an expense of about £7,000. Three quarters of a mile farther down, the Dee receives the waters of the Tarff, and becomes considerably widened. Two miles further, it sweeps past the burgh of Kirkcudbright; and thence over a distance of 5 miles, till it loses itself in the Solway frith, forms an estuary at first $\frac{3}{4}$ of a mile, and afterwards $1\frac{1}{2}$ mile, of average breadth. Its entire course, from the origin of Sauch burn till the embouchure of the river, is about 46 miles. In floods, the Dee sometimes rises 8 feet above its ordinary level. As the grounds around its sources abound in mosses, its waters are of so dark a hue as to render it difficult—in places where there is not a considerable current—to distinguish between a pool and a shallow. Its salmon, too, are of a darker colour, and much fatter, than those of most rivers in the south of Scotland. The Dee is navigable to Tongueland, or about 7 miles from the Solway; and hut for its cataracts, or with the aid of a canal to enable vessels to surmount them, might be the medium of an inland navigation to the very centre of the stewardry.

DEE (BRIDGE OF), a village in the parish of Balmaghie, Kirkcudbrightshire. It has a station on the Kirkcudbright railway. Population, 243.

DEER, or OLD DEER, a parish partly in Banff-

shire, but chiefly in Aberdeenshire. It lies almost in the centre of the district of Buchan, and is strictly compact, its Banffshire section being a detached pendicle of a quondam great barony, whose main body constitutes the parish of St. Fergus. Deer parish contains the villages of Deer, Biffy, and Stewartfield, and the post-office village of Fetterangus; and also approaches close on its east side to the post-office village of Mintlaw. It is bounded by the parishes of Strichen, Longside, Cruden, Ellon, and New Deer. Its length south-eastward is 11 miles, and its breadth $5\frac{1}{2}$ miles. It is watered by two rivulets,—the Deer and the Strichen,—which afterwards form the Ugie. The surface consists of irregular ridges of rising ground, running in various directions, and forming a number of valleys of unequal extent. The tops of some of these ridges are covered with heath, some with plantations, and many of them are cultivated. Round the village of Deer is a plain of considerable extent, ornamented with the woods and pleasure-grounds of Pitfour. The soil of the parish is very diversified. Granite is quarried. A coarse limestone was formerly worked. White quartz blocks of stone are numerous, and pieces of the purest rock-crystal have occasionally been found. The principal landowners, Ferguson of Pitfour, Ferguson of Kinnmudy, and Renssell of Aden, are resident; but there is a number of others. Recent improvements on the Pitfour estate, chiefly in the home-grounds, together with the mansion, cost nearly £80,000. There were formerly within the parish several interesting Druidical remains. There are two woollen mills at Millbrake and Aden. There are also in the parish eight meal mills. A number of the parishioners are linen weavers. The parish is traversed by the road from Aberdeen to Fraserburgh, by the road from Banff to Peterhead, and by the branch line of railway to Peterhead, and has a railway station. Population in 1831, 4,110; in 1861, 5,174. Houses, 1,057. Population of the Aberdeenshire section in 1831, 3,643; in 1861, 4,561. Houses, 908. Assessed property, in 1860, £16,610.

This parish is the seat of a presbytery in the synod of Aberdeen. It formerly was a prebend of the cathedral of Aberdeen; but then wanted its present Banffshire section, and comprised the present parish of New Deer. Patron, the Crown. Stipend, £219 2s. 8d.; glebe, from £70 to £75. Unappropriated tithes, £67 14s. There are three parochial schools, at respectively Deer, Clochcan, and Shannas. Salary of the first schoolmaster, £35 13s. 4d., with £24 10s. fees; of each of the other schoolmasters, £22 3s. 4d., with £20 fees. The schoolmasters have also a share in the Dick bequest. There are several private schools. The parish church was built in 1788, and contains 1,200 sittings. There is a Free church for the parish, with an attendance of from 400 to 500, whose receipts in 1865 amounted to £180 9s. 4½d. There is likewise a Free church at Cloch, which formerly belonged to the synod of United Original Seceders. There is an United Presbyterian church at Stewartfield, which was built in 1822, contains 440 sittings, and has an attendance of about 300. There is a Congregational chapel at Stewartfield, which was built in 1801, contains 300 sittings, and has an attendance of about 100. A commodious Scotch Episcopal chapel in the parish was built in 1766, and rebuilt in 1852. There is also a small English Episcopal chapel.

The VILLAGE OF DEER or OLD DEER is pleasantly situated on the south bank of the Deer rivulet, and on the road from Peterhead to Banff, 6 miles east of New Deer, $10\frac{1}{2}$ west by north of Peterhead, and 27 north of Aberdeen. Here are an office of the North of

Scotland Banking Company, a savings' bank, a friendly society, a small library, and the seat of an agricultural association. Fairs for cattle and horses are held on the Wednesday after the 19th of July, and on the Wednesday after the 19th of December; and fairs of inferior consequence are held on the Thursday after the 25th of January, on the Thursday after the 18th of February, on the Thursday after the 18th of March, on the Monday after the 17th of September, and on the Thursday after the 25th of October. Not far from the village stand the remains of the abbey of Deer, built in the beginning of the 13th century by Cummin, Earl of Buchan, for some monks of the Cistercian order. It has been an extensive building, but is now very much in ruins. The revenues of this place at the Reformation were in money £805 8s. 6d.; wheat 14 bolls; bear 13 chaldrons, 10 bolls; meal 65 chaldrons, 7 bolls, 1 firloft, 3 pecks. In 1587, the lands belonging to it were erected into a temporal lordship in favour of Robert, son of William, 6th Earl Marischal, by the style and title of Lord Altrie.

DEER (NEW), a parish, containing a post-office village of its own name, in the district of Buchan, Aberdeenshire. It is bounded by Tyrie, Strichen, Old Deer, Ellon, Tarves, Methlick, Fyvie, Monquhitter, King Edward, and Aberdour. Its greatest length north and south is upwards of 14 miles; and its greatest breadth is $8\frac{1}{2}$ miles. An elevation called the hill of Culsh, in the vicinity of the village, commands a very extensive view; yet the highest ground is not more than 300 feet above sea-level. The surface is flat, there being scarcely a hill or even a spot that may be called an eminence. Towards the north-east and south-east the appearance, for 7 or 8 miles, is almost one continued corn-field, interspersed with pieces of sown grass and turnip, and terminated by a gently rising ground, in the form of an amphitheatre. Towards the west the soil is shallow, and was formerly covered with heath. The public road from Aberdeen, by Udny and Tarves, divides the parish from south-east to north-west. Limestone abounds. About 2 miles from the church stands an old castle called Fedderatt, which appears to have been a place of considerable strength. It was surrounded partly by a morass, and partly by a fosse; and could be approached only on one side, along a causeway and a drawbridge. Water was conveyed to it by means of pipes, pieces of which have at different times been torn up by the plough. There are a few remains of Druidical temples, and several tumuli, which have been opened and found to contain urns enclosed in stone-coffins. About a mile west of the village is an extensive piece of ground, called Bruce Hill, where Robert the Bruce is said to have encamped after the battle of Inverury. The landowners are Fordyce of Brucklaw and Gordon of Nethermoor, who have residences in the parish, the Earl of Aberdeen, Ferguson of Pitfour, and five others. The yearly value of raw produce was estimated in 1840 at £37,084 12s. 8d. Assessed property in 1860, £12,995. The village of New Deer stands nearly in the centre of the parish, 6 miles west of Old Deer, $16\frac{1}{2}$ west of Peterhead, and about the same distance south-east of Banff. Its site is the backbone of a sort of ridge, with declination of the fields to the east and the west of the street. Here are an office of the North of Scotland Bank, and a library. Fairs are held on the third Wednesday of January, on the Wednesday after the 12th of April, on the Wednesday after the 19th of June, on the day in August after Turriff, and on the Wednesday after the 19th of October. Population of the village in 1861, 475. Population of the parish in 1831, 3,525; in 1861, 4,385. Houses, 811.

This parish, anciently called Auchreddy, was disjoined from Old Deer in the beginning of the 17th century. It is in the presbytery of Deer, and synod of Aberdeen. Patron, the Crown. Stipend, £219 2s. 8d.; glebe, £20. Unappropriated teinds, £737 17s. 6d. There are three parochial schools. Salary of the three masters, £35, £35, and £25 13s. 4d., with fees. Each of the masters receives also between £20 and £30 from the Dick bequest. There are nine private schools. The parish church is a handsome structure, built in 1840, and containing 1,500 sittings. A chapel of ease, containing 638 sittings, was built at Savoeh, near the south-eastern extremity of the parish, in 1834; and was constituted by the Court of Teinds a quoad sacra parochial church in May 1851. The right of presentation to it belongs to the Earl of Aberdeen. There is a Free church for New Deer with an attendance of 350; sum raised in 1865, £212 9s. 3d. There are three United Presbyterian churches at respectively New Deer, Savoeh, and Whitehill; the first with 310 sittings, the second with 380, and the third with 450. Attendance at the Savoeh and Whitehill U.P. churches, each 250.

DEER (THE), a small river in the north of Aberdeenshire. It rises near the north-west extremity of the parish of New Deer, and flows about 16 miles east-south-eastward and eastward, through the interior of that parish, across the parish of Old Deer, and nearly across the parish of Longside, to a confluence with the northern head-stream of the Ugie at a point about $4\frac{1}{2}$ miles west-north-west of Peterhead.

DEER ISLAND. See MULDOONICH.

DEERNESS AND ST. ANDREWS, an united parish on the east side of Orkney, and in the presbytery of Kirkwall and synod of Orkney. It comprises a district of Pomona and three small islands. Its post-town is Kirkwall. But the two parishes included in it, though politically one, though one also as to quoad civilia incumbency, are under completely separate ecclesiastical administration, and require to be separately described. Population of the united parish in 1831, 1,557; in 1861, 1,681. Houses, 318. Assessed property in 1860, £2,314.

Deerness parish comprises a peninsula of its own name, and the three islands of Copinsbay, Cornholm, and Horse. The peninsula is the most easterly land of Pomona. It is connected by a narrow isthmus with the most easterly part of St. Andrews; it extends about $4\frac{1}{2}$ miles northward to Mullhead, with a variable breadth of from 1 mile to 3 miles; and it is separated from the main body of St. Andrews along all the west by the large and beautifully winding harbour of Deer sound. This harbour runs nearly in the direction of north-east and south-west; it is four miles long, and from 1 to $2\frac{1}{2}$ miles broad. Its entrance is from the north; and as it is surrounded with land on every side, and has a bottom of clay mixed with sand, and a sufficient depth of water, it constitutes an excellent harbour. Around the shores the soil of the peninsula is mostly sandy; higher up it is loam and clay; the middle of the peninsula is extremely boggy and wet. Here are several tumuli; and near the end of the isthmus are the remains of a very large Pict's house, commonly called Dingy's bowe or Duncan's height. Deerness is very conveniently situated for a fishing station; and about 50 or 60 boats are employed in the herring fishery. On the sand and shores are seen myriads of plovers, curlews, sea-larks, sea-pies, and a large grey bird with a hoarse cry, called by the inhabitants the Horra goose. Here very strong ropes, calculated for different purposes in husbandry, are made of the shoots of the crow-

berry heath or *Empetrum nigrum*. The ropes for hanging the caseys, or baskets, over the horses' backs, are made of the fibrous roots of the sea-reed or *Arundo arenaria*. Tethers and bridlo-reins are made of long meadow-grasses, such as *Holcus lanatus*, which here receive the name of pounce or puns. Considerable improvements have recently been made in agriculture. The landowners are the Earl of Zetland, Balfour of Trenaby, and Davidson of Newball. Population in 1831, 668; in 1861, 804. Houses, 151.—Deerness was constituted a separate parish quoad sacra by the Court of Teinds in June 1845. Patron, the Crown. Stipend, £120, with manse and glebe. The parish church was originally a parliamentary one. There is a Free church: attendance, 350; sum raised in 1865, £99 0s. 1½d. There is a Society's school, with £15 salary.

St. Andrews parish is bounded by Inganess bay, Stronsay frith, Deer sound, and the parishes of Deerness, Holm, and Kirkwall. Its extreme length is about 6 miles; and its average breadth is about 2. Its surface is prevalently flat, yet is diversified by gentle inequalities, whose highest ground has an elevation of about 350 feet above sea-level. The coast is partly low beach and partly mural cliff, the latter rising in one place to a height of nearly 180 feet, and pierced in another by a great pool-bottomed cavern, which can be entered by a boat from the sea. The landowners are Lord Zetland, Stewart of Brough, and Baikie of Tankerness, the last of whom is resident. Population in 1831, 889; in 1861, 868. Houses, 166.—St. Andrews contains the quondam church and manse of the united parish. Patron, the Earl of Zetland. Stipend, £208 6s. 8d.; glebe, £6. Unappropriated teinds, £47 10s. 6d. Schoolmaster's salary, £35, with from £9 to £12 fees. The parish church was built in 1801, and enlarged in 1827, and contains upwards of 400 sittings. There is a Free church: attendance, 150; sum raised in 1865, £78 8s. 0d. Cattle fairs are held at Knockhall and Occlester at Candlemas, Midsummer, and Martinmas.

DEESIDE, the valley of the Aberdeenshire Dee.

DEESIDE RAILWAY, a railway, deflecting from the Aberdeen railway at Ferryhill, near Aberdeen, and ascending the valley of the Dee to Aboyne. The original line was only to Banchory, 17 miles, and was authorised in 1846, commenced in 1852, and opened in 1853. The extension thence to Aboyne is 15½ miles, and was authorised in 1857, and opened in 1859. Further extension up the Dee was in progress in 1866. See ABERDEENSHIRE.

DEIL'S DIKE (THE), a remarkable ancient line of fortification, extending from Loch Ryan in Wigtonshire, by way of Minigaff, Glencairn, Penpont, and Lochmaben, to the upper part of the Solway frith in Dumfriesshire, at a point opposite the commencement of the great wall of Adrian in Cumberland. It is now quite obliterated in many parts, and more or less obscure in many, but still very distinct in some. It appears to have been invariably eight feet broad at the base, with a fosse on the north or inland side of it; and was built in most places of unchiselled blocks of common moorstone,—in others, of mixtures of stone and earth,—and, in a few, as at Hightae Flow in Lochmaben, wholly of earth. It separates the fertile lands of the sea-board districts from the irremediable wastes and wild fastnesses of the mountains, and may be presumed to have been built by an industrious or comparatively settled people on its south side, as a defence against a warlike or comparatively roving people on its north side. All facts respecting it, however, and even all reliable traditions, have been lost. Chalmers, the author of *Caledonia*, says,—“Considering all its circum-

stances, it is extremely difficult to assign its age, its object, or its builders. In Ireland, there is nothing like the Deil's Dike; the inference is that it was not made by Irish" or Dalriadan "hands. I am disposed to think that this work is several centuries older than the arrival of the Irish Cruithne or Picts in Galloway." Again he says,—“It is obviously a very ancient work, and was probably formed by the Romanized Britons after the departure of the Roman armies.”

DEIL'S HOWS. See TANNADICE.

DELNEY, a station on the Highland railway, $3\frac{1}{2}$ miles north-east of Invergordon.

DELORAINÉ, certain lands in the parish of Eterick, Selkirkshire, 17 miles south-west of the town of Selkirk. In 1706, Henry Scott, 2d son of the Duke of Monmouth, and Countess of Buccleugh, was created Earl of Delorainé. In 1807 this title became extinct.

DELTING, a parish in the middle of the east of Shetland. Its post-town is Lerwick. Its main body is part of the mainland; and this is bounded, on the north, by Yell sound; on the east, by Nesting and Lunnasting; on the south, by Wcesdale and Sandsting; and on the west, by Sulemvoe and St. Magnus bay. It is so intersected by arms of the sea, that no accurate idea can be given of its extent. In the report of the parliamentary commissioners, it is stated to be 14 miles in length, by about 4 in average breadth; by Edmonston it is said to be about 10 miles long and 8 miles broad. The surface is hilly, bleak, and barren; but the small part on the coast which is under culture produces tolerable crops of oats and barley. Fishing is the principal support of the inhabitants. The chief harbours are St. Magnus bay, Altha firth, Bustavoe, South Voeter, and Sulemvoe. The two inhabited islands of Muckle Roe and Little Roe belong to this parish; the former separated from the mainland by a very narrow sound dry at low water; the latter about a mile from the mainland. There are also the three islets of Brother Isle, Fishholm, and Bigga. There are four mansions in the parish, Garth, Busta, Mosshank, and Ullhouse. There are seven landowners. The real rental is about £1,000. Assessed property in 1860, £1,490. Population in 1831, 2,070; in 1861, 1,975. Houses, 361.

This parish is in the presbytery of Olhafirth, and synod of Shetland. Patron, the Earl of Zetland. Stipend, £151 1s. 6d.; glebe, £10. Schoolmaster's salary now is £35, with about £3 fees. There are two parish churches, respectively in the south, and in the north, built in 1714 and 1811, and containing jointly 1,130 sittings. There is a Free church: attendance, 90; sum raised in 1865, £34 10s. 9½d. There are three non-parochial schools.

DELVINE. See CAPUTH.

DELVORICH, a small village in the parish of Kilmadock, Perthshire.

DEMYAT. See DUNMYAT.

DEN. See DEAN.

DENEND, a small village in the parish of Newtyle, Forfarshire.

DENFENELLA. See CYRUS (St.).

DENFIEND. See MONRIE.

DENHEAD, a hamlet in the parish of Cameron, Fifeshire.

DENHEAD AND DENMILL, a conjoint village, in the parish of Liff and Benvie, a short distance west of Dundee, Forfarshire. Here is a spinning-mill. Population, about 120.

DENHEAD-MOOR. See ANDREWS (St.).

DENHOLM, a post-office village in the parish of Cavers, Roxburghshire. It is beautifully situated on the road from Hawick to Kelso, 5 miles north-

east of Hawick, and the same distance south-west by west of Jedburgh. Its site is a small low tableau, shelving abruptly to the right bank of the Teviot, and overhung at fine scenic distances, on one side by Minto Crags, on another by the Dunian, and on a third by Rubberslaw. The landscapes of the Teviot everywhere in its vicinity are brilliantly beautiful; and a richly wooded "den" or ravine, leading up toward the hills from a "holm" or meadow at the upper end of the village, whence arose the name of Denholm, but now wearing itself the reflected name of Denholm-dean, presents a series of close views strikingly romantic. The body of the village is a square, compactly built on the four sides with neat houses, the central space, including about 5 acres, being, with the exception of the site of the parish school-house, enclosed and laid out in pasture. From the angles, roads or openings branch off, those on one side being on the main road through the village, and those on the other leading through brief streets or alleys, to a suspension-bridge for the accommodation of foot passengers across the Teviot. The village, a few years ago, at considerable expense, was much improved, as to the neatness of its appearance and the comfort of its inhabitants, by James Douglas, Esq. of Cavers. It is inhabited principally by stocking-weavers. Here are a Free church, an Independent chapel, and a well-selected and well-placed public library. Sum raised in connection with the Free church in 1865, £145 14s. Sittings in the Independent chapel, nearly 300. Denholm was the birth-place of Dr. John Leyden; and a monument to him was erected here in 1861. Population in 1861, 766.

DENINO. See DUNINO.

DENMILL. See DENHEAD.

DENMILL-CASTLE, the ruined ancient residence of the family of Balfour, in the parish of Ahdie, $1\frac{1}{2}$ mile south-east of Newburgh, Fifeshire. One of the most distinguished members of the family was Sir James Balfour, the laborious antiquary, and Lord-Lion-King-at-arms, in the reign of Charles I. "It is singular," remarks the Scottish Tourist, "that the fate of the descendants of one who so much preserved the historical documents of his country is involved in mystery. In the 18th century the last known representative left Denmill-castle on horseback with a solitary attendant, and was never afterwards heard of. On the sixteenth of April 1846, an announcement appeared in the North British Advertiser, offering a reward to any one who could produce information as to his fate. The castle became ruinous, and the charter chest documents collected by Sir James Balfour, with the exception of those secured by the Faculty of Advocates at Edinburgh, were destroyed as waste paper." See AHDIE.

DENNY, a parish, containing the post-town of Denny, the post-office village of Denny-Loanhead, and the villages of Hags and Fankerton, in the south-east of Stirlingshire. It is bounded by the parishes of St. Ninians, Dunnipace, Falkirk, Cumbernauld, and Kilsyth. Its length east and west is 6 miles; its breadth is about 4 miles; and its area has been computed at 7,520 acres. Carron Water traces all the northern and north-eastern boundary; Bonny Water traces part of the southern and most of the south-eastern boundary; and Castlerankine burn flows through the interior to the Carron, separating about one-third of the parish on its left bank from about two-thirds on its right. The surface of the greater part of the parish, like that of most of the districts in the eastern part of Stirlingshire, is gently undulating. The most prominent feature is Darritch hill, or the Hill of Oaks, near the north-

western extremity. The stone-fences, which nearly universally prevail here, and the almost entire want of trees and hedgerows, give the landscape an unusually bleak and tame aspect. The northern and western parts, which are more elevated than the southern, are principally occupied as sheep-pastures. The soil in the northern part belongs to the class known by the name of dryfield, and is light, sandy, and not very fertile. The cultivation, however, has within the last twenty years been greatly improved; and by the extensive application of draining and other improved methods of agriculture, very fair crops are now raised. Some of the land in the north-eastern part of the parish is of greatly superior quality, and lets at as high a rate as the best carse-land in the country. About 6,000 acres are regularly or occasionally in tillage; about 360 are reclaimable pasture; about 180 are under wood; and about 1,140 are either totally waste or irreclaimably pastoral. Sandstone and whinstone are quarried. Coals are found in abundance; and from the colliery of Banknock a considerable quantity is exported by the Forth and Clyde canal to Glasgow. Ironstone is also found to some extent. The numerous falls of the Carron here have furnished excellent situations for mills of various kinds. On the banks of that stream there were formerly not less than nine grain mills. There are now, however, only three; of which two are meal and barley mills, and the other for the grinding of flour. In addition to these, there are two other mills,—a mill for chipping dye-woods, and the preparation of other dye-stuffs,—two large paper-mills, in one of which fine white paper, and in the other coarse pasteboard is manufactured,—and three wool-spinning mills. Besides these, we may mention two extensive calico-printing establishments, which, though in the adjoining parish of Dunipace, yet from their immediate vicinity to the town of Denny, may be appropriately viewed in connection with the subject of the present article. In the parish of Denny, though not properly connected with the town, are a distillery on the Bonny at Bankier, a spade manufactory on the lands of Knowhead, a brick and tile work in the same district of the parish, and a considerable flour, meal, and pot-barley mill, with a small saw-mill, at Bonnyford in the extreme east. For the supply of sufficient water power to the mills on the Carron, there is an artificial reservoir on Earl's burn, in the parish of St. Ninians, nearly 60 acres in area, retained by an embankment of 22 feet in height, and formed at an expense of nearly £2,000. This reservoir burst in 1839, to the great damage of the property on the Carron, but was afterwards reconstructed. The woollen mills are lighted with gas and heated with steam; and they do extensive work in the manufacture of tartan and fancy shawls, and linsey-woolsey stuffs. The yearly value of the raw produce of the parish was estimated in 1839, at £22,450. The assessed property in 1860 was £13,098. The road from Glasgow to Falkirk traverses the southern border of the parish; and that from Glasgow to Stirling defects thence at Denny-Loanhead, and goes northward through the town of Denny. The Edinburgh and Glasgow railway, and the Forth and Clyde Canal, though not entering the parish, pass along the near vicinity of its southern boundary; and the Scottish Central railway makes its junctions there with the Edinburgh and Glasgow and with the Caledonian. A branch of the Scottish Central also goes into the parish, to the town of Denny; and this defects from the main line at Larbert, and was authorized in 1856. Population of the parish in 1831, 3,843; in 1861, 4,988. Houses, 647.

This parish—like a few others in Stirlingshire—

is remarkable for the number of small properties which it contains, occupied by vassals, or portioners as they are here called, holding of a subject superior. This peculiarity is said to have arisen from the alarm of an Earl of Wigton at the time of the Union in 1705, who from a belief that that event would prove fatal to the prosperity of his country, disposed of the whole of his large estates in this parish and the neighbouring ones of Cumbernauld and Kirkin-tilloch to his own tenants, on condition of their paying for ever the rents of that time. The number of heritors is about 150; the principal are Forbes of Callendar, and Graham of Myoathill, the latter of whom is resident. The tract of the parish situated on the left of Castleranking burn bears the name of Temple-Denny, and is supposed to have belonged in former times to the Knights Templars. The rest of the parish is naturally divided into two nearly equal parts, as to both area and population, by the watershed between the Carron and the Bonny; and these two parts are often called respectively North Herbertshire and South Herbertshire, both in popular parlance and in legal documents; but the reason or origin of the appellations is totally unknown. There are scarcely any remains of antiquity connected with this parish. A stone-coffin was found many years ago at Woodyett, on the north-eastern extremity. It is said to have borne the date of 1301, and to have contained human bones.—There was a very old bridge over the Carron near Denny. The ancient and principal arch of this old bridge was built in the form of four arched rings or couples, upon which the whole superstructure appeared to rest. There is only one bridge in this neighbourhood built in a similar way; namely, that unique looking bridge over the Devon, near Tullibody, the two original arches of which are built with rings or couples. But in this case the arches are pointed like the Gothic windows in some of our churches, whereas in Denny bridge the arches were semicircular or Saxon. This bridge was about 12 feet wide, and very high. A new one 32 feet wide, and 10 feet lower, was a number of years ago substituted for it.

The parish of Denny was formerly a vicarage of the parish of Falkirk, but was separated thence about the year 1618. It is now in the presbytery of Stirling, and synod of Perth and Stirling. Patron, the Crown. The stipend was augmented in 1840 to 19 chalders, with an increase of £5 as allowance for communion elements. The returns before that date gave stipend, £250 3s. 3d., glebe, £9 13s. 4d., unappropriated tithes, £449 0s. 10d. Schoolmaster's salary now is £50, with about £24 fees. The parish church stands west of the old village of Denny, was built in 1813 and repaired in 1838, and contains 768 sittings. It has a turreted steeple, about 75 feet high. A chapel of ease was built by subscription at Haggs in 1840, after the model of the church of Camelon, and contains about 700 sittings. The right of presentation to it belongs to the male communicants. There is a Free church for Denny: attendance, 100; receipts in 1865, £161 10s. There are two United Presbyterian churches, the one at the town of Denny and the other at Denny-Loanhead; the former built in 1796, enlarged in 1817, and containing 600 sittings; the latter built in 1815 at the cost of £1,400, and containing 731 sittings. There are eight non-parochial schools, one of them partially endowed. There are either in the town of Denny or in other parts of the parish three public libraries, several benefit societies, a farmers' club, a curling club, and an archers' club. Two annual fairs are held in the parish, the one about Whitsunday and the other about Martinmas.

The TOWN OF DENNY stands on the north-east border of the parish, contiguous to the Carron, on the road from Stirling to Glasgow, $7\frac{1}{2}$ miles south by east of Stirling. Its site is a gentle eminence, sloping on the north to the Carron, and on the south to Sclanders burn. The parish church stands 400 yards distant from the nearest part of the Carron; and a neat street descends from it to the bridge over the Carron, here called Denny-bridge. The old village consisted of a single wide street, or double row of houses, extending eastward from the church, along the road to Falkirk. A street which was begun in the present century, and which bears the name of Herbertshire street, and consists of one row of neat houses, runs parallel to the old village. The ascent from the south has of late years been feued out for neat villas and self-contained houses; and it forms a very pleasing and even beautiful line of approach. Upwards of two-thirds of the town have been built within the last 50 years. Most of the houses are of two stories, with garrets, slated roofs, and sashed windows. The parochial school, built about 12 years ago, is an ornamental building. The churches also are creditable structures. "Denny," said the New Statistical Account in 1839, "has such advantages of situation that, before another century revolves, it may be a large manufacturing town, with its provost and bailies, churches, ministers, and elders. About half a century ago, it was only a hamlet adjoining the church, containing unsophisticated prayerful families." The quantity of business done in it, in connexion with the mills on the Carron, with the distillery, and with the retail supply of miscellaneous wares to all classes of the circumjacent population, is very great. It is lighted with gas, and has offices of the Clydesdale and the National Banks. Population in 1841, 1,881; in 1861, 2,428. Houses, 250.

DENNY-LOANHEAD, a post-office village in the parish of Denny, Stirlingshire. It stands at the forking of the road from Glasgow into the roads toward respectively Falkirk and Stirling, $1\frac{1}{2}$ mile south of the town of Denny. It is itself a small place; but a stretch of the road about a mile in length immediately to the west of it, is so thickly planted with houses as to seem almost on the eve of becoming one continuous street. The United Presbyterian congregation at Denny-Loanhead, formerly Antiburgher, originated in a famous non-intrusion contest in 1735, and was strengthened by another in 1765, and has ever since been one of the strongest dissenting congregations in Scotland. Population in 1851, 74. Houses, 16.

DENOON. See GLAMMIS.

DENOVAN, an estate, a village, and a calico-printing establishment, in the parish of Dumpace, Stirlingshire. The estate comprises about one-fourth of the parish, and belongs to Forbes of Callendar. The village is situated on the southern border of the parish, in the vicinity of Denny. Population in 1851, 104. Houses, 16. The calico-printing establishment was commenced in the year 1800, and employs a large number of work-people, many of whom are resident in Denny. The surrounding scenery is interesting.

DERCLEUCH (Loch). See STRAITON.

DERCULICH (Loch). See LOGIERAIT.

DERGAN (THE), a rivulet of the parish of Ardchattan, Argyleshire. It rises in the mountains of Glensalloch, and flows northward, along that glen and through the woods of Barcalaim, to Loch Creran.

DERNOCK, DARNICK, or DARNWICK, a post-office village, in the parish of Melrose, near the right bank of the Tweed, about a mile above the town of Mel-

rose, Roxburghshire. It stands on the road from Edinburgh to Carlisle by way of Jedburgh, and on that between Melrose and Selkirk. Its appearance is smiling and comfortable, and indicates prosperity and content. It was one of the villages of the halli-dom of Melrose abbey, and still retains a massive tower of the 15th century, which seems to have belonged to some rich vassal of the abbot. Population in 1841, 280; in 1851, 348.

DERVAL. See DARVEL.

DESKFORD, a parish, containing a post-office station of its own name, in the north of Banffshire. It is bounded by the parishes of Cullen, Fordyce, Grange, and Rathven. Its northern boundary is within $1\frac{3}{4}$ mile of the town of Cullen. The parish has nearly the outline of a parallelogram, and is about 5 miles in length from north to south, and 2 to 3 in breadth from east to west. It consists of a valley running from south-west to north-east, between two ranges of hills, whence numerous rivulets descend through small ravines or glens which are beautifully fringed with hazel and birch. These rivulets from both sides unite in the valley with the burn of Deskford, whose primary source is at the head of the valley, in the adjoining southern parish of Grange. It runs north-east through the Cullen burn to the sea. As the banks of the Deskford burn are also finely bordered with natural wood, the parish altogether constitutes "one of the most beautiful little straths in the whole country." There are cascades in many of the rivulets which, in the summer-floods and winter-thaws, descend with great impetuosity through the trees, and exhibit many romantic and picturesque scenes. The Linn is the most remarkable cascade in the parish. It has a very fine fall of almost 30 feet. The soil of the lower land in the valley is loam resting on strong deep clay; but towards the hills it is a light black mossy soil upon clay and gravel. It is stated in the New Statistical Account that, of land, either cultivated or occasionally in tillage, there are 2,800 imperial acres; waste or in pasture 5,100,—of which 250 might be profitably cultivated; under wood 600. Average rent of arable land, 17s. 6d. per acre. Average gross amount of raw produce, £6,062 8s. In 1752, the then Lord Deskford—afterwards Earl of Findlater and Seafield—established a bleachfield in the north end of the parish, where about 1,500 pieces of cloth and 1,700 spindles of thread-yarn were annually whitened; but a number of years ago, this establishment dwindled to extinction. There are two meal mills and a barley mill. There is an excellent limestone quarry. There formerly stood, near the centre of the parish, the tower of Deskford, an ancient castle said to have been built by the Sinclairs, the immediate predecessors of the Ogilvies, in the property of the lordship of Deskford. Its remains were a number of years ago pulled down; but Cordiner has preserved a view of it. In the same vicinity also is the castle of Skuth, which has now also become ruinous. It is a striking object to passengers. In the institution at Banff is a curious antiquity consisting of a brazen swine's head, with a wooden tongue moved by springs. It was found about 25 years ago in a mossy knoll at Liechestown, near the farm of Inalterie, which is supposed to mean the place of the altar, and where there are remains of a very old and massive but anomalous structure, in one part of which there is a deep circular hole enclosed by a wall rising to a considerable height in the interior of the building. Close to it is a vault with a stair descending into it. In the immediate vicinity, also, there stood till recently an artificial conical eminence named the Law-hillock—said to have been the ancient seat of justice.

Another artificial hillock stands within view of this on the other side of Deskford burn. There is no modern edifice of any note in the parish. Population in 1831, 828; in 1861, 1,031. Houses, 185. Assessed property in 1860, £2,728.

This parish is in the presbytery of Fordyce, and synod of Aberdeen. It was originally part of Fordyce, and was afterwards included in Cullen. Patron, the Earl of Scaffeld. Stipend, £193 12s. 10d.; glebe, £8. Unappropriated teinds, £74 16s. 1d. The parish church adjoins the site of Deskford tower. There is no date on it; but one pew bears the date 1627, another 1630. Sittings, 357. There is a Free church: attendance, 200; receipts in 1865, £77 14s. 9d. Schoolmaster's salary, £52 10s., with about £16 fees, and a share of the Dick bequest. There are two Free church schools.

DESKRY (THE), a rivulet in Aberdeenshire. It rises on the hill of Morven, near the meeting-point of the parishes of Glenmuick, Strathdon, and Logie-Coldstone, and runs about 9 miles northward and north-westward, between Strathdon and Logie-Coldstone, across the Migvy district of Tarland, and between that district and the parish of Towie, to a confluence with the Don about 2 miles below Bellahig. It is crossed at Rippachy by the high road from Strathdon to Aberdeen. Its trout are small but excellent.

DESS (THE), a railway station and a rivulet in Aberdeenshire. The station is on the Deeside railway, 3 miles east of Aboynce. The rivulet runs from the Loch of Auchlossen to the Dee, and makes a deep romantic water-fall, called the Stock of Dess.

DEUCALEDONIAN SEA, the part of the Atlantic which encircles the Hebridean Islands, and washes the shores of the Western Highlands. It was so called by Ptolemy, and other ancient geographers.

DEUCAR-SWIRE. See **YARROW**.

DEUGH (THE), a stream of the north of Kirkcudbrightshire. It rises on the confines of Ayrshire, and pursues a tortuous course of at least 15 miles in length, through the interior of the parish of Carsphairn, to a confluence with the Ken, at the extreme southern angle of that parish. It is the true parent-stream of the Dee. See **CARSPIAIRN**.

DEVAR. See **CAMPBELTON**.

DEVON (THE), or **DOVERAN**, a river of Aberdeenshire and Banffshire. It rises among the mountains at the southern extremity of Cahrach, in several head-streams, some of which are in Aberdeenshire and some in Banffshire, at distances of about 22 miles south-west of the town of Banff, and 27 south of the mouth of the Spey. It describes a very serpentine career, but on the whole flows north-westward to the influx of the Bogie below Huntly, northward from the influx of the Bogie to Rothiemay, eastward or east-north-eastward to the vicinity of Turriff, and northward from the vicinity of Turriff to the Moray frith at the town of Banff. Its entire length of run, measured along all the great or considerable windings, is about 60 miles. Its connections with respectively Aberdeenshire and Banffshire are so fitful, leading it now into the one county, now into the other, and now along the boundary between them, as to render it more a puzzler than an expounder in political topography; yet, in one long sweep, from above Glass church to the vicinity of Rothiemay church, it runs entirely within Aberdeenshire, and over another long sweep, from a point 4 miles west-south-west of Turriff to its embouchure at Banff, it forms almost entirely the boundary-line between the counties. The parishes immediately watered by it, whether through their interior or along their margin, are Cahrach, Glass,

Huntly, Cairnie, Fordyce, Rothiemay, Marnoch, Inverkeithnic, Turriff, Forglen, Alvach, King-Edward, and Banff.

The river, in the upper part of its course, is a mountain-stream, careering along a series of glens, always rapid, sometimes impetuous, and occasionally subject to tremendous inundations. All the bridges on it above Huntly were swept away by the great flood of 1829. But its march, in the middle and lower parts of its course, is measured and beautiful, through fertile plains, among brilliant artificial decorations of wood and park and mansion, with several stretches of close scenery as exquisitely fine, in both nature and art, as almost any in the British Isles. A new bridge was founded on it at Glass in the summer of 1853. Its chief tributary, additional to the Bogie, is the Isla, which joins it a little above Rothiemay. The Deveron is well stored with trout and salmon. There is a shifting bar at its mouth which varies with gales of wind. In 1834, the mouth was entirely shut up by this, but broke out 600 yards further to the east. Hence arise frequent disputes among the cruive owners as to the line of the river's bed. The produce both of the upper and the lower fisheries has greatly decreased.

DEVIL'S CAULDRON. See **BLANE'S (ST.) CHAPEL**.

DEVIL'S CAVE. See **KILCONQUAR**.

DEVIL'S DIKE. See **DEIL'S DIKE**.

DEVIL'S MILL. See **DEVON (THE)**.

DEVON (THE), a river of Perthshire, Kinrossshire, and Clackmannanshire. It rises near the water-shed of the southern Ochils, in the parish of Blackford, a short distance east of Sheriffmuir, Perthshire. Its course is at first in an easterly direction. After flowing for about 2 miles through the parish of Blackford, and immediately on being joined by another streamlet from the south, it forms the boundary between the last-named parish and those of Tillicoultry and Glendevon. It then enters the parish of Glendevon, near Cleugh burn, and continues its eastward course till it arrives at the small village of Miltoyn at the eastern extremity of Glendevon. A little below Miltoyn it makes a decided bend toward the south-east, forming the boundary of the parishes of Glendevon and Muckhart on the west, and the parish of Fossaway and the shire of Kinross on the east, till it reaches the village of Crook of Devon, where, turning abruptly to the south-west, it flows onward in this direction, between the parishes of Muckhart and Fossaway, through those of Dollar and Tillicoultry, and along the southern boundary of Alloa; and finally entering Alloa parish, and making a sharp turn to the south, it falls into the Forth a little above the town of Alloa, after a total course of fully 30 miles.

The Devon has been celebrated by Burns; and from the romantic scenery which adorns its banks, it is indeed well worthy of being honoured in the poet's song. Its waters are beautifully pure; and the scenery at the Rumbling bridge and the Caldron linn, near the Crook of Devon, where several remarkable cataracts are formed, is of the most sublime and extraordinary kind. Passing through the village of the Crook of Devon, we keep the river on our right for about a mile, and then, descending along its rocky bed, we soon approach the Falls of the Devon,—the first of which, called the Devil's mill, is heard, but not seen. This forms the least considerable of the falls. The Devon here falls into an excavation in the solid rock with a noise resembling that of water falling on a mill-wheel. "The country people," says Garnett, "call it the Devil's mill, because it pays no regard to Sunday, and works every day alike." The noise it makes is supposed

to be occasioned by the water falling over a small cascade into a deep cavity in the rock below. The water tossed round with great violence, and constantly beating on the sides of the rock, causes a clacking noise, similar to that of a mill at work, which is very distinctly heard when the water has force enough, by its quantity, to beat on the rock with violence, and when it is not so high as entirely to cover the cavity. Near this spot is a cavern named the Pigeon's cave.

About 350 yards lower down the Devon, is a small arch, spanning a deep and gloomy chasm, called the Rumbling bridge. It is so named from the hollow brawling of the water while forcing its way among huge fragments of impending rocks; and as it hurries along, boiling and foaming in wildest tumult, the whole scenery adjacent is characteristic of that fantastic rudeness which Nature delights in exhibiting amid the roar of cascades and the thunder of cataracts. On looking down the Devon from the bridge,—a giddy height,—the prospect beneath the eye is truly sublime. The high, projecting, and impending precipices on either hand are wooded in all the capricious varieties of form and ramification of hazel, willow, birch, and mountain-ash; from among which, midway among the craggy steeps, daws, kites, and other birds that delight in solitude, are seen sailing in security and freedom. The southern bank of the Devon forms the middle ground, and a peep of the Saline hills closes in the distance. The whole is exceedingly picturesque and magnificent. In order to command a view of the wooded cliffs over which the Rumbling bridge is thrown, it is necessary to come round by the south bank of the river. The best station is about a gunshot from the brink of the water, on a gentle eminence immediately opposite the bridge. Here the deep and gloomy chasm through which the river forces its way is seen in one vast cleft, torn as it were asunder by some terrible convulsion of nature. The small arch, half-seen through the hanging branches which wave wildly over the face of the rugged steeps, gives an air of grandeur suitable to the solemn dignity of the scene. The whole is striking and impressive. Where the old arch is thrown across, the banks are 86 feet above the water. The span of the arch is 22 feet, and its width 12 feet. It was built in the year 1713, by William Gray, a native of the parish of Saline. Having no parapet defences, it required some fortitude to walk across this bridge even in the day-time; yet it was used, for upwards of a hundred years, by persons both on foot and horseback, by night and by day. In 1816, a substantial modern bridge was built over the old arch—which still remains—the height of which from the water is 120 feet. There is an excellent inn in the immediate vicinity of the bridge.

From the Rumbling bridge to the Caldron linn, or linn, the Devon glides gently along, until, about a mile below the former, its bed suddenly contracts; and as we approach the falls, the distant roar of the waters becomes imposing and awful. The upper fall is inconsiderable, yet sufficient to arrest the attention. Soon after comes into view the chasm through which the river boils and foams from caldron to caldron; for such are the circular excavations called which the incessant workings of the waters in the course of ages have caused. In the upper caldron, the water has so much the appearance of boiling, that it is difficult to divest one's self of the idea that it is really in a state of violent ebullition. From this caldron the water finds its way into a circular cavity, in which it is carried round and round, though with much less violent agitation. This second caldron is always covered

with a foam or froth. From this boiler the water runs into another, larger than either of the other two, the diameter of it being 22 feet. The water in this cavity is not agitated like the others, but calm and placid. When the river is low, these caldrons communicate with each other, not by the water running over at their mouths, but by apertures made, by the force of the waters, in the course of time, through the rocks which separate them at, perhaps, the middle depth of the caldrons. From the lower caldron, the whole body of the stream rushes perpendicularly over a rock into a deep and romantic glen, forming a fine cascade, particularly when viewed from the bottom of the glen, to which there is access by a zigzag path. This cascade is 84 feet below the first fall above the caldrons, and is 44 feet in height. The rocks which compose the linn are about twice as high; so that it appears as if the water had worn its way from the top to its present situation, which most probably has been the case. It falls in one unbroken sheet, without touching the rock; and the whiteness of the dashing water is finely opposed to the almost black colour of the rocks, which are formed of coarse-grained basalts. "While we were contemplating this beautiful scene," says Dr. Garnett, "the sun happened to shine upon it, and the spray, which arises from it to a considerable height, by refracting the rays of light, exhibited the appearance of a luminous vapour, in which the different prismatic colours were easily discernible." Having come round by the foot of the south bank of the river, and crossed it in front of the precipice over which the water rushes, we command a complete view of the great fall of the Devon. A stupendous pile of solid rocks, over which in one full, rapid, and powerful torrent, the river precipitates itself, presents its rugged front; while fragments of rock which from time to time have been torn from the face of the craggy steep lie scattered around in every direction, and in fine harmony with the rude and fantastic forms of the deep and wooded dell through which the Devon, as if tired of exertion, seeks silence and repose in its route to gain the windings of the Forth near Stirling.

There are no cliffs of very lofty elevation in the gorges of the Devon,—none probably of more than 100 feet in height. The effects of sublimity and savageness in the scenery are produced chiefly by the narrowness of the ravines and by the blackness of the rocks,—two characteristics which combine to make the recesses look very dark, and to baffle the attempts of the eye to penetrate their depth, except where the white foam flings up scintillations of light, and shows that

"Deep, deep down, and far within,
Toils with the rock the roaring linn."

In many places, also, the river is bewildered, and the sense of mystery intensified, by the dense foliage of woods and coppices, and by multitudes of gnarled trunks and twining roots, seeming like rough ligatures firmly fastened round the rocks. Fine plantations overshadow the banks in some parts among the hills, while "sillar sauchs wi' downy buds," dipping their long wavy boughs in the river's pure bosom, fringe the margin, as it meanders through the low grounds. Receiving many tributaries, no mean streams of themselves, the Devon, especially in winter, when the snow begins to melt, comes down with fearful strength and rapidity, sweeping away everything that disputes its progress. Its total descent comprises a fall of upwards of 2,000 feet; its total run of fully 30 miles makes so extraordinary a reduplication as to leave a distance, as the crow flies, of not more than about 5½ miles between it—

source and its embouchure; and its basin is so ramified among nearly all the southern and south-eastern Ochils as to send down their drenchings with rain, with thunder-plump, or with water-spout, almost in one gush to the plains of Clackmannan. Its lower part is of no great breadth, and is not navigable, although Mr. James Watt, who made a survey of it in 1766, reported that it was quite capable of being made so for several miles above its confluence with the Forth, at an expense of about £2,000.

DEVON (THE BLACK OR SOUTH), a small river of Fifeshire and Clackmannanshire. It rises among the Saline hills, in the north-east of the parish of Saline, in Fifeshire, and flows 5 miles westward through that parish, and 6 miles westward and south-westward through Clackmannanshire, to a disembougement in the Forth, on the boundary between the parish of Clackmannan and the parish of Alloa. It takes the name of Black Devon from the gloomy appearance of its waters. Its volume is very small in droughty seasons, most of its waters being then collected in dams or reservoirs, for driving the machinery of mills.

DEVON (CROOK OF). See **CROOK OF DEVON**, and **DEVON (THE)**.

DEVON IRON-WORKS. See **CLACKMANNAN**.

DEVONSIDE, a moderate village in the parish of Tillicoultry, Clackmannanshire. Here is a brick and tile work. In the immediate vicinity also coal is wrought. Population 317.

DEVON VALLEY RAILWAY, a railway from the Tillicoultry station of the Stirling and Dunfermline to the Fife and Kinross at Hopefield. It is 13½ miles long, and was opened on 1 May, 1863.

DEWAR, a hamlet in the parish of Heriot, 6½ miles south of Middleton, Edinburghshire. On Dewar farm is a spot called the Piper's grave, traditionally associated with a foolish and fatal exploit of a piper of Peebles. On Dewar hill, not far from the grave, is a remarkable large stone called Lot's wife; but the reason of its title is unknown. At a little distance hence is the Wolf clench, of which traditional story asserts that it was once inhabited by a wolf which laid waste the country around for a series of years, until a person of the name of Dewar having encountered the animal, killed it, and received for his reward a gift of the adjoining lands.

DEWARTON, a village in the parish of Borthwick, Edinburghshire. It consists chiefly of feus on the estate of Vogrie. It has a neat appearance, and seems to be pleasant and healthy above most places of its class. One side of the road is occupied by the houses, ranged in a single line; while the other side is occupied by a small plantation, traversed by a limpid copious stream. Population in 1851. 195. Houses, 42.

DHUISK (THE), or **DUSK**, a rivulet of the south of Carrick, Ayrshire. It rises on the south-east verge of the county, in the vicinity of the sources of the Cree, and runs about 10 miles north-eastward to the Stuebar, at a point about 3¼ miles above the village of Colmouell. It receives on its left bank the affluent of Cross Water, and on its right bank the affluents of the Feoch and the Muck.

DHULOCH. See **WICK** and **CRAIG-DHULOCH**.

DICHMONT. See **CAMBUSLANG**.

DICHMONT LAW, a hill in the parish of St. Vigeans, and about 3 miles from the coast, in Forfarshire. It rises about 670 feet above the level of the sea, and has on its summit a large cairn, hollowed in the middle, and now covered with grass, where anciently certain barons held their courts.

DICHTY (THE), a small river in the south of

Forfarshire, of about 15 miles in length of course. It rises in four head-streams, three of them from small lakes, among the Sidlaw hills in the west of the parish of Landie. Flowing—with the exception of brief sinuosities—nearly due east, it traverses the parishes of Auchterhouse, Strathmartine, and Mains, intersects the eastern wing of Dundee, where it receives the tribute of Fishy water, and after advancing half-way through Monifieth, debouches suddenly to the south, and falls into the frith of Tay 2 miles east of Broughty ferry. During its course it drives several mills; and it contains trout and a few salmon.

DIGMORE, a small harbour near the middle of the coast of North Uist, in the Outer Hebrides.

DILLICHIP. See **BONMILL**.

DILTY MOSS, a morass in the parishes of Carmylie and Guthrie, Forfarshire, about 2 miles long, and 1½ broad. It is remarkable for giving rise to two streams which, though both eventually finding their way into the German ocean, traverse Forfarshire from near its centre in opposite directions. At its north-east end rises the Elliot, which pursues a course to the south of east, and falls into the sea in the parish of Arbiriot; and at its south-west end rises a rivulet which flows to the north of west till it falls into the Dean, and then, as identified with that stream, flows westward till it leaves the county. See **CARMYLIE**.

DINART (THE), a river in Sutherlandshire, which takes its origin from Loch Dowl, a small lake in the Dire More, or 'Great forest;' and after a northerly course of 15 miles, along the base of the Conval and Tonvarn mountains, falls into Durness bay between Farout-head and Cape Wrath. It produces plenty of salmon.

DINGWALL, a parish, containing a royal burgh of the same name, at the head of the Cromarty frith in Ross-shire. It is bounded on the east, by the parish of Kiltearn; on the north, by the vast mass of Benwyvis; and on the west and south, by the parish of Fodderty. That part of the parish of Urquhart, called Ferintosh, lies on the skirt to the south-east; but Dingwall parish is divided from it by the river Conan, which, at high water, is widened to about half-a-mile by the influx of the sea. Excluding a small district, peopled by few inhabitants, and divided from the rest by a high hill, Dingwall parish forms an oblong peninsula of 1½ by 2 miles. It consists partly of a pretty extensive valley, and partly of the sloping sides of hills, a great portion of which is in a high state of cultivation. See **STRATHPEFFER**. The waste ground is not very considerable; there are no commons; the great bulk of the land is either in pasture or under culture; and the whole forms a beautiful interchange of hill and valley, wood and water, corn-fields and meadows. The soil in general is abundantly fertile, and the greater part uncommonly rich. There are some rivulets, but no river except the Couan. About 2 miles to the south-west of the town is a small lake, called Ousie. The sea, at high water, washes a considerable part of the parish on the south-east, running in apparent canals along the side of the town, and forming a beautiful variety of islets and peninsulas; but, even at high tide, it is very shallow for several miles down the frith; and, at low water, it recedes to the distance of nearly 4 miles, leaving nothing but a slimy strand. It is thought that about 200 acres of ground here might easily be reclaimed. About 1,400 acres in the parish are under wood, and 2,400 in tillage. The land rent at the close of last century, was about £1,200. The value of assessed property in 1860 was £7,506 odds. The total yearly value of raw

produce was estimated in 1837 at £15,854 15s. 8d.; of which £700 was for timber, £600 for fisheries, and £50 for quarries. The parish is traversed by the Highland railway, and has a station on it at the town. Population in 1831, 2,124; in 1861, 2,412. Houses, 387.

This parish is the seat of a presbytery in the synod of Ross. Patron, the Crown. Stipend, 244 8s. 11d.; glebe, £30. Unappropriated tithes, £54 14s. 10d. Schoolmaster's salary now is £50, with about £40 fees. The parish church was built in 1801, and contains about 800 sittings. There is a Free church, with an attendance of about 1,250, and an income in 1865 of £566 11s. 10d. There is an Episcopalian chapel, with an attendance of from 50 to 100. There are a Free church school, and ladies' boarding and day schools.

DINGWALL, a royal burgh in the above parish, a post town, a market town, a seaport, and the political capital of Ross-shire, of Cromartyshire, and of part of Nairnshire, is pleasantly situated at the mouth of the fertile valley of Strathpeffer, at the head of the Cromarty frith, and on the great north road, 19 miles north-west of Inverness by Beauly, 13½ by Kessock, 26 south-west by south of Tain, 7 east of Contin, and 174½ miles north-west by north of Edinburgh. It chiefly consists of a main street running east and west on the old Strathpeffer road. At the west end of this street, a small street runs north towards the Peffer; and at the east end, a large street, called Castle-street, extends from Castle hill to the main street, and thence, under the name of Hill-street, to a hill on the south. The town is lighted with gas, supplied with water, and otherwise possessed of appliances of comfort. Many of its houses are neat; its aggregate appearance is pleasant; and, though its site is low and rather damp, being a piece of level ground scarcely four feet above high flood-mark, yet a close zone of hedge-rows and clumps of trees, the richness of the circumjacent country, the pleasure-grounds of Tulloch castle on its north side, the finely-wooded hill of Tulloch rising 800 feet high about a mile to the north, the luxuriant beauties of Strathpeffer and Strathewan, and the diversified scenery of the Mullbay on the south, the Cromarty frith on the north-east, and the immensely massive Benwyvis on the north-west, combine to give it the sweet softness of an English village encompassed by some of the grandest witcheries of characteristically Scottish landscape.

The most remarkable building in Dingwall is a fine castellated edifice, containing court-house, county-rooms, and prison, "conspicuous on the plain as we enter from the south, and much finer and more comfortable as a residence than almost any of its inmates were before accustomed to." The town-house is a curious old-fashioned building, with a spire. The town has two good hotels, the Caledonian and the National. Near the town is a vestige of the ancient residence of the Earls of Ross. It was built close to the shore, and was at one time almost surrounded by the Peffer, into which the tide flowed at high water. What was not surrounded by the sea had a deep ditch and a regular glacis. The site of this castle is now occupied by a modern mansion. The Earls of Ross were the most powerful of the northern barons, and many of the ancient families in Ross-shire held their estates by charters from them, dated, "apud castrum nostrum de Dingwall." Near the church is an obelisk, 57 feet high, though only 6 feet square at the base. It was erected by George, first Earl of Cromarty, and was intended to distinguish the burying-place of the family.

"Dingwall," say the Messrs. Anderson, "must have been long a sort of terra incognita to all the world except its own worthy neighbours; for we find in the council records of Inverness, so late as the year 1733, that an embassy was projected by the magistrates to ascertain the condition of this burgh. The enterprising and intelligent bailie, who conducted it, reported that there was no prison, but there was 'a lake close to the town, which kept people from kirk and market for want of a bridge; that there was no trade in the town, but that there were one or two inclined to carry on trade if they had a harbour.' The council of Inverness treasured up this information in their minutes, and directed their cashier to pay to the bailie £8 Scots for his expenses." But now, as at once a county town, a stage on the great north road, the vestibule to the Strathpeffer mineral wells, the centre of an agricultural district, an entrepot to the navigation of the Cromarty frith, and the point of union of the highlands of Wester Ross with the more fertile country of the Black Isle, Dingwall has both become abundantly well known and enjoys a favourable situation for trade. Yet it has no manufactures; and even its commerce is very limited, being confined on the one hand to the importation of the several articles of merchandise which are required for the supply of the immediately circumjacent country, and on the other to the exportation of so much corn, timber, bark, or other country produce as can be conveniently procured to form a freight for the few vessels which come laden into its harbour. A mile below the bridge and town, coasting-vessels used to be loaded and unloaded on the mud at low water, their cargoes being carried on a bad road to and from the east end of the town. This inconvenience was remedied in 1815-7, by shaping the lower end of the Peffer into a regular canal 2,000 yards in length, with two wharves at which vessels of 9 feet draft of water find accommodation. The expense of these improvements amounted to £4,365, of which £1,786 were furnished by the Highland road commissioners, and £600 by the convention of burghs. The average income of the harbour is £137. A weekly corn market is held every Saturday. Fairs, chiefly for cattle and county produce, and all distinctively and peculiarly named, are held, the New-Year market, on the third Wednesday of January; the Candlemas, on the third Wednesday of February; Janet's, on the first Wednesday of June; Colin's, on the first Tuesday of July; Feil-Marce, on the first Wednesday of September; Martha's, on the first Wednesday of November; and Pepper, on the Tuesday before Christmas, old style. The town derives advantage in summer from visitors to the Strathpeffer wells. It has communications north and south by the Highland railway, and in other directions by coaches in summer; and it commands access to the great coast steamers at Invergordon. It has offices of the Caledonian Bank, the City of Glasgow Bank, and the National Bank, and offices of fifteen insurance companies; and is the seat of the Fingal mason lodge and the Wester Ross Farmer society.

Dingwall was erected into a royal burgh by Alexander II. in 1227; and its privileges were further confirmed by a charter granted in the reign of James IV., and confirmed by James VI. in 1587. It was entitled by these charters "to all the privileges, liberties, and immunities possessed by the burgh of Inverness." It is governed by a provost, and 15 councillors, and joins with Tain, Dornoch, Wick, and Kirkwall, in sending a member to parliament. Municipal and parliamentary constituency in 1865, 120. Revenue in 1864-5, £210.

"Dingwall," says the Parliamentary report on Municipal Corporations in Scotland, "had at one time a considerable extent of landed property, which does not, however, appear to have been turned to much account while in the possession of the burgh, nor to have produced any considerable revenue. The town property began to be fenced out, and far the greater part was so alienated, more than forty years ago. In most cases the grants were made to persons connected with or influential in the burgh, and without any competition or publication. But although, in such circumstances, the interests of the community were sometimes sacrificed, on other occasions the alienation of a large tract affording only pasture was sufficiently compensated by a very small permanent revenue, joined to the advantage arising from the extensive plantations or agricultural improvements of the vassals. Within the last forty years the management of the town-property has been comparatively pure; and latterly, alienations have taken place only after public advertisement, and by public sale, except in a very few instances, where small plots of ground, for erecting warehouses, or other such purposes, have been granted on the petition of individuals, for an annual duty fully equal to the value of the land. The burgh now retains only seven or eight acres in property, which, with the superiority of certain lands held fien of the burgh, and fishings in the river Conan and the Dingwall frith, produce altogether an average rental of £273 7s. 2d. sterling." The jurisdiction of the magistrates, which extends over the royalty, is in practice confined to the trial of assaults and other petty crimes, and to the decision of actions of debt, processes of removing, sequestration, encroachment and other civil causes to a very limited extent. Their whole functions as judges even ten years ago, were rapidly passing into the hands of the sheriff. The magistrates and council have no patronage except the appointment of the town clerk at a salary of 10 guineas, two burgh-officers at £5 each, the keeper of the town-clock at £5, and a kirk-officer at a salary of 5s. annually. There are no incorporated trades claiming exclusive privileges. Persons carrying on merchandise within the burgh must, however, take out their freedom as burgesses, the expense of which varies from 5 to 15 guineas, according to the nature and probable extent of the trade to be carried on; or they may obtain a temporary license from the magistrates to open shop at the rate of 5s. a-day or less. The burgh has adopted the general police act known as Loch's Act; and the magistrates and council for the time being are the commissioners under it. Dingwall was constituted by the Reform act the returning burgh of Ross-shire; and by an act passed in August 1843, it was appointed to be in all time thereafter the head-burgh of the counties of Ross and Cromarty and of the Ferintosh district of Nairnshire. A sheriff court is held here every Friday during session; and a small debt court also every Friday. It would appear, from several circumstances, that anciently this town was much greater than at present. Causeways and foundations of houses have been found some hundred yards from where the town now stands. Above the town, the Peffer used to spread itself into a small morass, which has been successfully drained. Dingwall gave the title of haron in 1609 to the noble family of Preston; but the title was attained in 1716, in the person of James, second Duke of Ormond. Population in 1841, 1,739; in 1861, 1,474. Houses, 325.

DINGY'S HOW. See DEERNESS.

DINLABYRE, an ancient chapelry in the parish of Castleton, Roxburghshire. The chapel is de-

molished, but many gravestones remain near its site. It is on the eastern side of the Liddel.

DINNET BURN, a small tributary of the Aberdeenshire Dee. It receives the superfluous waters of Lochs Kinerd and Dawin in the parishes of Tullich and Logie Coldstone, and runs along the boundary between the parish of Aboyne and the parish of Glenmick, to a confluence with the Dee 4 miles above Charleston of Aboyne. It may be regarded as the line of demarcation between the lowlands and the highlands of Deeside.

DINWOODIE, a station on the Caledonian railway, in the parish of Applegarth, 6½ miles north of Lockerby, Dumfries-shire. Dinwoodie is also a district of the parish of APPELGARTH: which see.

DIPPEN POINT, a grandly mural headland, and very conspicuous maritime landmark, on the south-east coast of the island of Arran, 1½ mile north-east of Kildonan castle, and 4½ miles south of the southern entrance of Lamlash bay, Buteshire. "It is a noble range of precipices," says Anderson's Guide to the Highlands, "rising perpendicularly from the sea a height of 300 feet. A somewhat hazardous footing can be found along the base of the cliffs. The dash of the waves close at hand, and the screams of the wild fowl over-head, conspire to try the nerves of the adventurous wayfarer. At one point, a stream issuing from the brink is projected beyond the base of the rocks, forming an arch of whitened spray well known to mariners."

DIPPLE, an ancient rectory, now comprehended in the parish of Speymouth, 1½ mile west of Fochabers. The church, which is now demolished, was dedicated to the Holy Ghost; but the churchyard is still in use. At the stile of the churchyard, there formerly stood a small house commonly called 'The House of the Holy Ghost,' around which, following the course of the sun, the people usually made a tour with the corpse at burials, nor could they be restrained from this superstition until the walls of this edifice were quite destroyed. The parson of Dipple was titular of Rathven in the district of Strathbogie.

DIPPOOL WATER, a rivulet of the north-east of Lanarkshire. It rises on the confines of Edinburghshire, and runs about 7½ miles south-westward, through the centre of the parish of Carwath, to a confluence with the Mouse on the confines of Carstairs parish.

DIRIE (THE), or DIRRY, a headstream of the Conon, flowing south-eastward nearly in the centre of Ross-shire, giving the name of Strathdirie to the wild mountain glen which it traverses, and taking up the road from Dingwall to Ullapool.

DIRLET CASTLE, an ancient fortalice, nearly in the centre of the parish of Halkirk, Caithness-shire. It stands in a beautiful romantic place, on a round high rock, almost perpendicular on all sides. The rock and castle hang over a very deep dark pool in the river Thurso, which runs close by its side. On each side of the river and the castle, are two other rocks much higher, looking down over the castle with a stately and lowering majesty, and fencing it on these sides. The last inhabitant was a descendant of the noble family of Sutherland. He was called in Erse the Ruder Derg, that is, 'the Red knight.' Having been denounced a rebel for his oppressive and violent practices, he was apprehended by Mackay of Farr, his own uncle, and died while on his way to Edinburgh—some say to Stirling—to be tried for his life.

DIRLETON, a parish, containing the post-office villages of Dirleton, Gulane, and Kingston, also the village of Fenton, on the coast of Haddingtonshire. It is bounded on the west and on the north by the

frith of Forth, and on the other sides by the parishes of North Berwick, Athelstaneford, and Aberlady. Its greatest length from east to west is $5\frac{1}{2}$ miles; and its greatest breadth is $4\frac{1}{2}$ miles. Peffer burn, flowing to the head of Aberlady bay, traces the southern boundary. Along the coast, and within a short distance of the shore, are three little rocky islets, viz., Fiddrie or Fetteray, Eyebrooky, and the Lamb. The coast presents a broad strip of flat sandy holms or links, edged on the landward side by richly-cultivated fields, and seaward by a fine sandy heath. Dirleton common, which lies between the village and the sea, is perhaps the finest coursing-field in Scotland. The soil is a dry sand, covered with a smooth short sward, without any admixture of stones. It is likewise free of fences. Towards Gulane point, the coast is rocky; and considerable encroachments have been made upon the arable land in that quarter by the blowing of the sand. The total superficial extent of the parish is 7,500 Scots acres, of which about 5,300 are arable, and nearly 2,000 are occupied with links and sandy hillocks. The valued rent was £10,262 Scots. The real rent toward the end of last century was £6,000. It is now more than double of that sum. Mrs. Hamilton Nisbet Ferguson is the proprietor of about two-thirds of the lands of the parish, and the superior of nearly the whole; and her residence of Archerfield, a plain commodious building, situated in a level park, and commanding an extensive view of the frith, is the only mansion. The parish is traversed through its centre, by the road from Edinburgh to North Berwick, and across its east wing by the North Berwick branch of the North British railway. Population in 1831, 1,384; in 1861, 1,540. Houses, 308. Assessed property in 1866, £14,361 4s.

In the 12th century, the Anglo-Norman family of De Vallibus or De Vaux, obtained a grant of the manors of Golyn and Dirleton, with part of Fenton. During the reign of William the Lion, William de Vaux bestowed the church of Golyn—rated at 80 marks in the Taxatio—on the monks of Dryburgh. In the same reign there was a chapel dedicated to St. Nicholas on Fiddrie isle in this parish. In 1298, De Vaux's castle at Dirleton greatly harassed the march of the English army under Edward by sorties on its rear, and was besieged by Antony Beck, the martial bishop of Durham, in behalf of Edward I., to whom it surrendered after a desperate defence. During the reign of Alexander III. a chapel was founded at Dirleton by Alexander de Vallibus; and in 1444, a collegiate church was founded at Dirleton by Sir Walter Halyburton, who, in 1392, had succeeded his father in the estate of Dirleton, which had passed into the family by a female heiress during the reign of David II. Sir Walter married the daughter of the regent Albany, and, in 1440, was created Lord Dirleton. The eldest daughter of Patrick, 6th Lord Dirleton, who died in 1506, carried the title and estate into the family of Ruthven. The castle and estate, says Sir Walter Scott, in his 'Border Antiquities,' "was the bribe which the last unhappy Earl of Gowrie held out to the cupidity of Logan, his associate in the memorable conspiracy. It seems to have been coveted by that person in the highest degree. 'I care not,' says Logan in his correspondence, 'for all the other land I have in the kingdom, if I may grip of Dirleton, for I esteem it the pleasantest dwelling in Scotland.' But Dirleton, included in Ruthven's forfeiture, passed to other hands, and was bestowed on Sir Thomas Erskine, who had lent the King active assistance against the efforts of the conspirators. He was created Viscount Fenton and Baron Dirleton. In the civil wars, Dirleton was for

a time occupied by a party of the Scottish guerilla, called then moss-troopers. Monk marched against them with four pieces of ordnance and a mortar; he was joined by Lambert, and besieged the place, which having surrendered at discretion, the captain of the moss-troopers—one Waite—and two of his followers, were executed by martial law. This was in the year 1650. Dirleton castle became, after the Restoration, the property of Sir John Nisbet, king's advocate. His male line having become extinct in the person of the late Mr. Nisbet of Dirleton, the property descended to his daughter, the present Mrs. Ferguson of Raith." Its massive structure, and the peculiar and praiseworthy care taken to preserve it from rude encroachment, by the tasteful proprietor, are likely to preserve this noble and graceful relic of feudal ages to many future generations. The whole has been enclosed with a handsome wall, which includes within its circuit not only the whole of the ruins, but also a fine bowling-green and a handsome flower-garden, to all of which access is readily granted to visitors of respectable appearance and deportment. Grose has given a poor view of Dirleton castle. It has had more justice done it in the 'Border Antiquities.'

This parish is in the presbytery of Haddington, and synod of Lothian and Tweeddale. Patron, Lady M. Hamilton. Stipend, £336 2s. 4d.; glebe, £21. Unappropriated tithes, £315 19s. 4d. Schoolmaster's salary, £34 4s. 4d., with £33 fees. The parish church stands in the immediate northern vicinity of the village of Dirleton, and contains about 600 sittings. There is a Free church; and the sum raised in connexion with it in 1865 was £70 12s. 8½d. There are two private schools, three public libraries, a savings' bank, and a friendly society. The original name of the parish was Golyn, modernized into Gulane; and the ruins of the former parish church still stand in good preservation at the village of Gulane.

THE VILLAGE OF DIRLETON stands near the centre of the parish of Dirleton, on the road from Edinburgh to North Berwick, 7 miles north of Haddington. It is one of the most beautiful villages in Scotland. The greater number of the houses were rebuilt by Mrs. Ferguson in the cottage ornée style. Each cottage is surrounded with its own plot of flowers and shrubs; and the whole are scattered along two sides of the spacious triangular village green, of which a third side is occupied with the magnificent remains of Dirleton castle, and its fine garden and bowling-green. Population, in 1861, 354. We know not a lovelier scene of its class than is presented by this village,—with its fine green, its noble pile of ivy-clad ruins, and the distant rock-gemmed frith,—especially in a summer eve, or when the light—

"The silver light, which, hallowing tree and bower,
Sheds beauty and deep softness on the whole,"—

is resting upon the fading landscape. The castle might be aptly enough apostrophized in the words of an anonymous poet:—

"The grandeur of the olden time
Maudled thy towers with pride sublime,
Enlivening all who near'd them;
From Hippocras and Sherris saek,
Palmer, or pilgrim, turn'd not back,
Before thy cellars cheer'd them.

Since thine unbroken early day,
How many a race hath passed away;
In charnel-vault to moulder!—
Yet nature round thee breathes an air
Serenely bright and softly fair,
To shame the awed beholder

The past is but a gorgeous dream,
And time glides by us like a stream,
While musing on thy story;
And sorrow prompts a deep alas!
That like a pageant thou should pass
To wreck all human glory!"

DIRRINGTON. See **LONGFORMACUS.**

DIRRY (THE). See **DRIE (THE).**

DISTINCT-HORN. See **GALSTON.**

DIVACH (THE). See **COLLIE (THE)** and **URQUHART.**

DIVIE (THE), a short picturesque stream of Morayshire. It rises among the hills on the southern border of the parish of Edenkillic, and runs north-westward about ten miles, including sinuosities, to the Findhorn. It is joined $\frac{2}{3}$ of a mile below Edenkillic church, by the Dorbach, which has a length of run similar to the Divie's own previous length, or about seven miles. The Divie almost vies with the Findhorn in wildness, variety, and romantic brilliance of scenery; and, when in flood, it becomes at times wonderful and even terrible.

DOCHART, a lake, a river, and a glen, in the parish of Killin, Perthshire. The lake is about 3 miles in length from east to west, and contains a floating islet, 51 feet long and 29 broad. This appears to have been gradually formed—like others of the same kind—by the natural intertexture of the roots and stems of some water-plants. It moves before the wind, and may be pushed about with poles. Cattle going unsuspectingly to feed upon it are liable to be carried on a voyage round the lake. On another, but stationary island, stand the ruins of a castle, the ancient residence of the Campbells of Loch Awe. It is embowered with wood, and has a very romantic appearance. The river Fillan runs into the west end of the loch. The river Dochart issues from the east end of the loch, and runs about 10 miles east-north-eastward along Glen Dochart, to join the Lochy and fall into Loch Tay at the village of Killin. The glen is romantic; and the river, just above the bridge of Killin, makes picturesque and much-admired falls. See **KILLIN.**

DOCHFUR (LOCH), a sheet of water, 4 miles south-west of Inverness. It is properly not a distinct lake, but only a small terminating wing of Loch Ness, and is sometimes called Little Loch Ness. See **CALERONIAN CANAL.** A burn, with some fine cascades, called Dochfour burn, falls into the lake. Dochfour house, contiguous to the lake's margin, is an elegant modern mansion in the cottage style. The surrounding scenery is very fine, whether up to the mountains or away to Inverness.

DOCHGARROCH. See **CALERONIAN CANAL.**

DOGDEN. See **GREENLAW** and **WESTRUTHER.**

DOL-, a prefix in the Celtic names of a few places, signifying a flat field or a meadow, and used in composition, in a descriptive manner,—as *Dol-ard*, modernized into *Dollar*, 'the high flat field.'

DOLL (THE), a glen and rivulet on the south-west of Clova, near the summit range of the Forfarshire Grampians. It is a fine haunt for the botanist.

DOLLAR, a parish, containing a small post-town of its own name, in Clackmannanshire. It is bounded by the parishes of Glendevon, Muckhart, Fossaway, Clackmannan, and Tillicoultry. Its length from north to south is about 3 miles; and its greatest breadth about $1\frac{1}{2}$ mile. Its general aspect is that of a beautiful plain or valley, having the Ochils for its northern boundary, and a gently rising ground confining it on the south. The river Devon runs through it in a meandering course from east to west. The central part of the parish, in which the town is situated, forms a somewhat large and slightly sloping plain with a southern exposure, and beautifully interspersed with hamlets, farm-houses, and enclosures.

The soil of that portion of the parish which extends from the hills to near the Devon is light and gravelly; on the banks of the river the land is more moist and clayey. The Ochils afford excellent pasture for sheep, and the mutton and wool produced here are of a superior quality. The parish abounds in excellent coal, which is worked in several places and exported in large quantities to considerable distances in Perthshire. Iron also abounds, and veins of copper and lead were formerly wrought in the Ochil hills a little way above the town of Dollar. The ores are said to have been exported to some extent to Holland. Silver has likewise been found in a glen to the west of Castle-Campbell, and pebbles of some value are occasionally picked up on the top of a hill called the White Wisp. There are two excellent stone quarries. The principal landowners are the Globe Insurance Company, Haig of Dollarfield, Murray of Dollarberg, and three others. The total yearly value of agricultural produce was estimated in 1841 at £15,219 18s. 6d. The assessed property in 1866 was £6,049. A large bleachfield on the banks of the Devon has existed since 1787. There is also a small woollen manufactory connected with the mills of Alva. There are likewise two tile-works, the larger of which, though a few yards beyond the eastern boundary, nevertheless belongs, as to all its workpeople, to Dollar. A chalybeate spring of extraordinary power, or rather a rill collected from rock-drippings, was discovered in 1830 at Vicar's Bridge, during a process of excavation for clay ironstone. Its water has a brandy colour, keeps unchanged in any climate, and is sold by some druggists in large towns. It is powerfully astringent, cures wounds and bruises, and is taken internally in small quantities. Dr. Thomson of Glasgow found an imperial gallon of it to contain 5·87 grains of muriate of soda, 170·99 of sulphate of soda, 953·18 of the sulphate of alumina, 1753·1 of the dipersulphate of iron, 141·55 of the persulphate of iron, and 58·7 of silica. The greater part of the parish formerly belonged to the Argyll family; but in 1605 the whole property was feued out, with the exception of Castle-Campbell and two neighbouring farms. Two ancient sepulchral tumuli are situated at a short distance from the town of Dollar. One of them, on being opened about fifty years ago, was found to contain two urns filled with human bones. The most interesting relic of antiquity, however, is **CASTLE-CAMPELL**: which see. The parish is traversed by the road from Stirling to Kinross, and enjoys ready access to the Tillicoultry branch of the Stirling and Dnnfermline railway. Population in 1831, 1,447; in 1861, 1,776. Houses, 282.

This parish is in the presbytery of Stirling, and synod of Perth and Stirling. Patron, the Globe Insurance Company. Stipend, £158 10s. 7d.; glebe, £18. The parish church was built in 1841, and contains upwards of 600 sittings. It is a very beautiful and imposing structure, and stands on a rising-ground in a conspicuous situation, so as to constitute a marked feature in a very brilliant landscape. There is a Free church for Dollar and Muckhart: attendance about 250; sum raised in 1865, £955 16s. 8d. The parochial schoolmaster has a salary of now £35, with £12 fees, and £6 14s. other emoluments. Grand educational appliances exist in Macnab's school or Dollar Institution. This is a large, famous, first-class educational establishment, founded in 1819, by a bequest of nearly £100,000 from John Macnab, Esq., a native of the parish, who rose from indigence to wealth, and settled at Mile-end in London. It comprises school-buildings, masters' houses, a library, a botanic garden, a playing-field, and other first-class conveniences. The

main buildings form an elegant Grecian edifice. The branches taught are English, English composition, writing, arithmetic, book-keeping, geography, drawing, botany, physics, mathematics, French, German, Italian, Latin, Greek, and Hebrew. The teachers are a principal and nine masters. There are likewise connected with the institution girls' and infants' departments.

The TOWN OF DOLLAR stands on the road from Stirling to Kinross, on a rising ground in the eastern part of the parish of Dollar, 12 miles north-east of Stirling, and about the same distance north-west of Dunfermline and south-west of Kinross. The scenery around it, particularly along the course of the Devon, and up the acclivities of the nearest Ochils, is interesting, varied, and replete with character. The town comprises the two villages of Old Dollar and New Dollar; and it borrows both some consequence from ancient associations and much picturesqueness from its chief modern buildings. The old village, with the exception of two tenements, was burnt in 1645 by Montrose's Highlanders, on their march to Kilsyth; one of the two excepted tenements being spared on the ground that it was supposed to belong to a neighbouring parish, and the other on the ground that it was supposed to belong to the Dunfermline abbey. The town contains an office of the Clydesdale Bank. Fairs are held on the second Monday of May, the third Thursday of June, the second Monday of August, and the third Monday of October. Population of the town in 1841, 1,131; in 1861, 1,540. Houses, 174.

DOLLAR-LAW, a mountain on the mutual boundary of Drummelzier and Manor parishes in Peeblesshire. It rises 2,840 feet above the level of the sea, and commands an extensive view over the Lothians, Berwickshire, and Northumberland.

DOLLAS. See DALLAS.

DOLPHINSTON, a village in the parish of Prestonpans, Haddingtonshire. It stands on the road from Edinburgh to Haddington, 2 miles west of Tranent. Here are several broken walls and gables, evidently of great antiquity, and probably monastic. Population, 63.

DOLPHINTON, a parish, containing a post-office station of its own name, on the eastern border of the upper ward of Lanarkshire. It is bounded on two of its four sides by Peeblesshire, and on the other two by the parishes of Dunsyre and Walston. It extends three miles in length from east to west, by $2\frac{1}{2}$ in breadth, and contains 2,926 statute acres. It is in a high-lying district, and contains a mountain named Dolphinton-hill, which is computed to rise 1,550 feet above the level of the sea, and which may be considered to form one of the links of the great mountain-chain which binds the island from St. Abb's Head to Ailsa Craig. With the exception of this hill, and of a conical mount named Keir-hill, the parish is all arable, although most of it lies at the elevation of from 700 to 800 feet above the level of the sea. The soil is generally of a dry friable earth or sandy loam. The parish has a branch railway from the Peebles at Leadburn. Formerly, a weekly market and two annual fairs were held at Dolphinton; but these have long since fallen into desuetude. Certain corn, lint, and waulk mills which once existed in the parish, have likewise passed away; and, altogether, by comparing the present reality with charters still in existence, it would appear that the parish is now a place of much less consequence than it was in the olden time. The principal landowner is Mackenzie of Dolphinton. The real rental is about £2,800. The yearly value of raw produce was estimated in 1834 at

£5,953. Assessed property in 1860, £2,795 odds. Population in 1831, 302; in 1861, 260. Houses, 47.

This parish is in the presbytery of Biggar, and synod of Lothian and Tweeddale. Patron, Lord Douglas. Stipend, £158 6s. 7d.; glebe, £27 10s. The church is a very old building; sittings, 140. Schoolmaster's salary, £36, with £12 fees, and some other emoluments. There is a parochial library. Dolphinton is understood to have received its name from the acquirement of the property by Dolfine, the eldest brother of Cospatrick, 1st earl of Dunbar, some time in the reign of Alexander I. How long it remained in the possession of Dolfine's descendants is not known; but it is certain that, at an early period, the manor and patronage of the church became a pertinent of the baronial territory of Bothwell. After remaining for a time in the possession of the house of Douglas, Dolphinton reverted to the Crown. In 1483, James III. presented it to Sir James Ramsay, one of the most accomplished of his favourites. After the assassination of James, Ramsay was denuded of the property, and James IV. conferred it, in 1488, on the master of his household, Patrick Hepburn, Lord Hales. In 1492, Hepburn exchanged Dolphinton and other lands, with the Earl of Angus, for certain territories in Liddesdale, including the important castle of Hermitage; but the superiority was still retained by the Hepburns till 1567, when it was forfeited along with the other domains of the ambitious and unprincipled Earl of Bothwell. It afterwards passed into the hands of Francis Stewart, Earl of Bothwell, but again reverted to the Crown upon his attainder in 1593. Soon after this the ancestors of the present house of Douglas became proprietors of the manor. During a long series of years subsequently, however, and up till the middle of the 18th century, the most of the parish was owned by a family of the name of Brown, who were succeeded by marriage, in 1755, by Mr. Kenneth M'Kenzie. It is worthy of notice that Major Learmont, one of the pious and devoted soldiers of the covenant, possessed the property of Newholm, in the parish of Dolphinton, and was an elder in the congregation. After the battle of Pentland Hills—in which he commanded the horse, and only escaped after feats of the most desperate valour—his property was forfeited; but it was bought back by his relative, the laird of Wishaw, for behoof of his family. Notwithstanding that Learmont was one of those who were "hunted like partridges upon the hills," it was his lot eventually to escape his enemies, and he died peacefully in his 88th year in 1693. His remains rest in Dolphintou churchyard.

DOLPHISTON, a hamlet in the parish of Oxnam, Roxburghshire. It stands near the right bank of the Jed, $4\frac{1}{2}$ miles south-south-east of Jedburgh. Here is an ancient tower, said to have been built by one Dolphus, from whom it took its name. The walls are from 8 to 10 feet thick, built of hewu stone, and so closely cemented with lime that it is found more difficult to obtain stones from it for building than from a quarry. It has been extensive, and divided into small apartments by stone partitions. Several vaulted apertures are in the middle of the walls, large enough for a small bed, and some of them so long as to be used by the tenants for holding their ladders. On a rising ground, a little to the south, there is an area of a chain square, which is said to have been a watch-tower or lighthouse, and seems to imply that Dolphiston tower had been used as a fort or place of refuge.

DON (THE), a river of Aberdeenshire. It forms a sort of twin-stream to the Dee, and is next to that river in Aberdeenshire as regards at once

basin, note, and magnitude, and resembles it also in possessing much volume, and much fine scenery, with very little commercial importance; yet differs essentially from it in some great characters, and even presents some striking contrasts. It rises on the skirts of Ben Aven, 6 miles west of Curgarff, amongst the mountains which bound Aberdeenshire on the south-west, at the head of Strath-Don, and which divide it from the head of Strath-Deveron in Banffshire. Its source is considerably lower than that of the Dee: the altitude is 1,640 feet above sea-level. A great part of its run, though somewhat parallel to the Dee, and at no great distance from it, is through districts much less mountainous, and abounding far more in plains and expanded meadows; so that, instead of the impetuosity and the fitfulness of the Dee, it displays a prevailing current of gentleness, calmness, and regularity. Running eastward in a very sinuous career, through the whole breadth of the county, it flows into the German ocean on the north side of Aberdeen. Its whole length of course is about 62 miles; though, in a direct line from its source to its termination, the distance is only 41 miles.

In its earliest stretches through the parish of Strathdon, which it divides into two nearly equal parts, it is joined on both sides by 7 or 8 burns, separated from each other by considerable hills, and most of them running through deep hollows and glens. The principal are the Eman and the Nochtic. All these burns abound with excellent trout; and salmon is even here very frequently found in the Don, at least towards the lower end of this parish. Turning northward, and dividing for a short distance the parish of Gleuhucket from part of Migvie, it receives from the latter the Deskry, and from the former the Bucket. Then again flowing eastward, it passes through the parish of Towie; and winding northward, reinforced by other tributaries, round Gorieshill, it at once becomes remarkably enlarged near Westside; after which it resumes its eastern route, dividing various parishes, particularly Forbes and Alford, from the latter of which, on the south, it derives the waters of the Lochel, the most considerable tributary it has yet received. In passing hitherto through the high parts of the district of Alford, the Don flows through a narrow gullet amongst the western mountains, while its banks are now partly wooded. Perpetually changing its course to the north and even the west, to the east and then through Monymusk parish to the south, the next considerable tributary which there enlarges it is the Ton burn from the south; when immediately it turns to the north again between Kemnay and part of Chapel-Garioch parishes, and arrives at a point a little to the south of the royal burgh of Inverury, where, on its northern bank, stands the building formerly occupied as the Roman Catholic college of Aquhorties. This point is about 16 miles from the mouth of the river, and its vicinity constitutes, perhaps, the most interesting as well as important part of its whole course. Here, at the Bass, a conical mount of considerable elevation standing in the midst of the confluence, it is joined by its principal tributary, the river Urie, from the district of Strathbogie.

The Don, here very much increased by the water of the Urie, notwithstanding the previous diversion of a large portion of its waters into the Inverury canal, flows southward from the Bass, between the parish and the low lands of Kintore on the south, and the mountainous part of Keithhall with Kinkell on the north. It divides, for a short distance, into two branches, which reunite, enclosing a river-island to the north of the royal burgh of Kintore. Be-

tween Fintray and Dyce it is bordered by mountains on both sides, with valuable plantations on the northern or Fintray side. It then runs southward, still dividing the parishes on its line, to Old Machar parish in the freedom of the city of Aberdeen, whence it turns to the east, by the city or old town, to its confluence with the sea, little more than a mile to the northward of the Dee, where it forms a kind of harbour, into which small craft may enter in safety, but where no trade of any importance can be carried on. "About a century ago," says Mr. Kennedy in his 'Annals of Aberdeen,' "the channel of the Don near the town was altered, and the stream diverted straight into the sea about a mile further northward than its ancient efflux." In a note, he adds, "Probably at some very remote period, Don had continued its former course still further southward down the hollow of the links, till it united with Dee in the harbour, and both together would form one stream into the ocean. Such conjecture is in some measure confirmed by the works of Ptolemy and Richard of Cirencester, there being no such river as Don delineated in their maps, or even mentioned in their tables, while Diva (Dee) and Ituna (Ythan) in the district of the Taixali, are particularly noticed. In the earlier records of the burgh, the river Don is distinguished solely by the name of Aqua Borealis."

As this river runs with considerable rapidity during the last 8 miles of its course, and as the rocks at its mouth confine it to a narrow channel, and give it there a gloomy aspect, the idea of its flowing rapidly through a rugged and mountainous country, where no space is left for forming even a commodious road along its banks, is at first induced; but after passing upwards for about a mile beyond the rocky chasm, where was built the spacious, stately, and attractive Gothic arch, constituting the celebrated Brig o' Balgownie, and up to whose locality alone the Don is navigable even for small craft, the hills recede so far from the river as to form spacious haughs or level valleys on either side, through which it winds in a slow majestic course. Nor is the prospect here uniform, but agreeably diversified. The hills above Inverury approach close to the river, which seems to have forced its way with difficulty through them; but all at once it opens into another spacious plain, from which the hills recede on either hand to a great distance, and then close again; and, after another temporary confinement among rocks and hills and woods, the river once more waters another plain of great extent. Such is the general character of the Don,—nowhere rapid, but in general flowing through level fields so little elevated above its usual surface, that, when violent rain falls, it bursts its bounds at once, and covers a great extent of country, which then appears to be an immense body of water interspersed with islands, houses, trees, and other rural objects. Too often on these occasions it commits extensive and calamitous depredations,—sweeping off whole fields of corn, and leaving nothing behind but want and desolation. The havoc it occasioned in August, 1829, will not be soon forgotten. Yet still its vales are so fertile, and the crops they yield so early and so excellent, that the husbandman is again and again tempted to risk his all on these precarious fields.

"The first great flood on record," wrote the new statist of the parish of Fintray in 1840, "happened in the year 1768, which carried away the greater part of the crop from the haughs and level lands, at the period between reaping and stacking. A similar inundation took place in August, 1799, which carried off considerable quantities of hay, and destroyed in a great measure the grain crop, the whole

of which stood at that time on the ground uncut. A similar, but still higher flood, happened on 4th August, 1829, when the river rose about 14 feet above its ordinary level, and nearly 18 inches higher than any flood of that river in the memory of the oldest person alive, and extending (where the river was not confined by elevated lands or embankments) to from a half to three-fourths of a mile in breadth. This extraordinary flood occasioned very serious losses to many individuals,—and had it not been for strong embankments, which had been erected a few years before, (some of which withstood, while others yielded to the impetuosity of the torrent,) the whole crop on the most valuable lands in the parish must have been completely destroyed. A great part of the haugh-land is now protected by embankment on the lands of Fintray and Wester Fintray, extending to upwards of 6,000 ells in length, and protecting from 200 to 300 Scotch acres of very fine rich land, from the river floods." Similar embankments have been made for the protection of the haugh-lands in most other parts of the river's course.

The Don has some valuable salmon-fishings, though by no means so valuable as those of the Dee. A statement of the actual quantity caught in either river, apart from the produce of the sea in this vicinity, cannot however be given, as the Don fishings are held by individuals who have also other fishings, and are without any particular motive for distinguishing the portion contributed by each. The fishing of a small space of the Don's banks, however, not more than 300 or 400 yards in length, was not long ago rented at £2,000. The coast of Don river is fished by cruives, hang-nets, net and coble, stake-nets, and bag-nets. The average produce of the salmon and grilse fisheries on this river, for seven years previous to 1828, was 299 barrels; but the average for the seven subsequent years rose to 419 barrels. Between the years 1790 and 1800 the yearly average number of salmon and grilse, caught in the Don, amounted to 43,240; while 36,240 was the average number caught in the Dee during the same period. But between 1813 and 1824, while the average number of fish caught in the Don was 40,677, the average of the Dee fishings was 51,862.

DON (LOCH). See MULL.

DONAN, a small island at the head of Loch-Alsh, where that sea-lake forks into Lochs Long and Durich, at the south-west corner of Ross-shire.

DONAN (CASTLE). See CASTLE-DONAN.

DONIBRISTLE. See DALGETY.

DOON (THE), a river which traverses Ayrshire, and, during the whole of its course in that county, forms the boundary-line between the districts of Carrick and Kyle. It is popularly said to originate in Loch Doon; but it really rises in two mountain-streams from which that lake receives its principal surplus waters. One of these streams, called Gallow-lane, wells up among the broad boundary mountain-ridge of Kirkcudbrightshire, within half-a-mile of the remote source of the Galloway Dee; the other, called Eagton-lane, issues from Loch Enoch, at the boundary between Kirkcudbrightshire and Ayrshire; and both pursue a northerly course of about 7 miles, till, at its southern extremity, they fall into Loch Doon. At the northern extremity, whence the united streams now called the Doon emerge, two tunnels, cut out of the solid rock, receive the river, and pour it impetuously down into a deep gorge 300 feet deep, only about 30 feet wide, and a mile in length. For 2 miles from the loch, the river flows due north; and it then bends gradually round, and, for about 7 miles, flows to the north-west. Over all this distance, with the exception of the fine vale of Dalmellington on its northern bank, the grounds which press upon its verge

are, for the most part, heathy or unwooded knolls and hills of uninviting aspect. About 2 miles below Patna it again bends, and, over a distance of 5 miles, flows westward; and then, a little below Cassilis house, it flows northward and to the north of west, till it falls, 3 miles south of Ayr, into the frith of Clyde. But, over its whole course from below Patna to its embouchure, it describes numerous curvatures, sinuously wending round many a sylvan knoll, and rioting at will among the beauties of a dely and undulating landscape. Here its channel is, for the most part, ploughed into a huge furrow from 10 to 200 feet deep, and, at the top, from 30 to 150 yards wide, the sides of which are richly clothed in natural wood and plantation. Such especially is its appearance both above and below the point where the river is spanned by 'the Auld Brig o' Doon,' and flows past 'the haunted kirk of Alloway,' and over all the space which was most familiar to the eye of the Ayrshire bard.

DOON (LOCH), a lake partly in Ayrshire, and partly on the boundary between that county and Kirkcudbrightshire. It discharges its waters by the river Doon, whose 'banks and braes' have been rendered classic by the poetic pen of our Scottish bard; and near the margin of which his countrymen have reared a monument to his memory worthy of one of Scotland's greatest sons. Loch Doon is about 8 miles in length, and from half-a-mile to three quarters in breadth. Its form is nearly that of the letter L; the head of the lake corresponding with the top of the letter, and its lower extremity—where it discharges its waters—with the end of the horizontal line at the bottom. The shores of this lake are wild and solitary, and almost entirely devoted to sheep-pasture. The mountains which enclose it are in many places of considerable height, especially at the top of the lake where they may be said to be lofty, and where their outline is varied and beautiful. These are the Star mountains, on the borders of the stewartry of Kirkcudbright, and from the base of which on this side, the Doon may be said to take its rise; while the Dee, which flows into the Solway frith, takes its rise on the opposite side.

The level of the waters of this lake has been considerably lowered from what it formerly was by the operations of the proprietors, and a portion of its bed laid dry. This—as in the case of Loch Leven in Kinross-shire—has lessened unquestionably the beauty of the scenery, by the exposure of tracts of barren sand and gravel, formerly covered with water; and—like the operations in Kinross-shire—has afforded no very useful result, so far as the ground on the shores of the lake is concerned. But, unlike those of Loch Leven, the operations on Loch Doon were not for the purpose of receiving ground; they had a more useful object in view, and have been attended with more beneficial results. Along the banks of the river Doon there are some very extensive tracts of meadow-ground, which were, after heavy rains, liable to be overflowed by the accumulated waters from the lake. By perforating a bed of rock over which the lake used to discharge itself, and forming tunnels, the usual level of its waters has been lowered; and, by erecting sluices, the proprietors are enabled to regulate the quantity of water which flows into the river, and thus to prevent the damage to the grounds upon its banks which used formerly to occur. These operations were executed by the Earl of Cassilis, and the late Mr. M'Adam of Craigengillan, the proprietors of the lands on either side of the lake.

On a small island at the head of Loch Doon are the ruins of an ancient castle. It is constructed of large square stones, and appears to have been a

lofty tower of an octangular form. Of the history of this structure, or its origin, we have not been able to obtain any satisfactory account. The island, however, which is nearest to the Carrick side of the lake, now belongs to the Marquis of Ailsa. In the early part of the 13th century, the lands of Straiton—which are bounded by a part of the lake—were held by John de Carrick, a son of Duncan, Earl of Carrick. This baron was engaged, in 1235, in a rebellion of the Galloway-men, and committed injuries on several churches within the diocese of Glasgow, which subsequently cost him a grant of part of his lands, and the patronage of the church of Straiton. But whether he or his successors had any connection with the castle on the island, we have been unable to ascertain. In 1823, several boats or canoes of great antiquity were found sunk in the lake near this island. They were all formed entirely from a single oak-tree hollowed out; and were shaped somewhat like a fishing-cobble. Three of them were raised, and two of them were afterwards sunk for preservation in a pool of water, a short way from the margin of the lake. One measured 20 feet in length, by 3 feet 3 inches broad; another 16½ feet, by 2 feet 16 inches; the third 22 feet, by 3 feet 10 inches. They are supposed to have lain in the water between 800 and 900 years. These having been found near the castle, would lead us to suppose that they had been in some way connected with it; but their construction is certainly to be attributed to an earlier people than those by whom the castle was built.

After leaving the lake, the water of Doon flows for about a mile through a narrow gully or ravine, the scenery of which is very remarkable. A lofty ridge of hills seems here to have been rent asunder to afford an exit to the waters of the lake; and the rocky walls, which enclose this singular hollow, yet exhibit marks on either side of their former proximity. A walk has been constructed along the edge of the river, throughout the whole length of this ravine, by which an easy opportunity is given to strangers of viewing its romantic and picturesque scenery. On either hand, the rocks rise to a great height, almost perpendicular, but rugged and broken, and having their sides and their summits magnificently festooned and ornamented with a great variety of copse and trees. The scenery is all of a close character, but varied and interesting, changing with every turn of the walk; now presenting a rude vista of rock and wood, and again a mural precipice which seems to bar farther progress; while the effect of the whole is heightened by the music of the river rushing along its broken channel, and the winds among the branches of the trees, which, "in the leafy month of June," almost exclude a sight of the sky.

DOON-HILL. See SPOTT.

DOONHOLM. See AYR.

DOONSIDE. See MAYBOLE.

DORARY, an isolated pendicle of Caithness-shire, a piece of hilly ground, encompassed by Sutherlandshire. It belongs to the parish of Thurso, although not within 4 miles of the main body of that parish. It is a part of the bishop's lands, and was a shieling belonging to the bishops of Caithness. The walls of the old chapel, called Gavin's Kirk, or Temple-Gavin, are still standing. The view from the summit is very grand and extensive.

DORBACK (THE). See DIVIE (THE).

DOREHOLM, one of the Shetland islands; constituting part of the parish of Northmaven. It is situated in a spacious bay to the southward; and derives its name from a remarkable arch which passes through its centre, which is so lofty and

capacious as to admit the boatmen to fish under it, and is lighted by an opening at the top.

DORES, a parish, containing a post-office village of its own name, in Inverness-shire; bounded on the north-west side by Loch Ness, and on other sides by the parishes of Inverness, Daviot, and Boleskine. Its length is about 20 miles; and its breadth is 3 or 4. A small isolated district is surrounded by Boleskine. The surface of the main body comprises the narrow strip of valley ground along Loch Ness, and the acclivity of mountains rising steeply up to the water-shed of the great glen, together with part of Stratherriek and the small vale of the Farigag. The soil is light. The proportion of arable land is very small, by far the greater part being fit only for sheep-pasture. Besides Loch Ness, which with its environs furnishes a beautiful landscape, there are two or three smaller lakes which abound with trout. The chief mansions are Aldourie, Eregie, and Gortleg. The landowners are Lord Lovat, Lord Salton, and five others. The real rental is about £5,860. Assessed property in 1860, £6,314 odds. At a distance of 3 miles from Loch Ness are the vestiges of a fort called Dun-Riehan, or 'the Castle of the King of the Ocean,' a name which it is supposed to have received at a period when the king of Norway and Denmark was master of the sea. A little to the east of this fort there are several cairns, and one almost equal in size to all the rest. Tradition says that Fingal here engaged in battle Ashi, the son of the king of Norway, and killed him, which gave the name of Drum-Ashi, or 'Ashi's hill,' to the scene where this event happened. About 9 miles distant, there is another fort called Dun-Dardell, which is said to have been one of the many forts in the great valley, extending from the German ocean at Inverness to the Atlantic at Fort-William, that were intended for making signals, by fire, of the enemy's approach, during the times of the Danish and Norwegian incursions. The rocky ground under this fort is particularly grand. The village of Dore stands 8 miles south-west of Inverness, on the south road thence to Fort-Augustus. Population of the parish in 1831, 1,736; in 1861, 1,506. Houses, 304.

This parish is in the presbytery of Inverness, and synod of Moray. Patron, the Earl of Cauldor. Stipend, £141 2s. 8d.; glebe, £8 3s. 4d. Unappropriated tithes, £18 17s. 9d. Schoolmaster's salary, £45, with from £12 to £15 fees, and £15 other emoluments. The parish church was built in 1828, and contains 500 sittings. There is a preaching-station at Torness in Stratherriek. There is a Free church for Dore and Bona; receipts in 1865, £180 1s. 6d. There are in the parish an Assembly's school, a F. church school, and a Gaelic school. Sir James Macintosh was a native of this parish.

DORES (CASTLE OF). See KETTINS.

DORNAL (Loch), a small sheet of fresh water, on the mutual boundary of Ayrshire and Wigtonshire, 3½ miles west of the Bridge of Cree.

DORNIE. See BENDALLOCH.

DORNOCH, a parish, containing the royal burgh of Dornoch, the post-office village of Clashmore, and the fishing-village of Embo, in the south-east corner of Sutherlandshire. "This place," says the Old Statistical Account, "derives its name from the Gaelic words *Dorn-Eich*, which signifies 'a horse's foot or hoof;' concerning which the current tradition is as follows. About the year 1259, the Danes and Norwegians, having made a descent on this coast, were attacked by William, Thane or Earl of Sutherland, a quarter of a mile to the eastward of this town. Here the Danish general was slain, and his army beaten, and forced to retire to their ships which

were not far distant. The Thane greatly signalized himself upon this occasion; and appears, by his personal valour and exertion, to have contributed very much to determine the fate of the day. While he singled out the Danish general, and gallantly fought his way onward, the Thane being by some accident disarmed, seized the leg of a horse which lay on the ground, and with that despatched his adversary. In honour of this exploit, and of the weapon with which it was achieved, this place received the name of *Dorneich*, or Dornoch, as it is now called. This tradition is countenanced by the horse-shoe, which is still retained in the arms of the burgh. In memory of the same event, a stone pillar was erected on the spot, supporting at the top a cross encompassed by a circle, which went under the name of the Earl's cross. Standing on a sandy hillock, it was gradually undermined by the winds; several years ago it tumbled down, and was broken to pieces; at present, only scattered fragments of it remain." This cross has been repaired and re-erected.

The parish extends 9 miles along the frith of Dornoch, and about 15 miles from north-west to south-east. It is bounded on the north by Rogart, and by the Loch of Fleet, which separates it from Golspie; on the south-east and south by the Dornoch frith; and on the west by Criech. But the district of Kainauld and Rhimusaig is isolated from the rest of the parish by the Fleet, and surrounded by the parishes of Golspie and Rogart. The shores are flat and sandy; but the surface gradually rises as it approaches the hilly districts towards the north and west. The soil is sandy, approaching to loam as it recedes from the coast. The small river Evelycks, which rises in Strath-Achvaich, and falls into the frith near the Meikle-ferry, after a course of 9 miles, affords a few salmon and trout. In the hilly district there are three or four small lakes, the largest of which is about a mile in length. There are several quarries of whinstone, and one of excellent freestone near the town of Dornoch. Upon an eminence, rising abruptly from the sea, near the Little Ferry, stand the picturesque ruins of the castle of Skibo, formerly a seat of the noble family of Sutherland. Not far from the Earl's cross, already mentioned, is the spot where an unhappy creature was burned in 1722, for the imaginary crime of witchcraft, in transforming her daughter into a pony, and getting her shod by the Devil! This was the last instance of these frantic executions in the north of Scotland; as that, in the south, was at Paisley, in 1697. The castle of Skibo, where the famous Marquis of Montrose was temporarily confined after his capture in Assynt, and which was a residence of the bishops of Caithness and Sutherland, was demolished in last century. The landowners are the Duke of Sutherland, Dempster of Skibo, and two others. The parish is traversed by the great road from Inverness to Wick. Population in 1831, 3,380; in 1861, 2,885. Houses 584. Assessed property in 1843, £3,336 6s. 6d.; in 1860, £5,583.

This parish is in the presbytery of Dornoch, and synod of Sutherland and Caithness. Patron, the Duke of Sutherland. Stipend, £266 15s. 4d.; glebe, £10. Schoolmaster's salary now is £60, with about £6 fees. The parish church is the restored old cathedral of Dornoch, and contains about 1,000 sittings. There is a Free church: attendance, 1,150; sum raised in 1865, £276 1s. 8d. There are a ladies' seminary, endowed by Lady Glenorchy, a young ladies' school, an Assembly school, and four other schools.

The Town of Dornoch, a post town, a royal burgh, the political capital of Sutherlandshire, and formerly the episcopal seat or cathedral town of the

bishops of Caithness and Sutherland, and therefore one of the cities of Scotland, stands on the north coast of the Dornoch frith, 1 mile east of the great north road, 6 miles by water north of Tain, 12 miles by water west of Tarbetness, 12 south-south-west of Golspie, and 201 north-north-west of Edinburgh. "Its streets and houses," says Andersons' Guide to the Highlands, "have a comfortable substantial aspect, as being built of a cheerful yellow freestone, and all supplied with ample garden ground. The town is situated immediately in front of a high gravel terrace on a light sandy soil, amid arid hillocks of sand, piled up by the sea and the winds, and prevented from drifting only by the bent grass which grows upon them. The whole locality is evidently an ancient sea-bottom; and though healthy, the place is exposed to every bitter blast which blows in this cold climate. In approaching Dornoch, the low but old-looking tower of the cathedral and the bishop's turreted castle give it a pleasing and venerable appearance. The streets are remarkably clean, and, unlike what we see in most old towns, they are wide and regularly formed. Although situated at the entrance of the frith which is an arm of the German ocean, Dornoch has, in these latter times at least, been little benefited by its proximity to the sea,—a bar of sand which stretches across the mouth of the frith, called the Geyzen Briggs, rendering the navigation intricate, particularly to vessels of large burden."

The castle or palace of Dornoch, the residence of the bishops of Caithness and Sutherland, was originally a large, massive, sumptuous edifice. In 1570, it was burnt to the ground by a strong body of marauders; and thence till 1813, it stood a ghastly ruin, when it was extensively repaired, and part of it fitted up as the county court-house and gaol. But latterly the whole of it has been removed, excepting its high picturesque western tower; and on the site of the removed parts has been erected a spacious handsome pile, containing court-house, prison, record-room, and county meeting-room.—The cathedral was built in the 13th century, by the bishop Gilbert de Moravia or Moray, the near kinsman of the cotemporaneous founder of the minster of Elgin. It has survived to our own times through many struggles, having been once burnt, about the same time as the castle, often otherwise damaged, and repeatedly restored or repaired; and about 18 years ago, at the cost of £6,000, defrayed by the Duchess-Countess of Sutherland, it was remodelled on a grand scale, intended to preserve all its old beauties and to add some new ones, but unhappily in a taste which has not escaped the censure of architectural critics. It now consists of chancel, nave, transepts, and central tower, with some injudicious new additions in the form of porches and sacristy. The nave is without aisles, but probably it originally had them. "The east window is a triplet, and there is a single lancet in the gable. Each side of the chancel has three lancets. The north transept has a small triplet to the north, and two separate lancets east and west. The south transept is the same. The nave has four lancets on each side, and at the west end one of those intersecting, unfoliated, middle-pointed windows of four (should be five) lights, so common in this part. The tower is short and thick, resting on arches of two first-pointed order, and crowned with a stunted spire." Sixteen Earls of Sutherland are said to lie buried in the south transept. But at the recent restoration of the pile, the whole chancel was formed into a new tomb for the Sutherland family, and the top of it railed in as their pew; and the site of the altar was appropriated to a large full-length statuo

of the late Duke by Chantry, with a great tablet behind recording the lineage and virtues of the Duchess-Countess.

Dornoch is a place of exceedingly little trade. Even the business belonging to it as the county-town occasions scarcely any stir. Fairs are held on the first Wednesday of February, on the third Wednesday of March, on the first Wednesday of November, and on the first Wednesday of December; but they are not now of so much consequence as formerly. The town has an office of the Caledonian Bank, offices of four insurance companies, a gas company, a subscription library, and a friendly society. It has also a good hotel, called the Sutherland Arms. Its links form a fine golfing-ground, of similar character to those of St. Andrews and Montrose.

By charter of Charles II., dated July 14th, 1628, Dornoch was erected into a royal burgh, with the ordinary privileges, but with a reservation in favour of the Earl of Sutherland's hereditary rights. The town-clerk reports that "the family of Sutherland have, and especially of late have claimed, as interjected superiors, a right to certain feus within what is termed the royalty of the burgh of Dornoch; but the declarant has no access to know on what written title this right is founded; and it consists with his knowledge that there are various tenements within the burgh which still hold by written titles, in burgage of and under the magistrates as superiors, and infest by hasp and staple." The burgh is governed by a provost, who is the Duke of Sutherland, 2 bailies, a dean-of-guild, a treasurer, and 6 councillors. Along with Tain, Dingwall, Wick, Cromarty, and Kirkwall, it unites in sending a member to parliament. Its parliamentary constituency in 1865, was 24. The property of the burgh consists of the links in the neighbourhood, which, for the year 1832-3, were let by public roup for the sum of £2 1s. A right to a salmon-fishing appears also to have been claimed, but never to have been rendered effectual. The rest of the annual income, which altogether amounts to only about £3 15s., is derived from custom and market-dues. Small, however, as the revenue is, no debts are owing, and no taxes or assessment are imposed. A claim is made for a very extensive and apparently undefined royalty, greatly exceeding the parliamentary boundaries; but the territory over which jurisdiction has been exercised is understood to be limited to what may be called the burgh proper. The magistrates appoint the town-officers, but not the gaol-officers. The salaries of the several officers of both classes amount in toto to £75 3s. 4d.; and they are paid out of the common good, as far as it will go; but, it being inadequate, the difference has for many years been made up by the Duke of Sutherland. The burgh has no church or school patronage. There being no privilege attached to burgh-ship, there are no burgesses. Population in 1831, 504; in 1861, 647. Houses, 134.

Dornoch, as already mentioned, was the seat of the bishops of Caithness and Sutherland. The precise time of the erection of the see is not ascertained. Andrew, bishop of Caithness, is witness to a donation by David I. to the monastery of Dunfermline. He was bishop here in 1150, and is probably the first of whom there is any authentic account. In 1222 Gilbert Moray was consecrated bishop here. While yet a young man, and a canon of the church of Moray, he greatly distinguished himself in behalf of the independence of the Scottish church. Attempts had been made to bring the clergy of that church under the jurisdiction of the Archbishop of York. The project was not only patronized by the King of

England, but favoured by the Pope's legate, who held a convention on the subject at Northampton, in presence of the Kings of England and Scotland, in 1176. Moray was one of the inferior clergy, who attended the Scottish bishops cited by the legate on this occasion. After the legate had addressed a speech to the convention, warmly recommending the measure in contemplation, a long silence ensued,—the bishops of Scotland being intimidated by the legate's presence and authority. At length, Moray arose, and asserted the independence of his church, in terms of such manly determination and vigorous eloquence as at once revived the courage of his associates, and extorted the applause of his adversaries; whereupon the legate, apprehending that he had spoken the prevailing sentiments of his country, broke up the assembly. The young orator was, on his return home, universally caressed, and afterwards promoted to the see of Caithness. He died at Scrabster, in Caithness—where the bishops had also a residence—in 1245. A statue of him is still shown in the church here, under the name of St. Gilbert; but it is not entire. The last bishop, Andrew Wood, was translated here from the Isles, in 1680, and remained till the Revolution.

Some writers tell us, that Dornoch was also the seat of one of the monasteries of the Trinity, or Red Friars, otherwise called Mathurines,—from their house at Paris dedicated to St. Mathurine. The great professed object of the institution of this order appears to have been the redemption of Christian captives; to which purpose a third part of their revenue is said to have been destined. "Tertio vero pars," says their constitution, "reservetur ad redemptionem captivorum, qui sunt incarcerationi, pro fide Christi, a Pagauis." Of 13 of these monasteries, which are said to have subsisted in Scotland at the Reformation, one was at Dornoch, founded in 1271 by Sir Patrick Moray. Not the smallest vestige of the building, however, can now be traced; the very site of it is unknown at this day. The lands belonging to the ministry of Berwick were given to this place, after that city had fallen into the hands of the English.

About the year 1570, George, Earl of Caithness, who claimed the wardship of Alexander, Earl of Sutherland, then a minor, had got the person of the latter into his possession. A tribe of Morays, inhabiting this part of the country, who were firmly attached to the noble family of Sutherland, and beheld the conduct of Caithness with a jealous eye, contrived to get the minor conveyed from Caithness, and put under the protection of the Earl of Huntly. Caithness in revenge invaded this country, by his son John, who invested the town and castle of Dornoch, of which the Morays had possessed themselves. Several skirmishes took place with various success. The Morays, no longer able to maintain the ground they had occupied, retired to the castle. Upon this the master of Caithness burnt the town and cathedral; but the besieged defended themselves in the castle for a month longer. At length, however, they were obliged to capitulate, having undertaken to depart out of Sutherland within two months, and delivered three hostages into the hands of the conquerors. The Morays fulfilled their engagement; yet the hostages were treacherously murdered.

DORNOCH FRITH (THE), the estuary of the river Oikell, separating Sutherlandshire from Ross-shire, and expanding into an arm of the North Sea. It commences at Bouar-Bridge, extends thence 10 miles east-south-eastward, with a maximum width of $1\frac{1}{2}$ mile to a contraction called the Meikle-ferry, and then suddenly expands, goes off toward the north-

east, and becomes identified with the North Sea, between Tarbetness and Dunrobin castle, at the distance of 13 miles from Meikle-ferry, with a terminating width of about 12 miles. Dornoch, which gives name to it, stands on its north coast, about 3 miles below Meikle-ferry; and Tain, which also sometimes gives name to it, stands on its south coast nearly opposite Dornoch. An expansion, immediately above Meikle-ferry, and below another contraction called Little-ferry, forms an excellent road-stead where vessels of considerable burden can lie at anchor, and where good harbour accommodation could easily be provided, but which is rendered comparatively valueless by the difficulties of entering it across a bar. The north side of the frith below Meikle-ferry, too, offers some harbourage for small vessels in calm weather; but a formidable bar extends from this coast almost to the south side of the frith, called, from the incessant noise, the Geyzen Briggs. The banks, forming this bar, however, are not so closely connected but that vessels may enter with safety under the direction of a pilot. The shores produce shell-fish, and the banks abound with cod and haddocks; but no vigorous exertion has been made to render these fisheries an object of importance.

DORNOCK, a parish, containing the villages of Dornock and Lowtherton, on the southern border of Annandale, Dumfries-shire. Its post-town is Annan. A small part of it, in the form of a pentagon, and containing an area of about a square mile, is detached from the main body, and lies about $\frac{1}{2}$ a mile to the north, bounded on the west by Annan, and on the other three sides by Kirkpatrick-Fleming. The main body, which also is pentagonal, is bounded on the north-east by Kirkpatrick-Fleming; on the east by Greta; on the south by the Solway frith; and on the west and north-west by Annan. The extreme length of the parish, including both parts, but not the intermediate space, is 4 miles, its extreme breadth $2\frac{1}{2}$ miles; and its area 3,880 acres. Nearly the whole surface is cultivated, and well-enclosed. The soil, in general, is loam or brick earth; and, though rather damp in winter, is productive of luxuriant crops. Neither coal nor limestone has been found; but freestone is plentiful. A brook rises in Robgillmoss, a small bog in the northern or detached part, and traverses the main body through nearly its centre. Perennial springs of the purest water abound. Kirtle water washes the north-east boundary, and contains a few trouts, eels, pike, and perch. The coast is about $2\frac{1}{2}$ miles in extent, and is low and sandy. The Solway frith is here 2 miles wide, and fordable during the recess of the tide. Fearful accidents, however, are liable to assail any passenger not intimately acquainted with the peculiarities of the path. Great quantities of salmon, grilse, and flounders, are caught, chiefly by means of trap-stake-nets, and sent off to the market of Carlisle. As to antiquities, there are remains of a Roman military road, a druidical temple, and a strong square tower,—the last is on the estate of the Marquis of Annandale. Various and remarkable tomb-stones, one or two of considerable antiquity, are to be seen in the burying-ground. On what was anciently a moor in the parish, a battle is traditionally said to have been fought between the Scotch and English, the former commanded by Sir William Brown of Coalston, and the latter by Sir Marmaduke Langdale and Lord Crosby. The English, it is said, were defeated, and both of their commanders slain, and afterwards interred in Dornock churchyard. Two stones, each $6\frac{1}{2}$ feet long, 2 broad, and raised in the middle like a coffin, mark the place of the reported interment. On the sides of these

tombs are cut hieroglyphics, like the broad leaves of plants, and other antique figures quite unintelligible. A spring-well on the spot where the battle was fought, is still called Sword-well, and probably acquired the name from some swords of the defeated having been found in its vicinity. The real rental of the parish is about £4,630. The yearly value of raw produce was estimated in 1833 at £11,450. Assessed property in 1860, £4,728 odds. The parish is traversed by the road from Dumfries to Carlisle, and by the Glasgow and South-western railway, and has a station on the latter. It is skirted also, though not touched, by the Caledonian railway, and has ready access to it at the Kirkpatrick station. The village of Dornock stands on the Dumfries and Carlisle road, 3 miles west of Annan. It is a poor unimportant place. Population of the village about 240. Population of the parish in 1831, 752; in 1861, 856. Houses, 169.

This parish, formerly a rectory, is in the presbytery of Annan, and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend, £208 3s. 6d.; glebe, £25. Schoolmaster's salary, now £40, with £30 other emoluments. The church was built in 1793, and contains 300 sittings. There are two private schools and a small subscription library. The name Dornock, Dornoch, or Durnoch, seems to be of Celtic origin, signifying "the naked water," and referring in this case to the originally bald shore of the Solway, though said in the case of Sutherlandshire to have had another origin.

DORRAL BURN. See DALLAS.

DORRINGTON. See LONGFORMACUS.

DOSK (NEW), the Kincardineshire district of the parish of Edzell. It was formerly a parish by itself, and has still a burying-ground of its own. See EDZELL.

DOUBLE-HILL, a hill in the north-east of the parish of Rescobie, Forfarshire. It rises from the plain about half a mile north of the lake of Rescobie, and has two summits, which are called respectively the hill of Pitscandy and the hill of Tnrim. The latter summit, which is the eastern one, commands a remarkably brilliant prospect, over most of the eastern half of Forfarshire, together with a great extent of coast.

DOUGLAS (THE), a small river of the middle ward of Lanarkshire. It rises on the east side of Caintable, close to the boundary line with Ayrshire, and runs north-eastward, through the interior of the parish of Douglas, and along the boundary between Carmichael and Lesmahago, to a confluence with the Clyde at a point about $1\frac{1}{2}$ mile above Boninton Linn. Its length of run, measured as the crow flies, is 13 miles,—10 of which are within the parish of Douglas. It receives on its left bank the tribute of Monks, Pedourin, and Peniel waters, and on its right bank the tribute of Kennox, Glespin, Parkhead, and Craighburn waters. Its basin comprises nearly all Douglas parish, and a considerable part of Carmichael and Lesmahago parishes; and in consequence of being overhung at the sources by a conspicuous portion of the great range of watershed which catches the rain-clouds coming from the south and west, it receives such a quantity of water as to render the volume of the Douglas, at the point of confluence, very nearly equal to the volume of the Clyde. The configuration of the main valley, too, is such as to impart some peculiarity to the climate. "The winds," says the old statistic of the parish of Douglas, "blow mostly from the south-west, which being the direction of the river, and the banks high on each side, what would be accounted a moderate breeze in other places is here often a kind of hurricane." "The district," says

the new statist, "is exposed to high winds, particularly from the south-west and west, which, being confined as in a funnel by the high grounds on each side, sweep down the strath with tremendous violence."

DOUGLAS, a parish, containing the post-town of Douglas and the villages of Rigside and Addington, in the middle ward of Lanarkshire. It is bounded on the west by Ayrshire, and on other sides by the parishes of Lesmahago, Carmichael, Wiston, and Crawfordjohn. Its length north-eastward is upwards of 12 miles; its breadth varies from 4 to 7 miles; and its area, according to the New Statistical Account, is about 28,004 Scotch acres,—of which 3,816 are arable, 22,376 are in pasture, 1,492 are under wood, and 320 are flow-moss. "Although this district," says the writer of the New Statistical Account, "cannot vie with the clothed luxuriance of some of our lowland districts, or with the bold and rugged grandeur of our Highland scenery, it presents, along the whole course of the river Douglas," see the preceding article, "an aspect of sweet and unpretending beauty which contrasts most favourably with the bleakness of the country through which it is approached on every side. The river flows through a strath, which widens gradually in its course towards the Clyde. From this strath the ground slopes on each side to a considerable elevation, adorned, especially on the north side, with extensive and beautiful plantations. Around Douglas Castle, there is some fine old wood, chiefly ash and plane trees; and plantations of more recent growth, and of great breadth, extend for several miles above and below. At Douglasmill, where the strath opens into wide and fertile holms, nearly surrounded with finely wooded banks, the scenery is particularly admired. Beyond the strath, on either side, the ground stretches into extensive moors, or swells into hills covered with grass to their summits. On the west it terminates in Cairntable, which, with its dependent range to the south, encloses it as with a chain of mountain ramparts. A great extent of ground has been recently planted by Lord Douglas; and as His Lordship is carrying on these plantations on a large scale, the aspect of the parish will be progressively improving for many years." The parish is rich in minerals. Coal is so abundant that, though extensively worked, it will not be exhausted for centuries. Much of it is sold out of the parish to a considerable distance. Limestone and sandstone are quarried. Ironstone occurs; and there are several pretty strong chalybeate springs. About nine-tenths of the parish belonged formerly to Lord Douglas, and belong now to the Countess of Home. Assessed property in 1860, £12,836. A branch railway to Douglas, from the Caledonian at Cleghorn Road, was opened in 1864. Population in 1831, 2,542; in 1861, 2,490. Houses, 419.

The most notable object in the parish is Douglas castle, the noble seat of the Countess of Home. It was built by the last Duke of Douglas, shortly after the conflagration of the former castle, in 1760. At the time of His Lordship's death only one wing had been completed; but even in this state the building is a stately one, and has a noble appearance. Independently of the intense historical interest which must ever attach to the residence of "the Douglas," there is a melancholy association connected with Douglas castle, as being the scene of "Castle Dangerous," the last novel of Sir Walter Scott, and the last place to which he made a pilgrimage in Scotland. The preface to this work was transmitted by Sir Walter from Naples in 1832, and contains the following passage:—"The author, before he had made much progress in this, probably

the last of his novels, undertook a journey to Douglasdale, for the purpose of examining the remains of the famous castle, the kirk of St. Bride of Douglas, the patron-saint of that great family, and the various localities alluded to by Godscroft, in his account of the early adventures of Good Sir James. But though he was fortunate enough to find a zealous and well-informed eiecron in Mr. Thomas Haddow, and had every assistance from the kindness of Mr. Alexander Finlay, the resident chamberlain of his friend Lord Douglas, the state of his health at the time was so feeble that he found himself incapable of pursuing his researches, as in better days he would have delighted to do, and was obliged to be contented with such a cursory view of scenes, in themselves most interesting, as could be snatched in a single morning, when any bodily exertion was painful. Mr. Haddow was attentive enough to forward subsequently some notes on the points which the author had seemed desirous of investigating; but these did not reach him until, being obliged to prepare matters for a foreign excursion in quest of health and strength, he had been compelled to bring his work, such as it is, to a conclusion. The remains of the old castle of Douglas are inconsiderable. They consist, indeed, of but one ruined tower, standing at a short distance from the modern mansion, which itself is only a fragment of the design on which the Duke of Douglas meant to reconstruct the edifice, after its last accidental destruction by fire. His Grace had kept in view the ancient prophecy, that, as often as Douglas castle might be destroyed it should rise again in enlarged dimensions and improved splendour, and projected a pile of building, which, if it had been completed, would have much exceeded any nobleman's residence then existing in Scotland; as, indeed, what has been finished, amounting to about one-eighth of the plan, is sufficiently extensive for the accommodation of a large establishment, and contains some apartments the extent of which are magnificent. The situation is commanding; and though the Duke's successors have allowed the mansion to continue as he left it, great expense has been lavished on the environs, which now present a vast sweep of richly undulated woodland, stretching to the borders of the Cairntable mountains, repeatedly mentioned as the favourite retreat of the great ancestor of the family in the days of his hardships and persecution. There remains at the head of the adjoining *bourg*, the choir of the ancient church of St. Bride, having beneath it the vault which was used, till lately, as the burial-place of this princely race, and only abandoned when their stone and leaden coffins had accumulated, in the course of five or six hundred years, in such a way that it could accommodate no more. Here a silver case, containing the dust of what was once the brave heart of Good Sir James, is still pointed out; and in the dilapidated choir above appears, though in a sorely ruinous state, the once magnificent tomb of the warrior himself."

The old church of Douglas was called St. Bride, from being dedicated to St. Bridget or St. Bride. It is a place of great antiquity; and the spire, and aisle which was used as the burying-place of the family of Douglas, are still preserved. The new burying-place is beneath the present church, and contains the coffins of the last Duke and Duchess of Douglas, the late Lord Douglas, and others of his kindred. The monuments in the old kirk of St. Bride's are said to have been wantonly mutilated by a party of Cromwell's troopers, who made the edifice a stable for their horses, and at a still later period by the mischievous propensity of the boys of the place, who for a length of time had free access

to the aisle. Even in their mutilated state some of the monuments are exquisitely beautiful, and Sir Walter Scott says of the tomb of the Good Sir James, that "the monument, in its original state, must have been not inferior in any respect to the best of the same period in Westminster abbey." The parish of Douglas is celebrated also in connexion with the great ecclesiastical struggle of the 17th century. Upon Auchinsangh hill, within its bounds, the Covenanters met, on the 26th of July 1712, and engaged in a formal renewal of the solemn league and covenant. In this district, too, the Cameronian regiment—now the 26th of the line—was embodied in defence of the Protestant government of the Prince of Orange. They were mustered on a field near the town of Douglas, in April 1689, under the command of Lord Angus, eldest son of the Marquis of Douglas.

This parish is in the presbytery of Lanark, and synod of Glasgow and Ayr. Patron, Countess Home. Stipend, £306 14s. The glebe is extensive and valuable. Unappropriated tithes, £73 5s. 2d. Schoolmaster's salary, now £52 10s., with fees. The present parish church, though comparatively modern, is incommodious. There is a Free church: attendance, 300; receipts in 1865, £143 9s. 4d. There is an United Presbyterian church, with an attendance of about 170. There is a Reformed Presbyterian church at Rigside, with an attendance of about 120. There are two non-parochial schools, both aided by Lord Douglas, the one at Rigside, the other at Tableston, in the upper part of the parish. According to the earliest record, Douglas ecclesiastically belonged to the monks of Kelso; from whom it passed, in the 12th century, into the hands of the Douglas family, who have ever since retained the patronage. The rectory of the parish was established as a prebend of the cathedral church of Glasgow, previous to 1500; and at the Reformation was held by Archibald Douglas, at which time the benefice was valued at £200 yearly. This person was actively concerned in the murder of David Rizzio, and afterwards obtained a pardon for his crime. In 1568 he was appointed a lord of session by the Regent Moray, in the room of Leslie, Bishop of Ross, who was dismissed. There seem to have been, in the Roman Catholic times, several ecclesiastical buildings in different parts of the parish,—particularly at Auderson, Glentaggart, Parishholm, and Chapel-hill.

The noble family of Douglas, "whose coronet so often counterpoised the crown," and which has so closely linked the district of Douglasdale to Scottish story, is said to have been founded by Theobald, a Fleming, who acquired these lands at a very early period. The first great man of the house, however, was "the Good Sir James," who was the friend and companion of Robert the Bruce in his valorous efforts to achieve the independence of Scotland. His own castle of Douglas had been taken and garrisoned by the troops of Edward I.; and he resolved to take it, and at the same time inflict signal chastisement on the intruders. History tells us that a beautiful English maiden, named the Lady Augusta de Berkely, had replied to her numerous suitors that her hand should be given to him who should have the courage and the ability to hold the perilous castle of Douglas for a year and a day; and Sir John de Walton, anxious to win by his valour such a lovely prize, undertook the keeping of the castle by consent of Edward. For several months he discharged his duty with honour and bravery, and the lady now deeming his probation accomplished, and not unwilling perhaps to unite her fortunes to one who had proved himself a true and valiant knight, wrote him

an epistle recalling him. By this time, however, he had received a defiance from Douglas, who declared that despite all his bravery and vigilance, the castle should be his own by Palm Sunday; and De Walton deemed it a point of honour to keep possession till the threatened day should pass over. On the day named Douglas having assembled his followers, assailed the English as they retired from the church, and having overpowered them took the castle. Sir John de Walton was slain in the conflict, and the letter of his lady-love being found in his pocket, afflicted the generous and good Sir James "full sorely." The account of this taking of the Castle of Douglas, given in the History of the Houses of Douglas and Angus, by Godscroft, is somewhat different, and states that Sir James had drawn Sir John de Walton, by an ambuscade, out from the castle into the open country, where he fell on his band, killed their leader, and took the castle.

The stronghold, however, was more than once taken, retaken, burnt, and rebuilt, during the life of the Good Sir James; and the account of one of the most interesting assaults upon it is given as follows, by Godscroft: "The manner of his taking it is said to have been thus—Sir James taking with him only two of his servants, went to Thomas Dickson of whom he was received with tears, after he had revealed himself to him, for the good old man knew him not at first, being in mean and homely apparel. There he kept him secretly in a quiet chamber, and brought unto him such as had been trusty servants to his father, not all at once, but apart by one and one, for fear of discoverie. Their advice was, that on Palm Sunday, when the English would come forth to the church, and his partners were convened, that then he should give the word, and cry 'the Douglas slogan,' and presently set upon them that should happen to be there, who being despatched the castle might be taken easily. This being concluded, and they come, so soon as the English were entered into the church with palms in their hands, (according to the custom of that day,) little suspecting or fearing any such thing, Sir James; according to their appointment, cried too soon, (a Douglas, a Douglas!) which being heard in the church, (this was St. Bride's church of Douglas,) Thomas Dickson, supposing he had been hard at hand, drew out his sword and ran upon them, having none to second him but another man, so that, oppressed by the number of his enemies, he was beaten downe and slaine. In the meantime, Sir James being come, the English that were in the chancel kept off the Scots, and having the advantage of the strait and narrow entrie, defended themselves manfully. But Sir James, encouraging his men, not so much by words as by deeds and good example, and having slain the boldest resistors, prevailed at last, and entering the place, slew some twenty-six of their number, and took the rest, about ten or twelve persons, intending by them to get the castle upon composition, or to enter with them when the gates should be opened to let them in; but it needed not, for they of the castle were so secure that there was none left to keep it, save the porter and the cooke, who knowing nothing of what had hapned at the church, which stood a large quarter of a mile from thence, had left the gate wide open, the porter standing without, and the cooke dressing the dinner within. They entered without resistance, and meat being ready, and the cloth laid, they shut the gates and took their refecton at good leasure. Now that he had gotten the castle into his hands, considering with himself (as he was a man no lesse advised than valiant) that it was hard for him to keep it, the English being as yet the stronger in that country.

who if they should besiege him, he knew of no relief, he thought it better to carry away such things as he most easily transported, gold, silver, and apparel, with ammunition and armour, whereof he had greatest use and need, and to destroy the rest of the provision, together with the castle itself, than to diminish the number of his followers there where it could do no good. And so he caused carry the meale and meat, and other cornes and grain into the cellar, and laid all together in one heape: then he took the prisoners and slew them, to revenge the death of his trustie and valiant servant, Thomas Dickson, mingling the victuals with their blood, and burying their carkasses in the heap of corne: after that he struck out the heads of the barells, and punchcons, and let the drink run through all; and then he cast the carkasses of dead horses and other carrion amongst it, throwing the salt above all, so to make all together unuseful to the enemy; and this cellar is called yet the Douglas lairder. Last of all he set the house on fire, and burnt all the timber, and what else the fire could overcome, leaving nothing but the scorched walls behind him."

In 1312-13, Sir James took the castle of Roxburgh, and in the following year commanded the centre of the Scottish army at the battle of Bannockburn. In 1317, the English were defeated by him, under the Earl of Arundel. In 1319, Sir James, in conjunction with Randolph, Earl of Moray, entered England by the west marches with 1,500 men, routed the English under the Archbishop of York, eluded Edward II., and returned with honour to Scotland. When Robert the Bruce was on his deathbed, in 1329, he sent for his true friend and companion in arms the Good Sir James, and requested him, that so soon as his spirit had departed to Him who gave it, he should proceed with his heart and deposit it with humility and reverence, at the sepulchre of our Lord at Jerusalem. Douglas resolved to carry the request of the dying King into execution; and for this purpose he received a passport from Edward III., dated September 1, 1329. He set sail in the following year with the heart of his honoured master, accompanied by a splendid retinue. Having anchored off Sluys, he was informed that Alphonso XI., the king of Leon and Castile, was engaged in hostilities in Grenada with the Moorish commander Osmyn; and this determined him to pass into Spain, and assist the Christians to combat the Saracens, preparatory to completing his journey to Jerusalem. Douglas and his friends were warmly received by Alphonso, and having encountered the Saracens at Theba, on the frontiers of Andalusia, on August 25, 1330, they were routed. Douglas eagerly followed in the pursuit, and taking the casket which contained the heart of Bruce, he threw it before him, exclaiming, "Onward, brave heart, that never failed, and Douglas will follow thee or die!" The Saracens rallied, however, and the Good Sir James was slain. His companions found his body upon the field along with the casket, and mournfully conveyed them to Scotland. The heart of the Bruce was deposited at Melrose, although his body was interred in the royal tomb at Dunfermline. The remains of Sir James were buried at Douglas, and a monument erected to him by his brother Archibald. The old poet Barbour, after reciting the circumstances of Sir James' fall in Spain, tells us—

"Quhen his men lang had mad murnyn,
Thai debowlyt him, and syne
Gert seher him swa, that mycht be tane
The flesch all haly fra the bane,
And the carionne thar in haly place
Erdyt, with rycht gret worschipp, was.
"The banyes have thai with them tane;
And syne ar to thair schippis gane;

Syne towart Scotland held thair way.
And thar ar cumyn in full gret by.
And the banyes honorabilly
In till the kirk off Douglas war
Erdyt, with dull and mekill car.
Sehyr Archebald has some gert syn
Off alabastre, baith fair and fyn.
Or save a tumbe sa rielly
As it behowyt to swa worthy."

The family was raised to a carldom in 1357 by David II.; and during this reign and the two which succeeded, the house of Douglas rose to a degree of power scarcely inferior to that of royalty itself; so that, as has been remarked by an old historian, it became a saying that "nac man was safe in the country, unless he were either a Douglas or a Douglas man." The Earl went abroad with a train of 2,000 men, kept a sort of court, and even created knights. In 1424, Archibald, the 5th Earl, became possessed of the duchy of Touraine in France, for services which he had rendered to Charles VII. the French king. William, the 6th Earl, when only a stripling, succeeded to the family power at a stage when it had attained a most formidable height. Their estates in Galloway—where they possessed the stronghold of Thrieve—and those of Annandale, and Douglas, afforded them a vast amount of revenue, and enabled them to raise an army not inferior to that of their sovereign. It was at this time, however, the policy of Crichton—one of the ablest of those who had the direction of affairs during the minority of James II.—to humble the overgrown power of the nobles; and accordingly Earl William, having been decoyed into the castle of Edinburgh, was subjected to a mock trial for treason, and hheaded Nov. 24, 1440. "This noble youth and his brother and a few other principal friends," says Godscroft, "on their arrival in Edinburgh, went directly to the Castle, being led as it were and drawn by a fatal destiny, and so came in the power of their deadly enemies and feigned friends. At the very instant comes the Governor, as was before appointed betwixt them, to play his part of the tragedy, and both he and the Chancellor might be alike embarked in the action, and bear the envy of so ugly a fact, that the weight thereof might not be on one alone; yet to play out their treacherous parts, they welcome him most courteously, set him to dinner with the King at the same table, feast him royally, entertain him cheerfully, and that for a long time. At last, about the end of dinner, they compass him about with armed men, and cause present a bull's head before him on the board. The hull's head was in those days a token of death, say our histories; but how it hath come in use to be taken and signify, neither do they nor any else tell us; neither is it to be found, that I remember, anywhere in history, save in this one place; neither can we conjecture what affinity it can have therewith, unless to exprobrate grossness, according to the French, and our own reproaching dull and gross wits, by calling him calf's-head (*tête de veau*) but not bull's head. The young nobleman, either understanding the sign as an ordinary thing, or astonished with it as an uncouth thing, upon the sight of the bull's head, offering to rise, was laid hold of by their armed men, in the King's presence, at the King's table, which should have been a sanctuary to him. And so without regard of King, or any duty, and without any further process, without order, assize, or jury, without law, no crime objected, he not being convicted at all, a young man of that age, that was not liable to the law in regard of his youth, a nobleman of that place, a worthy young gentleman of such expectation, a guest of that acceptance, one who had reposed upon their credit, who had committed

himself to them, a friend in mind, who looked for friendship, to whom all friendship was promised, against duty, law, friendship, faith, honesty, humanity, hospitality, against nature, against human society, against God's law, against man's law, and the law of nature, is cruelly executed and put to death. David Douglas, his younger brother, was also put to death with him, and Malcolm Fleming of Cumbernault; they were all three beheaded in the back court of the Castle that lieth to the west."

"When Earl Douglas to the Castle came
The courts they were fu' grim to see;
And he liked na the feast as they sat at dine,
The tables were served sae silentlie.

And full twenty feet fro the table he sprang
When the grisly bull's head met his e'e;
But the Crichtouns a' eam' troupin in,
An' he cou'dna fight an' wadna flee.

O, when the news to Hermitage came,
The Douglasses were brim and wud;
They swore to set Embro' in a breeze,
An' slochen't wi' auld Crichtoun's blood."

The duchy of Touraine now reverted to the French king. After a brief period of depressed fortune, the family rose to a still greater degree of power than ever, in the person of William, the 8th Earl. He was at first a favourite of James II., but having fallen into partial disgrace he went abroad, and his castle of Douglas was demolished during his absence by orders of the King, on account of the insolence of his dependents. Upon the return of the Earl he came under obedience to the King, but this was not meant to be sincere. He attempted to assassinate Crichton the chaneellor, and executed John Herries in despite of the King's mandate to the contrary. "By forming a league with the Earl of Crawford and other barons, he united against his sovereign almost one-half of his kingdom. But his credulity led him into the same snare which had been fatal to the former Earl. Relying on the King's promises, who had now attained to the years of manhood, and having obtained a safe-conduct under the great seal, he ventured to meet him in Stirling castle. James urged him to dissolve that dangerous confederacy into which he had entered; the Earl obstinately refused:—"If you will not," said the enraged monarch, drawing his dagger, "this shall!" and stabbed him to the heart. An action so unworthy of a king filled the nation with astonishment and with horror. The Earl's vassals ran to arms with the utmost fury; and dragging the safe-conduct, which the King had granted and violated, at a horse's tail, they marched towards Stirling, burnt the town, and threatened to besiege the castle. An accommodation, however, ensued; on what terms is not known. But the King's jealousy, and the new Earl's power and resentment, prevented it from being of long continuance. Both took the field at the head of their armies, and met near Abercorn. That of the Earl, composed chiefly of borderers, was far superior to the King's, both in number and in valour; and a single battle must in all probability have decided whether the house of Stewart or the house of Douglas was henceforth to possess the throne of Scotland. But while his troops impatiently expected the signal to engage, the Earl ordered them to retire to their camp; and Sir James Hamilton of Cadzow, the person in whom he placed the greatest confidence, convinced of his want of genius to improve an opportunity, or of his want of courage to seize a crown, deserted him that very night. This example was followed by many; and the Earl, despised or forsaken by all, was soon driven out of the kingdom, and obliged to depend

for his subsistence on the King of England." The overgrown strength of this family was destroyed in the year 1455; and the Earl, after enduring many vicissitudes, retired in his old age to Lindores abbey in Fife, and died there in 1488.

The title of Earl of Douglas, of this the first branch of the family, existed for 98 years, giving an average of 11 years to each possessor. The lands of the family reverted to the Crown; but they were shortly afterwards bestowed on the Earl of Angus, the head of a junior branch of the old family, descended from George Douglas, the only son of William 1st Earl of Douglas by his third wife, Margaret Countess of Angus, who, upon his mother's resignation of her right, received her title. This family assisted in the destruction of the parent-house; and it became a saying, in allusion to the complexion of the two races, that the *red* Douglas had put down the *black*. This family produced some men who have occupied a prominent position in Scottish story, such as Arhibaldi, the 5th Earl, who was known by the soubriquet of Bell-the-cat; and Archibald, the 6th Earl, who, marrying Margaret of England, widow of James IV., who fell at Flodden, was the grandfather of the unfortunate Henry Lord Darnley, the husband of Queen Mary, and father of James VI. This Arhibaldi, during the minority of his step-son James V., had all the authority of a regent. From the accession of the second Douglas line, after the forfeiture of the first, the possessions of the house were held by the family in uninterrupted succession till the death of the Duke of Douglas in 1761. William, the 11th Earl of Angus, was raised to the marquise of Douglas, in 1633, by Charles I. This nobleman was a Catholic and a royalist, and inclined to hold out his castle against the Covenanters, in favour of the King; but he was surprised by them, and the castle taken. He was one of the best of the family, and kept up to its fullest extent the olden princely Scottish hospitality. The King constituted him his lieutenant on the borders, and he joined Montrose after his victory at Kilsyth, escaped from the rout at the battle of Philiphaugh, and soon after made terms with the ruling powers. The first Marquis of Douglas was the father of three peers of different titles, viz. Arhibaldi, his eldest son, who succeeded him as second Marquis; William, his eldest son by a second marriage, who became 3d Duke of Hamilton; and George, his second son by the same marriage, who was created Earl of Dumbarton. Archibald, the 3d Marquis, succeeded to the peerage in 1700, and was created Duke of Douglas in 1703. In the rebellion of 1715 he adhered to the ruling family of Hanover, and fought as a volunteer in the battle of Sheriffmuir. He died childless at Queensberry-house, Edinburgh, in 1761, when the ducal title became extinct. The Marquise of Douglas devolved, through heirs-male, to the Duke of Hamilton, on account of his descent from the 1st Marquis; and the title of Marquis of Douglas and Clydesdale is now conceded by courtesy to the eldest son of that ducal house. The real and personal estate of the Duke of Douglas was inherited by his nephew, Archibald Stewart, Esq., who was served his nearest lawful heir, September 3, 1761. This gentleman assumed the surname of Douglas, and was created Baron Douglas by George III. in 1796.

DOUGLAS, a small post-town in the parish of Douglas, on the right bank of Douglas Water, 2 miles south-west of Douglas-Mill, and 11 south-south-west of Lanark. It was formerly a busy market-town, a seat of considerable trade, a place of much political importance, and a hugh of barony whose magistrates wielded the power of life and

death over culprits, together with other important prerogatives; but, like many other old towns which basked in the favour of a great feudal chief, it has lost the capacity of following prosperity through the free forms of modern institutions. Its entire appearance is antique and palsied. Its streets are very narrow; some of its houses look as if they still belonged to the dark ages; its inhabitants, with remarkably few exceptions, are all in the grade of weavers, mechanics, or labourers; and its very fairs were, till recently, associated with the grave-yard. A cotton factory was established in 1792; but it continued in operation for only a few years, leaving no other effect than a connexion with Glasgow in handloom-weaving. The place, nevertheless, is replete with interest for its antiquarian associations. It also has offices of the City of Glasgow and the Commercial Banks, and congregational libraries. Fairs are held on the first Wednesday of February, on the third Friday of March, on the first Friday after Whitsunday, old style, on the second Wednesday of June, old style, on the second Friday of August, old style, on the third Friday of October, and on the first Friday after Michaelmas. Population in 1841, 1,313; in 1861, 1,426. Houses, 204.

DOUGLAS BURN, a streamlet of Selkirkshire. It rises on the Blackhouse heights, contiguously to the boundary-line with Peebles-shire, and runs about 6 miles south-eastward to the Yarrow, at a point about 2 miles below the foot of St. Mary's Loch. See the article **BLACKHOUSE**.

DOUGLAS BURN, a streamlet of Argyleshire. It rises among the mountains between Loch Fyne and Loch Awe, and runs about 7 miles sinuously eastward to Loch Fyne, at a place 3 miles south of Inverary. A remarkable section of rock, about 100 feet high, occurs in its channel, exhibiting alternate strata of limestone and mica-slate.

DOUGLAS BURN, a streamlet of Dumbartonshire. It rises within a mile of the upper part of Loch Long, and flows about 5 miles east-south-eastward, along the boundary between the parish of Arrochar and the parish of Luss, to Loch-Lomond at Lower Inverglass.

DOUGLASDALE, the parish of Douglas, the basin of the Douglas river, or the whole of the middle ward of Lanarkshire. The name has been employed in each of the three senses, but is not now in common use.

DOUGLAS-MILL, the place of an extinct inn, at the intersection of the Glasgow and Carlisle road with the Edinburgh and Ayr road, in the parish of Douglas, 2 miles north-east of the town of Douglas, Lanarkshire.

DOUGLAS-MOOR, a large district of the parish of Crawford, Lanarkshire. The name is nearly obsolete.

DOUGLASTOWN, a village in the parish of Kinnettle, Forfarshire. It stands on the Arity, at the western verge of the parish, on the road from Glamis to Forfar, 2½ miles east of Glamis, and 3½ south-west of Forfar. A flax spinning mill, four stories high, and of proportionate length and breadth, was built here in 1792 by Mr. Douglas of Brighton and partners; and the village was erected at the same time, at great expense, chiefly for the accommodation of the workers in the mill. Population, 83.

DOUGLAS WATER. See **DOUGLAS (THE)** and **DOUGLAS BURN**.

DOULOCH, or **Dow-Loch**, a small fresh-water lake, at the foot of Glenshira, formed by an expansion of the Shira rivulet, 2 miles north-east of Inverary, Argyleshire. The name signifies "the black lake," and alludes to the sombreness and depth of

the waters. The lake reaches to within a quarter of a mile of Loch Fyne, and lies so slightly above that sea-arm's level as to be occasionally visited with some small portion of sea-water in spring-tides, yet presents every appearance of having, for many centuries, been a strictly independent sheet of water. Herrings and other salt-water fish have sometimes been taken in it in the same net with trout and salmon.

DOUNE, a small post-town in the parish of Kilmadock, Perthshire. It stands on the road from Stirling to Callander, and on the left bank of the Teith, at the influx of the Ardoch, about a mile east of Deanston, 8 miles north-west of Stirling, and 8½ south-east of Callander. The surrounding scenery is considerably diversified and very beautiful. The town itself has a pleasant appearance, and contains some objects of architectural interest. It consists principally of one large street, and two smaller ones branching off from this. But on the west side of it, at the bridge which takes over the thoroughfare to Deanston, is a sort of suburb which has been variously called Cotton-Row, Bridge-of-Teith, and New town of Doune. The town consists of well-built houses, most of them slated and of modern erection, and some of them very substantial, neat, and commodious. The parish church is a very handsome edifice, in the Gothic style, with an elegant tower. The United Presbyterian church is a neat modern structure. Here are also two Free churches, an Episcopalian chapel, and a Methodist meeting-house. Here likewise are a parochial school, a Free school, and a public library. The town has a market-cross. The bridge across the Teith is a strong building of two arches, erected in 1535 by Robert Spittal, tailor to King James IV.

But the principal object of architectural beauty here is the ancient castle of Doune. This is situated contiguous to the town, on a mound apparently artificial, and surrounded by beautiful wooded banks. The Teith flows immediately under its walls, and is joined a little below by the Ardoch. The period of its erection has not been ascertained. Tradition ascribes its foundation to Murdoch, Duke of Albany, who, along with his two sons, fell beneath the axe of the executioner at Stirling in 1425, during the glorious but iron reign of James I. This account, however, is obviously quite false; for although it was undoubtedly possessed by Albany, it had been for nearly a century before his time the seat of the Earls of Menteith. The custody of Doune castle was granted by James V. to James Stewart, ancestor of the Moray family. It afterwards fell into the full possession of his son, who was created Lord Doune in 1581; and since that period it has continued in the possession of the Earls of Moray. This ancient stronghold is of prodigious size and strength. It forms a square pile, the sides of which are 96 feet in length, the walls being 40 feet high, and 10 in thickness. Considering its immense age, it presents wonderfully few marks of the injuries of time. The tower, which stands at the north-east corner, is massive and lofty, being 80 feet high. The great hall is 63 feet long, and 25 wide. There are several other spacious apartments in that portion of the building which appears to have constituted the family-residence; and the whole of them exhibit striking proofs of former grandeur. From the south-east corner of what seems to have been the dining-room, a narrow stair descends into a subterranean passage which leads into a small dark cell, obviously intended for the purposes of a dungeon. Its roof is vaulted, and contains a small hole,—probably for lowering scanty pittance of food to the unhappy captive. There are other vaults and

prisons on the ground floor on each side of the entry, all of them of the same frightful description. The building was formerly covered with stones or slates; but no part of the roof now remains. Doune castle was occupied for the last time as a place of defence in 1745, by the adherents of Prince Charles, who planted a twelve-pounder in one of the windows, and several swivels on the parapets. John Home, the author of 'Douglas,' and Dr. Witherspoon, afterwards distinguished as a presbyterian divine, were confined along with other prisoners taken by the Pretender's forces. Many of our readers will remember the graphic account of their escape, given by Home in his 'History of the Rebellion.' Sir Walter Scott passed some of his younger years in the neighbourhood of Doune castle; and, besides directly introducing it into his story of Waverley, he no doubt drew suggestions and delineations from it into some of his other productions. It is mentioned also in the ballad which relates the death of the "Bonnie Earl o' Moray."

Doune was formerly celebrated for the manufacture of skins, Highland purses, and Highland pistols. But now it is sustained mainly by the cotton-mills of Deanston, and by the general business of miscellaneous handicraft and retail trade. Fairs are held on the second Wednesday of February, the second Wednesday of May, the last Wednesday of July, the first Tuesday and Wednesday and fourth Wednesday of November, and the last Wednesday of December. The November fairs are great ones, that on the first Tuesday for sheep, that on the first Wednesday for black cattle, and that on the fourth Wednesday for both sheep and cattle. The town has an office of the Union Bank, an office of the Royal Bank, a gas company, a free masons' lodge, a free gardeners' lodge, and a curling club; and it has likewise a station on the Callander branch of the Scottish Central railway. About a mile north-west of Doune stands Doune-Lodge, a seat of the Earl of Moray, formerly belonging to the Edmonstones, and then called Cambus-Wallace. Population of the town in 1841, 1,559; in 1861, 1,256.

DOUNIES. See BANCHORY-DEVENICK.

DOUN-REAY. See REAY.

DOURA, a collier village in the parish of Kilwinning, Ayrshire. The coal-works in its vicinity are of great extent, and are connected with the Ardrossan branch of the Glasgow and Ayr railway by a single-line railroad. Population of the village in 1861, 295.

DOVAN (THE). See DEVON.

DOVECOTHALL, a village in the south-east of the parish of Paisley, Renfrewshire. Its inhabitants are employed chiefly in the print-fields of the Levern.

DOVECOTLAND, a village in the East-church parish of Perth, suburban to the city of Perth. Population in 1861, 529.

DOVERAN (THE). See DEVERON.

DOVESLAND, a thickly peopled district of the southern part of the parish of Paisley, Renfrewshire. It is inhabited chiefly by weavers.

DOWALLY, a parish, containing a small village of its own name, in the Strathtay district of Perthshire. It was originally a chapelry of Caputh, but was constituted a separate parish in 1500, and is now united to Dunkeld. It consists of a main body and a detached district. The main body has the outline of a parallelogram, extending 6 miles down the left bank of the Tay, to the Pleyburn, about a mile from the town of Dunkeld, yet is bounded at that end by a small interjected portion of Caputh; and it marches with Kirkmichael on the east, and with Logierait on the north. The detached district is the barony of Dulcapon, situated on the left bank

of the Tummel, three-fourths of a mile in length, and separated from the main body by Logierait. The entire parish is estimated, in the New Statistical Account, to comprise 1,200 acres of arable land, 300 of pasture, 10,200 of woods, and 200 of lakes,—in all, 12,000 acres. The main body consists of a narrow band of low ground along the Tay, and a grand forest-clad range of overhanging heights. Some of the heights, however, are pleasantly pastoral, while others are abundantly stocked with roe deer, and with various kinds of game. The rocky hills of Craigie Barns and Craigiebencan, on the lower boundary, present a very precipitous and picturesque appearance. The King's pass, between Craigie Barns and a large rocky, wooded hill, called the King's Seat, derives its name from the circumstance of its having been the place where the Scottish monarchs placed themselves, in order to direct their shafts with advantage at the flying deer, when driven that way for their amusement; and, according to a story told by William Barclay in his treatise 'Contra Monarchomachos,' a chase of this kind had very nearly prevented the future miseries of the unhappy Mary Stuart. The road, which passes through Dowally to Athole, has been cut with great labour and expense along the bottom of the King's Seat, which overhangs the river so closely, and at such a height, that the timid traveller, who looks over the wall that has been built to support it, is little disposed to linger on his way. A lake of about half a mile in circumference lies on the summit of the hill of Duchray, at an elevation of nearly 1,900 feet above sea-level. Loch-Ordie, a much larger lake, lies at an elevation of about 700 feet. There are also the two lakes of Rotmel, whence issues the Dowally burn, which drives two saw-mills, and runs into the Tay. The village of Dowally stands on this burn, $\frac{1}{4}$ miles north by west of Dunkeld. Population of the parish in 1861, 971. See DUNKELD.

This parish, notwithstanding its entire union politically and ecclesiastically with Dunkeld, is nearly as distinct in the religious connections of its people, as if it were formally separate. It is a Gaelic district, while Dunkeld is an English one; and it has its own minister, church, and schoolmaster. The minister, indeed, is only the Dunkeld incumbent's assistant, but he resides in Dowally, and officiates both in English and in Gaelic. The former church was built at the time of the separation of the parish from Caputh, and was a long, narrow, inelegant structure. The present church was built in 1818, and contains 220 sittings. Schoolmaster's salary, £50, with fees.

DOWALTON (LOCH), a fresh-water lake on the mutual border of the parishes of Kirkmuir, Glassarton, and Sorbie, Wigtonshire. It has its name from the family of M'Dowall, the proprietor of the lands in which it is embosomed; but is also sometimes called Longcastle Loch. On the north, it sends out a stream, which, flowing eastward over a course of $4\frac{1}{2}$ miles, and intersecting the parish of Sorbie, falls into the sea at Garlieston. The lake is about 3 miles in circumference, and from 5 to 20 feet deep. On its western side it has an island of about 30 acres in area, on which are traces of an old building called Longcastle.

DOW-LOCH. See DOULOCH, CLUNIE, and PENFONT.

DOWN-HILL, an eminence, rising 580 feet above sea-level, on the boundary of the parish of Dunbar, Haddingtonshire. It is remarkable as the place of the Covenanters' encampment, previous to their defeat by Cromwell; and it sometimes gives to that action the name of the battle of Downhill, to distinguish it from the battle of Dunbar of the 13th century.

DOWN-HILL, an apparently artificial elevation, in the parish of Edenkille, Morayshire. It appears to have been a fortress of great antiquity. It is of a conical shape, round a considerable part of which runs the rapid Divio, in a deep rocky channel; and, where not defended by the river, it is encircled by a deep ditch with a strong rampart, the stones of which bear marks of fusion.

DOWNIE-HILLS, a hilly ridge extending east and west through the parish of Monikie, Forfarshire. It consists principally of a beautiful trap, well adapted for either roads or masonry, but terminates on the west in a quarry of excellent sandstone. Good specimens of agate, jasper, and spar are found on it.

DOWNIE-POINT, a bold headland in the parish of Dunnottar, screening the south side of the bay of Stonehaven, Kincardineshire.

DOWNIES, a fishing harbour at the southern extremity of the parish of Banebory-Devcnick, 6 miles north-west of Stonehaven, Kincardineshire.

DRAFFEN. See **DUNNO**.

DRAGON-HOLE. See **KINNOUL**.

DRAINIE, a parish, containing the post-town of Lossiemouth and the villages of Stotfield and Branderburgh, on the coast of Morayshire. It is bounded on the north by the Moray firth, and on other sides by the parishes of Urquhart, St. Andrews Lhanhryd, Spynie, and Duffus. Its length, east and west, is about 4 miles, and its breadth is about 2. The river Lossie traces the eastern boundary, and the site of the quondam loch of Spynie is traversed by the southern boundary. The surface of the parish is low and flat. There are only two small eminences meriting the name of hills. The loch of Spynie, which lies $1\frac{1}{2}$ mile along the southern boundary, was drained about the year 1807, at an expense of £10,800. Great profit was anticipated from it in the way of reclaimed rich land; but only small profit was for a long time realized. Much of the soil was found to be impregnated with sulphur and iron, affording nothing better than coarse pasturage, neither wholesome nor nutritious, and said to have the property of converting the colour of black cattle feeding upon it into grey. Some of the reclaimed soil near the margin of the loch, however, was rich fertile clay. The New Statistical Account in 1842 said respecting the whole parish,—“The low drained fields consist of rich loam or marly clay, and bear heavy crops of every kind of grain; the lighter grounds rest upon a substratum of gravel, or upon pure white sand. The quality of the ground is various, and the transition from the very best to the worst so sudden that scarcely twenty acres alike are to be found. About a square mile in the centre is of the very worst description.” The loch of Spynie discharged itself into the Lossie, about a mile from the sea. A canal now runs a little from the north of Spynie castle, on the site of Spynie loch, through Drainie parish to the Lossie, a little above Lossiemouth. Through the low plains, on each side of the Lossie, as it runs from Elgin along the eastern border of this parish to the sea, large embankments of earth have been raised at great expense, in order to prevent a recurrence of the calamitous inundation which happened in 1829. The two small eminences or hills in Drainie abound with white and yellow freestone, which is in great request for building over all this quarter of the country. In the Coullart hill, between Lossiemouth and Stotfield, there are appearances of lead. An unsuccessful attempt to mine the lead was made about 70 years ago; and another attempt, under promising circumstances, was begun in 1853. The hill of Cove-sea consists of one continuous mass of freestone, up-

wards of a mile in length, and forming a bold shore, cut and excavated by the surge into curious arches, caves, and pyramids. The scenery here is grand and picturesque. See **COVESEA**. At Lossiemouth, also, a natural cave, about 10 feet square, called St. Gerardine's cave, was adorned with a handsome Gothic door and windows, and a medicinal spring issuing from the rock above the hermitage; but in the course of working the quarries, it has been totally destroyed. The rental of the parish is about £7,600. The assessed property in 1860 was £7,565 odds. The fisheries are of considerable value. Great advantages of communication are enjoyed by the Morayshire railway from Lossiemouth to Elgin, and from the calls of the Leith and Inverness steamers. Population in 1831, 1,296; in 1861, 3,028. Houses, 503.

This parish is in the presbytery of Elgin, and synod of Moray. It consists of the two ancient parishes of Kinneddar and Ogston, which were united soon after the Restoration, and received the name of Drainie from the erection of a new central church on the estate of Drainie at the annexation. Patron, Gordon Cumming of Altyre. Stipend, £242 7s. 5d.; glebe, £10. Schoolmaster's salary now is £60, with fees and other emoluments. The parish church is an elegant structure, built in 1823, and containing about 700 sittings. There is a neat chapel subordinate to it in Lossiemouth. There are also in Lossiemouth a Free church and an United Presbyterian church. Receipts at the former in 1865, £228 14s. 9d.; attendance at the latter, 270. There are four non-parochial schools.

DREEL. See **ANSTRUTHER (EASTER)**.

DREGHORN, a parish, containing a post-office village of its own name, in the southern part of the district of Cunningham, Ayrshire. It is an irregular stripe, about 8 miles long, and from $\frac{3}{4}$ of a mile to 2 miles broad, stretching from south-west to north-east. On three sides its boundary is marked by streams,—on the east by Garrier burn, which divides it from Kilmours,—on the south by Irvine water, which divides it from Dundouald,—and on the west and north-west by Annock water, which divides it from Irvine and Stewarton; and on the north-east the parish is bounded by Fenwick. At the south-west end—which is distant only a mile from the coast—the surface is a dead flat very slightly above sea-level; but it thence rises, in gentle undulations, toward the east and north-east, and both in the interior, and especially along the banks of the Annock, wears a pleasing appearance. In the flat grounds, the soil is sandy and gravelly; but in the other districts, it is a fine deep loam, remarkably fertile. The whole parish, except a few acres of meadowland, is under cultivation, well-enclosed, and judiciously interspersed with wood. Coal is very largely worked. Limestone, ironstone, and sandstone are found. The principal mansions are Annock-Lodge, Pierecton, Warwickhill, and Cunninghamhead. The parish is traversed eastward by the Glasgow and South-western railway, and by the road from Irvine to Kilmarnock, and north-eastward by the road from Irvine, through Stewarton, to Glasgow; and is provided with numerous cross or subordinate roads. The village of Dreghorn is situated in the south-west district of the parish, on the first gentle acclivity above the flat grounds, and commands a fine view of the firth of Clyde, and the coast of Ayrshire. The houses stand in irregular lines, and, being interspersed with trees, and whitewashed, make a fine rural grouping to the eye. The village is 2 miles from Irvine, on the highway between that town and Kilmarnock; and has about 900 inhabitants. Population of the parish in 1831, 888; in 1861,

1,828. Houses, 282. Assessed property in 1843, £10,129 13s. 8d.; in 1860, £13,915.

This parish is in the presbytery of Irvine, and synod of Glasgow and Ayr. It comprehends the ancient parishes of Dreghorn and Piercetoun, which were united in 1668. The churches of both parishes anciently belonged to the monks of Kilwinning, and were served by vicars. In 1603, the patronage of the church of Piercetoun, with the tithes and churchlands, were granted to Hugh, the Earl of Eglinton, whose descendant continues to be the patron of the united parish. Stipend, £259 15s. 1d.; glebe, £15. Unappropriated teinds, £738 2s. 2d. Schoolmaster's salary, now £52 10s. The parish church was built in 1780, but was much injured by a stroke of lightning in December 1854. There is a Free church at Piercetoun; attendance, 200; receipts in 1865, £144 3s. 11½d. There are schools at Dreghorn, Crossroads, and Piercetoun,—the last a Free church school.

DREGHORN, an estate in the parish of Colinton, among the roots of the Pentland hills, about a mile south-east of the village of Colinton, Edinburghshire. The scenery on and around it is beautiful. The mansion, called Dreghorn Castle, was built about 50 years ago, and stands embosomed among wood about 490 feet above sea-level.

DREINICH, a small island in Loch Linnhe, near the island of Lismore.

DREM, a post-office village in the parish of Athelstaneford, Haddingtonshire. It stands on the road from Edinburgh to North Berwick, contiguous to the North British railway, at the point where that railway sends off the branch to North Berwick, 4 miles north of Haddington, and 17½ east of Edinburgh. Here is a railway station, which serves for Athelstaneford and Aberlady. The barony of Drem, comprising upwards of 500 acres of fine land, belonged in former times to the Knights Templars. The priest's house is still standing; and what was his garden adjoins it, defended by a holly hedge. The chapel, large part of which also remains, appears to have been a small but neat building. On the barony, a little to the south of the village, on a low conical hill with a flat summit, the foundations of the conical houses of a Pictish town, built round the hill side in regular rows, are still discernible, with those of large oblong houses in the centre. The town had been strongly fortified, first by a deep circumvallation, and higher up by three perpendicular ramparts.

DRHUIM (THE), an exquisitely picturesque portion of the strath of the Beauly, with a group of water-falls, on the grounds of Lord Lovat, Invernessshire. "This," say the Messrs. Anderson, "is the most sweetly Highland and beautiful part of the course of the Beauly. On either hand the mountain acclivities are rather steep and rocky, and the valley between them is not a quarter of a mile broad; but woods of birch and fir encompass the whole scene, especially on the north side; and the edges of the river are fringed all along with rows of oak, weeping birches, and alders. In one part, half up the strath, near the cottage of Teanassie (the burn of which will reward its being explored), the waters plunge through a rocky passage encircling high pyramids of stone, standing up in the midst of the stream, gigantic witnesses of its ceaseless and consuming power. Immediately below, the turmoil ceases, and the quieted element reposes in smooth dark limns; while the rocks at the same time recede and give place to soft daisied banks and sweet patches of corn land. On the southern shore, on a high conical mound rising above a perpendicular sheet of rock, is Dun Fion, a vifried structure, which was laid

open some years ago for the inspection of the curious by order of Lord Lovat."

DRIMMINNER. See TULLYNESSLE.

DRIMMIE. See LONGFORGAN.

DRIMMIN, the site of an ancient castle, now occupied by a Roman Catholic chapel, in the north-west corner of the parish of Morvern, near the north end of the Sound of Mull, Argyleshire. The spot is conspicuous and commanding.

DRIMMINOR. See CORGARF.

DRIMMITERMON. See DRUMMETERMON.

DRIMODUNE, a bay, nearly 2 miles wide, receiving the Blackwater, on the south-west side of Arran.

DRIMREE, a locality in the valley of Barbreck, in the parish of Craignish, Argyleshire, where tradition reports a sanguinary battle to have been fought between the Scots and the Danes, when the latter were vanquished, and their leader Olaus was slain. A number of rude monuments still exist at the place.

DRIMYEONBEG, a bay of considerable extent, with good holding ground, on the east side of the island of Gigha, Argyleshire.

DRINLEAGH, a locality in the parish of Criech, near Bonar-Bridge, Sutherlandshire, where a battle was fought in the 11th or 12th century with the Danes, who had just made an invasion, and were driven back hence with great slaughter to their ships. A remarkably large number of sepulchral tumuli still exist at the place.

DRIP. See TEITH (THE).

DROCHIL CASTLE. See NEWLANDS.

DROICH'S BURN, a brook flowing from the south-east side of the hill of Caillievar, and running in a deep narrow vale along the boundary between parish of Alford and the parish of Leochel and Cushnic, Aberdeenshire.

DROMORE, a station on the Portpatrick railway, 18¾ miles west-south-west of Castle-Douglas.

DRON, a parish on the south-east border of Perthshire. It is bounded on the south-east by Fifeshire, and on other sides by the parishes of Arngask, Forgandenny, Dunbarnie, and Abernethy. Its post town is the Bridge of Earn. Its northern extremity is about a mile from the river Earn, and 5 miles from the city of Perth. Its length from east to west, including a narrow strip of Dunbarnie which intersects it, is between 3 and 4 miles; and its breadth from north to south is about 3 miles. The river Farg divides it from Fifeshire and Abernethy. The southern district is a portion of the Ochils, generally sheeted with verdure, and adorned with strips or clumps of wood. The district thence till near the northern boundary is a sort of sloping plain, well cultivated and of beautiful appearance. A tract in the extreme north is a ridge of small elevation extending from east to west. The soil of the low grounds is principally clay and loam. About 2,600 acres are in cultivation, about 400 under wood, and about 1,100 in pasture. There are four principal landowners. The assessed property in 1843 was £4,300 8s.; in 1866, £4,438 1s. 2d. The principal residences are Balmanno Castle and Glenearn House,—the former a fine specimen of the old Scottish castellated mansion. The part of the parish isolated within Dunbarnie is called Ecclesiamagirdle. The etymology of this name has defied the ingenuity of antiquaries; but it probably bore some reference to a small chapel which formerly stood in this part of the parish, and of which some ruins, along with a burial-ground, still remain. The only other relic of antiquity in the parish is a remarkable rocking stone on the south descent of the hill opposite the church. This is a large mass of whinstone, of an irregular figure, about 10 feet in length, and 7 in

breadth, and stands in a sloping direction. On gently pressing the higher end with the finger, it acquires a perceptible motion, vibrating in an arch of between one and two inches, and the vibration continues for some time after the pressure is removed. "In that part of the Oehills which fronts the house of Ecclesiamagirdle," says the writer of the Old Statistical Account, "a very singular phenomenon took place about 7 years ago. After a long series of rainy weather, the hill, about 100 paces from the summit, burst open with a loud explosion like thunder, which was heard at the distance of two miles across the valley. A violent and rapid torrent, mixed with earth and stone and broken rock, issued from the opening, and rushed down with an impetuosity which swept all before it. The inhabitants of some houses which stood immediately below, alarmed at once with the noise and torrent, which directed its course full towards them, were preparing to flee for their safety, when happily the torrent deviated into a different tract, and after continuing to flow for 10 or 12 hours, it ceased, without having done any material injury, and has remained quiet ever since." The parish is traversed by the road from Perth to Edinburgh, and lies within easy distance of both the Scottish Central railway and the Perth fork of the North British railway. Population in 1831, 464; in 1861, 376. Houses, 80.

This parish is in the presbytery of Perth, and synod of Perth and Stirling. Patron, the Crown. Stipend, £166 19s. 6d.; glebe, £9, with £4 10s. per annum in lieu of coals. Schoolmaster's salary, £50, with about £21 fees, and £14 other emoluments. The church was built about the year 1826, and contains 350 sittings. The schoolhouse is a handsome modern building.

DRON. See LONGFORGAN.

DRONACH. See ALMOND (THE) and METHVEN.

DRONGAN, an estate, a collier village, and coal-works in the parish of Stair, Ayrshire.

DRONGS, a stupendous rock near Hillswiek in Northmaven. It is cleft in three places nearly to the bottom, and when seen obscurely through a fog, conveys the idea of a huge ship under sail.

DRONLY, a village in the parish of Auchterhouse, Forfarshire. It stands at the place where Dronly and Auchterhouse burns form Dighty water; and it has a station on the Dundee and Newtyle railway, 1 mile south-east of Auchterhouse. Dronly burn has a course of about 5 miles to this place, chiefly from west to east; and it drives a yarn washing mill a little above its confluence with the other burn. Population of the village, 103. Houses, 21.

DRIPPING CAVE. See SLAINS.

DRUIDHM (THE). See DRHUM (THE).

DRUIDIBEG (Loch), a lake of considerable size, in the island of South Uist. It is situated a little to the north of Heackle. Its effluence is a copious stream, driving the principal mill on the island. There are in the lake several islets, which are a crowded resort of water-fowl, and were formerly frequented by deer.

DRUIE (THE), a small affluent of the Spey, in the parish of Duthill, Morayshire.

DRUM, or DROM, a Celtic word signifying a knoll, a ridge, or a small hill. It occurs frequently by itself as a name of farms, estates, and other rural places; and is also a prefix in many names of seats of population, or other prominent localities, which were originally designated from some central or remarkable knoll.

DRUM. See KINELLAR, DRUMOAK, LIBERTON, and KILSYTH.

DRUM (Loch). See BANCHORY-TERNAN.

DRUMACHARGAN, one of the picturesque, copse-clad, conical hills of the parish of Monivaird and Strowan, Perthshire.

DRUMALBIN, the ancient name of the central ranges of the Grampians, which seem to have been erroneously regarded as one continuous backbone of Scotland.

DRUMALBIN, a hill in the parish of Carmichael, Lanarkshire.

DRUMASHI. See DORES.

DRUMBEG. See DRYMEN.

DRUMBLADE, a parish, containing a post-office station of its own name, in the north-west of Aberdeenshire. It is bounded by Huntly, Forgue, Insh, and Gartly; and is principally divided from these parishes by rivulets. Its length, from north to south, is from 5 to 6, and its breadth, from east to west, 4 to 5 miles. Its circumference is about 18 miles. Superficial area about 6,400 Scotch acres. Its outline is triangular. Its ancient name was Drumblait, which signifies 'Hills covered with corn.' The surface is composed of small hills and valleys. The soil of the latter is deep loam; and that of the higher ground is thin and gravelly, but fertile. Some of the hills are covered with firs, but most are arable. The valleys produce excellent crops. About 5,000 acres are arable, about 400 under wood, and about 1,000 pastoral or waste. The rental is about £6,730; half of which belongs to the Duke of Richmond, while the rest is distributed among four proprietors. There is abundance of a very fine yellow-brown clay, called clay-marl, and used as a manure: very little sand appears in it. The district possesses large quantities of coarse limestone, freestone—here called paisy-whin—and moor-stone, with some slate. The fuel commonly used is peat, turf, heath, &c. English coal is procured from Banff or Portsoy. The principal residence is Lessendrum. There are three tumuli; at the largest of which, called Meet-hillock, near Slioch, Bruce encamped, after having defeated Cumyn at Inverury. A small hill above this tumulus is called Robin's height, and had on the top large stones with inscriptions on them. The chief facilities of marketing and communication are through Huntly, which is 4 miles west of the parish church. Population in 1831, 978; in 1861, 926. Houses, 158. Assessed property in 1860, £6,804.

This parish is in the presbytery of Turriff, and synod of Aberdeen. Patron, the Earl of Kintore. Stipend, £159 9s. 7d.; glebe, £16. Schoolmaster's salary, £45, with about £26 10s. fees, and a share in the Dick bequest. The parish church was built in 1778, and repaired in 1829, and contains about 550 sittings. There is a Free church: and the sum raised in connexion with it in 1865 was £125 0s. 10d. There is a parochial library. Two annual fairs were formerly held in the parish; but they have recently fallen into almost total disuse.

DRUMBURN, a hamlet in the parish of New-abbey, Kirkcudbrightshire.

DRUMCARRO. See CAMERON.

DRUMCLOG. See AVONDALE.

DRUMCULTRAN. See KIRKGUNZEON.

DRUMDERG, an abrupt prominent hill in the parish of Loth, Sutherlandshire. At the foot of this hill, in the glen of Loth, in the 16th century, occurred a bloody conflict between the inhabitants of Loth and the men of Strathnaver.

DRUMELLIE (Loch). See LETNENDY.

DRUMGLOW. See CLEISH.

DRUMGLYE. A village in the parish of Glamis, Forfarshire. Population, about 120.

DRUMIN. See INVERAVEN.

DRUMLANRIG CASTLE, a magnificent seat

of the Duke of Buccleuch, in the parish of Durisdeer, Dumfries-shire. It stands on a knoll or rising-ground, on the right bank of the Nith, about 17 miles north-west of Dumfries, and $3\frac{1}{2}$ north-west of Thornhill; and, for several miles, forms an arresting feature in a rich and remarkably varied landscape, to the eye of a traveller passing along the highway which traverses the picturesque vale of the Nith. The castle is a hollow square, four stories high, surmounted with turrets at the angles, and presents such an array of windows, that the peasantry of the vale fondly report them to be as numerous as the days of the year. From the inner court, staircases ascend at the angles in semicircular towers. On the architraves of the windows and doors is a profuse adorning of hearts and stars, the arms of the Douglases. The castle fronts to the north, and has also a noble appearance on the east, combining, on each side, the aspects of strength and beauty,—the lineaments of a fortress and a mansion; and it is every night secured, not only by a thick door of oak, but by a ponderous gate of iron. Though more Gothic than Grecian, and marked with considerable architectural defects, it is a noble and imposing edifice; and suggests ideas of a princely chieftain holding his court among dependents and vassals. This great pile occupied ten years in building, and was finished in 1689, the year after the Revolution. William, first Duke of Queensberry—celebrated in civil history as a statesman, and in the annals of the Covenanters as an abettor of persecution—planned and completed it; and he expended upon it such enormous sums of money, and during the only night of his residing within its walls, was so exacerbated by the inaccessibility of medical advice to relieve him from a temporary fit of illness, that he abandoned it in disgust, and afterwards, in the unpolished language of the period, wrote upon the artificers' bills for erecting it,—“The deil pike out his een that looks herein!” A portrait in the gallery—that of William III.—is, in its wounds and defacement, a memorial of the Highlanders having occupied the castle on their march in 1745. Drumlanrig was the principal residence of the family of Queensberry. But on the death of Charles, the third Duke, in 1777, without male issue, it passed, along with the Queensberry titles, to William, Earl of March; and upon the death of the latter in 1810, it went by entail to the Duke of Buccleuch. During both these periods, and for years afterwards, it was little occupied, greatly neglected and defaced. But the present noble proprietor, after his majority in 1827, adopted it as a residence, and brought the house itself, and the beautiful grounds around it, into a smiling and polished condition. Pennant says: “The beauties of Drumlanrig are not confined to the highest part of the grounds, the walks, for a very considerable way by the sides of the Nith, abound with most picturesque and various scenery. Below the bridge the sides are prettily wooded, but not remarkably lofty; above, the views become wildly magnificent. The river runs through a deep and rocky channel, bounded by vast wooded cliffs, that rise suddenly from its margin; and the prospect down from the summit is of a terrific depth, increased by the rolling of the black waters beneath. Two views are particularly fine: one of quick repeated but extensive meanders amidst broken sharp-pointed rocks, which often divide the river into several channels, interrupted by short and foaming rapids coloured with a moory taint;—the other is of a long strait, narrowed by the sides, precipitous and wooded, approaching each other equidistant, horrible from the blackness and fury of the river,

and the fiery red and black colours of the rocks, that have all the appearance of having sustained a change by the rage of another element.” The Glasgow and South-western railway, a little north of the Carron-Bridge station, traverses a stupendous tunnel on the Drumlanrig grounds, 4,200 feet in length, running nearly 200 feet under the surface, with an archway measuring 27 feet by 29.

DRUMLEMBO, a village in the landward part of the parish of Campbellton, Argyleshire. Population, 462. Houses, 82. See CAMPBELTON.

DRUMLITHIE, a post-office village in the parish of Glenhervie, Kincardineshire. It stands on the road from Auchinblae to Stonehaven, about a mile east of Bervie Water, 6 miles south-west of Stonehaven, and $7\frac{1}{2}$ north-east by north of Laurencekirk. It has a station on the Aberdeen railway. Most of the inhabitants are weavers. Here is an Episcopalian chapel. Population, 332. Houses, 117.

DRUMLOCHAN BURN, a small tributary of the Findhorn, in the parish of Ardclach, Nairnshire.

DRUMMELLIE (Loch). See LETHENDY.

DRUMMELZIER, a parish in Peebles-shire. It contains a village of its own name; but its post-office is at Rahan-Mill, a little beyond its north-west limit. It is bounded on the south-west by Lanarkshire, and on other sides by the parishes of Glenholm, Stobo, Manor, Lyne, and Tweedsmuir. Its length south-westward is $13\frac{1}{2}$ miles; and its breadth varies from $\frac{2}{3}$ of a mile to 5 miles. It stretches from the mountain-ridge or water-line, which divides Peebles-shire from Lanark, away north-eastward into the centre of the county. Kingle doors burn rises in the heights which divide the two counties, and intersects a limb of the parish over a distance of $4\frac{1}{2}$ miles. There the Tweed, having entered the parish from the south, flows directly across, receiving the waters of this burn on its way; and it thence forms the north-western boundary-line over a distance of 9 miles. On the other hand, the eastern or south-eastern boundary-line is formed by a ridge of heights which separate the local waters of Drummelzier from those of Manor. The body of the parish is thus a slope or acclivity of hills looking down upon the Tweed, and terminating in the vale upon its banks. Its indigenous brooks, 7 in number, all rise toward the east, and run down westward or north-westward to pour their waters into the Tweed. But though a hilly district, and forming a part of the southern high-lands, the parish contains much arable land, and is finely variegated with plantations and cultivated fields. The vale along the river is in general narrow; yet, in some places, it expands into beautiful haughs; and, where the rivulets break down from the heights, it opens into fine cleughs or glens. This vale is the chief scene of culture, and the principal seat of the population. The soil in the haughs is rich alluvial loam; but elsewhere is, in general, sharp and very stony. Limestone and slate are found, but are not worked. Drummelzier castle—formerly a seat of the Tweedie family, and a link in a chain of fortresses, now all in ruin, along the banks of the Tweed—overlooks the river from a beautiful site environed with plantation. There are, in the parish, vestiges of a Roman road, and of two old castles,—one of the latter 6 feet thick in the walls, and held together by a cement as hard as stone, yet so old, that no tradition remains of even the period of its destruction. Upon a spot near the junction of the Powsail rivulet with the Tweed, is a tumulus, reported to be the grave of the famous wizard, Merlin. It is said that Merlin predicted

the union between the two kingdoms, and the prophetic couplet was thought to have been of some use in conciliating the prejudices of the people. It runs nearly as follows:—

“When Tweed and Ponsill meet at Merlin's grave,
Scotland and England one king shall have.”

Except a road along the Tweed, Drummelzier is badly provided with facilities of communication. There are five landowners. The yearly value of raw produce was estimated in 1834 at £4,414. The assessed property in 1860 was £3,173. The village of Drummelzier stands on the Powsail, a quarter of a mile above its confluence with the Tweed, and 8 miles east-south-east of Biggar. Population, about 80. Population of the parish in 1831, 223; in 1861, 209. Houses, 35.

This parish, formerly a vicarage of the rectory of Stobo, is in the presbytery of Peebles, and synod of Lothian and Tweeddale. Patron, Trotter of Balcludean. Stipend, £192 5s. 7d.; glebe, £18. Schoolmaster's salary, £35, with £11 8s. 1½d. of other emoluments. The present parish consists of the original Drummelzier, and the southern and larger part of the old parish of Davick. At Kingledoors, in the south-eastern part of Drummelzier, formerly was a chapel, dedicated to St. Cuthbert, the early evangelist of Tweedside; and, along with its appurtenances, and the lands of Hopcarshire, it was granted to the monks of Melrose.

DRUMMIETERMON, a long straggling village, to the north of Letham, in the parish of Dunnichen, Forfarshire. It is inhabited chiefly by small farmers, most of whom are also weavers. Population, 117. Houses, 28.

DRUMMOCHY, a village on the seaboard of the parish of Largo, Fifeshire. Population, 156. Houses, 22.

DRUMMOND, a village in the parish of Kiltarn, near the river Skiack, on the post-road from Dingwall to Novar inn. It has two well attended fairs,—one in June, and the other in December. The parish-school is here. Population, 72. Houses, 15.

DRUMMOND CASTLE, the ancient seat of the noble family of Drummond, in the parish of Muthil, Perthshire. That family was always ranked among the most ancient and illustrious names of the Scottish nation, and was distinguished by a long train of worthy ancestors not less remarkable for the noble alliances they made, and the dignities conferred on them, than for personal merit. Sir Malcolm Drummond flourished in the middle of the 12th century. From him descended Sir John Drummond of Stobhall, who made a great figure in the reigns of James III. and IV., and was concerned in most of the public transactions of the time. He was raised to the peerage by the title of Lord Drummond, January 14, 1487. His grandson James, 4th peer, was created Earl of Perth, March 4, 1605. His great nephew, James, 4th Earl, was successively Lord-justice-general and Lord-chancellor of Scotland. On the accession of James II. of England, he was in great favour with that monarch, and attempted to follow him abroad after his abdication, but was taken, and suffered four years' imprisonment. On his liberation he followed his master, who created him Duke of Perth, first lord of the bedchamber, knight of the garter, &c. He died at St. Germain's in May, 1716, and was interred in the chapel of the Scottish college at Paris. His eldest son James—by Lady Jane Douglas—attached himself firmly to the House of Stuart. He opposed the Union, and was very active in the insurrection of 1715. His son James, called Duke of Perth, imbibed all the principles of

his family, and joined the standard of the young Pretender. At the battle of Preston he acted as lieutenant-general; “and in spite of a very delicate constitution,” says Douglas, “he underwent the greatest fatigues, and was the first on every occasion of duty, where his head or his hands could be of use; bold as a lion in the field, but ever merciful in the hour of victory.” After the battle of Culloden had extirpated the hopes of the house of Stuart, he embarked for France, but died on the passage, May 13, 1746. Having died before the limited time appointed by parliament for the surrendering, he escaped the attainder; but it fell on his brother and heir John, who was embarked in the same cause, and whose estates and title were forfeited to the Crown. The estate of Drummond Castle, however, descended through a daughter of Lord Perth to the family of Drummond-Burrell, Barons Willoughby d'Eresby in the peerage of England, and Barons Gwydyr in the peerage of Great Britain, who continued to possess the estate. But the earldom of Perth, together with the titles subordinate to it, was restored by act of parliament in 1853 to George Drummond, who was Duc de Melfort and Comte de Lussau in France.

Drummond Castle occupies a picturesque site in the western part of Strathearn, about 2 miles south of Crieff. It is interesting at once for its family associations, for the beauty of its grounds and views, and for a visit made to it during two days, one of them a Sabbath, in September 1842, by Queen Victoria and Prince Albert. The oldest part of it, generally called the Old Castle, was built in 1490, destroyed by fire during the rebellion of 1745, partly rebuilt about 1822, and put into good habitable condition in 1842, preparatorily to the royal visit. The modern castle stands a little east of the old, on the same rock, forming two sides of a quadrangle, facing north and west. But it is a patchwork of various dates, comparatively mean in architectural character, and looking more a baronial keep than a noble mansion. A temporary wooden pavilion was erected in the quadrangle to serve as a banquetting hall during the royal visit. Contiguous to the south side of the castle is one of the grandest gardens in Europe. Nearly a mile to the east is a fine sheet of water, studded with swans. A park of two miles in diameter, with many a feature of both natural beauty and artificial decoration, holds the castle and garden nearly in its centre. The massive hill of Torlum, covered with wood to the summit, rises up on the west; the exquisite scenery of Strathearn lies under the eye, and spreads away to the east; and a sublime sweep of the Grampians fills all the view to the north.

DRUMMOSSIE MOOR, a bleak, broad-backed, sandstone ridge, with an elevation of about 800 or 900 feet above sea-level, along the east border of the parishes of Inverness and Dores. The east end of it forms the moor and battle-field of Culloden.

DRUMMUIR, a railway station in Banffshire, between Auchindachy and Dufftown.

DRUMNADROCHIT, a locality, with a post-office and a large excellent inn, at the mouth of Glen-Urquhart, near the north bank of Loch Ness, on the road from Inverness to Fort Augustus, Invernessshire. Fairs for cattle are held here on the Tuesday in October before Beauly, and on the Tuesday of November before Beauly.

DRUMNETERMONT. See DRUMMIETERMON.

DRUMOAK, a parish partly in Kincardineshire, but chiefly in Aberdeenshire. Its centre is about 11 miles west-south-west of Aberdeen; and it has a post-office of its own name. It is bounded by the parishes of Echt, Peterculter, Durris, and Ban-

chory-Ternan. The bnrns of Gormac and Culter divide it from Echt and Peterculter; and the river Dee divides it from Durris. Its length eastward is 6 miles; and its average breadth is about 2. Its surface rises to the height of about 500 feet above sea-level at the summit of the hill of Drum, and falls thence, with gentle undulations, on all sides to the boundaries, except on the east, where there is an abrupt ridge, called Ord hill, about 430 feet in height. The south shoulder of Drum hill commands an extensive magnificent prospect. Drum loch covers a space of 84 acres, and is fringed with wood. The soil of the parish exhibits much variety, but is generally poor. About 4,270 acres are in cultivation, about 12,700 are pastoral or waste, and about 1,650 are under wood. There are four land-owners. The mansions are Drum and Park,—the former a large Elizabethan structure of the 17th century,—and the latter a Grecian edifice of 1822. The tower of Drum, situated adjacent to the house of Drum, on the east side of the bill of Drum, is an oblong pile of three stories, supposed to have been built in the 12th century, when the forest of Drum was a royal chase. There are in the parish two saw-mills, three meal mills, and one carding mill. The yearly value of raw produce was estimated in 1842 at £13,864. Assessed property in 1860, £4,075. The parish enjoys ample facilities of communication by the Deeside railway and by the Aberdeen and Braemar turnpike. Population of the whole parish in 1831, 804; in 1861, 996. Houses, 195. Population of the Aberdeenshire section in 1831, 642; in 1861, 761. Houses, 148.

This parish, formerly a vicarage, is in the presbytery and synod of Aberdeen. Patron, Irvine of Drum. Stipend, £157 14s. 1d.; glebe, £21 16s. 8d. Schoolmaster's salary, £45, with £22 fees, a share in the Dick bequest, and some other emoluments. The parish church is a neat Gothic structure, erected in 1836, and containing 630 sittings. There are three non-parochial schools, and a parochial library.

DRUMORE, a post-office village in the parish of Kirkmaiden, Wigtonshire. It is situated on the east coast of that parish, 5 miles north-north-west of the Mull of Galloway; and has a small harbour and an old castle. Three or four small sloops belong to it, and are engaged almost solely in exporting agricultural produce, and importing coals and lime. Population, 429.

DRUMORE, a small loch in the parish of Kirk-michael, Ayrshire.

DRUMORE. See **PRESTONPANS** and **KIRKCUDBRIGHT**.

DRUMS, a village in the parish of Errol, Perthshire. Population, 73. Houses, 15.

DRUMSTURDY-MOOR, a straggling village in the parish of Monifieth, on the old road from Dundee to Arbroath, Forfarshire. Rising immediately on the south of it is the far-seeing Laws-hill, on the summit of which is a vtrified fort. Population of the village, 176. Houses, 33.

DRUMVAICH, a hamlet in the parish of Kilma-dock, Perthshire. Population, 49. Houses, 12.

DRYBRIDGE, a station on the Kilmarnock and Ayr railway, between Gatehead and Borassie, Ayrshire.

DRYBURGH ABBEY, a superb monastic edifice, now in ruins, in the parish of Merton, Berwickshire. It stands about 4 miles south-east of Melrose, on the left bank of the Tweed, in the most delightful part of the vale of that river, famed as it is for beauty along its whole extent. The abbey, overgrown with ivy, and adorned with flowers, stands amidst the gloom of wood, on a verdant level, above high banks of red earth which confine the course of the river,

whose rapid stream here makes a bold sweep around the park and mains-farm of Dryburgh, in its passage onwards. Mr. George Smith, architect, found the ruins so overgrown with the luxuriant foliage that he had great difficulty in taking accurate measurements of them. "Everywhere you behold the usurpation of nature over art. In one roofless apartment a fine spruce and holly are to be seen flourishing in the rubbish; in others, the walls are completely covered with ivy; and, even on the top of some of the arches, trees have sprung up to a considerable growth, and these, clustering with the aspiring pinnacles, add character to the Gothic pile. These aged trees on the summit of the walls are the surest records we have of the antiquity of its destruction." The structure was originally cruciform, divided in the breadth into three parts by two colonnaded arcades. The cross or transepts and choir have all been short. A part of the north transept which is still standing, called St. Mary's aisle, is a beautiful specimen of early Gothic work. Perhaps the most striking feature in the remains is a fine Norman arch, which was originally the western doorway. Its enrichments are in the style of the 12th century, and little affected by time. The monastery is a complete ruin. Nothing is entire but the chapter-house, St. Modan's chapel, and the adjoining passages. The chapter-house is 47 feet long, 23 broad, and 20 in height. At the east end there are five pointed windows; the western extremity contains a circular-headed centre-window, with a smaller one on either side. The hall is adorned with a row of intersected arches. Mr. Smith concludes his description with the following remarks:—"From a minute inspection of the ruins we are led to believe that there are portions of the work of a much earlier date. The arch was the distinctive feature of all structures of the middle ages, as the column was of those of classic antiquity; and among these ruins we observed no fewer than four distinct styles of arches,—namely, the massive Roman arch with its square sides, the imposing deep-splayed Saxon, the pillared and intersected Norman, and last, the early English pointed arch. These differ not only in design, but in the quality of the materials and in the execution. The chapter-house and abbot's parlour, with the contiguous domestic dwellings of the monks, we consider of much great antiquity than the church." [Monastic Annals of Teviotdale, p. 323.]—These structures were built of a hard pinkish-coloured sandstone, and exhibit a remarkable diversity in their levels. Near the ruins still flourishes a fine tree which there is good reason to suppose was planted seven centuries ago.

The late Earl of Buchan was devotedly attached to this place. At a short distance from the abbey he constructed in 1817 an elegant wire suspension-bridge over the Tweed, 260 feet in length, and 4 feet 7 inches between the rails, which was recently blown down. His Lordship also erected on his grounds here an Ionic temple, with a statue of Apollo in the inside, and a bust of the bard of 'The Seasons' surmounting the dome. He also raised a colossal statue of Sir William Wallace, on the summit of a steep and thickly planted hill; which was placed on its pedestal September 22, 1814, the anniversary of the victory at Stirling bridge, in 1297. "It occupies so eminent a situation," says Mr. Chambers, "that Wallace frowning towards England, is visible even from Berwick, a distance of more than 30 miles." The statue is 21½ feet high, and is formed of red sandstone, painted white. It was designed by Mr. John Smith, sculptor, from a supposed authentic portrait, which was purchased in France by the father of the late Sir Philip Ainslie of Pitton. The

hero is represented in the ancient Scottish dress and armour, with a shield hanging from his left hand, and leaning lightly on his spear with his right. Upon a tablet below there is an appropriate inscription.

Sir Walter Scott, in the 'Minstrelsy of the Scottish Border,' gives an interesting account of the Nun of Dryburgh,—an unfortunate female wanderer, who took up her abode, about ninety years ago, in a vault amongst the ruins of this abbey, which during the day she never quitted. It was supposed from an account she gave of a spirit who used to arrange her habitation, at night, during her absence in search of food or charity at the residences of gentlemen in the neighbourhood, that the vault was haunted; and it is still, on this account, regarded with terror by many among the lower orders. She never could be prevailed upon to relate to her friends the reason why she adopted so singular a course of life. "But it was believed," says Sir Walter, "that it was occasioned by a vow that, during the absence of a man to whom she was attached, she would never look upon the sun. Her lover never returned. He fell during the civil war of 1745-6, and she never more beheld the light of day."

The late Earl of Buchan, we are told by Allan Cunningham, waited upon Lady Scott in 1819, when the illustrious author of Waverley was brought nigh to the grave by a grievous illness, and begged her to intercede with her husband to do him the honour of being buried in Dryburgh. 'The place,' said the Earl, 'is very beautiful,—just such a place as the poet loves; and as he has a fine taste that way, he is sure of being gratified with my offer.' Scott, it is reported, good-humouredly promised to give Lord Buchan the refusal, since he seemed so solicitous. The peer himself, however, had made his tomb in these ruins before the illustrious bard. The last resting-place of Sir Walter Scott, is a small spot of ground in an area formed by four pillars, in one of the ruined aisles which belonged to his family. The ground originally belonged to the Halyburtons of Merton,—an ancient and respectable baronial family, of which Sir Walter's paternal grandmother was a member, and of which Sir Walter himself was the lineal representative. On a side wall is the following inscription:—"Sub hoc tumulo jacet Joannes Haliburtonus, Barro de Mertoun, vir religione et virtute clarus, qui obiit 17 die Augusti, 1640." Below this there is a coat-of-arms. On the back-wall the latter history of the spot is expressed on a small tablet, as follows:—"Hunc locum sepulturæ D. Seneschallus, Buchani comes, Gualtero, Thomæ et Roberto Scott, nepotibus Haliburtoni, concessit, 1791;"—that is to say, the Earl of Buchan granted this place of sepulture in 1791, to Walter, Thomas, and Robert Scott, descendants of the Laird of Halyburton. The persons indicated were the father and uncles of Sir Walter Scott. The latter of these uncles, however, and his own lady, were the only members of his family buried there before him. Lady Scott was hurried there in 1826, Sir Walter himself in 1832, and their son, Colonel Sir Walter Scott, in 1847. The place looks oppressively sad, intensely sepulchral, and is so small that the body of "the mighty minstrel" required to be placed in a direction north and south, instead of the usual fashion.

"So there, in solemn solitude,
In that sequester'd spot
Lies mingling with its kindred clay
The dust of Walter Scott!
Ah where is now the flashing eye
That kindled up at Flodden field,

That saw, in fancy, onsets fierce—
And clashing spear and shield,—

The eager and untiring step,
That urged the search for border lore
To make old Scotland's heroes known
On every peopled shore,—
The wondrous spell that summon'd up
The charging squadrons fierce and feat,
And garnished every cottage wall
With pictures of the past,—

The graphic pen that drew at once,
The traits alike so truly shown
In Bertram's faithful pedagogue
And haughty Marmion,—
The hand that equally could paint,
And give to each proportion fair,
The stern, the wild Meg Merrilies,
And lovely Lady Clare,—

The glowing dreams of bright romance,
That teeming filled his ample brow,
Where is his daring chivalry,
Where are his visions now?
The open hand, the generous heart
That joyed to soothe a neighbour's pains?
Naught, naught, we see, save grass and weeds;
And solemn silence reigns.

The flashing eye is dimm'd for aye;
The stalwart limb is stiff and cold;
No longer pours his trumpet-note
To wake the jousts of old.
The generous heart, the open hand,
The ruddy cheek, the silver hair,
Are mouldering in the silent dust—
All, all is lonely there!"

It has been conjectured, that the name Dryburgh takes its derivation from the Celtic *Darach-bruach*,—"the bank of the grove of oaks." Some vestiges of Pagan worship have been found in the Bass hill,—an eminence in its vicinity,—among which was an instrument used for killing the victims in sacrifice. In the early part of the 6th century a monastery was founded here by St. Modan; but it is supposed that after his death the community was transferred to Melrose. Mr. Morton observes, that it "was probably destroyed by the ferocious Saxon invaders under Ida, the flame-hearer, who landed on the coast of Yorkshire, in 547, and after subduing Northumberland, added this part of Scotland to his dominions by his victory over the Scoto-Britons at Cattrath." Part of the original monastery is supposed to remain in the sub-structure of the existing ruins. The present structure was founded by Hugh de Morville, Lord of Lauderdale, and Constable of Scotland, about 1150. According to the Chronicle of Melrose, Beatrix de Beauchamp, wife of De Morville, obtained a charter of confirmation for the new foundation, from David I.; and the cemetery was consecrated on St. Martin's day, 1150, "that no demons might haunt it;" but the community did not come to reside here until the 13th of December, 1152. The monks were Premonstratensians, from Alnwick. Tradition says, that the English, under Edward II., in their retreat in 1322, provoked by the imprudent triumph of the monks in ringing the church-bells at their departure, returned and burnt the abbey in revenge. King Robert the Bruce contributed liberally towards its repair; but it has been doubted whether it ever was fully restored to its original magnificence. Certain flagrant disorders, which occurred here in the 14th century, drew down the severe censure of Pope Gregory XI. upon the inmates. Many of the abbots of Dryburgh were persons of high rank and consequence. James Stewart, who was abbot in 1545, occasionally exchanged the cowl for the helmet. Having united his retainers with those of some neighbouring nobles, they holdly determined on making a raid on the English border, and crossing the Tweed,

burned the village of Horncliffe in Northumberland; but the garrisons of Norham and Berwick attacked and drove them across the border with considerable loss, before they could effect much more damage. In the same year Dryburgh abbey was destined again to be laid in ruins; being plundered and burnt by an English force under the Earl of Hertford. The market-town of Dryburgh had been previously destroyed by the troops of Sir George Bowes. The last head of this house—the lands and revenues of which were annexed to the Crown in 1587—was David Erskine, natural son of Lord Erskine, who is described as “ane exceeding modest, honest, and shamefast man.” The abbey and its demesnes were granted by James VI. of Scotland to Henry Erskine, Lord Cardross, second son of John, Earl of Mar, the Lord-treasurer, and Mary, daughter of Esme Stewart, Duke of Lennox,—the direct ancestor of David Stewart Erskine, Earl of Buchan.

DRYBURN. See **INNERWICK.**

DRYFE (THE), a river in Annandale, Dumfriesshire. It rises at the base of Loch Fell, on the northern point of the parish of Hutton and Corrie; flows due south down the centre of that parish for nearly 6 miles; then bends suddenly round and flows for about a mile eastward; and again debouching, takes permanently a south-western direction, over a distance of 9 miles, through the lower part of Hutton, the eastern wing of Applegarth, and the north-western wing of Dryfesdale, when it falls into the Annan. The stream has thus a total run of about 16 miles. In the early part of its course it flows through a hilly country clothed with verdure and adorned with plantation; but afterwards it traverses a champaign country almost all under a rotation of crops. In fair weather the stream is a mere rivulet, clear and pure in its waters, and stored in its pools with abundance of trout and a few salmon; but in humid weather, it is subject to sudden and impetuous floods, which come furiously down from the uplands, lay waste cultivated fields, sweep away produce and stock, and occasionally plough up, over rich and loamy soil, a new channel for the river. The Dryfe's impetuosity, or its property of ‘driving’ all before it, is supposed to be alluded to in its name.

DRYFE-SANDS. See **DRYFESDALE.**

DRYFESDALE, a parish, containing the post-town of Lockerby, in the centre of Annandale, Dumfriesshire. The name is popularly pronounced Drysdale. It is derived from the river Dryfe, and was anciently applied to the entire basin of that stream. The parish is bounded by Applegarth, Hutton, Tundergarth, St. Mungo, Dalton, and Lochmaben. It measures in extreme length, from a bend of the Annan, opposite Dormount, on the south, to the point where it is first touched by Corriellaw burn, on the north-east, $7\frac{1}{2}$ miles; and, in extreme breadth, from a bend of the Annan, opposite Halleaths on the west, to the confluence of Corrie water with Milk water on the east, 5 miles. Its area is upwards of 11,000 acres. The north-eastern division is an assemblage of verdant hills, partly cultivated and partly in pasturage. The highest elevation is White Woollen or White Wooten; so called from its having formerly fed with its fine pasturage large flocks of white sheep. Though rising 1,500 feet above the level of the sea, and somewhat acclivitous in ascent, it now nearly all luxuriates beneath dresses of grain, and presents to the eye of a lover of scenic beauty connected with agricultural improvement, a picture which will live long in his remembrance; and, in its turn, it commands from its summit a view of other objects so beautiful, so various, so far-spreading before the

eye, stretching away in a panorama of the picturesque, that the tourist will feel attracted to it as a kind of temple of taste. Standing on this hill, a spectator sees spread at his feet the richly-tinted carpeting of the How of Annandale; he looks across upon the brilliant landscape of Lower Nithsdale, backed by the looming hills of Galloway; he admires the serried horizon, though a limited view, toward the north; he sees along the diversified scenery, now frowning and highland, and now smiling and lowland, of Eskdale and the English border; and he looks away over the sandy waste, or the tumultuous and careering waters of the Solway frith, to the Isle of Man and the Irish sea. Many views are more magnificent and thrilling, but few live more soothingly and fondly in the imagination. The other hills of Dryfesdale, for the most part, are, like this chief one, cultivated and under a rotation of crops. The western and southern parts of the parish are in general flat and in a state of high cultivation. Along the banks of the Dryfe and the Annan, are tracts of rich holm-land, the depositions of the streams from time immemorial, consisting of deep loam, easy of culture, and luxuriantly fertile. The other flat grounds are, in general, light and dry, lying on a slaty and ragged rock or gravel; and, when properly cultivated, are abundantly productive. The Annan forms the boundary-line for about $6\frac{1}{2}$ miles on the west and south; the Milk, for about 2 miles on the south-east; and the Corrie, for about $1\frac{1}{2}$ mile on the east;—and they all diversify and enrich the landscape, and possess considerable attractions to the angler. The Dryfe—which was described in the preceding article—here terminates its course, after traversing the parish over a distance of $2\frac{1}{2}$ miles. The depositions which it makes, and the stretch of level laud which it occasionally desolates with its floods before entering the Annan, are called Dryfe-sands. This locality is memorable as the scene of a sanguinary contest, on the 7th December, 1593, between the Maxwells and the Johnstones. The former, though much superior in numbers, were routed and pursued; and lost, on the field and in the retreat, about 700 men, including Lord Maxwell, their commander. Many of those who perished or were wounded in the retreat, were cut down in the streets of Lockerby; and hence the phrase, currently used in Annandale to denote a severe wound,—“A Lockerby lick.” On Dryfesands, or the holm of Dryfe, about $\frac{1}{2}$ a mile below the old churchyard, are two very aged thorn-trees, called “Maxwell's Thorns,” with a tumulus at their base, which mark the scene of the slaughterous onset. In 5 localities are vestiges of strong towers; and in 8 places—chiefly eminences—are remains of camps or forts, some square or Roman, and others circular or British. The British camp most in preservation is at Dryfesdale gate, and occupies about 2 acres of ground, and commands an extensive view. The counterpart of this, is a Roman one about $\frac{1}{2}$ a mile to the east, where, about the end of the first century, the army of Julius Agricola, and the forces of Corbredus Galdus, King of the Scots, met in warlike encounter. There are plain traces of the great Roman road which traversed Dryfesdale, and which here branched-off into two great lines. The parish is intersected from north to south by the Caledonian railway, and by the road from Glasgow to London; and it has a station on the former at Lockerby. The yearly value of raw produce was estimated in 1836 at £17,550. Assessed property in 1860, £10,881. Population in 1831, 2,283; in 1861, 2,509. Houses, 462.

This parish is in the presbytery of Lochmaben, and synod of Dumfries. Patron, the Crown.

Stipend, £165 10s. 9d.; glebe, £25. Unappropriated tithes, £53 18s. 7d. Schoolmaster's salary, now is £70, with £37 other emoluments. The parish church, situated in Lockerhy, was built in 1757, and contains 750 sittings. There is a Free church in Lockerhy, whose receipts in 1865 amounted to £241 9s. 1d. There is also an United Presbyterian church in Lockerhy, with an attendance of about 250. There are two F. church schools. The church of Dryfesdale was anciently dedicated to St. Cuthbert, and belonged, as a mensal church, to the bishop of Glasgow. The upper part of the parish,—then called Little Hutton, to distinguish it from the continerminous parish of Hutton on the north—was a chapelry, having its own place of worship at an extinct hamlet called Little Hutton. There were also 2 other chapels,—one at Beck-toun, and the other at Quaas. The former belonged to the Knights Templars, and may still be traced in the vestiges of ancient tombs in what formed its burying-ground. Quaas chapel likewise has left local memorials; and contributed its font to serve as the market-cross of Lockerhy. The ancient parochial church of Dryfesdale stood on Kirkhill, on the south-east of the Dryfe. In 1670, both it and part of the cemetery around it, were swept away, and their site converted into a sand-hed, by one of the Dryfe's impetuous inundations. Next year, a new church was built near the former site, on what was thought a more secure spot; yet even this was, in a few years, so menaced by the encroachments of the river, which tore away piece after piece of the cemetery, that, along with its site, it was finally abandoned. These disasters were regarded as the verification of an old saying of Thomas the Rhymor, which a less astute observer of the furiously devastating power of the Dryfe than he might very safely have uttered:—

"Let spades and shoals do what they may,
Dryfe will have Drysdale kirk away."

The church of 1670, and even greater part of the cemetery, have now wholly disappeared. A story has long been current in Annandale, exhibiting an instance of the washing away of the bodies of the dead,—that a widower, after mourning for a reasonable time the spouse whom he had interred in Dryfesdale, wedded, on a wet and stormy day, a second helpmate, and crossing the hridge at the head of the bridal party, on their way homeward from the marriage-ceremony, saw the coffin of his deceased wife falling from "the scaur" into the torrent, and gliding toward the spot on which he stood. In what remains of the old cemetery, are two conspicuous tombs or enclosed burying-plots,—one of them that of the Johnstones, with their coat-of-arms sculptured over the entrance. See LOCKERBY.

DRYGRANGE, a locality where there is a bridge across the Tweed, above the influx of the Leader, on the road from St. Boswells to Lauder, on the eastern verge of the parish of Melrose, Roxburghshire. The view from the bridge is very fine. Closely adjoining is Drygrange house.

DRYHOPE, an old fortalice in the parish of Yarrow, Selkirkshire. It stands on a slight eminence, on the rocky margin of a streamlet, within a few hundred yards of the efflux of the Yarrow from St. Mary's Loch, 15 miles west-south-west of Selkirk. It was one of the strongest towers in the ancient Ettrick forest, second only to Newark; and it commands a finer and more extensive view than any other, along the vale, the bill screens, and the lateral glens of the Yarrow, and over the Loch of the Lowes away to the hills of Moffatdale. It is square, lofty,

and in good preservation, though roofless. It he-longed some time to the Earls of Traquair, but it is now the property of the Duke of Buccleuch. It was the birthplace and home of Mary Scott, "the Flower of Yarrow," famous for her beauty, the subject of some affecting fictitious tales, and the heroine of a tragical combat in which antagonist groups of brothers, the one Scotts and the other Douglasses, were all either killed on the spot or mortally wounded.

DRYMEN, a parish, containing a post-office village of its own name, in the west of Stirlingshire. Its outline is nearly triangular. Its greatest length from north to south is about 15 miles, and its greatest breadth about 10. It is bounded on the north by Perthshire, from which it is separated at various points, by the waters of Duchray, Kely, and Forth; on the south by the parish of Killearn and the shire of Dumbarton; on the west by the parish of Buchanan, and by the Catter burn and the Endrick, which separate it from Dumhartonsire; and on the east by the parishes of Kippen, Balfron, and Killearn. The greater portion of it is mountain and moor, and not much is distinguished for fertility. A large hilly tract in the north-west is almost entirely covered with heath, and an immense moss occupies the north-eastern angle. A tract of moorland likewise occupies all the south; but a picturesque portion of Strathendrick, in a beautiful state of cultivation, lies across the centre. The extensive mosses, which bear very unequivocal marks of a ligneous origin, seem to prove that this part of Stirlingshire was formerly almost entirely covered with wood. In 1795 an alder tree in this parish measured 19½ feet round the trunk; and at the present day an ash tree of an immense age in the churchyard measures 17 feet. The greater part of the uncultivated grounds afford pasture to sheep and black cattle. The hills on the west rise to the height of about 1,600 feet above sea-level; but the mosses in the centre, even at the water-shed between the river-system of the Forth and the river-system of the Clyde, do not rise higher than 222 feet. See BALLAT. There is abundance of wood, especially in the vale of the Endrick. The landowners are numerous. The principal residence is Park. The assessed property in 1843 was £10,032; and in 1860, £11,508. There are in the parish three corn mills, and at Gartness a woollen mill. The parish is traversed by the west road from Stirling to Dumharton, and also is traversed by the Forth and Clyde Junction railway. On the farm of Finnich Tennant is a large sepulchral cairn, in the interior of which several stone-coffins have been found; and near the bill of Gartmore, in the north-east district, is a Roman *castellum* in a fine state of preservation. It measures 50 paces square within the trenches. The noble family of Drummond derive their name from this parish, having, it is said, obtained a grant of lauds here so early as the time of Malcolm Canmore, and made Drymen their principal residence for 200 years before the time of David II., when they removed to Perthshire. A tradition exists that John Napier, the inventor of the logarithms, was born at the farm-house of Drumbeig in this parish. Of the truth of this there is some doubt. Part, however, of his patrimonial inheritance lay here, and the house of Gartness on the Endrick was a favourite residence of this illustrious person, and the scene of many of his profound investigations. This parish, like others in the western part of Stirlingshire, was down to a late period subject to the exaction of black-mail by the Macgregors of Glengyle. Sir Walter Scott mentions that on one occasion Rob Roy Macgregor summoned all the heritors and farmers of the surrounding district to meet him at the kirk of Drymen to pay this

tribute. Population of the parish in 1831, 1,690; in 1861, 1,619 Houses, 301.

This parish is in the presbytery of Dumbarton, and synod of Glasgow and Ayr. Patron, the Crown. Stipend, £272 7s. 4d.; glebe, £20. Schoolmaster's salary, £50, with £25 fees. The parish church stands near the village, and was built in 1771, and contains about 400 sittings. There is in the village an United Presbyterian church, which was built in 1819, and has an attendance of about 100. There are two private schools, a school of industry, a parochial library, and a savings' bank.

THE VILLAGE OF DRYMEN stands on the west road from Stirling to Dumbarton, about a mile north of the Endrick, and 5 miles west-south-west of Balfon. It forms a good key-point for visiting some of the fine scenery of the west of Stirlingshire, but is not a seat of any considerable trade. The Duke of Montrose's grounds of Buchanan House adorn its western vicinity. The part of the vale of the Endrick contiguous to it is very fine, and the bridge which there takes the highway across that stream is a handsome structure. The inhabitants of the village, with the exception of the ordinary tradespeople, are chiefly rural labourers. Fairs used to be held here almost every month; but now, in consequence of the increased facilities for obtaining commodities from Glasgow and other large markets, they are reduced to four in the year, chiefly for the hiring of servants. The village has a post-office under Glasgow, and a station on the Forth and Clyde Junction railway. Population in 1861, 411. Houses, 86.

DRYSDALE. See DRYFESDALE.

DUALT. See KILLEARN.

DUART CASTLE, an ancient building, once the castle of the chief of the Macleans, occupying the brink of a high cliff which shoots out from the coast of Mull into the sound opposite Oban. It is $4\frac{1}{2}$ miles from the ferry of Achnacraig, and consists chiefly of a large square tower, with walls of an immense thickness. Two additional buildings of more recent construction—one of which was occupied by a garrison towards the end of last century—connected by a high wall, form with the tower an oblong square of about 120 by 72 feet.

DUB OF HASS. See DALBEATTIE.

DUBB'S CAULDRON. See WAMPFRAY.

DUBB'S WATER, the short stream which conveys the superfluence of Kilmirnie loch to Lochwinnoch loch, on the mutual border of Ayrshire and Renfrewshire.

DUBBESIDE, or INVERLEVEN, a village in the parish of Markinch, Fifeshire. It stands at the mouth, and on the right bank of the river Leven, and is connected by a suspension bridge over that river with the town of Leven. Its inhabitants are employed chiefly in the manufacture of coarse linen. Here is an United Presbyterian church with an attendance of about 200. Population, 337.

DUBCAPON. See DOWALLY.

DUBFORD, a post-office station subordinate to Banff.

DUBH (LOCH). See SHIRA (THE).

DUBRACH. See DEE (THE).

DUBTON JUNCTION, the station on the Aberdeen railway at which the branch goes off to Montrose.

DUCHALL (THE), the southern head-stream of the Gryfe, rising on Garrock hill, at the south-eastern extremity of the parish of Innerkip, and flowing eastward about 6 miles, chiefly within the parish of Kilmalcolm, to a confluence with the northern head-stream of the Gryfe, or Gryfe proper. The extensive barony of Duchall, in the parish of Kilmalcolm,

was for many ages the chief property and place of residence of the ancient family of Lyle, Lord Lyle, which became extinct about 1556. Twelve years before that date most part of it was sold by Lord Lyle to John Porterfield of that ilk. The remains of the strong and romantic castle of the barony stand upon the confluence of the Duchall with another rivulet. In 1710 a mansion-house was built about a mile east from this. The present mansion-house was built in 1768. It stands on the right bank of the Gryfe, and is well sheltered with wood.

DUCHALL-LAW. See PAISLEY.

DUCHRAY. See DOWALLY.

DUCHRAY (THE), one of the head-streams of the river Forth. See FORTH (THE).

DUCRAIG, a small rocky island in the frith of Forth, lying west of Rosyth Castle, in the parish of Inverkeithing, but belonging to the parish of Dunfermline, Fifeshire.

DUDDINGSTON, a parish on the coast of Edinburghshire. It contains the post-town of Portobello, the villages of Joppa, Easter Duddingston and Wester Duddingston, and the hamlets of Duddingston Mill, and Duddingston Salt-Pans. It is bounded by the frith of Forth, and by the parishes of Inveresk, Liberton, Canongate, St. Cuthbert's, and South Leith. Its outline is very irregular, and might have been nearly a rectangle, but for a triangular elongation on its eastern side, and the attachment of a westward strip to its south-west angle. On the north, from the east base of Arthur's seat to the sea, the parish is only $1\frac{1}{2}$ mile long; but on the south, from Salisbury-green on the west to Magdalene-bridge on the shore, it is $3\frac{1}{2}$ miles. In its central part, over half its length, it is nearly $1\frac{1}{2}$ mile in breadth; but in the western strip it is only $\frac{1}{2}$ of a mile, and in the eastern angle diminishes from $1\frac{1}{2}$ mile to a point. Nearly the whole of the parish is dressed in the richest garb of cultivation. A fertile soil, well-enclosed fields, a varied surface, the beautiful demesne of the Marquis of Abercorn, and a delightful intermixture of lawn and tillage, of water-scenery, rows of plantation, and fences of shrubbery, render it an attractive environ of the proud metropolis of Scotland. Pow burn and Braid burn enter it on the south-west, and after forming a confluence, diagonally intersect it, and diffuse in their progress many beauties of mimic landscape. The united stream is conducted through the pleasure-grounds of the Marquis of Abercorn in an artificial canal, and afterwards traverses a romantic little dell, and passes on to pay its tiny tribute to the sea. Duddingston loch, spread out at the south-east base of Arthur's seat, and measuring about $1\frac{1}{2}$ mile in circumference, smiles joyously amid the opulent scenery around it, and in winter allures crowds of skaters from the neighbouring city to its glassy bosom. On the north-eastern bank of the lake rises the fine Grecian form of Duddingston-house, surrounded by gardens, plantations, mimic temples, and various adornings indicating united opulence and taste. A little eminence, surmounted by the venerable-looking parish-church, under the south cope of Arthur's seat and overlooking the lake, commands a wide expanse of beautiful and picturesque scenery. Overshadowed by the bold precipices of the neighbouring mountain, and shut out by it from every view of the magnificent and crowded city at its further base, a spectator feels himself sequestered from the busy scenes which he knows to be in his vicinity, or he hears their distant hum dying away on the breeze, and disposing him to enjoy the delights of solitude; and he looks south-east and south over a gorgeous panorama of elegant villas, towering castles, rich valleys, undulating hillocks, groves, ruins, and a

plenteous variety of scenic tints and shading, till his vision is pent up by the Pentlands and Lammermoor, or glides away with the sinking sea into the distant horizon. Many of the scenes and objects within his view—such as Craigmillar castle—crowd his mind with historical recollections; and others—such as the peopled shores and the laden waters of the frith—portray to him the enterprise and refinements of a modern age. Whether in the seclusion and loveliness of its own immediate attractions, or in the exhibition it gives of the wide landscape around it, softened and ruralized by the intervention of the mountain-screen of Arthur's seat hiding Edinburgh from the view, the little eminence of Duddingston is captivating in its attractions, and draws to its soothing retirement many a tasteful or studious citizen of the metropolis to luxuriate in its pleasures. The pedestrian approach to it from the city possesses allurements of its own, to heighten the attractions of the resort; leading by a pleasant path through the Queen's park, and under the basaltic columns of Samson's ribs, overhanging the tunnel of the Edinburgh and Dalkeith railway.

Though the parish, in its present state, is not excelled in the loveliness and exuberance of cultivation by any district in Scotland, and may compete with the finest spots in the rich champaign of England, it was, so late as 170 years ago, an unreclaimed moor, covered with sand, and variegated only by the rankest and most stunted shrubbery and weeds. About the year 1688, the proprietor of the estate of Prestonfield was Lord-provost of Edinburgh; and, better acquainted than his contemporaries with the fertilizing powers of city manure, he availed himself of ready and thankful permission, to enrich the sterile soil of his property with the accumulations of the yards and streets of the metropolis. So successful was his policy that, arid and worthless as his lands had been, they speedily became the first which were enclosed in the vicinity of Edinburgh, and are still esteemed the best grass pastures about the city, or perhaps anywhere else in Scotland. About the year 1751, the Earl of Abercorn, proprietor of the estate of Duddingston, compensated in vigour what had been lost by delay, in imitating the successful movements on the contemninous property; and having subdivided his estate into commodious farms, and enclosed and beautified it with hedgerows and clumps of plantation, expended £30,000 in rearing the architectural pile, and spreading out the array of water-embellishments and landscape decorations, which preside in its centre. At present very nearly two-thirds of the parochial area is in cultivation; while all the rest is either in pasture, meadow, or fen, or under wood or water. The yearly value of raw produce, exclusive of mines and manufactures, was estimated in 1843, at £10,252. Assessed property in 1843, £21,896 6s. 5d.; in 1860, £26,927.

Coal of excellent quality abounds in the parish, and finds a ready market in the metropolis. The strata of limestone and ironstone which run north-eastward through Edinburghshire, traverse the parish, and dip into the sea near its eastern extremity. Clay of so pure a kind has been found as to be material for stoneware, and for crucibles capable of sustaining without injury a very high degree of heat. On the coast, in the interstices of rocks and stones, have been found curious and rare vegetable petrifications; some of them resembling the finest Marseilles quilting, and others formed of reeds and shrubs known to be indigenous only in tropical countries. Small pieces of chalcedony and porphyry, and large masses of agate, have been picked up on the beach; but may now, it is presumed, be vainly

sought for, after the peering searches of numerous virtuosos of a former generation. Marl of different kinds, of great richness and in much plenty, has been found in Duddingston loch. Indigenous plants of upwards of 400 species, exhibiting a curious and interesting variety, allure the hotanist to gratify his taste, and admire the interminable displays of creative skill and beneficence, round the banks of the loch, and along the roots and skirts of Arthur's seat. The Fishwives' causeway, forming the north-east boundary of the parish, and once a part of the great post-road to London, bears mark of considerable antiquity, and is supposed to be a remnant of those regular roads, converging to Holyrood-house, which Mary, of debated memory, patronised as a means of soothing or of benefiting her turbulent subjects. At the mouth of Duddingston burn, have been found, buried in a deep stratum of clay, and from bark to core as black as ebony, the trunks of large oak trees,—remnants, it is supposed, of the King's forest, in which the inmates of the monastery of the Holy Cross had the privilege of nourishing their hogs. The Figgetwhins, formerly a forest, stretching over a considerable territory—sold in 1762 or 1763 for only £1,500—and now in part the opulent and beautiful tract around Portobello, and in part the site of that extensive and smiling suburb of the metropolis, are said to have been a place of shelter and of rendezvous to Sir William Wallace and his copatriots, when they were preparing to attack Berwick. Monteath, the secretary of Cardinal Richelieu of France, David Malcolm, an essayist, a celebrated linguist, and a member of the Antiquarian society about 1739, Pollock, professor of divinity in Aherdeen, and John Thomson, a recent landscape painter of no mean fame, were all ministers of Duddingston. The parish is cut, through its western wing, by the old Edinburgh and Dalkeith railway, and is intersected from west to east near the shore by the Leith branch of that railway, and by the main trunk of the North British railway. It is traversed also by the great road from Edinburgh to Berwick. Its principal manufactures are glass, earthenware, bricks, hats, ironwork, paper, and chemical preparations, chiefly in and near Portobello. Population in 1831, 3,862; in 1861, 5,159. Houses, 822.

The village of Easter Duddingston stands in the eastern angle of the parish, on a rising ground near the sea, and consists of a few plain cottages inhabited by labourers. Population, in 1831, 171; in 1851, 163. Houses, 39.—Wester Duddingston, situated on the north side of the loch, was once populous, and contained 30 looms; but now, though neat in appearance, and beautiful in situation, surrounded by gardens and plantations, and so attractive as to draw to its villa-like cottages summer-residents from Edinburgh, is very small, and not increasing. At the east end of it a house still stands in which Prince Charles slept on the night before the action at Prestonpans. This village is a station of the Edinburgh county police. Population in 1831, 225; in 1851, 167. Houses, 39.—Duddingston-Mill is a joyous little hamlet, containing the parochial school, and delightfully situated near the centre of the parish, about $\frac{1}{2}$ a mile east of Wester Duddingston. Near it is Cauvin's hospital, an edifice resembling a large elegant villa, built in 1833, and maintained, for the board and liberal education of 20 boys, by a munificent bequest of Louis Cauvin, a Duddingston farmer.—Duddingston Salt-pans consist of some straggling houses on the coast to the eastward of Joppa.

The parish of Duddingston is in the presbytery of Edinburgh, and synod of Lothian and Tweeddale.

Patron, the Marquis of Abercorn. Stipend, £313 13s. 10d.; glebe, £29. Unappropriated tithes, £53 7s. 5d. Schoolmaster's salary, £35, with about £12 fees. The parish church is a building of great antiquity, with arches and ornaments of Saxon character. A beautiful semicircular arch divides the choir from the chancel. The church was enlarged and repaired about 25 years ago, and contains between 300 and 400 sittings. There are in Portobello a quoad sacra parochial church, erected in 1810, enlarged in 1815, and containing 1,022 sittings; a Free church, with an attendance of 650, and receipts of £1,002 14s. 3½d. in 1865; an United Presbyterian church, built about 28 years ago, with an attendance of about 330; a Congregational chapel, built in 1835, and containing 300 sittings; an Episcopalian chapel, containing 504 sittings; and a Roman Catholic chapel, built in 1826, and containing 200 sittings. There are an endowed school at Easter Duddingston, eleven unendowed schools at Portobello, a parochial library at Wester Duddingston, and various useful institutions at Portobello. In the parish churchyard is an elegant marble obelisk, to the memory of Patrick Haldane, Esq. of Gleneagles. During the reign of William the Lion the monks of Kelso acquired the church and lands of Duddingston; and these being at an inconvenient distance from their abbey, they appointed baron-bailies, and on advantageous terms to tenants let the lands. In 1630, the estate of Prestonfield, now the property of Sir Robert Keith Dick, Bart., was disjoined from the parish of St. Cuthbert.

DUDDINGSTON, Linlithgowshire. See **ABERCORN**.

DUFF-HOUSE, a seat of the Earl of Fife, in the immediate neighbourhood of Banff, surrounded by a noble park, said to be 14 miles in circumference. It is a large quadrangular edifice, of massive proportions, decorated with Corinthian pillars in front, and a handsome balustrade on the top, terminated at each corner by a square turret. Externally it is sprinkled over with vases and statues; internally—to borrow a new-coined expression from a late lively tourist—it is perfectly Louvrezed with pictures,—chiefly portraits. There are the two mistresses of Louis XIV., Madame de Montespar, and the Duchess de Valliere, with the grand march himself; also Lady Castlemain, and Lady Carlisle, Jane Shore, and Nell Gwyn, with some others equally respectable, and forming "a pretty set" in every sense of that equivocal term; also Queen Elizabeth and her beautiful victim Queen Mary, and the youthful and accomplished Lady Jane Grey; the Duchess of Richmond by Vandyke; Mrs. Abington by Sir Joshua Reynolds; the late Duchess of Gordon, "looking like majesty personified;" Sir Francis Knollys by Sir Godfrey Kneller; the Admirable Crichton; the Chevalier St. George when a boy; Colonel Gardiner; and a whole host beside of beauties, warriors, statesmen, nobles, and authors.

This splendid mansion stands near the middle of an extensive plain, spreading on one side to the edge of the Deveron, which here fills its channel without cutting, and but rarely overflowing, its banks. The wall of the park, upon its north-east side, sweeps along the town of Banff; and the great gate, at the distance of about half-a-mile from the house, opens into the street. The windows of two sides command an approach from another quarter, where the river quits the park, at the distance of half-a-mile from the house. This approach opens straight along a magnificent bridge of seven arches, upon the highway to Aberdeen; the road into the town making an easy sweep to the other hand, and passing by the gate which leads from the end of the bridge to the house. The town of Banff, with the shipping in

its port, and a wide prospect of the ocean, form the verge of the landscape on the one side; upon the other are the winding river, the broad extended green vale, diversified by a variety of trees and shrubs in serpentine stripes, or grouped together in spreading groves; while the distant acclivities, on either side, are enriched to a great extent by cultivated fields and sheltering plantations. Where the river enters the park on the south side, it is contracted to the breadth of a brook between hanging rocks, over which is thrown a private bridge of one stately and elegantly formed arch, having in one of the abutments a chamber which commands a striking and romantic view to either hand. A large enclosure, stocked with a numerous herd of fallow deer, is contained in a recess of the park. On that quarter of the park which divides it from the town of Banff, there is a considerable extent of garden, enclosed by a wall, well covered with fruit trees, and a long range of hot houses.

In the age, it is supposed, of Alexander III., a convent of Carmelite friars had obtained possession of the beautiful and fertile vale in which Duff-House is now placed. A grant by Robert Bruce, dated at Scone, August 1st, 1324, confirms this possession of nearly 500 acres, for procuring bread, wine, and wax, for the exercises of divine worship. The same charter bestows a "chapel of the Virgin Mary near the town of Banff," the situation, it is believed, of the former church—where they had also several cells—"with the benefice thereto appertaining, for building a chapel and the other houses of their order." The ruins of this establishment have been entirely removed. In forming the modern arrangement of the grounds about Duff-House, a very large urn or stone, on a suitable pedestal, decorates a hillock in the park, and preserves all the bones which were turned up in the cemetery of these monks. The situation also of their chapel is now occupied by the vaulted sepulchre of the family of Fife, on a green mount overhanging the meadow upon the bank of the river. A plain undecorated fabric rises over the vault, which contains the monuments of the ancestors of the family; and considerable ingenuity has been exerted, and proportional cost expended, in providing for its long duration.

DUFF-KINNEL. See **KINNEL (THE)**.

DUFFTOWN, a post-office village in the parish of Mortlach, Banffshire. It stands near Mortlach church, and near the Fiddich rivulet, at the intersection of the road from Craigellachie to Cabrach with the road from Keith to Tomantoul, 11 miles south-west of Keith. It was founded in 1817. It contains a jail on its square, and a small neat Roman Catholic chapel. Fairs are held on the first Wednesday of April, old style, on the Monday before the first Tuesday of June, on the second Thursday of July, on the third Thursday of August, and on the Saturday before the second Tuesday of October, old style. The village has a station on the Keith and Craigellachie railway, an office of the Aberdeen Bank, and an office of the North of Scotland Bank. The circumjacent district is a rich mineral field, and there are, in particular, extensive limestone works. Population in 1861, 1,249.

DUFFUS, a parish on the coast of Morayshire. It contains the post-towns of Burgh-Head, Hopeman, and New Duffus, the villages of Cummingston, Roseisle, College, and Kaim, and the hamlets of Kirktown, Buthill, Starwood, Old Roseisle, Inskiel, and Unthank. It is bounded by the Moray frith, and by the parishes of Drainie, Spynie, and Alves. Its length eastward along the coast is 5 miles, and its average breadth is about 3 miles. Its outline is nearly that of a parallelogram. Except where it

tameness is varied by plantations, and relieved by the hill of Roseisle, a small eminence in its centre, and by an artificial mount on which the ruins of Duffus castle stand, the surface is a continued plain, everywhere arable. Along the coast extends a level tract, about $\frac{1}{2}$ a mile in breadth, which was at one time richly cultivated, but for many years became covered with sand from the western shore. The sand at length ceased to be blown thither, and the land has been almost all restored to its former condition. The soil in the eastern district is a deep rich clay, capable of producing any sort of crop. It resembles the Carse of Gowrie. The western consists of a rich black earth, mixed here and there with sand, but in general so excellent that the crops for quality and increase cannot be surpassed in Scotland. The plain of Duffus, together with the adjoining land, has been called, perhaps more from richness than from situation, "the Heart of Morayshire." The mildness and geniality of the climate are well known, but in so northern a latitude are very surprising. There is little rain; and as there may be said to be no hills, neither are there rivers or brooks. The loch of Spynie, which, when full, extended into Duffus for upwards of a mile, has been drained out of the bounds of this parish altogether; and though the benefits anticipated from the draining of it have not in general been realized, yet, so far as Duffus is concerned, the project has been successful. Duffus castle stood on the north-west shore of this lake. A deep moat surrounded it with a parapet-wall and drawbridge; and from the low-lying marshy state of the ground, it must have been almost encompassed with water. This castle must have been of great antiquity. The walls are formed of rude workmanship, being composed of rough stones run together with lime, the whole forming a mass 5 feet thick. The ruin, as it now appears, surrounded with its clumps of aged trees, and standing in the midst of a pleasant plain, presents at every point of view, a picturesque and interesting appearance. In the distance from the castle is the palace of Spynie, now also dilapidated. Formerly the walls of both these places must even have been washed by the waters of the loch; but now, since these have been drained away, corn-fields and green pastures intervene. The old castle is thought to have formed a place of strength for the protection of the palace. One of its earliest possessors, and perhaps its founder, was Freskinus de Moravia, whose family became conspicuous in Moray in the reign of David I. It is not certain when this castle was dilapidated. The coast of Duffus at the eastern end is rather bold, rocky, and cavernous. There are freestone quarries on the coast; while, inland, there is limestone which is now burnt for manure, &c. At the western end, the land is only elevated about 4 feet above sea-level. At this extremity a small but rather conspicuous promontory runs into the sea, forming the north-eastern extremity of Burgh-head bay. See BURGH-HEAD. Near Kaim, at this end of the parish, stood an obelisk, conjectured to have been that erected near the village of Camus, in commemoration of the victory obtained by Malcolm in Moray, over the Danes, under their memorable leader Camus. There are six principal landowners, and three of them (Sir Archibald Dunbar, Baronet of Northfield, Stuart of Inverugie, and Brander of Roseislehaugh,) are resident. The yearly value of raw produce was estimated in 1835 at £21,806. Assessed property in 1860, £12,074 odds. The village of New Duffus stands on the Northfield estate, 5 miles north-west of Elgin. It is remarkably neat, regular, and clean, and has a square enclosed by four paved streets. The villagers were noted for their devotion to the house

of Stuart. Population of the village, 159. Houses, 54. Population of the parish in 1831, 2,308; in 1861, 3,308. Houses, 640.

This parish is in the presbytery of Elgin, and synod of Moray. Patron, Sir Archibald Dunbar, Bart. Stipend, £232 8s. 10d.; glebe, £18. Unappropriated tithes, £245 15s. 11d. Schoolmaster's salary, £52 10s., with fees, and a share in the Dick bequest. The parish church, situated at New Duffus, is an old plain building, repaired in 1782. There is a Free church at Burgh Head: attendance, 720; receipts in 1865, £209 19s. 2½d. There are also at Burgh-Head a royal bounty chapel of the Establishment, and an United Presbyterian church. There is a small Episcopalian chapel near Kaim. There are an Assembly school and six private schools. Duffus gave the title of Baron in the peerage of Scotland to a branch of the noble family of Sutherland; but the title has been dormant since the death of Benjamin the fifth lord in 1843.

DUICH (LOCH), an arm of the sea, deflecting south-eastward from the head of Loch Alsb, and extending along the south-west side of the parish of Kintail, in the south-west corner of Ross-shire. Its length is about 5 miles. Its screens consist of mountains, rising right from its edge, sometimes in bold rocky acclivities, and sometimes in gentle undulating ascents, clothed with verdure, and variegated with trees and rocks. Its head is wider than its entrance, and leads to Glen-Leik and Glen-Shiel. One of the mountain-summits overhanging it commands a very extensive sublime prospect.

DUIRINISH, or DURINISH, a parish, containing the post-office station of Dunvegan, and the village of Stein, in the south-west of Skye, Inverness-shire. It extends from the Grieshernish branch of Loch Snizort on the north to Loch Bracadale on the south, and is bounded on its landward or east side by the parishes of Snizort and Bracadale. Its length is 19 miles; its breadth is 16 miles; its extent of coastline, measured along the sinuosities, irrespective of islets, is about 80 miles; and its superficial area is about 100 square miles. The ground about the lochs, or arms of the sea—which run far into the country—descends in some places with a quick, and in others with an easy slope towards the shore. The promontories or headlands are usually rocks of immense height, with a great depth of water near them. The coast of the northern district is a constant alternation of vertical cliffs and low shores, very striking when first seen, but becoming tiresome by its repetition. The shores and islets of Loch Follart, or Dunvegan Loch, borrowing some effect from Dunvegan castle, and woven into curious continuity by the intervening waters, form a grandly picturesque landscape. The coast from Dunvegan Head to Loch Bracadale consists principally of cliffs, very various in height and slope, but many of them lofty and almost vertical, and nearly all of such composition as to present a remarkable striped appearance. Some isolated pyramidal masses of rock, similar to the "stacks" of Caithness and Shetland, stand off the coast, and figure wildly in the water,—particularly three, called Macleod's Maidens, about 200 feet high, near Idrigil point. The northern district of the parish consists of the peninsula of Vaternish, and constitutes the quoad sacra parish of Halen. The rest of the interior may be considered as divided into three districts,—Glendale, extending westwards from Skinnieden, near the head of Dunvegan loch; Kilmuir, being the district in which the parish-church is situated, including the country between Dunvegan loch and Loch Bay, extending southward; and Armizort, extending to the eastward of Kilmuir, and to the boundaries of

Snizort and Bracadale. The only considerable mountains are two in the west, called Hallivails, lesser and greater. The moors are, in most places, deep and wet. The soil of the arable lands is partly a light black loam, and partly of a reddish gravelly appearance; but, though mostly thin and stony, is on the whole fertile. About 1,900 acres are at present in cultivation; about 3,000 more were formerly cultivated, but are now in pasture; and about 40,000 have always lain waste. Macleod of Macleod possesses about half of the parish; and eight other landowners share the rest. The mansions are Dunvegan castle, Vaternish, Orbst, and Grieshernish. See DUNVEGAN. The assessed property in 1843 was £4,998 11s.; in 1860, £6,172. The principal antiquities are fifteen Danish forts, several tumuli, several subterranean hiding-places, and the walls and souvenirs of Dunvegan castle. There are about 35 miles of turnpike road. Population in 1831, 4,765; in 1861, 4,775. Houses, 955.

This parish is in the presbytery of Skye, and synod of Glenelg. Patron, Macleod of Macleod. Stipend, £158 6s. 7d.; glebe, £22 10s. Schoolmaster's salary, £46, with £5 fees. The parish church was built in 1832, and contains nearly 600 sittings. There is a government church in Vaternish. There is a Free church for Duirinish, with an attendance of 1,400: receipts in 1865, £169 5s. 2½d. There are in this parish five Assembly's schools, three Gaelic Society's schools, and two other schools. An annual fair for black cattle is held at Fairy-Bridge, 3 miles from Dunvegan.

DUIRINISH, or DUINISH, an islet in Loch Etive, opposite Bunawe, Argyshire. It contains a dwelling-house and some pasture, and is connected with the mainland by a stone bulwark.

DUIRNESS. See DURNESS.

DUKE'S BOWLING-GREEN. See ARGYLE'S BOWLING-GREEN.

DULCAPON. See DOWALLY.

DULL, an extensive parish in Perthshire. It contains the village of Dull, the post-office village of Amulree, and part of the post town of Aherfeldy. It extends not less than 30 miles from north to south, but is so intersected by other parishes as to have a breadth varying from 12 miles to nothing. Its area is about 210 square miles. It is bounded by Blair-Athole, Moulin, Logierait, Little Dunkeld, Fowllis-Wester, Crieff, Monzie, Kenmore, Weem, and Fortingall. It comprises five distinct districts, —the district of Appin, in which the parish-church stands; the district of Grandtully, a peninsulated portion in the south-east; the district of Amulree, which is situated south from the rest of the parish, and is completely isolated from it; the district of Foss in the north-west; and the district of Fincastle in the north-east. "The general aspect of the parish," says the New Statistical Account, "is varied and uneven. A series of hills, forming part of the Grampian range, runs through its whole length and breadth from south-west to north-east, diminishing in height as they approach their eastern termination. Between these hills lie the valleys or straths of Glenquach, Appin, Foss, and Fincastle, each strath having its own respective river, and its sides interspersed with cultivated and in many places wooded braes, waving downwards in rich luxuriance to the plain below, or intersected by occasional deep and romantic ravines." The scenery comprehends every variety from the sublimely beautiful to the softly bland. Appin is by far the finest of the vales, and is continued down the Tay into Grandtully. "The division of the Appin," says the Old Statistical Account, "is flat. Part of the soil is thick, but by much the greater part is

thin and gravelly. It seems that the river Tay had occasionally altered its bed, and consequently carried away the earth and left much sand and gravel. The grain is of an excellent quality; and, in general, the harvest is as early as it is in Mid-Lothian." The top of the rock of Dull, immediately behind the manse, commands one of the most exquisite landscapes in the Highlands. The northern hill-screen of Appin, dividing it from Foss, culminates on the summit of Farragon, at an altitude of 2,535 feet above sea-level, and commands thence an extensive view among the Grampians. The still loftier SCHICHALLION, [see that article,] is on the western boundary. There are either within the parish or on its boundaries no fewer than twenty-one lakes,—the chief of which are Loch Tummel on the north-western boundary, Loch Fraochy in Glenquach, and Loch Ceannard in Grandtully. The river Tay enters the parish two miles below Kenmore, and runs along it for ten miles; the Lyon forms the boundary-line with part of Weem; the Quach traverses the Amulree district into Little Dunkeld; the Tummel, throughout most of its grandly romantic course, flows partly along the northern boundary and partly across the interior; and the Garry runs across two wings of the parish, one of them a little below the pass of Killecrankie. On these streams or on their tributaries, either while bounding Dull or within it, occur some of the most picturesque water-falls in Scotland, particularly those of Keltie, Camserny, Tummel, and Moness. The parochial area, according to the New Statistical Account, comprises 8,500 imperial acres under cultivation or occasionally in tillage, 9,000 in pasture, 1,000 in meadow, 3,000 under wood, 108,900 of moor and hill, and 4,000 of water and roads. The principal landowners are Sir Robert Menzies, Bart., Sir W. D. Stewart, Bart., and the Marquis of Breadalbane; and there are at least twelve others. The real rental is about £15,640. The yearly value of raw produce was estimated in 1842 at £60,913 3s. 4d. Assessed property in 1866, £16,754 9s. 3d. The principal mansions are Grandtully, Foss, Cluny, Moness, and Derulich. There are at Camserny a carpet manufactory, at Aherfeldy a dye-mill, and in other places a saw-mill and a wheel-wright mill. Limestone is worked at Tomphohuil; and a bluish building stone is quarried at the Aird of Appin. The principal antiquities are a Druidical circle at Croftmoraig, and several standing-stones, moats, barrows, and Pietist forts in various places. The village of Dull stands in the vale of Appin, 19 miles from Dunkeld, 26 from Crieff, and 34 from Perth. In the centre of it, in an old, large, round, stone socket, stands an ancient, tall, weather-worn market-cross, which belonged to a monastic edifice now quite extinct. The monastery was of a peculiar character, called an athnanery, only two other specimens of which existed in Scotland; and it conferred on the village a right of sanctuary similar to that of Holyrood. Population of the village, 145. Houses, 44. Population of the parish in 1831, 4,590; in 1861, 2,945. Houses, 591. The decrease of population has arisen from the enlargement of farms and from emigration.

This parish is in the presbytery of Weem, and synod of Perth and Stirling. Patron, the Crown. Stipend, £257 18s. 10d., with manse and glebe. Unappropriated tithes, £70 18s. Schoolmaster's salary, now is £50, with £14 fees and £7 other emoluments. The parish church stands at the village of Dull, and is a building of unknown date, thoroughly repaired in 1840, and containing about 600 sittings. The district of Foss forms a quoad sacra parish, and has its own parish church. The

district of Fincastle is annexed quoad sacra to the parish of Tenantry. There are chapels of the Royal Bounty at Amulree and Grandtully. There is a Free church at Aberfoldy, with an attendance of 400: receipts in 1865, £294 11s. 1d. There is also a Free church at Tummel-Bridge, on the western verge of the parish: receipts in 1865, £79 5s. 5d. There is a Free church preaching-station at Amulree, whose receipts in 1865 were £15 12s. 8½d. There are at Aberfeldy an Independent chapel, with an attendance of 180, and a Baptist chapel with an attendance of 80. There are in the parish four Society's schools, five other non-parochial schools, two public libraries, three friendly societies, and a savings' bank. Fairs are held at Aberfeldy, Amulree, Coshieville, Tummel-Bridge, and Kirkton of Foss. See the articles ABERFELDY, AMULREE, FOSS, GRANDTULLY, and TENANDRY.

DULLARG. See PARTON.

DULLATER. See KILSYTH.

DULNAN (THE), a river of Inverness-shire and Morayshire. It rises on the south side of the upper part of the Monadhleath mountains, and runs about 25 miles north-eastward, through eastern Badenoch and the Duthil district of Morayshire, to a confluence with the Spey at Bellentomb of Inverellan. It has generally a small volume, yet is very rapid; and when swollen with rains or with melted snows, it often does much damage to the corn-lands on its banks.

DULNAN-BRIDGE, a post-office hamlet in the parish of Duthil, Morayshire. The bridge across the Dulnan here is a substantial one built in 1791.

DULSIE-BRIDGE, a romantic bridge spanning a narrow chasm through which the Findhorn rushes, in an arch of 46 feet, with a smaller subsidiary one, at a point of the river 12 miles from Freeburn, and 2 from Furness inn, Nairnshire. It is on the line of the old military road from Fort-George through Strathspey and Braemar. The scenery at the bridge is most wildly picturesque, with softening features from wood. See ARDLACH.

DUM-, a prefix in many names of Latin and Celtic origin. See DUN-.

DUMBARNIE. See DUNBARNIE.

DUMBARTON, a parish containing a royal burgh of its own name, in Dumbarntonshire. It is bounded over a brief distance on the south-west by the Clyde, over 2½ miles on the north-east by Stirlingshire, and everywhere else by the parishes of Cardross, Bonhill, and West Kilpatrick. Its length north-eastward is between 7 and 8 miles; its breadth is between 3 and 4 miles; and its area is about 8,155 English acres. The river Leven, down to its influx into the Clyde, traces the boundary with Cardross. Dumbarton Castle rock—which we shall afterwards describe in connexion with the town—forms a grandly picturesque object, near the point of the peninsula between the rivers. The land, for some distance round it, and away behind the town, is low and flat, presenting all the characters of recent alluvium. The tract immediately contiguous to the rock, indeed, is so low as to be entirely covered by some of the spring tides of winter. But the surface somewhat inland rises into the commencing rough acclivities of the Lennox hills, and towards the north-east becomes wildly moorish. The soil of the parish varies from deep to shallow, from clay to gravel, from fertile loam to barren rock; but in general throughout the low tracts is more or less good. Limestone abounds at Murroch glen, between 2 and 3 miles from the town; and sandstone is found on the moors; and an excellent white sandstone is quarried at Dalroch, near the burgh, but within Cardross. The real rental of the parish is about

£17,500. Several printfields are situated on the Leven, and various kinds of manufactures are carried on at the town. The parish is traversed by the Dumbarntonshire railway. Population in 1831, 3,623; in 1861, 6,304. Houses, 463. Assessed property in 1843, £10,810 7s. 5d.; in 1860, £25,699.

This parish is the seat of a presbytery in the synod of Glasgow and Ayr. Patron, the Town-council of Dumbarton. Stipend, £233 6s. 2d., with a manse. The parish church was built in 1810, and contains 1,265 sittings. There is a Free church in the town, whose receipts in 1865 amounted to £1,482 9s. 10d. There is an United Presbyterian church, which was built in 1826, and contains 489 sittings. There are also an Episcopalian chapel, a Methodist chapel, and a Roman Catholic chapel. There are a burgh school with two masters, a Free church school, an Educational Society's school, and several other schools. A gateway, called College Bow, belonging to an ancient edifice on the site of a Culdee cell, was removed at the forming of the railway to a site in front of the burgh school. The name Dumbarton used to be written Dunbarton and Dunbriton, and is of disputed origin. Dumbarton, according to Chalmers, signifies 'the town of the Castle' on the summit; but the more common orthography at an early period seems to have been Dunbriton, which would signify 'the fort or castle of the Britons.' Both names are correctly descriptive, the one of the physical features, the other of the historical character of the place. In writing Dumbarton, we have given way to the prevailing though probably incorrect orthography.

DUMBARTON, a post-town, a market-town, a seaport, a royal burgh, and the capital of Dumbarntonshire, stands on the left bank of the Leven, about a mile above its influx to the Clyde, 3½ miles south of Alexandria, 5½ by water east-north-east of Port-Glasgow, 8 south-east by east of Helensburgh, and 14½ north-west by west of Glasgow. Its principal street, called High-street, forms a kind of semi-circle, nearly concentric with the course of the river, and situated at a short distance from the water edge. This street is intersected by the Cross-vennel and various other smaller streets. A suburb, called Bridgend, stands on the right bank of the river, within the parish of Cardross, opposite the upper part of the town, and is connected with it by a good stone bridge of five arches, built about the middle of last century. Another suburb, of recent origin, called Dennyston, is also there. The parish church, with a tolerably good steeple, stands on the opposite outskirts toward the east. The burgh hall was built in 1865, at a cost of about £7,000, and is an edifice in the French Gothic style, with a frontage of 133 feet, and a central tower 145 feet high. The town altogether has an irregular alignment and a plain appearance, displaying some features of taste, indeed, but very far from showy; and, in consequence of standing on a low dead level, it neither forms nor commands any picturesque view. Even the castle on the one hand or the screens of the vale of Leven on the other, do not blend with the town into any good landscape. And the town itself, seen from the Clyde or from any of the southern approaches, looks only a huddled mass of squatting houses, chequered in front by the timbers of ship-yards, and overtopped in the middle by the tall chimnies and the church-steeple. The Dumbarntonshire railway has added somewhat to its features, but much more to its bustle.

Very extensive glassworks were long in operation in Dumbarton, having three brick cones which made a prominent figure in the town's appearance. These works were a chief means of the town's trade, and sometimes employed so many as 300 workmen, le-

sides giving indirect employment in a commercial way; but they underwent great fluctuations; and after the abolition of the duty on glass, they finally declined, and were eventually abandoned. The premises were then sold; and where the cones once stood there is now a ship-building yard, fronted by an excellent street of dwelling-houses. In the time of the glassworks shipbuilding became considerable, and was carried on in two building-yards; the vessels built being entirely of wood. But about the year 1845, the trade of iron ship-building was introduced by the Messrs. Denny; and this has so extended that there are five building-yards, giving employment to at least 2,000 men; and some of the largest and most splendid of the British transit and mercantile navy have been sent out from Dumbarton. The growth of this branch of trade has created others. There are now two engine-works, two founderies, and a forge of very great extent. These works give employment to more than 500 operatives. There is also a most active rope-work. Some trade likewise is carried on in tanning and brick-making. Nor is the town of small importance as a general depot of retail traffic, and of miscellaneous supply to the populous tracts of Cardross and the vale of Leven. The river is navigable to the quay by large vessels only near high water of the highest tides. Steam-vessels of small draught, suited to the capacities of the Leven, formerly did large business, making several trips for general connexion with the Clyde every day. The railway, however, has curtailed that business, and is now a chief vehicle of traffic,—particularly for the shoals of tourists who are daily in transit to visit the scenery of Loch Lomond. Steam-boats still ply to Glasgow and Greenock. The town has two large inns, offices of the Commercial Bank and the Union Bank, sixteen insurance offices, a gas-light company, water-works, a mechanics' institution, a combination poor-house, an agricultural society, and a horticultural society. A weekly market is held on Tuesday, and six fairs in the year. Two weekly newspapers are published, the Dumbarton Herald on Thursday, and the Lennox Herald on Saturday.

In 1222 Dumbarton was erected by Alexander II. into a free royal burgh with extensive privileges. Additional charters were granted by succeeding monarchs, all of which were confirmed by James VI. in 1609, and ratified by parliament in 1612. The governing charter grants or confirms to the burgh considerable property in land and extensive fishings in the Leven and Clyde. It gives the town right to a free port, in the same manner as Edinburgh has in Leith; and conveys a right to levy customs and dues on all ships navigating the Clyde between the mouth of the Kelvin water, 3 miles below Glasgow, and the head of Loch Long. This right appears to have been very valuable. According to a statement published by a committee of the burghesses of Dumbarton, in 1829, although the space affected by it excluded Glasgow, it comprehended Greenock, and the ground on which the town and harbour of Port-Glasgow were subsequently formed. Every vessel, whether foreign or native, coming within these limits, was bound to go to, pay duties at, and take clearances from Dumbarton; and no merchants could carry their effects to any other harbour—either then existing or to be afterwards made within these limits—in defraud or evasion of the lucrative right thus vested in Dumbarton. The right also gave rise to a claim styled the "offers dues," which was levied without opposition from all foreign vessels coming into Clyde. A contract entered into between Glasgow and Dumbarton, in 1700, describes this as "obliging strangers to make the first offer of the goods

and merchandise imported by them into the Clyde, to the burghs of Glasgow and Dumbarton, at such expense and rate as the strangers, offerers, shall not have the power or liberty to undersell the same to others." But as these privileges were claimed by Glasgow as well as by Dumbarton, perpetual disputes respecting them occurred between the two burghs during the 17th century. These were finally terminated in 1700 by a contract, in which the town-council of Dumbarton sold to the town-council and community of Glasgow the dues payable to the burgh of Dumbarton by all ships coming into the Clyde, of which the freemen of Dumbarton were not owners, and also their share of the "offers dues,"—the town of Glasgow paid to Dumbarton the sum of 4,500 merks, about £260 sterling,—and the burghs agreed that the vessels belonging to the burghesses, inhabitants of Glasgow and Port-Glasgow, should not pay duties in the harbour of Dumbarton, and that, on the other hand, the vessels of Dumbarton burghesses should be exempted from duties in the harbours of Glasgow and Port-Glasgow. This contract was ratified by the convention of burghs and the Scottish parliament, in 1701. But the navigation having afterwards, by various acts of parliament, been put under the management of trustees, the rights thus transferred to Glasgow became vested in this parliamentary trust. These trustees made an attempt, in 1825, to abrogate the right of exemption from river-dues belonging to Dumbarton—an exemption which had then become of considerable value, owing to the high rates levied by the trustees, and the improvement in the navigation of the river. They were, however, defeated in parliament, and the rights of Dumbarton formally recognised, under a slight modification intended merely to guard against frauds. A similar attempt was again made in 1830, but a committee of appeal threw the bill out, as in breach of a solemn bargain between the parties. The trustees proposed in committee to give a sum of £16,000 to Dumbarton as the price of its exemption, besides saving the rights, for their own lives, of persons then burghesses of Dumbarton.

The burgh of Dumbarton is governed by a provost, 3 bailies, a treasurer, and 11 councillors. The magistrates exercise the usual civil and criminal jurisdiction belonging to royal burghs. The town-clerk acts as their assessor. The burgh-courts are held weekly. The magistrates have cognizance of certain trifling cases familiarly known in the burgh by the name of "Causeway complaints." There is also a dean-of-guild court, which exercises the usual jurisdiction of such courts, such as lining marches, judging of the sufficiency of buildings, and checking weights and measures. The magistrates and council appoint the town clerk, collector of town's revenues, collector of assessed taxes, master of public works, gaoler, town-officer, and town-drummer. The magistrates alone appoint the burgh-fiscal. The old corporations were six in number,—guildry, hammermen, shoemakers, tailors, coopers, and weavers. The town has a small police-establishment, but is not watched. The cleansing and lighting of the streets, and supplying water, are under the direction of the magistrates. Before the passing of the municipal reform act, the abuses arising from the mismanagement of the burgh funds were very considerable. The debt of the town amounted to £19,108 10s. 1½d. The total property of the burgh was stated, in 1832, at £17,910; but this was suspected to be an over-estimate, as, in 1819, it had been valued at only £10,658. This property consisted principally of the town's moor, the wauk-mill lands, the broad meadow, the Leven and Clyde fishings, and the harbour. The moor consists of about 4,000 acres, upon

Dumbarton Castle

which all the burgesses had the free right of pasturage. But it became the subject of a most expensive lawsuit which lasted about half-a-century, terminating only about 14 years ago; and it was afterwards sold, and is now the property of H. S. Crum, Esq. of Strathleven. The revenue from the fishings is about £150 a-year, and that from the harbour dues nearly £805. The total revenue in 1865 was £1,391. Dumbarton formerly joined with Glasgow, Renfrew, and Rutherglen in sending a member to parliament. It now joins with Kilmarnock, Port-Glasgow, Renfrew, and Rutherglen. Municipal constituency in 1865, 309; parliamentary constituency, 309. Population in 1841, 3,754; in 1861, 6,096. Houses, 430.

Dumbarton was anciently called Alclud or Alcluyth, that is, 'the Rock upon the Clyde;' and under this appellation it was, in the time of the Venerable Bede, the capital of the kingdom of Strathclyde. Before that time, however, the site was occupied as a Roman naval station, under the name of Theodosia; and it appears not improbable that the rock was occupied by a Roman fort, and that the wall of Antoninus terminated at this point. Dumbarton was at a much later period the chief town of the Earldom of Lennox. About the beginning of the 13th century, it was resigned by Earl Maldwyn into the hands of Alexander II., who, as we have already seen, erected it into a royal burgh. The town seems to have shared much less than might have been expected in the political convulsions which shook the kingdom, or in the strifes of war which frequently burst upon its own castle; yet it was several times severely injured by fire during the castle's sieges. Both James IV. and James V. used it as a naval station; and the former monarch made several of his expeditions from it to Tarbert in Kintyre, to the Western islands, and elsewhere. From Dumbarton also, without doubt, the small Scottish navy sailed—under the wretched conduct of the Earl of Arran—against England, shortly before the battle of Flodden. The town also makes a great figure in record for injuries done to it by floods. "Anno MCCCXXXIII.," writes Sir William Sinclair of Roslin, "on martens day in winter hegan ye great frost yat lestit quhill Sancte Juliane ye virgines day the XVI day of februar and yan it lowsit mervaluslie on yat sanctis day and syne freshit againe sa fast yat commoun passagis wes our ye watter of Levin fra ye toum of Dumbartane to Cardross and yat was never seen nor heard befor." So frequent and damaging were the floods about the beginning of the 17th century that the magistrates then felt obliged to apply to parliament for national pecuniary means to construct works against them. A commission was appointed to inquire what amount of means would be necessary; and they reported that "na less nor the sowme of thrette thousand poundis Scottis money was abill to beir out and furneis the necessar charges and expenses in pforming these warkis that are lible to saif the said burgh from utter destructione." A grant of twenty-five thousand merks Scots was accordingly made for the purpose by the parliament; and, this proving insufficient, a farther sum of twelve thousand merks was afterwards granted by King James.—Dumbarton, for a brief period, gave the title of Earl in the peerage of Scotland, to a branch of the family of Douglas, who were created Earl of Dumbarton and Baron Douglas of Ettrick in the year 1675; but this peerage became extinct at the death of George, the second Earl.

DUMBARTON CASTLE stands near the extremity of the peninsula between the Clyde and the Leven.

The rock appears to the eye to overhang both rivers, murally and stupendously, for some distance above the point of their confluence. It measures about 260 feet in elevation, and about a mile in circumference. It figures prominently, as well as very picturesquely, in most of the thousand good views of the brilliant scenery of the upper lagoon of the frith of Clyde. It is an erupted trappean mass, of the same character as Ailsa Craig, the Bass, Stirling Castle rock, Abbey-craig, and many other single, sharp-featured, romantic heights which start abruptly from the seas and plains of Scotland. It rises sheer up from the circumjacent low flat marshy tract, and stands completely isolated from any other elevations. Its material is basalt, tending to the prismatic form, slightly columnar, and in some parts magnetic; and is all the more curious for protruding through beds of red sandstone, nearly a mile distant from any other erupted matter. The rock has a bifurcated or double-peaked form, being cleft toward the summit by a narrow deep chasm. The western peak is a little higher than the other, but not so broad, and is sometimes called Wallace's Seat. Ossian, speaking of "Balclutha," which signifies "the home-town of the Clyde," and which he is supposed to have used as a poetic name of Dumbarton Castle, says, "The thistle shakes there its lovely head;" and, curiously enough, the true Scottish thistle, though really a rare plant in Scotland, still grows wild on Dumbarton rock.

The entrance to the castle, in old times and up to a period within the memory of some persons still living, was by a footpath, through a series of gates, up a gradual acclivity or talus of debris on the north side. The gates ought now to have been interesting antiquities within the castle; but they were loutishly sold for old iron, and are now, or lately were, in the possession of private parties in Port-Glasgow. The present entrance is on the south side, and is defended by a rampart. "From the gateway here a long broad flight of steps conducts to the governor's house,—a wretched mass of masonry, in no keeping with the features of the rock and surrounding scenery. From the governor's house a stair ascends to the point where the rock is parted into its two heads. Here are the barracks for the garrison, the state prison, the Duke of York's battery, the armoury, and the water-tank. From this point a steep stair conducts to the summit of the western peak, on which the flag-staff is erected. Here are seen the relics of a small circular building which some antiquaries conjecture to have been a Roman pharos or light-house." The whole place as a fortress, however, is far more romantic than strong. The barracks contain accommodation for only about 150 men; the armoury contains only about 1,500 stand of arms; and though sixteen guns are mounted variously at the governor's house, at the cleft, and on the eastern summit, they serve at best for raking the channel of the Clyde, and could do little or nothing to resist a siege; for ever since the invention of gunpowder artillery, Dumbarton Castle has been commandable by Dumbuck.

The view from the western summit of the rock is panoramic and gorgeous. To the north are seen the town of Dumbarton, the vale of Leven, and the waters of Loch Lomond, grandly backed by the massive Benlomond and his attendant mountains. To the east appears the rich long valley of the fluviatile Clyde, marked in the middle by the smoke of Glasgow and the stalks of St. Rollox, and shading off in the far distance into the misty forms in the vicinity of Tinto. To the south and south-west expands the lagoon of the Clyde, dotted over all its

broad bosom with ships and steamers, and screened along the farther side by the fine hills of Renfrewshire, with the towns of Port-Glasgow and Greenock at their base. And in the west and north-west, beyond the limits of the lagoon, are first the sylvan promontory of Roseneath, backed by the russet hills of Cowal, and next the tortuous sky-line of the Duke of Argyll's Bowling-Green, faced and flanked by the flowing forms of the Row and Luss hills. This brilliant panorama was seen, from its best point of view on the castle, on a day of August, 1847, by Queen Victoria and Prince Albert, who were then on their way to Ardverikie, but made a detour hither for the purpose of seeing Dumbarton Castle and the Clyde; and the part of the panorama within the limits of the lagoon, and its immediate shores, was then greatly enhanced in picturesque effect by the accessories of their visit. "The animated spectacle which the river presented on that occasion, from Bowling Bay to the Cloch—of which twenty-five steamers and many other vessels on the water, and large masses of people on every prominent point, far and near, formed the most prominent feature—gave to the beautiful and sublime array of nature the additional interest of a living picture of a kind never or rarely equalled."

Dumbarton rock, as we have already mentioned, was, in all probability, occupied as a stronghold in the time of the Romans; and, at all events, was chosen for the site of a fortress by the aboriginal inhabitants of Scotland, shortly after those invaders had evacuated the country. It is particularly mentioned by Bede, at the beginning of the 8th century, as one of the strongest fortifications possessed by the Britons. Hoveden refers to it as having been reduced by famine by Egbert, King of Northumberland, in 756; but Chalmers is disposed to doubt the accuracy of this statement. Its importance as a fortress has all along been considered so great that, from the time of Bede to the present hour, it has been retained by the Crown as one of the royal castles. When Maldwyn obtained the Earldom of Lennox from Alexander II., the castle of Dumbarton, with a portion of the land in its neighbourhood, was specially excepted from the grant. Along with the other royal fortresses of Scotland, it was delivered up to Edward I. during the competition between Bruce and Baliol for the Crown; and was afterwards made over to Baliol in 1292, when the dispute was settled in his favour. In 1296, it again fell into the hands of the English, and Alexander de Ledes was appointed governor of it by Edward. From 1305 to 1309, it was held for the same monarch by Sir John Menteith, the betrayer of Wallace. After the fatal battle of Halidon hill, in 1333, Sir Malcolm Fleming of Cumbernauld secured it for the King. Towards the end of the same century, it was held first by Sir Robert Erskine, and afterwards by Sir Robert Danielston. After the death of the latter, in 1399, Walter Danielston, parson of Kincardine O'Neil, forcibly took possession of it, and held it till 1402, when he surrendered it to the Crown. In 1425, James Stewart, son of the Regent Albany, assaulted and burnt the town of Dumbarton, and murdered Sir John Stewart, the King's uncle, who held the castle with 32 men. Dumbarton was besieged in 1481 by the fleet of Edward IV., and was bravely and successfully defended by Andrew Wood of Largs. In 1489, the Earl of Lennox, keeper of the castle, having engaged in an insurrection against the government of James IV., Dumbarton was besieged—though without success—by the Earl of Argyll. Shortly after, however, the King himself appeared before the castle, and compelled the sons of Lennox, who then held it, to surrender, after a

siege of six weeks. In 1514, the Earls of Lennox and Glencairn, during a tempestuous night, broke open the lower gate of the castle; and, having thus obtained access, turned out the governor, Lord Erskine. Lennox appears to have retained possession till 1516, when he was compelled to deliver it up to Allan Stewart. Shortly after the battle of Pinkie, Queen Mary, then a child, took up her residence in the castle of Dumbarton; and, on leaving it two years afterwards, she embarked here for France. Queen Mary again visited the castle, in 1563, when on a progress into Argyll; and during the troubles which followed on her dethronement, this fortress was held for her by Lord Fleming. But on a night in May, 1571, during the regency of the Earl of Lennox, it was captured by a feat of gallantry so remarkable as to be well worthy of detailed notice.

"Captain Crawford of Jordauhill, to whom the attack was intrusted," says Tytler, "had been long attached to the house of Lennox. He was the same person whose evidence was so important regarding the death of Darnley, and who afterwards accused Lethington of participation in the murder, since which time he appears to have followed the profession of arms. In the enterprise he was assisted by Cunningham, commonly called the Laird of Drumwhassel, one of the bravest and most skilful officers of his time, and he had been fortunate in securing the assistance of a man named Robertson, who, having once been warden in the castle, knew every step upon the rock familiarly, and for a bribe consented to betray it. With this man, Crawford and his company marched from Glasgow after sunset. He had sent before him a few light horse, who prevented intelligence by stopping all passengers, and arrived about midnight at Dumbuck, within a mile of the castle, where he was joined by Drumwhassel and Captain Hume, with a hundred men. Here he explained to the soldiers the hazardous service on which they were to be employed, provided them with ropes and scaling ladders, and advancing with silence and celerity, reached the rock, the summit of which was fortunately involved in a heavy fog, whilst the bottom was clear. But, on the first attempt, all was likely to be lost. The ladders lost their hold while the soldiers were upon them; and had the garrison been on the alert, the noise must inevitably have betrayed them. They listened, however, and all was still. Again their ladders were fixed, and their steel hooks this time catching firmly in the crevices, they gained a small jutting-out ledge, where an ash tree had struck its roots, which assisted them as they fixed the ropes to its branches, and thus speedily towed up both the ladders and the rest of their companions. They were still, however, far from their object. They had reached but the middle of the rock, day was breaking, and when, for the second time, they placed their ladders, an extraordinary impediment occurred. One of the soldiers in ascending was seized with a fit, in which he convulsively grasped the steps so firmly, that no one could either pass him, or unloose his hold. But Crawford's presence of mind suggested a ready expedient; he tied him to the ladder, turned it, and easily ascended with the rest of his men. They were now at the bottom of the wall, where the footing was narrow and precarious; but once more fixing their ladders in the copestone, Alexander Ramsay, Crawford's ensign, with two other soldiers, stole up, and though instantly discovered on the summit by the sentinel who gave the alarm, leapt down and slew him, sustaining the attack of three of the guard till he was joined by Crawford and his soldiers. Their weight and struggles to

surmount it, now brought down the old wall and afforded an open breach, through which they rushed in, shouting, 'a Darnley, a Darnley!' Crawford's watchword, given evidently from affection to his unfortunate master, the late King. The garrison were panic-struck, and did not attempt resistance. Fleming, the governor, from long familiarity with the place, managed to escape down the face of an almost perpendicular cleft or gully in the rock, and passing through a postern which opened upon the Clyde, threw himself into a fishing-boat, and passed over to Argyshire. In this exploit the assailants did not lose a man, and of the garrison only four soldiers were slain. In the castle were taken prisoners, Hamilton the Bishop of St. Andrews, who was found with his mail shirt and steel cap on, Verac, the French ambassador, Fleming of Boghall, and John Hall, an English gentleman, who had fled to Scotland after Dacre's rebellion. Lady Fleming, the wife of the governor, was also taken, and treated by the Regent with great courtesy, permitted to go free, and to carry off with her her plate and furniture. But Hamilton, the primate, was instantly brought to trial for the murder of the King, and the late Regent, condemned, hanged, and quartered without delay."

At the commencement of the civil war of Charles the First's time, Dumbarton Castle was in the possession of the royalists; but in 1639, it was captured by the patriots, and after some time recaptured by the royalists; and in 1640 it passed again into the hands of the patriots. An order was, soon afterward, issued by the parliament to destroy its fortifications; but this does not seem to have been obeyed. In 1652, the castle went into the possession of Oliver Cromwell; and at the union of the kingdoms, it was appointed to be one of the Scottish forts which should be always, in all time coming, kept in repair. Some other points in its history will be found noted in the article *LEXNOX*.

DUMBARTONSHIRE, a county partly maritime, but chiefly inland, in the west of Scotland. It comprises a main body and a detached district. The main body is bounded on the west by Loch Long and Argyshire; on the north by Perthshire; on the east by Stirlingshire and Lanarkshire; and on the south by the frith of Clyde and the river Clyde, which divide it from Renfrewshire. Its length, from Kelvin river on the south-east, to Aldernan rivulet in Arrochar on the north, is about 36 miles; its breadth varies from 2 to 13 miles. Its general outline is that of a crescent; the convex line being determined by the eastern coast of Loch Long, and the northern coast of the frith of Clyde, from the junction of Loch Long, up to within a few miles of Glasgow. The greatest breadth is between the south-west point of the peninsula of Roseneath, and the centre of the broadest part of Loch Lomond. The detached district comprises the parishes of Kirkintilloch and Cumbernauld, commences 4 miles east of the nearest part of the main body, is bounded on the north and east by Stirlingshire, on the south and west by Lanarkshire, and extends in the direction of east by north, with a maximum length of 13½ miles and a maximum breadth of about 4 miles. The main body comprehends about 228 square miles, and the detached district about 32½ square miles.

All the northern district of the county, lying partly around the head of Loch Lomond, and partly between that superhest of lakes and Loch Long, is entirely highland, intersected only by profound glens, and displaying, in rich rapid succession, all the most characteristic features of grand, romantic, beautiful, upland scenery. Benvoirlich, in the extreme north of that district, soars aloft to the height of 3,300

feet; and Finnart, at the extreme south-west of it, rises up from the edge of Loch Long to the height of 2,500 feet. The central part of the main body, from Finnart and the middle of Loch Lomond to the screens of the frith of Clyde, but including the peninsula of Roseneath, is a transition region between the highland and the lowland, exquisitely blending many a feature of sternness and of savageness with features profusely many and profusely fine of the most laughing loveliness. On the east side of this district, in particular, "the lofty hills are strikingly contrasted with the wide expanse of the beautifully spread and the pellucid waves of the queen of lakes, the far-famed yet scarcely sufficiently admired Loch Lomond; and savage grandeur, in all the towering superiority of uncultivated nature, is seen side by side with the very emblem of peace and tranquillity, an alpine lake which the winds reach only by stealth." The south-eastern district, comprising the sea-board of the Clyde, the vale of Leven, and the tract eastward of that vale to the extremity of the county's main body, is pervadingly lowland and luscious, almost sweet to excess with gentle contour and tasteful ornamentation; yet even this is diversified—to some extent, broadly occupied—with characters of abruptness and boldness, such as in the shoulders of Cardross hills, in the mass of Dumbarton rock, in the brows of Dumbuck, and of the basaltic ranges beyond it, and in the capricious, escarped, romantic acclivities of the Kilpatrick hills, which fling double brilliance on the scenes below by the force of contrast. The detached district is all lowland, and tamely so, yet extends so near the roots of the Campsie fells, as to borrow from them effects of scenery similar to those which the tracts along the fluviatile Clyde borrow from the Kilpatrick hills. "No region in Great Britain can boast of finer scenery than the county of Dumbarton; and certainly none is more variegated, or more frequently visited or admired by strangers."

About 20,000 acres of Dumbartonshire are occupied by fresh-water lakes and by streams. Loch Lomond, though belonging in a great degree to Stirlingshire, belongs in a greater to Dumbartonshire. Eight or nine other fresh-water lakes belong to Dumbartonshire, but are all small. The most remarkable of them is Loch Sloy in Arrochar, from which the Clan Macfarlane took their slogan or war-cry. The rivulets Falloch, Inveruglas, Douglas, Luss, Finlas, and Fruin, together with some brooks and torrents, exhibiting numbers of fine cascades, drain most of the highland portions of Dumbartonshire into Loch Lomond. The river Leven draws off the superfluence of that "queen of lakes," along the vale of Leven, to the Clyde. The Endrick traces the boundary about 5 miles with Stirlingshire into Loch Lomond. The Clyde, in its fluviatile character, or before expanding into frith, bounds only the parish of West Kilpatrick, and even there is swept deeply by the tides, and swarms with the vast commercial traffic of Glasgow. The Allander, a tributary of the Kelvin, drains most of East Kilpatrick; and the Kelvin itself drains most of the detached district of the county, but is there very far from picturesque, little else than a large ditch. Some tiny head-streams of the Carron, belonging to the river-system of the Forth, drain the eastern part of the detached district. Many beautiful streamlets, either affluents of the rivers we have named, or pursuing independent courses to Loch Long, the Gare Loch, and the frith of Clyde, trickle over the face of the county; and "springs of wholesome water gush out in liberal profusion for the use of man and beast."

The climate of Dumbartonshire is exceedingly diversified. Some parts of the county, such as the vale of Leven and the sea-board of the Clyde, are comparatively genial; while other parts, such as the pastoral lands of Arrochar and the tableaux of the Kilpatrick hills, are comparatively severe. Even small tracts, only a few miles distant from one another, are strongly affected, and made greatly to differ in regard to heat, to moisture, and even to the force and direction of short winds, by the configuration of the surface. Nowhere in Scotland do heights and hollows act more powerfully as controllers of climate, the former in the way of attracting or sheltering, or the latter in the way of ventilating or warming. Even in places so near and like one another as Kerpoch, Camus-Eskan, Ardincaple, and Bellretiro, the aggregates of rain-fall in one year, as ascertained by gauges all of one construction, were respectively 43.15, 45.5, 50.57, and 52.5. On the whole, however, the climate is good. There is more moisture, indeed, than in many other parts of Scotland; but the excess is not so much in the quantity that falls as in the length of time it takes to fall; and whatever disadvantage arises from a corresponding excess of cloudiness, seems to be well counterbalanced by a grand prevalence of "the zephyr," the genial west wind, which blows during no less a time than about nine months in the year. East winds, it is true, are much complained of in spring; but, in even their bitterest moods, these cannot be so bad here as in the eastern counties, and are seldom accompanied, at least in any serious degree, by "haars."

The rocks of Dumbartonshire range in character from the metamorphic to those of the coal measures. The oldest are in the north, and the newest in the south and south-east. Mica-slate forms the greater part of the highest and most striking uplands of the north. It is always stratified, often laminated, and generally comprises much mica, much quartz, and very little felspar. Its quartz is sometimes so extremely abundant as to render the rock more properly quartzose than micaceous. The mica-slate likewise passes occasionally into talc-slate; and between Tarbet and Luss both the mica-slate and the talc-slate are intersected by beds of greenstone and of felspar porphyry. Clay-slate also abounds in the north; and is worked as a roofing-slate in well-known quarries at Luss and Camstradden. It is generally incumbent on the mica-slate, and abounds with iron pyrites, and is often traversed by veins of quartz. A slate occurs in the same region so mixed with lime that it may be called a limestone slate. Trappean rocks of various lithological character, besides forming dikes and masses among other rocks, constitute Dumbarton castle, Dumbuck hill, and the Kilpatrick hills. Greywacke commences a little south of Camstradden quarry, and forms a large part of the parishes of Row and Cardross. This greywacke is chiefly amorphous, seldom slaty, and often, like the mica-slate, contains a profusion of quartz. A bluish-black limestone likewise is frequently associated with the greywacke. Old red sandstone extends from the lower part of Lochlomond, through the western part of Bonhill, and through Cardross and Row, to the south-west of Roseneath. A yellow sandstone of quite different lithological character from the old red sandstone, easily chiselled, but hardening by exposure, occurs on some parts of the seaboard of the Clyde, and extends fitfully and at intervals to Netherton Garscube in East Kilpatrick. Limestone, coal, shale, and small beds of ironstone lie above the sandstones, in the eastern wing of the main body of the county, and throughout the detached district; but, though of some value for their "calm limestone" and for cer-

tain coal-seams, they aggregately yield a very poor produce compared to that of other Scottish regions of the coal formation.

The surface of Dumbartonshire has been agriculturally estimated to comprise 6,050 English acres of deep black loam, 30,970 of clay on a subsoil of till, 25,220 of gravel or gravelly loam, 3,750 of green hill pasture, 99,400 of mountains and moors, 720 of bogs, and 930 of islands in Loch Lomond. The estates, with a few exceptions, are not large; and even the farms, in some places, do not comprise an area of more than 20 or 30 acres. The very largest estate yields a rental of only about £4,500. The number of landowners, exclusive of feuars and portioners in towns, is about 150. The rivalry of proprietors in the lowland districts, together with vicinity to Glasgow, facility of communication, and great increase of general trade, has powerfully stimulated agricultural improvement. A great deal has been done, and is still doing, to enhance the value of land. Draining has been practised extensively and to much advantage; and attention has been given to the proper management of fences. For a long period the operation of ploughing was performed, according to ancient Highland usage, with four horses abreast; the driver marching in front of his team, with a long stick in his hand, attached to which were the halters of each horse. This method, which required the close attendance of two persons, was superseded in time by the use of three horses, and afterwards by the use of only two. Lime is in general use; and large quantities of it are imported from the north of Ireland and the island of Arran, independently of what is manufactured in the county. There is also a large demand for common manure from Glasgow, Greenock, and other adjacent towns. Sea-weed, as a manure, is in small repute. Marl can be obtained, though not in great quantities, but is scarcely ever used. Oats are raised in greater quantities than any other species of grain. Wheat has, of late years, much increased; barley, however, has proportionally decreased. Pease are little sown; but the culture of beans is becoming more general, and in stiff clayey soils they are found to be an excellent preparative for wheat. Potatoes are cultivated in great quantities; their quality is excellent; and in Glasgow and the surrounding towns they always find a ready market. Copswood is at once highly ornamental, and a considerable branch of revenue; and no small degree of care is taken in its management. The land on which it is produced is unfit either for cultivation or pasture; so that the gain derivable from the wood may be considered, after the deduction of labour, as almost altogether gratuitous. A great extension which took place some time ago in sheep-farming was accompanied by the practice of moor-burning; so that the upland division of the county—which could once boast of little else than heath and moor—is now covered with verdure, and has, on the whole, a widely different aspect from what it presented at the close of last century.

The native horses are very inferior; and with very few exceptions are scarcely ever used in field-labour. The farmers generally supply themselves, at the Lanarkshire markets, with the celebrated breed of Clydesdale. Most of the black cattle in the upland districts are of the Highland breeds; while those in the lowlands are, in general, either crosses between these breeds and the Ayrshire one, or, on dairy farms, or for dairy purposes, pure Ayrshire. The sheep on the hill pastures are generally the black-faced, and those in the low grounds generally the Cheviot, with some pets of English origin. Swine are kept by almost every farmer, mostly for domestic use. On Inchmurrin and Inchlonaig, two islands of Loch Lo-

mond, there are extensive herds of fallow-deer. Red deer—once plentiful in the mountainous districts of the county—have long since been extirpated, and but very few roes remain among the rugged and woody spots on the banks of Loch Lomond and Loch Long. Bees once abounded on the moors, but have been almost extirpated thence by the burnings of the heath.

Dumbartonshire now possesses excellent means of land-communication. Of this, in former times, there was a great deficiency. Previous to the year 1790, the only turnpike road was that from Dumbarton to Glasgow, while the country roads were also few, and of the very worst description. The improvements in roads and bridges have proved of the utmost advantage to the county's agriculture and local commerce. The Forth and Clyde canal, begun in 1768, and finished in 1790, has also been of great service. The steam navigation on the Clyde, besides steadily stimulating trade over no small part of the county's lowlands, has vastly raised the value of property, together with creating all the wealth of watering-places, throughout most of the shores of the Clyde-lagoon, the Gare Loch, and Loch Long. And the recent opening of the Dumbartonshire railway has powerfully followed the steam-navigation to the town of Dumbarton in producing similar effects, though on a smaller scale, through the vale of Leven, and even up the shores of Loch Lomond. The Forth and Clyde railway, now in progress of construction, will no doubt also contribute its quota of benefits. The improvement of the navigation of the Clyde even produced the incidental advantage of adding to the productive area of the county about 600 acres of rich land; the spaces behind the stone walls which were formed for confining the tidal current having rapidly become filled with such fine mud and silt as soon became available first for meadow and next for the plough. Most of the low tracts of Dumbartonshire, even such as have not the aid of indigenous coal, have followed Glasgow in the race of manufacturing industry. The banks of the Leven, in particular, are covered with numerous bleachfields, printfields, and cotton-works, giving employment to thousands. Among the various manufactures of the county, the printing of cottons is still the most important. Next to this is cotton-spinning. There are several paper-mills, a large iron-works, two or three chemical works, two or three distilleries, and several ship-building yards at Dumbarton and Bowling. The salmon-fisheries are at present worth about £800 per annum. The herring-fishery produces about £4,000.

The only royal burgh in Dumbartonshire is Dumbarton. The towns are Kirkiatilloch, Alexandria, Helensburgh, Dumtocher, Renton, and Bonhill. The villages are Bowling-Bay, Dalmuir, Dumbuck, Old Kilpatrick, Little Mill, Milton, Faifley, Hardgate, Cardross, Garelochhead, Roseneath, Kilcraggan, Juss, Dalvaul, Jamestou, Mill of Halden, Dalsholm, New Kilpatrick, Knightswood, Nether-ton-Quarry, Cumbernauld, and Condorat. Some of the principal mansions are Roseneath Castle and Ardincaple House, the Duke of Argyll; Cumbernauld House, Lord Elphinstone; Rosdhu, Sir James Colquhoun, Bart.; Garscube House, Sir Archibald Campbell, Bart.; Tillichowan Castle; Bonhill Castle; Camus-Eskan; and Shandon Castle. The parishes are Dumbarton, Cardross, Row, Roseneath, Arrochar, Juss, Bonhill, Kilmarnock, West Kilpatrick, Kirkiatilloch, Cumbernauld, and part of East Kilpatrick.

The county of Dumbarton was for some time identical with the ancient district of Lennox; and its political history will be related in our article LENNOX. The sheriff-court for the county, and the com-

missary court are held at Dumbarton every Friday during session. The sheriff's ordinary small-debt court is held at Dumbarton every second Thursday during session, and occasionally during vacation. Sheriff's small-debt circuit courts are held at Kirkiatilloch on the second Tuesday of February, May, August, and November. Quarter sessions are held on the first Tuesday of March, May, and August, and the last Tuesday of October. The valud rental of the county in 1674 was £33,327 Scots; and the annual value of real property as assessed in 1843 was £147,079 10s. 11d. The assessment for prisons and rogue-money in 1865-6 was 1½d. per pound cash. Dumbartonshire returns one member to parliament. The parliamentary constituency in 1865 was 1,567. The weights of this county, previous to the equalization act, were avoirdupois for English goods and groceries, Dutch for meal, and tron of 23 ounces avoirdupois for butter, cheese, hatcher-meat, fish, and home flax. The Dumbarton pint is 2.9 cubic inches less than the standard pint. For wheat, pease, and beans, the firloft contained 2562.75 cubic inches, and is 1 firloft, 3 pints, 1 chopin, 3½ cubic inches of the old standard measure. For oats, barley, and malt, the firloft contained 3,417 cubic inches, which is 1 firloft 2 pints, 4.668 cubic inches standard measure, or 6.597 per cent. above the Linlithgow measure. The water peck of potatoes is nearly 42 lbs. The chaldron of lime is 64 bushels; of lime-shells, 32 bushels. The rood of land is 6 yards square; the score of sheep sometimes 21; and the stone of wool sometimes 17 lbs.

The population of Dumbartonshire in 1801 was 20,710; in 1811, 24,189; in 1821, 27,317; in 1831, 33,211; in 1841, 44,296; in 1861, 52,034. Inhabited houses in 1861, 5,893; uninhabited, 359; building, 69. The number of males in 1851 was 22,400; of females, 22,703. The number of persons committed, or bailed for criminal offences in 1851 was 139; the number brought to trial was 115; and the number convicted was 92. The number of persons on the poor roll in 1864 was 1,541,—casual, 824,—insane or fatuous, 38,—orphans or deserted children, 140. The amount raised for the poor in 1849 from assessment was £7,011 8s. 4d.; and from other sources £725 17s. 11½d. The places of worship in Dumbartonshire are 19 of the Established church, 15 of the Free church, 14 of the United Presbyterian church, 1 Reformed Presbyterian, 2 Original Secession, 3 Episcopalian, 3 Independent, 2 Baptist, 2 Wesleyan Methodist, 1 Evangelical Union, 3 Roman Catholic, and 1 Mormonite. The total number of sittings in 51 of these 66 places of worship is 26,527. The appliances of education in 1851 comprised 46 public day schools, attended by 1,747 males and 1,451 females,—29 private day schools, attended by 878 males, and 702 females,—2 evening schools for adults, attended by 33 males and 33 females,—59 Sabbath schools attended by 2,277 males and 2,689 females,—and 6 literary institutions, of various character, in the parishes of Dumbarton, Bonhill, Cumbernauld, Kirkiatilloch, and West Kilpatrick.

Dumbartonshire was full of the strifes of the olden times, between the Caledonians and the Romans, between the Scots and the Picts, between the Cumbrians and the Saxons, between highland clan and highland clan, between the catrans and the lowlanders, and between parties after parties in the several civil wars of the kingdom. Some of the salient points in its history are touched in our account of Dumbarton Castle, and in our article on Leunox. One of its chief antiquities is a large part of the wall of Antoninus, which runs through all the east wing of its main body, and along all the north verge of its detached district. Various Roman remains exist in

the vicinity of the course of the wall, particularly at Duntocher and in Cumbernauld. Dumbarton castle has some vestiges of the Roman period, and stands much associated with the Cumbrians or Strathclyde Britons. Several tumuli and old rude forts in various places, particularly in the highland districts, are memorials of the Caledonians, the Picts, and the Danes. A locality in Cardross is intimately associated with the name of Robert the Bruce. Numerous old castles, some scarcely traceable, some existing as ruins, and some incorporated with modern buildings, as at Faslane, at Kirkintilloch, at Balloch, at Dunglass, and at Ardincaple, are relics of the several periods of the baronial times. Some memorials exist also, particularly in Glenfruin, of sanguinary conflicts among the clans.

DUMBARTONSHIRE RAILWAY, a double line of railway from the Clyde, at Frisky, about half a mile below Bowling Bay, to the foot of Loch Lomond at Balloch. Its termini are constructed with a view to the utmost possible facility of connexion at the one end with the steam navigation of the Clyde, and at the other with the steam navigation of Loch Lomond. The line runs almost straight west-north-westward from Frisky to Dumbarton, and then deflects to the north up the right bank of the Leven. Its total length is $8\frac{1}{2}$ miles. Its stations, in addition to the termini, are Dumbarton, Dalreoch, Renton, and Alexandria. Steamers on the Clyde and on Loch Lomond ply regularly in connexion with its trains. This railway was opened for passenger traffic in July, 1850. The original project comprised branches to the total length of 35 miles, and bore the name of the Caledonian and Dumbartonshire railway. But the portion which we have described is the only part executed or not discarded; and this has not yet yielded any dividend; and, in consequence of its lying isolated from other railways, for the purpose mainly of connecting the Clyde up the Leven with Loch Lomond, it has often been popularly designated the Loch Lomond railway and the Vale of Leven railway. An accountant's report on its affairs in February, 1853, says:—"Cost of line, paid, and liabilities to this date, £244,975, besides liabilities to Helensburgh Harbour Company, holds land, &c., producing an yearly income of £100,—estimated value, £5,540." The completion of the Forth and Clyde railway will, it is expected, materially improve the affairs of the Dumbartonshire railway.

DUMBENNAN. See HUNTLY.

DUMBRAKE. See UDNY.

DUMBROCH, a lake of 10 acres in extent, and a large bleachfield, in the parish of Strathblane, Stirlingshire.

DUMBUCK, a village and a hill in the west corner of the parish of West Kilpatrick, Dumbartonshire. The village is a cheerful place, near the Clyde, with 20 houses, and a population of 126. The hill is a black basaltic mass, stooping precipitously to the plain at the western extremity of the Kilpatrick hill range, and overawing Dumbarton castle.

DUMBUILS, a low, craggy, precipitous elliptical hill, about a mile south-east of the village of Forganenny, in the parish of Forganenny, Perthshire. It has some remains of an ancient fortification, and commands a brilliant view of lower Strathearn and the frith of Tay.

DUMCRIEFF. See MOFFAT.

DUMFRIES, a parish on the south-west border of Dumfriesshire. It contains the royal burgh of Dumfries, the villages of Georgeton, Gaston, Locharbriggs, and Lochthorn, and part of the village of Kelton. It is bounded on the west by Kirkcudbrightshire, and on other sides by the parishes of Holywood, Kirkmahoe, Tinwald, Torthorwald, and

Caerlaverock. Its length southward is 8 miles; its greatest breadth is 3 miles; and its area is about 15 square miles. The river Nith traces all the boundary with Holywood and Kirkcudbrightshire; and Lochar water traces all the boundary with Tinwald and Torthorwald. About 8 miles north-north-west of the burgh a range of hills is cloven by the Nith, and they thence diverge and sweep down, in a well-wooded and picturesque amphitheatre, toward the Solway frith, terminating, on the east side, in the heights of Mousewald, and, on the west, in the towering summit of Criffel, and enclosing, in their progress, a beautiful and nearly level plain, of almost a regular oval figure. The centre of this plain, at the place where it is broadest, and where the two lines of hill are from 6 to 8 miles asunder, constitutes the parish of Dumfries. Its surface, for the most part, is a perfect level. But it rises in a brief but beautiful acclivity, from the edge of the Nith a little to the northward of the burgh, undulates along the area occupied by the streets, and then rises into a low ridge of hills, which intersect the southern division of the parish, stretching away at half-a-mile's distance from the river toward Caerlaverock. On their north-west face, where they look down upon the Nith, these hills are sloping, and wear the gentlest forms of beauty; but on the north-east they break down in abrupt declivities, and have a bold front and commanding outline. In one place, about $1\frac{1}{2}$ mile from the burgh, they present a precipitous front, and rise to a considerable height in two perpendicular rocks, known as the 'Maideu Bower craigs,' one of which has near its summit a remarkable cavity, said to have been the scene of Druidical rites for the testing of virginity. About two miles to the north-east of the burgh, is also a picturesque height, called Clumpton, which, at an early period, was, most probably, a mountain-grove and a haunt of the Druids, and, in a later age, was used as a beacon-post for commanding the considerable expanse of country which it overlooks. A beautiful eminence, called Corbelly hill, though not in the parish, but rising from the opposite bank of the Nith in the suburb of Maxwelltown, bears aloft an observatory, and mingles with the grouping of heights and groves on the Dumfries side, to form, if not a brilliant, at least a fascinating landscape.

Along the whole western border, the Nith sweeps gracefully under wooded and richly variegated banks; and along the eastern border, the sluggish and almost stagnant Lochar flows listlessly on through the brown wastes of Lochar moss. All the eastern section or stripe of the parish forms part of this remarkable morass [see LOCHAR MOSS]; but is, to a considerable extent, reclaimed, and, in some spots, even smiles in beauty. The north and north-western sections are a reddish earth upon a freestone bottom; and the south-western is a strong clay, and, in the flat lands, a clay upon gravel. Plantations of oak, elm, and other trees, are of frequent occurrence. Around the town, in every direction, are enclosures surrounded with trees, gardens, and nursery grounds, neat lawns and pleasant mansions, which impress a stranger with ideas of refined and opulent comfort. Several small lakes, particularly the Black and the Sand lochs, enrich the scenery of the parish, and, when paved with ice, are trodden by numerous groups of curlers. In Lochar moss is Ferguson's well, a mineral spring strongly impregnated with steel; and on the farm of Fountainbleau is a powerful chalybeate spring, which is numerously visited by invalids, and held in much repute for its medicinal properties. There are several quarries of red sandstone. There are also considerable salmon fisheries. The New Statistical Account estimates the

parochial area to comprise 7,930 acres in cultivation, 1,350 which have never been cultivated, principally in Lochar moss, 1,300 capable of being cultivated with a profit, 74 under full grown or natural wood, and 244 under plantation. The number of land-owners is large. The real rental of the landward districts is about £8,810. The yearly value of raw produce was estimated in 1833 at £22,286. Assessed property in 1843, exclusive of the burgh, £10,282 10s. 0d.

Antiquities within the limits of the burgh will occur to be noticed in the next article; but a few exist in other parts of the parish. A short way south of the town, on a romantic spot called Castledykes, overlooking a beautiful bend of the Nith, stood formerly the fortified residence of the Comyns. Near Castledykes is a field called Kingholm, which either may have received its present name from Bruce, in connexion with his having slaughtered Comyn, or may have originally been called Comyn's-holm, contracted gradually into Kingholm. At the opposite end of the town, and upon the banks of the river, is another field still called Nunholm, which lies adjacent to the site of a nursery formerly established at Lincluden. Toward the south end of the parish is an eminence called Trohoughton, which has been noticed by Pennant as a Roman station. In the eastern part of the parish, an antique, supposed to be a Roman sandal, was, many years ago, found; and in the Nith, nearly opposite the town-mills, was found, about 65 years ago, a small gold coin, thinner than a sixpence, but as broad as a half-crown, bearing, round the impression of a Roman head, the inscription 'Augustus.' Dr. Wight, professor of divinity in Glasgow, Dr. Ebenezer Gilchrist, and Mr. Andrew Crossbie, advocate, were natives of Dumfries; and the Rev. William Veitch—of whose life Dr. McCre has given an account—was, for some time after the Revolution, its minister. Population of the parish, including the burgh, in 1831, 11,606; in 1861, 13,523. Houses, 1,681.

This parish is the seat of both a presbytery and a synod. At the Reformation it was bereft of several chapels which formerly belonged to it, and of endowments connected with particular altars, and left in possession of only its principal church, dedicated to St. Michael. In 1658, a second minister was appointed; and in 1727 a second church, called the New church, was built. In 1745, the old church of St. Michael was pulled down, and the existing structure erected. The patron of both this church and the New is the Crown. In 1838 a third church was built, called St. Mary's, which has now the legal status of a quoad sacra parish, with the patronage vested in the male heads of families. All the places of worship in the parish, both established and dissenting, are situated in the burgh. Sittings in St. Michael's 1,250; in the New church 1,185; in St. Mary's 1,034. Stipend of the minister of St. Michael's £332 1s. 11d., with a glebe of about £25 annual value; of the minister of the New church £231 13s. 4d. There is a Free church with 984 sittings, whose receipts in 1865 amounted to £507 2s. 2½d. There are three United Presbyterian churches, —one of them in Loreburn street, built in 1829, at the cost of upwards of £900,—another in Buccleuch street, built in 1809, at the cost of £1,350,—and the third in Queensberry street, formerly Relief, with 812 sittings. There are a Reformed Presbyterian church, with 650 sittings, an Episcopalian chapel, with 300 sittings, an Independent chapel, with 374 sittings, a Wesleyan Methodist chapel, with 305 sittings, a Roman Catholic chapel, with 800 sittings, and a Baptist place of worship, with an attendance of about 40. Four endowed schools, under the patronage of

the magistrates, town-council, and ministers, are united under the name of the Dumfries Academy. The branches taught are Greek, Latin, French, English, mathematics, arithmetic, book-keeping, writing, drawing, and geography. The French and the drawing classes, however, are not endowed. Several schools, of a charity character, for poor children or for adults, are supported or aided by subscription; and there are at least thirty day schools conducted on private adventure,—most for the ordinary branches of education, and some for the higher and most polite branches.

DUMFRIES, a post and market town, a sea-port, a royal burgh, the county-town of Dumfries-shire, the seat of a circuit-court, and of a presbytery and a synod, and the metropolis of the south-west quarter of Scotland, is a place of elegance, importance, and great antiquity. It is situated in N. lat. 55° 2' 45", and W. long. from Greenwich 3° 36', on a slight undulating elevation on the east bank of the Nith, about 9 miles above the entrance of that river into the Solway frith, 8 south-west of Lochmaben, 14½ south-south-east of Thornhill, 15½ north-west of Annan, 30 west-south-west of Langholm, 33 north-west of Carlisle, 60 south-east of Ayr, 71 south by west of Edinburgh, and respectively 72 and 92, the former by road and the latter by railway, south-west by south of Glasgow.

The environs of the town, as may be inferred from the description we have given of the parish, are very beautiful. They have enough of both near hill and distant mountain to be perfectly relieved from the monotonous flatness which encompasses most of the best towns of England, and at the same time abound in mansions, lawns, gardens, nursery-grounds, wooded enclosures, and all the other ornamentation of luscious lowland scenery. The town itself, as to at once relative position, social character, marketing influence, immediate situation, and architectural structure, is one of the most interesting in Scotland. It is a minor capital, ruling in the south with nearly as much sway as Edinburgh rules the east. It is a place of snugness, of opulence, of taste, and of pretension, as the residence and resort of genteel families, who form a comparatively large proportion of its population, and give a very perceptible tone to its manners. It has sometimes been called by its admirers "the queen of the south," and was skittishly designated by Burns "Maggie by the banks o' Nith, a dame wi' pride eneuch." Its power, in trade and commerce and political control, is singularly commanding, in the midst of a great rich agricultural county, with scarcely a rival, or at least without any competitor which can for a moment be compared with it, between Ayr and Carlisle, or between the Irish sea and the Lowther mountains. And even as a town, though other influential towns were not remote, it is notable, both for its beautiful alignment in good street order along the river, and for a certain, curious, pleasing picturesqueness in the style and collocation of its houses. Built of a dark-coloured freestone, it in some spots has the sombre aspect of a town of brick; but many of its edifices being gauzed in a white paint, and others so decorated with the brush as to resemble structures of Portland stone, it presents a tout-ensemble of variegated tints and of mingled gaiety and sadness.

The suburb of Maxwelltown, extending along the Kirkcudbrightshire bank of the Nith, directly opposite, and nearly of the same length, looks to the eye to be part of Dumfries, and contributes to it some striking features, but will fall to be described in our article MAXWELLTOWN. The thoroughfare along the Dumfries bank of the river has the terraced form

leaving the view of the stream and of Maxwelltown fully open; and large part of this thoroughfare even expands into spacious widths, used variously for business and for promenading, and popularly called Sands. Two bridges connect Maxwelltown and Dumfries; but only the upper one is available for carriages; and this commands a good view of all the river-ward features of the suburb and the burgh, stretching partly to the north, but chiefly to the south. Buccleuch-street commences at the Dumfries end of this bridge, and goes up on a line with it, pleasant and airy in aspect, and containing the county buildings, and two neat places of worship. A street goes off from the middle of the south side of Buccleuch-street at the jail, and intersects the lower part of the town in a line parallel to the river. Another street goes off from the top of the north side of Buccleuch-street, and stands connected with a neat small new town, a suite of regular, retired, aristocratic thoroughfares, bearing some resemblance to various pleasant nooks in the new town of Edinburgh. An irregular wide thoroughfare winds from the top of the south side of Buccleuch-street round to a spacious area, a sort of Place, at the commencement of the High-street. A narrow but romantic old street strikes off from the west side of this area, and goes parallel to Buccleuch-street away to the Nith. Another street of a similar character strikes off from the opposite side of the area, and curves round northward to "the town-head," at a part of the Nith above a graceful bend which it makes before approaching the upper bridge. The north side of the Place, as we have called it, is occupied chiefly by the New church. The High-street, commencing grandly here, sweeps away southward parallel to the Nith. This street is nearly a mile in length; but, like a brook in a romantic glen, it deviates so from the straight line as, while disclosing part of its beauties, to allure a spectator onward to behold more; and it is of very unequal width, averaging probably about 60 feet, but expanding at three points into at least 100. At several places in its progress it sends off branch-streets at right angles toward the Nith; about half-way along it is joined from the south-east, at an angle of 50 or 60 degrees, by English-street, the spacious thoroughfare to Lochmaben and Annan; and all along the east it is winged by lanes and clusters of buildings which, together with the streets lying between it and the Nith, make the average breadth of the town $\frac{1}{2}$ of a mile. All the streets are well-paved, clean, and lighted up at night with gas; some of the smaller ones are remarkably elegant; and the great thoroughfares present an array of large and brilliant shops which may almost bear comparison with those of the proud metropolis. The Nith adds much both to the beauty and salubrity of the town, approaching it under an acclivity richly covered with wood,—breaking over a caul built diagonally across it for the supplying of a cluster of grain mills with water,—alternately leaping along in a shallow current, and swelling backward upon the caul by the pressure of the flowing tide—and both above and below the town, diffusing verdure and beauty over banks which are rich in promenading retreats for the citizens.

The upper bridge, or new bridge, is an excellent stone structure, erected in 1794, more substantial than elegant, yet not destitute of beauty. The old bridge, a short distance down, was built in the 13th century. This was originally a structure of 13 arches, and was esteemed the best bridge in Great Britain next to that of London; but it now consists of only 6 arches, and is mounted by a rapid ascent on the Dumfries side to what was formerly its centre, and affords accommodation only to foot-passengers. On the south side of Buccleuch-street are the county

jail and bridewell, the latter originally used as the court-house, and both built in 1807. They are surrounded by a high wall, bridewell in front and the jail in the rear; but are heavy-looking buildings, and inconvenient places of confinement. Directly opposite, on the north side of Buccleuch-street, and communicating with the jail by a vaulted subterranean passage, is the county court-house. This was originally the spacious chapel, or "tabernacle," erected by the Haldanes during the briefly triumphant march of their missionary operations in Scotland; and, after having for years stood unoccupied, it was converted into a court-room and other judiciary offices, and architecturally renovated and adorned, so as to combine interior commodiousness with exterior elegance of appearance. In the middle of the High-street, cleaving it, for a brief space, into two narrow thoroughfares, is a cluster of buildings surmounted by the Mid steeple, and including the chambers in which the meetings of the town-council are held. The Mid steeple is interesting both on account of the fine prominent figure it makes in every landscape view of the burgh, and because it was an architectural work of the famous Inigo Jones. Opposite it, in the eastern thoroughfare, is the Trades hall, erected in 1804, for the meetings of the seven incorporated trades. Overshadowed by the Mid steeple is a sudden expansion of the High-street called Queensberry square, the centre of traffic for the south-west of Scotland, and, in common with all the adjacent thoroughfares, the theatre of dense crowds of actors on the day of the weekly market; and in this square a Doric column of handsome architecture, erected in 1780 by the gentlemen of the county, in memory of Charles, Duke of Queensberry, rears aloft its fine pinnacle, and superintends the busy scenes around. In George-street, the assembly-rooms, of comparatively modern erection, display much beauty of architectural design. At the town-head, on the elevated bank of the Nith, before it sweeps round toward the new bridge, stands, in a spacious area, and commanding a fascinating view, the High school or academy. This institution has for fifty years been celebrated as a place of liberal education. The buildings are elegant, the classrooms capacious, and the masters well qualified for their duties. The Crichton Royal institution was originally designed to be an university, but is a large and handsome asylum provided by the bequest of upwards of £100,000 by the late Dr. Crichton of Friars carse. At the south-east extremity of the town, is the Dumfries and Galloway Royal infirmary, founded in 1776, and maintained chiefly by legacies, private contributions, parochial allowances, and annual grants from the counties of Dumfries, Kirkcudbright, and Wigton. It is commodiously fitted up in the interior, yet has a somewhat gloomy exterior. This institution is the only one of its class in the south of Scotland, and has been of incalculable benefit to the surrounding district. The poor's hospital, erected in 1733, by the bequest of two relations of the name of Muirhead, supports, as inmates, poor orphans and aged paupers of both sexes, and affords pensions to upwards of forty widows at their own homes; and it is maintained partly by its own funds, and partly by subscriptions and donations. A tenement in a humble street, formerly called Millbrae hole, but now called Burns street, was the death-place of the poet Burns, and was occupied by his widowed "Bonnie Jean" from the time of his death in 1796 to that of her own in 1834. It is a house of two storeys; and having been offered for sale in 1850, was then purchased by the poet's son, Lieut.-Col. William Nicol Burns. The Commercial inn, on the south side of the High-street,

is an object of curiosity, from its having been, in his retreat from England, in December 1745, the headquarters of Prince Charles Stuart. The theatre of Dumfries, though small, is of handsome structure, with a projecting portico, and possesses interest as the scene of the earliest efforts of Edmund Keane. The Glasgow and South-western railway is carried across the Nith by a viaduct about a mile above Dumfries; and it has added some noticeable features to the north-eastern outskirts of the burgh by its station there and its various works.

Of the ecclesiastical edifices of Dumfries, by far the most interesting is the old parish-church, situated at the south-east end of the town, and dedicated to St. Michael. The present edifice was built in 1745, and is surmounted by a lofty and handsome spire. The cemetery around it is famous for the vast multitude and singular variety of its monuments,—its splendid mausoleums rising like mimic temples over the ashes of the gifted and the wealthy,—its forest of obelisks, columns, and elevated urns, robed in white painting, and appearing in the dim moonlight like an assembly of spectres,—and its crowds of simple head-stones rearing their humble forms over the remains of the worthy but unknown to fame. Exclusive of such as were in a ruinous condition, the monuments, even about thirty years ago, according to a calculation then made by Mr. M'Diarmid, could not have been reared at a much less expense than £100,000. There were 120 monuments of the first class of architecture; considerably upwards of 700 tomb-stones on pillars, and in good repair; about 220 head-stones or erect slabs; and about 1,000 other monumental structures or stones which were more or less dilapidated. Among the monuments is one erected over the ashes of three witnesses to the truth, who were martyred during the persecutions of the Stuarts. But the structure which, more than any other, attracts the gaze of strangers, is a splendid mausoleum over the mortal remains of the poet Burns. The body of the bard was originally interred in the northern corner of the cemetery, and honoured with only a plain monumental stone erected by his widow. But a subscription, sanctioned by a contribution of fifty guineas from George IV., having been raised to express admiration of the poet's genius, his body, or as much of it as could be collected, was, on the 19th of September, 1815, exhumed from its obscure resting-place, and transferred to an arched vault in the present mausoleum. This beautiful edifice,

"The homage of earth's proudest isle,
To that bard-peasant given,"—

was constructed according to a design furnished by Thomas F. Hunt, Esq. of London, at a cost of £1,450; and it contains, in the interior, a fine emblematic marble structure, designed by Peter Turnerelli, which represents the genius of Scotland investing Burns, in his rustic dress and employment, with her poetic mantle. The New church—as it is still called—looks conspicuous within the burgh, from its blocking up the north end of the High-street, and is a fine edifice surmounted by a spire. It was built partly of materials from the dilapidated old castle of Dumfries, on the site of which it stands; and was first opened for public worship in 1727. The quoad sacra parish church of St. Mary's looks down English-road, and is a conspicuous and arresting object to strangers entering the town from the south-east. It was built according to a design furnished by John Henderson, Esq. of Edinburgh; and is a beautiful light Gothic structure, with an ornamental spire supported by flying buttresses. The Episcopalian chapel, and the Buccleuch-street

United Presbyterian meeting-house, are both neat and agreeable edifices, and contribute, with the county buildings, to present an attractive picture to a traveller entering the town from the north. The Free church, the Roman Catholic, the Independent, and the Reformed Presbyterian places of worship, are likewise good structures; and the second has a steeple erected in 1859.

Dumfries is rich in its religious, educational, literary, and social institutions. It has Bible and missionary societies, both general and congregational, for aiding the diffusion of Christianity; a Liberian society for assisting the free negroes on the African coast; a Samaritan society for watching over the well-being of the poor; a friendly society for the support of widows; an association for resisting the encroachments of infidelity; a public dispensary; a savings' bank; the numerous schools and charities already noticed; an astronomical association; a horticultural society; a mechanics' institution; an annual exhibition of works of art; four public reading-rooms; a public library, established in 1792; a society library, established at an earlier period; two other public libraries, and three circulating libraries; and four weekly newspapers, the Courier, the Herald, the Standard, and the Bulletin,—the first published on Tuesday, the second on Friday, the third on Wednesday, and the fourth on Saturday. Dumfries has altogether an intellectual and polished tone, which invests it with an importance far paramount to the bulkiness of its population. It has also, in a considerable degree, a character—an evangelical moralist would say, not an enviable one—for gaiety and fashionable dissipation. Besides its successful demand for select and celebrated actors in its theatre, it has a regatta club, a share in the meetings of the royal Caledonian hunt, and annual races in autumn on the crowded racing-ground of Tinwald downs. It was, till very recently, remarkable likewise for its frequent public processions, and its periodical shooting, in the field called Kingholm, for 'the siller gun,'—a baulh presented to the town by James VI., when returning from his visit to Scotland, as an expression of his satisfaction with the loyalty of the burghers.

The navigation of the Nith has at a great expense been materially improved. A rock which stood across the bed of the river, visible at low water, and preventing large vessels from passing Glencleap, has been cut away; other obstructions in the river's channel have been removed; the lighthouse at Southernness and the landing-places at the mouth of the river have been improved; and embankments have been thrown up, and various devices practised to counteract the devastating effect of the deep and impetuous tide which rushes up from the Solway; so that many vessels which were formerly obliged to unload at Glencleap or Kelton, can approach close to the burgh. Quays also are provided against whatever emergencies may occur, or for the accommodation of vessels of larger size, at brief intervals along the river. Besides those at the town and at Glencleap and Kelton, there is one, called the new quay, at the bend of the Nith near Castledyke; so that there are altogether 4 quays within a distance of 5 miles. Most of these improvements were effected previous to 1834, under an act of parliament passed in 1811, and at an expense of £18,930; leaving in 1834 a debt of £5,909, which was to be liquidated at the rate of £250 a-year. The harbour dues yielded from 1828 to 1832 an average yearly revenue of £1,083 5s. The customs duties in 1840-44 averaged £8,576 yearly; in 1845-9 averaged £11,540 yearly; and in 1864 amounted to £6,524. The port till recently extended from Sarkfoot to Glenluce, but it now extends only

from Sarkfoot to Kirkandrews burn. The tonnage belonging to it in 1840—1844 averaged 8,292; in 1845—1849 averaged 9,642; and in 1860 amounted to 15,286. The British shipping in foreign trade with it in 1840—1844 averaged 7,123 tons; and in 1845—1849 averaged 5,842. The foreign shipping in foreign trade with it was nothing in six of the years 1840—1849, and varied from 92 to 1,618 tons in the rest of these years. The shipping employed in its coasting trade in the years 1840—1844 averaged 186,362 tons a-year; and in the years 1845—1849 it averaged 193,767. Its commerce in 1860 was nearly all in British vessels, and comprised a tonnage of 2,712 inward in the foreign trade, 253 outward in the foreign trade, 42,869 inward in the coasting trade, and 29,461 outward in the coasting trade. The principal imports are timber, slate, iron, coal, wine, hemp, and tallow; and the principal exports wheat, harley, oats, potatoes, wool, freestone, and live stock.

Dumfries, however, figures more as a mart than as a port. Its markets have long been famous for the transfer of stock from Scottish to English dealers, and for their bulky unfluctuating importance. On every Saturday is a market of little value; and on every Wednesday is a great market, more resembling an annual fair than a matter of hebdomadal occurrence. On the Sands the cattle-dealers dispose weekly of an immense number of cattle and pigs; and, from the end of December to the beginning of May, they there dispose of many thousand carcasses of pork, usually selling upwards of 700 in one day, and sometimes, in a few hours, pocketing £4,000 or £5,000. There are also great annual fairs at Whit-sunday and Martinmas for black cattle, and, in October and February, for horses. But the chief market is an annual fair in September, when about 6,000 head of cattle are exposed for sale. During the droving season too, a vast number of transactions are effected privately throughout the surrounding country; no fewer than 20,000 head of cattle which had not been exposed in market, having been known, in a period of ten days, to pass the toll on the thoroughfare to England. So many pass through Dumfries, that the custom levied at the bridge has frequently amounted to £700 a-year. At each of the horse fairs about 500 horses are disposed of; and at that in February an immense number of hare-skins are sold, probably not fewer than 30,000 or 35,000. Manufactures are considerable in hats, which employ 600 workmen; in hosiery, principally of lambs' wool, which engage nearly 300 stocking-frames; and in shoes and clogs, or wooden-soled shoes, which employ upwards of 300 individuals. There are also several breweries, several tanneries, and an extensive basket-making establishment. The Glasgow and South-western railway has served, in various ways, both to stimulate trade and to modify it; the Dumfries and Castle-Douglas railway, with its extension to Portpatrick, has also had marked effects; and the Dumfries and Lockerby, going into junction with the Caledonian, will be valuable. Coaches meanwhile run to the Caledonian railway stations at Lockerby and Beattock. The town has branch offices of no fewer than seven banks,—the Bank of Scotland, the British Linen, the Commercial, the National, the Union, the Clydesdale, and the Royal. The principal inns are the Commercial, the King's Arms, the George, the Globe, the Swan, and the Crown.

Dumfries is a very ancient royal burgh. But many of its public records having been lost or destroyed at troublous epochs, particularly in the years 1715 and 1745, a new royal charter was in recent times given to it, confirming all its former rights, pri-

ileges, and corporate immunities. This new grant also conferred on the town a right of guildry, which it did not previously possess. The municipal government is vested in a provost, 3 bailies, a dean-of-guild, a treasurer, and 19 merchant-councillors, constituted according to the Reform Act; and the town is divided into four wards, who elect the council and the commissioners of police. The report of the convention of royal burghs in 1709 stated the sett of Dumfries, or the constitution of its council, to be what it still is under the act of municipal reform. The 7 incorporated trades of the town are hammermen, squaremen, weavers, tailors, shoemakers, skinners, and butchers; and these formerly wielded a paramount influence in the council. A large part of the heritable property formerly belonging to the burgh has been sold during the present century. The sales were occasioned by debts and by extensive improvements, and all are stated to have been made by "public roup for full value." The property thus disposed of, amounted in value to £15,305 1s. 7d. The present real property consists principally of mills and granaries, which, in 1833, yielded a rental of £357 19s. 8d. sterling, but comprises also some shops and houses in the suburbs, with small portions of land attached to them, yielding a rental of about £180,—and likewise certain feu-duties, which yield annually about £115. The burgh, from time immemorial, has possessed a right to levy tolls and customs for cattle and various descriptions of commodities passing across the river Nith. In 1681 this right was confirmed by an act of the Scottish parliament; and it was then declared that the burgh should possess, in all time coming, a right to levy customs from "Porttractford exclusive downwards to the mouth of the water of Nith," for the purpose of upholding the bridge of Dumfries. The amount of the dues leviable is not defined under the act; but they were fixed by a minute of council in 1772. The burgh has also the right to levy within its own limits various small customs, which yield an annual aggregate of about £590. Total corporation revenue in 1838—9, £1,596 6s. 11d.; in 1864—5 about £1,594. The income for police purposes is a separate account, mainly raised by assessment, yet materially aided by the sale of manure, and by police fines. Assessed property of the burgh in 1861, £30,028. Dumfries unites with Annan, Lochmaben, Sanquhar, and Kirkeudbright in sending a member to parliament; and its parliamentary boundaries include Maxwelltown. Municipal constituency in 1865, 587; parliamentary constituency, 705. Being the metropolis of an important county, Dumfries has a large number of resident lawyers; and, in addition to its quarter sessions, it has twice a-year the circuit justiciary court for the southern districts of Scotland, and the sheriff and small debt courts. Population of the municipal burgh in 1841, 10,069; in 1861, 12,313. Houses, 1,451. Population of the parliamentary burgh in 1861, 14,023. Houses, 1,684.

The name of the burgh in the ancient way of spelling it, was *Dunfres*, and is supposed to have been derived from the Gaelic *Dun* and *phreas*, signifying 'a mound covered with copsewood,' or 'a hill-fort among shrubs.' It most probably referred to the castle or strong fortress which long stood at the north end of the High-street; and as the original of that fortress may have been very rude, as the site of it could not have been an eminence of larger size than a mound, and as the soil of the site must have been of a very light kind, not likely to rear any tree-plants to a greater height than that of mere copse-wood, the name may be regarded as having, on its first application, and perhaps for several generations, been truly descriptive. The ancient arms of the

burgh was a chevron and three fleurs de lis; but that used for many years past is a figure of St. Michael, winged, trampling on a serpent, and bearing a pastoral staff. The motto is "Alorburn," a word which, during many centuries of warfare when the burgh was constantly exposed to danger, was used as a war-cry to assemble the townsmen. The side toward the English border being that whence danger usually approached, a place of rendezvous was appointed to the east, on an area intersected by a rill called the Lowerburn or Lorburn; and when the townsmen were summoned to the gathering, the cry was raised, "All at the Lowerburn,"—a phrase which was rapidly elided into the word "Alorburn." A street in the vicinity of the original course of Lowerburn still hears the name of Lorburn-street.

Dumfries was probably in existence, as a village or incipient town, so early as the eighth century. It appears to have originally grown up around the fortress of the copse-covered mound, or may have been first identified with that fortress, and next nursed by it into a young town. The place became of great military consequence in the 12th century, especially in the times of Wallace and Bruce, and was often then and thenceforth a subject of contention between the Scotch and English. So early as the reign of William I., who died in 1214, the town was of such importance as to be the seat of the judges of Galloway; and it probably received its first charter either immediately after the accession of that monarch, or during the preceding reign, that of Malcolm IV. From several remains of antiquity, it appears to have been then, not only a place of much military consequence, but a centre of very considerable traffic. So great a public work as the old bridge could have been thought of only in connection with a town and thoroughfare quite as important to Scotland, in the middle ages, as modern Dumfries is to the country at present; and this erection was constructed before the middle of the 13th century, by the Lady Devorgilla, third daughter of Allen, Earl of Galloway, and mother of King John Baliol. The same lady founded at Dumfries a monastery of Grey Friars. This edifice stood on a mound at the margin of the Nith, and though long since untraceable, continues to give name to Friars Vennel, one of the considerable streets of the town. In 1305, Robert Bruce had, in the chapel of this monastery, an angry altercation with the Red Comyn, a relation of its foundress. Hesitating about asserting his title to the crown, and irritated by opposition from Comyn, he poniarded the latter before the altar, and, rushing out to his friends who waited at the gate, hurriedly expressed a doubt that he had slain him. "You doubt!" cried one of his friends; "I mak siccar;" and he immediately ran to the wounded rival of his master and despatched him. Bruce, by this event, was committed to open warfare; and, unfurling his standard against the opponents of his claims, he led them on to Bannockburn, and there trod over their bodies to the throne. After the assassination of Comyn, the frequenters of the Greyfriars' chapel deserted it, and began to resort to the chapel of St. Michael, which stood on the site of the present St. Michael's church. Edward I. of England, in the course of his inroads into Scotland, occasionally halted at Dumfries; and here he ignominiously put to death the brave patriot and brother-in-law of Robert Bruce, Christopher Seton. The scene of Seton's execution was a mound or slight eminence at the entrance of the town on the east, then and previously the gallows-hill or common place of public execution, but now known as Kirsty's (Christopher's) mount. Christian Bruce, the widow of Seton, erected on the spot a chapel to his memory; and

her brother, King Robert, granted, in 1324, a hundred shillings yearly out of the barony of Caclaverock, for the support of a chaplain who should offer masses for the soul of the deceased. All vestiges of the building, which was called St. Christopher's chapel, have disappeared.

Dumfries castle was seized and garrisoned by Edward I., after he had dethroned John Baliol; but was retaken by Bruce after he had slain Comyn; and before 1312, it was once more seized by the English, and was again, in that year, retaken by Bruce. In 1307, Edward II. marched upon Dumfries, and received the homage of several Scottish nobles. In 1396, the burgh obtained some important immunities from Robert III.; in 1485, it received from James III. a charter, confirming its privileges and possessions; and in 1469, it obtained from the Crown all the houses, gardens, revenues, and other possessions, which had been the property of the Grey Friars. During the troubles which so long harassed and devastated the borders, Dumfries was frequently, in spite of the brave resistance of its citizens, plundered and burned. In 1536, one such disaster was signally retaliated by Lord Maxwell, who made an incursion into England, and reduced Penrith to ashes; and about the same period, either that nobleman, or some member of his family, built a strong castle for the defence of the town. In 1565, this castle was surrendered to Queen Mary, when, at the head of a portion of her troops, she visited the town to reduce and castigate some of her disaffected nobility. In April, 1570, Lord Scroop, acting under the Earl of Essex, made a devastating inroad upon Dumfries-shire; and in spite of a brave resistance on the part of the townsmen of the burgh, who marched under the leading of Lord Maxwell to oppose him, he took and plundered the recently erected castle, and set fire to the town. The citizens, harassed by frequent and heavy calamity from invasion and rapine, felt aroused to attempt the rearing of some strong rampart for their protection. In 1583, they erected a strong building called the New Work, which served the several purposes of a fortress, of a retreat for the people, and of a repository for their goods when they were heaten back by invaders. No vestiges, however, either of this erection or of the old castle, or of the castle built by the Maxwell family, can now be traced. About the time, too, when the New Work was erected, or possibly at an earlier period, a rude fortification or extended rampart, called the Warden's Dike, was thrown up on the south-east side of the town, between the Nith and Locher moss.

Dumfries was visited in 1617 by James VI., when he was on his return to England; and it then received from him 'the sillor gun,' to be shot for every seventh year by the incorporated trades. During the reign of Charles I. it shared largely in the disasters which overspread the country; and it shared still more largely in those of the dark reign of Charles II. On the 20th of November, 1706, 200 Cameronians entered the burgh, published a manifesto against the impending union of the two kingdoms, and burnt the articles of union at the cross. The Covenanters were indignant that the articles of union made no recognition of their solemn league and covenant, but on the other hand, recognised the constitution of the church of England, which they had sworn to overthrow and exterminate; yet, notwithstanding the intemperance and tumultuousness of their well-meant proceedings, they happily did not succeed in precipitating the town into any serious disaster. During the insurrection of 1715, when Viscount Kenmore encamped on the heights of Tinwald, and menaced the burgh with his army, the war-cry of

'Alorhurn' arose for the last time in the streets of Dumfries; and so loud was its sound, and startling its reverberations, that the Viscount, without attempting to execute his menaces, broke up his camp, and marched away to Annan. During the insurrection of 1745, a part of the citizens cut off at Lockerby a detachment of the Highlanders' baggage, and, in consequence, drew upon their town a severer treatment from the Pretender than was inflicted on any other burgh of its size. Prince Charles, on his return from England, let loose his mountaineers to live at free quarters in Dumfries; and he levied the excise of the town, and demanded of the citizens a contribution of 1,000 pairs of shoes, and £2,000 sterling. An alarm having reached him that the Duke of Cumberland had expelled his partizans from Carlisle, and was marching rapidly on Dumfries, he hastily broke away northward, accepting for the present £1,100 of his required exaction, and carrying with him Provost Crosby, and Mr. Riddell of Glenriddell, as hostages for the payment of the remainder. The town suffered considerably from the plunderings of his troops; and is supposed to have sustained, by his visit, damage to the amount of £4,000 sterling. The King—to whom, in opposition to the Stuarts, the town was steadfastly attached—afterwards granted, from the forfeited estate of Lord Elcho, the sum of £2,800, to compensate in part for the losses of the citizens, and express his approbation of their loyalty. Since 1746, the burgh has plenteously participated in the blessings of peace and increasing enlightenment, and though moving more slowly than some other towns in the race of aggrandizement, has been excelled by none in the gracefulness of its progress, and the steadiness and substantial character of its improvement.

Dumfries gives the title of Earl in the Scottish peerage, to the ancient family of Crichton of Sanquhar. In 1633, William, 7th Lord Crichton, was created Earl of Dumfries, enjoying, at the same time, the titles of Viscount of Ayr, Lord Crichton of Sanquhar and Cumnock, and other honorary distinctions. In 1696, the earldom, owing to a want of male heirs, passed to a female branch of the Crichton family, who married a member of the family of Dalrymple, and son of the 1st Earl of Stair. William Dalrymple, her eldest son, and 4th Earl of Dumfries, afterwards succeeded to the Stair peerage. On his death the earldoms were again separated,—that of Dumfries passing to his nephew, Patrick Macdowall of Feugh. This last Earl's heir or inheritrix was a daughter, who married John Stuart, eldest son of the Marquis of Bute. By a royal licence the Bute family, the present proprietors of the earldom, have assumed the name of Crichton.

DUMFRIES HOUSE. See CUMNOCK (OLD).

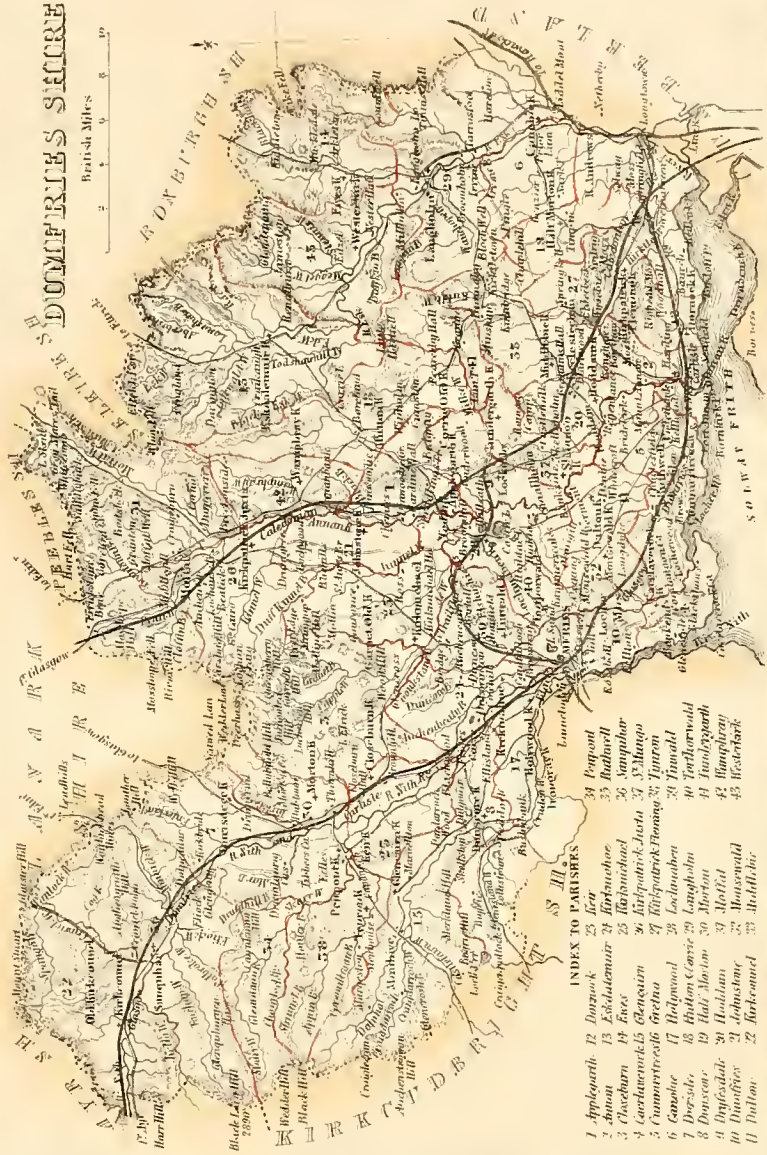

DUMFRIES-SHIRE, a large, important, and beautiful county in the south of Scotland. It is bounded on the north by the counties of Lanark, Peebles, Selkirk, and Roxburgh; on the east by Cumberland; on the south by the Solway frith; on the south-west by Kirkcudbrightshire; on the west by Kirkcudbrightshire and Ayrshire; and on the north-west by Ayrshire. In latitude it extends from 55° 2', to 55° 31'; and in longitude from 2° 39', to 3° 53', west from London. Its figure is irregularly ellipsoidal: the greater diameter from the mountain of Corsoncone on the border of Ayrshire, to Liddel mount on the border of Roxburghshire, in a direction nearly south-east by east, measures about 50 miles; and the lesser diameter, from Loch Craig on the confines of Peebles-shire, to the Solway frith at Caerlaverock-castle, in a direction west of south, measures about 32 miles. Its ellipsoidal

form, besides undulating in every part of the circumference, is indented to the depth of 10 miles by the southern point of Lanarkshire, to the depth of 5 miles by Etrick Head in Selkirkshire, and to the depth of 3 miles by the point of Kirkcudbrightshire which forms the parish of Terregles. Its circumference, drawing the line across the waters at the mouth of the estuaries of Nith and Annan, is about 174 miles, extending round a mountain-line of 120 miles, a champaign line on the east of 18, a line of seashore from the Sark to the Nith of 21, and a champaign line along the Nith and the Cluden on the south-west of 15. The surface of the county, as recently ascertained by the Ordnance survey, comprises 1,098 square miles. Dr. Singer's measurements, which were derived, at a large cost to the landholders, from the labours of a ten years' survey, and published in his General View of the Agriculture of Dumfries-shire, and which were long generally accepted as very near the truth, gave only 1,006 square miles; while other measurements, on which reliance was sometimes placed, gave so much as 1,228 and even 1,800 square miles. For several miles on the south-west, the county is divided from Kirkcudbrightshire by Cairn water. From the point where that stream ceases to touch it, all the way round its western, northern, north-eastern, and eastern border, it is—with the deduction of Liddesdale, or the parish of Castleton, which, though sloping toward the south, is included in Roxburghshire—marked off by the highest elevations of the mountain-range which breaks away westward from Cumberland and traverses the south of Scotland. Falling in now with Liddel-water, the boundary-line follows that stream till its confluence with the Esk; it thence, for about a mile, follows the united rivers, and then, for upwards of 3 miles, breaks due westward, through an open country, till it strikes the Sark; and following that stream to the sea, it afterwards runs along the margin of the Solway frith and the estuary of the Nith. The county is thus, with some unimportant exceptions, shut in by natural geographical limits.

All the northern part of Dumfries-shire is very mountainous, not only the summits of the water-dividing line which bounds it, but the elevations of the spurs which that range sends down toward its lowlands, rising, in many instances, to a great height above the level of the sea. Along the boundary from west to east are Black Larg, 2,890 feet above sea-level; Lowther, 3,130; Queensberry, 2,259; Hartfell, 2,635, the highest mountain in the south of Scotland; Whitecomb, nearly of equal altitude; Etrick Pen, 2,220; Wisp-hill, 1,836; and Tinnishill, 1,846. Radiating from the boundary mountain range are spurs, which, in some instances, run far down the county, decreasing, in their progress, into hills, but which, in most instances, are short, and allow the multitudinous head-waters, or mountain-rivulets of the border, to find confluences with one or other of three rivers which traverse the lowlands of the county. Of the interior mountains, the most remarkable are Cairnkinna and Glenquhargen in Penpont, the former 2,080, and the latter 1,000 feet above sea-level; Langholm-hill, between the Esk and the Tarras, 1,204; and Brunswark-hill in the parish of Hoddam, 740. Almost all the mountains, whether on the boundary or in the interior, have an inconsiderable basis, a rapid acclivity, and summits, in some instances, round-backed or flattened, in others conical, and in a few tabular or flat. The peaked and towering summits, or summits of rugged and craggy outline, so common in the Highland counties, are here unknown. Yet the Dumfries alps are scarcely less grand or picturesque,

and at intervals but a degree less savage, than those of Argyle or Perth; and they abound in sylvan ravines and fairy nooks and retreats of scenic beauty to which the Highland alps are strangers. The central or midland part of the county is exquisitely diversified in scenery, and exhibits an attractive blending of hill and valley,—the elevations possessing every variety of character, and often rising to considerable altitude, and the lower grounds consisting of slope, undulation, moorland, dell, and holm; so that a tourist traversing the district, no matter in what direction, is continually stimulated by novelty of view, and rapidly surveys the most heterogeneous classes of attraction in landscape. Down to the southern line of the midland district, the county, after ceasing near the boundary to be sectioned off into fragments by mountain-spurs, is divided into three great valleys or basins, traversed by the rivers Nith, Annan, and Esk. But that part of the county which lies south of a line drawn from Whinnyrig by Ecclefechan, Craigschaws, Solway hank, and Broomholm to Moorburnhead, is comparatively low and flat, being only occasionally marked by low hills, either round-backed or obtusely conical. At this line, the basins of the Annan and the Esk cease to be valleys, and are spread out or flattened into plains. The valley of the Nith, too, for 10 miles before it touches the Solway, is in all respects a plain, with the exception of a short range of low hills in the parish of Dumfries, a few unimportant isolated eminences, and an amphitheatre of beautiful but not high hills, one side of which divides the plain from the basin of the Annan, while the other trends away into Galloway. A portion of this plain of the Nith is the dead level of Lochar moss. Dumfries-shire, sloping down from the alpine heights of its cincturing boundary, and subsiding eventually into a plain, is Lombardy in miniature,—differing from its beautiful Italian type, chiefly in having a larger proportion of upland compared to its champaign country.

From the configuration of the county, no streams might be expected to flow into it from adjacent districts, and none to flow out except to the sea. The original waters of the Nith, however, as well as one or two of the unimportant and remote tributaries of that river, pass into the county through gorges or openings on the west. All other waters, which any where traverse it, well up within its own limits, and expend all their resources in enriching its own soil. The Nith, from the very point of entering it, and the Annan and the Esk, from a short distance south of their source, begin to draw toward them nearly all the other streams, so as to form the county into three great valleys or basins. All these three rivers pursue a course to the eastward of south, the Nith on the west, the Annan in the middle, and the Esk on the east; and, with the exception of some small curvings, they flow parallel to one another, at an average distance of about 12 miles, imposing upon their own and their tributaries' basins the names respectively of Nithsdale, Annandale, and Eskdale. The streams which flow into them, though very numerous, are, for the most part, of short course, of small body of water, and remarkable only for the beauty or picturesqueness of the ravines or dells through which they pass. The chief of those which enter the Nith are, from the west, the Kello, the Euchar, the Scaur, the Cairn, and the Cluden; and, from the east, the Crawick, the Minnick, the Enterkin, the Carron, the Cample, and the Duncow. The chief which enter the Annan are, from the west, the Evan, and the Aë; and, from the east, the Moffat, the Wamphray, the Dryfe, and the Milk. The chief which enter the Esk are, on the west, the Black

Esk; and, on the east, the Stennis, the Ewis, the Tarras, and the Liddel. In addition to these streams—which are all described in separate articles in our work—and multitudinous smaller ones, but independent of the three great rivers of the county, four rivulets, each 10 miles or more in length, flow southward, and fall into the Solway,—the Lochar and the Pow in the space between the Nith and the Annan, and the Kirtle and the Sark in the space between the Annan and the Esk. Several of the upland and tributary streams, like the parent rivers to whose embrace they run, form, for a brief way, considerable basins of their own, and impose upon them their names. Ancient documents, and even the rustic natives of the present day, talk frequently of Moffatdale, Dryfesdale, Evisdale, and 'the lads of Aë.'—Dumfries-shire possesses very few lakes, and these of but small extent. The most remarkable are those in the vicinity of Lochmahen, nine in number, the largest fully 3 miles in circumference. Loch Skene, too, at the source of Moffat water, is notable in connection with its furnishing the stream which forms the magnificent cataract called the 'Grey Mare's Tail.' Salmon, herlings, parr or samlet, and sea-trout, are found in the larger rivers; and pike, perch, trout, and eels in the smaller. Fish in great abundance, and, in one instance, of a strictly peculiar species, are found also in the lakes. In the Nith and the Annan, fishing for salmon, grilse, and whiting or herling, commences on the 10th of March, and closes on the 25th of September; but as to the period both of commencing and of closing, is generally considered to be a month too early. The fisheries of all the rivers are greatly injured by the killing of salmon in the spawning season, and by the use of stake-nets in the Solway.—Springs of the purest water exist in great numbers in the gravel beds and fissured rocks of the mountain district of Dumfries-shire. Of mineral waters in the county, the chalybeate are most frequent, and are always discovered by the oxide of iron which they deposit round their bed. The most celebrated are a chalybeate near Annan; another at the Brow, in the parish of Ruthwell; a sulphur-spring at Closeburnhouse; a chalybeate in a ravine of Hartfell mountain; and particularly the two springs, one sulphureous, and the other chalybeate, near the village of Moffat.

Most of Dumfries-shire basks, with a southern exposure, under the genial rays of the meridian sun. The high mountain-range which, over so considerable a distance, environs it, softens the acerbity of blasts from the north-west, north, and north-east. Its southern or perfectly lowland division, is warmed by the vicinity of the Solway, and hardly ever, in any spot or in any intensity of frost, retains snow for a week. Most of the rain which falls in the county is accompanied with mild winds from the south or west, and differs widely from the chilling distillations which annoy the eastern coasts of the kingdom. Snow, though capping the alpine summits on the boundary, does not remain very long on even the mountain faces of Dumfries-shire. Moisture, however, is somewhat abundant, coming more freely from the Atlantic than, on the eastern coast, it does from the German ocean. Rains prevail most towards the beginning of August and the end of September, and are then well-known under the names of the Lammas and the equinoctial floods; and they also, not infrequently, fall long and heavily during the months of winter. The prevailing winds blow, in summer and autumn, from the west and the south; and, in spring and winter, from the east and the north. The heat often rises, in summer, above 70° Fahrenheit, and has been known to raise

the thermometer to 92° in the shade; but in the average of the year, it is believed to be about 45°. The climate, as regards salubrity, is in general thought good.

Hares, in many districts, are very abundant. Rabbits also are found; but they are few in number, and have not any regular warren. Foxes have here retreats, whence they occasionally sally to plunder the poultry-yard; and they afford considerable employment to hounds, and sport to huntsmen. The red deer and the capercaillie, which formerly were met with in Dumfries-shire, are now extinct. Two or three forest-deer were not long ago discovered at Raehills, and have been protected and propagated; but they are believed to have strayed from the hills of Lanarkshire. At a former period, indeed, the forest-deer, though for a time extinct, was very abundant; and it is frequently found inhumed in the morasses. Pheasants, grouse, black game, partridges, and other game birds, and also the woodcock, the curlew, the plover, the snipe, and the lapwing, are very plentiful.

A brown or reddish coloured sandstone, dipping generally toward the Solway, and supposed to be a continuation of the red marl formation of Cumberland, stretches athwart the southern part of Dumfries-shire; and proceeding northward, merges in a reddish-coloured limestone, succeeded first by blue limestone and coarse white sandstone, and next by mandestone rock and primitive formations containing metallic ores. Near Dumfries and Lochmaben the sandstone is red; near Langholm and Sanquhar, it is grey; and at Cove, near Kirtle water, it is of light colour and solid texture, affording a fine material for pillars. The sandstone, where it crops out, is frequently incohesive, and is called tillband; but by being followed in its dip, it is usually found sufficiently compact to be used for ridge-stones. In each of the three great divisions of the county, limestone is worked in large quantities for sale. In Annandale the quarries are most numerous, but are each greatly inferior to the quarry of Closeburn in Nithsdale. At Kelhead the lime rock, which is of the first quality, is from 12 to 24 feet thick, and is said to yield 95 parts out of 100 of carbonate of lime. Ironstone has been found in spheroidal masses, associated with limestone, and exists also in detached masses in wet bogs; but it has not hitherto been worked. Marble has been worked at Springkell, Kelhead, and other places, and employed for some useful and ornamental purposes. Veins of slate are found in Evandale and the parish of Moffat; but, in the former case, are too schistous, and in the latter too inconveniently situated, to be of practical value. Coal, though supposed, in continuation of the coal-field of Cumberland, to stretch at a great depth under the red strata of the shores and valleys of Nithsdale and Annandale, and though seemingly, in some parts, forced up near the surface, and often laboriously searched for by boring, is found in a workable state only in the parishes of Sanquhar and Canobie, at the extremities of the county. The coal of Sanquhar is probably connected with the coal-field of Ayrshire; that of Canobie affords a supply of about 25,000 tons per annum; yet Dumfries-shire is, for the most part, obliged to supply itself with coal from Cumberland, or to find a succedaneum for it in the produce of Lochar moss and other bogs. Extensive lead-mines, the most productive in Britain, are worked at Wanlockhead, on the north-east boundary of the parish of Sanquhar. The galena or ore yields from 74 to 80 per cent., is contained in veins of from a few inches to 15 feet thick, and, during a period of 50 years, yielded 47,420 tons. Silver is extracted from this ore in the proportion of from 6 to 12 ounces in the ton. Lead ore has been found also, but not worked

in the parishes of Penpont, Johnstone, St. Mungo, and Langholm. Gold occurs in the mountains around Wanlockhead, either in veins of quartz, or in the sand washed down by the rivulets. In the reign of James V., 300 men are said to have been employed there during several summers, and to have collected gold to the value of £100,000 sterling; and either they or subsequent searchers have left monuments of their diligence, in the artificial mounds of sand which overlook the gold-bearing streams. The largest piece of gold ever found at Wanlockhead, is in the British museum, and weighs 4 or 5 ounces. Not many years ago, two pieces were picked up which weighed respectively 60 and 90 grains. An antimony mine, the only one in Scotland, was discovered in 1760 at Glendinning, in the parish of Westkirk; and, from 1793 till 1798, produced 100 tons of the regulus of antimony, worth £8,400 sterling. The ore is a sulphuret, and yields about 50 per cent., and forms a vein seldom exceeding 20 inches in thickness, and combining blende, calcareous spar, and quartz. Copper-ore is said to have been found, but not in considerable quantity, in the toadstone in the parish of Middlebie. Manganese occurs in small quantities in nests or heaps. Gypsum is found in thin veins. Loose blocks of sienite are found all over the low part of the county. Greenstone, greywacke, and greywacke slate, compose the rocks of many of the hills. Floetz-trap is found, generally in the shape of mountain-caps, on the summits of the mountains. Basaltic or whinstone rocks occur in various localities, and exhibit some fine specimens in the mountains near Moffat.

The soil, in the lower parts of Dumfries-shire, is in general light, and underlaid with rock, gravel, or sand. In some places, where it has a subsoil retentive of water, it is cold, and occasions rankness of vegetation. In Nithsdale and Annandale it is for the most part dry; but in Eskdale it is in general wet. A gravelly or sandy soil prevails on the ridges or knolls of the valleys and even of the bogs. Moor soil abounds in the mountain-districts, and wherever there is white-stone land; but when its subsoil is dry, it is capable of gradual transmutation into loam. A loamy soil, rich in vegetable mould, covers considerable tracts in the lower southern district, and is interspersed with other soils on the gentle slopes of the midland district. Alluvial soils—called in other parts of Scotland haugh-land, but here called holm-land—abound along the margins of the streams; and in general are shallow and poor in the upland dells, and deep and rich in the lowlands. Clay, as a soil, seldom occurs, except as mixed with other substances; but, as a subsoil, is extensively found, either white, blue, or red, under the green sward of ridges, and beneath soft bogs. Peat-moss exists, in great fields, both on the hills and in the vales; and, wherever drainage can be practised, is such as may be converted into soil. Sleaf, or the saline and muddy deposition of the waters of the Solway, spreads extensively out from the estuary of the Lochar, and is not only productive in itself, but affords an effective top-dressing for the adjacent peat-moss.

Estates are held either of the Crown, or of a subject superior, who may or may not have property in the county; and, in either case, they may be laid under entail for an unlimited period, and in favour of heirs yet unborn. Kindly tenures, or possessions of land as the king's kindly tenants, subject to the annual payment of a small fixed sum to an officer of royal appointment, exist in the vicinity of the castle of Lochmaben, and present an anomaly any resemblance to which in Scotland is found only in Orkney. Feu-holding, which involves perpetuity of right and

full power of alienation, but is subject to an annual payment quite or nearly equal to the fair rent of the soil, is confined chiefly to the burghs. Burgage-holding extends over considerable tracts of land around Dumfries, Annan, Lochmaben, and Sanquhar. Long leases of small portions or plots of land—provincially but inaccurately called feus—are everywhere common; and, being granted with a view to building, embody in a degree the idea of property. Farms of arable land are generally let on leases of 15, 19, or 21 years; and those of sheep-pasture, on leases of 9 or 13. A stipulation is made, in most instances, that not more than one-third of the arable land shall, at one period, be under white crops; and, in other instances, that the four-field or six-field course of husbandry shall be practised. But leases are of various forms, and not very rigidly observed in their conditions. Pasture-farms are usually entered at Whitsunday, and arable-farms in autumn after the removal of the crop. Rents are paid, one-half at Whitsunday, and the other at Martinmas. Sheep-farms vary in size from 300 to 3,000 acres, and pay, on the average, about 4s. per acre of rent. Arable farms vary from 50 to 600 acres, a large proportion of them being from 100 to 150; and they pay from £1 to £5 per acre,—the average for good land being about £3 10s. Some farms—though only an inconsiderable proportion, and chiefly in the midland district—are both pastoral and arable, and are regarded as particularly convenient and remunerating.

The agricultural capacities of Dumfries-shire were long under-estimated and neglected, and did not begin to be fairly developed till the year 1760. Charles, Duke of Queensberry, who died in 1778, greatly improved his property in Nithsdale and Annandale,—the largest property in the county. The Earl of Hopetoun laid the basis of extensive prosperity in the pastoral uplands of Annandale; and by abolishing thirlage to his mills, and giving advantageous leases to the farmers, spread a new and rich carpeting over the lowlands of his property. The Duke of Buccleuch, grandfather to the present Duke, succeeded, by skill and liberality, and by bearing the chief expense of the great road leading from England along the Esk, in diffusing agricultural energy over his extensive possessions in Eskdale. Sir John Heron Maxwell and Mr. Pulteney Malcolm introduced new and effective methods of husbandry into considerable districts on the southern plain. J. J. Hope Johnstone of Annandale, Esq., drew excited and profitable attention to improvements in the breed of cattle, and set a high example to landlords in a liberal treatment of his tenants. Menteath of Closeburn, however, on an estate of 10 miles by 8, achieved improvements which have provoked the emulation and aroused the energies of the whole county. By drainage, by the free but judicious use of lime, by irrigation, and by a wise and handsome treatment of servants, he converted mimic wildernesses into gardens, and raised the value of some land from 5 shillings to £4 10s., and £5.

Crops are cultivated of various kinds, and in various orders of rotation. In the uplands, and recently reclaimed grounds, wheat is not an object of attention. Farmers, in the best districts, differ considerably in their modes of culture; some skilfully endeavouring to suit a permanent course of cropping and of management to the peculiarities of the soil; and others labouring, by ingenious or experimental changes in the genera of the crops, and in the order of their rotation, to extract from the soil, its maximum of productiveness, without, at the same time, doing damage to its energies. A rotation of frequent occurrence is, first, oats,—next, potatoes or turnips,

the latter fed off by sheep,—next, wheat or barley, sown with grass-seeds,—next, hay,—and finally, for three years, pasture. Both for home-consumption and for exportation, oats and potatoes are more plentifully cultivated than any other crop. The culture both of potatoes and of turnips—particularly the latter—very greatly increased in the second and third decades of the present century, and was found to be a valuable improvement. Potatoes are in much request for the fattening of pigs and cattle. On ground of difficult access, and generally on upland farms, bone-dust is advantageously used in enriching the soil; and in fact, so far back as fifteen or twenty years ago, this manure, throughout entire districts, came into general use, and was an object of considerable mercantile or productive speculation. Other special manures, together with all the recent feasible appliances of improvement, have also been very largely tried. Implements of husbandry, and all the appliances of the farm-yard, are the same as those in other agricultural counties. The Dumfries-shire farmers, however, even twenty years ago, had very generally thrown away the sickle, in the reaping of their crops, and adopted in its stead a small scythe. Most of the farm-houses, including all of recent erection, are built of stone and lime, roofed over with slate, and are commodious and well-arranged. Plantations and pleasure-grounds abound in the lower parts of the county, and are everywhere remarkable for their beauty and opulence.

The mountainous division of Dumfries-shire is employed in pasturage; and is stocked, partly with black cattle, but principally with sheep. The cattle of Eskdale are, in general, larger than any others in the county. All farmers, however, who purchase cattle for breeding, endeavour to introduce the beautiful and much-valued form of the true Galloway cattle. Their prevailing colour is black, and their weight from 32 to 55 stone. The Ayrshire breed, however, is in general favour for the dairy. The mountain-flocks of sheep consist either of Cheviots, or of black faces with short wool. But most of the sheep of the lowland tracts are of mixed breed,—the Cheviots having been crossed with the Leicester sheep, the South Downs, and the Negretto and Paular breeds of Spain. A peculiarity in the store-farming of Dumfries-shire, is its rearing an enormous number of pigs. In the year 1770 not more than £500 value was received in the produce of pork; but so far back as 1812 it had risen to about £50,000 a-year; and since then, it has very greatly increased. The pork is excellently cured, and sent off in bacon to most of the leading markets of England. Poultry of all sorts, and bees, are objects of inferior attention.

Dumfries-shire, though conducting an extensive export trade in oxen, sheep, pigs, corn, wool, and skins, is not strictly a commercial, much less a manufacturing county. Its sea-ports are the scenes of a sea-ward traffic exceedingly small in proportion to its intrinsic importance and productive capacities: See articles ANNAN and DUMFRIES. Woollen and linen manufactures, though frequently tried in the county, have but recently been naturalized, and are still very limitedly successful. At Sanquhar, and the vicinity, gingham, Thibets, and tartans are woven. At Dumfries and at Annan, coarse gingham are largely manufactured, chiefly for the Carlisle market. Wages, however, have greatly declined. The average amount of a weaver's work, per week, will not exceed one cut, or 60 yards of coarse gingham, for which he only receives 6s. 6d., with 1s. extra, if approved, making 7s. 6d. But out of this he has to make payments which leave him

not above 5s. 3d. clear, on 6 days' work of 11 hours per day. Females employed in hand-sewing muslin collars, and seaming stockings, earn about 2s. per week; and in winding, from 1s. 6d. to 2s. About 50 years ago, weavers in this county might have made 35s. per week; though in fact—such were their habits of dissipation—they seldom made above 10s. Such energies as in other localities would be directed to manufacturing and mercantile enterprise, are here almost all employed in subordination to the direct and accessory pursuits of agriculture. Yet great improvements, from a concurrence of agencies, and a co-operation of favourable influences, have taken place, since the commencement of the present century, upon the condition and habits of the population. Smiling cottages, neater and cleaner than anywhere else in Scotland,—moorlands, richly cultivated to the base, and even upon the acclivities, of mountains,—a soil, arrayed in the gayest dress, and laden with luxuriance,—roads, churches, school-houses, fences, rural clothing and popular manners, convenient, beautiful or refined in character,—all attest the high though tranquil prosperity which Dumfries-shire has attained.

The county is intersected in every direction with excellent roads. The two Carlisle and Glasgow turnpikes traverse it from Sarkbridge respectively through Annan, Dumfries, Thornhill, and Sanquhar,—and through Ecclefechan, Lockerby, Dinwoodie-Green, and Beattock; the Dumfries and Edinburgh turnpike, northward by way of Moffat; the Carlisle and Edinburgh turnpike, along the vales of the Esk and the Ewes; and the Dumfries and Ayr turnpike, north-westward through Dunscore and Glencairn. Cross-roads wend along every valley, or stretch outward on the straight line, from village to village; and, in general, they have been much improved, and are kept in good repair. Safe and easy communications have been opened also through several parts of the alpine districts. The main trunk of the Caledonian railway traverses the county, down the valley of the Annan, and on toward the Sark above the head of the Solway frith; the Glasgow and Southwestern railway traverses the county down the valley of the Nith to Dumfries, and thence east-south-eastward to a junction with the Caledonian in the vicinity of Gretna; the Dumfries and Castle-Douglas railway defects from this at Dumfries, and makes a curve within the county before entering Galloway; and the Dumfries and Lockerby railway, which was authorized in 1860, and to be completed within four years, will go from Dumfries eastward by way of Lochmaben, into junction with the Caledonian at Lockerby.

Besides the fairs and cattle-markets of the town of Dumfries, there are fairs for lambs, at Langholm, 26th July; and at Lockerby, 16th August and 16th October, excepting when the date falls on Saturday, Sunday, or Monday, and then on the Tuesday following;—for sheep, at Langholm, 18th September; for tups, sheep, lambs, and wool, at Sanquhar, 17th July, if Friday, and if not, on Friday following;—for tups, at Moffat, in the latter end of June; at Annan, in May and October; at Moffat, in March and October; and at Lockerby, in April. There are also fairs of a general kind or for hiring purposes at Lochmaben, Thornhill, Ecclefechan, Minnhive, Penpont, and some of the places already named, the dates of which will be found noted in our articles on the several towns.

The royal burghs in Dumfries-shire are Dumfries, Annan, Lochmaben, and Sanquhar. The burghs of barony are Moffat, Lockerby, Langholm, Ecclefechan, Thornhill, and Minnhive. The other principal villages are Springfield, Glencaple, Torth-

orwald, Roucan, Collin, Penpont, Kirkconnel, Kirtle-bridge, Waterbeck, Dornoch, Cummertrees, Ruthwell, Clarencefield, Hightae, Mousewald, Closeburn, Holywood, Kelton, Locharbriggs, Amisfield, Dalswinton, Carron-bridge, and Cawick-mill. There are numerous hamlets. Some of the principal mansions are Drumlanrig-Castle and Langholm-Lodge, the Duke of Buccleuch; Kinmount, Glenstewart-House, and Tiunwald-House, the Marquis of Queensberry; Comlongan-Castle, the Earl of Mansfield; Rachills, J. J. H. Johnstone of Annandale; Springkell, Sir J. H. Maxwell, Bart.; Jardinehall, Sir Wm. Jardine, Bart.; Colstoun-Park, Sir Richard Brown, Bart.; Rockhall, Sir Alexander Grierson, Bart.; Westerhall, Sir F. J. W. Johnstone, Bart.; Amisfield, Charteris, Esq.; Closeburn-Hall, Douglas Baird, Esq.; Terregles-House, W. C. Maxwell of Nithsdale; Mossknow, William Graham, Esq.; Halleaths, Andrew Johnstone, Esq.; Mount Annan, Lieut.-Col. J. Dirom; Dalswinton, J. M. Leny, Esq.; Maxwelltown; Craigdarroch, Drumcrieff; Murraythwaite; Barjarg-Tower; Blackwood-House; Hoddam-Castle; and Broomholm.

Dumfries-shire originally comprehended, in addition to its own ample territory, the stewartry of Kirkeudbright; and, in the reign of William I., was placed under a sheriff. But, during a considerable period, its sheriffs had only a nominal authority beyond the limits of Nithsdale. From the reign of David I. till that of Robert Bruce, both Annandale and Eskdale were under independent baronial jurisdiction,—the latter on the part of various proprietors, and the former on the part of Robert Bruce's ancestors. The county consisted then strictly of the sheriffship of Nithsdale, the stewartry of Annandale, and the regality of Eskdale; and was partitioned off very nearly, according to the water-lines of the three principal rivers by which it is traversed. Bruce, on receiving the Scottish crown, made great alterations in the civil polity of his kingdom, and paved the way for hereditary sheriffships and local jurisdictions. By an act passed 20th of George II., Dumfries-shire assumed the status and the jurisdiction which it has since maintained. The county town is Dumfries. The sheriff court for the county, and the commissary court, are held there every Tuesday and Friday during session; the sheriff small debt court every Friday during session, and on the same days that ordinary courts are held in vacations; and the justice of peace small debt court every Monday. The courts under the sheriff small debt act are held at Annan, Langholm, Lockerby, Moffat, Thornhill, and Sanquhar. The valued rental in 1674 was £158,502 Scots. The annual value of real property, as assessed in 1815, was £295,621; as assessed in 1861, £350,636. The assessment in 1861 for respectively rogue-money and prisons was $\frac{1}{8}$ and $\frac{1}{8}$ of a penny per £1. The average yearly number of crimes committed was 71 in 1836-40, 96 in 1841-45, 209 in 1846-50, 141 in 1851-55, and 99 in 1856-60. The number of prisoners in Dumfries jail during the year July 1859—June 1860, was 320; and the average duration of their confinement was 21 days. The number of registered poor in 1863-64 was 2,165, and of casual poor, 3,289; and the amount expended for the former was £12,964, and for the latter, £939. The county returns a member to parliament. Constituency in 1865, 2,144. Population in 1801, 54,597; in 1811, 62,960; in 1821, 70,878; in 1831, 73,770; in 1841, 72,830; in 1861, 75,878. Males in 1861, 35,674; females, 40,204. Inhabited houses in 1861, 13,192; uninhabited, 373; building, 91.

Till the epoch of the Reformation, Dumfries-shire formed part of the extensive diocese of Glasgow, and

was divided into the two deaneries of Nithsdale and Annandale. The synod of Dumfries not only embraces the whole county, but extends its jurisdiction considerably into coterminous districts; and consists of five presbyteries, Dumfries, Lochmaben, Annan, Penpont, and Langholm. The presbytery of Annan has 9 parishes, and that of Penpont 9, all within the county; the presbytery of Langholm, 7, one of which is in Roxburghshire; the presbytery of Lochmaben, 13, small parts of two of which are in Lanarkshire; and the presbytery of Dumfries, 19, ten of which are in Kirkcudbrightshire. The total number of parishes in Dumfries-shire is thus 46. The number of places of worship in it, in 1851, was 49 belonging to the Established church, 21 belonging to the Free church, 20 belonging to the United Presbyterians, 6 belonging to the Reformed Presbyterians, 2 belonging to the Episcopalians, 2 belonging to the Independents, 2 belonging to the Baptists, 2 belonging to the Wesleyan Methodists, 1 belonging to the Evangelical Union, and 2 belonging to the Roman Catholics. The number of sittings in 30 of the Established places of worship was 17,905; in 13 of the Free church places of worship, 9,320; in the 20 United Presbyterian meeting-houses, 10,431; in 3 of the Reformed Presbyterian meeting-houses, 1,215; in the 2 Episcopalian chapels, 440; in the 2 Independent chapels, 614; in one of the Baptist chapels, 100; in the 2 Methodist chapels, 405; and in the 2 Roman Catholic chapels, 1,100. The number of attendants at the morning service of the Census Sabbath in 1851, at 27 of the Established places of worship, was 5,974; at 20 of the Free church places of worship, 4,898; at the 20 United Presbyterian meeting-houses, 4,660; at 3 of the Reformed Presbyterian meeting-houses, 1,028; at the 2 Episcopalian chapels, 212; at the 2 Independent chapels, 277; at the 2 Baptist chapels, 66; at one of the Methodist chapels, 63; at the Evangelical Union chapel, 100; and at the 2 Roman Catholic chapels, 1,047. There were, in 1851, in Dumfries-shire, 108 public day schools, attended by 5,073 males and 3,373 females,—68 private day schools, attended by 1,349 males and 1,554 females,—7 evening schools for adults, attended by 114 males and 96 females,—and 111 Sabbath schools, attended by 4,423 males and 4,502 females.

Dumfries-shire, in common with a large part of Galloway, was, at the period of the Roman invasion, A. D. 80, inhabited by the tribe called the Selgovæ. The Romans included it in what they termed the province of Valentia. After they withdrew, it remained for a season in a state of independence; but subsequently was overrun by Ida and the Angles; and, during two centuries, formed a part of the new kingdom which they founded. Vast multitudes of immigrants poured into it, in the meantime, from among the Cruithne of Ireland and the Scoto-Irish of Kintyre, and raised up with the natives the mongrel breed of Picts. This hardy, though heterogeneous race, hurst the yoke of foreign domination, and restored the district to a condition of rude independence. Edgar, after his accession in 1097, abolished the system of local governments, and established the Anglo-Norman dynasty, dividing Scotland into lordships. At his death, Dumfries-shire, in common with Cambria, in which it had become included, passed, by his bequest, to his youngest brother, David. Having become the adopted home of many opulent Anglo-Norman barons, whom David invited hither as settlers, Cambria was now partitioned into extensive baronies, and enjoyed the luxury of an apparently fair administration of justice. Nithsdale was possessed by a powerful chief, called Deneval, of Celtic ancestry, whose descendants as-

sumed the name of Edgar; Eskdale was subdivided among Asenals, Sonlises, Rosscalds, and others, who figured briefly and obscurely in their country's annals; and Annandale was possessed by Robert de Bruce, a chief of skill and valour, whose descendants afterwards wore the Scottish crown. The Bruces had many lands and castles in the county; but during the 12th and 13th centuries, resided chiefly in the castle of Lochmaben. Lesser proprietors in Annandale held of the Bruces as retainers, such as the Kirkpatricks of Kirkpatrick, the Johnstones of Johnstone, the Carlyles of Torthorwald, and the Carnocs of Traillat and Drumgrey. But, independently of any of the great barons, the ancestors of the present house of Maxwell held the castle and lands of Caerlaverock; and, in the same way, Sir John Comyn held lauds which, including the estate of Duncow, stretched round Dumfries to the south-east till they touched the Nith at Castledykes. In 1264, Alexander III. advanced to Dumfries with a large army, and thence despatched John Comyn and Alexander Stewart to the isle of Man to subjugate it to Scotland. In the wars of Bruce and Baliol, Dumfries-shire was placed between two fires; or, to use a different figure, it nursed at its breasts both of the competitors for royalty; and from the nature of its position, bearing aloft the Bruce in its right arm and the Comyn in its left, it was peculiarly exposed to suffering. Located as the baronial possessions of Bruce were in Annandale, and those of Baliol in Nithsdale, Dumfries-shire was necessarily the scene, if not of the most decisive, at least of the earliest and the most harassing struggles of the belligerents. Bruce, after the victory of Bannockburn had put him into undisputed possession of the kingdom, gave the Comyns' manor of Duncow to Robert Boyd, and their manor of Dalswinton to Walter Stewart; he bestowed on Sir Thomas Randolph his own lordship of Annandale and castle of Lochmaben, and created him Earl of Moray; and he conferred on Sir James Douglas, in addition to the gift of all Douglasdale, the greater part of Eskdale and other extensive possessions in Dumfries-shire.

In the troubles and warfare which occurred under David II., between the Bruicians and the Baliols, this county was again the chief seat of strife and disaster. Nor did it suffer less in degree, while it suffered longer in duration under the proceedings of the rebellious Douglasses, who, after being introduced to it by Robert Bruce, grew, by various ramifications of descent and acquisition, to be its most potent barons. On the attainder of this family in 1455, their authority and possessions reverted to the Crown, and were in part bestowed on the Earl of March. In 1484, the county was invaded by the exiled Earl of Douglas and the Duke of Albany; and thence, during a century and a half, it appears never to have enjoyed a few years of continuous repose. So late as 1607, the private forces of Lord Maxwell and the Earl of Morton were led out to battle on its soil, and were with difficulty prevented from tracking it with blood. During, in fact, the entire period from its assuming an organized form till the union of the Scottish and the English crowns, Dumfries-shire, from being situated on the border, was peculiarly exposed to hostile incursions and predatory warfare. Some of its children distinguished themselves by deeds of patriotic bravery; and others, for many generations, subsisted entirely on spoil and pillage. Under James VI., the county sat down in quietude, and began to wear a dress of social comeliness; but again, during the reign of the Charleses, was agitated with broils and insurrections. In the rebellions of 1715 and 1745—especially in the latter—it

was the scene of numerous disasters,—disquiet and consternation spreading here, more perhaps than in any other district of Scotland, among the middle and lower classes of the population. Of the aristocrats, a large proportion were imbued with the spirit, and a considerable number shared the ruin, of Jacobitism. The Maxwells, in particular, were utterly destroyed by the attainer of the Earl of Nithsdale in 1715; and, at the eras of both rebellions, several other families of note became, as to their possessions and influence, extinct. In more recent times, the Douglasses of Queensberry, and the Johnstones of Annandale, have merged into other families. At present, the noble house of Buccleuch is by far the ascendant family of the county, and possesses property, ecclesiastical patronage, and other appurtenances of rank and social grandeur, almost too great to be employed, except in very judicious hands, benignly for the well-being of the community.

A line of Roman road, proceeding northward, anciently entered Dumfries-shire across the Liddel, and wended along the east side of the Esk to Castle O'er and Raeburnfoot in Eskdalemuir. Another and more important line entered the county across the Sark at Borrowslacks, advanced to the westward of Brunswark-hill, crossed the river Milk at the Drove ford, between Seroggs and the bridge, proceeded by Lockerby and Torwood-moor, across the Dryfe a little way above its confluence with the Annan, and here divided into two branches, the one stretching northward through Annandale, and the other westward into Nithsdale. Of these two branches, the former, or the main line, wended along the east side of the Annan, passed Dinwoodie green and Girthhead, crossed the Wamphray water, and northward at Burnfoot crossed the Annan to the Roman intrenchments at Tassie's holm; it then crossed the Evan, advanced by the farm of Dyke, ascended the ridge of Loch-house, and passed on to the top of Errickstane-brae, advancing to Newton in Lanarkshire. The second or westward line of the main road, proceeded from the point of its divergence in Dryfesdale across the Annan, by Amisfield house, Duncow, and Dalswinton, advanced up the east side of the Nith by Thornhill, crossed Carron water, turned then away northward, entered and traversed the defile called the Wellpath, in the mountains above Durrisdeer, and there passed into the basin or vale of the Powtrail in Lanarkshire, afterwards to rejoin at Crawford castle, the line which had traversed Annandale. Some inferior side-branches struck off from these central lines. One diverged from the westward branch, through Kirkmichael, to what is now the glebe of that parish, and where there seems to have been a Roman station; and another turned off to the west from the Nithsdale road, crossed the Nith, and passed through Tynron by Scaur water. The most remarkable stations connected with the roads, are those of Brunswark, Castle O'er, and Raeburnfoot, together with Agricola's camp on Torwood-moor near Lockerby. In many places are Roman encampments, circular and square fortifications, cairns or barrows, vestiges of towers, and moats or artificial mounds, which are supposed to have been the seats of popular judicial assemblies. The most remarkable towers are at Amisfield, Lag, Achincass, Robgill, and Lochwood; and the largest and most beautiful moat is at Rockhall, near Lochmaben. Remains or vestiges of druidical temples exist in the parishes of Gretna, Estdalemuir, Holywood, Wamphray, and Moffat. A remarkable antiquity, supposed to be of Anglo-Saxon origin, is the cross of Markland, found in the churchyard of Ruthwell. The principal ancient castles, are those of Caerlaverock, Torthorwald, Closeburn, Morton,

and Sanquhar, in Nithsdale; Achincass, Hoddam, Comlongan, and Lochwood, in Annandale; and Wauchope and Langholm, in Eskdale. In various places, are vestiges of ancient monasteries. Throughout the country, vast quantities of ancient coins, medals, and pieces of armour have been found.

DUMGLOW. See CLEISH.

DUMGOIAC. See DUNBLANE.

DUMGREE, a quondam parish in the upper part of Annandale, Dumfries-shire. The greater part of it was annexed to Kirkpatrick-Juxta, and the rest to Johnstone. The church-yard of it, unenclosed, may still be seen within Kirkpatrick-Juxta.

DUMMITORMONT. See DRUMMITORMON.

DUN, any mound, isolated hill, or small hill-ridge, fitted either naturally or artificially to serve for military defence. The name is both Celtic and Latin,—*dun* in the former case, *dunum* in the latter; and was used in the early times of Scotland to designate either a naturally strong eminence, a fortified hill, or any kind of isolated fortress or castle. The name still occurs in Scottish topography,—sometimes by itself, as in the case of the parish of Dun,—oftener in apposition, as in the instances, Dun of Boreland, Dun of Finty, and many others,—and still oftener in prefix, as in the case of threescore places, or more, which are prominent enough to require full description in our ordinary alphabetical order. The prefix, for the sake of euphony, is sometimes, as in the case of Dumbarton and Dumfries, changed into Dum. The combination of it with its affixes has reference sometimes to persons, as in Dumnichen, 'the hill of Nechtan,' who was a Pictish chieftain,—Dunblane, 'the hill of St. Blain,' who was a Culdee missionary; sometimes to events, as in Dundee, 'the hill of God,' alluding probably to Druidical worship,—Dunipace, either Celtically 'the hill of death,' or Latinically 'the hill of peace,' alluding probably to a great sanguinary conflict, or to a treaty of pacification which followed it; and sometimes to topographical features, as in Dumfries, Dun-phreas, 'the hill-fort of shrubs,'—Dunfermline, Dun-fiar-linne, 'the hill-fort upon the crooked pool.'—The name Drum, which also is used both by itself and as a prefix, is a Celtic one near akin to Dun, and signifying a ridge or a small isolated hill, but without any reference to fortification.

DUN, a parish in the north-east of Forfarshire. Its post-town is Montrose. It is bounded on the north by Strickathrow and Logiepert; on the east by the parish of Montrose, and Montrose basin; on the south by the river South Esk, which divides it from Marytown and Farnell; and on the west by Brechin. It is of nearly a square figure, with points running off at two of its angles; and measures in extreme length and breadth about 4 miles, and in superficial area about 12 square miles. Along the banks of the South Esk and the shore of Montrose basin the surface is low, flat, protected by embankments, and of a clayey fertile loam. A little northward, and up to the centre of the parish, the surface gently and gradually rises, carpeted with a fine productive soil of blackish mould. From the centre to the northern boundary the surface ceases to rise, and, excepting a considerable tract which is covered with plantation, is, in general, wet and miry. Two brooks of local origin flow eastward respectively to the Esk and the basin. A third is collected into an artificial lake on the west, called Dun's dish, covering about 40 acres, and used to drive a mill. The bed of Montrose basin along the base of the parish, has a black, slimy, and very dreary appearance at low water; and is then frequented by considerable numbers of athletic females, from the neighbouring fishing-village of Ferryden,

searching for bait. Over the South Esk is a finely ornamented bridge of 3 arches, built in 1787. The river abounds with salmon, sea-trout, a fish called the finneck, which appears only during August and September, and several other trouts of passage. Dun, at the Reformation, was the property of a gentleman of the name of Erskine, who figures in a manner most patriotic and religious in the history of the period. The parish is traversed, at its greatest breadth, by the highway between Montroso and Brechin, and is abundantly intersected by minor roads. It is traversed also by the Aberdeen railway, and has a station on it at Bridge of Dun.—The landowners are Erskine of Dun, Cruickshank of Langley Park, Carnegie of Craig, and Sir James Campbell of Strickathrow. The yearly value of raw produce was estimated in 1833 at £10,392 10s. Assessed property in 1865, £9,528 19s. 2d. Population in 1831, 514; in 1861, 765. Houses, 130.

This parish is in the presbytery of Brechin, and synod of Angus and Mearns. Patron, Erskine of Dun. Stipend, £159 3s. 2d.; glebe, £15. Schoolmaster's salary, £34 4s. 4½d, with £19 19s. other emoluments. The parish church was built about 20 years ago. The former church is said to have been a chapel of the Dun family, whose mansion was built very near the church-yard. There are within the parish a private school and a small parochial library. Two fairs were formerly held, in May and June, on Dun's Moor; but in 1832 they were removed to a part of the Dun estate within Logiepert.

DUNAGOIL BAY, a small bay on the west side of the island of Bute, 1½ mile north-north-west of Garroch Head. Contiguous to it, on a bold rock 50 feet high, is a vitrified fort.

DUN-AIDH. See OA.

DUNAN, a bold promontory, in the parish of Lochbroom, on the west coast of Ross-shire.

DUNAVERTY, an ancient stronghold of the Lords of the Isles, in the parish of Southend, Argyleshire. Scarcely a vestige of it now remains. It stood on a peninsulated pyramidal hill, one face of which falls sheer down to the sea, at a part of the extremity of Kintyre, which is considered to be the nearest to the Irish coast. A fosse across the neck of the peninsula, and two or three concentric walls round the face of the ascent, combined with the great natural advantages of the site to give the fortalice uncommon strength. The earliest of the Lords of the Isles resided here; and Angus Og gave entertainment in it to the fugitive Bruce. In 1647 it sustained a severe siege by General Leslie with a body of 3,000 men. The garrison consisted of about 300 Irish and Highlanders, under the command of a brother of Sir Alexander McDonald. They were "put to the sword every mother's son, except one young man," says Sir James Turner. Adjacent to the peninsula, near the shore, is a village with about 100 inhabitants.

DUNBAR, a parish in the east of Haddingtonshire. It comprises a main body and a detached district. The main body lies along the coast, and contains the town of Dunbar, and the villages of East Barns, West Barns, and Belhaven. It is bounded on the north by the German ocean, and on other sides by the parishes of Whitekirk, Prestonkirk, Stenton, Spott, and Innerwick. Its greatest length, east-south-eastward, is nearly 8 miles, and its greatest breadth is upwards of 3½ miles; but its area is only about 11½ square miles. The western part of the coast, including Tynningham and Belhaven bays, presents a fine clean sandy beach; on approaching Dunbar from the west, the coast be-

comes bold and rocky; to the eastward of Dunbar, it presents a series of low rocky ledges, generally of red sandstone formation, and dipping gently to the south-east. As we advance towards the east, however, these rocks assume a more vertical slope, and here and there shoot up in sharp peaks. The surface of the interior presents a pleasing diversity of hill and dale, rising gradually toward the Lammormoor hills, and commanding an extensive prospect of ocean and seaboard from St. Abb's Head to the Bass Rock and the hills of Fife. The highest ground is Brunthill, which forms the extreme south-east point of this part of the parish, and rises to an altitude of about 700 feet above sea-level. A little to the north of it, on the march with Spott, is Doon hill or Down hill, which is about 120 feet lower. The only streams are the water of Bell or Belton and the water of Spott or Broxburn, two rivulets more remarkable for the beautiful scenery through which they glide, than for their volume of water or length of course. The soil is partly a rich loam, partly clay, and partly a light mould well-adapted for the production of grain and green crops of every description. Both the old and the new Statistical reporters claim for this district the high pre-eminence of being the most fertile tract of the most fertile district of Scotland. The detached district of the parish commences 1½ mile from the nearest part of the main body, and about 5 miles south-south-west of the burgh. It is surrounded by Whittingham, Stenton, Spott, and Innerwick, and measures about 7 square miles in area. It is quite a moor-land district, lying upon the Lammormoors, and having its waters flowing to the south-east, and drained by the Berwickshire Whitadder. The rocks of the main body of the parish exhibit most interesting phases of both the secondary formations and the erupted masses; and those of the detached district partake of the Cambrian character of the Southern Highlands. Coal occurs, but not of sufficient thickness to be worked. Red sandstone, more or less compact, is abundant. Grey limestone of excellent quality has long been quarried. There are upwards of thirty considerable landowners. Two of the chief are the Duke of Roxburghe and Sir John Warrender of Lochend; and others are the proprietors of Belton, East Barns, Heatherwick, Barnyhill, Links, and Ninevar. The valued rent is £16,953 Scots. The real rent in 1823 was £23,405. The yearly value of raw produce was estimated in 1835 at £59,350. Assessed property in 1843, £27,700 14s. 6d. There is good fishing of white-fish, herrings, and lobsters. A flax mill was tried at West Barns, and a cotton factory at Belhaven; but both proved failures. The principal manufactures, and also the principal antiquities, are at the town. The ancient villages of Belton, Heatherwick, and Pinkerton, with their respective chapels, have long since disappeared. The parish is traversed by the Edinburgh and London road and by the North British railway. Population in 1831, 4,735; in 1861, 4,944. Houses, 658.

This parish is the seat of a presbytery in the synod of Lothian and Tweeddale. Patron, the Duke of Roxburghe. Stipend, £382 9s. 5d. Unappropriated tithes, £40 2s. 2d. The principal schools in the parish are the two burgh-schools, the grammar and the mathematical school. The master of the first has a salary of £42; of the second, £36. There are 2 parochial schools, which are located respectively in West Barns and East Barns; the salary of the first master being £35; and that of the other, £25, as fixed under the Act of 1861. There are also in the parish an infant school and several adventure schools. The parish church is a splendid Gothic edifice, built in 1821, and capable of contain-

ing 1,800 hearers. There is a Free church; whose receipts in 1865 amounted to £377 19s. There are two United Presbyterian churches, the one with 700 sittings, the other with 500. Stipend of the minister of the former, £150 with a manse; of the minister of the latter, £100 with a manse. There are also places of worship for Baptists, Morrisonians, and Methodists,—the last with an attendance of about 260.—The parish of Dunbar belonged originally to the bishopric of Lindisfarne; but at the decline of the kingdom of Northumbria, it was ceded, with the rest of Lothian, to the King of Scotland, and annexed to the bishopric of St. Andrews. The church is noticed in the 'Taxatio' of Lothian in 1176, wherein, with the chapel of Whittingham, it is assessed in 180 merks. It was not a collegiate church originally, but was converted into a collegiate form in 1342, by Patrick, 10th Earl of Dunbar, for a dean, an arch-priest, and 18 canons. For their support were assigned, together with the revenues of the church at Dunbar, those of the chapels of Whittingham, Spott, Stenton, Penshiel, and Heatherwick; and in addition to these, were annexed the chapels of Linton in East Lothian, and Dunse and Chirnside in Berwickshire; the founder reserving to himself and his heirs the patronage of the whole. In 1492, the chapels of Dunbar, Pinkerton, Spott, Belton, Pitcox, Linton, Dunse, and Chirnside, were appointed as prebends to the collegiate church. Soon after this arrangement, the chapels of Spott, Stenton, and Heatherwick, were converted into parish-churches, yet still remained dependent as prebends of the college. On the forfeiture of the earldom of March in 1434-5, the patronage of the church fell to the Crown. During the reign of James III., it was enjoyed with the earldom of Dunbar, by the Duke of Albany. It again reverted to the King, on the forfeiture of his traitorous brother, in 1483, and now belongs to the Duke of Roxburghe, as principal heritor of the parish. The church of Dunbar ceased to be collegiate at the Reformation in 1560. A monastery of Red or Trinity friars was founded at Dunbar, in 1218, by the sixth Earl of Dunbar. Part of the building is still standing in the Friars'croft. A monastery of Carmelites or White friars was founded here, in 1263, by the seventh Earl. No vestige of this building now remains. A Maison Dieu stood at the head of the High street.

The TOWN OF DUNBAR stands on the coast of the parish of Dunbar, and on the road from Edinburgh to London, 3 miles east-south-east of the mouth of Tynningham bay or the estuary of the Tyne, 11 east by north of Haddington, 28 east of Edinburgh, and 30 north-west of Berwick. It is a royal burgh, a sea-port, a market-town, a centre of considerable traffic, and a place of much antiquarian interest. Its site is pleasant, and its environs abound in beauty. It chiefly consists of one spacious street called the High-street, of which Dunbar-house, the residence of the Earl of Lauderdale, forms the northern termination. Parallel to this street, and between it and the shore, run two smaller streets; while the harbour projects a little into the bay, on the south-east; and the bold rocks which are crowned by the ruins of its far-famed castle rise directly north of Dunbar-house, and within 300 yards of it. The houses are mostly modern. The most ancient part of the town is in the vicinity of the harbour and the castle. The High-street is a wide airy thoroughfare, containing several large buildings; and the town altogether has an agreeable prosperous appearance.

The route of the North British railway through the parish and past the town, is replete with interest. On the left of it, just after it enters the

parish, is Niuewar. On the right, a little farther on, in a beautiful winding glen, embosomed among stately trees, is Belton House. Passing from an embankment into a slight cutting, a little above Beltonford, the line crosses the Biel. To the right of it, as it approaches this point, but within the parish of Stenton, is an artificial lake of two miles in length, similar in scenery to some of the finest stretches of the Rhine, and freely accessible to the public. Contiguous to the Biel, at Bristly Brac, the line crosses the turnpike road on a viaduct of iron beams; and then it emerges from an embankment into a cutting, which is spanned by two bridges carrying across public roads. On the left now, at the head of Belhaven bay, is the pretty village of Belhaven, with elegant villas. Here, on crossing a road which comes up from Belhaven, the line reaches its bottom level, 112 feet below the level of the Edinburgh terminus. It then passes through the Friars'croft, and arrives at the Dunbar station, on the site of the minister's glebe, immediately in rear of the parish church. This station, being nearly midway between Edinburgh and Berwick, is the principal stoppage on the line. It is a tasteful structure, in the Elizabethan style; and contains, not only the usual accommodations for passengers and traffic, but also a depot for carriages, and an engine-shed and workshops. On and around the very spot occupied by the station stood the camp of Cromwell, at the most critical moment of his inroad into Scotland; and in the vicinity, both in the town and in the country, are the scenes of several great military events, which figure prominently in the history of the kingdom, and must form the topic of some of our subsequent paragraphs. Contiguous to the station is Loehend House, an elegant mansion in the Anglo-Gothic style; and a little to the south, but within the parish of Spott, are the neat modern mansion of Bowerhouses, and the witch-doom hill of Spott-loan, where poor women were burned alive, so late as the year 1705, for the imputed crime of witchcraft. About a mile east of the town, at crossing Broxburn, the line passes Broxmouth Park, a seat of the Duke of Roxburghe, "a modern mansion sheltered from every wind, surrounded with hills and dales, woods and waters, and everything to render it a most desirable retreat." The line then deflects to a permanent direction of south-east, and passes away toward Innerwick amid a continued variety of embankments and cuttings, viaducts and bridges, woods and fields, pleasant close-views and fine far-away prospects.

The parish church of Dunbar belongs fully as much to the environs of the town as to the town itself. It stands on the south-east outskirts, on a site 65 feet above the level of the sea. It is a large elegant structure, in the Gothic style, with a magnificent tower 108 feet high. It was built after a design by Gillespie Graham, at the cost of about £6,000, one-fifth of which was contributed by the burgh, and the rest by the heritors according to their respective valuations. The material of the edifice is a red stone from a quarry near Bowerhouses. The church, with its tower, is seen over a great extent of country, and serves as a landmark to mariners. The summit of the tower commands a brilliant view of the ocean and of part of five counties, comprising a large expanse of the screens of the Forth. The former church occupied the same site as the present, and was taken down expressly to give place to this. It was a venerable fabric in the form of a cross, measuring 123 feet in length, but only from 20 to 25 feet broad. The transept or cross aisle measured 83 feet. The west end, beyond the transept, was probably the ancient

chapel of Dunbar. The entry lay through a Saxon arch,—

“ On ponderous columns, short and low,
Built ere the art was known,
By pointed aisle and shafted stalk,
The arcades of an alley'd walk,
To emulate in stone;”

while the east end, including the south aisle of the transept, was a species of the Norman or Gothic style. In 1779, the old church underwent a thorough repair. It was ceiled in the roof, new floored, part of the long body cut off by a partition, and regularly seated; but nevertheless, it continued to be crazy and inconvenient, and it was used for the last time in March, 1819. Immediately behind the pulpit of the present church stands a superb monument, erected to the memory of George Home, Earl of Dunbar, 3d son of Alexander Home of Manderston. This nobleman was in great favour with James VI., and held successively the offices of high-treasurer of Scotland, and chancellor of the exchequer in England; and, while in the latter capacity, he was created a peer of his native land. It was on him that ‘the British Solomon’ chiefly depended for the restoration of prelacy in Scotland; and at the parliament held at Perth in 1606, he had the skill to carry through the act for the restoration of the estate of bishops. His death took place suddenly at Whitehall, on the 29th January 1611, when he was about to solemnize his daughter's marriage with Lord Walden in a magnificent manner. A writer in the ‘Biographia Scoticana, or Scots Worthies,’ imputes the circumstance to the judgment of heaven, while Sir John Scott, in his political epitome of slander, ascribes it to some poisoned sugar tablets which were given him by Secretary Cecil for expelling the cold. “His body,” says Crawford, “being embalmed, and put into a coffin of lead, was sent down to Scotland, and with great solemnity interred in the collegiate church of Dunbar, where his executors erected a very noble and magnificent monument of various coloured marble, with a statue as large as life.” The monument is 12 feet broad at the base, and 26 feet in height. Above the pedestal, Lord Dunbar is represented, kneeling on a cushion, in the attitude of prayer, with a Bible open before him. He is clad in armour, which is seen under his knight's robes, and on his left arm is the badge of the order of the garter. Two knights in armour stand on each side as supporters. Above the knights in armour are two female figures,—the one representing Justice, and the other Wisdom. Betwixt these figures, and immediately above the epula, Fame sounds her trumpet; while, on the opposite side, Peace, with her olive wand, sheds a laurel wreath on his lordship. Immediately beneath the monument is the vault, wherein the body is deposited in a leaden coffin.

Dunbar castle is an object of great interest. It is believed to have been founded at a very early period of the Christian era; it was eventually the work of different ages, making successive additions to its strength; it had the fame, for a long time, previous to the invention of gunpowder, of being impregnable; it was one of the grandest fortresses of the border counties, exerting a material influence on the national history; and though dismantled and demolished by order of Parliament in 1567, it still survives in sufficient vestiges to be an imposing antiquity. Grose has given two views of it, and Sir Walter Scott has particularly described it in his *Provincial Antiquities*. The following account of it is abridged from Miller's *History of Dunbar*:—The castle is founded upon a reef of trap rocks, which project into the sea, and, in many places,

rise like bastions thrown up by nature to guard these stern remains of feudal grandeur against the power of the waves, which yet force their way through rugged caverns and fissures in the stone, and, with a thundering noise, wash its dark foundations. These rocks are in some places composed of red basaltic greenstone, and in others of tufa; and in some places masses of indurated sandstone appear entangled in the trap rock. The body of the buildings measures about 165 feet from east to west; and in some places, 207 from north to south. The south battery—which Grose supposes to have been the citadel or keep—is situated on a detached perpendicular rock, accessible only on one side, 72 feet high, and is connected to the main part of the castle by a passage of masonry measuring 69 feet. The interior of the citadel measures 54 feet by 60, within the walls. Its shape is octagonal. Five of the gun-ports remain, which are called ‘the arrow-boles.’ They measure 4 feet at the mouth, and only 16 inches at the other end. The buildings are arched and extend 8 feet from the outer walls, and look into an open court, whence they derive their light. About the middle of the fortress part of a wall remains, through which there is a gateway surmounted with armorial bearings. This gate seems to have led to the principal apartments. In the centre are the arms of George, 11th Earl of Dunbar, who succeeded his father in 1369; and who, besides the earldom of Dunbar and March, inherited the lordship of Annandale and the Isle of Man from his heroic mother. The towers had communication with the sea, and dip low in many places. North-east from the front of the castle is a large natural cavern of black stone, supposed to have formed part of the dungeon, which, Pennant observes, “the assistance of a little art had rendered a secure but infernal prison.” But as it has a communication with a rocky inlet from the sea on the west, it is more likely that it is the dark postern through which Sir Alexander Ramsay and his brave followers entered with a supply of provisions to the besieged in 1338. It was a place also well suited for securing the boats belonging to the garrison. The castle is built with a red stone similar to what is found in the quarries of the neighbourhood. Part of the foundation of a fort, which was begun in 1559, for the purpose of accommodating a French garrison, may be traced, extending 136 feet in front of the castle. This building was, however, interrupted in its progress, and demolished. In the north-west part of the ruins is an apartment of about 12 feet square, and nearly inaccessible, which tradition denominates the apartment of Queen Mary.

Dunbar-house, now used as a militia barracks, is situated within the old castle park, and exhibits to the High-street a large concubant sphynx with wings extended, and to the sea a very handsome front, comprising a circular portico and two extensive wings. Had it been placed contiguous to the castle, it would have been one of the most picturesque residences in the kingdom.—The town-house of Dunbar is an old edifice.—The assembly-rooms are a good pile of building, erected in 1822 by subscription, but in a bad situation.—The burgh school rooms are modern.—The corn-exchange was projected in 1854, and opened in Oct. 1855.—The old harbour comprises a series of improvements and extensions, from the time of Cromwell till the year 1820; yet is small, and does not admit vessels of above 300 tons burden. The new harbour, called Victoria harbour, is adjacent to the old, has an area of 2½ acres, and is entered by a cut of 70 feet in width, through the ledge of rock on which the castle

stands. It was founded in 1844, in anticipation of the opening of the North British railway; and was completed at the cost of £15,762,—of which £11,262 were contributed by the Fishery Board, and the rest by the burgh. But even this harbour, for even small craft, requires some material improvement.—A harbour of refuge also has long been talked of at Dunbar, and has at last been resolved upon by the Lords of the Treasury. The chief considerations for it are the position of the town near the entrance of the frith of Forth, the extreme perilousness of the coast over a great extent to the south, the contiguity of the track of the numerous shipping along that coast, and the existence of many rocks and rocky islets, in the offing of the town, which might form the abutments of a breakwater.

"In the earlier periods of the history of Scotland," say the Parliamentary Commissioners on Municipal Corporations, "the collection of the customs or duties upon merchandise due to the Crown was generally intrusted to the royal burghs, who enjoyed the exclusive privilege of foreign trade. Through the distance of Haddington from the English border, the collection of the King's customs seems to have been neglected in the Merse during the reign of David II., and an opportunity afforded to the English when in possession of Berwick and Roxburgh, to purchase and carry off from that district wool, hides, and other merchandise, without paying custom. To remedy the evil, that monarch, by a charter dated the 40th year of his reign, granted to the Earl of March the right of having a free burgh at Dunbar, and free burgesses dwelling in the same, who should have the privilege of buying and selling skins, wool, hides, and other merchandise, together with a free port at Belhaven, and all the liberties and advantages which belonged to a free burgh and harbour. The burgesses of Dunbar were also appointed collectors of the King's customs within the bounds of the burgh and harbour; and the boundary of the burgh was declared to be the same as the earldom of March. It was further declared by this charter that the burgesses of Haddington should have the privilege of trading within the burgh of Dunbar; but that they should pay the customs due upon the articles of their trade there to the collector of Dunbar; and that the burgesses of Dunbar should have the privilege of trading within the bounds of the burgh of Haddington, but should pay the customs due upon the trade there to the collector of Haddington. We have not ascertained when Dunbar was first erected into a royal burgh. In the year 1469 a commissioner from Dunbar first appears in the rolls of parliament; but the liability of the burgh to general taxations, in consequence of its admission to the privileges of trade under the charter above referred to, had probably entitled them to be represented in parliament at a much earlier period. By a charter of confirmation and *de novo damus*, granted to the town by James VI., dated 23d October, 1618, it is declared 'that the ancient old bounds of the said burgh have been, now are, and in all time coming shall be the hail earldom of March and lordship of Dunbar; as also the bounds of the baronies of Coldingham, Mordingtown, Bunclie, Langtown, Innerwick, and Stenton; together with all and sundry tolls, customs, impositions, anchorages, or other duties, casualties, liberties, rents, commodities, privileges, and just pertinents whatsoever due, used, and wont, as well by sea as by land, and in the peaceable possession of which they have been for these sundry years bypast, and at present are.' No part of these lands, however, appear to be conveyed to the burgh, and the boundary

here described must be that of their exclusive privilege to trade."

In 1577, Dunbar was the rendezvous of the Dutch as well as of the Scottish fishery. Tucker, in his Report, of November, 1656, says: "The town of Dunbarre, or village rather, is a fisher town, famous for the herring-fishing, who are caught thereabout, and brought thither, and afterwards made, cured, and barrelled up either for merchandise, or sold and vended to the country-people, who come thither farre and neare at that season, which is from about the middle of August to the latter end of September, and buy great quantities of fish, which they carry away, and either spend them presently, or else salt and lay up for the winter provision of their families. The trade here is little except salt, which is brought hither and laid up, and after sold for the fishing; the people of these parts, which are not fishermen, employing themselves in tillage and in affairs of husbandry." In 1661 Ray observes in his Itinerary: "There is a great confluence of people at Dunbar to the herring-fishery; and they told us, sometimes to the number of 20,000 persons." In 1710, a custom-house was established here, which has jurisdiction from Berwick bounds to Gulane point. In 1752, a whale-fishery company was established at Dunbar, which, not succeeding, was dissolved in 1804. In 1792, there were 16 vessels belonging to the port, of a total burthen of 1,505 tons, and 2 Greenland ships of 675 tons. In 1830, there were 6 vessels belonging to Dunbar engaged in the wood and grain trade with the Baltic, and 39 in the coasting-trade. The number of registered vessels belonging to this port, in 1839, was 30, of aggregate 1,495 tons; and in 1851, it was 11, of aggregate 658 tons. A decrease in the population of the town between 1841 and 1851, is ascribed to the decline of the shipping trade, occasioned by the opening of the North British railway.

The trade of Dunbar has been fluctuating and various. Ship-building, the manufacture of sail-cloth and cordage, and the curing of herrings both by salt and smoke, afford employment to a considerable number of hands. There are also a soap-work, an iron-foundry, a steam-engine manufactory, several breweries, and a distillery. Dunbar was famous in the old times for its malt; and it still continues to be so. A weekly corn-market is held on Tuesday; and fairs, chiefly for hiring single farm and domestic servants, are held immediately after Whitsunday and Martinmas. The stoppage of the East Lothian bank in 1822, proved a heavy discouragement to trade in this quarter; but the engagements of the company were all honourably liquidated. The first printing-press in the county of East Lothian was set up at Dunbar by Mr. G. Miller, in 1795; and we believe that the Dunbar press has the high merit of having been the first in Scotland, from which issued a cheap periodical miscellany, in which the instruction and entertainment of the lower classes was professedly the principal object aimed at. The principal inns in Dunbar are the St. George, the Railway, and the Blackbull. The town has branch offices of the Commercial Bank, the British Linen Company's Bank, and the City of Glasgow Bank. It has also a reading room, a mechanics' institution, two public libraries, an itinerating library, a gas-light company, a clothing society, and a sailors' society. A small debt circuit court is held on the third Tuesday of February, April, June, August, October, and December.

The municipal council of Dunbar consists of 20 members, including a provost, 3 bailies, and a treasurer. Prior to the 3^d and 4th William IV., the na-

magistrates and old council, out of a lect of 8 made by themselves, chose 4 new councillors; the old and new council chose the 5 magistrates out of lects made by themselves; and then the old and new magistrates put off such 4 of the old councillors as they thought proper. There was no provision for any change in the council, except the 4 annually put off; so a majority of the council continued without election, and there was no restriction upon re-election. The jurisdiction of the magistrates extends over the whole royalty, which is ill defined. There is no dean-of-guild. The magistrates and council have the appointment of the town-clerk, chamberlain, superintendent of police, procreator-fiscal, burgh-schoolmasters, clerk to the corn-market, and burgh-officers. They have no other patronage. There are no incorporated crafts possessing exclusive privileges. The property of the burgh consists of the town's common, upon which the burghesses have a right of pasturage, and from which no revenue is derived; of lands, mills, and houses, fishing, sea-ware, teinds of fish, church-seat rents, and stone-quarries. The computed value of this property, including £5,000 for the common, is £14,500. The debt due by the town at Michaelmas, 1832, was £8,376 4s. 4d. The total revenue, of every kind, from all sources, in 1832, was £1,293 14s. 6d.; but £119 19s. 4½d. of this was not properly burgh revenue. The total expenditure in 1832 was £1,385 2s. 6½d.; but £132 3s. 7d. of this was in a very slight degree on account of the common property. The revenue in 1864-5, was £1,291. Dunbar unites with Haddington, North Berwick, Lauder, and Jedburgh in sending a member to parliament. The boundaries of the parliamentary burgh include Belhaven. Municipal constituency in 1866, 148; parliamentary constituency, 154. Population of the municipal burgh in 1841, 3,013; in 1861, 3,796. Houses, 475. Population of the parliamentary burgh in 1861, 3,516. Houses, 422.

The history of the town and castle of Dunbar is intimately connected with that of the ancient noble family of Dunbar. Cospatrik, the founder of that family, was the son of Maldred, the son of Crinan by Algha, daughter and heiress of Uthred, prince of Northumberland. After the conquest of England by William the Norman in 1066, Cospatrik and Merleswain, with other nobles of the north of England, fled to Scotland, carrying with them Edgar Atheling, the heir of the Saxon line, and his mother Algha, with his sisters Margaret and Christina. Malcolm Canmore, who married the Princess Margaret, bestowed on Cospatrik the manor of Dunbar and many fair lands in the Merse and Lotbrian. Cospatrik having signalized himself in an expedition against a formidable banditti which infested the south-east borders of Scotland, was created Earl of the Merse, or March; and the lands of Cockburnspath were bestowed on him by the singular tenure of clearing East Lotbrian and the Merse of robbers.

Patrick, 5th Earl of Dunbar, received from William I. in 1184, Ada, one of his natural daughters, in marriage. About the end of the 12th century, he held the offices of justiciary of Lothian and keeper of Berwick. In 1214, to retaliate the inroads made by Alexander into England, Henry III. invaded Scotland with a powerful army, and took the town and castle of Berwick. His next attempt was on the fortress of Dunbar; but finding it impregnable, he laid waste the country to the walls of Haddington, and returned homewards.—Patrick, 6th Earl of Dunbar, succeeded his father at the age of 46. In 1242, at a royal tournament held at Haddington, the young Earl of Athol overthrew Walter, the chief of the family of the Bissets. To revenge this affront, the lodgings of the Earl were set on fire the same

night, and Athol, with several of his friends, was either slain or burnt to death. The King endeavoured in vain to bring the perpetrators of this atrocious assault to trial; but the combination of the Cumyns and other nobles against the Bissets was so strong that the latter were obliged to abandon their country. On this occasion, the Earl of Dunbar—whom Lord Hailes calls the most powerful baron of the southern districts—put himself at the head of the nobles who demanded retribution.

Patrick, 7th Earl of Dunbar, during the turbulent minority of Alexander III., was one of the chiefs of the English faction. Thomas Lermont of Ersildoun, commonly called the Rhymer, visited Dunbar in 1285, and foretold to the Earl the sudden death of Alexander III., who was killed by a fall from his horse on the sands of Kinghorn. We are circumstantially informed by Bower—who was born at Haddington 100 years after—that, on the night preceding the King's death, Thomas, having arrived at the castle of Dunbar, was interrogated by the Earl, in the jocular manner he was wont to assume with the prophet, if to-morrow should produce any remarkable event; to which the bard replied, in the mystical language of prophecy: "Alas for to-morrow, a day of calamity and misery! Before the 12th hour, shall be beard a blast so vebement that it shall exceed those of every former period,—a blast which shall strike the nations with amazement,—shall humble what is proud, and what is fierce shall level with the ground! The sorest wind and tempest that ever was heard of in Scotland!" After this prediction, which was left to be fulfilled either by accident or the weather, Thomas retired. Next day, the Earl and his companions having continued in watch till the ninth hour, without discovering any unusual appearance in the elements, began to doubt the present powers of the soothsayer, to whom "the sunset of life had given mystical lore," and having ordered him into their presence, upbraided him as an impostor, and hastened to enjoy their wonted repast. But his lordship had scarcely placed himself at table, and the shadow of the dial fallen on the hour of noon, when an express, covered with foam, appeared at the castle-gate, demanding an audience. On being interrogated, he exclaimed: "I do indeed bring news, but of a lamentable kind, to be deplored by the whole realm of Scotland! Alas, our renowned King has ended his fair life at Kinghorn!" "This," cried the prophet, gathering himself up in the spirit of conscious veracity, "this is the scathful wind and dreadful tempest which shall blow such a calamity and trouble to the whole state of the whole realm of Scotland!"

Patrick, 8th Earl of Dunbar and March—surnamed Black Beard—succeeded to the honours and possessions of his father in 1289. He appeared at the parliament at Bigham in 1289, where he is called Comes de Marchia, being the first of the Earls of Dunbar designated by that title. When, in 1296 Edward, with a powerful army entered Scotland, the Earl of Dunbar, with the Bruces and their adherents, took part against their country; but Dunbar's heroic Countess got possession of the castle of Dunbar, and delivered it to the leaders of the Scottish army. Edward despatched the Earl of Warrenne with 12,000 men to lay siege to Dunbar, which was defended by the flower of the Scottish nobility. The Scots, sensible of the importance of this fortress, which, if taken, laid their country open to the enemy, hastened with their main army of 40,000 men, under the command of the Earls of Buchan, Lennox, and Mar, to its relief. Warrenne, undaunted by the superior numbers of the Scots, left part of his army to blockade the castle, while he

advanced to meet them. The English had to descend into a valley—probably Oswaldea, a glen near Spott—before they could reach the Scots; and as they descended, the Scots observing or imagining they saw some confusion in their ranks, set up a loud shout of exultation, and causing their horns to be sounded, rushed down from their well-chosen position. But when Warrenne emerged from the glen, and advanced undismayed against their formidable front, the undisciplined troops, after a very brief resistance, fled before him, and were pursued with great slaughter as far as Selkirk forest. Next day, Edward, with the main body of the English army, reached Dunbar, and compelled the garrison to surrender. When the heroic Wallace first undertook to deliver his country from her abject bondage, the Earl of Dunbar refused to attend a meeting of the estates at St. Johnston:

“Lightly he leuch, in scorn as it had been,
And said he had sic message seldom seen,
That Wallace now as governor sall ryng,
Here is gret faute of a gude prince or king
That king of Kyll I can nocht understand,
Of him I held never a fur of land;
That Bachiller Trowis, for fortoun schawis her quibell,
Tharwith to lest, it sail nocht lang be weil:
Bot to you lords, and ye will understand,
I make you wys, I aw to mak na hand,
Als fre, I am in this region to ryng
Lord of mine awne, as ever was prince or king;
In England als gret part of land I haif,
Ma rent thairof thair will no man me craif,
What will you maif, I warn you I am free,
For your sunnounds ye get na maif of me.”

The patriot-hero, with 200 men, went in pursuit of the haughty baron. Wallace was joined by Robert Lauder at Musselburgh, and afterwards by Crystal of Seton. They were met at Linton by Squire Lyle, who informed them that the Earl had made his gathering at Cockburnspath, and was on his march to Dunbar. Lauder upon this would have pressed forward; but Wallace is represented by the old ‘Makhar,’ already quoted, as calmly replying to the remonstrances of his comrade,

“We may at laysar ride,
With yone power he thinkis bargane to bide;
And of a thing ye sall weil understand
A hardier lord is nocht into Scotland;
Micht he be made trow stedfast till a king,
Be wit and force he can do meikill thing;
Bot wilfully he likis to tyne himself.”

Wallace encountered Patrick in a field near Innerwick, where the latter had assembled 900 of his vassals, and with half that number compelled the Earl, after a terrible conflict, to retreat to Cockburnspath, while he fell back on Dunbar; but finding the castle without provisions, and the garrison wode away with their lord, he gave it in charge to Crystal of Seton. In the meantime, the Earl of Dunbar had gone to Northumberland to solicit the aid of the Bishop of Durham; but his ostensible reason, says ‘The Minstrel,’ was “to bring the Bruce free till his land.” Vessels were immediately sent from the Northumbrian Tyne to blockade Dunbar, and cut off supplies, while the Earl, with 20,000 men, hastened to retake his fortress. In the interim the champion of Scotland had repaired to the west in quest of succour, and returning by Yester, was joined by Hay and a chosen body of cavalry. With 5,000 men he marched to the support of Seton, while the Bishop of Durham, who had remained at Norham with Bruce, came to the assistance of Dunbar, and riding through Lammermoor, threw himself into an ambush near Spottmoor. By this unexpected movement, Wallace was completely hemmed in, when Seton fortunately came to his relief. The two armies closed in mortal strife. The Scots pushed on so furiously against the Southrons, that they were just about to fly, but Patrick was

“Sa cruel of intent,
That all his host tuk of him harmlint:
Through his awne hand he put mony to pain.”

The desperate valour of the Wallaces, the Ramsays, and the Grahams, was of little avail against the superior force of the English; so that when the ambuscade of Bishop Beck appeared, they were on the point of retiring. Dunbar singled out Wallace amidst the throng, and

“Hereat the plait with his scharp groundyn claiff
Through all the stuff, and woundit him sum deill.”

The hero returning the blow with sevenfold vengeance, clove down Maitland, who had thrown himself hetwixt the two adversaries. Wallace's horse was killed beneath him, and he was now on foot dealing destruction to his enemies, when

“Erle Patrick than, that had gret craft in war,
With spears ordand guid Wallace doun to bear.”

But 500 resolute warriors rescued their champion, and the war-worn armies were glad to retire. The same night Wallace traversed Lammermoor in quest of the retreating host, while Bishop Beck, Earl Patrick, and Bruce, fled to Norham. On his return, the champion, still mindful of the odium attached to his name by the Earl of Dunbar,—

“Passit, with mony awfull men,
On Patrickis land, and waistit wonder fast,
Tuk out guid, and places doun that cast;
His steads, sevin, that Mete Hamys was call'd,
Wallace gert break the burly biggins bauld,
Baith in the Merse, and als in Lothiane,
Except Dunbar, standand he leavit nane.”

Edward II. of England, after seeing his army annihilated at Bannockburn, fled with a body of horse towards Berwick; but Sir James Douglas, with 80 chosen horsemen, so pressed on the royal fugitive, that he was glad to shelter himself in the castle of Dunbar. Here he was received by Patrick, 9th Earl, ‘full gently;’ after which, by means of a fishing-boat, he coasted along the shore till he reached the towers of Bamhrough. “This was honourable,” observes a distinguished writer, “because Patrick must have had in his thoughts at that time the making his peace with his native monarch, and could not be ignorant how easily and advantageously he might have done so, by detaining in custody the person of the King of England.” After this, the Earl of Dunbar made peace with his cousin Robert I., and was present at Ayr on the 26th April, 1315, when the succession to the Crown of Scotland was settled on Bruce. After the defeat at Hallidon-hill, however, and before Edward left Berwick, he received the fealty of the Earl of Dunbar with several others of the nobility; and the castle of Dunbar, which had been dismantled and razed to the ground on the approach of the English, was now rebuilt at the Earl's own expense, for the purpose of maintaining an English garrison.

In January, 1337, the castle of Dunbar was again in the entire possession of its own master, and at the service of the Crown of Scotland; and then the Earls of Salisbury and Arundel advanced at the head of a large English army to take it. At this important crisis the Earl of Dunbar was in the North; so that the defence of his stronghold devolved upon his Countess, a lady who, from the darkness of her complexion, was commonly called Black Agnes. She was daughter to the celebrated Thomas Randolph, Earl of Moray. During the siege, Agnes performed all the duties of a bold and vigilant commander. When the hattering engines of the English hurled stones or leaden balls against the battlements, she, in scorn, ordered one of her maids to wipe off with a clean white handkerchief the marks of the stroke; and when the Earl of Sal

isbury, with vast labour, brought his sow close to the walls, the Countess exclaimed:

"Beware, Montagow,
For farrow shall thy sow!"

Whereupon a large fragment of the rock was hurled from the battlements, and crushed the sow to pieces, with all the poor little pigs—as Major calls them—who were lurking under it. The following is Wynthon's rhyming account of this memorable siege:—

Schyre William Montague, that sua
Had tano the siege, in hy gret ma
A mekil and richt stalwart engine,
And up smertly gert dress it; syne
They warpit at the wall great stanes
Baith hard and heavy for the nauys,
But that nane merrying to them made,
And alsna when they castyne had,
With a towel, a damiselle
Arrayed jollily and well,
Wippit the wall, that they might see
To gere them mair annoyed be;
There at the siege well lang they lay,
But there little vantage got they;
For when they bykkyne wald, or assail,
They tint the maist of their travaile.

And as they bykeryd there a' day,
Of a great shot I shall you say,
For that they had of it ferly.
It here to you rehearse will I
William of Spens percit a Blasowne,
And thro' three faulds of Awbyrchowne,
And the Actowne through the third ply
And the arrow in the bodie,
While of that dynt there dead he lay;
And then the Montagu gau say;
"This is ane of my Lady's pinnis,
Her amouris thus, till my heart rinnis."
While that the siege was there on this wiche
Men sayis their fell sair juperdyis.
For Lawrence of Prestoun, that then
Haldin ane of the wichtest men,
That was in all Scotland that tide,
A rout of Inglismen saw ride,
That seemed gude men and worthy,
And were arrayed richt richly;
He, with als few folk, as they were,
On them assembled he there;
But at the assembling, he was there
Intill the mouth stricken with a spear,
While it up in the harnys ran;
Till a dike he withdrew him than,
And died; for nae mair live he might.
His men his death perceived noucht;
And with their faes faucht stoutly,
While they them vanquish'd utterly.
Thus was this guid man brought till end,
That was richt greatly to commend.
Of gret wirschipe and gret bownte
His saul be aye in safite.

Sir William als of Galstown
Of Keith, that was of gude renown,
Met Richard Talbot by the way
And set him to sa hard assay,
That to a kirk he gert him gae,
And close there defence to ma;
But he assailed there sae fast,
That him be-hor'd treat at the last,
And twa thousand pound to pay,
And left hostage and went his way.
The Montagu was yet lyand,
Sieging Dunbare with stalwart hand;
And twa gallies of Genoa had he,
For till assiege it by the sea.
And as he thus assiegeand lay,
He was set intil hard assay;
For he had purchased him covyn
Of ane of them, that were therein,
That he should leave open the yete,
And certain term till him then set
To come; but they therein halily
Were warnit of it privily.
He came, and the yete open fand,
And wald have gane in foot steppand;
But John of Cowpland, that was then
But a richt poor simple man,
Shut him off back, and in is gane,
The portcullis eame down on ane;
And spared Montagu, thereout
They cryed with a sturdy shout,
"A Montagu for ever mair!"
Then with the folk that he had there,
He turned to his Herbery,
And let him juypt fully.

Syne Alexander, the Ramsay,
That trowed and thought, that they
That were assieged in Dunbar,
At great distres or mischief were;
That in an evening frae the Baga,
With a few folk, that with him was,
Toward Dunbar, intil a boat,
He held all privily his gate;
And by the gallies all slyly
He gat with his company;
The lady, and all, that were there,
Of his coning well comfort were,
He issued in the morning in hy,
And with the wachis sturdily,
Made ane apart and stout melle.
And but tynsel entered he.

While Montagu was there lyand,
The King Edward of England
Purchased him help and alyawns.
For he wald amowe were in France;
And for the Montagu he sendis;
For he cowth nae thing till end
For owtyu him, for that time he
Was maist of his counsel privie
When he had heard the king's bidding
He removed, but mair dwelling,
When he, I trow, had lying there
A quarter of a year and mair.
Of this assiege in their theynyng
The English oysid to make karping
"I vow to God, she makes gret sterc
The Scottish wenche ploddere,
Come I aire, come I late,
I fand Annot at the yate."

Amongst the nobles who fell in the field of Durham, in 1346, was Thomas, Earl of Moray, brother to the heroic Countess of Dunbar. As he had no male issue, Agnes became sole possessor of his vast estates; and her husband assumed the additional title of Earl of Moray. Besides the earldom of Moray, the Earl of Dunbar and his Countess obtained the Isle of Man, the lordship of Annandale, the baronies of Morton and Tibbers in Nithsdale, of Morthington and Longformacus, and the manor of Dunse in Berwickshire; with Mochrum in Galloway, Cumnock in Ayrshire, and Blantyre in Clydesdale.

George, the 10th Earl of Dunbar and March, succeeded his father in 1369. From the vast possessions he inherited, he became one of the most powerful nobles of Southern Scotland, and the rival of the Douglasses. His daughter, Elizabeth, was betrothed to David, son and heir to Robert III., and on the faith of the prince, who had given a bond to perform the espousals, the earl had advanced a considerable portion of his daughter's matrimonial settlement; but Archibald, Earl of Douglas—surnamed the Grim—jealous of the advantages which this marriage promised to bestow on a family whose pre-eminence in the state already rivalled his own, protested against the alliance, and by his intrigues at court, through the influence of the Duke of Albany, had the contract between the Duke of Rothesay and Lady Elizabeth Dunbar cancelled, and his own daughter substituted in her place. Stung by this gross insult, Earl George retired into England, where Henry IV. granted him a pension of £400 during the continuance of the war with Scotland, on condition that he provided 12 men-at-arms, and 20 archers with horses, to serve against Robert. In 1398, in conjunction with Hotspur and Lord Talbot, March entered Scotland and fearfully devastated the lands, which he could no longer call his own, as far as Hailes castle on the Tyne. After the battle of Halidon in 1402, Henry addressed congratulatory letters to the Earl of Dunbar, the Percies, and others. At last, through the mediation of Walter Halyburton of Dirleton, a reconciliation with the Douglasses was effected in 1408; Douglas consenting to Dunbar's restoration, on condition that he obtained the castle of Lochmahen, and the lordship of Annandale, in lieu of the castle

of Dunbar and earldom of March, which he then possessed.

George, 11th Earl of Dunbar and March, succeeded his father, at the mature age of 50. In 1435, he and his son Patrick visited England. The motive of this visit to the English court is not known; but the slumbering jealousies of James I.—who had already struck a blow at the power of the barons—were easily awakened; and he formed the bold plan of seizing the estates and fortresses of a family which for ages had been the most powerful and opulent on the Scottish borders. The Earl of Dunbar was arrested and imprisoned in the castle of Edinburgh, while the Earl of Angus, Chancellor Crichton, and Adam Hepburn of Hailes, were despatched with letters to the keeper of the castle of Dunbar, who immediately surrendered it to the King's authority. In a parliament assembled at Perth, on the 10th January, 1434-5, George was accused of holding his earldom and estates, which had been forfeited by his father's tergiversation. "In vain did he plead," says Robert Douglas, "that his father had been pardoned and restored by Albany;" it was answered, "that a forfeiture incurred for treason could not be pardoned by a regent;" and the parliament, in compliance with this reasoning, having heard Sir George Dunbar, on his part, adjudged, "that, in consequence of the attainder of George de Dunbar, formerly Earl of March and Lord of Dunbar, every right both of property and possession in all and each of those estates in the earldom of March and lordship of Dunbar, and all other lands which he held of our said lord the King, with all and each of their appurtenances, did and does exclusively belong and appertain to our lord the King."

Thus the earldom and estates of Dunbar were vested in the Crown. The lordship of Dunbar was bestowed by James II. on his 2d son, Alexander, Duke of Albany, then in his infancy. "Against this measure," says Mr. Tytler, "which in a moment reduced one of the most powerful subjects in the realm to the condition of a landless dependent upon the charity of the Crown, it does not appear that the Earl, or his friends, dared to offer any remonstrance or resistance. They probably knew it would be ineffectual, and might bring upon them still more fatal consequences; and James proceeded to complete his plan for the security of the kingdom, by taking possession of the forfeited estate, and delivering the keeping of the castle of Dunbar, which he had seized in the preceding year, to Sir Walter Halliburton of Dirlton. He then, to soften in some degree the severity of his conduct, conferred upon March the title of Earl of Buchan, and assigned to him, out of the revenues of that northern principality, an annual pension of four hundred marks. That noble person, however, full of resentment for the cruelty with which he had been treated, disdained to assume a title which he regarded as only a mark of his degradation, and almost immediately after the judgment had adieu to his country, and, in company with his eldest son, retired to England. Although this extraordinary proceeding appears not to have occasioned any open symptoms of dissatisfaction at the moment, it is impossible to conceive that it should not have roused the jealousy and alarmed the minds of the great body of the feudal nobility. It cannot perhaps be pronounced strictly unjust; yet there was a harshness, it may almost be said, a tyranny, in the manner in which such princely estates were torn from the family, after they had been possessed for twenty-six years, without challenge or remonstrance."

In 1484, the castle of Dunbar was in the hands of

the English. On the marriage of Margaret of England with the King of Scotland in 1502, the earldom of Dunbar and lordship of Cockburnspath, with their dependencies, were assigned as the jointure of the young Queen; but the castle of Dunbar is expressly mentioned as being reserved by the King to himself. In 1515, Dunbar was garrisoned with French soldiers. In December 1527, when James V. laid siege to the neighbouring castle of Tantallon, then the stronghold of Douglas, he "gave send to the castle of Dunbar," says Lindsay of Pitcottie, "to Captain Morrice, to borrow some artillery, and laid great pledges for the same; because the castle was then in the Duke of Albany's hand, and the artillery thereof his own."

The English, in the inroad under the Earl of Hertford, in 1544, after their return from the siege of Leith, and after burning Haddington, encamped the second night—26th May—near Dunbar. "The same day," says Patten, "we burnt a fine town of the Earl of Bothwell's, called Haddington, with a great nunnery and a house of friars. The next night after, we encamped besides Dunbar; and there the Scots gave a small alarm to our camp. But our watches were in such readiness that they had no vantage there, but were fain to recoil without doing of any harm. That night they looked for us to have burnt the town of Dunbar, which we deferred till the morning at the dislodging of our camp, which we executed by V. C. of our hakbutters, being backed with V. C. horsemen. And by reason we took them in the morning, who having watched all night for our coming, and perceiving our army to dislodge and depart, thought themselves safe of us, were newly gone to their beds; and in their first sleeps closed in with fire, men, women, and children, were suffocated and burnt. That morning being very misty and foggy, we had perfect knowledge by our espials, that the Scots had assembled a great power at a strait called the Pease."

In 1547, the Duke of Somerset invaded Scotland with an army of 14,000 men; and having crossed the pass of Pease, with "puffing and payne," as Patten says, demolished the castles of Dunglass, Innerwick, and Thornton. "This done, about noon, we marched on, passing soon after within the gunshot of Dunbar, a town standing longwise upon the sea-side, whereat is a castle—which the Scots count very strong—that sent us divers shots as we passed, but all in vain: their horsemen showed themselves in their fields beside us, towards whom Bartevel with his viii. [c.] men, all hakbutters on horseback—whom he had right well appointed—and John de Ryband, with divers others, did make; but no hurt on either side, saving that a man of Bartevel's slew one of them with his piece, the skirmish was soon ended. We went a iii. mile farther, and having travelled that day a x mile, we camped nigh Tantallon, and had at night a blind alarm. Here had we first advertisement certain, that the Scots were assembled in camp at the place where we found them. Marching this morning at ii. mile, we came to a fair river called Lyn, (Tyne,) running all straight eastward toward the sea; over this river is there a stone bridge that they name Linton bridge, of a town thereby on our right hand, and eastward as we went, that stands upon the same river. Our horsemen and carriages passed through the water—for it was not very deep—our footmen over the bridge. The passage was very strait for an army, and therefore the longer in setting over. Beyond this bridge about a mile westward—for so methought as then we turned—upon the same river on the southside, stands a proper house, and of some

strength, belike, they call it Hayles castle, and pertineth to the Earl of Bothwell, but kept as then by the governor's appointment, who held the Earl in prison."—After the defeat at Pinkie in 1548, Dunbar was burnt by the German mercenaries under the Earl of Shrewsbury, on his return to England from the attack on Haddington.

On the assassination of Rizzio, Mary left Edinburgh, at midnight, in company with Darnley, and proceeded to the palace of Seton, whence she pursued her journey to the safer retreat of the castle of Dunbar. Having thus seduced the King to abandon his party, the Queen's next step was to avenge the murder of her favourite. A proclamation was accordingly issued from Dunbar, on the 16th March, 1565, calling on the inhabitants of the sheriffdom of Edinburgh in the constabulary of Haddington, Linlithgow, Stirling, Lanark, Roxburgh, Selkirk, Peebles, Berwick, Lauder, &c., to meet her at Haddington, on Sunday the 17th current, with eight days' provisions. Sir James Melville, one of the gentlemen of her chamber at Haddington, says that she complained bitterly of Darnley's conduct in the late assassination; and from that day forward never met him with a smile. "On the 19th of April, in parliament, the Queen taking regard and consideration of the great and manifold good service done and performed, not only to her Highness's honour, weill, and estimation, but also to the commonweill of her realm and lieges thereof, by James, Earl Bothwell, and that, through his great service foresaid, he not only frequently put his person in peril and danger of his life, but also super-expended himself, alienated and mortgaged his livings, lands, and heritage, in exorbitant sums, whereof he is not hastily able to recover the same, and that he, his friends and kinsmen, for the most part, dwell next adjacent to her Highness's castle of Dunbar, and that he is most habile to have the captaincy and keeping thereof, and that it is necessarily required that the same should be well entertained, maintained, and furnished, which cannot be done without some yearly rent, and profit given to him for that effect, and also for reward of his said service: therefore, her Majesty infetted him and his heirs-male in the office of the captaincy keeping of the castle of Dunbar, and also in the crown lands of Easter and Wester Barns, the lands of Newtonleyes, Waldanc, Rig, and Fluris, Myreside, with the links and coning-yairs, (warrens,) &c., the mill, called Brand's-smyth, West Barnes mill, with their lands, and £10 of annual rent from the lands of Loehend, with all the lands, privileges, and fees belonging to the government of the castle, lying in the constabulary of Haddington, and sheriffdom of Edinburgh, holding of her Highness and her successors."

On the 21st April, Mary went to Stirling, to visit her son; and on her return on the 24th, Bothwell, with an armed party of 800 men, met her at Cramond bridge, and taking her horse by the bridle, he conveyed her "full gently" to the castle of Dunbar. The Earl of Huntly, Secretary Maitland, and Sir James Melville, were taken captives with the Queen, while the rest of her servants were allowed to depart. Sir James Melville informs us, that next day, when in Dunbar, he obtained permission to go home. "There," continues he, "the Earl of Bothwell boasted he would marry the Queen who would or would not; yea, whether she would herself or not." Captain Blackater, who had taken him, alleged, that it was with the King's own consent. Crawford justly observes: "The friendly love was so highly contrasted betwixt this great princess and her enormous subject, that there was no end thereof, so that she suffered patiently to be led where the

lover list, and neither made obstacle, impediment, clamour, or resistance, as in such accident used to be, which she might have done by her princely authority." "They had scarcely remained ten days in the castle of Dunbar," says Buchanan, "with no great distance between the Queen's chamber and Bothwell's, when they thought it expedient to return to the castle of Edinburgh."

The nuptials of Mary and Bothwell, which were celebrated on the 15th of May, 1567, excited the indignation both of the nation and of foreign courts; and a confederacy of nobles met at Stirling, levied troops, and prepared to march against the murderer of their King. The regicide fled with Mary to Borthwick castle, and when Lord Home environed the castle, effected his escape, while the Queen, disguised as a page, followed him to Dunbar. In a few days after the Queen's arrival at Dunbar, 4,000 men had flocked to her standard. Confiding in her numbers, Mary left Dunbar with Bothwell on the 14th June, with 200 hawkbutters, the flower of her forces, and some field-pieces from the castle; and lodged the first night at Seton. This news having reached the associated lords, they left Edinburgh early next morning, (Sunday,) and met the Queen's forces at Carberry-hill, near Musselburgh. Here Bothwell a second time threw the gauntlet down to his accusers; but after the challenge had been for the second time accepted, he refused to fight. The confederates "conquered ere a sword was drawn;" and the poor Queen surrendered herself to the laird of Grange, whilst the guilty Bothwell retraced his steps to Dunbar. On the 26th of June, the lords of council ordained "letters to be directed in the Queen's name, to heralds, &c. to pass and charge the keeper of the castle of Dunbar, to surrender the same to the executor of the said letters in six hours; because the Earl of Bothwell was reset and received within the said castle." Bothwell, afraid that he might be environed in Dunbar, fled by sea to Orkney.

On the 21st September, 1567, four companies of soldiers, under Captains Cunyngham, Murray, Melville, and Hallihurton, were sent to take Dunbar, which surrendered to the Regent on the 1st of October. On the meeting of parliament, December 1567, the castle of Dunbar, which had been so often the asylum of the unfortunate and the guilty, was ordered to be destroyed. In act 35, parl. 1. James VI. we find the following item: "Forsamekle as thair hes bene of befor divers large and sumpteous expensis maid be our soverane lordis predecessouris and himself, in keeping, fortifying, and reparatioun of the castell of Dunbar and forth of Inchekeith, quhilkis ar baith unprofitabil to the realme and not abill to defend the enemis thairof, in cais the samin were assaultit: and now seeing that the said castell and forth ar baith hecumin sa ruinous, that the samin sall allutterlie decay, except thair be sic expensis maid thairupon as is unhabill to be performit without greit inconveniencis; and alswa havand consideration of ane act of parliament maid in unquhile our soverane lordis grandschiris tyme, King James the Feird, of maist worthie memorie, ordinand the said castell of Dunbar to be demolisheit and cassin downe, as in the act maid thairupon at mair lenth is contenit, quhilk act as zit is not abrogat. Therefore our soverane lord, with avise and consent of my lord regent, and the estatis of this present parliament, hes ordainit, and ordainis, That the castell of Dunbar and forth of Inchekeith be demolisheit and cassin down utterlie to the ground, and distroyit in sic wyse that na foundment thairof be occasioun to big thairupon in tyme cumming." In 1581, among several grants excepted by James

VI. from the general revocation of his deeds of gift made through impotunity, mention is made of the "forth of Dunbar granted to William Boncle, burgess of Dunbar." This, probably, referred to the site of the fortress, and perhaps some ground adjacent.

In 1650, Cromwell, at the head of 16,000 men, entered Scotland; and, after some marching and countermarching, engaged the Scottish army under General Leslie, in the neighbourhood of Dunbar. Leslie's position on Down-hill was admirable, and his force was nearly double that of his opponent; but rashly quitting his position, and descending into the plain, they exposed themselves to a fatal charge from Cromwell's van-brigade, which threw them into confusion, and decided the fortune of the day in a brief space. There is extant a letter from Cromwell himself to Lenthal, the speaker, giving a very fair though enthusiastic account of this memorable engagement. He says: "We having tried what we could to engage the enemy 3 or 4 miles west of Edinburgh; that proving ineffectual, and our victual failing, we marched towards our ships for a recruit of our wants. The enemy did not at all trouble us in our rear, but marched the direct way towards Edinburgh, and partly in the night and morning, slips through his whole army, and quarters himself in a posture casie to interpose between us and our victual; but the Lord made him lose the opportunity; and the morning proving exceedingly wet and dark, we recovered, by that time it was light, into a ground where they could not hinder us from our victual; which was a high act of the Lord's providence to us. We being come into the said ground, the enemy marched into the ground we were last upon; having no mind either to strive or to interpose between us and our victual, or to fight; being indeed upon this lock, hoping that the sickness of our army would render their work more easie by the gaining of time; whereupon we marched to Muscelburgh to victual and to ship away our sick men, where we sent aboard near 500 sick and wounded soldiers: and upon serious consideration, finding our weakness so to increase, and the enemy lying upon his advantages, at a general council it was thought fit to march to Dunbar, and there to fortifie the town, which, we thought, if any thing would provoke them to engage; as also, the having a garrison there, would furnish us with accommodation for our sick men; would be a place for a good magazin, (which we exceedingly wanted), being put to depend upon the uncertainty of weather for landing provisions, which many times cannot be done, though the being of the whole army lay upon it; all the coasts from Leith to Berwick not having one good harbour; as also to lie more conveniently to receive our recruits of horse and foot from Berwick.

"Having these considerations, upon Saturday, the 30th of August, we marched from Muscelburgh to Haddington, where, by that time, we had got the van-brigade of our horse, and our foot and train, into their quarters; the enemy was marched with that exceeding expedition, that they fell upon the rear-forlorn of our horse, and put it in some disorder; and indeed had liked to have engaged our rear-brigade of horse with their whole army, had not the Lord, by his providence, put a cloud over the moon, thereby giving us opportunity to draw off those horse to the rest of the army, which accordingly was done without any loss, save of three or four of our afore-mentioned forlorn, wherein the enemy—as we believe—received more loss. The army being put into a reasonable secure posture, towards midnight the enemy attempted our quarters on the west end

of Heddington, but—through the goodness of God—we repulsed them. The next morning we drew into an open field, on the south side of Heddington; we not judging it safe for us to draw to the enemy upon his own ground, he being prepossessed thereof, but rather drew back to give him way to come to us, if he had so thought fit; and having waited about the space of four or five hours, to see if he would come to us, and not finding any inclination of the enemy so to do, we resolved to go, according to our first intendment, to Dunbar. By that time we had marched three or four miles, we saw some bodies of the enemies horse draw out of their quarters; and by that time our carriages were gotten near Dunbar, their whole army was upon their march after us; and, indeed, our drawing back in this manner, with the addition of three new regiments added to them, did much heighten their confidence, if not presumption and arrogancy. The enemy that night, we perceived, gathered towards the hills, laboring to make a perfect interposition between us and Berwick; and having, in this posture, a great advantage, through his better knowledge of the country, which he effected, by sending a considerable party to the strait pass at Copper-speth, [Cockburnspath] where ten men to hinder, are better than forty to make their way: and truly this was an exigent to us; wherewith the enemy reproached us with that condition the parliament's army was in, when it made its hard conditions with the king in Cornwall.

"By some reports that have come to us, they had disposed of us, and of their business, in sufficient revenge and wrath towards our persons, and had swallowed up the poor interest of England, believing that their army and their king would have marched to London without any interruption; it being told us, we know not how truly, by a prisoner we took the night before the fight, that their king was very suddenly to come amongst them with those English they allowed to be about him; but in what they were thus lifted up, the Lord was above them. The enemy lying in the posture before-mentioned, having those advantages we lay very near him, being sensible of our disadvantage, having some weakness of flesh, but yet consolation and support from the Lord himself, to our weak faith, wherein, I believe, not a few amongst us shared, that, because of their numbers, because of their advantages, because of their confidence, because of our weakness, because of our strait, we were in the mount, and in the mount the Lord would be seen, and that he would finde out a way of deliverance and salvation for us; and indeed we had our consolations and our hopes. Upon Monday evening, the enemy, whose numbers were very great, as we heard, about 6,000 horse, and 16,000 foot, at least, ours drawn down, as to sound men, to about 7,500 foot, and 3,500 horse; the enemy drew down to their right wing about two-thirds of their left wing of horse, to the right wing shogging also their foot and train much to the right, causing their right wing of horse to edge down towards the sea. We could not well imagine, but that the enemy intended to attempt upon us, or to place themselves into a more exact position of interposition. Major-general and myself coming to the Earl of Roxburgh's house, [Broommouth] and observing this posture, I told him, I thought it did give us an opportunity and advantage to attempt upon the enemy; to which he immediately replied, that he had thought to have said the same thing to me: so that it pleased the Lord to set this apprehension upon both of our hearts at the same instant. We called for Colonel Monk, and showed him the thing; and coming to our

quarter at night, and demonstrating our apprehensions to some of the colonels, they also cheerfully concurred; we resolved, therefore, to put our business into this posture, that six regiments of horse, and three regiments and a half of foot should march in the van; and that the major-general, the lieutenant-general of the horse, and the commissary-general, and Colonel Monk to command the brigade of foot, should lead on the business; and that Colonel Pride's brigade, Colonel Overton's brigade, and the remaining two regiments of horse, should bring up the cannon and reere; the time of falling on to be by break of day; but, through some delays, it proved not to be so till six o'clock in the morning.

"The enemies word was 'The Covenant;' which it had been for divers days; ours, 'The Lord of Hosts.' The major-general, lieutenant-general Fleetwood, and commissary-general Whaley, and Colonel Twisletons, gave the onset; the enemy being in very good posture to receive them, having the advantage of their cannon and foot against our horse. Before our foot could come up, the enemy made a gallant resistance, and there was a very hot dispute at swords point between our horse and theirs. Our first foot, after they had discharged their duty, being over-powered with the enemy, received some repulse, which they soon recovered; but my own regiment, under the command of lieutenant-colonel Goff, and my major White, did come seasonably in; and at the push of pike, did repel the stoutest regiment the enemy had there, meerly with the courage the Lord was pleased to give; which proved a great amazement to the residue of their foot. This being the first action between the foot, the horse in the meantime, did, with a great deal of courage and spirit, beat back all opposition, charging through the bodies of the enemies horse and their foot, who were, after the first repulse, given, made, by the Lord of Hosts, as stubble to their swords. Indeed, I believe, I may speak it without partiality, both your chief commanders, and others, in their several places, and soldiers also, were acted with as much courage as ever hath been seen in any action since this war. I know they look on to be named; and therefore I forbear particulars. The best of the enemies horse and foot being broken through and through in less than an hour's dispute, their whole army being put into confusion, it became a total rout; our men having the chase and execution of them near eight miles. We believe, that upon the place and near about it, were about three thousand slain. Prisoners taken of their officers, you have this enclosed list; of private soldiers, near 10,000. The whole baggage and train taken; wherein was good store of match, powder, and bullet; all their artillery, great and small, thirty guns. We are confident they have left behind them not less than fifteen thousand arms. I have already brought into me near two hundred colours, which I herewith send you. What officers of quality of theirs are killed, we yet cannot learn; but yet surely divers are, and many men of quality are mortally wounded, as Colonel Lumsdel, the Lord Liberton, and others; and that, which is no small addition, I do not believe we have lost 20 men; not one commissioned officer slain that I hear of, save one coronet, and Major Rooksby, since dead of his wounds; and not many mortally wounded. Colonel Whaley only cut in the hand-wrist, and his horse twice shot and killed under him, but he well, recovered another horse, and went on in the chase. Thus you have the prospect of one of the most signal mercies God hath done for England and his people this war."

The subsequent history of Dunbar presents nothing very memorable. It partook of the alarm and

confusion consequent on the approach of the Highland army in 1745. In 1779, Paul Jones's squadron hovered a brief space in front of the town; and, in 1781, Captain Fall, another maritime adventurer, threatened a descent, but sheered off on perceiving preparations making for giving him a warm reception.—George Home of Manderstone, noticed in our account of the parish church of Dunbar, was created Earl of Dunbar in 1605, six years before his death. A viscountcy of Dunbar was created in 1620 in the family of Constable, and became dormant in 1721 at the death of the fourth Viscount. A dean of Dunbar, in the 15th century, became bishop of Moray; another dean of Dunbar, in the 16th century, became a senator of the College of Justice; and a rector of Dunbar, in the 17th century, became successively bishop of the Isles and bishop of Caithness. Dr. Carfrae, who became minister of Dunbar in 1795, was famous for his eloquence. A family of the name of Fall, who became during the last century the most extensive merchants in Scotland, were long the chief magistrates of Dunbar, and behaved as public benefactors, yet have not left a descendant in the town, nor even a tombstone. Mr. Polk, the recent president of the United States of America, is said to have been the lineal descendant of Mr. Pollock, who was provost of Dunbar in 1745-6, and who died in 1752.

DUNBARNIE, a parish, containing the post-office village of Bridge-of-Earn, and the village of Kintillo, in the south-east of Perthshire. It is bounded by the parishes of Perth, Rhynd, Abernethy, Dron, Forgandenny, and Forteviot. Its length eastward is 4 miles; and its greatest breadth is also 4 miles; but its average breadth is only $1\frac{1}{2}$ mile. It is intersected by the gently flowing Earn; and its scenery is of very uncommon beauty. The "softly swelling" Ochil hills approach its southern border, and appear almost to enclose it. The west is occupied by gentle rising grounds, adorned with plantations, avenues, and hedgerows. On the north is the beautiful hill of Moncrieff, the view from which, Pennant called "the glory of Scotland," and the description of which in 'The Fair Maid of Perth,' cannot fail to be in the recollection of many of our readers. The soil of the parish consists principally of clay, till, and loam, and has been cultivated with great success. There are several mineral springs; and those of Pitcaithly are in great repute and much frequented. Whinstone and sandstone are extensively quarried. The principal landowners are Sir Thomas Moncrieffe, Bart., Craigie of Dunbarnie, Grant of Kilgraston, and Stoddart of Ballendrick. The real rental about 1842 was nearly £7,000. The yearly value of agricultural produce was estimated in 1842 at £15,935. Assessed property in 1866, £8,236 11s. 10d. The high road from Perth to Edinburgh, and the Perth fork of the North British railway, traverse the parish; and the latter has a station at Bridge-of-Earn. Population in 1831, 1,162; in 1861, 1,935. Houses, 201.

This parish is in the presbytery of Perth, and synod of Stirling and Perth. Patron, Sir Thomas Moncrieffe, Bart. Stipend, £178 17s. 7d.; glebe, £13 8s. Schoolmaster's salary now is £60, with from £20 to £25 fees, and about £8 other emoluments. The parish church stands in the immediate vicinity of the Bridge-of-Earn. It was built in 1787, and contains 650 sittings. The ancient parish church stood a mile farther west, near the mansion of Dunbarnie. There were anciently also a chapel at Moncrieff, and a church at Kirkpottie, both appendages of the church at Dunbarnie. The former of these still continues to be the burying place of Moncrieffe; the latter has been long in ruins. There

is a Free church in the parish; receipts in 1865, £215 18s. 6½d. There are also a Free church school and a public library.

DUNBARROW, a detached district of the parish of Dunnichen, Forfarshire. It comprises a hill which rises about 700 feet above the level of the sea, and bears on its summit the foundation vestiges of an ancient fort.

DUNBARTON. See **DUMBARTON.**

DUNBEATH, a post-office village, and several other objects of interest, in the parish of Latheron, Caithness-shire. The village stands on the road from Inverness to Thurso, 7½ miles north-north-east of Berriedale, and 20 south-west of Wick. It is an ancient place, and was once the kirktown of a parish, which is now incorporated with Latheron. Here are an inn and a parochial school. Fairs are held on the last Tuesday of July and the first Tuesday of November, both old style. Population of the village, 40. Dunheath water rises in two head-streams on the western border of Latheron, and runs about 7 miles south-castward, to the head of a small bay, called Dunbeath bay, in the vicinity of the village. The bay is an excellent fishing station. The "bluff old castle" of Dunheath, on a narrow neck of land, impending on one side over the sea, and on the other over a deep chasm into which the tide flows, was taken and garrisoned by the Marquis of Montrose, in 1650. There is also an estate of Dunbeath.

DUNBLANE, a parish, containing the post-town of Dunblane, and the villages of Kinbuck, Balhadie, Buttergask, Greenloaning, and Rottearn, in the south of Perthshire. It is bounded by Comrie, Muthil, Blackford, Logie, Lecropt, and Kilmadock. Its length, east and west, is about 9 miles; and its breadth is about 6 miles. It comprehends the principal part of Strathallan, with a skirting of the Ochil hills on the east, and a skirting of the braes of Doune on the west; and being at the same time nearly equidistant from the German and the Atlantic oceans, and from the Moray and the Solway friths, with strong near shelter on most sides by the Ochils and the Grampians, it enjoys a singularly mild climate, free alike from the acerbity of the eastern winds and the humidity of the western clouds. The Allan flows first along the north-eastern boundary, and then direct through the interior. Its course below the town lies through a deep and finely wooded glen, and is in many places overhung by considerable precipices. Its channel is rocky, and the stream rapid and turbulent, but beautifully clear. The walk along the eastern bank, from the Bridge-of-Allan to Dunblane, is delightfully sequestered, winding, with alternate ascent and descent, through a thickly-wooded dell, full of sweet glimpses. That part of the parish which lies east of the Allan forms the western terminating declivity of the Ochil range. The part toward the north-west rises to a considerable height, forming the commencement of a dark heathy ridge which runs in a north-westerly direction, and makes a conspicuous object in the scenery. The part to the north of the town is in general bleak and dreary; and that toward the east and the north-west, is composed of heaths, moors, and swamps. The hills afford good pasture to sheep and black cattle. The arable land lies all on the red sandstone formation, and varies in its soil from gravel to a reddish clay. There are nearly twenty landowners; the chief of whom are Stirling of Kippendavie, Stirling of Keir, Sir James Campbell, Bart., and the Earl of Kinnoul. Value of assessed property in 1843, £14,300; in 1866, £19,075 12s. 7d. There are three manufacturing establishments at respectively the town of Dunblane, the mill of Keir,

and the village of Kinbuck. The principal mansions are Kippendavie-house, Keir-house, and Kilbride-castle,—the first and second of which are modern, and the third ancient. Sheriffmuir, the scene of the battle in 1715 between the Earl of Mar and the Marquis of Argyle, commences a little to the north-east of the town, and extends, with a moorish surface, to the eastern border. See **SHERIFFMUIR.** The road from Stirling to Crieff and the Scottish Central railway pass up the centre of the parish; and the latter has stations at Dunblane, Kinbuck, and Greenloaning. Population in 1831, 3,228; in 1861, 2,528. Houses, 407.

This parish is the seat of a presbytery in the synod of Perth and Stirling. Patron, the Crown. Stipend, £274 18s. 2d.; glebe, £15. Unappropriated tithes, £331 16s. Schoolmaster's salary, £35, with other emoluments; that of assistant, £49. The parish church is the chancel of the cathedral, containing about 500 sittings. There is a Free church in the town: attendance, 320; sum raised in 1865, £243 9s. 11d. There are two United Presbyterian churches,—the one in the town, with an attendance of 360, the other at Greenloaning, with an attendance of 110. There is also an elegant new Episcopalian chapel. There are Free church, Episcopal, and infant schools in the town, and a General Assembly's school at Kinbuck.

The **TOWN OF DUNBLANE** stands on the river Allan, and on the road from Stirling to Crieff, 2 miles north of Bridge of Allan, 3 miles east of Doune, 5 north of Stirling, and 28 south-west by south of Perth. Having formerly been the seat of a bishopric, it sometimes lays claim to the designation of city; but it is very far from presenting an urban appearance, in either extent or aspect, and must be content to rank as a mere village or small town, of not the highest character. Richard Franck, who travelled in Scotland about the year 1658, calls it "dirty Dunblane," and says, "Let us pass by it, and not cumber our discourse with so inconsiderable a corporation." The town has no doubt improved much since that traveller's day, yet not more than other towns of its class; so that, as compared to these, it still deserves in some degree his alliterative reproach. The principal street is narrow and inconvenient; and many of the houses are old and mean. The town's situation, however, is pleasant, a great part of it being built on the sloping banks of the Allan, and close by the side of the river; while the venerable cathedral, with its high square tower, and its long line of arched windows, relieves at least, if not redeems, the paltriness and poverty which surround it. Most of the town stands on the left or eastern bank of the river; and only a few houses stand on the opposite side, arranged into a straggling street. The road from Stirling, coming up from the Bridge of Allan, enters the town at the railway station, and crosses the river by a bridge of a single arch, which was formerly narrow, and was originally built about the beginning of the 15th century by Finlay Dermock, bishop of Dunblane, but was recently renovated and widened. The principal street of the town runs in a direction nearly parallel to the stream, and ascends from the bridge towards the cathedral.

The cathedral is said—though apparently with little evidence—to have been founded by David I., in 1142. It is certain, however, that it was restored or rather rebuilt by Clemens, Bishop of Dunblane, about 1240. The greater part of it has been unroofed, and is otherwise in a ruinous state; but the chancel, which is still used as the parish-church, is tolerably entire. The eastern window, and a few of the entrances have been partially renewed, and

this part of the building is kept in a good state of repair. Some of the choristers' seats, and those of the bishop and dean, all of them of oak quaintly carved, still remain; and two ancient sarcophagi, and the monument of a warrior and his lady, are preserved in this part of the building. There are also here three blue marble grave-stones which cover the bones of Lady Margaret Drummond, mistress of James IV., and her sisters Euphemia and Sybilla, who were poisoned at Drummond-castle in 1502. In the nave, most of the prebendal stalls are entire; and the entrance and the fine west window have suffered little injury; but the roof has fallen in, and the building is otherwise much decayed. In 1840 workmen were employed in securing it against further dilapidation. New mortar has been carefully applied to all the interstices, and cramp-irons have been introduced where necessary. The length of the cathedral is 216 feet, its breadth 56, and the height of the wall to the battlements 50 feet. The tower is placed along-side the building. Its height to the top of the little wooden spire, is 128 feet. The Bishop's palace stood to the south of the cathedral, on the edge of the declivity toward the river, and a few vestiges of its lower apartments and retaining wall may yet be traced. The United Presbyterian church and the Free church are very handsome structures, the former built in 1835; and the latter in 1854.

Dunblane is a burgh-of-barony. It is situated within the barony of Cromlix, the superior of which, Lord Kinnoul, formerly named a baillie who had a court-house within the town. The court-house is now occupied by the sheriff-substitute of this district of Perthshire, who resides and holds his court at Dunblane. Both the sheriff-court and the commissary-court are held here every Wednesday during session. A new gaol was built in 1842, on the site of an old mansion known as Strathallan-house or castle. The town has no charter nor constitution of any kind, nor any property or common good. A weekly market is held on Thursday; and fairs, principally for cattle, are held on the first Wednesday of March, old style, on the Tuesday after the 26th of May, on the 10th of August, old style, and the first Tuesday of November, old style. The town was lighted with gas in 1841. Here are a branch of the Union bank of Scotland, five insurance offices, a public library, a public reading-room, and a curling club. The library was originally the property of Bishop Leighton, and was bequeathed by him for the use of the clergy of the diocese of Dunblane. It consisted at first of about 1,400 volumes; but has been materially enlarged. A small building was erected for it in the main street, near the cathedral, with a marble tablet in front, bearing the Bishop's arms and the inscription "Bibliotheca Leightoniana;" and this building now contains also the public reading-room. The chief inn of the town is the Dunblane hotel. A branch railway goes from the Dunblane station of the Scottish Central to Doune and Callander. Population of the town in 1841, 1,911; in 1861, 1,709. Houses, 295.

At a spot about 2 miles north of the town, and within the barony of Cromlix, are two important mineral wells. These were casually discovered in 1814; and they promised for a time to become very famous. The stronger of the two was found by Dr. Murray to contain, in a pint of its water, 24 grains of muriate of soda, 18 of muriate of lime, 3.5 of sulphate of lime, .5 of carbonate of lime, and .17 oxide of iron. The other is precisely similar in composition, but only a little weaker. The waters are simply a mild saline aperient, akin in character to those of Airthrey and Pitcaithly; but,

though they had been worthless in themselves, they would have deserved notice as an attraction to a very salubrious climate. Many strangers, for some years, were drawn to them; a lodge was erected close to the town, for affording a convenient supply of the waters; and zealous efforts were made by some of the inhabitants to fit up their houses as summer lodgings. But the rivalry of the Bridge-of-Allan, in an equally good climate, with more pleasant curivous, and with a stronger similar water of the wells of Airthrey, has been triumphant.

Dunblane is supposed to have been originally a cell of the Culdees. The period of its erection into a see has not been ascertained; but the first bishop is said to have been appointed by David I. The see comprehended portions of Perthshire and Stirlingshire. Maurice, who was appointed bishop by Robert Bruce in 1319, had, while abbot of Inchaffray, distinguished himself on the field of Bannockburn. At a later period the see was held by a man eminent in a far other field, Robert Leighton, afterwards Archbishop of Glasgow. This gentle and heavenly minded man of genius was bishop of Dunblane from 1662 to 1670, when he was raised to the dignity of Archbishop. He was long remembered in Dunblane by the name of "the Good bishop;" and a retired, shady path near the river, which he used to frequent, is to this day fondly pointed out as "the Bishop's walk."—Dunblane gives the title of Viscount, in the peerage of England, to the noble family of D'Arey-Osborne, Dukes of Leeds,—created Viscount Dunblane in 1673 and Duke of Leeds in 1694.

DUNBOG, a parish in the north of Fifeshire. Its post town is Newburgh, 4 miles west-north-west of the church. It is bounded by the frith of Tay, and by the parishes of Flisk, Abdie, and Monimail. Its greatest length is about 4 miles, and its greatest breadth about 1½ mile; but its area comprises only 1,820 acres of arable land, 270 of hill pasture or waste ground, and about 30 of woodland,—altogether about 2,120 acres. Only the tip of a tongue of the parish touches the Tay. The main body consists of part of two ridges of hill, of an extreme altitude of about 500 feet above sea-level, and part of the intervening valley. The northern ridge is a continuation of Norman's law, is cultivated to the summit, and commands a superb view of the basin and screens of the Tay, of lower Stratbearn, and of the frontier Grampians. The southern ridge is bleak, and comprises all the barren land. The Earl of Zetland is the principal landowner; and there are two others. The yearly value of raw produce was estimated in 1836 at £11,707. The value of assessed property in 1843 was £2,994 5s. 11d.; in 1866, £3,639 10s. 8d. Population in 1831, 197; in 1861, 207. Houses, 46.

This parish is in the presbytery of Cupar, and synod of Fife. Patron, the Crown. Stipend, £225 18s. 2d.; glebe, £8 15s. Unappropriated teinds, £138 18s. 8d. Schoolmaster's salary is £52 10s., with about £15 fees. The church was built in 1803, and contains 240 sittings. There was formerly a village of Dunbog, which had a weekly market, but is now quite extinct. There was also a preceptory of the monks of Balmarnock, the site of which came afterwards to be occupied by the mansion of Dunbog, which is still standing, and belongs to the Earl of Zetland. To the south-east of this is the ruin of the castle of Collairnie, which for five centuries was the seat of a family of the name of Barclay.

DUN-BRIDGE. See DUN.

DUNBUCK. See DUMBUCK.

DUNCAN. See DEERNESS and St. ANDREWS.

DUNCANSBY, a township, a bay, a promontory, and two natural pillars, in the parish of Canisbay,

Caithness-shire. See CANISBAY. The promontory, or "head," is situated in north latitude 58° 38', and west longitude 3° 2', and forms the north-east extremity of the mainland of Scotland, $1\frac{1}{2}$ mile north-east of John o' Groat's house. The coast contiguous to it is exceedingly bold, and presents a wild and varied magnificence of scenic character. The head itself has a circular shape, and measures about 2 miles in circumference. It is covered with green sward to the very brink of the surrounding rock, with an intermixture of short heath. Towards the sea—which encompasses two-thirds of it—the head is one continued precipice; and, during the season of incubation, is frequented by innumerable flocks of sea-fowls. Near the top of the rock, and on that side which faces the Orkneys, is a vast cavern called by the neighbouring inhabitants, the Glupe. On the highest part of the head are the remains of an ancient watch-tower. The prospect hence is exceedingly grand, comprehending a vast and varied extent of intermixed land and sea. The Pentland frith, in all its amplitude, spreads away from the spectator's feet. The Orkney islands appear dispersed athwart the waters in just the groupings and the distances which give them the picturesqueness possible effect. Much of the German ocean, and more of the Moray frith, with many bold parts of their seaboard, in the hills of Morayshire, Banffshire, and Aberdeenshire, are clearly under view.—The two natural pillars of Duncansby are stupendous pyramidal masses of naked sandstone, popularly called the stacks of Duncansby. They rear their fantastic summits a great way into the air, and appear to a stranger approaching them like huge pinnacles of some old Gothic pile. The township of Duncansby has a population of about 300.

DUNCOMB. See KILPATRICK (WEST).

DUNCOW, a post-office village in the parish of Kirkmahoe, Dumfriesshire. It stands on the Duncow burn, and on the road from Tinwald to Auld-girth-Bridge, 5 miles north of Dumfries. Duncow burn rises in the south of Closeburn, traverses Kirkmahoe from north to south, dividing it into two nearly equal parts, and, a little below Kirkmahoe village, falls into the Nith. The course of this stream is about 7 miles. At the village of Duncow is a round hill or doon, whence it derives its name, and which formerly gave name to the barony of the Comyns, the opponents of Robert Bruce. In this village James V. left his attendants before he paid his angry visit to Sir John Charteris of Amisfield. Till recently a large stone marked the site of the cottage in which the King slept. The village has a school and a parochial library. Population, 121. Houses, 25.

DUNCRAGGAN. See VENACHOR (LOCN).

DUNCRIVIE, a village in the part of the parish of Arngask, which belongs to Kinross-shire. Population, 106. Houses, 25.

DUNCRUIB, the estate and residence of Lord Rollo, in the parish of Dunning, Perthshire. Lord Rollo is a lateral descendant of Rollo the Dane, and of Rollo first Duke of Normandy, through branches who came to England with William the Conqueror, and to Scotland in the reign of David I. The estate of Duncruib was a grant to the family of Rollo, in 1380, by David Earl of Strathearn, with the consent of King Robert his father. In 1512, it was erected into a free barony; and in 1651, its then proprietor, Sir Andrew Rollo, was raised by Charles II. to the dignity of Baron Rollo of Duncruib.

DUNDAFF LINN. See CLYDE (THE).

DUNDALAV, a rude fortalice on the summit of a

hill, in the farm of Dalchully in Badenoch, Inverness-shire. The hill is conical, and has an elevation of about 600 feet above the contiguous ground. The ascent is uncommonly steep and rocky, precluding all access except on the south side, where a narrow path seems to have been cleared for a road. The top is a beautiful horizontal plot of ground, commanding a very extensive prospect of the valley in all directions. Around this green there has been built a very strong wall of flat stones or flags, without mortar of any kind, whose thickness is 18 feet, and circumference 1,500; the height 8 feet perpendicular where it is most entire. Upon the north-east side there has been a turret, or citadel, constructed with the same materials, whose wall is also circular, and contains a reservoir for holding water. The wall of the citadel seems to have been extremely massy, from the quantity of stones that have fallen from it, which is much greater than from any other part of the building. The labour of collecting and carrying up-hill such an immense heap of stones as these buildings required, must have been great beyond conception, when we reflect, that very likely it was performed by mere bodily strength, without the aid of any mechanical powers. On both sides of this hill there are two other rocky eminences, but much inferior in size and altitude, which might, however, have been the cause of the name given to the principal one, *Dun-da-lav*, that is, 'the Two-handed hill.' At the distance of a few miles down the valley of Badenoch, there is another fortress, similar to this one, at Dalchully, but not so entire, which probably communicated with Craigellachie, still farther down. See DUNDOENADIL.

DUNDARDIL. See DORES.

DUNDARGUE. See ABERDOUR.

DUNDAS. See DALMENY.

DUNDEE, a parish on the southern border of Forfarshire. It comprises a main body and a detached district. The main body lies along the frith of Tay, and contains the greater part of the town of Dundee. It is bounded on the north by Liff, Mains, and Murros; on the east by Monifieth; and on the west by Liff. It is of an elongated form, stretching from east to west, broadest at the east end, and narrowest at the middle; and it measures diagonally, from Ninewells on the south-west to Gaigie on the north-east, $6\frac{1}{2}$ miles, and has an average breadth of $1\frac{1}{2}$ to $1\frac{3}{4}$. The detached district commences about $\frac{1}{2}$ a mile north of the north-east part of the main body, is bounded on the west by Tealing and on all other sides by Murros, and has nearly the figure of a square, $1\frac{1}{2}$ mile wide. The whole parish is computed to comprise about 3,812 acres of cultivated land, 135 of waste land, and 254 of land under wood. The surface of the main body rises with an easy ascent from the Tay. Behind the burgh it swells somewhat suddenly up, and forms the conspicuous hill called Dundee-law, whose summit is 525 feet above the level of the Tay; and toward the west it again swells considerably and forms the lesser elevation of Balgay-hill. The appearance of the whole slope toward the Tay, as seen from the river or the opposite shore, is beautiful. Balgay-hill, in addition to its own fine form, possesses the attraction of a sylvan dress; and Dundee-law is cultivated up its whole ascent, till it shoots into a round, green, and unusually pleasing summit. The soil, to the west of the town, is thin and dry; in the north-west of the parish, and behind Dundee-law, is poor, upon a bottom of till; and, in the eastern division, in general, good, being partly alluvial and partly mixed with clay. A part of the eastern division is intersected by the Dichty and the Fithie, which form a confluence just before leaving it. The united

streams form the southern boundary of the parish for about 600 yards. Tods-burn and Wallace-burn will be afterwards noticed. The Tay, along the parish, varies in width from 1 mile to $2\frac{1}{2}$; and is marred by shifting sand banks, upwards of a mile in length, parallel with the channel of the river. On the lands of Balgay are large rocks of porphyry; and the greater part of the parish is incumbent on rocks of igneous origin. The detached district abounds with excellent freestone. At one quarry this is extensively wrought; and pavement and slate are also raised in small quantity. The town is supplied with building-stone chiefly from Lochee and the vicinity, and by railway from the parishes of Strathmartine and Auchterhouse. The supply of pavement, for local use and for exportation, is chiefly from the immediate neighbourhood of the Sidlaw ridge. In recent times the true sandstone of the carboniferous group has been brought from Fifeshire, and used in some of the principal buildings; but in the sulphureous atmosphere of Dundee, it soon acquires a bloated and unseemly appearance. The yearly value of the agricultural produce was estimated in 1832 at £29,912; but it is now somewhat less. The landowners are numerous; but the principal estates are Craigie, Claypots, Duntroon, Druingeith, Baldovie, Pitkerro, Dudhope, Clepington, and Blackness. The parish is traversed by railways, east, west, and north, diverging from Dundee, and also enjoys great facilities of communication by road and water. On the summit of Dundee-law are vestiges of a fortification, traditionally ascribed to Edward I. According to tradition, a Pictish force having encamped on Tottel-hrow in the parish of Strathmartine, the Scottish army, under Alpine, occupied the law, rushed to battle on the intervening plain, and having been defeated, suffered the mortification of seeing their king captured and beheaded. This event occurred in 834. The view from the top of Dundee-law is panoramic, extensive, and splendidly picturesque. "East and south the prospect is bounded by the reach of the visual organs alone. The mouth of the Tay, the hay and towers of St. Andrews, the German ocean to the horizon, and the greater part of Fifeshire, are spread out as in a map. Turning to the opposite point of the compass, the dark ridges of the Sidlaw hills, with a broad valley intervening, and the more distant peaks of the Grampians, meet the eye. The neighbourhood of Dundee affords no scene at all to be compared to the glories of sunset witnessed from the top of the law." Assessed rental of the parish in 1865, £169,743 7s. Population in 1831, 45,355; in 1861, 68,986. Houses, 3,771.

This parish is the seat of a presbytery in the synod of Angus and Mearns. The original parish church was dedicated to St. Clement, the tutelary saint of the town, and stood on the site of the present town-house. But the parish church at the Reformation was a structure dedicated to St. Mary, connected with the great tower in the centre of the town, and forming the choir or eastern part of a quasi-cathedral edifice erected there. Another portion of the same edifice soon came into use as a conjoint parish church; the former then taking the name of the Old or East church, and the latter the name of the New or South church. In the latter part of the 18th century, a third portion came into use, first as a chapel of ease, and next as another conjoint parish church, under the name of the Cross or North church; and at the same time, a new structure was built in the form of an addition to the previous edifice, as still another conjoint parish church, under the name of the Steeple or West church. From 1609 the East and the South churches had been

jointly served by three ministers; but in 1823, a large place of worship which had been erected in 1800 in North Tay street by the Independents, was purchased for the uses of the Establishment, to be constituted a fifth conjoint parish church, under the name of St. David's church, and to be maintained, as to its ministry, by transferring to it one of the three incumbencies of the East and South churches.

Thus, in the parish of Dundee, are there five parish churches and five parochial incumbencies. The patron of the whole is the town-council. The stipend of the first minister is about £320, with a glebe worth about £27 10s., and a manse; and the stipend of each of the other ministers is £300. The four churches, East, South, North, and West, remained in agglomeration all around the great tower till the 3d of January, 1841, when a great fire gutted the South and the North, and nearly reduced the East to ruin. The South and the East have since been rebuilt; and the Gaelic church in South Tay-street has been put by purchase in lieu of the North. In ecclesiastical record, the Old or East church is known as St. Mary's, the New or South as St. Paul's, the Cross or North as St. John's, and the Steeple or West as St. Clement's. A notice of the original buildings, together with the sequents of the fire in them, must be reserved for its more appropriate place in our account of the public edifices of the town. There are also in the parish three chapels of ease,—St. Andrews, erected in 1774; Chapelshade, constituted in 1791; and Wallacetown, built in 1853. The appointment of the ministers of St. Andrews and Chapelshade is vested in the male communicants; and the stipend of each is about £200. In 1851, there were within the parliamentary burgh of Dundee 11 places of worship belonging to the Establishment,—8 of which contained a total of 8,884 sittings; and the attendance at the whole on the afternoon of the Census day amounted to 6,334.

The Free churches in the parish, together with the amount raised by each in 1864-5, are—St. Paul's, £1,638 2s. 5 $\frac{1}{2}$ d.; St. John's, £985 11s. 8d.; St. David's, £585 9s. 8d.; St. Andrew's, £1,045 19s. 11 $\frac{1}{2}$ d.; St. Peter's, £779 16s.; Dudhope, £445 17s. 10 $\frac{1}{2}$ d.; Wallacetown, £257 3s. 8d.; Chapelshade, £717 19s. 6 $\frac{1}{2}$ d.; Hilltown, £737 16s. 3 $\frac{1}{2}$ d.; Willison, £578 15s. 1 $\frac{1}{2}$ d.; Gaelic, £331 12s. 1d.; Chalmers', £171 13s.; Wellgate, £279 14s. 2 $\frac{1}{2}$ d.; and St. Enoch's, newly formed. In 1851, there were, within the parliamentary burgh, 11 Free churches, containing a total of 11,518 sittings, and attended in the afternoon of the Census day by 7,452 persons. The United Presbyterian churches in the parish are now two in Bell-street, and five in School-wynd, Tay-square, Butterburn, Temple-lane, and Cowgate; and containing altogether 5,364 sittings. In 1851, there were, within the parliamentary burgh, 9 United Presbyterian churches, containing a total of 6,818 sittings, and attended on the afternoon of the Census day by 4,614 persons. The Independent chapels in the parish, in connexion with the Congregational Union, are five, situated in Constitution-road, Princes-street, Lindsay-street, Castle-street, and Pannure-street. In 1851, five Independent chapels then within the burgh, not all the same as the above, contained a total of 3,494 sittings, and were attended on the afternoon of the Census day by 1,742 persons. The other places of worship at present in the parish are a Reformed Presbyterian, an Original Secession; two Evangelical Union; three Episcopalian, St. Paul's, St. Mary Magdalene's, and St. Salvador's; an old Scottish Independent, in Euclid-street; a Glasite, in King-street; two Baptist; a Wesleyan Methodist; a Primitive Methodist; a Quakers'; a Christian Church; a Disciples'; a Christian Union-

ist; two Roman Catholic, in Nethergate and Hill-town; and a Mormonite or Latter-Day Saints' burgh. But in the Census returns of 1851 for the parliamentary burgh, several of these do not appear, several others appear, and several have different designations; so that the list, together with sittings and attendance, stands as follows:—1 Original Secession, 320 sittings, 205 attendants; 2 Episcopalian, 900 sittings, 350 attendants; 3 Baptist, 430 sittings, 205 attendants; 1 Wesleyan Methodist, 550 sittings, 342 attendants; 1 Independent Methodist, 600 sittings, 150 attendants; 2 Evangelical Union, 700 sittings, 280 attendants; 3 Isolated Congregations, 440 sittings, 230 attendants; 2 Roman Catholic, 1,900 sittings, 1,000 attendants; and 1 Latter-Day Saints', 90 attendants.

The principal educational institution of Dundee is the High School. This comprises English school, grammar school, and academy. These were united, at the erection of the present seminary buildings, 32 years ago, at the head of Reform-street. The academy was previously the most considerable of the three. It was founded about the year 1792, and was aided by a legacy of £6,000 by Mr. Webster of London, which became available in 1800; and it had 25 small bursaries for mathematical pupils. The conjoint seminaries are superintended by a board of twenty directors,—half of whom are from the town-council and half from subscribers; and are conducted by seven male teachers and two female teachers. The principal branches taught are mathematics, physical science, geography, classics, modern languages, drawing, English grammar, writing, arithmetic, music, and needle-work. The other schools of Dundee are numerous, various, and aggregately good. Some are of high rank for polite education; many of ordinary range for the common branches; and a few of special adaptation, for the children of certain classes or conditions of the community. In 1832, the total number of all kinds in the parish was 80, which were computed to be attended by 3,700 children; and since that time, both the number of the schools and the attendance on them have no doubt increased correspondingly with the increase of the population. About 27 years ago, schools for the first time, then 5 in number, were established in connexion with the Dundee factories; and in 1845, the Factory Report pronounced these schools "excellent."

DUNDEE, a market town, an extensive sea-port, a great seat of manufacture, a royal burgh, the third town of Scotland in point of population, and the rival of the first in proportionate rapidity of increase, chiefly in the parish of Dundee, but partly also in the parish of Liff and Benzie, on the southern border of Forfarshire. It stands in north latitude $56^{\circ} 27' 33''$ and west longitude $3^{\circ} 2' 55''$, on the north side of the estuary of the Tay, 4 miles west of Broughty Ferry, 14 south by west of Forfar, 17 south-west by south of Arbroath, 22 east-north-east of Perth, and 42 by way of Cupar-Fife north by east of Edinburgh. It occupies chiefly a stripe of ground along the base of an acclivity, and seems pent up by Dundee-law and Balgay-hill as if they were a pursuing foe, urging it into the sea; but though it has at both ends crept along the Tay and sought to escape the pressure from behind, it has also begun to tread, in spacious streets, upon the lower acclivities in its rear.

Till recently the royalty was confined within narrow limits. From the south side of Balgay-hill a rill called Tod's-burn flows eastward, and, having been joined by another on the west side of the law, pursues a south-east course, till, after intersecting the modern town nearly in the middle, it

falls into the Tay. None of the united stream now appears above ground. Another rill, called Wallace-burn, rises on the north of the law, runs first eastward and next southward, and then falls into the Tay $\frac{1}{4}$ of a mile east of the mouth of the former. Between these rills, on low flat ground along the shore, stood ancient Dundee; consisting of only two principal streets,—the Seagate next the Tay, and the Cowgate on a somewhat parallel line to the north. West from the mouth of the first stream, rocks of from 50 to 90 feet above the level of the Tay swell up from the low grounds; and these, before being assailed by the levelling operations of modern improvement, were of considerably greater elevation, and must have formed a fine feature of the burghal landscape. On these rocks, at the point where they were highest, stood for centuries the ancient castle of Dundee. This important stronghold probably resembled, in its architectural features, the fortified edifices of the 11th century; but has long since disappeared.

The modern town of Dundee has bounded far beyond the limits of the ancient burgh. In one great line of street—somewhat sinuous, but over most of the distance not much off the straight line—it stretches from west to east, near and along the shore, under the names of Perth-road, Nethergate, High-street, Seagate, and the Crofts, nearly $1\frac{1}{2}$ mile. In another great line, first north-west, next north, and again north-west, it stretches from the shore, through Castle-street, Murraygate, Wellgate, and Bonnet-hill, upwards of $\frac{3}{4}$ of a mile; and even there straggles onward through the incipient appearances of farther extension. A third line of street,—commencing on the east at the same point as Perth-road, but diverging from it till it is nearly $\frac{1}{2}$ of a mile distant, and called over this space Hawkhill; then, under the name of Overgate, converging toward it, till both merge into the High-street; then at the latter street diverging northward through that part of the second line which consists of Murraygate, and at the end of that street debouching away eastward, under the name of the Cowgate, nearly parallel to Seagate,—extends about $1\frac{1}{2}$ mile. But while thus covering an extensive area, Dundee possesses little regularity of plan. Excepting the numerous new but in general short streets, on the north, and most of the brief communications between the two great lines along the low ground, not even the trivial grace of straightness of street-line is displayed. Most of the old streets, too, are of irregular and varying width; and many of the alleys are inconveniently and orientally narrow. Yet the town makes up by a dash of the picturesque, by its displays of opulence, and by the romance of its crowded quays, as also in a degree by the magnitude and the whirl of its numerous factories, for what it wants in the neat forms and elegant attractions of simple beauty. Its exterior, also, its general grouping, and its richness of situation in the core of a brilliant landscape, eminently render it, as seen from the Fife side of the Tay, or from Broughty Ferry-road, the justly lauded "Bonny Dundee" of song, and *Ail-lee*, "the pleasant" or "the beautiful" of Highland predilection. In a military point of view it is accessible on all sides, and is entirely commanded by the neighbouring heights, so as to be quite indefensible; but as regards commerce, comfort, and beauty, it is enriched by its singularly advantageous position on the Tay, and sheltered and adorned by the eminences among which it is cradled.

The most bustling and important part of the town is the High-street, called also the marketplace, and the Cross. This is an oblong square or

rectangle, 360 feet long, and 100 feet broad, wearing much of that opulent and commercially great and dignified appearance which characterises the Tron-gate or Argyle-street of Glasgow, or even the less crowded parts of the great thoroughfares of London. The houses are of freestone, four stories high, rich and gaudy in their shops, and generally regular and modern in their structure, though in two or three instances, surmounted on the front by the gable-end construction. On the south side, projecting several feet from the line of the other buildings, stands the Town hall. This is a fine Roman structure, erected in 1734, with materials which soon became unsightly, but was restored in 1853-4 to its original appearance. Beneath, it lies open in piazzas; and above, it towers up in a spire of about 140 feet in height. At each end of the High-street, is a building which closes up the wide and stirring area of the rectangle, but allows, on both sides, sufficient space for thoroughfares into the adjoining streets. That which occupies the east end, is the Trades' Hall, dividing the commencement of the Seagate from that of Murray-gate. It is a neat though plain building, adorned in the front with Ionic pillars, and surmounted by an elegant cupola. The Seagate, one of the streets of the ancient town, and formerly the abode of the Guthries, the Afflecks, the Brigtons, the Burnsides, and other principal families, is a long, sinuous, and very narrow street, extending away to Wallace burn. The line of street is then continued to the eastward, through the Crofts and Carolina port, till it merges in the road to Broughtly-Ferry. South of the Seagate are the gas works, whale-fishing yards, and East foundry. Murraygate, opening on the northern end of the Trades' hall, is narrow and inconvenient at its entrance, but soon expands in width, and assumes a pleasing appearance of well-built and somewhat regular lines of houses. In this street are banking-houses and several other public offices. At Wellgate-port, the eastern termination of Murraygate, the street forks into two,—the Cowgate, which runs eastward, and the Wellgate, which runs northward, forming a straight line with Bonnet hill. The Cowgate, more remarkable for business than any of the other thoroughfares, and virtually the exchange of the town, has some handsome buildings, most of which are devoted to commerce, and is adorned at its east end with a venerable archway, originally one of the town gates, where the reformer Wishart preached during the prevalence of the plague in 1544, the archway or gate serving to keep the infected and the uninfected in separate crowds. From the Cowgate, Queen's-street, St. Roque's-lane, and the Sugar-house wynd, lead off to the Seagate. King-street subdivides and contracts the Cowgate, and breaks off at an acute angle from its north side, running north-eastward to Wallace burn, and there merges in the great north road, by way of Arbroath and Montrose, to Aberdeen. The Wellgate rises gently from the Murraygate, and, on market-days, is a scene of bustling and tumultuous business. At the head of the Wellgate is the Lady well, whence the street has its name, and which draws ample supplies of excellent water from various springs on the high grounds. From this point Buckle-maker wynd—formerly the seat of a craft whence it derived its name, but which is now extinct—goes off at right angles and extends to Wallace burn. An extensive rising ground lying northward of this wynd, and called Forebank, is adorned with numerous elegant villas and gardens. On a line with Wellgate, and mounting up the ascent, is the Hilltown or Bonnet-Hill—where a number of bonnet-makers were for-

merly located—which stretches away over the acclivity on to the lands of Clepington; but it has a motley and grotesque appearance, and, though the seat of very extensive manufactures, consists generally of ill-built houses, confusedly interspersed with cloth factories. Maxwelltown, a suburb of recent origin, occupies grounds between Hilltown and Hillbank villa, northward of Forebank; and Hillbank, a new suburb, is rapidly forming on the villa grounds. Opposite to Buckle-maker wynd, Dudhope wynd, which forms the northern boundary of the Chapel-shade, breaks off to the west, and runs along nearly half-a-mile, terminating at the barracks.

From the High-street, to which we now return, Castle-street goes off at right angles with the commencement of the Seagate, and leads down to the harbour. This street contains several fine buildings; and is the site of the theatre and the Royal bank. At the south east corner of Castle-street stands the exchange coffee-room,—a commodious and beautiful building, having a spacious opening to the west, and erected by a body of subscribers at an expense of £9,000. Its western front, on the basement story, has Doric pillars, boldly relieved by deep recesses of the doors and windows; and, on the second story, is in a style of the Ionic order, more ornate than what usually occurs. The reading-room is 73 feet by 38, and is 30 feet in height. From the south-west corner of the High-street, and parallel with Castle-street, Crichton-street leads down to the green-market, and on to Earl Grey's dock. Opposite to the town-hall, and in a direction the reverse of Castle and Crichton streets, is a splendid modern street, called Reform-street, combining uniformity with elegance, and rivalling, in the beauty of its buildings, some of the admired parts of the Scottish metropolis. The splendour of this street is greatly enhanced by the magnificent appearance of the High School which closes it up on the north, and looks down along its area. This edifice is in the Doric style of architecture; and its portico or central part is copied from the exquisite model of the Parthenon at Athens. A double-columned gateway, closed in by an iron-palisaded wall which encircles a pleasant shrubbery, leads to the principal entrance. The building contains a room 42 feet by 40 for classes studying the higher departments of science, another of the same dimensions fitted up as a museum, one 37 feet by 30 for the junior classes, as well as a large provision of other apartments; and it was erected at an expense of about £10,000.

At the west end of the High-street, closing up the area, is an ancient building long called the Luckenbooths, on the corner of which is still a turret indicative of its former character. This venerable pile was the adopted residence of General Monk, when he entered Dundee and consigned it to the pillage of his soldiery; and it was the birthplace of the celebrated Anne Scott, daughter of the Earl of Buccleuch, and afterwards Duchess of Monmouth, whose parents had sought a refuge in the town from the effects of Cromwell's usurpation. It was also, in 1715, the adopted home of the Pretender, during the period of his stay in Dundee. The lower part of the building was originally divided into arched sections; but is now modernized. An edifice connected with the Luckenbooths, and originally called the tolbooth, is also very ancient, and had before it, in old times, the Tron in which the public weights were kept. In its vicinity is an alley once called Old Tolbooth lane. Within St. Margaret's close, at the High-street, were formerly a royal residence and a mint. The palace, after ceasing to be a home or a possession of royalty, was inhabited by the Earls of Angus, by the Scrymgeours of Dudhope,

and afterwards by John Grahame of Claverhouse, Viscount Dundee. Robert III. was the first sovereign who struck coin in the mint. An alley leading from the High-street is still called Mint-close.

Passing out of the High-street, on the north side of the Luckenbooths, the Overgate runs away westward for upwards of $\frac{1}{2}$ of a mile to the West-port, and there forks into lines of street called Hawkhill and Scouringburn, which pass on to the limits of the town. The Overgate was originally called Argyle-gate, from the connexion it had with the family of Argyle; and opposite the Windmill brae, is still a house to which tradition points as that family's quondam property. As the street proceeds, it sends off several branch-streets to the north which run up toward the base of the Law. This district, though containing many good houses, exhibits utter recklessness of architectural taste or uniformity, and is the site of large portion of the great manufactories. But South Tay-street, the principal communication with the lower part of the town, is elegant and possesses a beautiful square. The streets, or rather alleys, parallel with it, breaking off on the south side of Overgate and Hawkhill—Tally-street, Thorster-row, School-wynd, Long-wynd, and Small's-wynd—are, excepting School-wynd, narrow and gloomy communications. From the Overgate and Scouringburn to Ward-road, Lindsay-street, leading to the new jail and bridewell, Barrack-street and other openings break off northward, and present good lines of new and pleasingly constructed buildings. The barracks occupy a commanding eminence at the foot of the Law, and enclose the remains of Dudhope castle, formerly the residence of the constables of Dundee; and they are remarkable for healthful situation; but for several years prior to 1866, they were altogether untenanted.

Returning again to the High-street, we find a wide opening from its western end, on the south side of the Luckenbooths. Most of this opening is closed up, at the distance of a few yards, by the Union hall, formerly an Episcopalian chapel, which has its lower story fitted up and occupied as shops. On the south side of this building, leading out from High-street, and forming a main line of communication with Perth and Glasgow, opens the Nethergate, which stretches away, through the direct continuation of Perth-road, into the Carse of Gowrie, and, through a forking continuation seaward, into the delightful promenade of Magdalene-green. The Nethergate is a well-built and somewhat spacious street of nearly $\frac{1}{2}$ a mile in length; and leaves behind the bustle and confusion of the business parts of the town, and puts on appearances of architectural neatness and modern improvement. As it advances westward, it becomes the site of the elegant or the flaunting homes of the elite of the town; and, along with its branch-streets, has quite an aristocratic air as comports with its propinquity to manufacture and commercial stir. The houses, instead of forming continuous lines, now stand apart, environed with lawn and flower-plots; and eventually they announce their inmates to be parties who know quite as well to luxuriate in the results which affluence produces, as to ply the arts by which it is obtained. To render the Nethergate somewhat straight, and achieve a considerable degree of order and neatness in the collocation of modern buildings, many edifices of antique character and historical interest, shared a common demolition with the gant and ungainly houses which at one time jostled one another along the line. Among others, a short way after the debouch of the street from the cross, stood Whitehall, the residence, at various periods, of the kings of Scotland, the scene of frequent conventions of estates and burghs, and

the meeting-place of several general assemblies of the Church of Scotland. A memorial of the building still exists in the name of an alley, called Whitehall close, which leads down to the shore; in a sculpture of the royal arms of Charles I. over the entrance to this alley, with the inscription in decayed letters, "God save the King, C. R. 1660;" and in the insertion of some sculptured stones which belonged to it in several of the buildings which stand on or near its site. All that remains of it is a portion of the west wall. On the lintel of a door, leading to three low vaults, which communicate with one another, and are hemmed in by an outer wall of great strength, is inscribed, "Tendit acerrima virtus." Opposite this lintel is a niche with several ornamental figures; two of which, though much decayed, appear to have been statues. Whitehall was the home of Charles immediately before his ill-fated expedition to Worcester; and it seems to have been strictly a court-residence, surrounded by numerous houses belonging to the nobility. A little to the westward of Whitehall close stood one of the most ancient and spacious mansions in Dundee, the town-residence of the powerful Earls of Crawford, said to have been built in the 13th century, and along with its grounds, stretching downward from the Nethergate quite to the river. About eighty years ago, vestiges of the mansion were still in existence, having the word "Lindsay" embossed in a sort of battlement. The lords of Crawford resided here in feudal splendour; and, in the beginning of the 15th century, Archibald, sixth Earl of Angus and Lord of Liddesdale, commonly called Bell-the-Cat, visited the mansion, and was married within its walls, amid a pomp and magnificence of ceremony which were remarkable even in those days of excessive pageantry, to Maud Lindsay, daughter of the contemporaneous Earl of Crawford.

Passing off from the Nethergate near the site of the mansion of the Crawfords, Union-street leads down to the shore. This is a spacious and beautiful thoroughfare, traced along the sites of many unseemly and frail houses which formerly disfigured and menaced the locality. From its west side branches Yeaman shore, lying in its southern line of buildings a plain and indifferently situated public edifice, the Trinity house. Merging from Union-street on the south we find ourselves near the western point of the quays and docks of Dundee. Hence to the Trades' lane, Dock-street, consisting of new and elegant erections, runs parallel to the Tay, and forms a fine background to its series of docks, with their marine forest of masts. Going off from an open area at the foot of Castle-street is Exchange-street, running nearly parallel with Dock-street; and crossing the further end of this at right angles, and coming down to Dock-street, from the Seagate near the High-street, is Commercial-street. Both of these are new thoroughfares, and in keeping with the neatness and taste of the modern improvement-spirit of the town. In Green-market square, foot of Crichton-street, is the old custom-house, one of the most antequated buildings in Dundee. The lower part was formerly arched, and seems also to have been surrounded with a kind of piazza, now converted into shops and cellars. At the top it originally terminated in fine circular turrets; in each story it has circular turreted rooms, as well as other apartments bearing vestiges of ancient comfort and magnificence; and altogether it appears to have been one of those baronial residences which, in feudal times, abounded in the town, and which either have bequeathed their names to streets or left some scanty physical memorials to stimulate the curiosity of the antiquarian. The old Fish-market beside this edifice

was superseded by a clean area, well supplied with water, and placed under suitable regulations, between the end of Castle-street and the Green-market; and that Fish-market also was proposed, about the end of 1865, to be superseded by a new one on some other site. A conspicuous object in this vicinity is the Victoria or Royal Arch. This was erected to commemorate the landing of Queen Victoria and Prince Albert at Dundee in September, 1844. It comprises a great central arch and two side arches, surmounted by two central turrets and two side turrets. It is in the Anglo-Saxon style, with profuse ornamentation, and displays considerable originality. The architect was Mr. J. T. Rothead of Glasgow. The breadth of the structure is 82 feet; the height of the central turrets from the ground 84 feet; the height of the side turrets from the ground 54 feet; the height of the central arch 32 feet; the width of that arch 21 feet. Two Russian guns, taken at the Crimean war, stand in the open space before the Arch.

At the extreme west of the harbour, and nearly opposite Union-street, is Craig-pier, constructed with low-water extensions, for the special use of large steam vessels, plying at brief intervals on the Ferry to a similar pier on the Fife coast, two miles across. From this pier on the west, to Carolina-port on the east, stretch the proud and opulent series of docks which are at once the boast of Dundee, the chief means of its wealth, and the best evidence of its enterprise and taste. Previous to 1815—when commissioners were appointed by act of parliament to extend and improve the harbour—the only accommodations for shipping were a small pier and a few ill-constructed erections which could not be reached by vessels of any considerable draught of water. But between 1815 and 1830, a wet-dock, with a graving-dock attached to it, was constructed,—the tide-harbour deepened and extended,—sea-walls and additional quays built,—and various other improvements made, at the munificent cost of £162,800. The wet-dock, then constructed, and called William the Fourth's, covers an area of nearly 8 acres, and has its adjoining graving-dock in corresponding proportion. After 1830 a large part of the tide-harbour was converted into another wet-dock, called Earl Grey's dock; and still further improvements have been effected by the opening, in July, 1865, of two spacious wet-docks to the eastward; the nearest, Victoria dock, of 14 acres in extent; the other, Camperdown dock, of upwards of 7 acres. By these additions the accommodation for shipping has been nearly doubled. A remarkable feature is the gate or caisson of Camperdown dock, which is on a new and peculiar principle, and works with great ease and facility. All these improvements are considerably within the range of high-water mark, leaving an important space of ground skirting along the town to be occupied as the site of buildings, and the area of a continuation of Dock-street; and parts of the improvements are also within low-water mark, leaving, even there, between the new wet-docks and the sea, a space to be occupied by warehouses and building-yards. The great outer sea-wall is extended considerably to the eastward, and does great credit to Mr. Ower, the engineer, for the skill and science he has displayed. A stupendous crane has been erected on the quay of Earl Grey's dock, by which eight men easily lift a weight of 30 tons. The cost of the harbour improvements up to April, 1845, was about £550,000; and, with all incidental expenses, it amounted up to May, 1865, to no less than £1,259,549 17s. 5d. And now the harbour of Dundee is one of the finest, safest, and most convenient in Britain. One valuable advantage is

that, like the harbours of Liverpool and Greenock, it is situated almost all within the line of low-water mark, and offers commodious ingress in very reduced states of the tide. The estuary of the Tay, where it washes the town, is about 2 miles broad, and is pent up by banks which, in general, have a sufficiently rapid declination to leave little of the beach bare at low water. Shoals or sandbanks, however, are in it; and, during some years prior to 1866, they increased, both in number and in extent,—inasmuch that their effect on the navigation came to be a serious question, and engaged the attention of eminent engineers; though till then, by the appliances of lighthouses, beacons, and accurate charts, they had been rendered comparatively harmless.

Several public buildings and places of interest require more detailed mention than could be made of them in a general sketch of the town; and others—including all the ecclesiastical edifices—remain yet to be noticed. The Trades'-hall, already mentioned, was built in 1776, on the site of the old flesh-market; was originally fitted up with separate apartments for the nine incorporated trades; and contains a hall, 50 feet long, 30 broad, and 25 high, now occupied as a branch office of the Clydesdale bank. The town-hall, also already mentioned, contains the council chamber, and the guild-hall; and has, in its tower, an illuminated clock and a pleasant peal of bells. The royal exchange, at the north end of Panmure-street, is an elegant structure in the Flemish style of the 15th century, common in Brussels and in the other large towns of the Low Countries; was built in 1853-6, after a design by David Bryce of Edinburgh, at a cost of upwards of £12,000; shows a side frontage of two stories, surmounted by a range of dormer windows, with traceried heads and crocketed gables; contains a lofty ornate hall, 77 feet long and 34 feet wide; and has a tower which was intended to be 120 feet high, with a stone crown, but could not be finished in consequence of the ground beneath it beginning to give way, and was terminated at only one stage above the main building, in a carved parapet and flat roof. The public hall and corn exchange, now generally known as the Kinnaird hall, in Bank-street, is an edifice in the Anglo-Italian style, erected in 1856-8, after a design by Charles Edward of Dundee; and contains a hall 130 feet long, 60 wide, and 40 high, capable of accommodating from 2,500 to 3,000 persons. The Watt institution building, in Constitution-road, is a neat Grecian structure of 1838; passed, after a time, from its original use; and was transformed first into the Sheriff court-house, and afterwards into a church. The institution itself, after being dormant for several years, has somewhat revived; and the library, museum, &c., have been transferred to more central but less convenient premises in Lindsay-street. The county prison and police buildings were erected in 1836; and greatly extended in 1844. They stand, in a good situation, at the south-west corner of the town's gardens. They were constructed from designs by Mr. Angus, at a cost of £26,000. They comprise jail, bridewell, and police-office; and are well-adapted to their purposes, and highly creditable to the burgh. The court-house, for sheriff and circuit-courts, stands on the central front of the jail; is a handsome and spacious edifice, with portico surmounted by the royal arms in bold relief; and was opened, as a circuit-court for Forfarshire, in April 1865.

The new infirmary was founded in July 1852, and finished in October 1854. It stands in a conspicuous situation, amid open ground, on the heights of Dudhope, with a clear exposure to the south. It is a magnificent building in the Tudor style of archi-

ecture, unsurpassed by any edifice of its class in the kingdom, and a great ornament to Dundee. It was constructed after designs by Messrs. Coe and Goodwin of London, and cost upwards of £12,000. It has a frontage of 349 feet in length, with two wings running back each 100 feet, and a projection backward from the centre. Its internal arrangement is on the corridor system, very airy and eminently convenient. Its wards contain beds for 280 patients; and its corridors will serve, in all ordinary times, as promenades for convalescents, and may be fitted up, in time of emergency, with additional beds. The old infirmary stood in King-street, on an elevated site sloping to the south, well detached from other buildings, and was erected in 1798. It is now occupied as a female lodging-house.—The lunatic asylum was opened for patients in 1820, and is a well-arranged edifice, and well-conducted institution; situated about $\frac{1}{2}$ a mile north of the town, upon an inclined plane considerably higher than the vale of the burgh, commanding a fine view of the Tay and the country along its shores, and encircled with spacious airing-grounds and delightful garden-walks.—At the part of the Nethergate, opposite the foot of Tay-street, stood till lately the dilapidated remains of the hospital. The date of its foundation is unknown. On the 15th of April, 1567, Queen Mary granted to the magistrates, council, and community of Dundee, for behoof of the ministry and hospital, all lands, &c., which had belonged to any chaplainries, altars, or prebendaries, within the liberty of the town, with the lands which belonged to the Dominican and Franciscan friars, and the Grey sisters, which were incorporated into one estate, to be called the foundation of the ministry and hospital of Dundee. This charter was confirmed by James VI., in 1601. The property of the hospital, though under charge, nominally, of an hospital master, is, in fact, under the administration of the magistrates of Dundee. The funds are now applied to the aid of the infirm poor, and to supplement the stipends of the Established ministers.—The Howff or old burying-ground, in Barrack-street, was formed about the year 1564, in what had been the garden of the Grey Friars; and possesses much interest, both in general arrangement and in monuments; but, by order of the Queen in council, was closed as a place of sepulture in 1858.—The new burying-ground on the west side of Constitution-road, was opened in 1836; and is tastefully laid out in mounds and walks, with a Jussieuan arrangement of plants. The western cemetery, on the north side of the Perth road, was opened in 1845; comprises six acres, beautifully laid out in compartments and promenades; has a very grand gateway; and contains a monument to the poet Thom, who died in Dundee in 1848. The Eastern necropolis, on the north side of the Arbroath road, about 2 miles from High-street, was opened in 1862; is laid out in serpentine walks, with great taste and beauty; and has an admirably designed entrance gateway.

The new custom-house, at the east end of Dock-street, was erected in 1843. It is a large fine structure, with a portico, in the Roman-Ionic style, and cost £8,000. It contains also the excise-office, and accommodation for the meetings and offices of the harbour trustees.—The new post-office at the top of Reform-street is plain but substantial, and cost above £3,000.—The new terminus of the Scottish North-eastern railway, near the custom-house, is a handsome building, with semicircular front, after designs by Charles Ower. The Caledonian new railway station, in South Union-street, although handsome and spacious, was found, so early as 1865, to be already insufficient for the vastly increased traffic.—The

theatre, in Castle-street, was once elegant, became dingy and desolate, but has been considerably improved. The Thistle-hall, in Union-street, is a handsome Freemasons' lodge often used for public meetings. The industrial schools, in Ward-street, are a handsome structure in the early English style, erected in 1856. The Morgan hospital for the maintenance and education of 100 boys, springs from a bequest which, after being long litigated, was set free in 1858. The building for it was finished in 1866; occupies a commanding site at the corner of the old Forfar road, near the north entrance to the Baxter Park; and cost about £18,000. The total endowment of the hospital amounts to £73,000.

Two grand new objects, the Baxter Park and the Albert Institute, require particular notice. The Baxter Park lies to the north-east of the town, about a mile from High-street; comprises upwards of 30 acres; is beautifully laid out in flower-gardens, promenades, rockeries, &c.; and has, in the centre, a stately terrace adorned with a handsome and substantial pavilion in the Roman style of architecture. It was all planned by the late eminent landscape-gardener, Sir Joseph Paxton; it was gifted, as a place of recreation, to the inhabitants of Dundee, for all time coming, by Sir David Baxter and his sisters Misses Eleanor and Mary Anne Baxter; and it cost nearly £40,000, besides £10,000 funded by the donors for its perpetual maintenance. To express their appreciation of this magnificent gift, the public subscribed £1,000 for a fine marble statue of Sir David by Mr. Steell; and this stands in the centre of the pavilion. The park was opened, in the presence of Earl Russell, the Earl of Dalhousie, and many other distinguished visitors, on 9th September, 1863, which was observed as a general holiday; the number of persons present at the opening was estimated at 60,000; and the procession at it was the most imposing that had ever been witnessed in Dundee. The park is open daily without restriction; and, besides being a favourite place of resort for the inhabitants, it attracts large numbers of strangers.—The Albert Institute is situated in the meadows near the top of Reform-street, and in the immediate neighbourhood of the Post-office, the High School, and the Royal Exchange. It was founded as a memorial to the late Prince Consort; and was designed to contain a library, a picture gallery, a museum, and a reading-room. It was in the course of erection at the beginning of 1866,—in the Gothic style, after designs by Mr. Gilbert Scott; and it promised to be a most imposing structure. The ground was purchased from the Town Council for £8,000; the erection itself was computed to cost about £15,000; and the capital was about £25,000, raised partly by subscription and partly by shares.

The most prominent architectural object in Dundee is the cathedral-like group of edifices which suffered so great a devastation by fire in January 1841. This has for ages been popularly called the churches and the tower; and it is pre-eminently conspicuous at once as most visibly connecting the town with antiquity, as bulking most largely among its public edifices, and as constituting the most distinctive feature in its burghal landscape. Whether seen in full front or through a vista within any part of the town, the tower looms largely in the view, looking the impersonation of Time casting its gloom upon the evanescent scenes around. Or seen from any point or distance in the environs or in the circumjacent country, whether from the east or from the west or from the south, the tower lifts its gaunt length high above the undulating surface of a sea of roofs, and suggests thoughts of many generations who have fluttered away their ephemeral life, and

passed to their long home, beneath its shadow. The churches are situated west of the Luckenbooths, between the Overgate and the Nethergate. A chapel, it is supposed, originally occupied that part of their site on which now stands the East church, and was founded by Prince David, Earl of Huntingdon. Around this as a nucleus, other portions of the structure were raised to complete the form of a cathedral; and the whole must, for a considerable period, have been a church in the fields, the town having its boundary at the west end of the High-street. The edifice came to be irregularly cruciform, and comprised the four sections, called the West or Steeple church, the South or New church, the North or Cross church, and the East or Old church. The choir was 95 feet long, 54 high, and 29 broad; and had two aisles, each $14\frac{1}{2}$ feet broad. The cross part had no aisles; and was 174 feet long, and 44 broad. The roofs of the four sections were originally of one height, and presented an uniform appearance of architectural beauty. But the West or Steeple church having been destroyed by the English before the national union, a new one was erected in 1789, of such niggard and inharmonious proportions as utterly to mar the symmetry of the interesting pile. In fact, so many additions and vast alterations were made, in the course of ages, that, with the exception of the tower, probably no part whatever of the original structure remained. The tower stands at the extreme west of the churches, and is most advantageously seen, with its elegant gable windows, from the Nethergate. Its height is 156 feet. The top is accessible to visitors, and commands a magnificent bird's-eye view of the town and harbour, together with a splendid panoramic prospect of the environs. The East church, in its restored state, was opened in 1844, and the South church in 1847. They were reconstructed after designs by Messrs. Burn and Bryce of Edinburgh, at the cost of £11,135. The entire pile retains the crucid form of the original structures; and the style of the new churches is a laudable variety of the Gothic.

All the other ancient ecclesiastical edifices of Dundee—which were numerous, well-endowed, and quite in keeping with the spirit of ostentatious display and prodigal expenditure which characterized the Roman Catholic ages—have disappeared. The oldest, St. Paul's, was situated between Murraygate and Seagate. St. Clements occupied the site of the present Town-hall. A mile-and-a-half west of the town, a burying-ground, still in use, marks the site of the church of Logie,—a mensal or table-furnishing church of the Bishop of Brechin. On a rocky rising ground, north of the High-street, stood the chapel of St. Salvator, probably an appendage of the royal palace situated in the adjoining close of St. Margaret, or Maut close. Outside of the Cowgateport, between the Den-bridge and the east end of the Seagate, stood the chapel of St. Roque; commemorated in the name of a lane, which runs from King-street to the Seagate, and is called St. Roque's-lane. On a rock, a little eastward from Carolina-point, stood the chapel of Kilcraig, meaning, in the language of the Culdees, the church upon the rock, but afterwards called by the Roman Catholics the church of the Holy Rood. This chapel is commemorated in the name of Rood-yard,—a burial ground still used in the locality. At the foot of Hilltown, stood the chapel of Our Lady, commemorated in the name of the adjoining Lady Well. On a rock at the western part of the harbour, originally called Nicholas rock, and afterwards Chapel-craig, stood the chapel of St. Nicholas. On the east side of Couttie's-wynd, still stands a vestige of the base-

ment part of the wall of the chapel of St. Mary. A large cluster of houses called Pleasance, near the western approach to the barracks, probably indicates the site of a forgotten chapel dedicated to Our Lady of Placentia. There appear to have been four or five other chapels. There were also three friaries and two nunneries; and one of the latter, that of St. Clare, still remains on the north side of the Overgate, a quaint and venerable pile, long since deprived of all its conventual features.

In modern ecclesiastical edifices, both as to number and architectural beauty, Dundee will bear comparison, if Edinburgh and Glasgow be excepted, with any town in Scotland. St. Andrew's church, built in 1772, occupies a slightly rising ground on the north side of the Cowgate; and is much and justly admired for its uniform and simple elegance. An exquisitely formed spire rises from its west end, to the height of 139 feet, and contains a set of fine music-bells. St. David's church, in North Tay-street, though a plain edifice, is spacious and of pleasing aspect. Free St. Peter's, in Hawkhill, is a substantial structure, built in 1836, and has at the east end a neat spire, the bells of which are rung by water-power. Free St. Paul's, in the Nethergate, built in 1852, from designs by Mr. Charles Wilson of Glasgow, at the cost of about £5,000, is a handsome cruciform Gothic structure, with a spire 155 feet high. The other Free churches, particularly Dudhope church built in 1840, St. David's in 1843, St. John's and St. Andrew's in 1844, and Chalmers' in 1853, are all more or less interesting. One of the Bell-street United Presbyterian churches is both a spacious and a splendid edifice. Several other of the United Presbyterian churches, also, are large and substantial fabrics. Ward chapel, belonging to the Independents, built in 1833, is a splendid erection in the Gothic style, finely situated, and of an imposing appearance. Panmure-street Independent chapel, erected in 1855, after designs by Mr. Bryce of Edinburgh, is a picturesque building, with a boldly traced circular window and two octagonal towers. Castle-street, Prince's-street, and Lindsay-street Independent chapels also are interesting. St. Paul's Episcopal church, on the Castle-hill, at the top of Seagate, is a magnificent edifice, after designs by G. G. Scott of London, and was completed in 1855, at a cost of £13,000. Its style is decorated Gothic. Its form is crucid, with nave, aisles, transepts, and chancel. A tower of two stages rises at its west end, with surmounting spire to the height of 220 feet; and an octagonal apse terminates the chancel. St. Mary Magdalene's Episcopal church, in Blinshall-street, is a recently erected edifice, of smaller size and about one-fifth of the cost, but in similar style. St. Andrew's Roman Catholic church, in Nethergate, built in 1836, is an elegant Gothic structure, very similar to Ward chapel. St. Mary's Roman Catholic church, at Forebank, Hilltown, built in 1851, is a still grander and very spacious structure in the Anglo-Saxon style, capable of accommodating about 3,000 persons. Among recent ecclesiastical erections may be mentioned also St. Salvador's Episcopal in Hilltown, Wellgate mission Free church in Chapelsbade, the United Presbyterian mission church at Butterburn, and St. Clement's Established mission church in Peep o' Day lane; and among churches designed or contemplated, at the end of 1865, may be specified the Catholic Apostolic in Constitution-road, the Wesleyan Methodist in Ward-street, Free St. Paul's mission church in the Overgate, and Free St. Enoch's in the Nethergate.

Dundee is rich in charitable, literary, and public institutions. Besides the royal infirmary, the royal

lunatic asylum, the ancient hospital fund, and the Morgan hospital, it has a medical and surgical dispensary and vaccine institution,—a royal orphan institution,—an indigent sick society,—a clothing society,—an eye institution,—18 endowments for various philanthropic purposes,—the charitable funds of the guildry, the nine trades, the seamen fraternity, and numerous voluntary associations,—a seaman's friend society,—a society for the relief of indigent females,—two new poor's houses, the largest containing an infirmary for sick paupers, erected by the generosity of a private citizen,—a home for the reclamation of women,—a convalescent institution,—a humane society,—a society for the prevention of cruelty to animals,—a national security savings' bank,—a florists' and horticultural society,—the Watt institution,—a working men's association,—a right-of-way association,—a phrenological society,—a Highland society,—a philharmonic society,—a choral society,—several public libraries,—and numerous religious and school societies, general and congregational, for promoting almost every variety of enlightening and Christianizing effort at home and abroad.—The banks in Dundee are,—the Dundee banking company, established in 1763, but now amalgamated with the Royal bank,—the Eastern bank, established in 1838, now amalgamated with the Clydesdale, located in Trade's hall,—and branch offices of the Bank of Scotland, in Reform-street,—of the British Linen company, in Murray-gate,—of the National bank of Scotland, in Reform-street,—of the Royal bank of Scotland, in Murray-gate,—and of the Commercial bank of Scotland, the Union bank of Scotland, and the City of Glasgow bank, all in Reform-street.

The principal inns are the Royal Hotel in Nether-gate, the British in Castle-street, the Albion in Tally-street, the Crown in Green-market, the Dundee Arms in Crichton-street, the Star in Seagate, the Prince of Wales in Castle-street, Hood's in the Vault, Lamb's Temperance in Reform-street, Mather's Temperance in Murraygate, and Birrell's Temperance in Union-street. Dundee has six newspapers,—the Dundee Daily Advertiser and the Dundee Courier and Argus, published daily,—the Dundee Advertiser on Tuesday and Friday,—the Northern Warder, on Tuesday and Friday,—the Dundee Weekly News on Saturday, and the Dundee, Perth, Forfar, and Fife People's Journal, on Saturday; and the last has a circulation of 100,000.

Dundee is remarkable for failure, perseverance, and eventual success in attempts at manufacture. Coarse woollens, under the name of 'plaiding,' dyed in Holland, and exported throughout Europe,—bonnets, so extensively manufactured as to employ a large proportion of the population,—coloured sewing thread, made by seven different companies, maintaining 66 twisting-mills, and employing 1,340 spinners,—the tanning of leather, in at least 9 tanyards, and to the annual value of £14,200,—glass, in two factories, one for window and the other for bottle-glass,—the spinning of cotton undertaken, and, for a time, spiritedly conducted by 7 different companies,—the refining of sugar, which was carried on in a large building in the Seagate;—these, and the making of buckles and other minor manufactures, all flourished for a season, and, in the end, went utterly to ruin; bequeathing, in some instances, their names to streets, and in others the vestiges of their factory walls to the inspection of the commercial antiquary, as memorials of the instability of trade. The making of soap, the brewing of ale, and the manufacture of cordage, are ancient; and the first, after being long extinct, has again revived, the second has also taken a recent start, while the third is in an increas-

ingly prosperous condition. Other successful manufactures are the making of 'Dundee kid gloves,' known over the whole country, chiefly on account of the superior manner in which they are sewed, and made of a fine leather principally imported from England,—the manufacture of confectionery, and the famous 'Dundee marmalade,'—the making of candles,—the working of iron,—the construction of machinery,—the making of hand-cards, and cards for cotton, wool, silk, and tow,—the building of ships, together with the constructing of iron-steamers,—and above all, the manufacture of flax yarns and linen and jute fabrics.

"As an encouragement to the linen trade in its infancy," says Dawson's Abridged Statistical History of Scotland in 1853, "a bounty was given by Government on all linen exported, and a heavy duty laid on its importation. In the face of this procedure, the trade of Dundee increased to a prodigious extent, and is still on the increase. Its fabrics consist of Osnaburgs, sheeting, dnck, and coarse linens generally; besides which linen yarn, cotton-bagging, jute carpetings, canvas and cordage are goods extensively manufactured. In 1745, only 74 tons of flax were imported, without any hemp; the shipments of linen, during the same year, being estimated at about 1,000,000 yards; no mention being made either of sail-cloth or bagging. In 1791, the imports of flax amounted to 2,444 tons; and those of hemp to 299 tons; the exports that year being 7,842,000 yards linen, 280,000 yards sail-cloth, and 65,000 yards bagging. From this period the trade began to extend itself gradually, though not rapidly." Previously to the peace of 1815, no great quantity of machinery was employed in spinning; but about this period, in consequence partly and principally of the extensive improvement and introduction of machinery, and partly of the greater regularity with which supplies of the raw material were obtained, the trade began rapidly to increase; and the progress of it since has been astonishing. The quantity of flax imported in 1814 was about 3,000 tons; in 1830, 15,000 tons; in 1843, 32,000 tons; in 1857, including tow and codilla, 37,267 tons, together with 995 of hemp, and about 25,000 of jute; in 1863, of flax, codilla and hemp, 28,988 tons, and of jute, 46,983, total 75,971 tons, value about 2½ millions. In 1807 the number of flax-spinning mills in Dundee was only 4; in 1822, 17; in 1851, (including power-loom factories) 43, with a horse-power of 2,000; while in May, 1864, the number had risen to 61, containing 160 steam-engines with an aggregate horse-power of 4,621, moving 170,552 spindles and 6,709 power-looms, and giving employment to 36,020 hands. Since then the factories in the town and neighbourhood have increased and extended; and, at the end of 1865, the number of persons engaged, adding those employed at hand-looms, &c., was nearly 50,000, whose weekly wages amounted to about £20,000. (See Warden's admirable work on 'the Linen Trade.')

"The quantity of yarn now spun here," says Mr. Warden, "may be about 500,000 spindles weekly, or 25,000,000 per annum. Value, £3,750,000; and the total annual value of the yarns and linens produced in Dundee may be about £5,000,000, of which about one-half is consumed in the United Kingdom, and the other half exported. The exports are chiefly to the Mediterranean, Australia, the American continent, and the West Indies. In 1863 there were forwarded from Dundee, by sea, 5,583 pieces osnaburgs, 112,251 sheetings, 12,772 bagging, 121,356 canvas, 13,948 downlas, 132,369 sacking, 37,355 sundries, 5,130 tons yarns; and by rail, 44,712 tons yarns and linens." "We believe," says Mr. McCulloch, "that

the shipments of linen from Dundee alone are quite as great as those from all Ireland. While the manufacture has been slowly progressive in Ireland, it has increased at Dundee even more rapidly than the cotton manufacture has increased at Manchester."

Had space permitted, we would have given some description of the factories of Dundee, several of which are no less remarkable for their splendid architecture than for their colossal proportions. The most extensive, as well as the most imposing, are those of Messrs. Baxter, Brothers, & Co., (employing 4,000 hands,) in the Dens; A. and D. Edward & Co., (employing 2,500 hands,) in Scouringburn; Gilroy, Brothers, & Co., (employing 2,500 hands,) in Lochee-road; J. and A. D. Crimond, (employing 1,600 hands,) at Bowbridge; W. R. Morrison & Co., (employing 1,700 hands,) at Wallace fens; Thomson, Shepherd, & Briggs, (employing 2,000 hands,) at the Magdalen Green; and Cox, Brothers, & Co., (employing 3,200 hands,) at Lochee. Among all these fine works, perhaps the spinning-mill of Messrs. Gilroy bears the palm both for extent and artistic beauty.

In 1731, the port of Dundee, even including its creeks of Perth, Broughty-Ferry, Ferry-Port-on-Craig, and St. Andrews, had only 70 vessels of aggregately 2,300 tons burden; and even in 1792, it had no more than 116 vessels, of aggregately 8,550 tons. But in 1829, it had 225 vessels, of aggregately 27,150 tons; in 1840, it had 324 vessels, of aggregately 51,135 tons; in 1860, it had 225 vessels, of aggregately 42,381 tons; and in 1865, it had 212 vessels, registering 45,955 tons. The average yearly foreign trade of the port, in British shipping, in the years 1840—1844, was 79,586 tons,—in the years 1845—1849, 93,219 tons; in foreign shipping, in the years 1840—1844, 19,642 tons,—in the years 1845—1849, 22,585 tons; and the average yearly coasting trade, in the years 1840—1844, was 215,635 tons,—in the years 1845—1849, 274,224 tons. The foreign trade, in 1852, inward in British vessels was 40,290 tons,—in foreign vessels, 22,959 tons; outward in British vessels, 30,440 tons,—in foreign vessels, 14,366 tons; and the coasting trade, in 1852, inward was 152,288 tons,—outward, 66,168 tons. The foreign trade, in 1860, inward in British vessels was 45,037 tons,—in foreign vessels, 33,878 tons; outward in British vessels, 34,281 tons,—in foreign vessels, 25,599 tons; and the coasting trade, inward in British vessels, was 180,122 tons,—in foreign vessels, 143 tons; outward in British vessels, 72,741 tons,—in foreign vessels, 118 tons. In the year ending 31st May, 1865, the foreign trade inward was 414 vessels, 86,140 tons; and the coasting trade inward 2,563 vessels, 235,853 tons. The customs, in 1840—4, averaged yearly £46,294; in 1845—9, £57,271; in 1855, were £57,615; in 1860, £59,747; and in 1865, £76,860.

The principal articles of import are flax, hemp, timber, iron, tar, lime, coals, refined sugar, ashes, tallow, whale-blubber, and agricultural produce; and the principal articles of export, besides the different kinds of linen and jute fabric, are linen yarn, machinery and mill-work, iron and steel, confectionery, fish, coals, spirits, agricultural produce, and miscellaneous manufactured goods. A trade to Australia sprang suddenly up in the end of 1852, occasioned the despatch of 32 cargoes vessels of aggregately about 10,000 tons in the course of 1853, and is now not exceeded by the Australian trade of any port of the empire excepting Liverpool. There are several companies connected with the shipping of the port,—such as the Dundee, Perth, and London Shipping Company; the Dundee and Newcastle Steam Shipping Company; the Tay and Tyne

Shipping Company; the Arctic Shipping Company; and the Tay Whale-fishing Company. The D. P. and L. Shipping Company have regular steamers, twice a-week to London, once a-week to Hull, once a-fortnight to Rotterdam and to Dunkirk, and occasionally to Hamburg. The Arctic fishing-vessels are large and powerful screw-steamers, 9 in number, which make most successful voyages almost every season, while the old-fashioned sailing-vessels belonging to other ports on the east coast too often return clean. A steamer plies every hour during the day from Dundee to Newport; and in the summer months there are frequent trips by the river to Newburgh and Perth. Dundee has constant communication by rail with all parts of the kingdom, is well supplied with cabs for local conveyance, and has omnibuses which run every half-hour to the west-end of the town.

Dundee is only moderately accommodated with flesh and fish markets. Its fuel consists of coal, brought chiefly from England and Fife. The town, in its streets, shops, and public buildings, is lighted with gas. Altogether, Dundee is behind no town of Scotland in the race of social and civic improvement. "In population,"—says the writer in the New Statistical Account of Scotland, under date December, 1833,—"In population, manufactures, and trade, in the luxury and comfort which prevail, Dundee has perhaps advanced faster than any similar town in the kingdom. There are men alive in it who remember when its population was only one-fifth of what it is now,—when its harbour was a crooked wall, often enclosing but a few fishing or smuggling craft,—when its spinning-mills were unknown and unthought of, and its trade hardly worthy of the name. And curious would it be could we anticipate the future, and tell what will be its state when another generation shall have passed away, and other hands shall perhaps be called to prepare a record of its progress or decline." But much more curious than this is an account of Dundee written in 1678, by Robert Edward, Minister of Murroes, and published in a Description of the County of Angus. "At Dundee," says that account, "the harbour, by great labour and expense, has been rendered a very safe and agreeable station for vessels; and from this circumstance the town has become the chief emporium, not only of Angus, but of Perthshire. The citizens here (whose houses resemble palaces) are so eminent in regard to their skill and industry, that they have got more rivals than equals in the kingdom." He then gives a minute and fanciful description of the town, under the figure of a human body; and if he were now to view the human body which he so minutely describes, we doubt not that, owing to the huge corpulency and great stature it has attained, he would be much puzzled to trace out the features of the child in the full-grown man.

By act of 3^d and 4th William IV. the town-council of Dundee is fixed at 20, exclusive of the dean-of-guild, who has a seat ex-officio. All the councillors retire in a cycle of 3 years, 6 the first year, and 7 the second and the third; and the burgh being divided into 3 districts, 2 are returned each year by each district, and 3 the second and the third year by the first district. The magistrates are a provost, four bailies, and a dean-of-guild. They exercise jurisdiction over the whole of the ancient and extended royalty. They try questions of debt, and all criminal cases within burgh. There is a sheriff-substitute in the town, whose jurisdiction is cumulative with that of the magistrates within the royalty, and at the same time extends over the landward part of the parishes. The magistrates have the appointment of the town-clerks, procurator fiscal, chamber-

lain, collector of cess, jailer, and other city-officers. The town-clerk and procurator-fiscal are appointed *ad vitam aut culpam*; the other officers hold their appointments during the pleasure of the council. The guild-burgesses are possessed of funds, secured upon heritable bonds, amounting at Michaelmas, 1832, to upwards of £3,000. The nine incorporated trades, and the three united trades, possess funds which are employed chiefly in giving assistance to decayed members, and to widows. A report of the town-council, in 1854, shows that the endowments or mortifications belonging to the town for charitable and educational purposes have a capital value of £59,291 13s. 6d.; and this is exclusive of two endowments, not reported on, of the estimated value of from £1,000 to £1,500. The police of Dundee was regulated for some time by a statute passed in 1837, which divided the town into eleven wards, and vested the management jointly in the magistrates, and in a specially elected body of general commissioners. But it is now regulated by the general police act for Scotland passed in 1850. The magistrates and town-council are the police commissioners. The jurisdiction of the police board extends over the whole parliamentary burgh. The annual value of real property within the burgh in 1861-2, was £236,335; in 1865-6, £270,596.

The public property of the town consists of lands, houses, churches, and salmon-fishings; and in 1833, was estimated at £123,447 10s. 10d. The revenue of the burgh in 1692 was £279 4s. 6d.; in 1788, £2,320 8s. 8d.; in an average of several years preceding 1833, £7,011 11s. 3d.; in 1839, £7,936 7s. 7d.; in 1860, £3,263; in 1863-4, £3,512. Dundee formerly united with Perth, Cupar-Fife, St. Andrews, and Forfar, in sending one member to parliament; but under the reform act it returns a member for itself and suburbs. In 1859, the parliamentary constituency was 2,740; the municipal 2,693. In 1860, the parliamentary constituency was 2,676; the municipal 2,548. The constituencies are now identical, and in 1865 amounted to 3,039. Population of the municipal burgh in 1841, 60,355; in 1861, 61,449. Houses, 3,548. Population of the parliamentary burgh in 1861, 90,417. Houses, 5,185; rooms with windows, 44,054. Families living in one room with no window, 0·25 per cent.; in one room with window, 37·14 per cent. Males, 39,737; females, 50,630. Proportion in Lochee, 6,683; in public institutions, 1,111; in ships, 151. Population in 1865, about 102,000.

Dundee was formerly fortified with walls, begun by the English, and completed, in 1547, by the French. The existence and even the position of its gates are commemorated in the names of its streets, Nethergate, Overgate, Seagate, and Murraygate,—the first formerly called Fluckergate, and the second Argylegate. In the 12th century David, prince of Scotland, Earl of Huntingdon, the hero of Sir Walter Scott's graphic and exciting story of the Talisman, landed at Dundee on his return from the crusades; and, in fulfilment of some vows which he had made in the spirit of the period, he built a gorgeous church, and surmounted it with the magnificent tower which still forms the most striking feature in a scenic picture of the burgh. Dundee was twice taken by Edward I., pillaged of its records, robbed of its property, defaced in its churches, and even burned to the ground; and, though burned a third time during the inroad made to Scotland, in 1385, by the Duke of Lancaster, it speedily towered to an eminence of prosperity greater than it had ever attained previous to its disasters. At the period of the Reformation it was the first town in Scotland which publicly renounced popery. General Monk encountered a

stubborn, prolonged, and sanguinary resistance beneath its walls; and when, at length, he took the town by assault, he repaid the bravery of its burghers and of numerous strangers who had fled to it for refuge, by abandoning it to pillage. So great was the spoil, that each soldier in Monk's army received for his share nearly £60 sterling,—a sum, in the comparative value of money at the period, truly wonderful.

"Dundee," says Mrs. Stowe, "has always been a stronghold of liberty and the reformed religion. It is said that in the grammar school of this town William Wallace was educated; and here an illustrious confraternity of noblemen and gentry was formed, who joined to resist the tyranny of England. Here Wishart preached at the beginning of the Reformation preparatory to his martyrdom. Here flourished some rude historical writers, who devoted their talents to the downfall of popery. Singularly enough, they accomplished this in part by dramatic representations, in which the vices and absurdities of the Papal establishment were ridiculed before the people. Among others, one James Wedderburn and his brother, vicar of Dundee, are mentioned as having excelled in this kind of composition. The same authors composed books of song, denominated 'Gude and Godly Ballads,' wherein the frauds and deceits of popery were fully pointed out. A third brother of the family, being a musical genius, it is said, 'turned the tunes and tenors of many profane songs into godly songs and hymns, whereby he stirred up the affection of many,' which tunes were called the Psalms of Dundee. Here perhaps was the origin of 'Dundee's wild-warbling' measures. The conjoint force of tragedy, comedy, hallads, and music, thus brought to hear on the popular mind, was very great. Dundee was long a sufferer during the various civil commotions in Scotland. In the time of Charles I., it stood out for the solemn league and covenant, for which crime the Earl of Montrose was sent against it, who took and burned it. It is said that he called Dundee a most seditious town, the securest haunt and receptacle of rebels, and a place that had contributed as much as any other to the rebellion. Yet afterwards, when Montrose was led a captive through Dundee, the historian observes, 'It is remarkable about the town of Dundee, in which he lodged one night, that though it had suffered more by his army than any town else within the kingdom, yet were they amongst all the rest, so far from exulting over him, that the whole town testified a great deal of sorrow for his woful condition; and there was he likewise furnished with clothes suitable to his birth and person.' The most notable modern events in Dundee were the landing of Queen Victoria and Prince Albert, in September, 1844, and the embarkation of the Prince and Princess of Wales, in September, 1864.

Among many celebrated natives and citizens of Dundee, may be mentioned, Alexander Scrymgeour, one of the heroic companions of Wallace, and the first of Dundee's hereditary constables;—Sir John Scrymgeour, one of the former's descendants, who became Viscount of Dudhope, and adhering to Charles I., fell in the battle of Marston-muir;—Hector Boethius, the Scottish historian, in 1470, the Principal of King's college, Aberdeen, and one of the revivers of elegant literature;—Robert Pittlock, now called Patullo, who, as first Captain of the Scottish guard, in the service of France, acquired distinguished military honours under Charles VII.;—James Halliburton, one of the earliest and ablest of the Scottish reformers, through whose influence Dundee became the first town of Scotland in which the reformed religion was openly professed;—George

Mackenzie, Lord-advocate of Scotland, author of the 'Institutes of the Scots Law,' and founder of the Advocates' library of Edinburgh;—John Mar, the constructor, in the 17th century, of a curious chart of the North sea and the frith of Tay, which cannot, even at the present day, be excelled in correct illustration;—George Yeaman of Murie, the representative of the town in the last Scottish or Union parliament, and one of the ablest and most patriotic legislators of his country;—Mr. John Willison, the well-known and cherished author of 'The Afflicted Man's Companion';—Robert Fergusson the poet, and Robert Stewart, a friend of his, and an eminently literary man;—James Weir and James Ivory, teachers in the Dundee seminary, and profound mathematicians;—Admiral Duncan, the hero of Camperdown, and of many other naval fights;—Dr. Robert Small, the author of a luminous view of the astronomical discoveries of Kelper;—the poets, Thomas Hood and Robert Nicoll;—and the preachers, Mr. McCheyne and Dr. Russell. To these might be added Alexander Wedderburn, 1st Earl of Rosslyn; and Charles Middleton, 1st Lord Barham. Dundee has even claimed Sir William Wallace as a native.

Dundee has at two periods given noble titles. Sir John Scrymgeour, of the family who were long constables of the town and standard-bearers to the King of Scotland, was created Viscount Dundee, in 1641; and his second successor, the third Viscount, was created Earl of Dundee in 1661. On the latter's death, without immediate heirs, the Scrymgeours of Birkhill, now Wedderburn of Wedderburn, were deprived of their inheritance. In 1686 the estates—after having been for a time in the possession of Maitland of Hatton—were bestowed by James VII. on Captain John Graham of Claverhouse. This man, of infamous memory in the history of the persecution of Scotland's Worthies, was, in 1688, created Viscount Dundee. On his death, a few months afterwards, at the battle of Killiecrankie, the estates were finally conferred by King William on the family of Douglas.

DUNDEE AND ARBROATH RAILWAY, a railway from Dundee to Arbroath. The formation of it was commenced in August, 1836, and completed in less than three years. The railway, besides forming a communication between Dundee and Arbroath, is connected at Broughty-Ferry with the termination of the eastern or Dundee-ward fork of the North British railway, and at Arbroath with the east end of the Arbroath and Forfar railway, and through that with the Aberdeen railway. It commences at Trades'-lane, Dundee, and takes an easterly direction, running parallel with Dock-street on the north, and the new wet docks on the south. It then continues through an arm of the Tay for about a mile, when it enters a very deep rock-cutting on the Craigie estate. Proceeding still eastward, it crosses at two different points the road between Dundee and Broughty-Ferry. At 3½ miles, it reaches Broughty-Ferry, where the depot is very handsome and commodious, and where also were erected the company's workshops for repairing their engines. On leaving Broughty-Ferry, it proceeds along Broughty-Ferry links, and through barren sands past Monifieth and Barry, to Carnoustie, which is 10½ miles from Dundee; and thence it traverses a tract 6½ miles in extent, and of little interest, past East Haven, to Arbroath. A very sharp curve of ½ mile radius occurs toward its termination. Were this curve in the centre of the line, or where the trains go at high velocities, it might be considered dangerous; but as it is placed close upon the Arbroath depot, it is rather an advantage in bringing up the speed of the trains than otherwise. At Ar-

broath the station is most commodious, and the accommodation for passengers excellent. A branch goes from the station to the harbour. Close upon the depot stands the Bell-rock signal-tower, whence a communication is kept up with the men stationed upon the Bell-rock light-house.

This railway, from the favourable gradients, easily obtained, (the ruling one being 1 in 1,200,) and the little value of the land through which it goes, was constructed at the comparatively small cost of £6,460 per mile; and this too with a double line. The rails are 56 lbs. to the yard, and are laid principally upon stone-blocks. The bearings are three yards apart; and the gauge is 5 feet 6 inches. The railway has a total length of 16½ miles; and it passes through the parishes of Monifieth, Barry, Panbride, St. Vigeans, and Arbirlot. There are a number of beautifully executed bridges both under and over it; and the bulwark, or sea-wall, which runs from Dundee to the deep cutting at Craigie, is a work of great magnitude, showing, in an eminent degree, the skill and ingenuity of the company's engineer, Mr. Miller, of Grainger and Miller, Edinburgh, under whose direction the whole line was planned and executed. The authorized capital of the company was £266,700 in shares and £88,900 in loans. But, in 1863, the Dundee and Arbroath was amalgamated with the Scottish Northeastern.

DUNDEE AND NEWTYLE RAILWAY, a railway from Dundee and Lochee to Strathmore. It was opened, in 1831, as a single truck-line, 10½ miles long, from Dundee to Newtyle; was leased in perpetuity, under an act of 1846, to the Dundee and Perth company; and was greatly altered both under that act and under one of 1859. It has stations at Liff, Camperdown, Lochee, Baldovan, Baldragon, Dronley, and Auchterhouse. It originally left Dundee on an inclined plane of 800 yards in length, with a gradient of 1 yard in 10, and proceeded through a shoulder of Dundee-law, in a tunnel of 340 yards in length, toward the valley of the Dichty; but these features of it, as also a branch from it for goods through the streets to the Dundee and Perth terminus, have disappeared. It ascends an inclined plane, in the gorge of the Sidlaws, to a summit-level of 544 feet above the level of the sea,—and descends a second inclined plane, through the Slack of Newtyle, into the valley of Strathmore. It is connected by branches there with the Scottish Northeastern railway,—some of which originally were its own; and it communicates through these with Coupar-Angus, Meikle, Glammis, and Forfar. A new portion of it, 7¾ miles long, was opened on 10th June 1859, and the Lochee section, 6 miles long, was opened on 10th June 1861. The authorized capital for it, prior to its being leased, was £140,000 in shares, and £30,000 in loans; and further capitals were authorized of £50,000 in shares and £16,606 in loans by the act of 1846, and £70,000 in preference shares by the act of 1859.

DUNDEE AND PERTH RAILWAY, a railway from Dundee to Perth. It was opened in May, 1847. It is 21½ miles in length, and has stations for Invergowrie, Longforan, Inchture, Errol, Glencarse, and Kinfauns. Its course lies along the left bank of the Tay, through the Carse of Gowrie and past the skirts of the Hill of Kinoul, to the vicinity of Perth; and the scenery on its flanks—the wooded shores and islets of the river on the one side, the luxuriant lands and ornate screens of the carse on the other, with profusion of grove, park, mansion, and variegated feature on both—is everywhere beautiful, in many places brilliant, from Glencarse to Perth superh. The line commences at Yeaman shore,—skirts the west-

ern part of Dundee on a sea-embankment,—runs along the face of the romantic cliff of Will's Braes,—crosses the lovely river beaef of Invergowrie bay, near the village and quaint old churchyard of Invergowrie,—is carried on a stupendous viaduct across the great sandstone quarries of Kingoodie,—passes near the bay of Inchture, and harbour of Powgavie, the shipping-place of the Carse of Gowrie.—sheers off to some little distance from Errol, and northward of Inchyra,—coincides again with the river's bank, past Kinnoul,—crosses the Tay, from Barnhill, on a magnificent bridge, of great length, in the form of a segment of a circle, with the central part resting on an island,—and terminates at the Prince's-street station in Perth.—Both the Dundee and Perth railway, and the Dundee and Newtyle were amalgamated, in 1863, with the Scottish Central; and that again was amalgamated, in 1865, with the Caledonian.

Great changes were contemplated, in 1865, by the Caledonian company, specially affecting the interior of the town of Dundee; and great changes, to compete with these, were contemplated at the same time, by the North British company, a chief feature of which was to make direct access to Dundee by bridging the Tay; but all were suspended by a compromise early in 1866.

DUNDELCHACK (Loch), a lake in the parish of Daviot, Inverness-shire. It is about 6 miles long, and $1\frac{1}{2}$ broad. It never freezes in winter, but very readily in spring, by one night's frost, in calm weather. It pours its waters, by a small stream, into the Naim, forming in its course several beautiful lochlets.

DUNDONALD, a parish in the north-west of Kyle, Ayrshire. It contains the post-office villages of Dundonald and Troon, a suburb of the post-town of Irvine, and the villages of Old Rome, Shewalton, and Loans. It is bounded on the north by Irvine water, which separates it from Irvine, Dreghorn, and Kilmaurs; on the east by Riccarton and Craigie; on the south-east by Symington and Monkton; and on the south-west and west by the frith of Clyde. From a bend in Irvine water, before that stream enters Irvine harbour, the parish extends southward along the coast $7\frac{1}{2}$ miles; in its greatest breadth it extends between 6 and 7 miles; and it contains an area of about 17 square miles. It is divided from south to north into two nearly equal parts by the low range called the Claven hills, and afterwards by Shewalton moss. The upper or eastern section is a rolling surface of gentle eminences, adorned with clumps and belts of plantation; and consists, in general, of a fertile, loamy clay. The lower or western section is nearly a dead flat. Immediately on the coast, except around Troon, and in some other spots, it is sandy and barren; and from half-a-mile inland, it has an excellent soil, and is in a state of fine cultivation. The promontory of Troon, protruding $1\frac{1}{4}$ mile into the sea, and not $\frac{1}{2}$ mile of average breadth, forms a fine feature in the landscape of the Ayrshire coast, as seen from the eminences south-eastward of Ayr. The Claven hills range south-eastward about 3 miles, and south-westward about $1\frac{1}{2}$ mile, and are all either under culture, in pasturage, or covered with plantation. They are so low as not to bear comparison with the other hills of the county, yet have long been distinguished by particular names. One of the largest is called Warley hill,—probably a corruption of 'warlike;' and bears on its summits the vestiges of two encampments. The Norwegians who landed near Ayr, and were afterwards defeated at Largs, it is thought, fortified this hill; and they here were not only on a post of great security from the hostile warlike ap-

pliances of their period, but enjoyed a delightful and extensive view over the rich amphitheatre of Cunningham and Kyle, and the picturesque attractions of the frith of Clyde. On a rising ground, near the village of Dundonald, stands the ruin of Dundonald castle, which we shall notice in a subsequent paragraph. Westward of the castle is a very beautiful sylvan bank, nearly a mile in length, and, in most places, upwards of 100 feet in height. In a grand curvature of this bank, and on a gentle eminence, stands the house of Auchans, for a long period the residence of the Wallaces of Dundonald; afterwards, about 1640, the property of Sir William Cochrane of Loudon, who was created Earl of Dundonald; and subsequently the possession of the Earls of Eglinton. At the Auchans are the remains of a small orchard, which was once in high reputation. The pear, well-known in Scotland by the name of Auchans, derived its name from this place. The tree came originally from France, was planted in this orchard, grew to a great height, and was, a number of years ago, blown down by a storm. It appears that the Wallaces had preceded the noble family of Dundonald in the possession of this property, as well as that of Auchans; for Douglas mentions John Wallace of Dundonald and Auchans, as having married a daughter of David Stuart of Castlemilk, some time posterior to the year 1570. Both father and son, of the same name, are mentioned as proprietors of Dundonald, A. D. 1572. Plantations, especially around Auchans, are large. Shewalton moss, nearly 4 miles in circumference, affords an inexhaustible supply of peat. Coal abounds, and is worked in large quantities for exportation. Sandstone of fine quality is quarried at Craiksland. Honestone abounds on the estate of Curreath. The principal landowners are the Duke of Portland, Sir Percy A. Fairlie, Bart., Boyle of Shewalton, Campbell of Craigie, and ten or eleven others; and the principal mansions are Fullarton, Fairlie, Shewalton, Newfield, Curreath, and Hillhouse. The real rental is about £23,700. The parish is traversed by the Ayr fork of the Glasgow and South-western railway, and by the Troon and Kilmarnock railway; and it has harbours at Troon and at Fullarton,—the suburb of Irvine. Its industry is very diversified, ranging through the departments of agriculture, mining, handicraft, handloom-weaving, ship-building and commerce. It also partakes considerably, round Troon, the character of a summer sea-bathing retreat. The Lady Isle is in it. Assessed property in 1860, £27,538. Population in 1831, 5,579; in 1861, 7,606. Houses, 830.

This parish is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Earl of Eglinton. Stipend, £256 2s. 11d.; glebe, £8. Unappropriated teinds, £647 1s. 5d. Schoolmaster's salary £52 10s., with fees. The parish church was built in 1803, and repaired in 1835, and contains 611 sittings. Two chapels of ease were erected about 22 years ago, respectively at Troon and at Fullarton, each containing about 900 sittings. There are three Free churches, at respectively Dundonald, Troon, and Fullarton; receipts in 1865, of the first, £124 4s. 1½d.,—of the second, £246 2s. 8½d.,—of the third, £247 14s. There is an United Presbyterian church at Troon, with 289 sittings. There are an Assembly's school and a charity school at Fullarton, a female industrial school at Dundonald, two female schools at Troon, two Free church schools at Troon and Fullarton, and four subscription schools at Troon, Darley, Drybridge, and Old Rome. A bequest of £1,000 was left, in 1842, by Dr. James Macadam for distributing annually, to the poor parishioners of Dundonald, the value of its interest

in coals and blankets. The parish of Dundonald anciently comprehended, on the east, the chapelry of Riccarton, which was erected into a separate parish long before the Reformation; and, on the south, the chapelry of Crossby, now included in the united parishes of Monkton and Prestwick. The church, along with its two chapels, belonged to the monks of Paisley, and was served by a vicar.

The VILLAGE OF DUNDONALD stands on the road from Irvine to Dalmellington, and on that from Troon to Kilmarnock, 2½ miles east of the nearest part of the sea-beach and 4 miles south-west of Irvine. "It has an interesting aspect with its one-storey tenements, and stripes of carefully cultivated land adjoining, and the beehives clustering among pretty flower-plots, to which the ruins of Dundonald castle impart a romantic air. In the rear of the ruin a precipice juts out, overhung by dark masses of trees, at whose feet slumbers a miniature loch, formed by a gurgling streamlet, which meanders pleasantly through the valley." Population of the village, 345. Dundonald castle has never made any conspicuous appearance in our national history; but it claims attention as having been the residence of some of our princes of the house of Stewart. This castle gives name to the earldom in the family of Cochrane; but the rising ground on which the castle stands, with 5 roods of land adjoining, is all the property in this parish which now pertains to that family. No authentic record can be produced as to the time when the castle was built, or when it was spoiled of its roof, and rendered desolate. A large pile still remains. The walls are very thick, and built of whinstone, which abounds in the vicinity. The corners are of a freestone superior in quality to any now found in the parish. The Stuart arms are engrossed in different parts of the building; and the whole has much the form of those castles which were raised in many places of Britain during the 12th and 13th centuries. "The manor and parish of Dundonald," says Chalmers, "belonged to Walter, the son of Alan, the first Stewart, who held the whole of the northern half of Kyle, in the beginning of the reign of William the Lion; and it might have been granted to him by David I., or his successor Malcolm IV. Perhaps the castle of Dundonald was built by the first Walter, who had no appropriate house or castle when he settled in Scotland. It seems to have been the only castle which the Stewarts had in their extensive barony of Kyle Stewart; but several of their vassals had small castles in that district." Some writers have asserted—although perhaps rather on doubtful authority,—that Walter, the first of this name, and son of Fleance, received from Malcolm Canmore the baronies of Strathgryfe or Renfrew, and Kyle, in lieu of his pretensions to Lochaber. We do not know that the name of this place occurs before the mention that is made of it in the designation of Walter, the third of this Christian name, who is designated 'of Dundonald.' He was made Justiciary of Scotland by Alexander II., in 1230. It was his son Alexander who behaved so gallantly in the battle of Largs, against the Norwegians. "The castle of Dundonald," says Chalmers again, "became the retreat of Robert II., after his retirement from government, upon the death of James, Earl of Douglas, at Otterburn, in 1388." He must, however, before this date, have occasionally made this the place of his residence; for Sir John Kennedy, of Dunure, having endowed a chapel adjoining the burial-place of the parish-church of Maybole, this grant is confirmed by Robert II. at Dondoneald, 4th December, 1371. Robert II., after he ascended the throne, lived much in Dundonald castle; and he died here

in 1390. This event is particularly commemorated by the prior of St. Serf's Inch in Lochlevin:

"The seeownd Robert of Scotland Kyng,
As God purwaid, maid endyng
At Dowdownald in his emtre.
Of a sheort seknes thare deyd he."

In the same fortress, his mild but unfortunate son and successor, Robert III. occasionally resided. We need scarcely remind the reader, that this prince had been baptized by the name of John; but that this being deemed an unlucky name—as exemplified in the history of King John of England, of John Baliol, and of John, king of France—it was, at his accession, judged expedient that he should assume that of Robert. Hence, in the language of the vulgar, he was commonly known by the soubriquet of John Fernveir, equivalent to "John of the last year," or "he who was formerly called John." His first title of honour seems to have been Lord of Kyle; afterwards he was Earl of Carrick; as we learn from Wyntoun:—

"Syne eftywartis all a qwihle
Wyth a gret folk the Lord of Kyle,
That syne was Erie of Karryke,
And alsua Prynce of our kyuryk,
Made in Ammandrile a rade,
And sa lang tyme thare-hu he bade,
Qwihill all the folk of that emtre,
Consentyt Scotis men to be."

It would appear, that the title above referred to was not, like that of Earl of Carrick, connected with the dignity of heir apparent, but had been given to him, as a younger son, from the patrimonial inheritance of the Stewarts. This prince terminated his unhappy reign on April 4th, 1406. According to Pinkerton, this event took place at the castle of Rothesay in Bute. This corresponds with the account given by the continuator of Fordun, and by Skene in his 'Table of all the Kings of Scotland.' But Riddiman, David Macpherson, and others, give the preference to Wyntoun's testimony, who says that he died at Dundonald:—

"A thousand and foure hundyr yere
To tha the sext all reknyt clere,—
Robert the thrid, oure Lord the Kyng,
Maid at Dandownald his endyng."

Not far from this royal seat, the remains of an ancient ecclesiastical foundation are still to be seen, popularly denominated, 'Our Lady Kirk of Kyle;' but the time of its erection is quite unknown. This chapel was called Capella de la Grace, as appears from a charter of James IV., A. D. 1490. From its vicinity to Dundonald, it seems to have, at least, occasionally received some special tokens of royal favour. For the same prince, we are told, never passed through that part of the country without making an offering at 'Our Lady's Kirk of Kyle.' It appears that belonging to this establishment, there was a minister of the church of Rome, who was commonly known as "Our Lady of Kyle's Pardoner," and who seems, like others of the same order, to have perambulated the country for the purpose of vending her acts of grace. Population, 214.

DUNDONY, a small green island, opposite Stirlinghill, in the parish of Peterhead, Aberdeenshire. Here, in former times, was a salt-pan.

DUNDORNADIL, or DORNADILLA'S TOWER, or DUNEARDIL, an ancient hill-fort on the east side of Loch Ness, in the parish of Durness. It stands upon a high hill, of a circular or rather conical shape, the summit of which is accessible only on the south-east, by a narrow ridge which connects the mount with a hilly chain that runs up to Stratherrick. On every other quarter, the ascent is almost perpendicular; and a rapid river winds round

the circumference of the base. The summit is surrounded by a very strong wall of dry stones, which was once of great height and thickness. The enclosed area is an oblong square of 25 yards long, and 15 yards broad; it is level and clear of stones, and bas on it the remains of a well. Upon a shoulder of this hill, about 50 feet below the summit, there is a druidical temple, consisting of a circle of large stones firmly fixed in the ground, with a double row of stones extending from one side as an avenue or entry to the circle.

DUNDRENNAN, a post-office village, with a famous old abbey-ruin, in the parish of Kerwick, Kirkcudbrightshire. It stands in a narrow valley, on the right bank of the Abbey burn, about 2 miles from the Solway frith, and 5 miles east-south-east of Kirkcudbright. It consists chiefly of feus upon the estates of Dundrennan and Orroland. The situation is elegantly beautiful, with fine neighbouring prospects down the valley, and across the frith. The houses are pleasantly interspersed with picturesque old trees, and combine finely into one scene with the precincts of the abbey. Here is a parochial school. Population of the village, 202. Houses, 47. There is a mansion of Dundrennan. The parish of Kerwick also anciently bore the name of Dundrennan. The ruins of Dundrennan abbey, though now miserably dilapidated, evince it to have been a beautiful and extensive pile. The church was in the form of a cross, surmounted by a spire 200 feet high. The body was 120 feet long, and divided into 3 aisles by clustered columns spanned with arches,—the side-aisles each 15 feet broad, and the middle aisle 25. The transept measured, from north to south, 120 feet, and from east to west 46 feet. On the south side of the church were the cloisters, enclosing a square area of 94 feet, with a grass plot in the centre. East and west but chiefly south of these, were the lodgings and different offices of the monastery, occupying a space of nearly 300 square feet. This abbey was founded, in 1142, by Fergus, Lord of Galloway. Its first monks were brought from the Cistercian abbey of Kievall, in Yorkshire; and its first abbot was Sylvanus, who died in 1189. A subsequent abbot sat in the great parliament, at Brigham, in 1290, for settling the succession of the Crown. Walter—either the same abbot or his successor—swore fealty to Edward I. in 1296; and received, in return, a precept to the sheriffs of Berwick and of Cumberland for the restriction of the property of his house. Robert I. and David II. granted to the monks considerable territorial possessions. In the beginning of the 15th century, Thomas, the abbot, sat in the celebrated general councils of Constance and Basil. Edward Maxwell, of the noble family of that name, was abbot in the time of Mary; and afforded her an asylum here upon her flight from the disastrous battle of Langside. Dundrennan was one of those abbeys whose functionaries were appointed by the King, independently of the Pope. In 1587, all its property devolved to the Crown by the act of annexation. In 1605, it was made over to Gavin Hamilton, who had been consecrated bishop of Galloway. A considerable part of the useful Chronicle of Mcrose was compiled by a monk of Dundrennan,—most probably by Abbot Thomas.

“Dundrennan abbey,” says Mr. McDiarmid, “like most religious houses built by the Catholics in the olden time, is beautifully situated in a valley of the same name. Whether the surrounding limited district gave to or received from the monastery its present appellation, is a point we pause not to discuss—but most probably the former. The site of the edifice is merely sloping, and hardly deserves

the name of an eminence; but a brawling burn passes hard by; hills of various forms appear at a little distance; the braes which form the foreground, are in many places engagingly covered with copse; the Solway, a well-known arm of the sea, comes rippling to the land, at less than 2 miles to the south; and there are eminences plentifully scattered around that command delightful marine views over a long line of frith, including Skiddaw and his congeners, the isle of Man, and, looming far a-head, the singularly peaked mountains of Morne in Ireland. When the monastery was inhabited, all these and other objects must have been distinctly visible from the turret and tower; and, as regards vast amplitude of scenery, resting on the placid, running into the picturesque, and intermingling the sublime, there could be few retreats of the same order more highly favoured than Dundrennan abbey. The name of Queen Mary lends a charm to Dundrennan which bids fair to defy dissociation so long as one stone of the building remains upon another. After the disastrous battle of Langside, her course seems to have lain by the romantic Glenkens; and, in wending her way through its widest recesses, she drew rein for a brief space at Queenshill,—a property situated near the head of the vale of Tarf, the name of which was changed in honour of the above memorable event. At Tongland she is said to have crossed the Dee,—not of course by the splendid bridge erected by Telford, but a frail wooden erection, which her attendants destroyed as one means of retarding the movements of the enemy. While this work proceeded, the beleaguered Queen sought temporary shelter and refreshment in the cottage of a widow, who cheerfully gave of her little all, and was rewarded, scanty as ways and means may have been, to the extent of her ambition as proprietrix of a humble domicile and adjoining field. Still it is not easy to map the exact route of the persecuted and beautiful Mary during her flight to the coast. That she paused and breakfasted at the castle of Lord Harris, in the parish of Kirkgunzeon, is considered certain; and equally so that she visited the hospitable mansion of Lord Nithsdale—Terregles—where specimens of her needle-work, and the bed in which she slept are still shown; and it is natural to suppose that both hurried visits must have been paid after her crossing the Dee at Tongland. It was evening when the Queen reached Dundrennan; and the impression has long been croneously cherished that her last sad sojourn on the shores of a country which she never revisited except in dreams, was passed under the roof of this abbey. The monks, no doubt, bore her true fealty, but they perhaps dreaded the vengeance of her pursuers in the shape of fine or confiscation; and, from whatever motive, a lodging was provided in a private house, which, at the period alluded to, was occupied by the ancestors of the late Mrs. Anderson of Stroquhan. The monks, however, attended her to the water's edge,—assisted in seating her in an open boat,—and after waving many an affectionate adieu, slowly bent their steps homeward, pausing at intervals to mark how the frail bark progressed towards its destination. The elements, according to tradition, were auspicious, and the Solway on the day of expatriation, presented none of the terrors of a Highland loch—

‘The blackening wave is edged with white,
Tempt not the gloomy frith to-day.

Port-Mary is simply a creek surrounded by high rocks, which received its name from the circumstances recorded, as did Maryport on the opposite side, the point of debarkation.”

DUNDROICH, or 'the Druids' hill,' a mountain on the boundary line between Peebles-shire and Edinburghshire, but chiefly within the limits of the parish of Eddlestone in the former county. It rises 2,100 feet above the level of the sea, and commands a view, on one side, of Lanarkshire; on another, of Annandale; on a third, of Teviotdale; and on a fourth, of the three Lothians and Fifeshire.

DUNDUFF. See MAYBOLE and DUNFERMLINE.

DUNDURAMH. See LOCUGOHEAD.

DUNDURCUS. See BOHARM.

DUNDURN. See COMRIE.

DUNDYVAN and **NEW DUNDYVAN**, two large manufacturing villages in the parish of Old Monkland, Lanarkshire. They stand contiguous to Coatbridge, and in a sense form part of it, blending with it in the landscape, participating entirely with it in character, and sharing fully in its advantages of traffic and institutions. They, however, have ironworks of their own, with nine smelting furnaces,—also an academy of their own, with three teachers. Population of Dundyyvan, 1,298. Houses, 169. Population of New Dundyyvan, 2,204. Houses, 376. See COATBRIDGE.

DUNEARN. See BURNTISLAND.

DUNEATON (THE), a small river of the upper ward of Lanarkshire. It rises on the south-east side of Cairntable, and runs about 13 miles south-eastward, exclusive of sinuosities, partly on the boundary between the parish of Douglas and the parish of Crawfordjohn, but chiefly down the interior of the latter parish, to a confluence with the Clyde at a point about 2 miles below Abington. It is fed by so many little affluents that, over the last 4 or 5 miles of its course, it has an average width of about 40 feet. It is much subject to freshets; and then it overflows alluvial lands on its banks, and is liable to change its channel and its fords.

DUNEIRA. See COMRIE and STRATHHEARN.

DUNEMARK. See CULROSS.

DUNEVAN, an ancient hill-fort near Calder in Nairnshire. The fortifications consist of two ramparts, enclosing an oblong level space on the top of the hill; and within that space are traces of a well, and remains of a large mass of building which gave accommodation to the garrison. This fortress held a telegraphic communication, through two intermediate heights, with Dundornadil on Loch Ness.

DUNFERMLINE, a parish in the south-west of Fifeshire. It contains the royal burgh of Dunfermline, the post-towns of Charleston, Limekilns, Halbeath, and North Queensferry, part of the post-town of Crossgates, and the villages of Crossford, Master-ton, and Patienuir. The part containing the village of North Queensferry lies $2\frac{1}{2}$ miles south-south-east of the nearest part of the rest of the parish, and is a modern annexation formerly belonging to Inverkeithing. The main body measures about 9 miles in extreme length from north to south, 6 miles in extreme breadth a little south of the middle, 3 miles in breadth in the northern part, and about 36 square miles or 21,264 imperial acres in area. It is bounded on the south by the frith of Forth and by Inverkeithing; on the east by Inverkeithing, Aberdour, Dalgetty and Beath; on the north by Kinross-shire; and on the west by Saline, Carnock, and Torryburn. The greater portion of it has a southern aspect, the ground rising gradually from the sea towards the north. South of the town of Dunfermline, it is well-cultivated and enclosed; and the number of gentlemen's seats, with their wooded grounds, gives much beauty to the scenery. Towards the north, the soil is not so good; and although much has been done in the way of improvement, the general appearance of that part of the parish is not so interesting as it

is to the south. The coast is about $1\frac{1}{2}$ mile in extent, variously high and flat, chiefly rocky, with the bay, harbour, and village of Limekilns in its centre, and the harbour, limeworks, and village of Charleston at its western extremity. The general surface of the parish rises with not much diversity to the vicinity of the burgh, becomes there picturesquely undulated, and alters northward into increasing inequality of height and hollow. The principal hills are Craiglusear on the north-western border, and the hill of Beath on the boundary with the parish of Beath,—the latter clothed with verdure to its summit, and commanding a brilliant prospect. The only stream deserving notice is the Lye or Spital burn. This rises in the vicinity of Crossgates, and near the boundary with Dalgetty. Having received various accessions, it becomes considerable below the town, frequently overflows its banks, and lays the rich fields of Pittencrieff, Loggie, Keavil, and Pitliver under water. After running towards the western extremity of the parish, it unites with another small brook, and takes a southern direction, along the boundary with Torryburn, to the frith of Forth. There are, in the northern part of the parish, several lakes—chiefly the Town loch, Lochfitty, Lochgloe, and Black loch—whose aggregate area, together with that of the streams, has been computed at 227 acres. About 13,400 acres of the parochial surface are under cultivation, about 1,135 are under wood, and about 3,730 are either waste or pastoral. The principal landowners are the Earl of Elgin and Kincardine, Sir Peter Arthur Halket, Bart., Blackwood of Pitreavie, Hunt of Pittencrieff, Wellwood of Garvoek, Barelav of Keavil, and Dnie of Craiglusear; but there are about forty others. The real rental in 1844 was £24,161 in land, £4,195 in minerals, £18,677 in the burgh, and £3,441 in the villages. The yearly value of raw produce was estimated in 1844 at £116,767; of which £39,000 were for coals, £12,583 for limestone and lime-shells, £441 for sandstone and whinstone, and the rest for the produce of land. Assessed property in 1866, exclusive of the burgh, £40,715 12s. 10d.; inclusive of the burgh, £67,610 11s. 5d.

In the immediate neighbourhood of the town, toward the south-west, is the mansion of Pittencrieff. "The moment you leave the street," says Mercer, "you enter a private gate, and are on the verge of a deep glen filled with fine old trees, that wave their foliage over the ruins of the ancient palace. A little farther on is the peninsular mount, on which Malcolm Canmore resided in his stronghold,—the original germ of Dunfermline. Round the base of the mount winds a rivulet, over which is a bridge leading to the mansion-house, situated on the farther bank, in a spacious park well-wooded, adorned with shrubberies, and having a splendid prospect to the south. The ground, too, is classical; for amidst this scenery, three centuries ago, when it was even more romantic than it is at present, must often have wandered the poet Henryson, holding sweet dalliance with the muses. There can be no doubt that here was the very 'wod' he so beautifully describes in the introduction to one of his fables:—

' In myddis of June, that jolly sweet season,
Quhen that fair Plebus, with his beanis brycht,
Had dryit up the dew fra dall and doun,
And all the land maid with his lemys lycht;
In a morning betwene mid-day and nycht,
I rais and put all sluth and sleep on syde;
Ontill a wod I went alone, but gyd.

Sneit was the smell of flouris quhyt and reid,
The noyis of birdis rycht delitious;
The bewis brod blwmyt abone my heid;
The grund growand with grassis gratus,
Of all plesans that place was pleteuous.

With suet odours and birdis armonie;
The morning mild my mirth was mair forty.

The roses reid arrayt rone and ryss,
The primrose and the purple viola;
To heir it was a poynt of paradys,
Sic myrth the mayss and the merle couth ma
The blossoms blyth brak up on bank and bra;
The smell of herbis, and of fottis the cry,
Contending quha suld have the victory."

In the 13th century this property belonged to William de Oberwell, who, in 1291, granted a right to the monastery of working coal for their own use in his lands. In 1632 Thomas, 3d Lord Bruce of Kinloss, afterwards Earl of Elgin, had a charter of the barony of Pittencrieff; and Sibbald informs us that in his time it was the property of a Mr. Forbes. About the middle of the last century it belonged to George Chalmers, Esq.; and afterwards it passed by purchase to the family of Hunt.—The mansion-house and finely-wooded grounds of Pitferrane, the seat of Sir Peter Arthur Halket, Bart., have been held by the Halket family since the end of the 14th century, having been acquired from the Seotts of Balwarie, the previous proprietors, about 1399. From a remote period this family had the right of exporting coals from their lands to foreign countries free of duty. In 1707 the privilege was purchased by government for £40,000 sterling.—Near the sea-coast, is Broomhall, the elegant mansion of the Earl of Elgin and Kincardine, situated on an elevated lawn overlooking the village of Limekilns. The lands of Broomhall formerly bore the name of West Gellet, and do not seem to have come into the possession of the ancestors of their present proprietor till about the time of their first elevation to the peerage, at the beginning of the 17th century. They yield nearly one-fourth of the total rental of the parish. The Earl of Elgin claims to be the representative of the male line of the illustrious house of Bruce, but without ability to trace it to the royal Robert.—Pitreavie, situated to the east of Broomhall, belonged formerly to the baronet family of Wardlaw, who derived their name from an office which their ancestors held in the administration of law under the Anglo-Saxon kings. The 13th baronet, born in 1794, is now a resident in Edinburgh. Sir Henry, the first baronet, founded an hospital at Mastertown. His lady, Elizabeth Halket, of the family of Pitferrane, is now admitted to have been the authoress of the fine ballad of Hardyknote, which so long puzzled the antiquaries of the day, and to which Pinkerton wrote a second part, which gave rise also to much controversy. She is buried in a vault on the outside of the church of Dunfermline. The Scottish troops were defeated at Pitreavie by a detachment of Cromwell's forces under Colonel Overton, on the 20th of July, 1651, when 3,000 fell, and 1,200 were taken prisoners.

Coal was wrought in this parish before all other places in Britain, except two, and has been wrought in great profusion; yet is still exceedingly abundant. The unwrought strata are computed to extend to nearly 3,000 acres; and they comprise, in some parts, 10 or 12 seams of the aggregate thickness of upwards of 40 feet. The largest division of the coal-field lies within the property of the Earl of Elgin. The whole area belonging to him, wrought and unwrought, may be stated at from 2,600 to 2,700 acres. About 800 or 900 of these, which are the most southern, are nearly exhausted. A large portion of this extensive coal-field Lord Elgin holds on a lease of 999 years, from the Pitferrane family. Almost all the coal partakes more or less of the caking quality and soft texture of the Newcastle coal. A new pit was opened in 1839, named the Wallsend pit, which is the deepest coal-shaft in Scotland, and

probably one of the most valuable. It is in depth 105 fathoms, 1 foot. There are 19 beds of coal, containing altogether 49 feet, 8 inches of coal, which can be worked in 13 separate divisions, by this pit. About 60,000 tons are annually raised at the Elgin collieries, two-thirds of which are exported, chiefly to the Mediterranean and the Baltic. Immediately east of the Elgin collieries is the Wellwood colliery. It is situated about a mile north of Dunfermline. The coal from this work is extensively used in the town of Dunfermline and neighbourhood, and a large quantity of it is also exported, principally to France. The steam-boats plying between Paris and Rouen are almost entirely supplied with it. The quantity of coals annually raised at this work is about 40,000 tons. To the east of this colliery, and about $1\frac{1}{2}$ mile from the town, are the Townhill and Appin collieries. The yearly output from these amounts to about 15,000 tons, part of which is conveyed by a railway to Inverkeithing, and shipped there for France and the Baltic. Still farther to the east, and $2\frac{1}{2}$ miles from the town, is the large and very old colliery of Halbeath, which makes a larger output than the Townhill and Appin collieries, and also sends part of its produce by railway for shipment at Inverkeithing. This colliery likewise yields cannel coal for gas-works. There are other two collieries, at Cuttlehill and South Letham; but they are small. Limestone is found and wrought for sale on the lands of Broomhall, Roscobie, Lathalmond, and Dunduff. Those at Charleston on Broomhall lands, are the most extensive: see CHARLESTON. There are several whinstone and freestone quarries in the parish. Iron-stone pervades the whole coal-field of the Earl of Elgin, in thin bands and balls, and was once wrought to the extent of 4,000 to 5,000 tons per annum. Copper pyrites, in small quantities, is found embedded in the clay iron-stone, with carbonate of lime. In addition to the manufactories which will occur to be noticed in our account of the town, there are a brewery at Crossford, three tile and brick works at Charleston and elsewhere, an iron foundry and a saw-mill at Charleston, and four corn or meal mills in different localities. The parish is traversed westward from the town by the Stirling and Dunfermline railway, and eastward from the town by the Dunfermline branch of the North British railway; and another branch of the latter was in progress in 1866 from the town to North Queensferry. Population of the parish in 1831, 17,068; in 1861, 21,187. Houses, 2,377.

This parish is the seat of a presbytery in the synod of Fife. The charge is collegiate; and the patron of both charges is the Crown. Stipend of the first minister, £299 11s. 8d.; glebe, £34. Stipend of the second minister, £299 11s. 8d. without glebe or manse. The parish church was built in 1821, and repaired in 1835; and contains nominally 2,050 sittings, but available only about 1,400. Attendance, 730. St. Andrew's church was originally built as a chapel of ease, but was constituted, in June, 1851, by the Court of Teinds, a quoad sacra parish church. Sittings, 797. The North church, situated at the east end of Goldrum, was built in 1840 as an extension church, and likewise is now a quoad sacra parish church. Sittings, 800. The ministers of St. Andrew's and the North are both elected by trustees. There are three Free churches in the town.—the Abbey church, St. Andrew's church, and North church—whose joint attendance in 1851 was 1,358. Receipts in 1865 of the first of these, £540 8s. 3d.; of the second, £236 1s. 10d.; of the third, £127 4s. 1 $\frac{1}{2}$ d. There are four United Presbyterian churches in the town,—Queen Anne-street, with 1,612 sittings, and an attendance of

880; Chalmers'-street, with 430 sittings, and an attendance of 800; St. Margaret's, with 979 sittings, and an attendance of 570; and Gillespie, with an attendance of 470. There are also two United Presbyterian churches at respectively Limekilns and Crossgates; the former, with 1,056 sittings, and an attendance of 600, and the latter with 530 sittings, and an attendance of 250. There are in the town an Independent chapel with 700 sittings, and an attendance of 450; an Irvingite or Catholic apostolic meeting-house, with 310 sittings; an English Baptist place of worship, with an attendance of 160; an Episcopalian chapel, with 342 sittings, and an attendance of 85; a Roman Catholic chapel, with an attendance of 450; an Evangelical Union chapel; and places of worship for three or four other small bodies, all of different denominations.

There is no parochial school; but there are numerous other schools, of high character, with great diversity of adaptation. The burgh school, or high school, is under the management of the magistrates and the town-council, and is conducted by a master and an assistant. The branches taught in it are Greek, Latin, English, mathematics, geography, arithmetic, and writing. The master has a salary from the town, and the interest of a mortification by Queen Anne, amounting to £22 12s. 6d. The commercial academy is under the direction of the guildry, and is conducted by a master and assistants. The same branches are taught in it as in the burgh school. The Rolland or Priory Lane school, originated in a donation of £1,000 by the late Adam Rolland, Esq. of Gask, is under the direction of the town-council, and affords cheap instruction, in the common branches, to a large attendance of poor children. The Maclean schools, in Golfdrum, originated in a legacy by the late Rev. Allan Maclean, are under the management of the kirk-session, and comprise juvenile schools and an industrial school. Wilson's institution dates from 1837, and was founded by bequest of Mr. John Wilson. The Queen Anne-Place schools were established by the ladies of Dunfermline for poor girls. An elegant hall has been built by subscription for a government school of art. There are likewise in the town an Episcopal school and a suite of Free-church schools. There are excellent schools at all the collieries. There are in the town three seminaries for young ladies; likewise several teachers of music. The total of day schools in the parish, in 1844, exclusive of North Queensferry, was 32, conducted by 37 teachers, and attended by 2,622 scholars.

Dunfermline parish is an original one; but many lands formerly belonging to it have been united to the parishes of Beath and Carnock. A very ancient document concerning it, commonly called the chartulary of Dunfermline, but which treats particularly of the early affairs of Dunfermline abbey, and forms in type a large quarto volume, was printed in 1842 by the Bannatyne Club. Many distinguished men of the parish, both ecclesiastics and civilians, have figured prominently in literature and politics. Among the most eminent Scotsmen of the 15th century was 'Maister Robert Henryson, scholmaister of Dunfermling.' He was a poet of considerable fancy, and successfully attempted various styles of composition. His longest poem,—'The Testament of the Fair Cresseide,'—"contains," says Dr. Irving, "many strokes of poetical description, which a writer of more than ordinary genius could only have produced." He wrote a number of fables in verse, which convey useful lessons, but are rather prolix. Of these, probably the best is 'The Borrowstoun Mous, and the Landwart Mous.' His pastoral 'Robin and Makyne' displays a love of nature

and great sweetness of versification; and his 'Abbey Walk' is full of serious reflections. The learned civilian, Edward Henryson, LL.D., seems to have been the grandson of the poet. George Durie, abbot of Dunfermline, was made an extraordinary lord of session in July, 1541, and keeper of the privy-seal in 1554. He died in 1561. Robert Pitcairn, abbot of Dunfermline, was secretary-of-state during the regencies of Lennox, Mar, and Morton, and afterwards under James VI. Three other abbots of Dunfermline held the office of lord-high-chancellor of Scotland. Arnold Blair, a monk of Dunfermline, was chaplain to Sir William Wallace, and wrote two Latin books on the events of his day. John Durie, another monk of Dunfermline, embraced the Protestant faith at the Reformation, and became an eminent minister of it in Montrose, Leith, and Edinburgh. Adam Blackwood, a native of Dunfermline in the 16th century, settled in France, published various works there, and was a senator in the parliament of Poitiers. Alexander Seton, fourth son of the sixth Lord Seton, and a senator of the College of Justice, was in 1605 created Earl of Dunfermline. This title became extinct in 1694 at the death of James, the fourth Earl. The Right Honourable James Abercromby, speaker of the House of Commons, and third son of the gallant Sir Ralph Abercromby, was in 1839 called to the House of Peers by the title of Baron Dunfermline of Dunfermline. Admiral Sir Andrew Mitchell, and Dr. Ebenezer Henderson, of Highbury College, London, were natives of this parish.

The TOWN OF DUNFERMLINE stands a little south of the centre of the parish, 2½ miles north-north-east of Limekilns, 5½ north-west by north of North Queensferry, 11 south-south-west of Kinross, 12 west-south-west of Kirkcaldy, 16 north-west of Edinburgh, 21 east-south-east of Stirling, 29 south of Perth, 30 south-west of Cupar-Fife, and 43 north-east of Glasgow. The greater part of it is situated on an eminence of considerable extent, which stretches from east to west, has an elevation of about 270 feet above sea-level, and slopes in a pretty bold declivity toward the south. But so soon does the ground flatten, that the part of the burgh called the Nethertown stands on a plain. The town, as seen from any point sufficiently near to command a close view of it, and at the same time sufficiently distant to reveal it as a whole, presents a very fine appearance. It looks to be embosomed in wood,—exhibits over the tree-tops a tumulated surface of houses, of very diversified size and form,—and lifts into grand prominence Queen-Anne-street United Presbyterian church, "with its enormous rectilinear ridge," the lofty steeple of the former guild-hall, now the seat of the local courts, the humbler spires of the old part of the abbey and of the town-house, and above all the splendid nave and magnificent tower of the modern abbey parish church. A stranger, on approaching it for the first time, forms a very mistaken notion of its extent, supposing it to be little else than a grand village in a grove; and, on entering it, is surprised to find himself in a large town, teeming with activity, abounding in trade, and every way worthy of holding the first rank among burghs, between Stirling and Dundee, and between Perth and Edinburgh.

The view from various parts of the town, particularly from the Abbey cemetery, is extensive and brilliant; and that from the top of the church tower comprises portions of twelve counties, ranging from the Grampians to the Lammermoors, and from the sources of the Forth to the German ocean. Immediately under the eye are the fine tracts of southern Fifeshire, together with their equally fine

continuation in the detached district of Perthshire, onward through Clackmannanshire to the Ochils. Next is the frith of Forth, from North Queensferry to Culross, sometimes concealed by an elevated piece of shore, but here and there bursting abroad in varied openings, and rendered all the more gay by the chequering of it with land. Next are the southern banks and screens of the Forth, beautifully undulated and luxuriantly fertile, many wooded swells of the Lothians, the heights of Edinburgh, sometimes also its very spires, the pleasure-grounds of Hopetoun, the promontory of Blackness, the harbour of Borrowstownness, and the windings of the Forth through the causes to the vicinity of Stirling. And at the limits of vision are the Lammermoors, along the mutual border of Haddingtonshire and Berwickshire, Soutra hill at the water-shed of the Gala and the Tyne, the Pentland hills in Mid-Lothian, Tinto in Lanarkshire, the Campsie hills in Stirlingshire, and Benlomond and Benledi among the south-western Grampians.

The interior views of Dunfermline do not correspond in beauty to the exterior. Antiquities, public buildings, and natural situation, indeed, present some things to fascinate, and many to please; but the streets and private houses are far from possessing a corresponding interest. The town as a whole is neither well-aligned nor finely edificed. There are no grand street views. The chief thoroughfares, though containing substantial houses, are narrow and irregular. Considerable improvements, however, have been made, and are carefully maintained. Many modern houses are neat; and those in a line of street lately opened display much taste. Several new streets have been formed; and a large suburb on the west has been raised. Many neat villas and cottages ornées, surrounded by gardens and pleasure-grounds, stand in the outskirts, and are inhabited by townsmen. A bridge 297 feet in length, was built by the late George Chalmers, Esq., solely at his own expense, across the Pittencrieff glen, otherwise called the glen of the Tower burn, at the west side of the town; and this bridge became surmounted by excellent houses, with good shops, so as to be one of the best streets in the burgh. Here also, in this glen, are romantic natural features and interesting ancient monuments. "Nature and antiquity," remarks a recent guide book, "have conspired to embellish Dunfermline with rare attractions. The exquisite beauty of Pittencrieff glen could scarcely be surpassed. In point of situation it is a most agreeable surprise, hanging on the skirts of a manufacturing town like a jewel in an Ethiop's ear."

In a tower in this glen, some small vestiges of which still exist, and bear the name of Malcolm's tower, 8 feet high, covered with grass, and surrounded with traces which indicate that the original area of the building was 60 feet by 50—in this tower resided Malcolm Canmore, King of Scotland; and here he married Margaret, a Saxon princess, who had with her brother Edgar, the heir of the English throne, fled to Scotland for refuge from the Norman conqueror. Margaret was the daughter of Edward, son of Edmund Ironside, king of England. Upon William the Conqueror ascending the English throne, Edgar, son of Edward, with his mother Agatha, and two sisters, Margaret and Christian, retired into Scotland. Some authors say that, being on a voyage to Hungary, they were accidentally driven thither by a storm. The place in the frith where the ship anchored is a small bay, about a mile north-west of North Queensferry, near the present toll-bar. This bay is called St. Margaret's Hope. On the side of the present road, near Pit-

reavie, about 2 miles from Dunfermline, is a large stone called St. Margaret's stone. Here she is said to have rested, leaning on this stone. North and South Queensferry derive their name from St. Margaret. "The site of Malcolm's tower," says Mercer, in his excellent History of Dunfermline, "was strikingly adapted for a stronghold, and could not fail of attracting a rude engineer of the 11th century. Fordun says, it was a place extremely strong by natural situation, and fortified by steep rocks; in the middle of which there was a pleasant level, likewise defended by rock and water, so that it might be imagined that the following words were descriptive of this place:—*Non homini facilis, vix adeunda feris.* 'It is difficult to men, scarcely accessible by wild beasts.' The *venusta planities*,—or 'pleasant level' on which the tower was built,—forms the summit of a very steep eminence that rises abruptly out of the glen, and causes the rivulet to wind round its base, forming a peninsula. The whole substructure of the glen on both sides is formed of freestone, which projects in many places from the surface; and these rugged declivities must have been clothed with thick impervious woods, rendering the summits extremely difficult of access on three sides."

At the request of his queen, and of her confessor, Malcolm founded and endowed, in the vicinity of his own residence, a monastery for 13 Culdees, which, with its chapel, was dedicated to the Holy Trinity. The date of Malcolm's foundation must have been between 1070, when he was married, and 1086, when he and his queen made extensive grants to the church of the Holy Trinity. Malcolm's sons, Ethelred and Edgar, also bestowed lands upon this church. Alexander I. granted various lands to it, and is said to have finished the church; and his queen, Sibilla, also conferred lands upon it. He died at Stirling, but was interred at Dunfermline. David I., who ascended the throne in 1124, in accordance with his policy in other parts of the kingdom, not only added greatly to the wealth of the monastery, but introduced into it a colony of the Benedictines, or Black monks, from Canterbury in England; and for the purpose of making the change of rules under which they were brought more agreeable to the Culdees, he raised it to the dignity of an abbey, having a mitred abbot for its head, and a prior and sub-prior under him. From the style of the architecture, Mr. Leighton is inclined to think that it was during the reign of David I. that the church—the nave of which still remains—was erected. Gotfried or Gaufrid, who had been prior of Canterbury, was the first abbot. He died in 1154, and was succeeded by his nephew, Gaufrid. From a statement made to the Pope in 1231, it appears that the number of monks had then been increased to 50. About the period of the death of Alexander III., it had become one of the most extensive and magnificent monastic establishments in Scotland. Matthew of Westminster says, that at this time "its boundaries were so ample,—containing within its precincts three carrucates of land, and having so many princely buildings,—that three potent sovereigns, with their retinues, might have been accommodated with lodgings here, at the same time, without incommoding one another." When Edward of England invaded Scotland in 1303, he resided in the abbey of Dunfermline from the 6th of November that year till the 10th of February, 1304. At leaving it, Edward caused his army to set it on fire. "On account," says Matthew of Paris, "of its magnitude, the nobles of the kingdom were accustomed to assemble here to devise plots against Edward; and, during war, they issued thence, and proceeded to plunder and destroy the inhabitants of England.

The royal army, therefore,—perceiving that they had converted the temple of the Lord into a den of thieves, and that it gave great offence to the English nation,—utterly destroyed it, by levelling all its splendid edifices to the ground; sparing from the flames the church only, and a few lodgings for monks." As soon as the kingdom was settled under Bruce, this monastery was begun to be rebuilt; but probably it never regained its former grandeur. According to Lindsay of Pitcottie, the abbey and its church were finally destroyed on the 28th of March, 1560. The last abbot was George Durie, of the family of Durie, of that ilk, who held the office from 1530 till the destruction of the monastery. He died in 1572.

The abbey was richly endowed, and derived part of its extensive revenue from places at a considerable distance. Kirkealdy, Kinghorn, Burntisland, Musselburgh, and Inveresk belonged to it. According to a rental given up at the Reformation by Allan Couts, in name of George Durie, the abbot, the yearly revenue was as follows:—Money, £2,513 10s. 8d. Scots; wheat, 28 c. 11 b. 1 f.; bear, 102 c. 15 b. 1 f. 3 p.; meal, 15 c.; oats, 61 c. 6 b. 2 f.; horse-corn, 29 c. 1 b. 1 f. 2½ p.; butter, 34 st.; lime, 19 c. 15 b.; salt, 11 c. 8 b.—According to another rental by the same person:—Money, £2,404 4s.; wheat, 27 c. 4 b. 3 f.; bear, 83 c. 11 b. 2 f. 2 p.; oats, 158 c. 5 b. 2 f., whereof 84 c. white oats; lime, 20 c.; salt, 11 c. 8 b.; capons, 374; poultry, 746. In 1560, Robert Pitcairn was appointed commendator of the abbey, thus obtaining a right to its lands and rents, which he held till his death in 1584. The Master of Gray succeeded him, but was extruded in 1587, when Henry Pitcairn succeeded him. In 1589, the abbey, with its lands and privileges, was erected into a temporal lordship, which was conferred upon Anne of Denmark, queen of James VI. In 1593, Alexander Seton, who afterwards became first Earl of Dunfermline, was appointed by Queen Anne heritable bailie of her lordship of Dunfermline. Charles I. granted to Charles, second Earl of Dunfermline, a lease for 57 years of the feu-duties and rents of the lordship of Dunfermline, with the office of heritable bailie of the regality; which was in 1665 assigned to John, Earl of Tweeddale, for a debt due to him by the Earl of Dunfermline. In 1669, John, then Marquis of Tweeddale, had his office of bailie, &c., vested in himself by royal charter; and in 1693, obtained a prerogative of the lease of the lordship, in his own name, for 57 years. In 1748, the office of heritable bailie was abolished with other heritable jurisdictions in Scotland; but the office of heritable keeper of the palace is still retained by the Marquis of Tweeddale, who enjoys the fees of constable, mayor, and scribe of the lordship.

Although the ruins of the ancient abbey which still remain, are sufficient to afford a glimpse of what must have been its former grandeur, yet they are but a trifling portion of the extensive conventual buildings which must have existed here, even subsequent to the demolition. The western portion, or nave of the abbey church—which was originally a cross church—is still in tolerably good preservation; and is a fine specimen of the architecture of the age in which it was erected. It is generally said to be in the Saxon style of architecture; but Mr. Leighton is inclined to think that the style is Norman. The principal entrance to the abbey-church is from the west, where there is a very finely enriched door-way in the Norman style, and above this a handsome pointed window, divided by mullions and transoms. In the north side there is another entrance from what is now the church-yard,

by a porch of later erection, which is in the pointed style. The roof of the nave is supported by a double row of splendid Norman pillars, from which spring round arches to support the upper wall, and at the west end by a clustered column on each side; a clustered pilaster, from which springs a pointed arch, also supporting the upper wall. These columns likewise separate the body of the nave from the north and south aisles. The outside of the building is ornamented by two heavy towers at the west end, one of which is surmounted by a spire, and the sides by heavy buttresses characteristic of the style of the building. Immediately to the south of the abbey-church are the ruins of the fraterly or refectory, which formed the dining-hall of the monastery. Its south wall, from the windows of which there is a magnificent view, and the west gable, in which there is one of the finest pointed windows in Scotland, alone remain. The only other portion of the monastic buildings existing is the gateway of the monastery—now called the Pends—which exhibits a fine specimen of the pointed style of architecture. Mr. Swan has given views of the Norman porch, and of the Interior and Exterior of the old Abbey-church in his elegant work entitled 'Fife Illustrated.'

The abbey-church was long the place of sepulture of our Scottish kings. Here Malcolm Canmore and his queen St. Margaret were interred, also their eldest son, Edward, who was killed in Jedwood forest. Edmond their second son, and another named Ethelrade, who was Earl of Fife, King Edgar, Alexander I. with Sibilla his queen, David I. with his two wives, Malcolm IV., and Alexander III., with his queen Margaret and his son Alexander, were also here entombed. The great Bruce, too, the saviour of his country, was here laid at rest from his many toils, with his queen Elizabeth, and his daughter Christina, the widow of Sir Andrew Murray. The remains of these distinguished individuals were all interred in the choir, which forms the site of the present parish church, and which—while the nave continued to be kept in repair, in consequence of being used as the parochial place of worship from the Reformation till the year 1821—was allowed to pass into a state of total ruin. The entombment of Robert Bruce is described as follows by Barbour:

"They haiff had him to Dumferlyne,
And him solemnly yirded syne,
In a fair tomb into the quire;
Bishops and prelates that were there
Assozied him, when the service
Was done, as they best could devise;
And syne, upon the other day,
Sorry and wo they went their way.
And he debowelled was cleanly,
And also balm'd syne full richly;
And the worthy Lord of Douglas,
His heart, as it forspoken was,
Received has in great dewtie,
With fair and great solemnitie."

In digging for the foundation of the new parish church in February, 1818, the tomb of Robert Bruce was discovered, and his skeleton found wrapt in lead. On a subsequent day, the tomb was again opened in presence of the barons of exchequer, several literary gentlemen from Edinburgh, the magistrates of the town, and the neighbouring gentry. A cast of the skull having been taken, the stone coffin in which the remains lay was filled with melted pitch; it was then built over with masonry, and the pulpit of the new church now marks the spot where all that remains on earth of the patriotic warrior is deposited. Many of our great nobles were also buried in this church; among whom may be mentioned, the great Macduff; Constantine, Earl of Fife; William Ramsay, Earl of

Fife; the Earl and Countess of Athol, in the reign of William the Lion; Randolph, Earl of Moray, the compatriot of Bruce; and Robert, Duke of Albany, governor of Scotland. Many churchmen also of great power and influence were interred here.

After the accession of Alexander, our Scottish kings frequently resided on the south side of the Forth, but they occasionally also resided at Dunfermline. When they gave up their residence in the old tower is not known; but at an early period a palace or castle appears to have been erected adjoining the monastery, and on the site of the present ruins of the palace. James IV., after his accession to the Crown, was more here than any of his immediate predecessors; and he appears to have either entirely rebuilt or greatly enlarged the palace, and added to its height, as in 1812 a stone was found in the roof of one of the windows bearing the date of 1500. James V., and his daughter Queen Mary also resided here; and James VI., previous to his departure for England, appears often to have had his residence in the palace. In July, 1633, this unfortunate monarch visited Dunfermline, where he held a court, and created Sir Robert Ker of Ancrum, ancestor of the Marquis of Lothian, Earl of Ancrum, and dubbed five gentlemen knights. In August, 1650, Charles II. remained several days in the palace: and never again was this edifice graced with the presence of royalty. From this time it appears to have been entirely neglected; and in 1708, the roof fell in. It is now a complete ruin; all that remains being the south wall, and a sunk vaulted apartment traditionally called the King's kitchen. The length of the palace seems to have been 150 feet, by 33 in breadth. The remaining walls were several years ago repaired, and put into a state in which they may still last for ages, by James Hunt, Esq., the proprietor of the estate of Pittencrieff, adjoining which they are situated.

A mansion was built by Queen Anne, in 1600, in the vicinity of the palace, for her own separate residence. This came to be known as the Queen's house, and was kept in good repair many years after the palace went to ruin, but was entirely removed in 1797. An ancient cross adorned the market place, of similar ornamental character to the ancient crosses of Edinburgh, Aberdeen, Peebles, and some other burghs; but, according to the Vandal taste with which such things were regarded in the course of last century, it was removed in 1752. The central pillar of it, about 8 feet high surmounted by a lion rampant holding a shield, on which is a St. Andrew's cross, is preserved in the corner of a house in the vicinity of its site. The spire at the west end of the old abbey church was built by James VI. in 1563, and rises to a height of 156 feet from the base of the tower. An adventurous youth recently made a great sensation by climbing to the top of the spire, and taking off its old rusted weathercock to be repaired.

The new abbey church, the present parish church, is a splendid edifice, in light ornate Gothic style, with elegant perpendicular windows; and it has, near the east end, a fine square tower, 100 feet high. Instead of a Gothic balustrade on the tower is an open hewn work, in capital letters four feet high, exhibiting on the four sides the words "King Robert The Bruce," surmounted by royal crowns; and at each corner there is a lofty pinnacle. This device indicates that the structure is practically a mausoleum over the ashes of the Bruce; but it is of questionable taste in connexion with a church, and certainly is utterly ultraneous to the style of the architecture.—The Episcopalian chapel in Queen Anne place, built in 1842, is a beautiful Gothic edi-

fice, with lancet windows.—Gillespie United Presbyterian church, built in 1849, is also a fine Gothic structure.—St. Margaret's United Presbyterian church, St. Andrew's quoad sacra parish church, the North church at Goldrum, the Free churches, the Independent chapel, built in 1841, and one of the other chapels, are all either handsome edifices or respectable. But by much the most conspicuous of the ecclesiastical edifices, next to the new abbey, though certainly a most gaunt and humpish one, is Queen Anne street United Presbyterian church. This was originally built for the celebrated Ralph Erskine, who, while one of the parish ministers of Dunfermline, declined the authority of the General Assembly, and was expelled from his charge, and became one of the founders of the Associate presbytery, which gave rise to the various bodies of Seceders. A stone statue of him, on a pedestal, was recently erected in front of the church. And the pulpit which he occupied in the old abbey, previous to his expulsion from the Establishment, exists in the transmuted form of two small side-tables in the hall of Abbotsford. The principal school buildings, particularly those of the burgh, the free abbey, and the Maclean schools, are good modern structures. The guildhall is an elegant edifice, with a fine spire. A poors' house and a new prison were erected some years ago in the Town green, on the east side of the burgh.

At the beginning of the 17th century, Dunfermline was little else than a rural village, with about 1,000 inhabitants; and even at the beginning of the 18th, it continued to be almost without trade. It is now the seat and centre of a great manufacture in table linens and in kindred fabrics. This manufacture is the only one of the kind in Scotland; and it began at Dunfermline slowly and steadily, upwards of a century ago, and has ever since been a source of much wealth to the town, and of subsistence to many of the inhabitants. In 1740, textile manufactures were sufficiently introduced to give rise to an association of weavers; and yet even five years afterwards, they were not remunerating enough to enable the town to pay without difficulty a contribution of £80 levied by Prince Charles. About 1749, the British Linen company—then just established—began to employ a number of looms in the town for weaving table-linen; but the weavers wrought chiefly at ticks and cheeks during the winter, and only in the summer at table-linen. About 1763, the table-linen of Dunfermline first found its way to the London market. From that period the manufactures and wealth of the town began more rapidly to increase. Improvements have been made on the mechanism of the looms, great skill and taste displayed in the devices in the cloth, and a variety of other manufactures introduced. The weaving trade, besides employing a large proportion of the town's own population, supports looms in the parishes of Torryburn, Carnock, Culross, and Inverkeithing, and even in Kinross, Leslie, Strathmiglo, and Auchtermuchty. In 1836, the amount of capital employed in it was £826,261, the number of looms engaged in it was 3,517, the number of these looms within the parish of Dunfermline was 2,794, the number of warpers, winders, and other coadjutors of the weavers was 1,527, the average weekly wages of the weavers was 10s., the average weekly wages of the coadjutors of the weavers varied from 4s. to 18s., and the proportions of the 3,517 looms employed upon the different fabrics were as follow,—770 on single diaper, 1,880 on single damask, 269 on double damask, 445 on table-covers, 13 on worsted warps, 15 on full harness linens, and 17 on bed quilts. These statistics were obtained by a committee of manufac-

turers, in circumstances peculiarly fitted to secure the nearest possible approximation to accuracy. But the increase in the number of looms in the very next year was 183; and now extensive weaving factories have been established, and great improvements in fabrics and designs have been made.

The spinning of linen yarn was commenced, in 1792, in a mill in Brucefield, about $\frac{1}{2}$ a mile south-west of the town; and it was afterwards increased in the parish by the erection of six other mills. The yarns spun are of various qualities from tow and flax, and are used in the manufacture of the several kinds of fabrics woven in the town. Only one of the spinning-mills now exists. But there are at present, in or near the town, two steam weaving factories, several hand-loom weaving factories, three bleachfields, a soap work, a tannery, three rope works, four dye works, an extensive malleable iron work, two iron foundries, two tobacco manufactories, three breweries, and two flour mills. A weekly market is held on Tuesday for the sale of grain by sample, which is well attended by the agriculturists of the surrounding country. Fairs for the sale of horses and cattle, and a few other purposes, are held on the third Tuesday of January, March, April, June, July, September, October, and November. The town has offices of the Bank of Scotland, the British Linen Company's Bank, the Commercial Bank, and the National. It has also a national security savings' bank, and offices of thirty-three insurance companies. The principal inns are the Royal, the Commercial, the George, the Temperance, Brown's, Bruce's, and Milne's. The public conveyances are railway trains to the east and to the west, coaches to Edinburgh by Inverkeithing and Queensferry, and omnibuses to the steamers at Charleston.

Dunfermline was constituted a royal burgh in 1588 by James VI. It is governed by a provost, 2 bailies, a guild-magistrate, a treasurer, 17 other councillors, and a town-clerk. The provost and magistrates have the jurisdiction within the royalty as extended by the police act in 1811. They hold regular courts, the town-clerk acting as their assessor. There is a guildry, the deau of which has the power of judging in all questions of boundary of property, &c. This incorporation possesses property to the annual value of £350 per annum. There are eight incorporated trades,—wrights, tailors, smiths, weavers, shoemakers, bakers, masons, and fleshers. In 1811 a police act was obtained, which not only regulates the police of the town, but contains powers for paving, lighting, and cleaning the streets, for removing nuisances and obstructions, for opening new streets and widening the present ones, and likewise for increasing the supply of water. The provisions of this act were at the same time extended over the suburbs of the town, with the exception of that of Pittencrieff. The town was in consequence divided into wards, by each of which commissioners are appointed for carrying the provisions of the act into effect, and by whom the superintendent of police and other necessary officers are appointed. The necessary funds are raised by an assessment on the inhabitants. This act has produced great improvements in the town.—The present land property of the burgh consists of the farms of Highholm, Muirecockhall, Lilliehill, Cairncubbin, and part of the town's moor, with the coal under them, which for a number of years has been worked. These lands comprehend about 700 Scots acres, 180 of which are planted. The burgh likewise possesses 3 or 4 acres of land, known by the name of Hillblade acres. The house-property of the burgh consists of the workmen's houses at the

I.

town-collery, the flesh-market, slaughter-house, and washing-house, the town-house, the high school, and the charity-school in Priory-lane. The burgh is likewise possessed of a number of seats in the parish-church. The whole value of the land property of the burgh taking the rental at 30 years' purchase, in consideration of the value of the minerals, and the value put on the wood and houses by a professional man, is stated to be £19,501 5s. 10 $\frac{1}{2}$ d. The town-house, high school, and Priory-lane school, are estimated at £2,150. The only alienation of the burgh's real property of any consequence, within the last 50 years, was part of the lauds lying immediately south of those still belonging to the burgh, which were sold to Mr. Downie of Appin, in 1829, for the price of £14,105. The debt of the burgh at present is about £8,000. The annual revenue was estimated in 1834 at £870; and the expenditure at £731 12s. The present revenue is about £1,000. In 1850, a new water company was formed, and water-works were constructed at the cost of £20,000. In October, 1829, the town was lighted with gas.

A sheriff-substitute for the western district of Fifeshire resides at Dunfermline. Sheriff ordinary courts, also sheriff small-debt courts, are held on every Friday during session. Quarter session sheriff small-debt courts likewise are held on the first Friday of each month during vacation. A justice of peace court also is held once a-month. Dunfermline unites with Inverkeithing, Culross, South Queensferry, and Stirling in sending a member to parliament. Constituency in 1840, 550; in 1865, 488. The town has two halls for public meetings, a reading-room in the guild hall, a subscription library, a united tradesmen and mechanics' library, a working men's refreshment and reading rooms, a mechanics' institution, two horticultural societies, an agricultural society, an ornithological society, three total abstinence societies, two bowling-green clubs, a coursing club, a curling club, a number of benefit associations, a poor's house, and several charitable societies, a number of mason-lodges, and a mothers' institution.

Dunfermline owed its origin to the neighbourhood of the abbey and the palace, and was for a long time a burgh of regality holding of the monks. In 1303, while Edward I. of England was residing here, he was joined by his queen and some of his nobles, and received the submission of many Scottish barons who had held out against him during his progress through the kingdom in 1296. In 1323, the son of King Robert Bruce was born here who, after a long minority, ascended the throne under the name of David II. In 1385, Richard II. of England and his lords, says Froissart, "went to Dunfermline, a tolerably handsome town, where is a large and fair abbey of Black monks, in which the kings of Scotland have been accustomed to be buried. The King was lodged in the abbey; but after his departure, the army seized it and burned both that and the town." In 1581, James VI. and all his household subscribed at Dunfermline the first national covenant of Scotland. In 1596, a convention of the Estates was held here for recalling the popish lords who had been banished for a conspiracy. In that year also was born here James VI.'s eldest daughter, Elizabeth, who became Queen of Bohemia. In 1600, Charles I. was born here. In 1624, the town was almost totally destroyed by fire, and the inhabitants were suddenly reduced to such poverty as obliged them to supplicate public aid from the kingdom. In 1643, the parishioners of Dunfermline swore and subscribed the solemn league and covenant; and in 1650, Charles II. subscribed here a

2 G

remarkable document, known in history as the Dufferline Declaration, confirmatory of an oath he had formerly taken to adhere to the covenants. In 1715, about a month before the battle of Sheriffmuir, a Jacobite detachment was surprised at Dufferline.

DUNFILLAN. See FILLAN (St.).

DUNFION. See DRHUM (The).

DUNGAVEL. See WISTON.

DUNGEON (Loch), a fresh water lake of $\frac{3}{4}$ of a mile in length, in the north of the parish of Kells, and 8 miles north-west of New Galloway, Kirkcudbrightshire. It abounds in trout. Its superfluous goes off in a streamlet $5\frac{1}{2}$ miles eastward to the Ken.

DUNGLASS, a post-office station and the ruins of an old castle, in the parish of Old Kilpatrick, Dumbartonshire. The ruins are perched upon a small rocky promontory, almost encircled by the Clyde, about a mile below Bowling bay, and $2\frac{1}{2}$ miles east-south-east of Dumbarton. Several small villages, and a sprinkling of villas, are in the vicinity. The promontory was anciently a Roman station, and is believed by some antiquaries to be the point at which Antoninus' Wall terminated. The castle was the message of the barony of Colquhoun, which extended hence to Dumbarton; and the descendant of the residents in it is Sir James Colquhoun of Lass. On a conspicuous part of the rock stands an obelisk, to the memory of Henry Bell, the father of steam navigation.

DUNGLASS, the elegant modern seat of Sir John Hall, Bart., on the south-east verge of Haddingtonshire. It stands on the left side of a romantic rivulet, of about $4\frac{1}{2}$ miles in length of course, which forms the boundary between Haddingtonshire and Berwickshire, along a deep, gorgy, wooded dean to the sea. The mansion is nearly a mile from the shore; and the North British railway bestrides the dean below it, on one of the most magnificent viaducts in the kingdom. "This work consists of six arches—that which spans the dean measuring $124\frac{1}{2}$ feet in height, from the hed of the stream, 135 feet span, and 45 of rise in the arch. Of the five remaining arches, three are in Haddingtonshire and two in Berwickshire. The viaduct is an object of great architectural beauty, and leaves the far-famed Pease bridge in its immediate vicinity no longer an object of solitary wonder. The scenic effect is in this instance enhanced by the presence also of two other bridges over Dunglass dean, on the old and new road, and the picturesque accessories of wood and water. The prospect from the viaduct and embankment is beautiful and extensive, embracing on the right the green lawns and woods, the romantic dean and church-ruins at Dunglass, with the mansion-house tower seen above the tree-tops; and on the right 'the sea, the sea, the open sea,' St. Abb's head, and the animated sight of many a white sail shimmering in the sun." At the mouth of the dean is an ancient encampment in the form of an isosceles triangle.

The site of Dunglass mansion and its offices was anciently occupied by a small town and a strong castle, both of the name of Dunglass, and both now extinct. On the 16th of August, 1544, the English garrison of Berwick made an inroad into Scotland, and "burned and spoiled the town of Dunglass very sore." The fortress was originally one of the many strongholds of the Earls of Home. After the attainder of Lord Home in 1516, it appears occasionally to have been held by the Douglases; for, according to Patten, it was held by George Douglas, in 1548. Patten relates, that while Somerset's army was passing the Pease, "my lord's grace, willing to lose no time, and that the enemies as well by

deed as by bruit should know he was come, sent an herald to summon a castle of George Douglas, called Dunglas, that stood at the end of the same valley nearer the sea, and a mile from the place of our passage. The captain thereof, Matthew Hume, a brother's son of the Lord Hume's, upon this summons, required to speak with my lord's grace. It was granted, and he came. To whom, quoth his grace, since it cannot be but that ye must be witting both of our coming into these parts, and of our proclamation sent hither before, and proclaimed also since, and ye have not yet come to us, but keep this holde thus, we have cause to take you as our mere enemy. And, therefore, be ye at this choice—for we will take none advantage of your being here now—whether ye and your company will render your holde and stande, body and goods, at the order of our will, or else to be set in it again as ye were, and we will assay to win it as we can. The captain, being about this riddle brought in great doubt what answer well to make, and whether best to do, at last stricken with the fear of cruelty that by stubbornness he should well deserve, and moved again with the hope of mercy that by submission he might hap to have, was content to render all at his grace's pleasure, and thereupon, commanded to fetch his company, returned to the castle. In the time of tarrying for fetching his guard, we saw our ships, with good gale and order, fair sailing into their firth, which is a great arm of the sea, and runneth westward into their country above iiii. score mile. Upon this standeth Leith, Blackness, Stirling, and St. Jho's road, and all the best towns else in the south part of Scotland. This captain came and brought with him his band to my lord's grace, which was of xxi. sober soldiers, all so apparelled and appointed, that, so God help me—I will say it for no praise—I never saw such a bunch of beggars come out of one house together in my life! The captain and vi. of the worshipful of the company were stayed and commanded to the keeping of the provost-marshal, more to take Munday's handsell, then for hope of advantage; the residue were licensed to go their gate with this lesson, that if they were ever known to practise or do ought against the army, while it was in the country, and thereupon taken, they should be sure to be hanged. After this surrender, my Lord John Gray, being captain of a number—as for his approved worthiness right well he might—was appointed to seize and take possession of the manor, with all and singular the appurtenances, in and to the same belonging, with whom, as it hapt, it was my chance to go thither. The spoil was not rich sure; but of white bread, oaten cakes, and Scottish ale, whereof was indifferent good store, and soon bestowed among my lord's soldiers accordingly. As for swords, bucklers, pikes, pots, pans, yarn, linen, hemp, and heaps of such baggage beside, were scant stoopt for, and very liberally let alone; but yet sure it would have rued any good housewife's heart, to have beholden the great unmerciful murder that our men made of the brood-geese and good laying-hens that were slain there that day, which the wives of the town had pend up in holes in the stables and cellars of the castle, ere we came. In this meantime, my lord's grace appointed the house should be overthrown; whereupon the captain of the pioneers, with a iiiij. of his labourers, were sent down to it, whom he straight set a-digging about the foundation. In the town of Dunglas—the which we left unspoiled and unburned—we understood of the wives, (for their husbands were not at home,) that it was George Douglas's devise and cost to cast these cross trenches at the Peaths, and stood him in iiiij. Scottish L., which is as much sterling as iiiij. good

English crowns of V.s. a piece; a mote reward for such a work." Next day, Patten continues, "Our pioneers were early at their work again about the castle, whose walls were so thick, and foundation so deep, and there too set upon so craggy a plot, that it was not any easy matter soon to underdig them; our army dislodged and march on."

After the destruction of Dunglass thus recorded, it was rebuilt, and probably much enlarged; for, in 1603, it was sufficient to lodge James VI. and his whole retinue when on his journey to London; and, on his return, in 1617, he was welcomed by the 'Muses Dunglasides.' In 1640, the Earl of Haddington, and several of the neighbouring gentlemen who had joined the Covenanters, took possession of Dunglass castle, for the purpose of watching the garrison of Berwick. His lordship, having received a letter from General Leslie, was standing in the court-yard reading it to the company, when the powder-magazine blew up, and one of the side-walls in its fall overwhelmed his lordship and his auditors, who all perished in the ruins. Scotstarvet states, that a report prevailed that the deed was effected by a faithless page, who, in revenge of some real or imaginary insult, thrust a hot iron into a barrel of gunpowder, and perished with the rest.

DUNGLASS, a bare desolate height, 400 feet in elevation, terminating the east end of the valley of Strathblane, in Stirlingshire.

DUNGOIACH, a hill in the north-west of the parish of Strathblane, Stirlingshire. It lifts up from the valley a fine cone, to the height of 400 feet, clothed to the summit with wood; and contrasts very strikingly to Dunglass.

DUNGYLE, a green hill, anciently crowned with a strong British fort, in the south of the parish of Kelton, Kirkcudbrightshire.

DUNGYLE, or DUNAGOIL. See DUNAGOIL BAY.

DUNHARDUILL. See DUNDORNADILL.

DUNIAN, a spreading, lumpish, lofty hill, in the parishes of Bedrule and Jedburgh, Roxburghshire. Its summit, excepting at one place a cap or nobule of very inconsiderable elevation, is a round-backed and prolonged ridge, stretching chiefly along the boundary of the parishes, and partly into the interior of Jedburgh. At its highest point, which is within Bedrule, it has an elevation of 1,031 feet above the level of the sea; and very nearly at this point it is traversed by the high road between Jedburgh and Hawick. But the hill slopes on both sides in a very gentle acclivity, and bestrides the whole space between the Jed and the Teviot,—a geographical distance of nearly 3 miles, thus allowing the highway to climb it with comparative facility. On its eastern base, rising somewhat rapidly from the Jed, stands the chief part of the town of Jedburgh. The name Dunian signifies 'the hill of John.' The top of the hill commands an extensive prospect, replete with fine features of the picturesque, and comprising many spots which are either famous in song or memorable in history. "Near, and eastward below, the spectator views, as it were in a basin, the town of Jedburgh, distinguished by the venerable ruins of its abbey. At a greater distance, to the north-west, and on the opposite side of the Teviot, as in an amphitheatre opening to the south, the eye is struck with the plain yet elegant modern house of Minto, distinguished as the birthplace of many eminent patriots, statesmen, and legislators. To the south-east, and at a still farther distance, appears the bouse of Edgerston, distinguished for the fidelity, prowess, and loyalty of its inhabitants. Westwards are seen the beautiful windings of the wooded Rule, where it issues in three streams from the lofty mountains,

the Not o' the gate, Fana, and Windburgh, to where its rapidly rolling flood mixes with the Teviot opposite to the castle of Fatlips, on the Minto crags."

DUNINO, or DENINO, a parish in the east of Fifeshire. It is bounded by Cameron, St. Andrews, Kingsbarns, Crail, and Carnbee. Several post-offices are near it; but that of St. Andrews, 4 miles north-north-west of the church, is the most convenient. The estate of Kingsmuir on the south, the estate of Bonnyton on the north, and the farm of Brighton on the west, belonged formerly to Dunino, but do not belong to it now; and the first of these was included in its population-returns so late as 1841, but was included in those of Crail in 1851. Dunino at present measures about 3 miles in extreme length and breadth, and about 2,431 Scotch acres in area. The north-east boundary of the parish extends within $1\frac{1}{2}$ mile of the sea. The surface of most of the interior is pleasantly diversified with undulation, wood, cultivation, and the course of little streams. The highest ground is in the north, and rises scarcely 300 feet above the level of the sea. The largest stream is Pitmilly burn, which comes in from Cameron, flows eastward through the interior, passes on to the sea between St. Andrews and Kingsbarns, and has altogether from source to embouchure a run of about 7 miles. About 270 acres of Dunino are under wood. Coal seems, from the vast number of old pits in various places, to have at one time been a very plentiful article in this parish; but it is not now worked. Sandstone of excellent quality is abundant, but has not been much quarried. Ironstone occurs. The principal properties in the parish are Dunino, Stravithy, Pittairthy, and Kinaldy. The real rental is about £3,000. Assessed property in 1865, £4,305 5s. 3d. There is an old fortalice on the estate of Pittairthy; and there formerly were two others in the parish. Three stones contiguous to the manse-garden are supposed to have been part of a Druidical circle. The parish is traversed by the road from St. Andrews to Anstruther. Population in 1831, 383; in 1861, 370. Houses, 70.—This parish is in the presbytery of St. Andrews, and synod of Fife. Patron, the united college of St. Andrews. Stipend, £198 16s.; glebe, £28. Unappropriated teinds, £33 15s. 10d. Church built in 1826; sittings, 224. Schoolmaster's salary, £40, with £34 4s. 6d. to retired schoolmaster.

DUNIPACE, a parish, containing the villages of Torwood and Milton or Herbertshire, in the east of Stirlingshire. It is bounded by the parishes of St. Ninians, Larbert, Falkirk, and Denny. Its post-town is either Denny, contiguous to its southern border, or Falkirk, $2\frac{1}{2}$ miles east of its south-eastern extremity. Its length, east-south-eastward, is about $5\frac{1}{2}$ miles; and its greatest breadth is less than 3 miles. All its southern boundary is traced by the river Carron. Its eastern district is part of the carse of Stirling; and its western district rises to an altitude of about 600 feet above the level of the Forth. About two-thirds of its surface are incumbent on sandstone, and about one-third on trap rocks. If the entire area be reckoned at 46 parts, 38 of them are variously arable, 5 are under wood, and 3 are either moss, moor, or rock. There are about 30 landowners; but the principal estates are Denovan, Dunipace, Quarter, Torwood-head, and Herbertshire. Torwood Castle is an old ruin, of obscure history, surrounded by some remains of a famous wood where William Wallace found shelter after his defeat in the north, and where Donald Cargill excommunicated Charles II., and which was originally a part of the Caledonian forest. Herbertshire is an ancient mansion, once the property of the St. Clairs

of Orkney, on a beautiful site on the Carron. Carbrook-house is romantically situated, among picturesquely wooded grounds, within half-a-mile of Torwood. Dunpace-house, and Quarter-house, are elegant modern mansions. There are, respectively at Denovan and Herbertshire, two extensive print-works. There are also in the parish two flax-mills, one woollen spinning mill, one mill for grinding charred wood, and three grain mills. There are also four sandstone quarries. Facility of communication is enjoyed by the Stirling and Glasgow turnpike through the centre of the parish, and by the Scottish Central railway on the east. The real rental of the parish is upwards of £6,000. Assessed property in 1860, £12,111 0s. Population in 1831, 1,278; in 1861, 1,731. Houses, 209.

The name Dunpace is believed to have arisen from two remarkable mounds in the eastern part of the parish. "The whole structure of these mounds," says Mr. Nimmo, in his 'History of Stirlingshire,' "is of earth; but they are not both of the same form and dimensions. The more easterly one is perfectly round, resembling an oven, and about 50 feet in height. That it is an artificial work does not admit of the least doubt; but the same thing cannot be affirmed with equal certainty of the other, though it has generally been supposed to be so too. It bears no resemblance to the eastern one either in shape or size. At the foundation it is nearly of a triangular form; but the superstructure is quite irregular; nor does the height of it bear any proportion to the extent of the base. Buchanan calls the western mound the smaller; but his memory had quite failed him, for there are at least four times the quantity of earth in it that is in the other. Neither can we discern any appearance of the river's having ever come so near as to wash away any part of it, as that historian affirms; though it is not improbable that considerable encroachments have been made upon it, which have greatly altered its original shape, as it affords an excellent kind of gravel for different uses. The mounds are now planted with firs, which, together with the parish-church of Dunpace, standing in the middle between them and the river running hard by, gives this valley a romantic appearance. The common account given of these mounds is, that they were erected as monuments of a peace concluded in that place betwixt the Romans and the Caledonians, and that their name partakes of the language of both people, *Dun*, signifying 'hill,' in the ancient language of the country, and *Pax* 'peace,' in the language of Rome, the compound word *Duni-pace*, according to this etymology, signifies 'hills of peace.' If the concurring testimony of historians and antiquaries did not unite in giving this original to these mounds, we should be tempted to conjecture that they are sepulchral monuments. Human bones and urns had been discovered in earthen fabrics of a similar construction in many parts of the island; and the little mounds or barrows which are scattered in great numbers around Stonehenge, in Salisbury plain, are generally supposed to have been sepulchres of the ancient Britous." This conjecture of Mr. Nimmo is supported by his editor Mr. Stirling, who rejects the mongrel etymology of Buchanan, and states it as more probable that the word Dunpace is entirely Celtic in its origin.—a corruption of *Duin-na-Bais*, which signifies 'hills or tumuli of death.' "Dunipace," continues Mr. Nimmo, "is taken notice of in history as a place where important national causes have been decided, and that more than once, by great monarchs in person. The Roman Emperor Severus, accompanied by his sons Caracalla and Geta, is supposed to have here concluded a peace

with the Caledonians. We find Edward I. of England, at Dunipace, upon the 14th of October, 1301, when he signed a warrant to his plenipotentiaries, who were at that time in France, authorizing them to consent to a truce with the Scots, as a necessary preliminary towards a peace with their ally, the French king, between whom and Edward an obstinate war had long raged. At the chapel of this place, too, Robert Bruce and William Wallace are said to have had a second conference, the morning after the battle of Falkirk, which effectually opened the eyes of the former, to a just view of his own true interest, and that of his country. Until the bridge of Larbert was erected in the last century, the ordinary place of crossing the Carron seems to have been at Dunipace. No where else does the river offer a passage naturally so commodious and easy, the banks being generally steep and rugged. The numerous armies which frequently crossed this shire, appear to have taken their route that way, at least since the demolition of a Roman bridge which stood half-a-mile to the eastward." There were recently discovered, on the southern border of the parish, near Deuuy, some finely preserved Roman utensils,—one of them of an unique kind; and after a search, suggested by that discovery, there were discovered also, in a neighbouring wood, distinct vestiges of a previously unnoted Roman camp.

This parish is in the presbytery of Stirling, and synod of Perth and Stirling. It was anciently a chapelry of Cambuskenneth, and did not acquire parochial status till the Reformation. It was united, in 1624, on equal terms, to Larbert; but was, in course of time, depressed to secondary rank. Now, however, service is regularly performed in the church alternately by the parish minister and an assistant, who is paid by the heritors. The old church, as indicated by our extract from Mr. Nimmo, stood at the hills of Dunipace; and the parochial burying-ground continues there. The new church stands on a knoll $1\frac{1}{2}$ mile to the west. It was built in 1834, at the cost of £2,500; and is a Gothic edifice, with 604 sittings. The Free church has an attendance of about 100, and realized in 1865, £87 16s. There are a parochial school near the centre of the parish, and a private school at Torwood. Parochial schoolmaster's salary, £40 0s. 0d., with fees.

DUNKELD, a small district, of the character of a parish, containing a small post-town of its own name, the representative of an ancient city, in the Strath-tay division of Perthshire. It lies on the left bank of the Tay, 15 miles north-north-west of Perth, and is nearly surrounded by the parish of Caputh. It comprises all the site of the ancient city of Dunkeld, and as much of the parish of Caputh as is built upon by part of the modern town. The boundary between its two parts is the small burn Ketloch, which runs through the town in the manner of a common sewer. The city part was anciently the precinct of the cathedral, and was never either constituted into a parish itself or included in any other parish; and, in consequence of the old city having been almost utterly destroyed by the Jacobites in 1689, and of the modern town having been built next year on different ground, that part is ill defined. The part belonging to Caputh was never formally annexed to Dunkeld, and can be included in it at best only *quoad sacra*, yet in recent usage has been assigned to it both in the returns of the census and in some political arrangements. The entire district has a somewhat semicircular form.

about $1\frac{1}{2}$ mile in circumference, and about $\frac{3}{4}$ of a mile in diameter. It seems to have been treated as a quasi-parish ever since the cessation of the cathedral services; but it has long been united also to the parish of Dowally; and the joint charge bears the name of Dunkeld and Dowally. See the article DOWALLY. Assessed property of Dunkeld and Dowally in 1865, £3,148 13s. 9d. Population of Dunkeld and Dowally in 1831, 2,037; in 1861, 971. Houses, 155. Population of Dunkeld alone in 1831, 1,471; in 1861, 929.

Dunkeld is the bottom of a small, romantic, high-rimmed basin. It lies only 130 feet above the level of the sea, yet forms almost literally, and very grandly, the mouth of the Strath-tay highlands. The south-west side of it is defined by the Tay, just at the point of that noble river's debouch from the convergent defiles of Athole and the Brau; and the other sides are all closed by abrupt, lofty, wooded hills, of varied form and picturesque character. The chief features of the tract itself are the town of Dunkeld and the home-grounds of Dunkeld park,—both of which will be afterwards described; but those of the enclosing hills, and of the immediately circumjacent country, are so many, so rich, so diversified as to constitute a museum of landscape, containing specimens of almost everything which is most admired in the Highlands, together with blendings into one of the most brilliant margins of the Lowlands. All the environs of the town are pleasure-grounds. The hill on the east, called Newtyle, commands a magnificent view of Stormont and Strathmore. The hills on the north, besides containing gorgeous close-scenes of their own, reveal some ravishing views of Strath-tay.

The poet Gray, who visited Dunkeld in 1766, says—describing the approach to it,—“The road came to the brow of a deep descent; and between two woods of oak we saw, far below us, the Tay come sweeping along at the bottom of a precipice at least 150 feet deep, clear as glass, full to the brim, and very rapid in its course. It seemed to issue out of woods thick and tall that rose on either hand, and were overhung by broken rocky crags of vast height. Above them, to the west, the tops of higher mountains appeared, on which the evening clouds reposed. Down by the side of the river, under the thickest shades, is seated the town of Dunkeld. In the midst of it stands a ruined cathedral; the tower and shell of the building still entire. A little beyond it a large house of the Duke of Athole, with its offices and gardens, extends a mile beyond the town; and as his grounds are intersected by the streets and roads, he has flung arches of communication across them, that add much to the scenery of the place.” Mr. Gilpin says: “This favoured spot—for it is indeed a beautiful scene—consists of a large circular valley, the diameter of which is in some parts a mile; in others two or three. Its surface is various; and some of the rising grounds within the valley itself would even be esteemed lofty, if it were not for the grand screen of mountains, which circles the whole. At the base of those, towards the south, runs the Tay, in this place broad, deep, and silent. The whole valley is interspersed with wood, both on the banks of the river and in its internal parts; and would have been a still more beautiful scene, if art had done as much as nature.”

This district is the seat of a presbytery in the synod of Perth and Stirling. Patron, and sole heritor, the Duke of Athole. Stipend, £161 7s. 7½d., with £63 per annum in lieu of manse and glebe. The established church of the district, or quasi-parish church, is the choir of the cathedral, refitted and repaired in 1820, at an expense of about £5,400,

—of which £990 was granted by the Exchequer, and all the rest was defrayed by the Duke of Athole. Sittings, 655. There are a Free church, with an attendance of about 400,—an Episcopalian chapel, with an attendance of about 70,—and an Independent chapel, containing about 320 sittings. The sum raised by the Free church in 1865 was £187 2s. 6d. The principal school is the royal grammar school, founded in 1567, by James VI., affording a range of education similar to that in the best schools of Edinburgh, and attended on the average by about 60 pupils. The rector of it has an official residence, and, besides receiving a small salary from the original endowment, is superior of the lands of Muck-larie. There are likewise three female schools, two public libraries,—the Mackintosh and the Evangelical—several friendly societies, and a fund of St. George's hospital for 7 old or infirm men.

The TOWN of DUNKELD stands contiguous to the Tay, at the intersection of the road from Amulree to Blairgowrie with the road from Perth to Inverness, 10 miles north-east of Amulree, 12 west-south-west of Blairgowrie, and 15 north-north-west of Perth. The Tay is crossed here by a magnificent bridge, of which the middle arch is 90 feet wide, the two next 84 feet each, and the two next 74 feet each; with 2 land-arches, each 20 feet wide. Total waterway 446 feet. This bridge was built in 1807-9, at an expense of £30,000, of which £25,000 were contributed by the Duke of Athole. The town consists of two streets, the one leading from the bridge, and the other at right angles to it, with back lanes proceeding from both. The street leading from the bridge was commenced about 1809, as a kind of new town more elegant than the old, and adapted to a new transit, by way of the bridge, of the great road from Perth to Inverness. The street at right angles with this comprises the main body of the old town, as reconstructed in 1690. A view of the whole town, full and picturesque, with the cathedral at its head, the wooded hills around it, and the broad Tay gliding majestically past it, is obtained from the centre of the bridge.

The cathedral is an object of great interest. It stands at the upper end of the old street, slightly apart from the town, and overlooking the river. The choir, as already noticed, is a restoration of 1820, serving as the present quasi-parochial church; but the style of it is in keeping with the original model. The parts of the old edifice which remain are the grand tower, the two side-aisles, and the nave; and these, notwithstanding unroofment and considerable dilapidation, still constitute a fine mass of architecture. “At the west end,” say the Messrs. Anderson, “rises the buttressed tower, 90 feet in height, and 24 feet square, and adjoining it a small octagonal watch-tower. Buttresses project between the windows, surmounted above the church by traceried spiracles. The great aisle measures 120 by 60 feet; the walls are 40 feet high, and the side aisles 12 feet wide. On each side are seven spacious Gothic arches, with fluted soffits, resting on six plain Norman-like pillars, having shafts 10 feet high, and $4\frac{1}{2}$ in diameter, and two half-columns. Over the arches there are two tiers of windows, the lower semicircular, the higher acute. The windows of the side-aisles are all of different designs, and chiefly of the decorated or middle-pointed Gothic; and it is interesting and historically curious to mark, as observed by Mr. Billings, ‘even in this distant mountainous see, traces of the Flamboyant character of the French Gothic artists.’ He considers it probable that there was no part of the building erected before 1230. There is the tomb and stane of a bishop in his robes under a crocketed canopy

believed to be those of Bishop Robert Cardeny, who founded the nave, where he lies, in 1406. The new church is handsomely fitted up. In the spacious vestry, at the east end, is the gigantic stone effigy, arranged in panoply of mail, which formerly, in the old church of this place, surmounted the grave of the notorious Earl of Buchan, 'Wolf of Badenoch,' the natural son of Robert II., who burnt the cathedral of Elgin." In the chapter-house is a fine marble statue of the fourth Duke of Athole, erected in 1833 by his Duchess. The vault of the chapter-house is now the burying place of the Athole family.

The aboriginal of the cathedral was a Culdean wattle structure, formed about the year 570. This was superseded, in 729, by a stone edifice, which, in due time, became a Popish monastery. In 848, Kenneth Macalpine built a church in Dunkeld, to the memory of St. Columba, and is said to have transferred to it the bones of that father of Culdeism from Iona. In 1127, David I. converted the monastery, together with the church, into the seat of a bishopric. In 1318, Bishop Sinclair built the original choir of the cathedral on part of the site of the monastery; in 1406, Bishop Cardeny founded the nave, which he raised only as far as the second row of arches; in 1447, Bishop Ralston finished the nave; and in 1469, Bishop Lauder built the chapter-house and the great tower. The cathedral was destroyed, in 1560, by the ecclesiocasts of the Reformation. The episcopal palace stood a little to the south-west of it. This was originally a suite of long thatched two-storey houses; and in 1408, in consequence of great annoyances from the Highland caterans, it was increased and fortified by the erection of a strong castle,—the site of which, though now containing no vestige of the edifice itself, still bears the name of the Castle close. There were two ancient chapels, both now extinct,—the one built, about 1420, on the ground now occupied by Athole-street, and endowed with the rents of the lands of Mucklarie, which now belong to the rector of the grammar school,—the other built on Hillhead to the east of the town, for the benefit of the inhabitants of Fungarth, and dedicated to St. Jerome, whence the people of Fungarth are ludicrously called to this day Jorums. "There are," said the New Statistical Account of 1843, "two upright stones on the south of the cathedral, which formed part of the old monastery. The oldest house in the town, and which belonged to the Dean of Dunkeld, stands not far from the choir. It is the only house now standing out of the three that escaped the conflagration of the town in 1689. Its walls are of great thickness. The hill where the bishops hanged many a lawless freebooter is situated close to the second lodge of the Dunkeld grounds; and the hollow ground to the back of the lodge is the place where sorcerers were burned." The ancient cross of the town, removed about the beginning of the present century, stood about 20 feet high, and had four iron jugs for the punishing of petty offenders.

The bishops of Dunkeld made a great figure in the Popish times. They had four palaces, in respectively Dnmkeld, Cluny, Perth, and Edinburgh. Bishop Lauder got his lands south of the Forth erected into the barony of Aberlady, and those in the north into the barony of Dunkeld. The latter lands, besides surrounding Dunkeld, extended continuously, with a considerable breadth, seven miles, to the palace of Cluny. The revenue of the cathedral, or chapter, amounted at the Reformation to upwards of £1,600; but became then so alienated that a sufficient sum did not remain to support one incumbent. The Protestant bishops, during the temporary restoration of episcopacy, did nothing to

repair the cathedral. The present bishop of Dunkeld, in the Scottish Episcopal Church, is also bishop of Dunblane and St. Andrews, and resides at Trinity College, Glenalmond.

The earliest seat of population at Dunkeld is supposed to have been a strong Celtic fort, for commanding the entrance of the vale of Athole. This was called Dunkaledin,—a name which signifies 'the stronghold of the rough mountainous country,' and was corrupted into successively Dunkeldin and Dunkeld. The Pictish kings are supposed to have regarded this place as one of the keys of their dominion, to have occasionally resided in it, and to have made it a base of operations for repelling the Tayward inroads of the Danes. Some of the Scottish kings, also, loved it for its proximity to grand hunting-grounds. William the Lion, in particular, visited it for deer-hunting; and even Mary went to the chase here, amid a retinue of 2,000 Highlanders. Queen Anne also is traditionally said to have spent a night in Dunkeld House. "Many of the present monarchs of Europe have visited Dunkeld, and not only enjoyed the Highland hospitality of the Athole family, but been liberally indulged in all the sports which the locality so amply affords. The last royal visit to Dunkeld was paid by Queen Victoria and Prince Albert in September 1842. Her Majesty was received on the boundary of the Dunkeld property by a guard of the Athole men, and conducted to the park, where Lord Glenlyon, the heir-apparent of the Athole title, received Her Majesty at the head of several hundred Highlanders, and conducted her to the royal tent."

Dunkeld is a burgh-of-barony under the Duke of Athole. It received from Queen Anne, in 1704, a charter conferring on it the dignity of a royal burgh, with 3 bailies, a dean-of-guild, a treasurer, and 10 common-council-men; also fully empowering it "to have freemen, merchants, guild-brothers, municipal courts, or dean-of-guild, with the council and other members, liberties, and emoluments thereto belonging, as also burgh-brothers of the fraternity or guildry, and to be appointed and created with such liberties and privileges as belong to them, or are usual within any other burgh-royal within the kingdom; with full power and liberty to use, traffic, and merchandize, as well within the said kingdom as without it, in foreign countries, and of exporting and importing all lawful effects and commodities whatsoever." This charter, however, does not appear to have been accepted by the burgh, or carried into effect, as the town continued merely a burgh-of-barony. The jurisdiction of the burgh is that of an ordinary baron-bailie, who is appointed during the pleasure of the superior. He holds no regular court; but trifling disputes are settled by him at his own house. Dunkeld is the capital of a judicial district of the county; and, as such, is the seat of the district justice-of-peace courts. Sheriff's small-debt courts also are held here on the last Monday of February, June, and October. The town, in spite of its commanding situation at the mouth of the Highlands, and though popularly regarded as the capital of the northern part of the county, is not the seat of any extensive trade. It is a place of considerable transit, indeed, a place of considerable retail dealing with the surrounding country, and also a place of great resort to occasional or summer visitors; but it has no manufactures, and no comprehensive traffic. It is well supplied with butcher-meat and all other provisions, excepting sea-fish. A weekly market is held on Saturday; and annual fairs, for cattle or hiring, are held on the 14th of February, the 25th of March, old style, the 9th of June, old style, and the second

Tuesday of November. The town has several insurance agencies, a national savings' bank, and offices of the Union Bank, the Commercial Bank, and the Central Bank. Daily communications are maintained by public conveyance with Perth, Inverness, Pitlochry, and the Dunkeld road station of the Scottish Midland railway. There are several good inns, also a temperance coffee-house.

Behind the cathedral stood an old-fashioned square building, the ancient palace of the Dukes of Athole. A little to the west, adjacent to the Tay, but behind an eminence which was intended to be removed, stands the incompleting new palace, begun by the fourth Duke, but stopped at his death in 1830. This was designed to be a magnificent edifice; and, should it ever be completed, it will impart great brilliance to the town and environs. Two floors of it were nearly finished,—also a gallery 96 feet long, an elegant private chapel, a spacious staircase, and several noble Gothic windows, which were to have been decorated with stone sculpturings of the family's armorial bearings. The park connected with the palace is singularly grand. It was ever so by nature; and it received such artificial improvements from the fourth Duke as converted large part of it into one of the finest possible landscape gardens. Though the grounds were limited, the Duke so planned them as to have a home-farm, grass parks, an extensive garden, ornamental walks, picturesque carriage drives, American gardens, and a lawn, all within the enclosures. The walks are upwards of fifty in number, and the carriage-drives comprise a distance of at least thirty miles.

The Dunkeld grounds are particularly famous for their woods. Both the numbers and the luxuriance of the trees are remarkable. The predominance of the larch, also, but especially the relation of that tree here to important georgic improvement throughout Scotland, is notable. In 1738, almost fortuitously, five larch plantlets were brought from abroad to Dunkeld, and at the same a few others to Blair-Athole and Monzie. The larch had never before been thought of as a forest-tree for Scotland; and was then believed to be far too tender for adaptation to our climate. The five plants brought to Dunkeld from the Tyrol were planted in alluvial gravel, abounding with rounded stones, in a sheltered situation, at an altitude of 40 feet above the level of the Tay. In 1809, two of them were felled,—and the one, containing 168 cubic feet of wood, was sold on the spot for £25 4s. to a company of Leith ship-builders,—and the other, containing 147 cubic feet of wood, was sent to Woolwich dockyard, and there used as beams for repairing the Serapis store-ship. So many plantlets as to cover about 9,000 acres, contiguous to Dunkeld and away over the mountains, were planted before the year 1821; and all proved thriving and productive,—converting the whole tract into valuable forest-land, even in places too elevated to be suitable for the Scotch pine, and at the same time transmutting great tracts of it which had been heathy waste into good, natural, gramineous pasture. And from this grand experiment, together with the concurrent ones at Blair-Athole and Monzie, arose that general diffusion of the larch through Scotland which has eventually rendered it one of our best known and most cherished trees, both as an ornament of the shrubbery and as a denizen of the forest.

DUNKELD (LITTLE), a parish a little north-east of the centre of Perthshire. It contains the post-office village of Dalguise, and is separated, at its most populous part, by only the public bridge across the Tay, from the post-town of Dunkeld. It contains also upwards of twenty hamlets or villages,

varying in population from 30 to 180. It is bounded by the parishes of Dull, Logierait, Dunkeld and Dowally, Caputh, Kinclaven, Auchtergaven, Monzie, and Weem. Its greatest length, east-south-eastward, is 16 miles; and its greatest breadth is about 9 miles. The Tay runs along its margin, in grand sweeps, chiefly southward and south-eastward, over a distance of at least 13 miles, forming the whole of the boundary with Logierait, Dowally, Dunkeld, and Caputh. The Bran, coming in from the vicinity of Amulree, flows partly on the southern boundary, but chiefly through the interior, east-north-eastward, to the Tay. The name Little Dunkeld belonged originally to a village, now extinct, which stood on the Tay opposite Dunkeld, and was a sort of suburb to it; and, in consequence of the original parish church being situated there, the name was communicated to the whole parish. The famous mountain Birnam stands on the boundary with Auchtergaven. See **BIRNAM**. Most of the other borders, except on the Tay, and a large proportion of the interior, also, are mountainous. The total extent of uncultivated land has been computed at 20,378 imperial acres,—of which 12,500 are constantly waste, and only 367 are improvable. The arable and peopled tracts constitute three districts, each having a distinctive name,—Murthly, down the Tay, from Dunkeld bridge to the southern boundary,—the Bishopric, up the Tay, from Dunkeld bridge to the northern boundary,—and Strath-bran, from the junction of the two preceding, and transversely to them, up both sides of the Bran, to the western boundary. The southern and eastern parts of Murthly present an undulating surface. The soil is a kind of black loam mixed with sand, and tolerably fertile. There is a considerable tract of heath, a portion of which is now covered with fine woods. The northern part of the district below Inver is a deep, narrow vale along the Tay. It is adorned with oak-woods; and the bottom forms a stripe of good arable land. The Bishopric is about 10 miles in length. It derives its name from the greater part of it having formerly been the property of the see of Dunkeld. The Tay flows along it in a wide smooth stream. The bottom of the valley is level and fertile; and on the west is a long range of high mountains, which present an irregular but bold and abrupt face to the valley. The numerous projections of the range are perpetually changing the point of view, and opening up new prospects to the traveller as he moves along. This district is populous; and it contains a number of gentlemen's seats, and is richly adorned throughout the greater part of its surface with oak-woods. The soil is sandy, with a mixture of loam. Beyond the Bishopric, to the western extremity of the parish, there is a wild tract of great extent composed of hills, moors, and glens, through which considerable streamlets find their way into the Bran. It does not appear to be distinguished by any general name, and is scarcely occupied by any human habitations. The district of Strath-bran extends about 9 miles from west to east. It has a soil of clay and loam, and is more moist than either of the others. The surface rises in a gentle slope from both sides of the Bran, and is bounded on the south and the north by hills. The soil is fertile, and the lands are populous. Beyond the valley towards the south there is a long tract of bills occupying nearly 4,000 acres, and covered principally with heath, though in some places affording good pasture. In Murthly there is an inexhaustible body of freestone, of a fine grain, and great hardness. It is of a light, vivid ash colour, and was used for building the cathedral of Dunkeld. The hill of Birnam furnishes slates of a deep blue

colour, bordering on violet. Iron probably exists to some extent in the parish, as there are fountains strongly impregnated with this metal near Dalguise in the Bishopric, and also at Murthly. "In Strathbran," says the Old Statistical Account, "near the king's highway, there is to be met with a remarkable kind of clay. When wet it feels perfectly smooth and unctuous; when dry it acquires a remarkable degree of induration; and when pounded, the powder affects the touch like the finest wheat flour." "This argillaceous substance," it is added, "may be fit for some of the finest works of the potter." A great part of the wealth of this parish consists in the natural woods, which are mostly of oak. The planting of wood has also been carried to a great extent, particularly on the Athole estate, continuously with the vast plantations on the other side of the Tay. The total area under wood is upwards of 3,200 acres. The principal landowners are the Duke of Athole, Sir W. Drummond Stewart, Bart., Stewart of Dalguise, and Campbell of Kinloch. The real rental is about £11,620. Assessed property in 1843, £8,960 6s. 10d. Population in 1831, 2,867; in 1861, 2,104. Houses, 485.

On Craigobany, one of the summits of Birnam, there was recently discovered a vitrified fort. Near the bottom of the south-east side of Birnam, also, there is a round mound which bears some traces of a rude fortification. It has been known from time immemorial by the names of Court hill and Duncan's hill; and tradition reports that it was occasionally occupied by the unfortunate King Duncan. A number of small cairns are in the immediate neighbourhood. A little higher up the same hill are the ruins of an oblong building, called in Gaelic Forhillon, with circular turrets at the corners. Birnam, as is well known, was anciently a forest, and part of the domain of the Scottish kings. Besides the remains of antiquity already mentioned, there are a number of Druidical circles, British forts, and immense cairns. A stone-bridge over the Bran, a little above Trochrie, is said, in Sir John Sinclair's Statistical Account, to be the oldest in Perthshire. The castle of Trochrie on the banks of the Bran, and about 3 miles above Little Dunkeld, was a seat of the unfortunate John, Earl of Gowrie. It is now a complete ruin. The principal mansions in the parish are Murthly Castle, Dalguise House, Kinnaird House, Birnam Lodge, Birnam Cottage, and Torwood House. See MURTHLY and DALGUISE. The combinations of ornament and natural feature in the scenery of the parks are eminently picturesque; and those on the Athole grounds form a pendant to the romantic brilliance of the Dunkeld policies on the opposite bank of the Tay. But the most remarkable points in these grounds are Ossian's hall and the Rumbling bridge, on the Bran. See BRAN (THE). Ossian's hall is a neat edifice situated on a romantic promontory which overlooks a broad, broken cascade. The stranger is conducted into a small apartment lighted from the top, and desired to look at a picture of Ossian painted on the wall. While he is examining it, it suddenly disappears as if by magic, and he finds himself at the entrance of an oblong apartment, the walls and roof of which are covered with mirrors, wherein the cascade opposite the window is reflected, tumbling as it were in all directions;—a fantastic and ill-assorted combination of the solemnities of nature with childish toys. There is much sound, sober sense, as well as high poetry, in the 'Effusion' of Wordsworth, on this cascade and its hall, which we make no apology for quoting:—

"What He—who, mid the kindred throng
Of heroes that inspir'd his song

Doth yet frequent the hill of storms,
The stars dim-twinkling through their forms!
What! Ossian here—a painted thrall,
Mute fixture on a stuccoed wall;
To serve—an unsuspected screen
For show that must not yet be seen;
And, when the moment comes, to part
And vanish by mysterious art;
Head, harp, and body, split asunder,
For ingress to a world of wonder;
A gay saloon, with waters dancing
Upon the sight wherever glancing;
One loud cascade in front, and lo!
A thousand like it white as snow,
Streams on the walls, and torrent-foam
As active round the hollow dome,
Illusive cataracts! of their terrors
Not stripped and voiceless in the mirrors,
That catch the pageant from the flood
Thundering adown a rocky wood.
What pains to dazzle and confound!
What strife of colour, shape, and sound
In this quaint medley, that might seem
Devised out of a sick man's dream!
Strange scene, fantastic and uneasy
As ever made a maniac dizzy,
When disenchanting from the mood
That loves on sullen thoughts to brood!

O Nature! in thy changeful visions,
Through all thy most abrupt transitions,
Smooth, graceful, tender, or sublime—
Ever averse to pantomime,
Thee neither do they know nor us
Thy servants, who can trifle thus;
Else verily the sober powers
Of rock that frowns, and stream that roars
Exalted by congenial sway
Of spirits, and the undying lay,
And names that moulder not away,
Had wakened some redeeming thought
More worthy of this favoured spot;
Recalled some feeling, to set free
The Bard from such indignity!"

The parish of Little Dunkeld is in the presbytery of Dunkeld, and synod of Perth and Stirling. Patron, the Crown. There are two churches in the parish;—one at Little Dunkeld, which was built in 1798, with 820 sittings; the other at Laganallachy, which is situated in the district of Strathbran, about 3 miles from Little Dunkeld, with about 500 sittings. Stipend, £157 10s. 3d.; glebes at Little Dunkeld and Laganallachy worth about £28 a-year. The minister has also a right of cutting peats for fuel. There are two Free churches at Dalguise and Strathbran, with attendance of respectively about 150 and about 170; but they form one charge: receipts in 1865, £187 2s. 6d. There are two parochial schools. The salary of the one is fixed at £40, with £10 of fees; and that of the other is £10, with £15 of fees. There are five other schools. There is a small parochial library. The village of Inver, on the Bran near Dunkeld, was the birth-place of Neil Gow. An old oak in the Athole grounds, near this place, is still pointed out as his favourite tree, under which he used to sit for hours composing his beautiful airs.

DUNKELD AND DOWALLY. See DUNKELD.
DUNKELD AND PERTH RAILWAY. See PERTH AND DUNKELD RAILWAY.

DUNKELD ROAD, a station on the Scottish Midland railway, about 1 mile above Luncarty, and 1½ mile below Stanley.

DUNLAPPIE. See STRICKATHROW.

DUNLICHITY. See DAVIOT.

DUNLOP, a parish, partly in Renfrewshire, but chiefly in Ayrshire. It contains a village of its own name, 2½ miles north of Stewarton, which is its post town. It is bounded by the parishes of Neilston, Stewarton, and Beith. It is of an oblong figure, stretching from north-east to south-west, generally about 2 miles broad, but tapering and narrow toward the extremities. Its greatest length is about 7 miles. The surface, for the most part, is agree-

ably undulating, nowhere rising into a greater elevation above the beds of the local streams than 150 feet; yet the whole is more than 300 feet above the level of the sea; and, from many of its knolls or little hills, it carries the eye minutely and graphically over the richly cultivated country between it and the sea, and away over the map of romance spread out over the wide waters of the frith of Clyde. All the way south-westward it gradually slopes; in some places, it is a beautifully irregular agglomeration of knolls; and often, when it swells up, on one side, in a gentle rising ground, it breaks suddenly down, on the other, in a precipitous rock or grassy-bank overhanging a rivulet. In its central parts, however, it has a somewhat naked appearance from paucity of plantation. The parish is separated from Beith by Lugton water, and from Stewarton by Corschill-burn, and is bisected into nearly equal parts by the Glazert,—all the streams flowing south-westward. The soil, in some places, is a fine loam; in a few spots, is moss; but in general is of a clayey, retentive nature, and very productive. Limestone abounds; coal is of very inferior quality, and is not worked. About 30 acres are moss; about 131 are under wood; and nearly all the rest of the parish, excepting steep banks impracticable to the plough, is under cultivation. There are five principal landowners. The real rental, if all the land were in lease, is nearly £8,000. The estimated yearly value of raw produce in 1837 was £15,509 15s. Assessed property in 1860, £9,750 0s. 0d. Dunlop house, beautifully situated on the hook which forms the south-eastern boundary, is a splendid mansion. Dunlop has long been celebrated for its cheese; and though now successfully competed with by most parishes in Ayrshire, and some in Renfrewshire, in the production of that article, is even yet unsurpassed. Barbara Gilmour—a woman whose wits were sharpened, and whose range of observation was varied, by exile to Ireland, during the troubles in Scotland between the Restoration and the Revolution—settled down in Dunlop as a farmer's wife; and having specially turned her attention to the produce of the dairy, successfully attempted to manufacture from unskimmed milk a species of cheese then unknown in Scotland, and altogether different from the horny, insipid produce of skimmed milk still in use among the peasantry of Peebles and other secluded districts. Her manufacture was speedily imitated by her neighbours; and, in a short time, came into such general demand, under the name of Dunlop cheese, that, whether the produce of her own hands, or that of her neighbours, or that of persons in adjoining parishes, it found far and near a ready market. Even Mr. Cobbett himself has pronounced it "equal in quality to any cheese from Cheshire, Gloucestershire, or Wiltshire." About 25,000 stones are now produced annually in the parish; and large quantities from other parishes in the south and west pass through it as an entrepot both convenient for its situation, and advantageous for its celebrity. Dunlop is traversed for 5 miles by the road between Kilmarnock and Paisley; it is otherwise well-provided with roads; and it enjoys some facility of communication from being in the neighbourhood of the Glasgow and South-western and Glasgow and Barrhead railways. The village of Dunlop stands near the centre of the parish, and in the Ayrshire section of it, on the road from Stewarton to Paisley, 5 miles east-south-east of Beith, and 9 north-north-east of Irvine. It consists of a single street. Fairs for dairy stock are held here on the second Friday of May, old style, and on the 12th day of November. Population of the village, about 330. Population

of the Ayrshire section of the parish in 1831, 987; in 1861, 983. Houses, 167. Population of the whole parish in 1831, 1,043; in 1861, 1,038. Houses, 175.

This parish is in the presbytery of Irvine, and synod of Glasgow and Ayr. Patron, the Earl of Eglinton. Stipend, £251 8s. 5d.; glebe, £20. Unappropriated tithes, £256 18s. 9d. Schoolmaster's salary, £50, with about £37 fees. The parish church was built in 1835, and contains 750 sittings. There is a Free church, whose receipts in 1865 amounted to £86 1s. 11½d. There are a Free church school, an endowed female school, an adventure school, a friendly society, and two small public libraries. Dunlop parish was formerly a vicarage of the monks of Kilwinning.

DUNLOSKIN (Loch of), a small fresh-water lake, remarkable for its water-lilies, in the parish of Dunoon, Argyshire.

DUNMACSNICAN. See BERMOUNUM.

DUNMAGLASS, a district, 19 miles north-east by east of Fort-Augustus, surrounded by Invernessshire, and comprised in the old parish of Dunlichity, but belonging to Nairnshire. Here is the seat of the ancient family of MacGillivray, chief of the clan of that name. This district anciently belonged to the Thaness of Calder, one of whom procured an Act in 1405, incorporating all his lands in the shires of Inverness and Forres, into the shire of Nairn; and, accordingly, Dunmaglass forms still a part of that county, though under the jurisdiction of the sheriff of Inverness. Dunmaglass comprehends all the sources of the river Fargag, in Stratherrick, above Abershea. The whole is in the form of an oblique parallelogram, of which the longer diagonal runs north and south about 7 miles; the extent being about 16 square miles.

DUNMÁN, a rocky hill, overhanging the sea, and crowned with vestiges of an ancient British fort, at the south-east corner of the parish of Kirkmaiden, Wigtonshire.

DUNMORE, the ancient name of numerous isolated heights in various parts of Scotland. It signifies the great fortified hill, and seems to have been a common designation of ancient elevated strongholds; whence it came to be transferred to some seats of population in their vicinity. But even some conspicuous places which bear it in early history, such as the hill now called Norman's Law in the north-west corner of Fifeshire, have long ceased to be popularly known by it.

DUNMORE, a conspicuous height in the vicinity of Comrie, Perthshire. It is crowned by a handsome obelisk of white granite, 7½ feet high, reared in honour of the late Lord Melville. "The view from this elevated spot," says Brown, in his Picture of Strathearn, "is, in the opinion of some persons of taste, superior even to that by the approach to Comrie by the hills of Cowden and Auchincarry. The distant and faintly marked laws of Cupar, the undulating and gently swelling Ochils, lessening on the eye, and insensibly losing themselves, as it were, in the German ocean, the purple hues and misty azure of the mountains that surround Loch Lomond, heightened by the variety of colouring the intervening objects produce,—the finely wild pointed and irregular rocks that surround Ardvourlich, floating inverted upon the glassy surface of Loch Earn,—the valley itself, spread before you like a map, as far as the bridge of Earn,—the river winding its serpentine course through it, occasionally reflecting the sun's rays, at other times stealing out of view among the woods that line its banks,—are a few, and but a few, of the interesting objects beheld from this bold commanding station."

DUNMORE, a curious hill in the parish of Monzie, Perthshire. See *MONZIE*.

DUNMORE, a village, and an estate, in the parish of Airth, Stirlingshire. The village stands on the Forth, $1\frac{1}{2}$ mile north-west of Airth, and 8 miles east-south-east of Stirling. It has a small harbour, which is within the jurisdiction of the port of Alloa. The Stirling and Granton steamers call here. Population, 153. Houses, 36. The Dunmore estate is the property and residence of the Earl of Dunmore. The park is beautifully wooded; the mansion is an elegant Gothic structure; and both contribute fine features to the carse scenery of the Forth. See *AIRTH*. The first Earl of Dunmore was Lord Charles Murray, second son of John Marquis of Athole, and of Lady Amelia Stanley, by whom the sovereignty of the isle of Man, and the barony of Strange, came into the Athole family. His lordship was the sixth in descent from Mary, queen-dowager of France, the beautiful daughter of Henry VII., through the Earls of Derby, and the Cliffords, Earls of Cumberland. There is an Episcopalian chapel at Dunmore.

DUNMYAT, an abrupt commanding eminence, in the parish of Logie, and on the north flank of the windings of the Forth, about midway between Stirling and Alloa. Its altitude above sea-level is 1,345 feet. It is a frontier mass of the Ochils, projecting somewhat from the rest of the range, and breaking precipitously down in rocky cliffs from its shoulders to the plain. Its summit commands a prospect almost unrivalled in gorgeousness, and abundantly satisfying in extent,—the domain of Airthrey, the vale of the Devon, Cambuskenneth abbey, Stirling, the carse of the Forth, and a profusion of landscape decoration, on the foreground,—the fertile Lothians, and the fertile flat of central Scotland away to the centre of Clydesdale, with their rich variety of feature, on the middle ground south-eastward and southward,—nearly the whole basin of the Forth, from the vicinity of its head around Loch Ard to its immergence on the coast of the German Ocean, with its brilliance and diversity of water and of side-screens, on the middle ground from west to east,—and the peaks and masses of the frontier Grampians and of the Southern Highlands, from the centre of Perthshire, round by Loch Catrine and Loch Lomond, up Clydesdale, to the Pentlands of Peebles-shire, on the back ground. This height has the same general character as the rest of the Ochils, but is penetrated with large workable veins of barytes. See *OCHIL HILLS*.

DUNNAFEULAN. See *SANDA*.

DUNNAGOIL. See *DUNAGOIL*.

DUNNEMARLE. See *CULROSS*.

DUNNET, a parish, containing a post-office village of its own name, on the north coast of Caithness-shire. It is bounded by the Pentland frith, and by the parishes of Canisbay, Bower, and Olrick. Its greatest length, in the direction of south-east by south, is 12 miles; and its greatest breadth is 6 miles. A promontory, called Dunnet-head, projects about 3 miles northward from the main body of the parish, and is the most northerly tract in the mainland of Britain. This promontory consists of several hills interspersed with valleys, in which is a considerable extent of pasture for small cattle and sheep. Through its whole extent, it presents a front of broken rocks to the sea, the height of which varies from 100 to 400 feet. It is joined to the land by an isthmus, about $1\frac{1}{2}$ mile broad. A light-house was erected on this promontory in 1831. It shows a fixed light, visible at the distance of 23 miles in clear weather, and elevated 340 feet above high water. A great variety of fowls frequent the rocks; one called the

layer, or puffin, is found in no other place of the British isles, except Hoyhead in Orkney, and the cliffs of Dover. A small headland, called Dwarrick-head, projects to the west immediately south of the isthmus. A large bay, called Dunnet-bay, enters between that headland and Holburn-head, sends immediately off from its west side the bay of Thurso to the town of Thurso, and penetrates the land altogether about $5\frac{1}{2}$ miles south-eastward, with an average width of about $2\frac{1}{2}$ miles, to the commencement of the territorial boundary-line between Dunnet and Olrick. The total extent of coast belonging to Dunnet is about 15 miles. The greater part of it is bold and rocky. On the east of Dunnet-bay there is a beautiful level sand, stretching for two miles along the shore, over which the sea ebbs and flows above a quarter of a mile. The sand above high-water-mark is loose; and by being exposed to driving, frequently hurts the neighbouring lands. Adjoining it is a tract of barren sand nearly 2 miles in diameter, which is said to have been arable ground, or rich pasture, some time about the end of the 17th century. The ruins of cottages have appeared in different parts of it; but they seem to be of a much older date. That part of the coast to the east of Dunnet-head, along the frith, is low and rocky. Though Dunnet-bay runs so far into the land, it affords no shelter for any vessels upon the north-east side of it, which is contiguous to Dunnet-head, as it is exposed to the west. But on the Pentland frith, to the east of the Head, there are several very secure havens for boats or small craft. The haven of Brough, close by the Head, is well-sheltered from every wind but the north-west. The harbour of Ham, or Holm, scarcely a mile to the east of Brough, might also be rendered safe for small vessels at little expense. It has, however, the inconvenience of a bar of sand and gravel across the entrance, upon which there is not sufficient depth of water for vessels in any great burden, but with spring-tides. Scarfskerry is a narrow creek between two rocks, and affords a convenient landing for boats with easy weather, but is not capable of being much improved. Dunnet-bay affords excellent flounders and haddocks; and is sometimes frequented by shoals of herrings, in July and August. Besides these, great quantities of cuddins, as they are called here, or small saiths, are caught in the summer-season. The frith abounds with excellent cod and ling, which are found principally in deep water, in the tide-way, and taken with a line of 50 or 60 fathoms, to which a single hook is fixed, and a lead sinker.

All the parish, excepting Dunnet-head, may be regarded as nearly a level district, with an average elevation of about 150 feet or less above the sea, and with its inequalities disposed in almost parallel ridges, from north-east to south-west. The soil is in general light, comprising little clay or deep loam. The rock of Dunnet-head is sandstone; and that of the rest of the parish is the common flag-stone slate of the county. If the entire land surface be classified into 17 parts, about 5 of them are in cultivation, 2 are links, 6 are moss, and 4 are improvable waste land. There are ten small lakes on Dunnet-head,—two lakes of about a mile each in length, Hayland, and St. John's, in the interior of the parish,—and another, about two miles in length, Loch Seister, amidst a dreary expanse of moss, on the boundary with Canisbay. Quarries are worked both on Dunnet-head and in the interior. The principal land-owners are Trail of Ratter and Sinclair of Freswick. The real rental is about £3,600. The yearly value of raw produce was estimated in 1840 at £16,100. Assessed property in 1860, £5,769 0s. The road from Thurso to Canisbay bisects the parish nearly

through the middle. The village of Dunnet stands on that road, in the vicinity of the north-east extremity of Dunnet bay, and about 9 miles east by north of Thurso. It is a very small place, but has a beautiful exposure and declivity to the south. There are several caves in the rocks of the coast, and the vestiges of some old chapels are still to be seen. Two inner cells of Picts' houses exist at Ham. The entrances are about 8 feet asunder, and seem to have led from two outer circular apartments, of about 17 or 18 feet diameter, which appear to have had a communication from the one to the other. The entrance to the largest cell is near 30 inches wide; but as it is much filled up with earth, it is not known what the height of it may have originally been. The cell is about 9 feet long, and 6 feet wide about the middle; but becomes narrower towards the farther extremity, which is circular. The roof is about 5 feet from the earth in the floor. The walls are constructed of large rough stones, apparently without any kind of cement. Every course in the walls projects a little over that immediately below it, till they approach within about 3 feet of one another. That space is covered by a course of strong stone lintels. The smaller cell is finished in the same manner. And the whole is covered with earth, which forms a beautiful green mount, about 8 or 9 feet above the level of the adjacent field. Four cattle markets are held in the parish yearly, —three of them at Dunnet, on the first Tuesday of April, the Tuesday after the 15th of August, old style, and the first Tuesday of October, old style, —and the other at Reaster, $5\frac{1}{2}$ miles south-east of Dunnet, on the third Tuesday of October, old style. Population in 1831, 1,906; in 1861, 1,861. Houses, 382.

This parish is in the presbytery of Caithness, and synod of Sutherland and Caithness. Patron, Sir James Colquhoun, Bart. Stipend, £221 1s. 6d.; glebe, £10. Unappropriated teinds, £13 8s. 9d. Schoolmaster's salary, under the new act, £52 2s. The parish church is an old building, repaired in 1837, and containing 700 sittings. There is a Free church: attendance about 700; receipts in 1865, £124 12s. 7d. There are an Assembly's school, several private schools and a friendly society.

DUNNET-BAY. See DUNNET.

DUNNET-HEAD. See DUNNET.

DUNNICHEN, a parish, containing the post-town of Lethem, and the villages of Drummitemon, Cotton of Lownie, Bowriefauld, Craichie, and Dunnichen, a little south-east of the centre of Forfarshire. It is bounded by Rescobie, Kirkden, Carmylie, Guthrie, Inverarity, and Forfar. It is of extremely irregular outline; having a main body of nearly the form of a parallelogram, and sending off arms which embrace and almost bisect the parish of Kirkden. Part of it, too, is quite detached. See DUNBARROW. It is altogether about 5 miles in length from east to west, and about $3\frac{1}{2}$ miles in breadth; and it comprises about 4,514 Scotch acres. It consists of the three estates of Dunnichen, Dunharrow, and Tulloes. The surface in general consists of gently sloping ridges, and is considerably high, but does not shoot up into any very great elevations. The hill of Dunnichen, whose summit forms the northern boundary line, and which stretches about 3 miles in a south-easterly direction, is the highest ground; and at its loftiest point rises 520 feet above the level of a stream on a neighbouring plain, and 720 above the level of the sea. On the summit and sides of this hill—which, with trivial exceptions, is all cultivated or planted—the soil is a friable sandy loam; and in most other parts of the parish it is either of the same character as here, or a friable

clay with a retentive subsoil. A brook, called Vinny or Fimny, runs from west to east along the base of the hill of Dunnichen, receiving some rills in its course, and passes into Kirkden, there to disgorge itself into the Lunan. Sandstone of excellent quality for a variety of purposes is quarried at Dunnichen. About 420 acres in the parish are under wood; and more than twice that extent of ground is pastoral or waste. The total yearly value of raw produce was estimated in 1833 at £19,630 10s. Assessed property in 1860, £6 085 0s. 0d. Dunnichen-house is a fine mansion beautifully embosomed in plantation. There are in the parish a flax spinning mill and several corn mills; and there is considerable employment in the weaving of linen. The stations of the Aberdeen railway at Forfar and eastward are sufficiently near to afford facilities of communication. The village of Dunnichen stands in the north-western part of the parish, about 4 miles east-south-east of Forfar. A fair of much consequence used to be held here on the third Wednesday of March, old style; but it has dwindled into insignificance. Population of the parish in 1831, 1,513; in 1861, 1,932. Houses, 423.

This parish is in the presbytery of Forfar, and synod of Angus and Mearns. Patron, the Crown. Stipend, £158 2s. 3d.; glebe, £11. Schoolmaster's salary has become, under the act of 1861, £55. The parish church is situated at the village of Dunnichen, was built in 1802 and repaired in 1817, and contains 456 sittings. There is a Free church: attendance, 260; receipts in 1865, £224 11s. 10½d. There is an United Presbyterian church at Lethem, built about 15 years ago, and having an attendance of about 120. There is also an Independent chapel at Lethem, built in 1802, and containing 360 sittings. There are non-parochial schools at Lethem and Dunbarrow, and a public library at Lethem. The aboriginal church of Dunnichen was a chapel belonging to the abbey of Arbroath, situated on an island in a shallow lake, now for the most part drained, and bearing the name of the Mire of Dunnichen.

DUNNIDEER. See INSCH.

DUNNIKIER, the old part of the town of Pathhead, in the parish of Dysart, Fifeshire. It is of ancient date, and stands on the estate of Dunnikier. It comprises three principal streets, the Back, the Middle, and the Nether. At the end of the last of these is the house long inhabited by the Dunnikier family. Here is a Free church, whose receipts in 1865 amounted to £226 17s. 10d. See PATHHEAD and DYSART.

DUNNIKIER, an estate in the parishes of Dysart and Kirkcaldy, Fifeshire. It belongs to the ancient family of Oswald. It comprises a large portion of Dysart contiguous to the shore, and about seven-eighths of the landward part of Kirkcaldy. The modern mansion stands in the latter parish, sheltered by plantations. There are collieries on the estate.

DUNNIKIER-LAW, a hill, of 750 feet of altitude above sea-level, in the parish of Kilconquhar, Fifeshire. It commands an extensive and very brilliant view of part of Fifeshire, part of the friths of Forth and Tay, and portions of more distant country away to the Lammermoors, the Sidlaws, and the Grampians.

DUNNINALD. See CRAIG.

DUNNING, a parish, containing a small post-town of its own name, also the village of Newton of Pitcairns, on the south-east border of Perthshire. It is bounded by Kinross-shire, and by the parishes of Fossaway, Auchterarder, Gask, Forteviot, and Fergandenny. Its length northward is about 7

miles; and its greatest breadth is about 4 miles. The Earn flows along the northern boundary. The May drains the southern border. The Dunning burn rises among the Ochils, and makes a rapid descent over a bed of gravel to the Earn. A lake called the White Moss covers about 11 acres in the west. About one-third of the whole parochial area lies among the Ochils; and the rest slopes to the Earn. The Ochil district affords excellent sheep pasturage. The soil near the Earn is light and sandy; and in other parts varies from clay to gravel. Upwards of 200 acres are under wood. There are several quarries. The principal landowner is Lord Rollo, and two other large landowners are Graeme of Garvoek and Belshes of Invermay. A chief object of interest is Duncrub, the residence of Lord Rollo. See DUNCRUB. The houses of Garvoek and Pitcairns are modern mansions. There are in the parish three corn-mills, a saw-mill, and a woollen factory. There formerly were malt-works and a distillery. An extensive employment is weaving for the manufacturers of Glasgow. The Scottish Central railway traverses the parish, and has a station in it. Population of the parish in 1831, 2,045; in 1861, 2,084. Houses, 514. Assessed property in 1865, £12,606 3s.

This parish, formerly a chapelry, is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, the Earl of Kinnoul. Stipend, £238 19s. 2d.; glebe, £20. Unappropriated teinds, £13 18s. 6d. Schoolmaster's salary, fixed at £55, with £18 fees. The parish church was rebuilt and enlarged in 1810, and contains about 1,000 sittings. There is a Free church: whose receipts in 1865 amounted to £137 3s. 4½d. There are two United Presbyterian churches—the one at Dunning, with an attendance of 160,—and the other at Dalreoch, with an attendance of 100. There are also an Original Secession church, which however is now shut up, and an Evangelical Union place of worship. There are a free school, a female school, and a subscription school.

The TOWN of DUNNING stands on the road from Auchterarder to Perth, about 2 miles south of the Earn, 4 north-east of Auchterarder, 9½ south-west of Perth, and 53 by railway north-east by north of Glasgow. It was burnt by the rebels in 1716. It is now a neat little place, containing many substantial houses. It is held in feu of Lord Rollo, and is under the superintendence of a baron-bailie. It has a public library, a gas-works, and a bread society. A weekly market is held on Wednesday; and yearly fairs are held on the second Tuesday of May, old style, on the 20th of June, and on the 24th of October. Population, 1,105.

DUNNOTTAR, a parish, containing the fishing village of Crawton, and part of the post-town of Stonehaven, on the coast of Kincardineshire. It is bounded on the east by the German ocean, and on other sides by the parishes of Fetteresso, Glenberrie, and Kinneff. Its form is triangular, extending about 4 miles in length on each side, by 2½ in breadth, at the base along the coast, and comprehending 8,156 English acres. The river Carron traces all the northern boundary to the sea at Stonehaven. Part of the surface, inward from Stonehaven, is the eastern end of the How of the Mearns, or eastern commencement of the great hollow which extends diagonally across Scotland, and bears in Forfarshire and Perthshire the name of Strathmore. The rest of the surface is uneven, with frequent but inconsiderable risings, which do not deserve the name of hills. Towards the coast the soil is a kind of clay loam; but as it recedes it degenerates into a wet gravelly moor. The sea-coast, especially that

part of it called Fowls-heugh, upwards of a mile in length, is very bold, and formed of alternate strata of freestone and plumpudding-stone, the latter containing nodules of quartz and limestone. There are many deep caves in the rocks, which are much frequented by gulls, coots, and other sea-fowls. About 690 acres of the parish are under wood, about 4,860 are under cultivation, and about 1,740 are moorland or natural pasture. Sandstone has long been extensively quarried in a cliff above the harbour of Stonehaven. The prevailing rock of the parish is conglomerate. There are five principal estates. The chief country residence is Dunnottar house, a large plain mansion, built about 52 years ago, and embosomed in wood. The chief antiquity, and an object of great interest and very conspicuous, is Dunnottar Castle, which we shall afterwards notice in full. The real rental of the parish is about £6,600. Assessed property in 1865, £9,750 14s. 11d. The weaving of linen and cotten is an extensive employment. The Aberdeen railway traverses the parish diagonally, and has a station at Stonehaven. The great Strathmore road traverses in the same direction as the railway; and the great road from Montrose to Aberdeen, passes along the coast. Population of the parish in 1831, 1,852; in 1861, 1,828. Houses, 339.

This parish is in the presbytery of Fordoun, and synod of Angus and Mearns. Patron, the Crown. Stipend, £232 19s. 10d.; glebe, £8. Schoolmaster's salary, £34 4s. 4½d., with about £54 4s. 6d. fees. The parish church stands on the Carron, about a mile from Stonehaven. It was built in 1782. But the original parish church stood within the walls of Dunnottar Castle. There is a Free church in Stonehaven: attendance 500; receipts in 1865, £206 10s. 8½d. The parish also shares in the schools and other interests of Stonehaven, and has its own parochial school there. See STONEHAVEN.

The site of DUNNOTTAR CASTLE is a stupendous perpendicular rock, about 1½ mile south of Stonehaven, rising 160 feet above sea-level, and having a flat summit of several acres in extent. The whole mass somewhat resembles, in form, the rock on which Edinburgh castle is built, projects into the sea, and is almost separated from the land by a very deep chasm, which served as a kind of natural fosse or ditch; the adjacent rock having been scarped and rendered inaccessible by art. The castle ruins consist of a series of stately towers and other buildings occupying an extensive area, and rather resembling a ruinous town than a dismantled fortress. From its situation and extent this celebrated castle forms one of the most majestic ruins in Scotland; and, before the era of artillery, it must have been impregnable. The only approach to it is by a steep path winding round the body of the rock. The entrance is through a gate, in a wall about 40 feet high; whence, by a long passage, partly arched over, and through another gate pierced with four caitelles or loop-holes, the area of the castle is reached. This passage was also formerly strengthened by two iron portcullises. The area is surrounded by an embattled wall, and occupied by buildings of very different ages, which, though dismantled, are, in general, tolerably entire, wanting only roofs and floors. "The battlements, with their narrow embrasures," says the author of 'A Summer Ramble,' "the strong towers and airy turrets full of loop-holes for the archer and the musketeer,—the hall for the banquet, and the cell for the captive,—are all alike entire and distinct. Even the iron rings and bolts that held the culprits, for security or torture, still remain to attest the different order of things which once prevailed in this country

Many a sigh has been sent from the profound bosom of this vast rock,—many a despairing glance has wandered hence over the boundless wave,—and many a weary heart has there sunk rejoicing into eternal sleep." The most ancient edifice, except the chapel, is a square tower said to have been built about the latter end of the 14th century. A large range of lodging-rooms and offices, with a long gallery of 120 feet, seems to be of a very modern date,—not older than the latter end of the 16th century. There are ruins of various other buildings and conveniences necessary or proper for a garrison, such as barracks, a basin or cistern of water 20 feet in diameter, a howling-green, and a forge said to have been used for casting iron bullets.

The building now called the chapel was at one time the parish-church; for, notwithstanding its difficulty of access, the church, and even the burial-place of the parish, were originally situated on the top of this rock. During the contention between Bruce and Baliol, the natural strength of the place induced Sir William Keith, the great marischal of Scotland, to build a castle on it as a refuge for himself and his friends during these troublesome times. But, in order to avoid offence, he first built a church for the parish in a more convenient place; notwithstanding which, the bishop of St. Andrews excommunicated him for violating sacred ground. Sir William, on this, applied to Pope Benedict XIII., setting forth the exigency of the case, and the necessity of such a fortress, with the circumstance of his having built another church; on which his holiness issued his bull, dated 18th July, 1394, directing the bishop to take off the excommunication, and to allow Sir William to enjoy the castle at all times, on the payment of a certain recompense to the church; after which it continued in the Keith family till the forfeiture of the late Earl in 1715.

About the year 1296 this castle was taken by Sir William Wallace, who, according to his historian, burnt 4,000 Englishmen in it. Blind Harry gives the following very lively account of this achievement:—

"The Englishmen, that durst them not abide
Before the host full fear'dly forth they flee
To Dunnotter, a swake within the sea.
No further they might win out of the land.
They ssembled there while they were four thousand,
Ran to the kirk, ween'd girth to have tane.
The lave remained upon the rock of stane.
The bishop there began to treaty ma,
Their lives to get, out of the land to ga;
But they were rude, and durst not well.
Wallace in fire gart set all hastily,
Burnt up the kirk and all that was therein.
Attour the rock the lave ran with great din;
Some hung on crags, right dolefully to dee,
Some lap, some fell, some fluttered in the sea,
No Southern in life was left in that hold,
And them within they burnt to powder cold.
When this was done, feil fell on their knees down,
At the bishop asked absolutioun.
When Wallace leugh, said, I forgive you all;
Are ye war-men, repent ye for so small?
They rued not us into the town of Air,
Our true barons when they hanged there!"

In 1386 the castle of Dunnottar was refortified by Edward III. in his progress through Scotland; but, as soon as he had quitted the kingdom, it was retaken by Sir Andrew Murray, the Regent of Scotland. No further event of any historical interest or importance in respect to this castle occurred for many centuries afterwards, during which it was the chief seat of the Marischal family. But, in the time of the great civil war, it was besieged by the Marquis of Montrose; the Earl Marischal of that day being a staunch Covenanter. The Earl had immured himself in his castle, together with a great many of his partizans, including 16 covenanting clergymen who

had here sought refuge from Montrose. The Earl would have come to terms with Montrose; but he was dissuaded by his ministerial party, and the royalist at once subjected his property to military execution. Stonchaven and Cowie, which belonged to the vassals of the Earl Marischal, were burnt; the woods of Fetteresso shared the same fate; and the whole of the lands in the vicinity were ravaged. The Earl is said to have deeply regretted his rejection of Montrose's proposals, when he beheld the smoke ascending from his property; "but the famous Andrew Cant, who was among the number of his ghostly company, edified his resolution at once to its original pitch of firmness, by assuring him that that reek would be a sweet-smelling incense in the nostrils of the Lord, rising, as it did, from property which had been sacrificed to the holy cause of the covenant."

During the Commonwealth, Dunnottar castle was selected as the strongest place in the kingdom for the preservation of the regalia from the English army, which then overran the country. These being deposited in this castle by order of the privy-council, Earl Marischal obtained from the public a garrison, with an order for suitable ammunition and provisions. Cromwell's troops, under command of Lambert, besieged the castle, which was put under command of George Ogilvy of Barras, in the parish of Dunnottar, as lieutenant-governor; the Earl himself having joined the king's forces in England. Ogilvy did not surrender till the siege had been converted into a blockade, when he was reduced by famine and a consequent mutiny in the garrison. He had previously, however, removed the regalia by a stratagem on account of which he was long imprisoned in England. Mrs. Granger, wife of the minister of Kinneff, had requested permission of Major-general Morgan, who then commanded the besieging army, to visit Mrs. Ogilvy, the lady of the lieutenant-governor. Having obtained permission, Mrs. Granger, who was a resolute woman, packed up the crown among some clothes, and carried it out of the castle in her lap; her servant maid, at the same time, carrying the sword and sceptre on her back, in a bag of flax. The English general very politely assisted the lady to mount her horse. The regalia was kept sometimes in the church of Kinneff, concealed under the pulpit, and at other times in a double-bottomed bed at the manse, till the Restoration, in 1660, when they were delivered to Mr. George Ogilvy, who presented them to Charles II. For this good service, with his long imprisonment and loss of property, Ogilvy received no farther mark of royal favour or reward than the title of Baronet and a new coat-of-arms. Sir John Keith, brother to the Earl of Marischal, was created Earl of Kintore; but honest Mr. Granger and his wife had neither honour nor reward.

Dunnottar was used, in the year 1685, as a state prison for 167 Covenanters, males and females, who had been seized at different times in the west of Scotland, during the persecution under Charles II. In the warmest season of the year they were all barbarously thrust into a vault, still called 'the Whig's vault,' where a number of them died. About 25, in a state of desperation, crept one night from the window, along the face of the awful precipice, in the hope of escaping; but two of these perished in the attempt, and most of the others were captured, and subjected to horrible tortures. Dunnottar castle was dismantled soon after the rebellion of 1715, on the attainder of James Earl Marischal.

DUN-O'DEER, or DUNDEER. See INSCH.

DUNOLLY, the ruined ancient castle of the Macdougals of Lorn, on the coast of the mainland

of the parish of Kilmore, about midway between Dunstaffnage and Oban, and opposite the north end of the island of Kerrera, in the district of Lorn, Argyshire. "Nothing," says Sir Walter Scott, "can be more wildly beautiful than the situation of Dunolly. The ruins are situated upon a bold and precipitous promontory, overhanging Loch-Etive, and distant about a mile from the village and port of Oban. The principal part which remains is the donjon, or keep; hut fragments of other buildings, overgrown with ivy, attest that it had been once a place of importance, as large apparently as Artornish or Dunstaffnage. These fragments enclose a court-yard, of which the keep probably formed one side; the entrance being by a steep ascent from the neck of the isthmus, formerly cut across by a moat, and defended doubtless by outworks and a drawbridge. Beneath the castle stands the present mansion of the family, having on the one hand Loch-Etive, with its islands and mountains; on the other two romantic eminences tufted with copsewood. There are other accompaniments suited to the scene; in particular, a huge upright pillar, or detached fragment of that sort of rock called plum-pudding stone, upon the shore, about a quarter of a mile from the castle. It is called Clach-na-cau, or the Dog's pillar, because Fingal is said to have used it as a stake to which he bound his celebrated dog Bran. Others say, that when the Lord of the Isles came on a visit to the Lord of Lorn, the dogs brought for his sport were kept beside this pillar. Upon the whole, a more delightful and romantic spot can scarce be conceived; and it receives a moral interest from the considerations attached to the residence of a family once powerful enough to confront and defeat Bruce, and now sunk into the shade of private life."

Dunolly is now possessed by Macdougall of that ilk, the representative of the ancient family of this name. Such is the traditionary reminiscence of the dignity of Dunstaffnage, that, according to the inhabitants of the district, Dunolly was little more than one of the office-houses connected with the palace. For, misled by similarity of sound, if not partly by the love of the marvellous, as in Gaelic *ollamh*—pronounced *ollah*—signifies 'a physician,' it is received as an historical fact that the medical practitioner who was attached to the royal family had this castle allotted to him as his residence, the name being rendered, 'the Fort of the physician.' While, however, the absurdity of the idea appears, not only from the distance, which must have rendered it quite ineligible as a residence for one whose services would be often required at a moment's warning, hut from the total improbability that a place of such consequence would be assigned to any officer of the court; it seems to be directly opposed to historical proof of a far more authentic character than the greatest part of that which our meagre records furnish in regard to so remote a period. Olaf was a very common name among the Danes and Norwegians. It appeared in different forms; as in that of Aulav, Aulaf, Olave, Olo, and in Latin of Olaus. Of this name there was a Scandinavian king of Dublin, A. D. 853, and another, A. D. 959. Somerled, Thane of Argyle, and Lord of the Isles, who flourished about the middle of the 12th century, married a daughter of Olaus, King of Man, from whom our genealogists deduce two dynasties, distinguished in the stormy history of the middle ages,—the Lords of the Isles, and the Lords of Lorn. As the Norse princes—whether coming immediately from Norway, from the Orkneys, from Ireland, or from Man—made frequent descents on the western coasts and islands of Scotland, it seems almost certain that the name Dunolly signifies 'the Fortified hill of Olave.'

That it was a place of very considerable consequence in that quarter, and had received this name, even before the close of the 7th century, is undeniable, from the notice taken of it in that invaluable relic of antiquity, the Annals of Ulster. Here it is mentioned, "A. D. 685. Comhussit Tula aman (*sic*) Duin Olla." It is afterwards said,—"700. The destruction of Dunaila by Selvach."—"713. Dun Olla construitur apud Selvaou."—"733. Talorgan filius Drostanii comprehensus alligator juxta arcem Olla."—"852. Aulay, King of Lochlin," *i. e.* of Scandinavia, "came into Ireland, and all the foreigners of Ireland submitted to him." In the oldest map we have of Lorn—that of Timothy Pont—Dunolly is denominated Doun oldyf. Pinkerton entertains the same idea as to the origin of the name. In reference to one of the passages quoted from the Annals of Ulster, in which the place is called Dunolla, he says: "This is surely the noted Castle in Lorn." That excellent northern scholar Johnstone gives the same explanation:—"Dun Oly, *i. e.* Olave's tower. The place might receive this name, from having been the residence of Olave, the youngest son of Somerled, thane of Argyle."

There was discovered not long ago at Dunolly, an interesting subject for antiquarian examination. Some workmen employed in removing the soil from a spot immediately under the rock upon which the ruins of the castle stand, and occupied for at least a century past as garden ground, came, at the depth of about five feet, to a bed of ashes covering a considerable surface. A layer of loose stones, about four feet deep, succeeded, and upon being removed, showed the top of a wall of solid mason-work, running parallel with and closely attached to the castle rock. Curiosity led to the removal of a part of the wall, and the trouble was recompensed by discovering the entrance to a spacious cavern, the whole interior of which was ornamented with the most beautiful stalactites. But—what will excite a deeper feeling—the excavators found that they had broken in upon the slumbers of the dead; for, placed regularly round the bottom of the cave, lay many mouldering remnants of mortality. In the centre of this charnel-house was a large flag-stone covering an opening not unlike a modern grave; but nothing was found in it to disclose the purpose for which it had been reserved. Among the ashes were the bones of various animals, pieces of iron, remains of broadswords, a few defaced coins, and other vestiges of the hand of man. There is no existing tradition of the cave, or the use to which it had been dedicated.—Thomas Brydson, in his 'Pictures of the Past,' has the following pleasing verses on Dunolly castle:

"The breezes of this vernal day
Come whispering through thine empty hall,
And stir, instead of tapestry,
The weed upon the wall;

And bring from out the murmur'g sea,
And bring from out the vocal wood,
The sound of nature's joy to thee,
Mocking thy solitude.

Yet proudly, 'mid the tide of years,
Thou list'st on high thine airy form—
Scene of primeval hopes and fears—
Slow yielding to the storm!

From thy gray portal oft at morn,
The ladies and the squires would go,
While swel'd the hunter's bugle-horn
In the green glen below;

And minstrel-harp, at starry night,
Woke the high strain of battle here,
When with a wild and stern delight
The warriors stoop'd to hear.

All fled for ever! leaving nought
 Save lonely walls in ruin green,
 Which dimly lead my wand'ring thought
 To moments that have been."

DUNOON, a parish, comprehending the ancient parishes of Dunoon and Kilmun, and containing the post-town of Dunoon, the post-office villages of Kilmun, Ardintenny, and Inellan, and the post-office station of Toward, in the district of Cowal, Argyleshire. It is bounded, on the east, by Loch Long and the frith of Clyde; on the south, by the Kyles of Butc; and on other sides, by the parishes of Iuverchalain, Kilmodan, Strachur, and Lochgoilhead. Its length southward, in a straight line, is about 18 miles; but, measured along the coast, from near the entrance of Loch Goil to Ardyne-point, is at least 30 miles. Its breadth at the extremities contracts almost to a point, but elsewhere varies from 2 miles to 9 miles. Its superficial extent is about 180 square miles; of which about 2,200 acres are under wood, and not more than 2,800 acres are either regularly or occasionally in tillage. Holy Loch, an arm of the frith of Clyde, almost immediately contiguous to the entrance of Loch Long, penetrates the land about 2 miles, nearly at right angles with the general direction of the coast, and forms the division between the ancient parish of Kilmun on the north and the ancient parish of Dunoon on the south.

"The general aspect of the united parish, when viewed from the frith of Clyde or from its opposite coast," says Dr. Mackay in the New Statistical Account, "presents a bold and even grand collection of hill and valley, with a smoother sloping aspect toward the sea coast, along the greater part of its extent. Its wild grouping of hills, scarcely in general aspiring to belong to the mountain class, as at least compared with many other portions of Highland scenery, may be said more to possess dignity than grandeur. Taken in detail, its features become more interesting and perhaps singular. These are found to be formed, taking the general lineaments, by five separate or distinct hilly or mountainous ranges. There is, first, that to the north of Glenfinart, running nearly from east to west; next, the range running almost at right angles with the former, embracing a considerable portion of Kilmun parish, diminishing gradually in height towards and terminating in the point of Strone, separating Loch Long from the Holy Loch, and presenting its steepest acclivity immediately behind the village of Kilmun lying on the eastern shore of the Holy Loch. We have, as the third of these ranges, Benmore, with its neighbouring hills stretching to the north-west and south-west, rising abruptly and boldly from the valley of the Eachaig and the place of Benmore, forming in part the steep and wild western banks of Loch Eck and the northern side of Glenmassan. The fourth range, running nearly from east to west, forms the south side of Glenmassan, and the northern side of Glenlean. The fifth of these groups runs southward from Glenlean, forming the summit range of the territory comprising the parish of Dunoon proper, rising to its highest elevation towards the centre, westward of the village of Dunoon, in the hill denominated the Bishop's Seat, and terminating abruptly in the striking hill of Buachaill-ithean, on the estate of Castle-Toward; both the latter, as well as Benmore, commanding a magnificent view of the neighbouring counties and the western islands. The most striking feature of these mountain or hilly ranges is their wild and bold irregularity, both of position and appearance. Benmore is considered the highest of the hills of Cowal, and has been estimated at 2,500

feet above the level of the sea; and Buachaill-ithean, by measurement, has been found 1,220 feet. The whole of the other ranges in the parish are of inferior height to Benmore; but their steep acclivities, and the abrupt and rugged breaks occurring, both separating and intersecting them at numerous points, render their appearance imposing, and, on more detailed inspection, exceedingly interesting." Five valleys or glens, corresponding to the five principal mountain-ranges, "present another general feature of the parish still more diversified and interesting, exhibiting in detail local scenery of softer shades and of milder forms than could be anticipated from a more distant view of the general aspect of the territory, as seen from any point beyond its own limits." But by far the most important of these valleys, and the only one which need be particularly mentioned, is that which commences at the head of the Holy Loch, and is there about 2 miles broad,—and extends up the course of the rivulet Eachaig, about 4 miles, to Loch Eck, where it has a summit-altitude of only about 18 feet above the level of the sea,—and continues thence north-westward, along the basin of that lake, and through the parish of Strachur, quite across Cowal, to Loch Fyne. See Eck (Loch).

The sea-board of the united parish is comparatively smooth, and exhibits great profusion of artificial feature. Not less than six miles of it are skirted along the beach with arrays of beautiful houses, either constituting the villages, or spreading thickly away from their wings; and the greater part of it, both behind the villages and elsewhere, is either feathered with wood, or adorned with cultivation,—"showing either the variegated shades of natural copse, in which the oak prevails, or the richer appearance of planting and enclosures, with well-cultivated fields." The Kilmun part goes soon and steeply up the hills, yet even this abounds in ornamentation; and the Dunoon part has considerable spaces of comparative level, rises in a slower and more gradual acclivity, and presents a correspondingly great variety of artificial beauty. So rich is the array of villas that miles of it might be a worthy suburb to the most opulent city in the world. The whole sea-board, together with the russet heights above it, is a gallery of pictures hung up along the frith; and at the same time, hundreds of points on it command a magnificent view of the frith itself, and a large portion of its screens, from Helensburgh to Ailsa Craig.

The hills of the parish consist principally of mica slate and clay slate. Part of the shore on the south shows the old red sandstone; and a place at Toward-point contains a narrow bed of limestone. The soil in general is light. Agricultural improvement has been greater in Dunoon proper than in Kilmun; insomuch that, a few years ago, the average rent of arable land in the former was £1 16s., and in the latter only £1 4s. The live stock in the united parish is estimated at 20,000 sheep, 1,130 black cattle, and 200 horses. There are upwards of twelve principal landowners. The real rental is upwards of £9,000. Assessed property in 1860, £34,889 0s. 0d. The principal mansions are Toward-castle, at Toward-point, a splendid edifice in the modern Gothic style; Hafton-house, on the west side of the Holy Loch, spacious and brilliant, in mixed modern Gothic; Glenfinart-house, in Glenfinart, in the mixed English manor-house style; Benmore-house, in beautiful grounds at the foot of Benmore; and the Castle-house of Dunoon, contiguous to the old Castle of Dunoon, and an ornament to the town. There is a gunpowder mill at Glenlean. Not fewer than three distilleries were

not long ago erected; but they all proved failures. There are about 50 miles of public road within the parish; and abundant communication is enjoyed from no fewer than eight points of its coast by the Clyde steamers. Population in 1831, 2,416; in 1861, 5,461. Houses, 979.

Dunoon is the seat of a presbytery, in the synod of Argyle. It is said to be one of the most ancient parishes in Scotland. The parish of Kilmun was united to it, both quoad sacra and quoad civilia, by the court of teinds at a date not known. Patron, the Duke of Argyle. Stipend, £275 2s. 1d.; glebe, £36 17s. There is an assistant minister, who resides at Kilmun, and is paid partly by the parish minister, and partly by voluntary contribution from the parishioners. There are two parish churches, respectively at Dunoon and at Kilmun. The Dunoon church was built in 1816, and enlarged in 1834 and 1839, and contains 838 sittings. The Kilmun church was built in 1841, and contains 450 sittings. There are two chapels of ease, the one at Luellan, and the other near Toward-point. There are three Free churches, respectively at Dunoon, at Kilmun, and at Ardintinny. Attendance at the Dunoon Free church, about 360; sum raised in 1865, £357 11s. 6 $\frac{3}{4}$ d. Attendance at the Kilmun Free church, about 300; sum raised in 1865, £197 1s. 10d. There is a United Presbyterian church at Dunoon, built in 1828, and containing 280 sittings. There is also an Episcopalian chapel in Dunoon, with 180 sittings. There are three parochial schools, at respectively Dunoon, Kilmun, and Toward. Salary of the Dunoon schoolmaster, £45; of the Kilmun schoolmaster, £45; of the Toward schoolmaster, £22. There are also Assembly's schools at Dalilongard and Ardintenny, a female school of industry at Dunoon, Free church schools at Dunoon and Kilmun, and three other schools.

The Town of Dunoon, together with the continuations of it along the coast, extends at least four miles, from Sandbank opposite Kilmun, to the south side of Bawkie bay opposite Cloch-point. But the nucleus of it adjoins the site of its ancient castle, 2 miles south by west of the south side of the entrance of Holy Loch. 2 $\frac{1}{2}$ west-north-west of Cloch-point, and 8 west of Greenock. Only a small part of the town is strictly compact, or has a street character. Even part of its nucleus, and nearly the whole of its continuations, are either rows of cottages, chains of villas, or airy assemblages of house and mansion, spread freely out among gardens or athwart the slopes, without any reference whatever to the business conveniences of a town, but with entire reference to the open breezes of the sea-beach and the country. The southward continuation around Bawkie bay comprises as rich a string of marine villas as any in Scotland. The northward continuation, all the way to the very cheek of the Holy Loch, looks from the water like a mosaic of neat houses and garden plots, lying from the margin of the beach a considerable way up the hill face. The beach in most parts, particularly around Bawkie bay, is particularly good for bathers; and the walks accessible to the public are extensive and picturesque.

At the nucleus of the town, or immediately north of Bawkie bay, a small headland, rising into a rocky knoll, projects into the frith, and forms a natural military strength. This was the site of the ancient castle of Dunoon. Contiguous to its point, on the north side, is a wooden jetty, erected in 1835, by a private joint-stock company, extending 130 yards from the shore, having at its extremity a depth of seven feet of water at the lowest tide, and serving conveniently for the use of steamers, even for goods

and cattle, but particularly for passengers. Another landing place, at which the steamers call, is situated about 1 $\frac{1}{2}$ mile north of this, at a part of the town called the Kirm; and a third occurs at the mouth of the Holy Loch, near the end of the northern continuation, in the vicinity of Hafton-house, the splendid property of the family of Hunter, and called, on that account, Hunter's-quay. The parish church, on a conspicuous situation, opposite the jetty, is a very handsome edifice, in the modern Gothic style, with a tower. The other places of worship are neat buildings. An extensive-range of stores, surrounded by a high wall, on the shore of the Holy Loch opposite Kilmun, was erected by government about fifty years ago, as a lazaretto, in connection with a quarantine station in the loch,—a thing more suitable for Turkey than for the Clyde,—for a barbarous people than for a civilized nation,—and happily discovered years ago to be as unnecessary as it was hideous.

The original Dunoon castle probably belonged to the period of the Dalriadic colonists; and, even though it may have been a rude building, it must, in consequence of its situation, have been a powerful aid to them in holding possession of Cowal. This original castle may, in the course of time, have been either repaired in itself or succeeded by another. But the eventual castle does not appear to have dated earlier than the 14th century, or perhaps the 15th; and even this has been so demolished, first by the ordinary accidents of time, next by abandonment to neglect, and lastly by the abstraction of its materials for the building of cottages in the neighbourhood, that scarcely any vestiges of it, except the mere substractions, now remain. It appears to have consisted of three towers,—one looking up the frith, another in an opposite direction, and a third guarding the approach from the land. The first of these is the only one of which there are any distinct traces. It has been of a circular form. On the side parallel with the frith, may be seen the remains of a small entrance, which it is supposed must have served as a sally-port and a place of escape in cases of emergency. It is believed that there are still a number of vaulted apartments, pretty entire, under the ruins. The site of the castle includes about an acre of ground; and is much broader at the base, where it fronts the frith, than behind. The received belief of the vicinity is, that there was a nunnery, at a little distance from the castle, where stands the present church. In support of this hypothesis, it has been urged, that on clearing away the ruins of a chapel—part of which composed the old church—when the workmen began to pull down the gable, they discovered a beautiful Gothic window which had previously been so built up and plastered as to be indiscernible. But this proves nothing as to the existence of a nunnery; as it may reasonably be supposed that the chapel, appropriated to the worship of the inhabitants of the castle, would be finished in the best style of the age. There is no vestige, in our monastic history, of any nunnery in this district. Near the castle stood the *Tom-a-mhoid*, or 'the hill of the court of justice,' the same which is elsewhere called 'the mote-hill.' Here also was the gallow-hill, the name of which sufficiently indicates its appropriation. Another place, still denominated the cuspars, or the butts, marks the scene of the ancient archery. The privilege of a ferry was granted to the heritable keepers of this castle, on condition of their supplying the garrison with certain provisions.

The castle of Dunoon belonged for some time to the hereditary high-stewards of Scotland, to whom Malcolm gave a grant of Bute and Cowal, in the

11th century. According to our historians, indeed, Walter, the son of Fleance, having adhered to the interests of Malcolm Canmore, not only received from him the baronies of Renfrew and Kyle, but was made Lord of Bute and Cowal, then at the king's disposal, in consequence of an insurrection of the islanders in quelling which he acted as his Majesty's lieutenant and commander-in-chief. In reward for his services, he was also made Dapifer Regis. His son Alan was by King Edgar constituted Senescallus Scotiæ, or Great-steward of Scotland, whence originated the family name. Dunoon remained in the possession of the Stewarts till the reign of David II., who, in consequence of the insurrection of Edward Baliol, A. D. 1333, had deserted the throne. Baliol having overrun the country, among other fortresses took Dunoon. His despicable surrender of the kingdom to Edward III. so disgusted the nobles, that some of them rose in defence of their liberties; and Robert the Steward, who had lain concealed in Bute, resolved to stand forth in the public cause. He escaped to Cowal, and, aided by Colin Campbell of Lochow, one of the ancestors of the family of Argyle, made himself master of the castle of Dunoon, A. D. 1334. In reward of his faithful service, Campbell was made hereditary governor, and had the grant of certain lands for the support of his dignity. Robert, the first king of the Stewart family, succeeding David II., the castle would henceforth be viewed in the more honourable light of a palace. In the year 1544, the Earl of Lennox, anxious to obtain the regency, and having received the support of Henry VIII., appeared in the frith of Clyde with 18 vessels and 800 soldiers. Having made himself master of Rothesay, he proceeded to Dunoon. Here he met with powerful opposition from Archibald Earl of Argyle; but the latter was obliged to retreat with loss, being unable to resist the force of Lennox's artillery. The whole estate was consolidated by entail in the person of Archibald the 1st Duke, A. D. 1706. Mary in 1563, paid a visit at Dunoon to her favourite sister the Countess of Argyle, the natural daughter of James V. While here, she is said to have employed herself in the diversion of deer-hunting, and to have availed herself of the opportunity to grant charters to her vassals. How long Dunoon continued to be the residence of the Argyle family is uncertain. Pennant says:—"Inverary was inhabited about the latter end of the 14th century by Colin, surnamed *Tongollach*, or 'the Wonderful,' on account of his marvellous exploits, and I may add, his odd whims; among which, and not the least, may be reckoned the burning of his house at Inverary on receiving a visit from the O'Neils of Ireland, that he might have pretence to entertain his illustrious guests in his magnificent field-equipage. The great tower—which was standing till very lately—was built by the black Sir Colin, for his nephew, the 1st Earl of Argyle, at that time a minor. I do not discover any date to ascertain the time of its foundation, any further than that it was prior to the year 1480, the time of Sir Coliu's death. In December 1644, amidst the snows of this severe climate, the enterprising Montrose poured down his troops on Inverary through ways its chieftain thought impervious." It would appear, therefore, that Dunoon was only the occasional residence of the Argyle family; as they were the hereditary keepers of this palace. Dunoon also was, for some time, the residence of the bishops of Argyle, at least occasionally, after the restoration of episcopacy in the reign of Charles II.; and some ruins of their house were, not many years ago, still visible in the vicinity of the church.

The original castle must have drawn some inhabitants to its neighbourhood for the purposes of protection and traffic. Many vassals, first of the Stewarts and next of the family of Argyle, and perhaps some retainers also of the bishops, afterwards built houses near it, that they might be at hand to attend the court. But especially the ancient ferry here, becoming the principal communication between Cowal and the Lowlands, created such traffic as materially to extend the population. Hence, in the early part of the 18th century, the village of Dunoon was a considerable place; but, being then dependent on the ferry chiefly, and a new road being opened round the head of Loch Long, and on by Loch Lomond, to form a readier communication with the rising seats of trade in the fluviate Clyde, the village afterwards went rapidly into decay, till it sank to the condition of a Highland clachan; in which it continued till 1822. "In that year," says Dr. Mackay, "there were not more than three or four slated houses in it, besides the parish church and manse. As the power of steam became subservient to the purposes of navigation, and the first steamers built began to venture beyond Greenock, and to dare the dangers of crossing the frith,—esteemed no ordinary measure of boldness at that time,—individuals, and a few families from Glasgow, began to resort to Dunoon as a summer residence. The number was but small, indeed, who could find any accommodations to suit them. In 1822, James Ewing, Esq., then of Glasgow, commenced building the marine villa called, since, the Castle-house, on the grounds immediately adjoining Dunoon castle. The taste displayed in the erection of his villa, and in the laying out of the grounds around it, pointed out to others the advantages of the locality, of which several individuals of respectability soon availed themselves; and the village has since gone on increasing."

Several justices of peace reside in Dunoon. Sheriff small debt courts are held four times a-year. The town has a branch office of the Union Bank of Scotland, a national security savings' bank, offices of five insurance companies, two circulating libraries, a horticultural society, and a curling club. Steamers to and from Glasgow touch several times a-day in winter, and almost every hour, or oftener, from morning till night, in summer. Population in 1844, 1,296; in 1861, 2,968. Houses, 543. But the population thus given is the ordinary population, which is at least doubled during summer.

DUNPENDER. See TRAFRAIN LAW.

DUNPHAIL, an estate in the parish of Edenkilloe, and nearly up to the sources of the Divie, Morayshire. It abounds in fine scenery, and comprises about 800 acres of wood. The modern mansion is a splendid edifice in the Venetian style, built in 1829, and enlarged in 1842. The ancient residence was a fortalice on the summit of a steep conical hill, accessible only on one side, and protected round the other sides by a narrow romantic ravine, which is supposed to have been at one time the channel of the Divie. This fortalice resisted a siege by Randolph Earl of Moray, after the battle of the Standard; but it is now a ruin. The estate of Dunphail anciently belonged to the Cummings, and now belongs to their representative Mr. Cumming Bruce.

DUNREGGAN, a village in the parish of Glencairn, Dumfriesshire, 16½ miles north-west of Dumfries. It is situated on Dalwhat water, on the opposite bank from Minnyhive, and communicates with that village by a stone bridge. It not long ago underwent considerable improvement in its houses and general appearance. Population, 277. Houses, 58.

DUNRICHUAN. See DORES.

DUNROBIN CASTLE, a palatial seat of the Duke of Sutherland, in the parish of Golspie, Sutherlandshire. It stands on a moat overlooking the sea, 2 miles north-east of Golspie, and 4 south-west of Brora. It consists of an old plain pile, erected in 1275, by Robert Earl of Sutherland, from whom it took its name, and of an extensive elaborate mass of splendid additions, raised in 1847, in anticipation of a visit from the Queen. "This castle," said the Messrs. Anderson in 1851, "is beautifully surrounded with trees, in which are concealed two older burghs or dunes attributed to the Danes. The view from the top of the tower, the paintings in the public rooms, and especially the series of old Scottish portraits, and the elegant breed of Highland cattle for which the parks of Dunrobin are celebrated, rendered the old castle as it stood some years ago, worthy of admiration. But now it has become, by recent additions, one of the most princely palaces in the kingdom, and undoubtedly one of the largest in Scotland. Among the multitude of high towers and fretted pinnacles the old castle is almost lost, except on the seaward side, where its humble but dignified old tower and plain front form the western corner of the building. East of these, a magnificent elevation of four storeys, springing from a terraced basement, and pierced with rows of oriel and plain windows, beautifully finished with varied tabling, forms an extensive frontage which rises to a great height, and over which a number of towers, turrets, and minarets reach up into the sky, backed on the north by the lofty and very steep roof of the great entrance tower, which is at least 100 feet high. The general character of the whole building is that of a very large French chateau or German palace, with details in the scroll work and roofs of the chambers, borrowed from the best old Scottish models. The grand entrance and staircase are lined within with polished Caen stone; but the exterior is all of a hard white silicious freestone from Brora and Braambury Hill on the Duke's own property. Internally the castle is arranged into suites of apartments, each containing a complete set of sitting rooms and bed chambers, and named the Duke's, the Argyll, the Blantyre apartments, and those of other members of the family; and each suite has its own peculiar style and colour of decorations and painting. The grand seaward front has been appropriated to Her Majesty, whose apartments are separated from the rest of the palace by a wide gallery or passage. They are done up in the most costly and elegant manner, with silk tapestry hangings in some of the rooms instead of papering. From the oriel window of her bedroom, Her Majesty will command, in one view, the whole circuit of her dominions, from Ben Wyvis in Ross, round by the Alps of Inverness, Moray, and Aberdeen shires, and across the firth almost to the Ord of Caithness, which is concealed from view only by a projecting headland, while the mid-distance is beautifully varied by the yellow sands of the Dornoch firth, and the rocky promontory and high bright lighthouse on Tarbetness. Extensive as the buildings are, the entire design will not be finished until another tower or two and the family chapel are added; and in the former of which we presume it is intended to have a great feudal receiving room." A massive rampart wall extends along the sea frontage, a length of 300 feet, with bastions at the ends; and successive broad flights of steps conduct down a wooded bank to the flower gardens, situated between the castle-terrace and the sea.

DUNROD, an ancient parish on the coast of

Kirkcudbrightshire. It was long a vicarage of Holyrood, and was united, a little after the middle of the 17th century, to Kirkcudbright. It forms the southern part of the present united parish. Its cemetery, situated nearly $3\frac{1}{2}$ miles from the town of Kirkcudbright, continues to be used, and marks the site of the church at the western base of an oblong hill, which once may have exhibited a red appearance,—the word Dunrod meaning the reddish hill. A considerable population formerly resided here; but now not many houses remain in the neighbourhood.

DUNROD, an old barony in the parish of Innerkip, Renfrewshire. The hill whence the name probably arose is still called Dunrod hill, and figures prominently in the grounds of the Shaws water. A streamlet of the old barony also still bears the name of Dunrod burn, and is bestridden by a very ancient bridge, interesting to antiquaries. The progenitor of the barons of Dunrod was Sir James Lindsay, the constant companion of King Robert the Bruce; and the last of the barons flourished and fell in the 17th century, but lives in tradition as a wicked tyrant who sank into poverty under the weight of his crimes,—and in balladry as a low impostor in the guise of a great warlock. An old rhymer says,—

"In Auld Kirk the witches ride thick,
And in Dunrod they dwell;
The greatest loon among them a'
Is auld Dunrod himsel."

See KILBRIDE (EAST).

DUNROSSNESS, a parish in the south of Sutherland. It comprehends the ancient parishes of Dunrossness, Sandwick, and Coningsburgh; and contains three post-office stations of the same names. The main body of it is the southern part of the mainland, to the length of about 18 miles in a straight line, bounded on the north by Lerwick, and on all other sides by the sea. The other chief appurtenances of it are the inhabited island of Mousa in the north-east, the inhabited island of Fair Isle far to the south, Cross island immediately on the south-west, and the pastoral islands of Colsay and St. Ninian on the west. The chief creeks are Quendal-voe, West-voe, Grutness, and Aith's-voe. Sumburgh-head, a bold high rock composed of indurated sandstone, in N. lat. $59^{\circ} 51'$, and W. long. $1^{\circ} 16'$, is the southern promontory. There is a light-house upon it showing a fixed light, elevated 300 feet above high water, and seen at the distance of 24 miles in clear weather. See SUMBURGH-HEAD and FAIR ISLE. The island of St. Ninian, though now occupied only by cattle, is connected with the mainland at low water by a sandy beach, and was formerly the site of a church. It is said that the captain of a Dutch vessel, being nearly lost in a storm at sea, vowed, that if he was preserved from the dangers that threatened him, he would build a church on the first land at which he should arrive. This island was the spot to which he first came, and here he built a church which he consecrated to St. Ninian. There are the remains of another church on a projecting headland called Ireland-head, not far from this. There are several small lakes which abound with fish. Attempts were made to mine copper at Fitfill and Sand-lodge, but they proved unsuccessful. Much land has been destroyed by sand-drifts; yet there has been an increase of population, rather than a decrease, occasioned by reclamation of waste lands and improvement of the fishery. Population in 1831, 4,405; in 1861, 4,830. Houses, 909. Assessed property in 1843, £1,664 17s. 1d.

This parish is in the presbytery of Lerwick, and

synod of Shetland. Patron, the Earl of Zetland. Stipend, £208 6s. 8d.; glebe, £8. Unappropriated tithes £53 18s. 4d. Schoolmaster's salary is £35, besides £8 fees. The parish church was built in 1790, and contains 858 sittings. There is a government church in Sandwick, built in 1807, and containing 564 sittings. There are a Free church in Coningsburgh, and a Free church preaching-station in Dunrossness: receipts in 1865 of the former, £46 9s. 4d.,—of the latter, £20 7s. 3d. There are a Wesleyan Methodist chapel, and an Independent chapel in Sandwick, and two Baptist places of worship in Dunrossness. The parochial school is in Sandwick. There is a Society's school in Coningsburgh. There are adventure schools in various parts. There are parochial libraries in Dunrossness, Coningsburgh, and Sandwick.

DUNSCAICH. See SKYE.

DUNSCORE, a parish, containing a post-office station of its own name, and the village of Cottack, on the western border of Nithsdale, Dumfries-shire. It is bounded by Kirkeudbright-shire, and by the parishes of Glencairn, Keir, Kirkmahoe, and Holywood. Its outline is an oblong, extending eastward to the Nith, but compressed almost to bisection in the middle. Its greatest length is $11\frac{1}{4}$ miles; and its breadth varies from less than $\frac{1}{2}$ of a mile to about $3\frac{3}{4}$ miles. The surface in the upper or western district is rocky and mountainous, but slopes down toward a central glen; in the lower or eastern district, it consists chiefly of three diverging vales, with their intermediate hills; but toward or along the eastern boundary, it becomes somewhat open, and is beautified by the meanderings of the Nith and the luxuriance of its holms. The glen of the west is traversed by Glenslin water, and is 4 miles in length, and toward the houndary becomes rocky and barren. The hills which enclose it are heathy, and fit only for pasture; and one of them, called Bogrie hill, rises 1,200 feet above the level of the sea. The Cairn intersects the parish at its narrowest part; but previous and subsequent to the intersection, it forms the western houndary line for about 3 miles. It is here a more rapid stream than the Nith, which it soon afterwards joins; and after rain or thaw, it sometimes comes down with an impetuosity which very suddenly swells the brook into a torrent. Dalgonar hridge, erected over it above where it intersects the parish, is 80 feet in span. The Nith, touching the eastern district for about 2 miles, sparkles along in its usual brilliancy, and is gay and joyous in the adorning of its banks. The loch and water of Urr form the western houndary line, but are shut in by rugged, heathy uplands. The soil along the Nith and the Cairn is rich alluvial loam; in the higher districts, it is, in general, a light, stony loam, upon a till bottom; and, in considerable tracts, it is a spongy or a heathy moss. About one third of the entire parochial area has never been cultivated, and, with only trivial exceptions, is incapable of cultivation; and about 440 acres of the remainder are under wood. The yearly value of raw produce was estimated in 1835 at £15,989 15s. 8d. The landowners are numerous. The Glasgow and South-western railway passes near the east end of the parish along the Nith, and is accessible at the near station of Auldgrith. The parish is also traversed across that end by the turnpike from Dumfries to Glasgow; along the vale of the Cairn, by the road from Dumfries to Minnyhive; and from east to west, through its whole length, by a road leading into Galloway.

The old tower of Lag, situated at Haliday hill, and now a ruin, is said to have been built in the reign of James III., and was protected by an outer

wall and a ditch. It is square and narrow, but massive and towering. Its last inhabitant was Sir Robert Grierson, of infamous memory, for the sanguinary part he acted in the persecution of the Covenanters. In the upper part of the vale of Glenslin, overlooking a gorge or narrow pass, are the two square towers of Bogrie and Sundaywell. The latter belonged, in the times of the persecution, to a man whose memory is odiferous in tradition, John Kirk, who opened his stronghold as a refuge to the persecuted, and afforded frequent shelter and assistance to Blackadder and other ejected ministers. From the deep mountain seclusions in its vicinity, often did the appealing psalmody of 'a conventicle' arise, and echo away along the glens. Friar's Carse, in the vale of the Nith, was anciently a monastic establishment, dependent on Melrose abbey. Though only some detached antequely sculptured stones remain as vestiges of the edifice, the name is commemorated both in a small lake and in the surrounding estate. Adjoining this property is the farm of Ellisland, celebrated as the residence of the poet Burns during the palmiest days of his career; and painted for a place in the gallery of fame, by the linings of his poetic pencil. Dr. Crichton, a proprietor of Friar's Carse subsequent to James Riddle, Esq., the contemporary of Burns, bequeathed to Dumfries £100,000, with which a county lunatic asylum has been erected. The celebrated John Welsh, son-in-law to John Kuox, was a native of Dunscore. Population of the parish in 1831, 1,488. in 1861, 1,554. Houses, 281. Assessed property in 1860, £9,881.

This parish is in the presbytery and synod of Dumfries. Patron, the Crown. Stipend, £170 18s. 8d.; glebe, £42 10s. There are three parochial schools: the master of Dunscore receives £25, the master of Burnhead £30, and the master of Glenslin £25, and in various division the proceeds of £600 of mortifications. The parish church stands at Cottack, was built in 1823, and contains 850 sittings. There are in the parish a Free church, an United Presbyterian church, and a Reformed Presbyterian church, the first with an attendance of about 280, the second with an attendance of about 130. Receipts of the Free church in 1865, £203 16s. The church of Dunscore belonged very early to the monks of Holyrood; and, for a time, it stood on litigated ground between them and the monks of Melrose. Before the Reformation, this parish had several places of worship. One of these, situated on Glenslin water, can still be traced in the vestiges of its walls, and is commemorated in the name of a farm called the Chapel. The old parish-church stood five miles to the eastward of the present one; and its cemetery—containing the remains of Grierson of Lag, and of several families of note—is still in use.

DUN'S DISH. See DUN.

DUNSE, a parish, containing a post town of its own name, nearly in the centre of Berwickshire. It is bounded by Longformacus, Abbey St. Bathans, Buncle, Edrom, and Langton. Its length south-eastward is about 6 miles; and its average breadth is about $3\frac{1}{2}$ miles. The northern division, comprising about one-third of the area, is clothed in a heathy dress, variegated with stripes of pastoral green and autumnal yellow; and running up the acclivity of the Lammermoor hills, sends aloft near the houndary, the conspicuous cone of Cockburnlaw 912 feet above the level of the ocean. See COCKBURNLAW. The southern division undulates along the valley of the Merse, with, in general, a delightfully rolling surface, a rich and fertile soil, and an ample adorning of culture and grove. Dunse-law,

north of the town of Dunse, has a base of between 2 and 3 miles in circumference, and rises in a gradual ascent on all sides, till it terminates in a plain of nearly 30 acres, 630 feet above the level of the sea. Its table-summit was the site of the original town or village, and is still tracked by the vestiges of the entrenched camp of the army of Covenanters, under General Leslie, who here sat down to watch the warlike movements of Charles for enforcing prelacy. Whitadder water comes down upon the parish at its north-eastern angle, and forms its boundary-line over a distance of $2\frac{1}{2}$ miles. A brook called Langton burn flows down from the west, and forms the whole of the southern boundary-line, falling into the Blackadder at the point of leaving the parish. An artificial lake, in the vicinity of Dunse castle, abounds with perch and eels, and forms a smiling feature in the landscape. A moss skirts the south side of the town, stretching from east to west, and, except by one pathway, was in ancient times impassable. Another moss—celebrated for the murder of the Chevalier de la Beaute by Home of Wedderburn, and called, from the name of the victim whose blood it drank, Batties bog—stretches along the confines of the parish of Edrom. About one half of the entire parochial area is in cultivation; about one-twelfth is under wood; and most of the remainder is hill pasture. There are thirteen principal landowners; and three of them are resident in respectively Dunse castle, Wedderburn castle, and Manderston. Dunse castle, situated a little north-west of the town, is a magnificent modern Gothic edifice, agglomerated with a surviving tower of an earlier and ancient structure, believed to have been built by Randolph, Earl of Moray. Wedderburn castle, at the south-east limit of the parish, and Manderston, $\frac{1}{2}$ mile north of the former, are elegant mansions, surrounded by tastefully ornamented demesnes. Dunse was formerly scourged by pestilence, and so late as a century ago, was depopulated by ague and putrid fever; but, in consequence of rapid improvements in draining and cultivating the soil, it attained a healthy climate. Four lines of road diverge from the town nearly in the direction of the cardinal points; and lead the way through the parish respectively toward Edinburgh, Berwick, Coldstream, and Lauder. A branch of the North British railway also commences at the gas works on the south side of the town, and proceeds by way of Cairnbank, and between Wedderburn and Manderston, and through the parishes of Edrom and Chirnside, to a junction with the main line at Reston in the parish of Coldingham. Dunse is rich in the fame of distinguished natives, boasting names of no less eclat among scholars and divines than those of John Duns Scotus, 'the angelic doctor,'—Thomas Boston, the well-known author of 'The Fourfold State,'—Dr. Thomas M'Crie, the biographer of Knox and Melville,—Dr. Abraham Robertson, Savilian professor of astronomy at Oxford,—and Sir Joseph Paxton, the architect of the Crystal palace. Population in 1831, 3,469; in 1861, 3,595. Houses, 533. Assessed property in 1864, £22,495 5s. 9d.

This parish is the seat of a presbytery in the synod of Merse and Teviotdale. Patron, Hay of Dunse-castle. Stipend, £306 10s. 2d.; glebe, £35. Unappropriated tithes, £305 19s. 2d. Schoolmaster's salary, fixed under the act of 1861 at £70, with fees. The parish church was built in 1790, and contains 1,200 sittings. There is a Free church, called Boston church: attendance, 400; sum raised in 1865, £351 6s. 8d. There are three United Presbyterian churches, South, East, and West, with an attendance respectively of 400, 480, and 700.

There are about twelve non-parochial schools,—one of which is a handsome conspicuous Free church school in one of the principal streets of the town.—The name Dunse was anciently written Duns, and is simply the Celtic *dun*,—applied to the site of the original town on Dunse-law.

The Town of Dunse stands on a fine plain at the southern base of Dunse-law, $7\frac{1}{2}$ miles north-east of Greenlaw, $10\frac{3}{4}$ north-north-west of Coldstream, 11 south-west by west of Ayton, $15\frac{1}{2}$ west of Berwick, and 44 by road through Haddington, but 55 by railway, east-south-east of Edinburgh. Situated in the centre of the county, and unrivalled in extent, attractions, and marketing importance, it is the virtual, though not the nominal, capital of Berwickshire. It is neat and modern in its edifices, spacious and tidy in its streets, and pleasing, though not brilliant, in its general burghal appearance. In the market-place—which is a fine open area or square—stands the town-house, a beautiful Gothic structure of modern erection, surmounted by a very elegant and tasteful spire. An array of good houses, large shops, and commodious churches and seminaries, imparts to the town a cheerful aspect. As the scene of most of the legal business of the county, a large body of provincial lawyers figure among its population. Most of the inhabitants are sshopkeepers, handicraftsmen, and dependents on the marketing, from an extensive range of agricultural country. Though there is some weaving conducted in the town and neighbourhood, yet it does not sensibly impress on the town a manufacturing character. A weekly market on Wednesday, three annual fairs for cattle, and quarterly markets for sheep, draw down upon it the stir and the traffic by which it mainly subsists. The fair held on the first Thursday of June is an important one for fat cattle, which are mostly purchased by English dealers. There is usually a small show of sheep also at this fair. The August fair has declined of late years for cattle; but it is also a hiring market, and is held on the 26th of the month, or the Tuesday after when that date falls on a Saturday, Sunday, or Monday. The November fair is held on the 17th of the month. It also has declined. The first of the sheep-markets is held on the fourth Wednesday of March, and is chiefly for the sale of ewes in lamb; the second, on the third Wednesday of May, is for hogs and wethers; the third, on the second Wednesday of July, is principally for lambs, and is also a great wool-market. The fourth sheep-market is held on the fourth Wednesday of September, and is principally for draft ewes. The town has offices of the Bank of Scotland, the British Linen Company's Bank, the City of Glasgow Bank, and the Royal Bank, a savings' bank, insurance offices, several libraries, a news-room, a freemason lodge, and a total abstinence society. Justice of peace small debt courts are held monthly. Sheriff small debt courts are held six times a-year. The sheriff county courts and commissary courts are held on all Thursdays, except the last in each month, also on every Tuesday and Friday, during session. The sheriff-clerk's office also is in Dunse. An act of parliament passed in 1853, after narrating the inconvenience of continuing to make Greenlaw the county town, enacted that the county courts might be held as well in Dunse, and authorized the Lord Advocate to arrange from time to time the holding of the courts in either town.

Dunse is of considerable antiquity, and appears to have been at one time a free lugh-of-barony, whose burgesses had power to choose a magistracy, and create corporations. In 1670, Sir James Cockburn of Cockburn, who had purchased the estate of Dunse from Hume of Ayton, obtained from Charles

II. a charter, erecting it under him into a burgh-of-barony; and since that date, he and his successors in his claims had nominated a haillie to its government, without consulting the feuars and inhabitants. The baronial right of superiority was subsequently acquired, and continues to be possessed by Hay of Drummelzier. The south part of the town stands on the barony of Crumstane, belonging to the same superior. Yet the inhabitants of Dunse are a private association, who manage the police and the common good, and are called 'the feuars of Dunse,' in the same way that the inhabitants of royal burghs are called burghesses. The common good or property of the feuars consists of the town-house, which draws rent from the county of Berwick, and parties occasionally using its hall, and which is fitted up in the lower floor in shops; 10 acres of land on a neighbouring moor, which contain a whinstone quarry; and the proceeds of the manre of the town, and the weighing-machine or steel-yard. The annual revenue derived from these sources is about £130. Six corporations or crafts formerly existed, and claimed exclusive privileges; but during the last 27 years, they have practically ceased. During 120 years after the cession of Berwick-upon-Tweed to England, Dunse shared with Lauder the privilege of being the county-town; and not even in favour of Greenlaw, was it wholly deprived of that privilege till the year 1696. Population in 1834, 2,656; in 1861, 2,556. Houses, 346.

DUNSHILT. See DANESHALT.

DUNSINNAN, or DUNSNANE, one of the Sidlaw hills, in the parish of Collace, 8 miles north-east of Perth, and in the Gowrie district of Perthshire. It rises in a conical form, with a flat and verdant summit, to the height of 1,114 feet above sea-level, and 800 feet from its base, and commands a fine view of Strathmore and Blairgowrie. At one place is to be traced a winding road cut into the rock; on the other sides it is steep and of difficult access. It has been a military station, defended by a strong rampart and fosses which went quite round the upper part of the hill. The area within the rampart is of an oval form, 210 feet long, 130 broad, and a little lower than the ruins of the rampart itself, the height of which, as appears from the immense mass remaining, must have been great. This stronghold, which is 15 miles distant from Birnam, is attributed to the usurper Macbeth; and the traditions in the neighbourhood concerning the predictions of the witches, and the defeat and death of the Thane, are so similar to Shakspeare's history of Macbeth, that it is probable the great dramatist had visited the spot himself when in Scotland.—Dunsinnan house, delightfully situated amid extensive plantations, with a southern exposure, is a fine mansion, and has been recently enlarged and improved. William Nairne, Esq., a younger son of the Dunsinnan family, toward the close of last century, and during nine years of the present, adorned the situations of senator of the College of Justice, and member of the High court of Justiciary, bearing the title of Lord Dunsinnan.

DUNSKETH. See NIOG.

DUNSKERRY, an islet in the Pentland frith, 4 miles north of the promontory of Farout-head, Sutherlandshire.

DUNSKY. See PORTPATRICK.

DUN'S MOOR. See DUN.

DUNSTAFFNAGE, an ancient castle in Mid Lorn, Argyleshire, remarkable for being one of the first seats of the Scottish princes. It is situated on a promontory, almost insulated in that beautiful arm of the sea, Loch-Etive; and if romantic and magnificent scenery, and the pleasing interchange

of mountain and valley, wood and water, sea and land, island and continent, conjoined with all those recollections, borrowed from the earliest ages of our history, which are most gratifying to national feeling, be viewed as inducements in selecting the site of a royal residence, it might well be questioned whether Scotland could present one more desirable than the vicinity of Dunstaffnage. On the west, Dunstaffnage fronts that beautiful and fertile island, fitly denominated Lismore, or Leasmore, 'the great garden,' beyond which towers the bleak and rocky Mull. The prospect terminates, towards the north, with the lofty mountains of Morvern; while the view is enriched with a cluster of small islands scattered in various directions. Behind it lies that fortress, celebrated in our ancient chronicles under the name of BERIGONIUM, and also the ruined priory of ARDCHATTAN. See these articles.

"The builder of this castle," says Grose, "and the time of its construction are unknown. It is certainly of great antiquity, and was once the seat of the Pictish and Scottish princes. Here, for a long time, was preserved the famous stone, the palladium of Scotland, brought, as the legend has it, from Spain. It was afterwards removed by Kenneth II. to Scone, and is now in Westminster abbey, brought thither by King Edward I. On it was the following inscription:

'Ni fallat fatum, Scoti quocunque locatum
Invenient lapidem, regnare tenentur ibidem.'"

Our venerable Wyntoun has thus rendered this ancient national prophecy:

But gyf Werdys falyhand be,
Quhare-eyvr that stane ybe segyt se,
Thare sail the Scottis be regnand
And lordys haleoure all that land.

Boece has given the same legendary prediction. According to Wyntoun, Fergus, the son of Erc, brought this "stone of power" with him from Ireland into Scotland; but, before it reached Dunstaffnage, it had visited Icolmkill in its way. He, indeed, altogether omits the mention of this palace in the history of its peregrinations, which might almost vie with those of the cottage of "our Lady of Loretto." For, according to his account, Fergus

Brought this stane wytht-in Scotland
Fyrst quhen he come and wane that land,
And fyrst it set in Ikkolmkil,
And Skue thare-eftr it wes brought tyle
And thare it wes syne mony day,
Qhyll Edward gert have it away, &c.

Leslie asserts that it was brought from Argyle to Scone by Kenneth Macalpine. "This castle," Pennant has observed, "is fabled to have been founded by Ewin, a Pictish monarch, cotemporary with Julius Cæsar, naming it after himself, Evonium." Grose has said, "According to vulgar tradition, this castle was founded by Edwin, a Pictish monarch." It is probable that the name has assumed this form by an error of the press. But this good-humoured writer has undoubtedly fallen into an error, when he speaks of this as "a vulgar tradition:" for, as far as we can learn, there is not a vestige of the name Evonium among the natives. It seems to have no other authority than that of Boece, who acknowledges that the intention of the monarch, in designating the fortress which he erected from his own name, was in fact frustrated by the predominance of the vulgar designation. Although the so-called Evonium lies on the bay of Oban, even faucy can afford no aid from any supposed similarity; for the term Oban is explained 'the White bay;' whence

* "Unless the Destinies fail," or "be defective."

the name of the modern town of Oban, at the distance of 3 miles from the palace.

The castle is of a square form, 87 feet within walls, having round towers at three of the angles. The average height of the walls is 66 feet; 9 in thickness. The external measurement of the walls amounts to 270 feet. The circumference of the rock, on which it stands, is 300. The castle has its entrance from the sea by a staircase; but it is supposed that, in former ages, this was by means of a drawbridge. Only part of the building is habitable, the rest of it being in ruins. The masonry is considered very ancient. At the distance of about 400 feet from the castle are the remains of a chapel formerly appropriated to the religious services of its inmates. This, in length, is 78 feet; in height, 14; and in breadth, 26. It is said, that some of the ancient regalia were preserved here till the 18th century, when, in consequence of the infirmity of the keeper, they were embezzled by the servants, who could not withstand the temptation excited by the silver that adorned them. We are informed, however, that they left a battle-axe, 9 feet in length, of beautiful workmanship, and embossed with silver. Pennant has given a drawing of a small ivory figure found here, which he thinks "was certainly cut in memory of" the celebrated "chair, and appears to have been an inauguration sculpture. A crowned monarch is represented sitting in it with a book," rather a scroll, "in one hand, as if going to take the coronation-oath." Speaking of the ruined chapel, he says, that it had once been an elegant building, and has at one end an enclosure, used as a family cemetery.

As, according to all the slender remains of our national history, the fatal chair of royalty was transferred to Scone, after the union of the Scots and Picts under the son of Alpin, it might naturally enough be supposed that Dunstaffnage lost much of its former importance. Being no longer—as it had been under the Dalriadic kings—the regal seat, nor, from the far greater extent of dominion, in a situation adapted for this pre-eminence, its name scarcely appears in our annals for some centuries. Indeed, it seems highly probable, that very soon after it was deserted by its royal possessors, it became a stronghold of the Norwegians. About the year 843, Kenneth Macalpine transferred the seat of government from Dunstaffnage to the palace of Forteviot, in Perthshire. By this time the Norwegians had begun to make inroads on the western coast of Scotland, and had taken possession of a considerable part of Ireland; and we may trace them in the immediate vicinity of this regal fortress. See DUNOLLY. We lose sight of Dunstaffnage for several centuries, till it again rises up to view during the eventful reign of Robert Bruce. It was then possessed by Alexander of Argyle, father of John, whom Archdeacon Barbour calls the Lord of Lorn, and who, he says, dwelt in the vicinity of the head or source of Tay.

The lord of Lorne wonnyt thar by,
That was capitale enemy
To the king, for his emys sak,
Jhon Cumyn; and thought for to tak
Wengeance apon cruell maner.

John, called the Red Cumyn, whom Bruce had slain at Dumfries under the imputation of treachery, was *eme*, that is, uncle, to John of Lorn; Alexander of Argyle, the father of the latter, having married Cumyn's daughter. Sir Walter Scott, having remarked, that according to Lord Hailes, she was his aunt, adds that "the genealogy is distinctly given by Wintoun.

The thryd douchtyr of Red Cwmyu,
Alysawndyr of Argayle syne

Tuk, and weddyt til hys wyt:
And on hyr he gat in-tyl hys lyf
Jhon of Lorne, the quhilk gat
Ewyn of Lorne eftyr that."

This Alexander adhered to the interests of Bahol. At the time here referred to, Bruce was defeated in the battle of Dalry, near Tyndrum; but afterwards, A. 1308, having defeated the army of John of Lorn, he besieged his father in his fortress of Dunstaffnage

The king, that stoute wes, stark, and bauld,
Till Dunstaffnech rycht sturdely
A sege set; and besyly
Assaylit the castell it to get—
Schy Alexander off Arguile, that saw
The king distroy wp, cleue and law,
His land, send treyteris to the king;
And come his man but mar duelling.
And he resawyt him till his pess.

Bower, in his continuation of Fordun's Chronicon, says that Alexander rendered the castle to Bruce; but that, refusing to do homage to him, he received from the king a safe-conduct for himself and all who wished to retire with him, and fled into England, where he died. This account is more credible than the other; as the father certainly died in England, and John his son fled by sea, continuing, as we learn, from Barbour, in his rebellion. It is in relation to this interesting period of our history that Sir Walter Scott has introduced the following notice of this palace, in that beautiful poem, the Lord of the Isles, the scene of which is laid in this enchanting district of this country.

"Daughter," she said, "these seas behold,
Round twice an hundred islands roll'd,
From Hiort, that hears their northern roar,
To the green Ilay's fertile shore.
Or mainland turn, where many a tower
Owns thy bold brother's feudal power,
Each on its own dark cape reclined,
And listening to its own wild wind.
From where Mingary, sternly placed,
O'erawes the woodland and the waste.
To where Dunstaffnage hears the raging
Of Connal with his rocks engaging."

The lands of Dunolly still belong to the Macdougals, who claim as their ancestor this Alexander of Argyle. Their claim, indeed, seems indisputable. "The islands," Pennant has remarked, "remained governed by powerful chieftains, the descendants of Somerled, Thane of Heregaidel, or Argyle, who, marrying the daughter of Olave, King of Man, left a divided dominion to his sons Dugal and Reginald. From the first were descended the Macdougals of Lorn; from the last the powerful clan of the Macdonalds. The lordship of Argyle, with Mull, and the islands north of it, fell to the share of the first; Islay, Kintyre, and the southern isles, were the portion of the last." Nisbet gives the following account of this family; although he has strangely disguised the name of the place. "There was," he says, "a great and old family of this name in Argyleshire, called M'Oul, M'Dowall, or M'Dugall, Lords of Lorn, whose title and lands went, by an heiress, to Stewart, Lord of Lorn, and are now in the family of Argyle; Colin Campbell, the first Earl of Argyle, having married Isabel, heiress of Stewart of Lorn.—The heir-male of this family is John M'Dougall of Dunolick, whose castle of Dunolick was the mansion-house of the said family." The late proprietor informed Dr. Jamieson, that they had lost by far the greater part of their lands in consequence of their adherence to the interest of Baliol; and that on this ground Dunstaffnage had passed from them to the family of Argyle, who claimed this as their share of the spoil. In conformity with this account, Sir Walter Scott has said; "When the wars between the Bruce and Baliol factions again broke out in the reign of David II., the lords of Lorn were again

found on the losing side, owing to their hereditary enmity to the house of Bruce. Accordingly, upon the issue of that contest, they were deprived by David II. and his successor of by far the greater part of their extensive territories, which were conferred upon Stewart, called the Knight of Lorn. The house of Macdougall continued to survive the loss of power, and affords a very rare, if not an unique, instance of a family of such unlimited power, and so distinguished during the middle ages, surviving the decay of their grandeur, and flourishing in a private station."—A charter of Robert I. is still extant, granting to Arthur Campbell, fourth son of the brave Sir Colin Campbell of Lochow, "the constabulary of Dunstaffnage, and the mannes thereof, whilk Alexander Argyle had in his hands." David II. confirms a charter granted by his father to William de Vetere Pont (Weapont) dated at Dunstaffynch in the 4th year of his reign. "I find," says Pennant, "about the year 1455, this to have been a residence of the Lords of the Isles; for here James, last Earl of Douglas, after his defeat in Angus, fled to Donald, the regulus of the time, and prevailed on him to take arms, and carry on a plundering war against his monarch James the Second." He refers to Hume of Godscroft as his authority; but all that Godscroft says is: "The Earl himself by flight got him to Dunstaffnage, where finding Donald Earl of Ross, and Lord of the Isles, he incited him to make war against the King in his favours, and after he had engaged him therein, he withdrew himselfe again into England." This, however, does not amount to a proof that Dunstaffnage was then occupied as a palace by these usurping reguli. Buchanan merely says, that Earl James met with Donald, the tyrant of the isles, and Earl of Ross, at Dunstaffnage;—"ad Stephanodunum *convenit*." From this phraseology we can only infer that this was the appointed place of meeting; and it was most probably selected as the most convenient place for both; the Earl of Douglas, having no maritime accommodation, coming to that point which Donald could easily reach by sea. We cannot, indeed, suppose that this had become "a residence of the Lords of the Isles," without assuming it as a fact, that that branch of the noble family of Argyle, to which this fortress had been appropriated by Robert I., had been expelled from it.

DUNSYRE, a parish, containing a village of its own name, on the north-east verge of the upper ward of Lanarkshire. It is bounded by the counties of Edinburgh and Peebles, and by the parishes of Dolphinton, Walston, and Carnwath. Its post-town is Dolphinton. Its length southward is 6 miles; and its breadth is 5. Its surface lies high, most of it being more than 700 feet above the sea level, and contains a steep and precipitous hill about 1,250 in height, from which the parish is understood to have received its name. The climate is rather damp and ungenial. Springs are abundant; and the streamlet Medwin rises in the north-east corner, near the foot of the hill, called Craigengar. The soil is generally of a sandy nature, or a mixture of sand and clay, and is not very fertile. About 3,000 acres are in tillage, about 30 are under wood, and about 8,000 are either pastoral or waste. Much of the surface is wildly moorish; and part of this contains a dismal lake of about a mile in circumference. The yearly value of raw produce was estimated in 1834 at £9,052. Assessed property in 1860, £3,449 0s. 0d. The road from Carnwath to Edinburgh, traverses the northern border; and a station on the Edinburgh fork of the Caledonian railway is easily accessible. The village of Dunsyre is a small rural place, on the southern border of the parish, about 2½

miles north of Dolphinton, and 6½ cast of Carnwath. Population of the village, about 50. Population of the parish in 1831, 335; in 1861, 312. Houses, 52

This parish is in the presbytery of Biggar, and synod of Lothian and Tweeddale. Patron, the Crown. Stipend, £156 15s. 9d.; glebe, £28. Hamilton of Wishaw says—"The tenants of this parish were anciently a part of the patrimonie of the abhacie of Kelso; but in respect its but a small parish, they are wholly possessed by the incumbent." Salary of schoolmaster, under the recent act, £45. The route by which the army of Agricola reached the Roman camp at Cleghorn can be traced through the parish; and several cairns occur along the line, in some of which urns have been found. Dunsyre comprised a portion of the lands which were exchanged by the ambitious Earl of Bothwell with the Earl of Angus, for the lands and castle of Hermitage in Liddesdale. It was sold, however, by James, Marquis of Douglas, to Sir George Lockhart, the president of the Court of Session, in the hands of whose successors almost the entire parish still remains. In the troubled times of the persecution, Dunsyre often afforded a retreat to the Covenanters; and the last sermon preached by the amiable Donald Cargill was upon Dunsyre common in 1669. William Veitch, one of the most celebrated of the preachers of the Covenant, was at one time tenant of Westhills in the parish, from which he was compelled to flee, after the battle of Rullion Green.

DUNTALCHAIG (Locu), a lake on the mutual border of the parishes of Dores and Daviot, Inverness-shire.

DUNTOCHER, a small manufacturing and post town in the parish of West Kilpatrick, Dumhartonshire. It stands on a small stream, about 1½ mile from the Clyde, and 9 miles north-west of Glasgow. The stream descends from two lakes about 3 miles to the north-west, and ploughs its way past the town along a fine glen, opening a vista toward the Clyde, and presenting a remarkably large amount of water-power. A bridge over it at the town is very ancient, and, though often repaired, is believed by some antiquaries, and asserted by a current tradition, to be a Roman structure, perhaps the oldest bridge in Scotland. On a contiguous hill stood a Roman fort, which has been nearly effaced, but not without yielding memorials to modern research. In 1775, were discovered under ground on the side of the hill, several rows of pillars constructed of curious reddish tiles, and forming a labyrinth of passages of about 18 inches square, and floored over with larger tiles of the same kind, the whole surrounded by a stone wall, and conjectured to have been a sudatorium or hot bath for the use of the garrison. In a neighbouring field was found a Roman altar; and on various spots in the vicinity have been found also Roman querns, vases, and coins. The modern town, both in itself and as the centre of a small district, is a seat of much industry. It dates its prosperity from Mr. William Dunn's establishing four extensive factories for the spinning and weaving of cotton, at successive periods from 1808 to 1831. One of these is in the town itself, and the other three are at respectively Fairley, Miltonfield, and Hardgate, all within a mile. The quantity of cotton yarn spun annually is nearly a million of pounds, and the quantity of cotton cloth manufactured probably two millions of yards. This department of industry forms the main support of the inhabitants; but there are also a manufactory of agricultural implements in Duntocher, and lime-works, coal-works, and quarries in the near vicinity. The town has a savings' bank, a public library,

a chapel of ease, a Free church, two United Presbyterian churches, and a Roman Catholic chapel. Daily communication is maintained by omnibus with Glasgow. Population in 1861, 2,360. Houses, 232.

DUNTREATH. See STRATHBLANE.

DUNTROON. See DUNDEE.

DUNTROON CASTLE, an ancient baronial fortalice, now in a state of good repair as a mansion, at the south-west extremity of the parish of Kilmartin, Argyleshire. It occupies a picturesque situation, in front of knolls, rocks, and wood, overhanging the Crinan canal and the sea, and presents an imposing appearance to strangers passing through the canal. It belonged formerly to a branch of the Campbells, who took their designation from it; but it belongs now to Mr. Malcolm of Pottaloch. The famous Colkitto, in his invasion of Argyleshire in the summer of 1644, wished to take this castle, but could not succeed. On his approach to it he sent forward his piper, in the capacity of a spy, to procure information and mislead the inmates. The piper, on getting in, found that the place was strong enough to resist all Colkitto's force, that the entrance to it was so narrow as to admit only one person at a time, and that he himself was speedily suspected, inasmuch as to be obliged to yield himself prisoner in one of the upper turrets; and when, by and bye, he observed through some crevice or loop-hole that Colkitto was drawing near, he contrived to warn him of the danger of making an attack by playing on his bag-pipes the pibroch,—

"A Cholla mo ruu seachain ar tur, seachain an tur,
A Cholla mo ghaill seachain an caol, seachain an caol,
Tha mise an laimh, tha mise an laimh."

That is,

"Dearest Coll, shun the tower, shun the tower,
Beloved Coll, shun the sound, shun the sound,
I am in hand, I am in hand." I am a prisoner

Colkitto understood the warning; and, supposing the castle to be impregnable, he left his faithful piper to his fate, and continued his career of plunder and devastation, through the estates of Duntroon, Rassly, and Kilmartin, away onward to Loch-Awe.

DUNTULM, a bay and an old castle, in the parish of Kilmuir, and near the north-western extremity of Skye, Inverness-shire. The bay is comparatively open, yet affords anchorage and shelter in some winds. The castle was originally a Danish fort, and afterwards, by reconstruction and great extension, the magnificent family residence of the Macdonalds, descendants of the Lords of the Isles. It stands on a lofty perpendicular rock, whose base is washed by the sea, and seems to have been impregnable. It has long been a ruin; yet it still displays some remains of architectural decoration.

DUNURE, a post-office village and small seaport, in the parish of Mayhole, Ayrshire. It is situated on a small bay, 7 miles south-west by south of Ayr. A harbour was formed, in 1811, on the west side of the bay, within a projecting point of land; but it proved to be of small value, and was allowed to go to ruin. Round the point of land, the water is from 4 to 20 fathoms deep, with a level, clean, sandy bottom and good anchorage. From this deep water, a passage was cut, 150 feet wide at bottom, through the rock, to a square basin, with from 700 to 1,000 feet of quay, all sheltered by high ground, and screened by lines of buildings forming a quadrangle. The access from the sea is easy and safe in almost any wind, and the egress is so facile that a vessel, as soon as she leaves the harbour, can at any time and at once work to sea. The depth of

water in the harbour is 12 feet at ordinary spring tides, but could be artificially increased to nearly 30 feet. Yet in spite of all these advantages, on a coast so devoid of natural shelter, so inhospitable to shipping, and so overlooked by a productive country, the only craft frequenting this place has been an occasional sloop in the agricultural interests and a few fishing-boats.—In the vicinity, on the brink of a lofty sea-cliff, high above the waves, stands the ruin of Dunure Castle, the original residence of the noble family of Kennedy. It bears marks of high antiquity, and was formerly surrounded by a ditch and wall. It figures prominently in some wild scenes in the history of the Kennedys,—and especially so in events connected with the tragedy of Auchendrane. See MAYBOLE.

DUNVEGAN, a post-office station, a harbour, and a mansion, in the parish of Duirinish, on the west coast of Skye, Inverness-shire. They are situated on the north side, and near the head, of a bay which penetrates the land 10 miles on the south side of the peninsula of Vaternish, and is called variously Loch-Fellart and Loch-Dunvegan. Here is a good inn. Communication outward is regularly maintained by packet-boat. The situation, in a relative point of view, is nearly the same for the west coast of Skye as Portree is for the east. The mansion of Dunvegan is the principal seat of Macleod, the chief of the ancient and powerful clan of that name. It is partly old and partly modern. The modern part forms two sides of a small square; and on the third side is the skeleton of a castle of unknown antiquity, supposed to have been a Norwegian fortress when the Danes were masters of these islands. The entire pile, both exteriorly and interiorly, has recently undergone very considerable alterations, and is now one of the finest residences of its class in the Highlands. Several remarkable heir-looms are preserved in it,—connected with the curious usages and the wild superstitions of the olden times; and it is rarer than most old places in those weird associations for which all Skye, but especially Bracadale, has a bad pre-eminence. Dr. Johnson, and also Sir Walter Scott, spent a night in it; and both make special record of its ghostly traditions. Sir Walter, indeed, seemed to be so fascinated with these as to lose for the moment his right ordinary use of his eyes. "He gives a minute account of Dunvegan Castle, which, notwithstanding his unrivalled power and generally minute accuracy in the description of old towers and castles, is more picturesque than correct; and, in describing the scene to be witnessed from the window of 'the haunted chamber,' he allows his imagination to deceive him completely, when he states that 'Macleod's Maidens' formed an interesting part of it; for these pillars are not visible from any point within four miles of the castle." See DUIRINISH.

DUNWAN, a hill, 2½ miles south-south-west of the village of Eaglesham, and on the south-eastern verge of Renfrewshire. It forms the water-shed of the county at the sources of the White Cart, and has an altitude of about 1,000 feet above sea-level.

DUNYCOICH, or DUNYQUOICH. See INVERARY.

DUPLIN, or DUPPLIN, a parish in Perthshire, united in 1618 to that of Aberdalgie. See ABERDALGIE. This was the scene of an engagement between Edward Baliol and the Earl of Marr, on the 12th, or as some say the 18th, of August, 1332. Baliol having landed near Kinghorn, and routed the troops under the Earl of Fife who opposed his landing, marched northward, and encamped on the Millar's acre at Forteviot. The Earl of Marr heard at Perth,

"That all thare fays cummyn ware
To Forteviot, and thaim thure

Had lwygd in a lytl plas,
The Mylnarys Akre it calyed was;
And men sayis, bath hors and man
In that akyre war lwygd than."

The Earl of Marr was encamped, with a numerous army, on a rising ground on the opposite side of the river Earn, near to Duplin. The contemptible appearance of Baliol's forces, confined within such narrow bounds, proved a snare to the Royal army, who laughed at the idea of danger from a mere handful of enemies. Total carelessness was the natural consequence; and ere day dawned, the English had crossed the river, and attacking an army that had abandoned itself to intemperance, easily put it to a complete route. Some monuments of antiquity appear in the neighbourhood; but whether they have been erected as memorials of this disastrous battle, or claim an earlier era, is uncertain. There is a stone cross, quite entire, a good way up the acclivity, on the opposite bank of the Earn, almost straight north from the ford by which Baliol's army passed the river; and another on the south of Forteviot, upon a rising ground, called Dronachy, lying broken over at the pedestal, on which are many emblematical figures. About half-a-mile north from the first of these, a large tumulus or cairn was opened, and in it were found some coffins formed of rough flat stones, containing many fragments of bones. About 60 years ago a stone was found near the site of the place, having two lambs carved on it. Duplin-castle, the seat of the Earl of Kinnoul, noticed in our article on Aberdalgie, is situated about 4 miles south-west of Perth, and about the same distance west of Bridge-of-Earn, and commands a magnificent view of nearly the whole valley and basin of the Earn. This noble mansion was visited, in September 1842, by Queen Victoria and Prince Albert, in their progress to the Highlands.

DURA, a post-office station subordinate to Ben-awe, Argyleshire.

DURA DEN, a picturesque winding ravine, in the parishes of Ceres and Kemback, Fifeshire. It intersects from south to north the range of hills flanking the south side of Stratheden, and is traversed by the Kem or Kame, a rivulet of about 7 miles length of run from the parish of Kettle to the Eden. Dura den has a similar scenic character to Glenfarg, but is on a smaller scale. Its sides exhibit interesting sections of the rock-formations of the district,—yellow sandstone and the strata of the coal-measures. A bleachfield was established some thirty years ago, or upward, in Dura den.

DURIE, an estate in the parish of Seonnie, Fifeshire. It comprises about three-fifths of the parish, and extends to the coast. The town of Leven is entirely feued from it. The mansion house and pleasure-grounds are situated to the north of the town. This estate is the property of Charles Maitland Christie, Esq., but belonged formerly to a family of Gordons, and anciently to the family of Durie of that ilk. Sir Alexander Gordon, a proprietor of it in the 17th century, was a famous lord-of-session. He made a collection of the decisions of the court of session, from July 1621 to July 1642, which were afterwards published by his grandson, and are known by the name of Durie's Practicks. He was one of the most eminent men of his age. A coal worked in mines on the Durie estate, now exhausted, was long celebrated both at home and abroad for its excellence; insomuch that prime coal from any quarter came to be called in Holland and elsewhere Durie coal.

DURINISH. See DURINISH.

DURISDEER, a parish, containing the post-office

village of Durisdeer, and part of the post-office village of Carron-bridge, in the north of Nithsdale, Dumfries-shire. It is bounded by Lanarkshire, and by the parishes of Morton, Penpont, and Sanquhar. Its length south-westward is $7\frac{1}{2}$ miles; its greatest breadth is $5\frac{1}{2}$ miles; and its area is about $23\frac{3}{4}$ square miles. In the north it is bleak, inhospitable, and highland. Hills and mountains press so tumultuously upon the glens, that a tourist, in following a winding path, is puzzled to conceive how an opening among the heights which seem to forbid his progress can exist. The central, southern, and south-eastern sections are comparatively low in surface, and beautiful in diversity. Here the Nith diagonally intersects the parish, over a distance, including sinuosities, of 8 or 9 miles; and, all the way along, it luxuriates in much richness of scenery. From the narrow pass with shelving or precipitous banks, clad in wood and foiled by rock and sear, to the broad plain, cultivated like a garden, and screened by a mountain-barrier, the basin of the river exhibits nearly every variety of landscape, and astonishes the tourist by the suddenness and the beauty of its transitions. Near the southern boundary, where the vale is widest, stands the gorgeous ducal pile of Drumlanrig, surrounded with the fairy-land of its demesne. See DRUMLANRIG CASTLE. From north to south other parts of the parish, even its least cheerful and most rugged, are variegated, and occasionally tinged with beauty, by the courses of Carron water, and Kirk, Enterkin, and Mar burns. The soil in the low grounds is in general deep, loamy, and fertile. The uplands in the north-eastern border ascend to the water-shed between the systems of the Nith and the Clyde, and comprise part of the Lowther mountain; they enclose the hither part of a remarkable alpine pass, called the Wallpath, between Nithsdale and Clydesdale; and they contain the same rocks and minerals as the neighbouring mines of Wanlockhead and Leadhills. About one half of the entire parochial area is waste or pastoral, and about 2,000 acres are under wood. The Duke of Buccleuch is the principal landowner. The yearly value of raw produce was estimated in 1835 at £15,254. Assessed property in 1860, £7,934 0s. 0d. The parish is traversed along the vale of the Nith, by the turnpike from Dumfries to Glasgow, and along the vale of the Carron by that from Dumfries to Edinburgh, the two forking off from a hitherto common line immediately after entering the parish at Carron-bridge. The Glasgow and South-western railway also traverses the parish, and has a station at Carron-bridge. The village of Durisdeer is a sequestered place, on the Kirk burn, $3\frac{1}{2}$ miles north-north-east of Carron-bridge. Population of the village, 107. Houses, 27. Population of the parish in 1831, 1,488; in 1861, 1,320. Houses, 265.

This parish is in the presbytery of Penpont, and synod of Dumfries and Galloway. Patron, the Duke of Buccleuch. Stipend, £256 9s. 4d.; glebe, £25. Unappropriated tithes, £1,267 15s. 8d. There are two parochial schoolmasters, one of whom has under the recent act a salary of £33, the other a salary of £37, and each about £10 fees. The parish church was built in 1720, and contains 350 sittings. There is a Free church preaching-station, the receipts of which in 1865 amounted to £29 4s. 9d. There are two private schools. Durisdeer was originally a rectory, belonging to the see of Glasgow, and served by a vicar; and, in the 14th century, was constituted a prebend of Glasgow. There were anciently two chapels; vestiges of which are still apparent. One was situated on the Carron, and still gives the name Chapel to the farm on which it stood. In

the present parish-church is a grand mausoleum of the Drumlanrig Douglases. An aisle, surmounting the sepulchral vault, has a marble monument of multiform sculpture, and imposing appearance, but in a style offensive to modern taste, commemorative of James, second Duke of Queensberry, and his Duchess. On the sculptured wall, the ducal pair are represented as lying on a couch, dressed in state. The Duchess is stretched in the attitude of death, her hands folded over her breast. The Duke appears behind her, half raised on his elbow, wearing an enormous wig, and contemplating the countenance of his lady. The tout-ensemble of the sculpture, however, is anything but lugubrious; and, but for the affecting suggestion of the mutability and vanity of all human grandeur, presents such a display of the trappings and grotesque adornings of antique courtly apparel, as would be irresistibly ludicrous. North of the church, in the Wallpath, are vestiges of a Roman camp. Along the Wallpath the great Roman road through Nithsdale passed to join in Lanarkshire the road thither through Annandale. Durisdeer, according to one version of the old ballad, was the scene of Johnie o' Breadislee's 'woeful hunting'

— Johnie bused up his gude bend bow,
His arrows ane by ane;
And he has gan to Durrisdeer
To hunt the dun deer down.

The 'silly auld carle' tells the seven Foresters of Hislington what he has seen 'atween the water and the brae,' and a conflict, in which Johnie slays all the seven, but is mortally wounded himself, issues:

Now Johnie's gude bend bow is broke,
And his gude gray dogs are slain;
And his body lies dead in Durrisdeer,
And his hunting it is done.

DURN. See FORDYCE.

DURNESS, a parish, containing a post-office station of its own name, in Sutherlandshire. It comprises the north-western extremity of the mainland of Scotland. It is bounded on the west and the north by the sea, on the east by Tongue, and on the south by Edderachillis. It comprehends the cultivable lands on the eastern side of Loch Eriboll, commonly called Westmoin; the tract denominated Strathmore, and intersected by the river Hope; Durness Proper, or the peninsular tract stretching between Loch Eriboll and Durness bay and kyle; and the district of Parf, lying between the Atlantic and the kyle of Durness, and extending south to the Ashir district of Edderachillis. Its length from east to west is about 25 miles; its average breadth nearly 20 miles; and its superficial area, including the numerous lochs or arms of the sea which deeply indent its coasts, 300 square miles. The scenery is mostly wild and mountainous. It is nearly destitute of wood; and considerable tracts are occupied by bleak mosses. Towards the shore, however, where the peninsula of Durness terminates in Farout-head, there is a series of beautiful fields, and rich green pasture. On the sides of the hills, too, upon spots where shealings have been occasionally erected to shelter the shepherds in summer and harvest when feeding their flocks at a distance from their ordinary dwellings, the sward is richly variegated with clover and other valuable herbage. Along the shore a tract of flat land extends, in some places, to the very verge of the ocean; in others, there is a considerable extent of benty sands; while at the head-lands, piles of rocks tower to a vast height. The shores themselves are almost everywhere rocky and destitute of vegetation. The tides rush in with great rapidity, especially at Cape Wrath, where their violence is increased by a shoal

which runs out north by east from the extremity of the cape for 5 or 6 miles, and is covered by from 16 to 24 fathoms of water. See CAPE WRATH. About a mile from the coast is the Staigs, a rock the top of which is always above water, but which is nevertheless formidable to ships approaching the cape by night. Loch Eriboll forms a spacious harbour, in which even the smallest sloop enjoys perfect safety. It penetrates the country in a south-west direction, nearly 11 miles from the Whiten-head, which lies on the left hand of the entrance, and whose white and elevated rocks mariners distinguish at a distance, even in the night. On the west, or right hand of the entrance, is Rispond, a small dry harbour, with basin and pier, for fishing-boats and small craft. See ERIBOLL. To the west of Farout-head is Durness bay, a large shallow bay of rough sea, too open to afford shelter for vessels. Its upper extremity is prolonged into a narrow kyle running inland in a south-west direction up Strathdinard. Between Durness bay and Cape Wrath the cliffs are very magnificent. In the cavern of Smo, about a mile east of the parish-church, sounds are distinctly repeated by a remarkable echo. This cavern is, indeed, in many respects an object worthy of notice. It is, in some places, 100 feet wide, and from 60 to 180 feet in height. A short way within its mouth there is a perforation in the arch, through which a stream of water descends, and is received into a subterraneous lake. Tradition says, that the only person who ever had courage to attempt to explore it, was one Donald, Master of Reay, but that the extinction of the lights, by foul air, obliged him to return before he could advance to the extremity of the lake. Modern travellers, however, have the option of making a profound and most romantic exploration of the cavern for themselves, with the aid of a boat and lights furnished by the neighbouring peasantry. Macculloch notices a cave near the Whiten-head which, he says, "exceeds in beauty, splendour, and sublimity of effect, all the caves of Scotland except perhaps that of Papa Stour." The principal mountains in this alpine territory are Benhope in Strathmore; Ben-Spionnadh, which has an elevation of 2,566 feet; Cranstachie in Durness Proper; and Fairbheinn and Bendearg in the Parf district. See BEN-HOPE. The principal lake is Loch Hope. See HOPE (LOCH). There are numerous small lochs. Loch Borley in Durness Proper, affords, in great abundance, a species of char called 'Red Bellies,' and, in Gaelic, Tarragan. They are caught best in October, when they repair to the shallow water to deposit their spawn. From Loch Dinard flows a stream of the same name, which, after a north-east course of about 10 miles, flows into the kyle of Durness. The Hope, flowing through Strathmore, is a fine stream. There are two fertile islands, each about a mile long,—Hoan, near the entrance of Loch Eriboll, and Choaric, within that loch,—the former recently inhabited, and both containing burying-grounds, which are now disused. Limestone lies along nearly the whole of the kyle of Durness, some of it nearly of the quality of good marble, and much of it interstratified with quartz, and all lying unconformably on deeply inclined strata of gneiss and hornblende slate. Much of the parish is eminently interesting to geologists, but without containing any considerable mineral wealth. Only about 500 acres of the entire area are in cultivation; and only about 1,300 more are capable of being profitably cultivated. The great bulk of agriculture here takes the form of sheep-husbandry. The total real rental, inclusive of fisheries and kelp-shores, was only about £450 in 1796, and £2,550 in 1834. The Duke of Sutherland is the

only landowner. Nearly all the population is resident either on the shores of Loch Eriboll, or on the sea-coast between that loch and the Kyle of Durness. The yearly value of raw produce was estimated in 1834 at £8,000. Assessed property in 1860, £3,672 0s. 0d. The roads, ferries, and outward communications have, of late years, been greatly improved. Population in 1831, 1,153; in 1861, 1,109. Houses, 199.

This parish is in the presbytery of Tongue, and synod of Sutherland and Caithness. Patron, the Crown. The original parish comprehended all Lord Reay's country,—a tract of 35 miles in length and from 15 to 25 in breadth. But, as one minister was not equal to the task of instructing the inhabitants of so extensive a district, George, Lord Reay, in 1721, applied to the General Assembly for some suitable aid. The Assembly agreed that a collection should be made through all Scotland; and a contribution of £1,500 sterling was obtained. The original parish of Durness was, in consequence, divided into the three parishes of Durness, Tongue, and Edderachillis, in 1724; and stipends were assigned for the ministers of these parishes, in certain proportions, out of the teinds of Lord Reay's estate, and the interest of the money contributed. Stipend, £158 6s. 8d.; glebe, £20. Schoolmaster's salary now is £50, with £4 fees. The parish church was originally a cell to the Augustinian monastery of Dornoch. The structure still in use was built in 1619, and enlarged in 1692, and contains 300 sittings. There are two Free churches respectively at Durness and Eriboll, the sums raised in connexion with which in 1865, were, in the former, £42 16s. 10d., in the latter, £15 18s. 6d. There are an Assembly's school and two subscription schools. The celebrated Gaelic bard, Robert Donn or Mackay, who has been regarded as the Burns of the Northern Highlands, was a native of Durness; and a neat monument to his memory, with suitable inscriptions in Gaelic, English, Latin, and Greek, was recently erected in the churchyard by some admirers of his genius.

DUROR, a district, containing a post-office station of its own name, in the north of Appin, Argyleshire. It occupies the angle between Loch Linlith and Loch Leven. It is traversed also to Loch Limbe by a small stream called the Duror. Here is an inn, 5 miles south-south-west of Ballachulish, and 9 north-north-east of Port-Appin. Here also is a government church, built in 1826, repaired in 1834, and containing 323 sittings. Stipend, £120, with manse and glebe. Here likewise is an endowed school, with £20 a-year. Two annual fairs are held at Duror, in April and October.

DURRAN (Loch). See **OLRICK**.

DURRIS, a parish on the northern border of Kincardineshire. Its north-west corner is about 2 miles from the post-town of Banchory, and its northern boundary is all traced by the river Dee. The parish is bounded by Aberdeenshire, and by the parishes of Maryculter, Fetteresso, Glenhervie, Strachan, and Banchory-Ternan. Its length north-eastward is 8 miles; and its greatest breadth is 6½ miles. The ground rises from the south bank of the Dee, till, in its southern extremity, it terminates in a ridge of the Grampian mountains. There are thus extensive haughs or tracts of level land near the river, while, southwards, the mountains rise to an elevation of upwards of 1,000 feet above the level of the sea. Cairn-monearn is the highest of these, being elevated about 1,200 feet above sea-level. Mindernal, Mount Gower, and Craigheg, are nearly of the same height. On the top of Mount Gower is a mineral spring, similar to one of the Harrowgate waters. Several rivulets intersect the parish, of

which the Sheeoch burn is the chief. It rises in the south-western extremity beyond Shillofad, and runs south-eastwards, often with a great body of water, and with headlong rapidity, for about 12 miles, till it falls into the Dee at Durris church. There are several large plantations of larch and Scots pine,—both of which were introduced here by Lord Peterborough. A great part of the parish has been enclosed, and many improvements in agriculture have been effected. Nearly 2,000 acres were added to the arable land by the late proprietor, A. Mactier, Esq. Gross annual produce valued at about £14,000. Assessed property in 1843, £3,778 6s. 2d. Farm-produce is sold at Stonehaven and Aberdeen. Three annual fairs for cattle are held in Durris. On a bill named Castle hill there is the appearance of an ancient fortification having a regular fosse and glacis. There is an ancient mansion connected by a colonnade with Durris house, the principal modern building in the parish. The new turnpike from Aberdeen to Banchory passes along the northern border, and the Deeside railway is readily accessible. Population in 1831, 1,035; in 1861, 1,109. Houses, 190.

This parish is in the presbytery and synod of Aberdeen. Patron, Mactier of Durris. Stipend, £158 6s. 7d.; glebe, £15. Schoolmaster's salary, under the act £40, and other emoluments. The parish church was built in 1822, and contains 550 sittings. There is a Free church preaching-station; the sum raised at which in 1865, was £66 7s. 1d. There is a non-parochial school with a small endowment, called Hogg's charity school.

DURY. See **FOWLS WESTER**.

DUSK. See **DHUSK**.

DUTHIL, a parish, containing the post-office hamlet of Carr-bridge, at the south-west extremity of Morayshire. It is bounded on the north by Nairnshire, on the north-east by a detached district of Inverness-shire, on the northern part of the east by the parish of Abernethy, and on all other sides by the mainbody of Inverness-shire. Its length north-eastward is 16 miles; and its greatest breadth is 13 miles. The Spey runs for 7½ miles upon its eastern boundary; and the Dulnan intersects it nearly along the middle. The parish is mountainous, and contains much grand scenery. The surface consists principally of belts of alluvial land along the Spey and the Dulnan, a ridge of mountain extending between these rivers upward to Craigellachie, and a mass of wild upland all to the left of the Dulnan, tracked by a few small streams, and ascending to the watershed of the Monadhleagh mountains along the boundary. The military road from Dalnacardoch to Inverness passes through the parish. On this road is the stage-inn of Aviemore, which commands a fine view of the great fir woods of Rothiemurchus, supposed to cover from 14 to 16 square miles. See **AVIEMORE**. Opposite to the inn is Cairngorm; and about a mile to the west is the beautiful and bold projecting rock of Craigellachie, the 'rock of alarm.' "From its swelling base, and rifted precipices, the birch trees wave in graceful cluster; their bright and lively green forming a strong contrast, in the foreground, to the sombre melancholy hue of the pine forests, which, in the distance, stretch up the sides of the Cairngorm." Craigellachie is the hill of rendezvous to the Grants. 'Stand fast, Craigellachie!' is the slogan or war-cry of that clan,—the occupants of Strathspey,—the name of whom prevails here to the exclusion of almost every other. This truly Highland district altogether is exceedingly interesting and romantic. Its ancient name signified 'the glen of heroes,' and also 'the excellent valley,' because the kirk-

town commands the prospect of a valley upwards of 1,000 acres in extent. Three miles to the east of Duthil manse stands the picturesque ruin of the old tower of Muckerath, a seat of the Grants of Rothiemurehus, and which was erected in 1598 by Patriek Grant, a son of John, surnamed 'The Simple.' The old church of Duthil was one of the few Roman Catholic edifices which escaped the destructive energies of the Reformers. The burying place of the Seafield family is in this parish; and a splendid mausoleum was erected in it in 1837. The Earl of Seafield is the sole landowner. The parish, to be a highland one, is remarkably well provided with roads. Population in 1831, 1,309; in 1861, 1,928. Houses, 406. Assessed property in 1843, together with Rothiemurehus, £3,329 13s. 9d.

This parish is in the presbytery of Abernethy, and synod of Moray. Patron, the Earl of Seafield. Stipend, £242 1s. 8d.; glebe, £5. Unappropriated teinds, £110 1s. 3d. Schoolmaster's salary, fixed at £35, with about £16 10s. fees. The present parish church was built in 1826, and contains about 850 sittings. There is a Free church: attendance, 450; sum raised in 1865, £154 13s. 4d. There are two Society schools, and a school of industry. The parish of Rothiemurehus belongs politically to Duthil, but was erected in 1830 into a quoad sacra parish, and has parochial appliances of its own. See ROTHIE-MURCHUS.

DWARFIE STONE. See HOY.

DWARRICK HEAD. See DUNNET.

DYCE, a parish, containing a post-office station of its own name, 7 miles north-west of Aberdeen, Aberdeenshire. It is bounded by Fintray, New Machar, Old Machar, Newhills, and Kinnellar. Its length south-eastward is 6 miles; and its greatest breadth is 3 miles. The river Don traces all the northern and eastern boundary. A ridge of hills called Tyrebeggar runs directly through the parish from north to south. The soil near the Don is deep and rich, producing fine crops. Agriculture is here in an advanced state; nearly 3,000 acres are under cultivation. In the hilly ground of Tyrebeggar, however, upwards of 1,000 acres are covered with heath or underwood. There are several plantations of larch and Scots pine. Quarries of granite have been worked since the middle of last century; and dressed stones, for paving the streets and for building, were for some time sent hence in great quantities to London. On the top of one of the hills there is a Druidical temple, consisting of 10 rough stones planted in a circular form. There are also several cairns on the hills. The great North of Scotland railway traverses the parish, and has a station in it. There are six principal landowners. The yearly value of raw produce was estimated in 1840 at £7,765 18s. Assessed property in 1843, £3,570. Population in 1831, 620; in 1861, 585. Houses, 100. This parish is in the presbytery and synod of Aberdeen. Patron, Gordon Cumming Skene of Dyce. Stipend, £150 11s. 2d.; glebe, £7 10s. The church is an old building, situated on a rocky promontory, formed by a winding of the Don, and commands a fine view of the river's course through the valley for 20 miles. Schoolmaster's salary, £55 per annum, with £14 fees.

DYE (THE), a rivulet of the eastern Grampians. It rises on the south side of Mount Pattock, at the western extremity of Kineardineshire, and flows about 15 miles eastward, north-eastward, and northward to a confluence with the Feugh, $\frac{1}{4}$ of a mile above the manse of Strachan. It has a rocky irregular bed, and is subject to great sudden freshets. The glen which it traverses takes from it the name of Glendyc.

DYE (THE), a rivulet of the Lammermoor district of Berwickshire. It rises near the watershed of the Lammermoor hills, at a point about 2 $\frac{1}{2}$ miles east of Lammerlaw, and runs about 9 miles east-south-eastward to a confluence with the Whitadder, on the eastern border of the parish of Longformacus.

DYE, or WEST WATER (THE). See **ESK (NORTH)**, Forfarshire.

DYKE. See **DUMFRIES-SHIRE.**

DYKE AND MOY, an united parish, partly in Nairnshire, but chiefly in Morayshire. It contains the villages of Dyke, Kintessack, Whitemire, and Broom of Moy. Its post-town is Forres, 2 miles from its eastern boundary. Its two parts, Dyke and Moy, were united to each other in 1618; and the former is situated to the south, the latter to the north. The united parish is bounded on the north by the Moray frith, and on other sides by the parishes of Kinloss, Forres, Edenkille, Ardclach, and Auldearn. Its length southwards is about 7 miles; its breadth along the coast is about 5 $\frac{1}{2}$ miles; and its area is about 27 square miles. The river Findhorn, together with its expansion toward the mouth, forms the most of the eastern boundary, only cutting off two penicles from the rest of the parish. The southern district is grandly occupied by the castle, pleasure grounds, and forest of Darnaway. See **DARNAWAY CASTLE.** A great proportion of the central districts is fertile in soil, and highly cultivated. There are some fine arable fields of black and brown loam; and the surface is agreeably diversified with gentle slopes and flats, and ornamented with gardens and plantations, villas and mansions. Along the coast, however, is that extensive sandy desert called the Culbin or Mavistone sand-hills, which stretches across all the coast of this parish, and extends into the adjacent parishes of Auldearn and Kinloss, but particularly round the mouth of the river Findhorn. Boethius represents this as produced by the same inundation of the sea which swept away the princely estate of Earl Godwin in Keut in 1100, leaving the notorious Godwin sands in its room. Since the original devastation, the sea appears to have been encroaching considerably on this coast, or at least the evil has been extended by the blowing of the sand-hills. These were originally piled up in three great hills below Mavistone, in Auldearn parish; and from this great reservoir the sand has been drifted towards the north-east in such enormous quantities, that the barony of Culbin—one of the most valuable estates in Moray, distinguished, indeed, as 'the granary of Moray'—was literally and entirely buried under it. The lands were covered to the depth of several feet, between the years 1670 and 1695, and the estate so much destroyed, that the proprietor petitioned parliament to be exempted from paying the ordinary public dues. The estate still remains completely covered up, the only traces of its former existence being the occasional appearance of the ruins of houses, and portions of the soil still retaining seeds having the power of vegetating, which are occasionally dug up. The removal of the sand to Culbin is said to have been accelerated by the country people pulling up bent from the grounds in the parishes of Dyke and Auldearn; and the practice was prohibited, in consequence, by act of parliament. The entrance of the Findhorn into the sea has been removed from the westward, nearly 2 miles to its present situation; and on the spot where stood the ancient town and harbour of Findhorn, nothing now appears but sand and bent grass, scarcely affording meagre pasturage to a few sheep. Besides indications of an ancient forest visible in the bay between Findhorn and Burgh-head, there are other traces of con-

sidorable changes on the whole sea-coast in this vicinity. The heath of Hardmoor, which adjoins the now sterile district of Culbin, is celebrated as the place in which Macbeth was met by the weird sisters, while he journeyed with Banquo from the western islands, to meet King Duncan at the castle of Forres. It is a dreary and dismal enough tract, and its 'blasted' aspect well befits the imaginary scene of such a supernatural meeting. No one can pass this spot without having his mind full of the horrors of the tragedy. The imagination of thousands has been rivetted on it, and the poet, out of a few meagre and uncertain traditions, has invested what was, perhaps, after all, but a common and vulgar assassination, with the intense interest of a great moral catastrophe. The dismal appearance of Hardmoor, and also the view of the Culbin desert from the south, have been materially softened by recent thriving plantations. The New Statistical Account of 1842 states that 3,218 imperial acres in the entire parish are under tillage, 2,802 under wood, 1,286 in pasture, and 9,974 irreclaimable waste. There are six principal landowners. The real rental is about £5,632. The yearly value of raw produce was estimated in 1842 at £21,822. Assessed property in 1860, £3,905 0s. 0d. The principal mansions, besides Darnaway Castle, are Brodie House, Dalvey House, Moy, and Kincorth,—the first an irregular castellated edifice, comprising a modern addition in the old English style to an old mansion,—and the second a handsome modern building, on the site of the old castle of Dalvey, on a pleasant knoll. The great road from Inverness to Aberdeen goes across the centre of the parish, and is carried over the Findhorn by a beautiful suspension bridge. The village of Dyke, with the church and the burying-ground, stands on the south side of that road, $3\frac{1}{2}$ miles west-south-west of Forres. The village of Broom of Moy stands near the head of Findhorn Loch, $2\frac{1}{2}$ miles north-east of Dyke. Population of the parish in 1831, 1,451; in 1861, 1,247. Houses, 274. Population of the Nairnshire section in 1831, 13; in 1861, 8. House, 1.

This parish is in the presbytery of Forres, and synod of Moray. Patrons, the Crown, and Grant of Moy. Stipend, £252 14s. 8d.; glebe, £16. Unappropriated teinds, £140 2s. 11d. Schoolmaster's salary, £55 yearly, with about £30 fees, and a share in the Dick bequest. The parish church was built in 1781, and contains about 300 sittings. There is a Free church: attendance, 600; sum raised in 1865, £148 16s. 9d. There are three private schools.

DYKEHEAD, a village in the parish of Old Monkland, Lanarkshire. See **MONKLAND (OLD)**.

DYROCK (THE). See **KIRKMICHAEL**, Ayrshire.

DYSART, a parish, containing the royal burgh of Dysart, the post-towns of Pathhead and Gallatown, and the villages of Sinclairtown and Boreland, on the south coast of Fifeshire. It is bounded by the frith of Forth, and by the parishes of Kirkcaldy, Auchterderran, Kinglassie, Markinch, and Wemyss. Its length southward is 4 miles; and its breadth varies from $1\frac{1}{2}$ to 3 miles. The coast extends between 2 and 3 miles, and is bold and rocky. A part of it, called the Red Rocks, nearly a mile east of the burgh, bears marks of some dreadful convulsion, and is associated in tradition with the burning of witches, but displays striking features of natural scenery. The surface of the parish rises with a gradual ascent for about a mile from the coast. Ore water flows across its interior, and Lochty water along its northern boundary, to form a confluence at its north-eastern extremity. About 400 acres are under wood; and all the rest of

the parish is arable. The principal landowners are the Earl of Rosslyn, the Earl of Rothes, Oswald of Dunniker, and Fergus of Strathore. The valued rent is £5,321 6s. 8d. Scots. Assessed property in 1865, £15,489 8s. 2d. West of the burgh are the lands of Ravensraig belonging to the Earl of Rosslyn. Here, on a lofty rock which overhangs the sea-shore, are the ruins of Ravensraig castle, sometimes also called Ravenshough castle. The castle and lands of Ravenshough appear to have belonged to the Crown at a very early period; but they were granted by James III., in 1470, to William 3d Earl of Orkney, the ancestor of the present proprietor, in return for his resignation of that earldom to the Crown. The castle afterwards became the residence of the descendants of the 3d son, the Lords Sinclair, from whom it has descended with the other estates to the present proprietor. It was still inhabited at the time Sibbald wrote, but it has now for many years been in ruins. Adjoining Ravensraig are the lands of **DUNNIKER**: which see. In the northern portion of the parish is Strathore, the property of John Fergus, Esq., which in part anciently belonged to the Hepburns of Waughton; and at the north-east extremity is Skeddoway, long the property of a family of the name of Alexander, but now the property of John Fergus Esq. Dysart house, the residence of the Earl of Rosslyn, is situated above the sea-shore to the west of the burgh. It is a plain but neat and commodious mansion, and commands an extensive and very beautiful view of the frith, and of the scenery to the east. The gardens are very beautiful. The barony of Dysart appears to have belonged, so early as the 13th century, to the Sinclairs of Rosslyn. About a mile north of the burgh is a large memorial stone, which tradition says marks the spot where a battle was fought with the Danes; and about half-a-mile farther west, is a farm called Carberry, where the Romans are said to have had a station. The remains of the camp are said to have been formerly visible, but no traces of it are now to be seen: the tradition is strengthened, however, by the name of the place. Coal was worked in this parish so early as about four centuries ago; and it continues still to be worked on the estate of the Earl of Rosslyn. Tenant, in his Anster fair, says,

"Then from her coal-pits Dysart vomits forth
Her subterranean men of colour dun,
Poor human mould-warps, doom'd to scrape in earth,
Cimmerian people, strangers to the sun,
Gloomy as soot, with faces grim and swarth,
They march most sourly, leering every one,
Yet very keen at Anster loan to share
The merriments and sports to be accomplished there."

The Dysart coal-mines have been repeatedly on fire, inasmuch that a calcination of the rocks by the effects of their heat is observable for more than a mile inland, all the way from the harbour of the burgh. The ignition of them is supposed to have arisen from the spontaneous combustion of pyrites; and it was remarkably violent in 1662. George Agricola, the great metallurgist, who died in 1555, takes notice of this phenomenon as occurring here. Buchanan, from this circumstance, fixed on the neighbourhood of Dysart for the scene of exorcism in his 'Franciscanus,' and gives an admirable description of it under the horror of an eruption:

Campus erat late incultus, non floribus horti
Arident, non messe agri, non frondibus arbos:
Vix sterilis siccis vestitur arena myricis;
Et pecorum rara in solis vestigia terris:
Vichii Deserta vocant. Ibi saxea subter
Antra tegunt nigras vulcanica semina cautes:
Sulphureis passim concepta incendia venis.
Fumiferam volvunt nebulam, piceoque vapore

*Semper anhelat lumus: cæcisque inclusa cavernis
Flamma furens, dum lactando penetrare sub auras
Conatur, totis passim spiracula campis
Findit, et ingenti tellurem pandit hiatus:
Teter odor tristisque habitus faciesque locorum.*

There are beds of ironstone lying below the coal, which are also worked where they come near the surface. The ironstone is usually shipped for Carron works; a ton is said to yield 12 cwt. of iron. There are also limestone and freestone quarries. The principal manufacture in the parish was formerly that of checks and ticks, which was introduced about the commencement of the last century. In 1836 the number of looms employed was about 2,088; the quantity of cloth annually made was supposed to be about 31,006,720 yards. There are at present an extensive power-loom linen factory, an extensive suit of chemical works, a mill for spinning flax, a pottery for making stoneware, a rope-work, and a patent slip-dock for repairing vessels. The Edinburgh, Perth, and Dundee railway traverses the parish, and has stations in it at Dysart and Sinclairtown. Population in 1831, 7,104; in 1861, 8,842. Houses, 1,211.

This parish is in the presbytery of Kirkcaldy, and synod of Fife. It is a collegiate charge, a second minister having been established in 1620. The patron of both charges is the Earl of Rosslyn. The stipend of the first minister is £265 10s. 5d.; glebe, £21. He is also entitled to a fish-tynd which is of little value and never exacted; 16 chalders of salt, worth about £3 10s. per annum; a supply of coals, worth about £9 per annum; and 15s. 10d. yearly from some old buildings feued to the patron. The stipend of the second minister is £207 11s. 3d., with coals; but he has neither manse nor glebe. The unappropriated teinds amount to £714 4s. 7d. The parish church is a plain building, erected in 1802, and containing 1,800 sittings. There is a chapel of ease at Pathhead, built in 1823, and containing 970 sittings. The patronage of it is vested in such male heads of families as are communicants. There are three Free churches, at respectively Dysart, Pathhead, and Dunnikier; and the sum raised in 1865 in connexion with the first was £159 16s. 8½d.,—with the second, £417 3s. 9½d.,—with the third, £226 17s. 10d. There is likewise a United Presbyterian church in Dysart. The Census of 1851 exhibits in the parliamentary burgh of Dysart—which consists wholly of the southern or toward part of the parish of Dysart—one Establishment place of worship and one United Presbyterian church which made no returns of their sittings or attendance, two Establishment places of worship, with 2,770 sittings and an attendance of 1,140, an Original Secession church, with 800 sittings and an attendance of 330, one United Presbyterian church, with 420 sittings and an attendance of 336, two Free churches, with 1,250 sittings and an attendance of 955, and one Mormon place of worship, with 81 sittings and an attendance of 84. The parochial or rather burgh school is situated in the town of Dysart, and is well-attended. The teacher is paid, partly from the town-funds, and partly from money mortified for the purpose, the sum of £50 per annum, besides his school-fees. At Pathhead there is a school endowed by the late Mr. Philp of Edenshead, for the education of 100 children, who also receive a yearly allowance for clothing. There are in the parish 12 other schools. There are also two subscription libraries, two public reading-rooms, and several friendly societies and other institutions.

The TOWN of DYSART stands on the coast of the parish, 2 miles north-north-east of Kirkcaldy, 8 north-east of Burtisland, and 16 south-south-

west of Cupar. It is a good specimen of the curious old Flemish-looking towns of the coast of Fifeshire. An excellent view of it is obtained from the exterior. The town comprises three principal streets, all narrow, with a kind of square in the centre. The central or High street presents a number of antique substantial houses, having dates and inscriptions on their fronts. Many of them had piazzas on the ground-floor, where the merchants exposed their goods for sale; but these are now mostly built up. In the centre of the town is the town-house, which contains a council-hall, the prison, the weigh-house, and the guard-house. It is a plain building, ornamented with a tower and spire. Fortunately the prison requires to be but seldom used. The harbour, though not deficient in size for the trade, was formerly very unsafe; the swell, when there was a gale from the east, being so great that vessels were driven from their moorings and nearly wrecked within it. A number of years ago, however, an adjoining quarry was converted into a wet dock, which has 18 feet of water, and is sufficient to contain 17 or 18 vessels of different burden, exclusive of the old or outer harbour. So far back as 1450, salt was manufactured and shipped at Dysart, not only to other places in Scotland, but to Holland and the Continent; fish was also exported, as also great quantities of coal; and at an early period malting and brewing were carried on to a great extent. In fact Dysart enjoyed a large share of the trade which the different burghs on the north side of the Forth anciently possessed, and its inhabitants, for the most part, were in such good condition that an old song characterises them as "the canty carles o' Dysart." But the same circumstances which destroyed the trade of the other burghs, had a destructive effect upon that of this town. Its trade decayed, and its shipping rapidly disappeared. A few brigs, and a few sloops, are all that now belong to the harbour; and foreign vessels seldom visit it, except a few from Holland or the Baltic. A daily steamer plies between it and Newhaven; and ample inland communication is enjoyed by means of the Edinburgh, Perth, and Dundee railway.

Dysart is a royal burgh, and joins with Kirkcaldy, Kinghorn, and Burtisland in sending a member to parliament. It was originally a burgh-of-barony holding of the St. Clairs of Rosslyn, and subsequently of the Lords Sinclair. About the beginning of the 16th century, it was erected into a royal burgh; but the early charters have been lost. About 23 years ago, the burgh was disfranchised, in consequence of some informality at the election of the magistrates; and its affairs were then placed under the superintendance of three managers appointed by the court of session. Again, however, it has its own provost, two bailies, and a council. The corporation revenue in 1838-9 was £908,—in 1864-5, £984 0s. 0d. The royal burgh comprises only Dysart proper; but the parliamentary burgh comprehends also the neighbouring villages. Municipal constituency, 41; parliamentary constituency, 186. Population of the royal burgh in 1831, 1,801; in 1861, 1,755. Houses, 214. Population of the parliamentary burgh in 1861, 8,066. Houses, 1,073.

Near the middle of Dysart harbour is a high rock called the Fort, which is said to have been fortified by Oliver Cromwell; but no part of the works now remains. Although not mentioned in Spottiswoode's list of religious houses, there is said to have been a priory of black friars in Dysart, the chapel of which was dedicated to St. Dennis. Part of the old wall of this chapel, which still retains its name, yet re-

mains, but it has for a long period been converted into a smithy. Near the chapel of St. Dennis is the old church of Dysart, which bears the marks of having been a handsome piece of architecture in its time. On one of the windows is the date 1570; but the steeple and the porch bear marks of greater antiquity. In 1643, William Murray, the son of the parish minister of Dysart, and an intimate associate in youth of Charles I., was raised by that sovereign to the dignities of Earl of Dysart and Baron Huntingtower. He was much employed in important negotiations during the civil wars. He left two daughters, the eldest of whom inherited his titles,

and married first Sir Lionel Tollemache of Helmingham, in the county of Suffolk, and afterwards the infamous Duke of Lauderdale. Her offspring by her first husband inherited the titles. Of this family there was, in the time of Edward I. of England, one Hugh de Tollemache, who held of the Crown the manor of Bentley, in the county of Suffolk; and, in the 29th year of that monarch's reign, had summons to attend the expedition into Scotland. The present Earl of Dysart has seats in three English counties, but no seat in Scotland.

DYSART, a district of the parish of Maryton, Forfarshire. See MARYTON.

E

EACHAIG (THE), a small river of the district of Cowal, Argyleshire. It issues from Loch Eck, and flows nearly 4 miles south-eastward, along a glen of its own name, to the head of the Holy Loch. Two tributaries fall into it,—the Massan, near the house of Benmore, and the Little Eachaig very near its mouth,—the former coming from Glenmassan, and the latter from Glenlean. The Eachaig affords good trout and par fishing. See ECK (LOCH) and DUNOON.

EAGERNESS, a headland on the north-east side of Garlieston bay, in the parish of Sorbie, Wigtonshire. It projects about a mile from the mainland, and has an average breadth of about $\frac{3}{4}$ of a mile; and it terminates in a rocky but not very high point. An old castle stood on this point, and seems to have been a place of considerable strength, but has nearly disappeared, and does not figure in history.

EAGLE. See EDZELL.

EAGLES, ECCLES, or EGLIS, a prefix in some Scottish topographical names, variously Latin, Gaelic, and French, and signifying a church or place of worship.

EAGLESCARNIE. See BOLTON.

EAGLESFIELD, a village in the parish of Middlebie, Dumfriesshire. Population, 499.

EAGLESHAM, a parish, containing a post-office village of its own name, and forming the south-eastern portion of the county of Renfrew. It extends about 6 miles from east to west, and about 7 from north to south; and is bounded on the north-west by Mearns, in the same county; on the south-west by Fenwick, and on the south by Loudoun, both in Ayrshire; and on the east by Carmunnock and East Kilbride, both in Lanarkshire. The soil is various. The higher and western districts consist partly of dry heath, and partly of deep moss, with a number of green hills, and much natural meadow-ground. The moors are among the best in Scotland for game. The arable land in the lower districts is very productive. The whole parish enjoys free air and excellent water, and is remarkably healthy. The river White Cart takes its rise out of the moors of Eaglesham and East Kilbride, and in its course northward divides the counties of Lanark and Renfrew. The water of Earn, a tributary of the Cart, flows on the boundary with Mearns. The Borland burn and the Mains water drain all the

central districts northward to the Cart. Small lakes and reservoirs for mills cover about 240 acres. The whole parochial surface lies comparatively high above sea-level,—the best arable lands from 500 to 800 feet, part of the village itself about 800 feet; yet the tops of the highest hills, Balagieb, Dunovan, Mires, and Blackwood, not more than from 1,000 to 1,200 feet. If all the land were to be distributed into 246 portions, about 102 of these would be found to be under cultivation, 53 in meadow or in natural pasture, 90 in a state of moss or moor, and 1 under wood. Near the whole of it belongs to Gilmour of Eaglesham and Gilmour of Polnoon. The yearly value of raw produce has been estimated at about £20,000. The value of assessed property in 1860 was £11,350. The rocks of the parish, with very slight exception, are alternations of greenstone, claystone, and wacke,—part of the great mass of trap which prevails so extensively in the bills of the county. At Balagieb there have been observed several pieces of barytes. There are also found large masses of osmond stone, which stands the strongest heat without renting, and is, therefore, used in building ovens and other furnaces. The estate of Eaglesham formed part of the extensive grant made by David I. to Walter, the founder of the House of Stewart, before the middle of the 12th century. By Walter it was transferred to Robert de Montgomery, who was one of those knights that accompanied him when he migrated from England to Scotland. This estate, which was the first and, for two centuries, the chief possession of the Scottish family of Montgomery, continued to be their property, undiminished, for the long period of seven hundred years. For their succession to the Eglington estates and their elevation to the peerage, see article EGLINTON CASTLE. Between the Cart and the rivulet called Mains water, part of the ruins of the castle of Polnoon, or Ponoon, may still be traced. It was built by Sir John Montgomery of Eaglesham, with the money received for the ransom of Henry Percy, the celebrated Hotspur, whom he took prisoner with his own hand at the battle of Otterburn, in 1388. It is said that the ransom being called *poind money*, the name Polnoon was thence derived; but this seems strained and far-fetched. Polnoon lodge, which stands on the north-east of the village of Eaglesham, is a small mansion of

modern construction, belonging to Gilmour of Eaglesham. There are a large cotton-mill at the village, and a small one at Millhall. There is also a corn-mill at the village. Population of the parish in 1831, 2,372; in 1861, 2,328. Houses, 236.

This parish is in the presbytery of Glasgow, and synod of Glasgow and Ayr. Patron, Gilmour of Eaglesham. Stipend, £284 0s. 6d.; glebe, £25. Unappropriated tithes, £850 16s. 5d. Schoolmaster's salary, £52 10s., and £7 other emoluments. The parish church was built in 1790, and contains 550 sittings. There are an United Presbyterian church, with 480 sittings, and a Reformed Presbyterian church, with about 400 sittings. There is also a Free church preaching-station; the sum raised at which in 1865, was £37 10s. There are three private schools, a small public library, and a friendly society.—Robert Pollock, the author of 'The Course of Time,' was a native of this parish. He was born at North Moorhouse in 1798, was licensed to preach in connexion with the United Associate Synod in 1827, and died of consumption in the autumn of the same year. In his sketches of inanimate nature he returns again and again to the scenery of his beloved home:

"Mong hills, and streams,
And melancholy deserts, where the sun
Saw, as he passed, a shepherd only here
And there watching his little flock, or heard
The ploughman talking to his steers."

To the trees which overshadowed the paternal mansion, his verse thus pays homage:—

"Much of my native scenery appears,
And presses forward to be in my song;
But must not now: for much behind awaits
Of higher note. Four trees I pass not by,
Which o'er our house their evening shadow threw:—
Three ash, and one of elm. Tall trees they were,
And old; and had been old a century
Before my day. None living could say aught
About their youth; but they were goodly trees:
And oft I wondered, as I sat and thought
Beneath their summer shade, or in the night
Of winter heard the spirits of the wind
Growing among their boughs,—how they had grown
So high in such a rough tempestuous place:
And when a hapless branch, torn by the blast,
Fell down, I mourned as if a friend had fallen."

The VILLAGE of EAGLESHAM stands on the south-east side of the parish, about a mile from the White Cart, 9 miles south of Glasgow, 11 south-east of Paisley, and 12 south-west of Hamilton. In the reign of Charles II. it was of such importance that a weekly market was established in it by act of parliament. But in 1796, the old village was demolished, and a new one began to be built on a plan which had been formed two years before by the tenth Earl of Eglinton, a nobleman of fine taste, who, however, did not live to see his plan completed. The present village consists chiefly of two rows of houses, generally of two stories, facing each other at the distance of 100 yards at the upper, and 250 at the lower end, the nature of the ground not admitting of a more regular line of street. The houses have each a kitchen-garden at the back. Midway between the rows there runs a streamlet to which, from each side, there is a gentle descent, partly formed into washing greens, and partly embellished with trees. Upon the whole, the appearance of this village is eminently beautiful. The parish church, situated on one side of it, near the middle, is a handsome octagonal structure, with a steeple. The cotton mill stands at the upper end, on the streamlet. The village feus are for 999 years at a moderate ground rent. A large proportion of the inhabitants are cotton weavers. Yearly fairs are held on the 24th of April, old style, and on the last Thursday

of August. Daily communication is maintained by omnibus with Glasgow. Population 1,769.

EAGLESHAY, or EGLSHAY, an island in Orkney, belonging to the parish of Rousay, separated by Howa Sound on the west from the island of Rousay, and situated about 10 miles north of Kirkwall. It is $3\frac{3}{4}$ miles in length from north to south, and about 1 mile in breadth. It is a pleasant low-lying island, and contains a small fresh-water lake. The rocks are sandstone and sandstone flag, the strata of which in some places are very much elevated. The coast is in general sandy. In the north is a large tract of sand covered with bent, and sheltering great numbers of rabbits. This island is celebrated for having been the place where St. Magnus was murdered. It was formerly a vicarage, united to the ancient vicarage of Rousay. At the west end of the island is a small Gothic church, which was dedicated to St. Magnus. It has a pyramidal steeple at the west end; and at the east end is a vaulted choir which joins to the body of the church. The church is said to have been erected on the very spot where St. Magnus was murdered. Population in 1831, 228; in 1861, 205. Houses, 27.

EAGLESHAY, or EGLSHAY, an island in Shetland, about $1\frac{1}{2}$ mile in length and in breadth, belonging to the parish of Northmaven. It is situated in Islesburgh cove, on the east of St. Magnus bay, and is an excellent island for grazing. It abounds with rabbits.

EARL'S BURN. See DENNY, and NINIAN'S (ST.).

EARL'S CROSS. See DORNOCH.

EARLSFERRY, an ancient royal burgh, in the parish of Kilconquhar, Fifeshire. It stands on the coast, about $\frac{1}{2}$ a mile east of Kincaig, about the same distance west of Elie, 3 miles south of Collinsburgh, and 5 miles east-south-east of Largo. It is a very decayed place, with only the importance of a village. The town-house, in the middle of it, is an old building, surmounted by a spire, in which there is a clock and bell. It contains the town-hall, and formerly contained a cell for criminals,—which has been superseded by sending them to the jail at Cupar. The town shares in the gas-work, the savings' bank, the communications, and the trade of Elie. Population in 1841, 496; in 1861, 395. Houses, 90.

The tradition is that Earlsferry was originally constituted a burgh by Malcolm III., between 1057 and 1093, at the request of Macduff, the Maormor of Fife, who, in his flight from the vengeance of Macbeth, was concealed in a cave at Kincaig point, which still bears his name, and was afterwards ferried across the frith to Dunbar by the fishermen of the place. From this circumstance it was called Earlsferry; and it likewise obtained the privilege that the persons of all who should cross the frith from thence should be for a time inviolable, no boat being allowed to leave the shore in pursuit, till those who had already sailed were half-way over. There does not seem any reason to doubt the fact of Macduff having been concealed in the cave at Kincaig, nor that he was assisted in making his escape to the opposite coast by the inhabitants of the village in its neighbourhood. But the erection of this village into a royal burgh must have been at a subsequent period, and was probably done at the request of one of the descendants of the great Macduff. The Celtic people of Scotland erected no royal burghs; and we have no evidence of any earlier than the reign of David I. or Malcolm IV. The title of Earl, too, was equally unknown to the Celts; so that the name of Earlsferry must have been bestowed at a subse-

quent period, though in commemoration of the escape of Macduff. Earlsferry, however, is a burgh of great antiquity; but its earliest charter, the date of which is unknown, was destroyed by fire in Edinburgh. A new charter was in consequence granted by James IV., in which it is narrated that the burgh of Earlsferry was "of old past memory of men erected into ane free burgh," &c. By this charter all its ancient privileges and immunities were renewed and confirmed. A considerable trade is said at one time to have been carried on here, and two annual fairs and two weekly markets to have been held. This has long been at an end, and the fairs and markets have long been discontinued. The want of a proper harbour must always have been a great drawback; and the erection of a pier and formation of a harbour at Elie were necessarily very damaging. The magistrates of Earlsferry have the same powers with other magistrates of royal burghs; but it does not appear that at any time Earlsferry had exercised its privilege of sending a commissioner to the Scottish parliament.

EARLSHALL, an estate on the south side of the parish of Leuchars, Fifeshire. It is said by Sibbald to have been anciently a portion of the estates of the Earls of Fife, who had a residence here, whence it derived its title of Earlsall. The fine old house of Earlsall is beautifully situated amid venerable trees, and forms an exceedingly interesting object in the landscape. It appears, from initials, arms, and dates, on various parts of the house and offices, to have been erected towards the close of the 16th or beginning of the 17th century; but principally by William Bruce, whose initials and arms with those of his wife, Dame Agnes Lindsay, and the dates 1617 and 1620, are still to be seen. The house was inhabited until sold to the present proprietor, and might at no great expense be still rendered habitable. The object of greatest interest is the great hall, which is 50 feet in length by 18 in breadth, with a fine arched roof on which are painted and emblazoned the arms of the family and of a number of noble families with whom they claimed affinity.

EARL'S HILL, a hill on the west side of the parish of St. Ninian's, 6 miles south-west of Stirling. It is a continuation of the Kilsyth hills, forming the north-eastern part of the Lennox range, but is less than 1,000 feet in height. See **NINIAN'S (St.)**.

EARL'S SEAT HILL. See **BLAIN (The)**.

EARLSTON, a parish, containing the post-town of Earlston, and the villages of Fans, Netherstain, and Redpath, in the south of Lauderdale, Berwickshire. It is bounded on the north by Legerwood and Gordon; on the east by Hume and Nenthorn; on the south by Roxburghshire and Merton; and on the west by Leader water, which divides it from Roxburghshire. Its form is somewhat oblong, stretching from east to west, but with deep indentations on both sides in the middle. From Hardie's mill-place on the east, to the top of a projection near Kedslie on the west, it measures 6 miles; but in breadth it varies from $3\frac{3}{4}$ miles at the western limit, and 2 miles near the eastern limit, to a mile at the middle. A hill in the centre of the western division rises nearly 1,000 feet above the level of the sea, and was probably the site of a Roman encampment. In the eastern division, and near the northern and southern limits of the western, are other hills less elevated, which differ just sufficiently from the features of lowland scenery to give the district a pastoral aspect. Other parts of the parish, especially those along the banks of the Leader, and those of the south-eastern division, are comparatively flat.

The Leader comes down upon the north-western angle from the north, cuts off a small projecting wing, forms the boundary-line for a distance of $3\frac{1}{2}$ miles, strikes the Tweed at a point where that noble river offers to become the southern boundary, and drives it off south-eastward along the margin of the conterminous parish of Merton. During the whole course of its connexion with Earlston, the Leader is a stream of no common beauty, meandering among the hills and groves of Carolside, sweeping past the western base of the classic **COWDENKNOWES** [which see], and merrily careering between the richly-wooded slopes of Drygrange and Kirklands, till it pays its tribute to the queen-river of the south. One of the head-waters of the Eden rises about a mile east of the Leader's bed on the northern limits of the parish, and, joined in its progress by other rills which unite with it to form the main stream, it forms the boundary-line, first over most of the north and next over all the east, during a course of about 8 miles. While skirting along the north it is an uninteresting rill, cold in its appearance, and naked in its scenery; but after it sweeps round to flow along the east, it is overlooked on the side of Earlston by a phalanx of plantation $1\frac{1}{2}$ mile deep, and partakes, in a degree suited to its bulk as an infant river, the lively character of the Leader. Two other rills rise in the interior, and flow respectively toward the Leader and the Eden, contributing their tiny frolics to the gladness of the general scene. If the entire parochial area were distributed into 216 parts, 140 of them would be found to be under cultivation, 53 in hill-pasture or a state of waste, and 23 under wood. The soil, in some of the arable parts, is clay; in some, is a light dry loam; and in several is strong, rich, and very fertile. There are four principal landowners. The chief mansions are the splendid edifice of Mellerstain on the east, and the houses of Cowdenknowes and Carolside on the Leader. The parish is intersected, in its eastern division, by the road from Edinburgh to Kelso by way of Lauder, and has several other roads diverging from the village of Earlston. Population in 1831, 1,710; in 1861, 1,825. Houses, 327. Assessed property in 1864, £11,119.

This parish is in the presbytery of Lauder, and synod of Merse and Teviotdale. Patron, the Crown. Stipend, £217 14s. 6d.; glebe, £37. Unappropriated tithes, £217 14s. 6d. Schoolmaster's salary, £43, with £40 for retired schoolmaster. The parish church was built in 1736, and repaired and enlarged in 1834, and contains 650 sittings. There are in the village of Earlston two United Presbyterian churches, designated the East and the West, a Free church preaching-station, a subscription library, a friendly society of peculiar kind, and a total abstinence society. Attendance at the West United Presbyterian church, 230. Sum raised in 1865 at the Free church station, £5 5s. 9d. There are a Free church school and four other schools.—The ancient name of the parish was Ercildoune or Ersildun,—a word of Cambro-British origin, signifying 'the prospect-hill,' and alluding probably to a height in the vicinity of the original church, to the south of the village, whence a fine view is obtained of the vales of the Leader and the Tweed.—The church of Ercildoune was given, at the middle of the 12th century, to the monks of Kelso; and was transferred by them, about the year 1171, to the monks of Coldingham, in exchange for the church of Gordon; and it remained with the latter, and was served by a vicar till the Reformation. Ercildoune was occasionally the residence of King David I.—The manor was held in the twelfth century by the family of Lindsay,

and afterwards passed into the possession of the Earls of Dunbar. And from this circumstance arose the corruption of the ancient name into the modern form of Earlston.

THE VILLAGE OF EARLSTON stands on the left bank of the Leader, 6 miles south-south-east of Lauder. It consists principally of one long street, at right angles with the river, and stretching away to the east; and presents to the eye two rows of one-story houses, interrupted occasionally by buildings of larger bulk and greater pretension, used as inns or shops. The inhabitants are chiefly weavers and agricultural labourers. The fabrics woven are blankets, plaidings, flannels, merinos, shawls, muslins, shirtings, furniture stripes, and very stout gingham.—the last now well known throughout the country as Earlston gingham. It has an office of the National Bank, and two factories. Cattle fairs are held on the 29th of June and the third Thursday of October. Population, 980.

Earlston is not a little famous as the birth-place and residence of Thomas Learmont or Learmonth, who flourished during the latter half of the 13th century, and is popularly called Thomas the Rhymer. His dwelling-house, or peel-tower, stood on low ground between the west end of the village and the Leader. He lived there as tenant in fee of the opulent barons of the soil; and part of one of the walls of his house still remains. A stone also stands embedded in the wall of the church, the comparatively modern substitute of one more ancient, bearing the inscription, "Auld Rhymer's race lies in this place." Thomas was a poet. But he is celebrated among the lower orders throughout Scotland solely on account of his reputed character of a prophet, and in connexion with the rhyming distichs—often of doubtful meaning, and apparently of multitudinous origin—which float on the tide of tradition, and along the currents of ancient legendary literature. From some combination of causes easily intelligible by those who have peered behind the curtain of the confessional, and studied the expediences of the cloister, Thomas appears to have been made, with the help of a little astuteness in observing character and perspicacity in calculating moral chances, an expert tool of priestcraft—either on his private adventure, or more probably in combination with the monks of Coldingham, who had power over him as the owners of Ercildoune church, and dived deep into the politics of the court—for swaying the wills and influencing the conduct of wealthy and potent individuals in an age of the nobility's intense enslavement, and subjection to enormous pecuniary mulctings, by the pressure of superstition. Obtaining credit with the great and the influential for being a true prophet,—a credit which could be facilely manufactured out of a few clever verified conjectures, and a few predictions either spoken after the event, and promulged as spoken before it, or framed in combination with concerted means to effect their fulfilment,—he, as a matter of course, was rapidly viewed as a superhumanly gifted being by the multitude, and became associated, in the fancy of an ignorant people, with ideas and legends of whatever methods and invisible communications would be supposed to aid him in looking clearly down the vista of futurity. The faith which remote pastoral districts, and even many of the lower classes in sections of the country freely plied with the influences of enlightenment, still repose in the genuineness of his pretended prophetic character—especially as that character stands wholly connected with matters of very trivial importance, and superlatively contrasted to the moral grandeur, unutterable magnificence, and altogether surpassing worth

of the details of true prophecy, as given in written revelation—is just one humiliating evidence among several, that the pestilential fogs of the middle ages have not yet been dispersed by the reclaiming of the moral marshes of the land.

Sir Walter Scott, in his introduction to the ballad of 'Thomas the Rhymer,' says: "It cannot be doubted, that Thomas of Ercildoune was a remarkable and important person in his own time, since, very shortly after his death, we find him celebrated as a prophet and as a poet. Whether he himself made any pretensions to the first of these characters, or whether it was gratuitously conferred upon him by the credulity of posterity, it seems difficult to decide. If we may believe Mackenzie, Learmont only verified the prophecies delivered by Eliza, an inspired nun of a convent at Haddington. But of this there seems not to be the most distant proof. On the contrary, all ancient authors, who quote the Rhymer's prophecies, uniformly suppose them to have been emitted by himself. Thus, in Winton's 'Chronicle'—

'Of this fycht quilum spak Thomas
Of Ercyldoune, that sayd in derne,
There sud mit stalwartly, starke and sterne.
He said it in his prophety,
But how he wist it was *ferly*.'

There could have been no *ferly* (marvel) in Winton's eyes at least, how Thomas came by his knowledge of future events, had he ever heard of the inspired nun of Haddington, which, it cannot be doubted, would have been a solution of the mystery, much to the taste of the prior of Lochleven. Whatever doubts, however, the learned might have, as to the source of the Rhymer's prophetic skill, the vulgar had no hesitation to ascribe the whole to the intercourse between the bard and the queen of Faery. The popular tale bears, that Thomas was carried off, at an early age, to the fairy land, where he acquired all the knowledge which made him afterwards so famous. After 7 years' residence, he was permitted to return to the earth, to enlighten and astonish his countrymen by his prophetic powers; still, however, remaining bound to return to his royal mistress, when she should intimate her pleasure. Accordingly, while Thomas was making merry with his friends in the tower of Ercildoune, a person came running in, and told, with marks of fear and astonishment, that a hart and hind had left the neighbouring forest, and were, composedly and slowly, parading the street of the village. The prophet instantly arose, left his habitation, and followed the wonderful animals to the forest, whence he was never seen to return. According to the popular belief, he still 'drees his weird' in Fairy land, and is one day expected to revisit earth. In the meanwhile, his memory is held in the most profound respect. The Eildon tree, from beneath the shade of which he delivered his prophecies, now no longer exists; but the spot is marked by a large stone, called Eildon tree stone. A neighbouring rivulet takes the name of the Bogle burn from the Rhymer's supernatural visitants. The veneration paid to his dwelling-place even attached itself in some degree to a person, who within the memory of man, chose to set up his residence in the ruins of Learmont's tower. The name of this man was Murray, a kind of herbalist; who, by dint of some knowledge in simples, the possession of a musical clock, an electrical machine, and a stuffed alligator, added to a supposed communication with Thomas the Rhymer, lived for many years in very good credit as a wizard."

EARLSTON, Kirkcudbrightshire. See BOGANS and DALRY.

EARN (**BRIDGE OF**), a post-office village in the parish of Dunbarrie, Perthshire. It stands on the river Earn, and on the road from Perth to Edinburgh, 4 miles south-south-east of Perth. It has a station on the Perth fork of the Edinburgh, Perth, and Dundee railway. It may be said to consist of two parts, an old and a new. The old part was founded in 1769, on an acre and a half of ground, between the old bridge over the Earn and the Scales bridge, leased for 99 years. The new part was begun in 1832, for the accommodation of strangers frequenting the mineral wells of Piteathly. The plan for the new part was symmetrical, and produced a row or street of houses which has been much admired for its architecture. The bridge across the river which gave name to the village was very ancient and very bad, and has all been removed except a fragment. A handsome bridge of three arches was built instead of it, and is in fine keeping, as to features, with the new village. On the banks of the river adjacent to the new bridge, stands one of the most commodious hotels in Scotland. The village has also a ball-room, a library, and other appurtenances of a fashionable summer resort. The whole place, with its environs, has a pleasant appearance, and looks to be snugly nestling amid the riant beauties of the strath. Population, 381. See **DUNBARRIE** and **PITEATHLY**.

EARN (**LOCH**), a fresh-water lake, at the head of Strathearn, in Perthshire. It commences at the foot of Glen-Ogle, on the eastern boundary of the parish of Balquidder, and extends eastward, along a glen of its own, within the parish of Comrie. Its length is about 7 miles; its breadth is from 1 to 1½ mile; and its depth, in many places, is about 100 fathoms. Its temperature varies little throughout the year; so that not only is the lake itself never known to freeze, even in the most intense frost, but even the river Earn, which flows from it, seldom if ever freezes till it has run a distance from it of at least 5 miles. There is a road along each side of the lake, from the village of St. Fillans at its foot to the village of Lochearnhead at its head,—each road perfectly facile, and affording excellent views: but if any tourist have not time or taste to travel both, so as to make the entire circuit of the lake, he will find the south road the preferable one, on account of the larger and finer views of the opposite hill-screens.

There are few Scottish lakes more worthy of a visit than Loch Earn. Its shore throughout, and for at least half-a-mile inland, is clothed with thriving copse and brushwood,—creating continual changes of the scenery, and a succession of the most picturesque and romantic views. Beyond these woods, on every side, hills and mountains arise, piercing the clouds with their lofty summits, and adding grandeur and sublimity to the scene. Looking from either end of the lake, the view is peculiarly magnificent: the whole valley can be seen at once,—with its enormous vista of mountains enclosing all around,—the transparent lake which forms its glassy centre,—and the beautiful fringing of wood with which the base of the mountains and the shores of the lake are adorned. Dr. Macculloch says: "Limited as are the dimensions of Loch Earn, it is exceeded in beauty by few of our lakes, as far as it is possible for many beauties to exist in so small a space. I will not say that it presents a great number of distinct landscapes adapted for the pencil; but such as it does possess are remarkable for their consistency of character, and for a combination of sweetness and simplicity, with a grandeur of manner scarcely to be expected within such narrow bounds. Its style is that of a lake of far greater dimensions;

the hills which bound it being lofty and bold and rugged, with a variety of character not found in many of even far greater magnitude and extent. It is a miniature and a model of scenery that might well occupy ten times the space. Yet the eye does not feel this. There is nothing trifling or small in the details; nothing to diminish its grandeur of style, to tell us that we are contemplating a reduced copy. On the contrary, there is a perpetual contest between our impressions and our reasonings: we know that a few short miles comprehend the whole, and yet we feel as if it was a landscape of many miles, a lake to be ranked among those of the first order and dimensions. While its mountains thus rise in majestic simplicity to the sky, terminating in those bold and various and rocky outlines which belong to so much of this geological line, from Dunkeld and Killierankie, even to Loch Katrine, the surfaces of the declivities are equally various and bold,—enriched with precipices and masses of protruding rock, with deep hollows and ravines, and with the courses of innumerable torrents which pour from above, and, as they descend, become skirted with trees till they lose themselves in the waters of the lake. Wild woods also ascend along their surface, in all that irregularity of distribution so peculiar to these rocky mountains,—less solid and continuous than at Loch Lomond, less scattered and less romantic than at Loch Katrine, but from these very causes, aiding to confer on Loch Earn a character entirely its own. If the shores of the lake are not deeply marked by bays and promontories, still they are sufficiently varied; nor is there one point where the hills reach the water in that meagre and insipid manner which is the fault of so many of our lakes, and which is the cause throughout the far greater part even of Loch Katrine. Loch Earn has no blank. Such as its beauty is, it is always consistent and complete. Its shores, too, are almost everywhere accessible, and almost everywhere so wooded as to produce those foregrounds which the spectator so much desires; while, from the same cause, they present much of that species of shore scenery which is independent of the mountain boundary. Elegant ash-trees springing from the very water, and drooping their branches over it, green and cultivated banks, rocky points divided by gravelly beaches, which are washed by the bright curling waves of the lake, the brawling stream descending along its rocky and wooded channel, and the cascade tumbling along the precipice, which rises from the deep and still water below,—these and the richly cultivated and green margin, with the houses and traces of art that ornament its banks, produce in themselves pictures of great variety, marked by a character of rural sweetness and repose, not commonly found among scenery of this class. Thus also the style of Loch Earn varies, as we assume different points of elevation for our views, and perhaps in a greater degree than any of the Highland lakes,—assuredly more than in any one of similar dimensions. At the lower levels, and perhaps most of all at the western extremity where the banks are lowest, and at the eastern, where the beautifully wooded island forms a leading object in the picture, every landscape is marked by tranquillity and gentleness of character,—a character adapted to glassy waters and summer suns, to the verdure of spring and the repose of evening. High up on the hills, the grandeur of the bold alpine landscape succeeds to the tranquillity of the rural one; and amid the wild mountain forms, and the rude magnificence of aspiring rocks and precipices, enhanced and embellished by the gleaming lights of a troubled sky and the passage of clouds, we almost forget the

placid and cultivated scenes we have just quitted, and imagine ourselves transported to some remote spot of the distant Highlands."

Benvoirlich is the loftiest of those mountains which lend their grandeur to the scenery of Loch Earn. Upon the margin of the lake, and near the base of the mountain, is situated the house of Ardvoirlich, the residence of Robert Stewart, Esq., the proprietor of the Ben, and the present representative of an ancient family of the Stewarts to whom this property has long belonged. The grounds are well-wooded, the situation pleasant, and the walks lead to a variety of picturesque scenes and waterfalls in adjoining ravines. Near the middle of the lawn, between the house and the road, grows a thorn-tree, 160 years of age, which is interesting both from its shape, its size, and its age. The branches spread out thick and wide on every side, and nearly horizontal; so that forty men might easily dine beneath its shade. Nearly opposite to Ardvoirlich is a lime-quarry, which has been a great source of fertility and wealth to the valley of Strathearn. The stones are conveyed by water to the east end of the lake, whence they are carted away by the purchasers sometimes to a distance of 20 miles. This valuable quarry is on the property of Lord Breadalbane. Nearly 2 miles from the house of Ardvoirlich, and at the south-west end of the lake, is the ancient castellated mansion of Edinample, the property of Lord Breadalbane; near which are the remains of an old chapel. This place is beautifully wooded, and is situated in a narrow glen through which the Ample finds its way to the lake. The stream is here suddenly precipitated in two spouts over a projecting cliff of rocks, into a profound abyss where they unite, and rush again over a second precipice, forming a beautiful cascade near the castle. About $1\frac{1}{2}$ mile up the north side of the lake from St. Fillans, the traveller comes to the opening of Glentarkin, in which the great stone of Glentarkin stands,—a singular natural curiosity worthy of a visit. There is no road up this glen, and it is very difficult of access; but a traveller in the Highlands must not pay attention to these circumstances, if he would see all that is curious in such a rugged country. Nearly 3 miles up the glen, in the centre of a green sloping declivity between two rocky mountains, stands this singular stone. The remarkable thing about it is the beautifully balanced position in which it stands, and in which it has stood certainly since the remote period when it was detached from one of the rocky hills in its neighbourhood, and fell to its present situation. At the base where it rests on the ground, it measures 70 feet in circumference, but at about ten feet from the ground it spreads out equally on all sides, and its circumference is here 110 feet. Under its projecting sides, 60 or 100 men might find shelter. The solid contents of this enormous block above ground, exceeds 25,000 feet.

In the middle of the lower part of the lake opposite the village of St. Fillans is the only island which the lake contains. It is called Neish island. In early times it is said to have been inhabited by a family of the name of Neish, from whom it derives its appellation. This family and their adherents had long been at deadly feud with the M'Nabs, whose residence was at the head of Loch Tay. Many battles were fought between them with various success; but at length one was fought in Glenboultachan, about 2 miles north of Loch Earn foot, in which the M'Nabs were victorious, and the unfortunate Neishes cut off almost to a man. A small remnant of them, however, still lived in the island of Loch Earn, the head of which was an old man, a

relation of the original chief of the family. He subsisted chiefly by plundering the people in the neighbourhood. On one occasion—it is said to have been in the reign of James V.—the chief of the M'Nabs, who resided at Kennil house, near the head of Loch Tay, had sent his servant to Crieff for provisions for a Christmas merry-making. The servant was waylaid on his return at Loeh Earn foot, and robbed of all his purchases; he went home therefore empty handed, and told his tale to the laird. M'Nab had twelve sons, all men of great strength, but one in particular exceedingly athletic, who was ironically termed, Join mion Mac' an Appa, or 'smooth John M'Nab.' In the evening these young men were gloomily meditating some signal revenge on their old enemies, when their father entered and said,—Bhe'u oideh an oideh, m'am bu ghilleam na gillean, —'the night is the night, if the lads were but lads!' This hint was taken as it was meant, for each man instantly started to his feet, and belted on his dirk, his claymore, and his pistols. Led by their brother John, they set out, taking a fishing-boat on their shoulders from Loch Tay, carrying it over the mountains and glens till they reached Loch Earn, where they launched it, and passed over to the island. All was silent in the habitation of Neish; secure in their insular situation, and having the boats at the island, all had gone to sleep without fear of surprise. Smooth John dashed open with his foot the door of Neish's house; and the party rushing in, they attacked their old enemies, putting every one of them to the sword, and cutting off their heads, with the exception of one man and a boy who concealed themselves under a bed. Carrying off the heads of their enemies and any plunder they could secure, the youths presented themselves to their father; and Smooth John, holding up the head of the chieftain of the Neishes, said to his father, Na biodh fiongh, oirbh! 'Be in fear for nothing!' while the piper struck up the pibroch of victory. The old laird, after pleasing himself by contemplating the bloody heads, declared, 'That the night was the night, and the lads were the lads!'

EARN (THE), a river of the southern half of Perthshire. It issues from the foot of Loch Earn, at an elevation of 303 feet above the level of the sea, and flows in a direction prevailing eastward to a confluence with the Tay, at a point $2\frac{3}{4}$ miles above where the latter river begins to touch Fifeshire. The course of the Earn abounds in sweeps and folds and grand tortuosities, which contribute much to its beauty, to its abstruse power, and to its aggregate length, but which at the same time render it difficult to be measured; yet, estimated in a straight line, from Loch Earn to the Tay, it extends only about 27 miles. Yet, in consequence of drawing its waters from all the mountain-feeders of the lake, it has always a considerable volume and a lively velocity, and is liable, in the time of rains, to swell suddenly into terrible freshets, which burst upon the low grounds, particularly in the lower parts of its course, with devastating effect. It forms the boundary of all the parishes which touch it with the exception of Comrie, Forteviot, and Dunbarne, all which have portions on both sides. On its north bank are Monivaird, Crieff, Trinity-Gask, Aberdalgie, and Rhynd; and on the south are Strowan, Muthill, Blackford, Auchterarder, Dunning, Forgandenny, and Abernethy. The principal tributary streams on the north are the Lednock at Comrie and the Turrit at Crieff; and the principal on the south are the Ruchill at Comrie, the Mudrany at Kinkell, the Ruthven in the parish of Auchterarder, and the May at Forteviot. The Earn is navigable for about 3 miles above its mouth, or

as far as to the Bridge-of-Earn, for vessels of from 30 to 50 tons burden. Salmon, trout, pike, and perch, are found in its waters. The salmon-fishings are, however, of no great value.

The basin of the Earn, including that of the Loch and its affluents, is one of the most picturesque in Scotland. The styles of it vary from the wildly highland at the head to the lusciously lowland at the foot; but are beautiful both in natural feature, and in artificial adornment. The parts proper to the Loch are described in the article EARN (LOCH); and the parts proper to the river will be described in the article STRATHEARN. The richest parts of all, however, are those round the end of the lake and the first reaches of the stream, where the highland glen begins fitfully to soften into the lowland valley, especially at the place where the poet Hogg lays the scene of his "Kilmenny,"—where alone went the maid in "the pride of her purity;" and those parts are graphically touched as follows, with allusion to that scene, by George Gilfillan:—"We have seen this scene from the summit of Dummore and the side of Melville's monument, which stands upon it,—seen it at all hours, in all circumstances, and in all seasons—in the clear morning, while the smoke of a thousand cottages was seen rising through the dewy air, and when the mountains seemed not thoroughly awakened from their night's repose—in the garish noon-day, when the feeling of mystery was removed by the open clearness, but that of majesty in form and outline remained—in the afternoon, with its sunbeams streaking huge shadows, and writing characters of fire upon all the hills—in the golden evening, when the sun was going down over Benmore in blood—in the dim evening, to us dearer still, when a faint rich mist was steeping all the landscape in religious hues—in the waste night, while the moon was rising red in the north-east, like a beacon, or a torch uplifted by some giant hand—under the breezes and bashful green of spring—in the laughing luxuriance of summer—under the yellow shade of autumn—at the close of autumn, when the woods were red and the stubble sovereign of the fields—and again, when hill, valley, and wood were spotted with snow, have seen it in a hush so profound, that you might have imagined nature listening for mysterious tidings, and hardly dared to breathe—and in the cloudy and dark day, while the thunder was shaking the column, and the lightning painting the landscape. And gazing at it, whether in glimmer or in gloom, have we sometimes fancied that we saw that fearless form 'gaeing' up through the plains of Dalwhinnie, and the fairy plantations of Dunira,

'To pu' the cress-flower round the spring,
The scarlet hyp and the hyndberrie,
And the nut that hung frae the hazel tree;
For Kilmenny was pure as pure could be.'

And when gloaming especially had poured her dim divine lustre over the dark hills and white castle of Abruchill, and allowed the last lingering ray of sunbine to rest on the crest of Benvoirlich, and hushed the streams of Glenlednock behind, and drawn a dewy veil over the plain of Dalgiuross before, and softened the call of the Cauldron in the glen below, and suffused over all the landscape of earth and heaven, a sense unutterable of peace, and introduced into the scene, as a last glorious touch, the moon, to enhance the sense of solemnity, and to deepen the feeling of repose, have we, reclining on the hill, and seeing the stars coming out above the silent column, thought of the 'eve in a sinless world,' when,

'In ecstacy of sweet devotion;
O then the glen was all in motion;'

and owned the power of the 'consecration,' and felt the might of the 'poet's dream.'"

EARN (THE), Renfrewshire. See EAGLESHAM.

EARNISIDE WOOD, an ancient forest, now extinct, which extended around the abbey of Lindores, and along the shore of the frith of Tay a considerable way below the junction of the Earn and the Tay. Sibbald says that it was anciently four miles in length and three in breadth. The name of it, taken in connexion with its situation, seems to countenance a tradition that the Earn once flowed to the base of the hills in the north-west of Fifeshire, that the Tay ran close by the foot of the heights which now screen the north side of the Cause of Govwie, and that the two rivers did not unite till they reached a point considerably to the east of their present place of junction.

EARSAY, or IORSA, a stream, a glen, and a lake, in the parish of Kilmorie, in the island of Arran. The stream rises adjacent to the watershed of the northern half of the island, and runs about 7 miles south-westward to the north side of Mauchry bay. The glen is the trough of the stream's basin. The lake lies on the right side of the glen, about 2 miles from the stream's mouth; and it measures about a mile in length, but is proportionally very narrow. The lake contains trout and salmon.

EASDALE, or EISDALE, a Hebridean island, and a post-office village, in the parish of Kilbrandon, Argyshire. The island lies $\frac{1}{2}$ a mile east of Seil and 12 miles south-west by south of Obau. It is nearly circular, and does not comprise quite one square mile of surface. It consists wholly of slate of similar quality to that of the Welsh slate works, traversed in many places with basaltic veins, and interstratified with thin layers of quartzose and calcareous stones. This slate has been quarried for nearly two centuries, and has all along been in great request for its fine qualities. The quarries have eventually eaten up a large proportion of the island's bulk; and one of them is even so far down as 120 feet below the level of the sea. They have for a number of years past been worked with the appliances of steam-engines and railroads; and they employ upwards of 200 men, and produce from four millions to five millions of slates in the year. The island is the property of the Marquis of Breadalbane, lying at the western verge of that nobleman's immense estates. The strait between it and the island of Seil bears the name of the Sound of Easdale, and is part of the ordinary marine highway of the western steamers between Glasgow and the north. Population of the island in 1841, 531; in 1861, 449. Houses, 112.

The village of Easdale stands on both sides of the sound of Easdale. The houses of the quarriers are only one story high and slated, and all look neat and comfortable. So many as about 400 sailing-vessels, principally sloops, have in one year entered the harbour. The visits from steam-vessels, also, in their transit between Glasgow and the north, are remarkably numerous. A brilliant reception was given to Queen Victoria at this place, on occasion of her passing north to Adverkie. Population, about 449. See SEIL.

EAST-FORTUNE, a station on the North British railway, 3 miles east of Drem, and 3 miles west of Linton, Haddingtonshire.

EAST-GRANGE, a station on the Stirling and Dufermline railway, 4½ miles east of Kincardine, and 6 miles west of Dunfermline, serving for Culross and Torryburn.

EAST-HAVEN, a fishing-village in the parish of Panbride, 5 miles south-west of Arbroath, Forfarshire. It has a station on the Dundee and Arbroath railway. About a mile south-west of it is the kindred fishing-village of West-Haven. From the end of January till the beginning of June, lobsters are caught in large quantities by the fishermen of these villages, and sent up alive, in appropriately fitted up vessels, to the London market. In winter cod is taken in abundance, and salted for exportation. But haddocks constitute the chief produce, and are regularly sent to Dundee, Forfar, and other places in the vicinity. Population of East-Haven, 145. Houses, 38.

EAST-HOUSES, a village in the parish of Newbattle, Edinburghshire. It stands 1 mile east of the hamlet of Newbattle, and is inhabited principally by colliers. Population, 420. Houses, 91.

EASTWOOD, or POLLOCK, a parish, containing the post-towns of Pollockshaws and Thornliebank, in the east side of Renfrewshire. It is bounded by the parishes of Cathcart, Mearns, Neilston, Paisley, and Govan. Its greatest length from north to south is about 4 miles, and its greatest breadth from east to west is about 3 miles; but the form of it is so irregular, that its dimensions in different quarters greatly vary. On the north side it approaches within 2 miles of the city of Glasgow. The soil is in some parts light, in others heavy; but, excepting a tract on the south side, which is tilly and barren, it is in general fertile. The surface has a beautiful appearance, being diversified with little hills rejoicing on every side, with valleys, natural woods, plantations, and winding streams. The whole parish—except what is built upon, or occupied with wood—consists of arable land. The river White Cart traverses it from east to west. There are two smaller streams,—Auldhouse-burn and Brock-burn. The minerals wrought are sandstone, limestone, ironstone, and coal. The Giffnock sandstone quarries have a fine white rock, and employ nearly 100 men. The Eastwood pavement quarry is a fine formation of foliated limestone, 50 feet deep, and employs about 60 men. The yearly value of limestone, ironstone, and coal worked is about £5,000. Sir John Maxwell, Bart. of Pollock, is the most extensive landowner, and resides in the parish. About 350 acres are under wood. There are extensive manufactures, or accessories to them, or both, in various departments of the cotton trade, at Pollockshaws, Thornliebank, Auldfield, and Greenhank. There is likewise extensive hand-loom weaving in connexion with Glasgow and Paisley. The whole district swarms with industry, as if it were immediately suburban to Glasgow; and it is traversed

by the Glasgow and Barrhead railway. Assessed property in 1860, £32,503 0s. Population in 1831, 6,854; in 1861, 11,314. Houses, 709.

The ancient name of this parish was Pollock, which may be derived from the Gaelic *pollag*, "a little pool." About the years 1163-5, the church of Pollock, with its pertinents, was granted by Peter of Pollock to the recently founded monastery of Paisley; and to it the church continued to belong till the Reformation. In the 14th century, the church and parish came to be called by the name of Eastwood, which is obviously derived from an extensive wood which formerly existed here, and which was only recently extirpated. The original estate of Pollock, however, was within the parish of Mearns, and now bears the name of Upper-Pollock. See MEARNS. The Pollock estate comprising the greater part of Eastwood is usually called, in contradistinction, Nether-Pollock. Here has the family of Maxwell resided since the beginning of the 13th century. In 1682, a baronetcy was conferred on John Maxwell of Nether-Pollock, afterwards Lord-justice-clerk. Mr. Ramsay says, "The house of Nether-Pollock, a large and handsome structure of four stories, is situate on the right bank of the White Cart, amidst highly embellished pleasure-grounds and beautiful plantations. The building was completed in 1740 by the grandfather of the present proprietor, a few weeks before his death. The castle—which had been previously occupied by the family—was demolished about the same time: it stood on the site of the offices attached to the present mansion. Upon an eminence about 300 yards to the eastward of the house, there stood a still older castle,—the remains of the drawbridge and fosse belonging to which were in existence in Crawford's time (1710). A remnant of the woods, which in ancient times covered the ground in this quarter, was some years ago found imbedded in the river at Nether-Pollock. This was the trunk of a large oak, which, having been with difficulty dislodged, was found to measure 20 feet in circumference. It was set up in the pleasure-ground, where it may still be seen scooped out in such a manner as to form a summer-house. On the bank of the river at this place there stands a graceful group of wych-elms, of which an etching and an account were given in Mr. Strutt's 'Sylvæ Britannicæ,' published in 1826,—a splendid work, the portion of which that relates to Scotland was dedicated to Mr. Maxwell, younger of Pollock. The principal tree in this group is of extraordinary health and vigour. It was lately measured for Mr. Loudon's work on Trees, and was found to be 90 feet high, the diameter of the trunk being nearly 4 feet at 5 feet from the ground."—The lands of Darnley in this parish belonged for ages to a branch of the house of Stewart. See DARNLEY. It is singular that two ministers of Eastwood, Matthew Crawford, who died in 1700, and Robert Wodrow, who died in 1754, have written Histories of the Church of Scotland. Wodrow's is universally known; Crawford's remains in manuscript. Besides his worth as a minister, Wodrow was a man of extraordinary industry; and to him we are indebted, in addition to his great work, for much valuable information bearing on Scottish history and biography. He was among the first who attended to natural history in this country. George Crawford, in his 'History of Renfrewshire,' says,—"South of Nether-Pollock, stand the house and lands of Auldhouse, situate upon a rivulet of the same denomination, where there are found a great many fossil shells, collected by the Rev. Mr. Robert Wodrow, minister of the gospel at Eastwood, (my very worthy friend,) a gentleman well seen in the curious natural products

of the country." As having been connected with this parish, we may also mention Stevenson Mac-Gill, D.D., professor of divinity in the university of Glasgow, who died in 1840. He was clerical incumbent here from 1791 to 1797.

This parish is in the presbytery of Paisley, and synod of Glasgow and Ayr. Patron, Sir John Maxwell, Bart. Stipend, £267 18s. 4d.; glebe, £13 0s. 4d. Unappropriated tithes, £78 18s. 6d. Schoolmaster's salary, £70, with £80 fees. The parish church, situated at the south-west end of Pollockshaws, was built in 1781, and contains 750 sittings. There is a chapel of ease at Auldfield; the presentation to which is in the communicants, and the number of sittings in which is 786. There are in Pollockshaws the East Free church, with 800 sittings; the West Free church, with 500; an United Presbyterian church, with 800; an Original Secession church, with 460; and a Roman Catholic chapel, with 400. Receipts in 1865 of the East Free church, £303 12s. 9½d.; of the West Free church, £259 18s. 5½d. There is at Thornliebank an United Presbyterian congregation, who have at present a new place of worship in progress of erection. There are in the parish a hurrh school and several adventure schools; but in 1854, the number of children from 5 to 13 years of age attending school was only 780, while the total number was 1,395. There are in Pollockshaws a religious tract society, a destitute sick society, and several other beneficial institutions.

EAST-YELL. See YELL.

EATHACK (LOCH). See GAUR (THE).

EBRIE (THE), a small tributary of the Ythan in Aberdeenshire, giving the name Inverebrie to a detached pendicle of the parish of Methlick, situated at its mouth, contiguous to Tarves.

EBUDÆ. See HEBRIDES.

ECCLEFECHAN, a post-office village, in the parish of Hoddam, Annandale, Dumfries-shire. It stands contiguous to the Caledonian railway, and on the great road from Glasgow to London, 6 miles south-east by south of Lockerby, 16 east by south of Dumfries, and 80 by railway south of Edinburgh. The Mein water flows near it; Hoddam castle figures picturesquely at no great distance; and several vantage-grounds in the vicinity command magnificent views of the basin and screens of the Solway frith. The village has a manufacture of gingham. A general monthly market is held in it; and also a weekly market, during winter, for the sale of pork. The Caledonian railway has a station here, and attains in the vicinity its summit-level between Beatock and Carlisle. Here are a Free church and an United Presbyterian church. Population, 884.

ECCLES, a prefix in names, signifying "a church." See EALES.

ECCLES, a parish, containing the hamlet of Eccles, and the post-office villages of Birgham and Leitholm, on the southern border of Berwickshire. It is bounded on the north by Fogo; on the east by Swinton and Coldstream; on the south by the Tweed, which divides it from England and Roxburghshire; on the south-west by Roxburghshire and Hume; and on the west by Hume and Greenlaw. It has a somewhat pentagonal form, but with a ragged, and, in three places, an indented outline. From an angle above East Printonian on the north, to a bend in the Tweed opposite Loughton house on the south, it measures very nearly 6 miles; and from the extremity of a lochlet on the eastern boundary to an angle beyond Kennetsideheads on the west, it measures 5½ miles; yet in superficial area it does not contain more than 17½ square miles. The surface, excepting some unimportant ridges

which are just sufficient to relieve the scene from monotony, is a continued plain; and, over both rising-ground and level, is all so richly cultivated, fenced, and sheltered with wood, that scarcely an acre is waste or unattractive. The prevailing soil is clay mixed with sand, very fertile, and periodically laden with luxuriant crops. Towards the south the soil inclines to gravel; and, on several farms, it is a very rich loam. Agricultural improvement was early introduced to the parish and vigorously prosecuted; and, aided by the best natural and local appliances, has earned an abundant compensation. No parish in Scotland, probably, is more distinguished for exuberant crops of wheat, barley, oats, and other produce. So far back as 60 years ago, the farmers had become opulent, and almost luxurious, living in a style very different from that of their fathers. The Tweed, over a distance of 3 miles, rolls along the boundary; and, though not wearing here any of its dresses of romance and magnificence, it has not ceased to be pleasing and beautiful. The Leet for 2 miles forms the boundary-line on the east, and is joined in its progress by a brook of 8 miles course, which comes down upon Eccles from the west, forms for a while its boundary with Greenlaw, and then runs across its whole breadth from west to east. The climate, owing to the lowness and flatness of the situation, is not the most salubrious; and lays the population open to epidemics and diseases of debility. The rocks of the parish belong all to the new red sandstone formation. The principal landowners are the Marquis of Tweeddale, the Earl of Home, Sir John Marjoribanks, Bart., of Lees, and Sir Hugh Hume Campbell, Bart., of Purves-Hall. The real rental rose from £11,000 in 1793 to £20,000 in 1822. Assessed property in 1864, £22,846 4s. 2d. The hamlet of Eccles stands in the southern part of the parish, 5 miles north-east of Kelso, and about the same distance west by north of Coldstream. At Deadriggs, about a mile north-west of it, is a sandstone cross or monument, 14 feet high, with some curious sculpturings, and apparently of high antiquity, but of unascertained origin or object. Near Leet water is Leitholm peel, the ruin of an ancient stronghold of the border-reavers. Kames, in this parish, was the birth-place of the distinguished judge and philosopher, Henry Home, and gave him the judicial title, by which he is better known, of Lord Kames. Eccles is traversed along the banks of the Tweed by the great road between Carlisle and Berwick by way of Coldstream; is intersected north-eastward, nearly through its middle, by the north road from Kelso to Berwick; and, besides being supplied with various cross-roads, is traversed also from east to west by a line which cuts it into two nearly equal parts. Population in 1831, 1,885; in 1861, 1,861. Houses, 379.

This parish is in the presbytery of Dunse, and synod of Merse and Teviotdale. Patron, the Crown. Stipend, £245 19s. 10d.; glebe, 20 acres, with a manse. Unappropriated tithes, £819 8s. 4d. Schoolmaster's salary, £55, with £18 school-fee. The parish-church, situated at the village of Eccles, was built in 1774, and has a neat spire and pleasing appearance. Sittings, 1,000. The Free church has an attendance of 120, and raised in 1854 the sum of £96 10s. 8½d. The United Presbyterian church at Leitholm has an attendance of 190. There are four private schools. The church of Eccles was dedicated originally to St. Cuthbert, and afterwards to St. Andrew; and it was annexed, in 1156, by the Earl of Dunbar, to a convent which he founded in the parish, of Cistercian nuns. There were anciently 3 chapels,—one at Brigham, one at Leitholm,
