INTRODUCTION.

A VIEW of Scotland, introductory to a copious Gazetteer, must necessarily be very general. Every natural, political, and ecclesiastical division of the country, each great cluster of islands, every chain of heights and remarkable mountain or hill, each lake and river and arm of the sea, every city, town, village, and conspicuous mansion, and every interesting object, be it what it may, a landscape, an antiquity, a natural curiosity, or a work of art, are so fully noticed in their regular places, that a general article has no scope for description, and needs not even to be studded with references. Yet such a rapid geographical outline as shall indicate the mutual relations of the parts, some details which refer strictly to the country as a whole, and a few particulars which, while belonging to only some localities or to classes of objects, could not, without frequent repetition, be inserted in the body of the work, will form both suitable and pleasing materials for our Introduction.

POSITION.

Scotland is bounded, on the north, by the great North sea; on the east, by the German ocean; on the south-east, by the liberties of Berwick, and by England; on the south, by the Solway frith and the Irish sea; and on the west, by the Atlantic ocean. The line of its boundary on the south-east, from a point $3\frac{1}{4}$ miles north of Berwick to the head of the Solway frith at the embouchure of the Sark, measures, inclusive of sinuosities, about 97 miles. This line has very numerous but not great windings; and, over great part of its length, is very capricious, and not physically marked. The curious reader may trace it by reference to our articles on the counties of Berwick, Roxburgh, and Dumfries, whose southern boundary-lines are identical with this. Popular language is utterly at fault in speaking of Scotland as the part of Britain which lies north of the Tweed; that river running in the interior till 18 miles before it reaches the sea, and having on its left bank, for the last 4 of these miles, the liberties of Berwick. Scotland, as to its mainland, lies between $54^{\circ} 41'$ and $58^{\circ} 41'$ north latitude, and $1^{\circ} 43'$ and $5^{\circ} 38'$ west longitude; and, including its islands, it extends to $60^{\circ} 49'$ north latitude, and $8^{\circ} 55'$ west longitude.

EXTENT.

The greatest length of the mainland, in a line due north, or very nearly so, is from the Mull of Galloway to Cape Wrath, and measures 274 miles. The greatest length of it in any possible direction is from the Mull of Galloway to Dunnet-head, and measures 280 miles. Its breadth, from St. Abb's-head in Berwickshire to the point of Knap in Argyleshire, is 134 miles; from the mouth of the South Esk in Forfarshire to Ardnamurchan-point in Argyleshire, is 137 miles; and from Buchanness in Aberdeenshire to the extremity of Applecross in Ross-shire, is 146 miles. North of the Moray frith, the greatest breadth, from Duncansby-head to Cape-Wrath, is only 70 miles; and the least from the Dornoch frith to Loch-Broom, is 36. The whole country is so penetrated by friths and inlets of the sea, that it constantly and very widely varies in breadth, and has no spot which is upwards of 40 miles inland. The area, partly as ascertained by the Ordnance survey, partly as computed on the best other authorities, is 19,639,377 statute acres, or about 30,685 square miles. This excludes all sea-inlets beneath low-water mark, but includes about 155,000 acres of inland lakes. The Ordnance survey has long been in progress, and, at the end of 1864, had completed 15,400 square miles. The report to the Board of Agriculture made the area, exclusive of water, to be 18,944,000 acres, or 29,600 square miles; and estimated the cultivated lands at 5,043,450 acres,—the uncultivated at 13,900,550.

COASTS.

From the liberties of Berwick, the coast extends, along Berwickshire and part of Haddingtonshire, north-westward to near North Berwick; and there, over a commencing width of 11 miles, it yields to the long westward indentation of the frith of Forth. Over the greater part of this distance it is bold and rocky, presenting a firm rampart against the attacks of the sea, and offering few points where even fishing-boats may approach. On the north side of the Forth, it makes an almost semicircular sweep round the most easterly land of Fifeshire to St. Andrew's-bay; it thence trends northward to the north-east extremity of Fife; and it there gives place to the indentation of the frith of Tay. Between the Forth and the Tay, and over a considerable part of Forfarshire to the north, it is in general low and sandy, wearing alternately the softest and the tamest aspects. From Buddonness, on the north side of the entrance of the Tay, all the way along Forfarshire, Kincardineshire, and part of Aberdeenshire, to Buchanness, its direction is north-north-eastward, slightly variegated by sinuosities. Over the next 18 miles, it trends northward and north-north-westward, to Kinnaird-head; and between that promontory and Duncansby-head in the extreme north-east, it recedes to the vast extent of between 70 and 80 miles, admitting a triangular gulf or enormous bay, called the Moray frith. On the south side of this gulf, it stretches almost direct to the west, and on the other side it extends to the north-east; but at the inner extremity of the gulf, it is confusedly and entirely broken by the friths of Beanly, Cromarty, and Dornoch. From Duncansby-head it undulates 14 miles in a prevailing direction of north-west by west to Dunnet-head in the extreme north; it thence stretches 4 miles south-westward to the indentation of Thurso-bay; and from this bay to Cape-Wrath, in the extreme north-west, and in nearly the same longitude as the entrance of the bay, it describes, over a distance of about 50 miles, a small segment of a circle, the curvature being inland, but, besides having a rugged outline, is broken in three places by the inroads of respectively Loch-Tongue, Loch-Eribole, and Durness-bay. Over nearly all the north it is bold and dangerous, abntted with rocky headlands, crowned with frowning cliffs, torn into fissures, and assailed by very generally a tumbling and chafed sea.

From Cape-Wrath to the Mull of Kintyre, a distance of about 30 miles more than from the meridian of the liberties of Berwick to that of Duncansby-head, and comprising the whole west boundary of the mainland, the coast, as to its general direction, diverges very little from the straight line southward, or from a line a point or two westward of south; but over nearly its whole extent, it is so torn and shattered by inroads of the sea, yields to so many large and variform indentations, and, amidst its curious and ever-recurring recesses, leaps so maziily over the inner line of the Hebridean islets and islands, that it defies description and bewilders an uninitiated tourist. Its aspect is throughout wild and highland, alternately picturesque, grand, snblime, and savage. Toward the Mull of Kintyre the coast becomes narrowed with the continent, or rather with the long peninsula which projects from it, running down to the Mull into a point or headland; and there, over a commencing width of 35 or 40 miles, measured south-eastward to Ayrshire at Ballantrae, it recedes in the large, many-bayed, and curious gulf which forms the frith of Clyde. From Ballantrae to the Mull of Galloway, a distance of 37 miles, it describes the segment of an ellipsis, the curvature being toward the sea, but is broken a few miles south of Ballantrae by the entrance of Loch-Ryan. Over this distance it is rocky, beetling, and inhospitable, but not high, and is curiously perforated with large and numerous caverns. From the Mull of Galloway to a point 31 miles north-east by east, it yields successively to the large ingress of Lucè-bay, the considerable one of Wigton-bay, and the smaller one of the estuary of the Dee, and comes down only in the headlands by which these friths are separated. After passing the estuary of the Dee, it begins to be confronted with the coast of England; and thence onward, it is identified with the shore of the Solway frith.

HEADLANDS.

In enumerating the principal capes, promontories, and other headlands, we shall follow the coast-line in the order in which we have just traced it. St. Abb's-head is in the middle of the coast-line of Berwickshire, and forms the most projecting, bold, and conspicuous piece of sea-board between the liberties of Berwick and the frith of Forth. Fast Castle-head is 3½

miles to the north-west. Whitberry-head and Gulane-point, are in Haddingtonshire,—the latter some distance within the frith of Forth. Fifeness, a low, sandy, naked headland, is the termination of the peninsula of Fife. Buddonness, similar to the former, and Red-head, a beetling and bold promontory, are in Forfarshire. Todhead, Garron-point, Finnonness, and Girdleness, are in Kincardineshire,—the last at the mouth of the Dee, and at the end of a range of the Grampians. Buchanness is the most easterly land in Aberdeenshire, and even in Scotland. Rattray-point, Cairnbulg-head, and Kinnaird-head, are in the same county,—the two last at the entrance of the Moray frith. Knock-head is in Banffshire. Coulard-hill and Burgh-head are in Elginshire. Chanonry-point, at the entrance of the Beaully frith, is in Ross-shire. Cromarty-point, at the entrance of the Cromarty frith, and Tarbatness, the termination of the long narrow peninsula between the Cromarty and the Dornoch friths, belong to Cromartyshire. Ord of Caithness, Clytheness, Noss-head, Duncansby-head, Dunnet-head, and Holborn-head, are in Caithness,—the three last looking across the Pentland frith to the Orkney Islands. Strathey-point, Whiten-head, Far-out-head, Cape-Wrath, and Assynt-point, are in Sutherlandshire,—the last on its west coast, and the three first on its north. Rhu-more is on the west coast of Cromarty. Udrigal-head, and Rhu-Rea-head, are on the west coast of Ross-shire. Ardnamurchan-point, the most westerly ground on the mainland,—the Mull of Kintyre, at the entrance of the Clyde, and of the Irish channel,—and Lamont-point and Toward-point, the southern terminations on the east and the west of the district of Cowal, on the Clyde,—are in Argyleshire. Clough-point, on the Clyde, is in Renfrewshire. Kirkcolm-point, at the entrance of Loch-Ryan,—Corsewall-point, at the north-west extremity of the Rhinns of Galloway,—and the Mull of Galloway and Burrow-head, at the southern extremities of Scotland,—are in Wigtonshire. Ross-head, between Wigton and Kirkeudbright bays,—Balcarry-point, at the west side of Auchencairn-bay,—Almerness-point, between that bay and the estuary of the Urr,—and Southernness-point, at the extreme south east of Galloway,—are in Kirkeudbrightshire.

MARINE WATERS.

The German ocean, where it washes the mainland of Scotland, is closed up on the east side by Denmark, the entrance to the Baltic, and Christiansand in Norway. The North sea and the German ocean, where they girdle the northern and western shores, are—as we shall afterwards see—thickly occupied by the archipelagoes of Scotland, and both tamed in the fury of their billows, and to a considerable extent stripped of their superincumbent vapours, by the numerous and boldly screening islands, before they reach the main shore. From just the same circumstance, too, or owing to currents, whirlpools, shoals, rocks, variable winds, and intricacy of channel, among the girdlings of the islands, or between them and the mainland, these seas are not a little difficult and dangerous of navigation. And, owing to the gulleets and narrow sounds, which serve like funnels for the wind between high grounds, and to the great number and magnitude and power of the rocky or mountainous obstructions which are presented to the breeze and the tide, and to the labyrinth of paths, and the positions of successive or alternate propulsion, vexation, opposition, and becalming which have to be traversed by a current, the seas likewise exhibit in the frequent storms of winter, or amidst a gale on the longest and far extending day of the hyperborean summer, scenes of awful sublimity, which would appal almost any sensitive person except a native of the islands or of the mainland sea-board. The Irish channel, where it washes the Mull of Kintyre, looks up the frith of Clyde, and sweeps along the Rhinns of Galloway from Corsewall-point to the Mull of Galloway, is curtained on its west or south-west side by the county of Antrim, the entrance of Belfast loch, and the county of Down in Ireland, is 13 miles broad at the Mull of Kintyre, and 21 at Portpatrick, and may be viewed as having an average breadth along Wigtonshire of 24 or 25 miles. At the point where it expands into the Irish sea, or immediately off the Mull of Galloway, the tides, which come in one slow and majestic current across the Atlantic, which encounter the long, vast obstruction of Ireland, and which sweep round the ends of that country into the Irish sea by the opposite inlets at the Mull of Kintyre and at St. George's-channel, run against each other in a tumult of collision, and produce, even in calm weather, a tumbling, troughey sea, which no landsman loves to traverse. Resulting from the same causes, the tidal currents in the adjacent parts of the Irish sea, and above all in the Solway frith, are the most curious in the world. Some miles southward of the Galloway coast, where the efflux is felt from both the Galloway estuaries and the Solway frith, or even

some miles southward of the extreme land of the Mull of Galloway, where the current is less powerful, a Glasgow and Liverpool steamer of the old build might, in certain stages of the tide, have paddled away northward for a couple of hours, and scarcely preserved herself from being swept toward the Isle of Man. The Irish sea, where it washes Galloway, looks direct southward to the Isle of Man, and the north coast of North Wales; and the Solway frith, from the line 22 miles wide where it commences between Balmae-head at the entrance of Kirkeudbright-bay and St. Bees-head in England, to the narrow point where it terminates at the mouth of the Sark, is all the way flanked on the English side by Cumberland, and overlooked at intervals on that side by the towns of Whitehaven, Workington, Maryport, and Bowness.

The penetrations which the great encincturing marine waters of Scotland make in the shape of gulfs, bays, friths, and what are called lochs, are so numerous that a full list of them would task a reader's powers of endurance quite as severely as the continuous perusal of three or four pages of a pocket English dictionary. All the important and interesting ones, too, are so fully noticed in their respective places in the Gazetteer, that even they need be enumerated only with the view of indicating their mutual and relative positions.

Belhaven-bay, between Dunbar and Whitberry-head in Haddingtonshire, though a comparatively small marine inlet, is the only noticeable one on the east coast south of the Forth. The frith of Forth divides all Fifeshire, a detached part of Perthshire, and part of Clackmannanshire on the north, from all Lothian, East, Mid, and West, and part of Stirlingshire on the south; and it makes several interior indentations, the chief of which are Aberlady-bay in East-Lothian, Musselburgh-bay in Mid-Lothian, and Inverkeithing and Largo-bays in Fifeshire. St. Andrew's-bay, at the mouth of the Eden, cuts the eastern part of Fifeshire into two peninsulas, the larger on the south, and the smaller on the north. The frith of Tay divides Forfarshire on the north from Fifeshire on the south, and afterwards penetrates considerably into Perthshire. Lunan-bay makes but a small indentation on the coast of Forfarshire, yet is attractive for its beauty, and valuable as anchoring-ground. Montrose basin is a curious landlocked lagoon behind the town which gives it name. The Moray frith is greatly the broadest gulf in Scotland, having part of Aberdeen, all Banff, Elgin, and Nairn, and part of Inverness on one side, and Cromarty, Ross, Sutherland, and Caithness on the other, and measuring in a line, which may be considered its mouth, from Kinnaird-head to Duncansby-head, about 76 miles. Spey-bay makes a comparatively short and slender incision between Banff and Elgin. Burgh-head-bay forms a noticeable expansion between Elgin and Nairn. The Beaully frith, opening from the inner extremity or angle of the Moray frith, penetrates, first south-westward and then westward, between Nairn and Inverness on the one side, and Ross and Cromarty on the other; and it sends off from its south side, near the town of Inverness, the navigation of the Caledonian canal. Cromarty frith, opening with a narrow entrance from the Moray frith a few miles north of the mouth of the Beaully frith, describes a demisemicircle to the town of Dingwall, and forms the best harbour on the east coast of Great Britain, and one of the finest in the world. The Dornoch frith extends westward between Ross and Sutherland. Wick-bay makes a large semicircular indentation, on the east coast of Caithness, immediately north of Noss-head.

The Pentland frith, strictly a strait or sound, intervenes between the mainland and the Orkney archipelago,—forms the marine highway in the extreme north, to vessels going round Scotland,—and, on account of its powerful tidal currents, and its rugged and broken coasts, is of difficult and very perilous navigation. Thurso-bay broadly indents the middle of the north coast of Caithness. Lochs Tongue, Eribole, and Durness make sharp, considerable incisions, at rapid intervals, on the north coast of Sutherland. Lochs Inehard, Laxford, Assynt, Eynard, Broom, Little Broom, Greinord, Ewe, Gair, Torriden, Kishorn, Carron, Ling, and some others, curiously cleave into fragments the west coast of Sutherland and Ross. The Minch, a broad sound or little sea, intervenes between the mainland at Sutherland and Ross, and the archipelago of the Long Island; and the Little Minch, a much narrower sound, intervenes between that archipelago and the group of Skye. The Kyle and the sound of Sleat—the former a confined and winding strait, and the latter gradually expansive—separate Skye from the mainland along the coast of Inverness. Lochs Hourn, Nevish, and Nuagh, opening off from these straits, run-eastward into the mainland. The sound of Mull, a narrow strait, extends south-eastward between Morvern in Argyleshire and the island of Mull. Loch-Linnhe, a large and long sound, stretches north and south between Lorn in Argyleshire and the island of Mull; and is thickly sprinkled with islands and islets

belonging to the Mull group of the Hebrides. Lochs Eil, Leven, Crinan, and Etive branch away from it, and run far into the interior,—the first leading the way from the west to the navigation of the Caledonian canal. The sound of Jura, extending north and south, intervenes between the district of Knapdale and the island of Jura; and the sound of Isla, extending in the same direction, forms a narrow stripe between Jura and Isla. The frith of Clyde, previously to its being ramified into a labyrinth of straits, sounds, and elongated bays, rolls its great gulf of waters between the long peninsula of Kintyre on the west and the coast of Ayrshire on the east; and, in its higher waters, it encloses the various islands of Buteshire, cleaves southern Argyleshire into a series of wildly Highland and singular peninsulas, makes a considerable cleft in Dumbartonshire, and, as to its main channel, divides the counties of Argyle and Dumbarton from those of Ayr and Renfrew. Loch-Ryan and Luce-bay invade Wigtonshire on a line with each other, but on opposite sides,—make such a mutual advance as to leave a comparatively narrow isthmus between their inner extremities,—and divide the Rhinns of Galloway from the rest of Wigtonshire. Wigton-bay makes a long inroad between the two great political divisions of Galloway. Fleet, Kirkeudbright, and Auchencairn bays, and the estuary of the Urr, indent the coast of Kirkeudbrightshire. And the estuary of the Nith divides, for a considerable distance, the stewartry of Kirkeudbright from the county of Dumfries.

ISLANDS.

The islands of Scotland are very numerous, and, in many instances, are large and important. The greatest archipelago, that of the Hebrides, extends along nearly the whole west coast of the mainland. It is broadly distinguishable into two divisions, the outer and the inner, but is capable of subdivision into five groups. Three of these press close upon the coast, the group of Isla and Jura on the south, that of Mull in the centre, and that of Skye on the north,—the last separated from the second by the seas which wash the far-projecting Point of Ardnamurchan on the mainland, and the first and second so concatenated as to admit a line of separation chiefly by their geognostic properties. The fourth, largest, most northerly, and far-stretching group, lies quite away from the mainland, and even from the group of Skye, separated from the northern part of the former by the Minch, and from the western skirts of the latter by the Little-Minch. It consists of about 140 islands and islets, is about 140 miles in aggregate length, and lies so compactly as to be popularly viewed as one, and conventionally called the Long-Island. The fifth group is very small, lies to the far-west in profound loneliness, amidst a desert of waters, and draws attention chiefly by the romance of its situation and character,—consisting only of St. Kilda, itself more an islet than an island, and a tiny sprinkling on the bosom of the sea around it of dark, coarse gems, which pendulate between the character of islets and that of mere rocks. These groups are all fully treated in the article **HEBRIDES**. Another archipelago, that of Orkney, is separated at its south end by the Pentland frith, 6 miles broad, from the north coast of Caithness, or extreme north of the mainland of Scotland. Its islands and islets lie somewhat compactly; but are divisible into two groups, the larger and more compact on the south, the smaller and more dispersed on the north-east,—the two separated by a sound which bears on the east side the name of Stronsa frith, and on the west side that of Westra frith. A full general description of the whole will be found in the article **ORKNEY**. An islet called Stroma, lies in the Pentland frith, 4 miles north-west of Duncansby-head. A third archipelago, that of Shetland, lies 48 miles north-north-east from Orkney. About two-thirds of its whole superficies is amassed in a very long island, of surpassingly irregular outline, and in several places very nearly dis severed, called the Mainland. Yell sound, a winding strait, separates this island on the south from the other chief island on the north, but is, in some places, thickly strewn with islets. One small island, Fowla, lies quite away to the west from the main group. Another, called Fair-Island, lies about half-way between that group and the Orkneys. All the details of a general description are given in the article **SHETLAND**.

The other principal islands of Scotland are Mugdrum, in the frith of Tay; the Isle of May, Inchkeith, Cramond, Inchcolm, Inchgarvey, Inchmickry, Craigeith, Lamb, Fidra, and the Bass, in the frith of Forth; and Arran, Bute, Great Cumbrae, Little Cumbrae, Sanda, Devar, Pladda, Lamlash, Lady-Isle, and Ailsa-rock, in the frith of Clyde. Of seaward rocks and sandbanks, the chief are Car-rock, $1\frac{1}{2}$ mile north-east of Fifeness; Bell-rock, 12 miles east of Buddonness; Marr's-bank, a shoal, 30 miles east of the Bell-rock; Murray-bank, a sand-

bank 10 miles east of Montrose; the Long-Forties, a shoal, extending from the exterior side of Murray-bank, in a line nearly parallel with the coast, to within 70 miles of Kinnaird-head; Outer-Montrose-pits, a shoal, 90 miles east of Montrose; Covesea-skerries, a reef a mile off the coast of Drainie in Elginshire; the Pentland-skerries, at the east end of the Pentland frith; Lappoch-rock, between Lady-Isle and Irvine harbour, in the frith of Clyde; and the Big and Little Scaurs, rocks at the middle of the entrance of Luce-bay.

COAST-LIGHTS.

The dangers of navigating the seas of Scotland are very great; yet artificial means of mitigating them, till quite a recent period, were few and inefficient. But now, to say nothing of improvements in navigation itself, of the aids furnished by steam-tugs, and of the refuge presented by the Caledonian and the Crinan Canals, immense protection is afforded by beacon-towers and lighthouses. All these, of course, are well known to nautical men frequenting the Scottish coasts. But the lighthouses, by both their situation and their variety, possess interest for general readers. Several of them stand on wild reefs washed all round by the sea; and one of these, on the Bell-rock, is as remarkable a structure as any in the world. Most are situated so high on bold promontories or beetling sea-cliffs as to be visible at great distances; all have distinctive lights; and six are double. About 70 belong to particular harbours, or are local. Nine were erected by the Commissioners of Northern Lights between 1861 and 1867; and the following, with the date and cost of their erection, were under the Commissioners in 1861,—Little Ross, Kirkeudbrightshire, 1843, £8,478; Mull of Galloway, 1830, £8,378; Corsewall-point, 1817, £7,835; Loch Ryan, 1847, £4,241; Pladda Island, 1790; Devar Island, Campbelton, 1854, £4,916; Sanda Island, 1850, £11,931; Mull of Kintyre, 1787; Rhinns of Islay, 1825, £8,056; Sound of Islay, 1859, £7,437; Lismore, 1833, £11,229; Sound of Mull, 1857, £6,277; Ardnamurchan, 1849, £13,738; Sound of Sleat, 1857, £4,527; Kyleakin, 1857, £6,210; South Rona, 1857, £5,063; Skerryvore, 1844, £86,977; Barrahead, 1833, £13,087; Ushemish, South Uist, 1857, £8,809; Island-Glass, Harris, 1789; Stornoway, 1852, £6,380; Cape Wrath, 1828, £13,550; Dunnethead, 1831, 9,135; North Unst, 1855, £32,478; Whalsey-skerries, 1856, £21,750; Bressay-sound, 1858, £5,163; Sumburgh-head, 1821, £10,087; North Ronaldshay, 1854, £12,927; Start-point, Sanday, 1806; Hoy, 1851, £15,880; Cantickhead, Hoy, 1858, £5,661; Pentland-skerries, 1794; Nosshead, 1849, £12,149; Tarbatness, 1830, £9,361; Cromarty-point, 1846, £3,203; Chanonry-point, 1846, £3,571; Cove-sea-skerries, 1846, £11,514; Kinnaird-head, 1787; Buchanness, 1827, £11,912; Girdleness, 1833, £11,940; Bell-Rock, 1811, £61,331; Isle of May, 1816; Inchkeith, 1804. Those erected between 1861 and 1867 are in the sound of Jura, in Islay, near Easdale, in Loch Eil, Butt of Lewis, Monach islands, Stronsay frith, Holburn Head, and St. Abb's Head.

GENERAL SURFACE.

Hundreds and even thousands of parishes in England so closely or exactly resemble one another in all their features of landscape, that a sufficiently graphic description of one might be subscribed successively with the names of all. But so wondrously diversified is the surface of Scotland, that each of all its parishes, except a few, has some broad distinctive features of its own, each of the great majority might be the subject of a picture replete with individuality, and each of very many offers to the painter entire groups of scenes, sometimes multitudinous clusters, which are rich in the peculiarities of their respective elements. Any general description of such a country is in the highest degree susceptible of colouring from the bias of aversion or of favourable predilection. Scotland has spots as lusciously lovely or as superbly magnificent as ever poet sang, and spots as unutterably dreary or as inhospitably sequestered as ever a dreaming or misanthropic anchorite conceived; and, in respect both to scenery and to climate, can probably exhibit some actual tract of territory to justify, or at least to countenance, on the one hand, each sneer or sarcasm which has been written against her by illiberal prejudice, and, on the other, each of the most impassioned panegyrics which have been sung upon her by patriotic and enthusiastic admiration. To be fully understood, the country must be seen or studied in minute detail. No general description of it can be made the vehicle of very distinct ideas. Only such readers as acquaint themselves with it through some such medium as a copious Gazetteer, can be said to comprehend it,—

examining it piece by piece in such large districts as those of counties and grand divisions, and then looking in detail at its parishes, its principal mountains, its lakes, its rivers, and all its various interesting objects. Whoever shall peruse the present work, first in the great and comprehensive articles, and next in the multitudinous briefer articles which exhibit the individual objects and describe the minute features of the grand picture, must rise, we should hope, from the perusal with conceptions of the surface of Scotland incomparably clearer than if he had read any conceivable amount of consecutive description. He will be surprised, perhaps bewildered, by the amount of variety; he will be delighted, or even thrilled, by the frequency with which scenery occurs, ever new or peculiar, and addressing itself by turns, or in combinations, to every power of taste, from the love of the calmly beautiful to the sturdiest and sternest capacity for the awfully sublime; he will wonder to discover many a fairy nook or striking *lusus naturee* in a district which probably rash satire had pronounced repulsive even to a savage; and when he reflects how spiritedly and copiously Wordsworth and Scott and many other masters of song have written upon Scottish landscape, he will conjecture how mighty an impulse they must have felt, and how resistlessly they were hurried along, and into what a whirl of poetic excitement they were carried, in the careering of their descriptive poetry. But he must be aided, in this introductory article, by such a general view of the surface of the country as, though unneeded and useless for the purposes of description, will indicate to him the prevailing characteristic of each great district, and assist him to see the mutual connexion of counties, mountain systems, valleys, and the basins of the great rivers.

Scotland, then, as to its mainland, is naturally and very distinguishably separated both into two and into three great divisions. The two great divisions are the Highlands and the Lowlands, so noticed and traced in separate articles in the body of this work, that they need not be further mentioned. The three great divisions are, the Southern, lying south of the friths of Forth and Clyde, and of the valley of the Forth and Clyde canal,—the Central, lying north of this line, and south of the Glenmore-nan-albin, or great Glen of Caledonia, occupied by a chain of slender lakes, and traversed by the Caledonian canal,—and the Northern, lying north and north-west of the Glenmore-nan-albin.

Though the Southern division is all comprehended in what are called the Lowlands, and contains much champaign country, or many of the districts which obtain in Scotland the name of plains, it contains very little level ground except in the alluvial tracts,—the luxuriant Scottish ‘haughs’ and ‘holms,’—along the courses of the greater rivers. Its southern extremity, comprising all Wigtonshire except a belt on the north, is strictly neither mountainous nor lowland, a remarkably tumulated expanse,—a sea of hillocks, very thickly crested with wood, and wearing the hues of constant hesitation between wilderness, green pasture, and arable cultivation. Along the north of Wigtonshire, but chiefly in the adjacent portions of Kirkeudbrightshire and Ayrshire, from the head of Wigton-bay on the east, to the sea at Loch-Ryan, and to the frith of Clyde opposite Ailsa-Craig, commences a system of mountains which are often called the Scottish Southern Highlands, and which form the grandest feature of the southern division of the mainland. This system extends in a broad phalanx of spurs and ridges cut by gorges and glens quite across the kingdom in the direction of north-east by east, to the Cheviots on the boundary of Roxburghshire, and there passes on to Northumberland. It attains its highest altitudes about mid-distance in the country, and thence sends off huge spurs northward to the great bend of the Clyde round Tinto, north-north-eastward to the abrupt stoop of the Pentland-hills, a few miles south of Edinburgh, and north-eastward to the termination of the Moorfoot-hills in the vale of Gala-water. From the western end up to the central masses, no regular ridge can be traced; the mountains there forming an elevated region unmarked by order, and penetrated in various directions by deep long gorges and vales. East of the central heights, a distinctly marked but deeply serrated ridge, constituting an uniform water-shed, and shooting up in a continued series of summits, runs along the northern boundary of Dumfries-shire and Liddesdale, and afterwards bends north-eastward and northward along the boundary with England, to the vicinity of Yetholm. The heights, in a few instances, have sharp and pinnacled outlines, or present a bare and rocky aspect; but, in general, they are soft in feature and in dress, angularities being rounded away from side and summit, and verdure successfully struggling to maintain ascendancy over heath. On their south side they run far down in lateral ridges, and frequently subside with comparative suddenness, allowing the parallel narrow valleys to open boldly and sweepingly out into a great plain. In their main broad line they occupy the northern parts of Kirkend-

brightshire and Dumfries-shire, and the southern parts of the counties of Ayr, Lanark, Peebles, Selkirk, and Roxburgh. Their altitude, in the central masses, averages nearly 3,000 feet above sea-level, and in other parts, varies from 700 or 800 feet to a little upwards of 2,000.

The great plain, or rather champaign country, which lies between these mountains and the Solway frith, exhibits on the east a considerable expanse of level ground,—in the centre, an agreeable variety of flats and gentle hilly ridges,—and in the west, an irregularly tumulated surface. Greatly the boldest variety in this quarter, is the ridge of the Criffel-hills, which lifts a grand summit in the immediate flank of the Solway, at the mouth of the estuary of the Nith, and thence runs inland in a considerable ridge of 10 or 12 miles. The broad spurs toward Edinburgh and Gala-water, fill all Peebles-shire and Selkirkshire. They are quite as irregular as the main line of the Southern Highlands, not so bold, more softly dressed, and forming over a considerable space a hugely undulated expanse of verdure. As they become identified with the Moorfoot-hills in the south of Mid-Lothian, they lose much of both their greenness and their altitude. After the intervention of the vale of the Gala, they rise suddenly up in a broad and very moorish ridge, which takes the name of the Lammermoor-hills, occupies the northern part of Berwickshire, and the southern part of East-Lothian, and extends in a direction north of east to the German ocean at St. Abb's-head. An irregular triangle, formed by the east end of the main line of the Southern Highlands, and the spurs onward to the east of the Lammermoors, constitutes the basin of the parent-stream and the affluents of the Tweed. This, over a large part of its extent, is identical with the dells, and glens, and vales of the mountain-territory; but in the eastern and southern divisions of Berwickshire, and a small part of the north-eastern division of Roxburghshire, it forms the largest plain in Scotland, an expanse of very slightly undulated ground, closely resembling many districts in England,—the luxuriant, calmly pretty, garden-looking Merse.

Intervening between the South Highlands and the friths of Forth and Clyde, the great champaign grounds of Lothian and Strathelyde extend from sea to sea,—the former a hanging plain, declining to the north, and picturesquely variegated with hill and rising ground,—the latter a great valley, opening broadly out from among the glens and vales of the Highlands, stretching westward in agreeable undulations which decline on both sides to a line along the centre, and becoming pent up in the west between the Lennox-hills and a ridge in Renfrewshire. The water-shed between these two great champaign districts is everywhere very slightly marked, and contains less hill, and greatly less boldness and variety, than several ridges or eongeries of heights in the interior of Lothian. An insulated range, vaillanting in character between hill and mountain, commences behind Greenock, at the west end of the valley of the Clyde, and runs southward near the west coast to the hill of Knockgeorgan, 700 feet high, about 3 miles north of Ardrossan bay. Mistie-Law, near the middle of this range, rises 1,558 feet above sea-level. From the heights north of Ardrossan, the water-shed makes a circular sweep to the south, with the concave side to the west, enclosing in a sort of amphitheatre the great hanging plain of Ayrshire, frequently but very slightly tumulated, containing much level ground, and, in its southern part, several bold heights, and having a prevailing declination to the west. This water-shed, after leaving the insulated chain from Greenock to Ardrossan, is for a long way of very inconsiderable elevation; and where it forms the boundary-line between Lanarkshire and Ayrshire, it is so low as to admit, from some points on the east bank of the Clyde in the centre of Clydesdale, not more than 120 or 160 feet above sea-level, a view of the heights of Arran, distant 50 miles in the frith of Clyde; but over its southern half, it becomes identified, for some distance, with the water-shed of the main line of the Southern Highlands, and then sweeps westward to the sea, immediately on the left bank of the outlet of Girvan-water. The extreme north of the southern division of Scotland, or that which forms the middle part of the common boundary between it and the central division, is a strath or belt of low land, stretching along the south base of the Lennox-hills, from the head of the estuary of the Forth between Grange-mouth and Stirling, to a point a little above the head of the estuary of the Clyde, between the village of East Kilpatrick and the vicinity of Glasgow. This strath is identical, at its west end, with the valley of the Clyde; in the chief of its central part, it forms a detached district of Dumbartonshire; and in its east end, and the rest of its central part, it constitutes the plain of Stirlingshire.

The Lennox-hills, which skirt the central division of the kingdom between the Forth and the Clyde, extend from Stirling to Dumbuck, immediately above Dumbarton, in the direction

of west-south-west. Along the north side, a moorish descent terminates, over the western half, in a narrow and richly variegated vale, chiefly traversed by the river Endrick, and partly declining to Loch-Lomond and the river Leven,—and over the eastern half, in a flat broad belt of carse-ground, which is very sinuously watered by the river Forth, and which, after sweeping past a narrowed part at Stirling-castle, becomes identified with the plain of Stirlingshire. The mountains beyond extend over a vast region; occupy, with their intervening vales and lakes, the whole of the middle and western portions of the central division of Scotland; and press closely on the whole flank of the Glenmore-nan-albin. One of the highest summits of the region, as well as of all Scotland, is Bennevis, 4,380 feet above sea-level, situated on the south-east side of Loch-Eil, near the entrance of the Caledonian canal. The boundary of the most mountainous part of the region extends south-westward from this monarch-height to Ben-Cruachan, on the south side of Loch-Etive; it runs thence south-eastward to the mountains of Arroquhar, on the east side of Loch-Long, one of the most northerly branches of the frith of Clyde; it extends thence eastward to Benlomond, at the sources of the Forth; it thence passes on in the direction of east-north-east to Benedi, on the west side of Loch-Lubnaig; it thence diverges eastward to the enormously-based Bengloe, in latitude $56^{\circ} 50'$ and west longitude $3^{\circ} 40'$; it runs thence due east to the lofty ridge of Lochnagar, nearly in latitude 57° and west longitude 3° ; it extends thence northward, to the water-shed between the sources of the river Deveron and those of the Aven; it thence passes on westward to the northern extremity of Loch-Ness; and it thence extends south-westward, along the flank of the whole of Glenmore-nan-albin, to Bennevis. All the country comprehended within these boundaries, excepting Strathspey and a few deep glens, lies probably at a minimum of 1,000 feet above sea-level; it embosoms multitudinous scenes of grand and magnificent beauty, and of alternately savage and picturesque sublimity; it has many tracts which afford rich pasture, and not a few which are finely feathered over with forest; it even contains many well-sheltered spots small individually, but considerable in the aggregate, which are available for agriculture; but over by far the greater part of its extent, it either sends up wild and untameable summits to the clouds, or is an impracticable region of rocky steeps, unproductive moors, and extensive bogs.

Large tracts of continuous mountain lie on all sides, except the north-west, immediately beyond the boundaries we have indicated, and form, jointly with the great territory within these boundaries, the upland district of the central division of Scotland; but, though equally inhospitable, they are much inferior in mean height, and, in general, have less boldness, angularity, and rockiness of surface. The greatest range of the whole region cuts it from west to east into not very unequal parts, forms all the way a water-shed between streams respectively on the north and on the south, has a breadth of from 12 to 25 miles, runs at no great distance south of the 57^{th} parallel, extends from Bennevis by Loch-Ericht, and along the northern boundary of the counties of Perth and Forfar, to Mount-Caerloch in Kincardineshire, 18 miles west by north of Stonehaven, and thence sends off two hilly ridges to the east, one terminating at Stonehaven, and the other at Girdleness. It thus bristles up as a stupendous rampart from sea to sea, sends up many summits 3,000 feet above sea-level, has probably a mean altitude, west of Caerloch, of 2,500 feet, measures in length from Bennevis to Girdleness about 100 miles, and, besides being turned at the east end of its forking hilly ridges by the great north road and the Aberdeen railway, is pierced in three places with gorges or passes which admit the transit of military roads. Another range commences in the vicinity of Loch-Lydoch, several miles from the south side of the former range, in west longitude $4^{\circ} 35'$, and runs south-south-westward to Benloe, and thence southward, by the mountains of Arroquhar, along the west side of Loch-Long and the frith of Clyde, to a soft and gentle termination at Toward-point, the eastern peninsular headland of the district of Cowal. This range is not more than 50 miles in length, and, in Cowal, it is not more than 6 in mean breadth, and considerably less than 2,000 feet in the average height of its summits; but, north of Arroquhar, it is from 12 to 15 miles broad, sends up numerous summits to the height of nearly 3,000 feet, and forms a water-shed between the streams which flow respectively to the German and the Atlantic oceans. The section of the mountain district lying east of this range, and south of the great central range from Bennevis to Caerloch, somewhat nearly resembles in outline the figure of a quadrant, and contains many elevations, such as Benlomond, Benvenu, Benedi, Benvoirlich, Benlawers, and Schihallion, which rise about 3,000 feet or upwards, and in one instance even 4,000 feet, above sea-level. Its mountains, in some cases, are isolated; but, in general, they run in lateral spurs or offshoots eastward from

the south and north range, and more or less parallel with the great central range. These are short in the southern part of the district, but they gradually increase from 10 to 15 or 18, and even to upwards of 20 miles, in the north; and the glens which they there enclose are generally very deep, in part high above sea-level, have a contracted narrowness on the west, but usually expand into vales toward the east, contain aggregately a large amount of arable land and forest, and embosom a great proportion of the loveliest far-famed scenery of the Highlands.

Between the northernmost screen of these glens and the great east and west central mountain-range, extends the vale of Rannoch, traversed along the east by the tumultuous river Tummel, and occupied on the west by Loch-Rannoch; and from the west end of this lake, past the northern termination of the north and south great range, away south-westward to the spurs of Bencruachan, extends the moor of Rannoch, an immense level bog lying about 1,000 feet above the level of the sea, a dismal wilderness occupying an area of about 400 square miles. The section of country south and south-west of this, north of the peninsula of Knapdale and Kintyre, and west of the north and south mountain-range, measures about 40 miles by 25, and, with the exception of the stupendous mass of Bencruachan and some attendant heights, is a series of table-lands, elevated from 500 to 700 feet above sea-level, separated by narrow and deep glens ploughed up by water-courses, and covered partly with heath and grass, and partly with moorish soil and bog. The glens, though deep, are, in general, open, or expand into vales, and, in common with the banks of far-stretching bays and marine lochs, are subject to the plough or luxuriant in wood. The long narrow peninsula of Knapdale and Kintyre, extending nearly 50 miles southward, with a mean breadth of about 7 miles, rises at its southern extremity to an altitude of about 1,000 feet above sea-level, but elsewhere is very moderately and even gently hilly, has many interspersions of plain and valley, and wears an arable, sheltered, and softly picturesque appearance.

From the north side of the great central range, at a point north-north-west of Bengloe, a range upwards of 30 miles in length, and about 10 or 11 in mean breadth, goes off in the direction of north by east, to the stupendous mountain-knot of the Cairngorm heights—according to some authorities, the loftiest in Britain—and there forks into two branches, the one extending north-eastward, and lowering in its progress, along the right flank of the upper basin of the Deveron, and the other, under the name of the Braes of Abernethy, running northward between the vale of the Aven and the valley of the Spey, to the terminating and lofty heights of Cromdale. This range, except near the north end of its divergent branches, is unpierced by any road or practicable pass; and, from the Cairngorm group to its junction with the great central range, has a mean altitude of probably about 3,000 feet. In the triangle, the two greater sides of which are formed by the Glenmore-nan-albin, and the western moiety of the great central range, stretches north-eastward a range 30 miles in length, and considerable in breadth, called the Monadh-Leadh mountains. These heights commence, at their south-west end, in the Corryarrick mountains, 18 miles north-east of Bennevis; they divide in their progress into two branches, which enclose the glen of the river Findhorn, and terminate nearly due east of Inverness; and they possess an extreme altitude above sea-level of not much more than 2,000 feet. The south side of the east end of the great central range from Caerloch to Bengloe, and the ends facing the south-east and east of the lateral offshoots of the great range north and south, have a broad fringe of shelving upland, which, in a general view, may be described as descending in tiers, or as forming a declination by successive gradients to the Lowlands. This fringe—mountainous on the inner side, and merely hilly in the exterior—varies in breadth from 3 to 8 miles toward the south, and from 6 to 12 miles toward the north; it is everywhere chequered or striped with glens and vales, bringing down the roaring and impetuous streams eradled among the alps to the champaign country below; it exhibits, as seen from a distance, a magnificently varied breastwork thrown round the Highlands; and it encloses in its glens and vales a surpassingly rich assemblage of scenery, a vast aggregate area of picturesque and romantic forest, and not a small proportion of excellent arable ground.

Along the whole south-east side of this far-stretching and myriad-featured declivity, from the Forth between Stirling and Aberfoil to the German ocean at Stonehaven, a distance of about 80 miles, extends the plain of Strathmore, or the Great Valley, from 1 mile to 16 miles in breadth, over the most part from 6 to 8, and almost everywhere level and in fine cultivation. This grand strath sends off to the German ocean at Montrose, a short one of kindred character; farther north it becomes narrowed, and assumes the name of the Howe of Mearns;

and at the point where it is crossed by the river Tay, it looks down a transverse valley watered by that stream. But over nearly all its length, it is flanked along its south-east side by ranges of heights which, in some places, almost vie with the Grampians along the north-west side, and in others wear the aspect of soft and gentle hills. The most considerable range, called the Ochils, extends from a point 2 miles from the river Forth, and about 4 miles from Stirling, in the direction of east-north-east, to the frith of Tay; it is 24 miles in length, and has a mean breadth of about 12 miles; and it is loftiest toward the Forth, and attains an extreme altitude of 2,300 feet above sea-level. Another range, called the Sidlaw-hills, is continuous of the Ochils, except for the intervention of the valley of the Tay; it rises abruptly up a little below Perth, in a surpassingly picturesque height of 632 feet above sea-level, and extends to a point some miles south of Montrose, sending up, over the earlier half of its progress, numerous summits upwards of 1,000 feet in altitude, and afterwards forming naturally moorish terraces which now are either arable or, for the most part, clothed with wood. South-eastward of the Ochils, all the way to the German ocean, the surface is singularly rich in the calm and soft beauties of landscape, and exhibits an interminable blending of valley, slope, and gentle hill; its boldest variety being an isolated table-ridge, a few miles from the Ochils, 4 miles in length, and shooting up at the extremities into beautifully outlined summits, respectively 1,466, and 1,721 feet high. Eastward from the south end of the Sidlaws, and along the north shore of the frith of Tay to the vicinity of Dundee, stretches the Carse of Gowrie, a level expanse of wheat-bearing soil, unsurpassed in strength and richness. The surface elsewhere between the Sidlaws and the sea, is partly diversified with the soft low heights called Laws, and partly consists of sandy downs, but in general is a waving, well-cultivated plain.

North of the great central mountain-range from Bennevis to the German ocean, and east of the strictly Highland region, some high hilly ridges run eastward to near the sea, and send aloft numerous summits of mountainous aspect and altitude. The surface of the ridges and of the intervening tracts, alternately pleases and tantalizes by incessant change; it abounds in rocky ruggedness, steep declivities, and niggard moorlands; and it admits the dominion of the plough only or chiefly on the low grounds of its glens and valleys. The country lying to the north-east, and terminating in Kinnaird-head, at the entrance of the Moray frith, has plains which, in some instances, run 10 or 12 miles inland from the sea, and swell into hills, most of which are graceful in outline, and beautifully verdant, while some are ploughed to the summit, and all, with one exception, rise less than 600 feet above the level of the sea. The country lying along the Moray frith to the north-east end of the Glenmore-nan-albin, has a breadth between the Highlands and the sea of only from 12 to 18 miles; its level ground along the sea-board runs 9 miles inland in the vicinity of the Spey, but elsewhere is seldom more than 2 miles broad; its interior district is traversed seaward by lofty offshoots of the mountain region beyond; and its sea-board on the Beaully frith is a barren moor 10 miles by from 2 to 3,—the famous moor of Culloden. The Glenmore-nan-albin extends north-east and south-west, in a straight line from sea to sea; it is 60 miles in length from Loch-Eil to the Beaully frith; and it is principally occupied by three long stripes of fresh-water lake, aggregately upwards of 37 miles in length.

The northern or third great division of Scotland, with the exception of two comparatively small portions, is all Highland. One of the low tracts consists of the peninsulas respectively north and south of the Cromarty frith, and of a tract round the head of that frith from 2 to about 4 miles in breadth, which unites them. The southern peninsula, seaward from an isthmus which nowhere rises more than 50 feet above sea-level, swells on its west side into a flat-backed height, which, with a mean breadth of 2 miles, extends northward to the coast. The northern peninsula, though much and roughly variegated with high moorish grounds, and lifting up in one place a bold rampart on the coast, is crossed by the fine plain of Fearn, stretching from Tain to the most northerly bay of the Cromarty frith. The other low district is a somewhat variegated level, comprehends about four-fifths of the whole of Caithness, and will be quite understood, as to both its character and its relative position, by reference to the article on that county. The mountain region, while vast in area and multitudinous in feature, exhibits such masses and congeries of heights, and is so undisposed in ridges or ranges, that only a longer description than the patience of most readers could endure would serve to depict it. Its greatest elevation extends across nearly its centre, from Ben-Wyvis on the east, to Loch-Torridon on the west, and sends aloft its summits from a base lying at probably 1,500 feet above sea-level. On the north side of this line, or toward Cape-Wrath,

the elevation decreases more than on the south, or toward the peninsula of Morvern. On its west side occur most of those long and narrow indentations of the sea noticed in the sections on the coasts and the marine waters; remarkable for rendering so desolate a region inhabitable, and especially for their being of a class which occurs nowhere else in the world except on the coasts of Norway, Greenland, Iceland, and the hyperborean country around Hudson's Bay.

RIVERS.

Most of the running waters of Scotland, owing to the prevalence of mountain, and the frequent penetrations of the sea, have small length of course, and are not generally designated rivers. Yet though very numerous, and, for the most part, individually unimportant, they will be found distinctly noticed in the articles on counties, and fully described in the alphabetical arrangement. We can here, without useless repetition, only name the principal streams, and state their locality and direction.

South of the west end of the Southern Highlands, or in two cases in Wigtonshire, and in the third between that county and Kirkeudbrightshire, the Luce, the Bladenoch, and the Cree run south-eastward to the Irish sea. South of the main range of the Southern Highlands, the Dee, the Urr, the Nith, the Annan and the Esk run southward to the Solway frith. In the large triangular district, two sides of which are formed by the main range of the Southern Highlands, and by the long spur to St. Abb's-head, and whose aggregate basin comprehends about 1,870 square miles, the Tweed, aided chiefly by the affluents of the Gala, the Teviot, and the Whitadder, runs eastward, north-eastward, and northward, to the German ocean. The Lothians and the plain of Stirlingshire are drained north-eastward or northward to the frith of Forth, principally by the Tyne, the Esk, the Leith, the Almond, the Avon, and the Carron. Ayrshire is drained in a direction more or less westerly to the frith of Clyde, by the Stinchar, the Girvan, the Doon, the Ayr, the Irvine, and the Garnock. The basin of the Clyde, comprehending an area of 1,200 square miles, is drained in a direction north of west to the head of the frith of Clyde, by its cognominal stream, whose chief affluents are the Douglas, the Avon, the Kelvin, and the Leven. The Forth, drawing greatly the majority of its head-waters from the central division of Scotland, fed principally by the Teith, the Allan, and the Devon, and draining an area of 574 square miles, flows eastward to its frith.

The streams which, throughout both the central and the northern divisions of Scotland, run westward to the Atlantic, are all individually too inconsiderable to bear separate mention. Those which drain the district east of the Ochil-hills are chiefly the Leven and the Eden,—the former eastward to Largo-bay, and the latter north-eastward to St. Andrew's-bay. A vast territory lying immediately south of the great central range of mountains, and comprehending large portions of both the Highlands and the Lowlands, is drained to the extent of 2,396 miles, chiefly eastward, and partly southward, by the Tay and its tributaries, the principal of which are the Tummel, the Isla, the Almond, and the Earn. The north-east corner of this territory is drained eastward to the German ocean, chiefly by the South-Esk and the North-Esk. In the district immediately north of the central mountain-range, and east of the Cairngorm mountain-knot, the Dee and the Don run eastward to the sea at Aberdeen. In the district lying between this and the eastern half of the Moray frith, the Deveron runs northward to that frith, and the Ythan and the Ugie eastward to the German ocean. The district enclosed by the great central mountain-range, the north-east branch of the Cairngorm ramification, the Moray frith, and the Glenmore-nan-albin, is drained to the extent of 1,300 square miles, north-eastward to the sea by the Spey, to the extent of 500 miles northward to the frith by the Findhorn, and to a less extent for each stream, northward to the frith by the Nairn, and westward to Loch-Lochy, near the west end of the Glenmore, by the Spean.

In the great northern division of Scotland, the chief streams eastward are the Beauly to the head of the Beauly frith, the Conan to the head of the Cromarty frith, the Oyshell to the head of the Dornoch frith, the Brora, the Helmsdale, the Berriedale, and the Wick; and the chief streams northward are the Thurso, the Forss, the Halladale, and the Naver. Of all the rivers, the Clyde alone is navigable by sea-craft for any considerable distance above the estuary; and even it possesses this high property only in consequence of great artificial deepening and embanking, and over a distance of but about 12 miles.

LAKES.

The lakes of Scotland are very numerous, and, in many instances, are large, and singularly rich in scenery. The principal, for extent or scenic attractions, are Ken, drained by a cognominal stream, the chief affluent of the southern Dee; Skene, 1,300 feet above sea-level, drained by a remote tributary of the Annan, forming the magnificent cataract called the Grey-Mare's-Tail; St. Mary's-Loch, and the Loch of the Lows, drained by the classic Yarrow, a remote affluent of the Tweed; Doon, drained by its cognominal stream; Lomond, drained by the western Leven, the tributary of the Clyde; Leven, drained by the eastern Leven; Com and Ard, drained by the Forth; Katrine, Aehray, Vennachoir, Voil, and Lubnaig, drained by the Teith, the chief affluent of the Forth; Tay, Earn, Lydoch, Ericht, Rannoch, Tummel, Garry, Lows, Clunie, and Quiech, drained by the Tay and its affluents; Loch-Lee, drained by the North-Esk; Awe, Aviek, Shiell, and Eek, south of the central mountain-range, and near the west coast; Laggan, Ouchan, and Treag, drained by the Spean; Lochy and Archaig, drained by the Lochy, into Loch-Eil; Garry, Oich, Ness, and Ruthven, drained by the Ness into the Beauly frith; Duntalliak, drained by the Nairn; Affrick, drained by the Beauly; Marce, Fuir, Shallag, Fannich, Rusk, Luichart, Monar, Glas, Moir, and Slin, in Ross-shire; Shin, Naver, Furan, Baden, Loval, and More, in Sutherland; and Stenness in the mainland of Orkney. The area in square miles, of 26 of the principal, is respectively of Lomond, 45; Ness, 30; Awe, 30; Shin, 25; Marce, 24; Tay, 20; Archaig, 18; Shiell, 16; Lochy, 15; Laggan, 12; Monar, 12; Fannich, 10; Ericht, 10; Naver, 9; Earn, 9; Rannoch, 8; Stenness, 8; Leven, 7; Ken, 6; Lydoch, 6; Fuir, 6; Loval, 6; Katrine, 5; Glas, 5; Doon, 4½; and Luichart, 3.

MINERALS.

Without supplying a geological map, and writing twentyfold more copiously than our space will admit, we could not give an adequate view of the distribution of the rocks and minerals of Scotland. But from 'Malte Brun's and Balbi's Systems of Geography Abridged: Edinburgh, Adam and Charles Black, 1840,' we shall extract a summary, which will please the scientific reader by its clearness, and the popular one by its wealth of information; and then we shall exhibit in a brief summary the names and localities of all the rarer minerals of the country.

"In a general point of view," says that work, "Scotland may be separated, geologically as well as geographically, into three portions. By passing a line on the map nearly straight, from Stonehaven, through Dunkeld to the middle of the Isle of Bute, and thence with a slight curve to the Mull of Kintyre, we shall have traced the southern boundary of the primary non-fossiliferous system of rocks. Another line, but more irregular than the former, drawn from St. Abb's-head, passing near Peebles, Abington, Sanquhar, New Cummock, to about Girvan, will have a general parallelism with the former line, and will have the older greywacke, now named the Cumbrian system, lying to the south, and extending to the borders; while the land included between the two lines comprehends the old red sandstone, and great central coal basin of Scotland. We shall first notice the stratified systems of those three divisions of the country, beginning with the oldest.

"That extensive tract of Scotland which constitutes the northern division, is composed chiefly of primary stratified rocks, namely, gneiss, mica slate, chlorite slate, and clay slate, with subordinate masses of hornblende slate, tale slate, and primitive limestone. These, often with granitic centres, rise into magnificent mountains, of which the Grampians form a part. In many of these deposits, particularly in the mica slate, garnets of a brown colour are very abundant. The mountains of the Trosachs, so effectively described by Sir Walter Scott, are chiefly composed of mica slate. In these primary deposits no organic remains have ever been discovered. But these are not the only stratified formations which constitute this extensive district. The old red sandstone fringes the extremities of the land, commencing about Fochabers, on the east side of the Moray frith; extending on both sides of Loch-Ness within a short distance of Fort-Augustus, and then proceeding northwards with a variable breadth through Fortrose, Tain, and Dornoch; expanding the whole breadth of Caithness, and constituting the principal formation of the Orkney Isles. On the western side of the mainland, the old red sandstone is deposited in numerous patches on the gneiss formation, as at Loch Broom, Gairloch, and Applecross.

“The newer secondary rocks have been but very sparingly observed in Scotland; yet it is rather a curious fact, that the few patches which have been discovered, are superimposed generally on the old red sandstone, and have not been seen reposing in their uninterrupted order in the secondary series. Thus the lias shales, highly micaceous, and some of the upper beds of the oolitic system, occur at the mouth of the Cromarty frith from Dunrobin-castle to the Ord of Caithness, at Applecross and other points on the mainland,—and in the Western Isles, on the borders of Mull, the south and east of Skye, and near the Coek of Arran, on a small coal deposit. The equivalent of the fresh-water deposits of the wealds of Sussex, geologically situate above the oolitic group, and below the chalk, is seen near Elgin in Moray, and Loch-Staffin in Skye. In the central and southern divisions of Scotland, those newer groups of rocks have not been detected.

“In tracing the geological features of the country in the ascending order of the groups, and confining ourselves to the geographical divisions pointed out, we next come to the transition or greywacke system, now divided into two principal sections,—the lower or Cumbrian, and the upper or Silurian. So far as is hitherto ascertained, the Silurian division is unknown in Scotland; but the Cumbrian rocks, nearly destitute of organic remains, cover the principal part of the great area of the south of Scotland. These greywacke strata stand at high angles of from 60° to 90° from the horizon, and consist chiefly of coarse slaty strata, seldom divisible into thin roofing slates, and often alternating with arenaceous and coarse conglomerates. Amongst these strata limestone is seldom found; and when it is, the quality is inferior. In the division of the island of which we now treat, coal and its accompaniments are known in very few places. Coal is, however, worked at Canoby, and on the borders at the Carter-Fell. The only other rock formation found in connection with the old transition group here (with the exception of igneous rocks), is a red sandstone, ascertained, in some situations, to be the old red, but in some other places considered to be the new red sandstone, particularly in Dumfries-shire, where the surfaces of the slabs have curious impressions, supposed to be those of the feet of a species of tortoise.

“In the central division of Scotland is placed the great coal basin; but adhering to our rule of marking the successive formations in the ascending order, we shall first treat of the old red sandstone, the most ancient rock in this subdivision of the country. This rock abuts against the line of the primary rocks, and stretches across the whole country, from the German ocean to the Atlantic, pursuing a south-westerly and north-easterly direction. From the northern line of division it stretches south to the frith of Tay, bearing through Dunning, near Stirling, to Dumbarton, and thence through the Western Isles, Bute and Arran, and is wrapped nearly round the extremity of the mainland at the Mull of Kintyre. The old red sandstone thus forms a long, uninterrupted, and extensive fertile valley. In the north-western part it rises into hills, in the sides of one of which, Uam Vor, are deep and hideous fissures, the effect of some convulsion. It is more irregularly distributed on the southern boundary of the middle division, commencing on the east about Dunbar, and stretching westerly on the line of the transition range of Moorfoot and Lammermoor-hills beyond Middleton, where it is interrupted by a range of trap, but is again found in the country round Lanark. This formation appears to be of vast thickness, especially in the northern part of the division, and may, it is supposed from recent observation, be divided into three portions, the lower, the middle, and the upper beds. In what are considered the lower strata, the remains of fishes have been found in a high state of preservation, and also large scales and other remnants of a sauroid character, such as those of the *holoptychus*. The well-known Arbroath pavement belongs to the old red sandstone series.

“The most important group in the central district is the coal formation, consisting of limestone, ironstone, freestone, coal, and clays. Its extent from east to west is bounded only by the extremities of the land. To the north it is cut off from the old red sandstone by a range of trap hills, crossing the country from east to west. On the south it is bounded by the greywacke and old red sandstone. Its breadth averages 40 miles; and it is in length about 70. The mountain limestone forms generally the basis of this group; though it is frequently found interstratified with other members of the series, and abounds with countless numbers of organic remains. Below the mountain limestone, however, but belonging to the same group, a bed of limestone is worked at Burdiehouse, near Edinburgh, in which the organic remains differ essentially from those of that just named. These remains consist of many of the plants which distinguish the coal formation; but it also includes the teeth, scales, and other bones of fish, which partake of the reptile character, some of which must have been of

gigantic dimensions. Small fishes (the paleoniscus, &c.) are also found in a fine state of preservation. The same limestone has been found in other parts of the country, and is of superior quality to the common limestone for mortar, plaster, and the smelting of iron. The clay ironstone is found in beds and nodules, the workable kinds containing from 27 to 45 per cent. of iron. The kind termed black-band is in high request. From this ore a vast quantity of pig-iron is smelted. The coal is found in beds, varying from a few inches to 40 feet in thickness; and one bed in Ayrshire is about 100 feet thick, interrupted only by thin seams of shale from 1 to 3 inches, and is extracted in great quantity, and used as fuel for domestic purposes, the burning of lime, smelting of iron, working of steam-engines on sea and land. One variety, cannel-coal, is of superior quality for the preparation of gas. From the fire-clay are manufactured fire-brick and gas retorts; and the sandstone furnishes an inexhaustible store of substantial and beautiful material for building. These several deposits contain in abundance the impressions of the vegetables which distinguish the carboniferous period; and what is remarkable, the remains of animals, the same as noted as occurring in the Burdiehouse limestone, are found in the shales, and even in the coal itself. In this district, no strata newer than the carboniferous system is known to exist; all is covered over with accumulations of clays, gravels, sands, and soil.

“Having thus noticed the direction and geographical position of the several stratified formations of Scotland, we now come to treat briefly of the unstratified system. And in order to bring this department more clearly to the apprehension of the general reader, we must remark, that the unstratified rocks are of igneous origin. They were, in fact, melted volcanic matter, which had burst through the stratified deposits, which were thus elevated into mountain-ranges; the strata being at the same time raised on edge to various angles with the horizon. This being the case, we consequently find that the unstratified follow the same course with the stratified mountains, since the former were the elevating cause of the latter. Now granite, an igneous rock, is more generally found connected with the primary non-fossiliferous than with the succeeding formations, forming centres in gneiss and mica slate, and rising above them in magnificent pinnacles. It is therefore in the primary region that granitic mountains may be expected to predominate. Of this we find an instance in the Grampian chain, which stretches in a north-east and south-west direction, intersecting the country. The granite is most largely developed on the north-east side of the country. It there commences about the parallel of Stonehaven, extends northward to Peterhead and Banff, and, in a westerly direction, along the courses of the Dee and the Don, and still continues along the banks of the Tilt, Loch Ericht, Loch Lydoch, and terminates in this line near Oban and Fort-William. From the latter rises Ben-Nevis, composed of granitic sienite. But this is not the only range. Another may be traced commencing, in the north, between Thurso and Portskerry, which passes along, at irregular distances, near Loch Baden, the neighbourhood of Dornoch, Loch Oich, on the line of Loch Ness, and terminates in a lofty mountain at the head of Loch Sunart, on the west coast. Granite is found in several of the Western Isles, as in Rum, and is magnificently displayed in the Isle of Arran. Goatfell and the surrounding peaks are of granite. The granitic summits of these mountains form the highest land in Britain. Ben-Nevis is 4,373 feet above the level of the sea, and Beu-Macdhù rises about 17 feet higher. Though the granitic formation covers a greater area, and rises to a greater altitude in the north than in the south of Scotland, yet the latter is not deficient in this interesting rock. It rises through the older greywacke (the Cumbrian system) in Dumfries-shire; and occupies a great space in New Galloway, and in Kirkcudbright, and near Kirkmaiden, in the form of dykes. In some of those mountains, stones fit for the purposes of the jeweller have been found. The mountain Cairngorm, in Inverness-shire, has long been celebrated for its rock crystal, of a smoke-brown colour, and named Cairngorm from its locality, which, when cut by the lapidary, is highly esteemed for its colour and brilliancy, and is employed for seals, brooches, and other ornamental purposes. Topazes of a light blue colour, and sometimes of very large size, have occasionally been found on the same mountain, and also beryl (aqua marine), more rarely.

“Unstratified rocks of every other kind also prevail in Scotland; including all the varieties of trap (commonly named whinstone), basalt, greenstone, compact felspar, pitchstone, porphyries, and amygdaloids, which in many parts display ranges of symmetrical columns, sometimes of great extent,—as at Arthur-Seat near Edinburgh, in several parts of the coast of Fife, in the islands of Eigg, Arran, Lamlash, and in the incomparable Staffa. But we shall attend to the distribution of these rocks throughout the country. They are connected with

the older greywacke and red sandstones of the south of Scotland. Trap forms a great part of the Cheviots on the borders, and passes northwards into the districts of Dunse, Coldstream, Kelso, Melrose, Selkirk, and Roxburghshire, rising into beautiful dome-shaped hills. Hounam-Law, the Eildons, and Ruberslaw (the last, near 1,500 feet high), may be cited as examples. But in the great central valley of Scotland, beginning at Montrose on the east coast, trap hills appear in patches in the old red sandstone, passing in an irregular line to the frith of Tay, from the south-eastern extremity of which they proceed in a south-westerly course, without interruption, but varying greatly in breadth, through Dunning, Kinross, and Stirling, to Dumbarton. Another line, but less continuous, commences about Cupar, near St. Andrews, along the coasts of Fifeshire, and appears in groups about Linlithgow, Bathgate, near Glasgow, onwards to Paisley, and thence to Greenock, where it is greatly expanded, and turns north to the banks of the Clyde, nearly opposite the Dumbarton range. A third parallel range, also in interrupted masses, commences at Dunbar, is continued in the Pentlands, Tinto, and other hills in Lanarkshire, and in Ayrshire about Kilmarnock, Ayr, and New Cumnock. In Galloway, trap is in some parts greatly expanded. A few of those localities may be mentioned, as we are not aware that any public notice has yet been given of its existence in those parts. A dyke of greenstone occurs near Kirkcolm point in greywacke, at the western extremity of Loch Ryan; Cairn-Pat, between Stranraer and Port-Patriek, is also greenstone; and thence, the greywacke of the whole coast to the Mull of Galloway is intersected by dykes and hills of several varieties of trap. On the northern side of Loch Ryan, it is seen involved amongst the roofing slates of the Cairn; and a range of trap hills extends thence, rising through the greywacke, flanking the edge of the loch, taking a south-easterly direction, passing by Castle-Kennedy to the north, and onwards to New-Luce. Here it expands to an enormous extent in every direction; to the south it approaches Glenluce-bay. At Knoeky-bay, a short distance north of New-Luce, a lead mine was at one time worked, but becoming unproductive, was abandoned. It may, however, be observed, that the greatest development of trap is in the great central coal district, where it has fractured the strata, and raised the edges of the coal seams to the surface, an important natural operation, by which coal and its other useful accompaniments, ironstone, limestone, and building materials, have been made known and accessible. In the trap rocks of Scotland many interesting minerals are found. The far-famed Scotch agate or pebble abounds in nodules included in trap, near Montrose, Perth, and other places; and many of the most beautiful of the zeolites are found among the hills around Dumbarton, the opposite side of the Clyde, and in many other localities.

“The coal-fields constitute the principal mineral treasures of Scotland. The great coal district extends across the island from the eastern corner, or, as the district is termed in Lowland Scotch, the ‘East Neuk’ of Fife, to the mouth of the Clyde in Dumbartonshire on the west, and into East-Lothian on the east. It is not, however, continuous throughout the whole distance, but consists rather of a succession of large detached coal-fields. Its superficial extent has been estimated at nearly 1,000 square miles; and it has also been calculated that, according to the present consumption, it may be worked with advantage during 3,000 years. The Fife coal-field, north of the Forth, extends from Stirling to St. Andrews, and is in some places 10 miles broad. The richest portion of it lies between Dysart and Alloa. The Lothian coal-field, on the south and east of Edinburgh, is about 25 miles in length, with a breadth of five or six, and covers an area of 80 square miles. To the westward of Edinburgh there is no coal for several miles; but at Bathgate, workable beds are found, which extend westward, with some interruptions, to the neighbourhood of Glasgow, forming the great coal-field of Lanarkshire. The Clyde and the Forth form the boundaries of this field; but beyond Blantyre, the coal extends on the south side of the Clyde to the Cathkin-hills. After passing Glasgow, the coal-field stretches westward from the south bank of the Clyde, and occupies the valley in the line of the Ardrossan canal, extending through Renfrewshire to Dalry in Ayrshire; the most southerly point being at Girvan. Several small fields occur at different parts of the south of Scotland, particularly at Sanquhar, in Dumfries-shire, and Canoby, in the same county, on the borders of England. Coal is found also at Brora in Sutherlandshire, and Campbelton in Kintyre, but in insignificant quantities. Besides the fossil fuel yielded by the coal-fields, ironstone of excellent quality abounds in many of them; and is smelted to a great amount, and manufactured into articles suited for every useful purpose, at the great works of Carron, Shotts, Cleland, Airdrie, Clyde, Wilsontown, Muirkirk, Glenbuck, and some other places. It is the abundance and cheapness of coal in its vicinity that has enabled Glasgow to rival Manchester as a manufacturing emporium.

“Next to the coal and ironstone, the most valuable mineral product of Scotland is lead, of which there are rich mines at Leadhills and Wanlockhead, in the Lowther-hills, on the borders of Lanarkshire and Dumfries-shire. Lead is also procured at Dollar in Clackmannanshire, Strontian in Argyleshire, Belleville in Inverness-shire, and Leadlaw in Peebles-shire. A considerable quantity of silver is extracted from the lead. Particles of gold have frequently been found in the small streams among the Lowther-hills, and also immediately under the vegetable soil which covers the surface of the latter. Scotland abounds in quarries of the finest building materials, particularly sandstone. Hence the beauty of the numerous public edifices which adorn its cities and towns. The principal sandstone quarries are Craigeleith, a little to the west of Edinburgh; Binnic, near Uphall, Linlithgowshire; Humbie, near South Queensferry, also in Linlithgowshire; Giffneugh, near Glasgow, Lanarkshire; Longannet, near Kincardine, Perthshire; and Milnfield or Kingoodie, near Longforgan, Perthshire. Roofing-slates, only inferior to those procured in Wales, are quarried extensively at Ballachulish, and in the island of Easdale, both in Argyleshire. Granite is brought from Aberdeen to pave the streets of London; and the granite of Kirkcudbright has been partly used in the construction of the Liverpool docks. Variegated or veined marble, of a beautiful appearance, is found in Sutherlandshire, at Glentilt in Perthshire, at Tirie in Argyleshire, at Muriston in West-Lothian, and in other places.”

Octohedral alum occurs at Hurler near Paisley, at Creetown in Galloway, and in the vicinity of Moffat; rock-butter, at Hurler; compact gypsum, in the Campsie-hills; fibrous gypsum, in Dumbartonshire, in the vicinity of Moffat, and on the banks of the Whitadder; foliated fluor, in various situations, but rarely, though abundant in England; conchoidal apatite, or asparagus stone, near Kincardine, in Ross-shire, and in the Shetland isles; common arragonite, or prismatic limestone, in the lead mines of Leadhills, and in secondary trap-rocks in various situations; fibrous calc-sinter, the alabaster of the ancients, in Macallister's-cave in Skye; slate-spar, imbedded in marble in Glen-Tilt, and in Assynt; common compact leucillite, or black marble, in some hills of Assynt; stinkstone, or swinestone, in Kirkbean, and the vicinity of North-Berwick; white domolite, in beds containing tremolite, in Iona; and brachytypous limestone, or rhomb-spar, near Newton-Stewart and on the banks of Loch-Lomond.

Foliated brown-spar occurs in the lead mines of Leadhills and Wanlockhead; columnar brown-spar, on the banks of Loch-Lomond, and near Newton-Stewart; prismatic or electric calamine, at Wanlockhead; pyramido-prismatic baryte, or strontianite, at Strontian in Argyleshire; foliated prismatic baryte, or celestine, at Inverness, and in the Calton-hill of Edinburgh; white lead-spar, and black lead-spar, at Leadhills; indurated, friable, and green earthy lead-spars, prismatic lead-spar, or sulphate of lead, and radiated prismatic blue malachite, or blue copper, at Leadhills and Wanlockhead; fibrous common malachite, at Sandlodge, in the mainland of Shetland; radiated cobalt-mica, or cobalt-bloom, at Alva in Stirlingshire, and in the limestone of the coal measures in Linlithgowshire; earthy blue iron, on the surface of peat mosses in Shetland; sealy graphite, in Strath-Beaully in Inverness-shire, and in the coal formation near Cumnock; foliated chlorite, in Jura; earthy chlorite, along with common chlorite, at Forneth-cottage in Perthshire; other chlorites, variously, and in abundance; common talc, in Perthshire, Aberdeenshire, and Banffshire; indurated talc, or talc-slate, in Perthshire, Banffshire, and Shetland; and steatite, or soapstone, in the limestone of Iona, and the trap-rocks of the Lothians, Arran, Skye, and some other places.

Diatomous schiller-spar occurs in the serpentine of Fetlar and Unst in Shetland, and of Portsoy in Banffshire, in the greenstone of Fifeshire, in the porphyritic rock of Calton-hill, and in the trap of Craig-Lockhart, near Edinburgh; hemiprismatic schiller-spar, or bronzite, in Skye, and near Dimnadrochit in Inverness-shire; prismatic schiller-spar, or hypersthene, in Skye and Banffshire; kyanite in primitive rocks at Boharm in Banffshire, and near Banchory in Aberdeenshire, and in mica-slate near Sandlodge in the mainland of Shetland; fibrous prehnite, in veins and cavities in the trap of Castle-rock, Salisbury-Crag, and Arthur-Seat, Edinburgh, of Bishopton and Hartfield in Renfrewshire, of Cockney-burn and Loch-Humphrey in Dumbartonshire, of the vicinity of Beith in Ayrshire, and of Berwickshire, Mull, and Raasay; rhomboidal zeolite, or chabasite, in crystals in the vesicular cavities of the Mull and Skye trap; mealy zeolite, or mesotype, near Tantallan-castle in Haddingtonshire, and in Mull, Skye, and Canna; pyramidal zeolite, or apophyllite, in the trap-rocks of Skye, some other species of zeolite, variously, and in abundance; adularia, a rare sub-species of prismatic felspar, in the granite of Arran; compact felspar, a more common sub-species, in the Pentland

hills, in the Oehil hills, in Tinto, and in Papa-Stour in Shetland; other sub-species of prismatic felspar, in numerous localities; sahlite, a sub-species of pyramido-prismatic augite, in Unst, Tiree, Harris, Glentilt, Glenelg, and Rannoch; asbestos tremolite, in Glentilt, Glenelg, Iona, Shetland, and other places; common tremolite in Glentilt, Glenelg, and Shetland; rock-cork, a kind of asbestos, in veins in the serpentine of Portsoy, and in the red sandstone of Kincardineshire, in small quantities at Kildrummie in Aberdeenshire, and in plates in the lead veins of Leadhills and Wanlockhead; flexible asbestos, or amianthus, in the serpentine of Portsoy, Lewis, and Harris, of Mainland, Unst and Fetlar in Shetland, and in some other places; and rigid or common asbestos, in the serpentine of Shetland, Long-Island, and Portsoy.

Epidote or pistacite occurs in the syenite of Arran and of the Shetland mainland, in the gneiss of Sutherland, in the trap of Mull and Skye, in the quartz of Iona and Rona, and in the porphyry of Glencoe and other districts; common zoisite, in Shetland, Glenelg, and the banks of Loch-Lomond; common andalusite, in the primitive rocks of Aberdeenshire, Banffshire, and Shetland; saussurite, between Ballantrae and Girvan; common topaz, in an alluvium in the granite and gneiss districts of Mar and Cairngorm; schorlous topaz, or schorlite, in Mar; beryl, along with topaz and rock-crystal, in an alluvium among the Cairngorm range; common amethyst, in greenstone and amygdaloid, in many localities; rock or mountain crystal—a variety of which is the Scottish Cairngorm stone—in the alluvium of the Cairngorm district, in drusy cavities in the granite of Arran, and in various other geognostic and topographical positions; rose or milk quartz, in the primitive rocks of various districts; conchoidal hornstone, in the Pentland-hills; common calcedony, in most of the trap districts; carnelian, in most of the secondary trap districts, solitarily or in agate; striped jasper, in the clay porphyry of the Pentland-hills; porcelain jasper, among pseudo-volcanic rocks in Fifeshire; agate jasper, in the agates of central Scotland; precious and common garnet, variously in primitive rocks; prismatic garnet, or cinnamon-stone, in gneiss near Kincardine in Ross-shire; prismatic garnet, or grenatite, in Aberdeenshire and Shetland; and common zircon and hyacinth, in Galloway, Inverness-shire, Sutherland, Shetland, and other districts.

Common sphene, or prismatic titanium-ore, occurs in the syenite of Inverary, in Criffel and other Galloway-hills, and in some other parts of Scotland; rutile, or prismato-pyramidal titanium-ore, in the granite of Cairngorm, and the quartz of Killin and Bengloe; prismatic wolfram, in the island of Rona; iron sand or granular magnetic iron-ore, in the trap-rocks of various districts; micaceous specular iron-ore, at Fitful-head in Shetland, in clay-slate near Dunkeld, and in the mica-slate of Benmore; red hematite, or fibrous red iron-ore, in veins in the secondary greenstone of Salisbury-Crags, and in the sandstone of Cumber-head in Lanarkshire; columnar red clay iron-ore, among other pseudo-volcanic productions in Fifeshire; pea-ore, or pisiform brown-clay iron-ore, in the secondary rocks of Galston; bog iron-ore, in various parts of the Highlands and Islands; sealy brown manganese-ore, near Sandlodge in Shetland; grey manganese-ore, near Aberdeen; octahedral copper, in the serpentine of Yell, and the sandstone of Mainland in Shetland; prismatic nickel pyrites, or copper-nickel, at Leadhills and Wanlockhead, and in the coal-field of Linlithgowshire; nickel ochre, in the same localities as the last, and at Alva; prismatic arsenic pyrites, at Alva; magnetic or rhomboidal iron pyrites, in Criffel, Windyshoulder, and other Galloway hills; yellow or pyramidal copper pyrites, near Tyndrum in Perthshire, and in the Mainland of Shetland; grey copper, or tetrahedral copper-glance, at Sandlodge in Shetland, at Airth in Stirlingshire, at Fassney-burn in Haddingtonshire, and in the vicinity of Girvan; vitreous copper, or prismatic copper-glance, in Ayrshire, at Fassney-burn, and in Fair Isle; rhomboidal molybdena, in granite and syenite at Peterhead, in chlorite-slate in Glenelg, and in granite at the head of Loch-Creran; molybdena ochre, along with the last, at the head of Loch-Creran; grey antimony, or prismatoidal antimony-glance, in greywacke at Jamestown in Dumfriesshire, and among primitive rocks, accompanied by green fluor, in Banffshire; yellow zinc-blende, at Clifton near Tyndrum; and brown zinc-blende, at Clifton, and in small veins with galena, in the Mid-Lothian coal-field.

Amber, or yellow mineral resin, is found on the sea-beach; petroleum, or mineral oil at St. Catherine's well in the parish of Liberton, and in Orkney; asphaltum, or slaggy mineral pitch, in secondary limestone in Fifeshire, and in clay ironstone in Haddingtonshire; indurated lithomarge, in nodular portions, occasionally in secondary trap and porphyry rocks; mountain soap, in secondary trap in Skye; chiastolite, in clay-slate near Ballachulish in

Argyleshire; iserine, in the sand of the Don and the Dee; and pinitic, in porphyry in Bengloe and near Inverary.

PLANTS.

Scotland, in a botanical view, may be conveniently divided into three regions,—the frigid, the middle, and the genial. The frigid region comprises only the shoulders and summits of lofty mountains, or of alpine tableaux, which are covered for most part of the year with snow; and it contains no sort of vegetation, except some of the minute lichens and mosses which almost everywhere roset on the surface of bare rocks, and assist the first processes of disintegration. The middle region extends downward from the lowest limits of mere lichens and mosses, to the upmost limits of cultivated plants. Much of it, especially on the primitive rocks, both stratified and amorphous, presents a sparse savage mixture of the useful and the useless in indigenous herbage; but much also, especially on the trap and the Cumbrian rocks, abounds in good sward, and constitutes excellent sheep pasture. The upper parts are only a degree or two less barren than the frigid region; the middle parts are variously sprinkled, patched, or covered with coarse grasses, heaths, and alpine herbs; and the lower parts are much diversified with brown moors, verdant expanses, and pine forests. The genial region comprises all the country below the limits which can be reached by the plough. Its chief constituents are the dry deep soils on the skirts of mountains and the sides of hills,—the straths, the outspread plains, and the undulating surfaces incumbent on the secondary rocks,—and the corses, the haughs, and the holms, in the bottoms of glens and valleys, along the course of streams. The parts of it not under cultivation, excepting bogs, sands, and similar wastes, are remarkable either for rich verdure or for luxuriance and variety of general vegetation; and the other parts, at least in all the best districts, exult in gorgeous intermixtures of meadow, corn-field, garden, shrubbery, park, and grove. Some of its erop plants, in fine situations, thrive so high as 1,500 feet above sea-level; but wheat, even in the most favourable circumstances, can seldom reach maturity at a greater height than 600 feet.

Many plants are peculiar to Scotland, as distinguished either from all the rest of the United Kingdom, or from all or most of the rest of the world. Some belong to the lichens and mosses of the frigid region, and some to the cryptogams of the other regions; but these, though curious to botanists, possess little interest for general readers. We shall notice only the principal peculiar phænogams; and, as the great majority of them belong to the middle region, so that they cannot be instructively classified on any topographical principle, we may name them in the order of their natural families,—descending from the most complicated exogens to the simplest endogens.

Of the ranunculus family there are the alpine crowfoot and the rooting marsh-marigold. Of the cruciferous family are the rock draba, the daisy-leaved ladies'-smock, the Greenland scurvy-grass, and the hispid rock-wall-eress. Of the violet family is the pleasing violet. Of the carnation family are the alpine lychnis, the cerastium-like stitchwort, the scape-bearing stitchwort, the fascicled sandwort, the tetrandrous mouse-ear-chickweed, and the sagina-like spurrey. Of the leguminous family are the mean milk-vetch, the mountain field milk-vetch, and the silky uralian milk-vetch. Of the rose family are the grey dog-rose, the golden cinquefoil, and the three-toothed-leaved cinquefoil. Of the saxifrage family are fourteen saxifrages, the drooping, the brook, the pedatifid, the hairy, the broad-petalled, the stripped, the pigmy, the dense, the lively green, the clammy moss-like, the mossy moss-like, the pretty moss-like, the narrow-leaved moss-like, and the longish-stalked. Of the umbelliferous family are the golden chervil and the sparrow masterwort. Of the valerian family is the Pyrenean valerian. Of the composite family are the alpine sow-thistle, the fair crepis, the northern antennaria, the alpine erigeron, the one-flowered erigeron, and six hawkweeds, the peranthus-leaved, the soft-leaved, the honeywort-like, the villous, the small-toothed, and the lungwort-like. Of the heath family are the blue menziesia and the black-berried alpine bear's grape.

Of the gentian family is the snow gentian. Of the borage family is the tuberous comfrey. Of the figwort family are four speedwells, the rocky, the shrub-like, the bristled, and the obtuse-leaved alpine. Of the labiate family is the woolly thyme. Of the primrose family is the Scottish androsace. Of the amentaceous family are twenty-two willows, the shining, the glaucous, the woolly, the sand, the phylica-leaved, the plum-leaved, the myrsine-like, the veiny-leaved, the bilberry-leaved, the keel-leaved, the little tree, the withered-pointed, the silky rock, the phillyrea-leaved, the slenderer, Borer's, Davall's, Dickson's, Don's, Stuart's,

Anderson's and Foster's. Of the coniferous family are the hooked-coned pine and the Highland Speyside pine.

Of the orchis family are the inborn corallorrhiza and the white-flowered gnat-like gymna-denia. Of the smilax family is the whorl-leaved Solomon's seal. Of the asphodel family is the narrow-leaved victorial garlic. Of the rush family are the arched luzula, the spiked luzula, and four rushes, the many-headed, the supine, the chestnut, and Gesner's. Of the rope-grass family is the seven-angled pipewort. Of the sedge family are the rufous club-rush, the slender cotton-grass, the headed cotton-grass, the alpine trichophorum, and eleven carices, the curved, the slender, the russet, the banded-spiked, the brown-spiked, the scorched alpine, the rare-flowered, the rye-like, the dotted-fruited, Vahl's, and Mielichhofer's. And of the grass family are the northern hierochloe, the alpine foxtail, the alpine cat's-tail, Micheli's cat's-tail, the glomerated deschampsia, the smooth-leaved deschampsia, the close calamagrostis, the reed-like schedonorus, the long-leaved giant brome-grass, the alpine poa, the zigzag poa, the grey poa, and the awnless arrhenatherum.

But the large majority of Scotland's wild plants are common to it with England; and the most conspicuous of these occur either as weeds on the tilled lands of its genial region, or as inhabitants of that region's woods and wastes. Mr. Watson, speaking of this, says,—“It is the region where flourish the trees and bloom the flowers rendered classic by our poets, and not the less loved by many of us, that their very commonness has made them familiar by vernacular names, without the aid of botanical systems or a dead language. It is, par excellence, the land of the daisy and cowslip, the oak and hawthorn, the hazel copse and the woodbine bower; the region of fruits and flowers, where the trees of the forest unite a graceful beauty with strength and majesty, and where the fresh green sward of the pasture, commingling with the yellow waves of the corn-field, tell us that here at least, ‘the cheek of spring smiles in the kiss of autumn.’ The downs and chases, in early spring, are covered with the countless blossoms of the golden gorse, or the more gaudy broom, and empurpled with the different kinds of heath during summer and autumn. Little indeed as we may regard these shrubs, in Sweden and North Russia the gorse is prized as we prize the myrtles of the south; and our common heaths are unknown over a wide extent of Europe. A climate in which the heat of summer is rarely excessive, and where rain and clouds are so frequent, is unadapted to the spontaneous growth of fruits; and we accordingly find our native productions poor in the extreme. The wild cherry, crab, bullace, and native pear are the arborescent fruit-trees. The raspberry, strawberry, blackberry, sloe, hazel-nut, hip, and haw, form a very indifferent catalogue for our shrubby and herbaceous fruit-plants. The cranberry, bilberry, and crowberry, with the fruit of the rowan and juniper, common to the cultivated region and the one above it, are greatly surpassed by one fruit, almost peculiar to the latter, namely, the cloudberry. The changes produced by cultivation on some of the first mentioned fruits, it is unnecessary to detail. Lastly, the different kinds of gooseberries and currants cultivated in our gardens are probably derived from species indigenous to Britain, and are very apt to spring up in our woods and hedges from translated seeds.”

In Shetland, in Orkney, in the Hebrides, and in most of the Highlands, the range of cultivated plants is comparatively narrow; but in most of the Lowlands, and in some nooks of the Highlands, it is as broad and various as the conditions of soil, climate, and market economy will permit. Cultivation in all departments, from the sturdiest indigen to the most tender exotic, is so well understood by multitudes of Scotchmen that our foresters, our farmers, and our gardeners have extensively won the reputation, in other countries, of being the most skilful in the world. A large proportion of our farms are cropped, not only with rotations of all things most compensating in the nearest markets, but with varieties or hybrids of these most suitable to the specialities of soil and place; many of our woods, especially of the more recent ones, contain fine admixtures and luxuriant forms of native and foreign trees; many parks and shrubberies are currently adorned with specimens of rare or recently-discovered hardy exotics, almost as soon as these can be obtained; and not a few of the best gardens, private as well as public, in the various departments both of the open ground and of the glazed cover, are absolute museums of foreign botany. We manifestly have not space for even the shortest select list of Scotland's cultivated plants; and must content ourselves with naming the chief Scottish varieties of the three common cereal farm-plants, as indications of the care which is taken to produce or discover new good varieties, and to adapt them to circumstances.

Of oats there are the Hopetoun oat, a famous variety which originated about twenty-five years ago in East Lothian; the early Angus oat, extensively cultivated in the north-eastern

districts; the late Angus oat, extensively cultivated in the central districts; the Cupar-Grange oat, a prolific but late sub-variety of the late Angus; the Blainslie oat, of variable reputation during about fifty years past for high and late situations in the south-eastern districts; the Drummond oat, adapted to strong clay soils, and cultivated in some parts of Perthshire; the Magbiehall oat, which originated long ago in Peebles-shire; and the Dyock oat, which originated about twenty-three years ago in the vicinity of Aberdeen, and has been found well suited, in all parts of the kingdom, to poor soils in cold high situations. Of barleys there are bere or bigg, extensively cultivated in the Hebrides and Highlands, and peculiarly suitable for exposed light grounds; the Scotch barley, which admits of great latitude in the time of sowing, and was once in pre-eminent favour with brewers and distillers; and the Annat barley, which originated twenty-three years ago in the Carse of Gowrie, and has superior qualities, though inferior adaptation, to the universally favourite Chevalier. And of wheat there are the common white wheats of East Lothian, the Carse of Gowrie, Morayshire, and other districts, all called Scotch white wheats, but perceptibly differing from one another in qualities and adaptation; Hunter's wheat, which originated on a moor in Berwickshire, and has long been famous in the south-eastern districts; Mungoswells wheat, which originated about twenty-five years ago in East Lothian, and contests the palm with Hunter's; the white golden drop wheat, which originated twenty years ago in the Carse of Gowrie, and has a medium character between the common-eared wheats and the turgid ones; the Hopetoun wheat, which originated twenty-two years ago in East Lothian, and has challenged much attention in comparative experiments; and the white-bearded Shanry wheat, which originated about twenty years ago in Perthshire, and is a very superior winter bearded wheat. Many other varieties and subvarieties, less known or of less value, might be added; and the Scottish varieties and hybrids of some other field-plants are correspondingly numerous.

ANIMALS.

The zoology of Scotland comprises multitudes of interesting species which are common to it with other countries, but very few interesting species or varieties which are peculiar to itself. Its zoophytes, and some of its worms, present many attractions to naturalists, but scarcely any to general observers. Some of its entozoons and its insects possess a sad interest to stock farmers, for the diseases they create in sheep and cattle; and many of its insects and its land molluscs possess a similar interest to arable farmers, gardeners, orchardists, and foresters, for the injuries or the destruction they inflict on crops; but none of these are peculiar. The crustaceans, the sea molluscs, and the salt-water fishes yield an abundant trade to fishermen and fishmongers. The fresh-water fishes afford ample sport to anglers, as well as some curious study to naturalists; and a beautiful one of them, called the vendace, peculiar to a single lake in the parish of Lochmaben, is not a little interesting to all classes of observers. The reptiles, happily, comprise few species; but among these are a profusion of the odious toad and great plenty of the noxious viper.

The birds, including the migratory as well as the stationary, amount to nearly three hundred species. Among the aquatic birds are wild ducks, wild geese, the gannet, the wild swan, gulls, terns, guillemots, sand-pipers, snipes, the heron, the bittern, and the stork. Among the predatory birds are owls, hawks, the kestrel, the raven, the magpie, the butcher-bird, the osprey, and the eagle. Among the singing birds are linnets, larks, the thrush, the starling, the bulfinch, the goldfinch, the seskin, the blackbird, and the blackcap. And among the game birds are the woodcock, the partridge, the blackcock, the red grouse, the grey ptarmigan, the quail, the landrail, the pheasant, and the plover. The capercaillie, or cock of the wood, who once walked our mountains as king of the gallinaceous tribes, and was exterminated by the excessive pursuit of sportsmen about the middle of last century, has of late years been reintroduced from Sweden to several upland estates, and may possibly become once more a familiar inhabitant of our highland wastes. The domesticated fowls comprise all the approved kinds of poultry, both economical and ornamental, in fine selection and under good management; but do not present any peculiar, or at least remarkable, Scottish breeds.

The wild mammals comprise sixteen sea-species and thirty-seven land-species. Seals are particularly numerous. The common rabbit, the common hare, and even the alpine hare are abundant. The roebuck, the fallow deer, and the red deer are carefully preserved in the Highlands, and form a prime object of interest to sportsmen. The principal other native

mammals are the fox, the wild cat, the otter, the marten, the polecat, the stoat, the weasel, the mole, the brown rat, the common mouse, the field mouse, the squirrel, the hedgehog, the common bat, and the long-eared bat. At a former period, the bear, the wolf, and the curious white Caledonian ox were denizens of Scotland; but the bear was exterminated in the eleventh century, the last wolf was killed in the year 1686, and the Caledonian ox now survives only in small numbers, under careful keeping, in the parks of Hamilton Castle in Lanarkshire, Taymouth Castle in Perthshire, and Chillingham Castle in Northumberland. Two domesticable species of foreign quadrupeds also have recently been introduced as curiosities,—the bison into the park of Taymouth Castle, and the alpaca into that park and the park of Buchanan House in Stirlingshire.

The common hog of the Hebrides and the Highlands is a direct descendant of the wild hog of the ancient Caledonians, very small in size, of an uniform grey colour, with a shaggy coat of long hairs and bristles, and feeding on the hills without any artificial shelter in the same manner as mountain sheep. The Orkney hog and the Shetland hog are somewhat similar, but very ugly, very mischievous, and scarcely larger than an English terrier. The Lowland Scotch hog is a dingy, long-legged, lumpish, uncouth, thriftless animal of many subvarieties, passing up by imperceptible gradations from the size of the Highland hog to a size very much greater; but, though at a recent period quite general throughout the southern and the eastern counties, it is now, in a main degree, obliterated and supplanted by multitudes of crossings with the Chinese and the English breeds.

The Highland pony, or small native horse of the Highlands, lives almost wholly in the open air, in winter as well as in summer, and is a short-legged, sure-footed, sagacious traverser of the mountain and the bog. The sheltie or Shetland pony is so small as to seem almost like a toy, but very symmetrical and very docile, and has a strength and an endurance enormously greater than might be expected from its size. The Galloway horse originated in Wigtonshire,—it is said, from some Spanish horses which were thrown ashore in the wreck of one of the ships of the celebrated Armada. It is an elegant, stout, sure-footed, mountain-scaling creature, commonly not quite fourteen hands high. But it began long ago to be generally subjected to cross-breeding, with the view of enlarging it into fitness for the plough; and now, except in a few instances in such remote situations as the island of Mull, it has everywhere become extinct. Yet in lingering recollection of its excellence, the name of galloway continues to be given to every kind of horse which is supposed to resemble it in size and hardiness. The Clydesdale horse originated about 150 years ago in the central parts of Lanarkshire, in a steady assiduous process of crossings between the native horse and the Flemish one. It has for many years been quite common throughout all the best districts of the Lowlands; and it possesses such eminent value both on the road and on the farm as to be quite equal, or more than equal, for required work at minimum cost, to all the best English heavy draught breeds combined.

The Hebridean sheep is very small in size, thin, lank, and of comparatively little value, with wool of various colours from bluish-grey to deep russet. The Shetland sheep is small, handsome, wild, active, and hardy, with a fleece of soft, short, cottony wool, adapted to very fine manufactures. The Highland sheep is the descendant of an ancient race, with yellow face, yellow legs, and a dishevelled unequal fleece, but is now nearly extinct. The black-faced or heath sheep was introduced from Northumberland many centuries ago to the southern counties of Scotland, and from these about the middle of last century to all the Highlands, western, central, and northern, away even to the Pentland frith. It is a hardy animal, valuable for its mutton, but with a coarse fleece. The best subvarieties of it are those of Peeblesshire. The Cheviot sheep has existed from time immemorial on the Cheviot mountains, and has thence been spread over the southern highlands of Scotland, and over large tracts of the central and the northern highlands,—in some places supplanting the black-faced sheep, and in others competing with it for popular favour. It differs materially from that sheep in at once character, habit, and adaptation,—particularly in having shorter and finer wool, a more docile disposition, and a distaste for pastures which are over-run with heath or not freely gramineous.

All the native Scotch breeds and sub-breeds of bovine cattle, excepting three, are of the class called middle-horned; the three excepted breeds being hornless, and all the others having horns of intermediate size between short and long. The Shetlanders are the smallest, but have no superiors or even equals in the quality of their beef. The North Highlanders, including those of Orkney and Caithness, are much larger than the Shetlanders, but also

much coarser and far less handsome; yet they comprise two sub-breeds in Sutherlandshire, the Dunrobins and the Skibos, which have a high reputation. The West Highlanders or Kyloes are a shaggy race, far superior to the North Highlanders, and also older and more improved; nevertheless, in consequence of being very widely diffused throughout the Highlands and Hebrides, they comprise many sub-breeds of very various value. The Falklands are an old celebrated Fifeshire breed, supposed to have been introduced from the south of England by some of the kings of Scotland, who occasionally resided at Falkland; but they have become very scarce, and are likely soon to disappear. The runts, as they are contemptuously called, of Aberdeenshire and Fifeshire, are large, ill-shaped, half-haggard creatures, yielding beef which is bad for the retail butcher, but suits well to be salted and shipped. The Ayrshires make bad returns in the shambles, but have a high fame, long an unrivalled one, for the dairy; and besides being the pet-cattle of Ayrshire, are extensively diffused through the neighbouring counties as far as West Lothian. Of late years, however, they have been extensively outrivalled, in other parts of the southern Lowlands, by the English short-horns. The Buchan doddies, the Angus humlies, and the Galloway cattle, the three hornless breeds—the first abounding in the northern and central parts of Aberdeenshire, the second spread over all Forfarshire, all Kincardineshire, the south-eastern part of Aberdeenshire, and many parts of Fifeshire, and the third spread over all Wigtonshire, all Kirkeudbrightshire, the southern part of Ayrshire, and a considerable part of Dumfries-shire—are all excellent beef-yielding breeds, well known and much appreciated in the English markets,—the Galloways alone constituting one-third of all the cattle of Smithfield from March till July.

CLIMATE.

The climate of Shetland, of Orkney, and of the Hebrides has, in the case of each, some marked peculiarities, which are noticed in the articles devoted to their description. Even that of the mainland, owing to the bold and remarkably varied contour of the country, is so singularly various, as to offer matter for distinctive remark in notices of most counties, and even of not a few parishes.

In a general view, the heat, in consequence of the country's insularity, and of its frequent and long indentations by the sea, is much higher in winter, and more moderate in summer, than in the same latitudes on the continent. The temperature, except in moorlands in the interior, and the more mountainous districts, seldom remains long at the freezing-point; nor, in any part of the country, does it often rise to what is called Indian heat, or to an intensity which incommodes the labour of the field. The extremes, so far as they have been observed, are 92° of Fahrenheit, and 3° below zero; but, in the case of both, are rarely and very briefly approached. The ordinary greatest range of the thermometer is between 84° and 8° . The mean annual temperature for the whole country is from 45° to 47° ; and at the lowest is $41^{\circ} 11$,—at the highest $50^{\circ} 32$. Nor does the average descend as the observer moves northward, or to the vicinity or into the interior of the Highlands. For the mean temperature of Dumfries, deduced from the observation of 9 years, is $42^{\circ} 327$; that of Glasgow, as determined by Professor Thomson, is $47^{\circ} 75$; that of Edinburgh, as determined by Professor Playfair, is $47^{\circ} 7$; that of St. Andrews, deduced from the observation of 8 years, is $48^{\circ} 01$; that of Perth, deduced from the observation of 9 years, is $48^{\circ} 131$; that of Aberdeen, deduced from the observation of 10 years, is $47^{\circ} 648$; and that of Inverness, deduced from the observation of 13 years, is $48^{\circ} 09$.

The range of the barometer is often both great and rapid, and averages throughout the mainland 2.82 inches, or from 36.92 to 28.10. Snow is less copious, though probably more frequent, in its falls than in the south of England; and rain, on the average, is less than in the west of England. The joint quantity of the two has an annual mean amount for the kingdom of from 30 to 31 inches, but differs widely on the east and on the west coast,—varying, on the former, from 22 to 26 inches, and, on the latter, from 35 to 46 inches. At Dumfries, the mean annual quantity, as deduced from the observation of 7 years, is 33.54 inches; at Glasgow, from the observation of 31 years, 22.4 inches; at Perth, from the observation of 9 years, 23.01 inches; at Aberdeen, from the observation of 4 years, 27.37 inches; and at Inverness, from the observation of 7 years, 26.21 inches. The average number of days in the year on which rain or snow falls, is variously stated to be, on the east coast, 135 and about 145, and on the west coast, 200 and 205. The least humid district in the Lowlands, is East-Lothian; and the most humid, Ayrshire. Thick fogs, and small drizzly

rains, visit the whole country, chiefly in spring and autumn, and during the prevalence of easterly winds; and, in many localities, the fogs lie along a champaign country like seas of fleecy vapour, with the hills and loftier uplands appearing like islands on their bosom. Snow, except in the milder districts of the Lowlands, generally begins to fall about the middle of November, and seldom ceases its periodical visits till March or April.

The winds are to a high degree variable, both in force and direction; and, in the Highlands and Southern Highlands, produce not a few curious phenomena in connexion with the peculiar configuration of localities. They often rise to gale and storm, and in some places even to tempest; and about the period of the equinoxes, are more violent than in England. Those from the west are in autumn and the early part of winter, the most prevalent, and, in general, they are the highest; and those from the north-east prevail from the beginning of March till May or June, and are often keen and severe. At St. Andrews, the winds are westerly, except in the spring and early summer months, when those which are easterly prevail; at Perth, during 9 years ending with 1833, the winds were from the west and north-west, on 1,197 days, from the east and south-east, on 996, from the south and south-west, on 957, and from the north and north-east, on 137; and at Inverness, as the result of 13,800 observations, made during 21 years preceding 1825, the proportions of the winds in parts of 1,000, were westerly and south-westerly, 478, easterly and north-easterly, 237, northerly and north-westerly, 205, and southerly and south-easterly, 80. These instances, however, indicate in but a general way the comparative prevalence of the different winds throughout Scotland, and afford no index whatever to it in peculiar localities.

On the whole, the climate of Scotland, as compared with that of England, is cold, wet, and cloudy, occasions lateness in harvest to the average amount of at least three weeks, and prevents the remunerative cultivation of hops, and several other valuable vegetables. Yet, over by far the greater part of the area of the country, it is to the full as healthy. Mr. Malthus says,—“We are pretty confident, from extensive observation in different countries, that the proportion of the population that reaches 70 or 80 years of age, and the vigour then remaining, are greater in Scotland than almost anywhere else.”

AGRICULTURE.

The agriculture of Scotland, in common with that of England, continued till the latter part of last century in a very rude condition. Jethro Tull, the inventor of the drill husbandry, rose among the farmers of his day like a preceptor among children. He pursued agricultural improvement with the fervour of a passion, lavished upon it toil and wealth and genius, and effected greater achievements for it than any other man who ever trode the British soil. Yet he encountered a hurricane of derision from his contemporaries, and sank unhonoured and heart-crushed into the grave; and though an Englishman, he began to acquire even posthumous reputation through the instrumentality of a Scotchman. He extended his experiments through many years, published the first portion of his principal work, the “Horse-Hoeing Husbandry,” in 1731, and died in 1740. His system was first brought into notice in 1762, by Mr. Dawson, a tenant-farmer, at Frogden in Roxburghshire; and even then it had to fight its way to fortune. “When Mr. Dawson first settled at Frogden,” says the Agricultural Report of Northumberland, “the whole of that district was under the most wretched system of management, and the farmers unacquainted with the value of turnips, artificial grasses, or lime. At first his practice met with many opponents, and was ridiculed by the old, the ignorant, and the prejudiced; but his superior crops and profits soon made converts, the practice in a few years became general, and this district is now amongst the best cultivated in the kingdom, the land treble in value, and the aspect of the country greatly improved.”

The progress of agricultural improvement, thus powerfully impelled by the establishment of the drill husbandry, was afterwards grandly accelerated by the proceedings of the Highland and Agricultural Society, founded in 1784, and by those of the Board of Agriculture, with the celebrated Sir John Sinclair as its first president, formed in 1794; and from that time till the present, throughout all the best districts of the Scottish Lowlands, it has been so rapid and manifold as to make the unpractised head giddy to contemplate it, but happily is so well known to all classes of persons most interested in it that it does not need to be described. Some of its most striking features, in nearly the order of their development, have been the improving of the breeds of sheep and cattle, the field-culture of the potato, the routine use of turnips in the feeding of live stock, the general practice of liming, the establishment of regular

green and white crop rotations, the introduction of Swedish turnips and of spring and summer wheats, the invention of new agricultural implements and the improvement of old ones, the enclosing of commons and wastes, the reclaiming of bogs and morasses, the sheltering and economising of bleak and upland tracts with plantations, the organizing of farrery and the adapting of it to the farm, the multiplication of agricultural societies, the establishing of agricultural shows and agricultural schools, the introduction and ordinary use of special manures, the practice of subsoil draining, the marrying of agriculture to chemistry, geology, phytology, and other sciences, and the exalting of all the affairs of the farm, the commonest and humblest as well as the most rare and lordly, to their position of true dignity as at once the most complicated, the most scientific, the most physically useful, and the most morally benign of all human arts. In the Highlands and Islands, however, the progress has been very much less and exceedingly various.

The characteristics of the agriculture of Scotland as distinguished from that of the other parts of the empire, are, in the words of M'Culloch,—“1st, The nearly universal prevalence of leases of a reasonable endurance, and containing regulations as to management, which, while they do not improperly shackle the tenant, prevent the land from being exhausted previously to the termination of the lease; 2d, The absence of tithes, and in most cases, also, of poor-rates, and of all oppressive public burdens; 3d, The prevention of assignment and sub-letting by tenants and the descent of the lease to the heir-at-law; and 4th, The general introduction of thrashing-machines, and the universal use of the two-horse plough and one-horse cart.” These characteristics, however, have full place only in the Lowlands. Characteristics more or less different, in many cases widely so, exist in the Highlands and Islands. A barbarous system of mixed husbandry, with “infield” and “outfield,” prevailed there till a very recent period,—under miserable circumstances, and with most pitiable appliances; and this, though improved in some instances and revolutionized in others, has very extensively, in the most upland regions, been displaced altogether by a system of mere sheep farming, which has turned thousands of the human population adrift, and converted many a peopled glen into an utter solitude.

The soils of Scotland, as might be expected from the peculiarities of its surface and geology, are often very various in even a single field, and much more in extensive districts. Yet they have, in many instances of both the excellent and the inferior, long and broad expanses of uniformity; and, while in aggregate character poorer than those of England, they vie in their rich tracts with the wealthiest in the three kingdoms, and have prompted and tutored, over their penurious tracts, a keenness of georgic skill, and a sturdiness in the arts of husbandry, which have made Scottish farmers the boast of Europe. The carses of Stirling, Falkirk, and Gowrie, most of the three Lothians, the Merse, Clydesdale, and Strathearn, large portions of Fifeshire, Strathmore, Annandale, Nithsdale, Kyle, Cunningham, and the low grounds along the Moray and the Cromarty friths, and even some straths and very numerous haughs in the mountainous districts, are highly productive, and can bear comparison with the best tracts of land in England. According to Sir John Sinclair's digest of the productive soils, or of those on lands fully or partially cultivated, the loams amount to 1,869,193 English acres, the rich clays to 987,070, the gravelly soils to 681,862, the cold or inferior clays to 510,265, the improved mossy soils to 411,096, the alluvial haugh or carse land to 320,193, and the sandy soils to 263,771,—in all, as we stated at the outset, 5,043,450 English acres.

The distribution of land, the kinds, quantities, and produce of aration crops, the amount of the several kinds of live stock, and the extent of bare fallows, sheep pastures, home-stead occupancies, woods, and wastes, have been the subject of many conjectural estimates and conflicting statements,—all defective and unsatisfactory; but at length, in 1853, by special exertions of the Highland and Agricultural Society, under sanction of the Government, they were closely ascertained in three counties, and have subsequently been extended all over the kingdom. The general results are given at the close of this Introduction (see page lxxv). The following summary of the average results for 1855 and 1856 may however exhibit them in a fresher point of view to our readers. Of the entire surface of the soil of Scotland 23,697 per cent. is cultivated, and 76,321 uncultivated, barren, in pasture, or in bogs, lochs, rivers, ponds, roads, and habitations. Of the entire cultivated surface, 64,545 per cent. is under a rotation of crops, and in occupancy at a rent over £20 in eight counties, and over £10 in all the others, and 35,454 per cent. either in holdings under these values, or in orchards, private and nursery gardens, plantations, pleasure grounds, &c. Of the former, the following is the approximate average distribution for 1855 and 1856:

	per cent.	per cent.	per cent.	Total.
In Grass and Hay under rotation,	} 42.596	Wheat, 6.696	Beans, Pease, and Vetches, 1.738	81.9754
Oats,		Barley, 4.954		
Turnips,	26.3904	Potatoes, 4.249	Flax and Turnip Seed, } 026	1.820
	12.989		Summer Fallow, . 056	
	<u>81.9754</u>	<u>15.899</u>	<u>1.820</u>	<u>99.6944</u>

Besides carrots, cabbage, and other vegetables, grains, or roots.

MANUFACTURES.

For a number of years past, the condition of the cotton, woollen, flax, and silk factories of Scotland has been the subject of regular half-yearly reports by a government inspector; so that any person who desires to have an intimate view of their extent, progress, fluctuation, and economy may obtain it by examining a series of those reports. We can afford to note only the most important general facts, and to note even these in only the briefest terms.

In 1835, the total number of factories was 425, with 17,721 power-looms; in 1838, it was 492, with 9,734 horse-power in steam, and 5,421 in water; in 1850, it was 550, with 13,857 horse-power in steam, and 6,004 horse-power in water; and in 1856, it was 530, with 19,699 horse-power. In 1838, there were 192 cotton factories, with 8,340 horse-power, and 35,576 workers,—112 woollen factories, with 1,823 horse-power, and 5,076 workers,—183 flax factories, with 4,845½ horse-power, and 17,897 workers,—and 5 silk factories, with 148 horse-power, and 763 workers. In 1850, there were 168 cotton factories, with 1,683,093 spindles, 23,564 power-looms, and 36,325 workers,—182 woollen factories, with 224,129 spindles, 247 power-looms, and 9,464 workers,—188 flax factories, with 303,125 spindles, 2,529 power-looms, and 28,312 workers,—and 5 silk factories, with 36,652 spindles, and 841 workers. In 1856, there were 152 cotton factories, with 9,971 horse-power, 21,624 power-looms, and 34,698 workers,—204 woollen factories, with 3,260 horse-power, 800 power-looms, and 10,175 workers,—168 flax factories, with 6,346 horse-power, 4,011 power-looms, and 31,722 workers,—and 6 silk factories, with 122 horse-power, and 837 workers. No similar statistics have been obtained since 1856.

Of the 192 cotton factories which were in operation in 1838, 107 with 4,146 horse-power were in Lanarkshire, 58 with 1,921 in Renfrewshire, 7 with 554 in Perthshire, 4 with 617 in Aberdeenshire, 4 with 338 in Ayrshire, 4 with 417 in Dumbartonshire, 3 with 130 in Stirlingshire, 2 with 70 in Buteshire, 1 with 58 in Dumfries-shire, 1 with 55 in Kirkcudbrightshire, and 1 with 34 in Linlithgowshire. Of the 112 woollen factories, 24 with 285 horse-power were in Clackmannanshire, 18 with 249½ in Ayrshire, 17 with 310 in Roxburghshire, 15 with 199 in Selkirkshire, 7 with 292 in Aberdeenshire, 7 with 99 in Perthshire, 7 with 115 in Stirlingshire, 3 with 60 in Dumfries-shire, 3 with 101 in Lanarkshire, 2 with 24 in Kirkcudbrightshire, 2 with 26 in Renfrewshire, 1 with 16 in Berwickshire, 1 with 6 in Edinburghshire, 1 with 9½ in Fifeshire, 1 with 7 in Forfarshire, 1 with 4 in Kincardineshire, 1 with 8 in Linlithgowshire, and 1 with 12 in Wigtonshire. Of the 183 flax factories, 96 with 2,376 horse-power were in Forfarshire, 46 with 989 in Fifeshire, 13 with 238 in Perthshire, 8 with 60½ in Kincardineshire, 7 with 244 in Edinburghshire, 4 with 628 in Aberdeenshire, 3 with 46 in Ayrshire, 3 with 192 in Renfrewshire, 2 with 40 in Lanarkshire, and 1 with 32 in Linlithgowshire. And of the 5 silk factories, 3 with 106 horse-power were in Lanarkshire, 1 with 30 in Renfrewshire, and 1 with 12 in Edinburghshire.

An important act of parliament was passed in 1833, regulating labour in factories, and enforcing care for the education of children-workers. The last report on Scotland for 1853 says on the latter subject,—“The factories in which children have hitherto been employed reckon among their number some of the most important works in Scotland; and the owners of such factories, so far from considering their schools a trouble, take the greatest pride and pleasure in showing them; for while they profit by the labours of the children, they do not forget that they have a duty to perform in return, not by carrying out the requirements of the act as if it were intended to be a mere matter of form, but by appointing efficient teachers, furnishing them with the means of imparting the instruction so necessary to the welfare of the children in after-life, and by taking care that it is done. Such is the character of most of the factory schools maintained in the larger class of works in which children have hitherto been employed in Scotland; and in most of them the adults have the

choice of participating. In small works, the same means, of course, are wanting; but there are few even of them in which the provision for the instruction of the children may not be considered satisfactory." The following table gives a classified view of the factory-workers, as to age and sex, at four periods:—

Year.	NUMBER OF CHILDREN.		No. of Males between 13 & 18.	No. of Females above 13.	No. of Males above 18.	TOTAL.		
	Males.	Females.				Males.	Females.	Males & Females.
1835,	2,821	3,961	4,083	30,401	8,914	15,818	34,362	49,180
1838,	918	944	7,348	39,920	10,182	18,448	40,864	59,312
1847,	585	779	6,398	45,998	13,483	20,466	46,777	67,243
1850,	378	742	6,982	53,806	14,780	22,140	53,548	75,688

Hand-loom weaving—which deeply affects by far the largest class of the population interested in manufactures—was made the subject of commission inquiry in 1838, and of reports returned to the House of Commons in February, 1839. The inquiry was made in two territorial divisions; one over all Scotland south of the Forth and Clyde, including Kilsyth and Campsie on the further side of the connecting canal; the other, over what the report calls the east of Scotland, but over, in point of fact, very nearly every site of a loom not included in the former division. The following table indicates, as exhibited in the report, the number of separate trades or fabrics in the country south of the Forth and Clyde, the locality of each fabric, the number of looms employed in each, and the average rate of nett wages earned in each department, and distributed into two classes,—the first being the average nett amount earned, by adult skilled artisans, on the finer qualities of the fabric,—the second being the average nett amount earned by the less skilled and younger artisans, on the coarser qualities of the fabric.

Fabrics.	Districts where woven.	Date of Introduction.	Residence of chief manufacturers.	Number of looms.	Clear Weekly Wages.	
					1st Class.	2d Class.
Pulicates, gingham, stripes, checks, &c.,	Lanarkshire, especially in Airdrie, Lanark, and Glasgow; also at Girvan and other places on the west coast.	1786.	Glasgow.	18,020	7s. 0d.	4s. 6d.
Shawls, zebras, &c.,	Paisley, Glasgow, &c.	1802 to 1806.	Paisley, Glasgow and Edinburgh.	7,750	10s. 6d.	6s. 0d.
Plain muslins,	Lanarkshire, Glasgow, Irvine, Hamilton, Eaglesham, &c.	1784.	Glasgow.	10,080	7s. 6d.	4s. 6d.
Fancy muslins, silk gauzes, &c.,	Renfrewshire and Lanarkshire.	Silk gauzes in 1760.	Paisley and Glasgow.	7,860	9s. 6d.	6s. 0d.
Thibets and tartans,	Thibets in Lanarkshire; a few tartans in Dalmellington, Straiton, Sanquhar, and Hawick.	Thibets in 1824.	Glasgow and Hawick.	2,980	7s. 0d.	5s. 6d.
Carlisle gingham, Woollens,	Dumfries-shire. South-east of Scotland, Galashiels, Hawick, Jedburgh, &c.	...	Carlisle. Galashiels, Hawick, and Jedburgh.	1,575	7s. 6d.	4s. 6d.
Carpets,	Kilmarnock, Glasgow, and Lasswade.	...	Hawick, and Kilmarnock, Glasgow, and Lasswade.	950	16s. 6d.	11s. 0d.

			Total,...	51,060		

The report on the country north of the Forth, the Clyde, and the connecting canal, distributes the fabrics generally into woollen, linen, and cotton. The weavers were employed on carpets in factories, and on hard and soft tartans, and tartan shawls, in their own cottages; and "were in a condition similar to that of the other labouring classes in the country." The manufacture of tartans was seated chiefly at Stirling and its vicinity, and at Aberdeen, employed probably 2,500 looms, and might be considered as very prosperous, and likely to improve. The linen manufacture employed about 26,000 looms; and might be distributed into harness work, heavy work, and ordinary work. The harness work, as damask table-cloths, table-covers, and napkins, was carried on almost exclusively in and near Dunfermline; had doubled the number of its looms since 1826; employed in 1838 about 3,000; exported nearly half of its

produce to the United States; and yielded average weekly wages of about 8s. 6d. The heavy work, as sail-cloth, broad-sheetings, floor-cloth, and some kinds of bagging, was seated principally in Dundee, Arbroath, Aberdeen, Montrose, and Kirkealdy; employed about 4,000 looms,—all in factories; and yielded weekly wages, in not rare cases, of 15s., and of not less than 8s. 6d. average. The ordinary work, as dowlas, common sheetings, and osnaburghs, might be considered as the staple linen manufacture of Scotland; was seated principally in Forfarshire; employed from 17,000 looms in summer, to 22,000 or 23,000 in winter,—nearly all in small detached buildings adjacent to the weavers' cottages; and yielded average weekly wages of from 6s. to 7s. 6d. to the first class, and from 4s. to 5s. 6d. to the second. The cotton manufacture employed about 5,000 looms; and, next to Perth, which was its principal seat, was carried on chiefly at Dunblane, Auchterarder, Balfron, and Kinross. The weavers, except at Perth, and in a few instances at Kirkealdy and Aberdeen, were employed wholly by Glasgow manufacturers; and at Kinross, Dunblane, and Auchterarder earned not more than 4s. of average weekly wages.

Printfields and bleachfields have not figured so largely in public statistics as could be wished. One reason of this may be that they are rather an appendage of manufacture than a department of it,—belonging quite as much to mere art as to productive industry; and another may be that they have been very fluctuating, partly from the influence of taste, partly from the progress of chemistry, and partly on account of their restriction, in place or season, to large continuous supplies of pure water. Still, being essential to the prosperity of the great manufactures with which they are connected, they have been largely though variously maintained by modern Scottish enterprize. In 1846, there were 74 of them in Scotland. They are situated in the counties of Dumbarton, Renfrew, Lanark, Ayr, Stirling, Perth, and Linlithgow; and those in the parishes of Bonhill and Neilston, the former in the vale of the Leven, the latter in that of the Levern, may be taken as a fair specimen of the whole.

The paper-manufacture of Scotland is considerable, and is distributed through the excise collections of Aberdeen, Ayr, Dumfries, Edinburgh, Glasgow, Haddington, Linlithgow, Montrose, and Stirling. The number of paper mills in 1842 was 48; in 1848, 49; in 1854, 51; in 1860, 52. The quantity of paper made in 1842 was 17,065,666 lbs.; in 1848, 24,800,705 lbs.; in 1854, 36,857,719 lbs.; in 1860, 47,520,910 lbs. The quantity made in England and Wales, in 1860, was 166,739,390 lbs.; in Ireland, 9,314,985 lbs.

The mineral trade is great. The output of coals, in 1854, was 7,448,000 tons, from 368 collieries; in 1857, 8,211,473 tons, from 425 collieries; in 1864, 12,700,000 tons, from 490 collieries. The output of iron ore, chiefly in Lanarkshire, Ayrshire, and the south-west of Fifeshire, was 2,500,000 tons in 1857, and 2,225,000 in 1859; and the produce in pig iron was 918,000 tons in 1857, and 960,550 in 1859. The demand for iron sank increasingly below the produce from 1857 till 1865, but rose to it in 1866. The output of lead ore, from mines in Lanarkshire, Dumfries-shire, Kirkeudbrightshire, Argyleshire, and Perthshire, was 1,931 tons in 1856, and 1,946 in 1859; the produce in metallic lead was 1,416 tons in 1856, and 1,347 in 1859; and the produce in silver, extracted from the lead ore, was 5,232 ounces in 1856, and 4,022 in 1859. Cast iron goods are largely produced at the Carron works, at places in Lanarkshire, and at some other places.

The soap-trade, though employing no great multitude of hands, possesses interest for the connection of its statistics with general economy. The number of licensed soap-makers in Scotland in 1850 was 25,—in 1860, 26. The number of pounds weight of silicated soap made in 1850 was 36,390,—in 1851, 7,150; of other hard soap, in 1850, 16,038,905,—in 1851, 15,206,064; of soft soap, in 1850, 6,847,577,—in 1851, 7,150,119. The manufacture of the silicated soap was confined to Glasgow; and that of the other soaps was distributed among Glasgow, Greenock, Paisley, Leith, Prestonpans, Linlithgow, Dunfermline, Aberdeen, and Ayr.

A considerable glass manufacture is carried on at Glasgow, Alloa, Leith, and Portobello. A considerable manufacture of earthenware is carried on at Glasgow and Greenock. Leather-making, together with shoe-making, saddlery-work, and glove-making, are of considerable extent, and considerably diffused.—Sugar-refining is largely carried on at Glasgow, Greenock, and Leith.—Animal charcoal, consisting of calcined bovine bones, is manufactured for the uses of the sugar-refiner, and also for saturating iron bars with carbon to make blistered steel.—Agricultural implements, machinery, hats, jewellery, and all the articles of ordinary-artificership, are prominent.—Ship-building is more or less important at many of the greater ports, and even at some of the smaller ones, and is very conspicuous on the Clyde.

The extent of the tobacco and snuff manufacture of Scotland is indicated by the quantity of tobacco entered at the Scottish ports for home consumption. This in 1852 was 3,575 pounds weight manufactured, and 2,233,439 pounds weight unmanufactured; and the gross amount of duty on it was £353,360. More than half of the whole quantity was imported at Glasgow; and the next quantities, named in decreasing order, were at Leith, Montrose, Aberdeen, Arbroath, Dundee, Wick, and Banff. The number of licensed manufacturers of tobacco and snuff, in 1860, was 125; and that of licensed dealers in tobacco and snuff, 17,720.

The number of quarters of malt made in Scotland in 1850 was 571,635; in 1851, 531,935; in 1853, 530,593; in 1860, 672,941. The number of quarters used by brewers and victuallers in Scotland in 1851 was 133,590; in 1853, 165,955; in 1864, 245,775. The number of licensed brewers in Scotland in 1851 was 146; in 1864, 118. The number of licensed victuallers in Scotland in 1851 was 14,752; in 1864, 12,138. The number of maltsters in Scotland in 1851 was 919; in 1860, 478. The number of distillers of spirits in Scotland in 1815 was 27; in 1825, 329; in 1836, 222; in 1846, 175; in 1864, 115. The number of rectifiers of spirits in Scotland in 1815 was 2; in 1825, 7; in 1836 and 1860, 9. The number of gallons of spirits distilled lawfully in Scotland in 1708 was 50,844,—and in 1791, 1,696,000. The number in 1802—1815, when the duty fluctuated between 3s. 10½d. and 8s. 0¼d. per gallon, varied from 1,344,835 to 3,589,435. The number in 1816, when the duty stood at 9s. 4½d. was, 2,145,366. The number in 1817—1823, when the duty stood at 6s. 2d., varied from 3,062,820 to 3,547,199. The number in 1824—1826, when the duty stood at 2s. 4¾d., rose from 5,908,373 to 8,563,994. The number in 1827—1830, when the duty stood at 2s. 10d., varied from 7,243,819 to 10,117,097. The number in 1831—1839, when the duty stood at 3s. 4d., varied from 7,979,088 to 10,222,650. The number in 1840—1852, when the duty stood at 3s. 8d., varied from 7,650,272 to 11,638,429. The number in 1853, when the duty was 3s. 8d. and 4s. 8d., was 10,359,926. The number in 1854, when the duty was 4s. 8d., 5s. 8d., and 6s., was 9,862,318. The number in 1855, when the duty was 6s., 7s. 10d., and 8s., was 11,283,636. The number in 1856 and 1859, when the duty stood at 8s., was 12,001,098 and 13,190,865. And the number, in 1864, when the duty had been 4 years at 10s., was 14,869,564. Of the 10,359,926 gallons distilled in 1853, 5,330,714 were from malt only, 4,113,581 from malt mixed with unmalted grain, and 915,631 from sugar or molasses mixed with unmalted grain. The number of gallons exported to foreign parts, in 1851, was 194,073; in 1854, 366,625; in 1857, 2,061,579; in 1864, 3,581,037. In 1852, 2,267,419 gallons were exported from Scotland to England, 1,008,857 were exported from Scotland to Ireland, and 25,598 were imported from Ireland into Scotland. The number of gallons exported into England and Ireland in 1864 was 4,682,732; and the number of gallons of home-made spirits imported thence into Scotland, in the same year, was 51,929. Illicit distillation had become so prevalent in Scotland, in 1820, when the duty stood at 6s. 2d., that it is supposed to have supplied more than one-half of the spirits actually consumed; but by the reduction of the duty to 2s. 4¾d., and by the establishing of new regulations for giving additional security to the revenue, it fell rapidly off almost to extinction; and, notwithstanding an increase of the duty in a few years to 3s. 4d., and afterwards by gradation to 10s., it has never re-acquired any consequence. In 1856, when the duty stood at 8s., only 48 detections were reported, and many of these were of a trifling character. The force employed then for keeping down illicit distillation consisted of 35 officers and 71 assistants, and cost £11,882 a-year. One cause which operates against smuggling is the strong, general, active disapprobation of the landlords and the large occupiers of land; and another is a prevailing taste, among consumers, for a better flavour and quality of spirits than the smuggler usually supplies.

COMMERCE.

Scotland's exports consist principally of machinery, hardware, iron, coals, herrings, and the produce of her textile manufactures; and her imports consist principally of the raw materials for her cotton and linen fabrics, and of articles of colonial and foreign produce, which are demanded by the growing taste and luxuriousness of her population. To enumerate subordinate articles, or those included in this general classification, would be to write a list of goods as long, tasteless, and tiresome, as that of a vender of all wares. Till about the year

1755, when the exports amounted in value to £535,576, and the imports to £465,411, Scotland's commerce was almost as unknowing of foreign lands as her own hardy mountaineers, and as cold and cheerless as their climate and their dress. But from that period, and especially from a decade before the close of last century, it has progressively, though not uniformly, moved on to importance. The following is an account of the official and declared value of the imports into and the exports from the Scottish ports, from 1824 to the latest period at which the accounts are made up separately from those of the ports of England and Ireland :—

OFFICIAL VALUE OF EXPORTS.

Years.	Imports into Scotland.	British and Irish Produce and Manufactures.	Foreign and Colonial Merchandise.	Total.	Declared Value of Exports.
1824	£3,145,958	£5,009,324	£159,896	£5,169,220	£2,670,134
1825	3,719,366	4,937,746	109,811	5,047,557	2,721,186
1826	3,086,679	4,283,074	147,270	4,430,344	2,167,459
1827	3,948,205	5,932,850	126,745	6,059,595	2,745,965
1828	4,023,642	6,148,444	185,138	6,333,632	2,897,525
1829	3,888,994	6,528,587	127,530	6,656,117	2,787,935
1830	3,908,714	6,984,392	125,941	7,110,333	2,843,143
1831	4,187,087	7,943,612	111,086	8,054,698	3,189,318
1832	4,451,351	7,120,595	155,615	7,276,210	2,640,751
1833	4,638,652	6,820,381	130,721	7,051,102	2,636,840
1834	4,683,985	7,159,102	117,564	7,276,666	2,647,212
1835	4,659,151	8,372,598	156,735	8,529,333	3,272,250
1836	6,053,611	8,258,673	131,572	8,390,245	3,265,995
1837	5,130,371	7,250,554	134,332	7,384,886	2,724,476
1838	5,878,612	10,012,599	134,790	10,147,389	3,469,051
1839	4,933,611	11,216,504	105,376	11,321,800	3,961,692
1840	6,614,446	12,956,241	127,440	13,083,684	4,394,374
1841	6,476,670	12,240,523	132,451	12,372,974	4,124,957
1842	5,268,114	11,910,328	88,446	11,998,774	3,731,578
1843	7,043,691	13,712,735	91,479	13,804,214	4,073,626
1844	7,003,773	14,249,975	84,329	14,334,304	4,253,944
1845	8,264,806	14,751,366	105,927	14,857,293	4,320,275
1846	6,563,277	14,183,634	90,812	14,274,446	4,462,634
1847	7,367,465	12,723,097	144,419	12,867,516	4,151,695
1848	7,991,493	12,186,206	74,355	12,266,561	3,349,548
1849	9,508,064	13,721,492	192,127	13,913,619	4,027,626
1850	8,956,715	17,689,656	227,696	17,917,352	5,129,732
1851	8,921,108	17,478,695	393,174	17,871,869	5,016,116

The amount of customs from Scotland was, in 1836, £1,129,802; in 1844, £1,915,990; in 1850, £1,949,030; in 1855, £2,042,396; in 1860, £2,453,045; in 1864, £2,826,827. The head-ports, in 1864, named in the order of the magnitude of their customs, were Greenock, Glasgow, Leith, Port-Glasgow, Aberdeen, Dundee, Kirkcaldy, Perth, Arbroath, Grangemouth, Montrose, Troon, Alloa, Dumfries, Inverness, Banff, Ayr, Peterhead, Wick, Campbelton, Ardrossan, Borrowstownness, Stranraer, Lerwick, Kirkwall, Wigton, and Stornoway. But Granton also, in 1866, from being a sub-port, was made a head port.

FISHERIES.

The salmon fisheries of Scotland have long been extensive and famous, both yielding a large supply of prime fish for home consumption, and affording a considerable quantity for exportation to England; but they have materially declined during the last thirty years, and probably are now worth something less on the average than £150,000 a-year. The haddock fisheries, along the east coast, for the supply of fish both in a fresh state and in a half-cured state, have of late years become important, and may be regarded as inexhaustible. Whittings, skates, flounders, rock cod, and cuddies also are abundant. Turbot occur in the frith of Clyde and in the Moray frith. The lythe is extensively fished on the west coast. Soles, mullets, and garnets are scarce. Crabs are common; cockles abundant; lobsters not infrequent; shrimps and prawns rare; oysters very plentiful in small limited beds, but elsewhere not to be found. Several kinds of fish form no small part of the staff of life to the inhabitants of many parts of Shetland, Orkney, and the Hebrides. But by far the most important of the Scottish fisheries, both for market value, and for diffused connexion with general economy, are those of herrings, cod, and ling.

“Two centuries ago,” said the Messrs. Anderson of Inverness in 1850, “the Dutch were in the habit of sending as many as 1,500 and even 2,000 busses of 30 tons each, to prosecute the herring fishery off the coast of Shetland, besides several hundred doggers of about 60 tons burden to fish for cod and ling. For the latter, also, they carried on an extensive barter with the Shetland fishers. Towards the end of the 17th century, the Dutch herring busses, from wars with this country, and other causes, had decreased to 500 or 600, and they continued to diminish still farther during the 18th century, and have now almost disappeared from our coasts. Yet seventy years ago, they had 200 busses employed on the Shetland fishings; and the Danes, Prussians, French and Flemings, as many more; while the English had only two vessels and the Scotch but one. Public societies for the encouragement of the British fisheries have been formed at various times in this country, since the reign of Queen Elizabeth, previous to the society now established; but they were short lived, and their success was very partial. No attention was bestowed on the herring fishery till the year 1750, when a company was incorporated; which, however, eventually broke up, with a loss of £500,000 sterling. The present British Fishery Society was established in 1780. Parliament has frequently granted bounties for the encouragement of the fisheries; but as, till of late, these were paid on the tonnage, and not on the quantity of fish taken, vessels went out rather to catch the bounty than any thing else. For some years back, bounties for fishing herring have been found quite unnecessary, and are now discontinued. Several fishing villages, as Tobermory, Ullapool, and Pulteney-Town, near Wick, owe their origin to the British Fishery Society.” We may add, that, for the last quarter of a century, a large public grant has been annually made for building and repairing quays and piers connected with the Scottish fisheries.

The herring fishery in Scotland and the Isle of Man, during 1864, yielded less than an average catch. The quantity cured in the years 1860, 1861, 1862, 1863 and 1864 was 681,193,—668,828,—830,904,—654,816,—and 643,650 barrels; the quantity branded, 231,913,—265,347,—346,712,—276,880,—and 217,392 barrels; the quantity exported, 377,970,—390,313,—494,910,—407,761,—and 364,507 barrels. A fee upon the brand was introduced in 1856, and was expected to cause a considerable decrease in the number of barrels branded, but did not prove to have that effect. The amount estimated to accrue from the fee at the time of its being imposed, was £3,280; and the amount actually received from it in 1864 was £3,628,—and in the years 1859—1864 an average of £4,163 a-year. The export of herrings hitherto has been chiefly to Prussia and the Baltic, but promises now to be greatly extended. The cod, ling, and skate fishery in Scotland and the Isle of Man during 1864 yielded 3,370,974 fish; which was less by 420,287 than in 1863. The quantity cured dried was 107,758 cwts., or 21,967 less than in 1863; cured in pickle, 7,963 barrels, or 626 more than in 1863; and exported, of cured dried, 46,461 cwts., or 6,275 less than in 1863. The number of boats employed in the fisheries, in 1864, was 13,331; the number of fishermen and boys, 43,484; the number of fish-curers, 1,026; the number of coopers, 1,816; the number of other persons, about 44,426; the value of the boats, £328,136; the value of the nets, £472,566; the value of the lines, £74,953. The fisheries are distributed into the districts of Glasgow, Greenock, Rothesay, Ballantrae, Inverary, Loch Carron and Skye, Loch Broom, Stornoway, Shetland, Orkney, Wick, Lybster, Helmsdale, Cromarty, Findhorn, Buckie, Banff, Fraserburgh, Peterhead, Montrose, Anstruther, Leith, Eyemouth, and Isle of Man. The district most productive in herrings is Wick; and the three districts next to it in productiveness are Stornoway, Peterhead, and Helmsdale. The district most productive in cod and ling is Shetland; and the three districts next to it are Orkney, Stornoway, and Fraserburgh. The district richest in the aggregate value of boats, nets, and lines, is Anstruther; and the three districts next to it are Wick, Buckie, and Eyemouth. The Isle of Man district belongs to Scotland only so far as to include the Scottish fishings in the Solway Frith and the Irish Channel; and the items of it all, for 1864, were 34,164 barrels of herrings; 2,500 head of cod and ling; 628 boats; 2,550 fishermen and boys; 79 fish-curers; 17 coopers; and £65,178 value of boats, nets, and lines.

SHIPPING.

The shipping of Scotland, at a comparatively recent period, was inconsiderable; and even so late as 1656 comprised only 137 vessels, of from 250 to 300 tons each, and aggregately 5,736 tons. In 1760, the vessels employed in the foreign and coasting trade, and in fisheries,

were 999 in number, and 53,913 in tonnage. In 1800, the number was 2,415, carrying 171,728 tons, and employing 14,820 seamen. In 1828, the number carrying more than 100 tons each was 983; the number carrying less than 100 tons each was 2,160; and the aggregate tonnage of both classes was 300,836. On the 31st of December, 1840, the number of vessels belonging to Scotland was 3,479, of an aggregate tonnage of 429,204 tons, and manned by 28,428 men. The number of vessels built in Scotland, in the year ending 5th January, 1841, was 263, of an aggregate tonnage of 42,322 tons. On the 31st December, 1850, the vessels belonging to Scotland were 1,278 sailing vessels under 50 tons each, and aggregately of 38,531 tons; 2,154 sailing vessels above 50 tons each, and aggregately of 452,864 tons; 38 steam-vessels under 50 tons each, and aggregately of 1,064 tons; and 131 steam-vessels above 50 tons each, and aggregately of 29,763 tons. The number of vessels built in Scotland in 1851 was 136, of aggregately 30,000 tons. On the 31st December, 1864, the vessels belonging to Scotland were 1,073 sailing vessels under 50 tons each, and aggregately of 32,771 tons; 1,953 sailing vessels above 50 tons each, and aggregately of 575,778 tons; 106 steam-vessels under 50 tons each, and aggregately of 2,709 tons; and 295 steam-vessels above 50 tons each, and aggregately of 112,559 tons.

BANKS.

The number of Banks of Issue in Scotland in 1838 was twenty-nine, but now is only twelve. Eight of these, the Bank of Scotland, the Royal, the British Linen, the Commercial, the National, the Union, the Clydesdale, and the City of Glasgow, have their capital, not in shares, but in stock transferable to any amount, and do not require to lodge lists of partners. The date of institution, the name, the number of partners, the number of branches, the paid-up capital, and other particulars of the several banks, as they stood in December, 1864, are as follow; with the difference that the figure in the last column of the second, third, and sixth denotes ex-dividend:—

Insti- tuted,	NAME.	Part- ners.	Branches.	Paid up capital.	Dividend.			Price.
					Rate.	Payable.	Share Paid.	
1695	Bank of Scotland,		60	£1,000,000	10	April and Oct.	£100	£218 0 0
1727	Royal Bank,		74	2,000,000	7½	Jan. and July	100	153 15 0
1746	British Linen Company,	798	52	1,000,000	11	June and Dec.	100	230 10 0
1810	Commercial Bank,	805	76	1,000,000	11	Jan. and July	100	236 0 0
1825	National Bank of Scotland,	1,455	72	1,000,000	10 & 1	Jan. and July	100	220 0 0
1830	Union Bank of Scotland,	1,060	103	1,000,000	8	June and Dec.	100	186 0 0
1825	Aber. Town & County Bank,	529	31	156,000	10	March and Sep.	6	13 10 0
1836	North of Scot. Banking Co.,	1,249	34	280,000	10	May and Nov.	3½	8 5 0
1838	Clydesdale Banking Co.,	1,302	60	900,000	9	Feb. and Aug.	100	208 0 0
1839	City of Glasgow Bank,	1,000	94	870,000	7	Feb. and Aug.	100	142 10 0
1838	Caledonian Banking Co.,	725	16	125,000	10	August	2½	5 2 6
1834	Central Bank of Scotland,	421	9	100,000	12½	September	40	

The following table shows the amount of bank notes which the several banks are authorized by law to issue, and the average amount of their bank notes in circulation, and of coin held by them, during thirteen periods of four weeks, from December 12th, 1863, to November 12th, 1864, and from December 10th, 1864, to November 11th, 1865, as published in the Gazette.

NAME.	Authorized Circulation.	Average Circulation, 1863-4.	Coin. 1863-4.	Average Circulation, 1864-5.	Coin. 1864-5.
Bank of Scotland,	300,485	472,148	262,600	493,074	286,174
Royal Bank,	183,000	502,974	372,228	534,717	397,555
British Linen Company,	438,024	491,703	238,915	489,625	251,185
Commercial Bank of Scotland,	374,880	537,340	278,324	555,227	286,973
National Bank of Scotland,	297,024	454,375	260,868	472,094	259,500
Union Bank of Scotland,	454,346	592,519	244,927	582,421	235,745
Aberdeen Town & County Bank,	70,133	135,446	75,022	145,350	87,218
North of Scotland Banking Co.,	154,319	205,373	84,162	217,914	88,228
Clydesdale Banking Company,	274,321	368,850	152,465	373,026	151,395
City of Glasgow Bank,	72,921	357,581	325,311	364,249	330,360
Caledonian Banking Company,	53,434	72,169	33,718	74,112	33,300
Central Bank of Scotland,	42,933	59,450	30,544	61,443	29,949

The actual circulation of the banks on the first Saturday of 1856 and 1865, was as follows,—the Bank of Scotland in 1856, £418,533,—in 1865, £482,534; the Royal Bank in 1856, £254,080,—in 1865, £539,647; the British Linen Company in 1856, £514,554,—in 1865, £499,786; the Commercial Bank in 1856, £526,944,—in 1865, £550,598; the National Bank in 1856, £359,177,—in 1865, £455,652; the Union Bank in 1856, £538,706,—in 1865, £583,313; the Aberdeen Bank in 1856, £123,079,—in 1865, £135,441; the North of Scotland Bank in 1856, £203,358,—in 1865, £203,689; the Clydesdale Bank in 1856, £160,574,—in 1865, £355,355; the City of Glasgow Bank in 1856, £242,948,—in 1865, £365,244; the Caledonian Bank in 1856, £73,603,—in 1865, £69,975; the Central Bank in 1856, £61,282,—in 1865, £57,952. The aggregate circulation of bank notes in Scotland, some time after 1856, was shared also by five other Banks which do not now exist. These were the Perth Bank, which had a circulation of £45,515 in May 1857, when it was incorporated with the Union; the Western Bank, which had a circulation of £422,089 in November 1857, when it stopped payment; the Edinburgh and Glasgow Bank, which had a circulation of £137,104 in June 1858, when it was incorporated with the Clydesdale; the Eastern Bank, which had a circulation of £37,440 in January 1863, when it was incorporated with the Clydesdale; and the Dundee Bank, which had a circulation of £38,616 in February 1864, when it was incorporated with the Royal.

On the 20th November, 1864, there were in Scotland 54 savings' banks, having 58 unpaid, and 131 paid officers. The amount of security given by the unpaid officers was £14,400, by the paid officers £31,610. The salaries and allowances of the paid officers amounted to £7,680. The annual expenses of management, inclusive of all salaries, was £9,622. The number of accounts remaining open was 159,319; the total amount owing to depositors, £2,221,001; the total amount invested with the commissioners for the reduction of the national debt, £2,819,201; the amount in the hands of treasurers, £26,291; the average rate of interest paid to depositors, £2 19s. 1d.; the total amount of the separate surplus fund, £1,751; the annual number of receipts from depositors, 297,195; the annual number of payments to depositors, 177,422; the average amount of receipts from depositors, £3 1s.; the average amount of payment to depositors, £5 16s. 9d. An Act for depositing small savings in such post-offices as might be authorized by the Postmaster-General, was passed in 1861; and the number of post-office savings' banks in Scotland in January 1866 was 374.

INTERNAL COMMUNICATION.

The roads of Scotland, till about the middle of last century, were so few and bad, that three-fourths of the whole country were inaccessible to a wheeled vehicle. The Highlands, in particular, could be traversed only by their own chamois-moving mountaineers, and, even on their least upland grounds, were sublimely uncognizant of both the motion and the mechanism of a wheel; and at enormous cost and labour—as will be found detailed in our article on the HIGHLANDS—they were literally revolutionized in political, social, and agricultural character, simply by their being pierced and traversed with roads, and brought into acquaintance with the unpoetic cart. Both turnpike and subordinate roads are now ramified through most districts to an amount so nearly co-extensive with the wants of the country, that the absence of them in any locality is, in most instances, evidence of its being a tract of moorish or mountain waste; and, as Sir H. Parnell remarks, in his Treatise on Roads, “in consequence of the excellent materials which abound in all parts of Scotland, and of the greater skill and science of Scottish trustees and surveyors, the turnpike roads in Scotland are superior to those in England.” A parliamentary paper of November 1858 shows the extent of turnpike road in counties, but contains no return for Orkney and Shetland, and includes in Inverness-shire the highland or military roads of Sutherlandshire, Ross-shire, Nairnshire, Morayshire, Banffshire, Aberdeenshire, Argyshire, and Buteshire. According to this document, the extent of road in Aberdeenshire is 448 miles, in Ayrshire 735, in Banffshire 130, in Berwickshire 176, in Caithness-shire 136, in Clackmannanshire 37, in Dumbartonshire 63, in Dumfries-shire 349, in Edinburghshire 423, in Fifeshire 389, in Forfarshire 191, in Haddingtonshire, 145, in Inverness-shire 943, in Kincardineshire 96, in Kinross-shire 52, in Kirkcudbrightshire 249, in Lanarkshire 448, in Linlithgowshire 66, in Morayshire 89, in Nairnshire 19, in Peebles-shire 122, in Perthshire 337, in Renfrewshire 177, in Roxburghshire 195, in Selkirkshire 28, in Stirlingshire 135, and in Wigtonshire 50. The total of turnpike roads was thus 6,233 miles;

and in 1858-9 it was under 243 trusts, and yielded a revenue of £204,677 from tolls and £33,371 from other sources.

Owing to almost constant, and generally bold, inequality of surface, Scotland offers few facilities for the construction of canals; yet it has six of these works, two of which connect the eastern and the western seas, while the features of the others combine interest with utility. The Caledonian canal extends from the vicinity of Inverness on the north-east, to Corpach, near Fort-William, on the south-west, a distance of $60\frac{1}{2}$ miles, $37\frac{1}{2}$ of which are through Lochs Ness, Oich, and Lochy: and communicates between the Beaully Frith and the head of Loch-Eil. The Forth and Clyde canal extends from the Frith of Forth or mouth of the Carron, at Grangemouth, to Bowling-bay on the Clyde, a distance of 35 miles; and sends off a small branch to Glasgow, and a smaller one to the mouth of the Cart, to communicate by that river with Paisley. The Edinburgh and Glasgow Union Canal extends from Port-Hopetoun at Edinburgh, to the Forth and Clyde Canal at Port-Downie, near Falkirk, a distance of $31\frac{1}{2}$ miles. The Monkland Canal extends from the basin at the north-east extremity of Glasgow, to Woodhall, about 2 miles south-east of Airdrie, a distance of 12 miles; and communicates at its west end by a cut of a mile in length with the basin of the Glasgow branch of the Forth and Clyde canal. The Crinan canal lies across the northern extremity of the long peninsula of Knapdale and Kintyre, is about 9 miles in length, and connects Loch Fyne with the Western Ocean. The Glasgow, Paisley, and Ardrossan canal was projected to extend from Port-Eglington, on the south side of Glasgow, to the harbour of Ardrossan, but has been executed only to Johnstone, a distance of 11 miles. Another canal, $18\frac{1}{4}$ miles in length, went from Aberdeen harbour to Inverury, but was bought up and superseded by the Great North of Scotland Railway Company. The cost of the seven canals was nearly £2,500,000. The Caledonian and the Crinan have recently been much improved, and appear to be of permanent value; the Forth and Clyde also is of lasting consequence as a ship communication between the eastern and the western seas; but the others have been rendered comparatively worthless, and the Forth and Clyde itself has been greatly depreciated, by the formation of railways. The revenue of jointly the Caledonian and the Crinan, in the year ending 30 April 1865, was £9,107,—in the previous year, £10,476; the expenditure, in the year ending 30 April 1865, £10,216,—in the previous year, £10,994. The interests of the Forth and Clyde and the Monkland are now associated with those of the Caledonian railway.

The projecting of railways in 1845 rose to a mania, and concocted many schemes which could not be put into execution. It subsequently made provision for many good lines, and went on to spread an excellent net-work over much of the southern and central parts of the kingdom. It rose again, in 1865, to such a height of speculation as alarmed shareholders in the main constructed lines affected by it; and by a compromise early in 1866, some very costly schemes then entertained were suspended or withdrawn. The aggregate of railway open at the end of 1853, was 987 miles,—at the end of 1859, was 1,428 miles,—at the end of 1864, was 2,105 miles; and of the last, 928 miles were double, and 1,177 single. Other lines and branches, of considerable aggregate extent, were formed in 1865; and others, as from Stranraer to Girvan, from Muirkirk to Douglas, from Sanquhar to Lamington, from Kilmarnock to Neilston, from Glasgow to Busby, from Rutherglen to Coatbridge, from Cleland to Mid-Calder, from Ratho to Dunfermline, from Campsie to Gartness, from Callander to Oban, from Crieff to Comrie, from Crieff to Methven, from Dundee to Forfar, and from Aboyne to Braemar, were either opened or in progress in 1866. The railway system, in 1866, went northward to Bonarbridge, and promised both to go through the Great Glen to Loch Linnhe, and to go through Caithness to the Pentland frith.

A number of the earliest executed of the Scottish railways have been either materially superseded, greatly modified, or entirely absorbed by subsequent railways. Such are the Paisley and Renfrew, depreciated by the Glasgow and Paisley; the Edinburgh and Dalkeith, mainly superseded by the North British; the Pollock and Govan, absorbed by the Caledonian; the Kilmarnock and Troon, intertwined with the Glasgow and Southwestern; and several railways of the Lanarkshire mineral-field, variously altered and absorbed by the Caledonian, the Edinburgh and Glasgow, and the Monkland. A number of other railways also, which were planned or executed as separate undertakings, and which can still be described as separate works, have been conjoined by lease, amalgamation, or working with other railways, so as to be practically treated in the manner of branches. Thus the Glasgow and Coatbridge, the Wishaw and Coltness, the Clydesdale Junction, the Glasgow and Neilston, the Glasgow and Greenock, the Glasgow General Terminus and Harbour, the Rutherglen and Coatbridge,

the Lesmahago, the Cleland and Morningside, the Lanark and Douglas, the Wilsontown, the Granton and Leith, the Symington and Peebles, the Dumfries and Lockerby, are included in the Caledonian. Thus also the Edinburgh and Bathgate, the Stirling and Dunfermline, the Wilsontown and Coltness, the Glasgow and Milngavie, and the Glasgow and Helensburgh, are included in the Edinburgh and Glasgow; and that again, was amalgamated, in August 1864, with the North British. Thus also the Glasgow and Ayr, the Kilmarnock and Carlisle, the Dalmellington, the Ayr and Girvan, the Bridge of Weir, the Muirkirk, the Castle-Douglas and Dumfries, the Kirkeudbright, and the Portpatrick are included in the Glasgow and Southwestern. Thus also the Monkland and Kirkintilloch, the Ballochney, the Slamannan, the Airdrie and Bathgate, and the Bathgate and Morningside are included in the Monkland; and that, again, became connected, in 1865, with the North British. Thus also the Edinburgh and Hawick, the Berwickshire, the Peebles, the Leadburn and Dolphinton, the Selkirk and Galashiels, the Galashiels and Peebles, the Border Union, the Border Counties, the Devon Valley, the Kinross-shire, the West of Fife, the St. Andrews, and the Edinburgh, Perth, and Dundee, are included in the North British. Thus also the Dunblane and Callander, the Crieff Junction, the Dundee and Perth, and the Dundee and Newtyle are included in the Scottish Central; and that, again, was amalgamated, in 1865, with the Caledonian. Thus also the Scottish Midland, the Dundee and Arbroath, the Arbroath and Forfar, the Meigle and Alyth, and the Aberdeen are included in the Scottish Northeastern. Thus also the Denburn Valley, the Aberdeen Junction, the Aberdeen and Turriff, the Inverury and Old Meldrum, the Alford Valley, the Banff and Turriff, the Banffshire, the Formartine and Buchan, the Keith and Dufftown, the Morayshire, and the Strathspay are included in the Great North of Scotland. And thus also the Inverness and Aberdeen Junction, the Findhorn and Inverness, the Perth and Dunkeld, the Inverness and Perth Junction, and the Ross-shire, are included in the Highland.

The railways in operation on the 31st December 1864, were returned as the Caledonian, with 206 miles double and 153 single; the Edinburgh and Glasgow, 115 double and 31 single; the Glasgow and Southwestern, 169 double and 81 single; the Monkland, 13 double and 59 single; the North British, 228 double and 252 single; the Scottish Central, 70 double and 43 single; the Forth and Clyde, 30 single; the Leven and East of Fife, 19 single; the Scottish Northeastern, 115 double and 28 single; the Deeside, 32 single; the Great North of Scotland, 5 double and 221 single; and the Highland, 7 double and 226 single.

At the 31st December 1864, the total amounts which had been raised from shares and loans by the principal railway companies were as follow:—Aberdeen and Turriff, £120,876; Alford Valley, £111,022; Alyth, £44,000; Arbroath and Forfar, £230,350; Ayr and Maybole, £43,000; Banff and Turriff, £76,875; Banffshire, £77,476; Berwickshire, £131,150; Blane Valley, £21,479; Bridge of Weir, £29,725; Busby, £38,935; Caledonian, £10,453,442; Castle Douglas and Dumfries, £244,532; City of Glasgow Union, £14,510; Crieff and Methven, £7,205; Crieff Junction, £57,000; Deeside, £254,216; Devon Valley, £20,018; Dumfries and Lockerby, £117,210; Dunblane and Callander, £78,212; Edinburgh and Bathgate, £251,656; Edinburgh and Glasgow, £5,266,497; Esk Valley, £2,056; Findhorn, £10,973; Formartine and Buchan, £461,479; Forth and Clyde, £236,940; General Terminus and Glasgow Harbour, £212,595; Glasgow and Milngavie, £28,400; Glasgow and Southwestern, £4,922,314; Great North of Scotland, £1,808,486; Greenock and Wemyss Bay, £149,455; Inverness and Aberdeen Junction, £1,377,731; Inverness and Perth Junction, £908,045; Inverury and Old Meldrum, £24,755; Keith and Dufftown, £55,081; Kilmarnock and Troon, £40,000; Kirkeudbright, £75,928; Leadburn and Dolphinton, £18,494; Leslie, £33,719; Leven and East of Fife, £136,170; Maybole and Girvan, £147,419; Monkland, £935,457; Montrose and Bervie, £33,428; Morayshire, £150,248; North British, £10,756,930; Peebles, £129,000; Portpatrick, £556,622; St. Andrews, £26,300; Scottish Central, £2,940,556; Scottish Northeastern, £3,245,278; Strathspay, £230,182.

COINS, WEIGHTS AND MEASURES.

Scottish coinage cannot be traced higher than the twelfth century. During the whole of the Scoto-Saxon period, Scottish money was of the same fashion, weight, and fineness as the English, bore the same denominations, and was, in all respects, coequal with it in value. David II., amid the feebleness and wretched circumstances of his reign, coined groats,

half-groats, pennies, and half-pennies of silver, but so debased the coinage, that it was, for the first time, prohibited in England, or rated at a depreciated standard. The amount of deterioration was one-fifth of the whole value; and was estimated nearly at that proportion in the calculations of the English. David's successors not only followed his example, but carried out the principle of it with a boldness and a rapidity of expansion which excite surprise. Three, two, and one of the English pennies successively, and soon, became equal to four of the Scottish. The money of Scotland was at length carried so far along the career of deterioration, as, about the year 1600, to become only one-twelfth of the English in value; and, at this miserably depreciated rate, it has ever since stood in abstract or comparative reckoning.

Robert II., who ascended the throne in 1371, introduced gold pieces, and coined £17 12s. out of one pound of gold. Mary coined royals of 10, 20, and 30 shillings, generally known under the name of Crookston dollars. James VI. coined merks, half-merks, quarter-merks, half-quarter-merks, nobles, and half-nobles. Charles II. coined pieces of 4 merks and 2 merks, dollars of 56 shillings each in value, half-dollars, quarter-dollars, half-quarter-dollars, and sixteenths of dollars. James VII. coined 40 and 10 shilling pieces; and William and Mary pieces of 60, 40, 20, 10, and 5 shillings. At the epoch of the Union nearly £900,000 existed in Scotland in the different coins of various nations; and the whole specie was recoinced in uniformity with the English standard, and, with very little addition of paper currency, put into circulation, to the permanent exclusion of the old and wofully depreciated coins.—Copper money, or billon, generally known by the name of black money, was introduced to Scotland a century and a-half before it appeared in England. The copper coins of James II., III., IV., and V.,—the largest of which is about the size of a modern shilling, but very thin,—were probably intended to pass for groats and half-groats. Mary coined placks, or fourpenny pieces; and James VI. coined bodles, or twopenny pieces, and hardheads, or threepenny pieces; and Charles II., and William and Mary, besides repeating parts of the former coinage, coined bawbees.

The early weights and measures of Scotland were derived chiefly from England, during the 12th century; and whatever may have been their variety, they long continued to serve every practical end among an uncommercial people. The parliament, desirous to maintain uniformity, appointed standards in the several departments; and assigned the keeping of the standard ell to Edinburgh, that of the reel to Perth, that of the pound to Lanark, that of the firlot to Linlithgow, and that of the jug to Stirling. Yet these standards seem to have been very carelessly kept; and they did not prevent the usages of Scotland from becoming discrepant with those of England, or even from assuming various and perplexing local peculiarities. An uniformity of weights and measures was, from time to time, desiderated and attempted as a great social benefit; it was decreed by the act of Union to extend over both divisions of the United Kingdom; and it was pleaded and abstractly exhibited in numerous elaborate pamphlets, which were fruitlessly lauded by the learned, and coolly neglected or stolidly gazed at by the ignorant. In spite of both laws and logic, the people remained so wedded to their practices, that, till the recent introduction of imperial weights and measures, dissimilarities which arose during the torpidity and ignorance of the feudal times, continued with many of the properties of an intricate puzzle to perplex our theorists and embarrass our dealers.

PUBLIC REVENUE.

The revenue of Scotland, as to both its absolute amount and its relative proportion to that of England, has to the full kept pace with the increasing prosperity of the country. It amounted at the period of the Union, to £110,694; in 1788, to £1,099,148; in 1839, to £4,701,271; in 1848, to £5,916,983; in 1851, to £6,154,804; in 1864, exclusive of the post-office, to £8,382,687. The revenue from customs, in 1848, was £2,035,771; in 1851, £1,944,554; in 1858, £2,266,440; in 1864, £2,826,827. The revenue from excise, in 1848, was £2,395,253; in 1851, £2,755,378; in 1861, £3,470,426; in 1865, £4,062,196. The revenue from stamps, in 1848, was £576,544; in 1851, £547,872; in 1858, £621,202; in 1865, £809,669. The revenue from land and assessed taxes, in 1848, was £287,771; in 1851, £289,867; in 1858, £213,532; in 1865, £207,055. The revenue from property and income tax, exclusive of that from property in public funds, was, in 1847, £465,722; in 1857, £1,339,835; in 1861, £926,626; in 1864, £723,766. The revenue from the post-office, in 1848, was £164,383; in 1851, £175,009; in 1860, £300,662. The chief items of excise tax, in 1865, were £173,690 on licences, £274,401 on malt, and £3,570,654 on spirits. The divisions of property and income tax, in 1864, were £408,258 on real property, £37,754 on occupancy of real property, £248,973 on trades and professions, and £28,781 on public salaries.

GOVERNMENT.

Till the reign of James I., all persons who held any portion of ground, however small, by military service of the Crown, had seats in the Scottish parliament. The small barons were afterwards excused from attendance, and represented by "two or more wise men, according to the extent of their county." Parliament appointed the time of its own meetings and adjournments, nominated committees to wield its powers during recesses, possessed not only a legislative but an executive character, exercised a commanding power in all matters of government, appropriated the public money and appointed the treasurers of the exchequer, levied armies and nominated commanders, sent ambassadors to foreign states and appointed the judges and courts of judicature, and even assumed power to alienate the regal demesne, to restrain grants from the Crown, and to issue pardons to criminals. The King, even so late as in the person of James IV., was only the first servant of his people, and acted under the direction of parliament; he had no veto in the parliament's proceedings; nor could he declare war, make peace, or conduct any important business of either diplomacy or government without that assembly's concurrence. The constitution of the country had much more the character of an aristocracy than that of a limited monarchy. The nobility—who were dukes, marquises, earls, viscounts, and barons—were hereditary members of parliament; but they formed one house with the knights and burgesses, and occupied common ground with them in all deliberations and decisive votes. The nobles and other members of parliament were checked in their turn by the common barons, just as they checked the king; and even the common barons, or the landholders, were, to a large extent, checked in turn by their vassals. A jury of barons, who were not members of parliament, might sit on a lord's case, of even the gravest character, and might decide it without being unanimous in their verdict; and the vassals of a baron so completely involved or concentrated all his available power, in their own fidelity and attachment, as to oblige him, in many respects, to act more in the character of the father of his clan than in that of a military despot. The king, too,—while denied nearly all strictly royal prerogatives by the constitution of the country,—was indemnified for most by the accidents of its feudal institutions. He acquired considerable interest among the burgesses and lower ranks in consequence of the abuse of power by the lords and great landowners; and when he had sufficient address to retain the affections of the people, he was generally able to humble the most powerful and dominant confederacy of the aristocrats; though, when he did not acquire popularity, he might dare to disregard the parliament only at the hazard of his crown or his life.

The kings,—aided by the clergy, whose revenues were vast, and who were strongly jealous of the power of the nobility,—eventually succeeded in greatly diminishing, and, at times, entirely neutralizing, the aristocratical power of parliament. A select body of members was established, from among the clergy, the nobility, the knights, and the burgesses, and called "the Lords of the Articles;" it was produced by the bishops choosing 8 peers, and the peers 8 bishops, by the 16 who were elected choosing 8 barons or knights of the shires, and 8 commissioners of royal burghs, and by 8 great officers of state being added to the whole, with the Lord-chancellor as president; its business was to prepare all questions, bills, and other matters, to be brought before parliament; and the clerical part of it being in strict alliance with the king, while the civilian part was not a little influenced by his great powers of patronage, it effectually prevented the introduction to parliament of any affair which was unsuited to his views, and gave him very stringently all the powers of a real veto. This institution seems to have been introduced by stealth, and never brought to a regular plau; and as to its date and early history, it baffles the research, or at least defies the unanimity, of the best informed law writers. Yet "the Lords of the Articles" were far from being wholly subservient to the Crown; for they not only resisted the efforts of Charles I. to make them mere tools of his despotism, but went freely down the current which swept that infatuated monarch to his melancholy fate; and, at the Revolution, they waived all ceremony about getting from the fanatical idiot, James VII., a formal deed of abdication, and promptly united in a summary declaration that he had forfeited his crown. Before the Union there were four great officers of state, the Lord High-chancellor, the High-treasurer, the Privy-seal, and the Secretary,—and four lesser officers, the Lord Clerk-register, the Lord-advocate, the Treasurer-depute, and the Justice-clerk,—all of whom sat, *ex officio*, in parliament. The privy council of Scotland, previous to the Revolution, assumed inquisitorial powers, even that of torture; but it is now swamped in the privy council of Great Britain.

The Scottish nobility, since the Union, return from among their own number 16 peers to represent them in the upper house of the imperial parliament. Between the Union and the date of the Reform bill, the freeholders of the counties, who amounted even at the last to only 3,211 in number, returned to the House of Commons 30 members; the city of Edinburgh returned 1; and the other royal burghs, 65 in number, and classified into districts, returned 13. The Parliamentary Reform act in 1832, added, at the first impulse, 29,904 to the aggregate constituency of the counties; but it allowed them only the same number of representatives as before,—erecting Kinross, Clackmannan, and some adjoining portions of Perth and Stirling, into one electoral district, conjoining Cromarty with Ross and Nairn with Elgin, and assigning one member to each of the other counties. The same act enfranchised various towns, or erected them into parliamentary burghs, increased the burgh constituency from a pitiful number to upwards of 31,000, and raised the aggregate number of representatives from 14 to 23.

The officers of state for Scotland in recent times are the Keeper of the Great Seal, the Lord-Privy-Seal, the Lord-Clerk-Register, the Lord Advocate, and the Lord-Justice-Clerk. The supreme civil court, a court both of law and of equity, is the Court of Session. This originated in the reign of James V., but was modified at the Union, and has been materially altered even since the commencement of the present century. An account of its constitution, together with notices of the other metropolitan civil courts, will be given in our article on Edinburgh. The supreme criminal court is the High Court of Justiciary, consisting of the Lord-Justice-General or the Lord-Justice-Clerk and five other judges, who also are judges of the Court of Session. This court sits in full at Edinburgh, as occasion requires, for the three Lothians and for reference-cases from the rest of Scotland; and it holds regular circuit courts, by distribution of its members, at Jedburgh, Dumfries, Ayr, Glasgow, Inverary, Stirling, Perth, Aberdeen, and Inverness. The inferior courts of law are the baillie courts in burghs, and the sheriff courts and justice of peace courts in counties. The magistrates of burghs vary in title and number, according to the set of each burgh; but the magistrates of counties comprise, in every instance, lord-lieutenant, deputy-lieutenants, sheriff, sheriff-substitute, and justices of peace.

ADMINISTRATIVE DIVISIONS.

Scotland was anciently divided and subdivided into so many jurisdictions, and underwent such frequent changes in their limits, that any successful attempt to enumerate them would be insufferably irksome and almost wholly uninstrucive. The names of some of the larger jurisdictions continue to be used, and serve aptly to designate subdivisions of extensive counties; and other ancient names are, in several instances, popularly applied to whole counties in preference to the modern and legal designations. The counties—or, more properly, the sheriffdoms or shires—have, for upwards of half-a-century, been 32 in number. But they are excessively, and even ridiculously, various in extent; and, in many instances, are as grotesquely outlined, and even hewn into detached pieces, as if sheer merry-andrewism had presided over their distribution. An enormous addition, too, is made to the puzzle of their intertracery by parishes—which in most parts of Scotland constitute the only available subdivision—being, in very many instances, made to overleap the county boundary-line, and to lie, either compactly or detachedly, in two or even three shires. These evils, however, have been practically remedied by three devices,—placing two small neighbouring counties under one sheriff,—dividing large or populous counties into two or more districts, with each its own sheriff-substitute,—and placing detached or intersecting tracts under the administration of the functionary by whose proper territory they are surrounded. The first and the second of these devices, with the exception of Cromartyshire being joined to Ross-shire, and of Lanarkshire being divided into three wards, are quite recent, or indeed are only now in the course of being carried out; but they will no doubt be found, as the third has done, to contribute greatly to convenience and efficiency; though certainly the first and the third together produce the collateral disadvantage of rendering the limits of a county in regard to its administration exceedingly different from these limits in regard to its statistics. The anomaly of Kirkeudbrightshire being, not a shire but a stewartry, is scarcely worthy of mention; for it relates only to a name, and it wins diminishment or aggrandizement from that name exactly as one thinks of the feudal steward of a limited jurisdiction, or the princely the royal steward of broad Scotland.

Two of the counties—Bute and Orkney—consist entirely of islands; the former of those in the frith of Clyde, the latter of the Orkney and the Shetland archipelagoes. Three—Argyle, Inverness, and Ross—consist chiefly of territory on the mainland, and partly of the islands of the Hebrides. Two counties—Clackmannan and Kinross—comprehend each less than 84 square miles; seven—Linlithgow, Bute, Nairn, Renfrew, Dumbarton, Cromarty, and Selkirk—comprehend less than 266; four—Inverness, Argyle, Perth, and Ross—comprehend more than 2,590; and four—Aberdeen, Sutherland, Dumfries, and Ayr—comprehend more than 1,040. The following table gives the names of the shires in the order of their size, beginning with the largest, and states the ancient names, whether of subdivisinal or of co-extensive application.

Shires.	Ancient Names.
Inverness,	Lochalber, Badenoch, Moidart, Arisaig, Morer, Knoydart, Glenelg, Strathglass, and parts of Moray, Strathspey, and Ross, besides Skye, and other Hebridean islands.
Argyle,	Cowal, Kintyre, Knapdale, Lorn, including Appin, Kingarloch, Ardnamurchan, Suinart, Lochiel, Glenorchy, Morvern, and Ardgower, besides Mull, Isla, Jura, and other Hebridean islands.
Perth,	Perth, Stormont, Strathearn, Gowrie, Athole, Breadalbane, Monteith, Glenshiel, Ranoch, Balquidder.
Ross,	East-Ross, Ard-Ross, Kintail, Lochalsh, Kishorn, Toridon, Gairloch, Lochbroom, Strathcarron, and Black Isle, besides Lewis and other Hebridean islands.
Aberdeen,	Mar, Buchan, Garioch, Formartin, Strathgogie.
Sutherland,	Sutherland, Strathnaver, Assynt, Edderachylis, and Lord Reay's country.
Dumfries,	Nithsdale, Annandale, Eskdale, and Ewesdale.
Ayr,	Cunningham, Kyle, and Carrick.
Lanark,	Clydesdale.
Forfar,	Angus, including Glenisla, Glenesk, and Glenprosen.
Orkney,	Orkney Islands and Shetland Islands.
Kirkcudbright,	East-Galloway.
Caithness,	Caithness.
Roxburgh,	Teviotdale and Liddesdale.
Banff,	Strathdeveron, Boyne, Enzie, Balveny, and Strathaven.
Stirling,	Stirling, and part of Lennox.
Fife,	Fife and Forthryfe.
Berwick,	Merse, Lammermoor, and Lauderdale.
Elgin,	Central part of Moray, and part of Strathspey
Wigton,	West Galloway.
Kincardine,	Mearns.
Edinburgh,	Mid-Lothian.
Peebles,	Tweeddale.
Haddington,	East-Lothian.
Selkirk,	Ettrick Forest.
Cromarty,	Ross.
Dumharton,	Lennox.
Renfrew,	Strathgryfe, and part of Lennox.
Nairn,	Moray, &c.
Bute,	Bute, Arran, &c.
Linlithgow,	West-Lothian.
Kinross,	Part of Forthryfe, } Fife.
Clackmannan,	Strathdevon, }

CRIME.

Clear, judicious, comprehensive statistics of crime in Scotland have been produced since 1836, both in annual totals and in quinquennial averages. We shall give the summaries of them in three tables, with reference to respectively the numbers of the criminals, the classes of their offences, and the state of their education. And first, as to the numbers of the criminals:—

Period.	Committed for trial or bailed.			Tried.	Total convicted, outlawed, or found insane.	Convicted under aggravation of previous convictions.	Sentenced to death.	Executed
	Males.	Females.	Total.					
Average of 1836-40	2,516	834	3,349	2,789	2,563	506	2 $\frac{3}{4}$	1 $\frac{1}{2}$
Average of 1841-45	2,685	1,010	3,696	3,082	2,791	641	1 $\frac{3}{4}$	1
Average of 1845-50	3,248	1,240	4,488	3,689	3,370	977	2 $\frac{1}{2}$	1 $\frac{1}{2}$
Average of 1851-55	2,812	1,069	3,881	3,190	2,947	854	2 $\frac{1}{2}$	1 $\frac{1}{2}$
Average of 1856-60	2,552	1,067	3,619	2,924	2,524	831	1 $\frac{1}{2}$	$\frac{1}{5}$
Average of 1861-64	2,414	952	3,366	2,744	2,490	755	2 $\frac{1}{4}$	1

Next, as to the classes of offences :

OFFENCES.	Average of 1836-40.	Average of 1841-45.	Average of 1846-50.	Average of 1851-55.	Average of 1856-60.	Average of 1861-64.
Offences against the person,	751	835	1,088	1,014	1,034	900
Offences against property with violence,	530	537	703	532	377	408
Offences against property without violence,	1,676	1,883	2,182	1,916	1,827	1,708
Malicious offences against property,	47	64	73	62	63	54
Forgery and offences against the currency,	120	137	146	109	85	74
Other offences not included in the above classes,	266	239	295	247	232	234

And next, as to the offenders' years and state of education :

PERIOD.	Offenders of or under sixteen years of age.			Could neither read nor write.		Could read or write imperfectly.		Could read and write well.		Had superior education.	
	Males.	Females.	Total.	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Fem.
Average of 1836-40,	461	94	555	431	237	1,422	512	491	50	66	2 $\frac{3}{4}$
Average of 1841-45,	496	115	611	485	268	1,684	684	437	56	61	2 $\frac{3}{4}$
Average of 1846-50,	512	126	638	615	309	1,962	844	582	93	71	3 $\frac{3}{4}$
Average of 1851-55,	450	109	559	539	317	1,605	679	571	83	76	4
Average of 1856-60,	343	102	445	478	280	1,407	691	507	84	74	5
Average of 1861-64,	257	54	311	404	263	1,382	602	525	78	89	5 $\frac{1}{2}$

POOR LAW.

Compulsory assessment for the poor has been statutory in Scotland since so remote a period as 1576 ; but was allowed to lie almost wholly in abeyance, for sake of the resources of the kirk-session or of voluntary assessment, till the passing of a special act by the imperial parliament in 1845. The total of paupero-parochial combinations, or of territorial divisions regarded parochially for the purposes of pauper economy, is 883 ; and the number of those contributing organizedly for the support of the poor, when the new act came into operation, was only about 230 ; but the number in 1846 was 445,—in 1848, 602,—in 1850, 644,—in 1852, 671,—in 1856, 716,—in 1860, 749,—in 1864, 770. Any one of four modes of assessment is permitted ; but the first of these, which allows a parish to distinguish lands and heritages into two or more classes, according to the purposes for which they are used or occupied, and to assess the tenants or occupants of each class in such different rates as may seem just and reasonable, is the one generally preferred, having been adopted in no fewer than 746 of the 770 organized parishes of 1864.

The sums received from all sources for the relief and management of the poor were, in 1836, £171,042 ; in 1840, £202,812 ; in 1845, £258,814 ; in 1849, £583,613 ; in 1852, £541,889 ; in 1856, £651,000 ; in 1860, £671,515 ; in 1864, £776,455. The expenditure yearly in various years, together with the rate per head on the population according to the previous census, and the rate per cent. on real property according to the return of 1843, was as follows :—

PERIOD.	Relief of casual poor.	Relief of casual poor.	Medical relief.	Management.	Law expenses.	Poor-house buildings.	General sanitary measures.	Total expenditure.	Rate per head on pop.	Rate per cent. on property.
	£	£	£	£	£	£	£	£	s. d.	£ s. d.

The following table gives the personal statistics of these years under various heads—

PERIOD.	Number of registered poor relieved during the year.	Number of registered poor died or ceased to receive relief.	Number of poor on register at date.	Number of casual poor relieved during the year.	Number of poor refused relief.	Number of such poor relieved by order of the Sheriff.	Number of poor removed to Eng-land, Ireland, or to other parishes.	Number of insane or fatuous poor.	Number of orphaned or deserted children.
Year ending.

May 14, 1864,	101,636	22,954	78,682	50,186	6,038	248	1,939	6,289	6,537

Poor-houses are provided by single populous parishes, or by groups of contiguous parishes. In August 1864 there were 53 in operation, aggregately containing accommodation for 12,895 inmates; serving for 263 parishes, which had a population of 1,683,065 in 1861, and occupied on the 1st of July 1864 by 7,165 paupers. These poor-houses are for Edinburgh, Canongate of Edinburgh, St. Cuthberts of Edinburgh, Glasgow, Govan, Barony of Glasgow, Aberdeen, Old Aberdeen, Athole, Ayr, Black Isle, Campbelton, Cunningham, Dalkeith, Dumfries, Dundee, Dunfermline, Dysart, Easter Ross, Falkirk, Forfar, Galashiels, Greenock, Hawick, Inveresk, Inverness, Jedburgh, Kelso, Kirkcaldy, Kirkeudbright, Kirkpatrick-Fleming, Kyle, Latheron, North Leith, South Leith, Liff and Benvie, Linlithgow, Lochgilphead, Lorn, Maybole, New Monkland, Old Monkland, Mull, Nairn, Paisley, Paisley, Abbey of Paisley, Peebles, Perth, Rhinns of Galloway, Skye, Stirling, Thurso, Upper Nithsdale, and Upper Strathearn. In August 1864, also, 13 other poor-houses, for the use of 85 parishes, which had a population of 245,431 in 1861, were in progress.

POPULATION.

The following table shows, for each of the counties, and for the whole kingdom, the amount of the population of Scotland in the years 1801, 1811, 1821, 1831, 1841, 1851, and 1861, with the increase or decrease per cent. during each ten years, decrease being indicated by the sign (—).

Counties.	Persons.							Increase or decrease per cent.

The number of males and females in each county, and the number of inhabited houses, of uninhabited houses, and of houses in the course of erection, together with some other statistics of county population, will be found stated in our articles on the several counties. The average number of rooms to a house, of rooms to a family, of persons to a house, and of persons to a room, the per centage of families occupying one room with no window, and of families occupying one room with only one window, the number of persons to a square mile, and the number of acres to a person, in every county of Scotland in 1861, are shown in the following table:—

COUNTIES.	Average No. of Rooms to a House.	Average No. of Rooms to a Family.	Average No. of Persons to a House.	Average No. of Persons to a Room.	Per Centage of Families in one Room with no Window.	Per Centage of Families in one Room with only 1 Window.	Number of Persons to a Square Mile.	Number of Acres to a Person.

EDUCATION.

The Universities of Scotland are, in most particulars, sufficiently noticed in our articles on St. Andrews, Glasgow, Aberdeen, and Edinburgh, the cities in which they are situated. All, except that of Edinburgh, existed before the Reformation; and that of St. Andrews is illustriously associated with the name of Melville, and makes an honourable figure in the history of the revival of literature. They formerly differed from one another in parts of their constitution, and laboured all more or less under disadvantages; but they were brought nearly to uniformity, and materially altered and improved, by a comprehensive act, passed in 1856. A commission was then appointed, to continue till 1st January 1862, or, by order of the Queen and privy council, for a year longer, to unite the two of Aberdeen into one, to organize a new government for all, to revise the powers, privileges, and endowments of each, to found new professorships where necessary, and to make rules for admission of students, course of study, manner of teaching, fees, examinations, and degrees. Each of the universities has now a chancellor, a rector, a principal, a senatus academicus, and a general council, and is governed by a university court. The senatus academicus consists of the principal and the professors, confers degrees, and, subject to the control of the university court, superintends discipline and administers property. The general council consists of the chancellor, the university court, the professors, and all alumni who are off the roll of students, and upwards of 21 years of age; and it takes part in the election of office-bearers, according to provisions of the act, and makes representations to the university court on all questions affecting the university's prosperity. The university courts vary somewhat from one another in constitution, and will be noticed in our articles on the universities' seats. The professors prior to 1851, required to be members of the Established church; and the principals, except of St. Andrews, prior to 1856, required to be clergymen; but all are now free from restriction.

The students have ever been treated without reference to creeds or sects. Sums were issued to the Universities, from the Consolidated Fund, for compensation under the Copy-right act, from 1845 to 1865, amounting to £44,640; sums were voted to the Universities,

by Parliament, for their proper uses, from 1845 to 1865, increasing from £7,079 to £16,282 a-year, and amounting to £175,576; and payments were made for buildings of the Universities, superintended by the Office of Works, in the same years, to the amount of £35,705.

The public schools of Scotland were almost all, for some time, on the parochial system. This was established, by act of parliament, toward the close of the 17th century; it theoretically required that there should be at least one school in each parish; and, except in the remote Highland districts, it was very promptly and generally adopted. It seemed to be well suited to the educating of the people; it was worked vigorously, with good results; and it earned for Scotland the fame of being the best-educated country in the world; yet it was slowly and reluctantly discovered to possess many defects, both intrinsic and extrinsic; it required to be supplemented, in sequestered districts, by many appliances; it was superseded, in the large towns, by burgh-schools and association academies; and, though continuing to confer important advantages, it eventually allowed other and younger countries to overtop Scotland in educational celebrity. Great efforts were made by the Established Church, at various times and in various forms, in most parts of Scotland, but especially throughout the Highlands, to supply its deficiencies. One of the grandest of these efforts began so early as 1704, in the organization of the Society for Propagating Christian Knowledge; and another grand one was developed in 1824, in the appointing of a Committee of Assembly, with the character of a Board, to form and superintend schools. The Free Church also, from the time of its formation in 1843, made strong exertion to have a school in connexion with each of its congregations; and it carried out the exertion so successfully as to have 712 in 1851. The Episcopalians and the Roman Catholics likewise, in proportion to their numbers, made scarcely less efforts; other religious bodies, particularly the United Presbyterians, in many of their congregations, achieved much; and large numbers of influential persons, in various capacities as patriots or philanthropists, individually or in association, accomplished more. The Committee of Privy Council on Education came to the aid of the schools in 1839, and, from that year till the end of 1864, made grants of £508,385 to those connected with the Established Church, £394,929 to those connected with the Free Church, £43,487 to those connected with Episcopalians, and £23,354 to those connected with Roman Catholics. But dissatisfaction with the working of the grants and with the classification of the schools extensively existed; a desire for a national school system was widely felt; and a Commission to inquire into the schools was appointed, in 1864, by the Crown. The first report of the Commission was dated in March 1865, but contained only the oral-evidence taken till that date; and the second report was expected to be ready for presentation to Parliament, in time to admit of action upon it before the end of the session of 1866.

The number of children, from 5 to 15 years of age, attending school during the first week of April 1861, was 441,166; but that number excluded all scholars then absent from ill health or other causes, all scholars receiving instruction at home through tutors or governesses, and all scholars attending such schools, as, on account of Spring agricultural operations, are shut during the month of April; and the number of scholars of all ages, at that date, was 479,856. The number of schools visited by the government inspectors, between 1 September 1863 and 31 August 1864, for examination connected with annual grants, was 1,382 schools, with 1,632 school-rooms; for examination unconnected with grants, 181 schools, with 183 school-rooms; in all, 1,563 schools, with 1,815 school-rooms. Of the 1,563 examined on account of grants, 867 were of the Established Church, and had 89,433 children present at examination, 983 certificated teachers, and 1,077 pupil teachers; 392 were of the Free Church, or of other non-Established churches, and had 45,290 children present at examination, 488 certificated teachers, and 493 pupil teachers; 82 were of the Episcopal Church, and had 9,758 children present at examination, 85 certificated teachers, and 136 pupil teachers; and 41 were Roman Catholic, and had 7,850 children present at examination, 50 certificated teachers, and 99 pupil teachers. Of the 181 examined unconnectedly with grants, 146 were of the Established Church, and had 2,673 children present; 14 were of the Free Church, or of other non-Established churches, and had 1,092 children present; 20 were of the Episcopal Church, and had 1,117 children present; and 1 was Roman Catholic, and had 345 children present. Of the 1,382 examined for annual grants, 163 of the Established Church, 110 of the Free Church, 22 of the Episcopal Church, and 14 of the Roman Catholic ones, had ladies' committees to superintend instruction in domestic industry. The number of school-houses erected with aid of parliamentary grants, from 1839 till the end of 1864, was 364 of the Established Church, with accommodation for 34,044

scholars ; 305 of the Free Church, and of other non-Established churches, with accommodation for 25,113 scholars, and 16 of the Episcopal Church, with accommodation for 2,054 scholars ; or 695 in all, with accommodation for 61,211 scholars. The total cost of erection of these schools was £288,904 ; and the proportion of this furnished by parliamentary grants was £95,449.

Parochial schools have now no existence, or merely a nominal one, in large or considerable towns ; but they continue to be prominent in all smaller towns, and throughout the rural districts. The majority of parishes have each one parochial school ; some have two ; a few have three, or even four. The schoolmasters, prior to 1861, required to be members of the Established Church, and were under the jurisdiction of the presbyteries of their bounds ; but, in terms of an Act of that year, may now belong to other communions, are qualified for office by a testing examination on the part of examiners appointed by the university courts, and, in cases of immoral conduct or cruelty, are under the jurisdiction of the sheriff. The parochial schoolmasters are appointed by the parochial heritors and clergymen, with the reservation that, if two or three candidates are sent to the examiners, the one whom they certify to be the best qualified is held to be elected ; and prior to the Act of 1861 they had a maximum salary of £34 4s. 4½d., but now have a minimum of £35, and a maximum of £70, or, in cases of two or more schools in one parish, a minimum for all of £50, and a maximum of £80. About 250 of the schoolmasters, in 1865, were in receipt of Privy Council grants ; and a large number of them, particularly throughout the counties of Aberdeen, Banff, and Elgin, have considerable receipts from endowments or special bequests. The total number of parochial schools, in 1851, was 937 ; and in 1865, including 38 female ones, was 1,057.

The Established Church schools, in a general sense, include all the parochial schools, and all others which accept examination by the Church's presbyteries ; and, in a special sense, consist of those which receive support or aid from the Church's funds. The number reported to have been examined during 1864 was 2,614, with 202,583 children on their roll ; and the number known or computed to have been under presbyterial supervision, was not fewer than 3,000, with about 260,000 children on their roll. The number which received support or aid from the Church's funds, in that year, was 172 mixed schools and 34 female schools, together with 95 sewing-schools attached to the former ; the number of children attending them was 19,417 on week days, together with upwards of 2,000 for their Sabbath instruction ; and the amounts received by their teachers were £3,655 from the Church's funds, and £6,851 from other sources. The Free Church schools, in 1865, comprised 570 which received grants from the Church's funds, and about 200 which did not receive such grants. The 570 were classified into 434 congregational schools, 100 side and industrial schools, 30 missionary schools, 4 grammar schools, and 2 normal schools ; they were conducted by 594 teachers, and attended by 61,172 scholars ; and, exclusive of the two normal ones, they received from the Church's funds, £8,972. The schools of other religious bodies, in 1851— for we have not complete statistics of them at a later date—were 61 of the United Presbyterian Church, with 5,807 scholars, 2 of the Reformed Presbyterian Church, with 355 scholars, 36 of the Episcopal Church, with 2,658 scholars, 4 of Independents, with 424 scholars, 1 of Baptists, with 167 scholars, and 32 of Roman Catholics, with 5,673 scholars. The Established Church has two normal schools, the Free Church has two, and the Episcopal Church has one. These schools are colleges for teachers, training them in both the principles and the practice of teaching ; but they serve, at the same time, as great seminaries for children ; and all are aided with Privy Council grants. The two of the Established Church had 109 male students, and 101 female students in March 1865 ; received annually, for a course of years, £500 from the Church's funds ; received, in 1864, £8,450 from Privy Council grants ; and received, from 1839 till 1863, a total of £103,999 from Privy Council grants. The two of the Free Church had 116 male students and 127 female students in March 1865 ; received, in 1864, £9,968 from various sources ; and received, from 1839 till 1863, a total of £105,439 from Privy Council grants. The one of the Episcopal Church had 13 students in March 1865, and received, from 1839 till 1863, a total of £4,215 from Privy Council grants.

The burgh schools, as a class, are much superior to the parochial schools ; they exist in most towns of more than 3,000 or 4,000 inhabitants ; they are generally under the patronage of the local authorities, and those of the larger burghs commonly bear the name of high schools or grammar schools, have a plurality of well-qualified teachers, afford a wide scope of

education, and possess, for the most part, a fair or respectable amount of emoluments.—Some endowed schools, such as the Wallace academy in Closeburn, the Dollar institution in Dollar, the Madras academy in Cupar-Fife, and the Madras college in St. Andrews, are large and well-equipped establishments.—Very many schools in small towns, in villages, and in rural districts receive support, in a variety of degrees, from heritors or other wealthy persons. Subscription schools likewise make a considerable figure, but are exceeding varied in size, in specific object, and in almost every other character. Some of these, and also some of the previous class, are designed for particular descriptions of children; some are in connexion with factories or other public works; and many are of so general or miscellaneous a nature as to be incapable of classification.

Reformatory schools, certified under act of parliament, for the reclaiming of young offenders, were began in 1854, and amounted to 14 in 1864. Eight of these were for boys, and 6 for girls; 12 were Protestant, and 2 Roman Catholic. The average number of their inmates, in 1864, was 757 boys and 258 girls; the average cost of each inmate, £16 10s. 3¼d.; the amount contributed to them from parliamentary grants, £15,369.—Ragged or industrial schools, for reclaiming outcast children, were of earlier origin; they amounted, in 1851, to 21, with 1,182 male, and 795 female scholars; they afterwards became, in some degree, supplementary to the reformatory schools; and the number of them, in 1864, certified under act of parliament, was 19, with 565 boys and 257 girls under detention.

Schools of art, under government sanction, in 1851, were 3, attended by 998 scholars, 214 of whom were upwards of 15 years of age; and in 1864 were 9, attended by 11,188 scholars, and receiving £1,190 of grants from the Science and Art Department. There were 4 navigation schools in 1864; and these were attended, in the previous year, by 8,103 scholars. Scientific classes, for instruction in many departments of physical science, varying from elementary to advanced, are held in connexion with numerous schools and institutions.

The school statistics of the Census of 1851 were very copious and minute; and when measured by the amount of population at that time, they still throw much light on the educational condition of the kingdom; yet they are now available mainly in their leading figures, and not much in their details. The number of day-school scholars, according to direct returns from the schools, was 368,517; but by computation for missions and oversights, was 412,678. The number of public day schools was 3,349, with 280,045 scholars; of private day schools, 1,893, with 88,472 scholars; of Sabbath schools, 3,803, with 292,459 scholars; of evening schools for adults, 438, with 15,071 scholars; and of institutions of a character intermediate between educational and literary, 221. The number of day schools, public and private, in which geography was taught to boys was 2,899, ancient languages 1,511, modern languages 581, mathematics 1,321, drawing 324, music 710, industrial occupations 50; and the number in which geography was taught to girls was 2,910, ancient languages 188, modern languages 662, mathematics 65, drawing 298, music 915, industrial occupations 809. The number of the public schools which were parochial was 937, with 75,955 scholars; which were burgh schools 88, with 11,484 scholars; which otherwise were supported by taxation 14, with 1,461 scholars; which were endowed 491, with 39,537 scholars; which were supported by religious bodies, 1,385, with 114,739 scholars; which were connected with factories, collieries, or ironworks, 56, with 7,408 scholars; which were supported or aided by subscription, 378, with 29,461 scholars. The number of scholars in the Sabbath schools belonging to the Established Church was 76,233; to the Free Church, 91,328; to the United Presbyterians, 54,324; to the Reformed Presbyterians, 2,571; to the Episcopalians, 3,706; to the Independents, 12,593; to the Evangelical Union, 1,853; to the Baptists, 2,506; to the Methodists, 5,908; to the Roman Catholics, 13,015.

LITERATURE.

Scotland has long had the reputation of pre-eminent intellectuality. Her children have equalled or excelled those of most modern countries in almost every department of learning and art. A goodly proportion of them are known on the roll of fame to the ends of the earth, and will continue to figure on it till the end of time. Among her mathematicians and physicists may be mentioned the Gregorys, Maclaurin, Simpson, Black, Hutton, Robison, Ferguson, Playfair, Ivory, and Leslie; among her ethical writers, Reid, Smith, Beattie, Oswald, Campbell, Lord Kames, Lord Monboddo, Brown, and Stewart; among her physicians

and anatomists, Cullen, the Gregorys, the Monroes, and Abercromby; among her divines, Leighton, Macknight, Brown, Hill, Dick, Monerief, Thomson, Chalmers, and Wardlaw; among her engineers, Watt, Murdoch, Rennie, and Telford; among her agriculturists, Sinclair, Dickson, Ayton, Coventry, and Smith; among her historians, Fordun, Barbour, Buchanan, Robertson, Hume, Smollett, and Tytler; among her antiquaries, Lord Hailes, Geddes, Pinkerton, Chalmers, and Jamieson; among her critics, Blair, Kames, Campbell, and Jeffrey; among her painters, Runciman, Jamieson, Raeburn, Thomson, Wilkie, and David Scott; among her novelists, Smollett, Mackenzie, Galt, Scott, Wilson, and Lauder; and among her poets, Ossian, Ramsay, Thomson, Drummond, Armstrong, Beattie, Ferguson, Burns, Tannahill, Leyden, Motherwell, Scott, Byron, and Wilson.

The Lowland Scotch are eminently a reading people, and, in proportion to their bulk, have probably a very considerably larger number of public libraries than any other in the world. Subscription libraries—sometimes two or more in number, and generally large, select, and comparatively rich in literature—exist in most of the large towns; parochial and congregational libraries, for the most part pervaded by religiousness of character, exist in villages, hamlets, and in rooms attached to the crowded chapel of the city, or the solitary rural church or meeting-house; private circulating libraries, or libraries on private adventure, for letting out books to promiscuous readers, are usually of a light character, and abound in city, town, watering-place, and every locale or resort of the intellectually frivolous; circumambulating libraries, or such as keep detachments of a very large and excellent library in garrison throughout the country, and periodically move them from post to post, are in full and benign possession of extensive territories; Sabbath-school and other juvenile libraries, exist in great numbers, for the use of the young; and a public news-room, for blending literature with commerce, and with mental recreation, is to be found even in many a village, and in almost everything which can fairly be called a town.

The book-trade of Scotland, with very few exceptions, is confined to Edinburgh and Glasgow, so that sufficient notice of it is contained in our articles on these two cities. The number of stamps issued to newspapers in Scotland, in the year ending September, 1836, was 2,654,438; in the year ending 5th January 1839, 4,228,370; and in the year ending 31st December, 1852, 6,656,922 at a penny and 229,197 at a halfpenny. The amount from newspaper stamps, in 1861, was £18,112; in 1865, £15,574. In 1866, 23 newspapers were published in Glasgow, 15 in Edinburgh, 7 in Aberdeen, 6 in Dundee; 4 each in Paisley, Perth, and Stirling; 3 each in Ayr, Cupar-Fife, Dumfries, Elgin, Falkirk, Greenock, Inverness, and Leith; 2 each in Alloa, Arbroath, Ardrrossan or Salteoats, Crieff, Dumbarton, Kelso, Kirkcaldy, Kirkwall, Lockerby, Montrose, Peterhead, Rothesay, St. Andrews, Stranraer, and Wick; and 1 each in Airdrie, Aiman, Anstruther, Banff, Blairgowrie, Brechin, Campbellton, Castle-Douglas, Dalkeith, Dunfermline, Forres, Fraserburgh, Galashiels, Haddington, Hamilton, Hawick, Huntly, Invergordon, Jedburgh, Kilmarnock, Kinross, Kirkeudbright, Langholm, Linlithgow, Moffat, Nairn, Peebles, Portobello, Portsoy, Selkirk, and Stonehaven. Fourteen were published daily, 3 thrice a-week, 9 twice a-week, 116 weekly, 2 fortnightly, and 4 monthly.

RELIGION.

The Established church of Scotland is strictly presbyterian. Each parish is governed by a kirk-session, consisting of the minister and several lay-elders. A number of parishes, varying from 3 to 39, send each its minister and a ruling elder to form a presbytery, and are, on a common footing, under its authority. Several presbyteries contribute or amass all their members to form a synod, and are individually subject to its review or revision of their proceedings. All the presbyteries, in concert with the royal burghs, the four universities, and the Crown, elect representatives, who jointly constitute the General Assembly. This is the supreme court; and will be found noticed in our article on Edinburgh. The Synods, 16 in number, are exceedingly dissimilar in the extent of their territory, and the amount of their population; and the presbyteries, 84 in number, have also a very various extent, and are distributed among the synods in groups of from 3 to 8.

The number of parishes strictly political, whose aggregate limits comprise the whole kingdom, and whose ministers derive their income either from teinds or from some tantamount provision, is 925. But 21 of these are collegiate charges, each having two ministers; and several also have each two churches. There are likewise in connexion with the Establishment,

in the Highlands and Islands, 42 places of worship, which originated in a procedure of the Government in 1823 for Scottish church-extension, and are called government or parliamentary churches,—in the Lowlands, about 198 places of worship, which originated at various times and in various ways, in the enterprise of individuals, congregations, or societies, and except in cases which we shall immediately specify, are called chapels-of-ease,—and in the Highlands, in the Islands, or in parts of the Lowlands contiguous to the Highlands, 41 places of worship, which originated in efforts of a missionary character, and are called missions of the Committee of the General Assembly for managing the Royal Bounty. By an act of parliament passed in 1844, any non-parochial place of worship connected with the Establishment, on security of sufficient endowment for the stipend of its minister, and with the consent of a majority of the heritors affected by it, may be erected by the Court of Teinds into a quoad sacra parish church, having the same constitution and status, in government by kirk-session, in rule over a specified territory around it, and in representation in the superior courts, as a strictly political or quoad civilia parish church; and in virtue of that act, 101 of the parliamentary, mission, and chapel churches were, prior to May 1865, made quoad sacra parochial. The total number of places of worship connected with the Establishment in 1866, was 214; and 132 of them still ranked as chapels of ease.

The main support of the quoad civilia parish ministers is derived from tithes, called in Scotland teinds. The amount for each minister is assigned in chalders of grain; so that its money-value is variable; but this is determined each year by the average-prices of the previous year's grain crops in the county, officially struck by the sheriff with the help of a jury, and called the fiars. Scottish teinds are all predial, and are divided into parsonage or the greater teinds, consisting of the tithe of victual or grain, and vicarage or the lesser teinds, consisting of the tithe of grass, flax, hemp, butter, cattle, eggs, and some other articles. The tithes of fish are, in a few places, exigible; but, along with all the vicarage teinds, they are very inconsiderable. The parsonage teinds are held by the Crown, by universities, by pious foundations, by lay titulars, or by the proprietors of the lands from which they are due; and, with the limitation that those of one parish cannot, to any amount, be transferred to another parish, they are, in all cases, exigible as payment of the stipends which have been provided by law, or which may, in future, be awarded by the Court of Teinds. In 1838, those which belonged to the Crown amounted in value to £38,051 0s. 4d. formerly belonging to the bishops, £5,323 3s. 11d. formerly belonging to the chapel royal, and £2,523 5s. 10d. formerly belonging to the abbacy of Dunfermline,—in all, £45,897 10s. 1d. Of this sum, £30,155 17s. 8d. was appropriated to ministers' stipends. Of the unappropriated amount, the free yearly surplus, after necessary deductions, was only £10,182 4s. 8d., and the actual receipt, in consequence of mismanagement, was a pitiful trifle. Teinds belonging to other parties than the Crown, amounted to £281,384 14s. Of this sum, £146,942 was appropriated to ministers' stipends, leaving £138,186 17s. 6d. unappropriated. Any minister in whose parish there are unappropriated teinds is entitled, after an interval of twenty years from the date of the last augmentation of stipend out of them, to apply to the Court of Teinds for another augmentation. From 1838 till 1851, applications for augmentation were made from 141 parishes, and augmentations to the aggregate amount of £4,571 were granted.

In 872 parishes, payment of the stipends is made from the teinds; in each of 196 of these, the teinds are less in value than £158 6s. 8d.; and in each of about 220, while amounting to £158 6s. 8d. and upwards, they are so low as to have been all appropriated. In those whose teinds are less in value than £158 6s. 8d., the stipend is raised to that amount or upwards, by payment from the exchequer. In quoad civilia burgh parishes, stipend is for the most part paid from the burgh funds; and in Edinburgh and a few other towns, it is paid from funds specially levied under act of parliament. In the case of the parliamentary churches, whether parochial or not, the stipend is a fixed allowance for each of £120 from the exchequer; and in the case of the chapels-of-ease, it is paid chiefly from seat-rents, and, in some instances, partly from the church-door collections. Except in a few peculiar cases, the ministers of quoad civilia parishes, either altogether or partly landward, are entitled to manse and glebe; and, in a few instances, they receive a money allowance in lieu of one or both. In parishes which, while the teinds are low, confer no right to either manse or glebe, an allowance is made from the exchequer, to raise the stipend to £200; and in those which, in the circumstances, confer a right only to a manse, or to a glebe, but not to both, an allowance from the same source makes the stipend £180. Ministers of the parliamentary churches

are entitled by law each to a house and half-an-acre of garden ground; and, in the majority of instances, they have been provided by the heritors with glebes. In numerous parishes the ministers have rights of grazing, or cutting turf and peats, and several other privileges of aggregately little value. In quoad civilia country parishes, the area of the churches belongs to the heritors, and is generally divided by them among the tenants and cottagers on their estates; and when a surplus, or disposable number, of the seats is let, the proceeds are, in some instances, appropriated by the heritors for their private use, and, in others, given to the poor. In quoad civilia burgh parishes, seat-rents are, in general, exacted for all, or nearly all, the pews; and are either employed for stipend, or drawn as common burgh revenue. In the parliamentary churches, seat-rents were originally designed to be generally exigible, and to be applied in maintaining the repair of the churches and manses; but they are, in every case, collected with difficulty, and, in some instances, have been entirely abandoned. The aggregate amount of the stipends of the ministers of the Establishment, exclusive of assistants and missionaries, on an average of 7 years preceding 1836, was, from parsonage teinds, £179,393 10s. 3d.,—from vicarage teinds, so far as they were paid in money, or had been valued, £712 19s. 8d.,—and from other sources, £51,345 5s. 0d.,—in all, £231,451 4s. 11d. The aggregate annual value of glebes, exclusive of a few not valued, was £19,168 15s. 3d. The income of the church, from voluntary contributions, during the year ending 15th April, 1862, for schools, missions, and other schemes, was £50,202 14s. 5d.

The Free church of Scotland disputes with the Established church the palm of numbers and of influence, and even claims to be the true historical national church. It was constituted in May, 1843. Upwards of 500 ministers, a considerable number of preachers and of theological students, and a vast body of all classes of the people, at that time left the Establishment and formed the Free church. The main cause of the disruption is briefly stated in our article on Auchterarder. The constitution and government of the Free church are in all respects the same as those of the Established church, excepting only, or at least chiefly, the absence of patronage, the want of state connexion, and the machinery of finance. Even the distribution and the very nomenclature of the synods, the presbyteries, and the congregations, in as far as circumstances could be made to admit, are the same as in the Establishment. The number of synods at the date of the General Assembly in 1865 was 16; of presbyteries, 71; of organized congregations, 833; and of preaching stations, 71. The number of places of worship at the date of the census in 1851 was 889. A guaranteed stipend is paid, by equal dividend of the yearly proceeds of what is termed the sustentation fund, to each of the ministers of the Free church, except those of a few recent or peculiarly situated congregations, and this amounted for 1864 to £138. But a further sum accrues from other funds, and raised the average stipend in 1864 to £184 10s.; a still further sum, to any amount, is paid by as many congregations as can afford to give it; and 657 of the ministers in 1864 had also manses. The amount raised by the Free church in the year ending 31st March, 1865, for the sustentation fund, was £118,083 9s. 11d.; for building purposes, £41,821 13s. 6 $\frac{3}{4}$ d.; for congregational objects, £113,338 12s. 1 $\frac{3}{4}$ d. for missions and education, £70,207 16s. 6d.; for miscellaneous purposes, 13,579 0s. 10d; altogether, £357,030 12s. 11 $\frac{1}{2}$ d.

The United Presbyterian church is next in bulk to the Free church. It comprises the congregations of the United Secession church and the Relief church, which were united in 1846, and which, previous to the formation of the Free church, were the two largest dissenting bodies in Scotland. Its government is strictly presbyterian; but it has only one synod, and the representation there is the same as in its presbyteries, consisting of the minister or ministers and one lay-elder from each congregation. There belonged in 1865 to this church 31 presbyteries and 590 organized congregations; but the presbyteries vary in size from the inclusion of only 7 congregations to the inclusion of so many as 74; and five entire presbyteries, portions of two others, comprising altogether 103 congregations, are out of Scotland. The total of United Presbyterian regular congregations in Scotland, therefore, is 487; but many of these are large; and there are some mission churches and some preaching stations. The total number of United Presbyterian places of worship in Scotland in 1851 was 465. The disbursements for all congregational purposes are managed on the voluntary principle, and the aggregate income for them, including extraordinary as well as ordinary, amounted in 1858 to £129,079; in 1864 to £178,858. Ministers' stipends, in the larger charges, range from £300 to £700; in the medium charges, range from £120 to £300; and in the smaller charges, receive a supplement from a central fund, included among the benevolent schemes, and aiming to raise the minimum to £120. The sums contributed in the United Presbyterian

church during the year ending 31st December, 1864, for missionary objects and for other ultra-congregational purposes, amounted to £50,690 13s. 11d.

The Reformed Presbyterian church comprises 6 presbyteries and 45 congregations—one of the latter in England. The Reformed Presbyterian church in Scotland comprises 2 presbyteries and 11 congregations—all Scotch. The Synod of United Original Seceders comprises 4 presbyteries and 27 congregations—2 of the latter in Ireland; but in 1851 it had in Scotland 36 places of worship, a number of which afterwards became connected with the Free church. The Scottish Episcopal Church is distributed into 7 dioceses, and comprises at present 163 congregations. There are likewise in Scotland 8 English Episcopalian congregations. The Independents in connexion with the Congregational Union of Scotland have at present in Scotland 101 congregations; the Evangelical Union and affiliated churches 53; the various bodies of Baptists, about 78; and the Wesleyan Methodists, about 34. But many of all these classes of congregations, Independent, Union, Baptist, and Methodist, are very small. There are likewise about 110 other congregations, either Protestant or at least not Roman Catholic, of very diversified name and character, rarely more than 5 or 6 of them grouped into a denomination, and so many as about 10 or 12 standing alone; and what all these are may be proximately seen from the statistical table, which we subjoin of the Census of 1851; but not a few of them, besides being very small, are fluctuating and ephemeral. The Roman Catholic body in Scotland is distributed into three districts or quasi-dioceses, and comprises at present 128 places of worship and 182 priests.

The following table shows the total church-accommodation and church-attendance in Scotland, as returned to the Census officers in 1851, including an estimate for returns defective and for others known to be missing;—

A satisfactory outline of the ecclesiastical history of Scotland would occupy twenty or fifty times more space than we can spare. Its greatest elements would be critical remark on the date of the introduction of Christianity to Scotland; a view—partly given in our article on Icolmkill—of the character, discipline, and history of the Culdees; an examination of the rise and expansion of diocesan episcopacy; an exhibition of the inroads, methods of conquest, early condition, successive development, history, institutions, and corruptions of Romanism; a careful tracery of the multitudinous events of the Reformation, and of the struggles which presbyterianism maintained against popery, and against protestant prelacy, till the Revolution; and a rapid sketch of the rise and early history of each of the Scottish dissenting sects. Much of the most interesting parts of each of these elements, excepting the first, will be found interspersed with the body of our work; and, wherever it occurs, will be clearly understood without the aid of connecting links of narrative. Very frequently, however, in connexion with the monastic class of the Romish institutions, allusions and names occur which, as the institutions were in some instances peculiar to Scotland, will not be intelligible except with the aid of some explanatory statements.

The conventual orders, or different bodies of the regular clergy of the Romish church in Scotland, were very various, and were early introduced. The friars, while they lived in convents, were professedly strolling mendicants; and, in consequence of their astutely watching every opportunity of visiting the sick in their clerical character, and sedulously improving it, in their mendicant capacity, for drawing largesses and bequests from the wealthy, they amassed an incredible amount of property, and eventually made themselves the envy of the nobility, who could not cope with them in opulence and influence,—of the secular or parochial clergy, who were ostensibly provided for, and saw the friars superseding them,—and of the monks, or second great class of the conventual orders, who were forbidden, by most of their rules, to go out of their monasteries, and could receive only such donations as excessive fanatics carried to their cells. Yet all the other great classes—which were canons-regular, monks, nuns, and canons-secular,—made acquisitions of property which were exceedingly and even monstrosly great, in their circumstances, and which appeared moderate only when compared with those of the friars.

The canons-regular of St. Augustine had 28 monasteries in Scotland, and were first established at Scone, in the year 1114, by Atewalpus, prior of St. Oswald of Hostel, in Yorkshire, and introduced at the desire of Alexander I.—The canons-regular of St. Anthony wore neither an almuce nor a rochet, both of which were used by the other canons-regular, and they called their houses hospitals, and their governors preceptors; but they had in Scotland only one monastery, noticed in our article on Leith.—The red friars pretended to be canons-regular, but were denied the title by many of their adversaries; and they variously bore the names of Mathurines, from their house at Paris, which was dedicated to St. Mathurine, of Trinity friars, and of friars ‘De Redemptione Captivorum,’ from their professing to redeem Christian captives from the Turks. Their houses were called hospitals or ministries, and their superiors ‘ministri;’ their mode of living was similar to that of the canons of St. Victor at Paris; their habit was white, with a red and blue cross patée upon their scapular; and one-third of their revenue was expended in ransoming captives. They were established by St. John of Malta, and Felix de Valois; their first Scottish foundation was erected in Aberdeen, by William the Lion; and they had in Scotland 6 monasteries in 1209, and 13 at the Reformation.—The Premonstratenses had their name from the principal monastery, Premonstratum, in the diocese of Laon in France; and were also called Candidus Ordo, because their garb was entirely white. They followed the rule of St. Augustine, a copy of which they fabled to have been delivered to them in golden letters by himself; and were founded by St. Norbert, an archbishop of Magdeburg, who procured for himself, and his successors in the see, the title of primate of Germany. Their monasteries in Scotland were six.

The Benedictines, or Black monks, had their names respectively from that of their founder, and from the colour of their habit. St. Benedict, or Bennet, was born at Nirsi, a town of Italy, about the year 480, and was the first who brought monachism into estimation in the west. Five orders who followed his rule had monasteries in Scotland.—The Black monks of Fleury had 3 Scottish monasteries; and took their name and origin from the abbacy of Fleury la Riviere, on the river Loire, in France.—The Tyronenses, the second order of Benedictines, had 6 Scottish monasteries; and took their name from their first abbey, Tyronium, or Tyron, in the diocese of Chartres in France, where they were settled in 1109 under the auspices of Retrou, Earl of Perche and Montagne.—The Cluniacences, the third order of

Benedictines, had 4 monasteries in Scotland, and originated with Berno, who began to reform the Benedictines, or to frame some new constitutions, about the year 940, and who built a new abbey near Cluny, or Cluniaum, in Burgundy, 4 leagues from Macon.—The Cisterians, or Bernardines, the fourth order of Benedictines, had their names respectively from their first house and chief monastery at Cisterium, in Burgundy, and from St. Bernard, one of their earliest chief abbots, whose zeal succeeded in founding upwards of 160 monasteries. They originated in 1098, with Robert, abbot of Molesme, in the diocese of Langres in France; and were called White monks in contradistinction to the other orders of Benedictines, and in consequence of retaining only the black cowl and scapular of St. Bennet, and having all the rest of their habit white. Of thirty provinces into which they were divided, Scotland was one, and it contained 13 of their monasteries.—The monks of Vallis-caulium, Vallis-olerum, or Valdes-cheux, were established in 1193, by Virard, at the place which gave them name, in the diocese of Langres, between Dijon and Autun; they were a professed reform of the Cisterians, and very austere; and they were introduced to Scotland, in 1230, by Malvoisin, bishop of St. Andrews, and had here 3 monasteries.

The Carthusian monks were established, in 1086, by Bruno, a doctor of Paris, and a canon of Rheims, in the wild mountains of Grenoble in France; they originated professedly in miracle, and manifestly in excessive superstition, and were characterized by very great austerities; they were introduced to England in 1180, but they had in Scotland only one monastery, founded near Perth, in 1429, by James I., after his captivity in England.—The Gilbertines were, in the first instance, all nuns; but they afterwards had accessions from the canons-regular, who were domiciled under the same roofs as the nuns, but in separate apartments. Gilbert, their founder, was born in the reign of William the Conqueror, and was the son of a gentleman of Normandy, and lord of Sempringham and Tynrington in Lincolnshire; and he is said to have spent all his substance and patrimony in such acts of charity as were dictated by his diseased religion, and particularly in converting distressed and poor young women into nuns of his order. The nuns were bound to observe constant silence in the cloister; and they were not admitted to their novitiate till they were 15 years of age, and could not be professed before having fully on their memory the psalms, hymns, and antiphona used in the Romish ritual. Though the Gilbertines had 21 houses in England, they had only one in Scotland, situated on the river Ayr, founded by Walter III., Lord High-steward of Scotland, and supplied with its nuns and canons from Syxle in Yorkshire.

The Templars, or Red friars, were an order of religious knights, and followed the rule of St. Augustine, and the constitution of the canons-regular of Jerusalem. They were established at Jerusalem in 1118, by Hugo de Paganis, and Gaufrigus de Sancto Aldemaro; they professed to defend the temple and city of Jerusalem, to entertain Christian strangers and pilgrims, and to protect them while in Palestine; and they received from Baldwin II., king of Jerusalem, a residence in the vicinity of the temple, or its site, and thence had their name of Templars. To a white habit which, in every particular, distinguished their exterior, Pope Eugenius III. added a red cross of stuff sewed upon their cloaks; and from this they were called Red friars. They had enormous possessions, and numbered, throughout Christendom, upwards of 9,000 houses. In Scotland they had houses, farms, or lands, in almost every parish; and, in particular, they possessed very many buildings in Edinburgh and Leith, and had upwards of 8 capital mansions in the country. They are believed to have been introduced to Scotland by David I.; those in this country and in England were under the government of one general prior; and in common with all the other communities of their order, they were, in the year 1312, condemned for certain great crimes, by a general council held at Vienne in France, and were formally suppressed by Pope Clement V.

The Knights of St. John of Jerusalem closely resembled the Templars in professed character, and were a sort of noble military monks. Certain merchants of the city of Melphi, in the kingdom of Naples, who traded to Palestine, built, under permission of the Caliph of Egypt, a monastery and a church for the reception of Christian pilgrims, and paid the Caliph tribute for his protection; and they subsequently added two churches, dedicated respectively to the Virgin Mary and Mary Magdalene, and used them for the pompously charitable reception, the one of women, and the other of men. When Jerusalem was taken by Godfrey of Bouillon, Gerard of Martiques, a native of Province in France, built, in 1104, a still larger church, and an hospital for pilgrims and the sick, and dedicated them to St. John. The soldier-monks of the original erections were put in possession of these buildings, and took from them the names of Knights of St. John of Jerusalem, Knights-Hospitallers, and Johannites. After

being expelled from Jerusalem by Saladin, they retired to the fortress of Margat in Phenicia, and subsequently settled, at successive epochs, at Acre or Ptolemais, and in the islands of Cyprus, Rhodes, and Malta; and in the last of these they continued, and from it took the name of the Knights of Malta, till their power was broken, and the island captured, during the last European war. They were inveterate and sturdy foemen of the Turks, and figure largely in the military history of the Ottoman empire. Their members, excepting some illegitimate sons of kings and princes, were all gentlemen, who proved by charters, or other authentic documents, their nobility of descent by both father and mother, for four generations. They took the three ordinary monastic vows, and wore a black habit, with a cross of gold, which had eight points. Their houses were called preceptories, and the principal officers in them preceptors. On the suppression of the order of Templars, the Knights of St. John got many of their Scottish lands and tenements, and, in consequence, are frequently found with them in Scottish history. Their chief dwelling in Scotland was at Torphichen in Linlithgowshire. When buildings belonging to them were feued out to seculars, they used great care that the cross of their order should constantly surmount the houses, in evidence that the possessors were subject to them, and were amenable only to their courts. The same practice was previously observed by the Templars; and it accounts for the great number of crosses which, till a late date, might have been seen, and which, in some instances, still exist, on the tops of old buildings in Edinburgh, Leith, and Linlithgow.

The Dominicans, or Black friars, have, for six centuries, been one of the most considerable of the Romish orders of regular clergy. They are often called Preaching friars, from the circumstance of their having longer attended to preaching than any of the other orders. They may preach anywhere without obtaining the permission of the bishops; they are allowed to confess all noblemen and ladies without the consent of their curates; and they everywhere administer the sacraments, and are exempted from all ecclesiastical censures. Their habit is a white gown and scapular. Their founder was St. Dominic, the infamous projector or institutor of the inquisition. This monster devoted himself and his followers to what he and his fellow-Romanists called the conversion of heretics; and he preached and conducted the earliest of the sanguinary crusades against the amiable Waldenses. The order was divided into 45 provinces; of which Scotland was the 18th, and contained 15 convents. Though they were professedly mendicants, they were found, at the breaking up of their Scottish communities, to have amassed in this country a shameful amount of property.

The Franciscans, or Grey friars, also professed mendicants, had their two leading names from their founder, and from the colour of their habit; and affected to assume the title of Friars Minors or Minorites, as if deeming themselves the least or meanest of their function. Their founder was St. Francis of Assize in Italy, a merchant, and a consummately frantic fanatic, who flourished at the commencement of the 13th century; and their superiors were called Custodes or Wardens. They were divided into Conventuals and Observantines; the latter of whom were a reform, in 1419, by Bernardine of Sienna, and had their name from professing to observe St. Francis' rule more strictly than the Conventuals, by always walking bare-footed, and not wearing any linen. The Conventuals were introduced to Scotland in 1219, and had 8 convents in the country. The Observantines were introduced by James I., in a colony from their vicar-general at Cologne, and had here 9 convents.—The Carmelites, or White friars, were the third order of wandering mendicants. They absurdly pretend to trace up their origin to the schools of the prophets in the age of Elijah; and they have their second name from the colour of their outer garment, and their first from Mount Carmel in Syria, which abounds in dens, caves, and other sorts of hiding-holes, and was a favourite retreat both of some of the earliest anchorites under the Christian dispensation, and of numerous pilgrims during the period of the crusades. St. Louis, king of France, when returning from Palestine, brought some of the Mount Carmel ascetics to Europe, and gave them an abode in the outskirts of Paris. The Carmelites were divided into 32 provinces, of which Scotland was the 13th; and they were introduced to this country in the reign of Alexander III., and had here 9 convents.

The nuns of Scotland were few compared either with the Scottish male regulars, or with their own proportionate number in other lands. Those who followed the rule of Augustine had only two convents in this country, the one of Canonesses, and the other of Dominican nuns. The Benedictine or Black nuns followed the rule of Benedict, were founded by his sister St. Scholastica, and had in Scotland 5 convents. The Bernardine or Cistercian nuns likewise followed the rule of St. Benedict, and had 13 convents. The nuns of St. Francis,

or Claresses, were founded by Clara, a lady of Assize in Italy, who received from St. Francis himself a particular modification of his rule, full of rigour and austerity; and they had in Scotland only two houses.

The Secular canons, or conventual bodies of the secular clergy, formed communities which were called *Præposituræ*, or Collegiate churches, and were governed by a dean or provost. Each collegiate church was instituted for performing religious service, and singing masses for the souls of the founder and patrons, or their friends; it was fitted up with several degrees or stalls which the officiates occupied for an orderly or systematic singing of the canonical hours; it had for its chapter the governing dean or provost and the other canons, who bore the name of prebendaries; and, in general, it was erected either by the union and concentration in it of several parish churches, or by the union and concentration of several chaplainries instituted under one roof. The number of Collegiate churches in Scotland was 33.—Hospitals, for receiving strangers and travellers, or for maintaining the poor and the infirm, were the lowest order of ecclesiastical establishments, and had the accompaniment of a church or chapel. Keith gives a list of 28 which existed in Scotland; but says he is convinced the list might be vastly augmented.

ANTIQUITIES.

The number and variety of Druidical remains in Scotland are very great; and they abound most in the recesses of Perthshire among the spurs of the Grampians, indicating these deep seclusions to have been the principal Scottish seat of the aboriginal superstition. Druidical altars are of two sorts,—flat stones, which are either upright or recumbent,—and cromlechs, which consisted each of several stones usually placed upon their respective edges, and always supporting a large broad stone, so as to possess, jointly with it, a rude resemblance to a massive modern table; and the altars of both sorts are numerous, and, for the most part, are connected with Druidical circles, or other Druidical works,—though the cromlechs occasionally appear in some deep solitude without any accompaniment. Druidical cairns differ from the better known sepulchral cairns, and may be distinguished from them by their connexion with other Druidical works, by their being usually fenced round the base with a circle of stones, by their being approached along an avenue of upright stones, and by their having each on its summit a large flat stone, on which the Druid fires were lighted. Rocking stones, which are huge blocks so poised as to be easily moved, or made to oscillate, and which excite the wonder of the vulgar, and have provoked controversies among the learned, are, in some instances, supposed to be natural curiosities, but on the whole are generally allowed—whether of natural or of artificial origin—to have been made the tools of the degenerate Druidical priesthood, for imposing on the savage and the superstitious; and though not numerous, they occur with sufficient frequency to occupy a commanding place among the country's earliest antiquities. Druidical circles have, to a very great amount, been removed, since the epoch of georgical improvement, to make way for the plough; yet they continue to exist in such wondrous plenty, and such great variety, as to render continued notices of them, in accounts of parishes, monotonous and tiresome.

Sepulchral remains of the earliest inhabitants of Scotland, though they have to an enormous amount been swept away by the same cause which has thinned the Druidical circles, are still very numerous traceable in almost every part of both the continent and the islands, and may be considered under the several distinctions of barrows, cairns, cistvaens, and urns,—the two former constituting tumuli, and the two latter their most remarkable contents. The tumuli, in most instances, are circular heaps, resembling flat cones; and, in many instances, are oblong ridges, resembling the upturned or inverted hull of a ship. Most of them are composed of stones; many of a mixture of stones and earth; some wholly of earth; and a few wholly or chiefly of sand. Cairns and barrows are mutually distinguished by the former being of stones and the latter of earth; and both, when they are conical and covered with green sward, are vulgarly called hillocks. The tumuli are of uniform general character in all parts of Scotland and in England, the cairn prevailing in the northern division of the island, and the barrow in the southern, owing simply, as would seem, to the respective abundance on the surface of the countries of lapidose and of earthy substances; and, in the very numerous instances in which they have been opened and explored, they have been found to contain the ashes, the hair, or the bones, of human bodies, either nakedly interred, or carefully shut up in cistvaens and urns. The cistvaen, in strict accordance with the meaning of the word

in the British language, is a stone chest; it is very various in size, and even diversified in form; it contains, for the most part, ashes and bones, and occasionally an urn; and it very generally, among both the vulgar and the learned, bears the name of a stone-coffin. Urns are found generally in tumuli unenclosed in cistvaens, but occur also beneath the surface of level ground; they are composed usually of pottery, and sometimes of stones; they are of different shapes and sizes; and, according to the taste of the times or the ability of the parties concerned with them, are variously ornamented.—An occasional connexion, dictated apparently by policy, exists between the sepulchral tumuli and the Druidical circles; and a connexion, both more frequent and more natural, exists between these tumuli and the British strengths.

Akin to the simple and more common and plenteous sepulchral tumuli, are some large sepulchral cairns, which denote the fields of ancient conflicts. Besides being of comparatively large bulk, and having a comparative multiplicity of contents, these cairns are characterized by the vicinity of fragments of swords, of bows, and of flint-pointed arrows; they have, on the whole, thrown a faint light on the remote martial history of Scotland; and by the plurality of their occurrences among the bases of the mountain-rampart of the Highlands, they have contributed, along with some cognate antiquities, to evoke much controversy on the *questio vexata* as to the scene of the celebrated battle of the Grampians. Some of these cairns, which still remain, are called Cat-stanes; and the same name—which seems plainly to be derived from the British Cad, or the Scoto-Irish Cath, ‘a battle’—is applied, in various instances, to single stones.—Numerous stones of memorial, or rude pillars, apparently very ancient, and raised by the same people as the Cat-stanes, exist in every district, and, in allusion to their upright position, are traditionally called standing-stones; they are in their natural state, without the mark of any tool, and, of course, are very various in form; they frequently appear single, and frequently, also, in groups of two, three, four, and even a greater number; and in general, from their wanting inscriptions and sculpturings, they have failed to transmit the events which they were reared to commemorate. Another class of standing-stones are of a later date, and are of two species,—the one triumphal, and set up to commemorate some happy national event, such as a victory over the Danes; the other Romishly monumental, and erected with the double design of noting the scene of a disaster, and of bespeaking the prayers of passengers for the souls of persons who, in the course of the disaster, were slain or otherwise perished. Both kinds have sculptured on them the figure of a cross, with various knots of grotesque scroll-work, vulgarly denominated Danish-Tangles; and, in some instances, they are charged with a kind of hieroglyphics.

British strengths, consisting of circular and oval hill-forts, and other safeguards, are surprisingly numerous. Their situation in reference to the districts they command, their mutual or relative positions, and the accommodations attached to them, all indicate that they were constructed rather for the purpose of protection against the attacks of neighbouring and consanguineous tribes, than for that of repelling or checking an invading enemy. They occupy eminences in districts which, even in the earliest ages of Scottish population, must have been the most habitable and fructiferous; they frequently appear in compact or contiguous groups of three, four, and even a larger number; and they are so disposed in their groupings, that a view of all is obtained from the site of each, and that a larger and stronger one commands the rest from the centre, and seems to have been the distinguished post of the chief. The larger strengths were in many instances converted, at the Roman invasion, into Roman posts; and the groups are often chequered with Roman camps, which seem to have been constructed in astute perception of the nature of the ground, with the evident purpose of watching and overawing them. The forts are exceedingly various in area, strength, and details of construction; but, in general, they consist of an interior central building, one, two, or three concentric ramparts, and one or two exterior ditches. Two ranges of small forts, each, in general, perched on the summit of a dome-like hill, or conical rising ground, extend along the north side of Antoninus’ wall,—the one between the friths of Forth and Clyde, and the other along the face of the country on the north bank of the Forth; both, in the case of each of their forts, bear the name of Keir, evidently a corruption of the British *Caer*, ‘a fort;’ and they appear, from local and comparative circumstances, as well as from an intimation by Tacitus, to have been the only Caledonian posts erected with the design of opposing the Roman progress. The ramparts of all the British forts were composed of dry stones and earth, without any appearance of mortar or cement; and they varied in outline, from the circular or oval, to the wavingly irregular, according to the figure of the hills whose summits they

crowned. Connected with some of the forts, were outworks on the declivity of the hills below, which were probably designed to shelter the cattle belonging to the defenders of the fort.

Subterranean safeguards, or hiding-holes, have been discovered in many parts of Scotland, and seem, in most instances, to have been constructed, or improved and adopted, by the primitive people during a rude age. A few of them are entirely artificial; consisting of one, two, or three apartments of various dimensions, but generally very small; constructed entirely underground of large rude stones, without any cement; and containing, in most cases, unequivocal relics of having been human abodes. Natural caves, which abound on the rocky coasts, and among the clifty dells and ravines of Scotland, have very numerously been improved by artificial means into places of great strength: and, in some instances, they are of large capacity, and retain distinct vestiges of enlargement, or modelling within, and especially of fortification by various contrivances without. Other caves, chiefly of small capacity, and in very sequestered situations, are replete with interest as the known or reputed hiding-holes of the patriotic Scots during the Baliol usurpation, and especially of the devoted Covenanters during the Stuart persecution.

Scottish antiquities of Roman origin are so well known and understood, and, in all their great instances, are so fully described in the body of our work, that they require no particular illustration. Any separate and consecutive notice of them which could throw light on their interesting features, would be a sketch—necessarily too expansive for our available space—of the history and the scenes of Agricola's campaigns, and of the actions of Lucius Urbicus. The chief of them are Antoninus' wall, separately noticed in the alphabetical arrangement; roads or causeways, which intersected the whole territory south of Antoninus' wall and ran up in decreasing ramifications to the Moray frith, and are noticed in our articles on counties and districts; and quadrangular camps, fortified stations, bridges, and innumerable minor antiquities, profusely noticed in probably two-thirds of all the considerable articles in our work.—Pictish antiquities are curious rather for their obscureness and singularity, than for either their number or their imposing character. The principal are uncemented conical towers, vulgarly called Picts' houses, and vitrified forts, similar in form to the hill-forts of the Britons. A species of building, attributed, though doubtfully, to the Picts, is very common in Ireland, but exhibits only two specimens in Scotland, respectively at Abernethy and at Brechin. This is a tall, slender, cylindrical tower, coned at the top, very curious as a piece of architecture, but the subject of mazy and manifold disputations as to its designed use.

Inaugural stones are a class of monuments intimately associated with the most distinguished archæology of the Scoto-Irish and the Irish, and were used in the inauguration of the chieftains of the Irish clans. The chief Scottish antiquity of this class is the famous coronation-stone, now in Westminster, but anciently located successively at Dunstaffnage and at Scone, and noticed in our article on the former of these places.—Earthen works, additional to the barrows of the Britons, are a miscellaneous class of antiquities, and of various date and origin. Small circular intrenchments are not infrequent, and are supposed to be Danish forts. Elongated, flattened mounds, occur in a few instances, bear the name of Bow-butts, and are believed to have been constructed and used for the exercise of archery. Moats, or large artificial moundish hillocks, platformed on the summit, and ascending at a regular gradient on the sides, were places for the administration, over considerable districts, of public justice; and court-hills, not very dissimilar to them in appearance, were the sites of the baronial courts previous to the demolition of the feudal system. Both are very common in Scotland; and sometimes, or even very generally—according to the belief, at least, of local antiquaries—the characters and uses of the two are concentrated in one object,—the same mound being both moat and court-hill. "These moat and court-hills," says Grose, "serve to explain the use of those high mounts still remaining near our ancient castles, which were probably judgment-seats, but have been mistaken for military works, a sort of ancient cavaliers, raised to command the moveable towers, so commonly used for the attacks of fortresses. I, among others, for want of having seen and considered these moat and court-hills, was led to adopt that idea."

The ecclesiastical antiquities of Scotland consist of monasteries, collegiate churches, and a few chapels, parish churches, and hospitals; and appear all to be of not higher date than the 12th century. The religious buildings of the Culdees seem, for a considerable time, at least, to have been plain, fragile, and of very primitive workmanship; and even toward the close of the Culdee epoch, they probably were, in no instance, of a kind either to resist the influences

of time by their durability, or to woo the cares of the conservator by their architectural attractions. Our ecclesiastical antiquities are, in consequence, all Romish; and considered as works of art and magnificence, they are by no means inferior in point of execution to those of England. The most exquisite specimens are the abbeys of Melrose, Kelso, and Jedburgh, and the church of Elgin; specimens of great beauty are the abbeys of Dunfermline and Paisley; very handsome specimens are the abbeys of Dundrennan and Newabbey; the grandest specimens—those which best combine architecture with amplitude—are the abbeys of Holyrood and Arbroath; and the specimens in the highest state of repair are the cathedral of St. Mungo in Glasgow, the church of St. Magnus in Kirkwall, and the church of St. Giles in Edinburgh. Each of these, as well as of every other, whether extant or extinct, which presents in landscape or in history any feature of interest, our work fully notices and describes in its appropriate place.

The ancient border-houses, fortalices, and castles of Scotland, though small, seem to have been very numerous. Major says there were two in every league. Most of them are remarkably similar to one another; in general each is a high square tower, surmounting a beetling rock or other abrupt eminence; and many of them overhanging some stream or the sea. The towers are, for the most part, extremely strong, often from 13 to 15 feet thick in the walls; and they rise in height to 3 or 4 stories, each story vaulted, and the whole covered with a vaulted roof. At every angle, re-entering as well as salient, is a turret, supported like the guerites at the salient angles of modern bastions; at each end of the tower, adjoining the roof, is commonly a triangular gable, the sides diminishing by a series of steps called crow steps; and near the top of the tower usually runs a cornice of brackets, like those which support machicollations. At the bottom of most of the towers was the prison or pit, a deep, dark, noisome dungeon, to which the miserable prisoners were let down by ropes; and an iron door to the chief entrance to the tower was also no infrequent means of security. In some instances, a tower was double,—two being built together at right angles with each other, constituting a figure somewhat like that of the letter L or T, and forming a kind of mutual defence or partial flank. As luxury and security increased, both these towers, and the single or more common one, were enlarged with additional buildings for lodgings, frequently surrounded by walls, and in some instances, as in those of Linlithgow-palace and Loudoun-castle, eventually made the mere nucleus of modern, magnificent, princely mansions. The old towers were often the abodes of an almost incredibly large number of inmates; and as they were sparingly lighted through very small windows, they must have been as gloomy as unwholesome. When any of them were taken by an enemy, they were usually burned; but as they were little else than mere masses of stone, they suffered no damage except a little besooting or singeing; and, immediately afterwards, undergoing repair, and receiving a boastful though rude emblazonry of their owners' arms, and the date of their own disaster and renovation, they, in some instances, exhibit to the eye a curious tracery and surprising profusion of inscriptions, armorial bearings, and miscellaneous devices.

EARLY HISTORY.

The aborigines of Scotland seem, beyond any reasonable doubt, to have been clans of the same Gaelic origin as those who, in the most early ages, settled in England. Scotland, at the epoch of Agricola's invasion, may be viewed as a mirror which reflects back the condition of England at the earlier era when Julius Caesar introduced the Roman arms to Britain, and also that of Gaul at the still remoter period when Roman ambition subdued the common parent of the British nations. Caledonia, in its largest extent, from the Tweed and the Eden on the south, to Dunnet-head in Caithness on the north, was distributed among twenty-one tribes of Britons. Those on the east coast, or Lowlands, owing to the greater fertility of the soil, must have been more numerous and potent than those of the western or Highland districts; and all, accordantly with ancient Celtic usage, were mutually independent, and could be brought into union or co-operation only by the pressure of danger.

The Ottadini—whose name seems to have been derived from the Tyne or Tina—occupied the whole coast-district between the southern Tyne and the frith of Forth, comprehending the half of Northumberland, the whole of Berwickshire and East-Lothian, and the eastern part of Roxburghshire; and had their chief town at Bremenium, on Reed-water, in Northumberland. The Gadeni—whose name alludes to the numerous groves which adorned and fortified their territory—inhabited the interior country immediately west of that of the

Ottadini, comprehending the western part of Northumberland, a small part of Cumberland, the western part of Roxburgh, all Selkirk and Tweeddale, much of Mid-Lothian, and nearly all West-Lothian; and they had Curia, on Gore-water, for their capital. The Selgove—whose country lay upon “a dividing water,” and who gave name to the Solway—inhabited the whole of Dumfries-shire, and the eastern part of Galloway, as far as the Dee; and had, as their chief towns, Trimontium at Brunswark-hill in Annandale, Uxellum at Wardlaw-hill in Caerlaverock, and Caerbantorigum at Drummore, in the parish of Kirkeudbright. The Novantes—who are supposed to have taken their name from the abundance of streams in their country—possessed all central and western Galloway, between the Dee and the Irish sea; and had, as their principal towns, Lucopibia on the site of the present Whithorn, and Rerigonium on the north shore of Loch-Ryan. The Damnii inhabited all the expanse of country from the mountain-ridge which divides Galloway and Ayrshire on the south, to the river Earn on the north, comprehending all the shires of Ayr, Renfrew, and Stirling, all Strathelyde, and a small part of the shires of Dumbarton and Perth; and had the towns of Vanduarua on the site of Paisley, Colonia in the south-eastern extremity of Strathelyde, Coria in Carstairs, Alauna on the river Allan, Lindun near the present Ardoeh, and Victoria on Ruchil-water in Comrie. The Horestii inhabited the country between the Forth and the Tay, comprehending all Fife, Kinross, and Claekmannan, the eastern part of Strathearn, and the district west of the upper Tay, as far as the river Brand. The Venricones possessed the territory between the Tay and the Kincardineshire Carron, comprehending the Gowrie, Stormont, Strathmore, and Strathardle, sections of Perthshire, all Forfarshire, and the larger part of Kincardineshire; and had their chief town, Or or Orrea, on the margin of the Tay. The Taixali inhabited the northern part of Kincardineshire, and all Aberdeenshire to the Deveron; and had Devana, at the present Normandykes on the Dee, for their capital. The Vacomagi possessed the country between the Deveron and the Beauly, comprehending Braemar, nearly all Banffshire, the whole of Elginshire and Nairnshire, and the eastern part of Inverness-shire; and had the towns of Ptoroton or Alata Castra at the mouth of the Beauly, Tuessis on the east bank of the Spey, and Tamea and Banatia in the interior.

The Albani—whose name seems to allude to the height and ruggedness of their mountains, and who, in consequence of their becoming subjugated by the Damnii, were afterwards called Damnii-Albani—inhabited the interior districts between the southern mountain screen of the loch and river Tay, and the mountain-chain along the southern limit of Inverness-shire, comprehending Breadalbane, Athole, Appin, Glenorchy, and a small part of Lochaber. The Attacoti possessed the country between Loch-Fyne and the commencement of the Lennox or Kilpatrick hills, comprehending Cowal and the greater part of Dumbartonshire. The Caledonii Proper inhabited the interior country between the mountain range along the north of Perthshire, and the range of hills which forms the forest of Balnagowan in Ross, comprehending all the middle parts of Ross and Inverness. A vast forest, which extended northward of the Forth and the Clyde, and which covered all the territory of this tribe, gave to them their name, originally Celyddoni and Celyddoniaid, ‘the people of the coverts,’ and, owing to the greatness of the area which it occupied, occasioned its Romanized designation of Caledonia to be afterwards applied strictly to all the country north of the Forth and the Clyde, and loosely, but at a later date, to the whole kingdom. The Cantæ—so named from the British Caint, which signifies an open country—possessed Easter Ross and Cromarty, or the district lying between the Beauly and the Dornoch friths. The Logi—who probably drew their name from the British Lygi, a word which was naturally applied to the inhabitants of a sea-coast—possessed the eastern part of Sutherland, or the country between the Dornoch frith and the river Helmsdale. The Carnabii, who, like a cognominal tribe in Cornwall, derived their name from their residence on remarkable promontories, occupied the country north of the Helmsdale, or a small part of Sutherland, and all Caithness, except the north-west corner. The Catini, a small but warlike tribe, from whom the Gaelic inhabitants of Caithness and Sutherland at the present day are ambitious of proving their remote descent, inhabited the narrow territory, partly in Caithness and partly in Sutherland, between the Forse and the Naver. The Mertæ possessed the interior of Sutherland. The Carnonacæ possessed the north and west coast of Sutherland, and the west coast of Cromarty, from the Naver round to Loch-Broom. The Creones—whose name was expressive of their fierceness—possessed the coast between Loch-Broom and Loch-Duich. The Cerones inhabited the whole west coast of Inverness, and the Argyleshire districts of Ardnamurchan, Morven, Sunart, and Ardgower, or the coast between Loch-Duich and Loch-Linnhe. The Epidii—who derived their appel-

lation from the British Ebyd, 'a peninsula,' and from whom the Mull of Kintyre anciently had the name of the Epidian promontory—occupied the whole country enclosed by Loch-Linnhe, the territory of the Albani, Loch-Fyne, the lower frith of Clyde, the Irish sea, and the Atlantic ocean.

The Caledonian tribes, at the epoch when history introduces them to notice, appear to have been little raised, in their social connexions, above the condition of rude savages, who live on the milk of their flocks or the produce of the chase. According to the doubtful and darkly-tinted intimations of Dio, indeed, they possessed wives and reared their children in common, they lived in the most miserable hovels, they chose to live in a state of almost entire nudity, and they practised, like the heroes of more ancient times, a system of mutual plunder and professional robbery. Herodian concurs in exhibiting them in these sombre and repulsive hues at even so late a period as the 3d century. Yet, according to all testimony, they were brave, alert, and acquainted with various arts; they had remarkable capacity for enduring fatigue, cold, and famine; they were famous alike for speed in conducting an onset, and for firmness in sustaining an attack. Their vast stone monuments, too, which still remain, their hill-forts of such ingenious and elaborate construction as could not even now be taken by storm, and the gallant stand which they systematically opposed to the disciplined valour of the Roman armies, exhibit them in lights quite incompatible with an alleged state of unmitigated barbarism. But though advanced in civilization very little beyond the first stage, they had scarcely any political union. They are said by Dio to have been literal democrats, acting as clans, and adopting any public measure only by common consent, and by an universally and equally diffused authority; but they may be allowed, on the one hand, to have rejected the coercion of any chieftainship or autocracy or monarchic power, and, on the other, to have placed themselves, like the American Indians, under the aristocratic sway of their old men. Their armouries were generally furnished with helmets, shields, and chariots, and with spears, daggers, swords, battle-axes, and bows. The chiefs in command, or in bravery, alone used the helmet and the chariot; and the common men fought always on foot, with shields for defence, and with all sorts of the offensive weapons for attack. Their chariots were sometimes aggregated for making a vehicular onslaught, and were drawn by horses which are said to have been small, swift, and spirited. Their vessels for navigating the inland lakes, and even the seas which surround and so singularly indent the country, consisted only of canoes and currachs. The canoe seems to have belonged to a period preceding the epoch of record; it was the stock of a single tree, hollowed out with fire, and put into motion by a paddle; and it has frequently been found in marshes and drained lakes, and occasionally of a construction remarkably skilful and polished. The currach was certainly in use among the Britons of the south, and very probably was in use also among the Britons of Caledonia, in the days of Julius Cæsar; and is described by him as having its body of wicker-work covered with leather, and as accommodated with a keel, and with masts of the lightest wood. The currachs are even called little ships; they were pushed boldly out into the far-spreading sea; and were frequently, or rather currently, employed in invasions from the wooded north or 'the Emerald Isle' upon the shores which became seized and fortified by the Romans. Adamnan, in his *Life of St. Columba*, describes the currach which that apostle of Scotland employed in his voyages, as possessing all the parts of a ship, with sails and oars, and with a capacity for passengers; and he adds, that in this roomy though seemingly fragile vessel, he sailed into the North sea, and, during fourteen days, remained there in perfect safety.

In the year 78, Agricola, at the age of 38, commenced his skilful military career in Britain. His first and second campaigns were employed in subduing and Romanizing Lancashire, and the territory adjacent to it on the south and the east. His third campaign, conducted in the year 80, carried the Roman arms to the Taw, 'an expanded water,' 'an estuary,' probably the Solway frith. In his fourth campaign, or that of 81, he overran all the eastern and central lowlands, to the Forth and the Clyde. In his fifth, or in 82, he invaded "that part of Britain which is opposite to Ireland," or lower Nithsdale and the whole extent of Galloway. In the summer of 83, he crossed the Forth at what is now called Queensferry, and almost immediately experienced alarms from learning both that the tribes in his rear had dared to act offensively, by attacking the strengths he had erected for protection of his conquests, and that the tribes in his front menaced him with confederation and a vigorous resistance; but he pushed forward among the Horestii, found the clans for the first time in mutual co-operation, was assailed by them at Loch Orr in Fife, in the very gates of his camp,

repelled and broke them after a furious engagement, and, without much further trouble, brought all the Horestii under his yoke. In 84, he passed up Glendevon, through the opening of the Ochil-hills, and defiling toward "Mons Grampus," or the Grampian hill, which he saw before him, he found the Caledonians, to the number of 30,000, confederated, and under the command of Galgacus, already encamped at its base; and he there fought with them a battle so obstinate that only night forced it to a termination, so discouraging to the aborigines that they retired to the most distant recesses of their impervious country, and so curious in archæology as to have occasioned a thousand disputes, and no small expenditure of learning and research, in attempts to fix its precise theatre. The Lowlands south of the lower Tay, and the Earn, being now all in his possession, and a powerful body of the tribes of the conquered district enrolled with him as auxiliaries, a voyage of discovery and of intimidation was ordered by him round the island, and was achieved by the safe return of the Roman fleet to the Forth. Agricola was now recalled, through the envy of the Emperor Domitian; and the silence of history during the 35 years which followed, at once intimates the absence of any events of interest, and evinces the power of Agricola's victories as a general, and the wisdom of his measures as a statesman.

In 120, the Emperor Adrian built the celebrated wall between the Tyne and the Solway; and, though he did not relinquish the conquered territory north of these waters, he practically acknowledged himself to hold it by a partial and comparatively insecure tenure. The Ottadini, the Gadeni, the Selgova, and the Novantes, had neither domestic tumult nor devastation from invaders to engage their attention; they had learned the arts of confederation, and were strong in numbers and in union; they began to feel neither overawed nor restrained by the Roman stations which were continued in their territory; and they broke out into insurrections, and ran southward in ravaging incursions, which the Romans had not leisure to chastise, or even effectually to check. In 139, the year after Antoninus Pius assumed the purple, Lollius Urbicus was deputed as the prætor of Britain, to quell a general revolt, and reduce the inhabitants to obedience; and, in 140, he marched northward to the friths, tranquillized the tribes beyond them, and even began successfully to bring under the power of his arms the whole Lowland country northward, as far as the Beaulie frith. With the view of overawing the tribes to the south, as well as of repelling the wild clans who ranged among the mountain-fastnesses on the north, he constructed the great work, from Carriden on the Forth to Dunglass on the Clyde, which is described in our alphabetical arrangement under the title Antoninus' Wall. Iters, or highways, were carried in many ramifications through the country south of the wall, and in several lines along or athwart the conquered country to the north; and stations were established in multitudinous commanding positions, for garrisoning the Roman forces, and maintaining the natives under a continual pressure. Scotland was now divided into three great sections,—the district south of Antoninus' wall, which was incorporated with the Roman government of South Britain,—the Lowland country, between Antoninus' wall and the Beaulie frith, which is said to have been now erected into a Roman province, under the name of Vespasiana,—and nearly all the Highland district, north of Loch-Fyne, or the most northerly indentation of the Clyde, which still retained its pristine state of independence, and began to wear distinctly the name of Caledonia.

The tranquillity of the subjugated tribes, till the death of Antoninus, in 161, about which time probably Lollius Urbicus ceased to be prætor, sufficiently indicates the vigour of the administration throughout all the Roman territory. Disturbances which broke out immediately on the accession of Marcus Aurelius to the empire, were speedily quelled by Calphurnius Agricola, the successor of Lollius Urbicus; yet they were followed by the evacuation, on the part of the Romans, of the whole province of Vespasiana. The tribes beyond Antoninus' wall, thrown back into a state of independence, slowly nursed their energies for invasion,—made, in 183, predatory incursions beyond the wall,—regularly, toward the close of the century, overran the Roman territory,—entered, in 200, into a treaty with the Lieutenant of Severus,—and, in 207, renewed their hostilities, and provoked the emperor to attempt a reconquest of their country. Early in 209, Severus, after making imposing preparations, marched at the head of a vast force into North Britain, found no obstruction south of Antoninus' wall, and even penetrated into the territories of the Caledonians without encountering much resistance. The tribes, unable to oppose him, sued peace from his clemency, surrendered some of their arms, and relinquished part of their country. He is said to have felled woods, drained marshes, constructed roads, and built bridges, in order to seize them in their

fastnesses,—to have lost 50,000 men in destroying forests, and attempting to subdue the physical difficulties of the country,—to have subjected his army to such incredible toils as were sufficient to have brought a still greater number of them to the grave without feeling the stroke of an enemy. Caracalla, his son and successor, is supposed by some to have faintly, while Severus lived, followed up his policy, and to have fought with the Caledonians on the banks of the Carron; but early in 211, after Severus' decease, he relinquished to them the territories which they had surrendered to his father, secured to them by treaty independent possession of all the country beyond the wall, and took hostages from them for their conservation of the international peace.

The Caledonians, henceforth for nearly a century, cease to mingle in Roman story. They appear not to have interested themselves in the affairs of the Romanized Britons; and they were little affected by the elevation of Caesars or the fall of tyrants, by Carausius' usurpation of Romanic Britain, or by its recovery at his assassination as a province of the empire. But the five Romanized tribes south of the northern wall, though too inconsiderable to figure as a part of the Roman world, and for a time too poor and abject to draw the notice of their own quondam brethren, eventually became sufficiently Romanized, and carried onward in social improvement, and surrounded with the results of incipient civilization and industry, to be objects of envy to the poorer and more barbarous clans who retained their independence. In 306, the earliest date at which the Picts are mentioned, or any native names than those of the aboriginal British tribes are introduced, "the Caledonians and other Picts," after appearing to have made frequent predatory irruptions, and to have been menacing the south with a general invasion, provoked a chastisement from the Roman legionaries, and were compelled by Constantius, at the head of an army, to burrow anew behind the vast natural rampart of their Highland territory. In 343, the Picts are said, on doubtful authority, to have made another inroad, and to have been repelled by a short campaign of the Emperor Constans. In 364, the Picts, who in that age were divided into two tribes by the names of Dicaledones and Vecturiones,—the Attacotti, who still retained their ancient British name and position on the shores of Dumbarton,—and the Scots, who are first noticed in history in 360, who were a transmarine and erratic people from Ireland, and who appear to have made frequent predatory invasions of the Roman territories from the sea, and to have formed forced settlements on the coast,—all three simultaneously made an incursion more general and destructive than any which had yet defied the Roman arms in Britain. Theodosius was sent, in 367, into Britain, to restore tranquillity, and is said, though erroneously, to have found the Picts and the Scots in the act of plundering Augusta, the predecessor-city of the modern London. In two campaigns of 368 and 369, he drove the invaders, wherever he really found them, back to the northern mountains, repaired the wall of Antoninus, and erected the country lying between that wall and the southern one into a Roman province, under the name of *Valentia*, additional to four which already existed in South Britain.

The Picts and the Scots, forgetting, in the effluxion of a quarter of a century the punishment inflicted on them, and emboldened by the peril with which the empire was menaced by the continental hordes, again in 398, burst forth like a torrent upon Lowland Britain; but, by the energy of Stilicho, the Roman general, they were again stemmed, driven back, and flung behind another renovation of the great northern wall. But early next century they trod down every barrier, and began a system of incessant and harassing incursion, which amounted, on each occasion, to little or nothing less than temporary conquest. In 408, the British provincials were so awed and alarmed by them, that they assumed a sort of independence in self-defence, called earnestly to Rome for help, and were told by their masters to rule and defend themselves. In 422, aided by a legion which was sent in compliance with a renewed and wailing cry for assistance, they are said to have repelled the invaders, to have repaired, for the last time, the fortifications by which the Picts had been overawed, and to have, in consequence, won a respite of some years from the disasters of invasion. And, in 446, pressed anew by the Pietish foe, and abjectly acknowledging themselves for the first time to be Roman citizens, they made a vain appeal to their ruined masters for protection, and were despondingly told that Rome could no longer claim them as her subjects, or render them assistance as her citizens.

At the period of the Roman abdication, the sixteen tribes who ranged unsubdued beyond the wall of Antoninus, and then bore the denomination of the Picts, were the only genuine descendants in North Britain of the Caledonian clans. They acquired, from their independence, paramount importance, when the country ceased to be overawed by the Roman power; and

during the four succeeding centuries of the North-British annals, they figured as the dominating nation. The five Romanized tribes of Valentia, who had long enjoyed the privilege of Roman citizenship, speedily assumed independence, and organized for themselves a separate and national government. Early after the Roman abdication, the Angles, or Anglo-Saxons, on the one hand, settled on the Tweed, and began gradually to oblige the Ottadini to relinquish for ever their beautiful domains; and the Scots from Ireland, on the other, colonized Argyle, commenced to spread themselves over all the circumjacent districts, and entered a course of tilting with the Pictish government, which after the bloody struggles of 340 years, ended in its destruction. The history of all these four parties, between the years 446 and 843, belongs to what, with reference to the power which predominated, may distinctly and appropriately be called the Pictish period, and is briefly sketched in our article Pictavia.

The fate of the eastern ones of the five Romanized tribes of the province of Valentia after the Roman abdication, differed widely from that of those in the west. The Ottadini and the Gadeui, left in possession of the country from the Forth to the Tweed, and between the sea and the midland mountains, seem not to have erected themselves into an independent and dominant community, but to have resumed the habits and the policy of the early British clans; and when they saw their country early invaded by the Anglo-Saxons, more as settlers than as plunderers, they, with some bravery, but with little skill and less concert, made resistance when attacked, till, through disunion, ebriety, and unmilitary conduct, they speedily became subdued and utterly dispersed. The Selgova, the Novantes and the Damnii, with the fugitive children of the other two tribes, erected their paternal territories into a compact and regular dominion, appropriately called Cumbria, or Regnum Cambrensi, or Cumbrensi. This Cumbrian kingdom extended from the Irthing, the Eden, and the Solway, on the south, to the upper Forth and Loch-Lomond on the north, and from the Irish sea and the frith of Clyde, eastward to the limits of the Merse and Lothian; and, with the usual inaccuracy of the Middle ages, it was frequently and almost currently made to bear the name of the kingdom of Strathelcud or Strathclyde. Its metropolis was Alcluyd or Aldelyde, 'the rocky height on the Clyde,' to which the Scoto-Irish subsequently gave the name of Dun-Briton, 'the fortress of the Britons,' a name easily recognisable in the modernized word Dumbarton. On the south-east, where the open country of Teviotdale invited easy ingress from the Merse, the kingdom suffered speedy encroachments from the Saxons; and, along that quarter, though inland from the original frontier, and screened interiorly by a vast natural rampart of mountain-range, an artificial safeguard, called the Catrail, 'the partition of defence,' was constructed: see article CATRAIL.

From 508 to 542, Cumbria, or Strathclyde, acknowledged the authority and exulted in the fame of some extraordinary original, who figures as the redoubtable King Arthur of romance, who imposed the name of Castrum Arthuri, upon Alcluyd, or Dumbarton, and has bequeathed a tenfold greater number of enduring names to Scottish topographical nomenclature than any other ancient prince, and who, whatever may have been the real facts of his history, seems to have achieved many feats, to have received a treacherous death-wound on the field of battle, and to have altogether bewildered by his character and fate the rude romancing age in which he figured. In 577, Rydderech, another noted king of Strathclyde, but noted for his munificence, defeated Aidan of Kintyre on the height of Arderyth. In years between 584 and 603, the Cumbrians, aided by the confederacy of the Scoto-Irish, fought four battles against the intrusive and invading Saxons, and were twice victorious, and twice the vanquished. On many occasions, they had to fight with the Picts attacking them from the north; on some, with their occasional allies, the Scots, attacking them from the west; and, on a few, with the Cruithne of Ulster, and other Irish tribes, attacking them on the south-west and south. In 750, the Northumbrian Eadbert seems to have traversed Nithsdale and seized Kyle; and, in 756, that prince, jointly with the Pictish Ungus, seized the metropolis, though not the castle, of Alcluyd. Yet the descendants of the Romanized Britons were not conquered. Their reguli or chiefs, indeed, often ceased, from civil broil or foreign conflict, to succeed in unbroken series; but, when the storm of war had passed away, they soon reappeared, to wield anew the seemingly extinct power. The Cumbrians, though unable to prevent considerable encroachments on all sides within their ancient frontiers, and though slowly diminishing in the bulk and the power of their independence, remained a distinct people within their paternal domains long after the Pictish government had for ever fallen.

A body of Saxons, a people of Gothie origin, the confederates of those Angles who first

set foot on South Britain in 449, debarked on the Ottadinian shore of the Forth immediately after the Roman abdication. Amid the consternation and the disunitedness of the Ottadini, the new settlers rather overran the country than subdued it; and, though they seem to have directed neither their attacks nor their views northward of the Forth, they are said to have formed settlements along the coast of its frith, almost as far as to the east end of Antoninus' wall. In 547, Ida, consanguineous with the new settlers, one of the most vigorous children of the fictitious Woden, and the founder of the Northumbrian monarchy, landed, without opposition, at Flamborough, and, acting on a previous design, pointed his keen-edged sword to the north, carried victory with him over all the paternal domains of the Ottadini, and paused not in a career of conquest, and of compelling subjugation, till he had established a consolidated monarchy from the Humber to the Forth. After the defeat of the Cumbrians in 603, Ethelred, the second successor of Ida, took possession of the borders of the Selgovæ, and compelled the western Romanized Britons in general to acknowledge the superior energy and union of the Saxons. Edwin, the most potent of the Northumbrian kings, assumed the sceptre in 617; he acquired a fame of which tradition has spoken with awe; he struck respect or awe into the hearts of Cumbrians, Picts, Scots, and English; he appears to have, in some points, pushed his conquests from sea to sea, and to have made large accessions to his kingdom on the south and west; and he strengthened or occupied in some new form in the north, that notable "burgh" or fortification which, as *par excellence* his, survives in the castle of Edinburgh, the magnificent metropolis of all modern Caledonia. Egfrid, who was the third in subsequent succession, and ascended the throne in 671, was successful in several enterprises, particularly in an expedition in 684, against the unoffending Irish; but at his overthrow and death in 685, at Dunnichen, by the Picts, he bequeathed destruction to his government inward from the Solway, and downward to the south of the Tweed, and effectually relieved the Scots and the Strathclyde Britons from the terror of the Northumbria-Saxon name.

The quondam subjects of the diminished kingdom remained in Lothian and the Merse, but probably did not distinctly acknowledge any particular sovereign. The Northumbrian rulers had, for several successions after Egfrid, little connexion with the territory of modern Scotland; but, though they never reacquired all the ascendancy which he lost, they began, about the year 725, to be again strong along the Solway and in Southern Galloway; and, before the close of 756, they had formed settlements in Kyle and Cunningham, and disputed with the Strathclyde Britons the possession of the central Clyde. From the moment of the sceptre beginning to possess its ancient burnished brilliance, it was wielded, for several reigns, by feeble and careless hands, and it speedily became lustreless, rusted, and broken. Ethelred, the last of these dowdy monarchs, having been slain during an insurrection in 794, Northumbria, during the 33 following years, became the wasted and distracted victim of anarchy, and was thenceforth governed by earls, under the sovereign authority of the English kings. The Cruithne of Ulster, who had made frequent incursions on the shores of the lower Clyde, took advantage of the Northumbrian weakness to form at length a lasting settlement on the coast of Galloway. The Anglo-Saxons, during the Pictish period, left, in the Gothic names of some places on the Solway, and of many between the Tweed and the Forth, indubitable traces of their conquests, their settlements, and their national origin.

The history of the Scots, or Scoto-Irish, from the date of their definitive settlement in the country of the ancient British Epidii, in 503, to that of their being united to the Picts, and becoming the ascendant section in North Britain, is more perplexed and obscure than almost any passage of equal interest in the records of nations. They were too rude to possess the art of writing, and too restless to endure the repose of study; and when they found a bard able and willing to speak of them to posterity, they were permitted by their narrow views of social order to show him only the names and the personal nobleness of their reguli and chieftains as the elements of their fame. Even the genealogy and the series of their kings have been flung into nearly inextricable confusion by the contests of the Scottish and of the Irish antiquaries for pre-eminence in antiquity. Of their origin, and of their colonizing the ancient Epidia, or the territory of the present Kintyre and Lorn, as clear an account as can be furnished will be found in our article Dalriada. They probably obtained original footing in Argyle from silent sufferance; and by natural increase, and frequent accessions of new immigrants from the Irish Dalriada, they may have become nursed into strength in the strong recesses of the west, before the Picts were refined enough to suspect any danger from their

vicinity. The vast natural power of all their frontiers, the thinness of the hostile population on the sides where they were unprotected by the sea, the facility for slow and insensible but steady and secure encroachment among the mountain districts on the east and the north, the great distance of the seat of the Pietish power, and the intervention of the stupendous rampart of the Highland frontier between the operations of that power and the aggressions of settlement or slow invasion half-way across the continent,—these must have been the grand causes of the Scots eventually acquiring energy and numbers, and a theatre of action great and ample enough to enable them to cope with the dominant nation of North Britain, and to conduct negociations and achieve enterprises which resulted in their own ascendancy.

Kenneth, who succeeded to the throne of the Scots in 836, was the grandson by his mother of the Pietish kings Constantine and Ungus II., who died respectively in 821 and 833. On the death of Uven, the son and the last male heir of Ungus, in 839, Kenneth claimed the Pietish crown as his by right of inheritance. Two successive and successful competitors kept it five years from his grasp; but both wore it amid disturbance and in misery; and the last met a violent death at Forteviot, the seat of his power. Kenneth could dexterously take advantage of such confusions as arose from the loss of a battle or the death of a king, to achieve an important revolution; and finding no man bold enough again to contest his claim, he easily stepped into the vacant throne. In his person a new dynasty, and a consolidation of popular interests among two great people who had hitherto been at variance, began. The Scots and the Piets were congenial races, of a common origin, and of cognate tongues; and they readily coalesced. Their union augmented the power of both, and, by the ascendancy of the Scots, gave at length their name to all Pictavia and Dalriada, and to the accessions which afterwards were made by the two great united territories. The Scottish period, or that of Scottish ascendancy previous to Saxon intermixture, extended from the union of the Scottish and the Pietish crowns in 843, to the demise of Donald Bane in 1097. During this period, the ancient territories of the Selgovæ, the Novantes, and the Damnii, became colonized by successive hordes of immigrants from Ireland, who gave their settlements the name of Galloway, and who, by a strange fortune, became known under the appellation of the ancient Piets. Caledonian Northumbria, or the beautiful district of Lothian and the Merse, after a series of bloody struggles for upwards of two centuries and a half, became integrated with Scotland by the lasting connection of rightful cession and mutual advantage; and even the kingdom of Cumbria, or Strathelyde, degenerated so much from its former vigour that large part of it was subdued by the English, who afterwards transferred it to the Scots to be held as a fief of England. See the article CUMBRIA.

The next great period is the Scoto-Saxon, extending from 1097 to 1306. In the former period, the Gaelic Scots predominated; in this, the Saxon-English or Anglo-Saxon. A new people now came in upon the old; a new dynasty ascended the throne; a new jurisprudence gradually prevailed; new ecclesiastical establishments were settled; and new manners and a new speech overspread the land. Malcolm Canmore, the last but two of the strictly Scottish kings, married an Anglo-Saxon princess, and became the father of Edgar, who, by means of an Anglo-Norman army, and after a fierce contest, enforced his title to a disputed crown, and commenced the Scoto-Saxon dynasty. Under Malcolm Canmore, the domestics and relations of his queen aided her powerful influence round the royal seat in introducing Saxon notions; some Saxon barons fled, with their dependants, into Scotland, from the violence of the Norman conquest; numerous fugitives were afforded an asylum by the king, from insurrections which he fomented in the north of England; vast numbers of young men and women were forcibly driven northward by him during his incursions into Northumberland and Durham; and preliminary movements, to a great aggregate amount, and with a great cumulative influence, were made toward a moral and social revolution. When Edgar, aided by the results of these movements, brought in a force from without altogether foreign in speech and character to the Scots, and entirely competent in power to overawe them, and perfunctorily to settle their disputes by placing their leader on the throne, he rendered the revolution virtually complete—introducing in a mass a commanding number of foreign followers to mix with the native population, and treat them as inferiors, and throwing open a broad ingress for a general Anglo-Saxon, Anglo-Norman, and Anglo-Belgic colonization. So great and rapid was the influx of the new people, that, in the reign of David I., the second in succession after Edgar, men and women of them are said—somewhat hyperbolically, no doubt—to have been found, not only in every village, but in every house of the Scottish or Scoto-Saxon,

dominions. So powerful, though peaceful an invasion was necessarily a moral conquest, a social subjugation; and its speedy aggregate result was to suppress the Celtic tongue and customs, or coop them up within the fastnesses of the Highlands,—to substitute an Anglo-Norman jurisprudence for the Celtic modes of government,—and to erect the pompous and flaunting fabrics and ritual of Roman Catholicity upon the ruins of the simple though eventually vitiated Culdeeism which had so long been the glory at once of Pict, of Dalriadic Scot, of Romanized Briton, and of Galloway Cruithne.

At the accession of Edgar, or the commencement of the Scoto-Saxon period, Scotland, with the exception of its not claiming the western and the northern islands, possessed nearly its present limits,—the Solway, the Kershope, the Tweed, and the intervening heights forming the boundary-line with England. Northumberland and Cumberland were added as conquered territories by David I.; but they were demanded back, or rather forcibly resumed, by Henry II., during the minority of Malcolm IV. All Scotland may be viewed as temporarily belonging to England, when Henry II. made captive William I., the successor of Malcolm IV., and obliged him to surrender the independence of his kingdom; but, in 1189, it was restored to its national status by the generosity of Richard I., and settled within the same limits as previous to William's captivity; and throughout the remainder of the Scoto-Saxon period, it retained an undisturbed boundary with England, conducive to the general interests of both kingdoms. Lothian on the east, and Galloway on the south-west, were, at this epoch, regarded by foreign powers as two considerable integral parts of Scotland; and though so far consolidated with the rest of the country as to afford but slight appearance of having been settled by dissimilar people and governed by different laws, yet they were so far considered and treated by the kings as separate territories, that they were placed under distinct jurisdictions. In 1266, the policy of Alexander III. acquired by treaty the kingdom of Man, and the isles of the Hebridean seas, and permanently annexed the latter to the Scottish crown. When the great barons were assembled in 1284, dolefully to settle the dubious succession to the throne, they declared that the territories belonging to Scotland, and lying beyond the boundaries which existed at the accession of Edgar, were the Isle of Man, the Hebrides, Tynedale, and Penrith. In 1290, the Isle of Man passed under the protection of Edward I. Even essential Scotland, the main territory of the kingdom, was so deeply imperilled at the close of the Anglo-Saxon period, that she could be preserved from the usurping and permanent grasp of insidious ambition only by a persevering and intensely patriotic struggle; and she was at length re-exhibited and settled down in her independence, and reinstamped, but in brighter hues, with the colourings of nationality, by the magnanimity and the indomitableness of her people supporting all the fortune and all the valour of Robert Bruce, the founder of a new dynasty of her kings and the introducer of a new epoch in her history. An outline of her annals from the days of Bruce downward, sufficiently full to be in keeping with that which we have now sketched of the earlier periods, will be found in the historical section of our article on Edinburgh.

AGRICULTURAL STATISTICS.

From a Report by John Hall Maxwell, Esq., Secretary to the Highland Society of Scotland, addressed to James Booth, Esq., Principal Secretary of the Board of Trade, and dated Edinburgh, 30th August, 1856.

No. I.—ACREAGE.

THE
IMPERIAL GAZETTEER
OF
SCOTLAND.

AAN.

ABBEY.

AAN, or AEN, a stream of the eastern Grampians. It rises on the north side of Mount Battock, within the border of Aberdeenshire, and runs about 10 miles north-eastward to a junction with the Feugh, in the parish of Strachan, Kincardineshire. The name is a corruption of AVEN. See the article AVEN or AVON.

ABBEY, a village in the vicinity of Cambuskenneth Abbey, on the north-west border of Clackmannanshire. The tract around it is in dispute between the parish of Stirling and the parish of Logie. See CAMBUSKENNETH. Population of the village in 1861, 227.

ABBEY, a small village on the banks of the Tyne, about a mile east of Haddington. Here, in 1178, a Cistercian nunnery was founded and richly endowed by Ada, the mother of Malcolm IV.; and here, in 1548, the parliament met and gave their sanction to the marriage of Queen Mary with the Dauphin of France. Scarcely a trace of the convent now remains.

ABBEY, any district around the remains or the site of a great ancient monastic edifice. Thus there is a special district of Abbey around the abbey of Cambuskenneth. There is an ecclesiastical district of Abbey around the abbey of Arbroath. There is a parish of Abbey around the abbey of Paisley. And there is a district known in Scottish law as emphatically the Abbey, and possessed of the privileges of a sanctuary for debtors, around the abbey and palace of Holyrood. See the article HOLYROOD.

ABBEY-BATHAN'S. See ABBEY-SAINT-BATHAN'S.

ABBEY-BURN, a stream of Kirkcudbrightshire. It runs about 6 miles southward, through the parish of Rerrick, past Dundrennau abbey, to the Solway frith, at a point a little east of Abbey Head. Burn-foot, at its mouth, is a free port, and might easily be made a commodious harbour. See RERRICK.

ABBEY-CRAIG, a craggy, precipitous, greenstone hill, in the neighbourhood of Cambuskenneth abbey, in the parish of Logie. It rises about 500 feet above the level of the surrounding plain, and is precisely similar in form and texture to the rocks of Craigforth and Stirling Castle in its near vicinity. A monument to Wallace was recently begun upon it, at great cost, but stood incomplete in 1865. The hill is a picturesque feature in a most magnificent landscape, and commands a gorgeous prospect of the caesars and windings of the Forth. The Scottish army under Wallace was posted on it on the

night before the battle of Stirling. Excellent millstones are manufactured out of its rock.

ABBEY-GREEN, a village in the parish of Lesmahago, Lanarkshire. It occupies a beautiful position on the banks of the Nethan, about 6 miles from Lanark and 22 from Glasgow. A monastery was founded here in 1140 by David I., and was subordinate to the abbey of Kelso. The village has a post-office, and is otherwise the centre of influence to a considerable tract of country; but, in these respects, is usually designated by the name of the parish. See LESMAHAGO. Population of the village in 1861, 494.

ABBEY-SAINT-BATHAN'S, a parish in the Lammermoor district of Berwickshire. It is bounded by Haddingtonshire, and by the parishes of Cockburnspath, Coldingham, Buncle, Longformacus, Dunse, and Oldhamstocks. Its post-town is Dunse. It has a very irregular outline, and measures nearly 6 miles in extreme length, and 4 miles in extreme breadth. It is drained along the eastern boundary by the Eye, and through the interior by the head-stream and some feeders of the Whiteadder. It contains nearly 2,000 acres of arable land, and upwards of 3,000 acres of coarse pasture and barren heaths. The hills consist of greywacke, and rise 300 or 400 feet above the level of the vales. A mine of copper was commenced in 1828, on the estate of St. Bathans, but proved uncomensating. The yearly value of raw produce was estimated in 1834 at £2,555. The rental in 1864 was about £1,800. The Kirktown stands on the Whiteadder, about 7 miles north by west of Dunse. Population of the parish in 1831, 122; in 1861, 179. Houses, 27.

This parish is in the presbytery of Dunse, and synod of Merse and Teviotdale. Patron, the Crown. Stipend, £155 9s. 3d.; glebe, £13. Schoolmaster's salary, £50, with fees £12. The church is a very ancient structure, with about 140 sittings. A Cistercian nunnery, with the title of a priory, was founded here, toward the close of the 12th century, by Ada, daughter of King William the Lion, and dedicated to St. Bathans, Bythen, or Bethan, who is supposed to have been a cousin of Columba and his successor at Iona; and the priory acquired large revenues, and gave name to the parish; but not a vestige of it now exists. About three furlongs east of the church, in a field which still bears the name of Chapelfield, were to be seen, a number of years ago, the foundations of an ancient chapel; and about a mile to the west there existed not long since some

remains of the parish church of Strafountain—probably a corruption of *Trois Fontaines*—united at the Reformation to St. Bathan's, and originally an hospital founded by David I. A little to the north-west of Strafountain, near the banks of the Monynut, a tributary of the Whiteadder, is Godscroft, once the demesne of David Hume, a distinguished writer of the 17th century, and an intimate friend of the celebrated Andrew Melville. There is a parochial library.

ABBEY-WELL. See URQUHART.

ABBOTRULE. See ABBOTSRULE.

ABBOTSFORD, the country mausion erected, and long occupied, by our great national novelist, Sir Walter Scott. It stands on the right bank of the Tweed, a little above the influx of Gala Water, about 2 miles south-east of Galashiels, and immediately adjacent to the road between Melrose and Selkirk. It looks across a beautiful sweep of the Tweed, away to the green hills of Ettrick Forest; but, excepting this pleasant prospect, it owes all its attractions, and also its name, to "Scotland's mighty minstrel." He bought the site when it was occupied by a mean farmstead called Cartley Hole; he added to it various small adjacent properties from time to time as his means increased; and he slowly and ingeniously raised the mansion and elaborated the grounds, till the former became "a romance in stone and lime," and the latter a bewilderment of beauty, where

"Well might we deem that wizard wand
Had set us down in fairy land."

The edifice defies all the rules of architecture, and has singular features and extraordinary proportions, yet looks both beautiful and picturesque. It got many of its decorative details from some of the most famous old piles in Scotland,—for example, a gateway from Linlithgow and a roof from Roslin Castle; and it contains a multitude of curiosities connected with its illustrious founder, with literature, with the fine arts, and with Scottish antiquities. The melancholy interest of it, so profound at the death of Sir Walter, was greatly deepened by the extinction of his hereditary name at the death of his son.

ABBOTSFORD FERRY, a station on the Selkirk railway, opposite Abbotsford.

ABBOTSHALL, a parish, containing a suburb of the post-town of Kirkcaldy, on the southern border of Fifeshire. It is bounded by the frith of Forth, and by the parishes of Kinghorn, Auchtertool, Auchterderran, Dysart, and Kirkcaldy. Its greatest length is nearly 4 miles; and its greatest breadth is about 2 miles. The surface is low and flat for more than half a mile from the frith, then rises in fine slow swells, with beautiful diversities, for upwards of two miles, and then descends to the northern boundary. The soil is various, but on the whole excellent. The small streams Tiel and Camilla, and a tributary of the Oar, form the chief drainage, but have little feature. Raith loch, situated in the Raith pleasure-grounds, is an artificial and highly picturesque sheet of water, about a mile long, and in some parts nearly a quarter of a mile broad. Raith House is a good old mansion, with two wings, and a fine Ionic portico. A square tower on the summit of the hill on which that mansion stands, and at an elevation of about 400 feet above the level of the sea, commands one of the richest and most extensive panoramic views in Scotland. The residences of several proprietors are of a handsome description. The chief antiquity is a piece of the strong square tower of Balwearie, the residence of the famous wizard, Sir Michael Scott. See BALWEARIE. The parish is traversed by the Edin-

burgh, Perth, and Dundee railway. The real rental of the parish in 1836 was £7,500. Assessed property in 1864. £14,733. The great majority of the inhabitants live in Linktown. This consists of an old street, about three quarters of a mile long, extending on a line with the principal street of Kirkcaldy, and of a newer street, or New Town, going off at right angles from the end of the former toward the parish church. Linktown is a burgh of regality, under Ferguson of Raith. It shares fully in the trade and public communications of Kirkcaldy, and has a gas-work, a pottery, a brick and tile work, a sail-canvas manufactory, a linen bleachfield, large spinning-mills, several power-loom factories, and a flour-mill. Annual fairs are held on the 3d Friday of April and the 3d Friday of October; but they possess little consequence. See KIRKCALDY. Population of Linktown in 1841, 4,100; in 1861, 4,385. Houses, 354. The parish also contains the village of Chapel. Population of the parish in 1831, 4,206; in 1861, 5,193. Houses, 512.

This parish is in the presbytery of Kirkcaldy and synod of Fife. Patron, Ferguson of Raith. Stipend, £199 11s. 11d.; glebe, £36. Schoolmaster's salary now is £60, with house and garden, about £35 of fees, and £25 from other sources. The parish church was built in 1788, and has 825 sittings. There is a Free church; and the yearly sum raised by its congregation in 1865 was £361 9s. The United Presbyterian Church at Bethelfield was built in 1836, and has 1,096 sittings. There are four non-parochial schools. Abbotshall parish was erected in 1650, by disjunction from Kirkcaldy; and it took its name from the circumstance of an abbot of Dunfermline having built a house near the site of the church.

ABBOT'S ISLE, a small green island, in the bay of Stonefield, south side of Loch Etive, Argyleshire.

ABBOTSRULE, formerly a parish in Roxburghshire, now divided between Southdean and Hobkirk. It extended about 3 miles along the east side of the upper part of the Rule, from Blackcleuch Mouth to Fultonhaugh. The barony of Abbotsrule contains 2,343 English acres, and was exposed to sale in 1818 at the upset price of £35,000. See SOUTHDEAN.

ABB'S HEAD (Sr.), a bold promontory, in the parish of Coldingham, 2 miles north-north-east of the town of Coldingham, and 4 miles north-west of the port of Eyemouth, Berwickshire. It consists of a huge isolated mass of trap rock, opposing a perpendicular front of nearly 300 feet in height to the billows of the German ocean. On two other sides the point of the headland is nearly equally precipitous; and on the fourth it is divided from the mainland by a deep fosse. The stratified rocks adjacent to it display astonishing contortions, and are pierced with numerous large caverns. Tradition relates that, early in the 9th century, Ebba daughter of Ethelfred, king of Northumberland, fleeing from the amorous suit of Penda, the Pagan king of Mercia, was shipwrecked on this coast, and built a nunnery on this headland in token of gratitude for her preservation. Of this building no remains are now discernible; but within the memory of man, there were some relics of the chapel and cemetery, attached to it on an eminence about a mile to the east.

ABDIE, a parish, containing a suburb of the post-town of Newburgh, in the north-west corner of Fifeshire. It is bounded by Perthshire, by the frith of Tay, and by the parishes of Newburgh, Flisk, Dunbog, Monimail, Collessie, and Auchtermuchty. Two portions of it are separated from the main body by the intervention of the parishes of Newburgh and Dunbog. The whole, if compact,

might form an area of about 6 miles by 4. The surface is a varied succession of hill and dale. About 6,000 imperial acres are under cultivation; about 300 are under wood; and about 1,670 are either waste land or coarse pasture, extensively covered with heath and furze. The finest land is rich alluvium along the Tay. The highest ground is Norman's Law, "the hill of the northern man," situated in the eastern isolated portion, rising to the height of 850 feet above the level of the sea, with a bold precipitous front, and commanding a splendid view of the vale of Eden, the frith of Tay, and the course of Gowrie. Clatchard Crag is also a remarkable basaltic eminence, situated a little south-east of Newburgh, and presenting a precipitous front of about 250 feet, along whose face passes the railway. The loch of Lindores, near the centre of the parish, is a beautiful sheet of water, nearly a mile in length, covering about 70 acres, fed by a small stream called Priest's Burn, which never freezes and never dries up, and discharges its waters by a rivulet of about 2 miles in length into the Tay at Lindores, a short way below Newburgh. The lake abounds in perch, pike, eels, and aquatic fowl; and the stream which flows from it drives five or six very valuable mills,—saw-mill, bone-mill, and corn-mills. There are ten land-owners; and of these the Earl of Zetland draws the largest rental. Macgill of Rankellour once had much land here, but now has none. The most remarkable mansion is Inchrye House, a Gothic structure with turrets and battlements, situated a little east of the loch of Lindores, and figuring conspicuously in some of the finest views of the parish. The House of Lindores is also a picturesque object. The village of Lindores, near the foot of the loch, is a place of great antiquity; and it contains some vestiges of a castle which is said to have belonged to Duncan Macduff, first Thane of Fife. Balfour relates that, in the vicinity of this castle, in June 1300, a battle was fought between the Scots under Wallace and the English, and cost the latter a loss of 3,000 killed and 500 taken prisoners; and Blind Harry states that after the battle, Wallace and his companions retired to the castle. Lindores gave the title of Baron to the ancient family of Leslie, whose peerage became dormant in 1775, at the death of Francis, the seventh lord. Population of the village of Lindores in 1841, 95. There is also a village called Grange of Lindores. Population in 1841, 166. Mount Pleasant, the suburb of Newburgh, has been almost wholly built since 1831. Population in 1861, 452. The parish is traversed for a short distance by the Perth branch of the North British railway, and enjoys ready access to communication by that railway, and by the Tay steam-boats. Population in 1831, 870; in 1861, 1,381. Houses, 248. Assessed property in 1865, £9,558 13s.

This parish is in the presbytery of Cupar, and synod of Fife. Patron, the Earl of Mansfield. Stipend, £233 9s.; glebe, £23. Schoolmaster's salary now is £60, with about £17 fees. The parish church is a plain building with a pillared belfry, overlooking the loch of Lindores. It was built in 1827, and has between 500 and 600 sittings. There is a Free church for Abdie and Newburgh; attendance, about 220; yearly sum raised in 1865, £186 17s. There is one private school. The family of Balfour of Denmill, now represented by Lord Belfour, were long proprietors of a large part of Abdie; and their funeral monuments are still to be seen in the aisle of the old church. One of the most famous of them was Sir James Balfour, a distinguished writer on antiquities and heraldry, and Lyon-king-at-arms to Charles I. and Charles II. The

parish anciently bore the name of Lindores; and when or why it took the name of Abdie is not known.

ABER, any locality of a marked character, either knolly or marshy, near the mouth of a stream, whether the stream falls into lake or sea, or runs into confluence with another stream. The name occurs seldom by itself, and does not in that form designate any considerable seat of population. But it occurs often and prominently as a prefix,—commonly in combination with the ancient name, which also is often the modern one, of the stream on which the locality lies. And in the case of a parish, that locality may be sought at the site of the original parish church.

ABERARDER. See NARN (THE).

ABERARGIE. See ABERDARGIE.

ABERBROTHWICK. See ABEROATH.

ABERCAIRNEY. See FOWLIS WESTER.

ABERCHALDER. See OICH (THE), and CALEDONIAN CANAL.

ABERCHIRDER, a village in the parish of Marnoch, Banffshire. It stands on the road from Turriff to Portsoy, and on that from Huddy to Banff, about 7 miles west of Turriff, and about 9 south by west of Banff. It contains a post-office, a stamp-office, a branch-office of the North of Scotland Bank, an United Presbyterian church, an Episcopalian church, a Roman Catholic chapel, and a Baptist meeting-house; and near it is a large handsome new church, which was erected on occasion of the famous Free Church contest. See MARNOCH. Hiring markets for servants are held at Whitsunday and Martinmas; an annual market, for horses and cattle, called Marnoch fair, is held on the second Tuesday of March; and a weekly market for grain is held, during the winter, on Monday. Aberchirder was the original name of Marnoch parish; and is said to allude to the mouth of a moss or moss-burn. Population in 1841, 819; in 1861, 1,273.

ABERCORN, a parish on the north of Linlithgowshire. It is bounded by the frith of Forth, and by the parishes of Dalmeny, Kirkliston, Ecclesmachan, Linlithgow, and Carriden. Its post-town is Winchburgh. Its greatest length, east and west, is about 4½ miles; and its greatest breadth is about 2½ miles. The surface is exceedingly diversified and eminently picturesque, yet nowhere attains an elevation of more than 350 feet. Only two points are called hills,—Binns hill in the west, and Priest-inch in the south-east; and the former is cultivated to the summit, and commands a gorgeous, extensive, panoramic view. All the seaboard is rich with wood, and surpassingly beautiful. Hopetoun House on the coast, the seat of the Earl of Hopetoun, and the last place visited by George IV. in Scotland, is a truly princely mansion, amid superb pleasure-grounds. Binns House, the seat of Sir R. Dalryell, Bart., is also a fine mansion. All the streams of the parish are very small; but they drive some useful rural mills. There are several quarries of excellent sandstone, and a quarry of good whinstone; and there was, till lately, a small coal-mine. The yearly value of raw produce was estimated in 1843 at £22,700. The assessed property in 1860 was £8,528. The villages are Newton, Philipston, and Society, but are all small. The parish is traversed by the Union canal and by the Edinburgh and Glasgow railway. Population in 1831, 1,013; in 1861, 965. Houses, 188.

This parish is in the presbytery of Linlithgow and synod of Lothian and Tweeddale. Patron, the Earl of Hopetoun. Stipend, £188 15s. 2d.; glebe, £16. Schoolmaster's salary, £50, with £30 fees. The parish church is an old pile, thoroughly re-

paired in 1838. There is a Free church; yearly sum raised in 1853, £54 3s. 5d.,—in 1865, £35 14s. There is a school for girls, which was instituted by Lady Hopetoun, and is well attended. The monastery of Abercorn, anciently written Aeburnnig, is mentioned more than once by Bede, and may be regarded as an early Culdee establishment; and it is said to have been the residence of a bishop in the 7th century, at a time when the only other place of similar character in Scotland was Whithorn in Galloway. But not a vestige of it now exists. Nor is there a vestige of Abercorn castle, which was a feudal fortalice of great strength, and was dismantled in 1455, during the rebellion of one of the Black Douglases. The estate of Abercorn belonged, in the 13th century, to Sir John Graham, the friend of Wallace; it afterwards passed to the Douglases; it next went to the Hamiltons, and gave them a noble title, which continues to be enjoyed by their descendant, the Marquis of Abercorn; and it subsequently passed to the Mures, the Lindsays, the Setons, and last of all the Hopes, Earls of Hopetoun. Binns was the family seat of "the bloody Dalzell," and is still in the possession of his descendants.

ABERCROMBIE, or ST. MONANCE, a small parish, containing the post-office village of St. Monance, on the southern border of Fifeshire. It is bounded by the frith of Forth, and by the parishes of Pittenweem, Carnbee, Kilconquhar, and Elie. It measures about $1\frac{1}{2}$ mile from north to south, and about a mile along the coast. Its surface makes a very abrupt ascent from the low and rocky beach, and then has some diversities, but on the whole is flat. The soil is chiefly a friable fertile loam; and nearly all the land is arable and cultivated. Coal mines were worked, but are exhausted. The small stream Inweary flows on the western boundary to the sea; and the Dree burn runs eastward on the boundary with Carnbee. There are two landowners of £100 Scots valued rent. Assessed property in 1865, £4,350 17s. 3d. The village of St. Monance stands on the coast, about $1\frac{1}{2}$ mile west of Pittenweem. It is a burgh of barony, under the laird of Newark; and has 3 bailies, a treasurer, and 15 councillors. A good harbour is here, partly natural and partly formed by a strong pier, built in 1865; and it accommodates 3 or 4 trading vessels, and about 100 large fishing-boats belonging to the port, but is seldom frequented by strangers. A principal employment of the villagers is the herring fishery, all now in the neighbouring waters, but formerly carried on chiefly off the coast of Caithness. There are several friendly societies. The village of Abercrombie is small and rural. Population of the parish in 1831, 1,110; in 1861, 1,498. Houses, 192.

This parish is in the presbytery of St. Andrews, and synod of Fife. Patron, the Crown. Stipend, £162 0s. 11d., of which £32 19s. 4d. is received from the Exchequer. Glebe, 12 acres. Schoolmaster's salary, £35; fees, £60. There was formerly a private school. The old kirk of Abercrombie is in ruins, and has not been used as a place of worship for upwards of two centuries. It is the burying-place of the Balcaskie family. The church now in use is situated at the west end of the village of St. Monance, close upon the beach. It is a Gothic edifice, originally founded in the 14th century, and, till recently renovated, presenting a singularly antique appearance in its interior furnishings as well as externally. It is now a very handsome place of worship, seated for 523, and preserving as much of its ancient outline as was found consistent with modern ideas of comfort. It is related that David II., having been grievously wounded by a barbed arrow, and miraculously cured at the

tomb of St. Monance, dedicated this chapel to him, and granted thereto the lands of Easter Birnie. Keith says: "This chapel, which was a large and stately building of hewn stone, in form of a cross, with a steeple in the centre, was given to the Black friars, by James III., in 1460-80. The wall of the south and north branches of this monastery," he adds, "are still standing, but want the roof; and the east end and steeple serve for a church to the parishioners." This parish was known by the name of Abercrombie so far back as 1174. In 1646 the lauds of Newark, constituting the barony of St. Monance, were disjoined from Kilconquhar, and annexed quoad sacra to Abercrombie. The parish thus enlarged received the designation of Abercrombie with St. Monance. In the course of years, and with the decline of the village of Abercrombie and rise of that of Monance, the old title disappeared altogether, and the parish came to be known as that of St. Monance, and is still sometimes so designated; but early in the present century, the old title of Abercrombie was formally revived at the instance of the principal proprietor, Abercrombie Anstruther of Balcaskie. A peerage of Abercrombie existed in the 17th century, in the family of Sandilands, proprietors of the lands of Newark, but became extinct at the death of the second lord.

ABERDALGIE, a parish in the Strathearn district of Perthshire. It is bounded by the parishes of Tippermuir, Perth, Forteviot, and Forgandenny. Its post-town is Perth. It has a compact outline, and measures about 3 miles from east to west, and about $2\frac{1}{2}$ from north to south. It is washed along the south by the beautiful winding Earn, and ascends the hills toward the watershed with the Almond and the Tay; and it partakes fully in all the boasted beauty of Lower Strathearn, both as to the richness of its own scenery and the magnificence of its distant views. Duplin Castle, the seat of the Earl of Kinnoul, is a superb feature. The former castle was accidentally burnt to the ground in 1827; and the present one, in the Elizabethan style of architecture, was built at a cost of upwards of £30,000. The whole parish is the property of the Earl of Kinnoul, whose ancestors acquired it in 1625 from the Earl of Morton. The soil in general is fertile, but in some places thin. There are several sandstone quarries. The assessed property of the parish in 1843 was £3,870 17s., and in 1865 was £3,724 14s. 7d. Population in 1831, 434; in 1861, 295. Houses, 62.

This parish is in the presbytery of Perth, and synod of Perth and Stirling. Stipend, £157 19s. 4d.; glebe, £24. Patron, the Crown and the Earl of Kinnoul. Schoolmaster's salary now is £40, with about £14 fees. The parish of Duplin was united to this parish in 1618. The present church was built in 1773. A vault at the east end is the burying place of the Kinnoul family. The battle of Duplin was fought in this parish, August 12th, 1332. See DURLIN.

ABERDARGIE, a village in the parish of Abernethy, Perthshire. It is situated in the mouth of Glenfarg, near the mill of Farg, and has a humble appearance.

ABERDEEN, the capital of the north of Scotland. It stands on the east coast, between the rivers Dee and Don, in $57^{\circ} 8' 20''$ north latitude and $2^{\circ} 2' 48''$ west longitude, 45 miles south-south-east of Banff, 107 east-south-east of Inverness, 90 by railway north-east by north of Perth, and respectively 108, 112 $\frac{1}{2}$, and 135 north-north-east of Edinburgh, the first of these three distances being by road, the second by railway through Broughty-Ferry, and the third by railway through Perth. It comprises two town

Old Aberdeen and New Aberdeen, situated about a mile from each other, of different aspects, and with distinct charters and privileges; so that, though possessing one set of interests, and included within the limits of one parliamentary burgh, it requires to be described as two places, each with its own parochial connexions, and as a separate town.

The parish in which OLD ABERDEEN stands is called the parish of Old Machar. It is bounded on the north by the parishes of New Machar and Belhelvie; on the east by the sea; on the south by the parish of St. Nicholas and by Kincardineshire; and on the west by the parishes of Banchory-Devenick, Newhills, and Dyce. Its greatest length, from north to south, is about $7\frac{1}{2}$ miles; and its greatest breadth is about 4 miles. The river Dee divides it from Kincardineshire; and the river Don goes windingly across its centre. Its surface rises slowly from the beach, and is beautifully diversified by heights and hollows and by the fruits of art. The general landscape is pleasant, and comprises some fine close scenes and a good far-away view. Its chief features are the beach and sea, the course of the river, some woods on the Don, clumps of trees on the rising grounds, country mansions, villas, manufactories, villages, the town of Old Aberdeen, and the outskirts of New Aberdeen. The steep and rugged banks of the Don, from the house of Seaton to below the old bridge, are truly romantic. Many curious little sand-hills occur near Ferryhills, moulded into various forms, and disposed in all directions, seemingly by the retiring of some immense quantity of water. The soil of some parts of the parish is naturally fertile; but that of other parts either lies barren or has been forced into productiveness by labour and expense. The principal mansions are Grandholm, Scotstown, Denmore, Balgownie, Hilton, Powis, Cornhill, Seaton, and Woodside.

The part of the parish north of the Don is called the landward part, yet nearly one half of its population is in villages. The part south of the Don is all included in the parliamentary boundary of the burgh; and contains the manufacturing contiguous villages of Woodside, Tanfield, and Cotton, about 2 miles north-west of New Aberdeen,—the village of Ruthrieston, about 2 miles south-west,—the suburbs of Broadford, on the north side,—Gilcomston, along the north end of the west side,—the Windmill Brae and College Street near the south end of the same side,—Holborn, about half-a-mile to the south-west,—Dee village, on the bank of the river Dee,—and the new streets situated between Gilcomston and the Dee, extending nearly three-quarters of a mile westward, and containing many of the best houses of New Aberdeen. The agriculture of Old Machar has, in recent times, received large accessions both by the reclamation of waste lands and in the form of general improvement; and the manufactures, in addition to those in the town, comprise extensive woollen-cloth-making, thread-spinning, weaving, bleaching, and flax-spinning, at Grandholm-Haugh, Gordon's Mills, Printfield, Broadford, and Rubislaw. Assessed property in 1860, £112,172; of which £319 were in quarries, and £1,844 in fisheries. Population in 1831, 25,107; in 1861, 33,236. Houses, 3,431. Population, in 1861, of the landward part, 1,298. Houses, 226.

This parish is in the presbytery and synod of Aberdeen. The charge is collegiate. Patron of both charges, the Earl of Fife. Stipend of the first minister, £273 1s. 3d., without a manse or glebe; of the second minister, £282 19s. 9d., with a manse and glebe of the yearly value of £31 10s. Schoolmaster's salary, £60. The parish church formed part of the cathedral of St. Machar, in the city of

Old Aberdeen, and will be described in our account of the town. Sittings, 1,594. The chapel in King's College is open during the session for the accommodation of the professors and students. The parish in ancient times comprehended, not only all its present territory, but also the districts of New Machar and Newhills; and it ranked as a deanery, or was held by the dean of the cathedral, while these districts were served as chapelries. But about the time of the Reformation, New Machar was erected into a separate parish; and about the year 1633, Newhills also was made a separate parish. And in modern times, three chapels were built respectively in Gilcomston, in Woodside, and at Holborn, and during a few years previous to the Disruption, had the character of quoad sacra parish churches, each with a definite parochial territory. Gilcomston chapel was erected by subscription in 1769-71, enlarged in 1796, and has 1,522 sittings; and in September, 1852, it was constituted by the Court of Teinds a quoad sacra parish church. Woodside chapel is a commodious structure, erected in 1846; was constituted a quoad sacra parish church, by the Court of Session, in December, 1862; and had 1,140 persons on its communion roll in 1865. Holborn chapel was erected by subscription in 1836, at the cost of £1,858, and has 1,332 sittings. The minister of Gilcomston chapel is elected by trustees; and the minister of each of the other two chapels by the congregation. There are five Free churches,—Old Machar, Gilcomston, Woodside, Holborn, and Bon-Accord; and they had communicants in 1864, and raised contributions in 1865, as follow:—Old Machar, communicants, 246,—contributions, £612 4s. 10 $\frac{1}{2}$ d.; Gilcomston, communicants, 1,169,—contributions, £695 5s. 7d.; Woodside, communicants, 606,—contributions, £598 13s. 1 $\frac{1}{2}$ d.; Holborn, communicants, 846,—contributions, £558 19s. 8 $\frac{1}{2}$ d.; Bon-Accord, communicants, 496,—contributions, £397 4s. 6d. The other places of worship are an Original Seceder church, with 500 sittings; St. John's Episcopal church, with 386 sittings; a Congregational chapel at Cotton, with 480 sittings; and a Baptist meeting-house, with about 50 attendants. There are two private schools in the district north of the Don, and perhaps so many as seventy in the district south of it,—the total number in 1833 having been sixty-two, with an attendance of 2,160.

The TOWN OF OLD ABERDEEN stands about a mile north of New Aberdeen, and adjacent to the right bank of the Don, on the road to Peterhead and Fraserburgh. It is a burgh of barony, the seat of an university, and formerly the seat of a bishopric. It has a countrified, classic, and antique appearance, and presents a striking contrast, in both its quietness and its quaintness, to the bustle and pretension of New Aberdeen. Its environs abound in gardens and fruiteries, and look as if disdaining all acquaintance with manufacture and commerce. The approach to it from the north over the Don is eminently interesting. The river there flows in a deep narrow bed, between beetling crags and among embowering wood; and it is spanned, at the distance of 1,200 yards from the sea, by the famous 'Brig o' Balgownie,' a lofty, narrow, gaunt Gothic arch of 72 feet in width,—and, 450 yards lower down, by the new bridge of Don, a structure of 5 arches, and 500 feet in length. In 1281, Henry Cheyne, the nephew of the Red Comyn, who opposed the claims of Robert Bruce to the crown of Scotland, became bishop of Aberdeen; and, after Comyn was slain at Dumfries in 1305, the bishop was obliged to flee to England, and to let his episcopal revenues lie unapplied. But he eventually got reconciled to

King Robert, and was allowed to return and to take repossession of his see; and then, with the concurrence or more probably by the command of the king, he devoted the accumulated episcopal revenues to the building of a bridge over the Don, in the vicinity of the cathedral. This was erected probably about the year 1320, and is the present 'Brig o' Balgownie.' An annual sum of £2 5s. 8d. was bequeathed by Sir Alexander Hay toward the supporting of it; and this bequest, which, as the quaint inscription on the lobby wall of Aberdeen town-house says, consisted of "certain few fermes and an-rents," went on accumulating by increase of the value of the property. In 1825, the fund amounted to £20,000, and was applied to the building of the new bridge; and since then, though no expense has been spared in keeping the old bridge and road-way in excellent repair, the fund has again accumulated, insomuch that, in 1865, it amounted to £14,000. Lord Byron commemorates this locality in a stanza of Don Juan, where he speaks of "the Dee, the Don, Balgownie's Brig's black wall;" and he adds in a note, "The Brig of Don, near the Auld Town of Aberdeen, with its one arch, and its black deep salmon stream below, is in my memory as yesterday. I still remember, though perhaps I may misquote, the awful proverb which made me pause to cross it, and yet lean over it with a childish delight, being an only son, at least by the mother's side. The saying as recollected by me, was this, but I have never heard nor seen it since I was nine years of age:—

'Brig of Balgownie, black's your wa',
Wi' a wife's ae son, and a mare's ae foal,
Doon ye shall fa'!"

Several streets, courts, and closes of Old Aberdeen challenge attention by their singular or ancient features. Mar's Castle is a curious object. The town-house is a neat building, erected towards the close of last century. The trades' hospital, built on the site of the Mathurine convent, was founded in 1533 by Bishop Dunbar. There are no remains of the bishop's palace. The cathedral was originally founded in 1154; but having become ruinous, it was demolished, and a splendid new one founded by Bishop Kinnimonth in 1357. This is said to have been seventy years in progress; but it does not appear to have ever been completed. All parts of it except the nave were either destroyed by the fury of mobs at the Reformation, or pulled down by the soldiers of Cromwell as building material for a garrison. The nave is now the parish church, and is kept in high preservation, and underwent repairs in 1832. It is 135 feet long and 65 feet broad; and, though not an elegant structure, is massive and noble, and possesses some interesting features. The windows and pillars are in the severe early English style, and for the most part plain; but the western window is a very fine large one, with seven high lancet lights, and the capitals of the pillars of the transept are beautifully carved with oak and vine leaves. The ceiling, too, is of oak, finely carved, and painted with armorial bearings.

The buildings of King's college, however, are the chief ornament of Old Aberdeen. It appears that there existed, so long ago as the reign of Malcolm IV., a "*Studium generale in collegio canoniorum Aberdoniensium*," which subsisted till the foundation of this college by Bishop Elphinstone. In 1494, Pope Alexander VI., by a bull dated February 10th, instituted in the city of Old Aberdeen, or Aberdeen, an university, or "*Studium generale et Universitas studii generalis*," for theology, canon and

civil law, medicine, the liberal arts, and every lawful faculty; and privileged to grant degrees. James IV. applied for this bull on the supplication of Bishop Elphinstone, who is considered as the founder. But though the bull was granted in 1494, the college was not founded till the year 1505. It was dedicated to St. Mary; but, being taken under the immediate protection of the king, it was denominated King's college. James IV. and Bishop Elphinstone endowed it with large revenues; and Charles I. gave it additional possessions. It had, in 1836, an income of £2,363 from endowments and Crown grants; and it received, in 1840, a bequest of £11,000 from Dr. Simpson of Worcester. Its hursaries were 128, aggregately yielding £1,643 a-year. Its first principal was Hector Boethius.

A recommendation was made in the report of the University commissioners of 1838, that King's college and Marischal college should be united into one university, to be called the university of Aberdeen, with its seat at Old Aberdeen; and this recommendation has been carried out under the act 1858. The university possesses the funds which belonged to both colleges, and ranks from the year 1494, the date of King's college. The session, in arts, commences on the last Monday of October, and closes on the first Friday of April; in divinity, commences on the second Monday of December, and closes on the last Friday of March; in law, commences on the first Monday of November, and extends to the end of March; in medicine, for winter, commences on the first Monday of November, and extends over six months, and for summer, commences on the first Monday of May, and extends over three months. The general council meets twice a-year—on the Wednesday after the second Tuesday of April, and on the Wednesday after the second Tuesday of October. The chief officers are a chancellor, elected by the general council, a rector, elected by the matriculated students, a principal, appointed by the Crown, and four assessors, chosen by respectively the chancellor, the rector, the general council, and the senatus academicus. The university court consists of the rector, the principal, and the four assessors. The senatus academicus consists of the principal and the professors. The chairs are Greek, humanity, logic, mathematics, natural philosophy, moral philosophy, natural history, systematic theology, divinity and church history, divinity and biblical criticism, oriental languages, law, institutes of medicine, practice of medicine, chemistry, anatomy, surgery, materia medica, midwifery, medical logic and jurisprudence, and botany. The Crown appoints to fifteen of the chairs, and the university court to five. There are also three lectureships and eight assistantships. Under the act of 1858, the professorships of Greek, humanity, mathematics, moral philosophy, natural philosophy, church history, oriental languages, and chemistry, as also the principalship, were united with those of King's college; new professorships of logic, divinity and biblical criticism, institutes of medicine, materia medica, midwifery, and botany were instituted for the united colleges; compensation, to the aggregate amount of £3,500 a-year, was made to such professors and other officials as were necessarily displaced; a new scale of emoluments, including estimated amounts from fees, was fixed,—allotting to the principal £599 a-year, to the Greek professor £607, humanity £578, logic £492, mathematics £536, moral philosophy £492, natural philosophy £524, natural history £468, systematic theology £566, church history £486, biblical criticism £130, oriental languages £439, law £303, institutes of medicine £272, practice of medicine £254,

chemistry £531, anatomy, £600, surgery £266, materia medica £242, midwifery £223, medical jurisprudence £222, botany £377; and authority was given for repairs and alterations in Marischal college, and for the erection of new buildings at King's college, at an estimated cost of respectively £800 and £17,936. The number of members of the general council, in 1865, was 502. The number of matriculated students, in the winter session of 1863-4, was 560; in the summer session of 1864, 109. The number who graduated in 1864 was 43 in arts, 52 in medicine, and 4 in divinity.

The buildings of King's college stand on the east side of the town; and are rendered conspicuous at a distance by a fine square tower, fashioned at the top into a beautiful imperial crown, surmounted by a cross. The crown is said to have been built about 1530, by Bishop Dunbar, to replace an original spire or lantern, which had been damaged or overthrown by a storm. The buildings occupy the sides of a large quadrangle, underwent extensive additions and repairs shortly before the union of the colleges, and presented then remarkable mixtures of both style and material; and the west side, composed of class-rooms, has since then been rebuilt. All the old parts are of granite, with either round-headed arches, or severe sharp early English ones; and the restored portions of these have fronts of polished sandstone, and florid perpendicular windows. The buildings, as a whole, comprise a chapel, a library, a museum, a common hall, a suite of class-rooms, and a range of modern houses unattached, for the accommodation of the professors. The chapel is the choir of the old College church, and a very handsome building, and has stalls of beautifully carved black-oak, surrounded by a screen of the same material, in a style of artistic finish far superior to everything else of the kind in Scotland; but the ancient elegant decorations both of this building and of the common hall have been sadly spoiled by modernized seats, pulpits, and stucco-work. The tomb of Bishop Elphinstone is in the middle of the chapel, and was once highly ornamented, but is now covered with a slab of black marble without inscription. The library is the nave of the old College church, and is much too small to afford proper lodgment to the immense and most valuable collection.

When King's college existed as a separate institution, it was the great resort of students from the surrounding rural districts and from all parts of the North Highlands; and its numerous small bursaries, together with very moderate class fees, and efficient professional teaching, enabled large numbers of young men from the humbler ranks of life to obtain an excellent classical education, and so push their way to positions of influence and distinction. Since the union of the colleges, the curriculum of study has been somewhat extended, the system of bursaries partly modified, several of these formed into scholarships, and the class-fees considerably increased.

Old Aberdeen is a place of great antiquity, and was of considerable importance towards the end of the 9th century. David I., in 1154, translated the episcopal see from Mortlach to this place, and granted "to God and the blessed Mary, St. Machar, and Nectarius, bishop of Aberdeen, the baill village of Old Aberdon." Malcolm IV., William the Lion, and James IV., successively confirmed and enlarged the original charter, and conferred extensive grants of lands and tithes on the bishop of Aberdeen. On the abolition of Episcopacy, the right of appointing magistrates fell to the Crown; and, in 1723, a warrant of the Privy-council authorized the magistrates

to elect their successors in office in future. Previous to the municipal act, the council, including the provost, four bailies, and a treasurer, consisted of 19 members. The limits of the burgh are ill-defined. The revenue of the burgh in 1832, was £43 5s.; the expenditure £14 16s. 6d. The burgh has no debts, and little property; the latter consisting only of a right of common in a moss, and a freedom-hill lying north of the Don, the town-house, feu-duties, customs, and a sum of £310. The magistrates are trustees of £2,791 13s. 4d., three per cent. consols, being a proportion of a bequest left by Dr. Bell to found a school upon the Madras plan; and also of Mitchell's hospital, endowed in 1801, for maintaining five widows and five unmarried daughters of burghesses. There are seven incorporated crafts, but no guildry. Old Aberdeen is a place of little trade; but a fair for cattle and horses is held at it on the Wednesday after the third Tuesday of October, old style. The population of the town and its environs in 1851—or the population of Old Machar, after deducting the districts of Bon-Accord, Gilcomston, Holburn, and Woodside, and all the district north of the Don—was 8,772. But the population of the town itself was only 1,490.

The parish in which most of NEW ABERDEEN stands is called St. Nicholas. It was divided in 1828 into six parishes; but it is still conveniently recognised as one parish in topographical description and in statistics. It has an irregularly quadrangular outline, and comprises an area of about 1,100 imperial acres. It is bounded on the south by the river Dee; on the east by the sea; and on the other sides by Old Machar. The boundary on the Dee runs about $1\frac{1}{2}$ mile nearly eastward to the river's mouth; that on the sea-shore runs nearly $1\frac{1}{4}$ mile almost due north, to a point opposite the little eminence of Broad Hill, nearly midway between the Dee and the Don; and that with Old Machar runs nearly westward about a mile, and then irregularly south-westward for about another mile to the Denburn, between Broadford and Gilcomston, and thence southward, along the Denburn, almost three quarters of a mile, to the Dee. Somewhat more than one half of all the area, comprising most of the south side, all the west side, and nearly one half of the north side, is occupied by the city of Aberdeen and by the suburb of Footdee or Futtie, which lies along the lower reach of the river; and the rest of the north side is chiefly disposed in market gardens, nurseries, and bleach-greens; while nearly all the east side consists of a range of low sand hills and an expanse of links or open downs. The surface of the south and west sides is roughly tumulated, and comprises Heading Hill on the eastern outskirts of the city, and the Castle Hill, the Port Hill, the School Hill, and St. Catherine's Hill, (the last now levelled,) within the city and occupied by its streets; and the surface of the north side and of the links is nearly flat, and but very slightly elevated above the level of the sea. The annual value of property in the parish assessed to income tax in 1860, exclusive of railways, was £143,137; of which £2,016 were in fisheries, and £5,610 in gas-works. Population of the parish in 1831, 32,912; in 1841, 36,734; in 1861, 41,962. Houses, 2,711.

The parish of St. Nicholas, in remote Roman Catholic times, contained a parish church, a Dominican friary, a Franciscan friary, a Carmelite friary, and a monastery dedicated to the Holy Trinity. The parish church was probably the oldest of these structures, and certainly seems to have been by far the most magnificent; and it was dedicated to St. Nicholas, who had been bishop of Myria in Lycia,

and who, according to a prevalent custom of the times, was chosen patron saint of the city. That church, in a superb cathedral-like form in which it stood for ages, was probably built in the 12th century, and at all events is known to have existed in the 13th; and it afterwards was fitted up and long used as two churches,—the nave or west end of it under the name of the West church, and the choir or east end of it under the name of the East church. The church of the Franciscan friary also came early to be used in the capacity of what is now termed a chapel of ease, or rather took rank as a co-ordinate parochial place of worship under the name of Greyfriars church. A chapel was founded at Footdee, in 1498, by the town-council, for the benefit of the fishing population, and dedicated to St. Clement; and after the Reformation, it was neglected and went into decay; but in 1631, it was repaired and put into use as a church in connection with the Protestant establishment. The ministers of all the four places acted conjointly, or had a cumulative care of the parish, yet each exercised a special supervision within a district of his own; and during at least 150 years, the charges of the West church and the East church were collegiate. In modern times, several other places of worship were erected, either originally in connection with the Establishment, or in circumstances which afterwards brought them into connection with it; and in 1828, by a decree of the Court of Teinds, the four old churches and two of these modern erections, called the South church and the North church, were constituted separate and distinct parish churches, and had distributed among them all the territory of the old parish in six new parishes. Four other places of worship which existed prior to 1828, and one which was built in 1833, held the rank of quoad sacra parish churches at and before the Disruption in 1843; but three of them then adhered to the Free church, and the other two are now the only chapels of ease in St. Nicholas.

All the parishes of New Aberdeen are in the presbytery and synod of Aberdeen. The town council are the patrons of the six parish churches; and the congregations elect to the two chapels of ease. The stipends of the ministers of the West, the East, the South, and the North parishes, are £300 each, paid by the city corporation; that of the minister of Greyfriars parish is £250, paid by the city corporation; and that of the minister of St. Clement's parish is £279 11s. 10½d., derived from the half-barony of Torrie, the glebe of Footdee, and seat-rents.—The present West church stands on the site of the nave of the old church of St. Nicholas, and was built in 1755 and enlarged in 1836, and contains 1,454 sittings. Population of the West parish in 1831, 8,930; in 1861, 11,450. The present East church stands on the site of the choir of the old church of St. Nicholas, and was built in 1837, and contains 1,705 sittings. Population of the East parish in 1831, 3,846; in 1861, 5,182. The Greyfriars church is a very ancient building, the only ancient church now in New Aberdeen, and is often called the College church. Sittings, 1,042. Population of Greyfriars parish in 1831, 4,706; in 1861, 7,143. The present St. Clement's church stands on the site of the old Footdee church, and was built in 1828, and contains 800 sittings. Population of St. Clement's parish in 1831, 6,501; in 1861, 7,623. The original South church was built in 1779, and was first a meeting-house in connexion with the Relief body, and afterwards a chapel of ease in connexion with the Establishment; and in 1830-1 that structure was taken down and the present church erected on its site. Sittings, 1,562. Popu-

lation of the South parish in 1831, 4,313; in 1861, 4,291. The North church was built in 1826, and contains 1,486 sittings. Population of the North parish in 1831, 4,616; in 1861, 6,273. The two chapels of ease are called Trinity church and John Knox's church. Trinity church was built in 1794, and contains 1,247 sittings, but is now shut up; and John Knox's church was built in 1835, and contains 1,054 sittings.

The Free churches in St. Nicholas parish are the West, the East, Greyfriars, St. Clement's, South, North, Trinity, John Knox, Union, Melville, Mariners', and the Gaelic. The communicants in the West, in 1864, were 1,070,—the yearly contributions, in 1865, £1,772 7s. 4½d.; in the East, communicants, 890,—contributions, £1,461 7s. 7d.; in Greyfriars, communicants, 160,—contributions, £170 16s. 10½d.; in St. Clement's, communicants, 940,—contributions, £559 2s. 3¼d.; in South, communicants, 1,100,—contributions, £1,528 15s. 7½d.; in North, communicants, 487,—contributions, £498 17s. 3d.; in Trinity, communicants, 784,—contributions, £1,588 19s. 7d.; in John Knox, communicants, 914,—contributions, £568 15s. 3d.; in Union, communicants, 712,—contributions, £400 14s. 11d.; in Melville, communicants, 102,—contributions, £110 7s. 9½d.; in Mariners', communicants, 250,—contributions, £141 8s. 4½d.; in the Gaelic, communicants, 209,—contributions, £161 10s. 5d. There were, in 1865, six United Presbyterian churches,—respectively in St. Nicholas-lane, in George-street, in Belmont-street, in Charlotte-street, in St. Paul-street, and in Gallowgate; and the last had but recently become connected with the U. P. body. The other places of worship, in 1865, inclusive of some within Old Machar, were an Original Seceder church, in Skene-street; four Independent chapels, in connexion with the Congregational Union of Scotland, in Belmont-street, Dee-street, Blackfriars-street, and Albion-street; two Independent chapels, in connexion with the Evangelical Union, in St. Paul-street and Johns-street; St. Andrew's Scotch Episcopal church, served by the Bishop of Aberdeen and an assistant, in King-street, with 1,100 sittings; St. John's Scotch Episcopal church, in Crown-terrace; St. Mary's Scotch Episcopal church, in Carden-place; St. Paul's English Episcopal church, in Gallowgate, with 900 sittings; St. James' English Episcopal church, in Crown-street; a Wesleyan Methodist chapel, in Long Acre, with 900 sittings; three Baptist chapels, in George-street, John-street, and South Silver-street; a Glasite chapel, in St. Andrew's-street; a Quakers' meeting-house, in Gallowgate; a Unitarian chapel, in George-street; and a Roman Catholic church, served by the bishop of the northern district of Scotland, and two assistants, in Huntly-street.

In the times before the Reformation, there was a St. Mary's chapel, under the East church; there was a St. Catherine's chapel founded in 1242, and situated on St. Catherine's-hill; and there was a St. Ninian's chapel situated on the Castle-hill. The Black friars had their establishment on the School-hill, where Gordon's hospital and the Grammar-school now stand; the Carmelite, or White friars' monastery, was on the south side of the Green, near Carmelite-street; and the Greyfriars in Broad-street, where the Marischal college and Greyfriars church are now situated.

The CITY OF NEW ABERDEEN is a place of great spirit, bustle, and magnificence, every way worthy of its high honours as the seat of an university, the seat of much manufacture and commerce, and the fourth greatest town in all Scotland, and by far the first in the north. It fascinates all strangers, and

does so chiefly by its own power, or through the effects of the industry and the arts of its citizens; for it possesses none of the thrilling brilliance or grand picturesqueness of site and surrounding scenery which distinguishes Inverness, Perth, Stirling, Edinburgh, and so many other famous Scottish towns. The approach to it by sea lies along a bleak sandy coast, with low rocks and long reefs on the foreground, and a tame unfeatured surface on the background, and becomes interesting only at the point of sudden ingress among the crowded shipping of the harbour. The land approach from the south, too, traverses a broad, low, moorish outskirt of the Grampians, and is all utterly dismal till it hursts at once on a near view of the Dee and the city. But the contrast there is most striking; and an impression is instantly produced on an intelligent stranger, which subsequent acquaintance with the place thoroughly confirms, that wonders have been worked by art both within the city and on the surrounding soil. Three interesting walks, of four or five miles each, may be had among the environs. The first goes to Old Aberdeen, and up the Don, past Grandholm and through Woodside, and returns to the city by the Inverness road; the second goes by the Lunatic Asylum, on the north-west side of the city, to the Stocket-hill, where the best view of the city and the surrounding country is obtained, and proceeds thence to the great granite quarries of Rubislaw, and returns by the Skene turnpike road; and the third goes south-westward to the Old Bridge of Dee, and passes down the right bank of the Dee to Girdleness lighthouse, and crosses by the ferry to Footdee.

The first dwelling-houses of Aberdeen were probably a few rude huts near the spot where Trinity church now stands. The ground next occupied was probably in the neighbourhood of the castle and the green; and the town gradually extended in the direction of the Ship-row, the Exchequer-row, and the south side of Castlegate. But in the 14th century the town was almost totally destroyed by an English army under Edward III.; and a grand extension of it then took place over the eminences of Castle-hill, Port-hill, St. Catherine's-hill, and Woolman-bill; and this took the name of New Aberdeen, not in contradistinction to the kirktown of Old Machar, which now bears the name of Old Aberdeen, but in contradistinction to the old town on the Dee which the English had destroyed. Even the new town, however, with the exception of its public structures, was rude and insubstantial; and not till ages after did it acquire any regularity of alignment or urbanity of appearance. In 1545 a stone edifice was considered a mark of great opulence; and so late as 1741 the houses on the west side of the Broadgate were constructed of wood. Westwards of the Gallowgate, there was, till the latter part of last century, a large fenny marsh, called the Loch, which must have occupied a large portion of the north-west quarter of the present city. The very best streets, too, till then and afterwards, were narrow and unlevel, and had no better pavement than a causeway of round stones; and the parts of the town most favourable to drainage and ventilation on the Den-hurn and toward the south-west, were huddlements of houses so chokingly close to one another, and so abominably filthy, as to render it difficult to conceive how they could be ever free from pestilence; and the only egresses to the Dee and to the north were by steep, rough, suffocating thoroughfares, which persons accustomed to the modern conveniences of the city would think it a dire penance to go through. And even to the present hour, indeed, there are remains of this state of

things within the city, in no fewer than about 60 narrow lanes, and no fewer than about 163 courts or closes, of an average breadth of not more than 7 feet.

But about the end of last century a great change began; and it rapidly gave the city grand new features, and at the same time set its finest old ones in advantageous lights. First, a street was opened from Broad-street to North-street, so as to form an improved outlet to the north. Next, Marischal-street was opened from Castle-street to the quay; and, though rather inconveniently steep, it is interesting both for being still a great thoroughfare from the centre of the city to the harbour, and for being the first street in Aberdeen which was paved with dressed stones. Next, a new and important exit to the north-west was obtained by opening George-street through the middle of the loch, to communicate with a new turnpike road to Inverury. Next, two grand new exits were made, from the middle of the town at Castle-street, by respectively Union-street to the south-west, and King-street to the north,—two projects which were estimated by the engineer to cost the town council about £42,000, but which soon actually cost them £171,280, and then involved them in bankruptcy. And contemporaneously with these, and also subsequently, there were other great improvements which we shall have occasion to glance at when noticing the public buildings and the harbour.

The edifices of Aberdeen, both public and private, are for the most part constructed of a very fine granite from the neighbouring quarries; and those of the modern and principal streets are so clean, so massive, so uniformly surfaced, and reflect the light so clearly from the glittering mica of the granite as to look, on a sunny day, as if they had just been hewn and polished from the rocks on which they stand. Union-street is about a mile long, spacious, straight, elegantly edified, well-gemmed with public buildings, and altogether one of the finest streets of the empire; and at the same time runs on a higher level than the portions of the town on its southern flank, and looks over the tops of their houses to a pleasant prospect of the south side of the Dee. It is carried over two of the old streets of the town, and over the ravine of the Den-hurn, which formerly caused vast inconvenience to the thoroughfare; and there it is sustained by a magnificent bridge of three arches,—two of them covered and concealed and of 50 feet each in span, and the other open, 132 feet in span, and surmounted with cornice, parapet, and balustrades. This bridge cost £13,342. St. Nicholas-street leads airily from Union-street to George-street on the north-west. Market-street is wide, short, and moderately steep; leads direct from Union-street to the harbour; and, in 1865, was in process of being built with houses of a superior character. Castle-street is a large oblong square, the Place of the City, rich in public ornamental structures, and taking its name from an ancient fortress which stood on a rising ground on its eastern side. King-street is little inferior in splendour to Union-street, and has also several handsome public buildings. Broad-street is the site of Marischal college; and the house in it, No. 64, was the residence of Lord Byron, while under his mother's care. The other streets do not challenge particular notice, but may be described in the aggregate as at least equal to the second and the third class streets of most stone-built towns in Britain.

The West and East churches stand on the north side of Union-street, amid a cemetery of nearly two acres in area, which is separated from the street by

a very beautiful Ionic façade. The West church is a plain structure, in the Italian style, and contains a stone effigy of Sir Robert Davidson, provost of Aberdeen, who fell at Harlaw in 1411,—a curious brass plate, in memory of Dr. Duncan Liddell, founder of the mathematics chair in Marischal college,—and a fine white marble monument, executed by Bacon, at the cost of £1,200, in memory of a lady. The East church is a masterly and much-admired Gothic structure, nearly after the model of the fine old relic of mediæval architecture which it replaced. The two churches are separated from each other by the original transept of the old church of St. Nicholas, now called Drum's Aisle, in consequence of being the burial-place of the ancient family of that name; and this is surmounted by a square tower and spire, 140 feet high, containing a set of very finely toned bells. In the cemetery lie the mortal remains of the poet of 'the Minstrel,' of Principal Campbell, of the learned Blackwell, and of Dr. Hamilton, the author of a work on the National Debt.—Greyfriars church stands in a court adjacent to Marischal college, behind some lofty houses which separate it from Broad-street; and is a plain ancient Gothic hall, with a modern aisle on its east side. The General Assembly of 1640 was held here; and the town-council, on that occasion, made lavish outlay on the church and otherwise in order to do the assembly honour.—St. Clement's church, at Footdee, is a neat Gothic building of 1828, surrounded by a cemetery. The South church, in Belmont-street, is a Gothic structure of 1831, with massive gables and tower. The North church, in King-street, was built in 1826, at a cost of £10,500, and is an oblong edifice in the Ionic style, with a circular tower 150 feet high. The Free East, West, and South churches, in Belmont-street, form an imposing cruciform pile, with a graceful brick spire. St. Andrew's Episcopal church, in King-street, was built in 1817, at a cost of £8,000, is a handsome sandstone Gothic structure, and contains a statue of Bishop John Skinner by Flaxman. St. Mary's Episcopal church, in Carden-place, was built shortly before 1865, is in the early pointed style, and has a very rich interior. The Independent chapel, in Belmont-street, was built in 1865, at a cost of £3,200, and is in the Romanesque style. The Roman Catholic church, in Huntly-street, is a recent edifice in the early English pointed style, and is extensive and imposing.

The Town-house stands on the north side of Castle-street, and was erected in 1730. It is a plain edifice, containing town-hall, council chamber, and other apartments; and on its east end is an old square tower, now faced up in a very tasteful manner with dressed granite, and is surmounted by an elegant spire of 120 feet in height. The Court-house adjoins the town-hall, and was erected in 1818. A new suite of Municipal and County buildings was projected near the end of 1865; to occupy the site of the Town-house and Court-house, but to retain the tower; to present a frontage of 200 feet to Union-street, and one of 115 feet to Broad-street; and to have, at its southwest angle, a tower 28 feet square, surmounted by turrets and a lofty lantern gablet. The style is French Gothic, intermingled with Scottish baronial; and the estimated cost was £60,000.—The Music-hall buildings are westward of the bridge in Union-street; include the quondam county buildings, erected in 1820 at a cost of £11,500; and have a new splendid hall, added at a cost of £5,000, opened by the late Prince Consort, capable of accommodating nearly 3,000 persons, and containing a very fine organ.—The cross, one of the most beautiful structures of its

kind, stands in the middle of the upper end of Castle-street. It is an hexagonal building, richly ornamented with large medallions of the kings of Scotland from James I. to James VII.; and from the centre springs a splendid column of the composite order, and surmounted by an unicorn bearing on its breast a scuteleon charged with the Scottish lion. It was the work of John Montgomery, a country mason from the village of Old Rayne, and was originally erected in 1686, on the site of a more ancient cross, at the top of a smooth pavement, opposite the entrance of the Court-house, but, in 1842, for the sake of better effect, it was rebuilt where it now stands, with great improvements in style, and on a basement of several feet in height above the level of the street, and surrounded by an iron railing.—A colossal statue of the late Duke of Gordon, formed after a model by Campbell of London, stands about 30 feet in front of the cross, and nearly in the centre of Castle-street. The figure, hewn from a single block of granite, measures, including the plinth, 11 feet 3 inches; and the pedestal, a block of red granite, is 10 feet 3 inches in height.—A bronze statue of the late Duke of Gordon, formed after a model by Campbell of London, stands about 30 feet in front of the cross, and nearly in the centre of Castle-street. The figure, hewn from a single block of granite, measures, including the plinth, 11 feet 3 inches; and the pedestal, a block of red granite, is 10 feet 3 inches in height.—A bronze statue of the late Prince Consort, by Baron Marochitti, stands in a circular recess at the south end of Union terrace, on the west side of Union bridge. It represents the Prince seated, wearing various orders, with a scroll in one hand, and his field-marshal's hat in the other. The statue itself measures 6½ feet in height, and is placed on a pedestal of polished Peterhead granite 8 feet high. The likeness is not considered good. The statue is a memorial one by the town and county of Aberdeen, and was publicly inaugurated on 13 October, 1863, in presence of the Queen.

The Jail is situated immediately behind the Court-house, and was built in 1831. It is 129 feet in length, and 98 in breadth, and contains 69 cells and 6 day-rooms; and within its precincts is a court divided into six compartments, with the turnkey's lodge in the centre.—The West prison stands near the west end of Union-street, and was erected in 1809, at the expense of nearly £12,000. It is a large castellated building, within a square area of nearly two Scotch acres, surrounded by a high enclosing wall, and containing 112 cells, besides two sick-rooms, and 8 small adjoining dormitories, and having attached to it a house occupied by the chaplain, and other accommodations. It has not been used as a prison since 1863, the other jail affording accommodation for all the criminals under confinement.—The Barrack stands on the crest of the Castle-hill, above the Waterloo quay, and was built in 1796. It has an appropriate and commanding appearance, and contains quarters for about 600 men.

The Old Bridge of Dee, though situated about a mile south-west of the landward extremity of Union-street, belongs really to the city, both because it is under the sole management of the town council, and because it is connected with the city by a chain of interesting suburbs; and till quite recently, it was also the line of the only great thoroughfare to the south of Scotland. Bishop Elphinstone left a considerable legacy to build a bridge over the river Dee, near Aberdeen, but died in 1514, before anything was done towards it. Gavin Duubar, son of Sir James Dunbar of Cumnock, by Elizabeth, daughter of the Earl of Sutherland, having succeeded to the bishopric of Aberdeen in 1518, fulfilled his predecessor's intentions, and erected the greater part of the bridge where it now stands, about the year 1530. This bridge having gone into decay, was restored out of the funds belonging to itself, between the

years 1720 and 1724; and again it was widened from 15 to 26 feet, at an expense of £7,250, in 1842; and on the latter occasion, the facing of the enlarged side was carefully taken down and replaced so as to maintain unimpaired the old character of the masonry. The bridge is a fine structure of seven arches; and in the times of the ecclesiastical civil wars, it was the scene of more than one tough contest between the Covenanters and their oppressors.—A suspension bridge, called the Wellington bridge, was, in 1829, erected over the Dee at Craig-lug, 2,600 yards below the old bridge; and is a very splendid structure of 140 feet in span.—The viaduct of the Aberdeen railway across the Dee is one of the most magnificent things of its kind in Scotland, and a fine addition to the many striking architectural features of Aberdeen, but unhappily is so near the Wellington bridge as to make its relative position awkward, and to produce a confusing effect on the spectator. It was erected after a design by Messrs. Locke and Errington, and, from the peculiar difficulties attending its construction over a voluminous, rapid, and shifting river, causing more than one alteration in its foundations, is not the least creditable among the substantial and elegant achievements of modern engineering.—An excellent drawbridge goes across the harbour, opposite the foot of Marischal-street, to a group of small islands now united and called the Inches.

The entrance of Market-street into Union-street is adorned with piazzas. The Market-house stands on the west side of Market-street, and is unequalled, for extent, design, and finish, by any structure of its class in Scotland. It was projected by a joint-stock company, and opened in April 1842. It measures 315 feet in length, 106 feet in breadth, and 45 feet in height; and is divided into a basement floor, a main floor, and galleries, with a wide and deep flight of steps leading down to the first; and is also divided into three alleys by two ranges of massive pillars; and has in its centre a large fountain of finely polished granite.—The Post-office stands on the east side of Market-street, and is a building of 1841, erected with the aid of £2,000 from government.—The Corn-exchange is in Hadden-street, south of Market-street, and consists of a large hall with committee-room; and, except during market-hours on Fridays, the hall is occupied as a public news-room.—The office of the North of Scotland Banking Company stands in Castle-street, adjacent to the east side of the town-house tower, and is an elegant structure of dressed granite, built in 1839 at a cost of £14,000, with a Corinthian portico, in a minuteness and delicacy of execution which no previous granite building ever displayed.—The office of the Union Banking Company stands in the same street, on the opposite side, and is a chaste handsome building.—The Athenæum or Public Newsroom, stands at the west end of Castle-street, and is an elegant structure, erected in 1822. It is liberally supplied with newspapers and periodicals.—A handsome club-house, on the same principle as the London clubs, is in Market-street.—The Aberdeen Town and County Bank stands at the junction of St. Nicholas-street with Union-street; was erected in 1863, at a cost of £14,000; is a splendid edifice, in the Roman classic style; and has a telling-room, surmounted by a fine dome, beautifully lighted, and altogether one of the finest rooms of its kind in Scotland.—The Advocates' hall is in Union-street, west of the churchyard.—The Commercial Bank and the County Record office are in King-street.—The theatre is in Marischal-street.—The chief hotels of the city are the Royal, Douglas's, St. Nicholas, the Lemon-Tree, Forsyth's Temper-

ance, the Queen's, the Adelphi, and the City; and, in a general view, they are situated pretty near the centre of the town.

The Infirmary is a large, modern, splendid Grecian building, erected at different dates, and at a great expense. It consists of a centre and two wings, and contains accommodation for 210 patients. It has twenty large, lofty, well-aired wards, and eleven smaller apartments for cases requiring separate treatment; and contains every kind of convenience which can be found in the most approved hospitals in the empire. Behind the main hospital, and within the grounds, are a convalescent hospital, and accommodation for fever patients; also a pathological museum, under the superintendence of a well-qualified curator. The students of the Aberdeen medical school, who have in late years taken a very high rank in competitions for army medical appointments, walk the hospital; and several of the professors are Infirmary physicians and surgeons.—The Lunatic Asylum stands about half-a-mile north-west of the city; has grounds extending to about 45 acres, tastefully laid out and richly wooded; and has been constituted a district asylum for the county of Aberdeen. The main building was erected in 1819, at a cost of £13,135; of which £10,000 was a bequest by John Forbes of Newe; but, with the exception of that bequest, it was built, and has been maintained, by public contributions. A new building, called Elmhill House, for private patients, was erected in 1862, at a cost of £20,000; and is a handsome edifice in the Italian villa style, with its rooms comfortably and even elegantly fitted up in the manner of a private mansion. The pleasantly retired situation of the buildings, and the high professional character of the resident medical superintendent, Dr. Jamieson, have secured for the asylum a large measure of public favour and support. The average number of patients during the year 1864-5 was 360. The Hall of the Medical Society stands in King-street. It was built in 1820, and contains a large library and a museum.

The Grammar School has long held a high place among the institutions of Aberdeen, both for its antiquity and for the character of the education given within its walls. It can be traced back as far as 1418; and, under its modern rectors, particularly the late Dr. Melvin, one of the first Latinists of his day, it has enjoyed a high reputation as a classical school. Till 1863, its buildings, which were of a very unpretentious character, stood in School Hill; but in that year, under the auspices of Sir Alexander Anderson, Lord Provost, to whom the city owes many of its improvements, a new edifice was built in Skene-street-west, at a cost of £15,000; and this is a very handsome structure, in the old Scotch baronial style, with fine public school and superior class-rooms. The course of instruction also has been expanded. While formerly there were only a rector and three classical masters, there are now likewise teachers of mathematics, of English, and of modern languages; and the curriculum extends over five or alternately six years.—Gordon's Hospital confronts the School Hill. This is an institution of similar origin and character to Heriot's Hospital in Edinburgh. It comprises a handsome central building, erected in 1739 at the expense of £3,300, and two wings, with neat connecting colonnade, erected in 1834, at the expense of about £14,000, and has a lawn in front. Robert Gordon, merchant in Aberdeen, by deed of mortification, of date 13th December, 1729, and 19th September, 1730, founded this hospital for the maintenance and education of indigent boys, being the sons and

grandsons of burghesses of guild of Aberdeen, or the sons and grandsons of tradesmen of the burgh, being freemen or burghesses thereof; and for the purposes of it he assigned his whole estate, personal and real, to the magistrates and the four ministers of Aberdeen, whom he appointed perpetual patrons and governors of the hospital. There are at present 150 boys maintained and educated in this institution. Boys must not be under 9 years of age when admitted; and must leave at 16, when they are put to proper trades, under the direction of the governors. The funds were enlarged by a great bequest in 1816 from Alexander Simpson, Esq. of Collichill; and they now amount to about £60,000.—The Female Orphan Asylum or Orphan Girls' Hospital stands on the west side of the city. It is an institution for girls similar to what Gordon's is for boys; and owes its origin and maintenance to a gift of £26,000, in 1836, by Mrs. Elmslie, then a widow lady residing in London, but a native of Aberdeen. The Free Church college, in Alford-place, near the Orphan asylum, was built in 1850, at a cost of £2,000, and is an edifice in the Tudor style, with a square tower and an octagonal turret.

The other institutions of Aberdeen, educational, benevolent, religious, literary, and miscellaneous, are very many and various, and do great honour to the city. The chief are the mechanics' institution, in Market-street, with excellent library, several free schools, several largely endowed schools, several partially endowed schools, a boys' hospital, a girls' hospital, Carnegie's female orphan hospital, male and female industrial schools, a house of refuge, a mechanics' institution, a trades' hospital, a deaf and dumb institution, an asylum for the blind, a magdalene asylum, a number of mortifications and funds for behoof of the poor and the sick and the aged, a ladies' working society, a clothing society, a sick man's friend society, an aged and indigent females' society, a general dispensary, a savings' bank, a seamen's friend society, many missionary, tract, and Sabbath-school societies, five public libraries, several subscription libraries, a medical society, an advocates' society, a shipmasters' society, and the Royal Northern agricultural society.

But immensely the grandest institution, while it existed as a separate institution, was Marischal college. This was founded by George Keith, fifth Earl-Marischal, in April 1593. According to the deed of foundation, it was to consist of a principal, three teachers denominated regents, six alumni, and two inferior persons, viz., an economist and a cook. The principal was required to be well-instructed in sacred literature, and to be skilled in Hebrew and Syriac; he was also to be able to give anatomical and physiological prelections. The first regent was specially to teach ethics and mathematics; the second, logic; the third, Latin and Greek. The Earl reserved to himself and his heirs the nomination to professorships; the examination and admission of the persons so named being vested in the chancellor, the rector, the dean of faculty, and the principal of King's college, the ministers of new Aberdeen, and the ministers of Deer and Fetteresso. The foundation was confirmed by the General Assembly which met in the same month in which it was framed; and a few months after a confirmation was given by parliament. A charter of confirmation was granted by William, Earl-Marischal, in 1623; and a new confirmation by Charles II., in 1661. In all these charters, however, it was specially declared that the masters, members, students and bursars, of the said college, should be subject to the jurisdiction of the burgh-magistrates. An

additional regent was appointed within a few years after the institution of the college; a professorship of divinity was founded in 1616; and a mathematical professorship three years before. In 1753, the Senatus academicus directed that the students after being instructed in classical learning, should be made acquainted with natural and civil history, geography, chronology, and the elements of mathematics; that they should then proceed to natural philosophy, and terminate their curriculum by studying moral philosophy. This plan of study, with a few alterations, was afterwards continued; and seven other professorships, at different periods subsequent to that of divinity, were added.

Marischal college, as noted in our account of Old Aberdeen, has, under the University act of 1858, been united with King's college into one university, with a new constitution. The library, in 1827, contained 11,000 volumes; and the principal and professors had a right, under a decision of the Court of Session in 1738, to the use of the books transmitted from Stationers' hall to the library of King's college. Since 1827, the Marischal college library has been considerably enriched, having received, among other gifts, the valuable classical collection of the late Dr. James Melvin. Among the most eminent alumni of Marischal college were Gilbert Burnett, afterwards bishop of Salisbury, who took his degree of M.A. here in 1657; James Gregory, the inventor of the reflecting telescope; George Jameson, the father of painting in Scotland, and who has been called the Scottish Vandyke; Dr. Arbuthnot, the friend of Pope; Colin Maclaurin, the mathematician; and Dr. Reid, the metaphysician.

The original buildings of Marischal college were those of the Franciscan convent. A new edifice, retaining with it some of the old, was erected in the latter part of the 17th century; and an extension of it to supersede the retained parts of the old, was built in 1740-41. But the whole was insubstantial and in constant need of repair; and it was replaced, on the same site, in 1837-41, by a very extensive and most imposing pile, erected partly by subscription but chiefly by grant from government, at an expense of £21,420. This new structure is built of the very hard and durable white granite quarried in the vicinity, and is in a simple and bold style of the collegiate Gothic architecture, to suit the capabilities of the material. It forms three sides of a quadrangle, rises to the height of two lofty stories, and presents uniform and striking ranges of mulioned windows. A square tower rises from the centre, and terminates in four ornamented turrets at the height of about 100 feet from the ground. Open arcades extend on both sides of the principal entrance, 48 feet long and 16 feet wide. The public school is on the ground floor, 74 feet long and 34 feet wide; and a lofty staircase, with a ceiling of enriched groins and a massive stone balustrade, leads to the hall, 71 feet by 34, and to the library and the museum, each 75 feet by 34, and all 32 feet high, with ornamental ceilings painted in imitation of oak. There are also seventeen class-rooms and a number of other apartments. An obelisk stands in the area of the quadrangle, with base 16 feet square and 6 feet high, pedestal 9 feet square and 11 feet high, plinth 7 feet square and 3 feet high, shaft from 5 to 3½ feet square and 52 feet high, all of polished Peterhead granite; erected in 1860 to the memory of Sir James M'Grigor, Bart., who was several times rector of the college, and 36 years director-general of the army medical department.

The principal manufacture of Aberdeen, prior to the year 1745, was knitted stockings, which were mostly exported to Holland, and thence dispersed

through Germany. The linen manufacture was subsequently introduced, and now employs between 2,000 and 3,000 hands. The articles chiefly manufactured are thread, sailcloth, osenaburghs, brown linens, and sacking. The manufacture of sailcloth only commenced in 1795.—In the beginning of last century, the woollen manufactures of Aberdeenshire were chiefly coarse slight cloths, called plaidens and fingrons, which were sold from 5d. to 8d. per ell, and stockings from 8d. to 2s. 6d. per pair. These were manufactured by the farmers and cottagers from the wool of their own sheep, and by the citizens from wool brought to the market from the higher parts of the country. These goods were mostly exported to Hamburg. Blankets, serges, stockings, twisted yarns, and carpets, are now manufactured. There were, in 1838, 1,000 looms employed on linen, of which four-fifths were in factories, 130 on cotton, and 300 on woollen carpets. The number of linen and cotton looms has since greatly diminished, and the woollen manufacture has increased. The latter includes the manufacture of winceys, for which Aberdeen has, of late years, obtained a distinguished reputation. Banner mill, which employs about 650 hands, is now the only cotton mill. Wincey-weaving gives employment to several hundreds of persons. Messrs. Hadden and Sons employ about a thousand in woollen manufacture; and Messrs. Crombie, at Grandholm mills, about seven hundred. There are several breweries; and porter and ales in considerable quantities are annually exported to America and the West Indies. There are also several distilleries. There are likewise, at Ferryhill, Foot-dee, &c., extensive iron-works, at which steam-engines, anchors, chains, cables, and all kinds of machinery are manufactured. Ship-building has long been extensively and successfully carried on; and the invention of the famous "clipper bow" was the work of one of the local firms, the Messrs. Hall. Seven firms, including one newly commenced in 1865, are engaged in iron ship-building; and, during the year ending in May, 1865, eleven vessels of aggregately 8,385 tons were launched, while thirteen others were in progress. The cattle and meat trade has become very extensive; and the computed value of live stock and dead beef and mutton, forwarded to the southern markets, chiefly London, is about £1,000,000 a-year. Rope-making, paper-making, and the manufacturing of soap, combs, and leather are also carried on; and there is a large and increasing trade in the exportation of corn, butter, and eggs to London. Salmon fishing is also carried on to a great extent, the fish being principally sent to London packed in ice. Aberdeen salmon appear to have been exported to England so early as 1281. Towards the end of the 17th century, Aberdeen annually exported 360 barrels of 250 lbs. each to the continent. From 1822 to 1828, inclusive, being a period of seven years, 42,654 boxes of salmon, chiefly the produce of the Dee and the Don rivers, but including some Spey salmon, were shipped at Aberdeen; and from 1829 to 1835, inclusive, 65,260 boxes. The salmon fishings, however, have somewhat declined. Whittings, or finnocks, and haddocks are also taken, and made an article of trade to the London market. See articles *DEE* and *DON*. In 1819 the feu-duties of the whole fishing amounted to £27 7s. sterling, and it was stated in the House of Commons committee that they were then worth £10,000 per annum. The granite quarries near Aberdeen, which have contributed so much to the decoration of the town, afford also a staple commodity for exportation. The freight to London is about 8s. per ton; and the

vessels in returning generally bring coals from Sunderland.

The banks in Aberdeen are the head offices of the Aberdeen Town and County Bank, and the North of Scotland Banking Company, an office of the Union Bank, with which is now incorporated the old Aberdeen Bank, and branch offices of the Bank of Scotland, the British Linen Company, the Commercial Bank, the National Bank, the Royal Bank, and the City of Glasgow Bank. Four newspapers are published in Aberdeen—the Aberdeen Journal every Wednesday, the Aberdeen Herald every Saturday, the Aberdeen Free Press every Tuesday and Friday, and the Northern Advertiser every Tuesday. The Aberdeen Journal is the oldest of these, and was established in 1746. Aberdeen almanacks have long been celebrated. It appears that these useful manuals were printed here so early as 1626—and probably some years earlier—by Edward Rahan, a printer originally from St. Andrews. A club, called the Spalding Club, and constituted similarly to the Bannatyne Club of Edinburgh, was formed a good many years ago in Aberdeen for printing select and curious historical and literary remains of the north-east of Scotland. Aberdeen contains the head offices of the Scottish Provincial Assurance Company, and the Northern Assurance Company, and agency offices of not fewer than about 40 other insurance companies. A weekly grain market is held on Friday. A linen market is held on the Green on the last Wednesday of April; a wool market is held in the same place on Thursday and Friday of the first week of June and of the first and second weeks of July; a market for wooden utensils is held in Castle-street on the last Wednesday of August; but none of the markets, except the weekly one, is now of importance. Hiring markets are held in Castle-street on several Fridays about the Whitsunday and Martinmas half-yearly terms.

The chief communications are by the North-eastern, the Deeside, the Great North of Scotland, the Aberdeen and Banff, and the Formartine and Buchan railways. A junction between the North-eastern and the Deeside is at Ferryhill; but a junction between these on the south and the others on the north seemed long to be unattainable, and was for a good many years a subject of discussion. The distance between the Northeastern's terminus at Guild-street, at the top of the harbour, and the Great North's terminus at Waterloo-quay—a distance of one-eighth of a mile, along crowded quays, with no means of transit but by omnibus—was felt, especially by through travellers, to be very inconvenient. Numerous plans to effect a junction were tried and relinquished. But at length, in June, 1865, under the powers of the Denburn Junction Railway act, a junction railway from the North-eastern above the terminus to the Great North's Kittybrewster station, was begun to be formed, and was to be completed in two years. This is a mile and three-quarters long; it goes up the valley of the Denburn, under Union-bridge, and is taken by one tunnel under Woolmanhill, and by another under Maberley-street; and, owing to the necessity of purchasing valuable property on its route, it was computed to cost probably not less than at the rate of £100,000 per mile.

In 1656, when Tucker visited Scotland, there were 9 vessels belonging to Aberdeen, of a total burden of 440 tons; in 1839, the vessels belonging to the port of Aberdeen, as distinct from those of Peterhead, Stonehaven, and Newburgh, amounted to 254, of 30,032 tons; and in 1864 there were 251 sailing vessels of aggregately 77,440 tons, and 16 steam

vessels of aggregately 3,373 tons. In the year ending 30th September, 1852, 2,194 vessels entered the port, having an aggregate tonnage of 298,418; and in the year ending 30th September, 1864, 2,380 vessels entered, having an aggregate tonnage of 372,230. The imports, in 1864, comprised 176,980 tons of coal, 96,445 bolls of lime, 2,370 tons of flax and tow, 562 tons of hemp, 790 tons of wool, 26,487 loads of wood, 2,265 qrs. of oats, 37,230 qrs. of wheat, 13,038 sacks of flour, 2,521 tons of salt, 9,905 tons of iron, 10,863 tons of bones, and 6,046 tons of guano, besides other goods; and the exports, in the same year, comprised 22,638 b. b. of flax-manufacture, 107 h. h. of cotton manufacture, 6,184 b. h. of woollen-manufacture, 185,298 qrs. of oats, barley, and bear, 99,035 bolls of oatmeal, 4,021 cattle, 153 horses, 7,913 sheep and lambs, 2,745 pigs, 18,007 cwt. of pork, 38,781 tons of granite-stones, 20,826 Scotch pine timber, 1,059 cwt. of butter, 5,115 h. b. of eggs, and 807 h. b. of salmon. The amount of customs, in 1862, was £92,963; in 1863, £82,838. All the coast trade northward to Thurso, Stornoway, and Lerwick, and southward to Granton, Newcastle, Hull, and London, is mightily facilitated by powerful steamers.

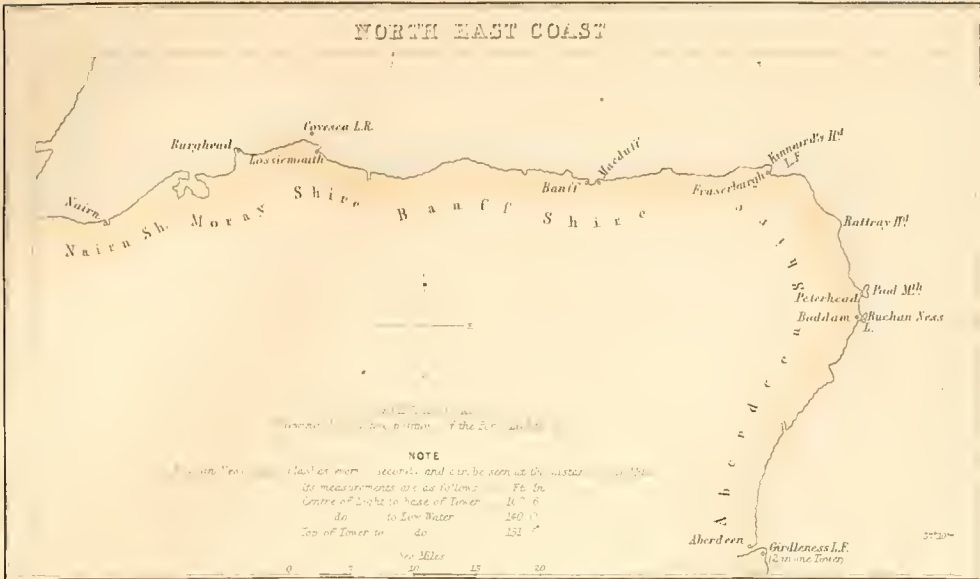

The harbour of Aberdeen was originally nothing more than an expanse of water, communicating with the sea by a narrow and shallow mouth; and the earliest artificial erection within the port was a hulwark extending from the Ship-row southward. In 1607, the erection of a pier on the south side of the channel was begun; in 1623, the extension of the wharf to near the present canal was commenced; in 1775, the new pier was begun; and from 1810 till about 1862, a series of vast improvements was effected at an aggregate cost of about £500,000, making the harbour of Aberdeen one of the most commodious in Scotland. The chief features have been an extension of the pier to the length of 900 feet, the construction of a breakwater on the opposite side to the extent of 800 feet, the erection of wharfs on the south-west side of Footdee, the enlarging of the old pier opposite Torrie, the extension of the old quay westward, the embanking of the Inches and converting them into quays, the forming of the massive Waterloo quay where the large steamers are berthed, and the forming within a reach of the river a set of magnificent wet docks. In 1864 the shore dues amounted to £23,983; the total income of the harbour to £30,723; and the total expenditure to £17,593, leaving a clear surplus of £13,226. In 1852 the debt on the harbour-trust stood at £282,173; in 1864, by the application of surplus revenue to its liquidation, it had been reduced to £188,200.

The town council of New Aberdeen consists of 19 members, including a provost, four bailies, and a dean of guild. The corporation became bankrupt in 1817; and the average annual revenue for the five years preceding Michaelmas 1832 was £15,184, the total average annual expenditure £17,528. The town's affairs are now rapidly retrieving, under the management of a popularly elected magistracy. The real property of the city was valued in 1858 at £179,072; and the corporation revenue in 1863-4 was about £11,376. The lighting and watching are under the charge of commissioners; and the general police is regulated by an act passed in 1862. The gas works are situated in the Footdee district. The supply of water, for a good many years, was obtained by pumping from the river at the Bridge of Dee. The continued growth of the city, however, made the supply altogether inadequate; and, in 1862, the Commissioners of police obtained powers for carrying out a scheme to supply water by gravitation. Plans were prepared by James Simpson, C. E.,

London, to form an aqueduct 22 miles in length, with intake of water at Cairnron on the Dee, at an elevation of 210 feet above high water at Aberdeen docks. The aqueduct passes from the intake through a rocky tunnel half-a-mile in length, on to a reservoir capable of containing 15,000,000 gallons at Invercannay a mile onward. There are also, at the lower end, near Aberdeen, a reservoir of the capacity of 6,000,000 gallons, at an elevation of 161 feet above sea-level at the docks, and one of less capacity on a higher level to supply the higher districts of the town. The construction of the works was undertaken by Mr. Easton Gihb for £103,999. They were begun in the spring of 1864, and were to be finished in two and a half years; and they will amply supply the city with water. The act for them also gives powers to carry out, for the city, an improved system of sewerage. The city is well situated for effectual drainage; hut, except in a few of the principal streets, built within the present century, it has no large common sewers. The only cemeteries within the city are those of St. Nicholas and St. Clement; and these are being forsaken for cemeteries in the suburbs. Overcrowded dwelling apartments are not uncommon. The trades' corporations in the city are the bammermen, the tailors, the bakers, the wrights, the cordwainers, the weavers, and the fleshers; and they possess valuable funds, belonging partly to the general body, and partly to each corporation. The general funds include Trades Hospital, which, in 1864, yielded a revenue of £1,400, the proceeds being divisible among old men members of the craft, and the widows' fund, yielding a revenue of £900. The gross yearly revenue of the separate funds amounts to not less than £6,000; and there are also school and bursary funds. The sheriff court for the county is held in the court-house in Aberdeen on Wednesdays and Fridays, the small debt court on Thursdays, and the Commissary court on Wednesdays, at 10 o'clock; and the general quarter sessions are held there on the first Tuesday of March, May, and August, and on the last Tuesday of October. The burgh of New Aberdeen formerly united with Montrose, Brechin, Arbroath, and Bernie to send a member to parliament; but the present parliamentary burgh of Aberdeen, which includes all the parish of Old Machar south of the Don, and a very small part of the parish of Banchory-Devenick, sends a member for itself. The constituency of the royal burgh in 1861, was 2,701; in 1864, 2,825. The constituency of the parliamentary burgh in 1861, was 3,586; in 1865, 4,005. The population, in 1861, of the entire royal burgh, was 54,376; of the part of it within Old Machar, 12,514; of barracks, prison, hospitals, and other institutions, 1,971. Houses of the whole, 3,869; of the Old Machar part, 1,158. The population of the parliamentary burgh, in 1831, was 58,019; in 1841, 63,262; in 1861, 73,805. Houses, 5,917; rooms with one or more windows, 48,073; separate families, 18,743. The population in 1861, of Ferryhill, within the parliamentary burgh, was 947; of Woodside, 3,724; of hospitals and other institutions beyond the royal burgh, 688. The annual value of real property in the parliamentary burgh, in 1857-8, was £179,072; in 1864, £216,616 11s. 9d.; in 1865, when the harbour had for the first time been put upon the roll, about £226,616.

The name Aberdeen is of disputed origin; and, in former times, it was spelt variously Apardion, Aberdoen, Aberdeyn, Aherden, and Habyrdinc. A charter by William the Lion is the town's oldest extant municipal document; and a second by the same monarch granted to the burghesses exemption from

olls and customs throughout the whole kingdom. King William's successors frequently resided here, and had a palace which stood upon the site of the present Trinity church and Trades hospital, in the Shiprow. On the 14th of July, 1296, Edward I. of England entered Aberdeen, where he remained five days and received the homage of the bishop and dean, and of the burgesses and community. An English garrison thenceforth for twelve years held possession of the town; but at length the citizens silently waxed hot in the cause of Bruce, and rose suddenly at night in a well-planned insurrection, with the watch-word "Bon-Accord," and captured the castle and massacred the garrison. King Robert Bruce, in the 14th year of his reign, made a gift and conveyance to the community of Aberdeen of the royal forest of Stocket; and besides this, he granted various other privileges and immunities to the citizens and burgh of Aberdeen, and in particular the valuable fishings in the Dee and Don. In 1333, Edward III. of England having sent a fleet of ships to ravage the east coast of Scotland, a body of English landed and attacked by night the town of Aberdeen, which they burnt and destroyed. In 1336, Edward having invaded Scotland, and led his army as far north as Inverness, the citizens of Aberdeen attacked a party of the English forces which had landed at Dumottar, and killed their general. In revenge, Edward, on his return from Inverness, attacked Aberdeen, put the greater part of the inhabitants to the sword, and again burnt and destroyed the town. Soon after this, as already related, the town was rebuilt, and considerably enlarged; and in the re-edification of it, the citizens were greatly assisted by King David Bruce, in acknowledgment of their steady loyalty and attachment both to himself and to his father. David II. resided for some time at Aberdeen, and erected a mint here, as appears from some coins still extant. In 1411, at the battle of Harlaw, the citizens of Aberdeen turned the fortunes of the day against Donald of the Isles; and, in 1547, they fought with equal gallantry but less success at Pinkie. In the early part of the year 1560, the Reformation obtained a permanent footing in Aberdeen. Adam Heriott was the "first minister of the true word of God in Aherdene." He died in 1574. During the civil wars of the 17th century, Aberdeen suffered much between the two contending parties; for whichever of the two happened to be in possession of the town levied heavy subsidies from the citizens. In September 1644, the Marquis of Montrose, with an army of about 2,000 men, approached Aberdeen, and summoned it to surrender; but the magistrates after advising with Lord Burley—who then commanded in the town a force nearly equal in number to the assailants—refused to obey the summons; upon which a battle ensued within half-a-mile of the town, at a place called the Crabstone, near the Justice-mills, in which Montrose prevailed, and many of the principal inhabitants were killed. "There was little slaughter in the fight," says Spalding, "but horrible was the slaughter in the flight fleeing back to the town." "Here it is to be remarked," adds the worthy Commissary-clerk, "that the night before this field was foughten, our people saw the moon rise red as blood, two hours before her time!" Charles II. landed at Speymouth, July 4, 1650, and visited Aberdeen a few days after. He revisited the city in February 1651, after the defeat of his hopes at Worcester and Dunbar; and in September 1651, General Monk's army took possession of Aberdeen. On Sept. 20, 1715, the Chevalier was proclaimed at the cross of Aberdeen; and three months afterwards, he passed through the town in person; but he did not receive here any effectual sup-

port. On Sept. 27, 1745, the Pretender was proclaimed at Aberdeen by the chamberlain of the ducal family of Gordon, and a party of troops in his service held possession of the town from a few weeks after that event till the approach of the royal army under the Duke of Cumberland.

The plague raged in Aberdeen in 1401, 1498, 1506, 1514, 1530, 1538, 1546, 1549, 1608, and last in 1647, when, out of a population of about 9,000, it carried off 1,760 persons. Cholera visited Aberdeen in August 1832; but the number of cases was only 260, and the number of deaths 105,—and these chiefly in Footdee and the east end of the city.—From 1336, when the town was last burnt, to 1398, it does not appear that any public records were regularly kept here; but from the last-mentioned period to the present day, (except for about twelve years in the beginning of the 15th century,) there is a regular and uninterrupted series of records in the town's chartulary. The county-records do not reach a more remote date than 1503.—Aberdeen gives the title of Earl to a branch of the ancient family of Gordon. Sir George Gordon of Haddo was executed, in 1644, at Edinburgh, for his adherence to the cause of Charles I. Sir John, his eldest son, who was restored to the baronetage and estates after the Restoration, was succeeded by his brother George, who was created chancellor of Scotland, and earl of Aberdeen, in 1682. George, the fourth earl, succeeded in 1801; and was created Viscount Gordon of Aberdeen, peerage of the United Kingdom, in 1814. George, the sixth and present earl, succeeded in 1864.

ABERDEEN. One of the eight districts of Aberdeenshire. It forms the lower part of the basins of the Dee and the Don, together with the seaboard northward to Foveran; and it comprehends the parishes of Old Machar, St. Nicholas, Bellhelvie, Dyce, Fintray, Kinnellar, New Machar, Newhills, Peterculter, and Skene, and part of the parishes of Drumoak and Banchory-Devenick. Population in 1831, 69,778; in 1861, 88,265. Houses, 8,423.

ABERDEEN AND TURRIFF RAILWAY. A railway in Aberdeenshire, northward from a junction with the Great North of Scotland at Inverness to Turiff. It was authorized on 15th June, 1855, and opened on 5th September, 1857. It is 18 miles long, and has stations at Wartle, Rothie, Fyvie, and Auchterless. Its receipts till 31st August, 1863, were £85,290 on shares, and £39,900 on loan; its expenditure, £148,447. It was incorporated originally as the Banff, Macduff, and Turriff Junction, with design of being prolonged northward to Banff and Macduff; and it took its present name on 19th April, 1859. A prolongation of it to Banff and Macduff, under the name of the Banff, Macduff, and Turriff Extension, was authorized on 27th July, 1857, and opened on 4th June, 1860; and this is 11½ miles long, and has stations at Plaidy and King-Edward; and the receipts of it till 31st August, 1861, were £49,872 on shares and £27,000 on loan, the expenditure, £81,724. The two railways are practically one, and are often called the Aberdeen, Turriff, and Banff railway.

ABERDEEN CANAL. A quondam canal from the harbour of Aberdeen, up the valley of the Don, to Inverury. It was projected in 1793, but not opened till 1807. It cost £44,000; did not prove very compensating; and was sold to the Great North of Scotland railway company for £39,272, and superseded.

ABERDEEN RAILWAY. A railway authorized in 1845, and now forming the northern part of the Scottish North-eastern railway. It goes from the city of Aberdeen south-south-westward to the centre of Forfarshire. The formation of it encountered great difficulties, suffered some tantalizing

delay, and cost an amount of money far exceeding the original estimate. But the work was opened, over all its length and with favourable prospects, on the 30th of March 1850, and cost a good deal less per mile than either the Scottish Central, the Edinburgh, Perth, and Dundee, the North British, or the Caledonian. It commences at Guild-street, adjacent to the upper dock and to the foot of Market-street, 700 yards west of the terminus of the Great North of Scotland railway; and has connexion with that terminus, and with the intermediate wharves, by rails along the quays, worked by horse-traction. It crosses the Dee at Polmuir by an elegant viaduct, noticed in our account of the city; and it proceeds by the stations of Cove, Portlethen, Newtonhill, and Muchalls, to Stonehaven; and thence goes through the fertile district of the Mearns, by the stations of Drumlithie, Fordoun, Laurencekirk, Marykirk, and Craigo, to the north border of Forfarshire; and there, at Dubton and at Bridge of Dun, it sends off two branches, the one 3 miles and 160 yards eastward to Montrose, the other 3 miles and 862 yards westward to Brechin. It thence proceeds by the station of Farnell Road, sends off a branch of 1 mile and 1,547 yards in length to Guthrie, and forms a junction with the Arbroath and Forfar railway at Frickeheim. That railway, which had previously been formed, was leased to it in 1848, and became ultimately incorporated with it. The Aberdeen itself and the Scottish Midland Junction were amalgamated with each other in 1856, under the name of the Scottish North-eastern. The length of the Aberdeen, from its northern terminus to Frickeheim, exclusive of branches, is 49 miles; and the aggregate length of the Scottish North-eastern system is 138 miles. The total consolidated capital of the company, at 31 July 1865, was £2,826,192.

ABERDEENSHIRE, an extensive county on the north-east coast of Scotland; bounded on the north and east by the German ocean; on the south by the counties of Kincardine, Forfar, and Perth; and on the west by Inverness-shire and Banffshire. Its outline is very irregular. It extends about 86 miles in length, from Cairneilar, or Scarscoch, the south-west point of Braemar, where the counties of Inverness, Perth, and Aberdeen meet, to Cairnbulg, a promontory forming the eastern point of the bay of Fraserburgh on the north-east; and about 47 miles in breadth, from the mouth of the Dee on the east, to the head-springs of the Don, on the skirts of Banffshire, on the west. It is the fifth Scottish county in point of area, and the third as respects population. The extent of sea-coast is about 70 miles. The circumference is about 280 miles. The area has been estimated at 1,970 square miles, or 1,260,625 acres. The county comprehends the districts of Aberdeen, Alford, the greater part of Deer or Buchan, Ellon, Garioch, Kincardine O'Neil, Strathbogie, and Turriff. In ancient times its recognised divisions were Buchan on the north; Mar on the south-west; and Formartin, Garioch, and Strathbogie in the middle. The Farquharsons, Forbeses, and Gordons, are the principal septs of this district of country. The Taixai or Tazali were the possessors of the soil in Roman times.

The south-western parts of this county are extremely rugged and mountainous; towards the east and north-east the country is mere level. About two-thirds of the entire surface are covered with mountains, hills, moors, and mosses. The principal mountains are Ben Macdhu, 4,390 feet; Cairntoul, 4,245; Ben-Aven, 3,967; Loch-nagar, 3,777; Ben-Uarn, 3,589; and Scarscoch, 3,402. The general scenery of the county is cheerless and bleak; yet many picturesque groups of landscape, variously

beautiful and romantic and grand, occur around some of the larger towns and along the courses of the large rivers. The shores are generally hold and rugged, occasionally rising into lofty precipices, and scooped out into extensive caverns. Immediately to the north of Aberdeen, however, there are extensive sand-flats.

Large forests of natural wood occur in some of the interior districts, especially in Braemar, Glentanner, and Mortlach. In these regions "the mountains seem to be divided by a dark sea of firs, whose uniformity of hue and appearance affords inexpressible solemnity to the scene, and carries back the mind to those primeval ages when the axe had not yet invaded the boundless region of the forest." The Scotch fir is very generally distributed, and reaches an elevation in this county of 2,000 to 2,300 feet. At Invercauld there is a tree of this species measuring 23 feet in girth at the soil; another in Mar forest measures 22 feet 4 inches; and other two in the same locality 19 feet. The best specimens in the eyes of a timber merchant occur at Aboyne. The larch is also a general tree in this county, rising from sea-level to 1,800 feet.

The climate is on the whole mild, considering its northern situation; the winters are not so cold, nor the summers so warm or so long, as in the southern counties. The mean temperature at Aberdeen, from nineteen years' observation by the late Mr. Innes, is $47^{\circ} 1$; at Buchanness, from registers for 1834-5-6, $47^{\circ} 3$; at Alford, 26 miles inland, and 420 feet above sea-level, $40^{\circ} 03$. Generally the mean of the three summer months is about 10° higher than that of the whole year; and the mean of winter as much below.

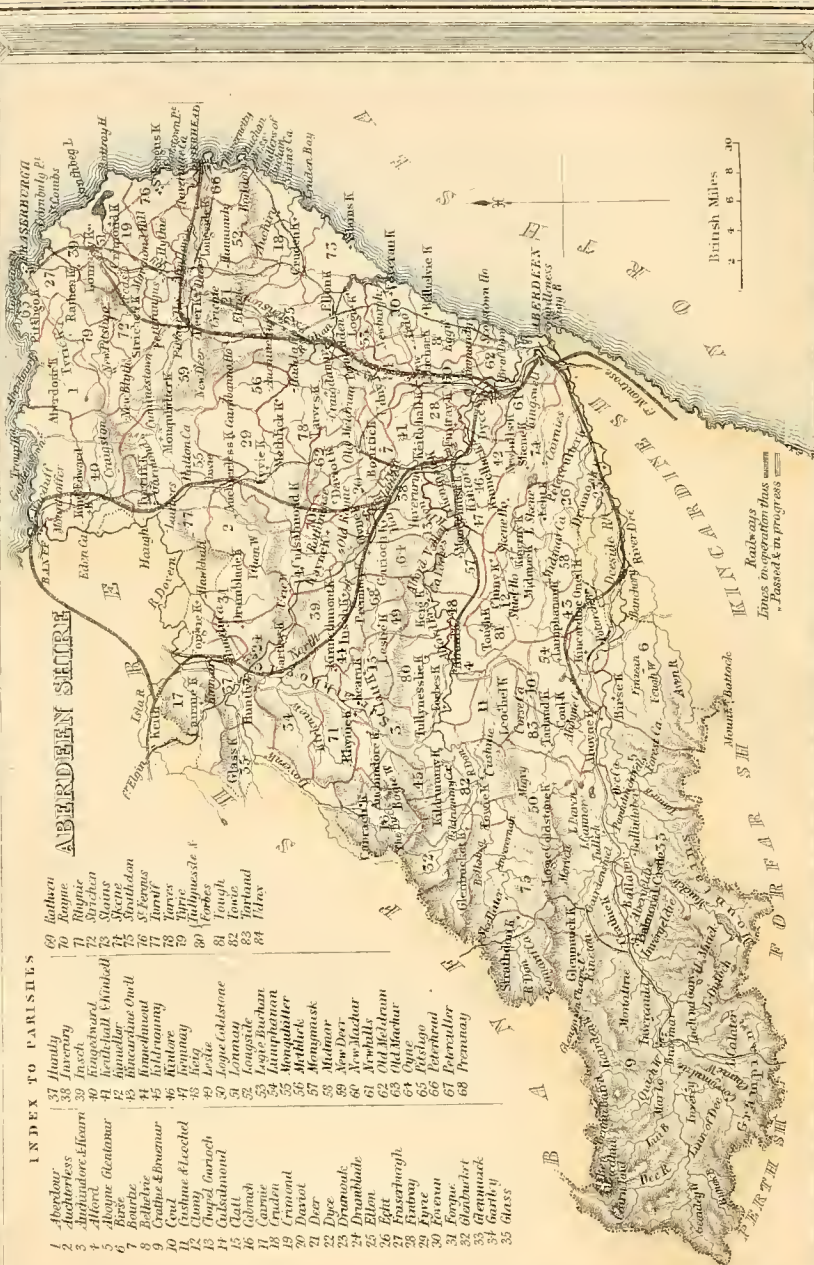

With regard to mineralogy, this county is not peculiarly rich. The granite quarries are its most valuable mineral treasures. The ordinary granite of Aberdeenshire is a small grained stone of the common ternary compound of quartz, felspar, and mica. Sometimes it passes into greenstone of the trap family, and sometimes into basalt. It forms the great mass of the Grampian chain. All the quarries around Aberdeen are of white granite with a bluish tint. The granite quarried near Peterhead is of a red colour, and of much larger grain than that of Aberdeen. There are several quarries in the parish of Aberdour which yield excellent millstones; a quarry of blue slate is wrought in the parish of Culsalmond; and a vein of grey manganese exists in the neighbourhood of Old Aberdeen. In the parish of Huntly there are indications of metallic ores; and plumbago, or black lead, has been discovered here. Aberdeenshire abounds with limestone; but, owing to the scarcity of coal, it cannot be wrought to much advantage, except near a seaport. Small pieces of amber have been found on the Buchan coast; and Camden has an apocryphal story of a piece the size of a horse baving been found on that coast! In the parish of Leslie, a beautiful green amethyst, with white and grey spots, is found in considerable quantities. It is easily wrought into snuff-boxes and other ornaments. Amethysts, beryls, emeralds, and other precious stones, particularly that species of rock-crystal called Cairngorm stone, are found in the Crathie mountains; and a variety of a fine polish and beautiful variety, on the shore near Peterhead. From Beny-board, on the estate of Invercauld, large specimens of rock-crystals have been obtained; and one of these, in the possession of the proprietor of Invercauld, is nearly two feet in length. Besides these, asbestos, talc, cyanite, and mica occur.

The mineral waters of Peterhead in the north, and Pannanich in the south, are celebrated. About

6,400 acres of the county are occupied with lakes. The principal rivers are the Dee, the Don, the Ythan, the Bogie, the Urie, the Ugie, and the Cruden. The Deveron also rises in Aberdeenshire,—though it has its embouchure in the county of Banff. All these rivers flow into the German ocean; and have long been celebrated—especially the first two—for the excellence of the salmon with which they abound. Besides the fishings in the rivers, the sea-coast of Aberdeenshire abounds with excellent fish, and a number of fishing vessels are fitted out from the seaports of this county, particularly from Peterhead and Fraserburgh. There is one canal, extending up the valley of the Don from Aberdeen harbour to Inverury. It has been described in a preceding article.

The surface of the mountains and other uplands of this county is, for the most part, either bare rock or such thin poor soil as admits of little profitable improvement or none, even for the purposes of hill pasture; that of the moorlands and the mosses comprises many tracts which might be thoroughly reclaimed, and not a few which have, in recent times, been very greatly improved; and that of the lowland and arable districts has a very various soil,—most of it naturally poor or churlish, but a great deal now converted into fine fertile mould by judicious cultivation. Heaths and coarse stiff clays are common in the higher districts of the county; and light sands and finer clays prevail in the valleys and on the sea-board. By far the greater part of the united parishes of Braemar and Crathie, containing nearly 200,000 acres, is incapable of cultivation. In the adjacent highland parish of Strathdon, containing 68,000 acres, the arable land does not exceed 5,000 acres. But in both these districts agriculture is making steady progress. Their principal crops are Angus oats and turnips. Of about 40,000 acres between the Don and the Dee, and midway between the sources and mouths of these rivers, nearly 16,000 acres are under the plough and yield an average rent of 16s. per acre. The land here is cultivated on a rotation of seven years; turnips are succeeded by hear or by oats with grass seeds; then the land is laid down in grass for three years; and then two successive crops of oats are taken. The cattle are chiefly the long-horned black or brown Aberdeenshire breed. The principal arable land of the county lies between the Don and the Ythan, in the districts of Formartin and Garioch, in Strathogie, and between the Ugie and the sea on the north. About 200,000 acres of land throughout the county are annually under oats. The cultivation of wheat is seldom attempted; and very little hay is made. Turnips are very extensively grown; and fat cattle are exported in great numbers to the London market. Sheep-farming is little followed. In 1811 the sheep-stock did not exceed 100,000 head, and the number has not greatly increased since that period. Tenantry-at-will is now almost entirely unknown; and leases are usually from 19 to 21 years. The tenant's choice in the management of his land was, until lately, restricted to the five and seven course rotations, which are still those most commonly practised; and he is usually allowed three years after entering on the farm to determine which course of cropping is likely to be the most eligible. The six-course shift has lately been introduced, and being regarded by all intelligent farmers as the best adapted to the nature of the soil of which this county is chiefly composed, and most consonant with the principles of correct husbandry, bids fair to supersede the above-named rotations at no distant period.

The recent improvements in agriculture have

comprised, not only more economical methods of cropping, but also better tillage, better implements, better manuring, better farm-yard management, better outhouse treatment of live stock, extensive subsoil draining, extensive reclamation of waste lands, and extensive enrichment of poor soils, and have resulted in such vast increase of produce from both arable lands and pastures as has changed the county from being a constantly losing one in the balance of agricultural imports and exports, to being a largely gaining one in that balance, by large exportation of oats and cattle. A writer in an official survey of the Board of Agriculture printed in 1794 for private circulation, says, "About the middle of last century, the farms in Aberdeenshire were of much greater extent than they are at present; and from many incidental circumstances that occurred to me during my residence in that county, it seems evident to me, that farmers were then in general a more wealthy and respectable body of men than they are at present; and it is very obvious that many extensive tracts of land which were then under the plough, are now abandoned as waste, and covered with heath. Of so little value was land in this country at that period, that there are instances of considerable tracts of corn lands being so totally abandoned as to be allowed to pass from one proprietor to another, merely by a prescriptive title of occupancy for upwards of forty years without a challenge." How great is the contrast now! The large farm system has been revived; farms have become scarce and dear; the scantiest season yields an abundant supply; and in average years there is enough and to spare. For example, in 1847, the farmers of Aberdeenshire, aided perhaps by those of a small contiguous portion of Kincardineshire, exported 43,750 quarters of oats, 52,150 bolls of meal, and 4,600 quarters of bear; and in the years 1828—1849 they exported cattle as follows,—in 1828, 150; in 1829, 250; in 1830, 400; in 1831, 550; in 1832, 800; in 1833, 1,250; in 1834, 3,125; in 1835, 4,528; in 1836, 5,505; in 1837, 5,850; in 1838, 6,150; in 1839, 6,250; in 1840, 6,422; in 1841, 6,450; in 1842, 9,543; in 1843, 10,150; in 1844, 10,561; in 1845, 11,928; in 1846, 12,300; in 1847, 13,783; in 1848, 15,420; and in 1849, 18,300. The steadiness of this increase, taken along with the rapidity of it, indicates unmistakably the highly improving state of things; and the aggregate value of the cattle exported is also very striking; for supposing them to have brought £20 a-head, the total receipts for them must have been about three millions of pounds. The export of sheep, pigs, dead meat, and eggs, has also been large. In 1827, the total value of all the disposable animal produce of the county was probably not more than £10,000; and in 1849 that of black cattle alone was upwards of £360,000. Yet the main part of this wonderful increase is ascribable, not directly to agricultural improvement in the mere working of its own energies, but indirectly to the stimulus exerted upon it by the facilities of steam-navigation to Hull and London.

Aberdeenshire has been long noted for its woollen manufactures, particularly the knitting of stockings and hose, in which numbers of the common people are constantly employed. The cotton, linen, and sail-cloth manufactures have been successfully introduced, particularly in Aberdeen, Peterhead, and Huntly. In 1831, there were about 1,600 hands employed in the linen, woollen, and cloth manufactures, in Old and New Aberdeen, and about 700 in other districts of the county. In 1841 the carpet-manufactory within this county employed 186 persons; cotton manufactures, 1,448; flax and linen, 3,489; lint, 233; rope, cord, and twine, 224; stock-

ings, 1,330; woollen and worsted, 840; paper, 173; combs, 220. There were also 384 bakers, 1,289 blacksmiths, 2,033 boot and shoe makers, 227 cabinet-makers, 563 gardeners, 153 iron-founders, 1,299 masons, 155 millwrights, 230 quarriers, 1,278 tailors, and 407 weavers.

The royal burghs of Aberdeenshire are Aberdeen, Inverury, and Kintore; and the towns and principal villages are Peterhead, (which is also a parliamentary burgh,) Huntly, Fraserburgh, Turriff, Old Meldrum, Old Deer, Tarland, Stuartfield, St. Combs, Boddom, Roseheart, Inveralochy, Cairnbulg, Ellon, Newburgh, Collieston, New Pitligo, Banchory, Charlestown of Aboyne, Ballater, Castletown of Braemar, Cuminstown, and Newbyth. The chief seats are Balmoral, the Queen; Birkhall, the late Prince Albert; Abergeldie, the late Duchess of Kent; Aboyne Castle, the Marquis of Huntly; Slaines Castle, the Earl of Errol; Keith Hall, the Earl of Kintore; Mar-Lodge, Skene-House, and Dalgety Castle, the Earl of Fife; Philorth Castle and Memsey-House, Lord Saltoun; Castle-Forbes, Lord Forbes; Haddo-House, the Earl of Aberdeen; Fyvie Castle, W. Gordon, Esq.; Dunecht House, the Earl of Crawford; Huntly Lodge, the Duke of Richmond; Strichen House, G. Baird, Esq.; Invercauld-House, J. Farquharson, Esq.; Pitfour, Admiral G. Ferguson; Cluny, John Gordon, Esq.; Freefield, Alexander Leith, Esq.; Leith-Hall, Sir Andrew Leith Hay; Logie-Elphinstone and Westhall, Sir James D. H. Elphinstone, Bart.; Crimonmogate, Sir Alex. Bannerman, Bart.; Pitligo-House, Sir John Stewart Forbes, Bart.; Craigievar Castle and Fintray House, Sir William Forbes, Bart.; Monymusk, Sir Isaac Grant, Bart.; Hilton, Sir W. B. Johnston, Bart.; Pitlurg, Sir W. C. Seton, Bart.; and Newe and Edinglassie, Sir Charles Forbes, Bart.

The principal lines of road in Aberdeenshire are the line from Aberdeen west-south-westward, up the valley of the Dee to Castletown-Braemar, and thence southward to the Spittal of Glenshee; the line from Aberdeen west-north-westward, through Skene and Cluny and up the vale of Alford, and thence northward to Huntly and Keith; the line from Aberdeen north-westward up the valley of the Don to Inverury, and thence in the same direction to Huntly; the line from Aberdeen north-north-westward, through Old Meldrum and Turriff, to Banff; the line from Aberdeen northward along the coast to Ellon, Peterhead, and Fraserburgh; and the line from Peterhead west-north-westward, by Newbyth, to Banff. The number of miles of turnpikes in 1858 was 448; the number of turnpike trusts, 33; the yearly revenue from tolls, £10,534. The railways are the Aberdeen or Scottish North-eastern, the Deeside, the Great North of Scotland, the Inverury and Old Meldrum, the Alford Valley, the Aberdeen and Turriff, and the Formartine and Buchan; and the first, third, and sixth are noticed in their own alphabetical place. The Deeside deflects from the Scottish North-eastern at Ferryhill, near Aberdeen; goes up the valley of the Dee to Aboyne; is 32 miles long; and has stations at Ruthrieston, Cults, Murtle, Milltimber, Culter, Drum, Park, Mills of Drum, Banchory, Glassel, Torphins, Lumphanan, and Dess. It was authorized in 1846; opened to Banchory in 1853,—to Aboyne in 1859; and its receipts, from shares and loans, till 31st December 1860, were £208,032. The Inverury and Old Meldrum deflects from the Great North of Scotland near Inverury; is 4½ miles long; was opened in 1856; cost £2,509; and is leased in perpetuity to the Great North of Scotland. The Alford Valley deflects from the Great North of Scotland at Kintore; goes 16½ miles westward to Alford; has stations at Kennay, Monymusk, Tillytownie,

and Whitehouse; and was authorized in 1856, and opened in 1859. Its receipts, from shares and loans, at 31st August 1861 were £31,821 short of the expenditure. The Formartine and Buchan deflects from the Great North of Scotland at Dyce; goes 40½ miles northward to Fraserburgh; sends off branches, 2½ to 9¾ miles long, to Ellon and Peterhead; and has stations at Parkhill, New Machar, Udney, Newburgh Road, Esslemont, Arnage, Auchnagatt, Brucklay, Old Deer or Mintlaw, Longside, New Seat, and Inverurie. It was authorized in 1858, and opened to Mintlaw in 1861. Its receipts, from shares and loans, till 31st August 1861, were £204,694.

Aberdeenshire is divided into 90 parishes; and in 1865, in addition to the parish churches, it contained chapels of ease. The synod of Aberdeen comprehends 87 of the parishes of Aberdeenshire, with all its chapels of ease, also 7 parishes of Kincardineshire and 12 parishes of Banffshire, with 5 chapels of ease, and is divided into the eight presbyteries of Garioch, Alford, Ellon, and Deer, which consist wholly of Aberdeenshire parishes,—Aberdeen and Kincardine O'Neil, which have a mixture of Kincardineshire parishes,—Turriff, which has a mixture of Banffshire parishes,—and Fordyce, which consists wholly of Banffshire parishes. The three Aberdeenshire parishes not comprehended in the synod of Aberdeen, are in the presbytery of Strathbogie and synod of Moray. The Free church synod of Aberdeen follows the same arrangement as the Established synod of Aberdeen; and in 1865, it comprised 87 churches and 10 preaching stations; and the yearly sum raised in connexion with the whole was £25,780 14s. 10d. The United Presbyterian synod has 23 churches in Aberdeenshire; and places 13 of these in its presbytery of Aberdeen, 8 in its presbytery of Buchan, and two in its presbytery of Banffshire. The synod of United Original Seceders has only two churches in Aberdeenshire, at Aberdeen and Clola, but gives the name of Aberdeen and Perth to one of its presbyteries. There are in Aberdeenshire 14 Congregational churches connected with the Congregational Union of Scotland, and 3 not connected with it. The Scottish Episcopal church has a diocese of Aberdeen; and this comprises 25 charges in Aberdeenshire, and 5 in other counties. There are nine Roman Catholic chapels in Aberdeenshire; but the Roman Catholic college of Blairs, which is often associated in the public mind with this county, is in the Kincardineshire parish of Maryculter 6 miles south-west of Aberdeen.—In 1837, there were in Aberdeenshire 93 parish schools, attended by 6,103 scholars; 161 private schools, attended by 6,765 scholars; and 39 other private schools the attendance of which was not returned.

Aberdeenshire is divided, for administration, into the two major districts of Aberdeen and Peterhead, with a sheriff-substitute for each, and into the ten minor districts of Braemar, Deeside, Aberdeen, Alford, Huntly, Turriff, Garioch, Ellon, Deer, and New Machar, with a set of deputy-lieutenants for each. Sheriff-courts are held weekly at both Aberdeen and Peterhead; the general quarter sessions are held at Aberdeen on the first Tuesday of March, May, and August, and on the last Tuesday of October; and small debt courts are held four times a-year at Tarland, Inverury, Turriff, Old Deer, and Fraserburgh.

Aberdeenshire sends one member to parliament. The number of electors in 1838 was 3,142; in 1863, 4,210. The valued rent of the whole county in Scottish money is £241,931 8s. 11d.; the annual value of the real property as assessed in 1860, £951,364; as assessed to property and income-tax in 1842–3, £605,802, whereof £423,388 was on lands, and £145,365 on houses. The assessment, in 1865,

for rogue-money and for rural police was $1\frac{1}{2}$ d., and for prisons $\frac{1}{2}$ d. per pound. Previous to the act for the equalization of weights and measures, the Aberdeenshire boll was equal to $1\frac{1}{2}$ boll of the Linlithgow standard. The boll of barley, bere, or oats, was 4 Aberdeen firlots of 136 pints of 60 $\frac{3}{4}$ oz. each. The brass standard bushel of Queen Anne, 1707, used in Aberdeen, contained 13 cubic inches less than the Winchester standard; and a bushel used in the county contained 40 cubic inches less. The peck of potatoes was 32 lbs. Dutch; the pound of butter or cheese, from 20 to 26 oz. Dutch; of malt, meal, or corn, 24 oz. Dutch.—The population of Aberdeenshire in 1801 was 121,065; in 1811, 133,871; in 1821, 155,049; in 1831, 177,657; in 1841, 192,387; in 1861, 223,344. Inhabited houses in 1861, 33,109; uninhabited, 763; building, 219. In 1841, 44,013 of the population were under 20 years of age; and 166,352 were natives of the county, 21,998 were born in other parts of Scotland, 1,711 were natives of England, 1,037 were natives of Ireland, 22 were natives of the colonies, and 170 were foreigners,—leaving 1,097 whose places of birth had not been ascertained. The number of persons engaged in commerce, trade, and manufactures, in 1841, was 27,937, or 15.5 per cent.; in agriculture, 25,224, or 13.1 per cent. The number of female servants was 13,377; of male servants, 1,334; of alms-people and pensioners, 1,947; of the medical profession, 341; of the clerical, 220; of the legal, 174; of independent means, 6,837. The yearly average number of crimes was 259 in 1836–40, 93 in 1841–45, 117 in 1846–50, 104 in 1851–55, and 89 in 1856–60. The number of prisoners in Aberdeen jail during the year July 1862—June 1863 was 1,208; and the average duration of their confinement was 16 days. In 1860, the number on the poor roll was 7,100,—casual, 1,699; insane or fatuous, 270; orphans or deserted children, 443; and the amount expended, in that year, for the poor on roll was £39,726, and for casual poor, £1,101.

ABERDONA. See CLACKMANNAN.

ABERDOUR, a parish containing a post-office of its own name, and the villages of Easter Aberdour, Wester Aberdour, and Newtown of Aberdour, on the south coast of Fifeshire. It is bounded by the frith of Forth, and by the parishes of Dalgety, Auchtertool, Kinghorn, and Burntisland. It measures about 4 miles in length, about 3 miles in breadth, and about 6,059 acres in area. But the island of Inchcolm, lying about 2 miles to the south, belongs to it; and a small detached district, called Kilrie-Yetts, lies about 4 or 5 miles to the east. A ridge of hills runs through the main body of the parish, in a direction nearly parallel to the coast. The tract to the north of this lies comparatively high, and has a cold sour soil, and is altogether bleak and churlish; but the tract to the south is genial and generous, and exhibits a profusion of both natural and artificial beauty. The coast is upwards of 2 miles long, and probably comprises twice that extent of shore-line. The western part of it rises gently into the interior, and is feathered and flecked with wood; the centre is indented by the sandy, wood-girt, finely-sheltered bay of Aberdour; and the eastern part is steep and rugged, and has shaggy sheets of wood down to the water's edge, and is traversed through its glades and across its brows by walks, which command most picturesque prospects of the frith and its southern seaboard, and of the hills of Edinburgh and the Pentlands. A rivulet runs windingly from the northern border of the parish, through its centre, partly along a rich little vale, to the head of Aberdour bay; and the embouch of this is denoted in the name of the parish, which alludes to the adjacency of the village.

Coal, lime, and sandstone abound and are worked. The average rent of arable land is about £2 per acre. The value of the assessed property in 1843 was £5,581 2s. 2d., and in 1865 was £10,200 9s. 8d. The principal landowners are the Earl of Morton and the Earl of Moray; but there are six others. The principal mansion is Aberdour House, the seat of the Earl of Morton, who is here called the gentleman of Aberdour; and the other mansions are Hillside House, Whitehill Cottage, Cattlehill House, and Templehall. The chief antiquities are the castle of Aberdour and a cairn or tumulus,—the latter on a flat-topped hill. The three villages of Aberdour stand adjacent to one another, and are often described as one village, at the head of Aberdour bay, 2 $\frac{1}{2}$ miles west-south-west of Burntisland, on the road thence to Inverkeithing. This place is a favourite bathing resort of the citizens of Edinburgh during summer; and it enjoys the advantage of a steam-boat communication of its own with Leith. It also has a few small sailing vessels, and does something, though not much, in oyster-fishing. A few of the inhabitants formerly were employed in the weaving of ticking, and in the work of two saw-mills and of a small spade factory. An hospital exists here for four widows, founded by Anne, Countess of Moray. The Earl of Moray presents three of the inmates, and the writers to the signet the fourth. Population of Easter Aberdour in 1851, 307; of Wester Aberdour, 469; of Newtown of Aberdour, 152. Population of the parish of Aberdour in 1831, 1,751; in 1861, 1,874. Houses 333.

This parish is in the presbytery of Dunfermline and synod of Fife. Patron, the Earl of Morton. Stipend, £207 14s. 6d.; glebe, £13. Schoolmaster's salary in 1865, £60, with upwards of £50 fees. The parish church was built in 1790, and repaired in 1826, and has 579 sittings. There is a Free church: attendance, 450; yearly sum raised in 1865, £166 13s. 10d. There is also a Scottish Episcopalian place of worship. There is a colliery school. The lands of Aberdour anciently belonged to the monastery of Inchcolm; and the western portion of them is said to have been given to it by one of the Mortimers for the privilege of burying in its church; and that portion, together with the lands of Beath, was acquired from an abbot of Inchcolm by James, afterwards Sir James Stuart. See INCHCOLM. The parish of Aberdour was formed in 1640 by disjunction from the parishes of Beath and Dalgety. A nunnery of the sisterhood of the Poor Clares formerly existed here. Aberdour bay was a convenient landing-place for any party coming from the continent to the royal court at Dunfermline, and the supposed commissioners sent to escort Queen Margaret of Norway resided its vicinity; so that the popular reading of the old ballad of Sir Patrick Spens—though not the reading preferred by Sir Walter Scott—is probably correct, which places the catastrophe of the piece midway between Norway and this place, and says,

"Half ower, half ower, to Aberdour,

"Tis fifty fathom deep,

And there lies gude Sir Patrick Spens,

Wi' the Scotch lords at his feet."

ABERDOUR, a parish on the north coast of Aberdeenshire. It is bounded by the sea, and by the parishes of Pitsligo, Tyrie, New Deer, King-Edward, and Gamrie. Its post-town is Fraserburgh. Its extent along the coast is about 7 miles; but its greatest length is not less than 10 or 11 miles. A portion, comprising about 800 acres, is separated a mile or so from the main body, by the intervention of Tyrie. The eastern part of the parish, or estate of Aberdour, is somewhat low and flat, with little diversity of surface. But the western

part, or estate of Auchmeddan, is elevated 200 or 300 feet above the level of the sea, and has a rugged surface, and a large proportion of moor and bog. Several long romantic hollows or deep ravines cleave the high grounds upward from the beach; and each, as they advance, branches off on both sides into lesser ones, which lose themselves among moors and bogs at a distance of about 3 miles from the sea. Little wild tumbling streams descend the ravines to the sea; and the mouth of one of these, called the Dour, gives name to the parish. In the southern district is the ravine or den of Glashy, traversed by the northern head-stream of the river Ugie. The greater part of this side of the parish consists of moors and bogs, interspersed here and there with corn fields. The coast, especially to the west of the church, presents a rocky, precipitous, and lofty front to the sea, insomuch that, in its whole extent, are only three openings where boats can land,—one in the north-east corner, one immediately below the church, and the third at the mouth of the burns of Troup and Auchmeddan, where a small harbour once existed, but is now totally destroyed. Numerous romantic caves pierce the cliffs at and below the level of the sea; and the most remarkable of these, called Cowshaven, served as a hiding-place to Lord Pitligo after the battle of Culloden, and runs up into the country “nobody knows how far.” The rocks of the parish are highly interesting to geologists; and are quarried in several places for granite and sandstone, and in two places for millstones. The total yearly value of raw produce was estimated in 1840 at £13,382 10s. 6d., exclusive of stones and fish, which were estimated at respectively £130 and £360. The value of assessed property in 1843 was £4,510. The chief antiquity is the remains of the castle of Dundargue, a place which made some figure in the civil wars of the 14th century, situated on a precipitous sandstone rock of 64 feet in height, on the beach, and connected with the mainland only by a narrow neck of rock and earth. The village of New Aberdour was founded in the year 1798. Fairs are held at it on the Tuesday after the 11th of April, on the 26th of May, on the Tuesday after the 7th of August, and on the 22d of November; but they are not well attended. Population of New Aberdour in 1861, 543. A small fishing village called Pennan stands on the Auchmeddan part of the coast, and has about half-a-dozen boats. Population of Pennan in 1851, 168. Population of the parish of Aberdour in 1831, 1,548; in 1861, 1,837. Houses, 324.

This parish is in the presbytery of Deer and synod of Aberdeen. Patron, Fordyce of Brucklaw. Stipend, £204 7s. 10d.; glebe, £12. Schoolmaster's salary, £42 10s.; female teachers, £15. The parish church is at New Aberdour, and was built in 1818, and has 800 sittings. A station of the Free church is also maintained there; but the yearly sum raised in 1865 by the people connected with it was only £11 10s. 7d. There is a parish school in Pennan.

ABERELLIOT. See ARBRILOT.

ABERFELDY, a small post-town in the parishes of Dull and Logierait, Perthshire. It stands on the Moness burn, on the south side of the Tay, and on the great road down Strath-tay, about 5 miles from Taymouth. It consists principally of one long street, a short one joining that about the centre, and a small square at their junction; it has, of late, been much improved; and it is connected by railway with the Highland line. It contains a Free church with 800 sittings, an Independent chapel with 400 sittings, a Baptist chapel with 60 sittings, branch offices of the Central and the Union Banks, a savings bank, and a public library. Fairs are held on

the first Thursday of January old style, on the Tuesday before Kenmore in March, on the last Thursday of April old style, on the Saturday before Amulree in May, on the last Friday of July old style, and on the last Thursday of October old style. The scenery in the vicinity of the town, up the Moness burn, is among the most interesting in Scotland. See MONESS. To this the well-known lines of Burns refer,—

“The braes ascend like lofty wa's,
The foaming stream deep roaring fa's,
O'erhung wi' fragrant spreading shaws,
The birks of Aberfeldy.

The hoary cliffs are crown'd wi' flowers,
White o'er the linn the burnie pours,
And, rising, weets wi' misty showers
The birks of Aberfeldy.”

In a field adjacent to the town, the 42d Highlanders, so well known by the name of the Black Watch, and so famous for their bravery in battle, were first embodied into a regular regiment. Over the Tay, opposite the town, is an elegant bridge of five arches, erected in 1733 by General Wade. The view from the centre of this bridge is magnificent. On the north are the Weem Rock and the soaring Grampians; on the east are the rich vale of Appin and the turrets and woods of Castle-Menzies; and all round is a sublime amphitheatre, with a foreground of objects ever beautiful and often new, including rich verdant meadows, groves in green array, and the broad and limpid Tay rolling in its cradle of granite to

“The white waves of the restless main.”

In 1861, the population of the Dull portion of Aberfeldie was 634; and of the Logierait portion, 511.

ABERFOYLE, a parish, containing a small post-office village of its own name, in the south-west corner of Perthshire. It is bounded on the north by Loch Katrine and Loch Achray, which separate it from Callander parish; on the east by the parish of Port-of-Menteith; and on the south and west by Stirlingshire. Its greatest admeasurement is from the east end of Loch Arlet, on the north-west, to the bridge across the Forth, on the road from Gartmore, in the south-eastern extremity, a distance of about eleven miles; its greatest breadth from north to south is towards the centre of the parish, and about 6 miles. The general aspect of this district is extremely picturesque. It is a narrow tract of country, bounded on every side by lofty hills and mountains. The bottom of the valley is occupied by a series of beautiful lakes, skirted with woods of oak, ash, and birch; and their banks are occasionally diversified with scanty portions of cultivated ground, the soil of which has, in the course of ages, been washed down from the mountains and deposited by the streams. The mountains are in some instances clothed with oak-woods more than half-way up; the lower eminences are, for the most part, covered to their summits; the higher regions are overgrown with heath, and sometimes present only the bare rugged rock. None of the mountains are of the first class in height. ‘Huge Benvenue’ and Benchochan, are far overtopped by Beadmond, in the parish of Buchauau, which, with its pyramidal mass, terminates the prospect to the west. The rocks are chiefly micaceous granite. There is a quarry of excellent slates, of blue and green colour; and it employs from 20 to 30 workmen, and produces about 500,000 slates per annum. Many of the rarer Alpine plants are to be found upon the mountains. The black eagle builds in some of the more inaccessible rocks; but it is now very rare. The falcon is also found here. The most considerable lakes

are LOCH KATRINE, LOCH ACHRAY, LOCH CHON, and LOCH ARD: which see. One head branch of the river Forth has its rise in the western extremity of the parish, at the eastern foot of Bon-Awe. After flowing through Loch Chon, and the upper and lower Loch Ard, it bursts forth, at the eastern extremity of the latter; and a few hundred yards to the east of it, flings itself over a rock nearly 30 feet high. After having formed a junction with the other head branch of the Forth, called the Duchray, coming from the south-west, the united stream receives the name of the Forth, and enters by a narrow opening—the famous pass of Aberfoyle—into Strathmore. In winter, the lakes are covered with waterfowl; among which swans, and some of the rarer species of divers, are occasionally met with. The soil is light. It is generally remarked, that the harvest is earlier in Aberfoyle than any where in the vicinity towards the south, where the flat country begins. The climate is healthy.—The property of this parish was anciently vested in the Grahams, Earls of Menteith; but, on the failure of heirs-male of that family in 1694, their estate came to the family of Montrose; and the Duke of Montrose is now sole heritor in this parish, being at the same time patron, proprietor, and superior of the whole, excepting a single farm (Drunlane) which holds blench of the Duke of Argyll. Assessed property in 1865, £4,085. Population in 1831, 660; in 1861, 565. Houses 116.

This parish is in the presbytery of Dunblane, and synod of Perth and Stirling. Patron, the Duke of Montrose. Stipend, £158 6s. 8d., with a manse and glebe. Schoolmaster's salary, £50, with £5 or £6 fees. The parish church was built in 1744, and thoroughly repaired in 1839, and has about 250 sittings. A school-house also is used by the parish minister for public worship generally once in two months.—The village of Aberfoyle stands on the Forth, about 21 miles from Stirling and 22 from Dumbarton. It has a good inn; and fairs are held at it on the third Tuesday of April, on the Friday before the third Tuesday of August, and on the last Thursday of October.—The principal line of road through the parish follows the vale of the Forth, or of its fountain-lochs rather, and enters the parish of Buchanan, between Lochs Arlet and Katrine, from which point it passes through a wild moor to Inversnaid on the eastern side of Loch Lomond. This is a road of great beauty and variety of scenery.—On a rising ground in the neighbourhood of the manse, and facing the south, there is a circle of stones, which, there is room to believe, may be a relic of Druidism. It consists of ten large stones placed circularly, with a larger one in the middle.—The scenery of this parish has been immortalized by Sir Walter Scott in his poem of *The Lady of the Lake*, and his novel of *Rob Roy*. Perhaps it owes its chief power and beauty to the mighty minstrel's inspiration. Nature herself is indeed a poet here,—yet a "something more exquisite still,"—a nameless charm, flung around us by the hand of one whose genius glorifies everything it touches, is everywhere resting on this elf and fairy realm. See articles ACHRAY (LOCH), BENVENUE, and FORTH.

ABERGELDIE, an estate in the parishes of Craithie and Glengairn, on the left bank of the Dee, 6 miles above Ballater, Aberdeenshire. The mansion comprises an old turreted square tower and various modern additions, and is an imposing pile. The grounds are eminently picturesque, and harmonize well with the adjacent royal park of Balmoral, and continue to wear the leafy honours of "the birks of Abergeldie,"—though Burns capriciously transferred the fame of them to Aberfeldy.

The limited fee of the estate was put up to sale in 1848, and became the property of the late Prince Consort. See BALMORAL. A fair for sheep, cattle, and horses, is held at Abergeldie on the last Friday of February.

ABERLACHIAN, a rivulet on the confines of the parishes of Inverness and Urquhart, toward the lower part of Loch Ness, Inverness-shire. It runs among romantic scenery, and makes a succession of beautiful cataracts and perpendicular water-falls. A fine spar cave was recently discovered here, adjacent to the road from Inverness to Fort-Augustus. It measures about 21 feet in length, from 6 to 12 in height, and from 3 to 6 in breadth, and has a rich and curious display of stalactites and stalagmites.

ABERLADY, a parish, containing a post-office village of its own name, on the north-west coast of the county of Haddington; bounded on the north by the frith of Forth, which here forms Aberlady bay, and by the parish of Dirleton; on the east by Dirleton and Haddington parishes; and on the south by Gladsmuir parish. Its greatest dimension is about 4 miles, in a line running north-east and south-west from the Pefferburn, near Saltcoats, to Coteburn in Gladsmuir; and its greatest extent from east to west is nearly the same. The Pefferburn—supposed to have been once called the Leddie, whence the name of the parish—rises in the parish of Athelstaneford, and after a winding course of 7 miles, falls into Aberlady bay, at Luffness point. From this point the whole bay between the Aberlady and the Goolan or Dirleton shore is left dry at low water, so that it may be crossed by foot passengers at a point where the sands are above a mile in breadth. At spring-tides, vessels of 60 or 70 tons may come up the channel of the Peffer to within a few hundred yards of the village of Aberlady. This anchorage-ground belonged formerly to the town of Haddington as its port. The sands covered by the tide abound in cockles, and some other kinds of shell-fish. Along the shore, from near Gosford House to the eastern point of the parish, runs a tract of sandy links, of considerable breadth, abounding with rabbits, and which is continued and spreads out into greater breadth along the Goolan shore. From this flat tract, the ground rises gradually as we proceed inland, but in no part attains any considerable elevation. The village of Gosford no longer exists; but the late Earl of Wemyss built a splendid mansion here, close on the links, and commanding a fine view of the frith towards Edinburgh. The present Earl has here a splendid collection of paintings. Ballencreeff House, the seat of Lord Elhbank, occupies a commanding situation; and Luffness, the seat of H. W. Hope, Esq., is an interesting old mansion. The village of Aberlady, 5 miles north-west of Haddington, consists of one long street of a good appearance. It is occasionally resorted to by the inhabitants of Haddington as a bathing-place; but the surrounding country presents little that is attractive to the stranger. Population of the village in 1861, 480. The North British railway traverses the parish, and has two stations in its immediate vicinity. Population of the parish in 1831, 973; in 1861, 1,019. Houses, 222. Assessed property in 1865, £9,823 9s.

This parish is in the presbytery of Haddington, and synod of Lothian and Tweeddale. Stipend, £280 11s. 11d.; glebe, £27 10s. Patron, the Earl of Wemyss. Schoolmaster's salary, £55, with about £34 fees. The parish church was built in 1773, and has 525 sittings. There is an United Presbyterian church, with an attendance of about 150. There is also a side school, with a large attendance. A little to the west of Luffness House are the remains of a

conventual building, once belonging to the Carmelites. An hospital is said to have been founded at Ballenerieff in the 12th century. This parish formerly belonged, in virtue of a grant from David I., to the bishop of Dunkeld, and was a vicarage in that diocese. It has been conjectured that the Culdees had a seat at or near Aberlady, called Kilspindie.

ABERLEMNO, a parish in the centre of Forfarshire. It is bounded by the parishes of Tannadie, Caralston, Brechin, Guthrie, Reseobie, and Oathlaw. Its post-town is Forfar. Its greatest length, in the line of the road from Forfar to Brechin, is $6\frac{1}{2}$ miles; its average breadth $3\frac{1}{2}$. The surface has a general declination towards the South Esk river, which runs along the northern boundary of the parish, and along the course of which the land is so level as to be occasionally extensively inundated by that river. The principal stream is the Lemno, which rises on the south-east side of the Finhaven ridge of hills in this parish; passes the kirk-town; sweeps in a circuitous direction around the base of the ridge; and, entering Oathlaw parish, turns north-eastwards, and flows into the Esk in the latter parish, at a point within one mile of its original source. The highest ground, Turin hill, has a height of about 600 feet above the level of the adjacent waters. There are two curious stone pillars or obelisks in this parish, supposed to have been erected in commemoration of a victory obtained over the Danes. They are covered with unintelligible hieroglyphics. About a mile to the north-east of the kirk-town are the ruins of Melgund castle, which tradition alleges to have been built by Cardinal Beaton, and which gives the title of Viscount to the noble family of Miuto. Auldhar Castle, Balgavies House, Carsegownie House, and Flemington Castle, are also interesting old edifices; and all, except the last, are still inhabited. The Arbroath and Forfar railway traverses the parish, and has a station in it at Auldhar. Nearly one-half of the parish belongs to the Earl of Minto. The valued rental is £4,233 6s. 8d. Scots. Assessed property in 1865, £9,867 8s. 10d. Population in 1831, 1,079; in 1861, 1,054. Houses, 223.

This parish is in the presbytery of Forfar, and synod of Angus and Mearns. Patrons, the Crown, and Smyth of Methven. Stipend, £228 6s. 6d.; glebe, £15. Unappropriated tithes, £469 14s. 11d. Schoolmaster's salary is now £45, with about £20 fees and other emoluments. The parish church is an old structure with about 450 sittings. There is a Free church; and the yearly amount raised in connexion with it in 1853, was £38 16s. 2½d.—in 1865, £92 3s. There is a private school. The present parish of Aberlemno comprises the old parishes of Aberlemno and Auldhar; but probably the former originally extended farther to the north-east, so as to include the mouth of the Lemno, from which it seems to take its name.

ABERLOUR, a parish containing a post-office village of its own name, in the south-west of Banffshire. It is bounded by Morayshire, and by the parishes of Boharm, Mortlach, and Inveraven. The Spey divides it from Morayshire; the Fiddieh, from Boharm; and the Dullan-burn, from part of Mortlach. Its general outline is triangular; and its extent along the Spey, irrespective of the river's windings, is 5 miles; and its greatest length, from the head of the Dullan to the mouth of the Fiddieh, is 9 miles. About two-thirds of the area are under cultivation; but nearly all is hilly; and the southern and eastern parts are completely wild and mountainous. The loftiest mountain is Benrinnes on the south-west, whose enormous base lies partly

and chiefly in this parish, but extends also into Luveraven parish. It rises to the height of 2,765 feet above the sea-level, and 1,876 feet above the adjoining country. From its summit, the mountains of Caithness on the north are visible in a clear day, and the Grampians in the opposite direction. The deep pass of Glækhamis separates this mountain, on the east, from the Convals, which are of much less elevation. Three small streams intersect this parish in a north-west direction, and discharge themselves into the Spey; and one of them, the burn of Aberlour, about a mile above its mouth, forms a beautiful cascade of 30 feet in leap, called the linn of Ruthrie. The Spey along the boundary is deep and rapid, and, in the great floods of 1829, rose 19 feet six inches above its ordinary level. A little above the confluence of the Fiddieh and the Spey, and 12 miles above Foehabers, are the picturesque rock and bridge of Craigellaehie. See CRAIGELLAHIE. The turnpike road to Foehabers and Elgin lies along this bridge; and adjaeant to it, on the south bank of the river, is Craigellaehie Junction railway station, at the meeting-point of the Dufftown branch of the Great Northern, the Morayshire line, and the Strathspey line. The Morayshire goes hence, across the Spey, by a trellis girdered iron bridge of 200 feet in span; while the Strathspey line goes up the south side of the river, past Aberlour village to Carron, and crosses there on a magnificent iron bridge. Aberlour House, about a mile south of Craigellaehie, is an elegant modern mansion, in the Grecian style; and has tastefully ornamented grounds, with very fine garden. A Doric column of Aberdeen granite, 84 feet high, surmounted by a large globe of polished granite, is on the front lawn. The village of Aberlour, or Charleston of Aberlour, stands on a haugh, at the mouth of the burn of Aberlour, 2½ miles south-west of Craigellaehie Junction station, and 17 by railway south-west of Keith. It was founded in 1812 by Grant of Wester Elehies; and is a burgh of barony, by royal charter. It consists of one broad street, about ½ a mile long, with a square to the west, and its houses are substantial and slated. It has a post-office under Craigellaehie, a railway station, and an office of the Union Bank. Fairs are held at it on the first Thursday of April, on the Thursday before the 26th of May, on the third Thursday of July, on the second Thursday of August, and on the second Thursday of November. Population of the village in 1861, 510. Population of the parish in 1831, 1,276; in 1861, 1,665. Houses, 296. Valued rental in 1864, £4,980.

This parish is the seat of a presbytery in the synod of Moray. Stipend, £287 8s. 2d.; glebe, small but valuable. Patron, the Earl of Fife, who is also the principal landowner. Schoolmaster's salary, £50. The former church, built in 1812, was destroyed by fire in 1861; and the present church erected since 1861, is one of the most elegant in the north of Scotland, in the Norman style, with a square tower 65 feet high, and containing about 800 sittings. A church is in Glenrinnes, constituted quoad sacra parochial in 1865. See GLENRINNES. A Free church is at Aberlour; and the yearly sum raised in connexion with it in 1865, was £90 7s. 3d. There are a side school in Edinville and a female school in Charleston. A house of the Knights Templars stood on Kinermony, an elevation to the west of the village, commanding a view of the valley of the Spey.

ABERLUTHNET. See MARYKIRK.

ABERMELE. See MUNGO (Str.)

ABERNETHY, a parish chiefly in Perthshire, and partly in Fifeshire; bounded on the north by the Earn river, which separates it from the parishes

of Dunbarnie and Rhynd, and by the estuary of the Tay; on the east and south by Fifeshire; and on the west by the parishes of Dron and Dunbarnie. This parish is of an irregular figure. It extends from east to west about 4 miles; and from north to south, in some places, nearly 5. The surface is uneven. A considerable part is hilly, and belongs to the Ochills. The low ground betwixt the rivers Tay and Earn on the north, and the hills on the south, forms nearly an oblong square of about 4 miles in length by $1\frac{1}{2}$ in breadth. About 25 feet below the surface of this flat, and 4 feet below the highest spring-tide mark in the Tay and Earn, there is uniformly found a stratum of moss, from 1 to 3 feet thick, comprising remains of oak, alder, hazel, birch, &c. The soil above this bed is composed of strata of clay and sand. The Earn, by breaking down the opposing banks in its serpentine turning, has formed beautiful links or haughs on each side of its stream, which are secured from being overflowed, by embankments. The Tay, which washes the eastern part of the northern boundary, is here navigable, and affords salmon and sea-trout. The proprietor of Carpow has valuable fishings upon it. In the middle of this river, opposite to Mugdrum, in the parish of Newburgh, is an island called Mugdrum island, belonging to this parish. It is nearly 1 mile in length; its greatest breadth is 198 yards; area 31 acres. The Earn, which bounds the northern part of the parish till it falls into the Tay, a little below the mansion-house of Carpow, is navigable for several miles. It also produces salmon and trout, which are chiefly sent to Perth, and thence to the English market. There are two passage-boats on the Earn,—one at Cary, which is seldom employed,—another at Ferryfield, upon the estate of Carpow, near the junction of the Earn and the Tay; and there are passage-boats also between the latter and the Carse of Cowrie. The Farg, a rivulet rising on the borders of Kinross-shire and flowing into the Earn about $1\frac{1}{2}$ mile west from Abernethy, abounds with small trout. There is another small rivulet, the Ballo burn, anciently called the Trent, which flows through what is called the glen of Abernethy. The principal landowners are the Earl of Mansfield, the Earl of Wemyss, Sir Thomas Moncrieffe of Moncrieffe, Paterson of Carpow, Tod of Ayton, and several others. The valued rent is £8,884 15s. 1d. Scots. Assessed property in 1865, £13,422 17s. 5d. Annual value of raw produce, as estimated in 1842, £26,274 10s. The branch of the North British railway toward Perth has a station on the north side of the town of Abernethy, 3 miles from Newburgh and $7\frac{1}{2}$ from Perth. Population of the entire parish, in 1831, 1,776; in 1861, 1,960. Houses, 349. Population of the Fifeshire portion in 1831, 164; in 1861, 147. Houses, 30.

The town of ABERNETHY is nearly in the centre of the parish; stands amidst numerous recent cottages, which are let to summer visitors; and consists of streets without any plan and badly edificed. It is a burgh of barony under Lord Douglas, coming in place of the Earls of Angus. It has a charter from Archibald, Earl of Angus, Lord of Abernethy, dated August 23, 1476; which was confirmed by charter of William, Earl of Angus, dated November 29, 1628. There is a post office here; and fairs are held on the 12th day of February, on the fourth Wednesday of May, and on the second Thursday of November. Population in 1841, 827; in 1861, 984. This place, though "now a mean village," says Dr. Jamieson, "once boasted high honours, and had very considerable extent. It would appear that it was a royal residence in the reign of one of the Pictish princes who bore the

name of Nethan or Nectan. The Pictish chronicle has ascribed the foundation of Abernethy to Nethan I., in the third year of his reign, corresponding with A. D. 458. The Register of St. Andrews, with greater probability, gives it to Nethan II., about the year 600. Fordun and Wytoun agree in assigning it to Garnat, or Garnard, the predecessor of the second Netban. Abernethy had existed as a royal seat perhaps before the building of any conspicuous place of worship. For we learn, that the Nethan referred to 'sacrificed to God and St. Bridget at Aburnethige;' and that the same Nethan, 'king of all the provinces of the Piets, gave as an offering to St. Bridget, Apurnethige, till the day of judgment.' Fordun expressly asserts, that, when this donation was made, Abernethy was 'the chief seat, both regal and pontifical, of the whole kingdom of the Piets.' He afterwards relates, that, in the year 1072, Malcolm Canmore did homage, in the place called Abernethy, to William the Bastard, for the lands which he held in England. I have elsewhere thrown out a conjecture that this place may have been denominated from the name of Nethan the founder. It has been said, indeed, that 'the name which Highlanders give to Abernethy, is *Obair* or *Abair Neachtain*, that is, the work of Nechtan.' But it seems preferable to derive it from Nethy, the brook on which it stands." But no such brook is here.—There are two villages in the parish.—Aberdargic and Glenfoot.

This parish is in the presbytery of Perth, and synod of Perth and Stirling. Stipend, £256 5s. 7d.; with a glebe of the value of £15, and a manse. Patron, the Earl of Mansfield. There are about £270 unappropriated tithes. The schoolmaster has the maximum salary, with the interest of a mortification of £190, and some other small fees. The parish church is a plain structure, built in 1802, and has about 600 sittings. Here are also a Free church and an United Presbyterian church. The sum raised by the F. church congregation in 1865 was £95 7s. 6d. The attendance at the U. P. church is from 350 to 400. There is one private school. Abernethy was in ancient times the seat of an episcopal see. When Kenneth III. had subdued the Piets, he translated the see to St. Andrews; but long before this, Abernethy was known as a principal seat of the Culdees. While they held it, there was an university here for the education of youth, as appears from the Priory book of St. Andrews. In the year 1273—by which time the Culdees were much discouraged—it was turned into a priory of canons-regular of St. Augustine, who were brought, it is said, from the abbey of Inchaffray. The Rev. Alexander Moncrieff, one of the four founders of the Secession Church, was minister of Abernethy, and proprietor of Culfargie, a considerable estate in the parish. The Rev. John Brown of Haddington, so well known for his theological writings, was a native of this parish.

In the church-yard stands a tower of an extraordinary construction. South-west from the kirk-town there is a hill, called Castle-law. Dr. Jamieson says: "Although the round tower of Abernethy has attracted the attention of many travellers and writers, and been the subject of various hypotheses, no one has ever thought of viewing it as connected with the royal residence; as it was undoubtedly used for some ecclesiastical purpose. That god-humoured old writer, Adamson, assigns a singular reason for the erection of this building; while he seems not to have known that there was another of the same description at Brechin, considerably higher than this. He pretends that this was built by the Piets to prevent the Scots from trampling on the body of their king after his death:—

Passing the river Earne, on th' other side,—
Thence to the Fights great Metropolitan
Where stands a steeple, the like in all Britaine
Not to be found againe, a work of wonder,
So tall and rounc in frame, a just cylinder,
Built by the Fights in honour of their king,
That of the Scots none should attempt such thing,
As over his bellie big to walk or ride,
But this strong hold should make him to abide.

MUSE'S THRENODIE, p. 172.

The tower is hollow, and has a recent staircase. At the bottom are two rows of stones, projecting as a sort of pedestal. It is 75 feet in height, and consists of 64 regular courses of hewn stones. At the base it measures 48 feet in circumference, but diminishes somewhat towards the top; the thickness of the wall being $3\frac{1}{2}$ feet at the bottom, and 3 at the top. It has only one door, facing the north; 8 feet in height, 3 wide, and arched. Towards the top are four windows; they are equidistant; 5 feet 9 inches in height, and 2 feet 2 inches in breadth; each being supported by two small pillars. Some intelligent visitors assert, that, whatever may have been the original design of this work, it has at one time been used as a cemetery. Where the earth has been dug up, to the depth of three feet, a number of human bones have been found in the exact position in which they must have been interred; which, it is urged, would not have been the case, had they been thrown in from the adjoining ground. It stands at the corner of the present churchyard. 'South-west from the town,' we are told in the 'Statistical Account,' 'there is a hill, called Castle-law. Tradition says, that there was a fort upon the top of it.' 'This,' it is subjoined, 'probably served for one of those watch-towers on which the Picts used to kindle fires, on sudden invasions, insurrections, or the approach of the enemy. But if any place bids fair to have been the site of a royal residence, this seems to have a principal claim.' It follows, however: 'About a mile and a half east from Abernethy, a little below the mansion-house of Carpow, stood the ancient castle which belonged to the lords of Abernethy; part of its foundation may be still seen.' Now, it might be supposed that here, as in other instances, the person who obtained the grant of royal domains would prefer the occupation of the ancient residence to the erection of a new one. The distance would be no objection. For I have elsewhere proved, from the most ancient authority, that, during the Pictish era, Abernethy was far more extensive than it now is; as the king, in his donation to St. Brigid, extends its limits to a stone near Carpow. I acknowledge, however, that the place called Castle-law seems to claim the preference. For, from the most minute inquiry, I learn that there is a tradition, perfectly familiar to every one in the vicinity, that this was the residence of the ancient Pictish kings. In confirmation of this article of traditionary belief, an appeal is made, not only to the vast quantity of stones still remaining on this hill, but to the description of those that have been carried off in successive ages. Unlike the materials of the cairns, which are so commonly met with in our country, these have, in a great measure, been hewn stones. A house in the neighbourhood has, of late, been entirely built of dressed stones carried off from the Law. There seems, therefore, to be no reason to doubt that this has been the site of very extensive and superb buildings. The remains of a surrounding moat are yet to be traced on the west side. At the bottom of this hill, an eminence is called the Quarrel-know, i. e. kuoll, where, according to tradition, the Picts were wont to celebrate their military games. This may have been its original appropriation, whence in later ages it might

continue to be employed for similar purposes. But the name itself can hardly claim so early an origin; having most probably been given to it, in an age in which the use of the cross-bow was common, from the designation of the arrow shot from it, which was called a *quarrel*; unless the term should be traced to our old Scottish word *quarrell*, or *querell*, denoting a quarry. The view from this elevation has been deemed worthy of its ancient royal honours, as scarcely excelled by any in Scotland,—a country so rich in beautiful and picturesque prospects. While the classic Earn unites with the noble Tay at your feet, the eye is delighted with the richness of the carse of Gowrie; and the prosperous tow of Dundee is seen in the distance, with the numerous sails that enliven the expanding river in its course to what was anciently denominated the Scythic sea."—In the south-west corner of the parish, among the hills, stands Balvaired castle, which belonged to the Murrays of Balvaired, in the reign of Robert II. It is now the property of the Earl of Mansfield, the lineal descendant of that ancient house.

ABERNETHY. A highland parish, partly in Morayshire and partly in Inverness-shire. It is bounded, on the north, by the parishes of Duthill and Inverallan; on the east, by Banffshire; on the south, by Braemar; and on the west, by the river Spey. Its post-town is Grantown; but it has a sub-office of its own. It comprises the old parish of Abernethy and the parish of Kincardine or Kinchardine—the latter united to it about the time of the Reformation, and lying wholly in Inverness-shire; and it is sometimes known as the united parish of Abernethy and Kinchardine. The name is descriptive of the situation of the kirk-town with respect to the Nethy, being within a mile of the fall of that stream into the Spey. The meaning of the name Nethy, or Neich, is not known; that of Kinchardine, or Kinie-chairdin, is 'the Clan of Friends.' The parish is 15 miles in length, measured from Cromdale on the north to Rothiemurchus on the south; and from 10 to 12 in breadth. The surface is highly diversified with haughs, woods, and mountains. A stretch of about 3 miles of low laud and meadow, along the bank of the Spey, is often overflowed by that river, which here runs smooth and slow. The arable ground bears but a small proportion to the uncultivated. A great proportion of the surface is covered with woods. On the Grant estate alone there are 7,000 acres of natural fir-wood.—The only river of any note, besides the Spey, is the Nethy, which, rising on the northern side of the hills to the east of Cairngorm, known as the Braes of Abernethy, flows in a north-west direction through the forests, and empties itself into the Spey, 4 miles above Grantown. It is about 12 miles in length, and is a rapid running stream; after rains, or thaws, it swells so as to bring down the timber that has been cut in the forests of Grant to the Spey, whence it is sent in rafts to Garwouth. There is a bridge over the Nethy about a mile above its confluence with the Spey, having a water-way of 84 feet. A little to the east of the Nethy is the burn of Cultmore. The Dualg burn flows into the Spey about 4 miles above the Nethy. There are several small lakes in Kinchardine, the most considerable of which is Loch Morlach, in Glenmore. It is of an oval form, and nearly two miles in diameter. It is in the bottom of the glen, and surrounded with aged fir-woods, which rise gradually towards the mountains. It discharges itself into the Spey by the Morlach burn, which is about 4 miles in length. In Glenmore there is another small loch, in extent about one acre, which abounds with small fat green trout. At the foot of Cairngorm, about a mile from its base, is

Loch Avon, whence the river of that name issues. At one end of this loch is a large natural cave, called Chlachdlian, or 'the Sbeltering stone.' Of the mountains of this parish, Cairngorm, or, 'the Blue mountain,' is the most remarkable. It commands an extensive view. The shires of Ross, Sutherland, and Caithness, are seen from its summit. See CAIRNGORM. A vast business in the cutting down of timber in the mountains, and floating it down the Nethy and the Spey, was commenced by the York Building Company about the year 1730, and resumed at a later period, and has conferred great benefits on the population. The practices of agriculture, in the low tracts, have in recent times undergone wonderful improvement. The chief landowner is the Earl of Seafield. Assessed property in 1860, £4,764. The Strathspey railway terminates here. Population of the parish in 1831, 2,092; in 1861, 1,928. Houses, 404. Population of the Morayshire portion in 1831, 1,258; in 1861, 1,141. Houses, 234.

This parish, formerly a vicarage, is in the presbytery of Abernethy, and synod of Moray. Patron, the Earl of Seafield. Stipend, £234 2s. 1d., with a glebe valued at £7, and a manse. Unappropriated tithes £98. Schoolmaster's salary in 1865, £45, with about £20 fees. The church of Kincardine is 8 miles distant from the kirktown of Abernethy. The parish-minister officiates two successive Sabbaths in Abernethy church, and every third Sabbath in that of Kincardine. The latter church has sittings for 600; the former, for 1,000. Both are well-built. There is a Free church at Abernethy; and the yearly sum raised at it in 1853 was £76 11s. 1½d.,—in 1865, £105 8s. There is a Society's school at Kincardine.—There is a large oblong square building near the church, called Castle Roy, or the Red castle; one side measures 30, the other 20 yards; the height is about 10. It never was roofed, had no loop-holes, and only one entrance to the inside. Neither history nor tradition give any account of it.—The Hon. John Grant, Chief-justice of Jamaica, was a native of this parish; and Francis Grant, Lord Cullen, and Patrick Grant, Lord Preston-grange, both eminent juriconsults, and lords of session, were connected with this parish. At Knock of Kincardine was born, in 1700, John Stuart, commonly called John Roy Stuart. He was a good Gaelic poet.

ABERNYTE, a parish in the Sidlaw-hills district of Perthshire. It is bounded by the parishes of Cargill, Longforgan, Inchtute, Kiunaird, and Collace. Its post-town is Inchtute. Its length is nearly 3 miles; and its greatest breadth is about 2 miles. It has an area of about 2,600 acres, of which a little upwards of 1,700 are under cultivation. The kirk-town, near the centre of the parish, is situated 11 miles north-east of Perth, and stands in a fine valley intersected by a stream flowing south-east into the estuary of the Tay. The highest point in the parish is the King's seat, on the northern extremity, which rises to the height of 1,155 feet, and commands a fine view southwards to the frith of Forth. The general declination of the country is towards the south-east. Upon the top of a hill called Glenny-law are two cairns, supposed to cover the remains of the slain in a feud between the Grays of Fowls and the Boyds of Pitkiude. Population in 1831, 254; in 1861, 310. Houses, 67. Assessed property in 1865, £2,937 17s. 8d.

This parish, formerly a vicarage, is in the presbytery of Dundee, and synod of Angus and Mearns. Patron, the Crown. Stipend, £159 11s. 3d.; glebe, £14. Schoolmaster's salary now is £50, with about £25 fees, and £4 10s. other emoluments. The parish church was built in 1736, and may accommodate

the whole population. There is a Free church for Abernethy and Rait; and the yearly sum raised in connexion with it in 1865 was £123 4s. 8d.

ABER-RUTHVEN. See AUCHTERARDER.

ABERTARF. See BOLESKINE.

ABERUCHILL. See COMRIE.

ABINGTON, a village, with a post-office, in the parish of Crawford-John, Lanarkshire. It stands near the confluence of Glengonnar Water with the Clyde, at the junction of the road down Glengonnar Water from Leadhills with the road from Dumfries by Elvanfoot to Glasgow, and near a station on the main trunk of the Caledonian railway, 5 miles from Lamington, and 48½ from Edinburgh. It is a neat and picturesque place, and is the rendezvous for the coursing matches in which the best dogs of England and Ireland are pitted against those of the west of Scotland. Gold is said to have been obtained from mines wrought in this neighbourhood in the reign of James VI. Population of the village, 135.

ABOYNE, a parish in the Deeside district of Aberdeenshire. It is bounded, on the south, by Forfarshire, and on other sides by the parishes of Glenmuick, Coull, Lumphanan, and Birse. It contains the village and post-office of CHARLESTOWN of ABOYNE; which see. Its greatest length is about 13 miles; and its greatest breadth about 12 miles. A detached part, with a population of about 60, lies beyond Birse, on the left bank of the Fegh. The present parish comprises two old parishes, Aboyne and Glentanner, and is frequently designated the united parish of Aboyne and Glentanner. The entire area of the united parish is about 29,000 acres, of which nearly 3,000 acres are arable. By far the greater part of the rest is covered with heath. The extensive forest of Glentanner, composed of Scotch fir, once the finest in the county, is now all sold, and nearly all cut; and the splendid plantations of the same wood about Aboyne castle are also nearly all exposed to the same fate. There is little if any hard wood in the parish, and none of great size. About five-sixths of the parish are held under entail. Four-fifths of it is the property of the Marquis of Huntly; and the rest belongs principally to Mr. Farquharson of Finzean, Mr. Dyce Nicol of Ballogie, and the Earl of Aberdeen. Assessed property in 1864-5, £6,290, including £280 in the Deeside railway, which has a station here, and is to be extended to Bridge of Gairn. Farms are generally very small, the soil light and early, and chiefly adapted for turnip husbandry. The principal mansion is Aboyne castle, a large massive building which has been enlarged and improved by the Marquis of Huntly. The site is rather low, but is finely sheltered and surrounded by well-laid out and extensive enclosures. About a mile to the south the Dee is crossed by an elegant suspension-bridge. The turnpike from Aberdeen to Braemar runs through part of the parish; and various lines of commutation road also pass through it. The Dee runs about 6 miles through and along the parish, and receives in its course a few tributary streams, the principal of which is the Tauer from the south. The parish is very hilly, particularly in Glentanner, where some of the hills attain a considerable altitude. Tumuli abound in various parts of the parish, but most in the north part. Some urns with calcined bones have been dug up in Glentanner, which indicate that the Romans had visited this part of Scotland at some time. There are three burying-grounds in the parish, one in Glentauner and two in Aboyne. Tradition has it that the pest or plague, had at one time raged with great violence here; and that it was first observed to abate on the Mondays and Fridays, after which the people should have immediately ab-

stained from breaking ground in the churchyard of Glentanner on those days of the week, out of gratitude for the appearance of deliverance from such an awful enemy to the human race. The observance, which is still most scrupulously adhered to, has more likely had its origin in the dark days of ignorance and popish superstition. The title of Earl of Aboyne merged, in 1836, in that of Marquis of Huntly. It was created by James VI. in 1599. Population in 1831, 1,163; in 1861, 1,160. Houses, 211.

This parish is in the presbytery of Kincardine O'Neill, and synod of Aberdeen. Patrou, the Marquis of Huntly. Stipend, £160 15s. 1d., with manse and glebe. Schoolmaster's salary of Aboyne school, £35; of Glentanner school, £30. The parish church is a very handsome edifice, built in 1842, and has 628 sittings. There is a Free church; attendance at it 150; sum raised in 1865, £44 11s. 5½d. There is a female school supported by Lady Huntly.

ABRUTHVEN. See AUCHTERAIDER.

ACH-, or AUCH-, a prefix in many topographical names of Gaelic origin. It signifies simply 'a field,' in a loose or general sense of that word; so that very few of the names compounded with it have a graphic character, or even a very definite or well-ascertained reference.

ACHAISTAL. See LATHERON.

ACHALHANZIE. See CRIEFF.

ACHALICK, a bay on the east side of Loch Fyne, about 3 miles south of Kilfinan church, Argyshire.

ACHALL, a lake in the parish of Lochbroom, Ross-shire. It is situated about 3 miles west of Ullapool, and is skirted by the road thence to Oikel-Bridge. It measures about 2½ miles in length, and upwards of 1 mile in breadth; and is variously embosomed in green hills, rugged heights, and wooded promontories; and, under some aspects, is one of the prettiest pieces of water in the Highlands.

ACHALLADER. See GLENORCHY.

ACHALLY. See BENACHALLY and CLUNIE.

ACHANDRAINE, a village in the parish of Inverary, Argyshire. Population, about 80.

ACHANDUIM. See LISMORE.

ACHANEILEIN, a quagmire, or quaking bog, of unknown depth, about three-quarters of a mile broad, and upwards of 5 miles long, in the parish of Arduamurchan, Argyshire. It lies along the south side of Lochshiel.

ACHARACLE, or AHARCLE, a government church district in the parish of Arduamurchan, Argyshire and Inverness-shire. It consists chiefly of the eastern portion of Arduamurchan, but comprises also a part of Sunart and a part of Moidart. Its post-town is Strontian. The church and the manse are situated at the west end of Lochshiel. The population, a number of years ago, amounted to 2,026, of whom 1,200 were Roman Catholics. There was a Free church station for Acharacle and Moidart; the yearly sum raised in connexion with which in 1853 was £5 16s. 1d.

ACHARANEY. See HALKIRK.

ACHARN, a village in the parish of Kenmore, Perthshire. It stands on the south shore of Loch Tay, 1¼ mile above the village of Kenmore. It is a neat, snug, little place, and is famous for a picturesque waterfall on a burn which rushes past it to the lake. "The burn, precipitating its waters over the side of a deep and wooded dell, first performs a perpendicular descent of fully 50 feet, separating towards the bottom into two vertical streams, which are caught by a small basin; whence the water escapes by successive inclined leaps, the whole forming a cascade apparently about 80 or 90 feet

high." [Anderson's Guide to the Highlands.] Population of the village, 42.

ACHBRECK, a mission-station on the Royal Bounty, in Glenlivet, in the parish of Inveraven, Banffshire. See GLENLIVET, INVERAVEN, and BANFFSHIRE RAILWAY.

ACHENACRAIG. See ACHNACRAIG.

ACHERUACH. See STRATHDON.

ACHESON'S HAVEN, a small barbour near Prestonpans, in the county of East Lothian. It was constructed by the monks of Newbottle, on their grange of Preston. It is often named Morrison's haven, from one of its later proprietors.

ACHILTY (LOCH). See CONTIN.

ACHINBLAE. See AUCHINBLAE.

ACHINCASS. See KIRKPATRICK-JUNTA.

ACHINDAVY. See AUCHENDAVY.

ACHINDUIN. See LISMORE.

ACHLOUCHRIE. See TANNADICE.

ACHMITHY. See AUCHMITHY.

ACHMORE. See WEEM.

ACHNACARY. See ARCHAIG (LOCH).

ACHNACRAIG, or ACHENACRAIG, a small harbour, with a post-office, in the parish of Toresay, and on the east coast of the island of Mull, Argyshire. It is situated at the entrance of Loch Don, 18 miles south-east of Aros, and 132 west by north of Edinburgh. It is the principal ferry of Mull, first to the opposite island of Kerrera, a distance of about 4½ miles, and thence to the mainland near Oban, a distance of 4 miles. Great numbers of black cattle are conveyed from it for the lowland markets; and formerly those also from Coll and Tyree were landed on the farther side of Mull and reshipped here.

ACHNAGOL, a village in the parish of Inverary, Argyshire. Population, about 90.

ACHNAVARN. See HALKIRK.

ACHRANNIE (SLUGS OF), two romantic cataracts on the river Isla, on the boundary between the parishes of Glenisla and Lintrathay, Forfarshire. They occur about 2 miles below the Reeky linn. See ISLA (THE). "The upper one," says the new statist of Glenisla, "is the most deserving of notice. Here the river is suddenly contracted by stupendous cliffs into a space scarcely exceeding 3 yards in breadth. Through this frightful chasm the deep boiling flood forces itself with tremendous power, and in curling wreaths of foam, thunders down a steep broken channel of considerable length, into a gloomy but spacious ravine, walled by rocks quite perpendicular and of great altitude. These are surmounted by a profusion of trees, exceedingly rich and varied in their foliage, which the hand of man never planted, and many of which he will never dare to approach."

ACHRAY (LOCH), a beautiful sheet of water in Perthshire, between Loch-Katrine and Loch-Vennachar, and at a nearly equal distance from both. With these lakes it is connected by two small streams,—one of which flows into its western extremity from Loch-Katrine, while the other, issuing from its eastern end, carries its waters into Loch-Vennachar. The lake receives its name from the farm of Achray, situated on its south-western shore; the term in Gaelic signifies 'the level field.' Loch-Achray, therefore, means 'the lake of the level field.' Compared with either of its sister-lochs, Loch-Achray is but of small dimensions; its utmost length being about a mile, and its breadth scarcely half-a-mile; but the epithet 'lovely' has been, with peculiar propriety, applied to this lake by Sir Walter Scott, as it is hardly possible to conceive any natural scenery more lovely than that presented by the shores of Loch-Achray. The northern shore is bold and rocky, but its harsher features are softened

The Falls of the ...

by a rich covering of wood and 'bosky thickets' to the water's edge,—

—" the copsewood grey,
That waves and weeps on Loch-Achray."

On the south, the ground rises more gradually from the lake, but it is mostly clad with heath. This soft and gentle character, however, can only be applied to the lake, its bays and shores, and their immediate vicinity; for beyond this we have lofty mountains rearing their rugged and often cloud-capp'd heads in awful majesty, and deep and silent glens and ravines through which the upland streams seek their way to the lakes. On the shores of Loch-Achray we are still within the power of the magician's spell; and so thoroughly has he peopled the visions of our fancy with the creations of his own imagination that we look for the localities of his poem, as we did at Loch-Katrine, with as perfect a faith, and gaze on them when found with as much devotion, as we should on the scenes of some of the most important transactions in our national annals. Along these shores the messenger of Roderic Dhu carried the fiery cross, to alarm and call to the rendezvous the sons of Alpine; and he who, giving himself up to the magic influence of the minstrel's strain, delights to blend together the real truth and the ideal in his conceptions, will remember how

" Fast as the fatal symbol flies,
In arms the huts and hamlets rise;
From winding glen, from upland brown,
They pour'd each hardy tenant down."

Near the east end of Loch-Achray, and before the traveller from Callander approaches it, he passes over 'the Brigg of Turk,' one of the localities of the poem. See GLENFINGLASS and TROSACUS.

ACKERGILL. See WICK.

ACKERNESS. See WESTRAY.

ADAM. See WHITEKIRK.

ADAM'S ROW, a village in the parish of Newtown, Edinburghshire. Population, 249.

ADD (THE), a river of the west side of Argyleshire. It rises in some marshes in the north-west extremity of the parish of Glassary; and in its winding course south-westward receives several tributaries, and acquires a considerable volume. It flows along the valley of Glassary, and through the moss of Crinan, and falls into the sea at Inner Loch Crinan. It occasionally, in heavy rains, overflows its banks, and does much injury to adjacent fields. It abounds with trout; and there is a salmon fishery at its mouth.

ADIE HILL. See RATHVEN.

ADVIE, an ancient vicarage and district, partly in Moray, partly in Inverness-shire, now comprehended in the parish of Cromdale; 8 miles north-east from Grantown. This district contains the barony of Advie on the eastern, and the barony of Tulchen on the western side of the Spey. These baronies, anciently a part of the estate of the Earl of Fife, came to the family of Ballendalloch in the 15th century, with whom they continued, until sold to Brigadier Alexander Grant.

ÆE (THE), or WATER OF ÆE, a river of Dumfriesshire. It rises at the southern foot of Queensberry-hill, runs south for some miles to Gleucross in Kirkmahoe, forming the boundary between Closeburn and Kirkmichael parishes; then bending its course south-eastward, forms a junction at Eshy with the Kimmel, a branch of the Annan. Its tributaries are the Deer burn, the Branet burn, the Garrel, Capple water, and Glenkill burn. Its length of course, including windings, is about 16 miles. It is a rapid stream, and very subject to sudden and powerful

floods; and as it flows much on a broad gravelly bed, through a country but slightly above its own level, it often does considerable injury, and is constantly undermining its banks and altering its course.

ÆBUDÆ and ÆMODÆ. See IBERIDES.

ÆN. See AAN.

AFFLECK. See AUCHINLECK.

AFFORSK, a picturesque ravine, in the parish of Gamrie, Banffshire. It is deep and winding, and has precipitous, diversified, and luxuriantly plant-clad sides, and passes down in a profusion of romance from the interior of the parish, past the old church, to the sea. See GAMRIE.

AFFRICK (LOCN), a lake on the mutual boundary of the parishes of Kilmorack and Kiltarity, in the north-western part of the mainland of Inverness-shire. It measures about 7 miles in length and about one mile in breadth, and extends in a north-easterly direction. It is very deep, and abounds in different kinds of small fish. The river Glass flows out of it, and soon expands into two other lakes of respectively 3 miles and 4 miles in length, and sometimes bears here the name of the Affrick. All the strath of the three lakes, and of the intervening runs of the river, is sublimely picturesque, and it possesses fine remains of the ancient Caledonian forest.

AFTON, a rivulet of Ayrshire. It rises among the uplands near the meeting-point of Ayrshire, Dumfriesshire, and Kircudbrightshire; and flows 8 miles northward to the Nith at the east side of the village of New Cumnock. Its current is rapid, and its course lies along a beautiful valley, to which it gives the name of Glenafton. It is noticed in one of the effusions of Burns.

AFTON BRIDGEND, a village in the parish of New Cumnock, taking its name from its situation on the rivulet Afton, Ayrshire. Population in 1861, 301.

AIIARCLE. See ACHARACLE.

AIGAS, or EILEAN-AIGAS, a beautiful island, 5½ miles south-west from Beauly, formed by the river Beauly, which here divides into two branches. It is of an oval figure, about 1½ mile in circumference; and contains about 50 acres. It is principally composed of a mass of pudding-stone, rising in an abrupt manner about 100 feet above the level of the water, but communicating with the mainland by a bridge. It is covered with natural wood of birch and oak, and is much frequented by roes, and occasionally by red deer. To this island Simon, Lord Lovat, conducted the dowager Lady Lovat, when letters of fire and sword were issued against him in 1697; and here, in a crow-stepped building in the old Scottish style, erected by Lord Lovat, reside the only descendants of Prince Charles Edward Stuart. The wild turkey of America was introduced to the island in the summer of 1842. See KILMORACK.

AIKENHAULD. See OATHLAW.

AIKERNESS. See POMONA.

AIKY. See DEER (NEW).

AILS CRAIG, a stupendous insulated rock, or rather mountain, in the mouth of the frith of Clyde, between the coasts of Ayrshire and Kintyre; in N. lat. 55° 15' 13"; W. long. 5° 7', according to Galbraith, but according to Norie, in N. lat. 55° 17' 0"; W. long. 5° 8' 0". From the islet of Pladda it is distant 10' 20" direct south. It is a mass of columnar syenetic trap, shooting up in a conical form, to an altitude of 1,100 feet according to Macculloch, from an elliptical base of 3,300 feet in the major axis, by 2,200 in the minor. Its formation is distinctly columnar, especially on the western side, in which the rock rises quite perpendicularly from the sea. Dr. Macculloch says, that "if a single pillar

be examined near at hand, it will be found far less decided in shape than those of Staffa or Skye, while the whole mass appears as if blended together, not as if each column could be separated; but, when viewed in the mass, the general effect of a columnar and regular structure is as perfect as on the north coast of Skye," while the diameter of the columns far exceeds those of Skye, ranging from 6 to 9 feet, and, in one place, attaining an unbroken altitude of nearly 400 feet. The only landing-place is on the east side, where there is a small beach formed by fallen fragments of the rock. From this, an easy ascent of 200 feet conducts us to the ruins of a square building of which nothing is known, though Macculloch conjectures it may have been an heremital establishment dependent on Lamlash in Arran. Beyond this building the ascent is extremely laborious, the visitor having to force his way over fragments of rock, and through a forest of gigantic nettles. Not far from the summit are two copious springs; the summit itself is covered with fine herbage, but affords only a scanty and somewhat perilous footing.

The aspect of this vast and 'craggy ocean pyramid' "from any distance, and in every direction," says Macculloch, "is very grand, and conveys an idea of a mountain of far greater magnitude; since, as its beautiful cone rises suddenly out of the sea, there is no object with which it can be compared. From its solitary and detached position also, it frequently arrests the flight of the clouds, hence deriving a misty hue which more than doubles its altitude to the imagination; while the cap of cloud which so often covers its summit, helps to produce, by concealing its height, the effect—invariable in such cases—of causing it to appear far higher than it really is; adding that appearance of mystery to which mountains owe so much of their consequence. What Ailsa promises at a distance, it far more than performs on an intimate acquaintance. If it has not the regularity of Staffa, it exceeds that island as much in grandeur and variety as it does in absolute bulk. There is indeed nothing, even in the columnar scenery of Skye or in the Shiant isles, superior as these are to Staffa, which exceeds, if it even equals, that of Ailsa. In point of colouring, these cliffs have an infinite advantage; the sobriety of their pale grey stone, not only harmonizing with the subdued tints of green, and with the colours of the sea and the sky, but setting off to advantage all the intricacies of the columnar structure; while, in all the Western islands where this kind of scenery occurs, the blackness of the rocks is not only often inharmonious and harsh, but a frequent source of obscurity and confusion."

Ailsa Craig is occupied throughout the warm parts of the year by innumerable legions of sea-fowl; and a favourite feat, in pleasure excursions by steam-boat from Glasgow, is to sail near the stupendous cliffs, and to fire a swivel against them so as to give a sudden and universal alarm to the birds. The scene which follows is wondrously sublime,—seeming as if the mountain were resolving itself into great dense clouds of feathered creatures, with an accompaniment of cawing and screaming almost terrific; but, at the same time, it is so very singular, so exceedingly unlike every other kind of sublime scene, that some attempts which spirited writers have made to describe it, though all true and graphic to persons who have witnessed it, appear bombastic and nonsensical to those who have not. An intelligent tacksman pays £34 a-year for the use of the rock; and, along with two or three assistants, spends the whole summer, from the month of May onward, in alternately fowling and fishing. The birds are of value chiefly for their

feathers, for the stuffing of beds; and they are caught in two methods. One of these is to spread a large net over any traversable part of the surface, and to leave it there for a sufficient time to allow them to settle down upon it; and when it is visited, it generally has entangled as many as will fill a sack or two, and the fowler needs only to pick them out and despatch them. The other method is exactly similar to the perilous one practised at St. Kilda. Morning and evening, when the birds are quiescent, the tacksman or an assistant is let down from the summit against the face of the precipice, by means of a rope securely held by two persons above. The man, thus dangling between sky and sea, is armed with a long pole carrying a hair gin; and he slips the gin over the head of each slumbering fowl, draws tight the loop, and then flings down the carcass to the foot of the precipice to be picked up at leisure by a boat. Notwithstanding the immense numbers which are thus taken, the feathered colonies of the Craig never look as if they had sustained any diminution, but seem, amid all the trackings of desolation which pass over them, to be like the sea, which "takes no furrow from the keel." Toward the end of summer, the colonies have completed the purposes of their yearly sojourn, and begin to leave in detachments according to their kind; and early in autumn the myriads of solan geese, cormorants, puffins, links, and gulls, have entirely taken their departure for other regions. The rock, however, is even then not without inhabitants; for, in addition to great numbers of rabbits, between forty and fifty goats work hard amongst the cliffs for a decent subsistence. The rabbits are thinned during the month of January, when, according to the season, from 50 to 100 dozens are taken off the rock; and as their quality is generally excellent, they are great favourites in the market.

Ailsa Craig is situated about 15 miles west of the town of Girvan, and belongs proprietorially to the barony of Knockgeran, in the parish of Dailly. A scheme was agitated, a number of years ago, to make it a fishing station for the supply of Glasgow and Liverpool, by means of the steam-boats which regularly pass it, and some buildings for the purpose were commenced, but the scheme was abandoned. The noble family of Kennedy, Earls of Cassilis in the peerage of Scotland, are proprietors of Ailsa Craig, and take from it their titles of Baron and Marquis in the peerage of the United Kingdom. Archibald, twelfth Earl of Cassilis, was created Marquis of Ailsa in 1831; and his grandson succeeded to his titles in 1846. The family seats are COLZEAN CASTLE and CASSILIS CASTLE, which see; and see also the article MAYBOLE.

AIRD, or ARD, any isolated height, of an abrupt or hummocky character, either on the coast or in the interior. The name by itself, chiefly in the form of Aird, occurs sometimes, yet not often, in Scottish topography; but in combination, as a prefix, chiefly in the form of Ard, it is of very frequent occurrence. Some words compounded with it refer to legendary circumstances, as Airdrie, "the king's height;" others refer to events in authentic history, as Ardchattan, "the height of Catan," one of the companions of Columba; but the great majority are descriptive of the localities themselves, as to either character or relative situation, as Ardclach, "the stony height," Ardnamurchan, "the height of the narrow seas."

AIRD, a hamlet in the parish of Inch, Wigtonshire.

AIRD (CASTLE OF), an extensive ruin, supposed to be the remains of a Danish fortification, situated on a rocky promontory a little to the north of Cara-

dell point, on the eastern side of Kintyre, opposite Machry bay in the island of Arran.

AIRD (THE), a fertile district of Inverness-shire, in the vale of the Beauly, chiefly the property of different branches of the clan Fraser.

AIRD (THE), a peninsula on the east coast of the island of Lewis, with which it is connected by the isthmus of Stornoway. It measures 5 miles in extreme length from Tuimpan-head on the north-east, to Chicken-head on the south-west; its average breadth is about $2\frac{1}{2}$ miles. It is in the parish of Stornoway, to which in ancient times it formed a chapelry called Ui or Uy. The old chapel is in ruins, but the inhabitants attend a government chapel at Knock. See LEWIS and STORNOWAY.

AIRD LYNN. See SHINNEL.

AIRD OF APPIN. See AIRDS.

AIRD OF COIGACH. See COIGACH.

AIRD POINT, the north-eastern extremity of the island of Skye, nearly opposite the mouth of the Gairloch in Ross-shire.

AIRDLAMONT. See ARDLAMONT.

AIRDLE, or **ARDLE (THE)**, a small river of the north-eastern part of Perthshire. It is formed by the union of two streams,—one descending from the Grampians, in the east forest of Athole, through Glen Fernal,—and the other flowing from the west through Glu Briarachan. These streams unite at Tulloch, and assume the name of the Airdle, which flows south-east through Strath-Airdle in the parish of Kirkmichael, and unites with the Shee a little below Nether Traquhair. The two united streams form the ERICHT: which see. The total course of the Airdle is about 13 miles.

AIRDMEANACH. See ARDMEANACH.

AIRDNAMURCHAN. See ARDNAMURCHAN.

AIRDRIE, a post and market town and parliamentary burgh, in the parish of New Monkland, Lanarkshire. It stands on the principal line of road between Glasgow and Edinburgh, 11 miles east by north of Glasgow, and 32 miles west by south of Edinburgh. Its site is a rising ground, between two rivulets, sloping gently to the west, but presenting no marked or interesting features. Chalmers thinks that this place is the Arderyth of the ancient Britons, where, in the year 577, Rydderech the Bountiful, king of Strathclyde, defeated Aidan the Perfidious, king of Kintyre, and slew Givendolan the patron of Merlin, who was also engaged in the battle. But so recently as about 130 years ago it continued in a strictly rural condition, and was occupied only by a farm hamlet. The surrounding country is still bleak, but has assumed an appearance of high general interest from the stir and achievements of manifold industry. The town is well-built, and has an aspect of tidiness, good taste, and great prosperity. The principal street extends along the Glasgow and Edinburgh road, and is spacious and airy. The town as a whole is not compact, yet on the other hand is free from all disagreeable compression and unhealthy closeness. It owes its rise and progress to the working of the rich and extensive beds of ironstone and coal which surround it,—to facilities of communication by road and canal and railway with the great markets and outlets of the west,—and to a large share in the weaving orders of the manufacturers of Glasgow; and, both in the spiritedness of its population and in the neatness of its streets and buildings, it does ample credit to the circumstances of its position and its history.

The town-house, erected about 20 years ago, is a very neat structure, and contains a good town-hall, a prison, and a police-office. The principal school, called the Academy, is a neat edifice, built by R. S.

C. Alexander, Esq., of Airdrie House, conducted by a rector and his assistants, and containing a branch for girls. The chief public institutions, commercial, charitable, and miscellaneous, are offices of the Bank of Scotland, the National Bank of Scotland, the Clydesdale Bank, the City of Glasgow Bank, a savings' bank, a Temperance savings' Bank, offices of ten insurance companies, a Gas Company, the Airdrie and Coatbridge Water Company, the New Monkland Poor-House, the New Monkland Orphan Society, the Airdrie Charity-House, the Benevolent Society, the Mechanics' Institution, the Horticultural Society, the Gardeners' Societies, New Monkland Agricultural Society, the Phrenological and Literary Society, the Airdrie Weavers' Friendly Society, the Temperance Society, and the Airdrie Sabbath School Union. The chief means of communication with Glasgow are the Monkland Canal and the Monkland branch of the Edinburgh and Glasgow Railway; and with Edinburgh is the direct Airdrie, Bathgate, and Edinburgh Railway. See the articles MONKLAND CANAL, MONKLAND RAILWAYS, SLAMANNAN RAILWAY, and EDINBURGH AND GLASGOW RAILWAY; and see also GLASGOW AND GARNKIRK RAILWAY. The number of passengers between Airdrie and Glasgow by the canal alone, previous to the great facility of railway transit, was upwards of 50,000 a-year. At present there are five railway trains daily from Airdrie to Glasgow, and three to Edinburgh.

In 1821, Airdrie was erected into a free burgh of barony; and by the Municipal Act it was put under the government of a provost, three bailies, a treasurer, and seven councillors; by the Reform Act, it was constituted a parliamentary burgh, to unite with Lanark, Hamilton, Falkirk, and Linlithgow, in sending a member to parliament; and by a special act passed in 1849, it acquired all requisite powers for its municipal government and for all matters of police. The corporation revenue in 1863-4 was £2,700; and the municipal and parliamentary constituency was 359. A burgh court is held every Monday; a sheriff's court every Tuesday; and a Justice of Peace court, every Thursday. A market is held every Tuesday; and fairs are held on the last Tuesday of May and the third Tuesday of November. Real property of the burgh in 1861-2, £29,742. Population in 1831, 6,594; in 1861, 12,922. Houses, 1,259.

Airdrie has a chapel of ease, called the West church, and had formerly another called the East church; but the latter, which was built in 1797, has been taken down. The West church was opened in 1835, and cost £2,370, and has 1,200 sittings. There are three Free churches, denominated Broomknoll, the West, and the High; and the yearly sum raised in 1865 in connexion with the first was £201 12s. 7d., with the second £259 0s. 11½d., with the third £259 6s. 0d. There are two United Presbyterian churches, the one in Well Wynd and the other in South Bridge-street; the former a neat modern structure; each attended by between 500 and 600. There is a Reformed Presbyterian church, with an attendance of 350. The other places of worship are one Independent, one Baptist, two Methodist, and one Roman Catholic. See MONKLAND (NEW), and BROOMKNOLL.

AIRDRIE, an estate in the parish of Crail, Fifeshire. It belonged in the reign of David II. to the family of Dundemore; in the 15th century, to the Lumsdens; in the reign of James VI. to Sir John Preston, president of the court of session; afterwards to General Anstruther; and latterly, to Methven Erskine, Esq., who became Earl of Kellie, and died here in 1830. The mansion is embosomed

in wood, and crowns a swelling ground at the distance of $2\frac{1}{2}$ miles from the coast, and comprises an ancient tower from which a magnificent view is obtained of the expanse and shores of the frith of Forth from the ocean to Edinburgh, and of the east coast of Scotland from St. Abb's Head to the Bell-Rock Lighthouse.

AIRDRIE-HILL, a property, rich in black-band ironstone, in the vicinity of the town of Airdrie, parish of New Monkland, Lanarkshire.

AIRDS, a beautiful district of Appin, in Argyleshire. It comprises the peninsula between Loch Linnhe on the west and north, and Loch Creran on the south and east. "I do not know a place," says Macculloch, "where all the elements—often incongruous ones—of mountains, lakes, wood, rocks, castles, sea, shipping, and cultivation, are so strangely intermixed,—where they are so wildly picturesque,—and where they produce a greater variety of the most singular and unexpected scenes." The promontory of Ardmucknish, richly clothed with oak-coppice, is a remarkably fine object. The estate of Airds comprises about 3,881 imperial acres, of which 792 are arable and 1,171 are under wood. The mansion-house is within $\frac{1}{2}$ of a mile of Port-Appin.

AIRDS BAY, a bay on the south side of Loch Etive, within the district of Muckairu, Argyleshire.

AIRDSMOSS, or **AINSMOSS**, a large tract of elevated moorland in the district of Kyle, Ayrshire, lying between the water of Ayr on the north, and Lugar water on the south. The road from Cumnock to Muirkirk may be regarded as its extreme eastern boundary, and that from Cumnock to Catrine as its extreme western. It is chiefly in the parish of Auchinleck; but the uncultivated tract of moss does not exceed 5 miles in length, by 2 in breadth. A severe skirmish took place here, on the 22d of July 1680, between sixty-three Covenanters and a party of dragoons; and a monument popularly called Cameron's stone, about half a mile west of the road from Cumnock to Muirkirk, marks the spot where the deadliest of the strife occurred. The present erection is neat and quite modern; but the original monument was a large flat stone, laid down about fifty years after the event, and marked with the names of the Covenanters who fell in the skirmish, and with the figure of an open bible and the figure of a sword grasped by a hand.

The sixty-three Covenanters were among the staunchest adherents of the famous Sanquhar declaration, which renounced allegiance to the King, and were headed by Richard Cameron, who was both their minister and their chief political leader, and by Hackston of Rathillet, who acted as their military commander. They had lain for some time ensconced in the moor, aware of danger being near them; and, in the afternoon of the 22d of July, they espied a body of well-armed dragoons, about 112 in number, under the command of Bruce of Earlsall, coming rapidly on. They had no alternative but to surrender unconditionally or make a desperate fight for liberty and life; and they promptly made ready to offer a stern resistance. Cameron prayed thrice aloud, "Lord, spare the green and take the ripe," and then made a brief encouraging address to his brethren. Hackston rode off to seek an advantageous position, but could not find any; and returned to the margin of the morass, and there quickly arranged his little company in the order of eight horsemen on the right, fifteen horsemen on the left, and forty foot, many of them badly armed, in the centre. A detachment of the foot were sent off to meet about twenty dismounted dragoons, who advanced to turn the flank of the Covenanters; and

the main body moved forward to confront the chief force of the enemy, who were coming on at a gallop. The Covenanters' horse rode right up to the very face of the dragoons, and were the first to fire, and broke in among their ranks with desperation and fury. Hackston himself was foremost, and rode riotously amongst them, and sustained assaults from several troopers at a time, and pushed forward and recoiled by turns, and laid about him for many minutes like an Achilles; and, his horse at last sinking in the bog, he sprang to his feet, and was instantly assailed by a heroic dismounted dragoon, an old acquaintance of his own, of the name of David Ramsay, and combated him long and fiercely with the small sword, without either gaining or yielding any considerable advantage, and was at length struck down by three mounted dragoons behind him, and then surrendered himself on quarter to Ramsay. The other horsemen of the Covenanters fought almost as desperately as their leader, and neither asked nor gave quarter; but were soon cut down or captured. The foot did not adequately support the horse, but delivered their fire at some distance; and when Hackston fell, most of them fled far into the wet and sinking parts of the bog, where the dragoons could not easily or at all follow them. No fewer than twenty-eight of Earlsall's dragoons were either killed or mortally wounded in this skirmish; and the survivors readily acknowledged the great bravery of their antagonists. Only nine of the Covenanters were slain. Richard Cameron himself was among the first who fell, and was shot dead upon the spot where he stood. A number of others were made prisoners, and taken to Edinburgh, and were afterwards either tortured, banished, or executed. The skirmish of Airdsmoss is the subject of the well-known beautiful effusion, beginning,

"In a dream of the night I was wafted away,
To the moorland of mist where the martyrs lay;
Where Cameron's sword, and his bible are seen,
Engraved on the stone where the heather grows green."

AIRI-INNIS, a lake, about 2 miles long and $\frac{1}{2}$ a mile broad, in the parish of Morvern, Argyleshire.

AIRLIE, a parish on the west border of Forfarshire. It is bounded by Perthshire, and by the parishes of Lintrathen, Kingoldrum, Kirriemuir, Glamis, Eassie, and Ruthven. Its post-town is Kirriemuir. Its greatest length, from east to west, is 6 miles; and its breadth varies from $\frac{1}{2}$ a mile to 4 miles. The Dean river, a sluggish stream flowing from the Loch of Forfar, forms the southern boundary; and the romantic Isla, running in a deep rocky gorge, bounds part of the north and west. The surface of the southern district is part of the howe of Strathmore,—alluvial and fertile; and the surface of the other districts rises, in a series of undulating parallel ridges, to an extreme height of about 350 feet above the level of the howe. The glen of the Isla, along the northern border, with rocky channel, lofty and precipitous braes, and a profusion of every kind of brushwood, is a striking series of close picturesque views. A hog of 128 acres in area, called Baikie Moss, once lay on the western border, but has all been brought under cultivation. There are eight landowners of £100 Scots valued rent. Assessed property in 1865, £9,838 16s. 6d. Baikie castle, the property of the last Viscount Fenton, was once a notable object; but not a vestige of it now exists. Airlie castle, the ancient seat of the Ogilvies, Earls of Airley, is 'the Bonnie House o' Airlie' of Scottish song. It occupied a commanding site on the rocky promontory at the confluence of the Melgum and the Isla, about 5 miles north of Meigle in Strath-

more; it possessed great strength of both position and masonry, and ranked as one of the proudest and most massive fortresses in Central Scotland; and, previous to the introduction of artillery, it must have been almost if not entirely impregnable. It had the form of an oblong quadrangle; and occupied the whole summit of the promontory, with the exception of a small space at the extremity, which is traditionally said to have been used for exercising the horses. The wall which protected it on the eastern and most accessible side—high and massive, together with the portcullis entry—still remains in connexion with the modern mansion of Airlie; and the fosse also continues distinct, but has been partially filled up, in order to render the place accessible to carriages. In July 1640, the Earl of Argyle, acting secretly upon the personal resentment which he had all his life long entertained against the Ogilvies, but overtly upon an express commission given him for the public service by the Committee of Estates, raised a body of 5,000 men of his own clan, and led them across the Grampians and down Strathtay to devastate the territories of the Earl of Airlie. He is said by an old tradition to have halted them for the night on the haughs at the village of Rattray; and, in accordance with this, though most diminishingly out of reckoning with regard to the numbers, the old ballad says,—

"Argyle has raised a hunder men,
A hunder men and mairly,
And he's awa down by the back o' Dunkeld,
To plunder the bonnie house o' Airlie."

The Earl of Airlie at the time was absent in England, whither he had gone as much to avoid the necessity of subscribing the Covenant, as to render immediate service to the King's cause. Lord Ogilvie, the Earl's eldest son, held the charge of Airlie castle, and had recently maintained it against the assault of a party under the Earl of Montrose; but, on the approach of Argyle's army, he regarded all idea of resisting them as hopeless, and hastily abandoned the castle and fled. Argyle's men plundered the place of everything which they coveted and could carry away, and then proceeded to damage the castle to the utmost of their power by dilapidation and fire; and Argyle himself acted so earnest a part in the demolition, that, according to the report of the historian Gordon, "he was seen taking a hammer in his hand, and knocking down the hewed work of the doors and windows till he did sweat for heat at his work." The modern house of Airlie is a beautiful and commodious residence. The other mansions are Lindertes House and Baikie House,—the former a modern structure in the castellated style. The railway from Newtyle to Glamis runs along the southern confines of the parish. Population in 1831, 860; in 1861, 845. Houses, 171.

This parish is in the presbytery of Meigle, and synod of Angus and Mearns. Stipend, £219 1s. 5d.; glebe, £12. Patron, the Earl of Strathmore. Schoolmaster's salary now is £40, with £13 fees. The parish church was built in 1783, has 411 sittings, and is in good repair. There is a Free church; and the yearly sum raised in connexion with it in 1865, was £69 10s. 3d. There is a private school.

AIRNTULLY. See AERTULLY.

AIRSMOSS. See AIRDSMOSS.

AIRTH, a parish, with a post-office village of its own name, in the earse district of Stirlingshire. It is bounded by the upper part of the frith of Forth, and by the parishes of St. Ninians, Larherst, and Bothkennor. It extends about $6\frac{1}{2}$ miles along the Forth, and is about $3\frac{1}{2}$ miles broad. Excepting two small hills, the whole surface is a plain. A small stream which rises near the centre of St Ninians

parish, flows eastward with a meandering course through this parish, and discharges itself into the Forth at Higgin's Nook. Stream-tides flow above a mile up this rivulet, which is liable to sudden and extensive floods. On the western side of the parish were formerly two extensive mosses,—one of nearly 500 acres, called the Moss of Dunmore; and the other, to the south of it, called the Moss of Letham. These—which might be remains of the great Caledonian forest—have almost disappeared before the progress of cultivation; and on the side of the frith also a considerable quantity of rich laud has been reclaimed from the sea. The hills of Dunmore and Airth are very beautiful wooded eminences, towards the centre of the parish, both commanding a fine view of the frith. Coal was once extensively wrought; and sandstone is plentiful in the two hills. There are three small harbours on the coast,—Airth, Dunmore, and Newmiln; and two ferries across the frith,—one at Kersie, where the frith is about half-a-mile in breadth, and the other at Higgin's Nook, where the breadth is nearly a mile. All the low grounds of the parish seem to have, at a comparatively recent period, lain below the frith; for they all contain strata of modern shells at no great depth; and at the forming of the present road from Airth to Stirling in 1817, the skeleton of a whale was found at a spot upwards of a quarter of a mile from the present beach. The mansions are Airth castle, Dunmore House, Higgin's Nook, and Powfoulis. Airth castle takes its name from an old tower adjacent to it which is said to have been the scene of an exploit of Sir William Wallace against the English. Dunmore House is an elegant, Gothic, castellated structure, the seat of the Earl of Dunmore, amid a beautifully wooded park. The village of Airth stands near the coast, about 5 miles north of Falkirk. It has a savings' bank, a circulating library, two friendly societies, and more than enough of alehouses; and an annual fair is held on the last Tuesday of July, chiefly for hiring shearers. Population of the village in 1851, 583. There is another village,—the village of Dunmore. Population of the parish in 1831, 1,825; in 1861, 1,194. Houses, 221. Assessed property in 1864, £10,367.

This parish, formerly a vicarage, is in the presbytery of Stirling, and synod of Perth and Stirling. Patron, Graham of Airth. Stipend, £281 12s.; glebe, £27. Unappropriated tithes, £1,489 3s. 2d. Schoolmaster's salary, £55, with £40 fees. The parish church is a handsome structure built in 1820, and has 800 sittings. There is a Free church preaching station; the sum raised at which in 1865 was £62 3s. 11d. There is also an United Presbyterian church, with an attendance of from 130 to 140. There are two private schools. An earldom of Airth was grafted in 1683 on the earldom of Menteith, held by the noble family of Graham; but it became dormant at the death of the second Earl in 1694.

AIRTHREY, an estate among the skirts of the Ochill hills, about 2 miles north of Stirling. It belongs to Lord Abercromby, and is graced by his beautiful residence of Airthrie castle. It is remarkable for the picturesqueness of its scenery, for the richness and variety of its minerals and mines, and most of all in recent years for the celebrity of its mineral wells. These wells are four in number, but yield only two waters, called the weak water and the strong water, for the use of invalids. According to the analyses of Dr. Thomson, one pint of the weak water contains 37.45 grains of common salt, 34.32 of muriate of lime, and 1.19 of sulphate of lime; and one pint of the strong water contains 47.354 grains of common salt, 38.461 of muriate of lime, 4.715 of sulphate of lime, and 0.45 of muriate

of magnesia. The waters, as a saline aperient, far excel those of Dunblane and Pitcaithley; and for general medicinal effect against various chronic diseases, they have begun to compete in fame with those of the most celebrated spas in Britain. But, no doubt, much of the benefit ascribed to them is really derived from the salubrity of the climate, and the influences of scenery, and the effects of repose and exercise. Visitors are accommodated with lodgings at the neighbouring village of the Bridge of Allan. See ALLAN (BRIDGE OF). A very neat hath-house, in the cottage style, with hot, cold, and shower baths, was erected a few years ago by Lord Abercromby.

ALATERVA. See WATLING STREET.

ALBANY, ALBION, or ALBINX, the ancient Gaelic name of Scotland, and, until Cæsar's time, the original appellation of the whole island. The Scottish Celts denominate themselves *Gael Albinn* or *Albinnich*, in distinction from those of Ireland, whom they call *Gael Eirinnich*; and the Irish themselves call the Scottish Gaels *Albannaich*; while their writers, so late as the 12th century, call the country of the Scottish Gael *Alban*. With respect to the etymology of the name *Albin* or *Albion*, it is to be observed, in the first place, that it is compounded of two syllables, the last of which, *inn*, signifies in Celtic a large island. Thus far the etymology is clear, but the meaning of the adjective part, *alb*, is not so apparent. Dr. John Macpherson thinks it folly to search for a Hebrew or Phœnician etymon of *Albion*, and he considers the prefix *alb* as denoting a high country, the word being, in his opinion, synonymous with the Celtic vocable *alp* or *alba*, which signifies *high*. "Of the Alpes Grajæ, Alpes Pœninæ or Peuninæ, and the Alpes Bastarnicæ, every man of letters has read. In the ancient language of Scotland, *alp* signifies invariably an *eminence*. The Alhani, near the Caspian sea, the Albani of Macedonia, the Albani of Italy, and the Albanich of Britain, had all the same right to a name founded on the same characteristic reason, the height or roughness of their respective countries. The same thing may be said of the Gaulish *Albici*, near Massilia." Deriving *alb* from the Latin word *albus*, the appellation of *Albion* would denote an island distinguished by some peculiarity either in the whiteness of its appearance or in the productions of its soil, and hence Pliny derives the etymon of *Albion* from its white rocks washed by the sea, or from the abundance of white roses which the island produced. His words are, "Albion, insula sic dicta ab *albis rupibus*, quas mare alluit, vel ob *rosas albas* quibus abundat." But although the whitish appearance of the English cliffs, as seen from the channel and the opposite coast of Gaul, certainly appears to support the supposition of Pliny, yet it is evidently contrary to philological analogy to seek for the etymon of *Albion* in the Latin. Amongst the various opinions given on this subject that of Dr. Macpherson seems to be the most rational. The term *Albany* or *Alban* became ultimately the peculiar appellation of an extensive Highland district, comprehending Breadalbane, Athole, part of Lochaber, Appin, and Glenorchy. The title Duke of Albany was first created for a younger son of Robert II. It became extinct in his son Murdoch, who was beheaded by James I. James II. renewed it for his second son Alexander; in whose son it again became extinct. Since the Union it has always been borne by the King's second son.

ALDHOUSE, a small village, about the centre of the parish of East Kilbride, Lanarkshire.

ALDIE, an ancient barony in the parish of Fossaway, Perthshire, originally belonging to the Earls of Tullibardine, but which came by marriage into the family of Mercer of Meiklour, and is now the property of Baroness Keith of Aldie. The hamlet of Aldie is about two miles south by east of the Crook of Devon. Aldie Castle, once the family-seat of the Mercers, is now in ruins.

ALDIVALLOCH. See MORTLACH.

ALE (THE), a small stream of Berwickshire. It rises in the north-east part of the parish of Coldingham, and flows about 8 miles south-eastward to a confluence with the Eye, at a point about 1½ mile above Eyemouth. Some parts of its valley are deep and picturesque; and the terminating part is very romantic, and has a remarkable elevation called the Kip-rock.

ALE (THE), a small river of Selkirkshire and Roxburghshire. It issues from several sources on the western heights of the parish of Roberton, flows eastward through that parish and through Alemoor loch, and runs first north-eastward and then eastward across the western district of Roxburghshire, draining the parishes of Ashkirk and Lilliesleaf and part of the parishes of Bowden and Ancrum, and glides into the Teviot a short distance below the town of Ancrum. It has a run altogether of about 20 miles, exclusive of its smaller windings; and it passes through much variety of scenery, from bleakly pastoral to lusciously luxuriant, yet in most places is, in some style or other, pleasing or picturesque. Its waters are of a darkish colour, and abound in trout. It was anciently called the *Alne* and the *Alna*. See ANCRUM.

ALEMOOR LOCH, a lake in the part of the parish of Roberton which lies in Selkirkshire. It has a circular outline, measures about two miles in circumference, and is of considerable depth. The scenery around it is pleasant in summer, but rather tame. This lake, Leyden informs us, is regarded with superstitious horror by the common people, as being the residence of the water-cow, an imaginary amphibious monster. A tradition also prevails in the district that an infant was once seized, while sporting on the 'willow shore' of this loch, by an *erne*, a species of eagle, which, on being pursued, dropped its 'hapless prey' into the waters. Leyden has introduced this incident with thrilling effect in his 'Scenes of Infancy,' in the lines commencing

"Sad is the wail that floats o'er Alemoor's lake,
And nightly bids her gulls unbottomed quake,
While moonbeams, sailing o'er the waters blue,
Reveal the frequent tinge of blood-red hue."

ALEXANDRIA, a post-town in the parish of Bonhill, Dumbartonshire. It stands on the right bank of the Leven, contiguous to the village of Bonhill, about 1½ miles south of Balloch and 3¼ miles north of Dumbarton. It has a station on the Dumbartonshire railway, and is traversed by the main road of the vale of Leven. The scenery around it is exquisite; and the appearance of its own streets and buildings is modern and pleasing. It has printworks and bleachfields which so long ago as in 1840 employed 438 persons; and it shares largely in the general industry which, in recent times, has

kept up so much stir and prosperity along all the once rural banks of the Leven. It has a branch office of the Clydesdale Bank, a chapel of ease, a Free church, an United Presbyterian church, and an Independent meeting-house. Population in 1841, 3,039; in 1861, 4,242. Houses 339. See **BOHMLL**.

ALFORD, a district in the south-west of Aberdeenshire, comprehending the parishes of Alford, Anchindoir, Clatt, Glenbucklet, Keig, Kildrumny, Kinnethmont, Lochell-cushnie, Rhyne and Essie, Strathdon, Tullynessle with Forbes, Tough, Towie, and part of Cabrach, which is mostly in the shire of Banff. This district is nearly surrounded on every side by hills and mountains, and there is no entrance to the greater part of it but by ascending considerable heights to gain the passes between them. The climate is good. Its distance from the ocean occasions more intense frosts and longer lying snows; but, on the other hand, the surrounding mountains protect and cover the country from the north-east fogs and winds which are so unfavourable to vegetation in less-sheltered situations and places upon the coast. Besides several inferior streams, Alford is watered by the Don, which, rushing through a narrow gullet amongst the mountains on the west, winds its course, in a direction from west to east, through the whole length of the district, and flows out through a narrow valley encompassed on the north by Bennochie, which here rises into high and magnificent alpine tops. See **БЕНОХИЕ**. A railway for this district, called the Alford Valley Railway, was opened in March 1859; deflects from the Great North of Scotland Railway at its station of Kintore; and proceeds about 16½ miles, by Fetternear, Kennay, Monymusk, Paradise, Castle-Forbes, and Haughton, to the village of Alford. Population in 1831, 11,923; in 1861, 13,241. Houses 2,470.

ALFORD, a parish, containing a post-office village of its own name, in the south-west of the district of Alford, Aberdeenshire. It is bounded by the parishes of Tullynessle, Keig, Tough, Cushnie, and Anchindoir and Kearn. Its greatest length, from east to west, is 7 miles; and its greatest breadth is 3 miles. Less than one-half of the surface is arable; and the rest is variously moss, moorland, hill-pasture, and waste upland. The soil on the banks of the Don is generally a good light loam. In the eastern part of the parish, the soil is in some places a deep loam; in others, a strong clay; and sometimes a mixture of both. In this quarter, and the adjoining parish of Tough, there was formerly a large marsh, now called the Strath of Tough or Kin-craigie, which was partially drained in the end of the 17th century. Two roads cross each other in this parish, a little to the north-east of the kirk-town: viz., the great northern road, which leads from Fettercairn, over the cairn of Month, to Huntly; and the road which goes from Aberdeen to Corgariff, a military station on the sources of Don. On the former of these lines is the bridge of Alford over the Don, a little below its junction with the Lochel, built in 1811. It is of 3 arches, having a waterway of 128 feet, and cost £2,000. It is 14 miles distant from the bridge of Potarch over the Dee, on the same line of road. There are two old fortalices in this parish; one of them, Astoune, seems to have been a place of some strength. The river Don here abounds with trout, and after high floods with salmon. Besides the Don, there are several inferior streams well stocked with trout; and upon one of them, the Lochel, a bridge was built by Mr. Melvine, then clergyman of the parish, in the end of the 17th century. The mansions are Haughton-House and Breda. There are three meal-mills. The village

of Alford is very small and very scattered, and is distant 27 miles from Aberdeen. It contains offices of four insurance companies, and an office of the Aberdeen Town and County Bank. It also contains a savings' bank and a parochial library, and is the seat of the Vale of Alford agricultural association. Fairs, chiefly for the sale of horses and cattle, are held on the first Monday of January, February, March, April, May, October, November, and December, on the Tuesday in June before Trinity Muir, and on the Friday after the second Thursday of September old style. Population of the parish in 1831, 894; in 1861, 1,264. Houses, 217. Assessed property in 1860, £5,752.

This parish is the seat of a presbytery in the synod of Aberdeen. Patron, the Crown. Stipend, £206 17s. 4d., with manse and glebe. Schoolmaster's salary now is £40, with about £10 fees. The parish church was built in 1804, and enlarged in 1826, and has 550 sittings. There is a female school. In this parish, the Marquis of Montrose, upon the 2d July 1645, signally defeated Baillie, one of the generals of the Covenant; but his cause sustained an irreparable loss in the death of Lord Gordon, eldest son of the Marquis of Huntly, who fell by a random shot, in the pursuit, near a large stone which is still pointed out by the country people. About 100 years ago some men, while casting peats, dug up the body of a man on horseback and in complete armour, who had probably perished either in the pursuit or flight from this engagement. Upon the top of a hill in this parish there is an immense cairn, 120 yards in circumference, and of a proportionable height. Of this monument there is no very distinct tradition, though some legends represent it as marking the burial-place of a brother of one of the kings of Scotland. Nor can any more certain account be given of a large cairn which stood at a place called Cairnhalloch.

ALINE (Locu), a beautiful little arm of the sound of Mull, connected with the sound by a very narrow channel, and penetrating about 2 miles into the most interesting district of Morven. The sides are steep and woody, and towards the head assume a rugged and picturesque appearance. Two streams flow into it at the head, at opposite angles; the one descends from Loch-na-Cuim, through Loch Ternate, and falls into the north-east corner of the loch; the other and larger stream, flows through Glen-Dow, skirting the western base of Ben-Mean, receives at Claggan a tributary from Glen-Gell, on the eastern side of Ben-Mean, and discharges itself into Loch Aline on the north-west point. Loch Arinas flows into the latter stream, by a small rivulet. At the head of Loch Aline is a fine old square fortalice, picturesquely situated on a bold rock overhanging the loch.

ALLAN (THE), a tributary of the Teviot, rising on the southern skirts of Cavers parish, and flowing in a north-east direction, through a lovely pastoral vale, till its junction with the Teviot at Allamouth peel, a mile above Branxhohn.

ALLAN (THE), a river of Perthshire and Stirlingshire, famed for its picturesque scenery, and giving name to the fertile district of Strathallan. Its head-springs descend in a south-eastern direction from the Braes of Ogilvie. The united stream first runs west, and then turns south-west, and enters the parish of Dunblane. At Stockbridge it bends suddenly towards the south-east, till it reaches Dunblane, whence it assumes a direction nearly south, till its junction with the Forth, about 2 miles above Stirling. Its entire course is about 18 miles. It is a fine trouting-stream, and is a familiar name to the lovers of Scottish song. It is the opinion of

Chalmers, that the Alauna of Ptolemy, and of Richard, was situated on the Allan, about a mile above its confluence with the Forth. See STRATHALLAN.

ALLAN BANK. See EDROM.

ALLAN (BRIDGE OF), a beautiful small town and charming watering place, in the parishes of Logie and Lecropt, on the northern border of Stirlingshire. It stands on the river Allan, on the road from Stirling to Crieff, and has a station on the Scottish Central Railway, 3 miles north of Stirling, and 2 miles south of Duiblanc. It is a favourite summer retreat of invalids, both on account of the salubrity of its climate, the beauty of the country around it, and the near proximity of the mineral wells of Airthrey; and, for a number of years prior to 1866, it had annually about 40,000 visitors. It commences at Coneyhill villa, not far from Lord Ahercromby's Lodge; descends westward, over a slope, to the quarter of Sunnylew; and consists partly of streets or rows of well-built houses, with many handsome shops, but chiefly of neat or elegant separate villas. It has a head post-office, an office of the Union Bank, a public reading-room, a well-kept howling-green, three large hotels, three smaller hotels, and four places of worship. Two of the hotels keep each a public library and a table d'hôte; and one of them has pleasure-grounds with jets d'eau. The Established church is a handsome Gothic edifice of 1859, with 350 sittings. The Free church is an edifice of 1853, in the middle pointed style; has a spire 108 feet high; and contains 800 sittings. The United Presbyterian church is a neat structure of 1846, with a public clock, and contains 400 sittings. The Episcopalian church was built in 1857; is in the early decorated style; consists of nave and chancel, with a belfry; and contains 250 sittings. Omnibuses run several times a-day, during summer, to Stirling. Airthrey Castle, Westerton House, Kippenross, and Keir, are in the vicinity; and very numerous spots of antiquarian interest, and places of picturesque and romantic scenery, are within easy access. Pop. in 1861, 1,803. Houses, 686.

ALLAN (PORT OF), a landing-place in the parish of Sorbie, Wigtonshire.

ALLANDER, a small river of Dumbartonshire and Stirlingshire. It rises among the Kilpatrick hills about 3 miles north of West Kilpatrick, and runs about 10 or 11 miles, partly eastward, but chiefly south-south-eastward, to the Kelvin, at a point about 2½ miles above Garscube. It is fed in summer by a reservoir among the hills; and it brings down thence supplies of water in droughty weather for the mills on the Kelvin; and always drives extensive machinery at places on its own course within the parish of East Kilpatrick.

ALLANTON, a village in the parish of Edrom, Berwickshire, situated at the point of confluence of the Blackadder and Whiteadder, on the road from Ladykirk to Chirnside, 1½ mile south of Chirnside. A new bridge was erected a few years ago over the Whitadder here, and has supplied an important want. There is a Free church in the village, whose yearly receipts in 1865 amounted to £241 1s. 11d. There is a mineral well in the vicinity. Population of the village, 258.

ALLANTON, an estate in the parish of Cambusnethan, Lanarkshire. The lands of Allanton anciently belonged to the abbey of Arbroath, and have for centuries been in the possession of the Darnley Stewarts. The mansion is an elegant pile; and the estate is rich in useful ores.

ALLANTON BURN. See KEIR.

ALLARDYCE. See ARBUTHNOT.

ALLEN (THE), a small stream in Roxburghshire. It rises on the north-western boundary of the parish

of Melrose, near Allenshaws; flows southward, skirting the western base of Colmslie hill, and passing the ruins of Hillslap, Colmslie, and Langshaw; and falls into the Tweed, about a quarter of a mile above the bridge near Lord Somerville's hunting-seat called the Pavilion, after traversing a romantic ravine called the Fairy dean, or the Nameless dean. The vale of the Allen is the prototype of the imaginary Glendearg in 'The Monastery;' although, as Sir Walter himself informs us, the resemblance of the real and fanciful scene "is far from being minute, nor did the author aim at identifying them."

ALLERMUIR, one of the Pentland hills, in the parishes of Colinton and Lasswade, Edinburghshire. It is one of the most conspicuous summits of the range, and has an altitude of 1,625 feet above the level of the sea.

ALLNESS. See ALNESS.

ALLOA, a parish, containing a town of the same name, also the villages of Cambus, Collyland, Tullibody, and Holton Square, and comprising the two ancient parishes of Alloa and Tullibody, in Clackmannanshire. It is bounded on the north and west by the river Devon; on the south by the river Forth; and on the east by the parishes of Tillicultry and Clackmannan. Its average length from east to west is about 4 miles; but its extent of bank along the winding Forth, here slowly beginning to expand into frith, is about 5½ miles; and its breadth from north to south is about 2 miles. "The low grounds lying on the banks of the Forth," says the excellent description of the parish in the New Statistical Account, "are of a fine fertile carse soil. The subsoil of part of it is a strong clay, fit for making bricks and tiles. The banks that arise from the carse, are mostly composed of gravel, with a fine loam near the surface. On the higher grounds, towards the north, the soil is thin, on a cold till bottom; but by draining of late years, it has been greatly improved. This parish contains no mountains or high hills; but its finely diversified surface, its little hills and fertile valleys, form a richly varied landscape. From any of the eminences near the town, scenery is presented to the eye, almost unrivalled for picturesque beauty, if not for magnificence. To the eastward, embosomed in trees, is seen the ancient Tower of Alloa, from the summit of which, although situated on flat ground, part of nine counties can be discerned. About a furlong north-east of the Tower, on a gentle elevation, is the new and elegant mansion of the Earl of Mar and Kellie. Beyond Alloa Wood, Clackmannan Tower crowns the summit of the next rising ground; while on either side of the expanding frith, innumerable beauties arrest the attention in the rich vale below. On turning to the north and west, a panorama of no ordinary splendour meets the eye,—on one side, the lofty Ochils, bounding the view, and covered with verdure to their summits,—on the other, the numerous windings of the river, Stirling with its finely elevated castle, and beyond, in the blue distance, the gigantic Benledi and Benlomond, with others of our Scottish alps." The highest ground in the parish is Gartmorn hill in the north-east, which has an altitude of 390 feet above the level of the Forth. Alloa Park mansion, the seat of the Earl of Mar and Kellie, is an elegant Grecian structure, surmounting a gentle eminence, and looking to the south, about a furlong east of the ancient town. The mansion of Tullibody, a seat of Lord Abercromby, is an old house near the Forth. In front of it are two pleasant low islands; behind it, on the north, is a wooded bank; and on either side, almost at equal distances from the house, are two prominences, jutting out into the carse, which

protect and shelter the lower grounds. Within a mile to the west, the Devon discharges itself into the Forth; and vessels of tolerable burden can load and unload at a pier built at the mouth of that river; while sloops and large boats loaded with grain come up near to the village of Cambus. In the north-east extremity of the parish is Shaw Park, formerly the seat of Lord Cathcart, now of Lord Mansfield. From the drawing-room windows, there is in view a fine reach of the river, with a magnificent far-away prospect, even to the hill of Tinto, in Clydesdale. Upon the eastern extremity of the parish, there is a large artificial piece of water, made about the beginning of the 17th century for the use of the Alloa coal-works. It is called Gartmorn dam; and when full, it covers 160 English acres of ground. There are two collieries in the barony of Alloa: the oldest of them, called the Alloa pits, is about $1\frac{1}{2}$ mile distant from the shore; the other is the Coalyland, and is about double that distance. There are various seams in each colliery; some of 3, 4, 5, and 9 feet in thickness. The pits are free of all noxious damps, and have in general a good roof and pavement, although there is iron stone over some of the seams. In 1768, a waggon-way was made to the Alloa pits, which proved to be so great an advantage that it induced the proprietor to extend it to the Coalyland, in 1771; and this has been substituted, in the course of improvement, by the best kind of cast-iron railway. The quantity of coal now annually raised in the parish is from 76,000 to 80,000 tons.

The ancient families of Alloa and Tullibody have all disappeared; and the oldest and mightiest of the present ones, though of ancient descent in connection with other districts, are comparatively modern here. The branch of the Aborombies which settled at Tullibody towards the end of the 16th century, were descended from the family of Birkenboig in Banffshire. The Cathcart family only made Shaw Park the seat of their residence, on parting with the estate of Auchincruive in Ayrshire, which they had possessed for ages. Their possessions in Alloa, and the adjoining parishes, descended to the late Lord Cathcart from his grandmother Lady Shaw; whose husband had purchased them, in the beginning of the 18th century, at a judicial sale, from the Bruces of Clackmannan. Neither can even the Erskines be said to be originally of this parish, although they got the lands which they now possess here, in the reign of King Robert Bruce. They were originally settled in Renfrewshire. They succeeded by a female, in 1457, to the earldom of Mar; but it was not until the year 1561 that they got possession of it. It was at that time declared in parliament, that the earldom of Mar belonged to John, Lord Erskine, who, in the year 1571, was elected regent of Scotland, on the death of the Earl of Lennox. The title was forfeited by John, the 11th earl, taking part in the rebellion of 1715; but was restored in 1824, in the person of John Francois, Earl of Mar.—The old parish of Alloa was anciently a chapelry to the parish of Tullibody; and the latter was a vicarage of the abbey of Cambuskenneth. "There are the remains of an old church in Tullibody," says the Old Statistical Account, "the lands of which, with the inches and fishings, are narrated in a charter by David I., who founded the abbey of Cambuskenneth, in the year 1147; and are made over to that abbacy, together with the church of Tullibody, and its chapel of Alloa. There are no records of the union of these two churches of Alloa and Tullibody. It seems probable, that it was about the beginning of the Reformation. It appears from John Knox, that, in the year 1559, when

Monsieur d'Oysel commanded the French troops on the coast of Fife, they were alarmed with the arrival of the English fleet, and thought of nothing but a hasty retreat. It was in the month of January, and at the breaking up of a great storm. William Kirkealdy of Grange, attentive to the circumstances in which the French were caught, took advantage of their situation, marched with great expedition towards Stirling, and cut the bridge of Tullibody, which is over the Devon, to prevent their retreat. The French, finding no other means of escape, took the roof off the church, and laid it along the bridge where it was cut, and got safe to Stirling. It is generally believed that this church remained in the same dismantled state till some years ago, that George Abercromby, Esq. of Tullibody, covered it with a new roof, and erected within it a tomb for his family. There is still a large burying-ground around this church; and on the north side of it, where there had been formerly an entry, there is a stone coffin, with a niche for the head, and two for the arms, covered with a thick hollowed lid, like a tureen. The lid is a good deal broken; but a curious tradition is preserved of the coffin, viz.: that a certain young lady of the neighbourhood had declared her affection for the minister, who, either from his station, or want of inclination, made no return; that the lady sickened and died, but gave orders not to bury her in the ground, but to put her body in the stone coffin, and place it at the entry to the church. Thus was the poor vicar punished; and the stone retains the name of the Maiden stone." Population of the modern parish of Alloa in 1831, 6,377; in 1861, 8,867. Houses, 1,110. Assessed property in 1860, £26,927.

This parish is in the presbytery of Stirling, and synod of Perth and Stirling. Patron, the Crown. Stipend, £299 3s. 2d.; glebe, £63. Unappropriated teinds, £101 9s. 7d. Schoolmaster's salary now is £70, with £16 in lieu of a house and garden, £18 10s. fees, and about £20 other emoluments. The parish church was built in 1819, at the cost of £8,000, and has 1,561 sittings. There are two Free churches in the town of Alloa, the East and the West, and another Free church at Tullibody. The yearly sum raised in 1865 in connexion with the East Free church was £236 9s. 3d.; in connexion with the West Free church, £298 3s. 7½d.; in connexion with the Tullibody Free church, £170 19s. 9½d. There are two United Presbyterian churches; the one called the West U. P. church, an old plain building, with an attendance of from 300 to 600; and the other, called the First U. P. church, a new neat building, with an attendance of above 700. The other places of worship are an Independent chapel, built in 1839, an Episcopalian chapel built in 1840, a meeting-place of Baptists, and a meeting-place of Methodists. There are eight private schools.

ALLOA, a burgh of barony, and post, market, and sea-port town, in the parish of Alloa, Clackmannanshire. It is distant 7 miles from Stirling, 7 from Dollar, 20 from Kinross, and 37 from Perth. The name has been variously written. In the charter granted by King Robert in 1315, to Thomas de Erskyne, it is spelled Alway; and, in some subsequent ones, Aulway, Anleway, and Alloway. Camden, in his 'Britannia,' seems to think it the Alauna of the Romans. He says, "Ptolemy places Alauna somewhere about Stirling; and it was either upon Alon [Allan] a little river, that runs here into the Forth, or at Alway, a seat of the Erskines." The windings of the Forth between Stirling and Alloa are very remarkable. The distance, from the quay of Alloa to the quay of Stirling, measured in

the centre of the river, is 17 miles, and to the bridge of Stirling $19\frac{1}{2}$ miles; whereas the distance, by land, from Alloa to the bridge of Stirling, does not exceed 7 miles, though the turnings in the road are numerous.

The situation of the town is pleasant. Some strata of rock run a considerable way between the carse and the high grounds, and break off about the ferry, a little above the harbour. On part of this rock is built the tower and the ancient part of the town. The tower marks the ancient residence of the family of Mar. It was built prior to the year 1315; but the entire building, with the exception of the square tower still standing, was accidentally burnt to the ground in the year 1800. The highest turret is 89 feet; and the thickness of the walls is 11 feet. The gardens were laid out by John, Earl of Mar, in 1706, in the old French taste of long avenues and clipped hedges, with statues and ornaments. The town formerly almost surrounded the tower; and in rude ages they afforded mutual benefits to each other. Most of the streets are narrow and irregular. There is one, however, on a regular plan, in a line parallel to the gardens of the tower, called John's-street, which is between 76 and 80 feet broad. A row of lime-trees, on each side, affords an agreeable shade in summer, and a comfortable shelter in winter. The town has of late years extended rapidly to the west, and it is adorned in that quarter by some elegant villas. The buildings of the town, as a whole, have a pleasant appearance. The parish church is alike conspicuous and elegant, a structure in a pointed style, 124 feet by 78, with a tower and spire soaring to the height of 207 feet. The Episcopalian chapel is a neat Gothic edifice. The Academy is a small but handsome Grecian building. The chief inns are the Royal Oak Hotel, the Crown Inn, and the Ship Inn.

Directly abreast of the town, and looking up to a pleasant view of it, is the harbour. The water here rises at eap tides from 14 to 16 feet, and at spring-tides from 22 to 24; yet it has been ascertained that the bottom of Alloa harbour is nearly on a level with the top of the pier of Leith. There is a double tide at each flowing and ebbing. The quay is built of rough hewn stone, and forms a pow, or small creek, where the rivulet that runs through the north-east end of the town falls into the river. A little above the harbour there is a dry dock. Above the dry dock there is a ferry, sometimes called the Craigward, and sometimes the King's ferry. The breadth of the river here, at high tide, is above half-a-mile; and there are good piers carried down to low-water mark on each side, and two large steamers are employed; but the rapidity of the tide sometimes renders the passage tedious. The scheme of building a bridge across the Forth here has often been talked of, and has been ascertained to be quite practicable; and some little time ago, measures were taken to form a company, with a capital of £100,000, to carry it into effect. The water here at ebb-tide is almost quite fresh, and at full-tide is nearly half fresh and half salt. The depth of the river for a considerable distance below the harbour has, in recent years, been injuriously lessened by the throwing of ballast out of vessels, by the floating of masses of matter from mosses, and by the lodgment which these substances give to the natural silt; insomuch that vessels formerly frequented Alloa of larger burden than any which can now frequent it. This port was for a long time an independent and head one, with admiralty jurisdiction on the north side of the Forth from Stirling-bridge to Pettieur, and on the south side from Stirling-bridge to Higgin's Nook; and it lost this dignity, and was

suffering inconvenience and loss for want of it, but has recently regained it. The port was long ago an important one, and at the end of last century had 115 vessels of aggregately 7,241 tons; but though still ranking as the seventh in Scotland, it has not at all prospered either in the ratio of its own advantages or in the proportion of some other Scottish ports. The harbour, all things considered, is the best in the Forth above Granton; and it commands an immense sphere of trade, in the way of both export and import. Yet the aggregate tonnage of its shipping, including sub-ports, at the end of 1860, was only 13,671 tons; and the dock and quay walls are not in good condition. The harbour revenue is derived from very light dues on goods and shipping; and in 1846, it amounted to £725 at Alloa, and £50 at Cambus; but is not levied at Clackmannan Pow, Kennetpans, and Fallin. The arrivals and departures at Alloa, in 1846, amounted to 439, of aggregately 31,940 tons, and paying customs duty £1,859; and 78 of the whole were to or from the colonies, or foreign. The arrivals and departures, in the same year, at Clackmannan Pow, Cambus, Kennetpans, and Fallin, were respectively 235, 28, 18, and 7. The vessels belonging to the port in 1864 were 49, of 10,512 tons; the coasting trade of 1860 comprised a tonnage of 2,302 inward, and of 13,754 outward; and the entire trade of 1863 comprised a tonnage of 11,385 inward in British vessels, 13,979 inward in foreign vessels, 16,546 outward in British vessels, and 25,225 outward in foreign vessels. The imports consist chiefly of corn, timber, wool, fuller's earth, and miscellaneous small goods; and the exports consist chiefly of coals, pig-iron, woollen-manufactures, glass, ale, whisky, leather, and bricks. The customs in 1863 amounted to £6,997.

The town and its environs contain many and various extensive manufactories. Camlet weaving was long a prominent department of industry, and employed about 100 looms, but became extinct. The manufacture of plaiding, tartans, shawls, blankets, druggets, and other similar fabrics, is of somewhat recent origin, yet sprang up so vigorously as soon to give rise to six large factories. The making of glass is carried on, and long has been so, in works which occupy a space of about six imperial acres, westward of the ferry, and fitted with a pier. Ale, of great celebrity, not only in Scotland but in distant lauds, is made, to the amount of about 80,000 barrels a-year, in eight breweries. Whisky, in vast quantity, is produced at Carsebridge and Cambus. Tobacco and snuff were once very extensively manufactured; and are still a considerable object. The other chief articles of production or labour are leather, bricks, stoneware, machinery, and flour. Weekly markets are held on Wednesday and Saturday; but only that on Saturday is well attended. Fairs are held on the second Wednesday of February, May, August, and November; but they are ill-attended and of very trifling consequence. The town has a stamp-office, an excise-office, a custom-house, offices of the Commercial Bank, the Union Bank, the National Bank, the Clydesdale Bank, and offices of ten insurance companies. Two newspapers are published in it,—the Alloa Advertiser and the Alloa Journal, both weekly on Saturday. Abundant communication is enjoyed up and down the Forth by the Stirling and Granton steamers, to Tillicoultry by branch railway, to Stirling, Dunfermline, and places beyond, by the Stirling and Dunfermline railway, and to Edinburgh, Glasgow, and connected places, by the Alloa junction of the Scottish Central railway. A line of railway was once projected direct between Alloa and Glasgow, to proceed by way

of Larbert and Denny, to join the Edinburgh and Glasgow railway in the vicinity of the Croy station; but this gave place to the line which leaves the Forth opposite Alloa, and joins the Scottish Central a short way north of the Larbert station. Alloa has an agricultural society, a horticultural society, a mechanics' institution, a public library, a Sbakspare club, and several friendly, charitable, and religious societies.

The town is governed by a baron bailie, appointed by the Earl of Mar and Kellie. He regulates the stents and cesses; he has also jurisdiction in debts not exceeding 40s., but few or no actions of debt are ever brought before him. The town obtained a police act in 1803, which was amended and enlarged in 1822. The town, as such, has no property or revenue, and no debts; but it pays county-burdens and rates corresponding to a valuation of £601 1s. 10d. Scotch; and, for the privilege of participating with the royal burghs in foreign trade, £11 6s. sterling as its share of royal burgh cess. Until the passing of the police act of 1822, it was ill supplied with water; but this has since been brought from the river at a considerable expense, and is filtered through an artificial bed of sand. The streets are lighted with gas, well-paved, and regularly cleaned. The town is practically the political capital of Clackmannanshire; and a new court-house and public offices, in the Flemish Gothic style, with a portico and a tower, at a cost of about £8,000, were completed in December 1865. The sheriff court is held on every Wednesday and Friday during session; and quarter sessions are held on the first Tuesday of March, May, and August, and on the last Tuesday of October. Population of the town of Alloa in 1831, 4,417; in 1861, 6,425. Houses, 643.

ALLOWAY, an ancient parish in the district of Kyle, in Ayrshire. It was united, towards the end of the 17th century, with the parish of Ayr, from which it is divided by Glengaw burn. 'Alloway's auld haunted kirk,'—a little roofless ruin,—long known only as marking the obscure resting-place of the rustic dead, is now an object of veneration, and many an enthusiastic pilgrimage, on account of its having been chosen by Burns as the scene of the grotesque demon revelry, at once ludicrous and horrible, described with such graphic and tremendous power in his tale of Tam o' Shanter; for it would seem that imagination is not restricted in her flight here by the actual and real. It is situated on the right bank of the Doon, a little below the point where the road from Ayr to Maybole is carried across that river by the new bridge, and a quarter of a mile from the cottage on Doon side in which the peasant-bard was born on the 25th of January 1759. The poet's father was interred here at his own request; and the bard himself expressed a wish to be laid in the same grave, which would have been complied with, had not the citizens of Dumfries claimed the honour of the guardianship of his ashes. Betwixt the kirk and the 'Auld brig o' Doon,' by which a road now disused is carried over 'Doon's classic stream,' about 100 yards south-east of the kirk, and on the summit of the right bank, which here rises boldly from the river, stands a splendid monument to the poet, designed by Hamilton of Edinburgh, and consisting of a triangular base, supporting nine Corinthian columns, which are surrounded by a cupola terminating in a gilt tripod. It is upwards of 60 feet in height, and cost above £2,000. The whole is enclosed, and ornamented with shrubbery; and the clever figures of Tam o' Shanter and Souter Johnny, executed by the ingenious self-taught sculptor, Thom, are placed in a small building within the enclosure. The moat of

Alloway, situated near the avenue leading to the House of Doonholm, is an ancient artificially-formed mound, on whose summit the magistrates of Ayr, in the olden times, often held courts of justice. Mr. Cathcart of Blairston, one of the lords of session, on his promotion to the bench, took the title of Lord Alloway. He died in 1829, and was interred within the ruins of Alloway kirk.

ALMAGILL. See DALTON.

ALMOND (THE), a river of Lanarkshire, Linlithgowshire, and Edinburghshire. It rises in the moor of Shotts, about a mile south-east of the kirk of Shotts, near the Cant hills; and for about 14 miles flows eastward, in a line nearly parallel with the post-road from Glasgow to Edinburgh, by Whitburn, which crosses it at Blackburn, and recrosses it again near to Mid-Calder. From a little beyond Mid-Calder, it flows in a north-easterly direction, and forms the boundary betwixt the shires of Linlithgow and Edinburgh, passing Ammondell, Bliston, Kirkliston, Carlourie, and Craigiehall, and falling into the sea at Camond, where it forms a small estuary navigable by boats for a few hundred yards. Its entire length of course, irrespective of smaller windings, is about 24 or 25 miles. Its bed, over a great part of its course, is broad and either gravelly or rocky; and after heavy rains, it often comes down in great freshets, and largely overflows its banks, and does much injury to low fertile lands in its vicinity. But, in recent times, it has been extensively restrained by very strong, high, and expensive embankments. The Union canal is carried across it near Clifton Hall by a noble aqueduct; and the Edinburgh and Glasgow railway is carried across it, lower down, near Kirkliston, by one of the most magnificent works on any line of railway, an immense viaduct of 43 arches, of 50 feet span each, and varying in height from 60 to 85 feet. See EDINBURGH AND GLASGOW RAILWAY. Its chief tributaries are Brieck Water, on the right bank below Blackburn, the Broxburn on the left bank above Kirkliston, and Gogar burn on the right bank below Kirkliston.

ALMOND (THE), a river of Perthshire. It rises in the south-east corner of Killin parish, on the north side of the range of hills at the head of Glen Lednock, and flows eastward to Newtown in the parish of Monzie, where it turns to the south-east, and skirts the road from Annliree to Buchandy. At Dallick it again turns eastward, and flows in that direction to Logic-Almond, beyond which it bends toward the south-east, and finally discharges itself into the Tay, about 2½ miles above the town of Perth, and nearly opposite to Scone. Its entire length of course, irrespective of smaller windings, is about 20 miles. It is a stream of high and varied picturesqueness, and is overlooked by many scenes and objects of great interest. See the articles MONZIE, FOWLES WESTER, LOGIE-ALMOND, METHVEN, and GLENALMOND. The valley for a long way is strictly a glen; and in that stretch, particularly in the neighbourhood of the bridge of Buchandy, about 10 miles from Perth, it contains numerous remains of Caledonian and Roman antiquity. The glen itself is dreary, desolate, and wild. In one part of it, where lofty and impending cliffs on either hand make a solemn and perpetual gloom, in the line of the military road from Stirling to Inverness, is the Clac-na-Ossian, or Stone of Ossian, supposed to mark the burial-place of the gifted son of Fingal. About 3 miles from this, in the Corriarlich or Glen of Thieves, is a large cave, known by the name of Fian's or Fingal's cave. Selma in Morven, which is said to have been Fingal's chief residence, is about 60 miles distant from Glenalmond: Newte, who travelled

through this district in 1791, says: "I have learned that when Ossian's stone was moved, and the coffin containing his supposed remains discovered, it was intended by the officer commanding the party of soldiers employed on the military road, to let the bones remain within the stone sepulchre, in the same position in which they were found, until General Wade should come and see them, or his mind be known on the subject. But the people of the country, for several miles around to the number of three or four score of men, venerating the memory of the bard, rose with one consent, and carried away the bones, with bagpipes playing and other funeral rites, and deposited them with much solemnity within a circle of large stones, on the lofty summit of a rock, sequestered, and of difficult access, where they might never more be disturbed by mortal feet or hands, in the wild recesses of the western Glen Almon. One Christie, who is considered as the eeerone and antiquarian of Glen Almon, and many other persons yet alive, attest the truth of this fact, and point out the second sepulchre of the son of Fingal." Macculloch, ever at war with 'old poetic feeling,' discredits the whole story of Ossian's supposed connexion with this place. With a better faith Wordsworth thus expressed himself on this dim tradition:

"Does then the Bard sleep here indeed?
Or is it but a groundless creed?
What matters it?—I blame them not
Whose fancy in this lonely spot
Was moved; and in such way expressed
Their notion of its perfect rest.
A convent, even a hermit's cell,
Would break the silence of this dell:
It is not quiet, is not ease,—
But something deeper far than these:
The separation that is here
Is of the grave,—and of austere
Yet happy feelings of the dead:
And, therefore, was it rightly said
That Ossian, last of all his race!
Lies buried in this lonely place."

A secluded spot called the Dronach-haugh, on the banks of this river, and about half-a-mile north-west of Lyncedoch, is said to be the burying-place of Bessie Bell and Mary Gray, famed in pathetic ballad story. The road through Glenalmond communicates between Stirling and Dalnaeardoch, by Tay bridge, passing through Amulree.

ALMONDBANK, a village, with a post-office, in the parish of Methven, Perthshire. It stands on the river Almond, 2½ miles east of the village of Methven; and has a station on the Methven railway. Its inhabitants are chiefly employed in various extensive factories in the vicinity,—the nearest of which is a power-loom weaving establishment. Population of the village, 386.

ALMOND CASTLE. See MUIRAVONSIDE.

ALNESS, a parish, containing part of the small post-town of Alness-Bridge, in the east side of Ross-shire. It is bounded on the south-east by the Cromarty frith, and on other sides by the parishes of Kiltarn, Kincardine, and Rosskeen. Its greatest length from north-west to south-east is about 20 miles; and its average breadth is about 5 miles. The surface along the sea-board of the frith is flat and cultivated, and the landscape there is beautiful; but the country inland is mountainous and barren. The Aultgrande burn, a stream of great magnificence, [see AULTGRANDE,] runs on the boundary with Kiltarn; and Alness Water, a stream of about 14 miles in length of course, runs on the boundary with Rosskeen; and both have a south-easterly direction, and empty themselves into the frith. In the higher part of the parish, surrounded by wild and uncultivated hills, are two fine fresh water

lochs, Loeh Moir and Loeh Glass, both of which are fed by tributaries descending from Rama-Cruinaeh, and the former of which discharges itself by the Water of Alness, and the other by the Aultgrande. Navar, the seat of Sir Hector Munro, is a fine building, 2 miles south-west from the bridge of Alness. Iron and silver ores have been found in this parish. Miss Spenee, while residing at the manse of Alness, in the month of July, thus describes the effect of twilight: "You can imagine nothing half so beautiful as the summer evenings in Scotland. The dark curtain of night is scarcely spread in this northern hemisphere, before

—————"Jocund day
Stands tiptoe on the misty mountain's top."

The firmament retains a glow of light, often brilliantly heightened by the aurora borealis—here called the merry daneers—which has a grand effect; and, when the softer shades of evening prevail, and throw into partial gloom the sleeping landscape, it is even at midnight, during the months of May, June, and July, only like our evening twilight, when every object is indistinctly visible. The grandeur of the mountains, the pellucid tranquillity of the rivers, and the deep gloom of the dark fir woods, altogether form a scene no person who has not beheld it can picture." Population in 1831, 1,437; in 1861, 1,178. Houses, 224. Assessed property in 1860, £4,756.

This parish is in the presbytery of Dingwall and synod of Ross. Patron, the Marehioness of Stafford. Stipend, £230 19s. 11d.; glebe, £10. Schoolmaster's salary, £50, with £20 fees, and some other small emoluments. The parish church was built in 1780, has been repeatedly repaired, and contains about 800 sittings. There is a Free church; attendance, from 500 to 700; yearly sum raised in 1865, £178 3s. 9d. There are two Society's schools, an Assembly's school, and a private school.

ALNESS-BRIDGE, a village with a post-office in the parishes of Alness, and Rosskeen, Ross-shire. The part of it in the former parish is called simply Alness; the part in the latter is called more strictly Alness-Bridge. The village stands on the Water of Alness, 10 miles north-north-east of Dingwall, and has a station, of the name of Alness, on the Highland railway. Ten annual fairs are held at it; seven of these were formerly held at Nonikill; and one in August is a great horse fair. Population of the Rosskeen part in 1861, 756.

ALSH (LOCH). See LOCHALSH.

ALTACHOGLACHAN. See ALTCONLACHAN.

ALTAMARLACH. See ALTMARLACH.

ALTAN-NAN-CEALGACH, a small stream on the western part of the boundary between Ross-shire and Sutherlandshire. It flows from a long lake, with low tame banks, called Loeh Boardan.

ALTAVIG, or ALTIVAIG, the southernmost of a group of flat islets—to which it usually gives name—on the north-east coast of Skye, between the point of Aird and Ru-na-Braddan. Martin says there is a little old chapel on it dedicated to St. Turos; and that herrings are sometimes so plentiful around a small rock at the north end of the isle, that "the fisher-boats are sometimes as it were entangled among the shoals of them!" See KILMUIR and STAFFIN (LOCH).

ALTCONLACHAN, or ALTACHOGLACHAN, a rivulet in the parishes of Mortlach and Inveraven, Banffshire. It runs down a mountainous course to the Terry, the chief tributary of the Livet. A famous battle was fought on it in 1594; though by a caprice of historians the action is more commonly named from Glenlivet. See the article GLENLIVET.

ALTDOWRAN, a romantic glen in the parish of Leswalt, Wigtonshire.

ALTGRAD. See **AULTGRANDE**.

ALTIMARLACH, a barn in the parish of Wick, Caithness. It carries off the superfluence of two lakes in the north-west part of the parish, and falls into the water of Wick, about 3 miles west of the town. Its banks were the scene of a famous conflict, on the 13th of July, 1680, between the Campbells and the Sinclairs. Campbell of Glenorchy, afterwards Earl of Breadalbane, claimed, in right of his wife and by royal patent, to be Earl of Caithness, but was resisted in his claim by Sinclair of Keiss; and he suddenly marched into Caithness, at the head of about 700 Argyle Highlanders, to enforce it. The Sinclairs, to the number of about 400, mustered to do battle, but were so reckless as to let the Campbells come over the Ord, and take post on the Altimarlach, while they themselves sat up all night at Wick drinking and carousing; and, in the morning, all wild with their revelry, they rushed out to conflict with the Campbells, and were promptly defeated, and compelled to run; and, according to tradition, so many of them were slain in the flight that the victors passed the river dry-shod on their bodies. It was on occasion of this incursion of the Argyleshiremen that the names were given to the well-known airs, "The Campbells are coming," and "The Braes of Glenorchy."

ALTIVAIG. See **ALTAVIG**.

ALTMORE (THE), a small stream of Banffshire, rising betwixt the parishes of Ruthven and Deskford, receiving several small tributaries from Altmore ridge in the former parish, flowing southwards betwixt the parishes of Keith and Grange, and falling into the Isla, about 1½ mile east of the town of Keith, after a rapid course of 6 miles.

ALTNACH (THE), a small highland stream of Inverness-shire and Banffshire. It rises on the north-east side of the Cairngorm mountains, a short way north of Loch Aven, and flows about 10 miles north-north-eastward, chiefly on the boundary between Inverness-shire and Banffshire, but partly within the latter county, to a confluence with the river Aven near Tomantoul.

ALTNAHARROW, an inn in the parish of Farr, Sutherlandshire. It stands near the head of Loch Naver, on the road from Bonar-bridge to Tongue, 21 miles from Lairg and 18 from Tongue. Fairs are held here on the 4th Wednesday of May and on the Friday in September before Bonar-bridge.

ALTNARIE (THE), a small tributary of the Findhorn, in the parish of Ardclach, Nairnshire. It is a mountain rivulet, with a southerly course, and it makes a profound and very romantic waterfall within a deep, wooded, and sequestered glen.

ALTON, a village in the north-west of the parish of Loudoun, Ayrshire. The name is a contraction for Auld-town. Population about 120.

ALTON'S HARBOUR. See **Nigg**, Kincardineshire.

ALTRIVE. See **YARROW**.

ALTYRE, a quondam parish, about 2 or 3 miles south of Forres, in Morayshire. It belonged to the parsonage of Dallas, but was annexed, by act of parliament, in 1661, to the parish of Rafford. The estate of Altyre, the property of Sir W. Cumming, Bart., the representative of the ancient Earls of Badenoch, is still the second in value in the united parish; and the mansion-house of Altyre, in the modern Italian style of architecture, is one of its chief ornaments. The burn of Altyre, one of the head-streams of the water of Forres, is an impetuous stream, and often comes down in inundating freshets. The soil of the arable parts of the estate

is generally thin, but sharp and productive; and the extent of hill and pasturage is very great. The place where the capital sentences of the baron court of Altyre were executed in the olden time is still known by the name of the Gallow-Hill. See **RAFFORD**.

ALVA,—anciently **ALVATH**, or **ALVETH**,—a parish, containing a post-town of its own name, in Stirlingshire. It anciently belonged to Clackmannanshire, but was attached about the beginning of the 17th century to Stirlingshire; and it was restored to Clackmannanshire by the Reform Act for political purposes, but still continues connected with Stirlingshire for judicial purposes. It lies about four miles north of the nearest parts of the main body of Stirlingshire; and is bounded on the north by Perthshire, and on all other sides by Clackmannanshire. Its length, from north to south, is between 4 and 5 miles; and its breadth is upwards of 2½ miles. The river Devon, a stream surpassingly picturesque, drains all the interior, either directly or by its tributaries, and glides along the southern boundary. See **DEVON (THE)**. This parish extends over a considerable portion of the Ochils; and over part of the valley—here commonly called 'the hill-foot'—between these hills and the Devon. The mean breadth, from the banks of the river to the rise of the Ochils, is about two-thirds of a mile. That portion of the Ochils which belongs to this parish, when seen from the south, at the distance of a mile or two, appears to be one continued range, presenting little variation in height; but the range slopes towards the south, and is intersected by deep and narrow glens, through most of which flow streams which discharge themselves into the Devon, and by these the foreground of this part of the Ochils is divided into three separate hills, distinguished by the names of Wood-hill, Middle-hill, and West-hill of Alva. On the brow of this last hill is a very high perpendicular rock, called Craig-Leith, long remarkable as the residence of that species of hawk which is used in hunting. The house of Alva stands on an eminence projecting from the base of Wood-hill, near the east end of the parish. The height of this part of the hill is about 220 feet above the Devon, which runs in the valley below; but immediately behind the house, the hill rises to the height of 1,400 feet, making the whole height 1,620 feet. The range continues to rise gradually for about 2 miles farther north, until it reaches, in Ben-Cloch, the highest point of the Alva range, and the summit of the Ochils; being, according to Mr. Udney, about 2,420 feet above the level of the Devon. This mountain is remarkably easy of ascent; and the view from the top of it is of vast extent, and one of the most gorgeous in Scotland. In the upper part of Alva glen, vertical cliffs rise aloft on all sides but one, and there is a very fine cataract; and in other parts, in that neighbourhood, there were formerly several deep diggings for silver-ore, and there are still uncovered pits, 30 or 40 feet in depth, situated within dark caves, and very perilous to inquisitive unwarmed strangers. Cobalt ore and precious pebbles have also been largely found; and in "the hill-foot" coal-mines were worked, and there is now a coal-mine. The House of Alva is one of the most exquisite residences in Britain; and the grounds around it are so fairly feathered and tufted as to give all truth to the old rhyme, "Oh, Alva woods are bonnie!" Population of the parish in 1831, 1,300; in 1861, 3,283. Houses, 354. Assessed property in 1860, £6,862.

This parish is in the presbytery of Stirling, and synod of Perth and Stirling. Patron, Johnstone of Alva, who also is the sole heritor. Stipend, £157

5s. 9d.; glebe, £27. Schoolmaster's salary, £55, with £28 fees. There are three non-parochial schools. The parish church was rebuilt in 1815, and enlarged in 1854. There is a Free church; attendance 120; yearly sum raised in 1865, £142 14s. 9d. There is also an United Presbyterian church, which was opened in 1843, and has an attendance of about 290.

The TOWN OF ALVA stands near the base of the West-hill, about a mile west of the House of Alva; has a junction railway $3\frac{1}{2}$ miles long, from Cambus, opened in 1863; and is washed along the east side by a small stream. It probably was a trivial hamlet about the beginning of the 18th century; and it contained 130 families in the year 1795, and contains now nearly five times that number. It has a branch office of the Union Bank of Scotland, and is partly the seat and partly the centre of an extensive and important woollen manufacture. This manufacture dates back to the origin of the village, but has varied in its fabrics. Serges were the chief productions till near the end of last century; plaidings and blanketings then took their place; tartan shawls were introduced in 1826, and soon became the most general article; and chequered cassimeres were introduced in 1832, and speedily became prominent. In 1798, the first woollen factory was built; and in 1841 there were eight factories; and the number of looms in the factories is now much greater than the number in smaller buildings and in private houses. The chief market for the fabrics is Glasgow; and other markets are Stirling, Perth, and Edinburgh. Population of the town in 1841, 2,092; in 1861, 3,147. Houses 330.

ALVAH, a parish on the north-east border of Banffshire. Its post-town is Banff. It is bounded on the north-east and east by Aberdeenshire, and on the other sides by the parishes of Forglen, Marnock, and Banff. Its length is about 6 miles; and its breadth varies from 2 to 6 miles. The river Deveron enters the parish about a mile below Forglen house, which is on its northern bank, and, after winding through a fertile valley, leaves it at a point about 2 miles from the sea. It here abounds with salmon, trout, and eel; and is frequented by wild ducks, widgeons, teals, and herons. About half-a-mile below the church, the river is contracted by two steep and rugged precipices, commonly denominated the Craigs of Alvah, between which it is about 50 ft. in depth. The scenery, naturally hold and picturesque, was greatly embellished here by its noble proprietor, the late Earl of Fife, who threw a magnificent arch over the river. The haughs along the banks of the river are subject to inundations, especially in the neighbourhood of the Craigs of Alvah, which check the rapidity of the stream, and throw the water backward. As we recede from the Deveron towards the west, the country becomes more hilly and barren. One of the most conspicuous hills is the Hill of Alvah, which rises from the bed of the river to the height of 578 ft. above the level of the sea, and serves as a landmark to mariners on their approaching the coast. This is an isolated hill, and is situated on the northern border of the parish; and the hill of Maunderlea, 155 ft. higher, is situated nearly four miles to the south-west, and is connected with other heights, and commands a vast prospect of the district of Buchan, the valley of the Deveron, and the coast of the Moray frith. An ancient castle, said to have been built by an Earl of Buchan, stood in a swamp, now a fertile field, near Monthlairy; and an ancient chapel stood on an adjoining eminence; but both have disappeared. A noted fountain, called St. Colme's well, was recently converted into a source of constant and

copious supply of pure water to the town of Banff. An extensive distillery was formerly on the Monthlairy estate. Population in 1831, 1,278; in 1861, 1,467. Houses, 245. Assessed property in 1843, £4,869 14s. 3d.; in 1864, £7,783 6s.

This parish is in the presbytery of Turriff, and synod of Aberdean. Patron, Sir G. S. Abercromby, Bart. Stipend, £178 15s. 5d.; glebe, £25. Unappropriated teinds, £221 16s. 6d. Schoolmaster's salary, £60, with about £20 fees. The church was built in 1792, and has 600 sittings. There are two private schools.

ALVES, a parish, containing a small post-office village of its own name, on the sea-board of Morayshire. It is bounded on the north by the Moray frith, along which it extends about one mile; on the east by the parishes of Duffus and New Spynie; on the south by Elgin, from which it is separated by Pluscardine hill; and on the west by Kinloss and Rafford parishes. Its outline is very irregular; and its surface varied with hill and dale. The soil is in general a deep fat loam incumbent on clay. There are six landowners. The assessed property in 1843, was £5,707 18s. 9d.; and in 1860, it was £7,545. At the south-eastern extremity of the parish is a conical hill called the Knock of Alves, which yields a good freestone for building. The only relic of feudal times is the castle of Asleisk, on the Earl of Fife's property. There is no river, or even considerable stream, in this parish; but the Aberdean and Inverness railway passes through it, and has a station here, at the junction of the branch to Burghead, $5\frac{1}{2}$ miles from Elgin and 7 from Forres. The village of Alves is a small straggling group of houses, on the highway between Elgin and Forres. Population of the parish in 1831, 945; in 1861, 1,010. Houses, 199.

This parish is in the presbytery of Elgin, and synod of Moray. Patron, the Earl of Moray. Stipend, £215 1s. 8d., with a glebe. Unappropriated teinds, £130 13s. 1d. Schoolmaster's salary, £52 10s., besides £25 fees. The parish church was built in 1769, and has 590 sittings. There is a Free church; attendance about 270; yearly sum raised in 1865, £124 15s. 6d. There are three private schools, and a small parochial library.

ALVIE, a highland parish, containing the post-office station of Lynwilg, in the district of Badenoch, Inverness-shire. Its form is very irregular. The principal inhabited division lies along the northern side of the river Spey, here running from south-west to north-east; and is from north-east to south-west about 10 miles long, and from 1 to 2 broad. It is bounded by the parish of Kingussie on the south-west; Moy on the north-west; and Duthel on the north-east. On the southern side of the river, Alvie parish extends, along the course of the Feshie, about 10 miles by 3; and is bounded on the east by Rothiemurchus; on the south by Blair; and on the west by Kingussie. Its total extent from north to south is upwards of 20 miles; and it has an area of about 90 square miles. The mountains are in general extremely barren, covered with heath, and frequently rocky. Those to the south of the Spey, belonging to the Grampian chain, are much higher than those to the north; some points here rising to 4,500 ft. above the sea-level. The interjacent valleys afford a plentiful and rich pasture in summer, but are for the most part inaccessible in winter. The lower or arable part of the parish, intersected by the Spey for the space of two miles, consists of a light stony soil, lying on sandy gravel, and producing heavy crops of corn in a wet season, but exceedingly parched in dry weather. There are some extensive plantations of firs and larches: and natu-

ral coppices of birch, alder, and mountain-ash. The valued rent of the parish is £1,394 Scots; the real rent was long ago above £2,000 ster. Assessed property in 1860, £3,731. The river Spey here abounds with salmon, trout, and pike. The Feshie affords trout and salmon. It rises on the northern side of the Graupian range, in the southern extremity of the parish; and flows at first north-east, till it approaches the road from Castlodon of Braemar, where it bends north-west, and then north, pursuing the course of the narrow valley through which also the only road intersecting the parish is led, and falling into the Spey, a little above that enlargement of the river called Loch Insch, and near Invoreshie. The only detached loch in the parish is that of Alvie. It is a beautiful sheet of water, about a mile long, and half-a-mile broad. It has a communication with the Spey, but it is not supposed that its trout visit the Spey; pike are also found in it of from 1 lb. to 7 lbs. weight. An elegant mansion was built here, named Belleville, by James Macpherson, Esq., translator of Ossian's poems, who was a native of Badenoch, and died here on the 17th of February, 1796, but was buried, at his own desire, in Westminster abbey; and Belleville afterwards became the residence of Sir David Brewster. At no great distance from Loch Alvie is the burial-place of the chief of the Macphersons. Another fine mansion in the parish is Kiurara house, long celebrated in fashionable and literary circles as the favourite seat of the accomplished Duchess of Gordon. The Spey, flowing under a long wall of mountain-crags and fir plantations, embraces in its sweep a verdant plain which is close shut in on the opposite side by the hill of Tor-Alvie; in this spot, on a knoll commanding the small plain, and itself sheltered by the loftier Tor, is the far-famed cottage of the duchess. Dr. Macculloch thus describes the scenery of Kiurara: "A succession of continuous birch-forest, covering its rocky hill and its lower grounds, intermixed with open glades, irregular clumps, and scattered trees, produces a scene at once alpine and dressed, combining the discordant characters of wild mountain landscape and of ornamental park-scenery. To this it adds an air of perpetual spring, and a feeling of comfort and of seclusion which can nowhere be seen in such perfection; while the range of scenery is at the same time such as is only found in the most extended domains. If the home-grounds are thus full of beauties, not less varied and beautiful is the prospect around: the Spey, here a quick and clear stream, being ornamented by trees in every possible combination, and the banks beyond, rising into irregular, rocky, and wooded hills, everywhere rich with an endless profusion of objects, and, as they gradually ascend, displaying the dark sweeping forests of fir that skirt the bases of the farther mountains, which terminate the view by their bold outlines on the sky." The swan, a variety of fishing-ducks or duckers, and the woodcock, live here in winter, but retire in summer. There is a small, recently-formed village, called Lynchat, on the Belleville property, near the south-west extremity of the parish. Population of that village in 1851, 73. Population of the parish in 1831, 1,092; in 1861, 833. Houses, 176.

This parish is in the presbytery of Abernethy, and synod of Moray. Patron, the Duke of Richmond. Stipend, £158 4s. 6d., with manse and glebe. Schoolmaster's salary now is £40, with £18 school-fees, and £4 10s. emoluments. The parish church was built in 1798, and repaired in 1833, and has 500 sittings. There is a government church at Insch, within 4 miles of the parish church. See INSCH. There is a Free church, formerly a station, for Alvie

and Rothiemurchus; and the yearly sum raised in connection with it in 1865 was £74 1s. 4d. There is also a Roman Catholic chapel, with an attendance of about 160. There are two private schools.

ALYTH, a parish partly in Forfarshire, but chiefly in Perthshire. It lies on the north side of Strathmore, and contains a post-town of its own name. It is bounded by the parishes of Glenisla, Airlie, Ruthven, Meigle, Bendochy, Blairgowrie, Rattray, and Kirkmichael. The river Isla separates it from Airlie and Meigle; and the Ericht or Blackwater separates it from Bendochy and Kirkmichael. Its length from north to south is about 15 miles; and its breadth varies from 1 mile to upwards of 6. It is divided into two districts of unequal extent and of widely different character by the hills of Alyth, Loyall and Barry. The southern district, which lies in the strath, is about 4 miles long, and 3 broad. The lower part along the Isla is extremely fertile, producing excellent crops of barley, oats, and wheat; but the frequent inundations of the Isla—which sometimes rises suddenly in harvest to a great height—are liable to occasion great disappointment and loss to the husbandman. The hill of Barry is about a mile in circumference at the base, and has a height of 680 feet; and the hills of Alyth and Loyall are somewhat higher. On the northern side of the hill of Alyth there is an open country of considerable extent, and capable of great improvement. Beyond the hill of Banff—which is 2 miles north-west of the town of Alyth—is the forest of Alyth, a large tract of heathy ground, of more than 6,000 acres, which formerly belonged to four proprietors who possessed it in common, but is now divided among them. The forest, which is skirted on the west with arable ground, affords pasture for a considerable number of sheep and black cattle; it abounds in game, especially moorfowl, and is much frequented in the shooting-season. At the north-western extremity of the parish there is a beautiful little district surrounded with hills, and intersected by the Ericht, which in summer has a delightful appearance. Mount Blair, the most considerable hill in this parish, but belonging partly also to Glenisla, is a very conspicuous piece of land. The base is not less than five miles in circumference; and the summit has an altitude of about 2,260 feet above the level of the sea. This mountain affords good pasture for a great number of sheep, and abounds in limestone. About 3 miles south-west of Mount Blair, on the west side of the forest of Alyth, is the King's-seat, rising to the height of 1,179 feet above the level of the sea. The situation is romantic; the water of Ericht runs at its foot on the west, and the side of the hill for a considerable way up is covered with a beautiful natural wood. The largest interior stream of the parish is the burn of Alyth, which rises in the mosses of the forest, and runs to the Isla at Inverquich. On the summit of the hill of Barry there is an area about 60 yards long and 24 broad, surrounded with a mound of earth, 7 feet high, and 10 broad at the top. On the west and north borders of this area are seen the marks of something like huts built of dry stones, which may have served to shelter the besieged from the weapons of the assailants, and the inclemency of the air. The northern and western sides of the hill are steep and almost inaccessible; on the south and east, where the declivity is more gentle, there is a broad and deep fosse, over which, at the southern extremity, is a narrow bridge built of unpolished stones and vitrified. It evidently appears to have been designed for a temporary retreat in time of war, and is well-adapted for that purpose. The traditional account is, that Barry hill was the place

where Queen Guinevra, the wife of the British king, Arthur, who was taken prisoner in a battle between the forces of that monarch and those of the Scots and Picts, was confined by her captors. The mansions in the parish are Banff-house, Balhary, Loyall, Balindoch, and Jordanston. The real rent by valuation in 1837, including the houses in the town, was little short of £12,000. Assessed property in 1865, £17,058 0s. 4d. Population in 1831, 2,888; in 1861, 3,422. Houses, 608.

This parish is in the presbytery of Meigle, and synod of Angus and Mearns. Patron, the Crown. Stipend, £229 19s. 6d.; glebe, £14. Unappropriated tithes, £134 1s. 11d. Schoolmaster's salary, £52 10s., with fees and other emoluments. The parish church is an elegant structure in the Norman style of architecture, built in 1839, and has 1,290 sittings. An Episcopalian congregation has existed here since the Revolution; and they have a chapel, built in 1857, and containing about 150 sittings. A Secession congregation was organized in 1781; and their church, now United Presbyterian, has 270 sittings. A Free church was built immediately after the Disruption, and contains between 700 and 800 sittings: yearly sum raised in 1865, £307 16s. 2d. There are an Industrial school, a Free church school, and an Episcopalian school.

The TOWN OF ALYTH stands on the burn of Alyth, 2 miles above its confluence with the Isla, 4 miles from Meigle, 5 miles from Blairgowrie, 12 from Forfar, and 17 from Dundee; and it has a junction railway from the Scottish Northeastern at Meigle, opened in 1841. It is a burgh of barony, and has been so since the reign of James III. The superiors of it are the family of Airlie, who have the title of Barons of Alyth. It was a market town in the reign of David Bruce; and it continues to have a weekly market on Tuesday, though this is now little more than nominal. It stands in a healthy situation, and enjoys an ample supply of excellent water. A system of police is maintained within it; and a baronial court is held on the first Tuesday of every month. The chief employment is handloom weaving of coarse linen for the Dundee trade; but it yields such miserable remuneration that many persons engaged in it are glad to take part in the harvest work of the neighbouring farms. There are two powerloom factories; the one with about 100 looms; the other founded about the end of 1865. The town contains the places of worship, and has an office of the Bank of Scotland, and two of the Royal Bank. Fairs are held on the third Tuesday of May, on the second Tuesday of June old style, on the first Tuesday of August, on the first Tuesday and Wednesday of November old style, and on the second Tuesday after the 11th of November old style, and monthly cattle markets are held during the winter months. Population in 1841, 1,846; in 1861, 2,106.

AMISFIELD, a village, an estate, and the seat of a post-office, in the parish of Tinwald, Dumfriesshire. Here are traces of an ancient fort, which probably was a Roman station. Here too is an ancient baronial tower, one of the most curious and most perfect in the kingdom, a tall, square, stubborn-looking fortalice, 5 miles north-east of Dumfries, between the two head-streams of the Lochar. This was long the family seat of the Anglo-Norman family of Charteris, or Chartres, who migrated northwards during the reign of David I., but seem to have first settled at Kinfauns in Perthshire. The apartments are placed one above another, and communicate by a narrow stair. There is a curiously carved door on one of them, of which Mr. Chambers has given an amusing account, and which door alone, he avers, "makes Amisfield castle worth going

twenty miles to see." See TINWALD. Amisfield has a station on the Dumfries and Lockerby railway. Population of the village, 140.

AMISFIELD, a seat of the Earl of Wemyss, in the parish and shire of Haddington, on the banks of the Tyne, about 1 mile east of Haddington. It is a handsome edifice of red-coloured sandstone, situated in the midst of an extensive park, and fronting towards the river and the great post-road from Dunbar to Haddington. It contains some fine paintings. It was built by the famous Colonel Charteris, who named it from the ancient seat of his family in Nithsdale, the subject of the preceding article. His only daughter conveyed it by marriage to the noble family of Wemyss.

AMPLE GLEN. See BALQUHIDDER.

AMULREE, a small village, with a post-office, in the parish of Dull, Perthshire. It stands on the river Braan, and on the road from Crieff to Aberfeldy; 10 miles south-west of Dunkeld, 10½ south of Aberfeldy, and 11½ north of Crieff. Its site is thought by Dr. Buckland to have been fashioned by a group of low moraines. It is encompassed with wild highland scenery, and has many attractions for sportsmen. It contains an inn, a government church, and a Free church. The minister of the government church has a stipend of £65, and a manse and garden and small glebe. The yearly sum raised in connexion with the Free church in 1863 was £15 12s. 8½d. Fairs are held on the first Wednesday of May and the day before, and on the Friday before the first Wednesday of November.

ANABICH, an island in the Outer Hebrides, parish of Lewis, county of Inverness. Population in 1841, 41; in 1861, 59. Houses 12.

ANCRUM, a parish, containing a post-office village of its own name, nearly in the centre of Roxburghshire. It is bounded by the parishes of St. Boswell's, Maxton, Roxburgh, Crailing, Jedburgh, Bedrule, Minto, Lilliesleaf, and Bowden. The Teviot, along which it stretches about 5 miles, divides it from Jedburgh and Bedrule. The greatest length of the parish is not less than 6 miles, and its breadth does not exceed 4. The old parish of Longnewtown forms the north and north-west parts of the present parish of Ancrum, and was annexed to it in 1684. The Ale, after fetching 'many a loop and link' on the borders of the present parish, flows through it to the village of Ancrum, where it fetches another circuit, and then falls into the Teviot, at the distance of half-a mile below the village, and a quarter of a mile above Ancrum bridge on the great road to Jedburgh. The soil in the lower grounds of the parish, on Teviot side, is rich, consisting of a mixture of sand and clay, and, in some places, of a loam. On the higher ground, or ridge which pervades the parish from east to west, and on the declivities exposed to the north, the surface is heath on a bottom of cold clay; but the flat ground, on both the Ancrum and Longnewtown side of the Ale, is a naturally rich though stiff clay. In 1837, as stated by the New Statistical Account, 7,496 acres were under cultivation, and above 800 in wood. There was formerly a greater extent of wood in this parish; but one of long standing remains, except upon the banks of the Ale, near the village of Ancrum, and in the environs of Ancrum-house. The principal landowners are Sir William Scott, Bart., of Ancrum, Ogilvie of Chesters, Richardson of Kirklands, the Duke of Roxburgh, the Marquis of Lothian, the Earl of Minto, and six others. The assessed property in 1843 was £8,892 11s. 6d.; in 1863-4, £12,498 17s. There are several freestone quarries. The stone is of two colours, red and white; and it is easily wrought and of a durable quality. The

situation of Ancrum-house, where the village of Over-Ancrum formerly stood, is picturesque and attractive. Spots of verdant lawn, craggy knolls, scattered trees, and, on the verge of the river, steep banks, in some places naked and of broken surface, and in others clothed with wood, here exhibit a fine assemblage of romantic objects. The trees surrounding Ancrum-house are the oldest and most beautiful in the district; they consist of oaks, beech, elms, planes, and limes. The prospect from the house down the vale of Teviot, of the junction of the Ale and Teviot, and towards the lofty mountains of Cheviot, is extensive and striking. Chesters-house is a fine building, picturesquely situated farther up the Teviot; and Kirklands, on the Ale, is deservedly admired for both its architecture and its situation.

The Roman road from York to the frith of Forth, after passing through the north-east part of the parish of Jedburgh, cuts a small part of the north corner of Ancrum; and upon the top and declivity of the hill to the eastward, on the border of Maxton parish, vestiges of a Roman camp may still be traced.—There is a ridge in this parish, over which the road to Edinburgh passes, about a quarter or half-a-mile west of the line of the Roman road, on the border of Maxton parish, called Lylliard's, or Lilyard's edge, from a lady of that name, who, on an invasion of the English under Sir Ralph Evers, and Sir Bryan Latoun, in 1544, during the distracted regency of the Earl of Arran, fought with masculine bravery, and fell here under many wounds. The old people point out her monument, now broken and defaced. It is said to have borne an inscription—recast from the well-known lines on a Chevy-Chase hero—running thus:

“Fair maiden Lylliard lies under this stane;
Little was her stature, but great was her fame;
Upon the English louns she laid mony thumps,
And when her legs were cutted off, she fought upon her stumps.”

Sir Walter Scott, in a note on the ballad of ‘The Eve of St. John,’ gives the following account of the battle of Ancrum Moor. In 1545, [1544?] Lord Evers and Latoun again entered Scotland, with an army consisting of 3,000 mercenaries, 1,500 English borderers and 700 assured Scottish-men, chiefly Armstrongs, Turnbulls, and other broken clans. In this second incursion, the English generals even exceeded their former cruelty. Evers burned the tower of Broomhouse, with its lady, (a noble and aged woman, says Lesley,) and her whole family. The English penetrated as far as Melrose, which they had destroyed last year, and which they now again pillaged. As they returned towards Jedburgh, they were followed by Angus, at the head of 1,000 horse, who was shortly after joined by the famous Norman Lesley, with a body of Fife-men. The English, being probably unwilling to cross the Teviot, while the Scots hung upon their rear, halted upon Ancrum moor, above the village of that name; and the Scottish general was deliberating whether to advance or retire, when Sir Walter Scott of Buccleuch came up at full speed, with a small hut chosen body of his retainers, the rest of whom were near at hand. By the advice of this experienced warrior—to whose conduct Pitscottie and Buchanan ascribe the success of the engagement—Angus withdrew from the height which he occupied, and drew up his forces behind it, upon a piece of low flat ground, called Panier-heugh, or Paniel-heugh. The spare horses being sent to an enuncheon in their rear, appeared to the English to be the main body of the Scots, in the act of flight. Under this persuasion, Evers and Latoun hurried precipitately forward, and, having ascended the hill, which their foes had abandoned, were no less dismayed than astounded, to find the phalanx of Scot-

tish spearmen drawn up, in firm array, upon the flat ground below. The Scots in their turn became the assailants. A heron, roused from the marshes by the tumult, soared away betwixt the encountering armies: ‘O!’ exclaimed Angus, ‘that I had here my white goss-hawk, that we might all yoke at once!’ [Godscroft.]—The English, breathless and fatigued, having the setting sun and wind full in their faces, were unable to withstand the resolute and desperate charge of the Scottish lances. No sooner had they begun to waver, than their own allies, the assured Borderers, who had been waiting the event, threw aside their red crosses, and, joining their countrymen, made a most merciless slaughter among the English fugitives, the pursuers calling upon each other to ‘remember Broomhouse!’—[Lesley, p. 478.] The English had 800 men slain, and 1,000 made prisoners in this battle. Their leaders, Evers and Latoun, were also left on the field,

“where Ancrum moor
Ran red with English blood;
Where the Douglas true, and the bold Buccleuch,
’Gainst keen Lord Evers stood.”

The most venerable fragment of antiquity in the parish were the Malton walls, which stood on a rising ground at the bottom of the village of Ancrum, close to the side of the Ale, where it turns its course towards the south-east, but whose last relics fell to the ground in the winter of 1836-7. “These walls,” says the Statistical reporter in 1796, “were strongly built of stone and lime, in the figure of a parallelogram; and, ascending on one side from the plain adjacent to the river, were considerably higher than the summit of the hill which they enclose; but are now levelled with its surface, and small part of them remains. Vaults or subterraneous arches have been discovered in the neighbouring ground, and underneath the area enclosed by the building. Human bones are still found by persons ploughing or digging in the plain at the side of the river, which is an evidence of its having been formerly occupied as burying-ground. The name, which these walls still retain, gives the colour of authenticity to a tradition generally received in this part of the country, that the building and surrounding fields had been vested in the knights of Malta, or Knights Hospitalers of St. John of Jerusalem, who, upon account of their splendid achievements and meritorious services in the holy wars, acquired property even in the most remote kingdoms of Christendom.—On the banks of the Ale, below the house of Ancrum, there were several caves or recesses, and not less than fifteen may be still pointed out. In some of them there are also vestiges of chimneys or fire-places, and holes for the passage of smoke from the back part of the cave to the outside of the bank. From these appearances, it is natural to conclude, that, though these caves—so frequently found on the banks of rivers in border-counties—were originally intended for places of concealment and shelter, yet, after the happy event which put an end to interior violence and depredation, they were probably assumed by the poorer classes for places of habitation, and improved by such further accommodations as the rude or simple taste of the times required.”

The village of Ancrum stands on a rising ground, on the right bank of the Ale, a little west of the Jedburgh and Edinburgh road, and about 3½ miles north-north-west of Jedburgh. Its original or uncontracted name was Alnecrumh or Alnecromb, and signifies the crook of the Ale,—the original name of the Ale; and is exactly descriptive of its situation on a bold sharp curve of the river. The scenery around it is softly yet richly picturesque. The pre-

sént village, as regards its buildings, is nearly all modern; but it dates from a considerable antiquity, and has in the centre of its green an ancient cross. It was long called Nether-Ancrum, to distinguish it from the now extinct village of Over-Ancrum; and both of these villages were burned to the ground during the hostilities connected with the battle of Ancrum Moor. Population of the present village in 1861, 538. The Edinburgh and Hawick railway traverses the north-west part of the parish, and has a station in it at Belses. Population of the parish in 1831, 1,454; in 1861, 1,511. Houses, 274.

This parish is in the presbytery of Jedburgh, and synod of Merse and Teviotdale. Patron, Sir William Scott, Bart. Stipend, £223 16s. 6d.; glebe, £30. Schoolmaster's salary now is £50, with £29 fees. The parish church was built in 1762, and repaired in 1832, and has about 520 sittings. There is a Free church: attendance 200; yearly sum raised in 1853, £68 16s. 5½d.—in 1865, £111 4s. There are two private schools.

ANDERSTON. See GLASGOW.

ANDREWS (Sr.), a parish, containing a city of the same name, on the east coast of Fifeshire. It is bounded on the north by the Eden river and its estuary, which separate it from Leuchars parish; on the north-east by the German ocean; on the south-east by the Kenly burn, which separates it from Kingsbarns and Denino parishes; and on the south and west by the parishes of Denino, Cameron, Ceres, and Kenhack. Its greatest length is about 10½ miles from north-west to south-east; its average breadth does not exceed 1½ mile; though in the north-western part it exceeds 4 miles, measuring from St. Andrews links to the western boundary of the parish at Chalderhills. Its area somewhat exceeds 17 square miles, and may be stated at 11,000 acres. The ascent of the surface is from the north to the south and east. From the Eden to the city of St. Andrews, the coast presents a flat firm sandy beach, skirted by the links so famous in the annals of golfing. From the city to the south-eastern extremity of the parish, the shore outwards from high water-mark is lined with rough and ragged shelving rocks covered with sea-weed, while the coast inwards is very rocky and bold, in some places presenting perpendicular rocks of the height of 30 or 40 feet, yet the plough here comes to the very brink, having a sufficiency of soil. The boundaries of the parish to the south and west terminate in moors covered with short heath and furze. In common with all the eastern part of the island, this district is well-acquainted with the cold damp easterly winds, or *haars* of April and May. The south-west wind, however, is the prevailing wind. There are no considerable lakes or rivers within the parish. In the embouchure of the Eden—up which the tide flows 4 miles—is a flat sandy bay abounding with large flounders, cockles, and mussels. In the course of the river, for about a mile from its mouth, salmon are caught, but in no great quantity. Towards the east end of the parish are some small creeks among the rocks, where fishing-boats and small vessels occasionally unload at low water. St. Andrews bay is proverbially dangerous to navigators. Vessels driven into it by an easterly wind, being unable to weather the opposite points of Fifeness and the Redhead, are compelled to run into the mouth of the Tay, which presents an intricate navigation amid its sand-banks. On the lands of Brownhills and Kinkell—which form the first rising ground eastward from St. Andrews harbour—there are a few insulated rocks, from 20 to 40 feet high, and of nearly equal breadth; one about half-a-mile from the harbour, is called the Maiden stone; and about half-a-mile fur-

ther, is the Rock and Spindle. The chief land-marks in this parish are the steeples of St. Andrews, and a small obelisk of stones, on the highest part of the farm of Balrymont, about two miles south-east of the town. The principal hills are the East and West Balrymonts, which rise to the altitude of about 360 feet above sea-level; and the hill of Clatto which has an elevation of 548 feet. On Strathkinness moor, about 3 miles west from the town, and on Nydie hill—which is a more elevated and westerly portion of the same moor—are quarries of excellent freestone, of which most of the houses in St. Andrews are built. In Denhead moor coal is now being worked; and on the estate of Mount Melville there is extensively wrought ironstone. About a mile east from the harbour, there is a natural cave, called Kinkell cave. The direction of it is southwards, and it penetrates about 80 feet; the shelving of the freestone roof presents a triangular cross section, and there is a continual dropping from the roof and sides which are covered with hanging plants. There are no very old or extensive plantations of wood in this parish. The number of acres under cultivation is about 10,000. The landowners are very numerous. The average rent of land is about 30s. per acre. The total yearly value of raw produce was estimated in 1838 at £46,625. Assessed property in 1865, £22,193 18s. 5d. There are four villages, Strathkinness, Boarhills, Grange, and Kincaple. The highways are such only as diverge from St. Andrews as a centre, viz. to Crail south-east; south to Anstruther; south-west to Ely; west to Cupar; and north-west to Dundee. A railway of 4½ miles, opened in 1852, goes from the city north-westward, by Pilmuir Links and Edenside, and joins the Dundee fork of the North British at Leuchars. On the road to Dundee, over the Eden, is a bridge of six arches, called the Gair or Guard-bridge, originally built at the expense of Bishop Wardlaw, who died in 1444, and who established a family of the name of Wan as hereditary keepers of this bridge, for which they have a perpetual fee of about 10 acres of land adjoining to it. Population in 1831, 5,621; in 1861, 7,092. Houses, 1,716.

This parish is the seat of a presbytery in the synod of Fife. It is a collegiate charge; the Crown appointing the first minister; and the town-council of St. Andrews the second. Stipend of the first minister £439 9s. 4d., with a glebe of the annual value of £23; of the second, £161 18s. 2d., with a glebe of the value of £16 5s. 2d.; both ministers have an additional allowance for a manse. Unappropriated teinds £791 9s. 10d. The parish church, within the city of St. Andrews, was erected in the 12th century, and thoroughly repaired in 1798. Sittings, 2,128. A new church, *quoad sacra*, is at Strathkinness; and a church was contemplated, in 1865, at Boarhills. There are in the city a Free church, with handsome Gothic front, and 900 sittings, whose yearly income in 1865 was £715 0s. 9d; a United Presbyterian church, built in 1865, with a fine spire, and 500 sittings; an Episcopalian chapel, built in 1825, at a cost of 1,400, and enlarged in 1853; an Independent chapel built in 1858, with 360 sittings; and a Baptist chapel built within the last few years. There is also a Free church at Strathkinness, whose yearly income in 1865 was £125 9s. 1½d. The places of education, in addition to the University and the Madras College, comprise some boarding schools, and a number of private schools.

The small parish of St. LEONARDS lies partly embosomed in the parish of St. Andrews, and is identified in most of its interests with that parish and with the city. It consists of several detached districts in and around the city, and of three farms about 4 miles

distant, and surrounded by the parishes of St. Andrews, Kingsbarns, Crail, and Denino,—all originally belonging to the priory, afterwards to the college of St. Leonard, and now to the United college of St. Salvator and St. Leonard. Its total extent is 820 acres. It is probable that the erection of the parish is of the same date with the foundation of the college whose name it bears. Although the principal of St. Leonards did not always officiate as minister of the parish—and in the instance of Mr. George Buchanan, was not even a clergyman—it is certain that for some time before the Revolution, the two offices were held by the same person; and from that period till 1836 the principal of the college was a clergyman and the minister of this parish. Stipend, £152 1s. 9d.; globe, £25. The chapel of St. Salvator's college is used as the parish-church; the old parish-church having been long in ruins; sittings, 312. Population in 1831, 482; in 1861, 513. Houses, 98. Assessed property in 1865, £1,189 7s. 7d.

The CITY OF ST. ANDREWS stands on a rocky ridge, in the central part of the coast of the parish of St. Andrews, 10 miles east of Cupar-Fife, and 39 north-north-east of Edinburgh. The ridge is about three-quarters of a mile long and half-a-mile broad, and is washed by the sea-waves on the east and north. It terminates on these sides in abrupt precipices of 50 feet in depth; and it gives the city, to a traveller approaching from the west, an appearance of elevation and grandeur. Its surface looks to the eye to be flat, but really declines gently on all sides from a point near the centre of the city. The view of the place, with its environs and back-grounds, from almost any part at the distance of some miles to the west and north-west, is magnificent. On the left the eye ranges over the vast sweep of the bay of St. Andrews, and the coast of Angus as far as the Redhead; on the right rises the richly wooded bank of Strathtyrum; while the venerably majestic towers and numerous spires of St. Andrews, shooting into the air, over the horizon line, directly in front, combine to form a finely varied and imposing scene, especially at that fair hour

"When morning runs along the sea
In a gold path."

The city commands a fine and open prospect of the German ocean towards the north-east; and the view on the opposite quarter is bounded by a curvilinear range of hills running from north to south-east, and cultivated to their summits. The road from Crail—or the coast-road, as it is called—conducts us to a view greatly admired by some, and indeed perhaps preferable to any other of St. Andrews; for the scenery is here softened and improved by gardens and fruit-trees, amid which the houses lie half-concealed, seeming to retire as it were into the shade. We have, at the same time, a fine prospect of the harbour, and of the ruins of the monastery and the cathedral. Some, however, prefer the view of St. Andrews from the side of Mount-Melvil, or the south-west prospect of it, on the road from Anstruther, to either of the two we have just described. From this point the city appears still more closely embosomed in gardens and plantations, above which numerous spires and pinnacles shoot up, conferring on it "a kind of metropolitan look." The city is about two miles in circuit, and has three chief streets,—South-street, Market-street, and North-street, each averaging about 70 feet in breadth, and all intersected by smaller ones, well-built, well-paved, and lighted at night with gas. The whole ground plan is remarkably regular. Some of the largest

and most prominent lines of building were originally uniform; and a few parts are sprightly and ornate with elegant new houses. Yet the three principal streets do not lie exactly parallel to one another, but diverge in a westerly direction from the cathedral, like spokes from the centre of a wheel. There was formerly another street, called Swallow-street, which lay farther to the north, now converted into a public walk, and known by the name of the Scores. The castle stood on the north of Swallow-street, 300 yards distant from the cathedral. St. Salvator's, called also the Old or the United college, is on the northern side of the town, between North-street and the Scores; St. Mary's, or the New college, directly opposite to it, on the south side of South-street. The buildings belonging formerly to the third college, or St. Leonards, are towards the east, off the east end of South-street. On the site of the Blackfriars monastery stands the splendid range of buildings belonging to the Madras college, to be afterwards noticed. At the west end of the Scores was built by subscription, in 1842, a handsome monumental obelisk, 45 feet high, on a massive base, in memory of the Protestant martyrs of St. Andrews, the circumstances of whose death will be afterwards mentioned. The total area of the city, including its gardens, is about 130 acres.

St. Andrews has been described as a paradox of splendour and desolation. Spacious streets, ornate buildings, local sports, and intellectual amusements,—the Union Club house on the Links, with its golf, sea-bathing, and fine promenades,—good society, education, libraries, antiquarian and historical associations, give it a grand aggregate of attractive character. Great improvements, both in renovating the old streets and in erecting new ones, have recently been made; and already, on entering the town from the west, we see its elegance extending as if by anticipation of a brilliant future. Playfair and Gillespie terraces, the former on a line with North-street, the latter on a line with the Scores, present exquisite cottage-rows in freestone; Gladstone-crescent, to the south of Playfair-terrace, presents magnificent piles of building; and many other new streets and places, in the north-west and the west, appear in all the beauty of fine freestone and ornamental masonry. South-street, which, as to both position and importance, might be called the High-street, is not excelled in fine old magnificence by any thoroughfare in any city; and a new street, called South Bell-street, deflecting northward from its western part, is composed of neat private residences. And in looking round on the various public edifices, modern and ancient, it is difficult to decide whether most to admire the Collegiate church, the Madras college, the University library, the Infant school, the remains of the old church of St. Leonards, or the gorgeous and gigantic ruins of the cathedral and the castle. The most popular of all the modern attractions is the late Sir Hugh Lyon Playfair's garden, which presents a rich display of floral beauty, novel and unique machinery, humorously libelled automata, music ground by flowing streams, jets d'eau, rockeries, and other striking features.

St. Andrews had once seven incorporated trades; and not the least of these was the weavers. Weaving was largely carried on, both throughout the city and in the suburbs; but, in 1865, only four members of the weavers' incorporation survived, not one of whom had worked a web for many a day, and only four old men still drove the shuttle. The making of golf balls, of sheep skin stuffed with feathers, was long a great branch of industry, and nearly the only one the city could boast of; but, in consequence of the introduction of gutta-percha in ball-

making, this is now extinct. A spinning-mill was tried but did not succeed; and the buildings of it were extended to form what is now known as Fleming-place. An extensive steam saw-mill, the property of Mr. Gibson Woodburn, is near the harbour; and the life-boat house is adjacent to it. A flour-mill of modern erection, a reconstruction of the old Abbey mill, was built by the incorporation of bakers, and is now worked by private enterprise; and a mill for barley and oatmeal is at the harbour. There are offices of the Bank of Scotland, the Royal Bank of Scotland, the Eastern Bank of Scotland, the Clydesdale Bank, and a branch of the National Security Savings' Bank. A market is held every Monday for grain, and every Wednesday and Saturday for poultry and dairy produce. Fairs are held on the second Monday of April, the second Tuesday of August, and the last Monday of November. Communication is maintained by railway, several times a-day, with Cupar, Dundee, and Perth, and through these with places beyond them. The principal inns are the Cross Keys Hotel, the Star Hotel, and the Royal Hotel. A new golf club-house was founded, with masonic honours, in July 1853. Had St. Andrews, with its antiquarian associations, been written into popular notice by Burns, Byron, or Scott, it would probably be drawing far more wealth from the visits of fashionable tourists than from all its few and feeble appliances of trade and manufacture. But by a strange popular caprice—aided perhaps by the one-eyedness of its position, away from the straight line of any great thoroughfare—it continued till quite recently to be totally neglected, and was now and then heard of at a distance almost as much for its forlorn appearance as for its curious ruins. Since the opening of the railway, however, it has begun to be a little better appreciated; and perhaps it may hope ere long to be visited by strangers in some due proportion to what Lord Teignmouth calls "its own picturesque situation, the extent, diversity and grandeur of the remains of its ancient secular and ecclesiastical establishments, the importance of the events which they attest, and the celebrity which it has derived from the records of historians and the descriptions of topographical writers."

St. Andrews long made a great figure as a seaport and a seat of trade. It was in the meridian of its glory in the 15th and beginning of the 16th centuries. Merchant-vessels were then accustomed to resort to it, not only from the opposite ports of Holland, Flanders, and of France, but from all the other trading kingdoms of Europe. At the great annual fair, called the Senzie market—which was held within the priory in the month of April—no fewer than from 200 to 300 vessels were generally in the port. In 1656, Tucker describes this town as "a pretty neat thing, which hath formerly been bigger, and, although sufficiently humbled in the time of the intestine troubles, continues still proud in the ruins of her former magnificence, and in being yett a seat for the muses." At that period only one vessel of 20 tons burden belonged to the port; and upwards of a century later there were only two small vessels. A revival afterwards occurred; and in 1838, there were 14 vessels, of aggregately 680 tons. The port also was made a honing port; and it, for some time, yielded about £700 a-year of customs. A great trade suddenly arose likewise in the export, to iron-works on the Tyne, of calcined ironstone from newly discovered mines at Winthank, about 3 miles from the city; but that trade did not last, and all other trade now is small. The chief is the import of coal coastwise, and of timber from Norway or the Baltic. A schooner, the property of local merchants, had a few years before 1865 to be

given up; and an attempt to run a steamer to Anstruther and Leith in the summer of 1865 proved an expensive failure. The harbour, with the exception of a small stream flowing through it, is dry at low water; it has so little depth across the mouth at any time, that any vessel of more than 100 tons burden is obliged to discharge part of her cargo before she can attempt to enter it; and though perfectly safe and sufficiently commodious within, it often can be approached only with much peril, in consequence of the narrowness of its entrance, and of being exposed to a heavy rolling sea in easterly winds. Some improvements have been made on it; but far greater ones are needed. Yet the shore dues, which are available for them, and for upkeep and repairs, amounted in 1862 to only £190 16s., and are at the same time available for the general improvement of the town.

St. Andrews was created a royal burgh in 1140; and a city or archbishop's see in 1471. As a royal burgh, it is now classed with Cupar, Easter and Wester Anstruther, Crail, Kilrenny and Pittenweem, in returning one member. The parliamentary constituency, in 1865, was 296; the municipal 293. The first member elected under the Reform act, was Andrew Johnston, Esq. of Rennyhill, who continued to represent the burghs till 1837; and Edward Ellice, Esq., a well-known reformer, was returned by a majority of 29 votes in that year, and again without opposition in 1865. The city is governed by a provost, dean of guild, four bailies, and 23 councillors. The debt of the burgh in 1832 was £4,662; but nearly all this was paid off a few years ago by the sale of town's property. Corporation revenue in 1863-4, £927, besides £285 from Dr. Bell's bequest. Value of real property in 1864-5, £19,462. The magistrates and council have the patronage of the second charge in St. Andrews parish-church; they were also patrons of the town-schools, but have transferred this right to Bell's trustees. The burgh boundaries were extended in 1860; and a thorough system of drainage was introduced in 1864-5. Population of the city in 1801, 3,263; in 1831, 4,462. Pop. of the parliamentary burgh in 1861, 5,176. Houses, 794. Pop. of the municipal burgh in 1861, 5,141. Houses, 786.

The original name of this city was *Mucross*, *i. e.* 'the Promontory of boars;' from *muc*, a sow or boar, and *ross*, a point, promontory, or peninsula.* But St. Regulus, or St. Rule, a monk of Patras, a city in Achaia, where the bones of St. Andrew were kept, having been warned in a vision to take some of these precious relics, and carry them with him to a distant region in the west, obeyed the command, and about the year 365 landed in this neighbourhood, and having been successful in converting the Picts, Hengustus, or Hungus, the king of the country, changed the name of *Mucross* into that of *Kilrymont*, *i. e.* *Cella regis in monte*, or 'the Chapel of the King on the Mount;' having given to Regulus and his companions a piece of ground adjoining the harbour, on which he also erected a chapel and tower in honour of the monk, and bearing his name. The exemplary virtues of Regulus and his companions—legendary history goes on to say—drew a great resort of people to his chapel; and the name of the city was soon changed from *Kilrymont* to *Kilrule*, *i. e.* 'the Cell or Church of Regulus;' which name is still retained in Gaelic. Dr. Jamieson thinks it highly probable that such a gift was made

* The village of Boarhills, in what was originally called the Boarhase, a tract of country stretching from Fife Ness to the neighbourhood of St. Andrews, retains the original name of the district, as translated into the dialect of later inhabitants; and the arms of the city display a boar tied to a tree.

by Hungus. "For," says he, "it appears indisputable, that, about the year 825, he founded a church at Kilrymont; which henceforth received the name of the apostle to whom it was dedicated. Sibbald views this gift of the Pietish king as meant for the benefit of the Culdees. But we have more direct evidence. For, as Martine speaks of 'Baronia Caledonorum infra Cursum Apris,' or 'the Barony of the Culdees below the Boar's raik,' the extracts hear, that this was given by King Hungus to St. Rule. Yet we learn, from the same source of information, that this tract was afterwards taken from the Culdees, and given first to the bishop, and then to the prior and canons regular of St. Andrews; 'so that,' as Sir James Dalrymple observes, 'this place appeareth to have been one of the ancient seats of the Culdees.' In the tenth century, such was their celebrity at St. Andrews, that King Constantine III. took up his residence among them, and A. 943, died a member of their society, or, as Wyntown says, abbot of their monastery:

Nyne hundyr wryntyr and aucht yhere,
 Quhen gayne all Donaldis dayis were,
 Heddis sowne cald Constantine
 Kyng wes threty yhere; and syne
 Kyng he sessyd for to be,
 And in Sanct Andrewis a Kynde.
 And there he lyvyd yheris fyve,
 And Abbot mad, endyed his lyve.—*Cronykil*, B. vi. c. x.

It is also believed that an Irish king attached himself to this religious body. For we learn from the Ulster Annals, that A. 1033, Hugh Mae Flavertai O'Neill, king of Ailech, and heir of Ireland, 'post penitenciam mort. in St. Andrewes eel.'" [History of the Culdees, p. 148.] The walls of St. Rule's chapel, and a tower still remain; though these are not probably the relics of the original building. The tower is a square of 20 feet on the side, and about 108 feet high, without any spire; the outside, from top to bottom, is of fine ashler work. The tower was covered with a flat roof and parapet, at the expense of the Exchequer, towards the end of last century; and a turnpike stair reared within leading to the top, from which there is a fine prospect. The name, Kilrule, continued in use till the 9th century, when the Piets were finally vanquished by the Scots, who elauged the name to St. Andrews.

The cathedral of St. Andrews is supposed to have been founded in the year 1159; but a period of 160 years elapsed before its completion, in 1318. It was demolished in June, 1559, by a mob, inflamed by a sermon of John Knox's, wherein "he did intreat (treat of) the ejectionne of the buyers and the sellers furthe of the temple of Jerusalem, as it is written in the evangelists Matthew and John; and so applied the corruptionne that was then to the corruptionne in the papistrie; and Christ's fact to the devote (duty) of thois to quhome God giveth the power and zeill thereto, that as well the magistrates, the proveist and baillies, as the commonalty, did agree to remove all monuments of idolatry: quhilk also they did with expeditionne." Such indeed was their expedition, that this noble edifice, the labour of ages, was demolished in a single day.*

* Tennant, the author of 'Anster Fair,' in a clever though less pleasing and less successful poem, entitled 'Papistry Storm'd,' [Edin. 1827, 12mo.] has sung in quaintest dialect, and with all the facetious strength, fluency, and vivacity, which he attributes to the vernacular idiom of Scotland—

"The steir, strabush, and strife,
 Whan, bickerin' frae the towns o' Fife,
 Great bangs of bodies, thick and rife,
 Gaed to Sanct Androis town,
 And, wi' John Calvin i' their heads,
 And hammers i' their hands and spades,
 Enrag'd at idols, mass, and beads,
 Dang the Cathedral down."

"While entire, the cathedral church," says Mr. Grierson, "had five pinnacles or towers, and a great steeple. Of the towers, two stood on the west gable, two on the east, and one on the south end of the transept or cross-church. Two of these towers, with the great steeple over the centre of the church, have long since disappeared. Three of the towers yet remain, the two on the east gable, which is still entire, and one of those on the west. The other, it is said, fell about two hundred years ago, immediately after a crowd of people had passed from under it in returning from an interment. Large fragments of it still remain, which show the goodness of the cement with which the stones have been joined together. The towers are each 100 feet high from the ground to the summit, and they rose considerably above the roof of the church. The two eastern ones are joined by an arch or pend, forming the great east light of the church, till they rise above the height of the roof; and it is evident that the western ones have been in the same state when entire. From each of these towers, to within the church, opened three several doors into so many galleries along the walls; which galleries were supported by pillars, 16 in number on each side, and at the distance of 16 feet from the wall. All that now remains of this once magnificent pile, is the eastern gable entire, as has been said, half of the western, the south side-wall from the western gable till it join the transept, a length of 200 feet, and the west wall of the transept itself on the south side of the church. The rest is entirely gone, 'every man,' as Dr. Johnson expresses it, 'having carried away the stones who imagined he had need of them.' From the length of time which elapsed during its erection, and the varying tastes of the ages in which it was built, we might be led to conclude beforehand that there would be found in it different styles of architecture, and the conjecture is confirmed by the appearance of what remains. For on the east gable there is to be seen the Gothic mixed with the Saxon; and in the part of the south side-wall which still subsists, we have ten windows, six of which, namely, those toward the west, are Gothic, and the other four Saxon. The Barons of exchequer, in 1826, caused the interior of the cathedral to be cleared out, and various repairs to be executed with the view of preserving this venerable relic of long-past centuries, which

* But for that care, ere this had past away!"

The Crown lands are now the property of the university, having been very recently purchased by that body from the Crown for £2,600, with the view of forming a botanical garden and observatory, and preserving the venerable ruins from further dilapidation; but they still lie in their old desolation.

In the vicinity of the cathedral stood the priory, or Augustine monastery, founded by Bishop Robert in 1144. John Hepburn, prior of St. Andrews, about the year 1516, surrounded the monastery on the north, east, and south sides with a magnificent wall, which is still pretty entire, and is nearly half-a-mile in extent. It is about 22 feet high, and 4 feet thick; and encloses a space of about 18 acres. But of all the various buildings which once occupied this sacred enclosure, only a few vestiges now remain. Near the west end of South-street stood a monastery, which Grose, in his Antiquities, assigns to the Dominicans; but Keith informs us that it was a convent of Observantines. A Dominican convent, we know, was founded in St. Andrews by Bishop Wishart in 1274, and an Observantine establishment by Bishop Kennedy, 150 years later. "The only

part which uow remains of the buildings of the convent, beside the grammar-school," says Mr. Grierson, writing in 1807, "is a fragment, with an arched roof in the Gothic style, extremely elegant in appearance, and supposed to have been the chapel. It strikes one as decidedly the most beautiful specimen of Gothic architecture now to be seen at St. Andrews." This fragment is now enclosed within the grounds of Madras college, and its preservation will, we doubt not, be an object of solicitude to the trustees of that noble institution. Besides St. Rule's, and the cathedral, Martine, in his 'Reliquæ Divi Andree,' written in 1685, mentions, as having been in some sort discernible in his time, fourteen different buildings: among which were the prior's house, commonly called the Old inn, which stood to the south-east of the cathedral; the cloisters, which lay west from the prior's house, separated from it only by the dormitory. In this quadrangle was held the great fair called the Senzie market, which began in the 2d week after Easter, and continued for 15 days. The refectory, or dining-room, was in length 108 feet, and in breadth 28. It is uow a garden; in Martine's time it was a bowling-green. Fordun relates, that Edward I., in 1304, stripped all the lead off this building to supply his battering-machines in a projected siege of Stirling. The New inn, the latest built of all the edifices in the monastery before the Reformation, is said to have been erected on the following occasion:—James V. having married the Princess Magdalene, the only and lovely daughter of Francis I. of France, in 1537, the young queen, being of a delicate constitution, was advised by her physicians to reside here for the benefit of her health. The New inn was, in consequence, built for the purpose of accommodating her majesty; and was erected, we are told, with such rapidity, that it was begun and finished in a single month! The queen, however, never enjoyed it, for she died at Holyrood-house, on the 7th of July, six weeks after her arrival in Scotland. The New inn was the residence of the archbishops after the annexation of the priory to the archbishopric in 1635.—The Kirkheugh, or St. Mary's church, no longer exists. Martine says, that in his time the manse of the provost of Kirkheugh was still standing, "on a little height above the shore of St. Andrews, now in no good repair;" and that "a little north from it were to be seen the ruins of old buildings, which were the chapel itself." A discovery of the substrucions of the chapel was made in 1860, when it was found to have been eueiform, and measuring, within the walls, 99 feet along the nave and choir, 20 feet across the nave, and 84 feet along the transepts.

The castle of St. Andrews was founded towards the conclusion of the 12th century, by Roger, bishop of the diocese, and son of Robert, third Earl of Leicester. It stood upon a point of land projecting towards the sea, on the north side of the town, about 250 yards to the north-west of the cathedral. It was enlarged and repaired betwixt the years 1318 and 1328. In 1336, Edward III. placed a garrison in it to command the town and neighbouring country. On his return into England, however, a few months after, the regent, Sir Andrew Moray of Bothwell, in conjunction with the Earls of March and Fife, besieged this stronghold, reduced it in the space of three weeks, and entirely demolished it a short time after. Bishop Trail repaired the castle towards the end of the 14th century, and died in it in 1401. James III. was born in the castle, as appears by the golden charter of the see granted to Bishop Kennedy; and it continued to be the episcopal palace till the murder of Beaton in 1545. Detached from the town, and bounded on two sides

by the sea, the ruins of the castle now serve as a useful land-mark to mariners. The sea washes the rock on which it is built on the north and east sides, and has in some places undermined its walls, a considerable part of which fell in consequence of this in December 1801. Martine says, that in his time there were people living in St. Andrews who remembered to have seen bowls played on the flat ground to the east and north of the castle; the ocean, therefore, must have made great encroachments on this part of the coast. It has recently swept away the curious cave known as Lady Buchan's cave, on the shore between the harbour and the castle. Every winter huge masses of the promontory are broken down and carried away by the tide.

The University of St. Andrews is the oldest in Scotland, having been founded in 1411 by Henry Wardlaw, bishop of the diocese, who obtained the sanction of papal confirmation from Benedict XIII., in 1413. The success of the original institution led to the foundation of St. Salvator's college, about the year 1455, by James Kennedy, Bishop of St. Andrews; St. Leouard's college, founded by Prior Hepburn, 1512; and St. Mary's, founded by Archbishop Beaton, in 1537. In each of these colleges were lecturers in theology, as well as in philosophy, languages, &c. In the reign of James VI. 1579, under the direction of Andrew Melville, these establishments were new modelled, and St. Mary's college appropriated to the exclusive study of theology; it is therefore distinguished by the name of the Divinity college, or the New college. In 1621, an act was passed re-establishing, in all their articles, the first foundations of the colleges, but still assigning to St. Mary's the department of theology. In 1747, on a petition from the masters of St. Salvator's and St. Leonard's, these two colleges were united into one society, under the designation of the United college. "The statute ordained," says the Report of the Commissioners in 1832, "the United college shall consist of one principal, one professor of Greek; three professors of philosophy; whereof one is to be professor of logic, rhetoric, and metaphysics, another to be professor of ethics and pneumatics, and the third to be professor of natural and experimental philosophy; one professor of humanity; one professor of civil history, in place of the suppressed humanity professorship of St. Salvator's college; one professor of mathematics, and a professor of medicine; 16 bursars on the original foundations; together with such as have been since or may hereafter be added, and the necessary servants: that the whole funds already or to be appropriated for the payment of the salaries of the principal and professors (all specially fixed by the act), shall be joined into one common stock, and be levied and received for their use, by such factor or steward as they shall from time to time appoint: that the patronage of the principalship and of the professorship of mathematics shall belong to the Crown; of the professorship of civil history to the Earl of Cassillis; of the professorship of humanity to Scott of Scotstarvet; of the professorship of medicine to the university, to be exercised as formerly; of the remanent professorships to the principal and professors of the United college, to be determined by comparative trial, in such form and manner as was usually observed in former times; of the bursaries to the same body, to be bestowed as before the Union, the whole being a well-timed and judicious piece of legislation, which, by raising the condition of the collegiate body, secured to it in some degree superior qualifications, and which, though bestowing, after all, only a very moderate endowment on the chairs of the seminary

has in fact filled them, since the date of it, with talents and attainments of the most respectable order, and the highest usefulness." The university commissioners, whose report we are now quoting, add: "It is pleasant to be enabled to state, that the members of the *Senatus Academicus* themselves have, on every occasion on which they could act with effect, manifested the utmost zeal in the cause of literature and science, and for the efficiency and fame of their university. In 1811, their medical chair, which it would appear had never become effective, engaged their attention; and in consequence of authority vested in them by its munificent founder, the Duke of Chandos, to form such regulations and statutes as might tend to the promotion of its object, they resolved that it should be a chair for instruction in the principles of medicine, anatomy, and chemistry, and that the holder of it should be an efficient professor, teaching two very important branches of medical science, chemistry and chemical pharmacy. They made at the same time certain arrangements for creating a fund, to meet the expense of a chemical apparatus and class experiments; and ever since that time, the prescribed branches have been taught every session with great ability, and to a respectable class. About 1818-19, a class for political economy was opened by the professor of moral philosophy, and the lectures on the subject have been so attended of late, as to show that the science is growing at St. Andrews, as elsewhere, into estimation and request. In the session of 1825-6, the United college originated a lectureship for natural history; and to promote the permanency and success of the measure, they voted 25 guineas from their revenue, as an annual salary to the lecturer. Some bequests of specimens have given a beginning to a museum, and the subjects of the science have excited great interest among the students." Since the date of this Report, a regular chair of natural history has been established, the museum has been augmented into a very fine collection, and the two together have materially increased the reputation of the university. The revenue of the university, as distinct from the two colleges, does not exceed £600, and is chiefly appropriated to the support of the university library. The income of the United college, in 1774, was £1,727; in 1823, £3,020. The salary of the principal, in 1824, was £342; of each of the four foundation-professors, £254; of each of the professors of humanity, civil history, and medicine, £140; of mathematics, £245. The bursaries belonging to the United college are 63, besides prizes; and there are foundation scholarships, first competed for in Sept. 1865. The annual amount of grants from the Crown is £297. The United college holds the patronage of Denino, Kemback, Kilmenny, and Cults, and alternately with another patron, Forteviot. The buildings of St. Salvador's college have been re-erected by government grants, within the last 37 years; and they form a magnificent square, ornamented by a handsome spire 156 feet high. Through a portal directly under this spire we enter a quadrangular court, 230 feet long, and 180 broad. The chapel stands on the right; is a handsome edifice, with Gothic front and turreted buttresses; and has six beautiful memorial windows. In the chapel is an elegant tomb, erected by Bishop Kennedy, the founder, for himself. "It is a piece of exquisite Gothic workmanship; and though much injured by time and accidents, is still sufficiently entire to show the fine taste of the designer. It stands on the north side of the church, opposite to where the altar formerly stood, and where the pulpit now stands. An epitaph is easily discernible

upon it, consisting of two lines, but so much defaced as to be altogether illegible. The top was ornamented by a representation of our Saviour, with angels around, and the instruments of the passion. The bishop died in 1466, and was embalmed with spices and buried in this tomb. Within it, and according to tradition, about the year 1683, were discovered six magnificent maces, which had been concealed there in troublesome times. Three of these maces are kept in St. Andrews, and shown as curiosities to strangers; and one was presented to each of the other three Scottish universities, Aberdeen, Glasgow, and Edinburgh. One of the maces is very superior in elegance and value to the rest, and is the original, of which the others are only copies. It is of beautiful Gothic workmanship. The bishop seems to have copied it in the architecture of his tomb." The roof of the church, which was of beautiful Gothic architecture, having become apparently insufficient, it was judged necessary to pull it down, and to substitute another in its place. In doing this, the architect unfortunately suffered the tomb of Kennedy to be greatly injured. The average number of students at St. Salvador's is about 200.

St. Leonard's college obtained its name from its vicinity to St. Leonard's church. "It appears," says a modern author, "from the foundation-charter, that there had been an hospital in the same place for the reception and entertainment of pilgrims of different nations, who crowded to St. Andrews to pay their devotions to the arm of St. Andrew which wrought a great many miracles. At length, however, the saint's arm being tired with such laborious sort of work, or thinking he had done enough, the miracles and the influx of pilgrims ceased, and the hospital was deserted. The prior and convent, who had been the founders and were the patrons of the hospital, then filled it with old women; but these old women produced little or no fruit of devotion, and were turned out. The prior and convent, having repaired the church and hospital of St. Leonard, next resolved to convert them into a college, to consist of a master or principal, four chaplains, two of whom were to be regents, and twenty scholars, who were first to be taught the languages and then the liberal arts and sciences. Six of them, who were thought most fit, were also to apply, with great ardour and vehement reading,—'continuo studio et lecturâ, vehementi opera,'—to the study of theology under the principal. Such of these scholars as were found fittest for it, were also to be taught music, both plain song and descant. The foundation-charter to this purpose, was executed by the archbishop, the prior, and chapter, at St. Andrews, August 20, 1512. By another charter, the prior and chapter endowed this college with all the houses, lands, and revenues which had belonged to St. Leonard's hospital." Both these charters received the royal confirmation in next year. On the union of this college with St. Salvador's, the buildings of it were sold and converted into dwelling-houses, to which purpose such of them as now remain are still applied. It stood on the south-east side of the town, adjoining to the monastery. The ruins of the church of St. Leonard are accounted a fine specimen of Gothic architecture. Into this church, it seems, Dr. Johnson could obtain no admission. He was always, he says, prevented by some civil excuse or other; and he loudly complains of its having been applied to the profane purpose of a green-house. It is now entirely unroofed. A little way to the east of it, and on the right, as we proceed from the principal gate of the abbey to the shore, stood an aged sycamore, which, the same traveller informs us, was the

only tree he had been able to discover in the county "older than himself." It was for a long time known by the name of Dr. Johnson's Tree.

St. Mary's college was originally projected by Archbishop James Beaton, uncle and immediate predecessor to the famous cardinal of that name. We are informed, that in the year 1537, "he augmented the seminary called the Pedagogy, by a variety of endowments, and afterwards converted it into St. Mary's college: that he had determined to pull down the buildings of the above-mentioned seminary, which were become old and infirm, and inconvenient for the studies of the youth, and to erect from the foundation others in a more magnificent style, but was prevented by death. He built, however," says our authority, "several parts, and completed some that had been begun by others. His successor and nephew, the cardinal, proposed to follow out his uncle's plans, and had made some progress in the undertaking when he was assassinated in the castle. Having demolished a set of old buildings, he laid the foundation of what was intended to be a handsome church, within the college, but this was never finished." In 1553, Archbishop Hamilton gave a new establishment to this college, according to which it was to consist of 36 persons: viz., a prefect, a licentiate, a bachelor, a canonist, 8 students of theology, 3 professors of philosophy, 2 of rhetoric and grammar, 16 philosophy students, a provisor, a janitor, and a cook. The income of this college on an average of 7 years preceding 1826, was £1,076. The principal has a salary of £238; the professor of divinity, of £231; the church-history professor, £286; and the Hebrew professor, £211. By the charters of foundation, the right of patronage of the parishes of Tynningham, Tannadice, Inchbroyack or Craig, Pert, and Laurencekirk, was vested in St. Mary's college. Pert is now united to Logic, and the crown and college present to that united parish alternately. The patronage of Tynningham was sold by the college to the Earl of Haddington, in the year 1760. But the college is still in possession of the other patronages. In the year 1803, the college obtained the right of patronage to the church of Tweedsmuir; and it would appear from the evidence that it was granted to the college by the late Mr. Scott of Dumnald. There are 20 bursaries, the total annual income of which averages £199. The average number of students is about 30. The buildings of this college stand on the south side of South-street, forming two sides of a quadrangle. On the west are the teaching and dining halls, both upon the first floor; and immediately below is the prayer-hall, in which the students used to assemble twice every day, viz., at nine in the morning, and at eight at night, for public prayers. The evening-service was abolished some years ago. The north side of the quadrangle is formed by the principal's residence and by an arched gateway; and the south-west corner of the court is occupied by the house of the janitor. Contiguous, towards the east, is the University library, containing 60,000 volumes, and forming, in continuation with these buildings, part of the south side of South-street.

The Madras college was founded by the Rev. Dr. Andrew Bell, one of the prebendaries of Westminster, and the founder of the Madras system of tuition, who died at Cheltenham, in January, 1832. Dr. Bell was a native of St. Andrews, and, among other splendid bequests for the purposes of education in Scotland, left a sum of £50,000 in trust, for the purpose of founding a seminary within the city of St. Andrews, with which the English and grammar-schools are now incorporated. The buildings are in

the Elizabethan style, and form a handsome quadrangle, with a court within. The number of pupils attending the Madras college is upwards of 1,000. The branches taught are English, Greek, and Latin, arithmetic, mathematics, geography, writing, drawing, French, German, and Italian, and church-music. The trustees are the provost of the city, the two parish-ministers, and the sheriff-depute of Fife. The lord-lieutenant of Fife, the lord-justice-clerk of Scotland, and the episcopal bishop of Edinburgh, are patrons and visitors of the college.

St. Andrews is a place of great antiquity, and has been the scene of some of the most memorable events recorded in Scottish history. We have already noticed several of the most memorable facts in its early annals; and will now supply a few additional historical notices to complete our sketch of the civil and the ecclesiastical history of this city. In 1298, Edward I., after defeating Wallace at Falkirk, sent a division of his army across the Forth to punish the men of Fife for the aid they had given Wallace. They found St. Andrews deserted of its inhabitants and "wasted it full plaine." In March 1309, Robert Bruce convened his first parliament here, who recognised his title to the crown, by a solemn declaration. In the 15th and 16th centuries the sanguinary temper of its ecclesiastics was often fearfully displayed. In 1407, John Resby, an Englishman, was burnt alive in this "town of monks and bones," for disseminating the doctrines of Wickliffe; and about twenty-four years afterwards, Paul Craw, a Bohemian, suffered the same fate, for propagating the tenets of Jerome and Huss. On March 1st, 1527, Patrick Hamilton, abbot of Ferne in Ross-shire, a young man of great accomplishments, and related to some powerful families, being the son of Sir Patrick Hamilton of Kincavil, and Catharine daughter of the Duke of Albany, and a nephew of the Earl of Arran, was burnt before the gate of St. Salvator's college. Not many months after, a man of the name of Forest was led to the stake for asserting that Hamilton died a martyr. On the 28th of March, 1545, the sainted Wishart was burnt before the castle, then the archiepiscopal palace of the ferocious Cardinal Beaton, under circumstances of peculiar barbarity. The front of the great tower was hung, as for a festival, with rich tapestry; and cushions of velvet were laid in the windows for the cardinal and prelates to repose on, while they feasted their eyes and glutted their fury with this most inhuman spectacle. The cardinal was so infuriated against the noble confessor that he forbade, by proclamation, the inhabitants of St. Andrews to pray for him, under pain of the severest ecclesiastical censures; and in his haste to get his victim put out of the way, the civil power was not consulted at the trial. But the avenger of blood was nigh at hand. By his unbounded ambition, relentless cruelty, and insupportable arrogance, Beaton had raised up against himself a host of enemies, who had even before Wishart's arrest and execution determined on his destruction. A conspiracy was formed against his life, at the head of which were Norman Lesley, Master of Rothes, his uncle John Lesley, and Kirkaldy of Grange. With fourteen associates, they assembled in the church-yard, on Saturday the 29th of May 1545, at 3 o'clock in the morning; and having gained admittance into the castle—which was then repairing—by small parties at a time, they turned the servants out, to the number of 150; and then proceeding to the cardinal's room, forced open the door, which their wretched victim had barricaded from the inside, and rushing upon him, stabbed him repeatedly with their daggers. But Melville, a milder

fanatic, who professed to murder, not from passion, but religious duty, reproved their violence. "This judgment of God," said he, "ought to be executed with gravity, although in secret;" and presenting the point of his sword to the bleeding prelate, he called on him to repent of his wicked courses, and especially of the death of the holy Wishart, to avenge whose innocent blood they were now sent by God. "Remember," said he, "that the mortal stroke I am now about to deal, is not the mercenary blow of a hired assassin, but the just vengeance which hath fallen on an obstinate and cruel enemy of Christ and the Holy Gospel." On his saying this, he repeatedly passed his sword through the body of his unresisting victim, who sank down from the chair to which he had retreated, and instantly expired. The conspirators then brought the body to the very window in which Beaton had a little ago sat with so much unfeeling pride to witness the burning of Wishart, and exposed it to the view of the people with every mark of contempt and ignominy. Balfour says, that the cardinal's corpse, "after he had lyne salted in the bottom of the sea-tower within the castell, was some 9 months thereafter taken from thence, and obscurely interred in the convent of the Black friars of St. Andrews, in anno 1547." John Knox, after having, as he expresses himself, "written merrily" upon the subject, informs us, that "as his funeral could not be suddenly prepared, it was thought best to keep him from spoiling, to give him great salt enough, a cope of lead, and a corner in the sea-tower, (a place where many of God's children had been imprisoned before) to wait what exequies his brethren the bishops would prepare for him." Language such as this can hardly fail to inspire disgust. But the following lines of Sir David Lindsay of the Mount, express, with tolerable accuracy, the sentiments with which the most judicious individuals amongst the reformers at that time regarded the cardinal's murder:—

"As for the cardinal, I grant,
He was the man we well might want;
God will forgive it soon.
But of a truth, the sooth to say,
Although the loun be well away,
The deed was foully done."

The conspirators were shortly after joined by 120 of their friends, and held out the castle for more than a year; but at last capitulated to Leo Strozzi, prior of Capua, a knight of Rhodes, who entered the bay with a squadron of 16 galleons, and speedily effected a breach in the walls. In April, 1558, Walter Mill, priest of Lunan, near Montrose, an infirm old man, above 80 years of age, was burnt at St. Andrews for the crime of heresy. So strongly was the resentment of the populace expressed on this occasion, that he was the last victim of popish cruelty in Scotland. "It was at St. Andrews, in June 1583, that James VI. found means to make his escape from the state of captivity into which he had been brought at Ruthven, and detained for nearly a twelvemonth by the Earls of Mar, Gowrie, Glencairn, and others. The king having got permission from these noblemen, who then attended him at Falkland, to pay a visit to his uncle the Earl of March, who resided in the monastery of St. Andrews, went to view the works of the castle a short time after his arrival. He entered the fortress accompanied by the governor to whom he had confided his intentions; but was no sooner in than he commanded the gates to be shut, and admission refused to the party who had attended him from Falkland. Having thus recovered his liberty, he was soon joined by the well-affected part of his nobility; and a proclamation was forthwith issued by him,

"commanding all the lieges to remain quiet, and discharging any nobleman or gentleman from coming to court accompanied by more than the following number of attendants: viz. fifteen for an earl, fifteen for a bishop, ten for a lord, ten for an abbot or prior, and six for a baron, and these to come peaceably under the highest penalties." In 1609, St. Andrews was the scene of a state-trial: that of Lord Balmerinoch, secretary of state to James VI. His crime was the having surreptitiously procured the king's signature to a letter addressed to the pope; and being found guilty by a jury of fifteen of his peers, he was sentenced to have his hands and feet cut off, and his lands and titles forfeited. The first part of the sentence was remitted by the intercession of the queen; but he died a short time after, in his own house, of a broken heart. In 1617, James VI. having, from what he himself calls "a salmon-like instinct to see the place of his breeding," paid a visit to Scotland, and convened an assembly of the clergy, both ministers and bishops, at St. Andrews. He addressed them in a speech of considerable length, in which he proposed the introduction of episcopacy, and upbraided them with what he called "having mutinously assembled themselves, and formed a protestation to cross his just desires." James was the last monarch who ever honoured St. Andrews with his presence. During the troublesome times which followed his death in 1625, while his son and grandsons successively filled the throne, and endeavoured to follow out his plans in the establishment of the episcopal religion in Scotland, this city, as being the seat of the chief ecclesiastical power, was frequently involved in trouble. The murder of Archbishop Sharp, in the neighbourhood of St. Andrews in 1679, will be found detailed in our article, MAGUS MOOR. The history of the city of St. Andrews since that period presents nothing sufficiently remarkable for notice in this brief chronicle. We shall now sketch the history of the see.

Keuneth III. translated the metropolitan episcopal see of Scotland from Abernethy to St. Andrews. Malcolm III. styled the bishop of St. Andrews 'Episcopus Maximus,' or Chief Bishop, and assigned to him the oversight of Fife, Lothian, Stirlingshire, the Merse, Angus, and the Mearns. He also conferred upon him the lordship of Mouymusk. Alexander I. bestowed upon the see of St. Andrews the famous tract of land called the Cursus Apri, or Boar's chase, of which it is not now possible for us to assign the exact limits, but "so called," says Boece, "from a boar of uncommon size, which, after having made prodigious havoc of men and cattle, and having been frequently attacked by the huntsmen unsuccessfully, and to the imminent peril of their lives, was at last set upon by the whole country up in arms against him, and killed while endeavouring to make his escape across this tract of ground." The historian farther adds, that there were extant in his time manifest proofs of the existence of this huge beast; its two tusks, each sixteen inches long and four thick, being fixed with iron chains to the great altar of St. Andrews. According to the best authorities, there were thirty-three successive prelates in St. Andrews before the see was elevated to the dignity of an archbishopric, in 1471. Neville, archbishop of York, having revived a claim of superiority over the Scottish clergy, which had already been productive of much ill-will betwixt the two countries, the pope, to silence the pretensions of York for ever, granted a bull erecting the bishopric of St. Andrews into an archbishopric, and subjecting to it the other dioceses of the church of Scotland. The prelate, in whose favour this bull

was obtained, was Patrick Graham, formerly bishop of Brechin, and brother by the mother's side, to the celebrated James Kennedy, his immediate predecessor. Graham, along with the primacy, obtained the power of a legate from the pope, for the reformation of abuses, and correcting the vices of the clergy. But he does not appear to have been aware of the difficulties he had to encounter here; for the clergy, with one consent, set themselves in opposition to him, and had influence enough to destroy his credit even with the pope himself. They accused him to his holiness of schism, and other enormous crimes, and prevailed so completely as to get him degraded from his office. "The nobility and courtiers also," says Spottiswood, "became his most violent opponents, insomuch that he was suspended by the king, excommunicated by the pope, expelled from his see, and, at the end of thirteen years from the date of his election, died in a state of imprisonment in the castle of Lochleven." The dioceses subject to the archbishop of St. Andrews, after the advancement of the see of Glasgow to the same dignity, were the following nine: Dunkeld, Dunblane, Brechin, Aberdeen, Moray, Ross, Caithness, Orkney, and, after its erection in the reign of Charles I., Edinburgh. The province of the see of Glasgow included the three dioceses of Galloway, Argyle, and the Isles. The following is a list of the successive bishops and archbishops of St. Andrews:

Fergustus 721
 Hadrianns, or Adrian, elected 840, killed by the Danes 872.
 Kellaeh I.
 Malisius, or Malvesius I., died in 970.
 Kellaeh II. died 996.
 Malmore.
 Malisius II. died 1031.
 Alwinus, from 1031—1034.
 Maldwin, 1034—1061.
 Tuthaldus, 1061—1065.
 Fothaldus, 1065—1077.
 Gregorius, bishop-elect.
 Catharus.
 Edegarus.
 Godricus.
 Turgot, died 1115.
 Eadmerus, elected in 1120.
 Robert, founder of the priory, elected in 1122, died in 1159.
 Arnold, founder of the Cathedral, died in 1162.
 Richard, chaplain to Malcolm IV., died in 1177.
 John and Hugh, a double election.
 Roger, who built the castle, died in 1202.
 William Malvoisine, chancellor of the kingdom, died 1233.
 David Bernham.
 Abel.
 Gameline, chancellor.
 William Wishart, died 1279.
 William Fraser, chancellor.
 William Lamberton, died 1328.
 James Bene, died 1332.
Vacancy of nine years.
 William Landal, died in 1355.

Stephen de Pay.
 Walter Trail, repaired the castle, died 1401.
 Thomas Stewart.
 Henry Wardlaw, founder of the university, consecrated in 1403, died 1440.
 James Kennedy, founder of St. Salvator's college, died 1466.
 Patrick Graham, the first archbishop, died 1478.
 William Schives, died 1409.
 James Stuart, chancellor, died in 1503.
 Alexander Stuart, chancellor, killed at Flodden 1513.
 Andrew Foreman, died 1522.
 James Beaton, chancellor, died in 1539.
 David Beaton, cardinal and chancellor, assassinated in 1545.
 John Hamilton, hanged at Stirling in 1570.
 John Douglas, the first Protestant bishop, consecrated in 1571, died 1576.
 Patrick Adamson, died 1591.
Vacancy of fifteen years.
 George Gladstones, died 1615.
 John Spottiswood, chancellor, the historian, died 1639.
 James Sharp, assassinated in Magnus-muir in 1679.
 Alexander Burnet, died in 1684.
 Arthur Ross, deprived of his office at the Revolution in 1688, died in 1704.

And some think that the magistrates of St. Andrews, keeping in their charter-chest some of these pennies, have done it in honour of their Overlord, and for an instance and remembrance of his royal privilege, which no subject in Britain has beside." As the city of St. Andrews lay wholly within the archbishop's regality, he was superior of all its property in land. He was 'Conservator privilegiorum Ecclesie Scoticanæ,' guardian of the privileges of the church of Scotland, and constant chancellor of the university *ex officio*; but he was in many cases also promoted to the dignity of lord-high-chancellor of Scotland; and it was his privilege, in general, to officiate at the coronation of the kings. Godricus, bishop of this place, crowned King Edgar, son of Malcolm Canmore; and Charles I. was crowned by Spottiswood in 1633. The archbishop was, by act of parliament, in the time of Charles II., constituted perpetual president of the general assembly of the church of Scotland; and he sat in parliament as a temporal lord in all the following capacities: "As Lord-Archbishop of St. Andrews; Primate of the Kingdom; first of both states, spiritual and temporal; Lord of the Lordship and Priory of St. Andrews; Lord Keig and Monymusk; Lord Byrehill and Polduff; Lord Kirkliston, Lord Bishopshire, Lord Muckhartshire, Lord Scotsraig, Lord Stow, Lord Monymail, Lord Dairsie, Lord Angus, Lord Tynningham, and Lord Little Preston." He also took precedence of all noblemen whatever in the kingdom, and ranked next to the royal family, When the privy council, in 1561, passed the famous act enjoining all beneficed persons to give in an exact account of the rental of their benefices, Hamilton, archbishop of St. Andrews, gave in the following account of his:

In money,	Chald.	Boll.	£2,904 7s. 2d
Wheat,	30	9	
Bear,	41	10	
Oats,	67	0	

Mr. Grierson estimates this revenue at £4,504 present currency. "And if," he says, "we add to this sum the value of the priory, and other alienations which had before this time taken place, we shall be led to think that the income of the prelates of St. Andrews, when in their most flourishing condition, could not be much less in value than £70,000, that is, than that sum would have been in 1807. The first great alienation of the revenues of this see was the foundation of the priory in 1120; the second, the erection of the hospital of Lochleven, or Scotland Well, in 1230; the third, the foundation and endowment of St. Salvator's college by Bishop Kennedy in 1455; the fourth, the disposing of Muckhartshire by Schives to the Earl of Argyle, to engage that earl to assist him in his dispute with the bishop of Glasgow; the fifth, the erection of St. Mary's college by the archbishops Stuart and the two Beaton; and the sixth, the act of annexation in 1587 by which this see, with all the other church-benefices in the kingdom, was annexed to the Crown, and the rents and revenues of it disposed to the Duke of Lennox by James VI., excepting only a small pittance, reserved as barely sufficient for the subsistence of Archbishop Adamson. It is true, this act of annexation was repealed in 1606; but in the act repealing it, and restoring the revenues of the see, there were a number of important reservations made which prevented it from attaining its former riches. The erection of the bishopric of Edinburgh, in 1633, was another great loss; for all the lands and churches, south of the Forth, belonging to the archbishopric, were now disunited from it, and conferred upon the new see. Yet the loss of

It appears that the bishops of St. Andrews had the power of coining money. But "the tradition goes," says Martine, "that they could not coin above a groat-piece; but this," continues he, "may be allowed to be a mere conjecture, for the German bishops, who coin, are not so restricted and limited. For proof that sometimes this privilege has been in use, I have seen copper coins bearing the same *monde*, chapleted about and adorned with a cross on the top, just in all things like the *monde* set by Bishop Kennedy in sundry places of St. Salvator's college, both in stone and timber, and the same way adorned, with a common St. George's cross on the reverse. The circumscriptions are not legible.

these was in some measure compensated by the bounty of Charles I., who having, two years after, purchased the priory from the Duke of Lennox, to whom it had been gifted by James VI., disposed this benefice to the archbishopric in lieu of the loss it had sustained. Such were the most important changes, losses, and revolutions, which this see, in the course of five centuries, from time to time underwent." The number of monks in the priory at the Reformation was, according to Martine, thirty-four, besides inferior servants; and of these thirty-four, "fourteen," says he, "turned preachers, at certain kirks of the priory, and some continued about the monastery till their death." The priories of May, Pittenweem, Lochleven, and Monymusk—of all which monasteries the monks were also Augustinians—were dependent on the priory of St. Andrews. The revenues of it in Martine's time, consisted, he tells us, in "silver, fen-duties, rent-alls teind-bolls, tack teind-duties, capons, poultry, and small sums in the name of kain; the houses and yards within the precincts of the monastery; the teinds of the 430 acres of land on the south side of the town, now called the Prior acres, formerly the convent's glebe; and the privilege of having the teind sheaves led into the priory barn by the heritors and tenants themselves. The yearly rent," he continues, "of the priory is at present as good as that of the archbishopric, if not better; and within a few years, at the falling of some tacks, it will be much better." When the act of council, in 1561, passed for the assumption of the revenues of all the church-benefices, that a third part of their value might be applied to the maintenance of the ministers of religion, and the remaining two-thirds to defray the expenses of the king's household, the rental of the priory of St. Andrews was found to be as follows:

In money.	Chald.	Boll.	£2,237 18s. 1d.
Wheat,	38	1	
Bar,	132	7	
Meal,	114	3	
Oats,	151	10	
Beans and pease,	5	7	

The following parish churches belonged to the priory and paid tithes to it: viz., the Trinity church of St. Andrews, now the town-church, Leuchars, Forgan, Cupar, Dairsie, Lathrisk, Kilgour, Scoonie, Kennoway, Markinch, Ecclesraig, Fordun in the Mearns, Bourthie, Nigvie and Tarlane, Dull in Athole, Longforan, Rossie in Gowrie, Inchture, Fowls, Portmoak, Abercrombie, Linlithgow, Haddington, Binuing, and Preston. The vicarage was annexed to the archbishopric in 1606; but was assigned afterwards by the archbishop to the newly erected parish of Cameron, that parish having been detached from the too extensive parish of St. Andrews, and having no legal maintenance belonging to it.—The provosty of Kirkcough was a convent of seculars, governed by a præfectus, or provost, and unquestionably the most ancient religious establishment of any in this place. It is believed by some to have been founded by St. Regulus himself, and to be the same with the institution which went by the name of 'Ecclesia Sanctæ Mariæ de rupe,' or St. Mary's church on the rock, and of which the chapel stood on a rock now covered by the sea at high water, and which still goes by the name of the Lady-craig, situated near the extremity of the present pier. There was also a chapel, called 'Ecclesia Sanctæ Mariæ,' on the hill above the harbour.—In June, 1841, her Majesty's Attorney-general, Sir John Campbell, Knt., on succeeding Lord Plunkett as Lord-chancellor of Ireland, was elevated to the

dignity of a Baron of the United Kingdom, by the title of Baron Campbell of St. Andrews.

ST. ANDREWS. See DEELNESS, DUNDEE, DUN FERMLINE, EDINBURGH, GLASGOW, GREENOCK, LILAN BRIDE.

ANGELS' HILL, a hillock, crowned by a small circle of stones and a small cairn, in the island of Iona, Argyleshire. Pennant regards the relics on it as Druidical. But a superstitious tradition says that Columba, on arriving at Iona, had a conference on the hillock with angels. Hence its name,—in Gaelic Cnocan-Aingal. See IONA.

ANGUS, the ancient name of FORFARSHIRE: which see. At a very early period the name Angus was given to the district of country lying between the North Esk on the north, and the Tay and Isla on the south. It is thought by some antiquaries to have been so called from Angus, a brother of Kenneth II., on whom this district was bestowed by Kenneth after his conquest of the Picts. Others think that the hill of Angus, a little to the eastward of Aberlemno church, was, in ancient times, a noted place of rendezvous on occasions of great public gatherings; and that the name was ultimately extended to the surrounding country. It seems more probable that the hill itself derived its name from the district.—The How or Hollow of Angus is a finely diversified valley in the northern part of Forfarshire, extending above 30 miles in length, from the western boundary of the parish of Kettins to the mouth of the North Esk. Its breadth varies from 4 to 6 miles.—The earldom of Angus now belongs in title to the Duke of Hamilton. It was in the line of Douglas previous to 1329; and it has been ascertained by Mr. Riddell that it again came into the old line of Douglas by a natural son of William, first Earl of Douglas.—The synod of Angus and Mearns comprehends the presbyteries of Meigle, Forfar, Dundee, Brechin, Arbroath, and Fordoun.

ANKERVILLE, a small village in the parish of Nigg, about 6 miles south-west of Tain, Ross-shire. A fair, called Hngb's fair, is held here on the third Tuesday of November.

ANNAN, a parish, containing a burgh of the same name, in the Annandale district of Dumfriesshire. It is bounded, on the south, by the Solway frith, and on other sides by the parishes of Cumbertrees, Hoddam, Middlebie, Kirkpatrick-Fleming, and Dornock. The Solway frith is in contact with it over a distance of upwards of three miles; the river Annan flows southward, along the west side of the parish, to the frith; and the river Kirtle runs on the boundary with Kirkpatrick-Fleming. The greatest length of the parish, from north to south, is 8 miles; the breadth varies from about 2½ to about 4 miles; and the area is about 11,100 imperial acres. The general surface declines to the south, but is comparatively flat. Three low parallel ridges extend southwestward; and between the western and the middle ones, amid softly featured and very beautiful scenery, runs the river Annan. Woodcockair, an obtuse conical hill, of about 320 feet of altitude above sea-level, is situated at the north end of the western ridge; and Annan hill and Barnkirk, with altitudes of respectively about 256 and 120 feet, are situated on the sea-board. The rising grounds and the banks of the Annan are decorated with wood. The shores of the frith are flat and sandy. The soil of most of the parish is very various; but the greater part is either a fertile loam or a rich clay. A tract of nearly 2,000 acres on the north-east of the burgh was formerly a bleak, moorish common; but is now reclaimed, enclosed, and beautified. There are six principal landowners,—the most extensive of whom, M'Kenzie of Newbie,

has a rental of £3,500. Assessed property in 1863, exclusive of the burgh, £12,352 17s. The chief mansions are Mount Annan, situated nearly two miles north of the burgh, and commanding a very extensive prospect; Warmanbie, about a quarter of a mile south of Mount Annan; Northfield, still farther south; and some large handsome houses in and around the burgh. The high roads from Dumfries to Carlisle and from Annan to the north traverse the interior; the Dumfries and Carlisle railway goes across the south end past the burgh; and the Caledonian railway overlooks the north-east, along the opposite bank of the Kirtle. The village of Bridekirk stands in the north-west. Population of the parish in 1831, 5,033; in 1861, 5,761. Houses, 1,085.

This parish is the seat of a presbytery in the synod of Dumfries. Patron, Johnstone of Annandale. Stipend, £279 2s. 4d.; glebe £30. Unappropriated tithes £191 15s. Schoolmaster's salary, £60 to £70, with about £40 fees, and £12 other emoluments. The parish church was built in 1790, and has 1,190 sittings. There is a chapel of Ease in the burgh, erected in 1842, and called Greenknowe church. There are a q. s. church at Bridekirk, and a chapel of Ease at Kirtle. There is a Free church in the burgh; the yearly sum raised in connexion with which in 1865 was £230 13s. 9d. There are in the burgh also an United Presbyterian church, with an attendance of 300; an Independent chapel in connexion with the Congregational Union, with an attendance of 120; and an Episcopalian chapel in connexion with the Scottish Episcopal church, with an attendance of 56. The places of education comprise the parochial school, the academy, and an infant and industrial school in Annan, endowed schools at Bridekirk and Breckenbiels, besides private schools.

ANNAN, a post and market town, a royal burgh, and the capital of Annandale, stands in the parish of Annan, on the left bank of the river Annan, on the high road from Dumfries to Carlisle, and on the Dumfries and Carlisle railway, $1\frac{1}{2}$ mile north of Annanfoot, $8\frac{3}{4}$ miles west by south of Greta, 12 south-south-east of Lockerby, $15\frac{1}{2}$ south-east by east of Dumfries, and 79 south by east of Edinburgh. Its streets are spacious, airy, and generally well paved; its houses are substantially built of good sandstone, and for the most part are neat and pleasant; its environs are studded with many modern, beautiful dwellings and cottages ornées; and its entire appearance is cleanly, cheerful, and prosperous. The parish church, at the east end of the town, is a handsome structure, surmounted by an elegant spire. The town-house, at the other end, once had a spire, but now wants it. The other places of worship, as well as the parish church, are in a general view very creditable to the burgh. The academy, erected in 1820, in Ednam street, is a large building under the conduct of two masters. The Dumfries and Carlisle railway crosses the river on a substantial stone viaduct, and afterwards, at some distance east of the burgh, traverses a deep cutting. A railway to Cumberland, by means of a viaduct about a mile long over the Solway, was being formed in 1865. The Dumfries and Carlisle highway approaches the west end of High-street by a bridge of three large arches, built in 1824, at the cost of about £8,000.

A small cotton spinning-mill was established in 1785, and employs about 130 hands. There is also a power-loom shed, with 112 looms. Hand-loom weaving, chiefly for Carlisle, is a considerable employment, but a sadly poor one. The curing of bacon and hams is carried on for the markets of Liverpool and London. See DUMFRIES. The ex-

porting of grain, wool, cattle, sheep, horses, and some miscellaneous goods to Liverpool is a large occupation; and, together with the market-business of transferring them from the producers to the exporters, forms a main feature of the industrious stir of the burgh. A weekly market is held on Thursday; and living fairs are held on the first Thursday of May and the third Thursday of October. The town has branch-offices of the British Linen Company's Bank, the Commercial Bank of Scotland, and the Royal Bank of Scotland, and a fair variety of other business institutions. It has also a subscription library, a mechanic's institute, a savings' bank, a penny savings' bank, and several benevolent and religious societies.

The port of Annan is situated at the efflux of the river, yet has entire identity of interest with the town, and requires to be noticed here as if it were strictly adjacent. It bears the name of Annan Waterfoot, or often simply Waterfoot. It is naturally the mere mouth of the river, sheltered by Barnkirk hill; but it has been artificially improved by an embankment, which cost £3,000, and by two jetties, of 140 yards in length. A commodious inn stands near the jetties; and there are ample facilities of communication with the town. Two steamers, previous to the opening of the railway, sailed twice a week hence to Liverpool. The aggregate tonnage belonging to the port is about 6,000 tons; but only two or three timber vessels from N. America and the Baltic, and several small coasting-vessels, trade regularly to the port. There is a ship-building yard. The imports from America and the Baltic consist of timber, deals, lathwood, and tar; and the imports coastwise consist chiefly of coals, slates, iron, herrings, salt, and miscellaneous goods.

Annan is conjectured to have received its first charter from Robert Bruce; and it certainly was either recognised as a royal burgh, or erected into one in 1538, by James V. Its subsisting charter was granted in 1612 by James VI. It is governed by a provost, 3 bailies, a treasurer, a dean-of-guild, and 15 councillors. It possesses extensive burgh-roads and commons, the latter of which have been divided, and are in a state of improvement. Its revenue, arising from rents, fisheries, tolls, and feu-duties, amounted, in 1833, to £670; its debts to £4,500; its expenditure in ordinary to £437. In 1863-4, the corporation revenue was about £435. The real rent of the old royalty was, in 1833, about £11,861; and of that part of the burghal property within the parliamentary bounds £8,000. The ancient royalty comprehends a district of above 5 miles in length; the parliamentary line has greatly limited the burgh. The magistrates hold no patronage; and there is no guild or incorporation. Annan joins with Dumfries, Lochmaben, Sanquhar, and Kirkcubright, in sending a member to parliament. The municipal and the parliamentary constituency in 1864, was 176. Population of the municipal burgh in 1841, 4,409; in 1861, 4,620. Houses, 871. Population of the parliamentary burgh in 1861, 3,473. Houses, 633.

Annan was probably a town before the time of Robert Bruce, but how long before cannot be conjectured. It was frequently plundered and burned, and always more or less kept in turmoil, during the wars of the succession and the hottest periods of the Border forays. In 1298 it was burned by English invaders; and in 1300 Robert Bruce either repaired or built a castle at it for its defence; and this he occasionally made his residence. In 1332, Edward Baliol, soon after being crowned at Scone, summoned the Scottish nobility to the castle of Annan to do him homage; and here Archibald Douglas,

at the head of about 1,000 horsemen, came upon him by surprise at night, slew his guards and many of his chief adherents, and frightened him, half-naked and on a horse without saddle or bridle, to take flight for Carlisle. In 1547, during the protectorate of Somerset, an English army entered Dumfriesshire, and met a stubborn resistance from the inhabitants of Annan, but eventually captured the town, and sacked and burned it. In 1548 and 1549, Annan and its neighbourhood were so fearfully harassed by incursions of the English that a sum of £4,000 was levied by government from the bishops and clergy for the purpose of repairing and strengthening its defences; and soon after, when 6,000 French auxiliary troops arrived in the Clyde, the larger portion of them were sent hither to protect the town and watch the invaders. The castle had been demolished, at previous English inroads, and was rebuilt at the time of repairing the defences; and in 1570, it was again demolished by an English army under the Earl of Sussex. But it was once more rebuilt, and maintained in strength; and, in 1609, in consequence of the disastrous and impoverished circumstances of the townspeople, it was granted to them by the government to be used as a place of worship. During the civil wars of the 17th century, the town was reduced to misery; and soon after the Restoration, it obtained from parliament, as a means of improving its condition, the privilege of collecting customs. In the winter of 1745, the retreating army of the Pretender, after sustaining great loss in the waters of the Eden and the Esk, spent a night in camp at Annan.

The castle stood on the east bank of the river and west side of the town, on the ground now occupied by the old churchyard; but, excepting a small part of the wall built into the town-house, it was all obliterated about half a century ago. A deep fosse once extended, from an elevation about half-a-mile up the river, past the eastern skirt of the town, to Annan moss, and seems certainly to have been formed and maintained for the town's defence against the English; and some of it can still be easily traced. An artificial mound, called the moat, exists near the site of the castle, but separated from it by a hollow, and is supposed to have been used in the middle ages as the seat of courts of justice; and the elevation at the upper end of the quondam fosse bears the name of Gallows-Bank, or corruptedly Gala-Bank, and is believed to have been the place where condemned persons were executed.—Among distinguished natives of Annan were Dr. Thomas Blacklock, the poet, and the Rev. Edward Irving of London; and among eminent persons connected with it were Hugh Clapperton, the African traveller, and Mrs. Graham, the wife of the poet of the *Salhath*.

ANNAN (THE), a river of Dumfriesshire. It flows through all the central district of the county from north to south, and gives to that district the name of Annandale. It rises among the high mountains and fells in which the shires of Dumfries, Lanark, and Peebles, touch each other; but its chief feeders flow from the southern and western base of the mountain which gives name to the Hartfell group, which is in the parish of Moffat, on the borders of Peeblesshire, and has an elevation of 2,635 feet. These feeders flow south-west, and successively discharge themselves into a stream holding a course nearly direct south from Corehead to Bridgend. At the latter place, the stream, now of considerable volume, inclines a little towards the east, and forming the boundary betwixt the parishes of Kirkpatrick-Juxta and Moffat, passes the village of Moffat, below which it

receives in succession, a stream descending from Snawfell, and the Frenchland burn, both coming from the north-east; and about 2½ miles below, is joined by Moffat water coming from the north-eastern, and Evan water descending from the north-western, extremity of the parish. These two tributaries unite with the Annan on opposite sides, at one point, at an elevation of about 350 feet above sea-level. Its next important tributary is Wamphray water, coming from the north-east, soon after receiving which its course becomes very meandering, though still bearing southwards. A little below Applegirth kirk it receives an important tributary from the north-west, in Kinnel water; and a little farther on, another important one from the north-east, in the Dryfe. At the southern extremity of Dryfesdale parish, of which it forms the western boundary, it bends eastward to St. Mungo kirk. At the south-eastern extremity of St. Mungo parish, it receives the Milk water, from its junction with which its course is south-east, to its junction with the Mein water, in the parish of Hoddam. From this latter point its course is nearly south to the town of Annan, whence its estuary sweeps in a south-west and then south-east direction into the upper part of the Solway frith. Its total length of course is about 30 miles. Its general character, in the lower part of its course, is that of a gently flowing pastoral stream, which is perhaps indicated in its name *Amhann*, in Gaelic, signifying the slow-running water. Allan Cunningham styles it 'the silver Annan.' In the ballad of 'Annan Water,' [Minstrelsy of the Scottish Border, vol. iii. p. 284, Cadell's edn.] it is styled 'a drumlic river;' but this was during a spate, the tragical consequences of which are commemorated in the ballad; and the editor informs us that when

'Annan water's wading deep,'

that river and the frith into which it falls are the frequent scenes of tragical accidents. See **SOLWAY FRITH**.

ANNAN WATERFOOT. See **ANNAN (BURGH OF)**. **ANNANDALE**, the valley of the river Annan. It is bounded on the north by Lanarkshire and Peebleshire; on the east by Eskdale; on the south by the Solway frith; and on the west by Nithsdale. The open, low, and expanded region of it, often called the How of Annandale, commences in the tremendous hollow of Errickstane, above the village of Moffat, and has a length of about 25 miles, and in some places a breadth of from 15 to 18 miles. It is very extensively carpeted with a deep, rich, alluvial soil; and is supposed, by distinguished geologists, to have been long the bed of a great inland lake. In consequence of its vicinity to England, and of its exposure to continual predatory incursions, the greater part of it lay, during the feudal ages, in a state of commonage and waste; but since the beginning of last century it has worn a very different appearance, and it is now one of the most gardenesque districts in Scotland. It contains a number of lakes, particularly about Lochmahen; and it abounds in sandstone, and has a good share of limestone and some other useful minerals. Population in 1831, 33,654; in 1851, 35,141. Houses, 6,333.

Annandale was anciently a part of the Roman province of Valentia; and it afterwards, by a grant from David I., soon after his accession to the throne, in 1124, to Robert de Brus, son of one of William the Conqueror's Norman barons, with whom David had formed a friendship while at the court of Henry I. of England, became a lordship under the Bruces, who took their title from it.

Much confusion prevailed among our historical writers as to the genealogical relations of the family of Bruce, until Chalmers, in his 'Caledonia,' and Kerr, in his 'History of Scotland during the reign of Robert I.,' pointed out the existing discrepancies, and traced the descent of this illustrious line. Robert de Brus entered England with William, duke of Normandy, in 1066; his son, of the same name, who is frequently confounded with him, received a grant of the lordship of Annandale as above mentioned; but immediately before the battle of the Standard, in 1138, he renounced his allegiance to David I., on finding himself unable to persuade the Scottish king to enter into terms of peace with England. He died on his paternal English estate of Gysburn in Yorkshire, in 1141, and was succeeded in his English estates by his elder son, the ancestor of the English Bruces of Skelton. Robert Brus, his younger son, is said to have received the transfer of Annandale from his father immediately before the battle of the Standard, and to have borne arms against the English in that engagement. This 3d Robert lived in the reigns of David I., Malcolm IV., and William the Lion. His son, the 4th Robert, married Isabel, a natural daughter of William the Lion. He died in 1191, and was succeeded in the lordship of Annandale by his son William, who died in 1215. Robert the 5th of the name, married Isabel, second daughter of David, Earl of Huntington, who was the younger brother of William the Lion, thus introducing the legitimate royal blood of Scotland into the family of Bruce. The fifth Robert Bruce died in 1243, and was succeeded by the 6th of the name, who married a daughter of Gilbert de Clare, Earl of Gloucester. He opposed the Cumyn influence in the affairs of Scotland; and at the age of 81 engaged in the competition for the Crown of Scotland; but ultimately resigned his rights in favour of his son Robert, Earl of Carrick. He died in 1295. His son accompanied Edward of England to Palestine in 1269, and soon after his return, married Margaret, Countess of Carrick, in her own right, by whom he had five sons and seven daughters. The eldest son of this marriage was THE BRUCE.

About the year 1371, upon the demise of David II., Annandale fell into the hands of Randolph, Earl of Moray, regent during the minority of David; and, with the hand of his sister Agnes, it went to the Dunhars, Earls of March. After their forfeiture, it fell to the Douglasses, who lost it by the same fate. It now belongs chiefly to the Earl of Hopetoun. It formerly gave the title of Marquis to the gallant horder-family of Johnstone. The lineal heirship of this title became extinct, on the death of George, 3d marquis, in 1792; and is claimed by Sir F. Johnstone of Westerhall, Bart. The famous Ben Jonson was the descendant of an Annandale family, and was really not a Jonson, but a Johnstone.

Lochmahen castle was the principal fort in Annandale, and was deemed almost impregnable. From having been a Roman province, this district abounds with Roman stations and antiquities. Part of Severus's wall, the camps of Birrens and Brunswark, and the remains of a great military road, are still visible in it. The ruins of the large quadrangular fortress of Auchincass, on Even water, once the seat of the regent, Randolph, cover an acre of ground, and still convey an idea of the strength and extent of the building. The castles of Hoddam and of Comlongan are also in tolerable preservation. See DUMFRIES-SHIRE, and LOCHMAHEN.

ANNANDALE'S BEEF-STAND. See ERICKSTANE BRAE.

ANNAT (THE), a rivulet in the parish of Kilmadock, Perthshire. It rises in a hill in the north-west corner of the parish, and runs into the Teith about a mile above Doune. It is remarkable for numerous cascades.

ANNISTON. See INVERKEILOR.

ANNOCK (THE), a small river of Renfrewshire and Ayrshire. It issues from the White Loch in the parish of Mearns, and flows south-westward, past Stewarton, to a confluence with Irvine Water, a little above the town of Irvine. It receives the Swinsey, the Corsehill, and the East burns at the town of Stewarton, and receives the Glazart at Water-meetings, 4 miles farther on; and it has altogether a course of about 14 miles.

ANN'S (ST.) See GLASGOW.

ANSTRUTHER-EASTER, a parish, burgh, and post, market, and sea-port town on the south coast of Fifeshire. The parish is strictly co-extensive with the burgh, and has no landward district. It is bounded, on the south, by the frith of Forth; on the west by Anstruther-Wester from which it is separated by the Dreef burn; on the north, by the landward part of the parish of Kilrenny; and on the east, by the fishing-town of Cellardyke. The shore is rugged and rocky; and a small bay, with safe and commodious harbour, washes the town. Previous to the year 1634, Anstruther-Easter was in the parish of Kilrenny, yet contained the residence of the minister, who therefore was styled the minister of Anstruther-Easter; and in that year it was constituted a parish of itself, and got a church of its own. It is in the presbytery of St. Andrews, and synod of Fife. Patron, Baird of Elie. Stipend, £131 15s. from variously the Exchequer, and a grant of part of the bishop's rents, and some money mortified for that purpose; glebe, £25. Schoolmaster's salary, £5 6s. 8d., with from £40 to £50 fees. The manse is a curious building, erected in 1590, by James Melville, nephew of the celebrated Andrew Melville, and then the minister of Kilrenny. The parish church is the original one built in 1634. It has a spire, and was repaired in 1834, and contains 750 sittings. There is a Free church; and the yearly sum raised in connexion with it in 1865 was £318 4s. 1½d. There are also an United Presbyterian church, a Baptist chapel, an Independent chapel connected with the Congregational Union, and an Independent chapel not so connected.

The town of Anstruther-Easter stands closely adjacent to the towns of Anstruther-Wester, and Cellardyke; and the three look to be one narrow town, stretching along the shore. It was erected into a royal burgh by James VI., in 1583; and once held of the family of Anstruther. It is governed by a council of 9, including 3 bailies, and a treasurer. The revenue in 1833 was £78; expenditure, £93; debt, £485; and in 1851-2, the revenue was £389 8s. 4d. The only taxes levied are the government cess, and the customs and shore-dues. The value of assessed property in 1865 was £3,880. A good harbour is here; and a new and more commodious one was, with aid of a grant from the Exchequer, about to be formed in 1865. In 1710, Anstruther, which formerly was a creek of Kirkcaldy, was made a port, and a custom-house established here. In 1753, a new quay was built; and, to defray the expense, an act of parliament was procured laying a tax of two pennies Scots upon every pint of ale brewed or sold in the burgh. In 1768, the tonnage belonging to Anstruther-Easter was 80 tons; in 1793, it was 1,400; and in 1850, it was 2,135 tons. There is some coasting-trade. The principal articles of export are grain and po-

tatoes, and salted cod. A weekly corn-market is held on Friday; and fairs are held on the first Tuesday after the 11th of April, on the 5th day of July, and on the 12th day of November. The town has a meal-mill, a tan-work, a brewery, a rope and sail-work, a remarkable number and variety of shops, an office of the National Bank of Scotland, one of the Clydesdale Bank, and one of the Commercial Bank. The Leven and East of Fife railway connects Anstruther with the North British at Thornton. Projects were concocted during the heat of the railway excitement, to form two lines of railway from Anstruther harbour,—the one by way of Cellardyke, Kilrenny, Crail, Kingsbarns, and Boarhill, to St. Andrews,—and the other by way of Pittenweem, St. Monance, Elie, Earlsferry, Kilonquhar, Colinsburgh, Newburn, Largo, Leven, Kennoway, and Cameron-Bridge, to a junction with the Edinburgh and Northern railway either near Thornton or at or near Markinch; and the latter project, after long delay, came to be virtually realized in the Leven and East of Fife scheme. Anstruther joins with Anstruther-Wester, Crail, Cupar, Kilrenny, Pittenweem, and St. Andrews, in returning a member to parliament. The parliamentary and the man. constituency in 1863, was 87 and 73. Anstruther-Easter is the birth-place of the Rev. Dr. Chalmers, and of Professor Tennant of St. Andrews, who has sung the humours of 'Anster Fair' with excellent jocularity, and a genius worthy of a higher subject. It also claims for its own the famous Maggie Lawder of song. Population in 1831, 1,007; in 1861, 1,155. Houses, 195.

ANSTRUTHER-WESTER, a small parish, containing a royal burgh of the same name, on the south coast of Fifeshire. It has a very irregular form. It contains about 600 acres of arable land, and about 9 or 10 acres of common, on which the burgesses have the privileges of pasturage and of casting turf. It is bounded on the south by the frith of Forth, along which it extends for about half-a-mile; on the east by Anstruther-Easter; on the north by Carnbee and Kilrenny; and on the west by Pittenweem. In the rivulet which divides the two Anstruthers, it is said there was once a considerable salmon-fishery, whence the arms of the town, bearing three salmon crossed, are supposed to be derived. Toward the end of last century, the average rent of land in the parish was from 21s. to 30s. per acre; and in 1838 it was £3 10s. At the west end of the town there is a large mound, called the Chesterhill, on which was formerly a fine spring. South-east of the town, and 6 miles distant from it, in the mouth of the frith of Forth, is the Isle of May; which, after the desolation of the abbey of Pittenweem, was generally supposed to belong to the parish of Anstruther-Wester, and in consequence was annually visited by the minister of Anstruther-Wester, while it was inhabited by 14 or 15 families. But it is also claimed as belonging to Crail parish. See MAX. Population of the parish of Anstruther-Wester in 1831, 430; in 1861, 438. Houses, 69. Assessed property in 1865, £3,084 1s. 6d.

This parish is in the presbytery of St. Andrews, and synod of Fife. Patron, Sir W. C. Anstruther, Bart. Stipend, £142 5s. 6d.; glebe, £22 10s. Schoolmaster's salary now is £45, with about £75 fees. The parish church appears, from the remains of a large choir, and the Gothic structure of the steeple, to be a very ancient building; but it has often been repaired. This parish was anciently a vicarage belonging to the priory of Pittenweem.

The town of Anstruther-Wester was created a royal burgh by James VI., in 1587. The affairs of

the burgh were managed by a council of 15, including 3 bailies, and a treasurer; but, in consequence of an irregularity in the election of 1851, which was set aside by the Court of Session, it is now under three managers of their appointment. The burgh property consists of the town's common, customs, and shore-dues, teinds of the white-fish, and herrings brought into the harbour, and the iron-stone and sea-ware found on the shore. Revenue in 1832, £69; expenditure, £79. Revenue in 1864-5, about £140. The magistrates and minister have the presentation of a bursar to the United college of St. Andrews. The parliamentary and municipal constituency in 1864 was 25. "The town of Anstruther, and many others on this coast," says the Rev. James Forrester, in the first Statistical account of the parish, in 1793, "suffered much in the civil wars, in the reign of Charles I., both by sea and land. They were zealous covenanters, and there are few old inhabitants of the parish who do not talk of some relations that went to the battle of Kilsyth, in 1645, and were never afterwards heard of. Anstruther shared the fate of its neighbours, about the year 1670, by an inundation of the sea, which destroyed or choked up the harbour, washed away the bulwarks, and rendered many of the houses unsafe to dwell in. An inundation of a similar kind happened about the end of last century, when about a third of the town seems to have been destroyed. A long street, called the Fore-street, was totally destroyed; scarce a vestige of it now remains. The rock on which the town-house once stood, is covered by the sea every spring-tide, and every tide the sea washes the street, where the principal houses of the burgh were situated. The old people date the decay of the towns on this coast to the Union with England. It is evident that that event did undoubtedly give a great shock to the trade of these towns. Their staple commodities were malt, herrings, and cod. Before the Union, there were 24 ships belonging to Easter and Wester Anstruther, and 30 boats employed in the fishery; in 1764, there were only two ships, each 40 tons burden, and three fishing-boats belonging to Anstruther-Easter, and one of 20 tons, and two fishing-boats to Anstruther-Wester." Anstruther-Wester is united to Anstruther-Easter by a good bridge over the Dreel burn. Population in 1841, 339; in 1861, 367. Houses, 56.

ANTONINUS' WALL, an ancient Roman work extending from the Clyde to the Forth. In the year 78 of the Christian era, Agricola took the command in Britain; but he did not enter North Britain till the year 81. The years 79 and 80 were spent in subduing the tribes to the south of the Solway frith hitherto unconquered; and in the year 81 Agricola entered on his fourth campaign by marching into North Britain along the shores of the Solway frith, and overrunning the mountainous region which extends from that estuary to the friths of Clyde and Forth, the Glotta and Bodotria of Tacitus. He finished this campaign by raising a line of forts on the narrow isthmus between these friths, so that, as Tacitus observes, "the enemies being removed as into another island," the country to the south might be regarded as a quiet province. See INTRODUCTORY. Little is known of the history of North Britain from the time of Agricola's recall till the year 138, when Antoninus Pius assumed the imperial purple. That good and sagacious emperor was distinguished by the care which he took in selecting the fittest officers for the government of the Roman provinces; and his choice, for that of Britain, fell on Lollius Urbicus, a man who united talents for peace with a genius in war. After putting down a revolt of the Brigantes in South Britain in the year

139, this able general marched northward the following year to the friths, between which he built a wall of earth on the line of Agricola's forts. Capitolinus, who flourished during the third century, is the first writer who notices this wall, and states that it was built in the reign of Antoninus Pius, but he gives no exact description of it. The wall or rampart extended from Caeridden on the frith of Forth to Dunglass on the Clyde. Taking the length of this wall from Old-Kilpatrick, on the Clyde, to Caeridden on the Forth, its extent would be 39,726 Roman paces, which agree exactly with the modern measurement of 36 English miles, and 620 yards. This rampart, which was of earth, and rested on a stone foundation, was upwards of 20 feet high, and 24 feet thick. Along the whole extent of the wall there was a vast ditch or *præentura* on the outward or north side, which was generally 20 feet deep, and 40 feet wide, and which, there is reason to believe, might be filled with water when occasion required. This ditch and rampart were strengthened at both ends, and throughout its whole extent, by one and twenty forts, three being at each extremity, and the remainder placed between, at the distance of 3,554½ yards, or something more than 2 English miles from one another; and it has been clearly ascertained that these stations were designedly placed on the previous fortifications of Agricola. Its necessary appendage, a military road, ran behind the rampart from end to end, for the use of the troops, and for keeping up the usual communication between the stations or forts. From inscriptions on some of the foundation-stones, which have been dug up, it appears that the second legion, with detachments from the sixth and the twentieth legions, and some auxiliaries, executed these vast military works, equally creditable to their skill and perseverance. Dunglass, near the western extremity, and Blackness near the eastern extremity of the rampart, afforded the Romans commodious harbours for their shipping, such as they enjoyed, while they remained in North Britain, at Cranonnd. This wall is called in the popular language of the country Grime's Dyke, the etymology of which has confounded antiquarians and puzzled philologists. In British speech and in the Welsh language of the present day the word *grym* signifies strength; but whether the appellation which the wall now receives is derived from such a root seems doubtful. Certain it is, that the absurd fiction of Fordun, Boyce, and Buchanan, who derive the name from a supposititious person of the name of Grime and his Scots having broke through this wall, has long been exploded, with many other fictions of the same authors. See KIRKENTILLOCH and FALKIRK.

ANWOTH, a parish on the coast of Kirkcudbrightshire. It comprises the peninsula between Wigton bay and Fleet bay, and has its extreme length thence to the north. Its post-town is Gatehouse. It is about 6½ miles long, and 3½ broad. It is bounded on the north and east by the parish of Girthon, from which it is divided by the river Fleet; and on the west by the parish of Kirkmabreck. The sea-shore is generally flat and rocky, though in one place it is bold and elevated. Towards the northern part of the parish, the surface becomes broken and barren, rising into numerous hills of small elevation. Along the banks of the Fleet, and to some distance from it, there is a considerable quantity of natural and plauted wood. The total area is about 9,000 acres, of which about one-third is arable. The Fleet is navigable for small vessels as far as Gatehouse: see article FLEET. The most remarkable hill is Cairnharrah, which is situated partly in this parish, and partly in Kirkma-

breck. It is elevated above the sea about 1,500 feet; and is the highest ground in this part of the country, Cairnsmuir excepted. It commands an extensive view of the adjacent country, the shire of Wigton, the Isle of Man, a part of Cumberland, and even of the high land on the coast of Ireland. There is a lead mine on the estate of Rusco. The mansions are Rusco, Ardwall, Kirkclanch, and Cardoness. The village of Anwoth stands on the Fleet, opposite Gatehouse, and is connected with that town by a bridge, and often considered as part of it under the name of Fleet-street. Population of the village in 1861, 377. The road from Gatehouse to Newtown-Stewart passes along the shore. There are two old buildings in the parish, the tower of Rusco, and the castle of Cardoness. Both these fortalices stand on the banks of the Fleet; the former about 2½ miles above where the river ceases to be navigable, and the latter 1 mile below that point, on a tongue of land, looking towards the bay at the mouth of the river. The Rev. Samuel Rutherford, author of a valuable volume of Letters on Practical Religion, and various popular devotional pieces, was minister of this parish; and a monument, in the form of an Egyptian obelisk, 56 feet in height, and wholly composed of granite, was erected in 1842 to his memory by his admirers, on a hill a little to the north-east of the farm-house of Boreland. This monument was overwhelmed by a stroke of lightning in 1847, and rebuilt in 1851; and it is conspicuous to a great distance, and serves as a landmark to navigators in the neighbouring seas. The parish churchyard contains a monument to the memory of John Bell of Whiteside, a Covenanter and native of the parish, who met a martyr's death at the hands of Grierson of Lag, in 1685, by being shot at Kirkconnell Moor in Tongueland. Anwoth and the Fleet have recently been sung in the admirable production entitled "Lays of the Kirk and Covenant." Population in 1831, 830; in 1861, 899. Houses, 149. Assessed property in 1843, £3,717; in 1864, £5,223.

This parish is in the presbytery of Kirkcudbright, and synod of Galloway. Patron, Sir William Maxwell, Bart. Stipend, £247 10s. 7d.; glebe, £10. Unappropriated teinds, £41 18s. 1d. There are two parochial schools; salaries, £45 and £25. The parish church is situated about a mile from Gatehouse. It was built in 1826, and has 400 sittings. There is an United Presbyterian church in the village of Anwoth, but it takes its popular designation from Gatehouse. There is a Free church school.

AONACHIAN, a post-office station, subordinate to Fort Augustus, Inverness-shire.

APP, a small stream of the parish of Ballantrae, Ayrshire. It flows about 6 miles south-westward, along Glenapp, into Loch Ryan.

APPIN, an extensive district of Argyleshire, above 50 miles in length, and from 10 to 15 broad; comprehending the Airds, the strath of Appin, Glen Duror, Glen Crerau, Kingerloch, and Glencoe; extending along the eastern side of Loch Linnhe, and belonging ecclesiastically to the parish of Lismore and Appin. See LISMORE. Appin is one of the most interesting districts in the Highlands; presenting a deeply indented and finely diversified coast sprinkled with islands; while the interior is intersected with deep glens and rushing streams, and rich in the most magnificent varieties of mountain and lake scenery. Appin was the country of the Stuarts, "the unconquered foes of the Campbell," in feudal times, but whom "the greedy Campbells" ultimately overmastered. The Etrick Shepherd, in a fine ballad entitled 'The Stuarts o' Appin,' thus alludes to its departed glories:

"I sing of a land that was famous of yore,
 The land of Green Appin, the ward of the flood;
 Where every grey cairn that broods over the shore,
 Marks a grave of the royal, the valiant, or good;
 The land where the strains of grey Ossian were framed,—
 The land of fair Selma and reign of Fingal,—
 And late of a race, that with tears must be named,
 The Noble Clan Stuart, the bravest of all.
 Oh-hon, an Rei! and the Stuarts of Appin!
 The gallant, devoted, old Stuarts of Appin!
 Their glory is o'er,
 For the clan is no more,
 And the Sassenach sings on the hills of green Appin."

Appin contains large quantities of both natural and planted woods. Lead ore occurs on the property of Minchfield; and extensive quarries of beautiful roofing-slate are worked at the foot of Glencoe. The landowners of Appin are Campbell of Ardnarmurchan, Cameron of Fassfern, Downie of Appin-House, M'Donald of Glencoe, Stuart of Ballachulish, Stewart of Ardsheil, Stewart of Fasnacloich, Stewart of Achnacone, Fleming of Kinlochlauch, M'Call of Minefield, and M'Donald of Dalness. The most remarkable antiquity is a square tower, situated on a rock in the sound between Appin and Lismore, and built by Duncan Stewart of Appin as a kind of hunting-lodge for King James IV. Excellent facilities of communication and traffic are enjoyed by means of the Glasgow and Inverness steamers. There is a post-office for the district; and there are four villages, Port-Appin, Tayribhi, Portnacroish, and Laroeh. The Appin parish church is situated in the Strath of Appin, and has 400 sittings. There is a government church at Duror, for the districts of Duror and Glencoe. There are two Episcopalian chapels, the one at Portnacroish, and the other near the slate quarries, but both served by one minister. There is also in Appin an Independent place of worship, connected with the Congregational Union; and there is a Free church for Appin and Lismore, whose annual money proceeds in 1853 amounted to £32 11s. 4½d.,—in 1865, to £270 17s. 2d. See AIRDS, GLENCOE, BALLACHULISH, LINNHE, CRERAN, and LEVEN.

APPIN, a beautiful vale, in the parish of Dull, Perthshire. See ABERFELDY and DULL.

APPLEBY LOCH. See GLASSERTON.

APPLECROSS, an extensive parish, on the west coast of Ross-shire. It comprises all the country between Lochcarron and Loch Torriden; and its post town is Lochcarron. It formed part of the parish of Lochcarron till 1726; and the name of Applecross was then for the first time given to it; but its name among the natives is Comrich or Comaraich. It has an irregular outline and is intersected by arms of Lochcarron and Loch Torriden, and by other sea-lochs and bays. The extent of sea-coast, in a direct line, is upwards of 20 miles; but following the shore in all its curves and windings, it cannot be under 90 miles. Though the coast is in some places high and rocky, yet, in many parts, it is flat and sandy; and the general character of the whole—as of most districts of old red sandstone formation, which is the prevalent geological character of the parish—is monotonous and dreary. The course of the tides is all along from the north. The general appearance of the parish is rocky and mountainous; yet amidst these hills, covered only with wild coarse grasses and heath, and indescribably dreary to the sight, occur valleys, both beautiful and fertile, but in many instances almost inaccessible. Towards the close of last century there was neither public road nor bridge from one extremity of it to the other, and the traveller was guided by the season of the year, in determining what course to take over the rugged hills, rapid waters, and deep and marshy moors of

this district; but this state of things is now greatly amended. A good and direct road runs between Applecross and Shieldag on Loch Torriden, a distance of 13 miles; and there are also good roads from the village of Lochcarron, at the head of Lochcarron both to Applecross, a distance of 20 miles, and to Shieldag, a distance of 15. Grazing-farms are numerous but small. The number of acres under cultivation does not exceed 2,000, while nearly 300 square miles are unfit for cultivation. Black cattle is the great article from which the farmer principally derives his emolument and the landlord his rent. Herring shoals occasionally frequent the bays, creeks, and harbours, of this district. The rivers, though small, are very rapid, and abound with trout; the stream of Firdon, and the river of Applecross, contain salmon; there are salmon-fishings at Torriden and Balgie; and fishing is much pursued on the coasts of this parish. In the district of Kishorn there is a copper-mine, which Williams, in his 'Mineral Kingdom,' considered as equally rich with any in Great Britain. On the south side of the bay of Applecross, close by the shore, there is a limestone quarry of an excellent quality. There are some natural woods of fir, birch, and hazel, in different parts of the parish. The ordinary fuel is peat. There are three proprietors: viz. Mackenzie of Applecross, the principal heritor, Mackenzie of Seaforth, and Sir F. Mackenzie of Gairloch, Bart. "Amidst the surrounding bleakness and desolation of the sandstone mountains of this district," say the Messrs. Anderson, in their excellent Guide to the Highlands, "the bay and homesteads of Applecross have ever been as an oasis in the desert; and hence they were early fixed upon by the monks of Iona as a proper site for a supplementary monastery, whence to assail the darkness of 'roving clans and savage barbarians' by the light of learning and religion. At its principal natural haven, Camus-Ferrah, or the Boat Cove, the land was claimed for the 'Prince of Peace,' by the erection of a large stone cross, still standing; several other crosses lined the approach towards the sacred buildings, and one curiously carved, of a very antique pattern, occurs in the churchyard. . . .

The house of Applecross is a fine old and high chateau; and the plain about it not only bears good corn crops, and some magnificent trees and young plantations, but in the garden the finest dahlias, fuschias, geraniums, and hydrangeas flower, and are left in the open ground all the year over; while, at the same time, in the higher grounds, the vegetation is quite arctic, and the species few, and even the hardy juniper becomes a short prostrate plant, instead of an upright bush. In the low strath, the air feels always mild, though moist; the light, in some places, is so subdued that the bat flies about at noonday; but nothing can surpass the beauty of the tints on the adjoining hill-slopes, or the grandeur and variety of the sea-coast views, especially of the mountains in the Isle of Skye." Population in 1831, 2,892; in 1861, 2,544. Houses, 568. Assessed property in 1860, £3,616.

This parish is in the presbytery of Lochcarron and synod of Glenelg. Patron, the Crown. Stipend, £158 6s. 5d; glebe £13. Schoolmaster's salary, £35, with £4 10s. fees. The parish church was built in 1817, and has 600 sittings. A government church was built in 1827 at Shieldag, 12 miles from the parish church; and the minister there preaches also, once a month, at Kishorn, 10 miles from Shieldag, in a place of worship built by the inhabitants. There is a Free church at Applecross; attendance, 300; yearly sum raised in 1865, £142 15s. 1d. There is also a Free church preaching station in the open

air at Shieldag; attendance, from 600 to 1,200; yearly sum raised in 1853, £10. There are two Assembly's schools, and two other schools.

APPLEGARTH, or APPLGIRTH, a parish in the centre of Annandale, Dumfries-shire. Its post-town is Lockerby. It is bounded by the parishes of Wamphray, Hutton, Dryfesdale, Lochmaben, and Johnstone. The river Annan runs along the western boundary, and the Dryfe runs through the interior. The greatest length of the parish, from north to south, is about 6 miles; and the greatest breadth is about 5. The southern district is low and level; about two-thirds of the entire surface is arable; and much of the rest is hill pasture. The soil on the low grounds is fertile. The highest ground between the Anuan and the Dryfe is Diuwoodie Hill, which has an elevation of 736 feet above the level of the sea; and the highest east of the Dryfe is Adderlaw, which has an elevation of 638 feet. There are seven heritors and three mausions, Jardine-Hall, Balgray, and Hook-House, — the first famous in connexion with the distinguished naturalist Sir William Jardine, Bart. The Caledonian railway and the Edinburgh and Carlisle turnpike traverse the parish, and the former has two stations in it at Nethercleuch and Dinwoodie. Population in 1831, 999; in 1861, 935. Houses, 161. Assessed property in 1860, £8,316.

This parish is in the presbytery of Lochmaben and synod of Dumfries. Patrons, Johnstone of Annandale and Sir W. Jardine, Bart. Stipend, £250 5s.; glebe, £10 10s. Unappropriated teinds, £244. There are two parochial schools. Salaries of the schoolmasters are £40, with nearly £30 fees, and £30, with about £15 fees. There is also a ladies' school. The parish church was built in 1760, and repaired in 1822, and has 380 sittings. It is generally supposed that there have been two old parishes successively annexed to Applegarth, viz. Sibbaldie and Dinwoodie, or Dinwiddie. It is not certain, however, whether Dinwoodie was ever a distinct parish or not; it rather appears to have been a chapelry to Applegarth. Sibbaldie was a distinct parish, and was annexed in 1609. There are still some remains of its church. Chalmers, in his Caledonia, informs us that on the 7th July, 1300, Edward I., who was then at Applegarth, on his way to the siege of Caerlaverock, made an oblation at the altars of St. Nicholas and Thomas à Becket, in Applegarth church. There are no authentic traces of this church now visible. There is a noble ash-tree in the church-yard of Applegarth, upwards of 14 feet in circumference near the root.

APPLETREE-HALL, a village in the parish of Wilton, Roxburghshire. Population in 1851, 75. See WILTON.

AQUAHARNEY. See CRUDEN.

AQUHORTIES. See INVERURY.

ARASAIG, or ARISAIG, a district, a promontory, and a village, in the parish of Ardnareurban, Inverness-shire. The district is on the west coast of the mainland, between Loch Morar and Loch Aylort, and has a rugged, sterile, and mountainous character. The promontory lies opposite the isle of Eig, at the distance of 6½ miles, between Lochnagaul on the north and Lochnannagh on the south. The village stands on the north shore of Lochnagaul, at a brief distance from the sea; and consists of only a few scattered houses, yet has a post office and a large inn, and is a place of importance to the district. Fairs are held on the Saturday in June before Fort-William, and on the third Tuesday of October. The Glasgow and Isle of Skye steamers call regularly in the vicinity. A regular ferry was formerly maintained to Skye; and passenger boats can still

be had. An excellent and beautiful road leads from the village to Fort-William. A neat Roman Catholic chapel, and Arisaig Cottage, the residence of Lord Cranstoun, are in the vicinity. A schoolhouse, used as a place of worship in connexion with the Establishment, stands at Ardnareurban.

ARAY (THE), or ARY, in Gaelic *AOREIDH*, a small but beautiful stream flowing into Loch Fyne, between the town of Inverary and the neighbouring hill of Duuyquacach, Argyleshire. It rises near Loch Awe and flows south. Its course is about 9 miles in length, over a rocky bed, and frequently under rugged cliffs, or between banks finely wooded with oak and birch. The road from Inverary to Oban skirts its course throughout its whole length; and the road around the head of Loch Fyne to Cairndow is carried over the stream, at its confluence with the loch, by a bridge. The first striking scene upon this stream, tracing its course upwards, is the romantic fall of Carlonan linn, which occurs at a point where the river is shut in by thick woods and rocky banks. About 2½ miles from Inverary is another considerable fall; and half-a-mile farther is the finest cascade in the river, the fall of Lenach-Gluthin, where the stream rushes, "with many a shock," over a broken and precipitous rock. It is supposed that the Aray takes its name from these falls, *Aoreidh*, in Gaelic, signifying 'unsmooth.' Skrine calls it 'the furious Aray.' As we ascend the glen of the Aray, the stream "changes temper" and dwindles into a burn flowing between bare mountain-ridges. Gilpin, who passed through Glen Aray in 1776, was greatly delighted with the forest-scenery here.

ARBEADIE, or NEW BANCHORY, a village, with a post office, in the parish of Banchory-Terman, Kircardineshire. The old village of Banchory, in the vicinity, has been displaced by a station on the Deeside railway. The new village was founded between the years 1805 and 1810, and has had much prosperity. It is now pretty generally known, as a post-town and otherwise, by the simple name of Banchory. It stands on the river Dee, and on the road from Aberdeen to Braemar, 18 miles west-south-west of Aberdeen. It is a place of much neatness and beauty, and in spite of distance, is a favourite resort of the Aberdonians. It contains a Dissenting place of worship, two schools, three inns, and offices of the Union Bank of Scotland, and the North of Scotland Bank. Population of the village in 1861, 681.

ARBIGLAND. See KIRKBEAN.

ARBIRLOT, in old writings *ABERELLIOT*, a parish on the coast of Forfarshire. Its post-town is Arb-roath. It is about 4 miles in length, and 3 in breadth; and is bounded on the north by the parishes of St. Vigeans and Carmylie; on the east by Arb-roath; on the south by the sea; and on the west by Panbride parish. The extent of sea-coast is about 3 miles, for the most part flat and sandy. The greater part of this parish is gently undulated; yet the hills are neither very high nor rocky, but are in general green, and capable of cultivation. The superficial area is about 500 acres, and about one-fifth of it is uncultivated. The average rent of the cultivated land is 18s. per acre. The principal crops raised are oats and barley; but a considerable quantity of wheat is also grown. In the year 1790, there were 97 acres sown with linseed, which in general succeeded well; but this branch of farming does not now attract much attention. The water of Elliot runs through this parish from north-west to south-east, but has its source in the parish of Carmylie, about 3 miles from the village of Arbirlot. It was once noted for trouts of a peculiar relish. See EL-

LIOT (THE). Kelly castle, which is built upon a rock on the side of this stream, is seen to great advantage on the road betwixt Arbroath and Arbirlot. This succeeded a very ancient mansion of the Mowbrays; was erected by one of the Ouchterlony's; passed in 1615 to the Irvines,—in 1679 to the Earl of Panmure; and was recently restored and adorned, at great cost, by the Earl of Dalhousie. The village of Arbirlot stands on Elliot Water, in the vicinity of the castle. A cattle fair is held here on the second Wednesday of November, but it is of small note. Population of the village in 1841, 77. There is another village, called Bonnington, about 2 miles to the west. There are three meal-mills and a flax-mill on the Elliot, and there is a bleaching-work at Wormy-hills near its mouth. At Wormy-hills also is a mineral well of some repute. A road is said to have been made through part of this parish by the Scottish historian, Hector Boethius; and it still bears his name in the corrupted form of Heckenhois-path. The Arbroath and Dundee railway and the Arbroath and Dundee highway pass along the coast. The whole parish is the property of the Earl of Dalhousie. Population in 1831, 1,036; in 1861, 960. Houses, 204. Assessed property in 1843, £6,395; in 1865, £9,661 6s.

This parish is in the presbytery of Arbroath, and synod of Angus and Mearns. Patron, the Crown. Stipend, £184 4s. 5d.; glebe, 4 acres. Schoolmaster's salary is £50, with £14 fees. The parish church was built in 1532, and has 639 sittings. There is a Free church; the yearly sum raised in connexion with which in 1865 was £174 3s. 0½d. There are also a parochial library, a savings' bank, and two private schools.

ARBORY HILL, a conical hill, of about 500 ft. in height above the level of the adjacent Clyde, in the parish of Lamington, Lanarkshire. Certain curious old remains occur on the top of it, which some persons suppose to have been a fort of the ancient Britons, and others suppose to have been a Druidical place of worship. See LAMINGTON.

ARBROATH, or ABERBROTHWICK, a parish, containing a royal burgh of the same name, on the coast of Forfarshire. It is bounded on the north by St. Vigeans parish; on the east by the German ocean; on the south and west by Arbirlot parish. The extent of sea-coast is about 1½ mile; the superficial area is 1,820 English acres. Average rent of land, 55s. per acre. Around the town the soil is rich and fertile; but towards the north-west there is a considerable extent of what was formerly moor-ground, the property of the community, and once covered with fir-plantations, but which having been feued out is now in a state of cultivation, and interspersed with villas. The Brothock, or Brothwick, a small stream rising in the parish of Kirkden, near the north-west boundary of St. Vigeans parish, flowing south-east through that parish, and the town of Arbroath, and falling into the German ocean after a course of about 6 miles, gives name to the parish. The water-power furnished by this stream, and its application in creating steam-power, have led to the establishment of numerous manufactures for weaving, spinning, flax-dressing, and bleaching. About a mile westward of the town is a strong chalybeate spring. Population in 1831, 6,660; in 1861, 9,847. Houses, 1,087. Assessed property in 1843, £17,314.

This parish is the seat of a presbytery in the synod of Angus and Mearns. Patron, the Crown. Stipend, £219 12s. 6d., with a manse. Unappropriated tithes, £125 12s. 11d. There is a permanent assistant minister, appointed by the kirk session, with a stipend of about £100. The parish church was built in 1791, and has 1,690 sittings. There is a Chapel of

Ease, called Abbey church, situated in the north-east corner of the abbey grounds, built in 1797, and containing 1,281 sittings. There is another Chapel of Ease, called Ladyloan church, built in 1838. There are two Free churches,—the East Arbroath and the High Street: attendance at the former, about 680,—at the latter, 400; yearly sum raised in 1865 in connexion with the former, £674 15s. 3d.,—in connexion with the latter, £337 4s. 0½d. There are three United Presbyterian churches,—called the North Grimsby-street, the Park-street, and the Erskine churches,—the first with 572 sittings, the second with 700, and the third with 850. The other places of worship are an Independent chapel with 400 sittings, a Baptist meeting-house, and a Glassite meeting-house. There are also in the town other two Free churches, called the Inverbrothock and the Ladyloan, an Original Secession church, an Episcopalian chapel, a Wesleyan chapel, and a Roman Catholic chapel; but all these stand within the parish of St. Vigeans. The number of private schools is about twenty.

THE TOWN OF ARBROATH comprises the ancient royal burgh of Arbroath, a town extension on the abbey lands, and a large suburb within St. Vigeans. It is a market-town, a sea-port, a seat of manufacture, and an important key-post of railway traffic. It is 17 miles east by north of Dundee; 12¾ west by south of Montrose; 15 south-east of Forfar; 13¾ south of Brechin; and 56 north-north-east of Edinburgh. It stands along the shore at the mouth of the Brothock, in a small plain surrounded on the west, north, and east sides by eminences in the form of an amphitheatre, which command an extensive prospect of the friths of Tay and Forth, the Lothian hills, and the elevated parts of Fifeshire. It has greatly extended in recent times. Formerly it consisted of one street, nearly a mile in length, running north and south from the sea, and another on the west side of smaller extent; both these being intersected by cross streets. To the eastward, and within the abbey lands, there are two handsome streets. On the west side of the Brothock, and within the parish of St. Vigeans, there are also several neat streets. Part of the High-street also has a good appearance; and many elegant houses adorn other parts of the town and the suburbs and environs. The place, as a whole, however, does not look well. Most of the streets are narrow; many of the houses in the cross streets are only one story high; and scarcely anything strikes or particularly pleases the generality of intelligent strangers, except the imposing ruins of the abbey. Yet the celebrated Dr. Johnson, who is nearly as well known to many Scotchmen for his scornful ride through their country as for all his good qualities, is pleased to say that he should scarcely have regretted his journey had it offered nothing more than the sight of Arbroath.

The town-house, containing a large elegant hall, a town-clerk's office, a small-debt court room, and apartments for the meeting of the town council, is a handsome building, erected in 1806. The prison and police office, to the west of the town-house, is a neat structure, erected in 1842. The guild-hall is a plain building. The trades' hall is a costly structure, built in 1814. The Arbroath academy is a chaste building, and has a fine play-ground in front, and was erected in 1821 at the cost of £1,600. The parish church itself is not a remarkable building; but its steeple, which was erected in 1831 at the cost of £1,300, and is 152 feet high and in the Gothic style, is singularly elegant. The Episcopalian chapel is a handsome new Gothic edifice, with an elegant spire. Erskine church is a much admired structure, built in 1851 at the cost of £1,600. The

public hall, for meetings, concerts, &c., with the museum, was erected in 1865. A beautiful market-place was erected in 1856, at a cost of about £5,000.

About the year 1736 a few gentlemen of property engaged at Arbroath in the manufacture of osnaburghs and brown linens; and from that time till now the linen trade has been a chief department of the town's industry. In the early years of the present century, the competency of machinery to spin linen yarn, first by water-power and next by steam-power, was slowly and carefully put to the test in a flour-mill in the parish of St. Vigeans; and no sooner was it fully proved than a sudden and great change took place in the western environs of the town. A tract of land, comprising about 35 imperial acres, lying within St. Vigeans, closely adjacent to the burgh, and on both sides of the Brothock, "was at once given off by its proprietor in feus; and, in an incredibly short space of time, immense factories with their towering stalks, and whole streets of dwelling-houses, were seen to rear their heads where, only a short time before, the waving corn and the smiling orchard attracted the eye." The grand rush of increased business occurred between the years 1820 and 1826, but it was greatly impelled by over-speculation; and in the latter part of 1825 and the early part of 1826, it received a tremendous check in a severe, extensive, and crashing 'crisis.' The linen manufacture seemed for a moment to be at a stand; and it went on for a while with faltering progress and remarkable caution; yet it by and by got considerably beyond its former limits, and became strong and firm as well as great. The number of spinning-mills in 1833 was 16; and three more were built before 1842; and they altogether give direct employment to between 1,600 and 1,700 persons. The weaving of canvas and of brown and bleached linens has at times employed about 2,000 hand-loomers. There are also bleaching-works, plash-mills, boating-mills, and callendering establishments. There are likewise ship-building yards, three founderies, and several manufactories of leather, saddlery, machinery, bone-dust, and other articles. A weekly market is held on Saturday; and hiring fairs are held on the last Saturday of January, on the first Saturday after Whitsunday, on the Saturday after the 18th of July, or the 18th itself when that day is a Saturday, and on the first Saturday after Martinmas. The town has offices of the Bank of Scotland, the British Linen Company's Bank, the Commercial Bank, and the Royal Bank; all accommodated in handsome buildings of very recent erection. The chief inns are the White Hart, the Albion, the Royal, and the George. Ample communications are enjoyed through all the Forfarshire railways, and thence to the north and west and south. Two weekly newspapers, the Arbroath Guide and the Saturday Evening Guide, are published on Saturday.

The port of Arbroath is of great antiquity; but its situation was, in ancient times, more to the eastward than at present. The site of the ancient harbour is still named the Old Shore-head; and an agreement is extant between the abbot and burghers in 1394, concerning the making of the harbour. Both parties were bound to contribute their proportion; but the largest fell to the share of the abbot, for which he was to receive an annual tax payable out of the burgh-roads. A new harbour was built about the year 1725. It is small, but can be taken by vessels in a storm, when they cannot enter any of the neighbouring ports. It is entirely artificial, but well sheltered from the sea by a long pier erected in 1788; the inner harbour is secured by wooden gates. It admits vessels of 200 tons at spring-tides, but at ordinary tides only vessels of 100 tons can

enter. It was formerly defended by a battery erected in 1783; but this fell into neglect and dilapidation, and was eventually removed. A new harbour and breakwater, under the authority of an act of parliament, 2° Victoria, cap. 16, was commenced in 1841, on an estimated cost of £40,000; and this harbour admits ships of 400 tons burden at spring-tides. The administration of it is vested in commissioners, to whom the property of the old harbour, and the shore-dues, have been transferred on payment to the community of £10,000 in name of compensation. In 1781, there belonged to the port 18 vessels, of aggregate 900 tons; in 1791, 32 vessels, of 1,704 tons; in 1833, 77 vessels, of 6,700 tons; and in 1860, 94 vessels, of 13,320 tons. The coasting trade of the port during the year 1860 comprised a tonnage of 28,336 inward, and 12,291 outward; and the foreign and colonial trade comprised a tonnage of 5,914 inward and 3,330 outward. The chief exports are the products of the manufactories of the town, and the products of Forfarshire mines and quarries; and the chief imports are flax, hemp, codilla, bones, oak-bark, hides, hattens, deals, oak-plank, fir-timber, and groceries. The custom-house revenue in 1860 was £13,041.

Arbroath possesses a very creditable amount of educational, literary, benevolent, and miscellaneous institutions. Its chief schools are the Academy or High school, with 3 teachers; the Burgh school, with 1 teacher; and the Benevolent School Society's School, with 2 teachers; and a Charity School instituted in 1845. A public subscription library was established in 1797, and now contains upwards of 7,000 volumes. The Mechanics' institution has a library of 1,500 volumes, and a reading-room open on Wednesdays and Saturdays. There are two public subscription reading-rooms. The Natural History, Antiquarian, and Scientific Society has a museum which is open to the public every Saturday. The other chief institutions and associations are a Savings bank, an Infirmary, a Dispensary, two Destitute Sick societies, a Ladies' clothing society, a Bible society, a Reform society, a Horticultural society, a Cricket club, and a Total-abstinence society.

Arbroath is a royalty of very ancient creation. It was probably erected into a royal burgh by William the Lion, about the year 1186; but this cannot exactly be ascertained owing to the loss of the original charter, which was taken by force out of the abbey—where it was lodged in the time of the civil wars during the minority of James VI.—by George, Bishop of Moray. The burgh was, however, confirmed in its privileges by a charter of *novodamus* from James VI. in 1599. It was formerly governed by a provost, 2 bailies, a treasurer, and 15 councillors, and has 7 incorporated trades. The magistrates and council are now elected according to the provisions of 3° and 4° William IV. The council consists of 18 members. In 1834, about 6,650 of the population were within the royalty, and 4,587 persons inhabited houses in streets without the royalty. The property of the town, consisting of common lands, houses, mills, harbour, feu-duties, entries, customs, and imposts, was recently valued at £33,874; but the parliamentary commissioners were of opinion that this was too high. The revenue, in 1788 was £864; in 1832, £2,922; the average annual expenditure for 20 years preceding 1832 had been £2,940, and the debt was £17,967. The revenue in 1837-8 was £3,859; in 1841-2, £1,692; in 1863-4, about £1,560. There is a guildry incorporation; and there are seven incorporated trades. A Bailie Court is held every Friday; and a Police Court on the forenoon of every Monday. Arbroath

unites with Forfar, Montrose, Brechin, and Bervie in sending a member to parliament. In 1837, the municipal constituency was 245, and the parliamentary constituency, 452; and in 1864 the municipal constituency was 662, and the parliamentary constituency was 668. Population of the parliamentary burgh in 1831, 13,795; in 1841, 14,576; in 1861, 17,593. Houses, 1,914. Estimated population of the parliamentary burgh in 1865, considerably above 20,000. Population of the municipal burgh in 1861, 7,984. Houses, 932.

The glory of Arbroath in former times was its abbey, the venerable ruins of which are still much admired by travellers. It was founded about 1178 by William I., and dedicated to the memory of Thomas-à-Becket. Its founder was interred within it; but there are no authentic remains of his tomb. It probably, however, stood near the great altar, in a spot which afterwards became a private burial-place. The monastery of Arbroath was one of the richest in Scotland, and its abbots were frequently the first churchmen of the kingdom. Cardinal Beaton was the last abbot of this establishment, at the same time that he was archbishop of St. Andrews. The monks were of the Tyronensian order, and were first brought from Kelso. A charter is still extant from John of England, under the great seal of that kingdom, by which the monastery and citizens of Aberbrothock are exempted "a teloniis et consuetudine," in every part of England except London and Oxford. This abbey was also of considerable note in Scottish history, particularly as the seat of that parliament which, during the reign of King Robert Bruce, addressed the celebrated manifesto to the Pope. After the death of Beaton, the abbey felt the destructive rage of the Reformers. The last commendatory abbot of Aberbrothock was John Hamilton, second son to the Duke of Chatelherault, who was afterwards created Marquis of Hamilton. The abbey was erected into a temporal lordship, in favour of James, Marquis of Hamilton, son to the former, upon the 5th May, 1608. It afterwards belonged to the Earl of Dysart, from whom Patrick Maule of Panmure, gentleman of the bedchamber to James VI., purchased it, with the right of patronage of all the parishes thereto belonging, thirty-four in number. The abbots of this place had several special privileges. They were exempted from assisting at the yearly synods; and Pope Bennet, by his bull dated at Avignon, granted to John, Abbot of Arbroath, the privilege of wearing a mitre and other pontifical ornaments.

The ruins of the abbey are "most deliciously situated," and strikingly picturesque. The New Statistical Account of the parish, written in December 1833, describes them as follows:—"The precincts of the abbey were enclosed with a stone wall from 20 to 24 feet in height; and formed an area 1,150 feet in length from north to south, and in breadth 706 feet at the north, and 484 at the south end. At the north-west corner there is a tower, still entire, 24 feet square, and 70 feet high, formerly used as the Regality prison. The ground-flat is now converted into a butcher's shop. Another tower, somewhat smaller, stood at the south-west corner of the enclosure, which, with the addition of a slated spire, served for many years as a steeple to the present parish church. Having become ruinous it was taken down in 1830, and a remarkably handsome spire, 152 feet in height, has been erected in its place. The main entry to the area was by a stately porch on the north side. If it had not been that, a few years ago, the vaulting was taken down under an apprehension of insecurity, this would have been entire. For defence it appears to have

been furnished with a portecullis, which now forms the armorial bearings of the town of Arbroath. There was another entry, but far inferior in architectural display, at the south-east corner, known by the name of the Dargate. A considerable portion of the north side of the enclosure was occupied by the Abbey church. The dimensions of this building were—length, 270 feet; length of transept, 132 feet; of the nave, 148 feet; and of the choir, 76½ feet; breadth of the transept, 45½ feet; of the central aisle, 35 feet; and of each of the side aisles, 16½ feet. From marks, visible on the walls, the height from the pavement to the roof appears to have been 67 feet. The building is now in a state of ruin. All that remains is the south wall, with part of the east and west ends. A portion of the two western towers still exists in a very mutilated condition. The great entrance at the west end of the church is entire, with indications of a circular window above. A similar window, on a smaller scale, is to be seen on the upper part of the wall of the south transept. The other windows which remain are in the early-pointed or lancet-shaped style. The pillars which supported the roof of the church are all demolished; but their foundations may be traced without difficulty. Adjoining to the south transept, on the east, is a building said to have been the charter-house of the abbey. It consists of two vaulted apartments, the one above the other, in a state of good repair. Immediately in front of this, and of the south transept, appear to have been the cloisters; and at a short distance from the south wall of the nave are the remains of the Abbot's house, which is still inhabited as a private mansion. On the whole, the buildings, although, when entire, they must have had an imposing aspect, were inferior, in point of magnificence, to some others of which Scotland could boast." The ruins too, are picturesque only in the large view, and have totally lost their beauty in detail and all their sculptural decoration; but the Commissioners of Woods and Forests have appointed a keeper of them, and expend annually a sum in repairing the extant walls.

Jurisdiction over the criminal affairs of the abbey and over its prison was resigned by the monks to a layman; and in the year 1445, the election to this office led to very disastrous consequences. The monks that year chose Alexander Lindsay, eldest son of the Earl of Crawford, and commonly known by the appellation of The Tiger, or Earl Beardy, to be the baillie or chief-justiciar of their regality; but he proved so expensive by his number of followers and high way of living, that they were obliged to remove him, and appoint in his place Alexander Ogilvie of Innerquharity, nephew to John Ogilvie of Airly, who had an hereditary claim to the place. This occasioned a cruel feud between the families; each assembled their vassals; and "there can be little doubt," says Mr. Fraser Tytler, "that the Ogilvies must have sunk under this threatened attack, but accident gave them a powerful ally in Sir Alexander Seton of Gordon, afterwards Earl of Huntly, who, as he returned from court, happened to lodge for the night at the castle of Ogilvie, at the very moment when this baron was mustering his forces against the meditated assault of Crawford. Seton, although in no way personally interested in the quarrel, found himself, it is said, compelled to assist the Ogilvies, by a rude but ancient custom, which bound the guest to take common part with his host in all dangers which might occur so long as the food eaten under his roof remained in his stomach. With the small train of attendants and friends who accompanied him, he instantly joined the forces of Innerquharity, and proceeding to the town of Ar-

broath, found the opposite party drawn up in great strength on the outside of the gates." As the two lines approached each other, and spears were placing in the rest, the Earl of Crawford, anxious to avert it, suddenly appeared on the field, and galloping up between the two armies, was accidentally slain by a soldier. The Crawfords, assisted by a large party of the vassals of Douglas, and infuriated at the loss of their chief, thereupon attacked the Ogilvies with a desperation which soon broke their ranks, and reduced them to irreclaimable disorder. Such, however, was the gallantry of their resistance, that they were almost entirely cut to pieces. Nor was the loss which the Ogilvies sustained in the field their worst misfortune; for Lindsay, with his characteristic ferocity, and protected by the authority of Douglas, let loose his army upon their estates, and the flames of their castles, the slaughter of their vassals, the plunder of their property, and the captivity of their wives and children, instructed the remotest adherents of the justiciar of Arbroath, how terrible was the vengeance which they had provoked.

The revenues of this abbey at the Reformation were as follow: money £2,553 14s.; wheat 30 ch. 3 bolls, 3 fir. 2 pecks; bear 143 ch. 9 bolls, 2 pecks; meal 196 ch. 9 bolls, 2 fir.; oats 27 ch. 11 bolls; salmon 37 bar. and 2 har. grises: omitted capons, poultry, grassmns, dawikis, and all other services and duties: to this is also to be added the teinds of the kirks of Abernethy, Tannadice, and Monifieth. While some workmen were employed in 1835, in clearing out the rubbish from the ruins of the abbey, they came upon a stone coffin containing the skeleton of a female which had been carefully enveloped in a covering of leather. This must have been some lady of rank in her day, and the good folks set it down as the remains of the Queen of William the Lion, who, as well as her husband, the founder of the abbey, was interred here.

During the war, in 1781, this coast was annoyed by a French privateer, named the Fearnought of Dunkirk, commanded by one Fall. On the evening of the 23d of May, he came to anchor in the bay of Arbroath, and fired a few shot into the town; after which he sent a flag of truce on shore, with the following letter:

"At sea, May twenty-third.

"Gentlemen, I send these two words to inform you, that I will have you to bring to the French colour, in less than a quarter of an hour, or I set the town on fire directly; such is the order of my master the king of France I am sent by. Send directly the mair and chiefs of the town to make some agreement with me, or I'll make my duty. It is the will of yours.

"To Monsieurs Mair of the town called)
Arbrought, or in his absence, to the)
chief man after him, in Scotland.")

The worthy magistrates, with a view to gain time to arm the inhabitants, and send expresses for military aid, in the true spirit of subtle diplomacy, gave an evasive answer to Monsieur Fall's letter, reminding him that he had mentioned no terms of ransom, and begging he would do no injury to the town till he should hear from them again. Upon this Fall wrote a second letter to them in the following terms:

"At sea, eight o'clock in the afternoon.

"Gentlemen, I received just now your answer, by which you say I ask no terms. I thought it was useless, since I asked you to come aboard for agreement. But here are my terms; I will have £30,000 sterling at least, and 6 of the chiefs men of the town for otage. Be speedy, or I shoot your town away directly, and I set fire to it. I am, gentlemen, your servant. I sent some of my crew to you; but if some harm happens to them, you'll be sure will hang up the main-yard all the preseners we have aboard.

"To Monsieurs the chiefs men of)
Arbrought in Scotland.")

The magistrates having now got some of the in-

habitants armed, and their courage further supported by the arrival of some military from Montrose, set Fall at defiance, and "ordered him to do his worst, for they would not give him a farthing." Whereupon, says the worthy historian of this memorable transaction in the annals of Arbroath, terribly enraged, and no doubt greatly disappointed, he began a heavy fire upon the town, and continued it for a long time; but happily it did no harm, except knocking down some chimney-tops, and burning the fingers of those who took up his balls, which were heated.

ARBROATH AND DUNDEE RAILWAY. See DUNDEE AND ARBROATH RAILWAY.

ARBROATH AND FORFAR RAILWAY. This railway commences at the harbour of Arbroath, and passing through the valley of the Brothock, and the upper part of the valley of the Lunan, and skirting the lochs of Balgavies and Rescobie, terminates in the Playfield of Forfar. Its length is 15½ miles, with a rise of 220 feet. The act of parliament for it, 6^o William IV., cap. 34, was obtained in May 1836; and a supplementary act was obtained in April 1840, 3^o Victoria, cap. 14. Under these acts the railway company had a fixed capital of £120,000, with power to borrow £40,000 in addition. The expense of constructing it was £131,644. About 5 miles of it were opened for traffic on 3d September, 1838; and the whole line on the 2d of January, 1839.

There are six intermediate stations between the terminal stations: viz., Colliston, Leysmill, Friockheim, Guthrie, Auldbar road, and Clocksbriggs. The population of the eight parishes through which the railway passes, including the towns of Arbroath and Forfar, is about 35,000. The effects on the district of this cheap and speedy means of communication were soon remarkable, and furnished a striking example of the utility of railways, and the great comfort and accommodation they afford to the public. Previous to 1839 there was not a stage-coach or conveyance of any kind for passengers between Arbroath and Forfar. The first year the railway was opened, there were conveyed upon it 98,513 passengers; and from the 2d of January, 1839, to the 5th of November, 1842, the number conveyed upon it amounted to 376,167. The goods conveyed during the same period amounted to 207,806 tons. During all this time too, and for several years after, the railway had only a single line of rails, and got little benefit from connection with other railways. But in the beginning of 1846, an agreement was made to incorporate it with the Aberdeen railway, to lay down upon it a second line of rails, to give its rails and carriages the same gauge as those of the Aberdeen railway, and to work it fully in connection with all the trains between Dundee and Aberdeen; and when these arrangements came into operation, they necessarily gave it a vast increase of utility. See ABERDEEN RAILWAY.

ARBUTHNOT, a parish in the south-east part of the county of Kincardine. Its post-town is Bervie. It is nearly of a triangular form, with the exception of a small district on the south-west side, which forms a projection southward of the water of Bervie, which, except at this point, divides it from the parishes of Bervie and Garvock. Upon the west it is bounded by the parishes of Fordoun and Glenbervie, or the great hollow of the Mearns, the Bervie and the Forth forming the dividing line on this side; and on the north-east and east it is bounded by the parishes of Dunottar and Kinneff. The surface presents two rising grounds or ridges, with hollows or valleys betwixt them and the boundaries of the parish on each side, where the ground again rises to still greater height, but in no quarter does the rise

much exceed 600 feet. The narrow valley in which the Bervie runs is highly picturesque and beautiful, containing the noble mansion of Arbuthnot and the ruined house of Allardyce, with the church situated between them. Within this parish there are several freestone quarries of excellent quality. In one spot there is a trap-rock full of pebbles, with some green Jasper of considerable beauty. On the south side of the Bervie, nearly opposite the church, a vein of manganese occurs. No coal or limestone has been discovered; but some chalybeate springs indicate the presence of iron. The proprietors are five in number; but Lord Arbuthnot is the only one resident. By a map of the county, executed in 1774, it appears that there are in this parish 7,785 Scotch, or 9,893 English acres, of which about two-thirds are cultivated; and about 300 acres are under wood. The Statistical reporter, in 1838, states that the average rent of the arable lands is only 18s. per acre; and that the real rental is about £6,200. The house of Kair, the property of the family of Kinloch, is a pleasant modern mansion. The family of Sibbalds of Kair, one of the most ancient in the county, possessed very extensive property in this parish. Among the last of this family was Dr. David Sibbald, who having been preceptor to the Duke of Gloucester, son to Charles I., suffered much on account of his loyalty in the civil wars, was imprisoned in London, and had his estate forfeited. He lived, however, to witness the restoration of Charles II., and died in his own house of Kair, in 1661. The celebrated Dr. Arbuthnot, physician to Queen Anne, had his birth and early education in this parish. He was son to Alexander Arbuthnot, minister here, who was deprived for nonconformity in the year 1689. Dr. Arbuthnot received the first part of his education at the parish school of Arbuthnot, whence he and his elder brother Robert, afterwards a banker at Paris, removed to Marischal college of Aberdeen, about the year 1680. This parish gives the title of Viscount to the ancient family of Arbuthnot, who also have the title of Baron Inverbervie, and whose only seat is Arbuthnot House, within the parish. The peerage was created in 1641. Population of this parish in 1831, 944; in 1861, 932. Houses, 176. Assessed property in 1865, £8,916 7s. 10d.

This parish is in the presbytery of Fordoun, and synod of Angus and Mearns. Patron, Viscount Arbuthnot. Stipend, £225 0s. 9d.; glebe, £9. Schoolmaster's salary now is £45, with about £10 fees. There are four private schools. The church is probably 400 years old, but is in good repair, and has 440 sittings. Adjoining it is an aisle of beautiful workmanship, which was built by Alexander Arbuthnot, designed, in the appendix to Spottiswood's History, brother to the baron of Arbuthnot, and parson of Arbuthnot and Logie-Buchan. He was elected the first Protestant principal of King's college, Aberdeen, in 1569. The lower part of this aisle was intended and has been used as a burial-place for the family of Arbuthnot. In the upper part was a well-finished apartment filled with books chiefly in divinity, bequeathed by the Rev. John Sibbald, one of the ministers of Arbuthnot, for the use of his successors, but which have all disappeared.

ARCHAIG, or ARKEG (LOCH), a beautiful sheet of water in the parish of Kilmallie, Inverness-shire, about 16 or 17 miles in length, and from 1 to 1½ in breadth. It is only about 2 miles distant from the south-west extremity of Loch-Lochy, and about 10 miles from the Neptune inn at the western end of the Caledonian canal. This loch presents one of those many spots of surpassing beauty which are so

numerous in Scotland, and yet so little known. Hundreds of tourists pass within a very short distance of this loch every season without one paying it a visit; and if the masters of the steam-boats which ply on the canal are aware of its existence at all, they are utterly ignorant of its picturesque and romantic beauty. Even Macculloch, indefatigable as he was in his researches, omitted visiting this enchanting spot. "It is said," he tells us, "that Loch-Arkeg is a picturesque lake, though unknown; which seems probable from the forms of the hills, and the nature of the country. But on this I must confess ignorance, and plead misfortune, not guilt; the flight of what never ceases anywhere to fly—time; and the fall of what seldom ceases here to fall—rain." The opening of the glen of Archaig is divided by a ridge of hills into two valleys of unequal breadth. This ridge commences near the farm of Clunes, rising in little round knolls crowned with wood, which gradually increase in height as they penetrate the glen, till they terminate abruptly in a lofty wooded precipice, the base of which is washed by the waters of the lake. In the southern—which is the broadest of these divisions—are situated the pleasure-grounds and house of Achnacary, the family-mansion of Cameron of Lochiel. Through the other, which is called Mil-dubh, or 'the dark mile,' there is a road to the shores of the lake. The lake may be approached by either of these openings, but the scenery of the latter is the most picturesque and romantic. Indeed, we know of hardly any place which can be put in competition with the Mil-dubh. It is a narrow, wooded pass, bounded on the one hand by the ridge already mentioned, which separates it from Achnacary; and on the other by a lofty barrier of almost perpendicular rocks. Great masses of these immense rocks have fallen down in various places, and now form small hills at the base of the precipices from which they have been detached. The whole pass is covered with trees—chiefly pine and birch—from its very bottom to the top of the mountains on both sides. Even the perpendicular barrier of rock on the north is covered with wood to the summit. Every interstice or opening in the rock seems to give root to a tree; and so much is this the case, that in many places the rocks are completely hid by the leafy screen which covers and ornaments them; yet a great deal of the wood which once occupied this pass has been cut down, and it has consequently lost something of the dark look which it formerly had, and which gave rise to its name. Indeed, it may be questioned whether the effect has not been increased by removing part of the wood. The numerous partial and varied lights which have thus been let in upon the scene, the exposure of the rocks which has been made in various places, and the shadowy gloom preserved on others, give a life and character to the pass of the Mil-dubh which is inexpressibly enchanting. The glen of Achnacary is also fine, though of a different style of beauty. The scenery is here of a more open character,—but still beautifully wooded, and more cultivated. The tourist will do well to visit both places, but he should most certainly approach Loch-Archaig by the pass of the Mil-dubh. By this road the lake is entirely hid till the traveller is close upon it. After penetrating through the pass, and just before entering on the lake, a small stream, falling over the rocks to the north, forms a pleasing cascade finely fringed with trees and underwood which overhang and almost dip into its waters. Immediately afterwards the lake begins to appear, small apparently at first, but gradually enlarging as we advance. Ascending a small hill a short way up its northern shore, its whole extent is opened up, stretch-

ing far to the west, and surrounded with dark and lofty mountains,—its shores richly wooded, and indented by winding bays and jutting promontories. Two or three small islands speck its bosom, and immediately opposite, on the southern shore, a dark forest of natural pine trees of great size frowns over it. Looking to the east, across the lower portion of the lake, we have the opening of Achnacary, with its house and pleasure-grounds; and in the distance, the waters of Loch-Lochy, with the mountain-barrier on its opposite shore. Altogether, Loch-Archaig affords scenery of the finest description, and it is questionable if it is excelled, or even equalled by any of our Scottish lakes.

The shores of this romantic lake more than once gave shelter to Prince Charles after his discomfiture at Culloden. A few days after that fatal encounter, he lodged at the house of Donald Cameron of Glenpean, on this lake. After his return from the islands, he and Donald Cameron slept for some hours on the top of a mountain called Mamman-Callum, on the shores of this lake, within sight of the encampment of his pursuers, which was not above a mile distant. Here they arrived in the morning, and remained till evening watching the motions of their enemies; at night-fall they betook themselves to Corrie-nan-gaul, in Knoidart, in which latter district he wandered for some time. Again, however, he was hunted by his ruthless pursuers towards Lochaber; and again the shores of Loch-Archaig afforded him shelter. Cameron of Clunes, the ancestor of the present possessor of that farm, being himself in peril, had erected a hut on a hill called *Tora-muilt*, or 'the Wedder's hill,' at the bottom of Loch-Archaig. To this place the Prince was taken by Clunes, and here he lurked securely, though in the immediate neighbourhood of his foes, for several days. At this period Charles is described as wearing a shirt extremely soiled, an old tartan coat, a plaid, and a phillag. He was bare-footed, and had a long beard. In his hand he usually carried a musket, and he had a dirk and pistol by his side. A few years ago, an ancient claymore, much injured with rust, was found near the site of this hut, which, in all probability, had belonged to Charles or some of his friends.—It was on the shores of Loch-Archaig that Munro of Culcairn was shot by an exasperated Highlander, shortly after the suppression of the Rebellion; and it reflects infinite credit on this people, that notwithstanding all the calamities they suffered, this is the only instance of assassination which can be brought against them. Mr. Chambers [History of the Rebellion in 1745, vol. ii. p. 139] has erred in several particulars in his account of this affair. The perpetrator was not a servant of Glengarry, but one of the clan Cameron, who resided on Loch-Archaig; his name was Dugald Roy Cameron, or, as he is still styled in tradition, *Du Rhu*. It is well known that an order was issued to the Highlanders to deliver up their arms after the Rebellion. Dugald, willing to make his peace with the government, sent his son to Fort-William with his arms to be delivered up. The young man when coming down Loch-Archaig was met by an officer of the name of Grant, who was conducting a party of military into Knoidart. This monster immediately seized the young man, and notwithstanding his statement as to the object of his going to Fort-William, ordered him to be shot on the spot. His father, fired at this savage deed, swore to be revenged, and learning that the officer rode a white horse, watched his return behind a rock, on a height above Loch-Archaig. Major Munro had unfortunately borrowed the white horse on which Grant rode, and he met the fate which was intended for another. Dugald Roy escaped at the

time, and afterwards became a soldier in the British service.

ARCHASIG-HIRM. See *RONA*.

ARCHERBRECK. See *CANOBY*.

ARCHIESTOWN, a village in the parish of Knockando, Morayshire. It stands on the moor of Ballintomb; and the nearest post-office to it is that of Craigellachie. It was founded in 1760, and partly burned in 1783; and it now consists of a principal street, a square, and several lanes. It contains an United Presbyterian church; and is a centre of influence to a considerable surrounding district. There is a mineral well in its vicinity. Population in 1861, 174. See *KNOCKANDO*.

ARCLET (*Loch*), a small gloomy-looking sheet of water in the north-west corner of the parish of Buchanan in Stirlingshire, and bordering on Aberfoyle parish. A stream flows out of its western side into Loch Lomond at Inversnaid; while the sources of the Forth are within half-a-mile of it on the south; so that it appears to lie on the dividing ridge betwixt the waters of the two friths. The road from Inversnaid to Loch Katherine passes on the southern side of the loch, which is wholly destitute of picturesque features.

ARD (*Loch*), a beautiful sheet of water in the parish of Aberfoyle, at the eastern base of Ben-Lomond. By a mountain-road, which is often travelled, it is about 7 miles distant from the Trosachs. The distance from Glasgow to Aberfoyle is about 30 miles, and from the parish church to the entrance of the lake, a mile. There are in fact two lakes, which are separated from each other by a stream about 200 yards in length; but the lower lake is of small extent, its length being scarcely a mile, and its breadth about half-a-mile. The upper lake is 5 miles in length, and 2 miles broad. The valley of Aberfoyle, with its varied rocks and precipices, and its river winding amid pleasant meadows and richly wooded hills, is very beautiful; but Loch-Ard, with its adjoining scenery, is the object of greatest interest in the district, and yields to none of the Scottish lakes in picturesque beauty and effect. The traveller, leaving Aberfoyle, after a walk of about a mile, arrives at the opening of the lower lake, the view of which is uncommonly grand. Far in the west, Ben-Lomond raises his huge and lofty form amid the clouds; while in nearer prospect are beheld gentle rising grounds covered to their summits with oak trees and waving birch. In front are the smooth waters of the lower lake; its right banks skirted with extensive woods which cover the adjoining mountains up to half their height. This, with the nearly inaccessible tract which lies to the westward, is what is called the Pass of Aberfoyle, and anciently formed one of the barriers between the Highlands and the Lowlands. This pass has been the scene of many fierce encounters in former times; in particular, one took place here between the Highlanders and the troops of Cromwell, in which the English soldiers were defeated. Advancing up the pass, the traveller arrives at the upper portion of the lake. A fine view of it is obtained from a rising ground near its lower end, where a footpath strikes off the road into the wood that overhangs the stream, connecting the upper with the lower lake; or a still finer, perhaps, from a height about 2 miles up the eastern side of the lake, a little way below what is called the Priest's point or craig. Here the lake is seen almost in its whole expanse,—its shores beautifully skirted with woods, and its northern and western extremities finely diversified with meadows, corn-fields, and farm-houses. On the opposite shore Ben-Lomond towers aloft, in form like a cone, its sides presenting gentle slopes towards the north-

west and south-east. A cluster of rocky islets near the opposite shore, lend their aid in ornamenting the surface of the waters of the lake; and numerous rocky promontories and sheltered bays with their waving woods increase the effect of the scene. A small wooded island, seen near the opposite shore, on the right side, is Duke Murdoch's isle. On this islet Murdoch, Duke of Albany, Regent of Scotland during the captivity of James I. in England, erected a tower or castle, the ruins of which still remain; and tradition reports that it was from hence he was taken previous to his execution at Stirling. On the shores of Loch-Ard, near a ledge, or rather wall of rock, about 30 feet in height, there is a singular echo which repeats a few words twice over.

ARD, or ARD. See ARD.

ARDARGIE, an estate in the parish of Forgandenny, Perthshire. Here is a remarkably perfect small Roman camp, situated on a high bank, which overlooks the river May, slopes to the west, and commands an extensive prospect among the Ochils, and along the course of the Roman road from Ardoch to the Tay. The camp is an exact square, of about 270 feet on each side; and is defended by trenches of 30 feet in width and about 14 in depth. There was once a village of Ardargie, but it is now extinct.

ARDAVASAR, or ARDVASAR, a bay, a headland, and a hamlet on the Isle-of-Skye side of the Sound of Sleat, about 6 miles north-east of the Point of Sleat, and about $1\frac{1}{2}$ mile from Armadale Castle, Inverness-shire. The headland is the ordinary landing-place from Arasaig.

ARDBLAIR, an old mansion in the parish of Blairgowrie, Perthshire. It is one of those ancient massive-looking structures which partake, in a nearly equal degree, of the gloomy, frowning, suspicious-looking style of the olden time, and the more open and commodious fashion of our own days. The castle is one of the family seats of Mr. Blair Oliphant of Gask and Ardblair, but it is now occupied by the tenant of the adjoining farm. On the south side of the house lies the moss of Ardblair, a tract of some 20 or 30 acres, covered with reeds and pools.

ARDCIATTAN, a large highland parish in the Lorn division of Argyshire. Its post-office is Bunawe. It consists of the large district of Ardchattan proper in the north, and of the smaller district of Muckairn in the south. The former was anciently called Balmhadan, and seems to have taken that designation from the same obscure ancient anchorite who gave name to the parish of Kilmadan or Kilmolan in Cowal; and the latter was anciently called Kilespikarrol, which signifies the cell or ecclesiastical retreat of Bishop Cerylus or Cerullus. The boundary between the two districts is Loch Etive. Ardchattan proper is bounded by Loch Creran, Loch Linnhe, Loch Etive, the river Awe, the northern part of Loch Awe, the parish of Glenorchy, and the district of Appin; and measures upwards of 40 miles in extreme length from north-east to south-west, and about 10 miles in mean breadth. Muckairn is bounded by Loch Etive, and by the parishes of Lismore, Innishail, and Kilchrenan; and measures about 9 miles in extreme length from east to west, and from 5 to 6 miles in mean breadth.

Ardchattan proper is as grandly and wildly mountainous a region as almost any in the Highlands; and, though picturesquely diversified with glens and woods and waters, contains a vast proportion of rugged alpine heights and of waste bleak mosses and moors. Its chief glens are Glensalloch, a sort of pass among the mountains, 6 miles in length, between Loch Creran and Loch Etive;

Glendow, extending from east to west, and scarcely 3 miles in length; Glenue, extending about 3 miles from a grandly mountain-girt head down to the river Creran; Glenetive, 16 miles in length south-westward to the head of Loch Etive, and all lonely and sublime, and anciently a royal forest; Glenhetland, a branch of the preceding, about 3 miles from the loch, and about 2 miles long; Glenkinglas, 9 miles long, upwards of a mile broad, and descending to the south side of the upper part of Loch Etive; and Glen-ve, parallel to the preceding, south of it, about 4 miles long, and about 1 mile broad, and beautifully verdant. A grand array of mountains occupies the northern side of the parish; and of these Benvean, Benmolurgan, Benvreck, Benscoullard, and Benaulay, are the most conspicuous. The stupendous Benveedan occupies the frontier toward the Glencoe district of Appin. Two grandly romantic mountains, called Buachail Etive or 'the keepers of Etive,' overhang Glenetive and form a sublime background to vista-views from the upper parts of Loch Etive. Bentreelahau flanks the north side of that loch, over a distance of 5 miles from near its head; and Beustarive, a vast broad-based mass, with an altitude of at least 2,500 feet, flanks the other side right opposite. Benchavrach, Benketlan, Ben-nan-aighean, and Beucochail, are all grand mountains between Loch Etive and Loch Awe. But vastly the grandest in that quarter, and indeed one of the sublimest in Scotland, is Bencruachan. See the article BENCRACHAN.

This great district contains a few pine and fir plantations, and abounds in natural forest trees, and contains altogether about 3,000 acres of woods. Every cutting of the woods is supposed to yield the proprietors no less than £15,000 or £16,000 sterling. They consist of ash, birch, hazel, and alder, but chiefly oak. Roes and fallow-deer run wild in the woods; and foxes, hares, wild-cats, pole-cats, martins, weasels, otters, badgers, black-cocks, moor-fowl, ptarmigans, partridges, plovers, eagles, and hawks are found here. The soil of the arable lands is generally light and dry, and when properly cultivated, and allowed time to rest, produces excellent crops of oats, barley, and potatoes. The largest estate, that of Barcaldine, is about 12 miles north-east from Oban, 28 miles south-west from Fort-William, and the like distance north-west from Inverary. It is situated on Loch Creran, and comprehends the whole of the southern banks of Loch Creran, a stretch of about 12 miles of coast, while at one point on the south it nearly reaches Loch Etive. This estate contains 10,741 acres Scots, or 13,546 imperial; but a large addition may be made on account of the great inequality of surface throughout, particularly on the hills and woods, so that the true extent of surface-measure may fairly be taken at upwards of 15,000 imperial acres. The rental, including the value of the sheep-farms and the wood-cuttings, was estimated in 1835 at nearly £2,700. There are six heritors, all of the name of Campbell; and the chief modern mansions are Lochnell House, Barcaldine House, Drimvuick House, and the House of Inverawe. The assessed property in 1843 was £10,708; in 1860, £12,471. A chief antiquity are the supposed vestiges of an ancient Dalriadic city: see BERECONIUM. Another chief antiquity is Ardchattan priory, situated on the north side of Loch Etive, about 10 miles from Dunstaffnage. It belonged to the monks of Valliscaulium, a branch of the Benedictines; and was founded about the year 1230 by Duncan M'Coull, ancestor of the Macdougalls of Lorn, and was burned by Colkitto during Montrose's wars. The dwelling-house of the proprietor of the surrounding

lands was formerly a part of the monastery, and his offices occupy great part of the ground on which the rest of it stood. In the walls of what remains are two stone coffins in niches, one of which is ornamented with a font, and an inscription in the Runic character. We are informed by some of our writers, that Robert Bruce held a parliament here, when he retired into this district after his defeat in the battle of Methven. But, as Pennant has remarked, it was "more probably a council," as "he remained long master of this country before he got entire possession of Scotland." The parts of Loch Etive adjacent and upward are replete with interest. See *ETIVE* (LOCH), and *CONNAL FERRY*. The valley of Eta is famous as having been the residence of Usnath, father of Nathos, Althos, and Ardan; the first of whom carried off Dairbula, wife of Conquhan, King of Ulster, which is the subject of a beautiful poem of Ossian. There is a small island, with some vestiges of a house upon it in Loch Etive, which goes by the name of *Elain Usnich*, or 'the island of Usnath;' and on the farm of Dulness, in Glenetive, is a rock rising in the form of a cone, and commanding a romantic prospect, which to this day retains the name of *Griannan Dearduil*, 'the basking-place of Dairbula.'

Muckairn is much less loftily mountainous than Ardchattan proper, and possesses a larger proportion of low and arable lands. A range of heights called the Mallore extends across part of it from north-east to south-west, but has nowhere a greater elevation than about 1,100 feet. The coast is generally low; and the shore line is diversified with creeks and headlands, and with the two fine bays of Aird and Stonefield. Since the year 1753, a great part of the district has been held in lease by an English Company, for the sake of converting its woods into charcoal, and of using this in the manufacture of pig-iron. The ore is imported from Lancashire; the smelting of it is carried on in extensive works, called the Lorn Furnace, in the vicinity of Bunawe; and the iron produced has the reputation of being among the best in the kingdom. This business, in its several departments, in the woods and at the works, employs the greater part of the population, and is found to be not at all conducive to a good state of social morals. The population of the entire parish of Ardchattan in 1831 was 2,420; in 1861, 2,110. Houses, 406. Population of Ardchattan proper in 1831, 1,650; in 1861, 1,381. Houses, 255.

This parish is in the presbytery of Lorn, and synod of Argyle. Patron, Campbell of Lochnell. By decret of locality in 1817, the whole valued teinds of Ardchattan and Muckairn were granted to the minister of Ardchattan. Stipend, £283 3s. 2d.; glebe, £8. There are three places of worship, Ardchattan, Muckairn, and Invergueschan in Glenetive. Muckairn has a minister to itself, [See *MUCKAIRN*;) and at Invergueschan there is a missionary, who preaches alternately with the missionary of Glencoe and Glenceran. A new and more centrally situated church was opened in Ardchattan parish, in July 1836; sittings 450. Both the old and new churches are situated close upon the northern shore of Loch Etive, the former 10 miles, and the latter 8 from the western boundary, and 30 and 32 miles respectively from the north-eastern boundary. There are two parochial schools, one in Ardchattan and the other in Muckairn. The salary of the schoolmaster of Ardchattan is £45; of the one of Muckairn, £50. There is one Free church in Ardchattan proper, and another in Muckairn: attendance at the former, 130,—at the latter 270; yearly sum raised in 1865 in connexion with the former, £69 4s. 8½d.—in connexion with the latter, £76 0s. 6½d.

There are two Assembly's schools, a Society's school, and three or four private schools.

ARDCHEANOCROCHAN. See *TROSACHS*.

ARDCHULLERIE. See *LUBNAIG* (LOCH.)

ARDCLACH, a highland parish in Nairnshire. It is bounded by Auldearn, Nairn, Cawdor, Moy, Duthil, and Edinkelly parishes; and is about 10 or 12 miles long, and between 7 and 8 broad. It has a post-office of its own name,—a branch from Forres. The Findhorn river traverses the parish, and is here rapid, and frequently impassable, excepting at the bridges. In 1809 the parliamentary commissioners authorized the execution of a road from Relugas, along the eastern side of the Findhorn, to join the old military road from Fort George to Edinburgh, through Strathspey and Braemar, near Dulsie bridge, and thus connect Forres with the Aviemore road and the south of Scotland. A branch-road falls into this at Tominaroch, half-way between the bridge at Relugas and Dulsie bridge, connecting it with Nairn. The distance of the kirk of Ardclach from Nairn by this branch-road is about 9 miles. The valley of the Findhorn here presents very beautiful scenery. "The whole country for several miles eastward," say the Messrs. Anderson, in their Guide to the Highlands, "is composed of a highly crystalline porphyritic granite, displaying, in some instances, faces of a hard columnar rock, which confine the waters of the Findhorn to a deep, narrow, and irregular channel; and in other places giving rise—from a tendency in their masses to exfoliate and decompose—to open holms and smooth grassy banks. All the varieties of hardwood characteristic of the course of Scottish rivers are seen in rich profusion on both sides of the stream; while the adjoining hills also exhibit a few scattered remnants of the ancient pine forests which formerly covered the country. Towards the east, the eye is attracted by the bright light green masses of the oak and birchen copses of Tarnaway and Relugas, which form the outer fringes of the more sombre pine woods. About a mile below Dulsie, a beautiful sequestered holm greets the traveller, encircled with terraced banks and birchen bowers; and in the centre of which rises a small cairn, with an ancient sculptured tablet, about eight feet high, and half as broad, standing at one end of it, and having a rude cross and many Runic knots still discernible on its surface. Tradition calls it the stone of memorial of a Celtic princess, who perished in the adjoining river, while attempting to ford it on horseback with her lover, a Dane. Immediately behind this spot, the high promontory of Farness rises nearly 200 feet above the river, the direct course of which it has shifted, and confined to a deep winding chasm of at least 3 miles' circuit." See *DULSIE BRIDGE*. Five considerable burns drain the flanks of the parish into the Findhorn; and one of these is eminently picturesque. See *ALTVAIE* (THE). This parish is a mountainous district, covered with heath, and furnishes little of any other kind of pasture. There is a considerable quantity of wood in it, chiefly consisting of firs, birch, alder, hazel, ash, and some oaks. The woods and hills abound with moor-fowl, woodcocks, partridges, hares, and foxes; some deer are found; and the otter and wild cat are sometimes seen. There are about 2,000 acres of arable land, and 4,000 acres of moss and moor, a very small part of which seems to be improvable for corn-lands. Very great improvements have recently taken place in agriculture. There are six landowners; and the valued rent is £2,326. The only mansion is Coulmony House. Population in 1831, 1,270; in 1861, 1,330. Houses, 262. Assessed property in 1860, £4,389.

This parish is in the presbytery of Nairn and synod of Moray. Patron, Brodie of Lethen. Stipend, £248 1s. 1d. Schoolmaster's salary, £42 2s. 9d., with £4 10s. fees. The parish church was built in 1839, and has 686 sittings. There is a Free church; and the yearly sum raised in connexion with it in 1865, was £90 2s. 8d. There are at Fortuigthy a Society's school and a female school.

ARDELISTER ISLANDS. See KILDALTON.

ARDEN, a village within the burgh boundaries of Airdrie, parish of New Monkland, Lanarkshire.

ARDENCONNEL. See Row.

ARDEONAIG, or Loch TAYSIDE, a mission under the Society for propagating Christian knowledge, which was divided as a separate charge from the parishes of Killin and Kenmore, in Perthshire, by authority of the presbytery of Dunkeld, about 1786, and consists of portions of these two parishes. Its greatest length is 7 miles; greatest breadth, 4. Population in 1831, 650. Church built by the Marquis of Breadalbane, in 1822; sittings 650. Minister's stipend £60, with a manse, and a glebe of the value of £12.

ARDERSIER, or ARDROSSER, a parish on the east coast and north-east corner of Inverness-shire. It contains a post-office of its own name, the fortifications and lands of Fort George, and the larger part of the village of Campbellton. See GEORGE (FORT) AND CAMPBELLTON. The parish is bounded by the Moray frith, Nairnshire, and the parish of Petty. Its greatest length, from north-west to south-east, is about 4 miles; and its breadth is upwards of 2 miles. The shore is sandy and flat, which is the character of the whole of this side of the Moray frith from Inverness to Nairn. The rental of the parish, including the farm sold to government when the garrison of Fort-George was built, was £365 in 1792; the rent of the garrison-farm was £50. At that period nearly the whole parish was in the possession of one farmer; but the greater part was sublet by him in small farms of from 20 to 30 acres. There were scarcely any enclosing walls known except a few rudely constructed of feal or earth. But now the rental is believed to be about £1,000, agriculture is vastly improved, and the lands are let in long-leased farms, and about 1,500 acres are under cultivation and about 1,800 in pasture and heath. The roads are exceedingly good. Where this parish is divided from Nairnshire, there is a stone about 6 feet high, and 3 broad, called the Cabbac stone, which, tradition says, was erected over a chieftain who fell in an affray about a cheese, in the town of Inverness. The whole parish is the property of the Earl of Cawdor, and was a part of the lands of the Bishop of Ross, with some temple-lands formerly belonging to the knights of St. John of Jerusalem. The territory which constitutes the precinct of the Fort, was purchased by government about the year 1746. Near to Ardersier—which is situate on the southern shore of the Varar—a very curious Roman sword and the head of a spear were discovered. Population in 1831, 1,268; in 1861, 1,239. Houses, 199. Assessed property in 1860, £2,275.

This parish is in the presbytery of Nairn and synod of Moray. Patron, the Earl of Cawdor. Stipend, £158 6s. 7d. Schoolmaster's salary, £50, with £20 fees. The parish church was built in 1802, and has upwards of 500 sittings. There is a Free church, with an attendance of 480; and the yearly sum raised in connexion with it in 1865 was £221 17s. 3d. There is in Campbellton an United Presbyterian church, with an attendance of about 150. There are two private schools.

ARDFERN, a post-office station subordinate to Lochgilphead, Argyshire.

ARDGAY, a village in the parish of Kincardine, and near Bonar-Bridge, on the north border of Ross-shire. It has a commodious inn, and communicates daily by public conveyance with Tain. A deed was granted in 1686 to erect it into a burgh of barony and a market town, with bailies, burgesses, tollhoth, market-cross, weekly market and two yearly fairs; but the deed was never carried into effect.

ARDGOUR, or ARDGOWER, a district in the extreme north of the mainland of Argyshire. It is bounded on the north-west by Loch Shiel, and on the north and east by Loch Eil. There is an excellent road from Loch Moydart to the Corran of Ardgour; and from the latter place there is a ferry across Loch Eil to the military road from Fort-William to the Low country. See articles SHIEL (LOCH), and EIL (LOCH). In 1829 a church was erected here by the parliamentary commissioners. See article BALLACULISH.

ARDGOWAN. See INNERKIP.

ARDINCAPLE. See Row.

ARDINNING, a lake, of about 60 acres in area, in the parish of Strathblane, Stirlingshire.

ARDINTENNY, a village, with a post office, in the parish of Kilmun, Argyshire. It stands on the west side of Loch Long, 4 miles from Strone ferry at the mouth of that Loch, and 12 miles from Strachur on Loch Fyne. Its site is a spit of low ground, zoned with verdure, at the base of steep, lofty, and picturesquely wooded mountains. The village has of late been considerably enlarged for the accommodation of summer sea-bathers; and it is a regular calling-place of the Glasgow steamers to Loch Goil and Arrochar. A regular ferry also plies between it and Colport, on the opposite shore of Loch Long; and a road leads from it, among the mountains, by way of Loch Eck to Strachur. The village has now a chapel of ease. Glenfinnart House, A. Douglas, Esq., is in the vicinity. "The lass o' Ardintenny" is a well-known song of Tannahill; but, as to both person and place, was probably a mere fancy-piece.

ARDKINGLASS. See LOCHGOLHEAD.

ARDLAMONT, a headland of Argyshire, between the kyles of Bute and the mouth of Loch Fyne. It is 6 miles north-east from Skipnish, the opposite point on the western side of the loch.

ARDLE (THE). See AIRLE (THE).

ARDLER, a station on the Scottish Midland Junction Railway, 2 miles from Cupar-Angus, and 5 miles from Newtyle, on the south-west border of Forfarshire.

ARDMADDY, in Nether Lorn, at the southern entrance of the singularly intricate and narrow channel, or kyle, between the island of Seil and the mainland of Argyshire. There is a small bay here, the shores of which are bold, and finely wooded. Pennant was hospitably received at Ardmaddy house, and has thrown his reflections on the condition of the Highland peasantry into the form of a vision with which he represents himself as having been favoured here. [See Second Tour, in Kerr's Collection of Voyages and Travels, vol. iii. pp. 357—360.] A quarry of white marble veined with red exists here.

ARDMEANACH, or THE BLACK ISLE, the large peninsula between the Moray frith and the Cromarty frith. It comprises 8 parishes, and is distributed among the counties of Cromarty, Ross, and Nairn. It consists for the most part of a series of sandstone ridges, and has, from almost end to end, a broad-hacked hilly summit. See MULLEUX. It lay, till somewhat recent times, in a dismally bleak and

moorish condition; but is now extensively cultivated and well-intersected by roads.

ARDMHERIGIE. See **ARDVERKIE.**

ARDMINISH, a bay about the middle of the east side of the island of Gigha, Argyleshire. It has good anchorage, in depths of 6 or 7 fathoms, and is frequented by vessels bringing coals, lime, and other imports, and taking away the produce of the island. At the head of it stand the parish church and the manse.

ARDMORE, a low, wooded, beautiful promontory, in the parish of Cardross, Dumbartonshire. Its head is a circular, soil-clad rock of about 40 feet in height, popularly called the *Hill of Ardmore*; and the rest of its surface is flat alluvium, lying very little above the level of high-water, and connected by a narrow isthmus with the mainland. The whole promontory is a conspicuous feature in the magnificent, lagoon-like scenery of the upper frith of the Clyde. See **HELENSBURGH.** The mansion of Ardmore is a pleasant modern building.

ARDMORE, a headland, a bay, and some small islands, on the east side of the island of Islay, and in the parish of Kildalton, Argyleshire.

ARDMORE, a headland in the Vaternish district of the west side of the island of Skye, Invernesshire. A hostile party of the Macdonalds of Uist once landed here while many of the Macleods of Skye were assembled in the adjacent church of Trumpan, and they suddenly surrounded the building, set fire to it, and destroyed nearly all who were in it; but before they got back to their boats, avengers came pouring down at the call of "the fiery cross," and slew the greater number of them on the beach.

ARDMORE, a harbour on the south side of the Dornoch frith, and within the parish of Eddertoun, Ross-shire. It affords accommodation to vessels of 150 tons burden; and is frequented in summer by smacks and schooners, chiefly with cargoes of coals and lime.

ARDMUCKNISH. See **AIRDS.**

ARDNACROSS, an estate and a small bay, in the parish of Campbellton, and east side of Kintyre, Argyleshire. The bay is 6 miles north-east of the town of Campbellton, and affords anchorage to vessels.

ARDNAFUARAN. See **ARASAIG.**

ARDNAMURCHAN, a bold and broad promontory, at the extreme north-west of the mainland of Argyleshire. It is the most westerly ground of the mainland of Scotland; and from the time of Somerled the Great till the reign of James VI., it constituted the political division between the Northern and the Southern Hebrides. Its name means the headland of the narrow seas, and is strikingly descriptive; for not a more conspicuous or terrible promontory exists among the many sounds and expanses which wash the coasts of Scotland. The shores around it are rugged, and have been the ruin of multitudes of vessels; and all the seaboard contiguous to it, for a long distance both coastwise and inland, is mountainous and bleak and wild. A lighthouse was built on the point of the promontory in 1849. "It is situated in north latitude $56^{\circ} 43' 45''$, and west longitude $6^{\circ} 13' 30''$; and it bears from Calliach Head north-east $\frac{3}{4}$ east, distant 7 miles; from the Cairns of Coll, east-south-east, distant 8 miles; from Rana Head, south $\frac{1}{2}$ east, distant 30 miles; from Scour of Eigg, south-west, by south $\frac{3}{4}$ west, distant 11 miles; and from Bo-Askadil Rock, west-south-west, distant 7 miles. The light is a fixed one, and of the natural appearance. It is visible in a north-westerly direction from north-east by east $\frac{3}{4}$ east round to south-west by south. The lantern is elevated 180 feet

above the level of the sea; and the light is seen at the distance of about six leagues, and at lesser distances according to the state of the atmosphere."

ARDNAMURCHAN, a large highland parish on the west side of the mainland of Argyleshire and Invernesshire. It contains the promontory of Ardnamurchan, and takes name from it; and it contains also the three post-office stations of Kilchoan, Strontian, and Arasaig. So late as the year 1630, the most westerly district, or that of the peninsula which terminates in the promontory of Ardnamurchan, constituted a separate parish called Kilchoan, from a church of that name dedicated to St. Coan; while the other districts formed a second parish, under the name of Eileinfinnan or Island Finan, from a beautiful little island in Loch Sheil, then the residence of the minister, and site of the principal church. In still more ancient times, the two most northern districts probably formed a third parish, named Kill-Maria, or Kilmarie, after a church—some vestiges of which still remain at Keppoch in Arasaig—dedicated to the Virgin Mary. The present parish comprehends five several districts, or countries, as they are here called, viz.: 1st., Ardnamurchan Proper, or the old parish of Kilchoan, which is 16 miles in length, and $4\frac{1}{2}$ miles in its mean breadth;—2d, Sunart, which is 12 miles by 6;—3d, Moydart, which is 18 miles by 7;—4th, Arasaig;—and 5th, South Morar. The two first of these districts are in the shire of Argyle; and they join at Tarbert in an isthmus of about 2 miles in breadth, extending from Salen, a creek on the north side of Loch Sunart, to Kinira bay; and extend in one range from east to west. The others are in the shire of Inverness, and lie parallel to each other and to Sunart, from which Moydart is separated by Loch Sheil; the river Sheil being the boundary between the north-east corner of Ardnamurchan Proper, and the south-west of Moydart, for about 3 miles, to its fall into the sea at Castle Tioram. The greatest length of the entire parish, calculating by the nearest road, is not less than 70 miles; its greatest breadth, 40. It is computed to contain 273,280 acres of land and water; of which, it is believed, about 200,000 acres are land. It consists principally of moors and mountains and hills, in general more rugged and precipitous than of great elevation, the highest not exceeding 3,000 feet. There is a considerable extent of oak-coppice on the shores of Loch Sunart. There are large tracts of moss, and vast tracts of moorland wastes; yet the scenery, as a whole,—or at least the most accessible portions of it along the glens,—cannot be called bare; and the pasturage, as compared with that of Mull, is rich and thrifty. The fisheries are numerous and various, but have hitherto yielded vastly less produce than might be expected. Quarries and mines are worked at Laga and Strontian,—the former a hamlet overhung by lofty mountains on the shores of Loch Sunart, and the latter to be noticed in a separate article. The value of assessed property in 1843 was £6,894 6s. The most interesting antiquity is described in the article **MINGARRY CASTLE**; and the several great districts and sheets of water in the articles **SUNART**, **MOYDART**, **ARASAIG**, **MORAR**, **GLENFINNAN**, **SUNART (LOCH)**, and **SHEIL (LOCH)**. Castle Tioram was burned in 1715, since which time it has been in ruins. The houses of Kinloch-Moidart (since rebuilt in an elegant style by Colonel Donald Macdonald), and Morar, together with every hut which they could discover, were burned by the king's troops in 1746, who also destroyed all the stock of cattle. One excellent road leads from Strontian to Corran Ferry, and another leads from Arasaig to Fort William; but, in general, inland communica-

tion is much impeded by bridgeless rivers, marshy grounds, and want of roads. Several good harbours exist both on the outer coasts and within the sea-lochs; but they are comparatively little used. The main marketing of the parish is done either across the Sound of Mull with Tobermory, or by the Skye and Long Island steamers with Glasgow. Population of the entire parish in 1831, 5,669; in 1861, 4,700. Houses, 861. Population of the Inverness-shire district in 1831, 2,358; in 1861, 1,917 Houses, 326.

This parish is in the presbytery of Mull and synod of Argyle. Patron, the Duke of Argyle. Stipend, £228 4s. 4d., with a manse and glebe. The parish church was built in 1830, and has 600 sittings. An assistant minister has under his charge the greater part of Moydart, and the whole of Arasaig and South Morar, and officiates in two places of worship, 46 and 56 miles distant from the parish church, the one a thatched house at Polish, and the other a school-house at Ardnafuaran. Stipend, £88 11s. 1d., with £5 for communion elements. A missionary on the Royal Bounty, with a salary of £60, has charge of the district of Laga, 10 or 12 miles in extent along Loch Snart, and preaches in a thatched house midway between the parish church and the church of Acharacle. Two ministers, each with a government church and a manse, have charge of the large districts of ACHARACLE and STRONTIAN: see these articles. There was a Free church preaching station in Ardnamurchan Proper; and the yearly sum raised in connexion with it in 1853 was £8 6s. 7d. There are two Free churches,—one for Acharacle and Moydart, and the other for Strontian. The salary of the parochial schoolmaster of Ardnamurchan was raised to £50. There are also a school at Strontian, two Assembly's schools, and three other schools.

ARDNELL. See KILBRIDE-WEST.

ARDO. See BANCHORY-DAVENICK.

ARDOCH, a village in the parish of Muthill, Perthshire. It stands on the river Knaik and on the road from Stirling to Crieff, 4½ miles south-west of the village of Muthill, and 12 miles north by east of Stirling. It is sometimes called Braco from the estate of which it is fened. A Chapel of Ease was built here in 1780, and contains 600 sittings. Here also is a Free church; and the yearly sum raised in connexion with this in 1865 was £177 1s. 7d. An United Presbyterian church stands about 1½ mile to the south. The village contains a subscription library; and is a thriving place. Fairs are held on the first Wednesday of January, on the last Tuesday of April, on the first Tuesday of August, and on the last Tuesday of October. Population, in 1861, 807.

A large Roman camp at Ardoch has been an object of intense interest to all Scottish antiquaries, and the subject of high controversies among them; and is both one of the largest and one of the best preserved antiquities of its class in Britain. It closely adjoins the village, and is intersected by the highway. "The situation of it," says the writer of the Old Statistical Account of Muthill, "gave it many advantages; being on the north-west side of a deep moss that runs a long way eastward. On the west side, it is partly defended by the steep bank of the water of Knaik; which bank rises perpendicularly between forty and fifty feet. The north and east sides were most exposed; and there we find very particular care was taken to secure them. The ground on the east is pretty regular, and descends by a gentle slope from the lines of fortification, which, on that side, consist of five rows of ditches, perfectly entire, and running parallel to

one another. These altogether are about fifty-five yards in breadth. On the north side, there is an equal number of lines and ditches, but twenty yards broader than the former. On the west, besides the steep precipices above mentioned, it was defended by at least two ditches. One is still visible; the others have probably been filled up, in making the great military road from Stirling to the North. The side of the camp, lying to the southward, exhibits to the antiquary a less pleasing prospect. Here the peasant's rugged hand has laid in ruins a great part of the lines; so that it may be with propriety said, in the words of a Latin poet, 'Jam seges est, ubi Troja fuit.' The area of the camp is an oblong of 140 yards, by 125 within the lines. The general's quarter rises above the level of the camp, but is not in the centre. It is a regular square, each side being exactly twenty yards. At present it exhibits evident marks of having been enclosed with a stone wall, and contains the foundation of a house, ten yards by seven. That a place of worship has been erected here, is not improbable, as it has obtained the name of Chapel-hill from time immemorial." The reporter goes on to state that there are other two encampments adjoining, having a communication with one another and containing above 130 acres of ground. These, he thinks, were probably intended for the cavalry and auxiliaries.

ARDPATRICK, a headland at the north side of the entrance of West Loch Tarbert, and at the south-western extremity of Knapdale, Argyleshire. Tradition asserts that St. Patrick landed here on his way from Ireland to Iona.

ARDRISHAIG, a small sea-port and post-town, in the parish of South Knapdale, Argyleshire. It stands at the east end of the Crinan canal, about 2 miles from Lochgilphead. It has a handsome recently-built hotel, and two places of worship, Established and Episcopalian; and it partakes in the institutions and marketings of Lochgilphead. Its inhabitants are supported principally by the Loch-Fyne herring fishery, by the traffic through the canal, and by the resort of steamers from Glasgow. Upwards of 100 fishing boats sometimes frequent the harbour during the fishing season; and commonly three steamers daily during summer, and either one or two during winter, ply between this and Glasgow, irrespective of those which pass through the canal. The quantity of sheep and cattle shipped here is considerable. On Wednesday, August 18th, 1847, the Queen and Prince Albert landed here, in their voyage from Inverary to Inverness-shire, and were welcomed by an immense and enthusiastic concourse of people. From the quay the royal party proceeded by a road about 200 yards in length, specially constructed for the occasion, and leading between a double row of trees, to the canal bank, where the royal barge was in waiting to convey them to the Victoria and Albert yacht, which, having rounded the Mull of Kintyre, lay at anchor in Crinan bay. Population in 1861, 902.

ARDROSS, a mountainous district, between Alness Water and Rorie Water, on the east side of Ross-shire. It was the early residence and fastness of the great clan Ross, and is now the property of Alexander Matheson, Esq.

ARDROSS, a barony in Fifeshire. See ELY.

ARDROSSAN, a parish, containing the sea-port town of Ardrrossan, and part of the sea-port town of Saltcoats, in the district of Cunningham, Ayrshire. It is bounded on the south-west by the frith of Clyde, and on the other sides by the parishes of West Kilbride, Dalry, Kilwinning, and Stevenston. Its greatest length is 6 miles, and its greatest breadth 3½. The extent of sea-coast is about 4 miles. The

north-west quarter of the parish, between Ardrossan and Kilbride, is hilly; the highest hill in this quarter is Knockgeorgan, or Knockgargon, which rises 700 feet above sea-level. A very extensive and magnificent prospect of the frith of Clyde and its sea-boards and the mountains of Arran is seen from most parts of the parish, and looks particularly brilliant from Knockgeorgan. The principal streams are the Mmnock or Caddel-burn, which rises in Kilbride, and flows eastward into the Gaaf; and the Stanley and Monfode burns, which flow southwards into the sea near Ardrossan. The soil is in general light and fertile. Aiton estimates the area of the parish at 9,000 Scots acres, and the real rent, in 1809, at £6,098. The Statistical reporter, in 1837, estimates the area at only 5,520 Scots acres; and the real rent at £7,800, being an average of 30s. per acre. The parish is intersected by three main lines of road; two of which run between Dalry and Ardrossan, and Dalry and Saltcoats, while the third, or coast-line, connects Saltcoats and Ardrossan. A railway from Ardrossan to Kilwinning was opened in 1832. This railway was executed by the projectors of the Glasgow and Ardrossan canal. As originally executed it was a single line worked by horses, extending 5½ miles, with branches of about 6½ miles. This line, improved and doubled, now forms a locomotive engine line; and the railway distance from Glasgow to Ardrossan, is 31½ miles. In 1846, an act was obtained, but lies in abeyance, for extending the Glasgow and Neilston railway to the town of Kilmarnock, and to Ardrossan harbour. Limestone is extensively quarried in the upper part of the parish; coal is believed to be abundant, but is not worked; and building stones, both good and beautiful, are very plenteous, and have both been quarried almost where they were wanted, and brought by railway from Stevenston. A low island of about 12 acres, with good pasture, lies about a mile north-west of Ardrossan town, and affords some shelter to the harbour; and a beacon-tower was erected on it, but has long been out of use. Upwards of two-thirds of the parish is the property of the Earl of Eglinton; and the rest lies distributed among nine proprietors. Population in 1831, 3,494; in 1861, 6,776. Houses, 682. Assessed property in 1843, £11,774 13s. 10d.; in 1860, £23,077.

This parish is in the presbytery of Irvine, and synod of Glasgow and Ayr. Patron, the Earl of Eglinton. Stipend, £261 1s. 3d., with a manse and glebe. Unappropriated teinds, £676 11s. 11d. The original parish church stood on the Castle-hill of Ardrossan, and was overwhelmed by a storm in 1691; its successor of the next half-century stood on a sheltered site about half a mile inland; and the next was built in 1773 in the town of Saltcoats, and contains 840 sittings. But in 1844, there was built at Ardrossan, a handsome new church, with a fine spire, at a cost of upwards of £3,000; and in March 1851, this was constituted by the Court of Teinds a separate parish church, under the name of New Ardrossan. The right of presentation to it is vested in eight trustees. There is a Free church at Ardrossan; a Gothic edifice with a spire, built in 1859, at a cost of £2,000; and the yearly sum raised in connexion with it, in 1865, was £234 5s. 5½d. There is also a Free church, a Gaelic one, at the west end of Saltcoats; it was originally connected with the Establishment, and was built about 1838; it is a neat Gothic structure, with Saxon door-way and small belfry, and contains 720 sittings; and the yearly sum raised in connexion with it, in 1865, was £88 3s. 3½d. A United Presbyterian church is in Ardrossan, built in 1857, at a cost of £1,300; and another United Presbyterian church is in the Saltcoats part of Ardrossan

parish, was built in 1865-6, is a very handsome edifice, and succeeded a previous church of 1790. An Independent chapel also is in Ardrossan, and was built in 1861, at a cost of £550. The parochial schoolmaster's salary is £60.

The TOWN OF ARDROSSAN stands about 1 mile north-west of Saltcoats, 5½ miles south-west of Kilwinning, and 31½ south-west of Glasgow. It anciently consisted of a baronial castle, a church, and a small fishing village,—all situated on a slightly elevated promontory, or small low projecting hill. How early it existed is not known; but both castle and village were at least contemporaneous with Sir William Wallace, and were the scene of one of his exploits. The castle being in possession of the English, Wallace, with some of his men, came stealthily by night, and set fire to the village as a lure to draw the garrison out; and while they ran to quench the fire, he and his men entered the castle, slew the English as they returned, and threw their corpses into the dungeon, which thence got the name of Wallace's Larder. The castle continued for ages after to be habitable, but was at length destroyed by Oliver Cromwell; and only slight vestiges of it now remain. An ancient proprietor of it, before it passed into the possession of Lord Eglinton's ancestors, was popularly reputed to be a warlock, and figures in some wild old legends as the Deil o' Ardrossan. Within the area of the original parish church lies an ancient tombstone which popular belief associates with him. "On this is sculptured the figure of a man at full length, with two shields of arms laid over him. One appears to represent the royal arms of Scotland, being the lion rampant—the other is probably the escutcheon of the deceased. Before the building of the new town, this was an exceedingly secluded spot, and the superstitious dread which was entertained for the sanctuary of 'the Deil o' Ardrossan' was very great. It was believed that were any portion of the 'mould' to be taken from under this stone, and cast into the sea, forthwith would ensue a dreadful tempest to devastate sea and land."

The modern town originated in special exertions of the 12th Earl of Eglinton. His lordship's idea was to make it the port of Glasgow. Steam navigation and steam-tugging were then unknown; the navigation of the parts of the frith of Clyde above the Cumbraes was often baffling and tedious; the navigation of the river above Port-Glasgow was practicable only for small vessels and with great difficulty; and it seemed to the Earl of Eglinton and to several rich gentlemen who co-operated with him, that if Ardrossan were connected with Glasgow by a canal, and were provided with a deep and capacious harbour, it could not fail to attract to itself the greater part of the sea-business which was then done at Greenock and Port-Glasgow, and perhaps give rise to a good deal more. The canal was to be cut from the suburb of Tradeston at Glasgow, by way of Paisley and Johnstone, a distance of nearly 31 miles to Ardrossan, and was estimated to cost £125,900; but, though promptly commenced at the Tradeston end, it never was executed farther than to Johnstone. The harbour was projected on a most magnificent design, such as would have made it scarcely inferior to any in the kingdom, and was commenced with great ceremony on the 31st of July 1806. But the estimated cost of it proved to be enormously under the mark; yet the Earl drove it forward with great energy of purpose and with vast personal sacrifice, till near the end of his life; and in 1815, four years before he died, and after upwards of £100,000 had been expended on it, Messrs. Telford & Rennie reported that £300,000 more would be re-

quisite to complete it. The works were for a long time suspended; but after the thirteenth Earl came of age, they were resumed on a scale of less extent, but still of great value; and now they are complete. The harbour is at once capacious, commodious, and well-sheltered; and there is a lighthouse with a fixed light on the north-east breakwater. A railway, as formerly stated, was projected to connect the harbour of Ardrossan with the canal at Johnstone; but it could not be executed farther than Kilwinning, and served for some years chiefly for bringing coals to the harbour. But now, under the name of the Ardrossan railway, and in connexion with the Glasgow and Ayr railway, it is one of the busiest lines in Scotland, and is serving largely and brilliantly, though in a very different way than was then dreamed of, some of the very purposes which were sought to be served by the original scheme of the canal.

The modern town itself was commenced about the same time as the harbour, and has been dependent on it for prosperity. It is built on a regular plan, with streets wide, straight, and crossing one another at right angles, and edified chiefly with neat, well-finished, two-story houses. The plan comprises also a crescent, of splendid design, around the fine sweeping bay on the east side of the town toward Salt-coats. There are many handsome villas, varied in style, but all more or less tasteful; and there is an elegant occasional residence of Lord Eglinton, called the pavilion. There is also a large and good-looking edifice, built for baths on the tontine principle in 1807,—allowed for a time to go to disuse and decay, but refitted in 1833. The chief inn is a very commodious one called the Eglinton Arms. The several churches have a fine appearance; and the whole place looks cleanly, cheerful, and prosperous. The town contains the sessional school, a private school, two ladies' schools, a school of industry, a post-office, a stamp-office, offices of the Bank of Scotland, of the Royal Bank, and of the City of Glasgow Bank, a number of insurance offices, a gas company, a bowling club, a curling club, a farmers' society, an artillery volunteer corps, and a total abstinence society. Ardrossan possesses great attractions as a bathing-place, and is now one of the much frequented summer resorts on the firth of Clyde. Fairs are held on the Tuesday before Ayr July fair, and on the fourth Thursday of November; and a projected annual tryst of two days in July, for sheep, wool, and cattle, was begun in 1846, but has ceased. The harbour, even while lying in the incomplete state in which the late Earl left it, was capable of accommodating a great number of vessels of almost any size, and was secure against almost every wind, and was often crowded in rough weather with vessels which ran to it for shelter. A considerable coasting-trade became steadily established at it, chiefly in the export of coals and cast iron; and since the opening of the Glasgow and Ayr railway, steamers have regularly sailed from it to Arran and Belfast. Within the year 1864 no less than 237,527 tons of cast iron were shipped here. In 1849, when the route of the Scottish mails to Ireland by way of Portpatrick to Donaghadee was given up, and a route was adopted from the Clyde to Belfast, multitudes of persons, who had no particular interest in the matter, were astonished that Ardrossan was not made the packet-station; and, as to all the main circumstances of directness, speed, and safety, it certainly seems decidedly superior to Greenock. Population of the town in 1837, about 920; in 1861, 3,192. Houses 249.

ARDROSSAN (NEW). See ARDROSSAN.

ARDROSSER. See ARDESIER.

ARDSHIEL, the seat of a chief cadet of the Stewarts of Appin, on the southern shore of the Linnhe-loch, near Kentalen bay, and about 3 miles from Ballachulish ferry at the mouth of Loch Leven. Stewart of Ardsziel was among the foremost who espoused the cause of Prince Charles in 1745; and, like many of his brother-outlaws, had to consult his safety by retiring to a remarkable cave in this neighbourhood. The mouth of the cavern is singularly protected by a waterfall which descends like a crystal curtain in front of it, but through which no traces of such an excavation are perceptible.

ARDSTINCHAR, an old castle, anciently the seat of a branch of the Bargany family, on the river Stinchar, a little above the village of Ballantrae, Ayrshire. From its situation in a narrow pass commanding two entrances into Carrick,—that along the shore, and that which leads up the river and across the country to Girvan,—this fortalice must have been of considerable importance in remoter ages. Pitcairn, in his History of the House of Kennedy, gives some curious information respecting it.

ARDTORNISH. See ARTORNISH.

ARDUTHIE, an estate in the parish of Fetteresso, Kincardineshire. The new town of Stonehaven is built upon it, and was originally called Arduthie, and is still sometimes called the Links of Arduthie. See STONEHAVEN.

ARDVASAR. See ARDAVASAR.

ARDVERIKIE, a shooting-lodge, built by the Marquis of Abercorn, on the banks of Loch-Laggan in Inverness-shire, which has obtained great and unexpected notoriety from having been occupied by Her Majesty and suite for a few weeks in the months of August and September, 1847. It occupies a green flat at the head of a little bay formed by one of the wooded promontories which jut into the loch. It was erected by the Marquis about 1840; and is a plain unostentatious building, rather irregular in its construction,—the windows, roof, and chimney-stacks a good deal in the cottage-style, and the whole suiting pretty closely one's idea of what quarters for the accommodation of a large shooting-party ought to be. The lodge is built close to the loch, the water flowing up almost to the walls on three sides of the building. For a shooting-box, as we have before remarked, the house is remarkably large and commodious. It has the appearance of being built at different times, as convenience dictated, one addition succeeding another, until, in the course of time, as might be supposed, an originally small square cottage had swelled out and covered the whole promontory. Its narrow windows—one hundred in number, and each of the front windows surmounted with a deer's head and antlers—add to the impression that the lodge is an antique structure, but in reality it is quite modern, and the masonry, though not the architecture, bears the stamp of yesterday. The gardens attached to the lodge are extensive and well managed, producing all the fruits and flowers of the country; and a fine lawn, with clumps of trees, gives a baronial aspect to the spot. A number of marquees were placed on the green, at proper distances from the lodge, in order to accommodate the servants of the royal visitors.—The interior of the lodge corresponds pretty closely with its external appearance,—the rooms being more comfortable than spacious, and their chief decoration being the antlers of deer shot in the surrounding forest. On the bare walls of two of the principal apartments are roughly sketched, by the masterly hand of Landseer, several of his best known and finest productions, and among them 'The Challenge,' and 'The Stag at Bay.' There is a splendid collection of stags' heads in the long corridor from which the

rooms on the ground-floor are approached. Many of these have thirteen and fourteen points; the greater number are royal heads, and to none would the most experienced deer-stalker take exception. The ornaments of the corridor are also those of the bed-rooms above stairs, in each of which, placed directly above the chimney-piece, the highly polished *os frontis* of a deer, surmounted by a pair of branching antlers, invites the wearied sportsman to dream of the adventures which await him among the corries and passes of the forest next morning.—The surrounding scenery is quite in keeping with the style of the lodge and its internal arrangements. The loch in front is a sheet of water about eight miles in length, with less than the usual complement of islands on its surface, and possessing nothing in its appearance which raises it above mediocrity among the list of Highland lakes. See LAGGAN (Loch). Yet, apart from scenic effect, it is not without claims to consideration; for it abounds with quantities of the finest black trout; and of the three little islands which stud its surface, the two nearest the lodge have traditional associations which invest them with no common interest. On one of these, called Eilan-an-Rìgh—‘the King’s Island’—are still visible from the windows of the lodge some remains of rude masonry which the country people say mark the residence of the ancient kings of Scotland, when they came to hunt in the adjoining forests; and quite close to it is Eilan-an-Comh—‘the Dogs’ Island’—which, as the name implies, was used by these barbaric and sporting monarchs as a kennel. The Gaelic name of the spot on which the lodge stands connects these loose traditions with a very ancient and obscure portion of Scottish history; for Ardverikie means, it is said, ‘the residence of Fergus.’ There is, however, very fair ground for believing that the district of country now occupied by the Marquis of Abercorn as a deer forest, was in former times a favourite hunting-ground with the Scottish kings. A mound is pointed out in the garden round the lodge, covered with fox-gloves, dockens, waving goose-grass, thistles, and a variety of other weeds, beneath which the dust of Fergus and four other monarchs is said to repose; and really the place looks genuine enough. We prefer, however, relying upon the fact that the surrounding country has from time immemorial contained the most favourite haunts of the red deer, and that in those wild times when the Majesty of Scotland harboured principally in Inverness-shire, their hunting propensities would naturally lead them to the banks of Loch Laggan.—The scenery about Ardverikie lodge is almost entirely destitute of those abrupt and massive features, and that bold outline, which give to the Lochaber hills so noble and prominent a character; nor has it the bleak, deserted, solitary appearance of the moors which occupy the east of Badenoch; but the land slopes gently up on each side of the loch, in gradually ascending heights clothed a good way from the water’s edge with birch, hazel, aspen, and mountain ash,—the natural growth of the country,—and opening as it ascends into spacious corries. Smooth summits of plain unpretending outline terminate the view, which has, in fact, little except its natural and unadorned character to recommend it. Her Majesty, however, could see from the windows of the lodge patches of snow still lingering on Corarder; and the unassuming grace of the woods, the brilliant verdure in which the brackens clothe the whole scene, the unsophisticated air of everything around, might not prove unacceptable after the stately magnificence of Windsor-Park and the elaborate agriculture of the Home-Farm. With respect to the

forest, it is as yet almost in its infancy; for though in former times the number of deer on it was very great, the introduction of sheep into this part of the country about sixty years ago drove them off to seek for cleaner pasture and more secure resting-places. The ground which the lodge occupies has been rented from Macpherson of Clnny, the proprietor, by the Marquis of Abercorn, on a long lease. Its extent may be estimated from the fact that it has a circumference of forty miles, and embraces within its ample space, besides the large grazing-farms of Galovy and Camdanoch, Benalder, with its numerous corries. The Marquis, upon obtaining his lease, threw the farms once more into forest, and introduced new herds of deer. It is said that not less than from 9,000 to 10,000 sheep could be kept on this extent of land, which is famous for the richness of its pasture—has now, after a very few years’ preservation, a stock of more than 2,000 red deer—and which, surrounded as it is by the forests of Mar, Athol, Breadalbane, Gaick, the Monadh-Liadh, and Invereshie, must rapidly increase its present numbers—Ardverikie is about 37 miles from Fort-William, 16 from Dulmheny the nearest post, and 10 from the parish church of Laggan. The road from Fort William to Laggan crosses the mouth of Glennevis, and passes the old castle of Inverloch, still pretty entire. Running through Torlundy-moss, at the base of Ben-Nevis, it proceeds through a country little cultivated, but apparently susceptible of much improvement. Only here and there occurs a rig of corn or of potatoes, with a straggling cot-house nestled in a forest of peat-stalks. At Span-bridge, 9 miles on the way, the road enters Glen-Spean. From Spean, as far as Tullish, the strath is well-cultivated. The Spean-water winds through a rocky channel, occasionally hidden by groves of birch and oak. Bounded on the north by the hills of Achnavite and Reinamagach, and on the south by the high hills of Unaehan, Lianachan, and Ben-Chinaig, Strathspean presents a landscape not often surpassed in beauty. From Tullish the road passes through a district exceedingly barren: grey rocks and patches of luxuriant heather, thrown about and intermingled as if from the hand of a sower, form the base-work of the scenery. In a drive of 9 miles some three houses only are to be seen, and two of the three are shepherds’ booths. A mile or two from the west end of Loch Laggan, the road enters Badenoch. The drive along the north shore is most delightful. The hills slope abruptly down to the lake, and for several hundred yards up, the hill-sides are covered with weeping birches, fantastically-shaped oaks, and mountain-ashes.

ARDVOIRLICH. See EARN (Loch).

ARDVRAICK. See ASSINT.

ARDWALLUM, a post-office station, subordinate to Stranraer, Wigtonshire.

ARDWELL, an estate in the parish of Stonykirk, Wigtonshire. It comprises a bay, a headland, and other places of its own name, and is a centre of influence to a considerable surrounding district; and at Ardwell inn is a post-office. See article STONYKIRK.

ARGYLE, a district of Argyleshire. It is separated from Lorn by Lochs Melfort, Avicb, and Avc, —from Knapdale, by Loch Gilp and the Crinan Canal,—and from Cowal, by Loch Fyne. The name Argyle is said to be derived from *Earra Gheidheal*, ‘the country of the Western Gael;’ and certainly this district is well entitled to the name, both from the eminent grandeur and romance of its highland scenery, and from the number and prominence of its old historical associations. See ARAY (THE),

and INVERARY. Population of the district in 1831, 17,658; in 1851, 17,219. Houses 2,862.

ARGYLE'S BOWLING GREEN, a group of precipitous, rugged, lofty mountains, occupying the peninsula between Loch Goil and Loch Long, on the east border of Argyleshire. The mountains have more sternness, more savageness, more true sublimity, than any other group in this part of Scotland; and their shoulders and summits look in the distance as if carved and contoured like statuary, and they form a superb sky-line and a magnificent background to the westward view from all the bosom and most of the shores of the upper frith of Clyde. See **LONG (LOCH)**, and **ROSESEATH**.

ARGYLESHERE, an extensive county of the south-west of Scotland. It comprehends several large islands, as well as a considerable portion of the mainland. The latter part is of a very irregular figure; and is bounded on the north by Inverness-shire; on the east by the counties of Perth and Dumbarton, and the frith of Clyde; on the south by the Irish sea; and on the west by the Atlantic ocean. According to Playfair, it lies between 55° 15' and 56° 55' N latitude, and 4° 32' and 6° 6' W longitude, and extends 90 miles from north to south, and, in some places, upwards of 40 miles from west to east. Its area, according to the same authority, is about 2,400 square miles, or 1,536,000 English acres, exclusive of its islands. But this county is intersected by so many inlets of the sea, and has as yet been so imperfectly surveyed, that no correct estimate can be formed of its extent. Dr. Smith, in his 'Agricultural Survey of Argyleshire,' estimates its utmost length, viz. from Loch Eil to the mull of Kintyre, at 115 miles; and its breadth from Ardnamurchan to the source of the Urchay, or Orchy, at 68 miles. He also estimates the superficial area, exclusive of the islands, at 2,735 square miles; while Sir John Sinclair has calculated it at only 2,260 square miles. The islands belonging to this shire have a joint superficial area, according to Dr. Smith, of 1,063 square miles; and, according to Sir John Sinclair, of 929 square miles; making a total area, according to the former, of 3,798; and, according to the latter, of 3,189 square miles, or 2,002,560 English acres, being one-tenth of the whole surface of Scotland. These admeasurements must be regarded of course as mere approximations to the actual area both of mainland and islands; nor, until the Trigonometrical Survey of Scotland is published, is it worth while to attempt their rectification from existing materials.

The northern division of the mainland of the county is cut off by Loch Linnhe, and contains the districts of Lochail, Ardgour, Sunart, Ardnamurchan, and Morvern; and the rest of the mainland comprises the five divisions of Lorn, between Loch Linnhe and Loch Awe,—Argyle, between Loch Awe and Loch Fyne,—Cowal, between Loch Fyne and the Frith of Clyde,—Knapdale, between the Crinau Canal and the Lochs Tarbert,—and Kintyre, all south of the Lochs Tarbert. The islands, with the exception of a few small ones in the Clyde, lie in three divisions:—1. Mull, together with Canna, Rum, Muick, Coll, Tiree, Gometray, Ulva, Staffa, Iona, and a number of adjacent islets; 2. The islands of Lorn, the chief of which are Shuna and Lismore within Loch Linnhe, and Kerrera, Seil, Easdale, Luing, Shuna, Lunga, and Scarba, very near the western coast; and, 3. Jura and Islay, together with Colusay, Oronsay, Gigha, and some small adjacent islets. But the whole county is politically divided into six parts:—1. Mull, comprehending the districts of mainland north of Loch Linnhe and the Mull group of islands; 2. Lorn, comprehending the

mainland division of Lorn and the Lorn islands; 3. Argyle, or Inverary, identical with the mainland division of Argyle; 4. Cowal, identical with the mainland division of Cowal; 5. Kintyre, comprising the peninsula and islets of Kintyre, and part of Knapdale; and 6. Islay, comprehending the Jura and Islay group of islands, and part of Knapdale.

The surface of a large portion of this great county is either gradually picturesque or brilliantly romantic; and very much of the mainland is an alternation of bleak barren moorlands, rugged chains of mountains, deep glens, winding inlets of the sea, and extensive sheets of inland water. The northern and eastern parts are peculiarly bleak, rugged, and mountainous, but interspersed with narrow and sheltered glens; and the western section is very irregular in its outline, and deeply indented by large bays or lochs. The greater proportion of what may be called arable land is composed of the level tracts along the coasts. About one-eighth part of the surface is under cultivation. The soil, according to Playfair, consists of the following varieties: "1. Gravel mixed with vegetable mould, occurring chiefly in the more lofty mountains, and along the banks of the rivers which have their sources in these mountains. 2. Peat-moss, occupying the extensive moors and low grounds, from which the water does not flow freely. 3. Decayed limestone. 4. Decayed slate mixed with coarse limestone. Of the two last, the former is a light soil, the latter more stiff; but both are fertile, and found in tracts not greatly elevated above the level of the sea. They form the great mass of the soil in the fertile districts of Mid-Lorn, Nether-Lorn, Craignish, &c. 5. A barren sandy soil, originating from freestone, or micaceous schistus, prevalent in the westerly parts of the mainland, and in some of the islands. Besides these, other kinds of soil are found in this county; and sometimes several species graduate insensibly into one another. In general a light loam mixed with sand, on a bottom of clay or gravel, prevails. On the acclivities of the hills, the most common soil is a light gravel on till. In the lower grounds, there is sometimes a mixture of clay and moss, and sometimes a coat of blaek mossy earth. The soil appropriated to pasture is partly dry, and partly wet and spongy; a considerable proportion of what is either flat or hilly is covered with heath. The summits of the highest hills are generally bare and barren rocks."

Some of the mountains are vast isolated masses; but others form ranges and groups, many constitute the main surface of entire districts, and not a few present such competing appearances of height, massiveness, and striking feature as make it difficult for a topographer to select any one in preference to others for specimen description. Some of the loftiest which have been measured are Ben-Cruachan, between Loch Etive and Loch Awe, 3,669 feet; Benmore, in Mull, 3,168 feet; Cruach-Lussa, eastward of Loch-Swin, 3,000 feet; Beden-na-Bean, north of the head of Loch Etive, 2,720 feet; the Paps of Jura, 2,580 feet; Buachaille-Etive, overhanging Glen-Etive, 2,537 feet; Ben-na-hua, on the north side of Loch Linnhe, 2,515 feet; Ben-Arthur, or the Coblher, at the head of Loch Long, 2,389 feet; Ben-More in Rum, 2,310 feet; and Ben-Tarn, south of Loch Sunart, 2,306 feet.

The principal streams are the Urchay or Orchy, and the Awe; the former flowing into, the latter flowing from Loch Awe. There are a multitude of minor streams, more distinguished by the romantic beauty of their course, than the volume of their water or their length of course. Loch Awe is the principal inland lake. See articles **AWE (LOCH)**,

and Orchny. The total area of the fresh water lakes is about 52,000 square aeres. The extent of marshy and mossy ground must be very great. Natural woods and plantations cover about 50,000 aeres.

Limestone abounds in many parts of Argyleshire, and seems to form the whole body of the large rich island of Lismore, and there forms a durable cement under water. Roofing-slates of excellent quality form the body of the islands of Easdale, Luing, and Seil, and also form a great tract of rock at Ballachulish in Appin, and are very extensively quarried at both localities. Marble exists in various quarters; and granite is quarried near Inverary. Veins of lead are frequent in the limestone and other strata; mines of this metal are wrought at Strontian, at Tyndrum, and in Islay; and in the latter island a vein of copper is wrought, and the same mineral has been found at Kilmartin. There is abundance of plumb-pudding stone at Ohan, Dunstaffnage, and northwards along the coast. The species of earth, called strontites, or strontian, was first discovered in the district of Ardnamurchan in 1791. Coal is wrought near Campbellton, and also occurs in the island of Mull. Granite forms the great mountain-masses in the north-east part of the county; but mica-slate predominates in the geological features both of the mainland and isles; an extensive tract of porphyry occurs on the north side of Loch Fyne; and Hoetztrap prevails in a few districts.

The climate of Argyleshire on the whole is mild, but excessively humid. In the north-eastern quarter, where the general elevation is greatest, it is often very cold. The principal branch of rural industry is that of rearing cattle and sheep. The quantity of grain produced bears a small proportion to the area. Oats are the principal grain raised, but a large import of meal is required for the home-consumption. Potatoes are very extensively cultivated, the poorest shieling having uniformly attached to it a small patch of potato-ground. The cattle reared here are of a small size, but highly esteemed in the markets of the South, to which they are exported in immense numbers. The sheep are chiefly of the Linton or blaek-faced breed; and have on the mainland displaced the horned cattle in most farms. Red deer are still found in some of the forests; and grouse and ptarmigans are plentiful.

The manufactures of this county are not great. A large quantity of kelp used formerly to be annually made along the shores, but it has been driven out of the market by foreign barilla. The fisheries, however, on the coast, and particularly in the lochs, are productive and improving. The two principal fishing-stations are Inverary and Campbellton; and large quantities of herrings are caught and cured at various stations along the coasts, and on the shores of the different lochs. Some leather is manufactured; coarse woolen yarns, stuffs, and stockings, are still made to a considerable extent; and at Bunawe and in Islay are valuable manufactures of iron. The general industry of the country, too, in getting up all possible produce for the provision markets of Greenock, Glasgow, and the places communicating with them, is very great, and has been amazingly stimulated by steam navigation. No similarly peopled region in any other part of Britain is so pervasively and ramifiedly plied with steam-vessels, and the effect of this so early as 1832, when the number of steam-vessels regularly plying in it was scarcely one half of the number at present, was so remarkable as to draw the following remarks from the Messrs. Chambers,—in their Gazetteer of Scotland:—"It is evident, from the peculiar form of Argyleshire, that it will always owe as much of the benefit arising from a ready communication between

its near and distant parts, to improvements in water carriage, as to any extension of that by land. The difficulty, indeed, of forming roads in a district so serrated by the sea, and so blocked up by chains of hills, is almost insurmountable; hitherto there have been only two or three roads in the county, skirting along the banks of the lochs. The very barrier, however, which mainly prevented communication in the days of our fathers, has turned out to be the highway in our own. By the never-to-be-sufficiently-admired spirit of the city of Glasgow, about 20 steam-vessels are constantly employed in conveying passengers and goods to and fro, throughout the country, and in transporting the country-produce to market at that city. The effect of this grand engine, even after so brief a period, is incalculable. It happens that, notwithstanding the immense extent of the country, there is not a single dwelling-place more than ten miles from the sea, nor a gentleman's seat, (excepting those on the banks of Loch Awe,) more than ten minutes walk from it. Every farmer, therefore, every gentleman, finds occasion to employ steam-navigation. When this mode of conveyance was in its infancy, it was generally supposed that the little wealth, bold shores, and scattered population of the county, kept it without the circle in which its adoption was to become beneficial. It came, however, to be attempted; and there is not now a loch, bay, or inlet, but holds a daily, or at least commands a weekly, communication with the lowlands and the several districts of the country. By this means, the farmers—even upon the smallest scale—are encouraged to fatten stock which they would never otherwise think of fattening; the fattening of stock, again, causes them to improve their arable land; the extra-profits enable them to buy luxuries which, in their turn, communicate sentiments of taste, and open the mind to liberal ideas. The comparative frequency, moreover, of their visits to the lowlands causes the speedier introduction of modern and improved systems of agriculture. Steam-boats are, in short, at once the heralds and the causes of every kind of improvement in Argyleshire; it is no hyperbole to say, that they have in ten years raised the value of land within the county twenty per cent. Every thing connected with this invention, so far as Argyleshire is concerned, bears a degree of romantic wonder strangely in contrast with its mechanical and common-place character. It accomplishes, in this district, transitions and juxtapositions almost as astonishing as those of an Arabian tale. The Highlander, for instance, who spends his general life amidst the wilds of Cowal, or upon the hills of Appin, can descend in the morning from his lonely home, and setting his foot about breakfast-time on board a steam-boat at some neighbouring promontory, suddenly finds himself in company, it may be, with tourists from all parts of the earth; he sits at dinner between a Russian and an American; and, in the evening, he who slept last night amidst the blue mists of Lorn, is traversing the gas-lighted streets of Glasgow, or may, perhaps, have advanced to Edinburgh itself, the polished, the enlightened, the temple of modern intelligence. Reversing this wonder, he who has all his life trod the beaten ways of men, and never hut in dreams seen that land of hill and cloud whence of yore the blue-hbonneted Gael was wont to descend, to sweep folds or change dynasties, can stand in the light of dawn amidst the refined objects of a capital, and when the shades of night have descended, finds himself in the very country of Ossian, with the blaek lake lying in imperturbable serenity at his feet, and over his head the grey hills that have never been touched by human foot. Steam-boats, it may be said, bring the most dissim-

lar ideas into conjunction,—make the rude Gael shake hands with the most refined Lowlander,—and cause the nineteenth and the first centuries to meet together. No such lever was ever introduced to raise and revolutionize the manners of a people, or the resources of a country.”

Previous to the abolition of the feudal system, in 1745, the obstacles to improvement either in agriculture or manufactures were quite insuperable in this district of Scotland. The abolition of that system,—the conversion of corn rents, or rents in kind and services, into money rents,—the suppression of smuggling,—the execution of the Caledonian and Criuan canals,—the formation of excellent lines of road throughout the county under the auspices of the parliamentary commissioners,—the more general diffusion of education,—and the introduction of a system of farming better adapted to the character and capabilities of the soil and country,—have all contributed to the improvement of this interesting district. But the main impulse has undoubtedly been given to industry in this quarter of the country by the introduction of steam-navigation, and the reciprocal intercourse which has consequently taken place between all parts of Argyleshire and the manufacturing districts of the west of Scotland.

The principal roads in Argyleshire are, 1st, the road eastward across Lochiel, being part of the communication from Arasay to Fort-William; 2d, the road eastward from Ardnamurchan to Strontian and Coran Ferry, leading thence to Fort-William and the north sides of Loch Leven; 3d, the road southward and southward from Ballachulish, along the coast of Appin and Ardochattan, to Loch Etive; 4th, the road eastward and southward from Ballachulish, through Glencoe and Glenorchy, to Tyndrum and Dalmally; 5th, the road eastward from Oban, by Ben Cruachan and Dalmally, to Tyndrum, leading thence to Stirling and Dumbarton; 6th, the road southward from the preceding at Taynult up both sides of the middle and upper parts of Loch Awe; 7th, the road southward from Dalmally to Inverary; 8th, the road eastward from Craignish to Loch Fyne; 9th, the road southward from Inverary to Lochgilphead; 10th, four roads eastward across Cowal, together with coast roads round much of that district; 11th, the roads along the coasts of Knapdale and Kintyre, connecting Lochgilphead and Ardrishaig with Tarbert and Campbellton; and 12th, considerable lines of road in Mull, Jura, and Islay. During the heat of the railway excitement, projects were entertained for constructing a railway eastward from Oban to Tyndrum, and thence to the head of Lochlomond, and for constructing another northward from that line to Loch Leven, and thence to Fort-William, and along the great glen of Scotland; and very sanguine hopes were cherished respecting the success of the former, which it was computed would extend 46 miles, and cost, for a single line of rails, under 47,000 a-mile, or in total £322,000. The Caledonian canal belongs for a brief way to the north end of Argyleshire; and the Crinan canal insulates Knapdale and Kintyre from Argyle proper and Lorn.

Inverary is the capital of Argyleshire; Campbellton and Oban are the other principal towns; and these three places are burghs, and unite with Ayr and Irvine in Ayrshire, in sending a member to parliament. The other towns and principal villages are Tobermory in Mull, Lochgilphead at the boundary between Argyle and Knapdale, Ardrishaig, 2 miles south of the former, Tarbert at the boundary between Knapdale and Kintyre, Bowmore in Islay, and Dunoon in Cowal. Some of the principal mansions are Inverary Castle, the Duke of Argyle;

Kildalloig, Sir John Elyton Campbell, Bart.; Strontian, Sir James Miles Riddell, Bart.; Fassfern, Sir Duncan Cameron, Bart.; Dunstaffnage, Sir Angus Campbell, Bart.; Kilmory, Sir John Powlett Orde, Bart.; Sontbhall, John Campbell, Esq.; Kingierloch, Charles H. Forbes, Esq.; Craignish; Ardgarton; Dunderraw; Ardinglass; Kilmartin; Strachur; Saddle; Kilfinnau; Sanda; Lazie; and Askinsh. The county sends a member to parliament; and its constituency in 1864 was 1,914. The valued rent in 1751 was £12,466 5s. 10d. sterling. The annual value of real property, as assessed in 1815, was £227,493; and in 1843, £261,920. The total rental for 1847 was £268,079. The valuation for 1864-5 was £345,179; and the assessment for that year, for police and other purposes, was 2½d. per £1.

Previous to the equalization of weights and measures, the Inverary boll of grain contained 4 firlots 7½ per cent. above the standard, or 6 bushels, 1 peck, 9 pints, 10 cubic inches English; and the boll of meal, at Inverary, 8 stone; at some other parts 9 stone; and at Campbellton 10 stone. The Campbellton potato peck weighed 56 lbs. avoird., and measured 9 English wine gallons; while the Inverary peck measured only 6½ gallons. The customary pint contained 109·87 cubic inches; the pound at Campbellton 16 oz., and at Inverary, 24; the stone of butter, cheese, hay, lint, tallow, and wool, was 24 lbs. avoird.; and the barrel of herrings 32 gallons English.

The population of the county in 1801, was 81,277; in 1811, 85,541; in 1821, 97,316; in 1831, 100,973; in 1841, 97,371; in 1861, 83,859. Inhabited houses in 1861, 14,636; uninhabited, 639; building, 117. The slow increase of the population from 1801 till 1831, and the subsequent fluctuation of it, may be attributed partly to the limited nature of its territorial resources; partly to the extensive emigration which has taken place from this county chiefly to Canada; and partly to the system so generally pursued by the large proprietors of throwing several small farms into the hands of one tenant, and discountenancing any attempt at minute subdivision of the soil. The number of crimes committed in Argyleshire, in 1863, was 101; the number of persons confined in Inverary and Campbellton jails, 61 and 95; and the average duration of their confinement, 28 and 31 days. The number of parishes assessed for the poor, in 1863, was 30; the number of registered poor, 3,856; the number of casual poor, 727; the sum expended on the registered poor, £23,019; the sum expended on the casual poor, £829.

One of the synods of the Established church bears the name of Argyle, and comprises six presbyteries, and has jurisdiction over all the parishes of Argyleshire, except one, and over five of the six parishes of Buteshire; and in 1865 there were within the bounds of its presbyteries 57 parochial charges, (inclusive of quoad sacra parishes,) and 14 chapels of ease. The Free church also has a synod of Argyle, comprising 4 presbyteries; and in 1865 there were within its bounds 40 churches and 14 preaching stations, and the yearly sum raised in connexion with the whole was £10,633 8s. 0½d. The Scottish Episcopal church has a diocese of Argyle and the Isles, comprising fourteen charges, eight of which, as also the residence of the bishop, are in Argyleshire. There are likewise in this county seven places of worship belonging to the United Presbyterian church, two belonging to the Reformed Presbyterian church, two in connexion with the Congregational Union of Scotland, and two belonging to the Roman Catholic community. In 1837, there were 68 parochial schools, attended by 3,774 scholars; 4 other parochial schools, the at-

tendance at which was not reported; 130 private schools, attended by 6,765 scholars; and 20 other private schools, the attendance at which was not reported.

Argyleshire was the scene of some of the great early events which moulded both the political and the ecclesiastical destinies of Scotland. See the articles DALRIADA and IONA, and the historical part of the INTRODUCTION. It was much infested, in ancient times, also, by the Norsemen and other predatory intruders, and was, in consequence, the scene of numerous battles and heroic achievements. The deeds of Fingal and his heroes, too,—if we may repose any confidence in the voice of tradition—were mostly performed in this district; and numerous monuments of the remotest antiquity still remain to demonstrate the warlike spirit of its former inhabitants. In the middle ages, the Macdougals of Lorn held sway over Argyle and Mull; while the Macdonalds, Lords of the Isles, were supreme in Islay, Kintyre, and the southern islands. These two chiefs were almost independent thrones, until their power was broken by the proceedings of James III., by the transference of Lorn through means of marriage to the Stewart family, and by the erection of the earldom of Argyle, in 1457, in favour of Campbell of Lochawe. See the historical part of the article HEBRIDES. The Campbells, under the able leading of their line of distinguished chiefs, the "Maccallum-More," soon got high ascendancy, throughout the county and beyond it, and thoroughly defeated an insurrection of the Macdonalds in 1614 against it, and have perfectly succeeded in maintaining it to the present day,—inasmuch that an enormous proportion of the land is the property of Campbells, while their two chief men, the descendants of Campbell of Lochawe and Campbell of Glenorchy, the Duke of Argyle and the Marquis of Breadalbane, not only rule the county, but are among the most powerful of the nobility of Britain. The dukedom of Argyle was created in 1701; and the Duke of Argyle is also Marquis of Lorn and Kintyre, Earl of Campbell and Cowal, Viscount of Lochow and Glenisla, and Baron Inverary, Mull, Morvern, and Tiree, and also has two titles in the peerage of the United Kingdom.

The antiquities of Argyleshire are many and various. The chief ecclesiastical ones are those of Iona, the priory of Oronsay, the priory of Ardcathatan, and the church of Kilmun. Some of the most remarkable civil ones are Duustaffnage castle, and Dunely castle, in Loch Etive, Kilchurn castle at the east end of Loch Awe, Artornish castle on the sound of Mull, Mingarry castle in Ardnamurchan, Dumoon castle on the east coast of Cowal, and Skipnish castle in Kintyre. Old "duns" or Danish forts occur in different parts of the coast. Druidical circles, more or less complete, are traceable in some places. Among natural curiosities may be named some singular caves in the parishes of Strachur and Lochgoilhead, and the magnificent basaltic colonnades of Ulva and Staffa.

ARIENAS (Loch), a small inland sheet of water in the district of Morvern, Argyleshire. See ALINE (Loch).

ARINANGOUR, a village in the island of Coll, Argyleshire. It stands about the middle of the coast, and has a pretty safe harbour, with a pier. The entrance of the harbour, however, is obstructed with rocks. Population of the village, about 180.

ARINISKLE-FANK. See KINLOCH-AILART.

ARISAIG. See ARASATO.

ARTTY. See INVERARITY.

ARKEG. See ARCHAIO.

ARKLE, an isolated, tapering, and picturesque

mountain, among the highlands of Edderacbillis in Ross-shire.

ARMADALE, a post-town in the parish of Bathgate, Linlithgowshire, 2½ miles west of Bathgate. It has a station on the Bathgate and Airdrie railway, an Established church, a Free church, an Episcopalian church, and a Wesleyan chapel. Population in 1861, 2,504. Houses, 354.

ARMADALE-CASTLE, the seat of Lord Macdonald, about 1½ mile from Ardaras bay, in the parish of Sleat, and island of Skye, Inverness-shire. It is a modern Gothic oblong structure, with an octagonal tower on each side of the doorway, but comprises only a third of the original design of the building; and it stands on a gentle slope, amid wooded pleasure-grounds, and commands an extensive view of the sublime and beauteous seaboard of Glenelg, Knoydart, Morar, and Arasaig.

ARMIDALE, a rivulet, a bay, a fishing-village, and a headland, on the coast of the parish of Farr, to the west of Strathly, Sutherlandshire. The rivulet is only 4 or 5 miles long, but drains some of the best land in the parish; and the bay is one of the safest landing-places on the north coast.

ARNATE. See MOULIN.

ARNCROACH. See CARNBEE.

ARGASK, a parish in the counties of Perth, Kinross, and Fife. Its post-town is Kinross. It is bounded by the parishes of Strathmiglo, Abernethy Dron, Forgandenny, Forteviot, and Orwell. It has a somewhat circular form, and is about 4 miles in diameter. Its surface is wavingly and roundedly hilly, lying among the Oehills, with summits of from 600 to 800 feet above sea-level, varied and pleasing in appearance, and commanding extensive and beautiful prospects. The landowners who have more than £50 a-year of land-value amount to twenty-eight; and ten of them are resident. There are two small villages, Damhead and Dunerivie; and there are four corn-mills and a saw-mill. The little river Farg and the road from Edinburgh to Perth pass through the interior. See GLENFARG. Population in 1831, 712; in 1861, 705. Houses, 161. Assessed property in 1865, £6,612 1s. 4d.

This parish was in the presbytery of Perth, but is now in that of Kinross, and in the synod of Fife. Patrons, Burt and Wardlaw. Stipend, £178 19s. 10d. with a manse and glebe. Schoolmaster's salary, £50, with about £20 fees. The parish church was built in 1806, and enlarged in 1821, and has 380 sittings. There is a Free church; and the yearly sum raised in connexion with it in 1865, was £80 11s. There are also an endowed school, and an adventure school. The original church of Argask was a chapel built for the accommodation of the family of Balvaire and their dependants, and was granted in 1282 to the Abbey of Cambuskenneth by Gilbert de Frisley to whom the barony of Argask or Forgie belonged.

ARNHALL. See FETTERCAIRN.

ARNIFOUL, a village in the parish of Glamis, Forfarshire. Population, 73.

ARNISDALE, a village in the parish of Glenelg, Inverness-shire. It is situated on the side of Loch Hourn, amid sublime scenery, about 13 miles south of the village of Gleuelg. A missionary of the Royal Bounty preaches here every third Sabbath. Population, about 600.

ARNISH-POINT. See STORNOWAY.

ARNISTON. See TEMPLE and BORTHWICK.

ARNOLD'S SEAT. See TANNADICE.

ARNOT. See SROW.

ARNPRIOR, a village in the part of the parish of Kippen which belongs to Perthshire. Population 96.

ARNTULLY, an estate and a village, in the parish of Kinclaven, Perthshire. The estate has recently undergone great improvements. The village is situated 8 miles north of Perth, and inhabited by linen-weavers, and is in a very declining condition. Population, 159.

AROS, a streamlet, a bay, a post-office station, and an old castle, on the east coast of the island of Mull, 9 miles south-south-east of Tobermory and 18 north-north-west of Auchnacraig ferry. A road leads hence 4 miles to the head of Loch-na-Keal on the west side of the island, and thence 7 miles to Laggan-Alva, the most convenient point of embarkation for Iona and Staffa. The bay of Aros receives the rivulet, and is capacious and wildly picturesque. The old castle crowns a basaltic promontory on its north side, and was a residence of the Lords of the Isles. "Only two walls and part of a third are standing; but they present an interesting memento of the rude and gloomy grandeur of former days."

ARRADOUL. See RATIVEN.

ARRAN, an island, in the frith of Clyde, forming part of the shire of Bute. It lies in the mouth of the frith, or in the centre of the large bay of the Northern channel formed by the peninsula of Kintyre on the west, and the Ayrshire coast on the east; from the former it is distant about 6 miles, and is separated by the sound of Kilbannan; from the latter, the average distance is about 13 miles, and the channel betwixt them is distinguished from the sound on the west of the island as being the frith of Clyde. From the island of Bute on the north, the least distance is 5 miles. Its greatest length, from the Cock of Arran, on the north, to the Struey rocks on the south, is about 26 miles; and the greatest breadth, from Clachland's point on the east to Dri-modune point on the west, is 12 miles.* The general outline is that of an irregular ellipse, little indented by bays or inlets. The largest indentation is that of Lamash bay betwixt Clachland's point and King's cross point, on the east coast. Loch Ranza, near the Cock, or northern extremity of the island, is a very small inlet. Brodick bay, a little to the north of Lamash bay, between Corriegill point on the south, and Merkland point on the north, affords good anchorage in about 5 fathoms water, but little shelter to vessels, especially in a north-east gale. Ineluding the islet of Pladda on the south, and Holy isle in the mouth of Lamash bay, the area of Arran is about 100,000 Scots acres, of which 11,179 are arable, and 613 are under plantations. There is also a considerable extent of natural coppice-wood on the north-west and north-east coast. The south end of the island is remarkably destitute of any thing approaching to plantation, and even of copsewood.

The island of Arran comprises only two parishes, —Kilbride on the east, and Kilmorie on the west; but it is topographically divided into the five districts of Brodick, Lamash, Southend, Shiskin, and Loch Ranza.

The Brodick district is that portion of the island

* Headrick estimates the length of this island, measuring from N. E. to S. W., at 34 or 35 miles; and its breadth as varying from 15 to 20 miles. Mr. Jardine states its length to be only 21 miles, and its breadth 9. Professor Jamieson, in his 'Outline of the Mineralogy of Arran,' estimates its length at 32, and breadth at 12 miles. The writer of the article Arran, in the 'Penny Cyclopaedia,' vaguely estimates its length from near Loch Ranza, in the N. N. W., to Kildonan, in the S. S. E., at "somewhat more than 20 miles; and its greatest breadth at 12." The Rev. Angus Macmillan, minister of Kilmorie, in his evidence before the Commissioners of Religious Instruction, [Report VIII. p. 470.] states the greatest length of his parish to be upwards of 30 miles. The admeasurements in our text have been given after a careful examination and comparison of the best maps and reports on the island.

most frequently visited by tourists, and most generally resorted to for sea-bathing. It lies around the bay of the same name, and extends northward to South Sannox. Its northern part is composed of the towering Goatfell, and its brother-mountains; and the beautiful glens or mountain-ravines called Glen Rosa or Rossie, Glen Sherrig, Glen Shant, and Glen Cloy, occur here. The base of the mountains here approaches close to the sea, so that the full effect of their altitude—which in Goatfell is 2,865 feet†—imposes itself on the eye of the spectator from the sea or beach, while they are constantly varying their appearance, as seen from any quarter, under the accidents of weather, light, and shade. The lower part of Goatfell is composed of red sandstone; then follows mica-slate, which is surmounted by a pyramidal mass of granite. The view from the summit embraces the coast of Ireland from Fairhead to Belfast loch; and the mountains of Isla, Jura, and Mull. The ascent may be accomplished, with the aid of a guide, in about two hours; and is best achieved from the inn at Brodick. The natives call this mountain *Goadh Bheinn*, or *Ben-Ghaoll*, that is 'the Mountain of Winds.' To the eye of a spectator on the summit of Goatfell—which is the loftiest peak in this granitic district—the neighbouring mountains present a wild assemblage of bare ridges, yawning chasms, abrupt precipices, and every fantastic form of outline, while the profound gulfs between them are darkened by eternal shadow. The scenery here is unrivalled in its kind, except perhaps among the Cuchullin Mountains in Skye.—On the north side of Brodick bay, adjoining the village, is the castle of Brodick, one of the seats of the Duke of Hamilton. It is an old irregular pile of building, of secluded aspect, but in good repair. The grounds around it are well-wooded; and the majestic heights of Goatfell, and Bennis [2,598 feet,] rise in the immediate background. This stronghold was surprised by James Lord Douglas, Sir Robert Boyd, and other partisans of Bruce in 1306, demolished in 1456, rebuilt by James V., and garrisoned by Cromwell. Cromwell's garrison, to the number of 80 men, it is traditionally related, were surprised and cut off by the natives.—On the opposite side of the bay, and at about one mile's distance from the sea, in Glen Cloy, is Kilmichael, the seat of John Fullarton, Esq., whose immediate ancestors received this estate, and a farm on the west side of the island, from Robert Bruce, for services rendered to him while in concealment in this island. Martin says: "If tradition be true, this little family is said to be of seven hundred years standing. The present possessor obliged me with the sight of his old and new charters, by which he is one of the king's coroners within this island, and as such, he hath a halbert peculiar to his office; he has his right of late from the family of Hamilton, wherein his title and perquisites of coroner are confirmed to him and his heirs. He is obliged to have three men to attend him upon all public emergencies, and he is bound by his office to pursue all malefactors, and to deliver them to the steward, or in his absence to the next judge. And if any of the inhabitants refuse to pay their rents at the usual term, the coroner is bound to take him personally, or to seize his goods. And if it should happen that the coroner with his retinue of three men is not sufficient to put his office in execution, then he summons all the inhabitants to concur with him; and immediately they rendezvous to the place, where he fixes his coroner's staff. The perquisites due to the coroner are a firloft or bushel of oats, and

† This is Dr. Macculloch's admeasurement. Professor Playfair estimates its height at 2,945; Mr. Galbraith at 2,863 feet.

a lamb from every village in the isle; both which are punctually paid him at the ordinary terms." [Description of the Western Islands.] Fergus Macloy or MacLouis, or Fullarton's, charter is dated Nov. 26, 1307. A number of cottages and villas are scattered along Brodick bay, which has become a favorite watering-place during the summer. Dr. Macculloch speaks of it in terms of unwonted rapture. "Every variety of landscape," he says, "is united in this extraordinary spot. The rural charms of the ancient English village, unrestricted in space and profuse of unoccupied land, are joined to the richness of cultivation, and contrasted with the wildness of moorland and rocky pasture. On one hand is the wild mountain torrent, and on another, the tranquil river meanders through the rich plain. Here the sea curls on the smooth beach, and there it foams against a rocky shore, or washes the foot of the high and rugged cliffs, or the skirts of the wooded hill. The white sails of boats are seen passing and repassing among trees,—the battlements of the castle, just visible, throw an air of ancient grandeur over the woods, and, united to this variety, is all the softness and all the rudeness of the Alpine landscape which surrounds and involves the whole." [Highlands and Western Isles, vol. ii. p. 29.] There is regular steam-communication between Brodick and the port of Ardrossan in Ayrshire, and also between Brodick and Glasgow, both by way of Rothesay and by way of Largs. The steamers, in the latter case, make the passage in about 5 hours, and after arriving at Brodick from Glasgow, and discharging their passengers there, they proceed round to Lamash bay, where they lie during the night, returning to Brodick for passengers at an early hour next morning.

Lamash district, to the south of Brodick district, has but a small extent of plantation within it, and no hills exceeding 1,200 feet in altitude. The village is in the form of a crescent facing the bay and the Holy isle, and backed by wooded heights, beyond which the green and rounded summits of the hills in this district are seen. The church is at the southern extremity of the village, which is $4\frac{1}{2}$ miles distant from Brodick, and 4 miles north of Whiting bay. See article KILBRIDE.—"The bay of Lamash," says Headrick, "may be about 3 miles, in a right line, from its northern to its southern entrance; and at its centre it forms a sort of semicircle of nearly 2 miles across, having the Holy isle on one side, and the vale of Lamash on the other. The northern wing projects nearly towards north-east, while the southern projects nearly towards south-east, giving to the whole a figure approaching to that of a horse-shoe, which prevents the waves of the ocean from getting into the interior bay. The two inlets may be about a quarter of a mile in breadth at their mouths, and widen gradually as they approach the central bay. The southern inlet is preferred by mariners, because here there is no danger but what is seen. The northern inlet is equally safe to those who know it: but the tails of rocks we have described as projected from Dun-Fionn, and the gradual decrease of altitude of the rocks on the opposite point of Holy isle, cause them to extend a considerable way below the sea, before they sink out of the reach of vessels drawing a great depth of water. But to those who know the channel, there is sufficient depth, at both entrances, for the largest ships of the line. Within, there is good holding-ground, sufficient depth for the largest ships, and room enough for the greatest navy to ride at anchor. In fact, this is one of the best harbours in the frith of Clyde,—if not in the world. In front of the village, Duchess Ann—who seems to

have been a woman of superior capacity—caused a harbour to be built of large quadrangular blocks of sandstone. We may form some idea of the magnitude and solidity of this work, when informed that it cost £2,913 10s. 5d. sterling, at a time when masons' wages are said to have been 8d., and labourers' wages 4d. per day. It is a great pity this building was allowed to be demolished; because its ruins render the village of more difficult access from the sea, than if it had never been constructed." [View, pp. 88—91.] This harbour has now nearly disappeared; a great part of the stones have been carried off to build the new quay a few hundred yards to the north, and the sand has buried a part. The Holy isle is interesting as well for the beauty of its conical form, rising to 1,000* feet, as for the view from its summit, and the striking character of its columnar cliffs, which consist of clinkstone on a base of red sandstone, with a stratum of white sandstone interposed. "The ascent," says Macculloch, "is rendered peculiarly laborious; no less from the steepness and irregularity of the ground, than from the tangled growth of the *Arbutus uva ursi* by which it is covered. The whole surface scarcely bears any other plant than this beautiful trailing shrub; peculiarly beautiful when its bright scarlet berries are present to contrast with the rich dark green of its elegant foliage. The columnar cliffs, which lie on the east side, though having no pretensions to the regularity of Staffa, are still picturesque, and are free from the stiffness too common in this class of rock; consisting of various irregular stages piled on each other, broken, and intermixed with ruder masses of irregular rocks, and with verdure and shrubs of humble growth. Beneath, a smooth and curved recess in a mass of sandstone, produces that species of echo which occurs in the whispering gallery of St. Paul's, and in other similar situations. There are no ruins now to be traced in Lamash; but Dean Monro says that it had 'ane monastery of friars,' founded by John, Lord of the Isles, 'which is decayit.' That was in 1594; and what was then decayed, has now disappeared. He calls the island Molass; and it is pretended that there was a cave, † or hermitage, inhabited by a Saint Maol Jos, who is buried at Shiskin, on the south side of Arran. ‡ It is further said that there was once a castle here, built by Somerdel."—King's Cross, in this district, which forms the dividing headland between Lamash bay and Whiting bay, is said by some to have been the point from whence Robert Bruce watched for the lighting-up of the 'signal-flame' at Turnberry point, on the opposite coast of Ayrshire, which was to intimate to him that the way was clear for his making a descent on the Carrick coast. Other traditions—which are followed by Sir Walter Scott in his 'Lord of the Isles.' [See Canto V. st. 7 and 17.]—represent Bruce as first hailing the supposed signal, 'so flickering, fierce, and bright,' from the battlements of Brodick castle. See TURNBERRY.

Sonthend district stretching from Largsbeg point, the southern extremity of Whiting bay, to Kilpatrick on Drimodune hay, is the most valuable district of the island in agricultural respects. There is here a belt of cultivated land, in some places of considerable breadth, between the shore and the secondary hills of the interior. The scenery is of a milder character than that of any other quarter of the island; but there is no accommodation for bathers

* Mr. Burrel's barometrical admeasurement gave only 891 feet.

† Headrick affirms the existence of and describes this cave See 'View,' p. 80.

‡ An Irish saint of the name of Malaise flourished in the 6th century

in this direction, the only houses being a few farmhamlets and scattered shielings, and the beach being rocky. This district is intersected by two main rivulets, viz. the Torlin or Torrylin, towards the east, and the water of Sliderry towards the west. These streams run nearly parallel to each other, from north-east to south-west, and receive numerous tributary streams in their progress from the secondary mountains towards the sea. Most of the other burns which flow into the sea are merely mountain-torrents, the beds of which are nearly dry except when they are swelled by excessive rains. These burns have cut deep chasms or ravines in the strata; and the main streams have frequently formed delightful valleys, though sometimes of small extent. Towards the head of Glen Scordel, from which the main branch of the water of Sliderry flows, and in several other places, there are vast veins of whinstone, interspersed with innumerable particles of pyrites, which retain their full brilliancy, in spite of exposure to air and the astringent moss-water to the action of which they are subjected. "These," says Headrick, "the people are confident in the belief of being gold; and I confess I was a little staggered, until my ingenious friend, Dr. Thomson, by analyzing a specimen, assured me that the gold was neither more nor less than pyrites of iron."—The islet of Pladda lies opposite Kildonan point in this division. See PLADDA. The ruins of Kildonan castle, a small square fortalice, surmount the sea-land here, but present no historical associations of interest. A large portion of the walls fell about 25 years ago.—Auchinhew burn, in this quarter, presents, according to Headrick, in the upper part of its wild ravine course, a fall or cascade, called Essie-more.—The Struey rocks, further to the west, or Bannan head, are precipitous cliffs of black basalt rising to an altitude of from 300 to 400 feet above a beach thickly strewn with their dissevered fragments. A little to the west of these rocks is a vast cave called the Black cave.—The kirk and manse of Kilmorie are situated in this district, on the Torrylin, where its mouth forms a small harbour for boats. See KILMORIE.

Shiskin district, so called from the little village or hamlet of Shiskin, or Shedog, is chiefly remarkable for the extensive natural caves which occur here in the sandstone rocks close upon the beach. One of these, called the King's cove, is supposed to have given shelter to 'the royal Bruce.' It is situated opposite Portree in Higher Cardel of Kintyre. It is also universally reputed to have been the occasional residence of Fionn,* or Fingal, when he resorted to Arran for the purpose of hunting. "The old people here," says Headrick, "have many ridiculous stories about Fionn and his heroes, which have been transmitted, from a remote period, by father to son,—in their progress becoming more and more extravagant. They believe Fionn and his heroes to have been giants of extraordinary size. They say that Fionn made a bridge from Kintyre to this place, over which he could pass, by a few steps, from the one land to the other. But, what is esteemed ocular demonstration of the gigantic size of Fionn, and sufficient to overwhelm the most obstinate scepticism, the hero is said to have had a son born to him in the cave; and a straight groove, cut on the side of the cave, is shown, which is firmly believed to have been the exact length of the child's foot the day after he was born. The groove is more than

2 feet in length; and, taking the human foot to be one sixth of a man's height, it follows, the child must have been more than 12 feet high the day after he was born! The cave is scooped out of fine-grained white sandstone. A perpendicular vein of the same sandstone has stood in the centre, from which the strata dip rapidly on each side, forming the roof into a sort of Gothic arch, to which the vein above serves the purpose of a key-stone. At the back part of the cave, this vein comes down to the bottom, and forms a perpendicular column with a recess on each side. The northern recess is only a few feet. The southern is of uncertain extent, being gradually contracted in breadth, and nearly closed by rounded stones. The length of this recess is about 30 feet. From the pillar in the back-ground, to the mouth of the cave, exceeds 100 feet. The greatest breadth may be about 49 feet; and the greatest height the same. The mouth has been defended by a rampart of loose stones; and stones are scattered through the cave which seem to have been used as seats. On the column there is a figure cut resembling a two-handed sword. Some think this was an exact representation of the sword of Fionn; others of that of Robert Bruce. To me it appears to be neither one nor other, but a representation of the cross. It stands upon a rude outline representing a mountain, probably Mount Calvary. On each side there is a figure kneeling and praying towards the cross. The sides of the cave exhibit innumerable small figures, equally rude, representing dogs chasing stags, and men shooting arrows at them. They also represent goats, sheep, cattle, and various other animals, though the figures are so rude, that it is seldom possible to ascertain what they represent." Mr. Jamieson [p. 125] thinks these scratches were "made by idle fishermen, or smugglers." Macculloch calls them "casual scratches by idle boys." North of this cave are several smaller caves, which communicate with each other. One of these is called the King's kitchen, another his cellar, his larder, &c. On the south side there is a cave called the King's stable, presenting a larger area than the palace, as the cave of residence is called. The scene from the mouth of these caves, on a fine summer-day, is very beautiful. And sweet it were to sit here—

"When still and dim

The beauty-breathing hues of eve expand:
When day's last roses fade on Ocean's brim,
And Nature veils her brow, and chants her vesper-hymn."

The Blackwater, a considerable stream, here falls into Drimodune hay. A small harbour has been constructed at its mouth, which is the ferrying-place to Campbellton, and from which there is a road across the island, by Shedog, the western side of Craigmvore, Corbie's craig, Glen Ture, and Glen Sherrig, to Brodieck.—The Mauchry burn is another considerable stream descending from Glen Ture, and falling into Mauchry bay to the north of the King's cove. Pennant tells us that this river flows through a rocky channel, which in one part has worn through a rock, and left so contracted a gap at the top as to form a very easy step across. "Yet not long ago," he adds, "a poor woman in the attempt, after getting one foot over, was struck with such horror at the tremendous torrent beneath, that she remained for some hours in that attitude, not daring to bring her other foot over, till some kind passenger luckily came by and assisted her out of her distress!"

The remaining or northern portion of the island forms the Loch Ranza district, extending from Auchnagallen, a little to the north of the Mauchry burn, round, by the Cock of Arran, to Corrie point on the east coast. This is a highly interesting district in

* Fionn means fair-haired; Gael was added to denote his race or nation. Highlanders seldom apply the epithet Gael to Fionn, unless you express doubts concerning his extraction. But they often characterize him by the surname of MacCoul, the name of his father.—Headrick.

point of scenery. The road by the shore presents a succession of beautiful views; and the village or hamlet of Loch Ranza itself is one of the most picturesque spots any where to be found in the western islands. It has a safe harbour formed by a natural inlet of the sea in the mouth of the valley or glen. Pennant, who crossed over to this bay from the Argyle coast, says: "The approach was magnificent; a fine bay in front, about a mile deep, having a ruined castle near the lower end, on a low far projecting neck of land, that forms another harbour, with a narrow passage; but within has three fathom of water, even at the lowest ebb. Beyond is a little plain watered by a stream, and inhabited by the people of a small village. The whole is environed with a theatre of mountains; and in the back-ground the serrated crags of Grianan-Athol soar above."— [Tour to the Western Isles, pp. 191–2.] Lord Teignmouth, who saw Loch Ranza under its winter-aspect, says: "In point of gloomy grandeur no British bay surpasses Loch Ranza. Dark ridges hem it in." We are quite sure that gloomy grandeur is not the common impression left by this scene on the eye and mind of the visitor. While residing here in summer we have often felt the beauty and truth of the sentiment conveyed in the bard's description of the approach of Bruce's little armament to this point of 'Arran's isle':—

"The sun, ere yet he sunk behind
Ben-Gholl, 'the Mountain of the Wind,'
Gave his grim peaks a greeting kind,
And bade Loch Ranza smile.
Tither their destined course they drew;
It seem'd the isle her monarch knew,
So brilliant was the landward view,
The ocean so serene;
Each puny waye in diamonds roll'd
O'er the calm deep, where hues of gold
With azure strove and green.
The hill, the vale, the tree, the tower,
Glow'd with the tints of evening's hour;
The beach was silver sheen;
The wind breathed soft as lover's sigh,
And, oft renew'd, seem'd oft to die,
With breathless pause between.
O who, with speech of war and woes,
Would wish to break the soft repose
Of such enchanting scene!"

Glensannox in this district has been compared to the celebrated Glencoe. "It is," says Macculloch, "the sublime of magnitude, and simplicity, and obscurity, and silence. Possessing no water, except the mountain torrents, it is far inferior to Coruisk in variety; equally also falling short of it in grandeur and diversity of outline. It is inferior too in dimensions, since that part of it which admits of a comparison, does not much exceed a mile in length. But, to the eye, that difference of dimension is scarcely sensible; since here, as in that valley, there is no scale by which the magnitude can be determined. The effect of vacancy united to vastness of dimension is the same in both: there is the same deception, at first, as to the space; which is only rendered sensible by the suddenness with which we lose sight of our companions, and by the sight of unheard torrents. Perpetual twilight appears to reign here, even at mid-day; a gloomy and grey atmosphere uniting, into one visible sort of obscurity, the only lights which the objects ever receive, reflected from rock to rock, and from the clouds which so often involve the lofty boundaries of this valley." No one should visit Arran without attempting to make himself acquainted with the beauty of the coast-scenery from Brodick to Glensannox; and, if time permits, to travel from Sannox to Loch Ranza, through Glen Halmidel, the excursion will not be regretted.—There is a small chapel at Loch Ranza, built about 60 years ago at the expense of the Duke

of Hamilton, on the boundary between Kilmorie and Kilbride parishes, but within the former parish. It is distant, by the road, about 24 miles from Kilmorie church, and about 12 from the boundary of Shisken district. The salary of the minister is £41, secured by a deed of mortification executed by Ann, Duchess of Hamilton, bearing date, 1st April, 1710.

The climate of Arran is moist, but is considered mild and healthy. Sudden and heavy falls of rain in summer and autumn are its greatest disadvantages. The prevailing winds are from the south and the west. Geraniums, myrtles, fuschias, and many other greenhouse-plants stand the winter in the open air at Brodick castle, and at different villas along the coast.—There are no foxes, badgers, or weasels, in Arran; but the brown rat is very destructive, and wild cats may occasionally be seen. Red deer exist in the northern part of the island; and American deer were introduced some years ago into Brodick park. Black and red grouse are abundant; a few pheasants may sometimes be seen; the capercaillie was reintroduced, with vast care, to a lofty and sheltered wood above Brodick castle; the ptarmigan is occasionally seen on the higher mountains; and the bittern occurs in the marshes. Trout are numerous; and fine sea-trout are sometimes taken in the Jorsa and Loch Jorsa.—The botany of Arran is considered rich; and the geology of it is more comprehensive and suggestive than that of almost any other limited tract of land in Europe. Playfair, Jamieson, Neckar, Headrick, Macculloch, Sedgwick, Munreghisou, Nichol, and a host of other geological savans have made Arran the scene of their explorations. But any attempt on our part to describe its rocks and enumerate its fossils could not be done in sufficiently brief space, and would be uninteresting to general readers. But ample information may be had from Macculloch's "Geological Structure of the Western Islands of Scotland," Jamieson's "Outline of the Mineralogy of the Shetland Islands and the Island of Arran," and Ramsay's "Geology of the Island of Arran;" and very pleasing and profitable information in other departments also may be got from Landsborough's "Arran and its Natural History."

The ecclesiastical statistics of Arran will be given in the articles KILBRIDE and KILMORIE; and some other matters will be stated in the articles LAMLASH, GLENSANNOX, RANZA (LOCH), PLADDA, SANNOX, and a number of others. There are only four roads in Arran. One of them goes round the coast; another goes across its centre from Brodick to Blackwater foot; another goes across its southern part from Lamlash to Ben-na-Carrigan; and another connects two of the preceding between Glen Scoradail and Clachan Glen. The roads, particularly on the coast, are in excellent condition; and the means of communication with all desirable parts of the mainland are very abundant. The proprietors of this island are the Duke of Hamilton, the Marquis of Bute, the Hon. Mrs. Westerna, and Fullarton of Kilmichael and Whitefarlane. The Duke is by far the greatest proprietor. His Grace's arable land, in 1813, was 10,228 Scots acres; and his present rental £10,000, arising from 458 farms or possessions. [See a valuable paper, by Mr. John Paterson, in the Prize Essays of the Highland Society, vol. v. pp. 125–154.] Population in 1801, 5,179; in 1821, 6,541; in 1841, 6,241; in 1861, 5,592. Houses, 1,130.

We have already, in the course of this article, had occasion to notice various traditions which exist in Arran respecting Fingal, and, though we are not prepared to assert with Dr. Macculloch that "Fingal was never heard of in Arran till lately," we may

venture to suggest that some of these may owe their origin to the early presence of the Norwegians, called *Fiongall*, or 'white foreigners,' by the Irish annalists. Somerled, thane of Argyre in the 12th century—whose name has also occurred in this article—appears to have been of Scoto-Irish descent. His father Gilliebrede had possessions on the mainland of Argyre, probably in the district of Morvern. When yet a youth, Somerled signally defeated a band of Norse pirates; and, having obtained high reputation for his prowess and skill in arms, was enabled ultimately to assume the title of Lord or Regulus of Argyre, and to compel Godred of Norway to cede to him what were then called the South isles, namely, Bute, Arran, Islay, Jura, Mull, and the peninsula of Kintyre. On the death of Somerled, in 1164, Mr. Gregory conjectures that Arran was probably divided between his sons Reginald and Angus, and may have been the cause of the deadly feud which existed between them. [History of the Western Highlands and Isles, Edin. 1836. 8vo. p. 17.] Angus, with his sons, fell in an engagement with the men of Skye in 1210; whereupon Dugall, another son of Somerled, and the ancestor of the house of Argyre and Lorn, patronymically called *Macdougall*, succeeded to his possessions. It appears, however, that the kings of Norway continued to be acknowledged as the sovereigns of the Isles, until their final cession to the Scottish crown by Magnus of Norway, in July, 1266. Somerled's descendants now became vassals of the King of Scotland for all their possessions; but the islands of Man, Arran, and Bute were annexed to the Crown. See the article *HEBRIDES*. After the unfortunate battle of Methven, Robert Bruce lay for some time concealed, it is said, in Arran; and afterwards in the little island of Rathlin on the northern coast of Ireland, whence he again passed over to Arran with a fleet of 33 galleys, and 300 men, and joined Sir James Douglas, who, with a band of Bruce's devoted adherents, had contrived to maintain himself in Arran, and to seize the castle of Brodiek, then held by Sir John Hastings, an English knight; and here he projected his descent on the Carrick coast. Several memorials of Bruce still exist in the names of different localities in Arran. On the marriage of the Princess Mary, eldest sister of James III., to Sir Thomas Boyd, eldest son of Lord Boyd, in 1466, the island of Arran was erected into an earldom in favour of Boyd; but upon the forfeiture of that family, the house of Hamilton rose upon its ruins; and a divorce having been obtained, the Countess of Arran gave her hand to Lord Hamilton—to whom it had been promised in 1454—and conveyed with it the earldom of Arran. [Tytler's History of Scotland, vol. iv. p. 227.] The title and estates of Arran then transferred have ever continued in the family of Hamilton to the present time, with the exception of a few years under the regency of Morton.

ARROCHAR, or **ARROQUHAR**, a parish, containing a village with a post-office of its own name, in the north-west corner of Dumbartonshire. It is bounded on the north by Strathfillan in Perthshire; on the east by Perthshire and Lochlomond to Nether Inverglass; on the south by the parish of Luss, from which it is separated by the Douglass burn; and on the west by the upper part of Loch Long, and Argyreshire. Its extent is nearly 15 miles, exclusive of the farms of Ardeish and Doune, which lie on the east side of Lochlomond, at the northern end of it; and its mean breadth may be computed at 3 miles. The area, according to the Ordnance survey, is 28,832 acres; but little more than one-fiftieth is arable. A large portion is covered with oak-

coppice. This is a very picturesque region; it is mountainous throughout, and presents some fine lake-scenery. The principal mountain is Ben-Voirlich which, according to Boué, has an altitude of 3,300 feet; or, according to the writer of the article Dumbartonshire, in the Penny Cyclopaedia, of 3,330 feet, "that is," the writer adds, "above 100 feet higher than the adjacent Ben-Lomond." But, according to the Ordnance survey, its altitude is only 3,180 feet; while that of Ben-Lomond is stated at 3,195 feet. It forms a noble object in the landscape to the tourist ascending either Loch Lomond or Loch Long. Its position is about 6 miles to the north of the head of Loch Long, and 3 west of Ardvoirlich on Loch Lomond. The principal streams within the parish are the Falloch, descending from Glen Falloch into the head of Loch Lomond; the Inverglass from Loch-Sloy; and the Douglass, which falls into Loch Lomond opposite Rowardennan. The streams which fall into Loch Long have a comparatively short course.—The scenery of the upper part of Loch Lomond, in this parish, is neither so extensive nor so magnificent as towards the middle and lower end; it is, however, of a wilder and more romantic character. The lake is here narrow and river-like, as most of the Scottish lakes are; and the adjoining hills, broken and rugged in their outlines, rise up at once abruptly and precipitously from the water. Still, however, the scenery is such as must afford high gratification to every lover of the picturesque. The romantic and varied shores,—the bold projecting headlands and retiring bays,—the rugged and serrated hills,—and the numerous openings of the deep and lonely glens,—forming together a picture of peculiar and enchanting interest; the effect of which is heightened in a surprising degree, when all the magic tints of its varied surface are awakened by the brightness of a summer's sun. Then, and then only, can it be seen in its full effect.—In ancient times, the land forming the western shore of Loch Lomond, from Tarhet upwards, and the greater part of this parish, was inhabited by

'The wild Macfarlane's plaided clan.'

The Macfarlanes—Parlans or Pharlans—are proved, by a charter still extant, to have descended from Gilchrist, the brother of Maldoven or Maldwin, the third Earl of Lennox; they held their lands in Arrochar, by a grant in that charter to Gilchrist by the Earl; and they retained these lands, as their principal inheritance, at all times, till the death of their last chief. They had, for their war-cry, "Loch Sloy! Loch Sloy!" and they took this from a small lake, Loch Sloy, properly Loch Sloighe, at the back of Ben Vorlich. Tradition says that they fought at that lake a battle against some Northlanders, forcing them into its dark and gloomy waters; and that they then gave it the name of Lochansloighe, which means "the small lake of the host or multitude." They appear to have, on all occasions, supported the Earls of Lennox, and to have followed their banner in the field. For several generations, indeed, they make no figure in history, and seem to have merged into mere retainers of the earls. But in the 16th century, Duncan Macfarlane of Macfarlane acted sternly in support of Matthew, Earl of Lennox; marched at the head of 300 men of his own name, in 1544, into junction with Lennox and Glencairn; was present at the battle of Glasgow Muir; and shared then and afterwards the fate of the party he supported. Andrew, the son of Duncan, engaged in the civil wars of the period; took part with the Regent, in opposition to almost all the Highland chiefs; was present with a body of his

followers, at the battle of Langside; and, falling fiercely on the flank of the Queen's army in the hottest of the fight, threw them into irretrievable disorder, and thus mainly contributed to decide the fortune of the day. Walter, the grandson of Duncan, made a vigorous stand for the royal party; was twice besieged in his own house in the time of Cromwell; and so provoked the English by his indomitable zeal that they afterwards burnt down his castle of Inveruglass. John Macfarlane, who was chief of the clan in 1697, built in that year the castle of Inverroech, at the back of what is now called Arrochar House; and over the front door of this mansion is a stone taken from the lintel of that castle, with a Scotch thistle and the date 1697. Walter Macfarlane of Macfarlane, the antiquary, shed a lustre on the name in another and far higher way than ever did any chief of the clan; for he is much and justly celebrated as the indefatigable collector of the ancient records of Scotland. A valuable portrait of him, presented by his friends, was hung up in the Glasgow cathedral, but carried off by some miscreant; and the late Principal Macfarlane of Glasgow college, himself a great antiquary, made earnest but vain attempts to recover the portrait. By far the largest proprietor of Arrochar parish now is Sir James Colquhoun of Luss, Bart. The conspicuous mountain, popularly called the Cobbler, situated on the north-west of the head of Loch Long, and very generally described as connected with Arrochar, is in the parish of Lochgoilhead and county of Argyle. The village of Arrochar stands near the head of Loch Long, on the east side, 2 miles from Tarbet, $1\frac{1}{4}$ from Helensburgh, 22 from Dumbarton by way of Luss, and $23\frac{3}{4}$ from Inverary, is a choice summer retreat and watering-place; contains an excellent hotel, and a number of pleasant villas; and has daily communication with Glasgow, during summer, both by steamers direct on Loch Long, and by access to the Loch Lomond steamers at Tarbet. Pop. of the parish in 1861, 629. Houses, 117. Assessed property in 1843, £3,096 3s.

This parish is in the presbytery of Dumbarton, and synod of Glasgow and Ayr. Patron, Sir James Colquhoun, Bart. Stipend, including the glebe, £260. Schoolmaster's salary, £50. The parish church was built in 1847. There is a Free church; and the yearly sum raised by it in 1865 was £145 0s. 7d. The territory of Arrochar was originally part of the parish of Luss, and was made a separate parish in 1658.

ARTHUR, a name of frequent occurrence in Scottish as well as Welsh and English topography, and generally traced by the voice of Tradition to the far-famed Arthur of romance. "It is amusing to remark," says Chalmers, in his elaborate 'Caledonia,' [vol. i. p. 244,] "how many notices the North-British topography furnishes, with regard to Arthur, whose fame seems to brighten, as inquiry dispels the doubts of scepticism, and archæology establishes the certainties of truth.—In Clydesdale, within the parish of Crawford, there is Arthur's fountain: in 1239, there was a grant of David de Lindsay to the monks of Newbole, of the lands of Brothelawyn, in that district, which were bounded, on the west part, 'a fonte Arthuri usque ad summitate montis.' Chart. Newbole, N. 148.—The Welsh poets assign a palace to Arthur, among the Northern Britons, at Penryn-ryoneth. In Lhuyd's Cornish vocabulary, p. 238, Penryn-ryoneth is called, the seat of the Prince of Cumbria: and see also Richard's Welsh Dictionary. The British *Penryn* supposes a promontory, with some circumstance which reduplicates its height; and this intimation points to Alchyd, the well-known metropolis of the Romanized Britons, in Strathelyde. Now a parliamentary re-

cord of the reign of David II, in 1367, giving a curious detail of the king's rents and profits in Dumbartonshire, states the 'redditum assize Castri Arthuri.' MSS. Reg. House; Paper-Office. The castle of Dunbarton, therefore, was the *Castrum Arthuri*, long before the age of David II. See the site of Dunbarton, in Ainslie's Map of Renfrewshire. The Point of Cardross was the Rhyn-ryoneth; the castle of Dunbarton was the Penrhyn-ryoneth. According to the British Triads, Kentigern, the well-known founder of the church of Glasgow, had his episcopal seat at Penrhyn-ryoueth.—The romantic castle of Stirling was equally supposed, during the middle ages, to have been the festive scene of the round-table of Arthur. 'Rex Arthurus,' says William of Worcester, in his Itinerary, page 311, 'eustodiebat le round-table in caastro de Styrling, aliter, Snowdon-west-castell.' The name of Snowdon castle is nothing more than the Snuá-dun of the Scoto-Irish people, signifying the fort, or fortified hill on the river, as we may learn from O'Brien, and Shaw; and the Snuá-dun has been converted to Snow-dun, by the Scoto-Saxon people, from a retrospection to the Snow-dun of Wales, which is itself a mere translation from the Welsh.—In Neilston parish, in Renfrewshire, there still remain Arthur-lee, Low Arthur-lee, and West Arthur-lee.—Arthur's-oven, on the Carron, was known by that name, as early, if not earlier, than the reign of Alexander III. In 1293, William Gurlay granted to the monks of Newbole 'firmationem unius stagni ad opus molendini sui del Stanhus quod juxta furnum Arthuri infra baronium de Dunypas est.' Chart. Newbole, No. 239.—The name of Arthur's-Seat, at Edinburgh, is said, by a late inquirer, 'to be only a name of yesterday.' Yet, that remarkable height had that distinguished name before the publication of Camden's *Britannia*, in 1585, as we may see in p. 478; and before the publication of Major, in 1521, as appears in fo. 28; and even before the end of the 15th century, as Kennedy, in his flying with Dunbar, mentions 'Arthur Sate or ony hicher hill.' Ramsay's *Evergreen*, v. ii. p. 65.—This is not the only hill which bears the celebrated name of Arthur. Not far from the top of Loch-Long, which separates Argyle and Dumbarton, there is a conical hill that is called Arthur's Seat.* Guide to Loch Lomond, pl. iii.—A rock, on the north side of the hill of Dunbarrow, in Dunniehen parish, Forfarshire, has long bore, in the tradition of the country, the distinguished name of Arthur's Seat. Stat. Aeco. v. i. p. 419.—In the parish of Cupar-Angus, in Perthshire, there is a standing stone, called the Stone of Arthur; near it is a gentleman's seat, called Arthur-stone; and not far from it is a farm, named Arthur's fold.—But, it is at Meikle, in the same vicinity, that the celebrity of Arthur, and the evil fame of his queen Venora, are most distinctly remembered. Peanant's *Tour*, v. ii. pp. 177–8; and Stat. Aeco. v. i. p. 506: and above all, see Bellenden's *Boece*, fo. lxxviii, for the origin of the popular fictions at Meikle, about Arthur and Venora.—The Scottish chroniclers, Barbour and Wyntowne, were perfectly acquainted with the Arthur of romance. We may easily infer, from the local facts, that his story must have been equally known to Thomas of Erildun, a century sooner. In 1293, the monks of Newbole knew how to make a mill-dam with the materials which they found on the banks of the Carron. Sir Michael Bruce of Stanhus thought it necessary, in 1743, to pull down Arthur's Oon, one of the most curious remains of antiquity, for the stones which it furnished, for building a mill-dam. The enraged antiquaries con-

* Ben-Arthur or the Cobbler is here meant.

signed Sir Michael to eternal ridicule. See the Antiquary Repertory, v. iii, pp. 74-5. Sir David Lindsay, in his 'Complaynt' of the Papingo, makes her take leave of Stirling castle thus:

'Adew fair Snawdoun, with thy towris hie,
Thy chapell royall, park, and tabill round.'

And, in his 'Dreme,' he mentions his having diverted James V., when young, with 'antique storeis and decidis martiall,

Of Hector, Arthur, and gentile Julius,
Of Alexander, and worthy Pompeius.'

This shows that the stories of Arthur were then ranked among those of the most celebrated heroes of Antiquity." See ARTHUR'S OVEN, ARTHUR'S SEAT, ARROCHAR, and MEIGLE.

ARTHURLEE, several localities a little west of Barrhead, in the parish of Neilston, Renfrewshire. The lands of Arthurlee anciently belonged to a branch of the Darnley family; but they are now divided among various proprietors, and are dotted with mansions, public works, and villages. One of the earliest bleachfields in Scotland was established at Cross-Arthurlee about the year 1773. A cotton mill was built at Arthurlee in 1790. A new and very extensive printfield, for all kinds of calicoes, was erected at South-Arthurlee in 1835. The whole tract shares largely in the manifold industry of the parish of Neilston, and enjoys abundant facility of communication in the Glasgow and Neilston Railway. The largest seats of population on it are the villages of Cross-Arthurlee and West-Arthurlee. Population in 1861 of Cross-Arthurlee, 663; of West-Arthurlee, 474.

ARTHUR'S OVEN, or ARTHUR'S OON, a remarkable Roman antiquity, destroyed in 1743, but till then singularly well-preserved, in the parish of Lerbeth, Stirlingshire. The place on which it stood is a piece of ground, about 50 feet square, now used as a washing-green, about 300 feet north of the north-west corner of the Carron Iron-Works. The building was highly famous among antiquaries, and can still be well understood by means of accurate drawings of it, and perhaps may continue for many ages to come as interesting to the curious as any existing ancient monument. The following account of it is given in the *Caledonia Romana*:—"This building was of a circular form, its shape in some measure resembling that of a common bee-hive. It measured at the base from twenty-nine to thirty yards in circumference, and continued of the same dimensions to the height of eight feet, from which point it converged gradually inwards in its ascent, till, at an elevation of twenty-two feet, the walls terminated in a circle, leaving in the top of the dome a round opening twelve feet in diameter. On its western side was an arched doorway nine feet in extreme height, and above it an aperture resembling a window, of a slightly triangular form, three feet in height, and averaging nearly the same in width. The whole was formed of heavy freestone, laid in regular horizontal courses, the first of them resting upon a thick massive basement of the same material, which, to follow out the simile, represented with curious fidelity the common circular board on which the cottage hive is usually placed. The interior of the structure corresponded with its general appearance from without, the only difference being in the concavity of the shape, and in its having two projecting stone cornices round its interior surface, the one at a height of four and the other of six feet from the ground. The style of the workmanship was singularly perfect, and showed an intimate acquaintance with masonic art. No cement of any de-

scription had been made use of in its construction, yet the stones were so accurately joined together, that even the difficult process of forming so diminutive a cupola by the concentration of horizontal courses, was accomplished there in the most skilful and enduring manner."

ARTHUR'S SEAT, a picturesque and conspicuous hill in the immediate eastern environs of Edinburgh. Its base is nearly a mile long; and its summit has an altitude of 822 feet above the level of the sea. See the article EDINBURGH. It commands a beautiful prospect on all sides, and forms a principal and imposing object from every point of approach to the capital of Scotland. The ascent is usually made from the precincts of Holyrood, or, on the opposite side from Duddingstone village. Taking the former route, after crossing the lower park, we leave the ruins of St. Anthony's chapel a little to the left. "A better site for such a building," says Sir Walter Scott, "could hardly have been selected; for the chapel, situated among the rude and pathless cliffs, lies in a desert, even in the immediate vicinity of a rich, populous and tumultuous capital; and the bum of the city might mingle with the orisons of the recluses, conveying as little of worldly interest as if it had been the roar of the distant ocean. Beneath the steep ascent on which these ruins are still visible, was, and perhaps is, still pointed out, the place where the wretch Nicol Muschat had closed a long scene of cruelty towards his unfortunate wife, by murdering her with circumstances of uncommon barbarity. The execration in which the man's crime was held, extended itself to the place where it was perpetrated, which was marked by a small cairn or heap of stones, composed of those which each passenger had thrown there in testimony of abhorrence, and on the principle, it would seem, of the ancient British malediction—'May you have a cairn for your burial-place.'" ['Heart of Mid-Lothian.'] In Maitland's 'History of Edinburgh,' [1753,] these ruins are described as being 43½ feet long, 18 broad, and as many high, with a tower of 19 feet square.

By striking off to the right, and pursuing an easy ascent over the green sward, we may gain the summit of the fine bold basaltic range called Salisbury crags, of which, says our immortal novelist, "If I were to choose a spot from which the rising or setting sun could be seen to the greatest possible advantage, it would be that wild path winding around the foot of the high belt of semicircular rocks, called Salisbury crags, and marking the verge of the steep descent which slopes down into the glen on the south-eastern side of the city of Edinburgh. The prospect, in its general outline, commands a close-built, high-piled city, stretching itself out in a form which, to a romantic imagination, may be supposed to represent that of a dragon; now a noble arm of the sea, with its rocks, isles, distant shores, and boundary of mountains; and now a fair and fertile champaign country, varied with hill, dale, and rock, and skirted by the picturesque ridge of the Pentland mountains. But as the path gently circles around the base of the cliffs, the prospect, composed as it is of these enchanting and sublime objects, changes at every step, and presents them blended with, or divided from, each other in every possible variety which can gratify the eye and the imagination. When a piece of scenery so beautiful, yet so varied,—so exciting by its intricacy, and yet so sublime, is lighted up by the tints of morning or of evening, and displays all that variety of shadowy depth, exchanged with partial brilliancy, which gives character even to the tamest of landscapes, the effect approaches near to enchantment. This path

used to be my favourite evening and morning resort, when engaged with a favourite author, or new subject of study." ['Heart of Mid-Lothian.']

The ascent of Arthur's Seat itself may be done either directly and steeply up the hill right south of St. Anthony's chapel, or circuitously and gently by way of Victoria Road to Dunsapie Loch, and thence westward; and in the former case is short—and in the latter very easy. To depict the scene from the summit, we must employ the same living pencil that has traced the landscape from the chapel and the crags. "A nobler contrast there can hardly exist than that of the huge city, dark with the smoke of ages, and groaning with the various sounds of active industry or idle revel, and the lofty and craggy hill, silent and solitary as the grave; one exhibiting the full tide of existence, pressing and precipitating itself forward with the force of an inundation; the other resembling some time-worn anchorite, whose life passes as silent and unobserved as the slender rill which escapes unheard, and scarce seen from the fountain of his patron-saint. The city resembles the busy temple, where the modern Comus and Mammon held their court, and thousands sacrifice ease, independence, and virtue itself, at their shrine; the misty and loudly mountain seems as a throne to the majestic but terrible genius of feudal times, where the same divinities dispensed coronets and domains to those who had heads to devise and arms to execute bold enterprises." ['Introduction to the Chronicles of the Canongate.']

The summit of Arthur's Seat is small, tabular, and rocky, and is so strongly magnetic that the needle, at some points of it, is completely reversed. The general mass of the hill comprises a diversity of eruptive rocks, together with some interposed and uplifted sedimentary ones; and it forms a rich study to geologists, and presents phenomena about which the ablest of them disagree or are in doubt. A favourite theory supposes it to have been a submarine volcano.

ARTORNISH. A castle, and anciently a chief stronghold and residence of the Lords of the Isles, on the west coast of Morven, Argyshire. It stands between a chain of rocks and the entrance of Loch Aline, nearly opposite the bay of Aros in Mull. The ruins are now inconsiderable, but the situation is wild and romantic in the highest degree. From this castle, John de Yle, designing himself Earl of Ross, and Lord of the Isles, in 1461, granted, in the style of an independent sovereign, a commission to certain parties to enter into a treaty with Edward IV. Sir Walter Scott has given the articles of this treaty in his Appendix to 'The Lord of the Isles,' [Note A.]—the opening scene of which poem is laid in "Artornish hall," where

"the noble and the bold
of Island chivalry"

were assembled to do honour to the nuptials of the hapless "Maid of Lorn;" and

"met from mainland and from isle,
Ross, Arran, Islay, and Argye,
Each Minstrel's tributary lay
Paid homage to the festal day."

ARY (THE). See **ARAY (THE).**

ASCOG, an estate, a bay, a lake, a considerable seat of population, and a post-office station, in the north-east of the parish of Kingarth, in the island of Bute. The estate belongs to the Thom family, and has a mansion in the style of the 17th century. The bay is about $\frac{1}{2}$ mile south of Bogany Point, and about the same distance south-east of the town of Rothsay. The lake lies along the mutual

boundary of the parishes of Kingarth and Rothsay, and has an area of $75\frac{1}{2}$ acres. A new church, for the accommodation of the numerous and increasing inhabitants of the neighbourhood, was founded at Ascog Point on the 3d of October, 1842.

ASCRIB ISLES. See **SNZORR.**

ASHDALE, a rivulet and a glen in the southern extremity of the parish of Kilbride, in the island of Arran. The rivulet has a run of only about 4 miles, chiefly eastward, from a lofty mountain source, to Whiting bay; and in the course of its progress it makes two beautiful cascades, the one about fifty feet deep, and the other upwards of an hundred. The glen is grandly picturesque and wildly romantic, and shows some interesting basaltic features.

ASHDOW. See **KILLEARN.**

ASHENYARD LOCH. See **KILWINNING.**

ASHIESTEEL, a residence on the right bank of the Tweed, and north border of the parish of Yarrow, Selkirkshire. It is about 6 miles east by south of Innerleithen, and nearly the same distance west of Galashiels. Sir Walter Scott lived here during ten years, and here won his earliest laurels, and has celebrated it in his poetry. A bridge was recently built in its vicinity across the Tweed, of rubble whinstone, and comprising only one arch, and that of 136 feet span.

ASHKIRK, a parish partly in Selkirkshire, but chiefly in Roxburghshire. It contains a small village of its own name, with a post-office. It is bounded on the north by Selkirk; on the east by Minto and Lilliesleaf; on the south by Robertson and Wilton; and on the west by Yarrow. It is about 7 miles long, and 3 broad. The surface is all hilly, but most of the hills are free from heath. The soil in general is light, and in several parts spongy. A good deal has been done of late years in draining and planting. The cultivated land amounts to about 2,800 acres. About 400 acres are under wood. The real rental in 1847 was £4,720. Assessed property in 1865, £5,976 4s. 3d. The only river in the parish is the Ale, which runs through it, in a narrow valley, from south-west to north-east. But there are several small lochs—none of them exceeding a mile in circumference—which discharge their waters into the Ale, and contain trout, perch, and pike. There are eight landowners: the chief of whom are Scott of Synton and the Earl of Minto. The parish was formerly a vicarage belonging to the chapter of Glasgow; and the greater number of the present proprietors still hold of the college of Glasgow. The bishop of Glasgow had a palace here, of which the last relics have disappeared within the memory of man. The parish itself was in early times wholly divided amongst the family of Scott. The road from Selkirk to Hawick traverses the interior; and the village of Ashkirk stands on that road and on the banks of the Ale 5 miles from Selkirk and 6 from Hawick. Population of the parish in 1831, 597; in 1861, 578. Houses, 104. Population of the Selkirkshire district in 1861, 187. Houses, 37.

This parish is in the presbytery of Selkirk and synod of Merse and Teviotdale. Patron, the Earl of Minto. Stipend, £205 12s. 9d.; glebe, £27. Unappropriated tithes, £636 11s. 4d. Schoolmaster's salary, £50, with £10 fees. The parish church was built in 1791, and has 202 sittings. There is a Free church, with an attendance of about 65; and the yearly sum raised in connexion with it in 1865 was £55 11s. 5 $\frac{1}{2}$ d.

ASHTON, a prolongation of the village of Gourack, in the parish of Innerkip, Renfrewshire. It extends southward along the coast, and along the road toward Innerkip, and confronts Dunoon

and the Holy Loch. It consists principally of a long and beautiful series of comfortable villas; and it contains an United Presbyterian church. See **GOURACK**.

ASKAIG (PORT), a small haven on the north-east coast of Islay, 11 miles distant from Bowmore, and 35 from East Tarbert. There is a good inn here, and the vicinity is well-wooded. Lead-mines were at one time wrought a little to the north-west of this place.

ASSEL. See **GIRVAN**.

ASSELED, a rivulet of Aberdeenshire. It rises in the north-east of Monquhitter, and separates that parish from the parishes of New Deer and Methlick, and has altogether a southerly course of about 7 or 8 miles to the Ythan.

ASSYNT, or **ASSINT**, a large highland parish in the south-west of Sutherlandshire. It contains a post-office at the village of Lochinver, and another of its own name in the vicinity of the church. The name is a contraction of *agus-int*, literally 'in and out;' and is supposed to have been originally applied to it as descriptive of its extraordinarily rugged surface and broken outline. Its area is estimated at 100,000 acres; and its circumference at 90 miles. On the north it is bounded by the Minch, and by the Kylecuthig or Kyle Skou, "across which a stone may be slung," and its extremities Loch Dow and Loch Coul. From the eastern end of Loch Coul, an imaginary line, drawn in a south-east direction across the summits of the mountains to Glashben, completes the boundary hetwixt Assynt and Edderachillis parish. The boundary line then turns south-west, for a distance of about 10 miles, dividing Assynt from Creech parish, and from Ross-shire; it then assumes a westerly direction, and passes by Loch Vattie, and Loch Faun or Loch Fane, to Inverkirkaig, where it meets the sea, dividing Assynt, in this direction, from the shire of Cromarty. The Kirkaig flows out of Loch Fane, and forms a fine cascade at a point in its course about 2 miles from the sea. The general course of the coastline, from the mouth of the Kirkaig to Ru-Stoer,—a distance of 20 miles,—is from south-south-east to north-north-west, and presents "islands, bays, and headlands, without end, but not a feature to distinguish one from another, nor a cliff nor a promontory to tempt a moment's stay;" all is dreary, desolate, and mountainous. Loch Inver is a fishing-station, and presents a pretty good harbour. The Inver flows into its head from Loch Assynt. The point of Stoer, or the Ru-Stoer, is a remarkable detached mass of sandstone, rising to the height of about 200 feet. A little to the south of the Ru is Soay island, measuring about 4 furlongs in length, by 3 in breadth. It is flat, and covered with heather and coarse grass. About a mile to the south of Soay, is the islet of Klett. But the principal island belonging to Assynt is Oldney or Oldernay, which is divided from the mainland by a channel in some parts not exceeding 20 yards in width. It is about a mile in length, by 2 furlongs in breadth; and was inhabited, in 1836, by twelve families.

The main line of road through this parish enters from the south, at Aultnaacealgeich buru, 10 miles from the bridge of Oykell, at the upper end of Loch Boarlan. A little beyond this, a road branches-off to the west towards Crockan, whence there is a road to Ullapool, on Loch Broom, 16 miles distant. Pursuing the main line, we arrive at Ledbeg, whence a detour may be made by the south side of Suilbhein to Inverkirkaig, provided the traveller dare encounter a very rugged journey, presenting only one habitable shieling in its whole course, namely Brackloch at the western end of Loch Cann, a very fine fresh

water loch. There is another, and a more dangerous route in winter, between the Suilbhein and its mountain-brother Camnibh or Canisp. After leaving Ledbeg we enter the glen of Assynt. This glen is very narrow, and has various windings, so that one is quite near Loch Assynt before being aware of it. Immediately before arriving at it, a very singular ridge of rock bounds the glen and the road on the right. This ridge rises to a perpendicular height of 300 feet; it is of blue limestone, and its mural surface has been worn away in many places in such a manner as to present the appearance of the windows, tracery, and fret-work of an ancient cathedral. Alpine plants and creeping-shrubs ornament with their graceful drapery every crevice and opening of these lofty rocks, and altogether create a scene of most picturesque though fantastic beauty. At length on turning round the edge of this ridge, the traveller finds himself at the village of Inchna-damph, or Innesindamiff, and the head of Loch Assynt. This lake is about 16 $\frac{2}{3}$ miles in length, and 1 mile in greatest breadth. It receives the waters of many mountain-streams, and empties itself into Loch Inver, an arm of the sea of which mention has already been made. On the shores of Loch Assynt, near the village of Inchna-damph, there are quarries of white marble, which were at one time wrought by an Englishman; but since his death they seem to be entirely neglected. If one may judge from the blocks lying about, the marble seems to be pure and capable of receiving a high polish; but from whatever cause, it is now only used for building dry stone-dykes and highland cottages. "At Ledbeg," says Dr. Macculloch, "I found the cottages built of bright white marble; the walls forming a strange contrast with the smoke and dirt inside, the black thatch, the dubs, the midden, and the peat-stacks. This marble has not succeeded in attaining a higher dignity." And marble cottages may be seen at other places besides Ledbeg, presenting the same strange contrast. The Assynt marble is similar in colour and quality to that of Skye, has a clouded silver grey appearance, and is found among micaceous formations. Loch Assynt lies in a very pleasing green valley, though it does not—except at its head and beyond the village of Inchna-damph—afford much of the picturesque or the romantic. The mountain of Cunaig, however, on the north side of the lake, and Bein-mhor or Benmore, with the other mountains which terminate the glen to the east, present scenes of much grandeur and magnificence. The ancient castle of Ardvraick, and the ruined house of the Earls of Seaforth, with the village and churchyard at the head of the lake, give an interest to Loch Assynt not often to be felt among the inland waters of these northern regions. Pursuing our route along the northern side of the loch, we pass the ruins of Ardvraick castle, situated on a rocky peninsula which projects a considerable way into the lake. This castle was long the residence of the Macleods, and in particular that of Donald Bane More; it was built in the year 1597, or 1591, and must have been a place of strength in ancient times. When the estate came into the Seaforth family, they erected a new mansion near the shore of the lake. This mansion is also now in ruins. Adjoining the present parish-church, and within the burying-ground, near the village of Inchna-damph, are the remains of an ancient Popish chapel, said to be the oldest place of worship existing in this district. On the farm of Clachtoll are the remains of an ancient Druidical temple. At Ledbeg a pruning-hook was found under the moss several years since, the use of which puzzled the natives of the place not a little. But a late Earl of

Bristol, then Bishop of Derry, happening to pass a few days here, pronounced it to be a pruning-hook used by the Druids, with which they yearly cut the sacred mistletoe from the oak. On reaching the northern end of Loch Assynt, one branch of the road turns westward to Loch Inver, following the northern bank of the river Inver; while another branch runs north to Unapool on the Kylecraigh, beyond which there is a ferry to Grinan, in Edderachillis, whence it proceeds along the coast to Scourie lake.

In the southern part of Assynt are several detached mountains of singular form. Dr. Macculloch has written of them so correctly, and described them so graphically, that although at some length, we must furnish the reader with his remarks. In talking of sandstone mountains, in his geological work, he says: "The independence of many of these hills forms one of the most remarkable parts of the character of this rock. In many places, they rise suddenly from a hilly land of moderate elevation composed of gneiss, attaining at once to an height above it of 1,000 or 2,000 feet. They are often separated by miles. In other cases, they are grouped, but still distinct at their base. Where insulated, they have a very striking effect, of which examples occur in Sul-bhein, and Coul-bheg. Similarly powerful effects result from the suddenness of their rise,—the summit, with the whole declivity, being visible from the base." Farther on, in the same work, he says, "It might be expected that the pinnaled summits and detached hills had resulted from the waste of the erect varieties, but in Coul-bheg, Coulmore, Sul-bhein, &c., they are produced by the wearing down of strata nearly horizontal; the harder portions, in the former case, remaining like pillars of masonry or artificial cairns. The west side of Sutherland and Ross consists of a basis of gneiss, forming an irregular and hilly surface, varying, in extreme cases, from 100 to 1,500 feet in height, but often presenting a considerable extent of table-land. On this base, are placed various mountains, either far detached, or collected in groups; and all rising to an average altitude of about 3,000 feet above the sea. The stratification of these is horizontal or slightly inclined. It follows that the whole of this country has been once covered with a body of sandstone, equal in thickness—in certain points at least—to the present remaining portions." In his letters on the Highlands [Vol. ii. p. 345] again, he thus describes Sul-bhein. "It loses no part of its strangely incongruous character on a near approach. It remains as lofty, as independent, and as much like a sugar-loaf, (really not metaphorically,) when at its foot as when far off at sea. In one respect it gains, or rather the spectator docs, by a more intimate acquaintance. It might have been covered with grass to the imagination; but the eye sees and the hand feels that it is rock above, below, and round about. The narrow front, that which possesses the conical outline, has the appearance of a precipice, although not rigidly so; since it consists of a series of rocky cliffs piled in terraced succession above each other; the grassy surfaces of which being invisible from beneath, the whole seems one rude and broken cliff, rising suddenly and abruptly from the irregular table-land below to the height of a thousand feet. The effect of a mountain thus seen, is always striking; because, towering aloft into the sky, it fills the eye and the imagination. Here, it is doubly impressive from the wide and open range around, in the midst of which this gigantic mass stands alone and unrivalled,—a solitary and enormous beacon, rising to the clouds from the far-extended ocean-like waste of rocks and rudeness.

Combining, in some positions, with the distant and elegant forms of Canasp, Coul-bheg, and Ben-More, it also offers more variety than could be expected; while even the general landscape is varied by the multiplicity of rocks and small lakes with which the whole country is interspersed. The total altitude from the sea line is probably about 2,500 feet; the table-land whence this and most other of the mountains of this coast rise, appearing to have an extreme elevation of 1,500. To almost all but the shepherds, Sul-bhein is inaccessible: one of our sailors, well-used to climbing, reached the summit with difficulty, and had much more in descending. Sheep scramble about it in search of the grass that grows in the intervals of the rocks; but so perilous is this trade to them, that this mountain with its pasture—which, notwithstanding its rocky aspect, is considerable—is a negative possession; causing a deduction of fifteen or twenty pounds a-year from the value of the farm to which it belongs, instead of adding to its rent."—At page 354 of the same work, the Doctor gives the following description of Coul-bheg: "The whole of this coast, from Coyraig in Assynt, as far as Ben-More at Loch-Broom, presents a most singular mountain outline; but Coul-bheg is even more remarkable than Sul-bhein, while its form is more elegant and versatile. In every view, it is as graceful and majestic as it is singular; and, like the other mountains of this extraordinary shore, it has every advantage that can rise from independence of position; rising a huge and solitary cone, from the high land beneath, and lifting its dark precipice in unattended majesty to the clouds. The ascent from the shore to the base of the rocky cone is long and tedious, over a land of lakes and rocks; but beyond that there is no access. All around is barrenness and desertion; except where some lake, glittering bright in the sunshine, gives life,—a still life,—to the scene; and the eye ranges far and wide over the land, seeing nothing but the white quartz summits of Canasp, Coyraig, and Ben-More,—the long streams of stones that descend from their sides,—and the brown waste of heath around, interspersed with grey protruding rocks that would elsewhere be hills, and with numerous lakes that seem but pools amid the spacious desert." In spite, however, of the many difficulties which must attend a close examination of this land of mountains and floods, the traveller who chooses to undergo the fatigue, and to encounter the difficulties of attempting to penetrate its recesses, will find much to please and still more to astonish him amidst its gigantic and awful mountains and lonely valleys. To those

"who love the pathless solitude
Where, in wild grandeur, Nature dwells alone
On the bleak mountain, and the unsculptured stone,
'Mid torrents, and dark range of forests wide,"

the solemn and sublime scenery of Assynt will afford moments of exquisite pleasure. One oft feels in wandering through its superb solitudes as if the next step would conduct him into the ideal and supernatural. To the geologist, nothing further need be said, to incite him to investigate this district most minutely, than a reference to the quotations from Dr. Macculloch already given.

The district of Assynt is said to have been in early times a forest belonging to the ancient thanes of Sutherland, the ancestors of the present Duke of Sutherland. In the reign of David II., Torquil Macleod, chief of the Macleods of Lewis, had a royal grant of Assynt. In 1506, on the forfeiture of Macleod of Lewis, Y Mackay of Strathnaver received a life-rent grant of Assynt. About the year 1660, both the property and superiority of Assynt passed

from the Macleods to the Earl of Scaforth. He made it over to one of his younger sons, whose heirs held it for three or four generations. It was afterwards purchased by Lady Strathnaver, who presented it to her grandson, William Earl of Sutherland; and it is now the property of that Earl's grandson, the present Duke of Sutherland. It was in this district that the great Marquis of Montrose was taken prisoner, and delivered up to the Covenanters. After his defeat, and the ruin of all his hopes, at Carhisdale, "Montrose, accompanied by the Earl of Kinnoul, who had lately succeeded to the title on the death of his brother, and six or seven companions, having dismounted from his horse and thrown away his cloak and sword, and having, by the advice of his friends, to avoid detection, exchanged his clothes for the more homely attire of a common highlander, wandered all night and the two following days among bleak and solitary regions, without knowing where to proceed, and ready to perish under the accumulated distresses of hunger, fatigue, and anxiety of mind. The Earl of Kinnoul, unable, from exhaustion, to follow Montrose any further, was left among the mountains, where it is supposed he perished. When upon the point of starvation, Montrose was fortunate to light upon a small cottage, where he obtained a supply of milk and bread, on receiving which he continued his lonely and dangerous course among the mountains of Sutherland, at the risk of being seized every hour, and dragged as a felon before the very man whom, only a few days before, he had threatened with his vengeance. In the meantime, active search was made after Montrose. As it was conjectured that he might attempt to reach Caithness, where his natural brother, Henry Graham, still remained with some troops in possession of the castle of Dunbeath, and as it appeared probable, from the direction Montrose was supposed to have taken, that he meant to go through Assynt, Captain Andrew Munro sent instructions to Neil Macleod, the laird of Assynt, his brother-in-law, to apprehend every stranger that might enter his bounds, in the hope of catching Montrose, for whose apprehension a splendid reward was offered. In consequence of these instructions, Macleod sent out various parties in quest of Montrose, but they could not fall in with him. 'At last, (says Bishop Wishart) the laird of Assynt being abroad in arms with some of his tenants in search of him, lighted on him in a place where he had continued three or four days without meat or drink, and only one man in his company.' The bishop then states, that 'Assynt had formerly been one of Montrose's own followers; who immediately knowing him, and believing to find friendship at his hands, willingly discovered himself; but Assynt not daring to conceal him, and being greedy of the reward which was promised to the person who should apprehend him by the council of the estates, immediately seized and disarmed him.' This account differs a little from that of the author of the continuation of Sir Robert Gordon's history, who says, that it was one of Macleod's parties that apprehended Montrose, but is altogether silent to Assynt's having been a follower of Montrose; but both writers inform us that Montrose offered Macleod a large sum of money for his liberty, which he refused to grant. Macleod kept Montrose and his companion, Major Sinclair, an Orkney gentleman, prisoners in the castle of Ardvraick, his principal residence. By order of Leslie, Montrose was thence removed to Skibo castle, where he was kept two nights, thereafter to the castle of Braan, and thence again to Edinburgh." [Browne's 'History of the Highlands,' vol. ii. pp. 35, 36.]

Above two-thirds of the inhabitants of Assynt reside on the sea-shore. In the district around Loch Inver there was, in 1831, a population of about 659; in the Kyleside district, 456; in each of the two hamlets of Knoockan and Elphine, 250; and at Unapool, 8 or 9 families. The population of the whole parish in 1831 was 3,161; in 1861, 3,178. Houses, 577. Assessed property in 1860, £3,879.

This parish is in the presbytery of Dornoch and synod of Sutherland and Caithness. Patron, the Duke of Sutherland. Stipend, £158 6s. 7d; glebe, £27 10s. The parish church was built about 1770, and repaired in 1816, and has about 270 sittings. The parish minister officiates at two preaching stations, the one at Loch Inver, the other at Kyleside, and both about 14 miles from the parish church. There is a government church with a minister of its own, at Stoer. See STOER. There are two Free churches,—the one at Assynt, and the other at Stoer; and the yearly sum raised in connexion with the former in 1865 was £79. There are seven schools, inclusive of the parochial one.

ASTOUNE. See ALFORD.

ATHELSTANEFORD, a parish, containing the post-office villages of Athelstaneford and Drem, in the northern part of Haddingtonshire. The village of Athelstaneford gave name to the parish; and, according to Buchanan and Camden, it got its own name from the following incident. In one of his predatory incursions, Athelstane, a Danish chief, who had received a grant of Northumberland from King Alured, arrived in this part of the country; and, engaging in battle with Hungus, king of the Picts, was pulled with violence from his horse and here slain. The rivulet where the battle was fought is in the immediate neighbourhood of the village, and is still called Lug Down burn, supposed to be a corruption of Rug Down. Buchanan adds, that Hungus was encouraged to hazard this battle by a vision of St. Andrew the apostle, who appeared to him the preceding night and promised him success; and that the victory was facilitated by the miraculous appearance of a cross in the air, in the form of the letter X, over a farm-hamlet which still retains the name of Martle, a supposed contraction of *miracle*. Achaius, king of the Scots, by whose assistance Hungus obtained this victory, in commemoration of the event is said to have instituted the order of St. Andrew. Thus far tradition. Etymology, however, would give a simpler account of the matter. *Ath-ail* means, in Gaelic, 'a stone ford;' and there is such a ford,—a narrow, deep, stony path,—across the Lug Down rivulet. Saxon settlers, finding the *Ath-ail* already in existence, super-added to it, in their own language, *stone ford*. (See Chalmers's 'Caledonia,' Vol. II. p. 516.) The lands on which the battle was fought were hestowed on the Culdee priory of St. Andrews, and are now held in perpetual lease by Kinloch of Gilmerton.

The parish of Athelstaneford is divided from that of Haddington on the south and south-west by the rivulet formerly mentioned, the Lug Down burn. This rivulet rises in the Garleton hills, and falls into the frith of Forth on the north side of Tynningham bay, after a course of about 5 miles. On the north this parish is separated from that of Dirleton by another small rivulet called the Peffer. See the article PEFFER. The ground rises gradually from this rivulet to the southern extremity of the parish, where the village of Athelstaneford and the church stand. The parish is about 4 miles in length, from west to east; and between 2 and 3 in breadth, from south to north. Previous to 1658 it did not contain above 800 or 1,000 acres; and the Earl of Wintoun was the sole proprietor of all the lands. At that

period it was considerably enlarged by annexations from the parishes of Haddington and Prestonkirk; so that the whole extent of it is now above 4,000 acres, of which 3,750 are arable. About one-third belongs to Sir David Kinloch of Gilmerton, whose residence is the only large mansion in the parish; and the rest is divided among the Earl of Hopetoun, the Earl of Wemyss, Lord Elihank, Sir James W. Drummond, and two other proprietors. A manufacture of striped variegated woollen cloth, which was held in esteem in Edinburgh under the name of the Gilmerton livery, once existed in the village of Athelstaneford, but is now extinct. The North British Railway passes south-eastward through the parish, and commands a good view of its surface, and has a station in it at Drem, and sends off here the branch toward North Berwick. The chief antiquities in this parish are the vestiges of a camp, or perhaps of a Pictish town, concerning which there is no tradition, and history is silent; and the remains of a chapel, in the village of Drem, called St. John's chapel, which belonged to the Knights' Templars. These are both on the property of the Earl of Hopetoun. The house of Garleton, too, may be mentioned under this head. It appears to have once been a place of magnificence, but is now a complete ruin. It is beautifully situated at the foot of the Garleton hills. Towards the end of the 16th, and beginning of the 17th century, a great part of the lower lands of East Lothian was possessed by the Hepburns, collateral branches of the Earls of Bothwell. A gentleman of that name was proprietor of the lands of Athelstaneford. A second son of his went into the Swedish service, and afterwards into the French service, and died a field-marshal of France. Blair, the author of 'The Grave,' and Home, the author of 'Douglas,' were ministers of this parish. Blair's grandfather was Robert Blair, the celebrated Covenanter; and his son rose to be Lord President of the Court of Session. After Home demitted his charge, he built a villa in the parish, called Kilduff, and laid out the grounds around it with considerable taste. Skirving, the author of a famous ballad on the battle of Prestonpans, and his son, Archibald Skirving, a very distinguished portrait painter, were also connected with this parish. Population of the village of Athelstaneford in 1851, 274. Population of the parish in 1831, 931; in 1861, 902. Houses, 222. Assessed property, in 1865, £9,360 1s.

This parish is in the presbytery of Haddington, and synod of Lothian and Tweeddale. Patron, Sir David Kinloch, Bart. Stipend, £262 0s. 6d.; glebe, £15. Unappropriated tithes, £372 16s. 11d. Schoolmaster's salary, £50, with about £48 fees. The original parish church—of which there are still some remains—was built by Ada, wife of Henry of Scotland, and annexed to her abbey in the neighbourhood of Haddington. The present church was built in 1780, and contains about 500 sittings. There are two private schools, and a parochial library.

ATHOLE, a mountainous district in the north of Perthshire, bounded on the north by Badenoch in Inverness-shire; on the north-east by Mar in Aberdeenshire; on the east by Forfarshire; on the south by the districts of Stormont and Breadalbane in Perthshire; and on the west and north-west by Lochaber in Inverness-shire. Sir John Sinclair estimates its superficial area at 450 square miles. The face of the country is highly picturesque, everywhere presenting lofty mountains, extensive lakes, deep glens, solemn forests, and all the finer features of Highland scenery. It is, moreover, "a land praised in song, richly wooded, yet highly cultivated and thickly inhabited." The loftiest mountain is Cairn

Gower, one of the Ben-y-Gloe ridge, on the east of Glen Tilt, which rises to the height of 3,725 feet. The Scarscock, at the point of junction with Aberdeenshire, is assigned by some topographers to this district of Perthshire. Its altitude is stated by some at 3,402; by others at 3,390 feet. The Blair, or Field of Athole, is an open fertile vale, intersected by the Garry, and generally presenting only low and rounded eminences. See article BLAIR-ATHOLE. The other streams in this district are the Edendon, the Bruar, and the Tilt, which are all tributaries of the Garry; the Airdle, a tributary of the Erich; and the Tumel, into which the Garry flows. All these streams belong to the basin of the Tay, and are described, in this work, in separate articles. The principal lakes are Loch Erich, Loch Rannoch, Loch Tumel, and Loch Garry, to which separate articles are also devoted. The Forest of Athole, the property of the Duke of Athole, contains upwards of 100,000 acres, stocked with red deer, moor-game, and ptarmigans, which are also preserved in the adjoining forests of the Earl of Fife, the Marquis of Huntly, and Farquharson of Invercauld. Athole gives the title of Duke to a branch of the Murray family. Sir John Murray was created a baron in 1604, and Earl of Tullibardine in 1606. The sixth Earl was created Marquis of Athole in 1676; and the second Marquis, Duke of Athole in 1703. The Athole-men have always been found, to use the language of old Froissart, "good chivalry, strong of limb and stout of heart, and in great abundance;" and their feuds with the followers of Argyle form a bloody chapter in Highland history. Stoddart says, that many of the Athole-men are good performers on the Great Highland bagpipe. He also notices the once-famed 'Athole-brose,' a composition of whiskey, honey, and eggs, as forming "an indispensable dainty in the feast, and no unimportant addition to the *Materia Medica*." [Remarks, Vol. II. p. 182.] This was written in 1800: probably Athole-brose is now banished from the feast, as it certainly is from the *Materia Medica* of all wise people in Athole. Claverhouse, Viscount Dundee, ended his fierce career, in the battle of Killiecrankie, a celebrated pass in Athole. See articles BLAIR-ATHOLE, KILLIECRANKIE, and PERTHSHIRE.

AUCH-. See ACH-.

AUCHALLADER. See GLENGORCHY.

AUCHANS. See DUNDONALD.

AUCHENAIRN, (OLD and NEW,) a village in the under ward and shire of Lanark, parish of Cadder, 3 miles north by east of Glasgow. In 1745, the Rev. James Warden, a native of this village, and minister of the parish, bequeathed 1,000 merks to the session, the interest of which is allotted to the support of a school here. In 1764, William Leechman, D.D., principal of the university of Glasgow, disposed to the session of Cadder about half-an-acre of ground, for a house and garden for the benefit of this school, of which the minister and elders are patrons. A new school-house was erected in 1826. Population, 744.

AUCHENBATHIE. See LOCHWINNOCH.

AUCHENBEATTY. See KIRKMAHOE.

AUCHENBOWIE. See NINNIANS (St.).

AUCHENCAIRN, a village, with a post-office, in the parish of Rerrick, Kirkcudbrightshire. It stands at the head of a bay of its own name, amid a beautiful tract of country, 7 miles east of Kirkcudbright. It is not built on any regular plan, but consists of good houses, with interspersions of trees, and has a cheerful and prosperous appearance. Here is a Free church, whose yearly sum raised in 1865 was £213 19s. 5d. Here also are several schools. A little south of the village is the old mansion of

Auchencairn; and on the banks of the bay are the charming residences of Collin, Nutwood, and Balcary. The bay is about $2\frac{1}{2}$ miles long and about 1 mile broad; and right across its mouth lies the green isle of Heston, giving it a land-locked and lake-like appearance. At low water the bay presents an uninterrupted bed of smooth sand, which is so dry and firm that horse-races have been holden upon it; small craft may load and unload in any part of it; and on the west side is a capacious natural basin, where vessels of burden may lie in safety from every storm. Population, 390.

AUCHENCROIVE. See QUIVOX (St.).

AUCHENDAVY, or AUCHENDOWIE, a small village in the parish of Kirkintilloch, about 2 miles east of the town of Kirkintilloch, Dumbartonshire. Here stood one of the forts of Antoninus' Wall; but it was cut through by the Forth and Clyde canal, and has been otherwise almost totally obliterated. Several curious discoveries of Roman remains have at different times been made here; but the most remarkable—to quote from the *Caledonia Romana*—"was the accidental opening, in the month of May, 1771, while the works of the Forth and Clyde canal were in progress, of a pit nine feet in depth, situated just without the south-west angle of the fort, which contained four Roman altars, with part of a fifth, a mutilated stone figure, and two ponderous iron hammers. Three of the altars had been broken through the middle, and all were lying huddled together, as if they had been hastily thrown in, and then covered with earth to conceal them from view—telling, as they lay, a silent but expressive tale of the sudden order of retreat, the precipitate muster of the garrison, the hurried dismantling of the station, and of the retiring footsteps of the legionary cohorts, as they defiled upon a southern route; while, perhaps, the shouts of the advancing Britons were already heard in the distance—startling the wild boar in the woods beyond Incharf, and the water-fowl among the sedges of the Kelvin."

AUCHENDRANE. See MAYBOLE.

AUCHENDRYNE, a village in the parish of Crathie, Aberdeenshire. It stands on the west side of the Clunie, opposite Castleton of Braemar, and is often regarded as part of that village. Great gatherings took place here in the olden time for hunting deer in the forest. See CASTLETON.

AUCHENGELLOCH, a wild locality, quite inaccessible to cavalry, and famous for its conventicles in the times of the Stuarts, in the parish of Avondale, Lanarkshire. A small monument was erected on it, a number of years ago, in memory of the sufferings of the Covenanters.

AUCHENGRAY, a station on the Caledonian railway, in the parish of Carnwath, and north-east border of Lanarkshire. It is situated in a bleak moorland region, $5\frac{1}{2}$ miles north of Carnwath and $6\frac{1}{2}$ south of West Calder. The branch line to the Wilsontown Iron Works goes off here, with a forked or double junction.

AUCHENLOCH, a small village on the east side of the parish of Cadder, Lanarkshire. It stands about 2 miles south of Kirkintilloch, adjacent to the bed of a large drained lake.

AUCHENREOCH. See URR and DUMBARTON.

AUCHENSAUGH, a hill in the parish of Douglas, Lanarkshire,—conspicuous for elevation above many surrounding hills, with the exception of Cairn table,—but chiefly remarkable for the swearing of the Solemn League and Covenant upon it by a body of Cameronians toward the close of the 17th century.

AUCHINARROW. See CROMDALE.

AUCHINBLAE, a village, with a post-office, in the parish of Fordoun, Kincardineshire. It stands

on a gentle rising-ground, washed by the rivulet Luther, amid the beautiful scenery of Strathfinella, $5\frac{1}{2}$ miles north-north-east of Laurencekirk, 11 south-west of Stonehaven, and 16 north of Montrose. An omnibus runs regularly between it and a station of the Aberdeen railway between Laurencekirk and Drumlithie. The village contains many substantial houses, and has a clean, cheerful, and prosperous appearance. It contains a flax spinning-mill, and a considerable number of hand-looms, engaged in linen-weaving. It contains also an office of the North of Scotland Bank. A weekly market for grain and cattle is held on every Friday from November till April; two large annual general fairs are held on the third Thursday of April and on the Wednesday after the second Tuesday of May; and hiring markets for servants are held on the 26th of May and the 22d of November. Population, 570.

AUCHINCASS. See KIRKPATRICK-JUNTA.

AUCHINCHEW, a romantic vale in the south of the island of Arran. It commences at the base of Knockearlew, and extends southward to the coast opposite the beautiful island of Pladda. Its flanks are cloven by ravines, and streaked with leaping rills. One of the cascades in it, called Essmore, makes a perpendicular descent of about 100 feet, into a magnificent cliff-walled amphitheatre, and serves as a landmark to mariners, and sometimes forms a brilliant circular iris.

AUCHINCLOCH. See KILSYTH.

AUCHINCRAW, a village in the parish of Coldingham, 3 miles north-north-west of Chirside, Berwickshire. Population in 1841, 203.

AUCHINDACHY, a station on the Great North of Scotland railway, $3\frac{1}{2}$ miles south-west of Keith.

AUCHINDINNY, a village on the south-east border of the parish of Lasswade, Edinburghshire. It stands romantically on the North Esk, 8 miles south of Edinburgh. Here are extensive paper-mills. Henry Mackenzie, the "Man of Feeling," often resided at Auchindinny House.

AUCHINDOIR AND KEARN, a mountainous parish, containing the post-office village of Lumsden, in the western part of Aberdeenshire; bounded on the north by the parish of Rhynie; on the east by the parish of Tullynessle; on the south and west by Kildrummy and Cabrach parishes. The etymology of the name, *Auchindoir*, is uncertain. It is supposed to signify 'The Field of the Chase or Pursuit.' "Buchanan tells us, that Luthlac, son to the usurper Macbeth, having been pursued northward by Malcolm, was slain 'in the valley of Bogie.' The spot where he was slain is thought to be about 2 miles to the north of the church of Auchindoir, but in the parish of Rhynie, in a place where a large stone with some warlike figures on it has been set up. If so, it is not improbable that Luthlac was overtaken about a mile to the south of the church, in the place where a number of cairns now are; that being defeated, he has been pursued through the valley of Auchindoir, which lies between the cairns and the figured stone; and that from this pursuit, the parish of Auchindoir has taken its name." [Statistical Report of 1792.] The greatest length of the parish is 9 miles; and greatest breadth 6. Its outline is very irregular. The larger part of the surface consists of hills and moors. Some of the mountains attain a great elevation. The Buck of Cabrach, over which the western boundary line of the parish runs, has, according to Ainslie, an altitude of 2,377 feet, or, according to the map of the Society for the Diffusion of Useful Knowledge, of 2,286 feet, above sea-level; and though more than 30 miles distant from the sea, is visible 10 leagues from shore. The principal stream is the Bogie. It is formed by two

rivulets, the burn of Craig, and the burn of Corchinan, flowing eastward into union near the parish church; and the united stream then runs north-westward through a rich strath or valley, to which it gives name. See BOGIE (THE). There is plenty of fine trout in it; but scarcely any salmon, except in the spawning season. The Don touches the south-east corner of the parish, and there receives the Mossat, which divides Auchindoir from Kildrummy. If we include a part of Kearn and Kildrummy, the valley of Auchindoir is nearly surrounded by a range of hills. From these, several smaller hills shoot forward into this valley; and the hills are indented by gullies, and deep narrow hollows; the whole presenting a prospect, which, though confined, and in most places bleak, to the admirers of wild and romantic scenery is by no means unpleasant. Except in the hilly parts, the parish is well cultivated, and the soil is generally good. Wheat is not grown, but excellent crops of barley and oats are produced, and many cattle and sheep are reared. Game of various kinds is abundant. Except on Donside and at Craig, there is little wood, the hills being mostly covered only with their native heath. The rock of a large part of the parish is sandstone; and it is extensively quarried for building purposes. The Coreen hills are mainly composed of mica schist, from which flag-stones forming excellent pavement are quarried. Towan-roof is formed of serpentine, along with which talc, soapstone, and the rather rare mineral asbestos are found. Limestone and slate occur in small quantities, with granite, greenstone, and other minerals. The chief proprietors are Mr. Lumsden of Auchindoir, Mr. Gordon of Craig, Mr. Grant of Drumminor, Mr. Gordon of Wardhouse, and Lord Forbes. Craig Castle is a very elegant mansion, the oldest portion of it built in 1518; and it is finely situated in a wild romantic ravine, the Den of Craig, celebrated in elegant Latin verse by Arthur Johnston. The Den is richly wooded; and the main branch of the Bogie flows through it, with some pleasant waterfalls. The old church, built in 1557, stands on the north-east part of the Den; and the walls of it are almost entire, and in some parts of exquisite workmanship. Drumminor House is mainly a very handsome modern edifice, and includes part of a previous mansion, which was formerly Castle-Forbes, the seat of Lord Forbes, now removed to the parish of Keig. The remains of the old church of Kearn are beside Drumminor; and that church was formerly the burying-place of the Forbeses. "On a little hill close by the church," says the Old Statistical Report, "there was anciently a castle, said to be mentioned by Boetius; but no traces of the walls of it remain. It has been defended on three sides by rocks and precipices, and on the fourth by a moat or deep excavation, evidently the work of art. There are several other antiquities, such as tumuli, barrows," &c. The turnpike from Alford to Huntly traverses the parish. Population in 1831, 1,030; in 1861, 1,593. Houses, 290. Valued rental in 1865, £5,604 11s. 5d.

This parish is in the presbytery of Alford, and synod of Aberdeen. In 1791, by a decret of the court of teinds, the parish of Kearn was disjoined from that of Forbes, and annexed to Auchindoir. Patron, the Earl of Fife. Minister's stipend, £158 1s., with manse and glebe. Schoolmaster's salary of the first parochial school, there being two, £20. The parish church was built in 1811 and has 450 sittings. There is a Free church; and the yearly sum raised in connexion with it in 1865 was £61 2s. 8d. The Free church for Rhyne also was built within the border of Auchindoir, in the face of opposition from the landowner of Rhyne, and with such speed

and enthusiasm that it was almost literally "a church built in a day;" yearly sum raised in 1865, £26 1s. 5 $\frac{1}{2}$ d. There are also, in the parish, a United Presbyterian church and an Episcopalian church; and there are a Free church female school, and one or two private schools.

AUCHINDUNE. See MORTLACH.

AUCHINHALRIG, a small village in the Banffshire section of the parish of Bellie, about 2 $\frac{3}{4}$ miles north-east of Fochabers. Here is a Roman Catholic chapel; and the clergyman who officiates in it resides here, and officiates also in a chapel at Fochabers.

AUCHINHOVE. See GRANGE.

AUCHINLECK, a parish, containing a post-office village of its own name, in the east of the district of Kyle, Ayrshire. It is bounded on the north by the parishes of Mauchline, Sorn, and Muirkirk; on the east by Muirkirk and Crawfordjohn; on the south by Kirkconnel, New Cumnock, and Old Cumnock; and on the west by Ochiltree. It is a narrow strip of country, measuring 16 miles in length, while it does not exceed two in average breadth. Its area is 24,295 acres; and about one-third is under tillage. The upper district is wild and hilly, though well suited for sheep pasture; and it rises, at the summits of Wardlaw and Stony hills, to the altitude of 1,630 and 1,843 feet. The central district is more cultivated; and the western part is well-enclosed and wooded. The rivers Ayr and Lugar trace part of the boundaries,—the former on the east, the latter on the south and the west. The principal heritor is Lady Boswell, the widow of Sir James Boswell, Bart.; to whose ancestor the barony of Auchinleck was granted by James IV. Auchinleck House, the seat of Lady Boswell, stands 3 miles west of the village, and is a fine Grecian mansion, built toward the end of last century by Lord Auchinleck, lord of session, and father of Dr. Johnson's biographer. Remains of a baronial fortalice of the early Boswells, figured by Grose, stand in its neighbourhood; and Dr. Johnson says, "I was less delighted with the elegance of the modern mansion, than with the sullen dignity of the old castle. I clambered among the ruins which afford striking images of ancient life. It is, like other castles, built upon a point of rock; and was, I believe, anciently surrounded with a moat." Remains of another old fortalice, called Kyle Castle, are in the upper district. Airds Moss, so sadly famous in Cameronian story, also is there. The minerals of the parish, particularly ironstone, limestone, and coal, are of great value. A lease of those on the Auchinleck estate was obtained, about 1848, by Messrs. Dunlop and Wilson of Clyde Ironworks, and passed latterly into the hands of Messrs. W. Baird & Co. of the Eglinton Ironworks. The same company became proprietors also of the Portland Ironworks, with a lease of the minerals around them; they likewise, in 1865, acquired a lease of the minerals on the Marquis of Bute's estate in the neighbouring parish of Cumnock. The Lugar Ironworks were established by Messrs. Dunlop and Wilson on the Auchinleck estate; new furnaces for them, on a more eligible site, were constructed in 1865, by Messrs. W. Baird & Co., while the old furnaces were allowed to go to ruin; and the calcined ironstone, in the meantime, was sent to the furnaces of Muirkirk and Eglinton. The Glasgow and Southwestern railway goes across the lower part of the parish, has a station at the village, and sends off hence a branch to Muirkirk; and a new railway, to be formed from Ayr to Cumnock, and thence by Muirkirk to Douglas, will give direct communication to Edinburgh. Considerable sums have recently been

spent, principally on Government loan, in the drainage of land. The value of assessed property, in 1843, was £7,496; in 1865, £30,056,—of which £10,785 were on railways. Hand-loom weaving and snuff-box making were long extensive employments; but within the 40 years ending in 1865, the former declined to about one-fifth of what it was, and the latter in even greater proportion. The village of Auchinleck stands on the Glasgow and Dumfries road, 1½ mile from Old Cumnock, 10 from Muirkirk, 12 from Galston, and 14 from Kilmarnock; and has an important lamb fair on the last Tuesday of August. Population of the village in 1861, 1,053. The parish contains also the village of Lugar. Population of the parish in 1861, 4,213. Houses, 727.

This parish is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, Lady Boswell. Stipend, £161 1s. 11d.; glebe £10. Schoolmaster's salary, £50. The parochial church was built in 1833, and has 800 sittings. A preacher of the Church of Scotland acts as a missionary at the Lugar iron-works. A United Original Seceder meeting-house is in Auchinleck village. A female school, supported by Lady Boswell, also is there; and three schools, supported by monthly deduction from the wages of the workmen, are connected with the iron-works. William McGavin, the author of "The Protestant," and William Murdoch, the associate of James Watt in mechanical invention, were natives of Auchinleck parish. The name Auchinleck is generally pronounced by the country people Affleck.

AUCHINLECK, a hill, of about 1,500 feet in height above sea-level, 4 miles west of Queensberry-Hill, parish of Closeburn, Dumfries-shire.

AUCHINLILLY. See CARRON (THE.)

AUCHINULLY or **LOWER BANTON**, a village, inhabited chiefly by colliers, miners, and sickle-makers, in the east side of the parish of Kilsyth, Stirlingshire.

AUCHINRAITH, a village in the parish of Blantyre, Lanarkshire.

AUCHINSKICH. See DALRY.

AUCHINTIBBER, a village in the parish of Blantyre, Lanarkshire. Population in 1841, 73.

AUCHINTOUL, an estate in the parish of Marloch, Banffshire. It comprises upwards of 3,400 acres,—of which about 2,350 are arable, about 200 are improveable moorland, about 400 are moss, and more than 300 are under wood. The village of Aberchirder stands on it. The mansion stands near the centre of the parish. This was once the property and residence of General Gordon, who rose to high command in the army of Russia under Peter the Great, and wrote a memoir of that monarch in two volumes, and who acted a conspicuous part among the Jacobite insurgents in 1715.

AUCHLEVEN, a village in the parish of Premnay, Aberdeenshire. It stands on the river Gady, and on the road from Insch to Keig. It has a corn-mill and a woollen-mill,—the latter for both carding and spinning.

AUCHLOSSEN (Loen), a lake partly in the parish of Aboyne, but chiefly in that of Lunphanan, Aberdeenshire. It is about a mile long, and nearly half a mile broad; but it was partially drained about 160 years ago, and must previously have been twice its present size. It abounds with various kinds of fish, and is frequented by flocks of aquatic fowls. Pikes have been caught in it measuring 6 feet in length, and weighing 25 lbs.

AUCHMEDDEN. See ABERDOUR, Aberdeenshire.

AUCHMILL, a village with a post office, 3 miles north-west of Aberdeen, and in the vicinity of the great quarries of fine granite, whence vast supplies

of that material are sent to Aberdeen for building and shipment.

AUCHMILLIAN, a village in the parish of Mauchline, 2 miles north-east of the town of Mauchline, Ayrshire.

AUCHMITHIE, a fishing-village in the parish of St. Vigean's, upon the German ocean, about 3½ miles north-east of Arbroath. It is situated on a high rocky bank, which rises about 120 feet above the sea, and is irregularly built; but contains several good houses, upon fens granted by the Earl of Northesk. The harbour is only a level beach in an opening between the high rocks which surround this part of the coast; and, after every voyage, the boats are obliged to be drawn up from the sea, to prevent their being destroyed by the violence of the waves. Near the village is the Gaylet pot, a remarkable cavern into which the sea flows. A place of worship was built in the village in 1829 by the late Countess of Northesk, but was not opened till 1834, and then began to be used as a kind of Chapel of Ease in connexion with the Established church. Population of the village, 400.

AUCHMORE. See WEEM.

AUCHMURE. See KIRKROSS-SHIRE.

AUCHMUTY. See MARRINK.

AUCHNACRAIG. See ACHNACRAIG.

AUCHNAGATT, a post-office station, subordinate to Ellon, Aberdeenshire.

AUCHNASHEEN, a post-office station, on the road from Inverness to Poolewe, 29½ miles west of Dingwall, and nearly in the centre of Ross-shire.

AUCHRANNIE. See ACHRANNIE.

AUCHTERARDER, a parish, containing a post-town of its own name, and containing also the villages of Smithyhaugh and Borland Park, in the Ochil and Strathearn districts of Perthshire. The name signifies 'the summit of the rising ground,' and is exactly descriptive of the situation of the town, on the ridge of an eminence in the middle of Strathearn, commanding, on the north and east, an extensive prospect of the adjacent country. The parish has united with it that of Aber-Ruthven or Abruthven, which signifies 'the Mouth of the Ruthven,' a small river on which it lies, and which discharges itself into the Earn. The annexation of the two parishes seems to have taken place some considerable time before the Revolution. The united parish is of an irregular form: its greatest extent from east to west is about 3 miles, and from north to south nearly 8 miles. It is bounded on the west by the parish of Blackford; on the north by Trinity-Gask; on the east by Dunning; and on the south by Glendevon. The greater part of it is an undulating country, lying on the south of the river Earn; and the rest includes some part of the Ochil hills, particularly Craigrossie, which is one of the highest of them, having an altitude of 2,359 feet above sea-level. These hills are clothed to their summit with grass, and afford good sheep-pasture. The general declivity of the parish is northward from the Ochils to the Earn. Almost the whole of the lower part is arable; and the northern declivity of the hills is arable a considerable way upwards. The Earn produces salmon, and the large white and yellow trout. It greatly beautifies the parish as well as the adjacent country; but is sometimes prejudicial to the neighbouring tenantry, by overflowing its banks in harvest. The Ruthven, which takes its rise in the hills, about 3 miles beyond the south-western boundary, is a beautiful little river, and runs with an uniform and constant stream through the whole length of this parish from south-west to north-east. Its course till it approaches the town of Auchterarder, lies along a narrow, steep-sided

richly-wooded vale; and it afterwards passes within 1,200 yards of the town, and finally joins the Earn about 4 miles beyond. This stream drives a number of corn and lint mills. It abounds with a species of trout peculiar to itself, of a small size, but remarkable for flavour and delicacy. This stream also is liable to sudden and extensive floods. In 1839, in particular, it did extensive damage in this way. The parish, particularly in the neighbourhood of the town, abounds with a hard and durable stone which is very fit for building both houses and dry-stone fences. The quarries in the neighbourhood of the town also afford grey slate in abundance. No coal has yet been found here. In the Statistical Report of 1838, the acres under the plough are stated at 7,176; the waste or pasture at 6,571 acres. There is only a small quantity of ground occupied by woods and rivers, and none at all by forests or marshes. About 300 acres are under plantation. There are a couple of hundred acres in common at the west end of the town, called the moor of Auchterarder, to which the inhabitants send their cows to pasture. In its present state it is of no great value; but it is capable of very great improvement. Attempts have been repeatedly made to get it enclosed and divided; but hitherto it has been found impossible to settle the respective claims of the various parties interested in it. The average rent of land, in 1792, was 20s.; in 1838, 30s. There are ten landowners; and the principal mansion is Auchterarder House, a structure in the Elizabethan style of architecture. The Scottish Central railway passes north-westward through the parish, and has a station near the town. About 300 or 400 yards from the lower end of the glen of the Ruthven, the finest viaduct on the whole line of the railway spans it. This is 498 feet long, 98 feet high, and consists of six large arches, each sixty feet in span, with a smaller arch at each end. The arches are supported on piers 75 feet high, 33½ feet by 12 feet at bottom, and 27½ feet by 9 feet at top. A pier contains 24,018 cubic feet, and weighs about 2,000 tons; a large arch weighs 560 tons; and the whole work weighs about 17,000 tons. As the arches are of uniform size, and as most of the piers stand on the same horizontal plain, the viaduct presents the appearance of unbroken unity; and it seems, on the whole, to be a fabric in which the elements of strength, durability, and neatness are skillfully combined. The stones for it were all brought from the quarries at Auchterarder and Lucas. The arch stones vary in thickness from 15 to 24 inches, with a uniform depth of three feet; the lengths are unequal, but some of them are eight feet long, and weigh five tons each. In consequence of the viaduct being somewhat depressed below the top of the glen, it is scarcely visible, even from a short distance; and partly for the same reason, the view from it is not extensive. Nearly two miles north-east of the viaduct, the railway is carried across a deep dell, formed by the burn of Parney, on two arches, one of which is built directly above the other. The lower arch contains the burn, and the diverted road from Auchterarder to Duinning passes through the upper. Almost beside these arches, there is a rock cut of considerable size; and immediately beyond it, there is a large earth cut, called the Jeanfield cut. Population of the parish in 1831, 3,182; in 1861, 4,657. Houses, 581. Assessed property in 1865, £15,358.

The parish of Auchterarder is the seat of a presbytery in the synod of Perth and Stirling. Patron, the Earl of Kinnoull. Stipend, £199 14s. 2d.; glebe, £17. Unappropriated tithes, £18 15s. 11d. Schoolmaster's salary is now £50, with about £40 fees. The parochial church stands in the middle of the town, and was built in 1784, and enlarged in 1811,

and has 930 sittings. The roofless walls of the old church of Aber-Ruthven are still standing; and beside them is an elegant aisle, surmounted by a beautiful urn, the burial-place of the Dukes of Montrose. There are two United Presbyterian churches in the town, the North and the South; the former with an attendance of 320, and the latter with an attendance of 455. There is a Free church in the town, with an ornamental tower; and the yearly sum raised in connexion with it in 1865 was £501 11s. 11d. There is a Free church also at Aber-Ruthven, erected chiefly through the liberality of Major Graeme, the proprietor of the district, and opened toward the end of 1851. The yearly sum raised in connexion with it in 1865 was £199 6s. 9d. There is likewise a chapel of the Evangelical Union. A number of benefactions for various local benevolent objects were made about 40 years ago by John Sheddan, Esq. of Lochie; and one of them was the erection of a schoolhouse, and the endowing of it with adjacent land worth £1,000. The parish of Auchterarder will ever be famous as the scene of the first and grandest of the ecclesiastical struggles which arose out of the Veto Act, and which terminated in the disruption of the Established Church. The exercise of patronage was at one time very unpopular in Scotland. It had been an early principle of the Church that clergymen should not be intruded on parishes contrary to the consent of the parishioners. When a patron presents, it is for the presbytery to say whether the presentee is qualified, and to refuse collation if he is not. In 1834, the Church pronounced the presentee's acceptability to the parishioners a necessary qualification, and passed the Veto Act, instructing all presbyteries to reject presentees to whom a majority of male heads of families in communion with the Church objected. In the case of the Auchterarder presentation, when this was acted on, the presentee brought an action in the civil courts to declare it an undue interference with his civil rights. The Church said—"This is a matter purely ecclesiastical. The civil and the church-courts have their respective jurisdictions. This is ours entirely, and the civil court must not interfere." The Court of Session said—"We care not what you call it. We are here to protect men's property. Patronage has been constituted property by Act of Parliament. Whether rightly so or not, it is a commodity that may be bought and sold. You have attempted to deprive a proprietor of the use of it, under a pretence, and we must stop you." The Church appealed to the House of Lords. The judgment of the court below was confirmed; but the General Assembly, till after the disruption, declined to implement the decision of the civil tribunals, holding itself irresponsible to any civil court for its obedience to the laws of Christ.

The TOWN OF AUCHTERARDER is distant by railway 14 miles from Perth and 19 from Stirling. It seems to have existed so early as the eleventh century. An old castle which stood a little to the north of it, and of which there are still some small and very strong remains, is believed to have been built by Malcolm Canmore as a hunting-seat; and the spacious tract still held in commonage by the townspeople is traditionally asserted to have been the gift of that monarch to the town; so that Auchterarder, as well as Dunfermline, may have been illumined at times by Canmore's brilliant court. The town at all events was early a burgh, perhaps a royal burgh, sending a member to parliament; and a great number of its houses hold burghage to this day; and how or when it lost its high privilege is not known. In 1328, King Robert Bruce made a charter graut of the lands of Auchterarder to one of his great barons,

but confirmed the liberties of the burgh and the burgesses, leaving them the same as they had been in the reign of Alexander III. The town, however, did not thrive; and, in the 16th century, an act of parliament recorded that "Ochterairder was very puir, and meikle infestit with gipsies and soruers," and ordained that an annual fair for the encouragement of trade be held there, in all time coming, on the 25th day of November. This fair is still held in terms of the statute; only, in accordance with the change of style, it is now held on the 6th of December. It is reckoned the greatest business day in the year, and has, no doubt, contributed to the improvement of the place. "Auchterarder," says the New Statistical Account, "was one of the Scottish towns ironically compared by George Buchanan with the fine English cities. Some English noblemen, boasting to King James of the properties of the English towns, the sarcastic Scot replied, that he knew a town in Scotland which had fifty draw-bridges, and which is afterwards described as a 'country village between Stirling and Perth, called Auchterardoch, where there is a large strand which runs through the middle of the town, and almost at every door there is a long stock or stone laid over the strand, whereupon they pass to their opposite neighbours, and when a flood comes they lift their wooden bridges in case they should be taken away, and these they call draw-bridges.' So goes the story." On the 28th of January, 1716, when the royalist troops under the Duke of Argyle were advancing upon Perth, the Earl of Mar burned the whole of Auchterarder except one house; and on the 30th, when Argyle arrived, he could find no accommodation, but spent the night upon the snow, "without any other covering than the fine canopy of heaven." "Auchterarder," says Newte—who visited this place in 1782—"seems to have lain under the curse of God ever since it was burnt by the army in the year 1715. The dark heath of the moors of Ochil and Tullibardine,—a Gothic castle belonging to the Duke of Athol,—the naked summits of the Grampians seen at a distance,—and the frequent visitations of the presbytery, who are eternally recommending fast-days, and destroying the peace of society by prying into little slips of life, together with the desolation of the place, render Auchterarder a melancholy scene, wherever you turn your eyes, except towards Perth and the lower Strathearn, of which it has a partial prospect."—When this superficial tourist penned his coarse and unjust remarks on presbyterial visitations, he probably knew no more of the matter than he seems to have done of what he calls the Antimonian heresies of the place.

The town, in its present state, consists principally of one street upwards of a mile long. Its most striking feature is the fine tower of the Free church. The town has offices of the Union Bank and the Central Bank, a savings' bank, and four insurance offices. A weekly market is held on Saturday; and is the principal grain mart for a considerable surrounding district. Fairs are held on the last Tuesday of March, on the first Thursday of May, on the Friday in August, in September, and in October, before Falkirk, and—as we have already noted—on the 6th day of December. The manufacture of Galas has of late years found a seat here, and is on the increase. Upwards of 15 manufacturers are engaged in it,—one of whom employs 300 hands. There is also a large woollen spinning-mill; and there are several dye-works. A good many looms are still employed in weaving cotton fabrics for Glasgow manufacturers. A number of mills of various kinds, more or less connected with the town, or at least intimately affecting its prosperity, are dispersed along

the water of Ruthven—particularly a farina mill, two flax mills, two saw mills, and four grain mills. A short way from the town is a village called the Boreland-Park, built for the accommodation of the soldiers who were disbanded after the war in 1763. Most of the soldiers who were planted in it, left it very soon afterwards—though the terms of their settlement were very advantageous—either from dislike to the place, or more probably to their new mode of life. Half a mile east of the vestiges of Malcolm Canmore's castle, there are remains of an old church, commonly called St. Mungo's, and supposed to have been at one time the parish church. And south-east of the town, at the foot of the Ochils, are some traces of ancient encampments, which may possibly have been outposts of the great Roman camp at Ardoch. Population of the town in 1831, 1,981; in 1861, 2,844. Houses, 380.

AUCHTERDERRAN, a parish, containing the village and post-office of Lochgelly, in the western part of Fifeshire. It is bounded by Auchtertool on the south; Abbotshall on the south-east; Dysart on the east; Kinglassie and Portmoak on the north; and Ballingray on the west. It has an irregular outline, and is about 5 miles long from north to south, and about 3 miles broad. It comprises part of a valley, screened on the south, east, and west, by rising grounds, which are of sufficient elevation to exclude the view of the frith of Forth, although they are cultivated to the top. The water of Orr flows through the parish from west to east. It is a slow running stream, rising in the north-west corner of the county, flowing through Loch Fetty, and falling into the Leven about 3 miles from its mouth. On the southern border of the parish is a sheet of water measuring nearly 3 miles in circumference, called Lochgelly, which discharges its waters, by a small rivulet, into the Orr. There are good limestone quarries; and coal is abundant, and is extensively mined. About 500 acres in the parish are under wood. Agriculture has undergone vast improvement, and is in excellent condition. There are eleven heritors, with rentals of £50 and upwards. The total land-rent in 1792, was £2,000, and in 1836, was about £7,000. Assessed property in 1865, £15,728 2s. The Dunfermline branch of the Edinburgh and Northern railway goes southwestward through the parish, and has a station in it at Lochgelly. Population in 1831, 1,590; in 1861, 3,457. Houses, 667. The increase of population has been occasioned by the opening of the Cardenden colliery and the Lochgelly iron-works.

This parish is in the presbytery of Kirkecaldy and synod of Fife. Patron, Boswell of Balmuto. Stipend, £237 11s. 10d.; glebe, £30. Unappropriated teinds, £824 0s. 11d. Schoolmaster's salary now is £60, with £25 fees. The parochial church is situated centrally in the east, and was built in 1789. There is a Free church station at Lochgelly; the yearly sum raised in connexion with which in 1853 was £34 8s. 9d. There is also at Lochgelly an United Presbyterian church, with an attendance of 300. There are likewise a subscription school, a savings' bank, and a total abstinence society.

AUCHTERGAVEN—vulgarly OCHTERGAEN—a parish, containing the post-office village of Bankfoot, and most of the post-office village of Stanley, and containing also the villages of Carniehill, Auchtergaven, and Waterloo, besides several hamlets, in the Strathay district of Perthshire. It lies midway between Perth and Dunkeld, and is washed for a short distance on the east by the Tay. It measures 10 miles in length from east to west, and about 3 in average breadth from north to south. Its general surface measures nearly 20,000 acres; but a

great proportion of this consists of hills and moors, or waste uncultivated ground. A small, old, contiguous parish, called Logiebride, is annexed to Auchtergaven; but no account can be had of the time when the annexation took place, either from tradition, or from the records of presbytery, in which the parish is always named Oughter or Aughter-gaven. The people residing in the district that belonged to Logiebride parish, however, still continue to bury in the churchyard at Logiebride; and a part of the church is yet standing, and is used as a burying-ground by the family of Tullybelton. It is distant 2 miles from Auchtergaven church. The united parish is bounded on the north by the parish of Little Dunkeld; on the east by Kinclaven parish; on the south by the parishes of Redgorton and Monedie; and on the west by Redgorton. A lower range of the Grampians skirts it on the north, and comprises the celebrated mountain of Birnam. See **BIRNAM**. From these heights a number of streams descend towards the Ordie, a tributary of the Tay, which rising in a small lake in the hill of Tullybelton, flows through Strathordie in this parish, and unites with the Shochie at Luncarty. At Loak the Ordie receives the Garry from Glen Garr. The bed of the Tay, near Stanley, is crossed by a whin-dyke, which here forms the celebrated Linn of Campsie. At the foot of Birnam there is a small secluded sheet of water which is frequented by the heron; and in this neighbourhood, the great bittern has been shot. In the year 1784 Mr. Dempster of Dunnichen, and Mr Graham of Fintray, along with several gentlemen in Perth, feued some ground at Stanley from the Duke of Athole, built a mill for spinning cotton, and soon after began to erect a village in its neighbourhood. At that time only a few families dwelt near Stanley; and, except the land within the enclosures around Stanley house, most part of the district was almost in a state of nature; but now it is the seat of a bustling and considerable population. See **STANLEY**. The old mansion of Stanley, on the Tay to the north of Stanley village, was built by the late Lord Nairne. The family of Nairne had another elegant house near Loak, the ruins of which are yet to be seen. It was purchased by the Duke of Athole after the forfeiture of Lord Nairne, and thereafter demolished. The title of Nairne was revived in 1824 in the person of William, Lord Nairne, who was succeeded by his son William, 6th Lord Nairne, who died, without issue, in 1837. The title is understood to have descended to the Baroness Keith. The Nairne family bury in the south aisle of Auchtergaven church. The chief mansions in the parish, additional to that of Stanley, are Airlywright House and the House of Tullybelton; and the proprietors of these mansions, together with the Duke of Athole, the Baroness Keith, and Sir William Drummond Stewart, Bart., are the landowners. Stone quarries are wrought in a number of places, and a slate quarry is wrought at Glenshee, near the western boundary. The total value of all kinds of raw produce was estimated in 1838, at £42,750. Assessed property in 1865, £13,406 10s. 6d. The manufactures comprise spinning and weaving in the Stanley factories, a great deal of handloom weaving in other places, extensive malting, a good deal of distillery work, and the work of a number of flax mills, corn-mills, and miscellaneous handicraft work-shops. The great north road from Perth to Inverness traverses the eastern district of the parish; and the Scottish Midland Junction railway approaches sufficiently near, at the station of Luncarty, to be of service to the parishioners. The village of Auchtergaven stands on the Perth and

Inverness road, 9 miles from Perth; and is a straggling place. A fair for cattle, sheep, and general business, is held at it on the second Friday of November. Population of the parish in 1831, 3,417; in 1861, 2,562. Houses, 448.

This parish is in the presbytery of Dunkeld, and synod of Perth and Stirling. Patron, the Crown. Stipend, £179 6s. 4d., with a manse and glebe. Schoolmaster's salary now is £50, with about £12 fees. The parochial church is in a central situation, on a sloping bank, adjacent to the Perth and Inverness road, and is an oblong building, with a tower, and was erected about the year 1812, and contains nearly 1,200 sittings. There is one Free church at Auchtergaven, and another at Stanley; and the yearly sum raised in connexion with the former in 1865 was £86 13s. 11d., and with the latter, £175 0s. 10d. There are two United Presbyterian churches, designated in their synod roll North Auchtergaven and South Auchtergaven, but both situated in the village of Bankfoot. There are five private schools. Robert Nicoll, who has been called the Second Burns of Scotland, was a native of the parish of Auchtergaven; and he sings in one of his pieces "the Folk o' Ochtergaen," and records in another that "the memories o' his father's hame, an' its kindly dwellers a'

Are twined wi' the stanes o' the silver burn
An' its fairy crooks and bays,
That onward sang 'neath the gowden broom
Upon bonnie Ordie braes."

AUCHTERHOUSE, a parish in the south-west of Forfarshire, bounded on the north by Newtyle and Glamis parishes; on the east by Tealing and Strathmartine; on the south by the parish of Liff, and the shire of Perth; and on the west by Lundie parish. Its greatest length is about 4½ miles, and greatest breadth 3½. About three-fourths of the surface are arable; and upwards of 1,400 acres are under wood. The Sidlaw hills shelter the parish on the north-west; and in the north-east are the hills of Auchterhouse and Balkello. Two streams, both rising in the parish of Lundie, flow through the lower part of this parish, and uniting at the village of Dronly, form the Dighty water, which flows into the frith of Tay, about 4 miles east of Dundee. There is abundance of building-stone and of paving-stone; and there are two corn-mills and two yarn washing-mills. There are two mansions, that of Auchterhouse, which belongs to the Earl of Airlie, and that of Balbouchly, which belonged to the late P. Miller, Esq. There are three small villages,—Kirktown of Auchterhouse, Dronly, and Bonniton; and the first of these stands 700 feet above sea-level, and is 7 miles north-west of Dundee, which is the post-town. Both the Dundee and Meikle turnpike road, and the Dundee and Newtyle railway pass through the parish, and afford abundant facilities of communication. Population in 1831, 715; in 1861, 706. Houses, 142. Assessed property in 1865, £7,190 14s.

This parish is in the presbytery of Dundee, and synod of Angus and Mearns. Patron, the Earl of Airlie. Stipend, £229 0s. 2d.; glebe, £14. Schoolmaster's salary now is £40; school-fees about £40. Church built in 1775. The old church was a large and handsome Gothic structure.

AUCHTERLESS, a parish, containing a post-office hamlet of its own name, in the north-west of Aberdeenshire. It is bounded on the north-west by Banffshire, and on other sides by the parishes of Turriff, Fyvie, Rayne, Culsalmond, and Forguc. Its greatest length north-eastward is about 8 miles; and its greatest breadth is nearly 4 miles. Its surface is the upper basin of the Ythan, from within

about a mile of the source of that stream, onward to the north-eastern boundary. The soil is gravelly, and lies on a formation of clay-slate. About one-third of the whole surface lies uncultivated; and about 500 acres are under wood. There is only one mansion; and the chief landowners are Duff of Hatton and Leslie of Badenscoth. Some remains of an ancient camp, supposed to be Roman, exist on the south-west border. The turnpike road from Aberdeen to Banff passes through the parish; and the hamlet of Auchterless stands on that road, 6 miles south by west of Turriff. A fair is held here for cattle, sheep, and general business, on the Wednesday after the second Tuesday of April. The small straggling village of Gordonstown stands upwards of 2 miles farther south. Population of the parish in 1831, 1,701; in 1861, 2,010. Houses, 355. Assessed property in 1860, £10,155.

This parish is in the presbytery of Turriff, and synod of Aberdeen. Patron, Duff of Hatton. Stipend, £191 6s. 5d.; glebe, £13 13s. Unappropriated teinds, £171 5s. 1d. Schoolmaster's salary now is £50, with about £21 fees. The parochial church was built in 1780, and repaired in 1832, and contains 650 sittings. There is a Free church preaching station at Auchterless; and the yearly sum raised in connexion with it in 1865 was £65 11s. 10d. There are five private schools.

AUCHTERMUCHTY, a parish, containing the town of Auchtermuchty and the village of Dunshelt, in the north-west of Fifeshire. It measures 2½ miles from east to west, and about 2 from north to south. It is bounded on the north by the Perthshire portion of Abernethy parish; on the east by Collessie; on the south by the river Eden, which separates it from Strathmiglo; and on the west by Strathmiglo and Abernethy. From its northern limits, where it rises to a considerable elevation on the Ochils, the face of the country slopes gently to the Eden. The soil is fertile and well-cultivated; and that of the south-eastern district is deep, rich alluvium, part of a plain which formerly was much flooded in winter, but which now is well drained and constitutes as luxuriant and gardenesque a piece of land as any in Scotland. There are two large landowners, five considerable ones, and about sixty small ones. Rental in 1865, £10,487 15s. 3d.; of which £2,370 was in the town. The only considerable mansion is Myres castle, now the property of Mrs. Tyndall Bruce of Falkland. The road from Newburgh to Kirkcaldy, and that from Cupar-Fife to Kinross intersect each other in the parish; and a station of the Fife and Kinross branch of the North British railway is adjacent to the town. Population in 1831, 3,225; in 1861, 3,285. Houses, 731.

This parish is in the presbytery of Cupar, and synod of Fife. Patron, Mrs. Tyndall Bruce of Falkland. Stipend, £238; glebe, £30. Unappropriated teinds, £77 5s. 8d. Schoolmaster's salary, £60, with about £60 fees. The parochial church was built in 1780, and enlarged in 1838, and contains 900 sittings. There is a Free church; yearly sum raised in 1865, £110 12s. There are three United Presbyterian churches; and one of these is in the pointed style of architecture, and was opened in January, 1846. There are a Baptist chapel in the town, and an Independent one in Daneshalt. The parochial school is a recent and rather ornamental building; and there are four other schools.

The TOWN OF AUCHTERMUCHTY stands at the intersection of the road from Newburgh to Kirkcaldy with that from Cupar to Kinross about a mile north of the Eden, 5 miles south of Newburgh, 9 west by south of Cupar, 10 north-east of Kinross, and 15 north of Kirkcaldy. A small burn flows through it

from Lochmill in Abdie parish, and joins the Eden near Kilwhis. It is an irregularly built town, consisting of three principal streets, and a number of lanes. The East Lomond hill forms the finest object in the surrounding landscape. Auchtermuchty was erected into a royal burgh by a charter of James V., dated May 25, 1517, and confirmed by charter of James VI., dated October 28, 1595. It had not, however, exercised its privilege of sending a member to parliament for a considerable time before the Union. Since the date of the 1 and 2 William IV., parties qualified in terms of it, resident within the burgh, have voted in the election of the county-members. In 1833, seventy-six of its inhabitants rented property within it amounting to £10 per annum and upwards. The burgh became bankrupt in 1816; and the whole of its property—except the town-house, jail, steeple, bell, and customs, which, on appearance for the magistrates and the Crown, were held to be *extra communitatem*—was sequestrated in June, 1822, and sold under authority of the court of session in a process of ranking and sale. The affairs of the burgh are managed by a provost, two bailies, and nine councillors. A Sheriff Circuit court, for the parishes of Auchtermuchty, Falkland, Collessie, and Strathmiglo, is held on the second Monday of January, April, July, and October. A Justice of Peace court also is held. A weekly market is held on Monday; and fairs are held on the first Monday of February, the last Monday of April, the second Monday of July, the first Monday of October, and the first Monday of December. The town has a gas company, an agricultural society, a savings' bank, and offices of the Union Bank, and the Bank of Scotland. A public building for lectures, concerts, &c., was founded in 1865; and a proposal was entertained in that year for introducing water by gravitation. The industrial works include a bleachfield, two saw-mills, a beam-making business, an extensive distillery and malting establishment, and a small steam factory,—the last erected in 1865. But the principal industry is hand-loom weaving; and this is maintained chiefly by agents for manufacturers in Newburgh, Kirkcaldy, and Dunfermline, and employs about 600 looms in the town, and about 800 in the parish. The town is becoming a favourite summer residence, especially for families from the coast. Every one has heard of the humorous Scottish poem, 'The Wife of Auchtermuchty,' which has been ascribed, but most erroneously, to James V., and which says,

"In Auchtermuchty dwelt a man,
An husband, as I heard it tauld,
Quha weil could tippie out a can,
And nowther luvit hunger nor cauld," &c.

Population of the town in 1841, 2,394; in 1861, 1,215. Houses, 263.

AUCHTERNEED, a small rural village, on a hillside, opposite Castle Leod, at the head of Strathpeffer, and at the skirts of Ben Wyvis, on the confines of Ross-shire and Cromartyshire. It has a straggling character, and is winged with patches of corn lands, which originally were allotments to some veterans of the Highland corps who served in the great American war.

AUCHTERTOOL, a parish, containing a post-office village of its own name, in the south-western part of Fifeshire. It is bounded by the parishes of Ballingray, Auchterderran, Abbotshall, Kinghorn, Aberdour, Dalgetty, and Beath. Its greatest length east-north-eastward is about 3 miles; and its average breadth is about 1½ mile. A range of hills, called Cullalo Hills, stands across its west end, and has an altitude of about 750 feet above sea-level, and stoops precipitously to the south. The rest of the

surface is undulating, but has a general declination to the east. The ground about the church and manse is elevated and commanding, and takes in a fine view of the sea to the east, as far as the eye can reach, comprehending in it the isle of May, the Bass, North-Berwick law, and a point of the Lothian coast which stretches a considerable way into the sea. There is one small lake in the parish called Camilla Loch, in which are some perch. It takes its name from the old house of Camilla adjacent to it; which was so called after one of the countesses of Moray, a Campbell. The ancient name of the house was Hallyards, when it belonged to the family of the Skenes. It is said to have been the rendezvous of the Fife lairds at the rebellion in 1715. When James V. was on his road to the palace of Falkland, after the defeat of his army on the English border, under the command of Oliver Sinclair, he lodged all night in the house of Hallyards, where he was courteously received by the Lady of Grange, "ane ancient and godlie matrou," as Knox calls her. It seems then to have belonged to the Kirkcaldies of Grange, a family of considerable note in the history of Scotland. It is now a ruin. Limestone, whinstone, and sandstone are quarried; but the last is of poor quality. The total yearly value of all the raw produce of the parish was estimated in 1836, at £9,262. Assessed property in 1865, £4,204. The chief landowners are the Earl of Moray and the family of Wemyss. The real rent in 1836 was £2,165. The village of Auchtertool stands in the south-eastern part of the parish, about $4\frac{1}{2}$ miles west of Kirkcaldy. It contains a large brewery, a parochial library, and a savings' bank. Population of the village in 1851, 239. There is another village, but a very small one, of the name of Newbigging. Population of the parish in 1831, 527; in 1861, 609. Houses, 121.

This parish is in the presbytery of Kirkcaldy, and synod of Fife. Patron, the Earl of Moray. Stipend, £157 18s. 10d.; glebe, £20. Schoolmaster's salary now is £50, with about £30 fees. The church stands a mile distant from the villages, and was repaired in 1833, and contains 280 sittings. There are a subscription school, an infant school, and a parochial library. The Lochgelly station of the Dunfermline branch of the North British railway is in the vicinity.

AUCHTERTYRE, a small village in the parish of Newtyle, Forfarshire. Near it are traces of an old camp. See NEWTYLE.

AUCKINGILL, a village in the parish of Canisbay, Caithness shire.

AUGUSTUS (FORT), a fort and a village on a small triangular plain, at the south-western extremity of Loch Ness, in the parish of Boleskine, Inverness-shire; 18 miles north of Garvismore-inn; $3\frac{1}{4}$ south-west of Inverness; 29 north-east of Fort-William; $5\frac{1}{2}$ miles from the north-east end of Loch Oich; and 144 from Edinburgh. The fort was erected on a part of the forfeited estate of Lord Lovat in 1729, and is a regular fortification, with four bastions defended by a ditch, covert-way, and glacis, and barracks capable of accommodating 300 soldiers. It was until late years garrisoned by a company of soldiers, and supplied with provisions from Inverness; but the guns have been removed to Fort-George, and there are only a few soldiers stationed here. The fortifications are in good repair; but as the whole is commanded from the neighbouring hills on every side, it is by no means capable of long resistance. It is a neat-looking place. The surrounding plantations, and the rivers Tarffe and Oich which run by it, give it very much the appearance of an English country-seat. "Look-

ing down from the glacis," says Miss Spence, "the eye commands the whole length of the lake, 24 miles. On the south side, bordered by lofty and precipitous rocks as far as the eye reaches, without any interruption except the hanging gardens of Glendoe. On the north, a softer and more varied prospect forms a happy contrast to the rude grandeur of Suidh Chuiman, and the dark heights of Stratherrick. Verdant bays retire from the view; wooded heights gently rising, and peopled glens of the most pastoral description, intervene,—each divided by its blue narrow stream pouring in to augment the abundance of the lake. This last, in calm weather, holds a most beautiful and clear mirror to its lofty and varied borders. In wintry storms its agitations resemble Ocean into tempest wrought.' The eddying winds which rush with inconceivable fury down the narrow openings in the hills, make navigation dangerous from their violence and uncertainty. The east wind—which sometimes prevails in winter for more than a month—raises tremendous waves, yet it is not so dangerous as the impetuous blasts which descend from the apertures between the mountains." Fort Augustus was taken by the rebels in 1745, who deserted it after demolishing what they could. The Duke of Cumberland established his head-quarters here after the battle of Culloden.

The village of Fort Augustus stands immediately behind the fort, and bears also the name of Killiecuming, or Cill Chuiman. It has a post-office under Inverness, a hotel, an established church, a Free church, a Roman Catholic chapel, an Established school, and a Free church school. A missionary clergyman of the Royal Bounty serves the Established church; and the sum raised in 1865 in connexion with the Free church was £77 15s. 5d. Sheriff small debt courts are held in January, May, and September. Fairs are held on the Monday before the second Wednesday of June, on the second Thursday of August, and on the Monday before the 29th of September. There are also occasional trysts for black cattle in spring and autumn. The Caledonian canal here passes through a series of five locks; and the place is enlivened by the transit of the Glasgow and Inverness steam-boats. Population of the village, 213.

AULDBAR, an estate and a railway station, in the parish of Aberlemno, Forfarshire. The estate belongs to the family of Chalmers, who reside on it in Auldbar castle, a modernized old stronghold. See ABERLEMNO. The railway station is on the part of the Aberdeen railway which originally formed the Arbroath and Forfar railway, and is situated on the southern border of Aberlemno parish, at a point whence a road was made to communicate between the latter railway and Brechin. See ARBROATH AND FORFAR RAILWAY.

AULDCAMBUS. See COCKBURNSPATH.

AULDCATHIE. See DALMENY.

AULD-DAVIE, a rivulet in Aberdeenshire, a head-tributary to the Ythan, into which it falls near Glenmailen. Near the confluence of the two streams, in the parish of Auchterless, are some relics of Roman antiquities, called the Rae or Ri dykes, supposed by many to point out the Statio ad Ituam of Tacitus. See 'Caledonia,' vol. i. p. 127; and Roy's 'Military Antiquities,' Plate LI. See AUCHTERLESS.

AULDEARN, a parish, containing a post-office village of its own name, in the north-east corner of Nairnshire. It is bounded on the north by the Moray frith; on the east, by Morayshire; on the south, by the parish of Ardclach; and on the west, by the parish of Nairn. It extends 4 miles along the front; and is in length about $6\frac{1}{2}$ miles, and in

breadth about 5½. The ground rises gradually from the coast to the inland part of the parish, where it becomes hilly. The soil is generally light and fertile in proportion to its vicinity to the sea. Near the coast is a small lake, called Loch Loy, about 1½ mile in length, and a quarter of a mile broad. Much of the surface is beautified with wood; and the whole of it, as seen from commanding eminences, backed by the frith and by the distant mountains of Ross-shire, looks smilingly lovely and brilliantly picturesque. The mansions of Boath and Lethen are the only ones which attract notice; but there are five landowners, and the valued rental is £7,256. The chief antiquities are traces of two Druidical temples, and remains of the old castles of Moyness and Inshoch, and monuments of the battle of Auldearn. The Highland railway and the Elgin and Nairn road go through the parish. The village of Auldearn stands on that road, about 2¼ miles south-east of Nairn, and 29 miles west of Elgin. It is a place of considerable antiquity, and a burgh of barony. A fair for cattle and horses is held on the 20th of June, if that day be a Wednesday or Thursday, and if not on the first Wednesday after; and another fair is held on the first Tuesday in November after Inverness fair. Population of the village in 1841; 351; in 1861, 358. Population of the parish in 1831, 1,653; in 1861, 1,328. Houses, 262. Assessed property in 1860, £8,663.

This parish is in the presbytery of Nairn and synod of Moray. Patron, Brodie of Brodie. Stipend, £241 5s. 4d.; glebe, £12 10s. Unappropriated teinds, £360 5s. 3d. Schoolmaster's salary is £60, with £10 fees. The parochial church stands close to the village, and was built in 1757, and has 477 sittings. There is a Free church at Auldearn; and the yearly sum raised in connexion with it in 1865, was £191 7s. 3¼d. There is an United Presbyterian church at Boghole, built about 1780, repaired in 1817, and containing 353 sittings. There are two friendly societies, a small religious library, and a neat monumental infant school,—the last in memory of John Innes, Esq., who was a native of the parish, and became a citizen of London. In the burying-ground of Auldearn are several interesting monuments of Covenanters who fell in the battle of Auldearn, and also some of the Hays of Lochloy and Moyness. It is rather remarkable that a very large portion, it is thought a great majority, of the inhabitants of the town of Nairn (not of the fishing class) have their burial places in Auldearn, and that to these they cling with a romantic feeling, the funerals of the poorest being well-attended all the way. To other causes, the supposed greater sacredness of the soil of Auldearn, on account of its having been the ancient seat of the deans of Moray, may perhaps be added as a reason for such a resort of funerals from Nairn, as well as many other places.

In May, 1645, the Marquis of Montrose, while pursuing General Hurry in his retreat on Inverness, took up a position near the village of Auldearn, with 1,500 foot, and 250 horse, where he was attacked by Hurry, now reinforced by the *elan Fraser*, and the Earls of Seaforth and Sunderland. "The village of Auldearn stands upon a height, behind which, or on the east, is a valley, which is overlooked by a ridge of little eminences running in a northerly direction, and which almost conceals the valley from view. In this hollow Montrose arranged his forces in order of battle. Having formed them into two divisions, he posted the right wing on the north of the village, at a place where there was a considerable number of dikes and ditches. This body, which consisted of 400 men, chiefly Irish, was

placed under the command of Macdonald. On taking their stations, Montrose gave them strict injunctions not to leave their position on any account, as they were effectually protected by the walls around them, not only from the attacks of cavalry but of foot, and could, without much danger to themselves, keep up a galling and destructive fire upon their assailants. In order to attract the best troops of the enemy to this difficult spot where they could not act, and to make them believe that Montrose commanded this wing, he gave the royal standard to Macdonald, intending, when they should get entangled among the bushes and dikes with which the ground to the right was covered, to attack them himself with his left wing. And to enable him to do so the more effectually, he placed the whole of his horse and the remainder of the foot on the left wing to the south of the village. The former he committed to the charge of Lord Gordon, reserving the command of the latter to himself. After placing a few chosen foot with some cannon in front of the village, under cover of some dikes, Montrose firmly awaited the attack of the enemy.—The arrangements of Hurry were these. He divided his foot and his horse into two divisions each. On the right wing of the main body of the foot, which was commanded by Campbell of Lawers, Hurry placed the regular cavalry which he had brought from the south, and on the left the horse of Moray and the North under the charge of Captain Drummoud. The other division of foot was placed behind as a reserve and commanded by Hurry himself.—When Hurry observed the singular position which Montrose had taken up, he was utterly at a loss to guess his designs; and though it appeared to him, skilful as he was in the art of war, a most extraordinary and novel sight, yet, from the well-known character of Montrose, he was satisfied that Montrose's arrangements were the result of a deep-laid scheme. But what especially excited the surprise of Hurry, was the appearance of the large yellow banner or royal standard in the midst of a small body of foot stationed among hedges and dikes and stones, almost isolated from the horse and the main body of the foot. To attack this party, at the head of which he naturally supposed Montrose was, was his first object. This was precisely what Montrose had wished by committing the royal standard to the charge of Macdonald, and the snare proved successful. With the design of overwhelming at once the right wing, Hurry despatched towards it the best of his horse and all his veteran troops, who made a furious attack upon Macdonald's party, who defended themselves bravely behind the dikes and bushes. The contest continued for sometime on the right with varied success, and Hurry, who had plenty of men to spare, relieved those who were engaged by fresh troops. Montrose, who kept a steady eye upon the motions of the enemy, and watched a favourable opportunity for making a grand attack upon them with the left wing, was just preparing to carry his design into execution, when a confidential person suddenly rode up to him and whispered in his ear that the right wing had been put to flight. This intelligence was not, however, quite correct. It seems that Macdonald—who, says Wishart, 'was a brave enough man, but rather a better soldier than a general, extremely violent, and daring even to rashness'—had been so provoked with the taunts and insults of the enemy, that in spite of the express orders he had received from Montrose on no account to leave his position, he had unwisely advanced beyond it to attack the enemy, and though he had been several times repulsed he returned to the charge. But he was at last borne down by the

great numerical superiority of the enemy's horse and foot, consisting of veteran troops, and forced to retire in great disorder into an adjoining enclosure. Nothing, however, could exceed the admirable manner in which he managed this retreat, and the courage he displayed while leading off his men. Defending his body with a large target, he resisted, single-handed, the assaults of the enemy, and was the last man to leave the field. So closely indeed was he pressed by Hurry's spearmen, that some of them actually came so near him as to fix their spears in his target, which he cut off by threes or fours at a time with his broadsword. It was during this retreat that Montrose received the intelligence of the flight of the right wing; but he preserved his usual presence of mind, and to encourage his men who might get alarmed at hearing such news, he thus addressed Lord Gordon, loud enough to be heard by his troops, 'What are we doing, my lord? Our friend Macdonald has routed the enemy on the right and is carrying all before him. Shall we look on, and let him carry off the whole honour of the day?' A crisis had arrived, and not a moment was to be lost. Scarcely, therefore, were the words out of Montrose's mouth, when he ordered his men to charge the enemy. When his men were advancing to the charge, Captain or Major Drummond, who commanded Hurry's horse, made an awkward movement by wheeling about his men, and his horse coming in contact with the foot, broke their ranks and occasioned considerable confusion. Lord Gordon seeing this, immediately rushed in upon Drummond's horse with his party, and put them to flight. Montrose followed hard with the foot, and attacked the main body of Hurry's army, which he routed after a powerful resistance. The veterans in Hurry's army, who had served in Ireland, fought manfully, and chose rather to be cut down standing in their ranks than retreat; but the new levies from Moray, Ross, Sutherland, and Caithness, fled in great consternation. They were pursued for several miles, and might have been all killed or captured if Lord Aboyne had not, by an unnecessary display of ensigns and standards, which he had taken from the enemy, attracted the notice of the pursuers, who halted for some time under the impression that a fresh party of the enemy was coming up to attack them. In this way, Hurry and some of his troops, who were the last to leave the field of battle, as well as the other fugitives, escaped from the impending danger, and arrived at Inverness the following morning. As the loss of this battle was mainly owing to Captain Drummond, he was tried by court-martial at Inverness and condemned to be shot, a sentence which was carried into immediate execution. He was accused of having betrayed the army, and it is said that he admitted that after the battle had commenced he had spoken with the enemy. The number of killed on both sides has been variously stated. That on the side of the covenanters has been reckoned by one writer at 1,000, by another at 2,000, and by a third at 3,000 men. Montrose, on the other hand, is said by Gordon of Sallagh to have lost about 200 men; while Spalding says, that he had only 'some twenty-four gentlemen hurt, and some few Irish killed;' and Wishart informs us that Montrose only missed one private man on the left, and that the right wing, commanded by Macdonald, 'lost only fourteen private men.' This trifling loss on the part of Montrose will appear almost incredible, and makes us inclined to think that it must have been greatly underrated; for it is impossible to conceive that the right wing could have maintained the arduous struggle it did without a large sacrifice of life. The clans who had joined Hurry

suffered considerably, particularly the Frazers, who, besides unmarried men, are said to have left dead on the field no less than eighty-seven married men. Among the principal covenanting officers who were slain, were Colonel Campbell of Lawers, and Sir John and Mr. Gideon Murray, and Colonel James Campbell, with several other officers of inferior note. The laird of Lawers' brother, Archibald Campbell, with several other officers, were taken prisoners. Captain Macdonald and William Macpherson of Invereschie, were the only persons of any note killed on Montrose's side. Montrose took several prisoners, whom, with the wounded, he treated with great kindness. Such of the former as expressed their sorrow for having joined the ranks of the Covenanters he released—others who were disposed to join him he received into his army, but such as remained obstinate he imprisoned. Besides taking sixteen standards from the enemy, Montrose got possession of the whole of their baggage, provisions, and ammunition, and a considerable quantity of money and valuable effects. The battle of Auldearn was fought on the 4th of May, according to some writers, and on the 9th according to others." [Browne's 'History of the Highlands,' vol. i. pp. 382—385.]

AULDFIELD. See POLLOCKSHAWS.

AULDGIRTH, a station on the Glasgow and South-western railway, and the site of a post-office, in the valley of the Nith, $6\frac{1}{2}$ miles south-south-east of Thornhill, and 8 miles north-north-west of Dumfries, in Dumfries-shire. The adjacent tract of country, to the extent of about two miles, is a contracted reach of the valley, almost a gorge, replete with beautiful close views. See NITH (THE).

AULDGRANDE. See AULTGRANDE.

AULDHILL. See KILBRIDE-WEST.

AULDHOUSE. See POLLOCKSHAWS.

AULDTOWN. See ALTON.

AULD WATER. See OLD WATER.

AULD WIFE'S LIFT. See WALBERNOCK.

AULTGRANDE, or ALTGRAD, a small river of the east side of Ross-shire. It issues from Loch Glass, about 10 miles north-north-west of Dingwall, and runs about 7 miles east-south-eastward to the Cromarty frith at a point about a mile north-east of Kiltearn. For a considerable way it runs through a vast chasm, occasioned by a slip in the sandstone strata, called the Craig-grande or Ugly-rock, of which Dr. Robertson, in the first Statistical report of Kiltearn, gives the following description:—"This is a deep chasm or abyss, formed by two opposite precipices that rise perpendicularly to a great height, through which the Aultgrande runs for the space of two miles. It begins at the distance of 4 miles from the sea, by a bold projection into the channel of the river, which diminishes in breadth by at least one-half. The river continues to run with rapidity for about three quarters of a mile, when it is confined by a sudden jutting-out of the rock. Here the side-view from the summit is very striking. The course of the stream being thus impeded, it whirls and foams and beats with violence against the opposite rock, till, collecting strength, it shoots up perpendicularly with great fury, and, forcing its way, darts with the swiftness of an arrow through the winding passage on the other side. After passing this obstruction it becomes in many places invisible, owing partly to the increasing depth and narrowness of the chasm, and partly to the view being intercepted by the numerous branches of trees which grow out on each side of the precipice. About a quarter of a mile farther down, the country people have thrown a slight bridge, composed of trunks of trees covered with

tuff, over the rock, where the chasm is about 16 feet broad. Here the observer, if he can look down on the gulph below without any uneasy sensations, will be gratified with a view equally awful and astonishing. The wildness of the steep and rugged rocks,—the gloomy horror of the cliffs and caverns, where the genial rays of the sun never yet penetrated,—the waterfalls, which are heard pouring down in different places of the precipice with sounds various in proportion to their distances,—the hoarse and hollow murmuring of the river, which runs at the depth of near 130 feet below the surface of the earth,—the fine groves of pines which majestically climb the sides of a beautiful eminence that rises immediately from the brink of the chasm,—all these objects cannot be contemplated without exciting emotions of wonder and admiration in the mind of every beholder."

AULTGUISH, a romantic rivulet in the parish of Urquhart and Glenmoriston, Inverness-shire. It is a continuous cataract down the precipitous and alpine Mealfourvounie, and amid the forest of Ruisky, on the north-west side of Loch Ness, nearly opposite the famous Fall of Foyers; and, as seen from the lake, it looks like a long white ribbon, streaked and figured with the intervening trees.

AULTKOLLIE. See **LOTH**.

AULTMORE. See **ALTMORE**.

AULTNAHARROW. See **ALTNAHARROW**.

AULTSIGH, a picturesque rivulet on the boundary between Urquhart and Glenmoriston, in the united parish of Urquhart and Glenmoriston, Inverness-shire. It issues from a little circular lake far aloft on the western shoulder of Mealfourvounie; and rolls and leaps precipitously, among magnificent scenery of cliffs and rocks and woods, to a profound ravine overhung by the mountain, and thence to Loch Ness at a point about 3 miles north-east of Invermoriston. This burn was the scene of a sanguinary and brutal conflict which occurred, in the 17th century, between a party of the Macdonnells of Glengarry and a party of the Mackenzies of Ross-shire, and which is commemorated in a well-known pibroch called "the Raid of Kil-Christ." On the summit of a hill south-west of the burn is a rocking-stone of about twenty feet in circumference, which two men can move.

AUSDALE, a hamlet and a rivulet in the southern corner of the parish of Latheron, and immediately north of the Hill of Ord, Caithness-shire. The hamlet stands about 4 miles south-west of Berridale; and the rivulet flows past it, and has a south-easterly course of about 2 miles thence along the north base of the Ord, and then leaps over a cliff of 100 feet in depth into the sea.

AUSKERRY, one of the Orkneys; constituting part of the parish of Stronsay. It is a small, uninhabited island, lying $2\frac{1}{2}$ miles to the south of Stronsay, and is appropriated to the pasturage of cattle and sheep. Here are the remains of a chapel; and also the ruins of a house which retains the appellation of the Monker, or Monk's house. A great quantity of kelp used to be manufactured here.

AVEN, or **AVON**, a frequent appellation of British rivers, both as a complete name and as a prefix. Mr. Thomas Richards, in his 'Antiquæ Linguae Britannicæ Thesaurus,' under the article *Afon*, observes: "Avon is the proper name of several rivers in England; as Avon, the river of Bristol; the Avon in Northamptonshire; another in Warwickshire, where there is a town called Stratford-upon-Avon, &c., for which this reason is to be assigned, viz. that the English, when they drove the Britains out of that part of Great Britain, called from them England, took the appellatives of the old inhabitants for pro-

per names; and so, by mistaking *Avon*, which, with us, signifies only a river in general, it came to serve with them for the proper name of several of their rivers." Mr. Ireland says that the name *Avon*, or *Evon*, is common to rivers whose course is easy and gentle. There are three rivers in Scotland which bear this name, besides several minor streams. The term *Avon* is also prefixed to the names of several Scottish streams: such as the Avon-Brouchag, and the Avon-Coll, in Ross-shire; the Avon-Adail, and the Avon-Araig, in Argyleshire. Chalmers says that the term *Amon*, is merely a variation of *Avon*; and, in confirmation of this, we may remark that the Almond of Perthshire is sometimes called *Almon*, and sometimes *Avon*. The names of very many Irish streams, and the names also of a good many Irish bogs and Irish alluvial tracts which have been designated from streams, have the prefix *Avina* or *Owen*, which is a variation of *Avon*, and a few have the prefix *Avon* itself.

AVEN, or **AVON (THE)**, a river which issues from a small lake of the same name, which lies embosomed among the vast mountains of Cairngorm, at an altitude of about 1,800 feet above sea-level. [See article **AVEN (LOCU.)**] It flows northwards through a narrow valley, and being joined by the Livet and Tervie at Castle Drummin, falls into the Spey at Ballindalloch, on the right bank, after a course of nearly 40 miles through a wild country. It abounds with trout. "The Avon," says Sir Thomas Dick Lauder, "issues in a large stream from its lake, and flows with so great pellucidity through its deep and dark glen, that many accidents have occurred to strangers by its appearing fordable in places which proved to be of fatal depth. This quality is marked by an old doggerel proverb,

'The water of Avon runs so clear,
It would beguile a man of an hundred year.'

At Poll-du-ess, a little way above the first inhabited place called Inchroty, the river is bounded by perpendicular rocks on each side. There the bed of the stream is 44 feet broad, and the flood (in August, 1829,) was 23 feet above the usual level. Deep as the ravine was, the river overflowed the top of it. From correct measurements taken, the column of water that passed here, with intense velocity, appears to have been about 1,200 square feet in its transverse section." At Ballindalloch, the rise of the Avon in the great flood of August, 1829, exceeded that in the flood of 1768 by 6 feet.

AVEN, or **AVON (THE)**, a river of Dumbartonshire, Stirlingshire, and Linlithgowshire. It issues from Loch Fanuyside in the parish of Cumbernauld, and flows about 8 miles eastward through the parishes of Cumbernauld and Slamanean, and between the latter parish and Muiravonside, and then runs about 10 miles, chiefly north-eastward, along the boundary between Stirlingshire and Linlithgowshire, to the frith of Forth about midway between Grangemouth and Borrowstonness. Its chief tributaries are Polness Burn and Ballenerief Water, both on its right bank. Much of its course winds along a shallow glen, amid softly beautiful scenery. But its embouch, like that of the Carron about 2 miles to the west, is a deep muddy cut through a wide expanse of sands and sleetches, which lie bare at low water. A splendid aqueduct of the Union canal and a grand viaduct of 23 arches of the Edinburgh and Glasgow railway, span its glen between the parishes of Linlithgow and Muiravonside.

AVEN (THE), in Lanarkshire. See **AVON**.

AVEN (LOCH), a small solitary sheet of water, in the south-west extremity of Banffshire. It is deeply embosomed amidst huge mountains. On its

western and northern edges, Cairngorm and Ben-Buinac shoot up perpendicularly; while the vast limbs of Ben-Macduh and Ben-Main overhang its southern extremity in frightful masses. Professor Wilson has thus described this lonely mountain-tarn: "You come upon the sight of it at once, a short way down from the summit of Cairngorm, and then it is some two thousand feet below you, itself being as many above the level of the sea. But to come upon it so as to feel best its transcendent grandeur, you should approach it up Glenaven—and from as far down as Inch-Rouran, which is about half-way between Loch Aven and Tomantoul. Between Iuchrory and Tomantoul the glen is wild, but it is inhabited; above that house there is but one other; and for about a dozen miles—we have heard it called far more—there is utter solitude. But never was there a solitude at once so wild—so solemn—so serene—so sweet! The glen is narrow; but on one side there are openings into several wider glens that show you mighty coves as you pass on; on the other side the mountains are without a break, and the only variation with them is from smooth to shaggy, from dark to bright; but their prevailing character is that of pastoral or of forest peace. The mountains that show the coves belong to the bases of Ben-Aven and Ben-y-buirid. The heads of those giants are not seen—but it sublimates the long glen to know that it belongs to their dominion, and that it is leading us on to an elevation that ere long will be on a level with the roots of their topmost cliffs. The Aven is so clear—on account of the nature of its channel—that you see the fishes hanging in every pool; and 'tis not possible to imagine how beautiful in such transparencies are the reflections of its green ferny banks. For miles they are composed of knolls, seldom interspersed with rocks, and there cease to be any trees. But ever and anon we walk for a while on a level floor, and the voice of the stream is mute. Hitherto sheep have been noticed on the hill, but not many, and red and black cattle grazing on the lower pastures; but they disappear, and we find ourselves all at once in a desert. So it is felt to be, coming so suddenly with its black heather on that greenest grass; but 'tis such a desert as the red-deer love. We are now high up on the breast of the mountain, which appears to be Cairngorm; but such heights are deceptive, and it is not till we again see the bed of the Aven that we are assured we are still in the glen. Prodigious precipices, belonging to several different mountains—for between mass and mass there is blue sky—suddenly arise, forming themselves more and more regularly into circular order, as we near; and now we have sight of the whole magnificence; yet vast as it is, we know not yet how vast; it grows as we gaze, till in a while we feel that sublimer it may not be; and then so quiet in all its horrid grandeur we feel too that it is beautiful, and think of the Maker."

AVEN ISLAND. See SANDA.

AVICH (Loch), a beautiful fresh-water lake in the parish of Kilchrenan and Dalavich, Argyleshire. It lies between Loch Awe and Loch Melfort,—2 miles from the former and 4 from the latter; and has a triangular outline, and measures about 8 miles in circumference. A stream, called the Avich, flows from it to Loch Awe. The lake contains some pretty little islands, and is frequented by numerous water-fowl. Its ancient name was Loch Luina.

AVIEMORE, a station on the Inverness and Perth part of the Highland railway, in Duthil parish, near the southern extremity of Morayshire, 32½ miles south-south-east of Inverness and 25 north-east by north of Dalwhinnie. It stands on the left

bank of the Spey, at the base of the bold and famous mountain of Craigellachie, which separates Strathspey from Badenoch, and in the near vicinity of Cairngorm, so well known for its precious stones. The scenery betwixt Grantown and Aviemore is somewhat tame and uninteresting; but the view becomes sublime when, after passing the latter, we ascend an eminence which commands the plain of Alvie and the course of the Spey, bounded by the lofty mountains beyond Pitmain. Near Avielochan, about 2½ miles to the eastward of Aviemore, is Loch-namhoon, a small sheet of water about 90 yards long, by 50 across, in which there was, previous to the great floods in 1829, a floating island of about 30 yards diameter. It was composed chiefly of eriophori, junci, and other aquatic plants, the roots of which had become matted together to a depth of about 18 inches, and having about 18 inches of soil attached to them. Some rare and beautiful plants, particularly *Andromeda cerulea*, *Alchemilla alpina*, and *Nuphar minima*—the last of these the smallest and scarcest of British water-lilies, have been found in the vicinity of Aviemore.

AVOCH, a parish, containing a post-office village of its own name, in the Ardmeanach district of Ross-shire. The name is written Avach and Auach in old records, and is popularly pronounced Auch. The parish extends about 2½ miles from east to west, and 4 from south to north; and is nearly of a rhomboidal form. It is bounded by the parish of Rosemarkie towards the east; by the Moray frith and Munloch bay on the south-east, south, and south-west; by the united parishes of Kilmuir-Western and Suddie on the west; by Urquhart or Ferrintosh on the north-west; and by the united parishes of Cullicudden and Kirkmichael on the north. It marches with these last on the hill of Mullbu, which attains here an altitude of 800 feet above sea-level. See ARDMEANACH and MULLBU. The parish consists chiefly of two ridges of hills of moderate altitude, running nearly parallel to each other in a direction from east to west, with a gently sloping vale on the north side of each, and the Mullbu rising behind all these towards the north. In Munloch bay there is an excellent quarry of hard reddish freestone, accessible to boats on the water-edge. Out of this quarry almost the whole of the extensive works of Fort-George were built. The Moray frith at Avoch is about 4 miles broad; and a finer basin is scarcely to be seen in the North. To an observer on this shore it has all the appearance of a beautiful lake. Chanoury point from the north, and that of Ardersier from the south-east, appear like projected arms to clasp each other and break-off its connection with the sea; while the point of Inverness, and the hills in that neighbourhood, seem to bound it in like manner in an opposite direction. The town of Inverness, at the one end, Fortrose and Fort-George at the other, add much to the landscape. From a boat in the middle of the frith, opposite to Culloden-house and the bay of Avoch, the view is still grander and more embellished. In the southern vale there is a fine rivulet, called the burn of Avoch—perhaps the largest stream in Ardmeanach—which empties itself into the sea near the church. A small lake, called Scaddin's loch, near the eastern boundary of this parish, was drained many years ago. Sir James J. R. Mackenzie of Seatwell, Bart., is proprietor of two-thirds of the parish. His seat of Rosehaugh-house stands on a beautiful bank, about 1½ mile from the sea, on the north side of the southern vale. The area of this parish is about 7,000 acres. The total gross rental, in 1790, was somewhat more than 730 bolls of victual, and £900 sterling. The valued rent is £2,531 6s. 4d. Scots. The road from Inver-

ness passes through the parish. The village of Avoch stands on that road, and on the bay of Avoch, $1\frac{3}{4}$ mile south-west of Fortrose. It is in a large degree a fishing village; and it has a very commodious and substantial pier, which both accommodates the fishermen, and facilitates the exportation of grain and wood, and the importation of coals, lime, bone-dust, and salt. The fishermen sweep a great extent of coast, and are enterprising and adventurous; and they bear a relation to the market of Inverness somewhat similar to that which the fishermen of Newhaven and Fisherrow bear to the market of Edinburgh. Population of the village in 1861, 1,597. Population of the parish in 1831, 1,956; in 1861, 1,788. Houses, 335. Assessed property in 1843, £3,658 2s. 10d.; in 1860, £5,256.

This parish is in the presbytery of Chanouyr, and synod of Ross. Patron, Sir J. J. R. Mackenzie, Bart. Stipend, £249 9s. 6d.; glebe, £7 10s. Unappropriated tithes, £74 18s. 5d. Schoolmaster's salary, £50, with about £10 fees. The parochial church was built in 1760, enlarged in 1792, and repaired in 1833, and contains upwards of 600 sittings. There is a Free church; yearly amount raised in 1853, £82 3s.; in 1865, £675 10s. 3d. There is also an Independent chapel in connexion with the Congregational Union, built in 1819. There are several private schools,—one of them at Milltown.

AVON, or AVEN (TUE), a river, partly of Ayrshire, but chiefly of Lanarkshire. It rises on the south of Distinet-thorn Hill, in the north-east corner of Kyle, at an elevation of about 800 feet above sea-level, and flows north-east between Carnscoch hill in Ayrshire, and Gravestone hill in Avondale parish, to Torfoots, a little below which it is joined by the Glengivel or Glengeil water, flowing from the south. Two miles farther on it is joined by Drumlog burn, coming from Moss Malloch on the north. A mile and a half below this point it receives the Little Cadder from the north, and soon after Lockart water from the south. Passing about a mile to the south of the town of Strathaven, it receives its largest tributary, the Kype, which flows from the south, and precipitates itself near its mouth over a cascade of about 50 feet in height. From this point it pursues a north-east course through Avondale and Stonehouse parishes, till it touches the western boundary of Dalsert, where it turns nearly north, and, after forming the dividing line betwixt Dalsert and Stonehouse parishes, enters the parish of Hamilton, flows through the Duke of Hamilton's grounds, passes to the south of the town of Hamilton, and falls into the Clyde about a mile to the south-east of that town, after a course of about 28 miles including windings. It is a beautiful stream, and gives name and comeliness to the parish of Avondale and the town of Strathaven. Its banks, along much of the lower part of its course, are alternately bold and precipitous, knolly and broken, softly green and wildly wooded; and at length they become a stupendous tumbling gorge, of similar character to the glen of the Esk at Roslin, but on a grander scale, and superior to every other celebrated sylvan Scottish defile in combinations of romance and power. The crags tower up in many places to the height of 250 or 300 feet; the summits and ledges, and many "a jutting frieze," are festooned with shrubs, or crowned with stately timber; and the alternations of recess and abutment, of grandeur and gracefulness, almost speak to the imagination like a colossal copy of Gothic masonry. Near the centre of the gorge, on the summit of a rock, nearly 200 feet above the head of the river, like "sentinel of fairy land," appear the ruins of Cadzow Castle, the original seat of the Ducal family of Hamilton,

destroyed by command of the Regent Moray, after the battle of Langside; and on the opposite side of the ravine stands the modern summer-house of Chatelherault, so called from the French dukedom which the Hamiltons possessed, and presenting a fantastic foil to the natural scenery around, by its red walls, its four square towers all in a line, its gaudy pinnacles, its globular ornaments, and its rich parterres. See HAMILTON. The ancient forest of Cadzow or wooded park of the Dukes of Chatelherault, when "princely Hamiltons' abode ennobled Cadzow's Gothic towers," had this romantic glen for its centre, and spread out from its mouth over the haugh along the Clyde—whither arrived James Hamilton of Bothwellhaugh, in frenzied flight, from his assassination of the Regent Moray at Linlithgow; and, in this connection, it is the scene of Sir Walter Scott's ballad of Cadzow castle, which tells how a hunting party, headed by the Duke, were inspiring one another's fierce party quarrel against the Regent—and how the frantic murderer rode headlong into the midst of them, and

"From gory selle and reeling steed
Sprang the fierce horseman with a bound,
And, reeking from the recent deed,
He dashed his carbine on the ground.

Sternly he spoke—"Tis sweet to hear
In good greenwood the bugle blown,
But sweeter to revenge's ear
To drink a tyrant's dying groan.

Then speed thee, noble Chatelherault,
Spread to the wind thy banner'd tree;
Each warrior bend his Clydesdale bow;
Moray is fallen, and Scotland's free."

AVONBRIDGE, a station on the Monkland railway, $10\frac{1}{2}$ miles north-east of Airdrie.

AVONDALE, a parish containing the post-town of Strathaven, on the west border of Lanarkshire. It is bounded by Ayrshire, and by the parishes of Kilbride, Glassford, Stonehouse, and Lesniahagow. Its greatest length from Avonhead on the south-west, to Righead on the north-east, is about 14 miles; its greatest breadth from Regal hill on the south, to the boundary of Kilbride parish on the north, is about 8 miles. The total superficies must be nearly 40,000 acres; and the rental in 1860 was about £22,946. Assessed property in 1843, £24,784 11s. Hamilton of Wisbaw, in his account of the sheriffdom of Lanark, compiled about the beginning of last century, describes this "great paroch," as "a plentiful country, especially in grain, and no want of corn." Its agricultural reputation is still good; its dairy husbandry is particularly celebrated; and in the art of fattening calves for the butcher, the farmers of Strathaven are unrivalled in Scotland. The upper part of the parish is wholly moorland, and presents a succession of hills, mosses, and moors, on which there is capital grouse-shooting. The fertility of the soil, and consequent richness of cultivation and beauty of landscape, increases as we descend the strath of the Avon, which below Strathaven becomes, as Wordsworth has described it in one of his sonnets, 'a fertile region green with wood.' In very ancient times the great Caledonian forest extended up Avondale, by Strathaven, and passed over the high ground near Loudon hill into Ayrshire. Trunks of huge oaks, the relics of this forest, have been discovered near the head of the Avon, and amongst the mosses that still exist here; and at Chatelherault, in the neighbourhood of Hamilton, there still exist some noble ashes and oaks, the remnants probably of the ancient forest. The principal river is the Avon; and this divides the parish into two nearly equal parts. Limestone is very abundant, and is worked in several places:

and an inferior coal, good enough for calcining the limestone, is also worked. The Duke of Hamilton is the principal heritor; but property here is greatly subdivided. Hamilton of Wishaw states that "this baronie did anciently belong to the Bairds; and thereafter came to Sinclair; and from them to the Earl of Douglas, with whom it continued several ages; and after his fatal forfeiture, in anno 1455, it was given by King James the Third to Andrew Stewart, whom he created Lord Avendale; and it continued with him and his heirs until 1538, or thereby, that he exchanged it with Sir James Hamilton for the baronie of Ochiltree, in the parliament 1543 [1534?]. From which tyme, it continued with the successors of Sir James Hamilton until it was acquired by James, first of that name, Marquess of Hamilton; and continueth with his successors since. This paroch is large, and lyeth betwixt the parishes of Killbride to the west, Hamilton to the north and north-east, and Glasfoord, Stonehouse, and some parts of the shire of Ayre to the south and south-east. There are many small vassals in this parish, besyde three or four gentlemen.—Overtoun, Netherfield, Rylandsyde, Lethem, and Kype; but all of them hold of the familie of Hamilton." The road from Hamilton to Muirkirk and that from Edinburgh to Ayr pass up the parish, on opposite sides of the Avon; and ample facilities of communication are enjoyed to Glasgow and other places from Strathaven. Population of the parish in 1831, 5,761; in 1861, 6,125. Houses, 785.

This parish is in the presbytery of Hamilton, and synod of Glasgow and Ayr. Patron, the Duke of Hamilton. Stipend, £305 2s. 6d.; glebe, £24. Unappropriated teinds, £955 18s. 8d. Schoolmaster's salary now is £60, with about £25 fees. The parochial church stands on the west side of Strathaven, and was built in 1772, and contains 803 sittings. There is a chapel of ease at Strathaven, of recent erection, and called East Strathaven church. There is a Free church at Strathaven; attendance, 300; yearly sum raised in 1865, £159 1s. 6½d. There are three United Presbyterian churches in Strathaven, called the First, the East, and the West; and one of them was built in 1820 and contains 630 sittings, another in 1777 and contains 1,087 sittings, and the third in 1835 and contains 976 sittings. There are thirteen schools, inclusive of the parochial one.

The moorlands of Avondale were the scene of many sufferings of the Covenanters and many prowlings of the dragoons during the times of the persecution. Auchengelloch there was famous for its conventicles. See *AUCHENGELLOCH*. The memorable battle of Drumclog, in which 'cruel Claverse' was signally defeated by a small body of Covenanters collected together under Hamilton, Burley, Cleland, and Hackston, was fought on the farm of that name in the upper part of the parish, about 2 miles to the east of Loudon hill, on Sabbath, June 1, 1679. The localities of the spot, as well as the engagement itself, are very accurately described in 'Old Mortality.' In this affair Claverhouse lost his cornet and about a score of his troopers; on the side of 'the hillmen' only four were killed. The victors commemorated their triumph in a rude ballad entitled 'The Battle of Loudon hill,' which Scott has preserved in his 'Border Minstrelsy,' [Cadell's edn., vol. ii. pp. 206—225,] though not without a quantity of industriously gleaned introductory matter, well-calculated to throw ridicule on those worthy men

With better feeling, though perhaps with more of the imaginativeness of the poet than the veracity of the historian, has Allan Cunningham indited his Cameronian legends and ballads. In the 7th vol. of Blackwood's Magazine, there is a bundle of very spirited Cameronian ballads from Allan's pen, from one of which, on 'The Discomfiture of the Godless at Drumclog,' we shall here quote a couple of stanzas:—

"This morning they came with their brass trumpets braying,
Their gold pennons flaunting, their war-horses neighing;
They came and they found us—the brand and the spear
Soon emptied their saddles and sobered their cheer;
They came and they sounded—their trumpet and drum
Now give a mute silence, their shouters are dumb;
The chariot is smote, and the charioteer sleeping,
And Death his dark watch o'er their captains is keeping.

Oh! who wrought this wonder?—men ask me—this work
Is not of man's hand for the covenant kirk;
Few—few—were the saints 'neath their banners arraying,
Weak, hungry, and faint, nor grown mighty in slaying;
And strong, fierce, and furious, and thirsting and faint
Of our blood—as the dust of the summer for rain—
Came our foes; but the firm ground beneath their feet turned
Into moss and quagmire—above their heads burned
Heaven's hot and swift fires—the sweet wind to-day
Had the power for to blast, and to smite, and to slay!"

AVONDOW. See FORTH (THE).

AWE (LOCH), a large and magnificent freshwater lake in the central part of the mainland of Argyshire. It extends from the east side of Ben-Cruachan about 24 miles south-westward to a point about 4 miles east of the head of Loch Craignish, and has rarely a breadth of more than a mile; but it makes an offset north-westward from the southern base of Ben-Cruachan, and looks there to be about 4 miles broad; and from that offset it discharges its surplus waters by the river Awe toward Loch Etive. The chief beauty of it is comprised between its north-eastern extremity and Port-Sonnachan, about 6 miles down its southern shore. Here the scenery can hardly be equalled in Great Britain. But the remaining portion of the lake is uninteresting to the traveller, possessing little variety, and neither beauty nor grandeur. At its north-eastern end, however, the stranger may spend weeks in examining the beauty of its wooded and varied shores and islands, or the grandeur of its lofty mountains and deeply secluded glens. The water of the lake appears a basin enclosed among mountains of rude and savage aspect, but lofty and grand,—"filling," says Dr. Macculloch, "at once the eye and the picture, and literally towering above the clouds." On the north side, the elevated ridge of Cruachan rises simple and majestic, throwing its dark shadows on the water, which, spacious as we know it to be, seems almost lost amid the magnitude of surrounding objects. On the opposite side, Ben-Laoidh, Ben-a-Cleidh, and Meall-nan-Tighearnan form a striking and magnificent termination to the landscape. Among all the mountains, however, which surround Loch Awe, Ben-Cruachan soars pre-eminent.

In approaching Loch Awe through Glen-Aray, the traveller finds little to attract his attention after leaving the pleasure grounds around Inverary castle, until he has attained the head of the glen, and begins to descend towards Cladich. There, however, Loch Awe, with its beautiful expanse of water, its islands, and the magnificent screen of mountains which enclose it, bursts at once upon his view. Ben-Cruachan is immediately opposite to him, its summit enveloped among clouds; and the dark pass of the river Awe winding along its base. To the east is seen the castle of Kilclurn, the openings of Glenstrae and Glenorchy, and the lofty mountains which enclose them lessening gradually in the did-

"Who fled to woods, caverns, and jutting rocks,
In deadly scorn of superstitious rites,—
Or what their serpsies construed to be such."

tance; to the west the long and sinuous portion of the lake glitters like a silver stream amid the dark heathy hills and moors which form its banks. See articles BEN-CRUACHAN, KILCHURN, and GLENORCHY.

The north-eastern portion of Loch Awe acquires much increase of beauty from a number of islands which spot its surface and give relief to its expanse. Looking down upon it from Cladich, a long heathy isle called Innishail, or 'the Fair island,' presents itself to the view. In this island, the remains of a small monastery with its chapel are still to be seen; and its ancient burying-ground is still sometimes used. It was inhabited by nuns of the Cistercian order, memorable, says tradition, for the sanctity of their lives, and the purity of their manners. At the Reformation, this house was suppressed, and the temporalities granted to Hay, abbot of Inchafrey, who, abjuring his former tenets of religion, embraced the cause of the reformers. Inchafrey was erected into a temporal lordship by King James VI., in favour of the abbot. The old churchyard on this island is an object of peculiar interest, from its ancient tombstones, the greater part of which are carved in a variety of ways. Some appear, from the figures cut upon them, to have covered the graves of religious persons; others, having the long two-hand sword, or the claymore, mark the graves of warriors; on others, again, mailed figures point out the resting-place of knights and crusaders; and one stone in particular, from the arms, coronet, and numerous figures it contains, would lead us to suppose that in this lone spot even the noble had been buried. Among other families, the M'Arthurs appear to have made this their place of internment, as numerous stones bear the name of individuals of that ancient race. This sept formerly inhabited the shores of Loch Awe, opposite to this island, as the M'Gregors did the lands at the upper portion of the lake. Both, however, have given way before the overpowering influence and good fortune of the Campbells.

Beyond Innishail, and farther up the lake, is Innis-Fraoch, or 'the Heather isle.' Here is an ancient castle, the residence at one period, of the chief of the MacNaughtans. It is a small but strongly built fortalice. Its solitary walls are overshadowed by chance-planted trees and bushes, and are the haunts of sea-birds and large water-fowl. This island is the subject of a very singular highland tradition. It was the Hesperides of the Highlands, and produced, according to Celtic poetry, the most delicious apples, but which were guarded by an enormous serpent. Dr. W. Beattie, in his 'Scotland Illustrated,' [vol. ii. pp. 99—101.] has given a very absurd and tasteless amplification of the simple Gaelic legend connected with this island. It is singular thus to find in a remote district of the Highlands of Scotland, a traditionary fable which is generally considered as classic.

The shores of Loch Awe, and the recesses of the surrounding mountains and glens, were formerly the retreat of the Campbells in times of danger. 'It's a far cry to Lochow!' was the slogan, or war-cry of the knights of Lochow and their followers; with it they derided their foes, and indicated the impossibility of reaching them in their distant fastnesses. At a still earlier period, this district formed a portion of the extensive tract of country at one time possessed by the numerous and powerful Clan-Gregor; but so early as the 15th century, the Campbells had obtained a footing here. Not a stone of the MacGregor's dwelling in Glenstrae is now remaining to mark the spot where his mansion stood; but in many a corrie, and many a lonely glen, the highlander still points out where a fugitive son of

Alpine stood at bay, and fell beneath the exterminating rage of his relentless pursuers. In a wild corrie or hollow of Ben-Cruachan, is pointed out a huge stone from behind which a MacGregor, no longer able to continue his flight, shot a bloodhound which had been set upon his track, and from which he found it impossible otherwise to make his escape. This is alleged to have been the last instance in which any of the outlawed Clan-Alpine were chased as beasts of prey.

AWE (Loch), a Highland lake dotted with several small islets, and adorned with natural wood, in the south-eastern part of the parish of Assynt, 3 miles south of the head of Loch Assynt, and by the side of the road from Dornoch to Loch-Inver, Sutherlandshire.

AWE (The), the river which flows from Loch Awe to Loch Etive in Argyleshire. It bursts from Loch Awe through the wild and tremendous mountain-pass of Brandir, and is very voluminous and very rapid, and runs north-westward, and has a total course of only about 4 miles. A considerable portion of the western base of Cruachan seems to have been torn asunder to form an opening for the waters of the lake; and the river flows through a gully or hollow of the most frightful description. "This pass," says Mr. Allan, "is about 3 miles in length; its east side is bounded by the almost inaccessible steeps which form the base of the vast and rugged mountain of Cruachan. The craigs rise in some places almost perpendicularly from the water; and, for their chief extent, show no space or level at their feet, but a rough and narrow edge of stony beach. Upon the whole of these cliffs grew a thick and interwoven wood of all kinds of trees, both timber, dwarf, and coppice; no track existed through the wilderness, but a winding part which sometimes crept along the precipitous height, and sometimes descended in a straight pass along the margin of the water. Near the extremity of the defile, a narrow level opened between the water and the Craig; but a great part of this, as well as the preceding steeps, was formerly enveloped in a thicket, which showed little facility to the feet of any but the martins and the wild cats. Along the west side of the pass, lies a wall of sheer and barren craigs: from behind they rise in rough, uneven, and heathy declivities, out of a wide muir between Loch Etive and Loch Awe; but in front they terminate abruptly in the most frightful precipices, which form the whole side of the pass, and descend at one fall into the water which fills its trough. At the north end of this barrier, and at the termination of the pass, lies that part of the cliff which is called Craiganuni: at its foot the arm of the lake gradually contracts its water to a very narrow space, and at length terminates at two rocks (called the rocks of Brandir), which form a straight channel, something resembling the lock of a canal. From this outlet there is a continual descent toward Loch Etive, and from hence the river Awe pours out its current in a furious stream, foaming over a bed broken with holes, and cumbered with masses of granite and whinstone. If ever there was a bridge near Craiganuni in ancient times, it must have been at the rocks of Brandir. From the days of Wallace to those of General Wade, there were never passages of this kind; but in places of great necessity, too narrow for a boat, and too wide for a leap, even then they were but an unsafe footway, formed of the trunks of trees, placed transversely from rock to rock, unstripped of their bark, and destitute of either plank or rail. For such a structure there is no place in the neighbourhood of Craiganuni, but at the rocks above-mentioned. In the

lake, and on the river, the water is far too wide; but, at the strait, the space is not greater than might be crossed by a tall mountain pine, and the rocks on either side are formed by nature like a pier. That this point was always a place of passage, is rendered probable by its facility, and the use of recent times. It is not long since it was the common gate of the country on either side the river and the pass. The mode of crossing is yet in the memory of people living, and was performed by a little currach moored on either side the water, and a stout cable fixed across the stream from bank to bank, by which the passengers drew themselves across, in the manner still practised in places of the same nature. It is no argument against the existence of a bridge in former times, that the above method only existed in ours, rather than a passage of that kind which might seem the more improved expedient. The contradiction is sufficiently accounted for, by the decay of timber in the neighbourhood. Of old, both oaks and firs of an immense size abounded within a very inconsiderable distance; but it is now many years since the destruction of the forests of Glen Etive and Glen Orchy has deprived the country of all the trees of a sufficient size to cross the strait of Brandir; and it is probable, that the currach was not introduced till the want of timber had disabled the inhabitants of the country from maintaining a bridge. It only further remains to be noticed, that at some distance below the rock of Brandir there was formerly a ford, which was used for cattle in the memory of people yet living. From the narrowness of the passage, the force of the stream, and the broken bed of the river, it was, however, a dangerous pass, and could only be attempted with safety at leisure, and by experience."

Mr. Allan has clearly identified the pass of Brandir with a scene of a memorable exploit of Scotland's favourite hero, Sir William Wallace. It appears that Edward of England had given a grant of Argyre and Lorn to a creature of his own, named M'Fadyan, who proceeded to take possession of the country at the head of 15,000 Anglo-Irish and renegade Scots. Before this force Duncan of Lorn retreated towards Loch Awe, where he was joined by Sir Neil Campbell; but the force of the invader compelled them to throw themselves into a castle which crowned a rock in this formidable pass, called the Crag-an-radh, or 'Rock of the Ladder.' Wallace, on being apprized of their danger, hastened to their relief, and managed to surprise M'Fadyan's army in a situation where flight was impracticable. "The conflict continued for two hours, with unexampled fury on both sides. Multitudes of the Irish were forced over the rocks into the gulf below. Many threw themselves into the water to escape the swords of the Scots; whilst various bands of highlanders, stationed among the rocks, sent down showers of stones and arrows where the enemy appeared most obstinate in the strife. Wallace, armed with a steel mace, at the head of his veterans, now made a charge which decided the fate of the day. Those Scots who had joined the Irish, threw away their arms, and on their knees implored mercy. M'Fadyan, with fifteen of his men, having made his way over the rocks, and attempted to conceal himself in a cave, 'wyndyr cragnòr,' Duncan of Lorn requested permission of Wallace to follow and punish him for the atrocities he had committed; and it was not long before he returned, bringing his head on a spear, which Sir Neil Campbell caused to be fixed on the top of the rock in which he had taken shelter. After the defeat of M'Fadyan, Wallace held a meeting of the chiefs of the West Highlands, in the priory of Ardehatten; and having arranged some

important matters respecting the future defence of the district, he returned to his duties in the Low Country, having received an accession to his numbers, which covered any loss he had sustained in the late engagement. The spoil which the Scots collected after the battle is said to have been very considerable; any personal share in which our hero, as usual, refused." [Carrick's Life of Wallace, edn. 1840, pp. 45, 46.]

At this pass, also, was fought, in 1308, a severe skirmish between King Robert Bruce and Macdougall of Lorn. That chief had, two years before, much embarrassed Bruce by a fierce struggle at Dalree; and he was married to an aunt of the murdered Comyn, and had all along been a furious opponent of Bruce's claims. One of Bruce's first objects, after fairly getting the upper hand in Scotland, was to punish Macdougall and overthrow his power; and with this view, he marched into Argyleshire, determined to lay waste the country, and take possession of Lorn. His adversaries, however, were not unprepared to meet him, and to dispute his progress. On advancing, he found John of Lorn and his followers posted in the formidable pass of the Awe, which it seemed impossible to force, and almost hopeless to turn. But the military eye of the King soon discovered that the natural difficulties which this position presented might be overcome by a combined attack; and accordingly having sent a party to ascend the mountain, gain the heights, and threaten the enemy's rear, he immediately attacked them in front, with the utmost fury. For a time the Macdougalls sustained the onset bravely; but at length perceiving themselves in danger of being assailed in the rear, as well as in the front, and thus completely isolated in the defile, they betook themselves to flight; and the difficulties of the pass which had been of advantage to them in the first instance, now that they were broken and thrown into disorder, proved the cause of their ruin. Unable to escape from the mountain gorge, they were slaughtered without mercy; and by this reverse, their power was completely broken. Bruce then laid waste the surrounding country, besieged and took the castle of Dunstaffnage, and received the submission of Alister of Lorn, the father of John, who now fled to England. Alister was allowed to retain the district of Lorn; but the rest of his possessions were forfeited and given to Angus of Islay, who had all along remained faithful to the King's interests.—The bridge of Awe is also the scene of Sir Walter Scott's beautiful tale of the Highland Widow and her son, which must be in the recollection of all our readers. His description of this wild spot is—like all his other descriptions—not more graphic than correct.

AYLORT (Lochn), a projection of the sea on the coast of Moydart, Inverness-shire. It forms an offset from the south-east of Loch Na-Nua, longer than the upper part of that loch itself, and extends nearly 5 miles to the west and north-west toward the southern confines of Arisaig.

AYLORT (KINLOCH). See KINLOCH-AYLORT.

AYR (THE), a river which rises at Glenbuck in the eastern extremity of the parish of Muirkirk, in Ayrshire, and, after a course of about 33 miles nearly due west, in which it divides the county at its broadest part into two nearly equal portions, falls into the sea at the town of Ayr, where its estuary forms the harbour. It is for some miles of its course only a small rivulet, flowing among holms and haughs through an open moorland district; but, being joined by the Greenock, and 'the haunted Garpal,' it becomes a large body of water. It is augmented by 'the winding Lugar' at Barksinning,

and by 'the brawling Coil' at Shaws. "Most of its course for the last 20 miles is bounded by steep rocky banks, generally covered with wood, which in several places are highly picturesque. In a few spots the banks open, and some enchanting holms are found between them; but in many places the river is seen for some miles together, dashing and foaming in a deep and narrow chasm, rendered dark and gloomy by the bulky foliage of the trees which overhang the stream." [Aiton's 'View,' p. 59.] The Ayr is subject to heavy floods during winter. After continued rains in the upland districts through which it flows, in the language of Burns,

"from Glenbuck down to the Ratton-key,
Auld Ayr is just one lengthened tumbling sea."

Sorn castle, Ballochmyle, Auchencruive, and Auchinleck, may be mentioned as worthy of notice for their beautiful situation on the banks of this river. The Ayr was anciently named Vidogara. The etymology of the present name of the river is doubtful. In its bed is procured a species of claystone which is well-known to artisans by the name of 'Water-of-Ayr stone,' and proves a fine whetstone. Salmon are caught in the mouth of the river during the summer season; but the fishing in this river is not nearly so productive as that in the Doon.

AYR—anciently ARE, sometimes AIR—a parish containing part of the town of its own name on the coast of Ayrshire. It is bounded on the west by the sea; on the north by the river Ayr, which divides it from Newton-upon-Ayr and St. Quivox; on the east, by Coylton; on the south-east, by Dalrymple; and on the south-west, by the river Doon, which divides it from Maybole. It comprises the ancient parishes of Ayr and Alloway, which are nearly equal in extent, and are separated from each other by the Glengaw burn. See ALLOWAY. The united parish measures about 2 miles along the coast, about $3\frac{1}{2}$ along the river Ayr, between 5 and 6 along the south-eastern boundary, and about 4 along the Doon. The surface for a good way from the sea is low and flat, but afterwards rises gradually to the east and south-east. The soil near the coast is light and sandy, and for nearly two miles farther is a light, rich, fertile mould, and afterwards becomes somewhat churlish, and at length a cold, stiff, tilly clay. All is well improved and capable of improvement; a considerable proportion is under wood or highly embellished; and most is in a state of fine, judicious, productive tillage; but the parts farthest inland are cold and bleak and of very tame appearance. There are two small lakes, one toward the south side named Carcluy, and the other at the eastern extremity called Loch Fergus. The latter has a small island in the centre, but is not above a mile in circumference. There is plenty of muirstone; but freestone is neither abundant nor good; and coal is not wrought, although all the neighbouring parishes possess inexhaustible pits of the finest coal. The chief mansions are Castle hill, on a rising ground near the town; Rozells, some distance to the west; Newark Castle, at the base of Carrick Hill; and Cambusdoon, Doonholm, Bellisle, and Mount Charles on the Doon. But all the environs of the town and all the lower part of the district of Alloway are so ornate and gardenesque as to look almost like a series of pleasure grounds. A battle seems to have been fought in early times in the southern or south-western border of the parish, between Fergus I. King of Scots and Coilus King of the Britons, in which both leaders lost their lives. The names of places in the neighbourhood seem derived from this circumstance; and a circular

mound, marked by two large upright stones, and long the reputed burial-place of 'auld King Coil,' having been opened in May, 1837, was found to contain four urns. History has recorded two distinguished characters in literature, natives of this parish: Johannes Scotus, surnamed Erigena, and the Chevalier Ramsay, author of *Cyrus's Travels*, and other works. To these may be added John L. M'Adam, Esq., of road-making celebrity, who was born at Ayr in 1756, Lord Alloway, Professor Jackson of St. Andrews, and most of all the poet Burns. Population in 1831, 7,606; in 1861, 9,308. Houses, 1,128. Assessed property in 1843, £24,663 13s. 11d.; in 1864, £33,381 7s. 9d.

This parish is the seat of a presbytery in the synod of Glasgow and Ayr. The charge is collegiate, and there are two churches, and the ministers officiate indiscriminately in the two. Patron of the first charge, the Crown; of the second charge, the Town Council and Kirk Session. Stipend of the first minister, £178 5s. with a manse and glebe; of the second minister, £283 6s. 9d. with allowance for a manse, and with a glebe worth £28 6s. 8d. The old parochial church was built in 1654, and is surrounded by the town burying-ground. The new parochial church was built in 1810, by the town council of Ayr, at an expense of £5,703. Total sittings in both churches, 1,982. All the dissenting places of worship within the parish are in the town; those also in the adjacent parishes of Newton-upon-Ayr and St. Quivox are in the suburbs; and as the latter as well as the former are popularly regarded as in Ayr, they may be mentioned in this place. There are a Free church in Ayr-proper, a Free church in the suburb of Newton, and a Free church, of later origin, in the suburb of Wallace-town; and the yearly sum raised in 1865 in connexion with the first was £865 19s. 6d.,—with the second, £805 1s. 10d.,—and with the third, £194 5s. 7 $\frac{1}{2}$ d. There is one United Presbyterian church in Cathcart-street in Ayr-proper, and another in Darlington-road in the suburb of Newton; and the former was built in 1816 and has 1,182 sittings, and the latter was built in 1860 and has above 800 sittings. There is in Ayr-proper a Wesleyan Methodist chapel, built in 1813 and containing 530 sittings; and there are in Wallace-town an Original Seceder meeting-house, built in 1799, and containing 605 sittings,—a Reformed Presbyterian meeting-house, built in 1832, and containing 480 sittings,—an Independent chapel, in connexion with the Congregational Union, built in 1805 and containing 550 sittings,—a Roman Catholic chapel, built in 1836, and containing 800 sittings,—and a chapel of ease to St. Quivox; and in Newton a parish church. There is also, in Ayr-proper, a Scottish Episcopalian church, in which the Bishop of Glasgow and Galloway officiates. There are likewise a Moravian chapel and a Morrisonian chapel. There is a beautiful new cemetery on the river Ayr, about $\frac{1}{2}$ a mile from the town.

AYR, a royal burgh, a market and sea-port town, the capital of Ayrshire, and the seat of a circuit court, stands on the west side of a fertile and beautiful plain, at the influx of the river Ayr into the frith of Clyde, 9 miles from Maybole, 10 $\frac{1}{2}$ from Irvine, 34 from Glasgow by road and 40 by railway, and 75 miles from Edinburgh by road and 87 $\frac{1}{2}$ by railway. It looks to the eye to consist of two nearly equal parts, separated from each other only by the river; and it is popularly regarded as comprehending both these parts; and for all business purposes it, of course, does comprehend them; and it comprehends them also as a parliamentary burgh. But only the part on the left bank of the river constitutes the royal burgh, and forms the proper sub-

ject of our present notice; while the part on the right bank consists of the mutually contiguous suburbs of Newton, Wallacetown, and Content, and will be noticed in the articles NEWTON-UPON-AYR and WALLACETOWN.

The view of the town from the brow of Brown Carrick hill, which overhangs the left bank of the Doon, immediately south of Burns' monument and Alloway kirk, is singularly brilliant and imposing. The general prospect there, indeed, away over Kyle and Cunningham and across the Firth of Clyde to the stern Alps of Arran and the green hills of Bute and the heathery mountains of Argyleshire, [See MAYBOLE, parish of,] is so mightily magnificent as to make the town and its environs but one small feature of the whole; but that one feature, nevertheless, is very striking. "The handsome new buildings on the side of Wellington Square and Burns' Street first appear to the eye, shaded by the plantations that adorn the numerous villas that intervene in the suburbs. The old part of Ayr is almost hid in the background, unless in so far as the irregular tops of the chimneys and gable ends peer above, or are seen through some open space, giving it a turreted sort of aspect and conveying an impression of greater extent than in reality belongs to it. The county buildings, the lofty tapering new spire, and the imposing gothic-like erection of Wallace Tower, have tended much to beautify and adorn the town, and to add to the effect of its appearance, as seen from a distance."

The parts of the town nearest the river and toward the shore have a modern, showy, urban aspect; and those in the centre and toward the south are antiquated, mean, and village-like. The principal street, or High Street, winds through both regions, and partakes the character of both; and might, till quite recently, have been described as presenting motley groups of elegant structures and mean buildings in most uncouth and amorphous combination, with fronts, gables, and corners projecting to the street as chance or caprice may have directed. But in recent times, the town as a whole has undergone vast improvements in its architecture and alignments and economy;—such as would have seemed most wonderful to persons who knew it fifty years ago; and now it holds a high rank, for both beauty and cleanliness, among the second-class towns of Scotland.

The bridges which connect Ayr with the suburbs are the "The Twa Brigs" which figure so famously in the poems of Burns. They stand within 150 yards of each other. The old bridge is said to have been built in the reign of Alexander III., by two maiden sisters of the name of Lowe, whose effigies were carved upon a stone in the eastern parapet; and it comprises four lofty and strongly framed arches. The new bridge was built in 1778, chiefly through the exertions of Provost Ballantyne, the gentleman to whom Burns dedicated the poem of "The Twa Brigs." It is a beautiful structure, with five arches from a design by Robert Adam. The old tolbooth and town-hall formerly interlined the Sandgate at a short distance from the site of the new bridge, and was surmounted by a spire 135 feet high, containing "the Dungeon clock" alluded to in Burns' poem; but it obstructed and almost blocked up the thoroughfare, and was taken down in 1826; and now a spacious and very elegant street lies right open from the new bridge to Wellington Square. The present town buildings stand at the junction of Sandgate and High Street. They contain an elegant suite of assembly rooms, and are surmounted by a remarkably handsome spire of 226 feet in height. The county buildings, containing

court and record rooms and county hall, stand on the north-west side of Wellington Square, and were built from a design by Mr. Wallace, after the model of an ancient temple in Rome, at an expense of upwards of £30,000. A dwelling-house with a statue of Sir William Wallace on its front, occupies the site of the ancient court-house of Ayr, supposed to have been that in which the Scottish lords, according to the narrative of Blind Harry, were treacherously hanged. Wallace Tower, in which Sir William Wallace is traditionally said to have been imprisoned, was a rude old building at the head of the Mill Vennel, and near the middle of the east side of High Street; and in 1830, this was taken down, and an elegant Gothic structure of the same name and about 115 feet high erected in its place, with the clock and the bells of the dungeon steeple at its top, and with a statue of Wallace, done by the well known self-taught sculptor, Thom, in a niche on its front. The ancient cross of Ayr was an elegant hexagonal structure, situated near the site of the present town buildings, but was removed at the time when the new bridge was built.

The original church of Ayr, or at least a very ancient one, stood between the town and the mouth of the river, and was dedicated to St. John the Baptist; and there the parliament of King Robert Bruce met on the 26th of April, 1315, and settled the succession of the crown on the King's gallant brother, Edward Bruce, Earl of Carrick. But in 1652 Cromwell created a citadel of 12 acres in extent, and now called the Fort, round the site of that church, and converted the church into an armoury and guard-room, and, by way of compensation, gave between £600 and £700 toward the erection of the present old parish church. The citadel was designed as a military station to overawe and defend Ayrshire and Galloway. The remains of this fortress, with its grounds, were purchased, several years ago, for about £3,000; the church was extended and altered into a modern residence; and the grounds were laid off for feuing, and were, in 1865, being rapidly covered with handsome villas. The present old parish church is a substantial cruciform building, in an open retired situation behind the High-street; has Gothic windows, recently filled with magnificent memorial designs in stained-glass; was all recently re-seated; and, in interior effect, is not excelled by any provincial place of worship in Scotland. The new parish church is a handsome structure, both without and within, but has no spire or tower. Some of the dissenting places of worship have a very respectable appearance. An extensive Dominican friary anciently stood somewhere about the head of Mill Street; and a Franciscan friary anciently occupied the site of the present old parish church; but not a trace of either of them now exists, excepting the well belonging to the latter, which is still called the Friar's well.

A great Roman road led from Galloway into Ayrshire by way of Dalmellington, and can still be traced south-west of Castlehill gardens within $1\frac{1}{2}$ mile or Ayr, and probably terminated at the mouth of the river as a military station or a sea-port. Some urns and culinary utensils and other small relics, of seemingly Roman origin, have been found deep in the ground at the town. A castle was built near the mouth of the river by William the Lion, about five years before the erection of Ayr into a burgh, and is distinctly mentioned in the charter of erection as "novo meo castello de Are." Large military forces of Edward I. of England held possession of the principal fortresses of the Lowlands during that monarch's usurpation of Scotland, and no doubt held possession of the castle of Ayr; but those here probably did

not find it sufficiently commodious for them, and they therefore erected on the south-east side of the town an encampment or temporary barrack which became the scene of a tragical revenge upon them by Sir William Wallace. See *BARNS OF AYR*. But in 1298 King Robert Bruce burned the castle of Ayr, in order to prevent it from again becoming the stronghold of an English army, who were marching westward to attack him, and whom he had not sufficient strength to encounter. The castle probably stood on the spot afterwards occupied by the east corner or bastion of Cromwell's Fort; but no traces of it now remain.

Ayr was early regarded by the Kings of Scotland as a place of both political and commercial importance. The charter erecting it into a royal burgh was granted about the year 1202 by William the Lion; and conferred extensive privileges, which are still enjoyed by the town. Several of the Kings of Scotland, after the period of authentic record, built ships at Ayr; and Buchanan characterises this place as "emporium non ignobile." Aud Defoe remarks of it: "It is now like an old beauty, and shows the ruins of a good face, but is still decaying every day; and from having been the fifth best town in Scotland, as the townsmen say, it is now the fifth worst; which is owing to the decay of its trade. So true it is that commerce is the life of cities, of nations, and even kingdoms. What was the reason of the decay of trade in this place is not easy to determine, the people themselves being either unwilling or unable to tell." [Tour through Great Britain, edn. 1745, p. 114.] The merchants used to import a great quantity of wine from France, and export corn, salmon, and other produce of the country; and the farmers and corn-merchants throughout most of Kyle and Carrick, as well as the owners and workers of the rich mineral-fields there, must ever regard it as a valuable sea-port. Its modern trade was for a long time severely damaged by the rising trade of Glasgow; but, even in spite of the competition of Troon and Ardrossan, has been greatly revived since the opening of the railways.

The sea-shore of Ayr is flat and shallow, and the entrance of the river, which forms the harbour, was formerly much obstructed by a bar of sand, especially in a north-west wind, but is now considerably protected by a strong breakwater. The water, even at spring-tides, seldom rises above 14 feet. The piers extend about 1,100 feet each; and there are two light-houses in taking the harbour. The position of Ayr north pier light, as determined by Mr. Galbraith in 1827, is N lat. 55° 28' 53"; W long. 4° 36' 21". There are three lights, bearing south-east by east $\frac{1}{2}$ east 850 feet. Two of the lights are bright, and one red. The red and one bright light are in the same building, and show all night. In 1792 an act was passed for deepening and maintaining this harbour, and enlarging and improving the quays. Another act was passed in 1817, with the same objects. The amount of the harbour dues in 1864 was £4,880. The principal trade is the exportation of coal and pig-iron; and the quantity of the former exported in 1864, was 137,499 tons,—of the latter, 16,097 tons. Other exports are farm produce, leather, ale, &c. The chief imports are beef, butter, barley, yarn, linen, limestone, whiting, and porter from Ireland; spars, deals, and heavy timber from North America and the Baltic; slates and hark from Wales; bones from South America; guano from Ichaboe and Liverpool; tar and pitch from Archangel; and whisky from Campbelton. In 1812, the number of vessels belonging to the port was 60, of aggregately between 5,000 and 6,000 tons; in 1836, it was 18, of aggregately 2,459

tons; in 1843, it was 36, of aggregately 3,684 tons; and in 1864, it was 57, of aggregately 8,498 tons. The total number cleared in 1836, exclusive of steam-boats, was 739, of aggregately 62,730 tons. The coast trade during the year 1864 comprised a tonnage of 104,525 inward, and 106,206 outward; and the foreign trade during the same year comprised a tonnage of 3,233 inward, and 1,988 outward. The limits of the port include also the harbour of Girvan and intermediate creeks.

The manufactures and productive industry of the town comprise some ship-building, extensive engineering, saw-mills, a woollen-mill, extensive carpet-weaving, extensive work in tanning and shoemaking, much weaving and muslin-flowering for the manufacturers of Glasgow, and a full proportion of all the ordinary departments of handicraft. Ayr port has long been the principal fishing-station throughout a very great extent of coast; and besides commanding valuable salmon fisheries in the rivers Ayr and Doon, it has an abundant supply of all kinds of white fish from the sand banks in the frith. Weekly markets are held on Tuesday and Friday; and fairs are held on the Thursday and Friday before the second Wednesday of January, on the first Tuesday and last Friday of April, on the Thursday and Friday before the second Monday of July, and on the second Th. and third Tu. of October. The chief inns are the King's Arms, the Star, the Ayr Arms, the Queen's, the Black Bull, the Temperance, the Buck's Head, and the Wheat Sheaf. The town has a trades-house, a merchant company, a corn exchange, an excise office, an inland revenue office, a gas company, a water company, twenty insurance offices, a savings' bank, and offices of the Clydesdale, the Union, the Bank of Scotland, the National, the Royal, the City of Glasgow, and the Commercial Banks. The Ayr Observer newspaper is published every Tuesday, the Ayr Advertiser every Thursday, and the Ayrshire Express every Saturday. Communication is maintained by steamboats with Glasgow, Arran, Campbelton, and Stranraer; and by railway with Dalmellington, Girvan, Ardrossan, Kilmarnock, Glasgow, and all intermediate and connected places.

The academy of Ayr is one of the best provincial seminaries in Scotland. It was founded and chartered in 1798, and then superseded the parochial schools of the burgh; and it rose out of a bequest of £1,000 by Mr. Ferguson of Doonholm, aided by large subscriptions from the town and many wealthy gentlemen. The building stands in an open and very healthy situation near the Fort, and is plain and chaste, and contains good class-rooms, a large public hall, and a library and museum. All the branches of education necessary for a commercial life are here taught by able masters; besides the Latin, Greek, and modern languages, experimental philosophy, chemistry, astronomy, &c. Smith's Institution is a school for poor children, which superseded a subscription Lancasterian school, and rose out of a bequest of about £2,000 in 1825 by Captain John Smith of Ayr. The other public schools are a school of industry, a Ladies' charity school, an infant and juvenile school, and a ragged school. The mechanics' institution was instituted in 1825, and prospered so rapidly as soon to have nearly 200 members and a large and excellent library. The other chief institutions, literary, benevolent, and miscellaneous, are an extensive town library, a public reading room, a dispensary, a fever hospital, a female funded society, a sailors' society, a fishers' and mariners' benevolent society, a Sabbath school union, a religions tract society, a Bible society, bowling and curling clubs, a general agricul-

tural association for Ayrshire, and a horticultural and agricultural society. Concerts and balls are held in the Queen's Rooms,—formerly the theatre; races are held annually, in September; and the Caledonian hunt is here every fifth year. The race-course is situated about a mile south of the town, and consists of an enclosure of about 90 acres.

The magistrates of Ayr, prior to the municipal act, were a provost, two bailies, a dean of guild, a treasurer, and 12 councillors; and had jurisdiction over all the united parish of Ayr and Alloway. The municipal constituency in 1865 was 448. The corporation revenue in 1832-3 was £2,057 6s. 11d.; and in 1863-4 it was £2,645 16s. 9d. The ordinary expenditure, in the latter year, was £2,764 6s. 8d.; the amount of debt, £14,724 2s.; the value of the burgh property, £32,676 18s. 3d. The only local taxation is for cess and poor's money. There are nine incorporated trades, who all possess funds varying respectively from £50 to £1,500. A burgh criminal court is held as often as required by the town magistrates; a sheriff court every Tuesday during session; a commissary court as often during session as it may be required; a small debt court every Thursday; and a justice of peace court every Monday. Other authorities are the parochial board, the municipal police board, and the county prison board. The parliamentary burgh of Ayr—which includes Newtown, Wallacetown, and Contout,—unites with Irvine, Campbelltown, Inverary, and Oban in sending a member to parliament. Parliamentary constituency in 1865, 673. Population of the royal burgh in 1841, 7,035; in 1861, 8,222. Houses, 951. Population of the parliamentary burgh in 1841, 15,749; in 1861, 18,573. Houses, 2,104.

AYRSHIRE, a large and important county in the south-west of Scotland, taking name from the town of Ayr. It is bounded by Renfrewshire on the north and north-east; by the counties of Lanark and Dumfries on the east; by the stewardry of Kirkcudbright on the south-east; by Wigtonshire on the south; and by the North channel and the frith of Clyde on the west. Its length, from Galloway burn upon the north side of Loch Ryan, to Kelly burn which divides it from Renfrewshire, is, by the public road, 90, and in a direct line 60 miles, the difference being occasioned by the curvature of the coast; its breadth from east to west is in some places 30 miles; and its average breadth is a little above 19. Its superficies was reported by Mr. Aiton, on measurements which he esteemed good, to be 1,600 square miles, and by Sir John Sinclair, on calculations founded on Arrowsmith's map, to be 1,045 square miles; but was definitely ascertained, by the recent survey of the Ordnance staff, to be 1,149 square miles.

Ayrshire is historically and popularly, though not now politically, divided into the three districts of Cunningham in the north, Kyle in the middle, and Carrick in the south. The entire county has nearly the outline of a half moon, with the concavity on the coast and the convexity on the inland side. The concavity, however, exists more in the northern half of the coast than in the southern, and has there a low sea-board, broadly fringing it like a valley, and imposes the name of the bay of Ayr on the

large lateral expansion of the frith of Clyde by which it is there swept. The surface of the county is exceedingly diversified, and yet is for the most part lowland, and so disposed as to be visible in vast expanses from thousands of vantage-grounds. "A considerable part of Carrick," says Mr. Aiton, "and some parts of Kyle and Cunningham towards the inland verges, are hilly; and that part of Ayrshire which borders with the counties of Dumfries and Galloway justly merits the name of mountainous. A chain or group of mountains commences at Saint Abb's head, on the verges of the shires of Berwick and East Lothian; runs westward the whole breadth of the island, on the boundaries of the Lothians and the county of Roxburgh, and between those of Lanark and Ayr on the north, and Dumfries and Galloway on the south; and terminates at the rock of Ailsa. Richard, who wrote in the 12th century, and is the earliest Scots writer certainly known, denominates this range of mountains the *Uxellum Montes*. Some of the highest of the mountains in this chain are situated in the neighbouring counties; but a considerable range of the south and eastern parts of Carrick is mountainous, and forms a part of that group of mountains, abounding with lochs, and very barren. A large range of Ayrshire, from the foot of the water of Doon, to the north of Ardrossan harbour, is a plain open country, neither level nor hilly, but rising from the shore in a gradual easy acclivity, till it terminates in mountains on the south-east, and moorish hills on the eastern boundaries. No part of it can be termed level; for the surface abounds with numerous swells or roundish hills which facilitate the escape of moisture, promote ventilation, and diversify and ornament the face of the country. The prospects from some of these eminences are uncommonly rich and variegated. On ascending any of the little heights, in almost any part of the county, you have a delightful view of the frith of Clyde, the beautiful hills of Arran and Ailsa, rising out of the sea, a large tract of Ayrshire, the Highland hills, and the coast of Ireland." And nowhere is this view more extensive or in richer combinations than from the heights of Brown Carrick, in the south-west of the parish of Maybole. See MAYBOLE.

Cunningham is in general a level and agreeable district of a triangular form and declining gradually toward the sea; and is divided from Kyle by the Irvine, intersected by the Garnock, and watered by several streams of little note. Towards the confines of Renfrewshire, it rises into an assemblage of hills with intervening valleys. Along the sea-coast, and in the southern part of the district, there are tracts of tolerably flat and fertile soil. Its western angle, however, is mountainous, and the coast is rocky. This district comprehends 260 square miles, [Playfair,] and abounds in manufacturing towns and villages.—Kyle, the middle district, consisting of about 380 square miles, [Playfair,] lies between the river Doon and the Irvine, and is traversed from east to west by the Ayr, which divides it into King's Kyle on the south, and Kyle Stewart on the north. Towards the confines of Lanark and Dumfries-shire, it is elevated, rugged, and covered with heath; but the midland and maritime tracts are agreeably diversified, well-cultivated, and planted with villages and seats. "Kyle or Coil, having once been a forest, may have taken its name from that circumstance, the Celtic *coil* signifying 'wood;' but the natives, misled probably by the old chroniclers, derive it from Coilus, a British king, who is reported to have fallen in battle somewhere on the river Coil, and to have been buried either at Coyton or at Coilsfield. If such a personage ever existed, this

does not appear to have been the scene either of his actions or of his misfortunes. The hill-country, towards the east, is bleak, marshy, uncultivated, and uninteresting; and on that side, except at one or two places, the district was formerly impervious. In advancing from these heights to the sea, the symptoms of fertility and the beneficial effects of cultivation, rapidly multiply; but there is no 'sweet interchange of hill and valley,' no sprightliness of transition, no hold and airy touches either to surprise or delight. There is little variety, or even distinctness of outline, except where the vermiculations of the rivers are marked by deep fringes of wood waving over the shelvy banks, or where the multitudinous islands and hills beyond the sea exalt their colossal heads above the waves, and lend an exterior beauty to that heavy continuity of flatness, which, from the higher grounds of Kyle, appears to pervade nearly the whole of its surface. The slope, both here and in Cunningham, is pitted with numberless shallow depressions, which are surmounted by slender prominences, rarely swelling beyond the magnitude of billocks or knolls. Over this dull expanse the hand of art has spread some exquisite embellishments, which in a great measure atone for the native insipidity of the scene, but which might be still farther heightened by covering many of these spaces with additional woods, free from the dismal intermixture of Scotch fir,—a tree which predominates infinitely too much all over the country, deforming what is beautiful, and shedding a deeper gloom on what is already more than sufficiently cheerless."—Carrick, the southern and most romantic district, including that portion of Ayrshire which lies to the south of the river Doon, and consisting of 399 square miles, [Playfair,] is in general mountainous, with some delightful valleys interspersed, and fertile declivities inclining towards the sea-coast. The two valleys watered by the Stiuchar and the Girvan exhibit a wild and varied scenery, which attracts the notice and excites the admiration of every traveller. The principal elevations in Carrick are on its south-west border, in the parish of Colmonell; and the highest ground in the whole county is the summit of Cairntable, 1,650 feet above sea-level, on the boundary of the parish of Muirkirk and district of Kyle with the parish of Douglas and county of Lanark. See the articles CUNNINGHAM, KYLE, and CARRICK.

The climate of Ayrshire is similar to that of other districts situated on the western coast of Britain. For more than two-thirds of the year the wind blows from the south-west, and the rains are often copious, and sometimes of long duration.—The principal rivers of Ayrshire are the Garnock, a small stream which rises on the borders of Renfrewshire, 10 miles above Kilwinning, flows southward, receives the Lugton, and falls into the harbour of Irvine; the Irvine, which has its source near Loudon hill, on the confines of Lanarkshire, and thence proceeds westward by Derval, Newmilns, Galston, Riccarton, &c., until augmented by many rivulets it flows into the sea at Irvine; the Ayr, which holds a western course nearly parallel to the Irvine; the Doon, which issues from Loch Doon, on the east border of Carrick, and flows north-north-west to the sea near the mouth of the Ayr; and the Girvan and the Stiuchar, which issue from small lakes near the border of Kirkcudbrightshire, and flow south-west to the North channel into which they fall, the former at Girvan, and the latter at Ballantrae. All these rivers receive further notice in separate articles. Their course is short, and, as they all rise on or near the inland boundaries, indicates the general basin-like outline of the county.—The principal loch is

Doon: which see. There are several small lochs in different quarters of the county.

Clay or argillaceous earth is the most common soil in this county; and in different quarters it has been found from 40 to 200 feet in depth. This species of soil is naturally so tenacious that it can only be ploughed when in a state of moisture. By summer-fallowing, and the application of lime and other manure, it is, however, convertible into fine rich loam; and there are thousands of acres in the county of Ayr, which, by this mode of treatment, have been changed from sterile clay to the richest mould. Loam of alluvial formation is found in holms, on the sides of rivers, and in other low situations in different parts of the county; but this bears a small proportion to what has been converted into loam by human industry. There is a greater proportion of moss and moor ground than any other. The origin of the extensive mosses in Ayrshire may be traced to the overthrow of the forests which, we are informed from the earliest and most authentic history, at one time covered great tracts of land in Scotland. Forest-trees are frequently found lying many feet under ground, in the position in which they had been cut down by the earlier inhabitants. These trees, laid prostrate on the earth, extirpated all former vegetation, and moss earth has been formed from the aquatic plants introduced by the stagnation of water occasioned by such circumstances. Lochs of water of moderate depth have also grown into flow-mosses, by plants striking root in the bottom, when composed of earth or mud. The most common of those plants are marsh-fog, goul-bear, drab-coloured fog, cotton-beads, and turfy cluh-rush. The following is the extent of the different kinds of soil in the county, according to Mr. Aiton:

Soil	Acres.
Clay soil:	
In the district of Carrick,	10,000
In Kyle,	175,000
In Cunningham,	135,000
	320,600
Sand or light soil:	
In Carrick,	90,000
In Kyle,	41,000
In Cunningham,	16,000
	147,000
Moss and moor ground:	
In Carrick,	200,000
In Kyle,	93,000
In Cunningham,	54,000
	347,000
	814,600

Chalmers assigns to these different classes of soil the following proportions: clay soil 261,960 acres; sandy soil 120,110; moor lands 283,530. There are no extensive natural woods in Ayrshire; but a considerable quantity of copse-wood occurs on the banks of the rivers, and a large extent of ground in the lower parts of the county is now under plantations.

The mineralogy of Ayrshire is highly interesting, and capable of affording a wide field of study both to the geologist and agriculturist. The higher parts of Carrick abound in unmixed granite of a greyish colour. Braccia, whinstone, greenstone, and red sand-stone, are also found in the same district. Immense beds of coal have been discovered in different parts of the county. The coal-district of Scotland, which intersects the island from the Atlantic to the German ocean, runs through the centre of Ayrshire from the shore to its inland verges. It commences on the south, in the strath of Girvan in Carrick about 2 miles from the sea, runs up by Dalmellington and New Cumnock on the south side of Kyle, by

Sanquhar in Nithsdale, and Douglas and Carnwath in Lanarkshire, and being cut off by the heights of Lammernmoor, terminates near North Berwick: it runs nearly in a line from the rock of Ailsa to that of the Bass. Cannel coal, of excellent quality, is found at Bedlar hill near Kilbirnie, and at Adam-mill by Tarbolton. Blind coal—a species principally composed of carbon, and in which there is only a very small portion of bituminous matter—is obtained in great quantities, and many thousand tons of it are yearly exported to Ireland. It is chiefly used for drying grain or malt. Copper and lead have both been wrought,—the latter to some extent at Dalegales in New Cumnock. Gold is said to have been discovered in Ayrshire, and dug by an Englishman named Dodge, about the year 1700. A few specimens have been found in the hills of Carrick of agates, porphyries, and calcareous petri-factions. Millstones are quarried near Kilbride; and a species of fire-stone near Auchinleck. Iron-stone is extensively worked in each of the three districts of the county. In the parish of Stair, antimony and molybdena have been found; and, in several parts of the county, that species of whet-stone known by the name of Water-of-Ayr stone. Chalybeate springs—some of them strongly impregnated with sulphur—are found in almost every parish; but none of them present any thing peculiarly interesting. There are two springs in the parish of Maybole of uncommon magnitude.

The rotation of crops formerly differed widely in different districts, but has been rendered more uniform by the progress of georgical improvement. Wheat was seldom to be seen in this county beyond the limits of a nobleman's farm previous to the year 1785; but it is now become common, and seldom fails to yield a valuable return. Rye is not often sown, except on the sandy ground near the shores, where small quantities have been raised. Oats have always been the principal grain crops of Ayrshire. Beans also are somewhat extensively sown. Turnips were first introduced by the Earls of Eglinton and Loudoun, about the middle of the last century, and they have subsequently been reared on almost every description of land; but, as in all other places, they grow to the best advantage on light dry soil. Swedish turnip is extensively cultivated. Potatoes are reared in great abundance, and to as good account as in any other county in Scotland. Clover is abundant. Ryegrass, though a native plant, remained unnoticed till about the year 1760, and it did not come into general use till about 1775. Only a small proportion of the surface of the county is occupied as meadow-land. The natural pasture—of which there is a considerable extent in the county—is devoted to the feeding and rearing of sheep. Much of the arable land also undergoes an alternation of crop and pasture; and the greater part of the pasture is occupied with dairy stock, or other cattle fed in the district. Agriculture, on the whole, is in a highly improved and very intelligent condition, and so long ago as 1837, a writer in the New Statistical Account said respecting it:—"During the last few years, the farmers have in general devoted much of their attention to the study of agriculture as a practical science; and erroneous processes in the cultivation of the soil, which antiquated prejudice or inveterate custom had long retained, are gradually becoming obsolete,—while useful improvements and discoveries are eagerly substituted in their place. Farmer's societies have done much to introduce a more enlightened mode of husbandry than formerly prevailed. This has been greatly aided also by the example of many of the landed proprietors, who themselves farm on a large scale."

And now, in 1856, Ayrshire is notable for high-farming,—of which Myremill near Maybole is the show-farm for beef, mutton, and pork, and Cuning-park near Ayr for butter.

It would be a matter of some difficulty to ascertain at what period attention was first given, in this district, to the rearing of cattle. At all events it must have been remote, as the following adage, which was familiar to every grey-beard of the 17th century, shows:

"Kyle for a man,
Carrick for a cow,
Cunningham for butter and cheese,
And Galloway for wool!"

The Galloway cattle are well-made and hardy; but the native dairy cows are now preferred as milkers, and are much more profitable to the farmer. About the year 1750, several cows and a bull—either of the Teeswater, or some other English breed—were sent to the Earl of Marchmont's estates in Kyle, all of the high brown and white colour now so common in this county. It is probably from these or other similar mixtures that the red and white colours of the common stock were first introduced. In 1780, or a year or two previous, the opulent farmers in the parishes of Dunlop and Stewarton made up their stocks of this breed. Their example was followed by others, and the breed was gradually spread over Cunningham, Kyle, and Carrick. The size of the Ayrshire improved dairy cows varies from 20 to 40 stones English, according to the quality or abundance of their food. The most valuable quality which a dairy cow can possess is to yield an abundance of milk. Ten Scots pints per day is not thought uncommon for the Ayrshire breed; some give twelve or thirteen; and fourteen pints have been taken from a good cow in one day. The greater portion of the milk is manufactured into cheese, of which there are two kinds,—the common and the Dunlop cheese. See the article DUNLOP. Sheep, chiefly of the blackfaced kind, are, in some parts, a considerable object of attention. The orchards and gardens and pleasure-grounds of Ayrshire have long challenged general admiration, on account of both their tastefulness and their extent.

The manufactures of Ayrshire are important. The woollen manufacture has long existed in this district, especially at Kilmarnock, Ayr, Stewarton, and Dalry. In 1838 there were 18 woollen-mills within the county, employing 242 hands.—Linen was more extensively manufactured in former years in Ayrshire than it is now. The chief localities of this manufacture are Kilbirnie and Beith. The number of flax-mills, in 1838, was 3, employing 172 hands.—The cotton manufacture has long been increasing, and is now prosecuted on a large scale. Its chief localities are Catrine, Kilbirnie, and Patna. The number of cotton-mills, in 1838, was 4; employing 703 hands. A considerable number of women are employed in embroidery. A number of great iron-works, additional to former ones, have recently sprung up, and give extensive employment. The manufacture of wooden snuff-boxes employs about 120 hands. Extended information on these points, and on other departments of productive industry, as well as in general trade and commerce, will be found in our articles on the principal towns.

The royal burghs in Ayrshire are Ayr and Irvine. A parliamentary burgh, not royal, is Kilmarnock. The other principal towns are Newton-upon-Ayr, Ardrossan, Beith, Catrine, Girvan, Old Cumnock, Saltcoats, Largs, Kilwinning, Mauchline, Maybole, Stewarton, Troon, Galston, Kilmaurs, Newmilns, Stevenston, Dalry, and Kilbirnie. The principal villages are Ballantrae, Dailly, Patna, Crosshill,

Kirkmichael, New Cumnock, Dalmeilington, Muirkirk, Glenbuck, Darvel, Fenwick, and Gateside. Some of the principal mansions are Culzean Castle, the Marquis of Ailsa; Dumfries House, the Marquis of Bute; Fullerton House, the Duke of Portland; Eglinton Castle, the Earl of Eglinton; Loudoun Castle, the Marquis of Hastings; Brisbane House, the late Sir T. M. Brisbane, Bart.; Auchinleck House, Boswell of Auchinleck; Killochan Castle, Sir J. A. Cathcart, Bart.; Dalquharran, Right Hon. T. F. Kennedy; Kilkerran, Sir James Ferguson, Bart.; Blairquhan Castle, Sir Edward Hunter Blair, Bart.; Bargany, Duchesse de Coigny; Berbeth, Hon. Col. Cathcart; Enterkinc, J. Bell, Esq.; Barskimming, Sir T. M. D. Miller, Bart.; Sundrum, John Hamilton, Esq.; Auchincruive, Alex. Oswald, Esq.; Ballochmyle, W. M. Alexander, Esq.; Craufurdland, W. H. Craufurd, Esq.; Logan House, W. A. Cunningham, Esq.; and Fairley House, Sir P. A. C. Fairley, Bart.

The roads from Glasgow to Dumfries and Portpatrick, and from Greenock and Paisley to all the border counties, pass through Ayrshire; and excellent roads connect all its towns with one another, and with every place of consequence beyond. The number of miles of turnpikes in it, at November 1858, was 755, the number of turnpike trusts 17, the yearly revenue from tolls, £16,830. Local railways, or branches of the Glasgow and South-western, go from Ayr to Dalmeilington and Girvan, from Troon to Kilmarnock, from Irvine to Bushy, from Kilwinning to Ardrossan, from Hurlford to Newmilns, and from Auchinleck to Muirkirk, and together with the main lines of the Glasgow and South-western, form a connected system of communication through great part of the county. The grand trunk of the Glasgow and South-western enters the county near Beith, and proceeds by way of Dalry, Kilmarnock, Mauchline, and Cumnock, toward Nithsdale; and a main line, originally forming with the northern part of the main trunk the Glasgow and Ayr railway, leaves the main trunk near Dalry, and proceeds past Irvine and along the coast to Ayr. A railway was authorized in 1862 to deflect from the Glasgow and Greenock branch of the Caledonian at Port-Glasgow, and to enter the coast of Ayrshire down to Wemyss bay; and may eventually be prolonged to Largs. The Troon and Kilmarnock railway is the oldest public work of its class in Scotland. A railway was once projected, under the name of the Ayrshire and Galloway, to connect Ayr with the Port-Patrick railway near Castle-Douglas.

Ayrshire has been divided, since 1846, into the two sheriff-districts of Ayr and Kilmarnock. The parishes in the Ayr district amount to 28, and are Auchinleck, Ayr, Ballantrae, Barr, Colmonell, Coylton, New Cumnock, Old Cumnock, Dailly, Dalmeilington, Dalrymple, Dundonald, Girvan, Irvine, Kilwinning, Kirkmichael, Kirkoswald, Maybole, Monkton, Muirkirk, Newton-upon-Ayr, Ochiltree, St. Quivox, Stair, Sorn, Straiton, Symington, and Tarbolton; and those in the Kilmarnock district amount to 18, and are Ardrossan, Beith, Craigie, Dalry, Dreghorn, Dunlop, Fenwick, Galston, Kilbirnie, West Kilbride, Kilmarnock, Kilmaurs, Largs, Loudoun, Mauchline, Riccarton, Stevenston, and Stewarton. The sheriff-substitutes of the two districts have their residences and courts and clerks respectively at Ayr and Kilmarnock, and each acts distinctively for his own district; yet both possess a cumulative jurisdiction over the whole county. The sheriff-court for the Ayr district is held every Tuesday and Thursday during session; the small debt court every Thursday; the commissary court every Thursday; the justice of peace court every Monday; the quarter sessions on the first Tuesday of March and

August, fourth Tuesday of May, and third Tuesday of November. The sheriff court for the Kilmarnock district is held every Wednesday and Thursday during session; the small debt court every Thursday; the justice of peace court every alternate Monday. Courts under the small debt act are held at Irvine every two months; at Beith and Cumnock four times a-year; and at Girvan three times a-year. The assessment in 1865, for bridge-money, was $\frac{1}{2}$ d., for rogue-money, $\frac{1}{4}$ d., for police, $\frac{1}{2}$ d., for prisons, $\frac{1}{4}$ d., per pound. The valued rental of the county in 1674, was £191,605 Scots; the annual value of real property, as assessed in 1843, was £520,828; and the valued rental, as ascertained under the new valuation act in 1865, was £876,438. The number of commitments for crime in the year, within the county, was 71 in the average of 1836-1840, 118 in that of 1841-1845, 178 in that of 1846-1850, 125 in that of 1851-1855, and 105 in that of 1856-1860. The total number of persons confined in the jail at Ayr, within the year ending 30th June, 1863, was 509, and the average duration of the confinement of each was 31 days. The number confined in the jail at Kilmarnock in that year was 252; and the average duration of their confinements was 21 days. Thirty-eight parishes are assessed, and eight unassessed for the poor. The number of registered poor in the year 1852-3 was 4,929; in 1862-63, 6,330. The number of casual poor in the year 1852-3 was 17,691; in 1862-63, 7,216. The sum expended on the registered poor in 1852-3 was £22,928, in 1862-63, £34,582. The sum expended on the casual poor in 1852-3 was £2,365; in 1862-63, £2,544. Ayrshire returns one member to parliament. Constituency in 1865, 4,642; Population of the county in 1801, 84,207; in 1811, 103,839; in 1821, 127,299; in 1831, 145,055; in 1841, 164,356; in 1851, 189,058; in 1861, 199,063. Inhabited houses in 1861, 25,742; uninhabited, 878; building, 224.

Ayrshire, in former times, was comprehended in the bishopric of Glasgow; and all, except two parishes, is now comprehended in the synod of Glasgow and Ayr. The parishes of Ballantrae and Colmonell are in the presbytery of Stranraer; the parish of Largs is in the presbytery of Greenock; and the other 43 parishes constitute the presbyteries of Ayr and Irvine. The number of parish churches is 48,—the towns of Ayr and Kilmarnock having each two; and the number of subordinate ones is 15. The Free church Assembly distributes the county in nearly the same way as the Established church, but includes Ballantrae and Colmonell in the presbytery of Ayr. In 1865 it had 49 churches and 2 preaching stations within the county; and two of the churches were in the presbytery of Greenock, 24 in the presbytery of Irvine, and 23 in the presbytery of Ayr. There are at present 30 churches in Ayrshire belonging to the United Presbyterian Synod,—three of which are in its presbytery of Paisley and Greenock, and all the rest in its presbytery of Kilmarnock. There are in the county 7 Reformed Presbyterian churches, 5 United Original Secession churches, 4 Episcopalian chapels of the Scottish Episcopal communion, 3 Congregational chapels, 10 Morrisonian chapels, 2 Baptist chapels, 4 Wesleyan Methodist chapels, 1 Unitarian chapel, 9 Roman Catholic chapels, 2 small meeting-places belonging to the Mormons, and 6 or 7 small meeting-places belonging to isolated congregations. There were in 1851, in Ayrshire, 177 public day-schools, attended by 9,233 males and 6,974 females,—121 private day-schools, attended by 3,750 males and 3,415 females, 7 evening schools for adults, attended by 139 males and 101 females.—and 205 Sabbath schools, attended by 9,023 males and 10,531 females.

Throughout every part of Ayrshire are scattered the relics of former ages. Cairns, encampments, and druidical circles are numerous; see articles DUNDONALD, GALSTON, and SORN. Of ancient castles the most celebrated are LOCH DOON, TURNBERRY, DUNDONALD, and SORN; see these articles. The principal ecclesiastical ruins are those of the abbys of CROSSRAGUEL and KILWINNING: which also see. The most ancient families of Ayrshire are the Auchinlecks, Boswells, Boyds, Cathcarts, Crawfords, Cunninghams, Dalrymples, Dunlops, Fullartons, Kennedys, Lindsays, Montgomerys, and Wallaces. Of the titles of nobility connected with this county, the earldom of Carrick, now merged in the Crown, is the oldest. The earldom of Glencairn was created in 1488; that of Eglinton in 1503; that of Cassillis in 1509; those of Loudon and Dumfries in 1633; and that of Dundonald in 1669.

Ayrshire was inhabited in Roman times by the Damii and the Novantes. After the abdication of the Romans, this district became a part of the Cumbrian kingdom. During the Saxou heptarchy Kyle became subject to the kings of Northumbria. The Saxons maintained themselves in this district for many centuries, and have left numerous traces of their presence here. In 1221 the sheriffdom of Ayr was erected. In the wars of Wallace and Bruce, Ayrshire was the scene of numerous conflicts with the English. During the religious persecutions under the last of the Stuarts, the men of Ayrshire distinguished themselves by their struggles for the maintenance of the rights of conscience; and were punished for their contumacy by having 'the Highland host' quartered upon them in 1678. "We might from these circumstances," says Chalmers, "suppose that the people of Ayrshire would concur zealously in the Revolution of 1688. As one of the western shires, Ayrshire sent its full proportion of armed men to Edinburgh to protect the convention of Estates. On the 6th of April, 1689, the forces that had come from the western counties, having received thanks from the convention for their seasonable service, they immediately departed with their arms to their respective homes. They were offered some gratification; but they would receive none, saying that they came to save and serve their country, but not to enrich themselves at the nation's expense. It was at the same time ordered, 'that the inhabitants of the town of Ayr should be kept together till further orders.' On the 14th of May arms were ordered to be given to Lord Bargaeny, an Ayrshire baronet. On the 25th of May, in answer to a letter from the Earl of Eglinton, the convention ordered, 'that the heritors and fencible men in the shire of Ayr be instantly raised and commanded in conformity to the appointment of the Estates.' But of such proofs of the revolutionary principles of Ayrshire enough! The men of Ayr not only approved of the Revolution, but they drew their swords in support of its establishment and principles. On that memorable occasion the governors were not only changed, but new principles were adopted and better practices were introduced; and the Ayrshire people were gratified, by the abolition of episcopacy, and by the substitution of presbyterianism in its room, which brought with it its old maxims of intolerance and its invariable habit of persecution."—[Caledonia, vol. iii pp. 473,474.] The singular assertion with which this extract closes requires no refutation from us. It is but a proof of the amazing obliquity of perception with which otherwise shrewd minds are sometimes afflicted, even on points where facts as well as all history and respectable testimony are against them.

AYRSHIRE AND GALLOWAY RAILWAY. See AYRSHIRE.

AYTON, a parish, containing a village and a post-office of its own name, on the coast of Berwickshire. The name was anciently written Eytun and Eitun, and seems to have been taken from the water of Eye. The parish is bounded by Coldingham and Eyemouth parishes on the north; by the German ocean on the east; by Mordington and Foulden on the south; and by Chirnside and Coldingham on the west. It is about $4\frac{1}{2}$ miles long, measured from north-east to south-west, or from north-west to south-east; and $3\frac{1}{2}$ broad, measured from east to west. There are about $2\frac{1}{2}$ miles of sea-coast, which presents a high and rocky shore, celebrated in the annals of smuggling. The northern side of the parish has a beautifully undulated surface; and the southern side has a softly contoured range of hills, richly adorned with wood, and rising in the highest part to an altitude of about 660 feet above the level of the sea. The whole surface, excepting about 800 acres which are in plantation, is under cultivation. The water of Eye goes through a large part of the interior, along a very lovely valley, and contains good trout, but not in any quantity. The Ale traces the northern boundary to a confluence with the Eye, about $1\frac{1}{2}$ mile from the sea; and the united stream then traces the rest of the northern boundary to the shore at the town of Eyemouth. The North British railway traverses the parish in a curving route, first eastward and then southward; and commands close views of most of its interesting objects. It enters on a high embankment at Hornburn, 9 miles from Berwick; passes through a cutting, overlooked by the mansion of Prendergust; goes along another embankment, and over the road to Dunse, and close to the mansion of Peelwalls; traverses a cutting on the Peelwalls estate; has a station at Cocklaw, for Ayton and Eyemouth, and commands there a superb view of the valley of the Eye, with Ayton Law and the village and park of Ayton in the foreground; passes then through much diversity, with glimpses of Netherbyres and Linthill, and a view of Chesterbank and its lofty backgrounds; runs along an embankment amid the richly picturesque scenery of Flemington; crosses on an iron viaduct the great road from Edinburgh to London; traverses a cutting at the head of the ravine leading down to the romantic fishing-village of Burmouth, and there has a goods' station for that village and for Eyemouth; and finally takes leave of the parish at the little stream of Ross Burn. On the hills on the south side of the parish are the remains of two camps supposed to be Roman or Saxon. Urns, and broken pieces of armour, have been found here. In the low grounds towards the north-west are the vestiges of three encampments thought to have been Danish or Pictish. History mentions the castle of Ayton, founded by the Norman baron De Vesei, which was taken by the Earl of Surry in 1498; but no vestiges of it now remain. The modern house of Ayton which was built upon its site was consumed by fire in 1834; and a splendid new mansion, in the old castellated style, was built in 1851. In 1673, there appear to have been 24 heritors, including portioners and feuars, in this parish; in 1790, there were about 14. At the former period, they were more distinguished by family and rank. There were six of the name of Home, each of some distinction.—The village of Ayton stands on Eye water and on the Berwick and Edinburgh road, near the centre of the parish, and about $7\frac{1}{2}$ miles from Berwick. It is modern, regular, neat, and cleanly. It stands partly on a pleasant bank sloping to the south, has some

handsome villas in its outskirts, borrows beauty from the rich scenery around it and from the luscious pleasure-grounds of Ayton Castle, and altogether is one of the loveliest villages in Scotland. Two paper mills were erected in the vicinity about the end of last century, and are still in employment. Population of the village of Ayton in 1861, 875. The fishing village of Burnmouth is finely situated in a deep cove on the coast; and it has an excellent boat harbour, which was erected at the cost of £1,600. Cod, ling, haddocks, whittings, flounders, hollyback, turbot, mackerel, and other kinds of fish are caught on the coast in their seasons; and lobsters and crabs are plentifully obtained on the rocky shore. There are four grain mills in the parish. Population in 1831, 1,602; in 1861, 2,014. Houses, 306. Assessed property in 1860, £14,987.

This parish is in the presbytery of Chirnside, and synod of Merse and Teviotdale. It was anciently united to Coldingham; and at the Reformation it formed a parish in conjunction with Lamberton; but

in 1650, Lamberton was disjoined from it. Patron, the Crown. Average stipend of the years 1863-5, £257 6s. 8d. Glebe, of variable value; till lately, £36. Unappropriated tithes, about £330. Schoolmaster's salary, £55, with about £50 fees, government grant, and one or two other small emoluments. The old parochial church stands about a $\frac{1}{2}$ of a mile from the village, in a beautiful situation on the Eye, and comprises part of the walls of an ancient pile. A new church was erected in 1865, at a cost of between £5,000 and £6,000; is a splendid edifice, in the Gothic style, with a spire 130 feet high; and contains 750 sittings. About three-fourths of the cost were defrayed by A. M. Imies, Esq., of Ayton Castle. There are two United Presbyterian churches in the village, containing 295 and 561 sittings; and one of them is recent and neat. There are an infant school and a side school at Burnmouth, with salaries from the heritors of £30 and £25, and with government allowances. There are also two private schools and a parochial library.

B

BACKDEAN, a hamlet in the parish of Newtown, Edinburghshire.

BACKIES, a village in the parish of Golspie, Sutherlandshire. Here is the ruin of an ancient Pictish tower, which looks into a glen, and commands an extensive prospect of sea and land. Population of the village, 145.

BACKLESS, a hill in the parish of Watten, Caithness-shire, on which cattle trysts are held on the first Monday of July, August, and September.

BACKMUIR, a village in the parish of Liff and Bervic, south-west border of Forfarshire. Population, 166.

BACKMUIR OF GILSTON. See GILSTON.

BACKWATER. See LINTRATHEN and ISLA (THE).

BADANVOGIE. See APPLECROSS.

BADCALL (Loch), or **BADCAUL**, a small bay on the western coast of Sutherlandshire, in the parish of Edderachylis, between Loch Broom on the south, and Scourie bay on the north. At its mouth is an archipelago of small islands. See EDDERACHYLIS.

BADENOCH, a highland district, about 35 miles long and 28 miles broad, in the south-east of the mainland of Inverness-shire. It is bounded on the north by the Monadhleath mountains, which form the southern side of the vale of the Findhorn; on the east by the Braes of Aberuethy; on the south by Athole and Lochaber; and on the west by the Great Glen of Scotland, or rather by the Corryarick mountains which lie farther to the east. It is a wild and mountainous district, covered in many places with natural woods, and in others presenting wide stretches of bleak lonely moorland. The river Spey intersects the district, rising in Loch Spey, a small mountain tarn at the western extremity of Badenoch, at an elevation of 1,200 feet above the sea, and flowing slowly through a gradually widening valley, first eastward, and then north-east. See article SPEY. The district, when first seen from the descents of the Grampians, gives promise of a much wider

diffusion of comfort than a minute investigation realizes. The plain is extensive, and being frequently flooded in winter by the Spey, great part of it consists of meadow and rich arable land, reclaimed from the water by means of artificial embankments. The woods growing around the gentlemen's houses, and in spots where they have been planted of late years for purposes of improvement, have a warm and flourishing appearance. Most of the farm-houses are substantial stone structures; few of the black heather bothies are seen, which are the usual accompaniment of Highland misery; and the villages are modern and cleanly in their aspect. To the eye, in short, are presented all the characteristics of a thriving lowland valley. But a close inspection soon convinces the inquirer that a deep stratum of wretchedness lies under this fair exterior; and numerous families, in very poor and distressed circumstances, are found living in houses which evidently were erected when the prosperity of the district was greater, and the people in much higher spirits than they are now. A great proportion of the large farms a few years ago were occupied by gentlemen who had been connected with the army. A stranger was amazed at the majors and captains and lieutenants, with whom he found a peacable country to be planted; and as they were all Macphersons or Macintoshes, he was apt to get completely bewildered in attempting to preserve their respective identities. These gentlemen were officers who received their commissions from the Duchess of Gordon, and on returning from the wars founded upon their services in the field a claim to a comfortable agricultural settlement. This claim was allowed; but these military farmers, generally speaking, were not successful. See the articles ALVIE, KINGUSSIE, and LAGGAN.

Badenoch was in ancient times the land of the powerful family of the Cumyns or Cummins, who came from Northumberland in the reign of David I.

In 1230, Walter, second son of William Cumyn, Earl of Buchan, acquired the lordship of Badenoch, by grant of Alexander II. In 1291, John Cumyn, Lord of Badenoch, acknowledged Edward I. as superior lord of Scotland. His son, popularly called Red John Cumyn, was slain at Dumfries by the dagger of Bruce, on the 10th of February, 1306. Bruce annexed the lordship of Badenoch to the earldom of Moray; and the Clan Chattan appears from about this period to have settled in Badenoch. Robert II. granted Badenoch to his son Alexander, Earl of Buchan, "a species of Celtic Attila, whose common appellation of 'the Wolf of Badenoch' is sufficiently characteristic of the dreadful attributes which composed his character." "On some provocation given him by the Bishop of Moray," says Tytler, "this chief descended from his mountains, and, after laying waste the country, with a sacrilege which excited unwonted horror, sacked and plundered the cathedral of Elgin, carrying off its rich chalices and vestments, polluting its holy shrines with blood, and finally setting fire to the noble pile, which with the adjoining houses of the canons, and the neighbouring town, were burnt to the ground. This exploit of the father was only a signal for a more serious incursion, conducted by his natural son, Duncan Stewart, who, at the head of a wild assemblage of katherans, armed only with the sword and target, broke with irresistible fury across the range of hills which divides the county of Aberdeen and Forfar, and began to destroy the country, and murder the inhabitants, with reckless and indiscriminate cruelty. Sir Walter Ogilvy, then sheriff of Angus, along with Sir Patrick Gray, and Sir David Lindsay of Glenesk, instantly collected their power, and, although far inferior in numbers, trusting to the temper of their armour, attacked the mountaineers at Gasklune, near the Water of Ila. But they were almost instantly overwhelmed, the katherans fighting with a ferocity, and a contempt of life, which seem to have struck a panic into their steel-clad assailants. Ogilvy, with his brother, Wat of Lich-toune, Young of Ouchterlony, the Lairds of Cairncross, Forfar, and Guthrie, were slain, and sixty men-at-arms along with them; while Sir Patrick Gray and Sir David Lindsay were grievously wounded, and with difficulty carried off the field. The indomitable fierceness of the Highlanders is strikingly shown by an anecdote preserved by Winton. Lindsay had pierced one of these, a brawny and powerful man, through the body with his spear, and thus apparently pinioned him to the earth; but although mortally wounded and in the agonies of death, he writhed himself up by main strength, and with the weapon in his body, struck Lindsay a desperate blow with his sword, which cut him through the stirrup and boot into the bone, after which he instantly sunk down and expired." In 1452, the Crown bestowed Badenoch on the Earl of Huntly, who, at the head of the Clan Chattan, maintained a fierce warfare with the western clans, and his neighbours of Lochaber.

BADENYON, a small property in the parish of Glenbucket, Aberdeenshire, on which are the relics of an old house, celebrated in the Rev. John Skinner's song, 'John o' Badenyon.'

BAGGAGE KNOWE. See **KILSYTH**.

BAHYMONT. See **ANDREWS (St)**.

BAIDLAND HILL. See **DALRY, AYRESHIRE**.

BAIKIE. See **AIRLIE**.

BAILLIESTON, a village, with a post-office, in the Crosshill district of the parish of Old Monkland, Lanarkshire. It has a United Presbyterian church, an Episcopal church, and coaches five times a day to Glasgow. Population in 1861, 1,822.

BAINSFORD. See **BRAINSFORD**.

BAL-, a prefix in many topographical names of Celtic origin. It is the same as the Bally which occurs so very often in the topographical nomenclature of Ireland. It is commonly interpreted to mean 'a town;' but it originally bore that meaning only in reference to the central seat of population on a single estate,—the town or homestead of a landlord, comprising only his own residence and the residences of his domestics and immediate retainers. Some of the names compounded with it refer to the original landowners—as Balmaghie, 'the town of Macghie;' Balmacellain, 'the town of Macellain;' and others either refer to some historical incident, or are descriptive of the character or situation of the locality,—as Balfroon, 'the town of sorrow;' Balquidder, 'the town in the back country.'

BALAGEICH. See **BALLOCHGEICH**.

BALAGICH. See **EAGLESHAM**.

BALAHULISH. See **BALLACHULISH**.

BALANTRADOCH. See **TEMPLE**.

BALBARDIE, a mansion, park, and lake, in the parish of Bathgate, Linlithgowshire.

BALBEDIE-HILL. See **LOCH-LEVEN**.

BALBEGGIE, a village, with a post-office, in the parish of Kinnoul, Perthshire. It stands $4\frac{1}{2}$ miles north-east of Perth, on the road thence to Newtyle. It contains a United Presbyterian church, with about 350 sittings, and gives name to a section of the parish of Kinnoul. See **KINNOUL**. Population of the village, 222.

BALBEUCHLY, an estate ecclesiastically belonging to the parish of Capnith, Perthshire, but locally situated within the parish of Auchterhouse, Forfarshire. The Dundee and Newtyle railway has a station on it, between the stations of Baldragon and Auchterhouse.

BALBIRNIE, an estate in the parish of Markinch, Fifeshire. Some years ago the proprietor made extensive alterations on it; and, in the course of these, nearly removed the village of Balbirnie, situated near the Leven, $7\frac{1}{2}$ miles north of Kirkcaldy. Here are extensive collieries; and here also are a paper mill and a woollen factory.

BALBIRNIE, a village in the parish of Rnithven, Forfarshire.

BALBITHAN. See **KINTORE**.

BALBLAIR, an island in the parish of Fodderty, Ross-shire.

BALBLAIR, a house, on the top of a lofty terrace, about a mile west of the town of Nairn, marking the spot where the royal army lay encamped on the eve of the battle of Culloden, and overlooking the whole route by which the Highlanders had to approach in their proposed night attack. See **CULLODEN**.

BALBROGIE, a village in the Perthshire portion of the parish of Cupar-Angus. Population in 1851, 80.

BALBUNNOCH, a village in the south-east corner of the parish of Longforgan, Perthshire. It includes a range of houses erected about thirty years ago on the estate of Mylnefield, and most of its inhabitants are employed at a neighbouring bleachfield within an adjacent parish. Population 200.

BALCAIL. See **GLENLUCE**.

BALCARRES, the family-house and estate of a branch of the house of Lindsay, in the parish of Kilconquhar, Fifeshire. Balcarres was erected into a barony in 1592, in favour of John, second son of David, eighth Earl of Crawford. His son David was created first Lord Balcarres in 1633 and his grandson, Alexander, first Earl, in 1661. The pre-

sent seats of the noble family of Crawford and Balcarres are Dunecht House in Aberdeenshire and Haigh Hall in Lancashire. Lady Anne Lindsay, the eldest daughter of the fifth Earl of Balcarres, was the author of the well-known ballad of Auld Robin Gray. The present mansion of Balcarres is an old pile, recently decorated into a fair specimen of the Tudor style of architecture, situated on a southern slope, about three miles from the coast, and commanding an extensive view of the frith of Forth and the Lothians.

BALCARRY POINT, a headland at the west end of the entrance of Auchincarn bay, in the parish of Kerrick, Kirkcudbrightshire. The Ayrshire and Galloway Railway Company intended to make this the terminus of their railway, and to construct here a commodious harbour or pier and quay. See **AUCHINCAIRN**.

BALCASKIE. See **CARNBEE**.

BALCASTLE, a hamlet in the parish of Slamanuan, Stirlingshire. See also **KIRSYTH**.

BALCHRISTIE, an estate in the parish of Newburn, Fifeshire. A church of the Culdees is supposed to have stood here, on a spot about $1\frac{1}{2}$ mile south-west of Colinsburgh. David I. granted to the monks of Dunfermline, "Balchristie cum suis rectis divisis, excepta rectitudine quam Keledei habere debent." A dispute ensued between the prior and canons of St. Andrews, and the monks of Dunfermline, about their respective rights to Balchristie. King William determined that the monks should have Balchristie, subject to the rights which the Culdees had in it during the reign of David I.

BALCOMIE. See **CRAIL**.

BALCRAID. See **NEWTYLE**.

BALCRUVIE. See **LARGO**.

BALCURRIE, a village in the Milton district of the parish of Markinch, Fifeshire. Population, 186.

BALDERNOCK, a parish on the southern border of Stirlingshire. It is bounded on the south by Lanarkshire, and on other sides by the parishes of East Kilpatrick, Strathblane, and Campsie. Its post town is Glasgow, 7 or 8 miles to the south. Its greatest length is 4 miles, and its breadth is about 3 miles. Bardowie Loch, covering about 70 acres, and containing excellent pike and perch, lies on the south-west boundary. The river Kelvin traces the southern boundary, and is here a sluggish stream, subject to very high occasional freshets. Embankments were constructed nearly a century ago to prevent it from making inundations. About 700 or 800 acres of rich flat alluvial land, called the Balmore Haughs, lie alongside of it. The rest of the surface of the parish rises by gradual ascent, pleasantly diversified with round swelling knolls, and terminates in moorish ground, which has a height of upwards of 300 feet above the level of the sea, and commands an extensive and beautiful prospect. The landowners are numerous. The estimated yearly value of the raw produce in 1841 was £5,383. Assessed property in 1860, £6,500. Coal and lime have long been worked; ironstone, fire-clay, and alum ore are also valuable; and the Hurler and Campsie Alum Company have here a copperas work. In the beginning of the reign of Alexander II. the lands of Cartonbenach were conveyed to Maurice Galbraith by Malduin, Earl of Lennox. Soon after, in 1238, we find the same harony granted, under the name of Bathernock, to Arthur, son of Maurice Galbraith, with power to seize and condemn malefactors, on condition that the convicts should be hanged on the Earl's gallows. From the Galbraiths of Bathernock, chiefs of the name, descended the Galbraiths of Culcruch, Greenock, Killearn, and Balgair. In the north-west corner of

the parish, on an elevated piece of ground, stands an old ruined tower, being all that now remains of the mansion-house of the Galbraiths of Bathernock. It appears to have been a large building surrounded by a ditch. Not far from this to the eastward, are several of those large loose heaps of stones called cairns, some of them oblong, and others of a circular shape. One of the circular cairns is about 80 yards in circumference. Tradition says that in this place, called Craigmaddy moor, a battle was fought with the Danes, in which one of their princes was slain; and the farm on which these cairns are is named Blochairn, which may be a corruption of Balcairn, viz., 'the town of the cairns.' But the most curious relic of antiquity in this parish, is a structure called the Auld wife's lift, situated about a mile to the north of the church, on high ground, in a little plain of about 250 yards in diameter, which is surrounded by an ascent of a few yards in height, and in the form of an amphitheatre. It consists of three stones of a greyish grit, two of which, of a prismatic shape, are laid along close by each other upon the earth; and the third—which was once probably a regular parallelopiped, and still, notwithstanding the depredations of time, approaches that figure—is laid above the other two. The uppermost stone is 18 feet long, 11 broad, and 7 thick, placed nearly horizontally with a small dip to the north. Its two supporters are about the same size. It can hardly be matter of doubt that this is one of those rude structures erected by the Druids in their sacred groves. Its situation, in a very sequestered spot, on an eminence surrounded by a grove of oaks—the stumps of which trees were still visible in 1795—corresponds exactly with every description we have of these places of worship. The tradition is that three old women, having wagered which should carry the greatest weight, brought hither in their aprons the three stones of which the lift is constructed. Population in 1831, 805; in 1861, 718. Houses, 132.

This parish is in the presbytery of Dumharton, and synod of Glasgow and Ayr. Patron, the Crown. Stipend, £156 19s. 1d.; glebe £19. Schoolmaster's salary now is £55, with about £20 fees. The parish church was built in 1795, and contains 406 sittings. There is a Free church; attendance, 410; yearly sum raised in 1865, £134 16s. 1 $\frac{1}{2}$ d. There is easy access to the Campsie Junction railway, the Edinburgh and Glasgow railway, and the Forth and Clyde canal.

BALDOON. See **KIRKINNER**.

BALDOVAN, a village in the parish of Strathmartine, Forfarshire. Population in 1851, 44. It has a station on the Dundee and Newtyle railway, $7\frac{3}{4}$ miles north-north-west of Dundee.

BALDRAGON, a station on the Dundee and Newtyle railway, 1 mile north-north-west of Baldovan station.

BALDRIDGE. See **DUNFERMLINE**.

BALEDGARNO. See **BALLEDGARNO**.

BALERNO, a village, with a post-office, in the parish of Currie, Edinburghshire. It stands on the Water of Leith, about 6 miles south-west of Edinburgh. Here are a sandstone quarry, a paper-mill, and a United Presbyterian church,—the last built in 1829, and containing about 500 sittings. Population, 510.

BALFIELD, a hamlet in the parish of Lethnott, Forfarshire.

BALFOUR. See **KINGOLDRUM** and **MARKINCH**.

BALFOUR, a post-office station, subordinate to Kirkwall, Orkney.

BALFRISHEL, a village in the parish of Boleskine, Inverness-shire.

BALFRON, a parish, containing a post-town of its own name, in Stirlingshire. It is bounded by the parishes of Drymen, Kippen, Gargunnoch, Fintry, and Killearn. It extends nearly due west, and is about 11 miles long and 3 miles broad. The Endrick, which is here a beautiful, winding, wooded, and excellent angling stream, flows along the southern boundary. The surface of the parish rises gradually to the north. Very extensive georgical improvements were in progress in 1865; and those of one proprietor cost upwards of £40,000 in two years. The views along the valley of the Endrick, round by the Campsie and Kilpatrick hills, and away to many of the grandest peaks of the frontier Grampians, are superb. The landowners are numerous, and chiefly non-resident. The clachan or kirktown of Balfron was formerly a place of some little note, but has been shorn of its importance by its immediate neighbour the modern town of Balfron. On an old oak-tree in the middle of it, with a trunk of 14 feet in circumference, there was formerly one of those curious old implements of public punishment called a joughs. Population of the parish in 1831, 2,057; in 1861, 1,517. Houses, 193. Assessed property in 1843, £4,704.

This parish is in the presbytery of Dumbarton, and synod of Glasgow and Ayr. Patron, the Earl of Kinnoul. Stipend, £157 6s. 4d.; glebe, £25. The parish church was built in 1832, and contains 690 sittings. There is a Free church for Killearn and Balfron; and the yearly sum raised in connexion with it in 1865 was £162 4s. 7d. There are two United Presbyterian churches,—the one at Balfron, and the other at Holm of Balfron, the former containing 320 sittings, and the latter 500. There are a parochial school, with salary of £41; and an industrial female school with about 100 pupils.

The **TOWN OF BALFRON** stands on a gentle declivity, sloping to the Endrick, $1\frac{3}{4}$ mile east of Balfron station on the Forth and Clyde railway, 19 miles north-north-west of Glasgow, and about the same distance west-south-west of Stirling. It was founded in 1789 by Robert Dunmore, Esq. of Ballindalloch, who first introduced cotton-weaving into the parish. It occupies a beautiful situation, and was neatly built; and it long was prosperous and interesting; but it depended mainly on handloom-weaving, which has been displaced by machinery; and now many of its houses are dilapidated or deserted. Most of its inhabitants are shopkeepers, cotton-spinners, and handicraftsmen. The Ballindalloch cotton-mills, in its vicinity, once employed about 250 hands, but now employ only from 50 to 80. The town has a branch-office of the British Linen Company's Bank. It has also a public library. A fair is held on the third Tuesday of May, old style. Communication is maintained by coach with Milngavie, and thence by railway with Glasgow. Population of the town, in 1861, 1,179.

BALGAVIES, a lake on the mutual border of the parishes of Roscobie and Aberlemno, Forfarshire. It is an expansion of the river Lunan, adjacent to the Auldbar station of the Aberdeen railway. It was formerly dredged for marl, for the use of farmers; and it now affords to the angler a tolerable supply of perch and pike.

BALGAY. See **DUNDEE**.

BALGEDIE, a hamlet in the parish of Portmoak, Kinross-shire. It stands on the north road from Kinross to Leslie, $\frac{1}{2}$ mile north of Kinnesswood. Here is an United Presbyterian church.

BALGLASS. See **KILLEARN**.

BALGONIE, two villages,—Milton of Balgonie and Coalton of Balgonie,—in the parish of Markinch, Fifeshire. Milton of Balgonie stands on the

river Leven, 2 miles south-east of the town of Markinch. It has a post-office and a Chapel of Ease,—the latter containing 650 sittings. Population in 1861, 428. Coalton of Balgonie is in the vicinity of Milton. Population in 1861, 490. The Balgonie flax-mills form three sides of a rectangle, 160 feet by 140, and employ about 270 hands. The Balgonie bleachfield employs about 70 hands. The old heronial castle of Balgonie stands on a steep bank, overhanging the Leven. It was a seat of the Earl of Leven, who was created Baron Balgonie in 1641. The estate of Balgonie was purchased in 1823 for £104,000 by James Balfour, Esq. of Whittingham.

BALGOWNIE. See **ABERDEEN**.

BALGRAY, a hamlet in the parish of Tealing, Forfarshire.

BALGRAY, a hamlet in the parish of Govan, Lanarkshire. It stands on the banks of the Kelvin, about 3 miles north-west of Glasgow. Here is a quarry of excellent sandstone, about 600 yards from a wharf on the Forth and Clyde canal. Upwards of twenty fossil trees were discovered in this quarry about 25 years ago, standing close to one another, in their natural position, all apparently exogens. A piece of the trunk of one of them, about two feet in diameter, was taken to the Andersonian Museum in Glasgow.

BALGREGGAN. See **STONEYKIRK**.

BALHADDIE, a hamlet in the Ardoch district of the parish of Dunblane, Perthshire. Population 33.

BALINTOKE, a fishing-village in the parish of Fearn, Ross-shire. It stands on a piece of flat coast of the Moray frith, about 6 miles north-north-east of the Souters of Cromarty, and about 7 south-east of Tain. Population, 306.

BALINTRAIT, a harbour in the parish of Kilmuir-Easter, Ross-shire. It has a pier, and accommodates vessels from Leith, Aberdeen, and other ports for bringing coals and general merchandise, and taking away grain and timber. See **KILMUIR-EASTER**.

BALISHEAR, an island, about $3\frac{1}{2}$ miles long, near the south-west coast of North Uist, in the Outer Hebrides. Population in 1841, 157; in 1861, 199. Houses, 35.

BALKEELO, a hamlet in the parish of Tealing, Forfarshire.

BALLACHRAY. See **BALLOCHROY**.

BALLACHULISH, a district containing several notable objects of its own name on the mutual border of Argyleshire and Inverness-shire, around Loch Leven. The ferry of Ballachulish is situated near the mouth of that loch, and connects the roads from Appin and Tyndrum with the road to Fort William. It is distant 5 miles from Corran ferry, 16 miles from King's House, 14 from Fort William, 31 from Tyndrum by the Glencoe road, 45 from Fort Augustus, and 61 from Inverary by the military road. The Glasgow and Inverness steamers frequently call here. Each side has an inn; and the view from that on the north side is singularly grand. "Beyond the ferry, the hills, covered with woods and pastures, rise gradually to a considerable height, and decline to the south-west, where the lochs of Leven and Linnhe unite. In that direction, the eye, gliding over a vast expanse of water, is arrested by immense groups of mountains of different forms and heights in Morven, which compose an admirable landscape. About 4 miles eastward are the stupendous mountains of Glencoe. Such variety of grand and interesting scenery is not perhaps to be found in any other part of Scotland." The village of Ballachulish stands on the north, or Inverness-shire, side of the ferry, and has a post-office. Population

in 1841, 279. The slate quarry of Ballachulish is situated about 2 miles east of the south side of the ferry, at the mouth of Glencoe. It employs about 300 persons, and yields annually from five to seven millions of roofing-slates. A village called Portnacroish or Laroeh adjoins the quarry, contains good stone houses for the workmen, and has a population of about 500. A neat Episcopalian chapel stands near the quarry, and about half-a-mile from "the sounding Cona;" and has at times been attended by so many as 300 communicants. There is a Free church for Ballachulish and Glencoe, the yearly sum raised in connexion with which in 1865 was £87 14s. 10d. A large tract of country, under the name of Ballachulish, and belonging to the parish of Kilmalie, was erected into a quoad sacra parish by authority of the General Assembly in May, 1833; and again by authority of the Court of Teinds in December, 1845. It consists of two distinct districts, separated from each other by the Linnhe loch, with a church in each district, in which worship is performed alternately once a fortnight. The district connected with the church at North Ballachulish, which lies in Inverness-shire, is 17 miles in length by 7 in breadth; that connected with the church at Ard-gour in Argyleshire, is 14 miles by 6. The two churches are about 4 miles apart, and were built in 1829, at an expense of £1,470 each, under the provisions of the act 5th George IV. c. 90. The church at Ballachulish has 300 sittings; that of Ard-gour, 210. Stipend £120, with a manse and glebe. This parish is in the presbytery of Abertariff, and synod of Glenelg. Patron, the Crown. Population in 1851, 1,235.

BALLAGAN. See STRATHBLANE and BLANE.

BALLANBREICH. See FLISK.

BALLANGEICH. See STIRLING.

BALLANTRAE, a parish, containing a village of its own name with a post-office, in the south-western corner of Ayrshire. It is bounded by the Irish sea, Loch Ryan, Wigtonshire, and the parish of Colmonell. Its length, from north to south, is about 10 miles; and its breadth is nearly as great. The coast is beaten by a tremendous surf in westerly and north-westerly winds; and, except for about two miles adjacent to the village, is in general high and rocky. The land rises with a gradual slope from the shore to the tops of the mountains forming part of that extensive range of hills which stretches across the south of Scotland, almost from the Irish sea to the eastern extremity of the Lammermoors. The highest hill is Benerad, about 6 miles south-east of Ballantrae, which has an elevation of 1,430 feet. The surface of the parish is much diversified with heights and hollows, intersected by little streams of water descending from the hills. All beyond the mountains towards the east is soft mossy ground covered with heath and ling. The principal river is the STINCHAR: see that article. Another stream called the App, flows in a south-west direction through Glenapp into Loch Ryan. Many parts of the parish command magnificent views of the frith of Clyde and the Irish sea; and the summit of Benerad looks also to the Solway frith, the Isle of Man, and the mountains of Cumberland and Westmoreland. About 7,000 acres are arable, with chiefly a light, dry, gravelly soil. There are thirteen landowners. The real rental was about £2,000 in 1790, and nearly £7,500 in 1838. The principal antiquity is the old castle of ARBSTINCHAR: which see. The road from Ayr to Portpatrick passes down the valley of the Stinchar and the lower part of Glenapp. Population of the parish in 1831, 1,506; in 1861, 1,483. Houses, 265. Assessed property in 1843, £7,265 2s. 9d; in 1860, £9,627.

This parish is in the presbytery of Stranraer and synod of Galloway. Patron, the Duchess de Coigny. Stipend, £258 1s. 3d.; glebe, £15 10s. Schoolmaster's salary is £50, with £16 fees, and £16 other emoluments. The parish church was built in 1819, and contains 600 sittings. There is a Free church; attendance, 230; yearly sum raised in 1865, £122 8s. 6d. There are four private schools.

The village of BALLANTRAE stands on the north bank of the Stinehar, about $\frac{1}{2}$ a mile from its mouth, and on the road from Ayr to Portpatrick, 12 $\frac{1}{2}$ miles south-south-west of Girvan and 17 north of Stranraer. A tidal harbour was recently constructed here at the cost of about £6,000, contributed by the neighbouring proprietors and by the Board of Fisheries. It comprises a basin of considerable size, excavated out of solid rock, and a strong pier, built on a rocky ledge. Sloops lie here to unload lime and coal, and to take in agricultural produce. The Glasgow and Stranraer steamers also call at the mouth of the river. The village has a good inn and a subscription library, and is the seat of a Farmer's Society. Population, 557.

BALLAT, a bog in the parish of Drymen, Stirlingshire. It lies at the watershed between the river-systems of the Forth and the Clyde, or on the summit-line between the east and the west coasts of Scotland, yet has an elevation of only 222 feet above the level of the sea.

BALLATER, a village with a post-office, in the parish of Glenmuick, Aberdeenshire. It stands on the left bank of the Dee, and on the road from Castletown to Aberdeen, 18 miles east by north of Castletown, and 42 miles west by south of Aberdeen. It is a modern place, singularly neat and clean, and looking like the skeleton or miniature of a beautiful great town. Its houses are stone-built, slated, and mostly whitewashed. Its subordinate streets cross the main street at right angles. The parish church stands in the middle of a large airy square, and has a handsome, conspicuous steeple. The number of sittings in this church is about 800. There is also a Free church, whose total yearly revenue in 1865 was £202 4s. 3 $\frac{1}{2}$ d. A bridge was built across the Dee at Ballater in 1783, but was destroyed by a river-flood in 1799. A new bridge was finished at the end of the year 1811, with a water-way of 238 feet, at an expense of £4,224. It consisted of five arches, the middle arch having a span of 60 feet, the extreme arches of 34, and the intervening arches of 55 feet. This bridge also was swept away by the great flood in August 1829. The present bridge is a handsome wooden structure on stone piers. "The view of Ballater from the lower extremity of the plain," says Sir T. D. Lauder, "is something quite exquisite. I do not speak of the village itself, which, at that distance, presents little more than the indication of a town, with a steeple rising from it; but I allude to the grand features of nature by which it is surrounded. The very smallness of the town adds to the altitude of the mountains; for, when seen from the point I mean, it might be a city for aught the traveller knows to the contrary. It stands, half-hidden among trees, in the rich and diversified vale. On the north rises the mountainous rock of Craigdarroch, luxuriantly wooded with birch, and divided off from the bounding mountains of that side of the valley by the wild and anciently impregnable Pass of Ballater. Beyond the river, amidst an infinite variety of slopes and wood, is seen the tall old hunting-tower of Knock; and, behind it, distance rises over distance, till the prospect is terminated by the long and shivered front of Loch-na-gar." Ballater is crowded during summer by lodgers and visitors in attendance on the neigh-

houring mineral wells of Pannanich. See the article **PANNANICH**. Fairs are held here on the first Tuesday of May, old style, on the second Monday and Tuesday of September, old style, and on the Saturday before the 22d of November. An extension of the Deeside railway hither was expected to be open about August, 1866. Population in 1861, 362.

BALLEDGARNO, or **BALLERNO**, a village in the parish of Inchture, Perthshire. It stands about 8½ miles west of Dundee, and 14 east-north-east of Perth. It is supposed to have taken its name from an extinct castle, built in the olden times, by a royal Prince Edgar. Adjacent to it on the south-east is the fine mansion of Balledgaruo, surrounded by plantation.

BALLEMENOCH. See **CARDROSS**.

BALLENCRIEF. See **ABERLADY**.

BALLENCRIEF WATER. See **TORPHICHEN**.

BALLERNO. See **BALLEDGARNO**.

BALLINDALLOCH. See **INVERAVEN** and **BALFRON**.

BALLINDEAN, a bamlet in the parish of Inchture, 1½ mile north-west of the village of Inchture, Perthshire.

BALLINGRAY.—popularly **BINGRY**, a parish in the south-west of Fifeshire. It is bounded by Portmoak, Kinglassie, Auchterderran, Beath, and Cleish. Its post-town is Blairadam. It is about 3½ miles in length, by 1½ in breadth. About one-third is under tillage. Coal is extensively wrought. There was until recently a considerable loch called Loch Orr, from which the small stream Orr issues; but it has been in great part drained. Towards the eastern extremity of this loch was a small island, upon which stood the remains of an ancient castle, supposed to have been founded in the reign of Malcolm III. The family of Loch Orr was of considerable importance in early times. In the reign of Alexander II., Adam De Loch Orr was sheriff of Perth; and the name of Thomas De Loch Orr occurs in the roll of the parliament held at Ayr. The domain of Loch Orr afterwards passed into the hands of the Wardlaws of Torry. A little to the westward of Loch Orr house were the vestiges of a Roman camp, now levelled and effaced. Some have conjectured that this was the spot where the Ninth legion was attacked and nearly cut off by the Caledonians. The only hill in the parish is Binarty, on the north border, and richly adorned with plantation. The real rental in 1837, was £4,160. Assessed property in 1865, £5,942 5s. Population in 1831, 392; in 1861, 736. Houses, 141.

This parish is in the presbytery of Kinross, and synod of Fife. Patron, Lady Scott of Abbotsford. Stipend, £172 8s. 3d.; glebe, £18. Schoolmaster's salary, £45. The church was built in 1831.

BALLINLUIG, a village in the parish of Logierait, Perthshire. It has a station on the Highland railway, at the junction of the branch to Aberfeldy, 8½ miles north-north-west of Dunkeld.

BALLINTORE. See **BALINTORE**.

BALLINTUMB, a post-office station, subordinate to Blairgowrie.

BALLO, one of the Sidlaw range of hills, in the parish of Longforan, Perthshire. It attains an altitude of 992 feet above sea-level.

BALLOCH, a place of thoroughfare in the parish of Bonhill, Dumbartonshire, a little below the efflux of the Leven from Loch Lomond. It formerly was a ferry connecting the countries on the two sides of the lake and the river; but now it has a neat suspension-bridge, erected in 1842 by Sir James Colquhoun of Luss; and is the meeting-point of the Dumbarton and the Forth and Clyde railways, and the starting place of the Loch Lomond steamers.

Several trains arrive and depart daily; and an omnibus plies to Drymen. Here is a large and excellent inn. A great cattle tryst is held in the vicinity on the 15th of September. The castle of Balloch was the early seat of the Lennox family; but no remains of the building now exist.

BALLOCH, a small sheet of water, about half-a-mile in circumference, at the foot of Torlum, in the parish of Muthil in Perthshire. It discharges itself into the Earn by a small stream.

BALLOCH, a village in the parish of Inverness. Population, 104.

BALLOCH CASTLE. See **TAYMOUTH CASTLE**.

BALLOCHMYLE, an estate in the parish of Mauchline, Ayrshire. It comprises about two-fifths of the parish. Burns has made it famous by his song of 'The Bonny Lass o' Ballochmyle.' 'The braes o' Ballochmyle' are on the northern bank of the Ayr, between Catrine and Howford bridge, and about 2 miles from Mossiel. "Bending in a concave form," says Chambers in his 'Illustrations of the Land of Burns,' "a mixture of steep bank and precipice, clothed with the most luxuriant natural wood, while a fine river sweeps round beneath them, they form a scene of bewildering beauty, exactly such as a poet would love to dream in during a July eve."

BALLOCHNEY, a village in the Clarkston district of the parish of New Monkland, and within the municipal boundaries of the burgh of Airdrie, Lanarkshire. Population in 1851, 559. See next article.

BALLOCHNEY RAILWAY. This is an extension of one of the branches of the Monkland and Kirkintilloch railway, or rather a prolongation of that railway, by two arms which run into the interior of New Monkland parish, so as to embrace the coal and iron-stone works in the rich mining districts on both sides of Airdrie. The company of proprietors was incorporated in 1826 by 7° Geo. IV. c. 48. The original capital was £18,000, which was increased, in 1835, to £28,000; and by an act passed in July 1839, to £70,000. It commences at Kipps colliery, about 2 miles west of Airdrie, runs thence in an easterly direction, and passing Airdrie about a quarter of a mile to the north, terminates at Ballochney colliery, about 3 miles to the north-east, sending out in its course several branches to the town and to the different collieries. This is but a short railway, not exceeding 3 miles of length in the main line, and about as much in the branches; but it is remarkable for two beautiful self-acting inclined planes, which form part of the line, and are the first of the kind that were constructed in Scotland on any great scale. The gravity of the ascending and descending trains of waggons, are nicely balanced against each other, and their velocities regulated throughout the different parts of the line by varying slightly the inclination of the plane from top to bottom, by which means undue acceleration is prevented. The Ballochney lower inclined plane is 1,100 yards in length, and rises 118 feet perpendicular; the inclination varies from 1 in 22 at the top to 1 in 32 at the bottom. The upper inclined plane is also 1,100 yards in length, and rises 94 feet perpendicular, varying in inclination from 1 in 25 at the top to 1 in 36 at the bottom.

BALLOCHVOY, a village, with a post-office, in the north of the island of Mull, about 4 miles west-south-west of Tobermory. It consists of a single street, of small neat houses.

BALLOGIE, an estate in the parish of Birse, on the southern border of Aberdeenshire. Here is a Roman Catholic chapel. See **BIRSE**.

BALLUMBIE. See **MURROES**.

BALLYCHELISH. See BALLACHULISH.

BALM-WELL. See LIBERTON.

BALMACLELLAN, a parish on the north side of Kirkcubrightshire, bounded by Dumfries-shire and by the parishes of Kirkpatrick-Durham, Partoun, Kells, and Dalry. Its post-town is New Galloway. Its greatest length is about 14 miles; and its greatest breadth about 10. Urr water, flowing from Loch Urr, forms its eastern boundary; the Ken and Loch Ken skirt it on the south-west; while the Grapel, flowing south-west into the Ken, and the head-streams of the Cairn flowing north-east, separate it from Dalry. The road from Dumfries to Newton-Stewart, by New Galloway, intersects the lower or southern half from east to west. The surface is in general level, except towards the north-north-east, where there is a considerable range of hills running north-east and south-west. Along the banks of the Ken, the soil is chiefly dry, light, and gravelly; the remainder is also of a light nature, but sometimes of a deep moss, and covered with heath. Only about 4,000 acres are arable. There are five small lakes, which are plentifully stocked with fish, especially Loch Brack, which is remarkable for excellent trout of a large size. There are two slate quarries. The principal landowners are Viscount Kenmure and Spalding of Holm; but there are twelve others. The real rental was £1,900 in 1792, and £5,000 in 1840. Assessed property in 1860, £6,582. A branch of the family of Maclellan possessed lands contiguous to the church and village for several centuries, and are supposed to have transferred their name to the property. This family was in great authority so early as the reign of Alexander II. In 1217, David Maclellan is mentioned in a charter of that king. They were also heritable sheriffs of Galloway till the time of James II. Its branches were so numerous and respectable that there were then in Galloway twelve knights of the name of Maclellan, of whom Sir Patrick Maclellan, tutor of Bonnie, was the chief. He was the eldest son of Sir Patrick, who lived about the year 1410, and of a daughter of Sir Andrew Gray, of Broxmouth and Foulis. But, in 1452, having taken part with Herries of Terreagles, against William, Earl Douglas, he was besieged in his own castle of Raeberry, and after being cast into close prison in the Earl's castle of Thrieve, was put to death, and interred in the abbey of Dundrennan. His relations then made great depredations on Douglas's lands in Galloway, and his office of sheriff was forfeited to the Crown. Sir Robert Maclellan was made a gentleman of the bed-chamber by Charles I.; and afterwards, in 1633, created Baron Kirkcubright, with limitation to heirs male. The family-possessions at Kirkcubright have long since been alienated; and the title has been dormant since the death of the 9th Lord in 1832. The village or kirktown of Balmaclellan is situated $1\frac{1}{2}$ mile north-east of New Galloway. Population in 1851, 113. There is also a hamlet called Crogo, which in 1840 had a population of 60. Population of the parish in 1831, 1,013; in 1861, 1,086. Houses, 204.

This parish, formerly a rectory, is in the presbytery of Kirkcubright, and synod of Galloway. Patron, the Crown. Stipend £226 19s. 8d.; glebe, 235. Church built in 1722; enlarged in 1833; sittings 366. There are three parochial schools. The salary of each of the masters is £26 13s. 4d.; and the school-fees of two of them amount to about £30. There is also a private school.

BALMAGHIE, a parish, containing the villages of Laurieston and Bridge of Dee, in the centre of Kirkcubrightshire. It is bounded by the parishes of Kelton, Crossmichael, Partoun, Kells, Girthon,

Twynholm, and Tongland. Its post-town is Castle-Douglas. Its greatest length is about 9 miles; and its greatest breadth about 7. The river Dee runs along the eastern boundary, and the Black Water of Dee along the northern. The general appearance of the surface is far from pleasing to the eye. A great part of it is covered with heath, rocks, and morasses. There are a few bleak rugged hills, which rise to a considerable height, and are incapable of improvement; but the parish in general cannot be said to be mountainous. The best cultivated tracts lie along the eastern and southern skirts. There are five small lakes in the parish, in which anglers find abundance of pike, perch, and trout. Of these, Grannocb, or Woodhall loch, is the largest; it is about a quarter of a mile broad, and $2\frac{1}{2}$ miles in length. At Lochenheck, on the estate of Woodhall, is a strong mineral spring, "that for time immemorial," says a writer quoted in the Old Statistical account, "has been frequented by numbers every spring and summer-season, for behoof of their health; and its good effects have been sanctioned by every one of the faculty that knows its virtues. It is a chalybeate water, and perhaps one of the strongest of the kind in North Britain." This well still retains its celebrity; and an inn stands in the vicinity for the accommodation of visitors. There are sixteen landowners. The principal mansions are Balmaghie House and Duchrac House. The real rental was £2,640 toward the end of last century, and £6,200 in 1844. Assessed property in 1860, £7,648. The chief antiquity is Thrieve Castle. See the article THRIEVE. The Rev. John Macmillan, the founder of the Reformed Presbytery, from whom the adherents of that body sometimes took popularly the name of Macmillanites, was minister of Balmaghie, and suffered deposition here on account of his peculiar tenets. Several of the parishioners of Balmaghie fell martyrs during the persecution; and in the churchyard are gravestones over three of them. Population in 1831, 1,416; in 1861, 1,225. Houses, 216.

This parish is in the presbytery of Kirkcubright, and synod of Galloway. Patron, Gordon of Balmaghie. Stipend, £203 8s. 8d.; glebe, £17 10s. Unappropriated tithes, £146 0s. 1d. There are two parish schools. Salary of the one schoolmaster, £43, with about £30 fees; that of the other, £37, with £18 fees. The parish church was built in 1794, and has 360 sittings. There is a Free church preaching station; and the yearly sum raised in connexion with it in 1865 was £56 1s. 8d. There are two private schools.

BALMAHA, a small seat of manufacture, in the parish of Buchanan, Stirlingshire. It is situated on the banks of Loch Lomond, about $\frac{1}{2}$ miles west-north-west of Drymen. About 700 tons of small wood are annually consumed here in the making of pyroignous acid and dye-stuffs.

BALMALCOLM, a village in the parish of Kettle, Fifeshire. It stands about $\frac{1}{2}$ a mile south-east of the village of Kettle.

BALMANGAN BAY, a small harbour in the parish of Borgue, near the mouth of the estuary of the Dee, Kirkcubrightshire. It has 12 or 15 feet of water at four hours' flood in all tides. Adjacent to it is a picturesque ruin of a tower, built in the 15th or 16th century.

BALMBRAE, a village in the parish of Falkland, Fifeshire.

BALMERINO,—popularly *Bamirnie*,—a parish in Fifeshire; bounded on the north by the frith of Tay; on the east by the parish of Forgan; on the south by Kilmany; and on the west by Creigh and

Flisk. Its post-town is Newport. Its medium length from east to west is about $3\frac{1}{2}$ miles; and its greatest breadth $2\frac{1}{2}$ miles. Two hilly ridges, spurs of the Ochils, traverse it from east to west, leaving between them a fertile valley inclining towards the east. The highest point of the southern ridge is Coultrey hill, which exceeds 500 feet, and is wooded to the top. The whole shore is bold and rocky. Mr. Leighton states the area of the parish at 3,346 acres, of which 2,700 are in cultivation, and about 500 under wood. The area, according to the Ordnance survey, is $4,131\frac{1}{2}$ acres. There are four villages: namely, Galdry near the northern boundary; Balmerino on the coast; Coultrey towards the west; and Kirkton. Balmerino is a nice little fishing village, and a creek of the port of Dundee, with which it communicates by a weekly packet. But in 1841 its population was only 62. When the first Statistical report was written, above 7,000 bolls of grain were yearly shipped at this port for Dundee and other markets. But this trade no longer exists: the farmers find it more convenient to send their grain to Cupar, and other neighbouring towns. Salmon are caught on the coast by means of the toot net, but no longer in such numbers as formerly; and that delicate little fish, the spirling, once caught here in immense quantities, seems to have betaken itself to other haunts. A considerable number of the parishioners are employed in weaving for the Dundee manufacturers. The principal land-owners are Stuart of Balmerino, Morison of Naughton, and Wedderburn of Birkhill. The lands of Balmerino, at the beginning of the 13th century, were in the possession of Henry de Ruel or Rewel, whose nephew and heir, Richard, sold them, in 1225, to Queen Emergarde, the mother of Alexander II., for 1,000 merks. Emergarde founded an abbey upon her newly-acquired possession, which she dedicated to the Virgin Mary, and to St. Edward the Confessor; and, dying in 1233, was buried before the high altar. The last abbot of this well-endowed house was Sir John Hay. After the Reformation, the lands belonging to it were erected into a temporal lordship in favour of Sir James Elphinston, in whose family they continued till the forfeiture of John, 6th Lord Balmerino, in 1746. They were then purchased from the Crown by the York Buildings company, who resold them to the Earl of Moray. The remains of the abbey are now of trifling extent. An arcade of pointed arches supported on short thick pillars, and two vaulted apartments still remain; but the chapel has entirely disappeared. There are still some remains of the orchard, and one or two venerable chestnut trees in the surrounding grounds.—A little to the east of the abbey are the ruins of the ancient castle of Naughton, surmounting an isolated mass of rock. Sir William Hay of Naughton is noticed by Winton as

"Ane honest knycht, and of gud fame,
A travaill knycht lang before than."

And Gawain Douglas places him among the heroes of romance in his 'Palace of Honour':

"Then saw I Maitland upon auld beir'd grey,
Robin Hude, and Gilbert with the quibite hand,
How Hay of Naughton flew in Madin land."

Mr Leighton conjectures that Naughton was the site of the battle of Dunnechtan, fought in 685, wherein the Pictish King, Bredei, defeated and slew the Saxon King, Egfrid of Northumbria. But Chalmers supposes this engagement to have taken place at Dunnichen in Angus. There is a field in the neighbourhood of Naughton, called Battle-law, where

the Danes, in their flight from the battle of Luncarty, made a vigorous stand against the Scots and Picts under Kenneth III., but were again put to flight with severe loss, and compelled to take refuge in their ships in the mouth of the Tay.—Population of the parish in 1831, 1,055; in 1861, 815. Houses, 203. Assessed property in 1865, £9,996.

This parish, formerly a vicarage, is in the presbytery of Cupar, and synod of Fife. Patron, the Crown. Stipend, £239 9s.; glebe, £18. Unappropriated tithes, £95 4s. 4d. The abbey-church was used for service till the year 1595, when a new church was erected near the foot of the Scurr hill, where the burial-ground still remains, although the church now in use, which was built in 1811, is farther east, or more toward the centre of the parish. The parish-school is at Galdry. Schoolmaster's salary now is £50, with from £25 to £28 of fees. There is a female school.

BALMORAL, a royal residence in the parish of Crathie, Aberdeenshire. It is situated on the south bank of the Dee, 7 miles west-south-west of Ballater, and 11 east-north-east of Castletown of Braemar. It was originally a shooting lodge of the Earl of Fife; but was rented on a lease of 38 years, and very greatly enlarged, by the late Sir Robert Gordon, brother of the Earl of Aberdeen; and in 1848, when 27 years of the lease had yet to run, the reversion of it was purchased by the Queen. The original building was a long, steep-roofed, high-gabled, small-windowed house; and Sir Robert Gordon's additions were so numerous and various, in the form of turrets, central tower, and many-shaped erections, as to convert it into a very extensive and very irregular edifice. It belonged to no recognised order of architecture,—displayed no unity of design,—produced no harmony of effect; yet, when seen at a sufficient distance to be seen as a whole, might be called picturesquely grand. Other additions were made to it, after it came into the Queen's possession; but these did not alter its character. The furniture as well as the house was included in the purchase; and the royal family took possession of both with very little change. "The drawing-room," says a description, written at the time, "has much comfort, but no splendour; the walls are covered with light-coloured chintz, with furniture and hangings to match; a grand piano forms one appendage, and a bagatelle board another; the chief beauty of all is the view from the windows and balcony, whence the well-known hill of Craig Gowan, waving fragrance with every breeze, fills the eye. Attached to the centre there are two wings of equal size, but somewhat differently constructed from each other. The front of the wing on the left is partially covered with a green-house, containing the usual exotics; but that wing is not intended to contain royalty. All the apartments that can be spared are devoted to bed-rooms; dressing-rooms are so employed for example; and the only public rooms are the dining and drawing rooms, and the library and billiard-room. The latter is on the ground floor or the right wing; nothing is at present in it but empty shelves; and in the centre stands a billiard-table. The entrance hall is at the corner next the library, occupying the remainder of the ground plan of this wing; over the interior door is a shallow peculiar front; in Dutch tile-work is the word *salvee*. The entrance-hall has a Dutch-tile pavement, bearing a dog chained, and the Roman words *cave canem*; the fire-place is constructed of iron bars crossed on the very hearth, for wood; and the mantel-piece has figures of warriors projecting from the wood. Above these, and overhanging the breadth of both the library and the entrance-hall, is the Queen's bed-

room. The house, be it remembered,—runs parallel with the river—that is, from east to west; so that all these rooms look to Craig Gowan and the South.

A new edifice, worthier of being a royal residence, was erected in 1853; and the old one was removed. The new castle stands nearer the river than the old did; was built after designs by William Smith of Aberdeen, at a cost of about £100,000; is in the old Scottish baronial style, with some modifications of feature; consists of two blocks of buildings, connecting wings, and projecting tower,—the last 35 feet square, 80 feet high, surmounted by a circular turret; and is all furnished in a manner much more substantial and chaste than elegant or showy. A handsome suspension bridge also was constructed across the Dee, at a cost of £5,000; and forms a communication with the north side of the river at the church of Crathie. The estate of Balmoral, comprising about 11,000 acres, was purchased in 1852, by the Prince Consort; it extends from the Dee to the summit of Lochnagar, and joins the estates of Abergeldie and Birkhall, which also became royal property; and the three estates constitute one demesne, contain upwards of 35,000 acres, and extend 11 miles along the Dee, and southward thence to the watershed of the Dee's basin.

The scenery is everywhere superb. "The vale or dell in which Balmoral castle stands, is formed by a circumvallation of 'the everlasting hills,' being really

'With rock-wall encircled, with precipice crown'd.'

To use an apposite Shakesperian word, it is almost completely 'circumwalled' with majestic mountains, by which it is bisected or severed into two several straths. The southern section, more spacious than the other, is, in superficial shape, a wooded haugh, a natural platform, sloping gently from under the shade of Craig-an-Gowan's shaggy side down to the margin of the meandering and sparkling Dee, along which it forms a pleasant, park-like meadow. The other, or opposite section, is a bosky bank, rising abruptly from the rushing tide of the river in the depth of the dell, and anon blending with the steep northern battlement of hills. From the castle, whithersoever the eye is directed, it catches glimpses of the most enchanting scenery, in which the beautiful blends with the sublime, and the picturesque rises to the romantic. Eastward, the view is bounded by Craig-an-Darrach (the rock of oaks), and by the precipitous chasm called the Pass of Ballater; westward, beyond the military road from Braemar to Fort George, which winds by the hoary Cairn-na-Cuimhne, may be got some glorious glimpses of the pine-clad haughs of Invercauld; southward, the wearied eye reposes on the soft and fragrant foliage of the birks of Craig-an-Gowan; and, northward,

'Dee's silver stream rolls his swift waters near,
Gilt with the golden sunbeams here and there,'

with a hundred heathery hill-tops—a 'dark ocean of mountains behind.' The prospect all around, instead of being merely beautiful, becomes truly sublime, when we look from the shore of the river up to the distant hills; and the eye is relieved by beholding the immediate and intervening objects, namely, the natural woods on the skirts of the mountains, up to the point where terminates the woody region—a point which, in this latitude, is elevated about 2,000 feet above sea-level. Such, then, is this wild sequestered glen of Balmoral—such is the site of its castle—such are the picturesque beauties of its vicinity. In all our romantic land there is, probably, no region in which the 'sublime and

beautiful' are more harmoniously and happily blended, than in the environs of the secluded haugh which Her Majesty has selected as the site of her Highland Home." [Black's Picturesque Tourist. Eighth Edition, 1850.]

BALMORE, a village in the parish of Baldernock, Stirlingshire. Population in 1851, 158. Some rich adjacent alluvial lands bear the name of Balmore Haughs. See **BALDERNOCK**.

BALMUIR. See **MAINS**.

BALMULLO, a village in the parish of Leuchars, Fifeshire. It stands on the road from St. Andrews to Dundee, and is straggling, airy, and well-watered. Here is an Original Seceder Meeting-house. Population, 274.

BALNABRUACH, a small fishing village in the west end of the parish of Nigg, Ross-shire. Population in 1851, 167. See **BALNAPALING**.

BALNACROSS. See **TONGLAND**.

BALNAGARD, a village in the parish of Little Dunkeld, Perthshire.

BALNAGOWN. See **KILMUIR EASTER**.

BALNAHUAIGH, an islet of about one mile in circuit, lying midway between Lunga and Eisdale. It is included in the parish of Jura, and, in 1800, had a population of 150, who were supported by quarrying slate, the whole rock being one slate quarry.

BALNAMOON'S MIRES, a morass formerly of great extent, but now drained and cultivated, about 5 miles north of Arbroath. The small stream Keiler takes its rise here.

BALNAPALING, a small fishing village at the west end of the parish of Nigg, Ross-shire. All the inhabitants of this village and of Balnabruach bear the surname of either Ross, Skinner, or McLeod.

BALNASUIN, a hamlet in the parish of Weem, Perthshire.

BALQUHAIN. See **CHAPEL OF GARIOCH**.

BALQUIDDER, a highland parish, containing the post-office village of Lochearnhead, and also the village of Strathyre, in the south-west of Perthshire. It is bounded by the parishes of Killin, Comrie, and Callander. Its length from west to east is about 18 miles, and its breadth is between 6 and 7 miles. It has a somewhat angular outline, with an acute angle pointing to the west. Ranges of lofty mountains occupy almost all its borders, so as nearly to enclose its principal strath. Numerous torrents descend to Lochs Doine and Voel, which lie along the centre of that strath, and to the river Balvaig, which flows smoothly and curvingly to the head of Loch Lubnaig within the south-east border of this parish. After heavy rains the low grounds around these lochs are widely inundated—as might be expected from the form of the country. According to tradition all the lower grounds, and the foot of the mountains, were formerly covered with wood; and large trunks of oak and birch trees are still found occasionally in the mosses. There is still a considerable quantity of coppice. There are also several plantations. The writer of the first Statistical account claims the south part of Benmore as in this parish, and estimates its height at 2,903 feet above sea-level; also the western side of Ben Voirlich, to which he assigns an altitude of 3,300 feet. A little to the south of Benmore is Binean, or 'the Mountain of Birds,' which has a nearly equal elevation. To the south-west of Binean is Benchroan; and to the south-east of Benchroan are Stobdune and Benchoan. All these are very lofty mountains; but we have not admeasurements of their respective heights. The principal roads are that from Callander, by Loch Lubnaig to Lochearnhead, and through Glen Ogle to Tyndrum; and that from Lochearnhead to Balquidder. Glen Ogle is a

narrow pass hemmed in for several miles on both sides by very lofty and precipitous rocks. Glen Ample is a narrow deep ravine on the eastern skirts of the parish, intersected by a rapid mountain-torrent called the Ample, which flows north into Loch Earn. The vale of Balquhider, with its two fine lochs, presents some very beautiful scenery, and is rife with traditions of Rob Roy, many of whose exploits were performed here, and whose ashes rest in the little churchyard of Balquhider. To the west of the kirktown are 'The Braes of Balquhider,' celebrated in Scottish song. There are three mansions,—Stronvar House, Edinehip, and Edinample Castle; and seven considerable landowners,—the chief of whom are the Earl of Breadalbane, the Earl of Moray, Sir Mal. Maegregor, Bart., and Mrs. Carnegie of Stronvar. The kirktown of Balquhider stands on the Balvaig, a little below the foot of Loeh Voel, 12 miles north-north-west of Callander. Population of the parish in 1831, 1,049; in 1861, 746. Houses, 142. Assessed property in 1864, £7,772.

This parish is in the presbytery of Dunblane, and synod of Perth and Stirling. Patron, Sir Mal. Maegregor, Bart. Stipend, £275 15s. 11d.; glebe, £20. Schoolmaster's salary, £50, with £6 fees. The parish church was built in 1855, is a handsome Gothic structure, and contains 460 sittings. There is a Free church; attendance, 140; yearly sum raised in 1865, £102 13s. 0½d. There are two non-parochial schools.

BALTA, an islet lying to the east of the isle of Unst, in the Shetland group, in N. lat. 60° 41'. Balta sound, between Balta and Unst, is a bay 2 miles in length, and about half-a-mile broad, so completely shut in by the island of Balta that, seen from a distance, it resembles a lake. Both sides of this bay are in a state of high cultivation.

BALTEBUN. See SADEL.

BALTHAYOCK. See KINNOUL.

BALVAIG (THE), a stream which rises in the western corner of Balquhider parish in Perthshire, flows east-north-east into Loeh Doine, through which it flows into Loeh Voel, and thence emerging, flows first east, and then south, to Loeh Lubnaig, from the lower or southern extremity of which it re-issues, and then flows south-east into the Teitb, coming from Loch Venachoir, which it joins at Bochastle, about half-a-mile above Callander bridge.

BALVAIRD. See ABERNETHY.

BALVENY CASTLE. See MORTLACH.

BALVICAR, a village in the island of Seil and parish of Kilbrandon, Argyleshire.

BALWAHANAIID, a bamlet in the parish of Weem, Perthshire.

BALWEARIE, the ancient seat of the family of "the wondrous Michael Scott," in the parish of Abbotshall, Fifeshire. It is said to have been in their possession for at least 500 years. Only a small part of it now remains; but this shows it to have been a building of great strength, with walls 6½ feet thick.

Sir Michael Scott was born at Balwearie in the early part of the 13th century. Filled with the thirst of learning from his youth, he left his native country, and studied successively at Oxford—where he had Roger Bacon for a fellow-student—at Padua, and at Toledo; and, having acquired a European reputation for learning, was invited to the court of the Emperor of Germany, where he remained some years. On his return to England, he was honourably received by Edward I., who permitted him to proceed to Scotland, where he arrived just after the death of Alexander III. rendered an embassy to Norway expedient, for the purpose of conveying the Princess Margaret, daughter of Eric, King

of Norway, by Margaret, the eldest daughter of Alexander III., to Scotland, of the crown of which kingdom she had become, by her grandfather's death, the direct and lawful inheritrix. To this honourable embassy, Sir Michael Scott, and Sir David Wemyss, another Fifeshire gentleman, were appointed by the regents of the kingdom. They succeeded so far in their mission as to get the young Princess intrusted to their care; but the royal maiden sickened on her passage to Scotland, and died in Orkney. Sir Michael's name does not again appear in history; he died soon after, having attained an extreme age. Tradition varies concerning the place of his burial; but Sir Walter Scott has decided in favour of Melrose.

"It is well known," says Tytler, in his 'Lives of Scottish Worthies,' "that many traditions are still prevalent in Scotland concerning the extraordinary powers of the Wizard; and if we consider the thick cloud of ignorance which overspread the country at the period of his return from the continent, and the very small materials which are required by Superstition as a groundwork for her dark and mysterious stories, we shall not wonder at the result. The Arabic books which he brought along with him, the apparatus of his laboratory, his mathematical and astronomical instruments, the Oriental costume generally worn by the astrologers of the times, and the appearance of the white-haired and venerable sage, as he sat on the roof of his tower of Balwearie observing the face of the heavens, and conversing with the stars, were all amply sufficient to impress the minds of the vulgar with awe and terror. 'Accordingly,' says Sir Walter Scott, in his Notes on the Lay of the Last Minstrel, 'the memory of Sir Michael Scott survives in many a legend, and in the south of Scotland any work of great labour and antiquity is ascribed either to the agency of Auld Michael, or of Sir William Wallace, or of the Devil.'"

Finlay, in his 'Scottish Historical and Romantic Ballads,' conjectures that Balwearie was the scene of the atrocious Lammikin's "black revenge," as related in the ballad of that name, of which one copy commences thus:—

"Lammikin was as gude a mason
As ever hewed a stane;
He biggit Lord Weire's castle,
But payment gat he nane."

And another copy,—

"When Balwearie and his train
Gaed to hunt the wild boar,
He ga'd bar up his castle
Behind and before."

In this latter copy, "the wicked Balcanqual" takes the place of Lammikin, or Lambkin; but all writers, Mr. Finlay tells us, agree in considering this not the name of the hero but merely an epithet.

BALWHERNE, a village in the parish of Methven, Perthshire.

BAMBREICH. See FLISK.

BAMIRNIE. See BALMERNO.

BANCHORY. See ARBEADIE, BANCHORY-TERRAN, and DEESIDE RAILWAY.

BANCHORY-DEVENICK, a parish divided into two parts by the river Deek, and this being here the boundary between Aberdeenshire and Kineardineshire, that part of the parish which lies on the north side of the river is in the former county, and that on the south side in the latter. The post-town is Aberdeen. The part of the parish in Aberdeenshire is a strip about one mile in breadth, and 4 in length, stretching both farther east and farther west than the part of the parish upon the opposite bank. On the east this part is bounded by the parish

of Old-Maehar; on the north by Newhills; and on the west by Peterculter. The Kineardineshire part is bounded on the east by the parish of Nigg, and by the German ocean, for about 3 miles; on the south by Fetteresso parish; and on the west by Fetteresso and Maryculter. The coast is bold and rocky, but presents three small fishing-harbours, Findon, Portlethen, and Downies. The general appearance of the country is rugged and stony. The stone which prevails is blue granite. The soil is in general light, and either mossy or sandy, but when properly managed produces good grain, particularly on the river side, and on some parts of the coast. There are seventeen landowners. The river Dee is here about 80 yards broad, but is not navigable. From its long course, and the mountainous country through which it runs, it is subject to sudden and high floods. A foot suspension bridge has here been thrown across it. Its span between the pillars is 185 feet, and whole length 305 feet. The Aberdeen railway and the great road from Aberdeen to Edinburgh traverse the interior. There are several very large cairns, both on the north side of the river, and towards the coast. There is also, on the south side of the parish, a Druidical temple, situated on an eminence about $1\frac{1}{2}$ mile from the coast. Population of the parish in 1831, 2,588; in 1861, 2,919. Houses, 578. Assessed property in 1865, £10,282 9s.

This parish is in the presbytery and synod of Aberdeen. Patron, the Crown. Stipend, £159 2s. 9d.; glebe, £13 16s. 8d. Schoolmaster's salary, £50, with £20 fees and other emoluments. The parish church was built in 1822, and has 900 sittings. There is a quoad sacra parish church at Portlethen, with 460 sittings, and an attendance of 430. There is a Free church in Banchory-Devenick; yearly sum raised in 1865, £180 8s. 10 $\frac{1}{2}$ d. There are three private schools.

BANCHORY-TERNAN, a parish, containing the small post-town of Banchory or Arbedie, on the north border of Kineardineshire. It is bounded on the south by the parishes of Durriss and Straehan; and on all other sides by Aberdeenshire. Its length is about 9 miles, and its breadth about the same. Its area is intersected by the Dee, and comprises about 5,090 acres on the south side of that river, and about 16,210 on the north. The range of Kerloak, 1,890 feet high, touches the southern frontier; a ridge about 1,000 feet high intervenes between it and the Dee; and the long isolated bill of Fare extends within the northern border. About 6,500 acres of the parochial surface are cultivated; about 5,000 are under wood; and most of the remainder is either moorish pasture or irreclaimable waste. The scenery along the Dee is eminently picturesque, abounding in fine strong natural features, and adorned with the tasteful results of art. The Feugh, which is a small but impetuous collection of streams from the Grampians, bisects the southern part of the parish. Over this river, near a fine catacact and fall of its waters among rocks, and near its conflux with the Dee, almost opposite to Banchory the road from Stonehaven to Deeside is carried on a substantial stone-bridge of four arches. The Loch of Leys, in the northern part of the parish, several miles in circuit, had in its centre an artificial island with an old ruin, supposed to have been a refuge-eastle of the Leys family; and shortly before 1865 the lake was drained, and then disclosed some interesting ancient relics. The chief mansions are Crathes Castle and Tilwhilly Castle, facing each other on opposite sides of the Dee; and the former belongs to the Burnetts of Leys, who date in the parish from the time of Robert Bruce,—the latter to the Douglasses, whose charter dates about 1415.

There are three other good mansions, and many handsome villas and ornate cottages. The parish is traversed by the Deeside railway, and has a station on it. The old village of Banchory, which existed in the 14th century, and was long of some consequence, has been displaced by the railway station. The new village is noticed in our article ARBEDIE. Population of the parish in 1831, 1,972; in 1861, 2,947. Houses, 513. Assessed property in 1865, upwards of £11,000.

This parish is in the presbytery of Kineardine O'Neil, and synod of Aberdeen. Patron, Sir James H. Burnett of Leys, Bart. Stipend, £287 10s. 9d.; glebe, £10. The parochial school is combined with an old endowed grammar school, and there are a side parochial school, a General Assembly's school, a Free church school, and two female schools. The parish church contains nearly 1,200 sittings; communicants in 1865, about 900. There is a Free church; yearly sum raised in 1865, £256 15s. 9d. There is also an Episcopalian church.

BANDIRRAN. See CAPUTH.

BANETON, or BANETON, a village in the parish of Kennoway, Fifeshire.

BANFF, a parish, containing a royal burgh of the same name, in the north-east corner of Banffshire. It is bounded on the north by the Moray frith; and on other sides by the parishes of Gamrie, King-Edward, Alvah, Marnoch, and Boyndie. The Deveron traces the eastern boundary for about $1\frac{1}{2}$ mile to the sea; and the Boyndie traces the greater part of the western boundary. The length of the parish north-north-eastward is about $6\frac{1}{2}$ miles; and the greatest breadth is about 2 miles. The northern district is pleasingly diversified and softly picturesque; though its highest ground, called Gallow Hill, has an elevation of not more than between 200 and 300 feet above the level of the sea. The southern district lies considerably higher than the northern, yet is diversified only by swells, and has a very tame appearance. About 4,000 acres are cultivated, about 250 are under wood, and about 740 are pastoral or waste. It is generally supposed that a considerable part of this parish towards the south-west was, in ancient times, covered with wood, and belonged to the forest of Boin. A simple distich, which tradition has handed down, confirms this opinion:—

"From Culbirnie to the sea,
You may step from tree to tree."

Culbirnie is a farm-hamlet about 3 miles distant from the sea. The turnpike road from Fraserburgh to Inverness passes through the northern part of the parish from east to west. The principal land holders are the Earl of Fife, the Earl of Seafield, and Sir Robert Abercromby of Birkenbog. Duffhouse, the mansion of the Earl of Fife, is a noble edifice in the Roman style; and contains some fine paintings. See article DUFF-HOUSE. The old eastle of Inchdrewer, about 4 miles south-west of the town, is still entire. It is only remarkable as having been the scene of Lord Banff's death, under very suspicious circumstances, in 1713. The Bairds of Auehmeddeu in this parish are a very ancient family. From them are descended the Bairds of Newbyth in East Lothian; and of the same family it is asserted, in Rose of Mounteffer's manuscripts,—but with little probability we think,—was the celebrated Boyardo, the author of the 'Orlando Innamorata.' Population of the parish in 1831, 3,711; in 1861, 4,673. Houses, 794. Assessed property in 1860, inclusive of the burgh, £12,961.

This parish is in the presbytery of Fordyce and synod of Aberdeen. Patron, the Earl of Seafield. Stipend, £245 19s. 9d.; glebe, £35. Unappropriated

teinds, £280 3s. 3d. The rector of the grammar school in the burgh receives the salary of parochial schoolmaster. The parish church was built in 1790, and contains 1,500 sittings. A Chapel of Ease was built in 1835, at Ord, in the southern district of the parish, about 5 miles from the burgh; and it has 300 sittings, and is served by a missionary of the Royal Bounty. There is a Free church in the town; whose total yearly receipts in 1865 amounted to £548 15s. 9d. There is also a Free church for Ord and Ordiquhill; whose total yearly receipts in 1865 amounted to £99 19s. 3d. There are in the town an United Presbyterian church, with 490 sittings, built in 1822; an Independent chapel, in connexion with the Congregational Union, with 400 sittings, built in 1834; a Scottish Episcopalian chapel, with 356 sittings, built in 1834; a Wesleyan Methodist chapel, with 300 sittings, built in 1818; a Roman Catholic chapel, with 110 sittings; and a United Christian Brethren's chapel. There are four boarding-schools for young ladies, and two free schools, Perrie's and Wilson's.

BANFF, a royal burgh, a market-town, a seaport, and one of the most fashionable places of residence in the north of Scotland, stands in the north-east corner of the parish of Banff, on the west side of the embouchure of the Deveron, 7 miles east of Portsoy, 22 west of Fraserburgh, 45½ north-north-west of Aberdeen, and 165 north by east of Edinburgh. It is closely environed by the superb park of Duff House; and it occupies a lovely situation, and commands a charming prospect. The approach to it from the south passes down the right bank of the Deveron, through a series of brilliant close views, and is carried across the river, 650 yards above its mouth, by a handsome bridge of seven arches. The town consists of two parts, the town-proper and the sea-town, completely separated from each other by the site of the castle. The town proper is the larger of the two, and stands partly on low ground beside the river, and partly on an adjacent acclivity. The sea-town stands on an elevated level which, for the most part, terminates abruptly in the vicinity of the beach; but, as seen from the low ground beyond the river, it appears to stand on a long ridge, whose northern end is crowned with a battery. The site of the castle is a small tableland, projecting between the two towns, nearly opposite the mouth of the river, and commanding a panoramic view. The streets, though irregularly edified, are generally straight and of pretty good appearance. High Street, Castle Road, and a street in the sea-town terminating at the battery, form a continuous line from south to north of upwards of half-a-mile in length. Many old houses have been replaced by new ones during the last forty years; and now scarcely a building exists to indicate that the town is not entirely modern.

The town-house, built about the end of last century, is a very large plain structure, forming two sides of a square, with a spire of much older date, of graceful proportions, and 100 feet high, rising from the external angle. The prison is a massive and strong edifice, but has not sufficient accommodation. The parish church is a plain structure, but occupies a conspicuous situation at the south side of the town, and has an unfinished spire. The Episcopalian chapel is a very handsome though small building in the Gothic style. The market-place was laid out in 1830, and is very commodious. The other public buildings, such as the dissenting meeting-houses, the trades hall, and a good suite of public baths, do not challenge particular notice; but a few of the largest private houses are ornaments to the town.

There was in Banff a large monastery of the Carmelites, dedicated to the Virgin Mary, and supposed to have been founded in the reign of Malcolm IV., or even in that of Malcolm Canmore. Large vestiges of it were in existence in the latter part of last century, but are now completely effaced. Part of it probably was incorporated with a residence of the Lords Banff, which was sometimes styled a palace in consequence of having been the temporary abode of certain of the Scottish kings, and which was demolished in 1640 by General Monro. The property of the monastery was variously disposed of at the Reformation, but eventually came all into the possession of the Earl of Fife. A chapel, called the Chapel of the Holy Rood, is supposed to have stood on the Rose Crag, toward the present northern extremity of the Castle grounds; and the lands on which the sea-town now stands belonged to this chapel. There were also, in the Roman Catholic times, either chapels or other structures dedicated to St. Thomas, St. Ninian, and St. Catherine. The Knights Templars, likewise, had property in the town, distinguished by their usual mark of an iron cross; and probably they had an hospital at a place a short distance from the town which still bears the name of Spittal mire.

A castle or citadel—of the character of a constabulary, where the king lodged when visiting this part of his dominions, and where a constable, thane, or sheriff administered justice in his absence—existed in Banff coevally with the Carmelite monastery. Malcolm IV. probably resided in it in 1160, while engaged in exterminating the ancient inhabitants of Moray; and some of his charters are dated from Banff. The lands of Blairshinnoch were bestowed by David Bruce in 1364, for furnishing a soldier to attend the king in his court *apud castrum de Banffe*. The thanes of the castle for a long time held their office only during the King's pleasure; but on the marriage of James Stuart, Earl of Buchan, and brother of James II., to Margaret Ogilvie of Auchterhouse, he was made hereditary thane, receiving the castle and its appanages as a message of his earldom. Pecuniary embarrassments caused the Buchan family to sell it to Robert Sharp, sheriff-clerk of Banff, elder brother of the famous Archbishop Sharp. The archbishop was born in Banff in 1613; and after his murder in 1679, the castle passed successively to his brother, Sir William Sharp of Stonyhill, to Leslie of Kininvie, and to the Earl of Findlater. The last of these obtained it by purchase in 1683, and transformed it into a pleasant residence, in the modern style. The Earl of Seafield, the lineal heir of the Earl of Findlater, and the descendant of the family of Auchterhouse, who held the castle under the crown prior to its being made the property of the Earl of Buchan, is now the proprietor. All that now remains of the ancient structure is a part of the outer wall and of the ditch. The present building has the appearance simply of a plain modern edifice with wings. The house in which Archbishop Sharp was born was pulled down about the year 1816.

Banff possesses more importance as a county town and as a pleasant residence than as a place of trade. Its only noticeable manufactures are a brewery, a foundry, and a small rope and sail work. There is also a distillery at Mill of Banff, about a mile from the town. A weekly market is held on Friday; and fairs are held on the 7th of January, on the first Tuesday of February, old style, on the Tuesday after the 26th of May, or on the 26th itself if that day be a Tuesday, on the first Friday of August, old style, and on the Friday before the 22d of November. But only the one in May, which is

called Brandon fair, is of any magnitude; and those of Lannmas and Martinmas are simply hiring fairs. There are no cattle markets. The chief inns are the Five Arms and the Royal Oak. One railway goes hence to the south, another goes to the west, and the Forth and Moray frith steamers call. Banff has offices of the Commercial Bank, the National Bank, the Union Bank, the City of Glasgow Bank, the Aberdeen Town and County Bank, and the North of Scotland Bank. It has also a savings' bank, a reading-room, a scientific institution, and a literary society. A newspaper called the Banffshire Journal is published every Tuesday.

The port of Banff includes the creeks of Macduff, Fraserburgh, Gardenstown, Portsoy, Port-Gordon, and Garmouth. It has also a bonding warehouse and yard. Yet Banff itself makes but a small figure in matters of shipping. Its harbour, which is situated to the north of it, at the side of the mouth of the Deveron, is often impeded by the shifting of the river's banks and shoals, and is neither commodious nor good. About £18,000 were spent in improvements on it in 1816; and a vessel drawing 12 feet can enter at ordinary high water. Macduff, which is situated on the opposite side, and which is included in the parliamentary boundaries of Banff, has a much better harbour, and may be regarded as the chief seat of the sea-ward trade of this district. The number of vessels belonging to the port of Banff in 1834 was 67, of aggregate 4,301 tons; and the number in 1864 was 115, of aggregate 12,891 tons. The amount of custom's duty collected at the port in 1835 was £1,112; and in 1863, £3,338. The Deveron salmon-fishings are rented at about £1,800, and the fish caught at them are principally sent to the London market. In 1831, 1,759 barrels of herrings were cured here; in 1863, 20,639 barrels. These are exported to London, Ireland, and Germany. Live cattle and grain are also exported to London.

Banff was a part of the ancient thanedom of Boim or Boyne, whence the name seems to be derived. In some old charters it is spelled Boineffe and Baineffe. The district of Boyne has probably received its name from a conspicuous mountain in the neighbourhood of Cullen, called the Binn. On the south side of this hill, at Darhrich, the forester had his dwelling; and it is well known that the forestry and thanedom territory extended thence to the borough-lands of Banff, divided only by the water of Boyndie. Tradition has assigned a very early origin to Banff as a royal burgh. In 1165, William the Lion gave a toft and garden in this burgh to the Bishop of Moray; and Robert I. confirmed its privileges. But the earliest charter extant is one of Robert II., dated October 7, 1372; and the governing charter is one of James VI., dated May 9, 1581, which was renewed when that sovereign attained the age of 25. The town was formerly governed by a provost, 4 bailies, and 12 councillors. It is now governed by a provost, 4 magistrates, and 17 councillors. Municipal constituency, in 1838, 133; in 1865, 140. The territory over which the jurisdiction of the borough is exercised extends from the burn-mouth of Boyndie, across the Gallowhill, to the Spittal Mire, and thence to the sea at Palmer cove. The magistrates used to claim the right of patronage over the parish church, but have never shown a title to it. They have five mortifications under their management, viz.: 1st, Cassie's bounty, consisting of £10,000, the interest of which is half-yearly distributed among indigent persons. 2d, Smith's bounty, which is also a sum of £10,000, yielding an yearly dividend of £308 18s. 8d. The objects of this charity are, first, to pay

£25 of additional stipend to the minister of Fordyce; and, secondly, to apply the remainder to the maintenance and education during five years, of boys of the name of Smith, at an yearly allowance of £25 for each. The academy for this purpose is at Fordyce, and the teacher has a salary of £40, with a free house, a garden, and about 10 acres of ground. 3d., Perrie's free school, being a mortification of £1,100 for educating poor children, and from which a salary of £40 is paid to a schoolmaster, who has also a free house and garden, and from 80 to 90 pupils. 4th, Wilson's charity, consisting of a sum of between £5,000 and £6,000. 5th, Smith's mortification, being a sum of £1,000. There are in Banff six incorporated trades. No one can carry on business as a merchant without becoming a guild-brother. The property of the burgh consists of lands and houses, salmon-fishings, feu-duties, public buildings, and markets. The value of the lands, in 1833, was £2,014 10s. The revenue of the burgh, in 1833, was £1,304; expenditure £1,336. In 1863-64, the revenue was about £1,110. The total estimated value of the burgh property in 1834 was £22,961. The total amount of debts in 1833 was £14,298. Assessed property in 1864-5, £8,660. In 1763, the debt was only £20; although so early as 1470, the burgh was under embarrassments. At that time it was held by the public functionaries that they had no power to increase their revenues, except by leasing their property. The magistrates, therefore, without fraud, and upon their "great aith, with consent of all and sundry neighbours of Banff," let out to certain burgesses, for 19 years, the whole salmon fishings, consisting of 12 nets, for the "infetting and foundation makkin of a perpetual chaplenary, to sing in the peil heife* of the burgh, for our sovereign lord the King and Queen, their predecessors and successors,—for all Christians soules,—for the theiking of the kirk with sclate, and the bigging of the tolbuthe,—and for qubat the burgh has not substance." It is believed that similar leases were granted until 1581, when there was obtained the charter, formerly referred to, giving power to feu to the resident burgesses and their heirs male. In 1595 the provost, bailies, and certain other persons, were appointed commissioners to carry the power into execution. The instructions to them bear that, "because of the warres and troubles, the darth of the country and scantiness of victual, with exorbitant stents and taxation for supporting the warres, the public warkes, and up-hading of the kirk, tolhuthe, and calxies, &c.; for remeid wherof, this empowers to set, sell, and feu the common land and salmon fishings of the burgh to merchant burgers and actual residents." By virtue of these powers these commissioners did alienate, for a small feu-duty, the greater part of the burgh-lands and salmon-fishings. The limitation in the charter, that the alienations should be made only to resident burgesses, and their heirs male, either never had been in observance, or quickly fell into disuse. Nor does the forfeiture emerging if a burgess should alienate to other than to a resident burghess, appear to have been operative. The greater part of the property was acquired by neighbouring proprietors, including the families of Fife, Findlater, and Banff. The last alienation of any importance, which has been traced, was in 1783, when the provost purchased about 20 acres of the burgh-lands, for 20 years' purchase of a feu-duty of 1s. 6d. per acre. It constitutes a wholesome feature in the municipal arrangements of Banff that

* The Pool-haven, where formerly boats and small craft were moored. It is now the burying-ground.

the cess and other public burdens and taxations are levied annually by a Head court—as it is called—consisting of all the heritors and burgesses within burgh.—Banff unites with Elgin, Cullen, Inverury, Peterhead, and Kintore in returning a member to parliament. The parliamentary constituency, in 1861 was 223. The parliamentary burgh boundaries extend from the Little Tumbler rocks on the shore to the westward of Banff, and the mineral well of Tarlair to the eastward of Portsoy, so as to include the town of Macduff.

The only noticeable historical matters in connexion with Banff previous to the 17th century are those already mentioned, which relate to its castle. In 1644, the lairds of Gight, Newton, and Ardlogie, with a party of 40 horse, and musketeers, all, in the language of Spalding, “brave gentlemen,” made a raid upon the good town of Banff, and plundered it of huff-coats, pikes, swords, carabines, pistols, “yea, and mouey also,” grievously amercing the bailies, and compelling them to subscribe a renunciation of the Covenant. In 1645, Montrose, following the example so recently set him by his adherents, marched into Banff, plundered the same “pitifully,” carried off all goods and gear on which he could lay his hands, burnt some worthless houses, and left “no man on the street but what was stripped naked to his skin!”—On the 7th of November, 1700, the famous James Macpherson, with some associates, was brought to trial before the Sheriff of Banff, and being found guilty “by ane verdict of ane assyse, to be knaive, holden and repute, to be Egiptians and vagabonds, and oppressors of his majesty’s free lieges in ane hangstrie manner,” were condemned to be executed on Friday the 16th of the same month of November. The sentence was carried into execution against Macpherson only. He was a celebrated violin player, and, it is affirmed, performed at the foot of the gallows, on his favourite instrument, the rant which bears his name, besides reciting several rude stanzas by way of a last speech and confession.—On the 10th of November, 1746, the Duke of Cumberland’s troops passed through Banff on their way to Culloden, and signalized themselves by destroying the Episcopal chapel, and hanging a poor countryman whom they suspected of being a spy. In 1759, a French vessel of war appearing off the coast threw the worthy burghers into no small consternation, and suggested the expediency of erecting a battery for the future protection of the harbour. In 1763, 1799, 1829, and 1835, some of the streets of the town were flooded to the depth of five or six feet by inundations of the Deveron, so that the inhabitants had to be rescued from their houses by boats. In the first of these years the bridge at the town was swept away; and in 1829 the present very substantial and splendid bridge was in great danger, and some of the adjacent grounds of Duff-House Park were under water to the depth of fourteen feet. Banff gave the title of Baron to a branch of the family of Ogilvie. The peerage was created in 1642; and it became dormant at the death of the eighth lord in 1803. It is claimed by Sir William Ogilvie, of Carnoustie, Bart.

BANFF-HILL. See **ALYTH.**

BANFFSHIRE, one of the north-east counties of Scotland; bounded on the north by the Moray frith or the German ocean; on the east and south by Aberdeenshire; and on the west by the shires of Inverness and Elgin. This county according to Mr. Souter in his ‘Agricultural Survey of Banffshire,’ published in 1812, might be comprehended in an isosceles triangle, on a base of 30 miles along the coast from Troup-head, on the horder of Aber-

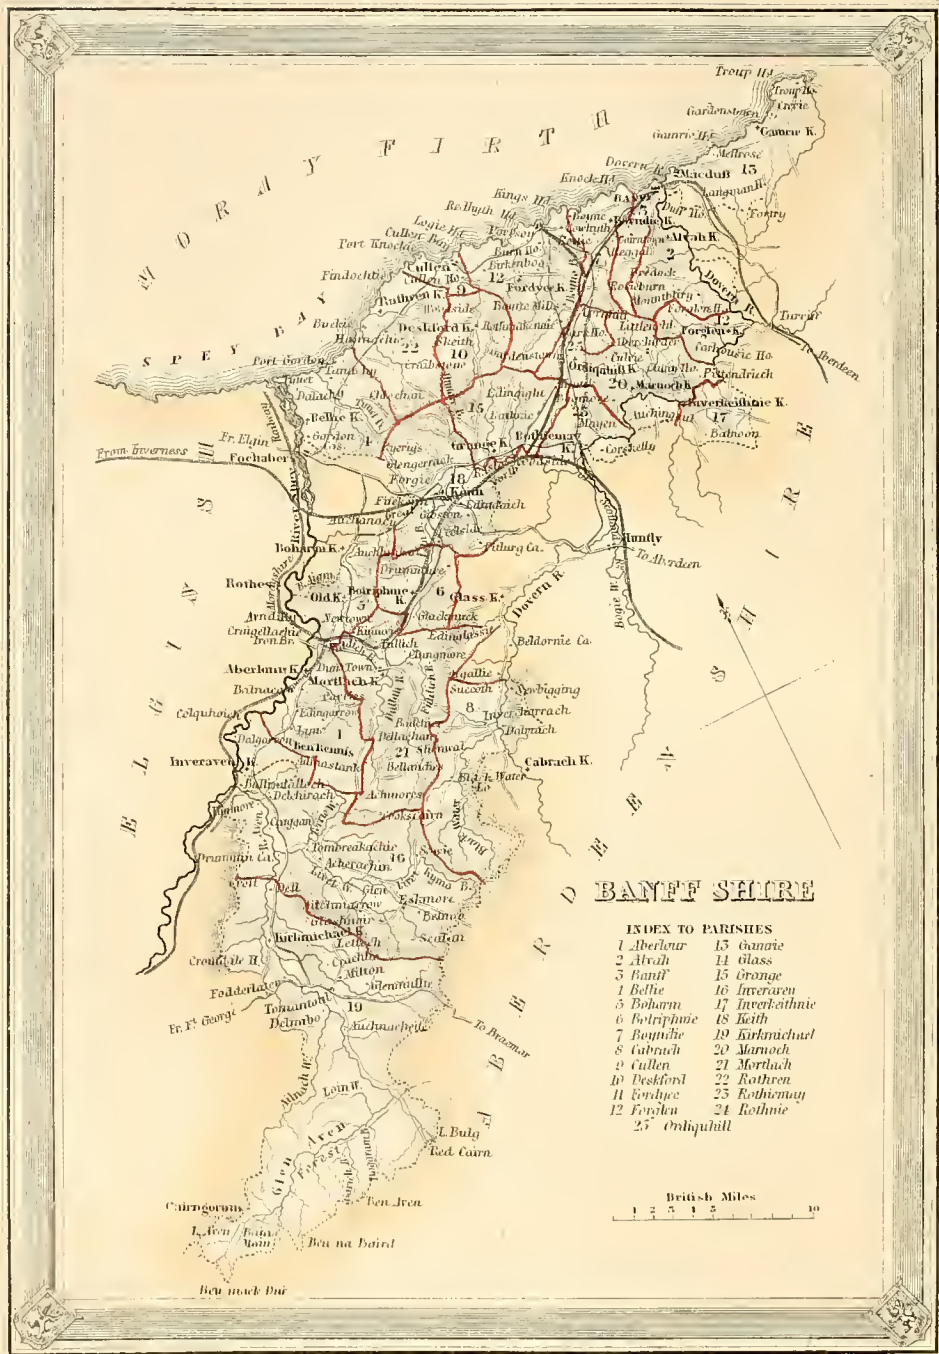

deenshire, to the influx of the Spey, on the confines of Moray; its height being 64 miles inland from the shore. Measured on the latest and most accurate maps, the distance in a direct line between the two extreme points on the coast, is 34 miles; and from Troup, in a direct line running south-west to Ben Macduh, or to Cairngorm, both in the south-west corner of the county, at the head of Glen-Aven, 67 miles. At the average distance of 12 miles from the coast, however, it is contracted by the county of Aberdeenshire on the east, and by part of Moray on the west, in the parish of Keith, to a breadth of only 4 miles; so that, in its general form, it has been thought to bear some resemblance to an hour-glass. Making the proper deduction on this account, its surface is, according to Mr. Souter, 622 square miles, or 315,600 acres Scots computation. By another admeasurement its superficies is estimated at 686 square miles, or 439,219 English acres. The course of the Deveron, in general, is accounted the boundary of Banffshire with Aberdeenshire; yet the parish of Gamric, on the coast, and part of the parish of Inverkeithnie, in the interior, are on the Aberdeenshire side of that river; while the greater part of the parishes of Cairney, Glass, and Cabrach, politically in the county of Aberdeenshire, are on the Banffshire side. Kirkmichael, the most upland district of the county, is bounded by the mountains which rise on the southern sides of Glenhucket and Strathdu. Similar to the Deveron on the east, the river Spey may, with little impropriety, be deemed the general boundary on the west; although the county of Moray also extends in various places across that river into the parishes of Bellie, Keith, Boharn, and Inveraven.

Banffshire comprehends the coast districts of Boyne and Enzie,—the former extending from Banff to Cullen, and the latter from Cullen to the Spey; the inland districts of Strathdeveron, Strathisla, Balveny, and Strathaven; and part of the great districts of Buchan and Moray. The parish of St. Fergus, part of Old Deer, half of Gartly, and the estate of Straloch in New Machar, appertain to the county of Banff, although in distant and unconnected quarters of Aberdeenshire. These detached pertinents, in what relates to civil justice, are, by a particular provision of the legislature, under the jurisdiction of the sheriff of Aberdeen.

A grand group of mountains round the point where the counties of Banff, Inverness, and Aberdeenshire meet, and composed of Cairngorm, Ben Buinae, Ben Macduh, and Ben Aven, all surrounding Loch Aven, belongs to the Northern Grampians, and forms the highest land in Great Britain. Of these Ben Macduh, on the south side of Loch Aven, in N. lat. 57° 6', and W. long. 3° 37', is in Aberdeenshire, and its altitude, according to a recent admeasurement, is 4,390 feet, being 17 feet higher than Ben Nevis. Cairngorm, which is common to Inverness-shire and Banffshire, has an elevation of 4,095 feet, and Ben Aven, common to Aberdeenshire and Banffshire, has an elevation of 3,967 feet. Among the detached summits of the Grampians which entirely belong to Banffshire, are Benrinnes, 2,747 feet high, and 15 miles south-west by south of Keith, Corryhabies, 2,558 feet high, and situated south-east of Benrinnes, and Knockhill, 2,500 feet high and 12 miles south-west of Banff.—The principal rivers of Banffshire are the Spey, the Deveron, the Aven, the Fiddich, the Livet, and the Isla; and the principal lakes are Loch Aven and Loch Baulg.

“From the nature of the soil of Banffshire,” says the first agricultural reporter, “as well as from its generally exposed situation, and the great height of many of the mountains, this district is often sub-

jected to all the evils of a cold and rainy climate. The harvests, which are precarious and often interrupted, are rarely completed before the end of October. The crops in the more upland parts of the county, are for the most part damaged by rains, which about that season often set in for weeks together, and are frequently succeeded, without any interval of good weather, by frosts and deep falls of snow, which often suspend the operations of husbandry for many of the winter-months." In the years 1782 and 1787, the harvest was scarcely completed in less than three months; and in some parts of the interior, the crop lay uncut during the whole winter. It is, however, a curious fact, that in 1782 the parish of Rathven, in the Enzie, had the good fortune to escape the general calamity: scarcely had they ever a better crop, or more grain to spare."

The whole of Banffshire, except the tract along the sea-shore, may be described as a hilly mountainous country, interspersed with fertile valleys well adapted to the cultivation of corn and grass. The hills, either covered with heath or moss, afford little pasture; while from their bleak and barren aspect, they have a very gloomy and unpleasant appearance. The arable land—which bears but a small proportion to the waste—lies on the sides and towards the bottoms of the higher hills, or on the sides of those valleys through which the waters have their courses. In several of these valleys, where cultivation has hitherto been found impracticable, there is abundance of fine healthy pasture, on which young cattle are raised to great advantage, the grounds being in general well-sheltered with natural woods. Taking a general view of the whole district, the arable soil may be described as of three qualities. That of the plains on the banks of the waters, where it has not been mixed with the sand by the washings of the streams, is a stiff deep clay; on the sides of the valleys it is a deep black loam on a bed of rock, generally limestone; on the sides of the hills, and in the higher parts of the country, where cultivation has taken place, the soil is either of the same quality as that last described, or a mixture of moss and gravel on a red tilly bottom, and—as may be supposed—very retentive of water. Along the whole coast, consisting of the parishes of Gamrie, Banff, Boyndie, Fordyce, Cullen, Rathven, and Bellie, the soil consists for the greater part of sand and loam, the latter by far the more predominant; and in general lies upon a freer bottom. The aggregate rental of the county, presuming that the average rent of the arable acre did not, on the whole, exceed £1, limited the number of arable Scots acres, in 1811, to 80,000; thus leaving an amount of uncultivated surface equal to 236,000 acres. The quantity of arable land now, however, greatly exceeds that in 1811. It is probable that at least 120,000 Scots acres are now under cultivation, and that not above 80,000 are incapable of improvement.

In a general view the county of Banff may be denominated a land of limestone, which, although it is not found in one continuous bed, over any extensive tract in the county, yet may be easily traced in almost every quarter of it. This rock is extended through the district of Strathspey, where the counties of Inverness and Moray meet with Banff; and being also found in Badenoch, farther up the course of the Spey, may perhaps extend onwards even to the western shore. It may be also traced southwards through the higher district of the county of Aberdeen, in the adjoining parishes of Cabrach, Glenbucket, Auchindoir, and Tullynessle. At Portsoy it passes into marble, or serpentine, which composes almost entirely the hill of Durn. Marble is also

found in the parishes of Keith and Mortlach. When first quarried at Portsoy, it was exported to France, where, for some time, it became fashionable; but the market being overstocked, a ship-load of it long lay neglected on the banks of the Seine. It is still wrought into monuments, chimney-pieces, and toys. In the Enzie district the calcareous matter, probably from a tinge of iron-ore, is in the form of stone marl, of a dark red colour. In the upper extremity of the county, in the parishes of Kirkmichael and Inveraven, there are extensive beds of pure white marl. In Kirkmichael it appears in a white cliff, 40 or 50 feet high, on the bank of the Aven. Except the red stone of the Enzie already mentioned, there is no freestone in this county; but it is in general well furnished with stone for building. Slate is found near Letterforie, in the parish of Rathven; near the Boat-of-Bridge, in the parish of Boharm; and in several other places. Flints have been found along the shore of Boyndie hay. "Some years ago," says Professor Jamieson, "while examining the geognosy of the vicinity of Peterhead, our attention was directed to the chalk-flints found in that neighbourhood, by previous information. We traced them extending over several miles of country, and frequently imbedded in a reddish clay, resting on the granite of the district. These flints contain sponges, alcyonia, echini, and other fossils of the chalk-flint, thus proving them to belong to the chalk formation, which itself will probably be found in some of the hollows in this part of Scotland." In the course of the Fiddich a laminated marble is found which may be formed into whetstones and hones. Scotch topazes, or what are commonly called Cairngorm stones, are found in the mountains in the south-western extremity of Banffshire, bordering with those in Aberdeen and Inverness-shires; and also on several other adjoining mountains, in the forest of Mar. The stones are found near the top of these mountains.

It does not appear, that previous to the year 1748, any material improvements in agriculture were introduced into this district. In those days the mode of management was the same here as was then universally practised over all the north of Scotland. The arable lands on every farm were divided into what was called *outfield* and *infield*. To the infield—which consisted of that part of the farm nearest to the farm-houses—the whole manure was regularly applied. The only crops cultivated on the infield land were oats, beer, and pease; the lands were kept under tillage as long as they would produce two or three returns of the seed sown; and when a field became so reduced and so full of weeds as not to yield this return, it was allowed to lie in natural pasture for a few years, after which, it was again brought under cultivation, and treated in the manner before mentioned. The outfield lands were wasted by a succession of oats after oats as long as the crops would pay for seed and labour; they were then allowed to remain in a state of absolute sterility, producing little else than thistles and other weeds; till, after having rested in this state for some years, the farmer thought proper to bring them again under cultivation, when, from the mode of management before described, a few scanty crops were obtained. About this time, it was a common practice for the farmers to lime their outfield-ground substantially after this kind of rest, and then to crop it as long as it would bear, oats after oats, without any intermission. Only oxen ploughs were used; and when the seed-time was over, the cattle were either sold to dealers, or sent to the high lands, where they were grazed for three or four months at the rate of 1s. or 1s. 6d. each. During this period

the plough was laid aside, and the farm-servants and horses were employed in providing the necessary stock of fuel, and collecting earth to be mixed with the dung produced by the cattle during the preceding winter. About the year 1754, the Earl of Findlater, then Lord Deskford, came to reside in the neighbourhood of Banff; and having taken one of his farms into his own possession, set about cultivating it in the most approved manner then known in England; and, for that purpose, engaged three experienced overseers from that kingdom. His lordship also selected some of the most intelligent, active, and substantial tenants in the country, to whom he granted leases on reasonable terms, for twice nineteen years, and a lifetime, of farms formerly occupied by three or four tenants. By these leases each tenant became bound to enclose and subdivide a certain portion of his farm with stone-fences, or ditch and hedge, during the first nineteen years of the lease, and, in the course of the second nineteen years, to enclose the remainder. They were also bound to summer fallow and sow grass-seeds, on a certain number of acres within the first five years of the lease. His lordship was also the first that introduced the turnip-husbandry, and by his example, as well as precept, during his frequent excursions among his tenants, was the means of bringing the cultivation of that crop, as well as other green crops, by degrees, into general practice. Agriculture is now conducted on the best principles in Banffshire. A regular rotation of cropping is followed; wheat is extensively grown in the lower districts; and the cattle and stock are of the most approved breeds.

The lowest denomination of land in Banffshire is the fall, consisting of 36 square yards. Previous to the equalization of weights and measures, the firloft contained 31 pints, each 6 per cent. above the standard. A quarter of grain by the Banffshire old wheat-firloft is nearly 3 pecks more than a quarter by the Winchester bushel. The holl of barley was 17 stones, or 17½ stones; and of potatoes, 36 stones. The potato-peck was 32 lbs. Four gills, or two English pints, make a Banffshire choppin; and two Banffshire pints are about one-tenth part less than an English gallon. Wool was sold in market by the Banffshire pound, which was eight ounces more than the English pound. Butter, cheese, and hay, were also sold by the same pound weight of 24 ounces; but meal and butcher's meat were sold by a pound which was only one and a half ounce more than the English pound. In the higher part of the district, about Keith, a stone of wool was two pounds more than about the town of Banff and along the coast.

The principal productions of this county are cattle, corn, and fish. The cattle are bought up by the dealers, from the 1st of May to the end of November, and sent off in droves to the southern districts. The corn and fish are exported by sea. There were 55,000 quarters of grain exported for the London market from this county in 1831. There are in this county ten fishing-towns, which in 1863 employed 1,004 boats. The fish which visit the shores are cod, ling, haddock, skate, whittings, hollybut, dog-fish, and occasionally turbot and mackerel. The value of the fishing-boats, nets, and lines used in 1863 was £91,461. The salmon-fishery on the Spey, for the distance of 8 miles from the mouth of the river, has been acquired by the family of Gordon; and as the fishing-quarters are now established on the Banffshire side of the river, the whole of the Duke of Richmond's salmon-fishery, now let at the yearly rent of £8,000, may be stated as among the produce of this county. The salmon-fishing on the Deveron, of which the Earl of Fife is the principal proprietor,

his right extending from the sea about 3½ miles up the river, is now let at a yearly rent of about £2,000 sterling. There are from 160 to 190 men usually employed by the tacksmen of these fishings in the different departments of the work. The staple manufactures of this county are those of linen-yarn and linen-cloth, which at one time were carried on to a very considerable extent at Banff, Cullen, Keith, and Portsoy, and gave employment to a great number of men and women in the different operations of heckling, spinning, weaving, and bleaching. There were likewise at Banff and Portsoy very extensive manufactures of stocking-threads, which were chiefly sent to Nottingham and Leicester. There are several tan-works and some extensive distilleries in the county.

The roads and other communications in the lowlands of Banffshire are numerous and very convenient; but those in the uplands are scanty. The two principal roads through it are the two roads from Aberdeen to Inverness, by way respectively of Banff and Huntly, the former across the broadest part of the county along the coast, and the latter across the narrowest part at Keith. The railways are a line southward from Banff to Turriff and Aberdeen; a line south-westward from Banff to Keith; a branch from this to Portsoy; and the Aberdeen and Inverness line, past Keith, along Strathisla. The towns and principal villages are Banff, Keith, Fife-Keith, Buckie, Cullen, Dufftown, Tomintoul, Charlestown, Whitehills, Fetterangus, Gardentown, Macduff, Aherchirder, and Findochty. The principal mansions are Gordon Castle, the Duke of Richmond; Duff House, Balveny Castle, Rothiemay, Auchintoul, and Mount-Coffer House, the Earl of Fife; Cullen House, the Earl of Seafield; Forglan and Birkenbog, Sir George S. Abercrombie, Bart.; Letterfourie, Sir Robert Gordon, Bart.; Edingight House, Sir James Milne Innes, Bart.; Glenbarry House, William J. Tayler; Mayen House, William Duff, Esq.; Park House, L. Duff Gordon-Duff, Esq.; Auchlunkart House, A. Steuart, Esq.; and Cairnfield House, John Gordon, Esq.

There are 25 parishes in Banffshire; and 8 of these are in the presbytery of Strathbogie, 8 in the presbytery of Forfyce, and 9 in four other presbyteries,—12 in the synod of Moray and 13 in the synod of Aberdeen. There are also 6 chapels of ease,—all in the coast districts, and 4 of them in the presbytery of Forfyce. There are in Banffshire, in connexion with the Free church of Scotland, 23 churches and 1 preaching-station, classified in the same way as the parishes of the Establishment; in connexion with the United Presbyterian Synod, 8 churches constituting chiefly its presbytery of Banffshire; in connexion with the Congregational Union of Scotland, 3 churches; in connexion with the Scottish Episcopal church, 3 chapels in its diocese of Aberdeen and 2 in its diocese of Moray; and in connexion with the Roman Catholic body 8 chapels. In 1837, there were 25 parochial schools, attended by 1,238 scholars, 80 private schools attended by 2,932 scholars, and 31 other private schools, the attendance at which was not reported.

The sheriff court for Banffshire is held at Banff every Wednesday for ordinary business, and Thursday for proofs, during session; and there are three sessions. The first begins on 15th January, or first ordinary court day thereafter, and continues till 15th March; the second begins on 3d or 4th April; and continues till 31st July; the third begins on 1st October, and continues till 15th December. Small debt courts are held at Banff on every Tuesday during session, and on the first Tuesday of every month in vacation; at Buckie, on the Tuesday before the

second Thursday of January, April, July, and October; at Keith, on the Wednesday before the second Thursday of each of the same months; at Dufftown, on the second Thursday of each of the same months; and at Tomintoul, on the Friday after the second Thursday of April and October. The valued rent of the county in 1674 was £79,200 Scots; and the present real rental is about £180,000 sterling. The annual value of assessed property in 1815 was £88,942; and in 1865, £182,885. The assessment in 1864-5, for police was 1½d., and for rogue-money and prisons, ¾d. per pound. The parliamentary constituency in 1865 was 1,062. Population in 1801, 37,216; in 1811, 38,433; in 1821, 43,663; in 1831, 48,337; in 1841, 49,679; in 1861, 56,020. Inhabited houses in 1861, 10,452; uninhabited, 305; building, 87. The number of families in 1831 was 10,855; and of these 4,264 were engaged in agriculture, and 2,456 in trade, handicraft, and manufacture. The average yearly number of crimes was 24 in 1836-40, 16 in 1846-50, and 23 in 1856-60. The number of prisoners in Banff jail during the year July 1862-June 1863 was 95. The number of registered poor in 1862-63 was 1,913, and of casual poor, 371; and the expenditure for the former was £12,689, and for the latter, £329.

BANFFSHIRE RAILWAY. A project was formed in 1845 to construct a railway from Dufftown, near the Richmond and Teninver lime-works, along the valley of the Isla, past Keith and Fife-Keith, through Boghain, within about 1½ mile of Fochabers, and about one mile east of Gordon Castle, round the hill of Fochabers, on to Port Gordon. Total distance, about 21 miles; estimated expense, £120,000. Another project contemplated an extension of the railway, 10 miles, from Dufftown to Achbreck, where the Duke of Richmond proposed to erect a village and smelting furnaces. The actual Banffshire railway is a line of 16½ miles from a junction at Grange to Banff harbour, with a branch of 3½ miles to Portsoy. This was opened in 1859; and an extension of it to Port-Gordon, 14½ miles, was authorized in 1863.

BANGOUR, an estate in the parish of Uphall, in Linlithgowshire, which has been for many generations the residence of a branch of the Hamiltons, one of whom, William, second son of James Hamilton of Bangour, holds an honourable name in Scottish song. He was born in 1704. He engaged in the Rebellion of 1745, and celebrated the victory won by Charles's arms on the 21st September, 1745, by an 'Ode on the Battle of Gladsmuir.' His poems were collected and published in 1748, and again in 1760. They are inserted in the 9th volume of Anderson's 'British Poets,' and in the 15th of Chalmers's 'English Poets.' His finest effusion is the exquisite ballad, 'The Braes of Yarrow,' founded on an ancient ballad called 'The Dowie dens of Yarrow.'

BANKEND, a village with a post-office, on the right bank of Lochar Water, and on the eastern border of the parish of Coerlaverock, 2 miles east of Glencleap, Dumfries-shire. Population, 189.

BANKEND, a hamlet in the parish of Kirkcunzeon, contiguous to the village of Kirkcunzeon, Kirkcubrightshire.

BANKFOOT, a village with a post-office, on the Corral burn, a little above its confluence with the Garry, in the parish of Auchtergaven, Perthshire. It is an entirely modern village, built on ground fenced by Mr. Wylie of Airlywright. Here are two United Presbyterian Meeting-houses; and in the vicinity are the parish church and the village of Cairneyhill. A savings' bank was instituted here in 1833. A large proportion of the inhabitants are weavers. Population, 748.

BANKFOOT AND GADGIRTH-HOLM, a joint

hamlet in the parish of Coylton, Ayrshire. Population, 77.

BANKHEAD, a hamlet in the parish of Monikie, Forfarshire.

BANKHEAD, a village within the parliamentary boundary of the burgh of Wick, Caithness-shire.

BANKS, a hamlet in the parish of Monswald, Dumfries-shire.

BANKTON, the seat of the gallant Colonel Gardiner, who fell at the battle of Prestonpans—or Gladsmuir, as it is sometimes called—in 1745, in the parish of Prestonpans, and shire of Haddington, 1 mile north-west of Tranent. It was afterwards the seat of Andrew Macdowall, Esq., advocate, who, on his promotion to the bench, took the title of Lord Bankton from it.

BANKTON-PARK, a village in the parish of Kettle, a little north-west of the village of Kettle, Fifeshire. It is entirely modern. Population in 1851, 136.

BANNATYNE (POET). See **PORT-BANNATYNE**.

BANNAVIE. See **CALEDONIAN CANAL**.

BANNOCK (THE), a rivulet of Stirlingshire. It rises in Loch Conlter, on the south side of the Gillies hill, and flows in a winding course, between steep and rugged banks, eastward to Milton, passing to the south of Greysteel farm-house, where the bank has a steep southern declivity, and to the south of Caldam-hill, between which eminence and the town are two morasses, one on each side of the old Kilsyth road. At Milton, on the road from St. Ninians to Glasgow, the Bannock turns towards the north-east, winding in that direction, through a deep and rugged valley, to the village of Bannockburn; and, after a course of a few miles, it falls into the Forth.

BANNOCKBURN, a village with a post-office in the parish of St. Ninians, Stirlingshire. It stands on the road from Stirling to Falkirk, betw en St. Ninians and Torwood, 2½ miles south-east of Stirling, and 9 miles north-west of Falkirk. It has a station on the Scottish Central railway. It is cut by the Bannock into two parts, which are known as Upper and Lower Bannockburn. It is a thriving seat of industry, and has greatly increased since the early part of the present century. A large proportion of the inhabitants are engaged in the manufacture of carpets, tartans, and shawls. Some also are engaged in a tan-work or in malting; and others are colliers. The Bannockburn coal is considered to be of very excellent quality, a ton of it yielding 11 cwt. of coke. Fairs are held on the first Tuesday of June and on the first Tuesday of October. There are three places of worship,—a Chapel of Ease, a Free church, and an United Presbyterian church. The yearly sum raised in connexion with the Free church in 1865 was £348 3s. 10d. Population in 1841, 2,205; in 1861, 2,258. Horses, 277.

The famous and decisive battle of Bannockburn was fought in the neighbourhood of this village, on Monday, June 24th, 1314. The Scottish army under the Bruce, and mustering 30,000 disciplined men, and about half that number of disorderly attendants, first rendezvoused at the Torwood, between Falkirk and Stirling. The English army, commanded by Edward II. in person, and reported to have been in the proportion of at least three to one to that of the Scotch, approached from the side of Falkirk, and encamped on the north of Torwood. The Scottish army, meanwhile, drew nearer Stirling, and posted themselves behind the Bannock. They occupied several small eminences upon the south and west of the present village of St. Ninians; their line extending in a north-easterly direction from the brook of Bannock, on which their right flank rested, to the elevated ground above St. Ninians, on which their

extreme left rested. Upon the summit of one of these eminences, now called Brock's brae, is a large granite stone sunk in the earth, with a round hole, about four inches in diameter, and the same in depth, in which, according to tradition, Bruce's standard was fixed, and near it the royal pavilion was erected. This stone is well known in the neighbourhood by the name of the Bored stone. Thus the two armies lay facing each other, at a mile's distance, with the Bannock running in a narrow valley between them. Stirling castle was still in the hands of the English. Edward Bruce had, in the preceding spring, besieged it for several months; but, finding himself unable to reduce it, had abandoned the enterprise. By a treaty, however, between Edward and Philip Moubray the governor, it had been agreed, that, if the garrison received no relief from England before St. John the Baptist's day, they should then surrender to the Scots. Robert was much dissatisfied with his brother's terms; but, to save his honour, confirmed the treaty. The day before the battle, a body of cavalry, to the number of 880, was detached from the English camp, under the conduct of Sir Robert Clifford, to the relief of the castle. These, having marched through low grounds upon the edge of the carse, had passed the Scottish army on their left before they were observed. The King himself was among the first to perceive them; and, desiring his nephew, Randolph, who commanded the left wing, to turn his eyes towards the quarter where they were making their appearance, in the crofts north of St. Ninians, said to him, angrily, "Thoughtless man! you have suffered the enemy to pass. A rose has this day fallen from your chaplet!" Randolph, feeling the reproach severely, instantly pursued them with 500 foot; and coming up with them in the plain, where the modern village of Newhouse stands, commenced a sharp action in sight of both armies, and of the castle. Clifford's squadron wheeling round, and placing their spears in rest, charged the Scots at full speed; but Randolph having formed his infantry into a square with their spears protended on every side, and resting on the ground, successfully repelled the first fierce onset, and successive charges equally desperate. Much valour was displayed on both sides; and it was for some time doubtful who should obtain the victory. Bruce, attended by several of his officers, beheld this rencounter from a rising ground supposed to be the round hill immediately west of St. Ninians, now called Cockshot hill. Douglas, perceiving the jeopardy of his brave friend, asked leave to hasten with a reinforcement to his support. This the king at first refused; but, upon his afterwards consenting, Douglas put his soldiers in motion. Perceiving, however, on the way, that Randolph was on the point of victory, he stopped short, that they who had long fought so hard might enjoy undivided glory. The English were entirely defeated with great slaughter. Among the slain was William Daynecourt, a knight and commander of great renown, who had fallen in the beginning of the action. The loss of the Scots was very inconsiderable; some assert that it amounted only to a single yeoman. Randolph and his company, covered with dust and glory, returned to the camp, amidst acclamations of joy. To perpetuate the memory of the victory, two large stones were erected in the field—where they are still to be seen—at the north end of the village of Newhouse, about a quarter of a mile from the south port of Stirling. Another incident happened, in the same day, which contributed greatly to inspire the Scots forces. King Robert, according to Barbour, was ill mounted, carrying a battle-axe, and, on his bassinet-helmet, wearing, for distinction, a crown. Thus

externally distinguished, he was riding upon a little palfrey, in front of his foremost line, regulating their order; when an English knight, who was ranked amongst the bravest in Edward's army, Sir Henry de Bohun, came galloping furiously up to him, to engage him in single combat; expecting, by this act of chivalry, to end the contest, and gain immortal fame. But the enterprising champion, having missed his blow, was instantly struck dead by the king, who raising himself in his stirrups, as his assailant passed, with one blow of his battle-axe cleft his head in two, shivering the handle of his own weapon with the violence of the blow. The Scottish chiefs remonstrated with their king for having so rashly exposed his precious life. He felt the justice of their censures at so critical a juncture, but playfully evaded further confession by affecting to be chiefly concerned for the loss of his good battle-axe. The incident is thus recorded by Barbour:—

"And quhen Glosyster and Herford war
With their bataill, approachand ner,
Befor thaim all thar con ryndand,
With helm on heid, and sper in hand
Schyr Henry the Boune, the worthi,
That was a wycht knyght, and a hardy;
And to the Erle off Herford casyne:
Armyt in armys gud and fyne;
Come on a sted, a bow schote ner,
Befor all othyr that thar war;
And knew the King, for that he saw
Him swa rang his men on raw;
And by the crowne, that was set
Alsua upon his bassynet,
And towarth him he went in by,
And [quhen] the King swa aperly
Saw him cum, forouth all his feris,
In hy fill him the hors he steris,
And quhen Schyr Henry saw the King
Cum on, for owtyn abaying,
Till him he raid in full gret hy,
He thought that he suid weill lychtly
Wyn him, and haf him at his will,
Sen he him horsyt saw sa ill,
Sprent that samyn in fill a ling
Schyr Henry myssit the noble King.
And he, that in his steryps stude,
With the ax that was hard and gud,
With sa gret mayne raucht him a dyn,
That nothyr hat, na helm, mycht stynt
The hevy dusche that he him gave,
That ner the heid till he mays clave.
The hand ax schaft fruscit in twa;
And he doune to the erd gan ga
All flatynys, for him failly mycht.
This was the fryst strak off the fycht."

The heroic achievement performed by their King before their eyes, raised the spirits of the Scots to the highest pitch.

The day was now far spent, and as Edward did not seem inclined to press a general engagement, but had drawn off to the low grounds to the right and rear of his original position, the Scots army passed the night in arms upon the field. Next morning, being Monday, the 24th of June, all was early in motion on both sides. Religious sentiments in the Scots were mingled with military ardour. A solemn mass was pronounced by Maurice, abbot of Inchaffray; who also administered the sacrament to the king, and the great officers about him, while inferior priests did the same to the rest of the army. Then, after a sober repast, they formed in order of battle, in a tract of ground, now called Nether Touchadam, which lies along the declivity of a gently rising hill, about a mile due south from Stirling castle. This situation had been previously chosen on account of its advantages. Upon the right, they had a range of steep rocks, whither the haggage-men had retired, and which, from this circumstance, has been called Gillie's or Servant's hill. In their front were the steep banks of the rivulet of Bannock. Upon the left lay a

morass, now called Milton bog, from its vicinity to the small village of that name. Much of this bog is still undrained; and part of it is now a mill-pond. As it was then the middle of summer, it was almost quite dry; but Robert had recourse to a stratagem, to prevent any attack from that quarter. He had, some time before, ordered numbers of pits to be dug in the morass and the fields on the left, and covered with green turf supported by stakes, so as to exhibit the appearance of firm ground. These pits were a foot in breadth, and from two to three feet deep, and placed so close together as to resemble the cells in a honeycomb. It does not appear, however, that the English attempted to charge over this dangerous ground during the conflict, the great struggle being made considerably to the right of this ground. He also made calthorps be scattered there; some of which have been found in the memory of people yet alive. By these means, added to the natural strength of the ground, the Scottish army stood as within an intrenchment. Barbour, who lived near those times, mentions a park with trees, through which the English had to pass, before they could attack the Scots; and says, that Robert chose this situation, that, besides other advantages, the trees might prove an impediment to the enemy's cavalry. The improvements of agriculture, and other accidents, have, in the lapse of four hundred years, much altered the face of this as well as other parts of the country: vestiges, however, of this park still remain, and numerous stumps of trees are seen all around the field where the battle was fought. A farm-house, situated almost in the middle, goes by the name of the Park; and a mill built upon the south bank of the rivulet, nearly opposite to where the centre of Robert's army stood, is known by the name of Park-mill. The Scottish army was drawn up in four divisions, and their front extended near a mile in length. The right wing, which was upon the highest ground, and was strengthened by a body of cavalry under Keith, Marschal of Scotland, was commanded by Edward Bruce, the king's brother. The left was posted on the low grounds, near the morass, under the direction of Walter, Lord-High-Steward, and Sir James Douglas, both of whom had that morning been knighted by their sovereign. Bruce himself took the command of the reserve, which was drawn up immediately behind the centre. Along with him was a body of 500 cavalry well-armed and mounted; all the rest of the Scottish army were on foot. The enemy were fast approaching in three great bodies, led on by the English monarch in person, and by the Earls of Hereford and Gloucester, who were ranked among the best generals that England could then produce. Their centre was formed of infantry, and the wings of cavalry, many of whom were armed cap-a-pec. Squadrons of archers were also planted upon the wings, and at certain distances along the front. Edward was attended by two knights, Sir Giles de Argentine, and Sir Aymer de Vallance, who rode, according to the phrase of these days, at his bridle. That monarch, who had imagined that the Scots would never face his formidable host, was much astonished when he beheld their order and determined resolution to give him battle. As he expressed his surprise, Sir Ingram Umfraville took the opportunity of suggesting a plan likely to insure a cheap and bloodless victory. He counselled him to make a feint of retreating with the whole army, till they had got behind their tents; and, as this would tempt the Scots from their ranks for the sake of plunder, to turn about suddenly, and fall upon them. The counsel was rejected. Edward thought there was no need of stratagem to defeat so

small a handful. Among the other occurrences of this memorable day, historians mention an incident. As the two armies were on the point of engaging, the abbot of Inchaffray, barefooted, and with a crucifix in his hand, walked slowly along the Scottish line; when they all fell down upon their knees in the act of devotion. The enemy, observing them in so uncommon a posture, concluded that they were frightened into submission, and that, by kneeling, when they should have been ready to fight, they meant to surrender at discretion, and only begged their lives. "See!" cried Edward, "they are kneeling; they crave mercy!" "They do, my liege," replied Umfraville; "but it is from God, not from us." "To the charge, then!" replied Edward; and Gloucester and Hereford threw themselves impetuously upon the right wing of the Scots, which received them firmly; while Randolph pressed forward with the centre division of the Scotch army upon the main body of the English. They rushed furiously upon the enemy, and met with a warm reception. The ardour of one of the Scottish divisions had carried them too far, and occasioned their being sorely galled by a body of 10,000 English archers who attacked them in flank. These, however, were soon dispersed by Sir Robert Keith, whom the King had despatched with the reserve of 500 horse, and who, fetching a circuit round Milton bog, suddenly charged the left flank and rear of the English bowmen, who having no weapons fit to defend themselves against horse, were instantly thrown into disorder, and chased from the field:—

"The Inglis archeris schot sa fast,
That mycht thair schot baff ony last,
It had been hard to Scottis men.
Bot King Robert, that wele gan ken
That thair archeris war peralouss,
And thair schot rycht hard and grewouss,
Ordanyt, forouth the assemble,
Hys marschell with a gret menyne,
Fyve hundre armyt in to stele,
That on lycht hors war horsyt welle,
For to pryk among the archeris;
And swa assaile thaim with thair speris,
That thair na layser half to schute.
This marschell that Ik of mute,
That Schyr Robert of Keyth was cauld,
As Ik befor her has yow tauld,
Quhen he saw the battailis sua
Assemblit, and to gidder ga,
And saw the archeris schoyt stoutly;
With all thaim of his company,
In hy apon thaim gan he rid;
And our tak thaim at a sid;
And ruscht among thaim sa rudly,
Stekand thaim sa dispitously,
And in sic fusoun berand down,
And slayand thaim, for owyn ransoun,
That thair thaim scalyt eirilkane.
And fra that tyme furth thar wes nane
That assemblyt schot to ma.
Quhen Scottis archeris saw that thair sua
War rebatyit, thair wouxt hardy,
And with all thair mycht schot evely
Among the hors men, that thar raid;
And woundis wud to thaim that maid;
And slew of thaim a full gret dele."

Barbour's Bruce, Book ix., v. 228.

A strong body of the enemy's cavalry charged the right wing, which Edward Bruce commanded, with such irresistible fury, that he had been quite overpowered, had not Randolph, who appears to have been then unemployed, hastened to his assistance. The battle was now at the hottest; and it was yet uncertain how the day should go. Bruce had brought up his whole reserve; but the English continued to charge with unabated vigour, while the Scots received them with an inflexible intrepidity; each individual fighting as if victory depended on his single arm. An occurrence—which some

represent as an accidental sally of patriotic enthusiasm, others as a premeditated stratagem of Robert's—suddenly altered the face of affairs, and contributed greatly to victory. Above 15,000 servants and attendants of the Scottish army, had been ordered, before the battle, to retire, with the baggage, behind the adjoining hill; but having, during the engagement, arranged themselves in a martial form, some on foot, and others mounted on the baggage-horses, they marched to the top, and displaying, on long poles, white sheets instead of banners, descended towards the field with hideous shouts. The English, taking them for a fresh reinforcement of the foe, were seized with so great a panic that they gave way in much confusion. Buchanan says, that the English King was the first that fled; but in this contradicts all other historians, who affirm, that Edward was among the last in the field. Nay, according to some accounts, he would not be persuaded to retire, till Aymer de Vallance, seeing the day lost, took hold of his bridle, and led him off. Sir Giles de Argentine, the other knight who waited on Edward, accompanied him a short way off the field, till he saw him placed in safety; he then wheeled round, and putting himself at the head of a battalion made a vigorous effort to retrieve the disastrous state of affairs, but was soon overwhelmed and slain. He was a champion of high renown; and, having signalized himself in several battles with the Saracens, was reckoned the third knight of his day. The Scots pursued, and made great havoc among the enemy, especially in passing the river, where, from the irregularity of the ground, they could not preserve the smallest order. A mile from the field of battle, a small bit of ground goes by the name of Bloody fold; where, according to tradition, a party of the English faced about and made a stand, but, after sustaining a dreadful slaughter, were forced to continue their flight. This account corresponds to several histories of the Earl of Gloucester. Seeing the rout of his countrymen, he made an effort to renew the battle, at the head of his military tenants, and, after having personally done much execution, was, with most of his party, cut to pieces. The Scottish writers make the enemy's loss, in the battle and pursuit, 50,000, and their own 4,000. Among the latter, Sir William Vipont and Sir Walter Ross were the only persons of distinction. A proportion almost incredible. The slain on the English side were all decently interred by Bruce's order; who, even in the heat of victory, could not refrain from shedding tears over several who had been his intimate friends. The corpse of the Earl of Gloucester was carried that night to the church of St. Ninians, where it lay, till, together with that of Sir Robert Clifford, it was sent to the English monarch. Twenty-seven English barons, two hundred knights, and seven hundred esquires, fell in the field; the number of prisoners also was very great; and amongst them were many of high rank, who were treated with the utmost civility. The remains of the vanquished were scattered all over the country. Many ran to the castle; and not a few, attempting the Forth, were drowned. The Earl of Hereford, the surviving general, retreated with a large body towards Bothwell, and threw himself, with a few of the chief officers, into that castle, which was then garrisoned by the English. Being hard pressed, he surrendered; and was soon exchanged against Bruce's queen and daughter, and some others of his friends, who had been captive eight years in England. King Edward escaped with much difficulty. Retreating from the field of battle he rode to the castle; but was told by the governor that he could not long enjoy safety

there, as it could not be defended against the victors. Taking a compass, to shun the vigilance of the Scots, he made the best of his way homeward, accompanied by fifteen noblemen, and a body of 500 cavalry. He was closely pursued above forty miles by Sir James Douglas, who, with a party of light horse, kept upon his rear, and was often very near him. How hard he was put to, may be guessed from a vow which he made in his flight, to build and endow a religious house in Oxford, should it please God to favour his escape. He was on the point of being made prisoner, when he was received into the castle of Dunbar by Gospatrick, Earl of March, who was in the English interest. Douglas waited a few days in the neighbourhood, in expectation of his attempting to go home by land. He escaped, however, by sea in a fisherman's boat. His stay at Dunbar had been very short. Three days after the battle, he issued a proclamation from Berwick, announcing the loss of his seal, and forbidding all persons to obey any order proceeding from it, without some other evidence of that order's being his. "The riches obtained by the plunder of the English," says Mr. Tytler, "and the subsequent ransom paid for the multitude of the prisoners, must have been very great. Their exact amount cannot be easily estimated, but some idea of its greatness may be formed by the tone of deep lamentation assumed by the Monk of Malmesbury. 'O day of vengeance and of misfortune!' says he, 'day of disgrace and perdition! unworthy to be included in the circle of the year, which tarnished the fame of England, and enriched the Scots with the plunder of the precious stuffs of our nation, to the extent of two hundred thousand pounds. Alas! of how many noble harons, and accomplished knights, and high-spirited young soldiers,—of what a store of excellent arms, and golden vessels, and costly vestments, did one short and miserable day deprive us! Two hundred thousand pounds of money in those times, amounts to about six hundred thousand pounds weight of silver, or nearly three millions of our present money. The loss of the Scots in the battle was incredibly small, and proves how effectually the Scottish squares had repelled the English cavalry.'"

BANOVIE. See BLAIR-ATHOLE.

BANTON, a village in the parish of Kilsyth, 1½ mile north-east of the town of Kilsyth, Stirlingshire. Here are a Chapel of Ease and an endowed school. The inhabitants are principally miners, colliers, and sickle-makers. Population, 130.

BAR-, or **BARR-**, any small tract of ground, whether inland or insular, which lies higher than the country around it. The word means a top or summit, and is used in that sense as a prefix in a few Scottish topographical names.

BARA. See GARVALD.

BARA. See BARRA.

BARACHNIE, a village in the Crosshill district of the parish of Old Monkland, Lanarkshire. Population, 235.

BARASSIE, a station on the Troon and Kilmarnock railway, 7 miles from Ayr and 8 miles from Kilmarnock, Ayrshire.

BARBARAVILLE, a village in the parish of Kilmuir-Easter, Ross-shire. Population, 173.

BARBASWALLS, a village in the parish of Ruthven, Forfarshire.

BARBAUCHLAW. See LUGGIE (THE).

BARBER, a hamlet in the parish of Rosencath, Dumbartonshire.

BARCALDINE. See ARDCHATTAN.

BARCLOSH. See KIRKGUNZEON.

BARDOWIE LOCH. See BALDERNOCK.

BARGARRAN, a locality on the eastern border of the parish of Erskine, Renfrewshire, famous for furnishing the occasion of one of the last judicial trials for witchcraft in Scotland. The case is narrated in Arnot's 'Collection of Criminal Trials,' and also in a small duodecimo volume, entitled 'The Witches of Renfrewshire.'

BARGATON LOCH. See **TONGLAND**.

BARGEEDIE, a village in the parish of Old Monkland, Lanarkshire.

BARHEAD. See **BARRHEAD**.

BARHILL. See **BARRHILL**.

BARHOLM. See **KIRKMABRECK**.

BARJARG, a village and an estate in the parish of Keir, Dumfriesshire. Population of the village in 1851, 58. There is an extensive lime-work on the estate. The limestone has generally a reddish colour, and contains about 54 per cent. of carbonate of lime, and 36 per cent. of carbonate of magnesia. See **KEIR**.

BARLEYSIDE, a village in the parish of Falkirk, Stirlingshire.

BARLOCCO ISLES. See **WIGTOWN BAY**.

BARMEKIN. See **ECHT**.

BARNBURE. See **MAUCHLINE**.

BARNOUGLE CASTLE, an ancient seat of the Moubrays, in the parish of Dalmeny, Linlithgowshire. In 1620, it passed, by sale, from the Moubrays; and it is now the property of the Earl of Roseberry. Its site is close on the frith of Forth; and the sea has, in its encroachments here, completely washed away the lawn before it, so that it was long since found necessary to erect a bulwark for the safety of the castle. See **DALMENY**.

BARNHILL, a modern village, on the links of the parish of Monifieth, Forfarshire. Population in 1851, 41.

BARNHILL, a village in the parish of Blantyre, Lanarkshire. Population, 165.

BARNHILL'S BED. See **MINTO**.

BARNS (EAST), a village in the parish of Dunbar, Haddingtonshire; on the great line of road from Berwick to Edinburgh, and 2½ miles south-east of Dunbar. An Antiburgher congregation which used to assemble here, removed their place of meeting to Dunbar in 1820. There is a parochial school here, endowed with the interest of £150. Population in 1851, 125.

BARNS (WEST), a village in the same parish, and on the same line of road, 2 miles west of Dunbar; on a small stream called the Biel, which here flows into Belhaven bay. Here also is a parochial school, having all the legal endowments, with the maximum salary. Population, 170.

BARNS OF AYR. Near the end of the 13th century, during the usurped and military possession of Scotland by Edward I. of England, there was on the south-east side of the town of Ayr, an encampment or temporary barrack of a portion of his forces; and this is known in history as the Barns of Ayr. The surrounding country had been the focus of an insurrection against the English tyranny; and was viewed by the creatures and officers of Edward with wakeful suspicion and malicious dislike. The well-affected and the ill-disposed were regarded with nearly the same feelings,—or rather, the former were either carelessly or sullenly confounded with the latter; and all persons of the upper classes, whatever might be their partisanship, their discretion, or their general character, were viewed indiscriminately as fit subjects to be victimized to the usurper's policy and bloody despotism. Under pretence of holding a Justice-Aire, all near the town were summoned to attend; and a number who appeared, including Sir Reginald Crawford, Sir Bryce Blair, and

Sir Hugh Montgomerie, were treacherously made prisoners and put to death, without even the formality of a trial. Sir William Wallace at the time was not far off, at the head of one of those small fleet flying brigades, which so often surprised and confounded his enemies; and when he heard of the infamous occurrence, he determined to make a severe retaliation. Selecting fifty of his choicest men, and strengthened by a number of the retainers of the murdered gentlemen, he hastened to the temporary barracks of the English, or Barns of Ayr, approached them stealthily, and surrounded them at dead of night, while their inmates were fast asleep in fancied security and after a deep carousal. He placed a cordon of men around them to prevent the possibility of escape, procured combustibles, and set fire so promptly and furiously to the pitch-covered thatch of the roofs that the whole erections were speedily in a blaze. The roused sleepers within rose and rushed outward, screaming and horrified, but were everywhere confronted with Scottish swords, and were either killed in the act of flight or driven back to die in the flames. No fewer than about five hundred perished. Wallace, it is said, went away before the tragedy was completed; and when at an elevated spot, about two miles distant, where vestiges of an old ecclesiastical ruin popularly called Burn-weel Kirk still exist, he looked back to the blazing scene of his vengeance, and exclaimed to his followers, 'The Barns of Ayr burn weel!' Miss Baillie has made good use of this story in her Metrical Legend. Many of the romancing histories of Scotland treat it as one of the most remarkable minor incidents in the story of the war of independence; and the local traditions of Ayrshire proudly point to it as high evidence of the eminent connexion of their country with the life and achievements of Scotland's greatest hero.

BARNTON. See **CRAMOND**.

BARNWELL, a suppressed parish in the district of Kyle, Ayrshire. It was suppressed in the 17th century; and its territory was divided between Craigie and Tarbolton, while the greater part of its stipend was given to Stair.

BARNYARDS, a village in the parish of Kilconquhar, Fifeshire. Population, 232.

BAROCHAN. See **HOUSTOUN**.

BARON-HILL. See **ROTHERSAY**.

BARONY PARISH. See **GLASGOW**.

BARR-. See **BAR-**.

BARR, a parish containing a village of the same name with a post-office, in the south-east of Carrick, Ayrshire. It is bounded by Kirkcudbrightshire, and by the parishes of Straiton, Dailly, Colmonell, and Girvan. Its length is about 20 miles, and its breadth about 8. It comprises about 55,190 acres, but is so moorish and billy that not more than 1,200 acres are in tillage, and not much more than another 1,000 capable of profitable improvement. Its heights are extensively disposed in ranges, with extreme altitudes of from 1,000 to 2,700 feet. The Stinchar rises in it, and flows through it from north-east to south-west between two high ranges. The principal roads which intersect it are the old and new roads from Wigtownshire to Ayr; the former running up the dale of the Minnock water from south to north, on the eastern side of the parish; the latter branching off in a north-east direction from the former, at Rowantree. Another road branches off and runs north-west to the village. A third stream is the Muck water, which rises among the hills to the south, and flows in a direction parallel to the Stinchar, to its confluence with the Dusk in the parish of Colmonell. There are a few small lochs, and several extensive morasses. The village of

Barr is situated on the south side of the Stinchar, at the confluence of the Gregg water with that river, 7 miles from Girvan. Its population in 1861 was 380. A fair is held at it on the last Thursday of May; and this was formerly held at Kirk Dominæ, a name given to the ruins of an ancient Roman Catholic chapel which still exist, about a mile to the south-west of the church. Population of the parish in 1831, 941; in 1861, 910. Houses, 181. Assessed property in 1860, £8,858.

This parish, formerly a vicarage, is in the presbytery of Ayr, and synod of Glasgow and Ayr. It was disjoined in 1653 from the parishes of Girvan and Dailly. Patron, the Crown. Stipend, £331 3s. 1d.; glebe, £18. Unappropriated tithes, £154. Schoolmaster's salary, now £56 10s., with £30 fees and other emoluments. The parish church is an old building, and contains 390 sittings. There is a Free church; attendance, 145; yearly sum raised in 1865, £128 4s. 3½d.

BARR, a glen in the parish of Killean, and west side of the peninsula of Kintyre, Argyleshire. It opens to the ocean southward of the Mull of Islay, and about 12 miles north-west of Campbelltown; and at its head is Benantuire or Wild Boar's Mountain, with an altitude of 2,170 feet above the level of the sea.

BARR, an estate in Renfrewshire. See LOCHWINNOCH.

BARRA, a hill, about 600 feet high, in the parish of Bourtie, Aberdeenshire. See BOURTIE.

BARRA, or BARRAY, an island parish at the southern extremity of the Outer Hebrides, Invernessshire. It comprises a group of nine inhabited islands and upwards of a dozen uninhabited ones. The nearest land to it on the north is South Uist, distant 6 miles; on the east, Canua and Rum, distant 26 miles; on the south, Tiree, distant 30 miles; and on the west, America. It extends south-westward, in the same direction as the main body of the Outer Hebrides, and looks on the map as if forming a tail to that great lizard-shaped group. Its length is 28 miles; and its greatest breadth is 8 miles. It is all one estate, and, from time immemorial till December 1840, was the property of the family of Macneil; but was then sold for £38,050 to Colonel Gordon of Cluny, and was reckoned to contain 4,000 imperial acres of arable land, and 18,000 acres of meadow and hill-pasture. The land rental of it was £2,458 10s. 7d. Assessed property in 1843, £2,469 12s. 9d. The inhabited islands are Barra, Watersa, Sandera, Pabba, Mingala, Bernera, Hclesa, Fladda, and Fuda. The island of Barra contains five-sixths of the whole population, and is also the main island in point of size. It lies in the northern part of the parish, and measures about 12 miles in length, and about 6 miles in extreme breadth, but is much intersected by arms of the sea. Watersa, separated from the main island by a channel of one mile, is about 3 miles in length, and in some places 1½ mile broad. Sandera, to the south of Watersa, and distant 5 miles from Barra, is 2 miles in length and 2 in breadth. Pabba, at the distance of 8 miles from Barra, is 1½ in length, and 1 in breadth. Mingala, at the distance of 12 miles, is 2 miles in length, and 2 in breadth. Bernera—which, from its being called the Bishop's isle, seems to have once belonged to the Bishop of the Isles—16 miles south-south-west of Barra, is 1 mile in length, and ¾ in breadth. All these islands are difficult of access, on account of the strong currents running between them. Close by the island of Mingala is a high rock, with very luxuriant grass on the top of it. The inhabitants of this island climb to the top at the risk of their lives, and by means of a rope

hoist up their widders to fatten on the fine herbage. This must be the Scarpa Verveem mentioned by Buchanan. The island of Barra has a barren rocky appearance, excepting the north end, which is fertile. In the middle and at the south end are some very high hills, presenting a mixture of green sward, rock, and heath. The soil in general is thin and rocky, excepting at the north end. There is also a great deal of sand, which is blown about with every gale of wind, so that a large part of the best corn-land has been thus blown away, or covered with sand. Grazing and sheep husbandry are extensively practised. The Barra breed of ponies was once much celebrated for symmetry, agility, and strength, but has greatly degenerated within the last few years.

Barra held originally of the Kings of Scotland, till the reign of James VI., when an English ship was seized on the coast by Roderick Macneil, then laird of Barra, surnamed Rory the turbulent. Queen Elizabeth complained of this act of piracy committed upon her subjects; upon which the laird was summoned to appear at Edinburgh, to answer for his unjustifiable behaviour; but he treated the summons with contempt. Several attempts were then made to apprehend him, all of which proved unsuccessful, until Mackenzie, tutor of Kintail, undertook to effect by stratagem what others could not do by more direct means. Having come, under cover of a friendly visit, to the castle of Kisimul, where the laird then resided, he invited him and all his retainers on board his vessel, where, not suspecting any hostile design, they suffered themselves to be overpowered with liquor. In this situation poor Rory's friends were easily put on shore, leaving their unconscious chief in the hands of his kidnapper. Kintail hoisted sail under night, and the wind proving fair, was soon out of reach of his pursuers. He at length arrived with his prisoner in Edinburgh, where Rory was immediately put on his trial. Rory confessed to his malpractices, but alleged that he thought himself bound, by his loyalty, to avenge the unpardonable injury done by the queen of England to his own sovereign, and his majesty's mother. By this answer, he obtained his pardon, but forfeited his estate, which was given to Kintail, who restored it back to the laird, on condition of his holding of him, and paying him 60 merks Scots as a yearly fee-duty. Some time after, Sir James Macdonald of Slate married a daughter of Kintail's, who made over the superiority to Sir James. The old residence of the feudal lairds of Barra was a small fortalice in Castle-bay, built upon a rock which must have formerly been almost covered with the sea. This building is of a hexagonal form; the wall is about 30 feet high; and in one of its angles is a high square tower, on the top of which, at the corner immediately above the gate, is a perforated stone through which the gockmau, or watchman, who sat there all night, could let a stone fall upon any one who might attempt to surprise the gate by night. Within the wall are several houses, and a well dug through the middle of the rock. Buchanan calls it an old castle in his time.

There are great quantities of cod and ling caught upon the east coast of Barra. The fishing banks extend from the mouth of Loch Boisdale to Barra-Head. At the close of last century from 20 to 30 boats were generally employed in this business from the latter end of March, or the beginning of April, to the end of June; there were five hands to every boat, and on an average they killed from 1,000 to 1,500 ling each boat. In 1829, the number of boats belonging to this parish employed in the herring, cod, and ling fisheries was 81, manned by

405 hands. The number of cod, ling, and hake fish taken was 31,574; the total quantity cured and dried 1,136 cwt., of which 291 cwt. were exported to Ireland. It does not appear that this fishery has made any progress since the end of last century. Shell fish abound here, such as limpets, mussels, whelks, clams, spout-fish or razor-fish, lobsters, and crabs; but the most valuable to the inhabitants is the shell fish called cockle. It is found upon the great sand at the north end of Barra, in such quantities, that in times of great scarcity all the families upon the island have resorted hither for their subsistence; and it has been computed, that no less than from 100 to 200 horse-loads of cockles have been taken off the sands at low-water, every day of the springtides, during the months of May, June, July, and August. Dean Monroe tells us that, "in the north end of this isle of Barray, there is one rough heigh know, mayne grasse and greine round about it to the head, on the top of quihlk there is one spring and fresh water well. This well truly springs up certain little round white things, less nor the quantity of onfeit corne, lykest to the shape and figure of an little cokill, as it appearit to me. Out of this well runs ther ane little strype downwith to the sea, and quher it enters into the sea ther is ane myle braid of sands, quihlk ebbs ane myle, callit the Traymore of Kilbaray, that is the grate sands of Barray. This ile is all full of grate cokills, and alledgit be the ancient countrymen that the same cokills comes down out of the foresaid hill through the said strype, in the first small forme that we have spoken of, and after ther coming to the sandis growis grate cokills always. Ther is na fairer and more profitable sands for cokills in all the world."

Of harbours, the first towards the north is Ottirvore, which is more properly a roadstead than a harbour; the entrance to it is from the east between the islands of Griskay and Gigha. The next farther south is Flodda sound, which is surrounded by a number of islands, and opens to the south-east; here the largest ships may ride with safety all seasons of the year. Tirvee, or the inland bay, is so called from its cutting far into the middle of the country; here vessels may ride out the hardest gales; it opens also to the south-east. At the south end of Barra is Kistimul-bay, or Castle-bay, so called from the old castle formerly mentioned; it opens to the south. In the island of Watersa is a very commodious harbour for ships of any burden: it is accessible from the south-east between the islands of Sandera and Muldonich. Ottirvore and Flodda are much frequented by ships to and from the Baltic. A vessel sails once a-month from Barra Head to Tohermory; communication is regularly maintained with the post-office of Lochmaddy in North Uist; and private boats ply at all seasons of the year to Glasgow. Population of the island of Barra in 1841, 1,977; in 1861, 1,591. Houses, 324. Population of the parish in 1831, 2,097; in 1861, 1,853. Houses, 368.

This parish is in the presbytery of Uist and synod of Glenelg. Patron, the Crown. Stipend, £165 10s. 5d.; glebe, £7 10s. Schoolmaster's salary, £45, with fees and allowance for a garden. The parish church stands in the centre of the island of Barra, and was built about the year 1834, and contains 250 sittings. A church was erected in Bernera by the parliamentary commissioners at the cost of £1,470. There is a Roman Catholic chapel in the parish, with an attendance of 300; and the large majority of the parishioners are Roman Catholics.

BARRA HEAD, the high ground of the island of Bernera at the southern extremity of the parish of Barra, and of the Outer Hebrides, Inverness-shire. It is situated in north latitude 56° 48', and west

longitude 7° 38'. Here is a splendid lighthouse, built of a beautiful granite, furnished by the island itself. The light stands 680 feet above the level of high water, and is seen in clear weather at the distance of 32 miles. It is an intermittent light, visible during 2½ minutes, and eclipsed during ½ a minute. The lighthouse was erected in 1833. Notwithstanding its great elevation, the sea spray flies over it in jets during high westerly winds.

BARRACHINE. See **BARACHNIE**.

BARRAY. See **BARRA** and **BURRAY**.

BARRHEAD, a manufacturing and post town on the northern border of the parish of Neilston, Renfrewshire. It stands on the south bank of the Levern, and on the road from Glasgow to Irvine, 3 miles south-south-east of Paisley, and 6½ south-west of Glasgow. It is also connected with Glasgow by the Glasgow, Barrhead, and Neilston Direct Railway, on which there are several trains up and down every day. The town has made very rapid progress since about the beginning of the present century; and is now, along with the village of Neilston, a centre of trade to a manufacturing population of between 30,000 and 40,000. It has branch offices of the Union Bank, the Royal Bank, the Bank of Scotland, and the City of Glasgow Bank. A small debt court is held in it every alternate month. There are five places of worship in it,—a Chapel of Ease, a Free church, an United Presbyterian, a Morrisonian, and a Roman Catholic. All these, except the United Presbyterian, have been built since 1837. The yearly sum raised in connexion with the Free church in 1865 was £537 13s. 6½d. The Roman Catholic chapel was opened in 1841, and can accommodate nearly 1,000 persons. Population of the town in 1841, 3,492; in 1861, 6,018. Houses, 430.

BARRHILL, a village with a post-office, in the parish of Colmonell, Ayrshire. It stands nearly in the centre of the parish, on the river Dusk, and on the road from Girvan to Newtown-Stewart. Here is a Free church, whose total yearly proceeds in 1865 amounted to £103 14s. 9½d. Cattle markets are held on the fourth Friday of April, September, and October. The village is quite modern, and had in 1837 about 100 inhabitants.

BARRHILL, an elevation on the mutual border of the parishes of Cumhernauld and Kirkintilloch, about 3 miles west of the village of Cumbermauld, Dumbartonshire. One of the forts in the line of Antoninus' wall stood on its summit; and some vaults belonging to it, all entire, were discovered near the close of last century. The situation commands a view of almost the whole line of the wall, or upwards of 32 miles, from east to west.

BARREL OF BUTTER. See **ORPHIR**.

BARRIE, a parish, containing the village of Barrie and the small post town of Carnoustie, at the south-eastern extremity of Forfarshire. It is bounded by the German Ocean, the frith of Tay, and the parishes of Panbride, Monikie, and Monifieth. Its length is about 4 miles; and its breadth about 3. The coast is flat and sandy; but a high verdant bank, which seems once to have formed the coast-line in this quarter, extends from north-east to south-west, so as to give to the northern division of the parish the appearance of a terrace elevated about 50 feet above the southern division. About one half of the entire area is arable; and the rest is too light and sandy to be capable of cultivation. The south-eastern extremity is the headland of Budden-ness, bearing two lighthouses for guiding vessels into the frith. See **BUDDEN-NESS**. There are six or seven principal landowners. The greater part of the parishioners, both male and female, are more or less engaged in the manufacture of brown and white

linen for the manufacturers of Dundee and Arbroath. The road from Dundee to Arbroath traverses the north-west wing of the parish. The Dundee and Arbroath railway also traverses the interior, and has a station here. The village of Barrie stands a little north-west of the centre of the parish, nearly midway between Dundee and Arbroath. Population of the village in 1851, 217. Population of the parish in 1831, 1,682; in 1861, 2,465. Houses, 601. Assessed property in 1843, £4,051 14s. 9d.

This parish is in the presbytery of Arbroath, and synod of Angus and Mearns. Patron, the Crown. Stipend, £143 12s. 11d.; glebe, £5 10s. Unappropriated tithes, £4 3s. 8d. Schoolmaster's salary, now is £50, with about £30 fees. The parish church was enlarged in 1818, and has 673 sittings. There is a Free church at Barrie; and there are a quondam chapel of ease, now a quoad-sacra parochial church, a Free church, an United Presbyterian church, and a Reformed Presbyterian church, at Carnoustie. Attendance at the Barrie F. church, from 300 to 330; at the Carnoustie F. church, 450; at the U. Presbyterian church, 250. Yearly sum raised in 1865 by the Barrie F. church, £203 14s. 7d.; by the Carnoustie F. church, £435 10s. 11½d. There is one private school. In the neighbourhood of Carnoustie Malcolm II. signally defeated a body of marauding Danes under Canus.

BARSKIMMING. See MAUCHLINE and STAIR.

BARVAS, a parish in the north of the island of Lewis, Ross-shire. It is bounded on two sides by the Atlantic, and on other sides by the parishes of Stornoway and Lochs. Its post-town is Stornoway. Its length south-westward is about 25 miles; and its breadth is about 8 miles. In the extreme north is the terminating promontory of the island, called the Butt of Lewis. All the coast is bold and rugged, having a tremendous surf upon it when the wind blows from the west or the north-west. The soil is in general light and stony, or mossy. The only arable land is along the coast. There is not a tree, and scarcely a shrub throughout the parish. The principal river is the Barvas, which rises in some small lakes on the southern boundary of the parish, and flows northwards, expanding near its mouth into a small loch. The streams contain some trout, and occasionally salmon: on the coast, cod, ling, and haddocks are caught. The interior abounds with plovers, snipes, wild-geese, and ducks. There is a road from the mouth of the Barvas, southward along the eastern bank of that stream, to Stornoway, a distance of about 18 miles. The village of Barvas, together with the parish church, stands on the north side of the mouth of the Barvas. The islands of Rona-Lewis and Sulisker belong to this parish. Population of the parish in 1831, 3,011; in 1861, 4,609. Houses, 846. Assessed property in 1843, £1,941 17s. 7d.; in 1860, £2,586.

This parish is in the presbytery of Lewis, and synod of Glenelg. Patron, the Crown. Stipend, £158 6s. 8d.; glebe, £20. Schoolmaster's salary, £35. The parish church was built about 1794, and contains 300 sittings. There is a government church, under the patronage of the Crown, and with the usual endowment, in the northern district, called Cross or Ness. There is a Free church at Barvas; there is also one in Cross; and the yearly sum raised in 1865 in connexion with the former was £73 7s. 6d., and in connexion with the latter, £116 8s. 8½d. There are five non-parochial schools.

BARVIE (THE), a romantic rivulet of Perthshire, falling into the Earn near Crieff. See MONZIE.

BARWHINNOCK. See TWYNHOLM.

BASS (THE), a stupendous insulated rock, in the parish of North Berwick, Haddingtonshire. It stands in the mouth of the frith of Forth, about 1½ mile from the nearest part of the shore, and about 3½ miles north-east of the town of New Berwick. It measures fully a mile in circumference, and has a height of 420 feet above the surface of the water. Its north side is the loftiest and rises almost sheer up from the sea. Its south side has a somewhat conical form, and ascends with a moderate gradient from near the base. Its surface comprises about seven acres of grassy pasturage. A cavernous passage pierces a great limb of it from north-west to south-east, and can be traversed even at full tide in calm weather, but does not present any remarkable feature. The only landing-place is a flat shelving point on the south-east; and this was long commanded by a small fortalice now in ruins. The scenery of the south side of the frith, with the Bass in near view, is one of the most beautiful in Scotland. As Dr. Moir has said,

"Traced like a map, the landscape lies
In cultured beauty stretching wide;
There Pentland's green activities—
There ocean with its azure tide—
There Arthur's Seat, and, gleaming through,
Thy southern wing, Dunedin blue!
While in the orient, Lammer's daughters,
A distant giant range are seen—
North Berwick Law with cove of green
And Bass, among the waters."

An interesting volume, the joint production of five Edinburgh literati, was published several years ago, entitled, "The Bass Rock, its Civil and Ecclesiastical History, Geology, Martyrology, Zoology, and Botany." Mr. James Miller also gives a variety of curious legendary matter respecting the Bass in notes to a poem, published in 1825, and entitled "St. Baldred of the Bass." This St. Baldred seems to have been a Culdee hermit, of similar character to St. Mungo of Glasgow, with a reputation for good deeds which won him the title of the apostle of East Lothian, and is said to have died on the Bass in the year 606. But the earliest known proprietors of the rock—the earliest parties which appear connected with it in perfectly authentic record—are the ancient family of the Lauders: hence called 'the Lauders of the Bass.' There is a charter in existence in favour of Robert Lauder from William de Lambert, bishop of St. Andrews, dated 1316. This curious document sets forth that 'the island in the sea called the Bass is to be holden by the said Robert and his heirs, from us and our ancestors for ever, with all liberties, commodities, and easements, and with the pertinents, freely and quietly, in all and by all, without any reservation; paying, therefore, the said Robert and his heirs, to us and our successors at Tynnyngham, at the term of Whitsunday, yearly, one pound of white wax, in name of feu-favour, for all lands, services, and demands, which can be exacted or demanded by us and our successors for the said island with the pertinents.'

The Bass remained in the possession of the Lauders for several centuries. But about the middle of the seventeenth century, it belonged to the Laird of Waughton. Cromwell was then on the eve of his departure to invade Scotland; and a fear being entertained that the public records of the church would be in danger, it was proposed that the Bass might be made secure for the registers, as it had been in a former day of calamity! The proprietor 'most gladlie offered to receive them, promising his utmost

care to secure and preserve them from all danger.' But the precaution was in vain. The Bass soon submitted to the indomitable Cromwell; and in the following spring the Parliament ordered 'the Records of the Kirk,' to be packed up in cask 'and sent to the Tower, there to remain in the same custody that the other records that came from Scotland are.' These documents perished in the conflagration which occurred in the House of Commons in October 1833.

From the Laird of Waighton the Bass passed into the hands of Sir Andrew Ramsay, lord provost of Edinburgh, and great-grandfather of the present Sir John Dick Lauder, the lineal descendant of "the Lauders of the Bass." It was purchased from Sir Andrew in October, 1671, by Lauderdale, in name of the government, to be used as a state prison. A pamphleteer of that period, referring to the matter, says, "My Lord Lauderdale, to gratify Sir Andrew, moves the King, upon the pretence that the Bass was a place of strength, like to a castle in the moon, and of great importance, the only nest of solan geese in these parts, to buy the rock from Sir Andrew, at the rate of £4,000 sterling, and then obtains the command and profits of it, amounting to more than £100 sterling yearly, to be bestowed upon himself." The history of this rock now presents, for a number of years, a series of acts, most cruel and oppressive. About forty individuals, chiefly clergymen, were confined here, for periods ranging from two months to six years, on no other accusation than that they followed their own conscientious convictions in matters of religion, rather than yield compliance to the will of the King. A great part of the time spent here by the persecuted servants of God was spent in solitary confinement. No one was permitted to see his neighbour, and seldom were they allowed to leave their cells. Sometimes, indeed, they would be permitted, two by two, to walk on the rock above, and within the fortress; but this was more a precaution against the approach of bad health than the evidence of the cruelty of their persecutors relenting. Diseases were caught here by not a few, which elieved to and enfeebled them for life; and the cell of the celebrated Colonel John Blackadder proved his grave.

The landing of the Prince of Orange in England, in 1688, changed the entire aspect of things. Yet for two years the Bass Rock held out for the exiled King. In 1690 it surrendered into the hands of the new government, but speedily, by accident, fell again into the hands of the adherents of James. A few young officers who had been taken prisoners at Cromdale, were imprisoned on the Bass. They soon formed a plan to take it by surprise, and succeeded. For several years, they contrived, with great bravery, to keep their ground, and every effort to dislodge them proved ineffectual. Their friends supplied them with provision from the shore; and as they grew more fearless, they plundered various merchant vessels, and made all pay tribute who came incautiously within range of the guns. The siege cost Fletcher of Saltoun, the new governor, a vast amount of trouble and expense; and it was not till two ships of war were despatched to cut off supplies, that the marauders were brought to the necessity of capitulating. By an ingenious stratagem, they succeeded in obtaining honourable and advantageous terms. Thus the Bass was the last place in Scotland that held out for James. After the surrender an order was issued that the fortress and buildings should be dismantled, and the cannon and ammunition removed; but this was not finally effected till 1701. The property of the Bass was acquired by President Dalrymple, from the Crown, by charter, in 1706, and

the island has ever since been in the uninterrupted possession of his family.

The Bass is frequently visited by parties of pleasure. The best season for visiting it is June or July. Boats are obtained at the keeper's house in the hamlet of Cauty bay. Upon landing, which cannot be done with comfort except when the weather is fine, you are met by the wall of the fortress, which serves to enclose the patch of pasture where about a score and a half of sheep are grazing, and through which you pass by a door which is kept locked by the person who farms the island. Within the door you stand at the foot of a gentle declivity, covered with a thin coating of soil, which supports a rich though precarious pasture. Half way up the declivity stands an ancient chapel, built, as is supposed, on the site of the cell of St. Baldred. It has obviously seen several centuries; but it cannot claim an antiquity equal to that of the good hermit. The Bass, it appears, was once a parish; but where the parishioners came from it is hard to guess, unless we understand certain references in old documents to imply that it included the neighbouring parishes of Aldham (now Whitekirk), Tynningham, and Preston. Beyond the chapel there was, in the olden time, a garden, the fruit of which cheered and refreshed the good Mr. Fraser of Brea during his confinement on the rock. But now, both fruit-trees and flowers have disappeared, and not even a rose is left on its stalk, 'to mark where a garden had been.'

Several birds take up their abode on the Bass, the chief of which is the gannet or solan goose. It is smaller than a domestic goose, and ranker in flavour, owing perhaps to the fact that it feeds upon fish. It is the young bird only that is used. At one time the gannets were greatly in demand, but they are yearly becoming less so. The rent of the Bass is paid out of the proceeds of the young birds and the few sheep which it supplies with pasture. It was long believed that this was the only habitat of the gannet in Scotland; but this is now known to be a false impression, as several other rocky islands shelter them in large numbers. The birds make their nests on the surface of the rock, and along the shelves in the perpendicular cliffs. They are said to be very tame, nearly as much so as the penguins found on Possession Island by Sir James Ross, in his expedition to the Antarctic Ocean.

BASS OF INVERURY (TRUE), an earthen mound on the banks of the Ury in Aberdeenshire, said by tradition to have been once a castle which was walled up and covered with earth because the inhabitants were infected with the plague. It is defended against the stream by buttresses, which were built by the inhabitants of Inverury, who were alarmed by the following prophecy, ascribed to Thomas the Rhymer:

"Dee and Don, they shall run on,
And Tweed shall run and Tay;
And the bonny water of Ury
Shall bear the Bass away."

The inhabitants of Inverury sagaciously concluded that this prediction could not be accomplished without releasing the imprisoned pestilence; and, to guard against this fatal event, they raised ramparts against the encroachments of the stream. The notion of the plague, or pestilence, or black death, or other fearful epidemic, being buried in certain places, is one of the most common traditions in Scotland. "According to some accounts," says Leyden, "gold seems to have had a kind of chemical attraction for the matter of infection, and it is frequently represented as concentrating its virulence in a pot of gold. According to others, it seems to

have been regarded as a kind of spirit or monster, like the cockatrice, which it was deadly to look on."

BASSENDEAN, an ancient parish, now comprised in the parish of Westruther, in the west of Berwickshire. It was a vicarage, and belonged to the nuns of Coldstream. The church, now in ruins, stood near the mansion-house, on the south-east; and the walls still enclose the burying-place of the Homes of Bassendean. Soon after the Reformation, Andrew Currie, vicar of Bassendean, conveyed to William Home, third son of Sir James Home, of Cowdenknows, "terras ecclesiasticas, mansionem, et glebam vicarie de Bassendene:" whereupon he obtained from James VI. a charter for the same, on the 11th of February, 1573-4. This William, who thus built his house upon church-lands, was the progenitor of the present family here; of whom George Home, a compatriot of the Duke of Argyle, was one of the most devoted supporters of Presbyterianism against the inroads of Episcopacy in the 17th century. See WESTRUTHER.

BASTAVOE. See YELL.

BATHAN'S. See ABBEY ST. BATHAN'S.

BATHGATE, a parish, containing a post-town of its own name, and also the village of Armadale, in the west of Linlithgowshire. It is bounded by Lanarkshire, and by the parishes of Torphichen, Linlithgow, Ecclesmachan, Livingston, and Whitburn. Its length westward is about $7\frac{1}{2}$ miles; its greatest breadth is 4 miles; and its area is 10,888 imperial acres. A considerable portion of the south-east, south, and west of the parish is almost a level; but the north-east is hilly. The soil is exceedingly variable, some very good, some very indifferent and intermixed with patches of moss and moor; and the climate is far from genial. But where the land is arable, it is in a good state of cultivation, and yields good crops of barley, oats, pease, and beans. Large tracts also are covered with thriving plantations, which tend greatly to heighten the beauty of the landscape and improve the climate. All the streams are small; and some go to the Avon, and others to the Almond. There was a lake of about 11 acres; but this was drained in 1853. The parish is very rich in useful minerals. It contains quarries of whinstone for road-metal, a quarry of excellent sandstone for building, two large lime-works, and several extensive coal mines. A peculiar kind of coal, or a bituminous shale, is worked at Boghead, about two miles west of the town; is exported, in large quantities, to the continent of Europe and other places; is used chiefly in the production of illuminating gas, paraffin oil, and solid paraffin; was mined, in years prior to 1866, at the rate of about 100,000 tons a-year; and was then computed to exist to only such limited extent that it would become nearly exhausted in about 8 or 9 years. Common coal, blackband ironstone, and grey ironstone are worked in the same field as this coal. A chemical work, for manufacturing paraffin oil and solid paraffin from the Boghead coal, and employing from 600 to 700 men, is about a mile south of the town. Another chemical work, for the same purpose, was erected shortly before 1865; and, together with brick-making and mining, employs between 300 and 400 persons. A third chemical work, for extracting oil and paraffin from a bituminous shale which abounds in its vicinity, was erected near the end of 1865, about 3 miles east of the town. A very rich iron ore was at one time worked on the estate of Couston by the Carron Company. A silver ore was for some time worked in one of the lime quarries, which still retains the name of Silver mine; but, after yielding a considerable quantity of silver, the ore became too poor for remunerating working, and now the

lime alone is wrought. Lead occurs in small veins. Fire clay is abundant. Mineral pitch lies in thin beds among the limestone. Calc-spar is plentiful; and heavy-spar, pearl-spar, Lydian stone, and chalcidony are occasionally found. There were formerly four grain mills, but there are now only two. There are five principal landowners. The estimated total value of annual produce in 1843 was £34,541. Assessed property in 1843, £12,975 4s. 7d.; valued rental in 1865, £40,449 7s. 1d.; of railways, £5,664 18s. The mid-road between Edinburgh and Glasgow, that which formerly was the shortest and most frequented line of communication between these cities, intersects the parish; four lines of railway, toward respectively Edinburgh, Borrowstownness, Airdrie, and Morningside, diverge from the town; and great railway extensions were either in progress or under consideration at the end of 1865, of a kind to affect materially the traffic of the parish. There are two railway stations at the town, about $\frac{1}{2}$ of a mile asunder. Trains run thrice a-day to Edinburgh and to Glasgow, and twice a-day to Borrowstownness and to Morningside. Population of the parish in 1831, 3,593; in 1861, 10,134. Houses, 1,527.

This parish, anciently a vicarage, is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Patron, the Earl of Hopetoun. Stipend in 1864, £215 15s. 1d. Schoolmaster's salary, £60, with 11s. 6d. of a mortification, and about £50 fees. There is also a free academy, conducted by four teachers, in which Latin, Greek, French, and other branches of education are taught. This institution originated in an ample bequest by Mr. John Newlands of Jamaica, a native of Bathgate; and occupies a handsome building, with connected yards, on a rising-ground a little to the south-east of the town. The number of pupils attending it in 1843 was 537. There are also schools connected with two of the public works. The ancient church of Bathgate was of modern value. Malcolm IV. granted to the monks of Holyrood the church of Bathgate, with a portion of land. Robert, the Diocesan, who died about the year 1159, also granted to it certain privileges, and subsequently the abbot and monks of Holyrood made a transfer of the church-property to the abbot and monks of Newbattle, which arrangement was confirmed in 1327 by Bishop Landels. The present parish-church was built in 1739, and underwent some alterations in 1780; and it is in tolerably good repair, and capable of accommodating 719 persons. There is also a church in connexion with the establishment at Armadale. There are two Free churches, the one in Bathgate, the other in Armadale; and the sums raised by their congregations in 1865 were £182 18s. 1½d. and £193 7s. 9d. There are a United Presbyterian church, an Evangelical Union chapel, and a Roman Catholic church in Bathgate, and an Episcopalian church and a Wesleyan chapel in Armadale.

The **TOWN OF BATHGATE** stands nearly in the centre of the parish, on the Edinburgh and Glasgow road, and at the termini of the Bathgate railways, $2\frac{1}{2}$ miles north by west of Blackburn, $5\frac{1}{2}$ south by west of Linlithgow, 18 west-south-west of Edinburgh, and 24 east-north-east of Glasgow. Its situation is pleasant. The hilly grounds adjacent to it on the north and east, and the beautiful park of Balbardie in its northern vicinity, give it a cheerful aspect. The town consists of two parts, the old and the new. The old town is built on a steep ridge, and the streets are narrow and crooked. The new town is built on a regular plan, and has a good appearance. Much extension has been made, and great additional stir has arisen, from the opening

of the railways, and from the operation of the neighbouring mines and works. Many handsome shops and fine new dwelling-houses meet the eye; the churches, the academy, the gas-work, a distillery, and a brewery are conspicuous; and the corn exchange, the office of the Royal Bank, and the office of the Union Bank are recent and ornamental. A weekly market is held on Tuesday, and has become important as a central corn-market for Linlithgowshire and the adjoining counties. Fairs, well attended, are held on the Wednesday after Whitsunday, old style, and the Wednesday after Martinmas, old style; fairs, poorly attended, are held on the fourth Wednesday of June and the fourth Wednesday of October; and three other fairs are allowed by statute, but are not held. The town has offices of the National Bank, the Royal Bank, the Union Bank, and the Clydesdale Bank. It has also a savings' bank, several friendly societies, and a total abstinence society; and there is a library connected with the academy. A sheriff small debt court is held on the third Wednesday of January, April, July, and October. There is a small prison; but it has fallen into disrepair, and is now used only for a night or so till a prisoner can be conveyed to Linlithgow.

Bathgate was erected into a burgh of barony by act of parliament in 1824. The governing body appointed by the act was a provost, three bailies, twelve councillors, and a treasurer; and in the first election, these were chosen by all the persons, whether within the burgh or not, who had subscribed £1 or more toward the expense of the act; but in all future elections, they were to be changed partially, on the first Tuesday of September every year, in the following manner. The provost, the treasurer, the eldest and third bailies, and the four eldest councillors were to go out, and their places to be filled by open votes. The proprietor of the lands and barony of Bathgate, whether a burgess or not, was to be entitled to one vote; and he further might fill up the office of third bailie, if he choose, but he required to fill it with a person who had been provost, bailie, or treasurer within the previous three years, or who had been a councillor within two years. The other voters were to be all resident persons who had been admitted burgesses, and were at the same time proprietors, feuars, or occupiers of houses of at least £3 of yearly rent; and the burgesses were either all who had paid £1 toward the expense of the act, or who, while renting £3 or upwards, had paid an entrance-fee fixed by the magistrates and council, and not exceeding two guineas. The act also contained detailed regulations for lighting with gas, for paving the streets, and for a system of police, and authorized an annual assessment to be made, not exceeding one shilling in the pound. But, in 1865, by a small majority, the general police act was adopted; and, though some talk arose of bringing an action of reduction on the ground of informality, yet commissioners were appointed and other steps taken to carry out the new act. Population of the town in 1831, 2,581; in 1861, 4,827. Houses, 748.

Bathgate lays claim to a considerable antiquity, having been part of the extensive possessions given by King Robert Bruce as the dowry of his daughter, Lady Margery, to Walter, high-steward of Scotland, in 1616. Walter himself died here in 1328, at one of his chief residences, the site of which may be still seen marked by three stunted fir-trees. Some of the inhabitants suffered hardship and loss in the times of the persecution; and the insurgent army of the Covenanters passed a disastrous night here on their march from the west to Rullion Green. The town, with a territory around it, was anciently a sheriffdom in itself,—a distinction which it probably

obtained from its connexion with the royal family; and indeed it still is in law a sheriffdom in itself,—only that the sheriff of Linlithgowshire is always also the sheriff of Bathgate. On the abolition of hereditary jurisdictions in 1747, John, Earl of Hopetoun, claimed £2,000 for his right to this sheriffdom.

BATHGATE AND EDINBURGH RAILWAY. This work commences at Bathgate, and proceeds by Braeclert Hall and Clifton to a junction with the Edinburgh and Glasgow Railway at a point a little west of the Ratho station. It is about 10½ miles in length. A branch goes off from it at Houston to Uphall, intended for Binny Quarry. The two first miles of it are on a dead level, and the rest have gradients varying from 1 in 704 to 1 in 110. The cuttings and embankments are comparatively light; and there is a viaduct of about 160 yards in length across the Almond. There are three stations for respectively Livingston, Houston, and Broxburn.

BATTIE'S BOG. See DUNSE.

BATTIE'S DEN. See PANBRIDE.

BATTLEDYKES. See OATHLAW.

BATTLEHILL, in the parish of Annan, Dumfriesshire, said to have received its name from a bloody engagement which took place here betwixt the Scots and English, in which the latter were cut off to a man. A strong mineral spring was recently discovered here.

BATTLEHILL, a hill on the mutual border of the parishes of Drumblade and Huntly, Aberdeenshire, said to have acquired its name from a conflict which took place on it, in the olden time, between the Cummins and the Gordons.

BATLEKNOWES. See WHITSOME.

BATTLELAW. See BALMERINO.

BATTOCK (MOUNT), a conspicuous summit of the Grampians, elevated 3,465 feet above sea-level, and situated at the point where the counties of Forfar, Kincardine, and Aberdeen meet. See GRAMPPIANS (THE).

BATTURICK. See KILMARONOCK.

BAY OF MARTYRS. See IONA.

BAYHEAD, a suburb of the town of Stornoway, in the Outer Hebrides. See STORNOWAY.

BAYNETON. See BANETON.

BEALOCH-NAMBO, a magnificent pass across the northern shoulder of Ben-Venne, leading into the district on the south side of Loch Katrine. It appears to have been formed by the partial separation of this side of the mountain from the rest, and composes an exceedingly sublime piece of scenery.

BEANSTON. See PRESTONKIRK.

BEATH, an inland parish, containing the villages of Cowdenbeath, Kelty, and Oakfield, in the west of Fifeshire. Its post-town is Blairadam. It is bounded by the parishes of Cleish, Ballingry, Auchtertool, Aherdour, Dalgetty, and Dunfermline. Its length is about 4 miles, and its breadth about 3. The surface is rugged and hilly, but not mountainous. Its highest ground is the beautiful hill of Beath on the south-west boundary, which commands an extensive and very beautiful prospect. A shallow and tame lake, called Loch Fitty, lies on the western boundary, and sends eastward, through the centre of the parish, a principal tributary of the Orr. The Kelty, a head-water of that river, flows along part of the northern border. Three collieries and a lime-work are in operation. The total yearly value of all the produce of the parish, was estimated in 1836 at £13,947. Assessed property in 1865, £11,782 2s. There are thirteen landowners; the chief of whom are the Earl of Moray and Mr. Dewar. The Edinburgh and Perth road traverses the parish northward; and the Dunfermline branch of what is now the North British railway traverses it east-

ward, and has a station in it at Cowdenbeath. Population in 1831, 921; in 1861, 2,390. Houses, 416.

This parish is in the presbytery of Dunfermline, and synod of Fife. Patron, the Earl of Moray. Stipend, £183 17s. 10d.; glebe, £17. Schoolmaster's salary is £52 10s., with about £30 fees, and a house and garden. In the minutes of session of this parish it is recorded, that "the first place of meeting that ever the Protestant lords of Scotland had for the covenants and reformation was at the kirk of Baith." Yet it appears from the same record—of which a long and curious extract is given in the New Statistical Account—that this kirk was long neglected after the Reformation, and being unsupplied by any minister, the parishioners were accustomed to assemble "to heere a pyper play upon the Lord's daye, which was the daye of their profane mirth, not being in the workes of their calling." There is a Free church at Keltly; attendance, 70; yearly sum raised in 1853, £44 11s. 1½d.

BEATON'S MILL. See NINANS (St.).

BEATTOCK, a place of thoroughfare in the parish of Kirkpatrick-Juxta, Dumfriesshire. It is situated in the vale of Erua Water, on the road from Edinburgh to Carlisle, and on the line of the Caledonian railway, 2 miles south-south-west of Moffat, and 60½ south by west of Edinburgh. It was formerly a stage on the great south road, and has an excellent large inn; and is now the railway station for Moffat, and has an elegant station-house in the early English style of architecture. In its near vicinity are Loch-House tower and the neat modern village of Craigielands.

BEAUFORT. See KILTARLITY.

BEAULY, a village, with a post-office, and with a station on the Highland railway, in the parish of Kilmorack, Inverness-shire. It stands at the debouch of Strathglass, and on the north side of the river Beauly, near its influx into Loch Beauly, 12 miles west of Inverness. Its situation is pleasant. Its principal street consists for the most part of slated houses, and contains some well-stocked shops. Many new houses have been built since 1841. The harbour is small, and admits vessels of 50 tons burden. The village has a Roman Catholic chapel, and a branch-office of the North of Scotland Bank, and is the constant residence of a sheriff-officer; and it has an intimate connexion with the affairs of the Moor of Ord. See ORD. This village was the market-town of the old barons of Lovat. In the immediate neighbourhood, near the brink of the river, are the remains of the old priory of Beauly, which was founded by Bisset of Lovat, in 1230, for monks of the order of Valliscaullim. The Frasers, Chisholms, Mackenzies of Gairloch, and several other families, have their burial-place here. About 2 miles west of Beauly are the celebrated falls of Kilmorack. Population of the village, 917.

BEAULY (THE), a river of Inverness-shire, principally formed by the union of the Farrer from Glen Farrer, and the Glass river, which gives the name of Strathglass to the entire strath through which the Beauly flows. These two streams unite at Erchless castle; and the Beauly formed by them flows in a winding course of about 10 miles in length, and with frequent narrowings and widenings, north-eastward, to Loch Beauly. The road from Inverness to Beauly is carried across this river by a bridge of 5 arches, with a waterway of 240 feet, known as the Lovat bridge, and built by the Parliamentary commissioners in 1810. There is an excellent salmon-fishery at the mouth of the Beauly.

BEAULY (LOCH), the upper basin or inner division of the Moray frith. Its northern shores are in

Ross-shire; the southern, in Inverness-shire. Its length, from the mouth of the Beauly river to the narrow part which connects it with the lower basin of the Moray frith at Kessock ferry is 7 miles; and its greatest breadth is about 2 miles. Its shores are low and well-cultivated. The Caledonian canal enters its lower parts at Clachnaharry, a little west of Inverness. See CALEDONIAN CANAL.

BEAUMONT. See MOREBATTLE.

BEDEN-NA-BEAN. See ARGYLESHIRE.

BEDRULE, a parish containing the three small villages of Bedrule, Newton, and Rewcastle, in the centre of Roxburghshire. Its post-town is Jedburgh. It is bounded by the parishes of Jedburgh, Hobkirk, Cavers, Minto, and Ancrum. Its length, from north to south, is upwards of 4 miles; and its breadth is between 2 and 3 miles. The Teviot traces the northern boundary, and the Rule traces the western one. The surface consists of the alluvial flats of these rivers, and of bold lofty hill-screens on the south and east; and comprises nearly equal proportions of arable land, pasture, and moorland. A grand feature over all the east is the broad-based, high-crested, far-seeing Dunian. See DUNIAN. The valley of the Teviot here is rich and beautiful, and the vale of the Rule is narrow and picturesque. See TEVIOT and RULE. The village of Bedrule stands on Rule Water 2½ miles from Denholm and 3½ from Jedburgh. It was once a sort of military town, and was burnt in 1544 by an incursion of the English; but it is now a strictly rural place, with modern houses, and a farm-stead-like appearance. Population in 1851, 111. The chief of the family of Turnbull—a branch of the very ancient family of Rule—had his principal residence at Bedrule castle in ancient times. This stronghold was pleasantly situated behind the church, on the bank of the river,—a situation from which are seen distinctly to the north-west, the most elevated tops of some of the hills near Ettrick and Yarrow, and the Eildons near Melrose abbey; the Reidswyre to the south-east; and south-westward, the same frontier tract whence the Liddel derives its source, which, after uniting with the Ewes and the Esk, falls into the Solway frith. The view is more confined towards the east and the west; yet in these directions are seen the top of Dunian and the entire ascent of Ruberslaw, the former having an elevation of 1,031 feet, the latter of 1,419 feet above sea-level. The castle of Bedrule no longer exists. Newton was anciently the property of a family of the surname of Ker, who appear to have been cadets of Fernihirst. There was also a house of strength here, now likewise demolished; but the beautiful avenues of venerable trees still remaining bespeak to the passing traveller something of the consequence and taste of its former inhabitants. Rewcastle, situated upon a more elevated ground than either Bedrule or Newton, is considered by some as a place of great antiquity. Indeed, it is said, that the courts of justice were originally held here, and afterwards removed to Jedburgh. Fulton also was once a place of consequence, but now survives only in some remains of its tower. There are vestiges of a regular encampment, on an elevated ground almost at an equal distance between Bedrule and Newton; from its figure it appears to have been British. There is another at the distance of about half-a-mile to the eastward, which seems to have been Roman. The roads from Hawick to Kelso and Jedburgh traverse the lower part of the parish; and a road goes up the vale of the Rule. Population of the parish in 1831, 309; in 1861, 222. Houses, 41. Assessed property in 1865, £3,782 10s.

This parish is in the presbytery of Jedburgh, and synod of Merse and Teviotdale. Patron, Hume of

Ninewells. Stipend, £148 9s. 8d. Schoolmaster's salary, £50 with fees. The church was built about the year 1803, and has about 140 sittings.

BEE (Loen), a large irregular inlet of the sea, in the northern part of the island of South Uist. It is nearly connected with Loch Skipport on the eastern side of the island, by a long narrow arm running along the eastern base of Ben Phorster.

BEG (THE). See **SHEE** (THE).

BEGLIE (Wicks of), a celebrated pass in the Ochils, in the parish of Dron, in Perthshire, about $3\frac{1}{2}$ miles to the west of Abernethy, and a little to the west of the great road leading from Queensferry to Perth, through Glenfarg. Sir Walter Scott, in the opening chapter of 'St. Valentine's Day,' in the second series of the 'Chronicles of the Canongate,' describes this spot as commanding a matchless view of "the fair city of Perth," and its beautiful environs; but the truth is, that no part of Perth, or its Inches, nor even the stupendous rock of Kinnoull, can be seen from the Wicks properly so called,—the beautiful and picturesque hill of Moredun or Moncrieff completely intercepting the view of any of these objects. The view from the Wicks, however, is most magnificent, and well-repays the labour of the ascent and circuit. Immediately beneath is stretched out the delightful vale of Strathearn, with the river from which it takes its name winding along till it loses itself in the Tay; while to the right, the whole extent of that garden of Scotland, the carse of Gowrie, is in full view, with the expansive estuary of the Tay even to its confluence with the ocean,—not to mention the innumerable objects of minor interest which lie scattered on the foreground, and the magnificent range of the Grampians in the farthest distance. It is not, however, until the traveller on this line of road arrive at a place called Cloven Crag, 4 miles nearer Perth, and immediately adjoining the west end of Moredun, that the view described in the novel breaks upon his astonished sight; or that the scene in the direction of Perth, however beautiful, excites the emotion of wonder, or could have called forth the exclamation of the Romans. The mistake appears to have arisen from the author having in his memory combined the views from both stations; and when we consider that both possess many points in common,—are both on the same road, and within a few miles of the other,—and that Scott's recollections were those of more than half-a-century's wear and tear, the mistake is very naturally accounted for.

BEIL GRANGE, a village in the parish of Stenton, Haddingtonshire.

BEITH, a parish partly in Renfrewshire but chiefly in Ayrshire. It contains a post-town of its own name, and the villages of Gateside, Northbar, and Burnhouse. It is bounded by the parishes of Lochwinnoch, Neilston, Dunlop, Kilwinning, Dalry, and Kilbirnie. It has a triangular outline, and measures 4 miles in extreme length. It comprises part of the watershed between the basin of the Clyde and the river systems of Ayrshire. A small ridge of hills, with summits elevated from about 500 to 652 feet above the level of the sea, extends along the north-east border; and thence the general surface declines with gentle undulations, to the west and south-west. The tops of the hills command a gorgeous and very extensive prospect southward to the hills of Carrick and around Ailsa Craig, south-westward to the peaks of Arran, north-westward to the serrated ridges of Cowal, and northward to Benlomond and the frontier masses of the Perthshire Grampians; but the parish does not contain within itself any other kind of scenery than the simply pleasant or the gently beautiful, or such as

arises from good soil and superior cultivation. The land is possessed by upwards of 150 heritors, many of whom farm their own property, and have greatly enhanced its value by skill and labour. A narrow strath, or continuous depression, extends westward from the course of the Cart at and below Paisley to the course of the Garnock at and below Kilwinning, presenting a remarkable natural facility of overland communication between the river Clyde and the bay of Ayr; and the highest part of it, with an extreme elevation of only about 95 feet above the level of the sea, lies along the western part of the parish of Beith. It was along this strath that the Ardrossan canal was to have been cut; and it is along this that the Glasgow and Ayr railway goes. But great difficulty was experienced in constructing the railway here, on account of the softness of the ground; and the line had to be supported on pile-work. Kilbirnie Loch lies in the highest part of the strath. It is more than a mile long and about half-a-mile broad; and it contains trout, perches, and pikes, and is frequented in hard winters by various kinds of aquatic birds. An excellent limestone, containing from 90 to 95 per cent. of pure carbonate of lime, and seeming to consist almost wholly of ancient shells, is very extensively worked and exported for manure, and at the same time has the hardness and other properties of coarse marble, so as to be in considerable request also for architectural purposes. Coal also is mined; clay ironstone is abundant; and sandstone and whinstone are quarried. The botany of the parish comprises a wide range of plants, particularly of rare flowering beauties. Two of the most conspicuous residences are Caldwell House and Woodside. The antiquities challenge the attention of the curious, but are not popularly interesting. The Castle of Giffen, indeed, was long a remarkable object in the district, being a square tower, 40 feet high, surmounting an eminence of 150 feet in the vicinity of the strath; but it fell in 1838. The real rental of the landward part of the parish is estimated in the New Statistical Account in 1839 at £10,000. The staple rural produce is cheese; and this is equal to the best Dunlop, and brings the highest price in the Glasgow market. Population in 1831, 5,117; in 1861, 5,775. Houses, 659. Assessed property in 1843, £15,140 9s. 7d.; in 1860, £20,521.

This parish is in the presbytery of Irvine, and synod of Glasgow and Ayr. Patron, the Earl of Eglinton. Stipend, £251 5s. 11d.; glebe, £130. Unappropriated tithes, £447 18s. 9d. The old glebe—upon which a part of the town now stands—was exchanged in 1727, by contract between the Earl of Eglinton, the presbytery of Irvine, and the incumbent, for a small farm near the town of Beith, consisting of 31 acres 3 roods. Schoolmaster's salary, £70 with fees. The parish church was built in 1807; sittings 1,250. It would appear, that the old church was built soon after the Reformation. The third minister of Beith, after the Revolution, was Dr. William Leechman, principal of the University of Glasgow, in 1736; who, in 1744, was succeeded by Dr. John Witherspoon, afterwards president of Princetown college, New Jersey. There is a Free church; yearly sum raised in 1865, £210 18s. 11 $\frac{1}{2}$ d. There are two United Presbyterian churches, built in 1784 and 1816, and containing 849 and 498 sittings. There is also an Evangelical Union chapel. There are a Free church school, a United Presbyterian school, two industrial, and six private schools. Before the Reformation, there were two chapels for public worship in this parish; one where the present church now stands, and the other upon the lands of Trehorn, one end of which remains entire. This chapel, with two acres of land adjoining to

it, belonged to the monastery of Kilwinning, as appears from a charter under the great seal, dated 1594.

The TOWN of BEITH stands on the road from Paisley to Saltcoats about a mile east of the nearest point of the Glasgow and Ayr railway, 4 miles west-north-west of Dunlop, 5 north-east by north of Dalry, and 11 south-west by south of Paisley. It stands on an eminence, presents a jaunty appearance from the railway, and commands an extensive view of the surrounding country. The parish church is a handsome building, with a tower. The lower story of the town-house consists of shops; but the upper story is a large hall, which is used as a public reading-room, and as the court-room of justice of peace courts, and sheriff small debt courts. The town has three inns,—the Saracen's Head, the Crown, and the Star; and it has branch-offices of the Commercial Bank, the Union Bank, and the Clydesdale Bank. It has also a reading-room, a public library, and a howling-green,—the last formed in 1864. A branch railway from it to the Crofthead and Kilmarnock line was authorized in 1865. Markets are held on Fridays, and fairs four times a-year.

About the time of the Revolution or a little earlier, Beith is said to have contained only 5 dwelling-houses and the manse. But in 1759 it had about 700 examinable inhabitants, and in 1788 nearly 1,500. About the time of the union of the two kingdoms, a trade in linen cloth was introduced into this place, which became so considerable that the Beith markets were frequented by merchants from the neighbouring towns every week. About the year 1730, the linen business, which had greatly declined, was succeeded by a considerable trade in linen-yarn. The Beith merchants purchased the yarn made in the country around, and sold it to the Paisley and Glasgow manufacturers. This trade, when carried to its greatest extent, about the year 1760, is supposed to have amounted to £16,000 sterling yearly: and though it has long been upon the decline, linen yarn is still a considerable article of merchandise. From 1777 to 1789, the manufacture of silk gauze was carried on to a great extent. The present pursuits of manufacture and commerce are remarkably various, and might almost be said to comprise more or less of everything Scottish. Leather-making and the corn-trade are prominent in the town itself; and thread-making, flax-spinning, and bleaching are prominent in the neighbouring villages. Population in 1861, 3,420. Houses, 336.

BELHAVEN, a village in the parish of Dumbar, Haddingtonshire. It stands about a mile west of the town of Dumbar, but is included by the parliamentary boundaries of that burgh. It is intersected by the great post-road from Edinburgh to Berwick, and is close upon the sea, at the head of a small bay which in ancient times formed the haven of Dumbar. It is the watering-place of Dumbar; and in its vicinity are a number of elegant villas. It gives the title of Lord to a branch of the family of Hamilton. In 1647, Sir John Hamilton of Broomhill was created Lord Belhaven and Stenton. The title is now borne by a descendant of Hamilton of Wishaw. A strong sulphurous spring was not long ago discovered here. It contains sulphur and hydrogen gas in considerable quantity; the muriates of lime and soda; and sulphate and muriate of magnesia both in large quantity. An attempt was made in 1815 to establish a cotton factory at Belhaven, but failed. Population in 1861, 405.

BELHELVIE, a parish, containing a post-office station of its own name, on the coast of the Aberdeen district of Aberdeenshire. It is bounded by the

German ocean, and by the parishes of Foveran, New Machar, and Old Machar. Its greatest length, northward, is 6 miles; and its greatest breadth is 5 miles. The distance of its centre from Aberdeen is about 7 miles. All the coast is a beach of fine sand, flanked by bent-clad sand-hills. A narrow belt of land lies beyond this, with sandy soil and sweet short grass, kept always in pasture, and so nearly level that the Government engineers for surveying Scotland selected it for measuring their base line of 5 miles and 100 feet. The surface farther inland rises gradually to the west, and is diversified with small low hills and hilly ridges; and the western boundary is a continuous ridge, with summits of about 800 feet above the level of the sea. A number of rivulets rise in the interior; and there is an abundance of springs of excellent water. There is a great deposit of serpentine, called Portsoy marble or Verde d'Ecosse, near Milldens. A great part of this parish formerly belonged to the Earl of Pannure, on whose forfeiture in 1715 it was purchased by the York Building company. In 1782 it was again sold, by order of the court of session, in sixteen different lots, since which partition a rapid improvement has taken place on the district. The road from Aberdeen to Peterhead and Fraserburgh passes through the interior. Fairs, chiefly for the sale of cattle, are held on the last Tuesday of April, old style, on the day in July before Aiky, and on the second Tuesday of October, old style. Population in 1831, 1,621; in 1861, 1,807. Houses, 370. Assessed property in 1843, £7,317; in 1860, £9,054.

This parish is in the presbytery and synod of Aberdeen. Patron, the Crown. Stipend, £179 12s. 10d.; glebe, £10. Schoolmaster's salary is £50, with £16 10s. fees and house and garden. The parish church is an old building, and contains 519 sittings. There is a Free church at Belhelvie, and the yearly sum raised in connexion with it in 1865 was £121 2s. 3d. There is an United Presbyterian church at Shiels, built in 1791, and containing 330 sittings. There are three non-parochial schools.

BELLA (THE). See LUGAR (THE).

BELLADROM. See KILTARLIVY.

BELL-CRAIG. See MOFFAT.

BELLEVILLE. See ALVIE.

BELLIE, a parish partly in Morayshire and partly in Banffshire. The Morayshire section contains the town of Fochabers; and the Banffshire section contains the villages of Auchinhalrig, Dalaely, Bogmoor, and Tugnet, and a part of the Braes of Enzie. The parish is bounded on the north by the Moray frith, on the west by the river Spey, and on other sides by the parishes of Rathven, Keith, and Boharm. Its greatest length, northward, is nearly 6 miles; and its greatest breadth is nearly 4. A considerable portion of the area is contained within the ancient banks of the river Spey, which has greatly shifted its channels at different periods. At Gordon castle, which lies between the old and the new course of the river, these banks are near a mile distant from each other; but they gradually widen in their approach to the sea, and where the river falls into the frith, are nearly 2 miles asunder. This district suffered severely during the great floods in 1829. GORDON CASTLE, well known to be one of the noblest palaces in Britain, and which attracts the notice of all travellers, will be described in a separate article. About a mile north of Gordon castle, and 3 south of the frith, on a high bank, is the churchyard of Bellie, where stood the parish church till 1797. A capital salmon-fishery is here upon the Spey, the yearly value of which, in 1860, was £2,519. Value of all produce in 1842, £29,108. Assessed property in 1860, £8,443. Population of the

Banffshire section in 1831, 1,151; in 1861, 977. Houses, 210. Population of the whole parish in 1831, 2,432; in 1861, 2,292. Houses, 500.

This parish is in the presbytery of Strathgogie and Synod of Moray. Patron, the Duke of Richmond. Stipend, £181; glebe, £33. Schoolmaster's salary, £50, with a share of the Dick bequest, and with £40 a-year in lieu of school fees from the bequest of Alexander Milne, a native of the parish, who died in America, and left about £20,000 for free schools in Bellie. A suite of schools, called Milne's Institution, was built, from that bequest, at Fochabers in 1846; is conducted by a rector, three other masters, and a sewing mistress; and forms a splendid structure, in the Tudor style, with a commodious dwelling for the rector, who has a flourishing boarding-school. The parochial school is now at Bogmoor. The parish church is at Fochabers. A Free church, an Episcopalian chapel, and a Roman Catholic chapel also are at Fochabers; and a Roman Catholic chapel is at Auchinhalrig. Yearly sum raised at the Free church in 1865, £161 9s. 1d.

BELL-ROCK, a reef in the German ocean formerly called The Scape, and the Luch Cape, situated in 56° 26' N lat., and 2° 23' W long.; about 12 miles south-east of Arbroath, and 30 north-west of St. Abb's Head; in the direct track of navigation, to vessels entering either the frith of Forth or the frith of Tay, and formerly much dreaded by the mariner as the most dangerous spot on the eastern coast of Scotland, or perhaps upon the whole coast of Great Britain. The rock is a red sandstone, apparently of the same formation with the Redhead in Forfarshire, from which it is 11 miles distant. Its angle of inclination with the horizon is about 15°, and it dips towards the south-east. The reef is altogether about 2,000 feet in length, of which at spring-tide ebbs a portion of about 427 feet in length, by 230 in breadth, is uncovered to a height of about 4 feet; but at high water the whole is covered to the depth of 12 feet. At low water of spring-tides, and at the distance of 100 yards all round the rock, there are about 3 fathoms water. Tradition relates that the abbots of the ancient monastery of Arbroath caused a bell to be so fixed upon the rock that it was rung by the motion of the waves, and thus warned the mariner of impending danger; it also adds that a Dutch captain carried away the bell, and, as retribution for his offence, was afterwards lost upon the rock, with his ship and crew. This tradition, if we mistake not, forms the plot of a popular melodrama.

The necessity of erecting a lighthouse upon this rock was powerfully shown in the year 1799, when about seventy vessels were wrecked upon the coast of Scotland. The Commissioners of the Northern Lighthouses took up the matter; and, after many preliminary arrangements, Mr. Stevenson, the scientific engineer of the Lighthouse Board, erected the present edifice from his own design, but on the principle of the Eddystone Lighthouse, between the years 1807 and 1811. All the stones were shaped and prepared in the workyard at Arbroath; and the several courses having been dovetailed, and connected together by joggles of stone and oaken trenails, the whole building, when erected upon the rock, and properly fixed and cramped, was constituted into one solid mass, from the centre to the circumference. This lighthouse is of circular form, and built of granite and sandstone; the former being used for the foundation and exterior casing, and the latter for the interior work. The masonry is 100 feet in height; and including the light-room, which is of cast-iron, the entire height is 115 feet. Its diameter at the base is 42 feet, and at the top 13 feet.

The ascent from the rock to the entrance door, which immediately surmounts the *solid* part of the building (30 feet in height), is by a trap-ladder; and thence to the first apartment, containing the water, fuel, &c., of the light keepers, by a circular staircase. There are five apartments above the water-room; the light-room store, the kitchen, the bedroom, the library, and the light-room itself. All the windows have double sash frames glazed with plate-glass, and protected by storm shutters; for although the light-room is full 88 feet above the medium level of the tide, and is defended by a projecting cornice, or balcony (with cast-iron network), yet the sea-spray, in gales of wind, is driven against the glass so forcibly, that it becomes necessary to close the whole of the dead-lights to windward. The light room is of octagonal form, 15 feet high, and 12 feet in diameter, and covered with a dome roof, surmounted by a ball. The frame-work is of cast-iron, and the plate-glass a quarter of an inch thick, and measuring 2 feet 6 inches by 2 feet 3 inches. The burners are argand, placed in the focus of silver-plated reflectors, hollowed to the parabolic curve by the process of hammering, each reflector measuring 24 inches over the lips. These reflectors are arranged upon a frame with four faces, or sides, two of which are fitted with shades of red-stained plate-glass. The frame revolves upon a perpendicular axis, and thus exhibits, alternately a red light and a bright natural light; and both kinds may be seen, in a clear atmosphere, at six or seven leagues distance. During storms, or in foggy weather, the reflector machinery is made to ring two large bells (each weighing about 12 cwt.), in order to warn the seaman of his danger, when too nearly approaching the rock. The cost of the whole pile was £61,331, toward which government lent a sum of £30,000.

Sometimes the windows of the light-room are broken by sea-birds. Thus about 10 o'clock on a night of February, 1842, a large herring-gull struck one of the south-east windows with such force, that two of the plates of glass were shivered to pieces and scattered over the floor, to the great alarm of the keeper on watch and the other two inmates of the house, who rushed instantly to the light-room. An album is kept at the lighthouse, wherein a distinguished poet wrote as follows:

"Pharos loquitur.
Far in the bosom of the deep,
O'er these wild shelves my watch I keep;
A ruddy gem of changeful light
Bound on the dusky brow of night;
The seaman bids my lustre hail,
And scorns to strike his timorous sail."

BELLSHILL, a post-office village in the parish of Bothwell, Lanarkshire. It is situated on the south-west border of the great mineral-field of the county; and many of its inhabitants are colliers or iron-workers. It stands 9 miles south-east of Glasgow, on the road thence to Edinburgh by Whitburn. Here is an United Presbyterian church, with a manse and glebe. Sittings in the church, 812; at tendance, 630. Here also is a Congregational chapel, with an attendance of about 200. Population of the village in 1841, 1,013; in 1861, 2,945.

BELLSMAINS, a hamlet in the parish of Borthwick, Edinburghshire.

BELLSQUARRY, a village in the parish of Mid Calder, about 2 miles west of the town of Mid Calder, Edinburghshire. Population, 120.

BELLTOWN, a hamlet in the parish of Methven, Perthshire.

BELTREES (Newtown or), a hamlet in the parish of Lochwinnoch, Renfrewshire. Population 58.

BELLYCLONE, a village in the parish of Mardale, Perthshire.

BELLYMIRE. See **CHIRNSIDE**.

BELMONT, one of the Sidlaw hills, in Forfarshire, rising to the height of 759 feet above the level of the sea.

BELMONT CASTLE. See **MEIGLE**.

BELMONT HOUSE. See **UNSR**.

BELNAHUA, an island in the parish of Jura, Inner Hebrides, Argyleshire. It measures only about a mile in circumference, and is almost a barren rock, but is valuable on account of its slate-quarry, and has about 150 inhabitants.

BELRINNES, or **BENRINNES**. See **ABERLOUR**.

BELSES, a village and a station on the Edinburgh and Hawick railway, in the parish of Ancrum, Roxburghshire, 5 miles south of Newton St. Boswells, and $7\frac{1}{2}$ north-north-east of Hawick.

BELTON, an ancient rectory in the shire of Haddington, now comprehended in the parish of Dunbar. It is situated on a small stream, the Biel, at the distance of about 3 miles south-west of the town of Dunbar.

BELTONFORD, a hamlet with a post-office, in the parish of Dunbar, Haddingtonshire. It is situated $2\frac{1}{2}$ miles west by south of the town of Dunbar, on the road thence to Haddington.

BEMERSYDE. See **MERTON**.

BEN, a rugged mountain or hill. The word is used as a prefix in very many descriptive Scottish names,—whether of mountains, as Benmore, ‘the great mountain,’ Benlaoidh, ‘the mountain of the fawns,’—or of tracts designated from hills, as Bendochy, ‘the hill of good prospect,’ Benholme, ‘the hill of meadowy land.’

BENABHRAGIDH, a mountain in the parish of Golspie, Sutherlandshire, in the vicinity of Dunrobin castle, rising to 1,300 feet above sea-level. It is composed of red transition sandstone and breccia.

BENABOURD, a mountain on the mutual border of the parish of Crathie and Braemar, Aberdeenshire, and the parish of Kirkmichael, Banffshire. It is adjacent to Benmacdhui, and forms one of the culminating group of the eastern Grampians. Its altitude above sea-level is 3,940 feet.

BENABOURD, a lofty mountain in the parish of Glenorchy, Argyleshire.

BENACHALLY, a mountain in the north of Stormont, Perthshire, about 5 miles north-east of Birnam, having an altitude of 1,800 feet above the level of the sea. On its northern side, at an elevation of about 900 feet, is a lake about a mile in length, and $\frac{1}{2}$ a mile in breadth. In its eastern face is a large cavern called the Drop, and having a continual dropping of water from the roof. The summit of the mountain commands a splendid view of Stormont, of Strathmore, of a vast extent of the Grampians, and of the inland side of the Sidlaws and the Ochils; it also commands remote, romantic, and dim glimpses of the Pentlands and the Lammermoors.

BENACHAOLIS. See **JURA**.

BENACHIE. See **BENNOCHIE**.

BENAGEN, a bulky mountain on the mutual border of the parish of Boharm, Banffshire, and the parish of Rothes, Morayshire, immediately east of the Spey, and about 7 miles south of Fochabers.

BENALDER, a wild and lofty range of the central Grampians, on the southern border of the parish of Laggan and county of Inverness. It extends between Loch Laggan and Loch Erich. It is as lofty as the Monadhleagh range, and far more picturesque. It was the favourite haunt of the red deer or mountain stag previous to the introduction of the sheep husbandry. Here, too, Prince Charles

Stuart lay concealed several weeks previous to his escape from Scotland in the French frigate.

BENAN, a mountain in the parish of Straiton, in Ayrshire, about half-a-mile south of Straiton village. Altitude 1,150 feet.

BENANOIR, one of the peaks of Jura, having an altitude of 2,420 feet above sea-level, according to Pennant, or 2,340 according to Dr. Walker. Pennant ascended this mountain—which he calls Beinu-an-óir, or ‘the Mountain of Gold’—and describes the task as one of much labour and difficulty. The best ascent to it is from the bay of the Small isles, passing Corrabhain, the most precipitous but lowest of the cluster. It is composed, Pennant says, “of vast stones, slightly covered with mosses near the base, but all above bare, and unconnected with each other. The whole seems a cairn, the work of the sons of Saturn; and Ovid might have caught his idea from this hill, had he seen it.

*Affectasse ferunt regnum celeste gigantes,
Atque congestos struxisse ad sidera montes.*

Gain the top, and find our fatigues fully recompensed by the grandeur of the prospect from this sublime spot. Jura itself afforded a stupendous scene of rock, varied with little lakes innumerable. From the west side of the hill ran a narrow stripe of rock, terminating in the sea, called the Slide of the Old Hag. Such appearances are very common in this island and in Jura, and in several parts of North Britain, and the north of Ireland, and all supposed to be of volcanic origin, being beds of lava of various breadths, from three feet to near seventy. Their depth is unknown; and as to length, they run for miles together, cross the sounds, and often appear on the opposite shores. They frequently appear three or four feet above the surface of the ground, so that they are called on that account whin-dikes, forming natural dykes or boundaries. The fissures were left empty from earliest times. It is impossible to fix a period when some tremendous volcanic eruption happened, like that which of late years infested Iceland with such fatal effects, and filled every chasm and every channel with the liquid lava. Such a stream poured itself into these fissures, and having cooled and consolidated, remains evident proofs of the share which fire had in causing the wondrous appearances we so frequently meet with and so greatly admire. In a certain bay in the isle of Mull, there remains a fissure which escaped receiving the fiery stream. The sides are of granite: the width only nine or ten feet; the depth not less than a hundred and twenty. It ranges north by west, and south by east to a vast extent; and appears against a correspondent fissure on the opposite shore. In the Phil. Trans. Tab. iv. is a view of this tremendous gap, together with the two stones which have accidentally fell, and remained hitched near the top of the northern extremity. These, and numbers of other volcanic curiosities in the Hebrides, are well-described by Abraham Mills, Esq. of Macclesfield, who in 1788 visited several of the islands, and in the lxxxth vol. of the Phil. Trans. has favoured the public with his ingenious remarks. To the south appeared Islay, extended like a map beneath us; and beyond that, the north of Ireland; to the west, Gigha and Car, Cantyre, and Arran, and the frith of Clyde bounded by Ayrshire; an amazing tract of mountains to the north-east as far as Benlomond; Skarba finished the northern view; and over the Western ocean were scattered Colonsay and Oransay, Mull, Iona, and its neighbouring group of isles; and still farther the long extents of Tiree and Col just apparent. On the summit are several lofty cairns,

not the work of devotion, but idle herds, or curious travellers. Even this vast heap of stones was not uninhabited; a hind passed along the sides full speed, and a brace of ptarmigans often favoured us with their appearance, even near the summit. The other paps are seen very distinctly: each inferior in height to this, but all of the same figure, perfectly mammillary. Mr. Banks and his friends mounted that to the south, and found the height to be 2,359 feet; * but Beinn-an-Gir far overtopped it: seated on the pinnacle, the depth below was tremendous on every side. The stones of this mountain are white (a few red), quartz, and composed of small grains; but some are brecciated, or filled with crystalline kernels of an amethystine colour. The other stones of the island that fell under my observation, were a cinereous slate veined with red, and used here as a whetstone; a micaceous sandstone; and between the small isles and Ardefin, abundance of a quartz micaceous rockstone."

BENANTUIRC. See BARR, ARGYLSHIRE.

BENARMIN. See SUTHERLANDSHIRE.

BENARTHUR. See ARROQUHAR.

BENARTIE. See PORTMOAK and KINROSS-SHIRE.

BENA VEN, a mountain in the south-west extremity of Aberdeenshire, one of the noble group forming the highest of the eastern Grampians. Its altitude is estimated by Playfair at 3,931 feet; by some others at 3,967 feet. See ABERDEENSHIRE.

BENAW, a mountain in the parish of Glenbucket, Aberdeenshire. Its altitude above sea-level is about 1,800 feet. The venerable but decaying castle of Glenbucket, the seat of an ancient branch of the Gordon family, stands on its declivity.

BENBECULA, a Hebridean island, in the parish of South Uist, Inverness-shire. It lies between the islands of North and South Uist, from the last of which it is separated by a narrow channel nearly dry at low water. It is a low flat island, measuring about 8 or 9 miles each way. The soil is sandy and unproductive. In the interior are several fresh water lakes; and its shores are indented with an endless variety of bays, and fringed with islands. "The sea," says Macculloch, "is here all islands, and the land all lakes. That which is not rock is sand; that which is not mud is bog; that which is not bog is lake; and that which is not lake is sea; and the whole is a labyrinth of islands, peninsulas, promontories, bays, and channels." This island was an ancient property of the chiefs of Clanranald; but now belongs to Gordon of Cluny. A missionary of the Royal Bounty resides on it. Here also was a station of the Free church, but so poor that the total of its yearly proceeds in 1853 was only £2 1s. 9d. Population of the island in 1841, 2,107; in 1861, 1,485. Houses, 282. See UIST (SOUTH).

BENBEOCH, one of the most prominent heights in the mountainous ridge which occupies the lower part of the parish of Dalmellington, in Ayrshire. Part of it displays a magnificent basaltic colonnade; and some caves here, which were formed by fallen columns, were the retreat of troops of foxes which, not long ago, made great havoc among the flocks and poultry of the surrounding country.

BENBREACH. See UIST (NORTH).

BENBUI, a mountain in the parish of Inverary, Argyshire. It is the loftiest mountain in that grandly picturesque region, having an altitude of about 2,800 feet above sea-level.

BENBUI, a mountain on the south-western rim of the basin of Lochlomond, Dumbartonshire, commanding a superb view of Lochlomond and its

screens, of Strathendrick and the Buchanan highlands, of part of the vale of Leven, of all the upper frith of Clyde, and of the whole length of Glenfruin.

BENCÁIRN, a mountain in the parish of Rerwick, Kirkeudbrightshire, rising to the height of 1,200 feet above sea-level.

BENCHAPULL, the loftiest mountain in the parish of Kilmiver and Kilmelfort, Argyshire, commanding an extensive view to the north and west, yet not higher than about 1,500 feet above sea-level.

BENCHINNIN MOUNTAINS, that portion of the Grampians which lies in Forfarshire. "None of these mountains," says Headrick in his 'General View of the Agriculture of Angus,' "are so abrupt and majestic as many other alpine districts of Scotland, nor are they covered with such valuable herbage as falls to the lot of some. These mountains are generally rounded and tame, are mostly covered with a thin coat of moorish soil, and carry stunted heath. Perhaps the only exception to this observation, are the mountains at the head of Glen Clova. There the glen divides into two narrow defiles, and the valley is bounded by a mountain which rises abrupt and majestic, between the defiles into which the glen divides. This, and the contiguous mountains, exhibit bold and terrific precipices; and where there is any soil, it is clothed with green and succulent herbage. An observation of the late Dr. Walker, Professor of Natural History, Edinburgh, 'that the steepest side of mountains, islands, and continents, is chiefly towards the west,'—is in them verified; the most abrupt declivity of these mountains being towards the west. It is hence, that the streams which arise in the west and north of the county, run chiefly south-east, and receiving in their progress innumerable torrents from the mountains, are swelled into rivers before they reach the ocean. These streams have scooped out considerable valleys among the mountains, the principal of which are Glenisla, with its branches, on the west, Glen Prosen, Clova, Lethnot, and Glenesk. The Grampian district of this county is about 24 miles from west to east, and from 9 to 15 miles in the opposite direction."

BENCHOCHAN, a mountain in the parish of Aberfoyle, Perthshire, rising to the height of 3,000 feet above sea-level.

BENCHONZIE, a mountain of Perthshire, on the mutual border of the parishes of Comrie and Monivaird, having an altitude, according to Jameson, of 2,923 feet.

BENCHREACHAN, a mountain in the parish of Fortingal, Perthshire. It is one of the grand masses of the Central Grampians, and has an altitude of about 3,860 feet above the level of the sea.

BENCLEUGH, the highest of the Ochils, in the parish of Tillicoultry, Clackmannanshire. It is mostly composed of granite, containing large crystals of black schorl. It rises to the height of 2,352 feet above the level of the Devon, which runs at its base; and it commands one of the most extensive and brilliant prospects in Scotland.

BENCLYBRIC, or BENCHLIBRIG, the highest mountain in Sutherlandshire, on the skirts of the parishes of Lairg and Farr. Its form is conical, and its altitude about 3,157 feet.

BENCOCHAIL. See ARDCHATTAN.

BENCROGHAN. See UIST (NORTH).

BENC RUACHAN, a magnificent mountain of Argyshire, in the district of Lorn, between Loch Etive and Loch Awe. It has an elevation of 3,393 feet according to Jameson, or 3,390 feet according to an admeasurement of Colonel Watson; and its base is 20 miles in circuit. Its steepest side is to

* This must be Benshianta, or 'the Mountain of Enchantment,' which is about 60 feet lower.

wards the north-east; from the south it rises gently, and may be ascended with considerable ease. Macculloch says of it: "Compared to Benlomond it is a giant; and its grasp is no less gigantic. From the hold granite precipices of its sharp and rugged summit—which is literally a point—we look down its red and furrowed sides into the upper part of Loch Etive and over this magnificent group of mountains, which, extending northward and eastward, display one of the finest landscapes of mere mountains in the Highlands. Its commanding position not only enables us thus to bring under our feet the whole of this group as far as Appin and Glencoe, and even to Ben-Nevis, but opens a view of the whole of the eastern ocean of mountains, reaching from Rannoch as far as Ben-Lavers and Benlomond, and beyond them to lands which only cease to be visible because they at length blend with the sky. So marked also are their characters, so rocky and precipitous their summits, and so varied their forms, that this landscape excels, in variety as in picturesque character, all other landscapes of mere mountains, excepting perhaps that from Ben-Lair in Ross-shire. The view which it yields, of the open country, is not much inferior to that from Ben-Lavers, if indeed it is inferior; and, in this respect, it can only be compared with that mountain and Benlomond. While it looks down on the long sinuosities of Loch Awe and over the irregular lands of Lorn, bright with its numerous lakes, it displays all the splendid bay of Oban and the Linnhe Loch, with Jura, Isla, and all the other islands of this coast; commanding, besides, the horizon of the sea, even beyond Tree and Coll, together with the rude mountains of Mull and the faint and blue hills of Rum and Skye; a scene as unusual as it is rendered various by the intermixture of land and water, by the brilliant contrast of these bright and intricate channels with the dark and misty mountains and islands by which they are separated, and by the bold and decided forms of all the elements of this magnificent landscape."

BENDEANAVAIG. See PORTREE.

BENDEARG, a mountain 3,550 feet high, in Athole, Perthshire. See BLAIR-ATHOLE.

BENDEARG, a mountain in the east of the parish of Lochbroom, Ross-shire.

BENDEARG, a mountain-range on the west coast of the parish of Durness, about 6 miles from Cape Wrath, Sutherlandshire.

BENDOCHY, a parish in the north-east of Perthshire. It comprises a lowland district and a highland one,—the latter detached from the former, at the distance of from 8 to 13 miles to the north-west. The lowland district measures about 7 miles in length from south to north, and has an extreme breadth of about $1\frac{1}{2}$ mile. It is bounded by the parishes of Alyth, Rattray, Blairgowrie, and Cupar-Angus. Its post-town is Cupar-Angus, distant 2 miles from the church. It is partly skirted on the east by the Isla, and is cut through the middle by the Erich. The greater portion of it is beautifully variegated low ground; but the upper portion comprises skirts of the Grampians, with an extreme altitude of about 800 feet above the level of the sea. There are four quarries of sandstone. Excellent facilities of communication are enjoyed through the near vicinity of the Scottish Midland Junction railway. The highland district of the parish constitutes the peninsula between the convergent courses of the Arde and the Blackwater, and comprises a mountainous ridge of an extreme height of probably about 1,400 feet above the level of the sea. The landed property of the parish lies distributed among twenty-one heritors; and the real rent of the arable

land is about £7,087. Population in 1831, 780; in 1861, 769. Houses 157. Assessed property in 1843, £6,950 16s. 1d.; in 1865, £9,964 14s. 1d.

This parish, formerly a vicarage, is in the presbytery of Meigle, and synod of Angus and Mearns. Patron, the Crown. Stipend, £251 17s. 6d.; glebe, £14. Church repaired in 1752 and 1803; sittings, 380. The highland district has been assigned to the chapel of PERSIE; which see. Salary of parochial schoolmaster now is £45, with about £10 fees. There are two private schools.

BENDONICH. See LOCHGOILHEAD.

BENDORAN, a mountain in the parish of Glenorchy, and eastern border of Argyleshire, a little east of the efflux of the Orchy from Loch Tulla. It is famous in Gaelic poetry. The name signifies the mountain of otters.

BENEADDAN, a mountain in Morvern, Argyleshire. Its altitude is 2,306 feet above sea-level.

BENEGIN. See BENAGEN.

BENERARD. See BALLANTRAE.

BENFAD, a range of mountains in the parish of Glenshiel, Ross-shire, with pyramidal summits rising to the height of nearly 4,000 feet above sea level.

BENGAIRN, one of the chief summits of a lofty hill-range on the mutual border of the parishes of Kelton and Rerrick, Kirkeudbrightshire. It has a height above sea-level of about 1,200 feet, and commands a brilliant view of the valley of the Dee, the Solway frith, and the mountains of Dumfries-shire and Cumberland.

BENGALL, a village in the parish of Dryfesdaie, Dumfries-shire. It stands adjacent to two hills, which have vestiges of two ancient camps or forts, the one British and the other Roman.

BENGHULBHUINN. See GLENSHEE.

BENGLOE, or BENYGLOE, a mountain-range in Athole, Perthshire. Its highest summit has an altitude of 3,725 feet above sea-level. See BLAIR-ATHOLE and TILT (THE).

BENGRIANMORE. See KILDONAN.

BENHILL. See RATIVEN.

BENHOLM, a parish, containing the post-town and railway station of Johnshaven, in Kincardineshire. It is bounded by the German ocean, and by the parishes of Bervie, Arbutnot, Garcock, and St. Cyrus. It is nearly square, and measures about 3 miles each way. The shore is low, rough, and rocky, has been the scene of many shipwrecks, and appears to be touched by a northward ocean-current, as the bodies of several persons drowned in the frith of Forth have been found on it. A strip of land, of an average breadth of 300 yards, and almost level with the sea, extends along the shore; is all part of an ancient sea-bottom; consists partly of shingle, more generally of sea-sand intermingled with water-worn stones; and, except at the site of Johushaven, has all been covered artificially with soil, and made either pastoral or arable; and a portion of it was thus improved so late as 1863. The ancient sea-margin, along the inner side of this strip, is very distinctly marked, and is in some places steep, in other places sloping. The ground inward hence rises with unequal ascent toward the north-west. A chain of little hills, whose summits are covered with heath, runs along the south-west boundary; a ridge of hill, also covered with heath and furze, forms part of the north-west boundary; and a rising-ground, called Gourdon hill, and attaining an altitude of about 400 feet, terminates the view on the north-east. The interior tracts consist of hill and dale; and hence the name Benholm, "ben" a hill, "holm" a dale. About 400 or 500 acres are under wood. The climate, particularly about

Brotherton House and Johnshaven, is mild and salubrious. A fuchsia-tree, with a stem as thick as a man's leg, has grown in Brotherton garden; and figs ripen there in the open air. Fevers are never known to prevail in Johnshaven, nor any epidemic except smallpox and scarlatina. Fish and shell-fish of various kinds abound on the coast. Fishing for cod, haddocks, and other white fish is said to have fallen off; herring-fishing, to a comparatively small extent, is tolerably prosperous; and salmon-fishing by bag-nets has, of late, been carried on with considerable success. Several tons of whelks, gathered on the shore, and of crabs taken in creels, are sent to London every season. Much land in the upper district, formerly moor and waste, has recently been reclaimed and made arable. The soil of the lower district, to the breadth of $\frac{1}{3}$ mile from the shore, is very productive and early, and well adapted for all sorts of crops; but that of the upper district is less fertile and later. The highest rent per acre, in 1865, was £3; and the average rent about £2 5s. There were then three estates,—Brotherton, Benholm, and Knox; but about the beginning of the 18th century, the greater part of the property belonged to the Earl Marischal. A splendid baronial mansion was in the course of erection at the end of 1865 by Mr. Scott, on his estate of Brotherton, on the site of a previous house, which had stood more than 200 years. A square tower, the ancient residence of the family of Benholm, stands in a peninsular situation; is supposed to have been built in the beginning of the 16th century; appears, from both its situation and its structure, to have been intended for a place of strength; and, though not now inhabited, is still entire. A rough stone, in the circumference of a stony circle, and commonly called the Cloach stone, is on the summit of a hill bordering with St. Cyrus, and commanding an extensive prospect. It is more than a foot thick, measures 8 feet along the ground, and rises nearly 6 above its surface, in an inclined direction towards the north. A battle is traditionally said to have been fought near it; a number of flint heads of arrows have been found on the hill side below it; and a great quantity of human bones have been discovered between it and the coast, for nearly a mile along the rising ground above Johnshaven, within graves the bottom and sides of which were lined with rough stones. An oblong cairn of stones, mixed with a black loam totally different from the surrounding soil, is on the summit of Gourdon hill, facing the north-west, in view of the Grampians, and is supposed to be the site, and to contain the ashes, of ancient heacon-fires lighted for intimating to the people of the interior hostile invasions of the coast. The rocks of the parish are sandstone, conglomerate, and trap; and their surfaces, wherever exposed either naturally or by excavation, are found to be all grooved and striated by glacial action, in a direction uniformly from north-east by east to south-west by west. Two sandstone quarries are worked on the estate of Brotherton, and one on that of Benholm; and the stone from one of the former is the best building stone in the county. The spinning of coarse linen or hemp for sacking employs a number of women. The parish is traversed by the road from Montrose to Aberdeen, and by the Montrose and Bervie railway. Population in 1861, 1,574. Houses, 362. Total rental in 1865-6, £3,617 1s. 10d.

This parish is in the presbytery of Fordoun, and synod of Angus and Mearns. Patrons, Lord Craunston and Scott of Brotherton. Stipend, £260 8s. 5d., with manse and glebe valued at £42. Schoolmaster's salary, £45, with fees. The parochial church stands nearly in the centre of the parish, was rebuilt in 1832,

and contains 750 sittings. There is a Free church; and the sum raised in connexion with it in 1865 was £180 14s. 2d. There is also, at Johnshaven, a U. Presbyterian church. There are, at Johnshaven, a Free church school, with an attendance of from 90 to 100, and a female school, with an average attendance of 140. There is a freemasons' lodge.

BENHOPE, a noble mountain of Sutherlandshire, towering to the height of 3,150 feet above sea-level. It extends in a south-west direction along the vale of Strathmore in the parish of Durness. It may be approached by the road leading from the head of Loch Eribol to Loch Naver; or from the head of Loch Hope, which stretches from its western base towards Loch Eribol. It is composed of quartz and grey slate.

BENIORN, a mountain in the parish of Golspie, Sutherlandshire. Altitude 1,712 feet.

BENHUTIG. See TONGUE.

BENKETLAN. See ARDGHATTAN.

BENLAIR. See MAREE (LOEH).

BENLAOGHAL. See TONGUE.

BENLAOIDH, or **BENLOY**, a magnificent mountain on the mutual borders of Perthshire and Argyleshire. It is situated at the head of Strathfillan, about 4 miles south-west of Tyndrum. It forms the western extremity of a chain which culminates in Benmore and extends eastward to Killin; and at the same time it projects two grand spurs into Glenorchy, and is the loftiest summit connected with that superbly highland district. Its name signifies 'the mountain of fawns.' The writer of the New Statistical Account of Glenorchy says, "Though now denuded and shorn of the woods which even at a comparatively recent period clothed and adorned its sides, Benlaoidh is one of the most elegant of mountains in a district in which it is no easy matter to adjust the competing claims of a host of rivals for this distinction."

BENLAWERS, a mountain of Perthshire, in the parish of Kenmore, on the north-east side of Loch Tay. Its altitude is stated by some at 3,944 feet; by others, at 4,015 feet above sea-level. It is easy of ascent; so much so, that one may, in perfect safety, ride to the summit. Benlomond alone can, probably, compete with this mountain for the grandeur of the view to be obtained from it. But a much greater variety, and a greater range of country can be seen from Benlawers; and it has this advantage, that it towers over all the neighbouring mountains, by more than 1,000 feet. Words cannot express the magnificence and variety of the view from Benlawers; but a faint conception of it may be formed from the extent of country it embraces. Looking to the south, Loch Tay, with all its ornaments of wood and field, lies at our feet, terminating towards the west in the rich valley of Killin, and joining eastward with the splendour of Strath-Tay. Beyond the lake the successive ridges of hills embosoming Strathearn, lead the eye to the Ochills and the Campsie fells, and beyond even to Edinburgh. Dunkeld and its scenery are also distinctly visible; and we can make out, with ease, the bright estuary of the Tay, the long ridge of the Sidlaw hills, and the plain of Strathmore. Westward, we trace the hill-screens of Loch Lomond and Loch Katrine, and, indeed, every marked mountain as far as Oban. Bencruachan and Buachaille-Étive are particularly conspicuous. To the north, Schichallion and its adjoining mountains, with the valley of the Tummel and Loch-Rannoch, as far as Loch-Laggan, which appears like a bright narrow line. In this direction the eye is carried as far as Glencoe and Bennevis, on the one hand; while, on the other, Benyglow lifts its complicated summit above the

head of Ferrogon; and, beyond this the mountains of Marr and of Cairngorm, at the head of the Dee, some of them marked with perpetual snow, are the last that can be traced. This mountain abounds in game, and also presents a most interesting field to the botanist.

BENLEDI, a mountain of Perthshire, 2 miles west of Callander, rising to 3,009 feet, according to some, but according to others—and more correctly we believe—to only 2,863 feet above sea-level. It commands an extensive prospect of Stirlingshire and the windings of the Forth.

BENLEVEN, or **ISLE OF BENLEVEN**, the part of Dumbartonshire which is peninsulated between Lochlomon and the river Leven on the one side, and the frith of Clyde, the Gareloch, and Lochlong on the other. It comprehends the parishes of Luss, Cardross, and Row, and part of the parishes of Bonhill and Arroquhar.

BENLIGA, a mountain of 1,692 feet of altitude above sea-level, in the parish of Stobo, Peeblesshire.

BENLOMOND, a mountain renowned in song and story, situated on the eastern bank of Lochlomon, in the parish of Buchanan, Stirlingshire. Its altitude above sea-level is 3,192 feet. In every view, it is an object of interesting grandeur. When approaching it,—whether we advance from the lake, or from its south-eastern base,—it is impossible to do so without all the higher feelings of our nature being excited. The journey to the top is long and laborious—from the inn at Rowardennan it is about 6 miles; but the horizon extends at every step, and the labour is richly repaid from the magnificence of the view which it affords:

"It is the land of beauty, and of grandeur,
Where looks the cottage out on a domain
The palace cannot boast of,—seas of lakes,
And hills of forests,—Torrents here
Are bounding floods; and there the tempest roams
At large, in all the terrors of its glory."

The lake, with its numerous islands, is spread out beneath the feet of the traveller; the cities of Edinburgh and Glasgow are seen sparkling in the sun-beam; the whole county of Lanark, and the rich vale of the Clyde, with all its towns and villages, the hill of Tintock, and the distant mountains of Cumberland, attract the eye towards the south. To the west are seen the counties of Renfrew and Ayr, the frith of Clyde, with the islands of Arran and Bute, and beyond this the distant Atlantic and the coast of Ireland; on the east, the county of Stirling, with the windings of the Forth, the fertile plains of the Lothians, and the castles of Edinburgh and Stirling. On the north the prospect is awfully sublime, presenting mountain piled on mountain,—Bencruachan towering above Benvoirlich and all his brethren in the foreground,—and Bennevis rearing his still loftier head in the extreme distance, while nearer at hand are seen,

"Craigs, knolls, and mounds, confusedly hurled,
The fragments of an earlier world,
And mountains, that like giants stand,
To sentinel enchanted land."

None meet the view, from the base of Benlomond to the Western ocean. The northern side of this mountain presents an aspect peculiarly terrific. Here the mighty mass, which hitherto had appeared to be an irregular cone placed on a spreading base, suddenly presents itself as an imperfect crater, with one side forcibly torn off, leaving a stupendous precipice of 2,000 feet to the bottom. Standing on the brink of this tremendous precipice, from which most travellers recoil with terror, the spectator is above the

region of the clouds, which are seen floating in the atmosphere beneath, or enveloping the sides of the mountain. The effect of the rainbow, as seen from hence, is "beautiful exceedingly." But when the forked or sheeted lightning is beheld flashing below, and the thunder heard, pealing and reverberating among the mountains, the awful pomp and majesty of the scene is heightened in an immeasurable degree. The spectator, overwhelmed with sensations of grandeur and sublimity, feels as if he had shaken off for a time this mortal coil and all terrestrial impressions, and were no longer a denizen of this nether sphere. "In such a situation," says Dr. Stoddart, "the most sublime sensations cannot be felt, unless you are alone. A single insulated being, carrying his view over these vast, inanimate masses, seems to feel himself attached to them, as it were, by a new kind of bond; his spirit dilates with the magnitude, and rejoices in the beauty of the terrestrial objects, and,

—'the near heav'ns their own delights impart.'"

In the summer months, this mountain is visited by strangers from every quarter of the island, as well as foreigners, who come to view the romantic scenery of the highlands. The month of September is in general accounted the best for ascending it, because from the cool temperature of the air, the horizon is then less clouded by vapours than during the more intense heats of summer. The old way of making a visit to the summit, was to take a boat from Luss to Rowardennan, or cross over from Inveruglas, or be ferried over from Tarbet. On a pane of glass, in the window of this last-mentioned inn, or rather of the old inn of Tarbet, some verses were written by an English gentleman who had ascended Benlomond, and was probably afterwards confined at Tarbet by rain. Though these verses have been copied into almost every guide and tour-book, yet as they contain some very good advice and instruction to those who wish to ascend the mountain, and at the same time possess a considerable share of merit, we shall take the liberty of presenting them to our readers.

"Stranger! if o'er this pane of glass perchance
Thy roving eye should cast a casual glance,—
If taste for grandeur, and the dread sublime,
Prompt thee Benlomond's fearful height to climb,—
Here stop attentive, nor with scorn refuse
The friendly rhymings of a tavern muse.
For thee the muse this rude inscription plann'd,
Prompted for thee her humble poet's hand,
Heed thou the poet; he thy steps shall lead,
Safe o'er yon towering hill's aspiring head.
Attentive then to this informing lay,
Read how he dictates, as he points the way.
Trust not at first a quick adventurous pace.
Six miles its top points gradual from the base.
Up the high rise with panting haste I pass'd,
And gain'd the long laborious steep at last.
More prudent thou, when once you pass the deep,
With measur'd pace and slow ascend the steep;
Oft stay thy steps, oft taste the cordial drop,
And rest, oh! rest, long, long upon the top.
There hail the breezes, nor with toilsome haste,
Down the rough slope thy precious vigour waste;
So shall thy wondering sight at once survey,
Vales, lakes, woods, mountains, islands, rocks, and sea,
Huge hills, that heaped in crowded order stand,
Stretch'd o'er the northern and the western land:
Vast lumpy groups! while Ben, who often shrouds
His lofty summit in a veil of clouds,
High o'er the rest displays superior state,
In proud pre-eminence, sublimely great.
One side, all awful, to th' astonished eye
Presents a steep three hundred fathoms high.
The scene tremendous, shocks the startled sense
In all the pomp of dread magnificence.
All this, and more shalt thou transported see,
And own a faithful monitor in me.

THOMAS RUSSELL, Oct. 3, 1771."

Benlomond is chiefly composed of granite, interspersed with great quantities of quartz. This last

mineral is found near the top, in immense masses, some of which must weigh several tons; these appear like patches of snow upon the mountain, even when seen from Luss. Considerable quantities of micaceous schistus are found, even at the top, and many rocks towards the base of the mountain are entirely composed of this mineral. Plovers abound near the middle of the mountain, grouse a little higher, and near the top ptarmigans are occasionally seen. To the botanist, Benlondie affords a fund of great amusement. As we ascend, we find the plants we had left below assume a very different appearance, and some very rare and beautiful species are found in abundance. The *Alchemilla alpina*, or cinquefoil ladies mantle, grows upon all the upper part of the mountain. The *Sibbaldia procumbens*, or procumbent silver-weed, distinguished by its tri-lobed leaves, grows in great quantity, even on the very summit. The *Silene acaulis*, or moss catchfly, the leaves of which form a beautiful green turf, like a carpet, which is variegated with a fine purple flower, grows in large patches. The *Rubus chamaemorus*, or cloud-berry, is found in great quantities, about half-way up the south-east side of the mountain. The blossoms of this plant are of a purplish white, succeeded by a bunch of red berries, which are ripe in July, and have a flavour by no means unpleasant. These berries are much esteemed by many northern nations, but probably for want of finer fruits. The Laplanders bury them under the snow, and thus preserve them fresh from one year to another. They bruise and eat them with the milk of the rein-deer. The *Azalea procumbens*, or trailing rosebay, the smallest of woody plants, was first found here by Dr. Stuart of Luss, but is not very plentiful. The *Trientalis Europæa*, or chick-weed-wintergreen—the only British plant of the class *Heptandria*—grows in the woods near the base of the mountain. The *Pinguicula vulgaris*, *Narthecium ossifragum*, and *Thymus acinos* likewise abound. Very near the inn of Rowardennan, are to be found great quantities of the *Drosera rotundifolia*, or round-leaved sundew, and *Drosera Anglica*, or great sundew. These plants catch flies, by shutting up their leaves, and crushing them to death; in this they resemble the *Dionæa muscipula*, or American fly-eater.

At Craigrostan, on the western side of Benlondie, is a cave to which tradition has assigned the honour of affording shelter to King Robert Bruce, and his gallant followers, after his defeat by M'Dougal of Lorn, at Dalry. Here, it is said, the Bruce passed the night, surrounded by a flock of goats; and he was so much pleased with his nocturnal associates, that he afterwards made a law that all goats should be exempted from grass mail or rent. Next day, tradition adds, he came to the Laird of Buchanan, who conducted him to the Earl of Lennox, by whom he was sheltered for some time, till he got to a place of safety. Craigrostan was in a later age the property of the celebrated outlaw, Rob Roy M'Gregor; and north of it is a cave, said to have been used by him as a place of refuge.

BENLOY. See BENLONDIE.

BENLOYAL. See TONGUE.

BENLUBHAN. See LOCHGOLMHEAD.

BENLUNDIE, a mountain of 1,464 feet of altitude above sea-level, in the parish of Golspie, Sutherlandshire.

BENMACDHU, or BENNAMACDUICH, or BENMACDHU, one of the Cairngorm group of mountains, in the south-west corner of Aberdeenshire, estimated by Jameson at 4,300 feet in altitude; by Mr. H. C. Watson at 4,326 feet; and by others at 4,390 feet. If this last admeasurement be correct, Ben-

macdhu must be higher than Bennevis, hitherto regarded as the most elevated spot in great Britain. The writer of a lively article on this mountain in Chambers' Journal, after informing us that the attempt to ascend a rough surface, at an angle of about 25°, and to the height of some 2,000 or 3,000 feet, is no trifling matter, goes on to say: "Your eye will teach you at a glance the most accessible mode of ascent, which you will find to resemble a great ill-constructed stair of unhewn blocks of granite, some mile or so in length. By degrees you are introduced to a different tract. The heather and long fern no longer impede your progress; and you sometimes walk over a deep-cushioned carpet of alpine mosses, short and stunted, but rich in variety of colouring, and fresh and moist from the recently melted snow; then you pass over a broad field of snow, hard as ice, and under which, from a pny archway, trickles some small stream which feeds the river beneath. In the hottest noon of a summer-day, the summit is cold and wintry; the various gentle breezes which fan the sides of the warm valleys will here be found concentrated into a swirling blast, cold and piercing as if it had sprung from the sea on a December morning; then the snow appears in large patches wherever you look around you, and the bare surfaces of the rocks are deserted even by the alpine moss. We know no mountain so embedded among others as Benmacdhu. On all sides it is surrounded; and the eye, fatigued with tracing their distant outlines, feels as if the whole earth were covered by such vast protuberances. Betwixt these hills, and over their summits, you will see the clouds wandering about like restless beings who have no fixed habitation. Benmacdhu, stretching over a considerable space, has many summits, and presents a vast variety of aspects; but there is a certain part towards the north-east where it turns itself into a basin, joining the contiguous summits of Benaven and Benabour, and where it assumes a form peculiarly striking and grim. Here one rock distinguishes itself from its brethren by displaying a pointed needle from a summit of vast height, which appears considerably off the perpendicular, and hangs its head over the glen below. Betwixt this wild height and another bolder and broader, there is a deep fissure, down which tumbles a considerable stream, which, after forming itself into Loch Aven, descends to join the Spey."

BENMAIGH, a noble isolated mountain, at the head of Lochbny, south end of Mull, Argyshire.

BENMORE, the highest mountain in Mull. It lies between the head of Loch-na-keal and Loch Sereidan. Macculloch says: "The ascent is neither very tedious nor difficult. I found it to be 3,097 feet high. The view is various and extensive. Staffa, Iona, the Treshinish isles, Coll and Tiree, with Ulva, Gometra, Colonsa, Eorsa, and other objects, are seen beautifully diversifying the broad face of the western sea, distinct as in a map: while, to the southward, Scarba and Jura, with the smaller isles of the Argyshire coast, recede gradually in the distant haze. The rugged surface of Mull itself, excludes the objects to the eastward; but Loch Sereidan forms a beautiful picture beneath our feet; its long and bright bay deeply intersecting with its dazzling surface the troubled heap of mountains."

BENMORE, a noble mountain of 3,903 feet of altitude above sea-level, in the parish of Killin, Perthshire. See KILLIN.

BENMORE, a mountain-range, with pyramidal summits, nearly 4,000 feet above sea-level, in the parish of Glenshiel, Ross-shire.

BENMORE, a mountain in the parish of Lochs, island of Lewis, Ross-shire,—celebrated in old hunting-songs of the Outer Hebrides.

BENMORE, a mountain-range in the parish of Dunoon, Argyleshire. It rises abruptly and boldly from the valley of the Eachaig, and from the west side of Loch Eck, and also screens the north side of Glenmassan. It has an altitude of about 2,500 feet above sea-level, and is supposed to be the highest mountain of Cowal.

BENMORE, a mountain 2,310 feet high in the island of Rum, Argyleshire.

BENMORE, one of the chief summits of a mountain range on the north end of the island of North Uist, Inverness-shire. See **UIST (NORTH)**.

BENMORE, or **CONVAL**, a mountain of about 3,230 feet of altitude above sea-level, in the parish of Assynt, Sutherlandshire. See **ASSYNT**.

BENMUICDHU. See **BENMACDHU**.

BENNABOURD. See **BENABOURD**.

BEN-NA-CAILLACH. See **BROADFORD**.

BENNAN. See **BENAN**.

BENNANAIGHEAN. See **ARDCHATTAN**.

BENNETSTON, a village in the parish of Polmont, Stirlingshire. Population in 1841, 642. See **POLMONT**.

BENNEVIS, a sublime mountain in the parish of Kilmalie, immediately south-east of Loch Eil at Fort William, in the south-west extremity of Inverness-shire. Its summit has an altitude of 4,406 feet above sea-level; and its circumference at the base is supposed to exceed 24 miles. "The circuit or outline of the mountain all round," say the Messrs. Anderson in their Guide to the Highlands, "is well defined, for it is almost completely isolated by two yawning ravines, and separated from the adjoining lofty mountain-ranges, and projects boldly in front of them. The base of Bennevis is almost washed by the sea; none of its vast proportions are lost to the eye, and hence its appearance is peculiarly imposing; while the sky-outline, which is not peaked, but plain and tabular, deviating but little from a right line, admirably harmonises with its general massiveness and majesty. Its northern front consists of two grand distinct ascents or terraces, the level top of the lowest of which, at an elevation of about 1,700 feet, contains a wild tarn or mountain lake. The outer acclivities of this, the lower part of the mountain, are very steep, although covered with a short grassy sward, intermixed with heath; but at the lake this vegetable clothing ceases.

On the north-eastern side of Bennevis, a broad and tremendous precipice, commencing at the summit, reaches down to a depth of not less than 1,500 feet. The furrows and chasms in the black beetling rocks of this precipice are constantly filled with snow, and the brow of the mountain is also encircled with an icy diadem. From the summit, the view, as will readily be conceived, is remarkably grand and extensive. The astonished spectator, who has been so fortunate as to reach it free of its frequent robe of clouds, descends towards the south and east, the blue mountains of Bencruachan, Benlmond, Benmore, Benlawers, Schehallion, and Cairngorm, with a thousand intermediate and less aspiring peaks. On the other sides, his eye wanders from the distant hills of Caithness to the remote and scarcely discernible mountains of the Outer Hebrides. Numerous glens and valleys lie to the south, but they are hidden from observation; and to the utmost verge of the horizon, countless mountains of all sizes and shapes, heathy, rocky, and tempest-worn, extend before the eye, as if the waves of a troubled ocean had, in their commotion, been turned into stone. Looking towards the other points of the compass, we meet with more variety; the silvery waters of Loch Eil, Loch Linnhe, and Loch Lochy, of the Atlantic and German oceans, rendering the vast pros-

pect more cheerful and brilliant. It may safely be said, that every point of the horizon is 120 miles removed from the spectator.

"Bennevis, in its geological structure, very clearly exhibits the successive elevation of mountain masses by volcanic agency. It consists of three great zones of rock, the fundamental one being gneiss and mica-slate, through which an enormous irruption of granite, forming now the lower half of the mountain, bursts forth. At a subsequent period, a new summit of black compact felspar rocks (the principal member being a porphyritic greenstone) was projected from below through the centre of the granite, shooting up beyond it at a high angle, and now constituting, as similar rocks do elsewhere, the loftiest rocky pinnacle in the country. The older masses are, in many places, traversed by veins of the superior rocks." "The summit," says Dr. Macculloch, "is utterly bare, and presents a most extraordinary and unexpected sight. If any one is desirous to see how the world looked on the first day of creation, let him come hither. Nor is that nakedness at all hyperbolic; since the surfaces of the stones are not even covered with the common crustaceous lichens; two or three only of the shrubby kinds being barely visible. It is an extensive and flat plain, strewed with loose rocks, tumbled together in fragments of all sizes, and, generally, covering the solid foundation to a considerable depth. While these black and dreary ruins mark the power of the elements on this stormy and elevated spot, they excite our surprise at the agencies that could thus, unaided by the usual force of gravity, have ploughed up and broken into atoms, so wide and so level a surface of the toughest and most tenacious of rocks. Certainly Nature did not intend mountains to last for ever; when she is so fertile in expedients as to lay plans for destroying a mountain so apparently unsusceptible of ruin as Bennevis. Situated in the midst of this plain, whence nothing but clouds and sky are visible, the sensation is that of being on a rocky shore in the wide ocean; and we almost listen to hear its waves roar, and watch as if for the breaking of the surge, as the driving rack sweeps along its margin. As the clouds began to close in around, curling and wheeling over head, and hurrying up in whirlwinds from the deep and dark abysses which surround it, a poetical imagination might have imaged itself on the spot where Jupiter overthrew the Titans; the bulk, the apparent freshness, and the confusion of the fragments, resembling a shower of rocks just discharged by a supernatural power from the passing storm. The wild and strange sublimity of this scene is augmented by the depth of the surrounding precipices, whence the eye looks down into interminable vacancy, on the mists that are sailing in mid air, or into the rugged depths of chasms, black as night, impenetrable to the eye or to the light of day." The ascent of the mountain is both difficult and dangerous, and ought not to be attempted without a guide, or by any but strong healthy persons, who have been accustomed to feats of climbing.

BENNOCHIE, a mountain in Aberdeenshire, situated between Alford and Garioch, and stated by Dr. Keith, in his 'Survey of Aberdeenshire,' to have an altitude of 1,440 feet. The chief peculiarity of Bennochie is its bold peaks, which communicate to it, when viewed from certain points, a remarkably grand and striking aspect. The mass of the mountain consists of a reddish granite, traversed from north to south by great dykes of porphyry.

BENORMIN, a great mountain on the mutual border of the parishes of Farr and Kildonan, Sutherlandshire.

BENRADII. See REAY.

BENREISIPOLL, a mountain in Sunart, Argyleshire, estimated by Sir James Riddell, Bart., at 2,661 feet in elevation.

BENRINNES. See ABERLOUR.

BENSHIANTE. See BENANOUR.

BENSTACK, a conical mountain, nearly 3,000 feet high, between Glenstack and Loch Stack, in the parish of Edderachyllis, Sutherlandshire.

BENSTARIVE, a massive and picturesque mountain, at least 2,500 feet high, on the east side of the upper part of Loch Etive, parish of Ardebattan, Argyleshire.

BENTALUIDII. See TOROSAY.

BENARN. See ARGYLESHIRE.

BENTHOLAIRE. See LOCHGOLHEAD.

BENTS, a station on the Wilsonton railway, $4\frac{1}{2}$ miles south of Bathgate.

BENVALLA, a mountain, 1,850 feet in height above sea-level, in the parish of Stobo, Peeblesshire.

BENVENUE, a grandly picturesque mountain on the south bank of Loch Katrine, and north side of the parish of Aberfoyle, Perthshire. See KATRINE (Loch).

BENVIE, a village in the parish of Liff and Benvic, Forfarshire. Population in 1841, 60. See LIFF and BENVIE.

BENVIGORY, the loftiest hill on the east side of the island of Islay, Argyleshire. A severe engagement was fought here by the Macdonalds and the Macleans, when contesting the possession of the island.

BENVOIRLICH, a magnificent mountain in the parish of Arroquhar, $2\frac{1}{2}$ miles from the head of Lochlomond, Dumbartonshire. See ARROQUHAR.

BENVOIRLICH, a mountain, about 3,300 feet in height above sea-level, on the west border of the parish of Comrie, 3 miles south of the head of Loch Earn, Perthshire. It commands a very extensive view.

BENVRACKY, a mountain in Perthshire, which terminates the vale of Athole on the one hand, and the strath of Garry on the other. The view from its summit is one of the most beautiful and extensive in the alpine scenery of Scotland. Though this mountain is about 30 miles from Perth, a good eye can discern from it, in a favourable day, not only the bridge, but the steeples, and some of the more prominent objects in the neighbourhood of that city. Its height has been determined to be 2,756 feet above the level of the sea.

BENVRAICK. See BUCHANAN.

BENVYVIS, or BENUAISH, a huge mountain in the parishes of Kiltearn and Fodderty, Ross-shire, having an elevation of 3,426 feet according to the New Statistical Account, but of 3,722 feet according to Mr. C. Schmidt's admeasurement. It is visible in the shires of Nairn and Banff, and from Inverness. It is seldom without snow on its summit even in mid-summer; and, in one of the charters of Fowlis, the forest of Uaish is held of the Crown on condition of presenting at court a snow-hall, or, as some say, three wain-loads of snow, gathered from the top of this mountain, on any day in the year on which they may be required. Its outline presents an enormous lateral bulk like a hay-stack; its summit where free from snow, is covered with soft green sward. It has never been entirely free from snow in the memory of man, except in September, 1826.

BENYGLOE. See BENGLOE.

BERBETH. See STRAITON.

BERIGONIUM, the supposed site of the capital of Dalriada, near the beach of the Atlantic, about 4 miles north of Dunstaffnage, parish of Ardchattan,

Argyleshire. It comprises a double-topped rocky eminence, and a piece of contiguous plain. "Both the flattened summits," say the Messrs. Anderson in their Guide to the Highlands, "are girt with a vitrified wall, strongly defined, and in some parts exposed, to a height of 8 feet. This rock is vulgarly called Dun Mac Snichan. Either area is an irregular oblong, measuring respectively 160 and 100 paces circumference. They are separated by an interval of 120 paces. The rock is barely accessible, except at one end where it is defended by a second wall, and at another spot about the middle of one side, where a broad gap affords a steep approach. The adjoining cliff is called Dun Bhail an Righ, 'the hill of the king's town.' From the foot of the cliffs, a straight raised way, said to have been at one time paved and called Straid-mharagaid, 'the market street,' proceeds along the top, and at a few yards distance from the edge of the steep green bank which lines the beach leading to Dun Mac Snichan. It is about ten feet broad, and, where best defined, of a like height. Some years ago a stone coffin, an urn, and a sandal were found in the ground behind. A hollow log of wood, turned up at an early period, was readily construed, by the sticklers for the regal associations fondly attached to this spot, into a remnant of the water-pipes of the city. At the base of the cliff is a small burying ground, an ancient cell or chapel, from which the 'street' or paved way communicated most likely with the sea-shore opposite Dunstaffnage or with the vitrified site, and which, therefore, was in all likelihood only a procession road during Christian times to the religious sanctuary." A claim is made for this place to be also the Selma of Ossian,—and likewise the site of a fortress built by the first Fergus of Scotland. "This castell," we are told, "standis in the west part of Scotland forment the Ilis, qhahere he exercit his lawis to that fyne, that his pepyl might be drawin the more esaly for exercitioun of justice." But however well the locality connects with the Fingalian heroes, it cannot be connected by the slightest show of evidence with the first Fergus, nor by anything like satisfactory evidence with the capital of the Dalriads. "It is beyond a doubt," remarks Dr. Jamieson, "that the term Berigonium, also written Beregomum, is a misnomer. There is not a vestige, in the language or traditions of the country, that this castle ever bore a name that had the slightest resemblance of this. It has been supposed, that Bocce, finding Berigonium mentioned by Ptolemy, had not only read it erroneously, but, in consequence of the false position given to our country in the map, had viewed a town or castle in Gallo-way as belonging to Argyle. We learn, however, from Camden, that the oldest edition of his Geography, printed at Rome, A. 1480, gives Berigonium, which he views as the modern Bargeny in Carrick. The only Gaelic name, by which the pretended Berigonium is known, is Dun-Mae-Snichan, or Dun-Macsnichan. As Sniochan is supposed to be a patronymic, the designation may signify, 'the fortified hill of the son of Sniochan, or Snachan.' It is by no means improbable that this name had originated in a later era than that of the erection of the kingdom of the Dalriads; as it will be found that, in many instances, the name borrowed from posterior occupants supersedes that of those who preceded them. This holds as to a variety of camps or fortifications, undoubtedly Roman or British, which are by the tradition of the country called Danish; as having been possessed by these northern invaders at a later period. The name Sniochan, or Snachan, has more appearance of relationship to Norwegian, than to Celtic nomenclature. For, in

the Danish memorials, we meet with Snig-ur, or as otherwise written Snio, in Latin bearing the form of Snigon-is in the genitive, as the name of a north-er prince.

BERNARD'S (St.). See EDINBURGH.

BERNERA, the southernmost of the group of islands, constituting the Hebridean parish of Barra, Inverness-shire. See BARRA. Bernera is 1 mile long and $\frac{3}{4}$ of a mile broad. It is a mass of gneiss, with the north-western part dipping into the water, and the south-easterly exhibiting an abrupt section rising to the height of above 500 feet. The cliffs on this side are greatly varied in outline,—inclining, perpendicular, and projecting,—smooth, largely fissured, or minutely intersected,—here overhanging the deep in a jutting mass,—there forming a retiring cove terminating above in a perpendicular fissure, and below in a gloomy cavern, the abode of the dark-winged cormorant. In the summer-months these cliffs are inhabited by prodigious numbers of kittiwakes, guillemots, auks, and puffins. The natives of the island derive a plentiful supply of excellent food from the nests of these birds, first robbing them of the eggs, and afterwards of the young. They also procure abundance of puffins by dragging them from the holes in which they breed at the summits of the cliffs. One who has not seen some of the great breeding-places of the Hebrides, can hardly form an idea of the prodigious swarms of birds by which they are frequented. When the wind blows strongly from the south or south-east, some of the birds in flying to the cliffs are frequently carried inland over the summit—which in this island is pretty even—to a small distance, when they wheel about and regain their nests. This happens especially to the puffins, which always nestle near the tops of the rocks. The natives, aware of this circumstance, take advantage of it for procuring these birds. A man lays himself upon his back, close to the edge of the cliff, with his head to the sea, and having in his hands a stout fishing-rod, or light spar, which is directed over his head toward the sea, and projects in part beyond the edge of the rock. He remains patiently in this state until a bird, driven over him by the force of the wind, comes within reach, when he suddenly raises the rod, and dexterously hits it, which long practice enables him to do with precision. The bird of course falls, and is immediately secured. The man resumes his expectant position, and in this manner procures a very considerable number of puffins and auks, when the weather is favourable to the operation. This method of procuring birds is practised only in the island of Bernera, none of the other breeding-places in the Hebrides happening to be so constructed as to admit of it. The lighthouse on this island is noticed in the article BARRA-HEAD. Population of Bernera in 1841, 30; in 1861, 34. Houses, 6.

BERNERA, an island in the quoad civilia parish of Harris, Outer Hebrides, Inverness-shire. It lies in the Sound of Harris, about 1 mile north of North Uist, and 5 miles south-south-west of Palabay. Its length is about $3\frac{3}{4}$ miles, and its breadth about 2 miles. A government church was built here in 1829; and was constituted a quoad sacra parish church by the Court of Teinds in June 1845. The minister of it has charge of all the islands in the Sound of Harris. There is a Free church for Trumsgarry and Bernera; and the yearly sum raised in connexion with it in 1853 was £3 1s. Population of Bernera island in 1841, 713; in 1861, 315. Houses, 64. Population of Bernera quoad sacra parish in 1851, 1,051.

BERNERA, an island in the parish of Uig, Outer Hebrides, Ross-shire. It lies on the west side of

Lewis between two inlets of the sea, called Loch Bernera and Loch Roag. It is about 8 miles in length, by 2 in breadth; and is surrounded by an archipelago of islets, amongst which is one to the west of Bernera, known as little Bernera. Near the shore of the larger Bernera are some interesting monuments, of the kind commonly called Druidical: the remains of three stone circles. The principal, and by far the most perfect of them—one of the most remarkable in form and extent in the British isles—stands on the brow of a promontory overhanging the bay, striking the eye at a considerable distance, like a cemetery of thickly-clustered tombstones. We are indebted to Dr. Macculloch for the following description of it. "The general aspect of this structure is that of a cross, nearly of the proportions of the Roman crucifix, with a circle at the intersection. But a nearer inspection discovers more than is essential to that form. The largest line lies in a direction of about twenty-four degrees west of the true meridian, or pretty nearly in that of the magnetic variation at present, which is therefore the general bearing of the work. Great stones intermixed with some that have fallen, and with blank spaces whence they may have been removed, or where more probably they are covered by the soil, are found along this line, for the space of 588 feet, including the circle; their number amounting to fourteen, and eleven of them being still erect. If we were allowed to fill up the blanks according to the general proportions of the intervals between those that remain, the number would be twenty within that distance. But following the direction of this line further on, there are indications of other stones, all of them fallen, and nearly covered by earth and vegetation, that would justify us in extending it ninety feet or more, further; thus making the total length about 680 feet. Parallel to the long leg of the cross, and to that only, is another line, now far less perfect than the first, since it contains only three erect and seven fallen stones, and reaches, as far as I could discover, only to 480 feet. Thus these two lines may be conceived to form a sort of avenue to the circular enclosure; its breadth being exactly equal to a semi-diameter of the circle, as the additional line touches the edge of this. The shorter line of the cross, at right angles to the other, now measures 204 feet, including the circle; but as it is longer on one side than the other, its original length has probably been greater, though I was unable to detect any traces of fallen stones; the progress of some enclosures having here interfered with the integrity of the work. This line contains ten erect stones. The diameter of the circle is sixty-three feet from north to south, and sixty-two from east to west, and it contains fourteen erect stones in the circumference, with one in the centre. This central stone is twelve feet high; one near the end of the long line measures thirteen, a few are found reaching to seven or eight, but the height of the greater number does not exceed four. The intervals between the stones vary from two to ten yards, but the larger ones are probably the consequence of the loss of those which once occupied these places. I ought to add that the total number of stones which I could discover, either erect or recently fallen, is forty-eight; and that if the whole rank were complete, as it appears originally to have been built, they would amount to sixty-five or sixty-six." "My measurements," says Lord Teignmouth, "did not entirely coincide with those here stated; but on the whole they are doubtless accurate. The recent removal of the peat-moss, in which the stones are half buried, from the sides of one of them, exhibits not only the surprising growth of this vegetable

production, on a height where it could not receive any alluvial contributions, or deposit of extraneous decayed vegetable matter, but also the method employed by the rude architects who erected them, to fix them on those bases on which they have remained unmoved for centuries. The stone is inscribed in a hole, filled up with small loose fragments of the same material. The elevation of the stones of the central circle must have amounted to thirty feet above the ground. Where exposed to view, the substance is as white as a bleached bone, contrasting singularly with the gray hue produced by the atmosphere. The fanciful conjecture of Toland respecting this structure, which I have read detailed in an Encyclopædia, is ridiculed by Dr. Macculloch. The circular or oval form of these edifices was selected, no doubt, as best adapted to the purpose for which they were erected, and not with reference to the signs of the zodiac, as the number of stones in the circle varies indefinitely. The extensive appendage to the circle at Calernish, which distinguishes it from other circles, consists of the four avenues of stones directed towards it, from the four principal points of the compass, and is also so simply constructed that its origin may be accounted for without imputing to the architect an astronomical design exhibited in no other structure of the same kind. The other two circles in the neighbourhood are composed of much smaller stones: one is incomplete, the other has a double row still standing, and arranged in an oval form. The people have no tradition respecting them."

BERRIEDALE, a small river of the parish of Latheron, Caithness-shire. It rises near the boundary with Sutherlandshire, runs eastward on the northern side of Morvern and the Maiden-Pap, for about 10 miles, and then turns to the south-east, and flows into the small bay on which the village of Berriedale is situated, forming there a confluence with the water of Langwall, which is also an alpine stream flowing from the west. There is a good salmon-fishery in the bay. The country included between the two rivers consists of a group of huge dark mountains. Both of the rivers are very small in summer, but large and impetuous in winter.

BERRIEDALE, a village with a post-office, in a quoad sacra parish of its own name, within the quoad civilia parish of Latheron, Caithness-shire. It stands at the mouth of the Berriedale and Langwall rivers, and on the road from Wick to Inverness, $7\frac{1}{2}$ miles south-south-west of Dunbeath, and $9\frac{1}{2}$ north-east of Helmsdale. Its situation is very romantic, almost in a gorge, near the north skirt of the Ord of Caithness, and also near the southern termination of the grand cliffs and stacks which form so striking a feature of the coast of Caithness-shire. The village has a good inn. Here also are a very neat government church, and a very comfortable adjacent manse. The church was built in 1826, at an expense of £750, and contains 312 sittings. It was constituted a quoad sacra parish church by the Court of Teinds in December 1846. The amount of the minister's stipend is £120. Here likewise is a Free church; the yearly sum raised in connexion with which in 1865 was £81 5s. 10 $\frac{1}{2}$ d. Berriedale gives the title of Baron to the family of Sinclair, Earl of Caithness; and it was once famous for a strong ancient castle, which is now in ruins. According to tradition, William Sutherland, alias William More Mackelbin, that is, Big William the son of Hector, was the last inhabiting proprietor of this castle. Being about to set out on a warlike expedition to the Orkneys with one of the Earls of Caithness, and impressed with the idea that he should never return to his native country, he lay down on

the ground above Berriedale inn, contiguous to the small burying-ground, and there caused the length of his body to be cut out in the sward in the form of a grave, which to this day retains the name of the Long Grave, and measures about 9 feet 5 inches. In the neighbourhood is the pleasant mansion of Langwell, within the margin of a thriving plantation. Population of the quoad sacra parish of Berriedale in 1851, 1,264.

BERRY-HEAD, a magnificent rocky promontory at the southern extremity of Walls, in Orkney, corresponding in some respects to the opposite promontory of Dunnet-Head in Caithness-shire.

BERTHA, a spot of some interest to antiquaries and others who,

"Such places labour to make known,
As former times have honoured with renown."

It is situated at the confluence of the Almond with the Tay, about 2 miles above the town of Perth; and, according to General Roy, there are still some faint vestiges of Old Perth, or Bertha, here. Buchanan relates that an inundation of the Tay, in one night swept the greater part of the town of Bertha away. This happened towards the end of William's reign, who died in 1214. The king himself escaped the disaster which overwhelmed the place; but his infant son, with many of the promiscuous multitude, lost their lives. Though the existing vestiges of Bertha are extremely slight, yet they serve to show how, in all probability, the place was situated on a tongue of land before it was washed away. Here the Roman road crossed the Tay, and the houses on the opposite bank are still called Rome. From so many concurring circumstances, but especially from the distance between it and Hierna corresponding so well with that assigned by Richard in his Itinerary, there seems to be some ground to conclude, that the ancient Bertha must have been the Orrea of the Romans. General Roy has preserved a plan of it.

BERTRAM-SHOTS. See SHOTS.

BERVIE (THE), a small river of Kincardineshire. It rises among the Grampians in the upper district of the parish of Glenberrie, and flows about 16 miles southward and south-eastward to the German ocean, at the boundary between the parishes of Bervie and Kinneff. It winds in beautiful curves, and is adorned with the parks of Gloubervie, Whiteriggs, Arbuthnot, and Allardice. It is an excellent trout-stream, and has a small salmon-fishery at its mouth.

BERVIE, a parish, containing the hurch and post-town of Bervie, and the fishing-village of Gourdon, on the coast of Kincardineshire. It is bounded by the German Ocean, and by the parishes of Kinneff, Arbuthnot, Garvoek, and Benholme. Its outline is four-sided. Its length is about 2 miles, and its breadth about $1\frac{1}{2}$. The surface has a gradual ascent inland, with two hilly ranges nearly parallel. Bervie Hill, the highest ground, has an altitude of about 400 feet above sea-level; and Gourdon Hill serves as a landmark to mariners. Nearly two-thirds of the entire area of the parish are in cultivation, and about 70 acres are under wood. The chief landowners are Lord Arbuthnot and Mr. Farquhar. There are several quarries of sandstone. The fisheries are important. The road from Montrose to Aberdeen passes along the coast. Population of the parish in 1831, 1,137; in 1861, 1,561. Houses, 274. Assessed property in 1843, £3,343 13s. 4d.; in 1865, £4,742 16s. 4d.

This parish is in the presbytery of Fordoun and synod of Angus and Mearns. Patron, the Crown. Average stipend, £250; glebe, £18. The teinds were

recently exhausted. Schoolmaster's salary now is £50, with about £20 fees. The parochial church was built in 1833, and contains 900 sittings. There is a Free church; and the yearly sum raised in connexion with it in 1865 was £54 12s. 13d. There is also a Baptist chapel. Bervie parish was originally a part of the parish of Kinneff, and was separated from it about the time of the Reformation. There was, in Romish times, a friary here, which is still commemorated in the name of a locality called Friar's Dubs.

The TOWN OF BERVIE or INVERBERVIE stands at the mouth of Bervie Water, and at the end of a railway from Montrose, 7 miles east of Laurencekirk, 10 south-south-west of Stonehaven, and 13 north-north-east of Montrose. It has no natural advantages of site, and presents a cold, straggling appearance; it is also a small place, with only a village population, and does not look as if it could ever acquire much consequence; yet it contains some good houses, and is neither so poor nor so spiritless as some of the other small royal burghs of Scotland. It consists principally of three small irregular streets, related to one another somewhat in the manner of three sides of a square. The town-house is a modern two-story building, with a handsome belfry. The parish church is an elegant Gothic edifice, with a square tower of upwards of 100 feet in height. The bridge across the river is a fine structure, with one beautiful, large-span arch, at the height of about 80 feet above the bed of the stream. The castle of Hallgreen is a large, strong pile of the 14th century, in fine repair and of picturesque appearance, surmounting an eminence near the sea, at the southernmost point of the burgh boundaries. A spinning-mill of three stories stands at the upper side of the bridge, and was the first mill built in Scotland for the spinning of linen yarn and thread. The principal trade of the town consists in the manufacture of duck and dowlas, and in the supply of the surrounding country with miscellaneous wares. The market-day is Wednesday; and for six months in the year is a good grain market. A good cattle-market is held on the Thursday before the 19th of May in each year. There is also another of less importance held on the Thursday before the 19th of September. Cattle-markets and hiring-markets likewise were attempted to be established, a number of years ago, in November, December, and February; but they did not succeed, and have been relinquished. The town has a public reading-room, and offices of the North of Scotland Bank and the Aberdeen Town and County Bank. Its harbour, however, is at the village of Gourdon, about a mile to the south, where there are several granaries and warehouses belonging to Montrose merchants.

Bervie owes its distinction, as a royal burgh, to the circumstances of David II. being shipwrecked on the coast in 1362, and having been kindly treated by its inhabitants on reaching the shore. But its charter was renewed by James VI. in 1595. It unites with Montrose, Brechin, Arbroath, and Forfar in returning a member to parliament. Its parliamentary constituency in 1865 was 36. Its magistracy consists of a provost, three bailies, a dean of guild, a treasurer, and 9 councillors. Corporation revenue in 1864, about £167. Population of the municipal burgh in 1841, 864; of the parliamentary and municipal in 1861, 952. Houses, 181. There was until after 1851 a small part of the parliamentary burgh beyond the limits of the municipal burgh.

BERVIE BROW, or CRAIG DAVID, a bold promontory on the north side of Bervie water, in the parish of Kinneff, Kincardineshire. It is a conspicuous landmark for mariners, and is seen at sea at the distance of 15 leagues.

BERWICK (NORTH), a parish, containing a royal burgh and post-town of the same name, on the north coast of Haddingtonshire. It is bounded on the north by the frith of Forth, and on other sides by the parishes of Dirleton, Prestonkirk and Whitekirk. Its length from east to west is 3 miles; and its breadth is upwards of 2½ miles. Toward the east, the coast is rocky and bold; but toward the west, on both sides of the town, it presents considerable stretches of level sand and flat grassy downs, of the kind called links. Several rocky islets lie near the shore; and the large insular rocks of Craigleith and the Bass lie at a little distance. Two small pretty bays occur respectively east and west of the town, and a larger and very beautiful one, called Cauty Bay, is situated at the boundary with Whitekirk opposite the Bass. A range of low but in some parts very picturesque hills stretches across the southern part of the parish, from Fenton tower, eastwards to Whitekirk hill; but the most remarkable hill is North Berwick law, a very beautiful conical shaped hill which, rising to the height of about 800 feet above sea-level from a flat country, is visible from all sides at a great distance, and forms a well-known landmark to mariners. A few small rivulets intersect the parish. The soil is in a high state of cultivation. The chief landowners are Sir Hew Dalrymple, Bart., of Leuchie House, formerly North Berwick House; Sir George Grant Suttie, Bart., of Balgone; Lady Mary C. Nisbet Hamilton; Lady Susan Ramsay Bourke; and John Thomson, Esq. of Eastcraig. There are quarries of limestone and excellent building-stone; and there is a foundry for steam-engines and for tile-making machines. Estimated value of land produce, in 1839, £24,454. Assessed property in 1865, of the landward parts, £11,992 2s.; of the burgh, £4,424 19s. The most interesting antiquities are the ruins of Tantallan Castle, and some architectural remains on the Bass Rock. See TANTALLAN CASTLE and BASS (THE). About a quarter of a mile west of the town of North Berwick, stand the ruins of an abbey, or Cistercian nunnery, founded in 1154 by Duncan, Earl of Fife. At the Reformation this nunnery contained 11 nuns, and was well endowed. It presents few traces of its former magnificence. Views of it are given by Grose. Adjoining the harbor, on a small sandy knoll, are the slight remains of what is called the Auld Kirk, and which has evidently at one period been surrounded by the parish burying-ground, now nearly washed away by the sea. Population of the parish in 1831, 1,824; in 1861, 2,071. Houses, 344.

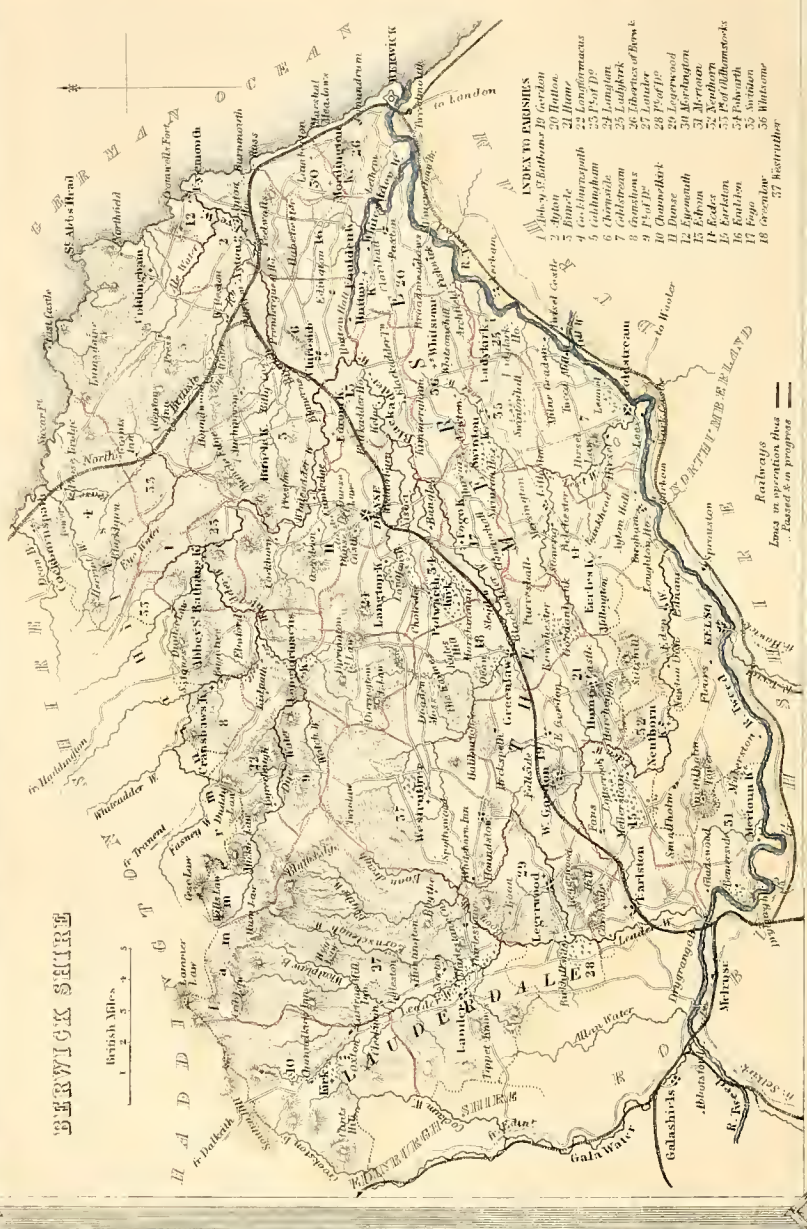

This parish is in the presbytery of Haddington, and synod of Lothian and Tweeddale. Patron, Sir Hew Dalrymple, Bart. Stipend, £306 3s. 5d.; glebe, £38, with 12 Solan geese from the Bass. Unappropriated tithes, £434 15s. 6d. Schoolmaster's salary, £52 10s., with £10 for a female teacher. There are a burgh school in the town, a sub-parochial school in the vicinity of Tantallan, and a private school. The parochial church was built in 1670, and repaired in 1819, and contains 550 sittings. The Free church contains about 400 sittings; yearly sum raised in 1865, £197. The United Presbyterian church was built in 1832, and contains 390 sittings. The Episcopal church is recent, and contains about 200 sittings.—The old parish church is famous in the annals of witchcraft as the reputed favourite rendezvous of the witches and wizards of the Lothians.

The TOWN OF NORTH BERWICK stands on the coast 9 miles north-north-east of Haddington, 11 north-west of Dunbar, and 22 north-east by east of Edinburgh. It took the name of North Berwick in contradistinction to Berwick-upon-Tweed, which

Railways
Lines in operation, thus
... about to be proposed

was often called in old times South Berwick. The town ranks at once as post-town, market-town, watering-place, sea-port, and royal burgh; it consists principally of two streets nearly at right angles to each other; it was greatly enlarged and improved during the twelve years ending in 1865; it has a large public hotel, a good private hotel, and, on both sides, commodious new villas for summer visitors; it acquired a bowling-green in 1865; and it looks all healthiness and cheerfulness, and is surrounded on sea and land by very beautiful environs. The beach on both sides of the harbour presents fine gently sloping sands, and forms excellent bathing-ground; the links afford good scope for the healthy diversion of golfing; and the frith, the rocky isles, the low trap hills to landward, and especially North Berwick law, immediately south of the town, with a rich skirt of wood and a delightful zigzag walk to the summit, comprise enough of scenery to give very pleasing exercise to the imagination. The result is that North Berwick is a select place,—attracting a larger proportion of wealthy and well-informed visitors than most towns of its size.

North Berwick was created a royal burgh by Robert III., and received a confirmation of its privileges by charter from James VI. The parliamentary boundary extends from the Yellow Craig rock on the east, to Point Gary on the west—a distance of nearly a mile in a direct line, but considerably more by the curvatures of the coast—with an average breadth betwixt the shore and the southern boundary line of about 360 yards. The burgh joins with Haddington, Dunbar, Jedburgh, and Lauder, in returning a member to parliament. The parliamentary constituency in 1865 was 87. The town is said to have been a sea-port so early as the time of Robert II.; it is said also to have been a place of noticeable trade some time or other long ago. But Mr. Tucker, in his enumeration of the ports of Scotland in 1656, does not even mention North Berwick, though he notices Eyemouth and Dunbar, and the minor ports of the Forth up to Borrowstounness. In the report of the commissioners appointed by the convention of royal burghs, in 1691, to visit the different burghs, and report upon their condition, it is stated “that there were neither yearly fairs nor weekly markets;” and the other observations on its trade are summed up in these words, “ships they have none, nor ferry boat, except two fish-boats which pay nothing to the town.” At the present day the harbour is formed by a tolerably good pier, on which considerable sums have been laid out; but it is dry at low water, and neither very easy of access, nor very well sheltered when gained. There were in 1834 five vessels belonging to the port, amounting in burden to 249 tons; and in 1850 there were four vessels, amounting in burden to 270 tons. For fifty years the trade may be considered to have been stationary, the letting of the customs and shore dues having varied very immaterially during the greatest part of that time. “There has latterly,” say the Parliamentary commissioners, “been a great falling-off in the grain and lime trade; but new objects of traffic have sprung up in the export of potatoes, turnips, and flour; and within the last ten years there has been a considerable increase in the importation of foreign rape cake, and crushed bones for manure. There are no manufactures, and no traces of any such ever having existed in the burgh. There are still no regular markets, and only two annual fairs, one in the month of June, and the other in the month of November.” A weekly stock grain-market was recently established, with seemingly good prospect of success; but it lasted

only three months, and does not appear at all likely to be resumed. The revenue of the burgh, in 1833, was £141 18s., of which £85 arose from customs and shore-dues. The expenditure during the same year was £124 5s. 2d.; and the debt amounted to £794 19s. 8d. The revenue in 1863 was about £380. The municipal government is vested in 12 councillors, who elect 2 bailies, and a treasurer. Municipal constituency in 1865, 59. The town-clerk is appointed by the magistrates during pleasure, and has a salary of £10 10s. There is no regular burgh-court; but sheriff small-debt courts are held three or four times in the year. The burghesses have a right of common on the links on both sides of the town. In 1814, the town-council sold the island of Craigeleith, lying off the harbour, to Sir Hew Dalrymple for £400. The town has an office of the British Linen Company's Bank. It has also a subscription library, and two or three benevolent societies. A branch of the North British railway deflects at Drem, and runs north-eastward to a terminus at North Berwick. There are several passenger trains daily; and there is a station for Dirleton about midway between Drem and North Berwick. Population of the municipal burgh of North Berwick in 1841, 607; in 1861, 700. Houses, 114. Population of the parliamentary burgh in 1841, 1,037; in 1861, 1,164. Houses, 179.

BERWICKSHIRE, the most south-easterly county of Scotland, lying on the coast of the German ocean, and along the north-east border of England. Its principal division was anciently called the Merse, or March, a name which it still retains, and which probably signifies the Border-district, or frontier-province. But this district seems formerly to have included a considerable portion of the eastern lowlands of Teviotdale, as Roxburgh castle was anciently called Marchmount, or the Castle of the March or Merse. This denomination, the Merse, is still often used, loosely, for the whole county. The modern name, Berwickshire, is derived from the town of Berwick-upon-Tweed, once its chief burgh or county town; but which, after the demise of Elizabeth, and the accession of James VI. of Scotland to the English throne, was constituted a peculiar jurisdiction, hypothetically separate from both kingdoms, and virtually forming a distinct county.

Berwickshire is bounded on the east by the German ocean; along which, from the boundaries of Berwick township to St. Ah's Head, its coast trends north-north-west for 8½ miles. The shore then takes a west-north-west direction, for other 9 miles, till its junction with East Lothian at Dunglass bridge; and, by the revenue laws, this latter part of the coast is considered as being within the limits of the frith of Forth. Almost the whole of this coast consists of bold rocky precipices of considerable altitude; and is nearly inaccessible, except at Eyemouth and Coldingham bays, and two or three other places, which are accessible to fishing-boats, at sandy or gravel beaches at the foot of the rocks. The whole irregular northern boundary skirts with East Lothian, along the mountain-range of Lammermoor. But, within this line, Berwickshire entirely surrounds a detached portion of one of the East Lothian parishes; while the most northerly part of this county is situated beyond, or to the north of, the Lammermoor hills, and is continuous with the extensive and fertile vale of the Lothians. Clint hill, one of the highest of the Lammermoor chain, in the parish of Channelkirk, at the north-western extremity of the county, rises 1,544 feet above the level of the ocean. Lammerlaw, in the parish of Lauder, has an altitude of 1,500 feet. The

general range of these mountains declines as it approaches the sea, averaging about 1,000 feet in perpendicular elevation, and it terminates in three precipitous promontories, at Fast-castle, Ernsclough, and St. Abb's Head; which last is detached from the extremity of the chain by a deep narrow dell almost level with high water mark at spring-tides. See LAMMERMoor-HILLS. The western irregular limit of Berwickshire is partly with Mid-Lothian, towards the north, but chiefly with Roxburghshire, from which it is partly divided, on that side, by the lower part of the Leader water, to its junction with the river Tweed near Melrose. Excepting a portion of Roxburghshire adjoining Kelso, and the township of Berwick, both of which are on the north side of the Tweed, that beautiful river, in a meandering course of about 40 miles, forms the southern boundary of this county, dividing it from Roxburghshire on the west, Northumberland in the middle, and North Durham on the east, of this line of division. North Durham is a detached portion of the English bishopric and county-palatine of Durham, having the whole extent of Northumberland interposed between it and the main body of the patrimony of St. Cuthbert, which once held extensive possessions in Scotland also. From Berwick township, Berwickshire is divided by a semilunar dry march, consisting partly of a ruinous dry stone wall called the Bound dyke, and partly of a narrow lane called the Bound road; this boundary extends from Marshal-Meadows on the sea-shore on the east, to the Tweed on the west, crossing the Whitadder in its course.

Mr. Blackadder estimates the extreme length of the county, from east to west, at $31\frac{1}{2}$ miles, and its extreme breadth, from north to south, at $19\frac{1}{2}$ miles; the mean length at $26\frac{1}{2}$ miles, and the mean breadth at 17 miles; and the total contents at 285,440 acres. But, Mr. Kerr says, "from a very careful consideration of the map itself, attentively measured by its own scale, the mean length appears to be 28 miles, the mean breadth 17 miles, and the consequent contents 304,640 acres." Mr. Home very nearly agrees with Mr. Blackadder's measurements; and the Rev. Mr. Edgar, in the New Statistical Account of Scotland, implicitly adopts those of Mr. Kerr; but two other reporters, Mr. Low and Mr. Bruce, give widely different measurements from both, and also from each other. The Ordnance Survey makes the area to be 301,937 acres of land, 215 water, and 799 foreshore.

In ancient times, the shire of Berwick seems to have been a separate jurisdiction from the bailiary of Lauderdale, and to have been itself divided into the Merse and the Lammernmoor districts. It is not easy to say what were the exact boundaries and extent of these three divisions, now almost obsolete. See the articles LAUDERDALE and MERSE. For the purposes of agricultural inquiry, the whole county may be very conveniently considered under two districts, the Merse and the Lammernmoor,—the former including all the comparatively low land along Tweed, Whitadder, Blackadder, and Eye,—and the latter comprehending Lauderdale, along with the more eastern hilly country peculiarly called Lammernmoor. According to this general division of the county, the Merse designates the whole lower ground from Tweed up the cultivated slopes of the lower southern range of the Lammernmoor hills, including the western parishes of Nenthorn and Merton, and forming the largest piece of compact plain in Scotland. Mr. Blackadder estimates this division to contain 100,226 acres. The whole remainder of the county—with an exception to be mentioned in the sequel—is therefore to be considered as forming the Lammernmoor district; and, according to the

same authority, should contain 185,214 acres. But Mr. B. computes that there are 7,280 acres of lowland and arable slopes of the lower hills in Lauderdale, besides a detached portion of lowland containing 2,200 acres, at the north-east corner of the county, in the parish of Cockburnspath, adjoining the vale of East Lothian. Consequently the hill-lands of Lammernmoor and Lauderdale are thus reduced to 175,734 acres. Some farther considerable reduction might still be made from this estimate of the hill-lands, as there are several narrow tracts of vale land along the sides of streams winding deep among the mountains, and many arable slopes of the lower interior hills themselves. But these perhaps are fully compensated for by hills and moors and bogs within the district of the Merse. The township of Berwick, geographically situated within this county, may probably contain 4,680 acres of land, almost entirely arable, exclusive of the site of the town and suburbs. Thus, according to the respectable authority of Mr. Blackadder, the whole of this county may be estimated and distributed as follows:

	Acres.
Lowlands of the Merse	100,226
Lowlands in Lauderdale,	7,280
Lowlands of Cockburnspath,	2,200
Berwick township,	4,680
Total arable, improved or improvable,	114,386
Hill-lands of Lammernmoor and Lauderdale,	175,734
Total extent in statute acres,	290,120
Or leaving out Berwick township,	285,440

In spring the prevalent winds are from the eastern points, and are attended by much cold raw weather and frequent frosts. This cold ungenial temperature is very apt to continue far into the summer, probably owing to the neighbourhood of the ocean; but, from the same cause, the winters are seldom of very long continuance, or peculiar severity; though certainly more severe than on the west coast in the same latitude. The influence lessens perceptibly in all respects at 8 or 10 miles from the sea; and the winters in the Lammernmoor hills and Lauderdale are severe and continued, though not more so than in the hills of Northumberland, or of Yorkshire. In autumn the prevailing winds are from the west, and are often attended with injury to the standing corn by shaking, especially when harvest is protracted much beyond the equinox. From the best information that can be procured, this county, in common with the whole eastern lowlands of Britain, appears to enjoy a comparatively dry climate, much more friendly to the cultivation of grain, and other agricultural pursuits, than the lowlands on the western coast. The hilly district of Lammernmoor, however, and the higher parts of the southern slopes of the Lammernmoor hills, called the moor-edges, are greatly more liable than the lower part of the county to have the spring seed-time delayed and interrupted, and the harvest rendered late, difficult, and precarious. These disadvantages, however, are by no means greater in Berwickshire than in other districts of equal elevation, either in Scotland or England. The Merse, as already observed, is skirted on the north by the elevated range of the Lammernmoor hills, and at some distance on the south, beyond the Northumberland portion of the vale of Tweed, by the more lofty chain of the Cheviot mountains; and these two chains are united, in a great measure, far inland by intermediate lower hills dividing the eastern from the western lowlands. Hence the clouds, wafted by the eastern gales from the British ocean, are attracted from the vale between by these ranges of hills, which in spring and

autumn are often enveloped in mist, drenched by rain, or clothed in snow, while the lower intermediate Merse, and the rest of the vale of Tweed, are enjoying the most genial seed-times, and highly propitious harvest weather.

The Merse, though quite properly called a plain, yet is much diversified by gentle undulations, and also contains several considerable heights, as at Lamberton, Dunse, and Home castle. Lammermoor and Lauderdale comprise an extensive range of lofty, rounded, well-defined hills, which are mostly flat, or at least very obtuse on their summits, and not precipitous or rocky on their sides. They are everywhere intersected by a number of narrow upland valleys or dells, through which the numerous feeders or brooks which combine to form the Leader, Whitadder, Blackadder, and Eye waters, wind towards the lower vale. The summits, in many places, extend into considerable flats or elevated table-lands, which often slope gradually to the lower vales on the south sides of the hills, the higher parts being moor, but gradually declining into good land. The county possesses every variety of soil, from the most stubborn clay to the most barren sand or gravel, but none whatever of a chalky or calcareous nature. Along the banks of Tweed, Whitadder, and Blackadder there is an extensive tract of fine deep free loam, often upon a gravel bottom, sometimes upon a bottom of till or coarse retentive clay. In this lower vale land there is likewise a large extent of stiff and rather coarse clay soil, usually cut off from the immediate vicinity of the rivers by the before-mentioned rich loam. A third species of soil, of a free and dry sandy or gravelly consistency, occupies most part of the remainder of the Merse, the vale lands of Lammermoor and Lauderdale, and the lower slopes of most of the hills: this is denominated turnip soil, and is usually incumbent upon a dry bottom of gravel or sand. In every quarter of the county,—frequently in the same farm, and sometimes in the same field,—these three soils are intermixed in patches, or irregular stripes, of greater or less extent, and all graduate into each other, forming intermediate varieties. In many situations, even of the most fertile parts of the country, marshy places or bogs are found in the hollows, into which the water of springs or small rills is poured from the adjoining slopes. These are overgrown with rushes or other marsh-plants, and are inundated in rainy weather. Some of the larger bogs are of great depth, and seem anciently to have been lakes or ponds now filled up with peat moss, owing to the long-continued accumulation of decayed aquatic plants. Others seem to have been anciently the sites of woods, as the remains of trees are still found when digging for peats in them. Some bogs have little or no peat-moss in their composition; and such, in various instances, have been converted into sound firm pasture, or good arable land, by judicious draining. Peat-mosses or turf-bogs are found in all the hilly country, and in various patches through the low lands. Dogden moss, near Polwart, covers about 500 acres, and is in some places 10 feet deep.

Several endeavours have been made to discover a workable seam of coal in Berwickshire. In the estate of Lamberton, contiguous to Berwick bounds, at the south-east extremity of the county, a stratum of coal has long been known, which crops out on the sea-banks near the fishing-hamlet of Ross. Some coal has also been found in the parishes of Mordington and Cockburnspath. An attempt was once made to dig for copper ore at Ordwell on the Whitadder; but, either from want of produce in proportion to expense, or want of skill in work-

ing, it has been long abandoned. More recent attempts to work this mineral at St. Bathans, and also near the old church of Ellim, in Longformacus parish, have proved equally abortive. No indications of lead, tin, antimony, or any other metallic ore—copper and perhaps red iron-ore excepted—are known to exist in this county. Some slight trials were made many years ago of a ferruginous claystone rock, on the estate of Ayton, as an iron-stone or ore of iron; but it was found too poor in metal to defray the expense of transport to Carron iron-works. In some inland parts there are a few veins of limestone; but hitherto, the county has been mainly dependent on its neighbours for the two great articles of domestic comfort and agricultural improvement,—coal and lime. Coals are brought from the south side of the Tweed to all the south and east parts of the county, and from Mid-Lothian into Lauderdale. The north-east corner is supplied from Dunbar harbour, whither they are imported mostly from Fife. Lime follows nearly the same roads; except that some of the north and east part of the county procure it from kilns in the vale of East Lothian. Both coals and lime, especially the latter, are imported at Eyemouth. The coals come from the frith of Forth, and from Newcastle and Sunderland. Lime is brought from the river Wear, and from North Sunderland, near Bamburgh castle. Coke, or charred pit coal, for brewers, maltsters, and corn merchants, is likewise imported at Eyemouth from Newcastle. In many parts of the county, shell marl has been found in small quantities. Trap whinstone, and amorphous basalt, interspersed with irregularly stratified clay-stone, are almost universal. In several places, rocks of breccia, or coarse pudding-stone, are found. The most remarkable instance of this is the rocky promontory which covers Eddle mouth bay, on the north-west, in which nodules of whin and schist, of great variety of size, form, and colour, are imbedded in a lapidified clay, somewhat like steatite, of various colours, often greenish, generally very hard and tough, but soapy to the touch. The durability of this stone is thoroughly ascertained. In many places, large beds of silicious sandstone occur in regular stratification. Some of these are of a coarse open grain, and serve tolerably well for filtering stones. Many of the quarries are of excellent quality; and perhaps there does not exist a finer specimen of that kind of stone than is exhibited in the magnificent ruins of Melrose abbey, in the county of Roxburgh, only about 2 miles from the western borders of Berwickshire; in which exquisitely rich and delicate carvings in high relief, which have been many centuries exposed to the weather, are still sharp and uninjured. From comparison of grain and colour—the last a pale red or almost peach bloom—there is every reason to suppose that beautiful structure had been supplied with stone from Dryburgh upon Tweed within this county.

Excepting the Eye, with its scanty tributaries, which falls into Eyemouth bay, and a very small number of inconsiderable brooks which run separately into the sea, all the streams of Berwickshire contribute to swell the waters of the Tweed. This fine river, so celebrated in song and renowned in story, is only navigable for sea-vessels to Berwick bridge, about one mile from its mouth; though the tide flows about 7 miles higher. The other streams in the county are usually denominated *waters*,—a kind of intermediate provincial term, between the dignity of a river and the insignificance of a brook, which latter is called a *burn* in Scotland. Still smaller rills, especially in marshy places, are often called *sykes*. The Leader, or Leeder, with its numerous burns, winds through the vale of Lau-

dale. It issues from a number of narrow upland dells or valleys, among the wild hills of that district, and joins the Tweed at the south-western angle of the county, where that river begins to form the south boundary of Berwickshire. The Whitadder and Blackadder—*quasi* White and Black waters, owing to their respective tinges when in flood—are next to exclusively Berwickshire streams. Dye, one of the main sources of Whitadder, rises by several brooks or feeders, on the ridge of hills which separate Lauderdale from Lammormoor. The Whitadder proper, rising within East Lothian, at an elevation of 1,150 feet, unites with Dye in a romantic vale of some extent, in the bosom of the Lammormoor hills; and, having received the Blackadder much lower down, at Allanton, in the vale of the Merse, unites with the Tweed within Berwick bounds, about 3 miles from the sea. The Blackadder and its streamlets, or feeders, rise from the southern slopes of the Lammormoor and Lauderdale hills, at an elevation of about 1,130 feet; and, after winding through the vale of the Merse, joins the Whitadder between Allanbank and Ninewells. The small stream of the Eden principally belongs to that portion of Roxburghshire which indents into this county, on the north side of Tweed, into which that small river flows a few miles below Kelso. The Leet, another small stream, belongs entirely to the how of the Merse, and joins Tweed at Coldstream. The small river Eye, with a few feeders—particularly the Ale and Horn—waters a narrow but fertile vale in the east end of the Merse; several of its upper streamlets wind among some narrow valleys towards the west end of the Lammormoor hills. Its peculiar source is within East Lothian. At one place,—from near Ayton to near Chirnside,—a narrow winding vale, of very inconsiderable elevation, almost permits the Whitadder and Eye to unite. Midway between, Billy bog or Billy mire discharges its superfluens waters into both rivers,—eastwards by the Horn burn, into Eye, with just sufficient declivity for its ready passage; westwards by the Billy burn, into Whitadder. This singular vale is about 5 miles long, and has a northern branch, more elevated, from Auchincrow on Billy bog, to Reston on the Eye, enclosing an isolated hill of considerable extent and elevation, but altogether arable. The Ale, Wedderburn, and many other brooks, are too inconsiderable to require any special notice. All the rivers, waters, and brooks in this county abound with trout of different kinds; some contain a few pike and perch, and all have plenty of eels. See articles LEADER, WHITADDER, BLACKADDER, EYE, and ALE.—There are no lakes of any importance in the county. Coldingham loch—a piece of water covering about 30 acres—and one or two more, are too insignificant to form exceptions, and do not merit any particular notice. Duns spa, once in some little repute as a mineral spring, has fallen into complete neglect.

In the 11th century, almost the whole of Berwickshire, except a portion of the Merse, was covered with wood. During the 12th and 13th centuries, many persons of consideration settled in it, having received from the Crown grants of lands which they cultivated. But the husbandry of those times consisted more in the feeding of flocks and the rearing of cattle than in the production of corn. Toward the middle of last century, agriculture began to be studied as a science, and essential improvements to be made by enlightened practical farmers. About the year 1730, Mr. Swinton of Swinton, father of the late Lord Swinton, in the course of a few years, drained and enclosed his whole estate. Mr. Hume of Eccles, about the same time, began and carried

on his improvements with great ardour and success. Lord Kames, another of the early improvers in this county, about the year 1746, introduced the turnip-husbandry which has here been carried to perfection. Clover and grasses were also sown at Kames, and at sundry other places, towards the year 1750. Soon after this period, the enclosing and improving of estates became a favourite pursuit with other landed proprietors. Mr. Fordyce of Ayton profited by all the preceding discoveries and meliorations. In enclosing his landed property, he sheltered his fields with belts and clumps of planting, and added the Scots cabbage to the husbandry of Berwickshire. Dr. Hutton, the geologist, a considerable proprietor in this county, turned his attention to practical husbandry, and succeeded in all his plans. In this way, the fertility and wealth of Berwickshire have been greatly improved, and the land-rent has been more than quadrupled. "The spirit of improvement," says the Rev. Mr. Edgar, in his General Observations in the New Statistical Account, "quickly spread to tenants of skill, enterprise, and capital. Their success stimulated others to follow their footsteps. Encouragement was given by proprietors to tenants, by granting them leases on liberal terms, and of a proper duration. Lauds were enclosed, moorish tracts improved, lime and manure liberally applied, the turnip-husbandry extensively pursued, and by the general use of thrashing machines, and a thorough improvement of turnpike and parish roads, facilities were afforded for marketing grain on a scale commensurate with the improved productiveness of the soil, and the increasing capabilities of the county. Notwithstanding the severe depression under which this interest has laboured for some years past, and which at no period was more felt than at present, this county still retains its agricultural pre-eminence. Improvements are still proceeding to a certain extent, and perhaps there is no district of Scotland where agriculture is conducted with more of the precision and exactness of a science. The average size of farms in this county may be stated at from 300 to 400 English acres. Of all agricultural improvements of modern times, perhaps the most valuable is the perfection to which draining has been carried. From the nature of the soil, and its tendency to humidity, no county required this improvement more than Berwickshire, and though much remains to be done, nowhere has it been more successfully or more extensively pursued. Drains are now laid out in a more scientific style than formerly, and as a natural consequence, their operation on the soil is far more efficient and salutary." Surface draining has also been much practised, with excellent effect, on the upland pastures.

"At the end of last century," says the same writer, "the local connection of this county with the English borders directed the attention of some considerable landed proprietors to effect an improvement on the breeds of cattle and sheep. The late Mr. Robertson of Ladykirk merits particularly to be mentioned as having taken the leading part in this branch of improvement, to which he sedulously devoted himself. His mesne of Ladykirk afforded him means and opportunities which few enjoyed, of carrying this department of rural economy to greater perfection than perhaps any other individual in Scotland. His efforts were crowned with success, and his breeds of sheep and cattle still continue to be highly prized by connoisseurs and adepts in these matters. The tenantry also followed his example on a more limited scale. The old breeds of cattle and sheep were gradually displaced, and kinds were introduced of more productive value

better adapted to the soil and climate, more kindly feeders, and sooner prepared for the butcher. To this department considerable attention is still paid in this county; and as its agriculture is of a mixed description, combining the raising of corn with the breeding, rearing, and feeding of stock, it is naturally to the farmer an object of no small importance, and his success very much depends on it. By the gradual extension of the turnip husbandry, which has gained for Berwickshire the appellation of the Norfolk of Scotland, and to which, by the application of the modern improvement of bone manure, a greater breadth of land can now be devoted, means are afforded of feeding for the market a much larger quantity of stock than in former times; and from this county being within a reasonable distance of the great stock markets in the north of England, and from the establishment of new markets for cattle and sheep at Coldstream, Duns, and Aytoun, at which places business in this line to a large amount is transacted, opportunities are presented to the farmers of readily disposing of their stock to any extent." The pasturage of sheep, of the Cheviot and black-faced breeds, takes the place of all other kinds of husbandry throughout the high grounds of Lammermoor and Lauderdale, and in general is very skilfully managed.

There are no very large estates in Berwickshire, though several have become of great value, and some are connected with estates in other counties of very considerable magnitude. Towards the end of last century, Mr. Low estimated that hardly any of the Berwickshire estates exceeded £5,000 of yearly rent. "That circumstance"—says Mr. Kerr in 1808—"must now be very materially altered in consequence of the rapid rise of rents since he wrote, and the limitation might probably be now extended to nearly double that amount, or from £8,000 to £10,000 a-year; but the reporter has no data on which he can depend for ascertaining this circumstance, and is not inclined to hazard assertions on vague information." In the year 1795, according to the cess-roll or land-tax book of the county, its lands were then unequally divided among 294 proprietors, of whom only 14 held under the limitations of entail. At that period, according to the report of Mr. John Home, 141 of these properties were classed in valuation below £100 Scots, 66 from £100 to £400 Scots, 41 from £400 to £1,000 Scots, and 46 of £1,000 Scots and upwards. The total valuation in 1864-5, exclusive of railways, was £326,203.

Anciently, the agricultural population of Berwickshire was chiefly collected in farm-towns or villages, in which ten, twelve, or more small farmers, with their rick-yards, and outhouses and cottagers, were crowded together. These villages are now deserted, so far as the farmers and their immediate servants are concerned, and farm-houses, with their yards, buildings, rick-yards, and cottages for married servants, are now placed centrally on every farm. Many of the old-farm towns,—the ancient abodes of idleness, poverty, and dissipation,—have now become clean country-villages, filled with industrious mechanics of all kinds, shop-keepers and labourers, who work for the surrounding farmers. The circumstances of the agricultural labourers in this county are thus described by an intelligent writer in the 'Quarterly Journal of Agriculture,' No. 27. "The terms of the engagement of a married ploughman are the following:—A house, seldom less than 24 feet by 15, and which is large enough to form, by the appropriate arrangement of the furniture, one large and one small apartment; a garden, containing perhaps 10 or 12 perches of land, situated generally behind the house;—a cow kept all summer on grass,

and accommodated in winter in a cow-house, with straw, and 3 cartloads of turnips in spring, or in lieu of the turnips, 60 stones of hay;—the produce of 1,000 yards of potatoes, measured along the drills, the ploughman supplying the seed, and the farmer bestowing the dung and the labour;—60 bushels of oats, 18 bushels of barley, and 6 bushels of pease, of the best quality; hut, should there be none of the best, then of the quality next to the seed corn; the corn being given about Christmas;—as much ground as would sow one peck of linseed, but this allowance is now commuted to the setting of 500 yards more of potatoes, linen cloth being bought cheaper than the best that can be manufactured by the poor people;—formerly poultry and sheep were kept for ploughmen, but now the value of their maintenance is commuted into money, 15s. for the poultry, and £3 for the sheep yearly, and this is all the money the ploughman receives;—coals are driven to the ploughmen when required, but this is accomplished at little expense to the farmer, inasmuch as the carts bring them which would return empty from the delivery of corn. The value of all these allowances may be estimated as not exceeding £26 a-year, which makes the wages of a ploughman 10s. a-week. For all these considerations which have evidently been formed for the comfort of the ploughman, he is obliged to take charge of, and work one pair of horses, in every requisite operation connected with the farm;—he must attend the stable every morning, noon, and night, to give food to the horses;—he must take his turn with the ploughmen to remain at home on Sunday to fodder and water the horses;—he must work in winter as long as there is day-light, and in summer ten hours a-day in the fields, and in seed-time and harvest his hours of labour are unlimited; he must supply a female labourer to work at farm labour at all seasons, and for the same time as himself, when required; and for whose labours he receives eightpence or tenpence a-day, when she is employed, according to the rate of wages; this female must reap corn during harvest, as rent for the house and garden, for which she receives the ordinary victuals allowed in harvest;—his own family must feed his cow in winter;—and he must work his garden only at leisure hours. Most farmers erect a pigsty, or allow one to be erected in the garden, in which the ploughman feeds a pig at his own expense, for his domestic consumption. The manure to the garden is supplied from the ploughman's own house and the pig-sty. Should the female worker get constant employment, the ploughman may just clear himself with her labour; if not, he will certainly lose by her maintenance and wages, which are from £6 to £8 a-year; but, should he have a daughter to supply the place of a hired servant, her labour will be profitable to him. He generally earns a little money from his cow, for butter and cheese, provided she is a good one, and his wife manages his domestic affairs cleanly and thriftily. He receives a sixpence for drink-money when he goes from home with the horses, on the delivery of corn. These terms may appear complicated to those who are accustomed to simpler, but in practice they are very easily understood. The farm-steward receives, in addition to the terms of the ploughman a little more money, and sometimes a bushel and a half of light wheat, as a compensation for his greater responsibility. His wages are seldom under £30 a-year. His duty is to give the corn for the horses every day out of the horse-corn chest; to order and distribute the labour of the farm; to superintend the labour of the women in the fields in summer, and in the thrashing and cleaning of the corn in the barn in winter; to sow the corn, and to build it into stacks; and generally

to keep a watchful eye on all things for his master's interest. He is exempted from staying at home on Sunday, but he must supply a female to work in the fields; and to reap the harvest as rent for his house and garden. The shepherd, in addition to the ploughman's allowance, receives the keep of eight ewes summer and winter. He must dispose of these lambs after weaning in July, with the exception of two ewe-lambs and two gimmers, which he keeps on to renew his ewe stock, two of which he must sell off every autumn before tupping time in October. His wages seldom amount to less than £35 a-year. The shepherd is generally the servant on the farm who receives the highest wages, but his hours of labour are unlimited. His duty is very constant and fatiguing when a large flock and a wide range of pasture occur. He must go through his flock early in the morning and late at night, and at other times during the day, and count his flock once a-day; he must keep them clean from scab, maggots, and other filth; he must watch the ewes at the lambing-season night and day, and castrate the tup lambs; he must wash the sheep and clip the wool, and bathe them for turnip-feeding in winter; he must be able to slaughter sheep and pigs neatly; and he must give such general assistance in harvest as his time permits, such as taking the reapers' victuals to the harvest-field, and binding up loose corn to be led in. He must also supply a female to work in the field and reap the harvest, as rent for his house and garden. In regard to unmarried ploughmen, when they live with their fathers or friends, who are ploughmen, they receive the same allowance of corn as they do: but the keep of the cow is commuted to them in money, and they are exempt from supplying a field-worker. When an unmarried ploughman takes up house, he receives the same wages as a married one, and is bound to supply a female worker. When an unmarried ploughman gets his victuals in the farm-house, as the other domestic servants, the rest of his wages is given in money, £5 half-yearly, according to the rate of wages; and he sleeps in some apartment in the stead-ing. Female domestic servants live in the farm-house and receive £5 or £6 in the summer, and about £3 in the winter half-year. Their duty is to milk the cows, feed the calves, perform the dairy operations of making butter and cheese, do kitchen work; and one of them, when not fully occupied in the house, goes to work in the field or barn. Stable-boys get their meat in the house, and receive £2 or £3 half-yearly. They keep the riding-horses and gig, if there is one, attend to visitors' horses, and go errands. Cottagers or labourers who work with the spade where they can get work, smiths, and carpenters, take their houses and shops on similar terms. Each supplies a field worker, who reaps the harvest as rent for the house and garden; and each gets 500 yards of potatoes set, and the carriage of two cart-loads of coals. The smith undertakes to shoe the horses and uphold the iron-work of all the implements on the farm, for £3 a-year and the carriage of one cart-load of smithy coals, for every pair of horses. The carpenter upholds all the wood-work of the implements, and supplies a pair of cart-wheels without the rings, for £3 the pair of horses yearly. The accounts of both are settled half-yearly. The smith and carpenter, with all their apprentices and journey-men, generally lend a hand for a day at the building of the hay-stack, for their meat. A regular hedger and ditcher, when such is kept on a farm, is regarded as a hired servant, though his house is let to him on the same condition as a cottager. He either receives his wages entirely in money, at so much per week and settled half-yearly, or in corn like the ploughman, and the remainder in money. His wages may

amount to £30 a-year. His duty is to cut, switch, clean, and repair gaps in the hedges; to scour ditches to prevent the overflow of water; to cut water-furrows across headlands and in hollow parts of fields to prevent the accumulation of surface-water. He assists the steward to build corn-stacks and sow corn; the shepherd to clip wool and wash and bathe the sheep. Frequently the ploughmen assist him to cut the long water-furrows in new sown fields, if the weather appears precarious."

Berwickshire is a strictly pastoral and agricultural district. The only manufacture of any importance, within the county, is that of paper. The manufacture of woollens and linens is so small as not to merit consideration; being confined, in the former, chiefly to coarse goods for ordinary use, and, in the latter, to household linens for farmers and labourers' families. The expense of fuel is rather hostile to the introduction of the woollen manufacture, for which this county affords ample materials; yet the example of Galashiels, a very short distance from the extreme western part of the county, gives warrant for believing that it might succeed here. The manufacture of ginghams and plaidings was not long ago introduced with great success at Earlston.

The fisheries of Eyemouth district, which includes all Berwickshire coast, are so important that, in 1863, they employed 699 boats and 1,833 men and boys,—the boats, nets, and lines being valued at £60,758, while the number of cod, ling, or hake caught was 8,222, and the number of barrels of herrings cured was 36,943. Fish carriers, called cadgers, purchase from the fishers, and distribute the white fish, codlings, haddocks, whittings, skate, haly-but, and flounders, and a few turbot, into the inland country, and often as far as Edinburgh. A few red herring houses at Eyemouth were once well employed. Some boats or small vessels go annually to the herring-fishery on the coast of Caithness. The salmon-fishery in the Tweed is of considerable importance: but the principal share of it belongs to the township of Berwick, and the opposite side of the Tweed. From Berwick bounds, up to where the fishery ceases to be important, half of the river belongs to England, and the other half to Scotland; and the 3 lower miles of the river—by far the most important—belong entirely to England and Berwick. Mr. Home, in 1797, estimated the rental of the salmon-fishings on the Berwickshire side of the Tweed at £1,500 a-year. But in 1863, the value of all the salmon-fishings of Berwickshire was only £1,075.

The customary boll of Berwickshire is equal to 1.048 Linlithgow barley bolls, or to 1.529 Linlithgow wheat bolls. It is consequently equal to .779 parts in the 1000 of the Winchester quarter, or to 6.237 Winchester bushels. In the western parts of Berwickshire, adjoining Roxburghshire, the Roxburgh customary measures used to be employed; but in Berwick market—the great mart of Merse grain—all kinds of corn were sold and delivered by the customary Berwickshire boll, there called the old boll; as another customary measure was used farther south, understood to contain two Winchester bushels, and called the new boll. Ship-horne lime, imported only at Eyemouth, is sold unslacked by a customary lime boll, which is understood to be only equal to the East Lothian pease boll, or about half a Winchester quarter. Lime and coals from Northumberland, or rather North Durham, are understood to be delivered at the coal-pits and limc-kilns by the same measure. In Berwickshire, potatoes are usually sold by measure. Six fills of the corn firloft up to the edge of the wood, or a little higher, or four fills heaped by hand as

high as they can go, were counted as one boll; being about 9 Winchester bushels, and supposed equal to 476 English pounds. In Berwick township, the universal custom was to give 560 English pounds as a boll of potatoes. The Berwickshire ton of potatoes for the English market was 28 cwt. In Berwick market, fresh butter was sold by a customary pound of 18 avoirdupois ounces; while in the country markets, the trou pound of 22½ ounces was used, which was also the usual pound for cheese, while that for wool was 24 ounces. The legal firkin of 56 English pounds was universally used for salt butter, but usually a pound or two heavier to allow for brine. Fresh salmon—a principal staple of Berwick, and a considerable part of which comes from fishings within this county—was sold to the coopers, or salmon-dealers, by a customary stone of 18¾ avoirdupois pounds. The Berwickshire peck is $\frac{2}{3}$ of a firiot, instead of $\frac{1}{2}$.

Since the dismemberment of Berwick from Scotland, Lauder remains the only royal burgh in the county; and, in conjunction with Jedburgh, Haddington, Dunbar, and North Berwick, sends one representative to parliament. Greenlaw, a small place 20 miles west of Berwick, in an inconvenient situation, is the county town. But Dunse is at once larger, more centrally situated, and in every respect more important, and may be regarded as the first town of the county; yet even this would rank as a trivial place in a manufacturing district. The only sea-port is Eyemouth. The other towns and chief villages are Coldstream, Ayton, Earlston, Chirnside, Coldingham, Paxton, Gavintou, Auchincraw, Reston, Leitholm, Birgham, and Allantou.

The lands of Gordon and Huntly in Berwickshire were the early residence of the great Gordon family of the north of Scotland, and gave rise to respectively their dukedom of Gordon and their marquisate of Huntly. A shooting-lodge and some pastoral lands in the Lammermoors belong to the Duke of Roxburgh. Langton House, together with nearly all the parish of Langton, belongs to the Earl of Breadalbane. The other chief seats in the county are the Hirsell, the Earl of Home; Thirlestaine Castle, the Earl of Lauderdale; the Retreat, the Earl of Wemyss; Nisbet House, Lord Sinclair; Mertoun House, Lord Polwarth; Wedderlie, Lord Blantyre; Dryburgh Abbey, the Earl of Buchan; Lennel House, the Earl of Haddington; Marchmont House, Sir Hugh Hume Campbell, Bart.; Newton-Dou, Sir W. H. Dou, Bart.; Renton, Sir Charles Stirling, Bart.; Blackadder, Col. Sir George A. F. H. Boswell, Bart.; Kelloe, George Buchan, Esq.; Paxton, W. F. Home, Esq.; Ladykirk, David Robertson, Esq.; Foulden, John Wilkie, Esq.; and Dunse Castle, William Hay, Esq.

The principal roads in Berwickshire are the road from Berwick to Edinburgh along the coast; the north road from Berwick to Kelso through Swinton and Leitholm; the road from Coldstream to Kelso along the Tweed; the road from Coldstream to Haddington through Dunse; the road from Coldstream to Lauder through Greenlaw; the road from Eyemouth to Lauder, through Ayton, Chirnside, Dunse, and Westruther; and the east road from Kelso to Edinburgh, through Earlston and Lauder. The total extent of roads within the county was supposed to be 647 miles at the date of Mr. Blackadder's report; and must be considerably greater now. The North British railway passes along the coast, and is of great value to all the seaboard district. A branch deflects from it at Reston, in the southern part of the parish of Coldingham, and goes south-westward through the county to a junction at St. Boswells. The Berwick and Kelso railway no-

where touches the county, yet keeps constantly near it on the English side of the Tweed, and is of value to various parts of the border district, particularly around Coldstream. The Edinburgh and Hawick railway also does not touch the county, yet comes very near it at the point of bifurcation into the two lines toward respectively Kelso and Hawick, and is of value to the parishes of Mertoun and Neuthorn, and to the lower part of Lauderdale. A project was at one time in contemplation to cut a railway, under the name of the Berwickshire and Lothians railway, from Berwick, by way of Paxton, Hutton, Fogo, Greenlaw, the vale of the Leader, and Soutra Hill, into junction with the Lothian railways, sending off branches in the Merse to respectively the Union Bridge, Dunse, Coldstream, and Kelso. Another project, similar to this, but applying only to the south-western and the western districts of the county, proposed to cut a branch railway of 30 miles in length, under the name of the Berwickshire Central Junction railway, from Kelso, by way of Nenthorn, Earlston, and Lauder, into junction with the Edinburgh and Hawick railway.

Berwickshire comprises 32 parochial charges, 4 ancient parishes in union with 4 of these charges, the ancient parish of Home in union with the Roxburghshire parish of Stichel, and two districts of the mainly Haddingtonshire parish of Oldhamstocks. Nineteen of the 32 parochial charges, or modern parishes, may be considered as in the Merse, and 13 in Lammermoor. One belongs to the presbytery of Dunbar, and synod of Lothian and Tweeddale, and 31 belong to the synod of Merse and Teviotdale; 10 of these 31 constitute the presbytery of Dunse, 13 constitute the presbytery of Chirnside, and 8, together with 1 in Edinburghshire, constitute the presbytery of Lauder. There is within the county only one chapel of ease. The Free church of Scotland has 15 churches and 2 preaching-stations in Berwickshire; and it places one of the churches in its presbytery of Haddington and Dunbar, 9 of the churches and 1 of the preaching-stations in its presbytery of Dunse and Chirnside, and the remaining 5 churches and 1 preaching-station in its presbytery of Kelso and Lauder. The United Presbyterian Synod has 17 churches in Berwickshire,—2 of which are in its presbytery of Kelso, 3 in its presbytery of Melrose, and 12 in its presbytery of Berwick. The only other places of worship within the county, so far as we can discover, are a Reformed Presbyterian church at Chirnside, an Episcopalian at Dunse, and an Evangelical Union and a Baptist at Eyemouth. Berwickshire, therefore, appears to be eminently presbyterian.

The sheriff and commissary courts are held at Greenlaw on the last Thursday of every month, and at Dunse on every other Thursday, as well as every Tuesday, during session. Sheriff small debt courts are held at Greenlaw seven times, at Lauder three times, at Ayton and Coldstream four times, at Dunse nine times a-year. Quarter sessions are held at Greenlaw. The assessment, in 1865, for police was 1*l.*, and for rogue-money and prisons also 1*l.* per pound. The valued rent of the county in 1674 was £178,366 Scots. The annual value of real property as assessed in 1815 was £245,379; and in 1860 was £311,132. Population in 1801, 30,206; in 1811, 30,893; in 1821, 33,385; in 1831, 34,048; in 1841, 34,438; in 1861, 37,634. Inhabited houses in 1861, 6,802; uninhabited, 429; building, 46. The number of families in 1831 was 7,385; of whom 2,921 were employed in agriculture, and 1,915 were employed in trade, handicraft, and manufactures. The number of persons convicted for criminal offences in the average of 1836-1860 was 52; in 1863, 47.

The number of prisoners in Greenlaw jail in the year ending 30 June, 1863, was 75; the average net cost of each, £41 6s. 2d. The number of registered poor in 1862-3 was 1,252; of casual poor, 814. The amount expended on the registered poor, in that year, was £9,781; on the casual poor, £494.

No Druidical monuments have been discovered in Berwickshire; but in several places cairns of stones denote the graves of those who had fallen in battle. In the parish of Eccles, at Crosshall, there is an upright stone column, with various sculptures; but there is no inscription, nor is there any tradition concerning it. On the ridge between Coldingham and Bunkle there are vestiges of five oval and circular encampments. Several remains of antiquity may also be traced on Cockburn law, on Habchester, and at Chesters in Foggo parish. Herri's dyke, a mile from Greenlaw, is an earthen mound, with a ditch on one side of it, and not many years ago it could have been traced 14 miles eastward. Edin's or Wodin's hall, about a mile below the abbey of St. Bathan, on the Whitadder, consists of three concentric circles of stone, 7 feet and 10 feet distant from one another: the diameter of the innermost circle is about 20 feet. On the south are deep and wide trenches; and eastward are traces of several camps. There are remains of several religions houses, viz. the monastery of Coldingham, the abbey of Dryburgh, St. Bathan's, &c. Many castles and places of strength were built in this shire after the 11th century. The castle of Berwick was the residence of David I. Home castle, in the 12th century, was the seat of the family of Home; the tower of Cockburnspath was built, perhaps, by the Earls of Dunbar. Fast castle, on a rocky cliff overhanging the sea, was long ago demolished. Lauder or Thirlstane castle was built by Edward I. There were many other castles in different parts of the county, viz. Cranshaw, Huntly in Gordon parish, Edrington in Mordington parish, &c.

At the period of the Roman invasion, Berwickshire was inhabited by the Ottadini. It was afterwards invaded by bands of Saxons from Germany, who ingrafted their language and manners on those of the original inhabitants. The conquests of these foreigners extended a considerable way along the shores to the east and west, and in course of time they gave the land thus secured to themselves the title of Lothian. The whole area of Berwickshire was comprehended in this Saxon territory, which received the name of Saxonia in the Scots-Irish Chronicle, but was called Bernicia in the age of Bede. Until 1020, this district of country was included within the kingdom of Northumberland. In that year it was ceded to Malcolm II. by Cospatrik, Earl of Northumberland, who settling in Scotland, was created Earl of Dunbar. In 1097 Edgar, the son of Malcolm, acquired the sovereignty of Berwickshire, which on his death he bequeathed, along with part of Cumberland and Lothian, to his brother David. Under this personage Berwickshire rose into consequence, and the town of Berwick came to be a seat of merchandise, and known for the value of its fisheries. About this epoch many Norman and Anglo-Saxon families settled in Berwickshire, and laid the foundation of a number of noble houses still ranked in the peerage of the country. It appears likewise that the town of Berwick became a settlement of Flemish and other foreign traders. Berwickshire suffered in the succeeding centuries in all the wars between the two hostile nations, and was occasionally involved in disputes with its neighbour the palatine bishop of Durham. Berwick, and its bridge across the Tweed, were in general chief and special objects of dispute between the belligerents.

Henry II. in 1174, wrenched Berwick and its castle from his captive, William. Richard I. again restored them to Scotland. The disputes regarding the succession to the crown, after the death of Alexander III., involved Berwick in many miseries. In 1291 it was given up to Edward I. A few years afterwards, Berwick renounced its allegiance, and in 1296 was taken by assault by Edward. After the defeat of the English at Falkirk, they retained Berwick for twenty years. In 1318 Berwick was once more, and for the last time, attached to the Scottish monarchy. During the reign of James III., the crown was coveted by the Duke of Albany, who, to support his pretensions, introduced an English army into North Britain, under the Duke of Gloucester, afterwards Richard III. The affair ended in compromise; but Gloucester refused to withdraw his forces unless Berwick was delivered into his hands. After a persevering diplomatic struggle, the Scotch were forced to accede to the dishonourable terms; and on the 24th of August, 1482, this oft-contested town and castle were resigned to England. In 1551 it was made a free town, independent of both England and Scotland, which it still remains, with many privileges peculiar to itself and its citizens. It is governed by English laws, and does not come within the scope of the present work. After it ceased to be the county-town, the affairs of the shire were administered at Dunse or Lauder; but on Greenlaw becoming the property of Sir George Home of Spot, in 1596, it was declared the most fit to be the shire-town, and this arrangement was ratified by parliament in November, 1600. It did not, however, become the head-town of the county, in every particular, till 1696.

BERWICKSHIRE RAILWAY, a railway, 20½ miles long, from Dunse to St. Boswells; forming a nexus between lines of the North British system; and opened partially in Nov. 1863,—wholly in 1864.

BETHELFIELD. See ABBOTSHALL.

BETHELNIE. See MELDRUM.

BEVELAW. See PENICUK.

BIBLESTONE. See BIRNIE.

BIGGA, an island, about 2½ miles long, situated in Yell Sound, about 1½ mile west of the south-western extremity of Yell Island, Shetland. It is now a grazing island, but was formerly occupied by eight tenants.

BIGGAR (THE), a rivulet of Lanarkshire and Peebles-shire. It rises on the mutual border of the parishes of Libberton and Biggar, and flows about 4 miles southward through the latter parish, and then about 5 miles eastward, partly along the boundary between Lanarkshire and Peebles-shire, but chiefly within the latter county to a confluence with the Tweed a little below Drummelzier. Its upper course for about 2 miles is between two ridges of considerable elevation,—that on the east attaining, in the Bushyberry or Bizzyberry, an elevation of 1,150 feet, and that on the west rising to 1,260 feet. The stream then passes through the town of Biggar, and afterwards enters a fine open vale which comprises the southern district of Biggar parish. Here, at the distance of about 1½ mile from the Clyde, it is joined by a rill which brings to it a portion of the waters of that river in times of high flood,—and which, with no very great labour of excavation, might be made to bring to it all the waters of the Clyde at all times, so as to convey them through it to the Tweed. The length of this vale between the Clyde and the Tweed is 7 miles; the total descent of it is 25 feet; and the mean elevation of it above sea-level is about 615 feet.

BIGGAR, a parish, containing a post-town of the same name, on the eastern border of the upper ward of Lanarkshire. It is bounded by Peebles-shire,

and by the parishes of Dolphinton, Walston, Libberton, and Culter. Its outline is triangular; its greatest length is $6\frac{1}{2}$ miles; and its area is about 7,289 statute acres. The Clyde traces a small part of the western boundary; and Biggar Water flows through the centre. The general character of the surface is indicated in what we have said, in the preceding article, respecting the vale of Biggar Water. The hill district is more extensive than the plain; and the hills have a rounded contour, and an unpicturesque appearance. About 750 acres are under wood, and about 400 are wildly pastoral; but most of the remainder of the surface either owns the dominion of the plough or might easily be made to own it. There have been important recent improvements in the reclaiming of land; and another very interesting improvement was recently effected for restraining the inundations of Biggar Water. The average rent of land is about £1 per acre. The landowners are numerous. The total yearly value of raw produce was estimated in 1835 at £12,028. Assessed property in 1865, £12,890 17s. 10d. The chief mansions are Carwood, Biggar-Park, Cambus-Wallace, and Edmonston-Castle,—the last a splendid pile, built after a design by Gillespie Graham, and situated in a secluded vale in the east. A tumulus or moat-hill, 120 paces in circuit at the base, 54 paces in circuit at the top, and 36 feet high, is situated at the west end of the town, and seems never to have been opened. Vestiges of ancient camps, of roundish outline, occur in three places in the parish. Four large stones, which seem to have formed part of a Druidical circle, surmount a round hill on the lands of Oldshields. "There is tradition of a battle having been fought at the east end of the town, between the Scots, under the command of Sir William Wallace, and the English army, who were said to be 60,000 strong, wherein a great slaughter was made on both sides, especially among the latter." [Old Statistical Account.] "It has been alleged," says Mr. Carrick, "that, on this memorable occasion, Edward commanded in person; but such could not have been the case, as the English monarch was not in the country at the time. That a considerable battle was fought in the neighbourhood, there is reason to believe, as well from current tradition, as from the number of tumuli which are still to be seen. These accounts, however, are decidedly at variance with truth, both in regard to the amount of the English, and the person who commanded. It is more probable, that the enemy did not exceed 8,000, or at most 10,000 men, part of which appears to have been under the command of Roden, Lord de Whichenour. On the side of the Scots, Sir Walter Newbigging headed a body of cavalry. His son David, a youth, at that time little more than fifteen years of age, held a command under him, and the well-tryed military talents of the father were not disgraced by the efforts of the young patriot, whose conduct on this occasion was afterwards rewarded by the honour of knighthood, probably conferred by the hand of our hero himself. The family of Newbigging came originally from England; and Sir Walter and his son, on this occasion, found themselves opposed to their near kinsman, the Lord of Whichenour." ["Life of Wallace."] Edward II. spent the first six days of October, 1310, at Biggar.—In 1651, Boghall castle in this parish, held out for the commonwealth of England, against General Leslie's army. This strength has long been dismantled, and has nearly disappeared, but more in consequence of the ruthless hand of man than that of time. Boghall stands upon a flat, or rather a marshy ground, half-a-mile south from the town, and is probably so called from its situation. This castle formerly belonged to the

Flemings, Earls of Wigton, a family of great antiquity. They acquired the lands and barony of Biggar by the marriage of Sir Patrick Fleming with one of the daughters and co-heiresses of the brave Sir Simon Fraser, of Oliver Castle. This Sir Patrick was the second son of Sir Robert Fleming, who died in 1314; and, like him, was a faithful friend to King Robert Bruce. In 1451, Sir Robert de Fleming obtained a charter from James II., erecting the town of Biggar into a free burgh of barony, and by the same was created a lord of parliament, by the title of Lord Fleming of Cumbernauld; and, on the 15th of June, 1452, Malcolm Fleming, his nephew, procured a grant under the great seal, of the lands and barony of Boghall, and some other estates. The road from Edinburgh to Dumfries by way of Elvanfoot, and the branch of the Caledonian railway from Symington to Peebles, intersect the parish; and the railway has a station at the town. Population of the parish in 1831, 1,915; in 1861, 1,999. Houses, 337.

This parish is in the seat of a presbytery in the synod of Lothian and Tweeddale. Patron, Fleming of Cumbernauld. Stipend, £263 14s. 7d.; glebe, £30. Unappropriated tithes, £146 5s. 7d. Schoolmaster's salary now is £60, with about £75 fees and other emoluments. The parochial place of worship was built in 1545, and largely endowed, by Malcolm third Lord Fleming, lord-high-chamberlain of Scotland, as a collegiate church for the support of a provost, 8 prebendaries, 4 singing-boys, and 6 poor men. It is a cruciform structure. The steeple was never finished; and porch, vestry, buttresses, arched gateway, organ gallery, and oaken ceiling have been destroyed; but the body of the building remains entire and in good repair, and in 1834 was supplied with new seats and with a large addition to the sittings. There are two United Presbyterian churches—the one with 750 sittings, the other rebuilt in 1866. The parochial school is recent and handsome. The burgh school was founded in 1859.

The Town of BIGGAR stands south of the centre of the parish, at an intersection of public roads, $10\frac{1}{2}$ miles south-east of Lanark, 15 west by south of Peebles, and 28 south-west of Edinburgh. It consists principally of one very wide street, situated on a rising ground at a little distance from the left bank of Biggar Water, and enjoying a fine southern exposure. But a large modern suburb stands on the right bank, partly on a steep brow, and partly on lower ground, with sloping gardens; and to a spectator approaching by the Carnwath road, this suburb presents a very beautiful appearance. The town is a burgh of barony. It has offices of the Commercial, the Royal, and the National Banks. It has also a savings' bank, a corn-exchange, and three public libraries. Fairs are held on the last Thursday of January, old style, on the last Thursday of April, on the third Thursday of July, old style, on the last Thursday of August, and on the last Thursday of October, old style. Population in 1841, 1,395; in 1861, 1,448. Houses, 238.

BILLIKELLET. See CUMBRAYS (THE).

BILLY CASTLE, the ruin of an ancient fortalice on the eastern verge of the parish of Bunkle, Berwickshire. It stands on a grassy knoll, in a sequestered situation, surrounded by wood, about a mile south of the village of Auchincraw. Only a piece of wall about 12 feet high and a few detached fragments now remain. But the original castle was surrounded by the dangerous morass of Billy mire, and was a building of great strength and considerable size. It was erected in the 13th century to protect the possessions of the powerful Earls of Dunbar; it afterwards became the property of the

scarcely less powerful Earls of Angus; it figured frequently in the severe contests of the Border warfare; and it was finally taken, burned, and despoiled, in 1544, by the Earl of Hertford. The present estate of Billy comprises 920 acres, chiefly fine fertile land, and is the property of W. F. Home, Esq., of Paxton.

BILLY MIRE, an ancient morass, now drained and cultivated, extending from the vicinity of the Eye to the vicinity of the Whitadder in the parishes of Coldingham, Chirnside, and Bunkle, Berwickshire. It was almost impassable, and was crossed by a causeway, said to have been first constructed by the Romans. This causeway was usually taken up during the time of war between Scotland and England. Billy Mire gives name to a truce which was concluded between the Border authorities of the two kingdoms in 1386; and also figures in history as the scene of the murder of De la Beauté by some of the Wedderburns in 1517. So recently as about 40 years ago, it was thickly covered with hog-reeds, dwarf willows, and other aquatic plants, and was resorted to by thousands of wild ducks. A number of sluggish hurns—among which are those of Bunkle and Drædan—drain the upper part of it, and flow together to a rivulet; and this rivulet now bears the name of Billy Mire, and runs eastward, along the mutual boundary of the parishes of Coldingham and Chirnside, to the Eye in the vicinity of Ayton. An ancient cromlech or Druidical altar, popularly called the Pech stane, stands on the most elevated point of ground between the Bunkle and the Drædan, about a mile south of Billy Castle; and a large sepulchral cairn formerly stood near it, environed by huge masses of granite. The following obscure traditionary rhyme, relative to these objects, was current in the district some fifty years ago:—

By the Cairn and Pech stane
Grisly Drædan sat alane;
Billy wi' a kent sæe stout,
Cries 'I'll turn grisly Drædan out'—
Drædan teuch, and stalk'd awa',
And vanished in a babanqua."

BILLYNESS, the west headland of the bay of Anstruther, Fifeshire.

BILSDEAN, a hamlet in the parish of Oldhamstocks, Haddingtonshire. It stands on the road from Edinburgh to Berwick, about a mile from the boundary of Berwickshire.

BIMAR, a rocky isle in the frith of Forth, about $\frac{2}{3}$ of a mile south-west of North Queensferry, Fifeshire. It is covered at high water; and a stone heacon, 27 feet high, was erected on it a few years ago by the Commissioners of Northern Lights.

BIN OF BURNTISLAND, a conspicuous hill in the parish of Burntisland, south coast of Fifeshire. It rises abruptly to the height of 625 feet above the level of the sea, is situated about half a mile from the beach, has a bare and ragged summit, and forms a marked feature of the screens of the Forth, in striking contrast to the fertility and brilliance all around it.

BIN OF CULLEN, a remarkable hill in Banffshire, about $1\frac{1}{2}$ mile south-west of the town of Cullen, and 2 miles from the sea, elevated 1,076 feet above sea-level. From its conical shape, it forms a conspicuous land-mark to mariners. See **CULLEN**.

BINARTY. See **BALLINGRAY**.

BINCHINNAN. See **BENCHINNAN**.

BINEND, a lake of 50 acres in extent in the parish of Eaglesham, $3\frac{1}{2}$ miles west of the village of Eaglesham, Renfrewshire.

BINNANS, a rocky hill, with a precipitous face to the west, in the western extremity of the parish

of Greenock, Renfrewshire. It overhangs the east side of the bay of Gourock, and commands a brilliant view of the upper frith of Clyde from Dunoon to Dumbarton.

BINNIE, in the parish of Uphall, Linlithgowshire, 13 miles west of Edinburgh, and 2 miles from the Union canal at Broxburn. There is a good sandstone quarry here, which is extensively used for building in Edinburgh and Glasgow. Binnie craig rises to the height of about 450 feet.

BINNING, in the shire of Linlithgow, an ancient parish annexed after the Reformation to the parish of Linlithgow. Thomas Hamilton, who was by James VI. made one of the senators in the college of justice, secretary of state, and lord-advocate and register, in 1613, was created Baron Binning and Earl of Melrose, which title he afterwards changed for that of Haddington. In 1627, he was constituted lord-privy-seal, which office he held for ten years. The title Lord Binning is borne by the eldest son of the Earl of Haddington.

BINNINGWOOD. See **TYNNINGHAME**.

BINNS. See **ABERCORN**.

BINRAM'S CROSS. See **YARROW**.

BIRDSTONE, a village in the parish of Campsie, Stirlingshire. It is situated on the peninsula formed by the confluence of Finglen Burn and Kelvin Water, about a mile north of Kirkintilloch. Population, 100.

BIRGHAM, or **BRIGHAM**, a village in the parish of Eccles, Berwickshire. It stands adjacent to the Tweed, on the road from Coldstream to Kelso, directly opposite Carham in Northumberland, and $3\frac{1}{2}$ miles west by south of Coldstream. When Henry II. of England, relying on the alleged superiority of his clergy over those of Scotland, sent Hugh, Bishop of Durham, into Scotland, in 1188, to collect funds for carrying on a new crusade, the envoy, it is said, was met at Brigham, by William the Lion, and some of his nobles and prelates, who boldly denied the authority of the English church over that of Scotland, and declined to allow the proposed subsidy to be levied in Scotland. In 1239, a meeting of the Estates of Scotland was held here to take into consideration the proposal for a marriage between the Prince of Wales, and the Princess Margaret of Scotland; and in July, 1290, the treaty of Brigham—as it is called—was signed here, by which a lasting peace seemed to be secured to the two kingdoms, but which was rendered null by the death of the young princess on whom so many fair hopes depended, at Orkney, on her voyage to Scotland from Norway, in September, 1290. A chapel stood at Brigham in Popish times; and the burying ground connected with it still exists. Population of the village, 241.

BIRKHILL. See **LEGERWOOD**.

BIRNAM, a mountain in the parishes of Auchtergaven and Little Dunkeld, Perthshire. It rises from the right bank of the Tay, at the entrance to the Highlands, and attains a height of 1,580 feet above sea-level. Its summits command an extensive view of Strathmore, Stormont, Athole, and Strathbraan. Its sides and skirts were anciently covered with forest, but are now marked only by the scars of slate quarries and the feathery growth of young larch plantations. An ancient vitrified fort of 320 paces in circumference was recently discovered on one of its summits. But the grand interest of Birnam consists in its association with the story of Macbeth, as immortalised by Shakspeare; and this is well told as follows in 'the Beauties of Scotland':—"When Malcolm Canmore came into Scotland, supported by English auxiliaries, to recover his dominions from Macbeth the Giant, as the country people

called him, he marched first towards Duunkeld, in order to meet with those friends who had promised to join him from the north. This led him to Birnam wood, where accidentally they were induced, either by way of distinction, or from some other motive, to ornament their bonnets, or to carry about with them in their hands the branches of trees. The people in the neighbourhood stated, as the tradition of the country, that they were distinguished in this situation by the spy whom Macbeth had stationed to watch their motions. He then began to despair, in consequence of the witches' predictions, who had warned him to beware 'when Birnam wood should come to Dunsinann;' and when Malcolm prepared to attack the castle, where it was principally defended by the outer rocks, he immediately deserted it; and flying ran up the opposite hill, pursued by Macduff; but finding it impossible to escape, he threw himself from the top of the hill, was killed upon the rocks, and buried at the *Lang Man's Grave*, as it is called, which is still extant. Not far from this grave is the road where, according to tradition, Bane was murdered. The resemblance between these traditions and Shakspeare's account of the same event, in his tragedy of Macbeth, is extremely remarkable, and suggests the idea that this celebrated dramatist must have collected the tradition upon the spot; because, had he taken the subject of his play from the Scottish history, he must have represented Macbeth as having perished at a different part of the country. The only material difference between the tradition and the tragedy is, that by the former Macbeth east himself from the top of a rock; whereas Shakspeare, in consistency with poetical justice, as well as to give greater interest to the catastrophe, represents the usurper as falling in single combat with Macduff, whom he had so deeply injured. In Guthrie's 'History of Scotland,' it is stated, that, anno 1599, King James desired Elizabeth to send him a company of English comedians; with which request she complied; and James gave them a license to act in his capital, and before his court. 'I have great reason,' he adds, 'to think that the immortal Shakspeare was of the number. There is no doubt that in 1589 plays were actually exhibited in Perth, within a few miles of Dunsinann or Dunsinain. From the old records kept at Perth of that year, it appears that on the 3d of June the kirk-session of Perth authorized this amusement, after having examined the copy of the play. The actors were at that time all of them men, no women having appeared on the stage till the reign of Charles the Second.' See DUNSINNAN.

BIRNIE, a parish in Morayshire, bounded on the west, north, and east, by the parish of Elgin, and on the south by Rothes and Dallas. Its post-town is Elgin. Its length northward, to within $2\frac{3}{4}$ miles of Elgin, is 7 miles, and its average breadth is $1\frac{3}{4}$ mile. The greater part of the surface consists of high hills covered with heath. The cultivated soil, however, in the valleys and on the sides of hills, and the several falls of water in the rocky channels of the rivulets, have formed some beautifully diversified scenes. Three rivulets, the Lenock, the Barden, and the Rusherook, intersect the parish, and flow into the river Lossie; and this river receives the Lenock on the west side of the parish, and then flows through the northern end. There are about 100 acres of deep rich loam on its banks. It abounds in burn-trouts and eels; and about Lammas salmon and white trouts swim up, and afford fine diversion to the angler. The Lossie is subject to violent floods. Its most remarkable inundations happened in the years 1768, 1782, and 1829. The parish contains 5,784 Scots acres, of

which 850 were under cultivation in 1791, and 2,130 in 1829. It is divided into 40 compact farms, varying from 20 to 120 acres, and held in leases of 19 years. About 450 acres are under wood. The real rent, in 1791, was £360; in 1835, £1,200. The only landowner is the Earl of Seafield; and he has done a great deal for the agricultural improvement of the parish, advancing the sum of £5 to his tenants for every acre of waste land brought under cultivation. The Biblestone, having the figure of a book engraven upon it, lying about a mile east from the church, on the side of the road leading from Birnie to Rothes, has probably been placed there as a landmark. The cairn of Kilforman, of a conical figure, 300 feet in circumference at the base, has been probably placed over the remains of a brave man whose exploits are now forgotten. A cave in the middle of a steep rock, near the Gedloch, was, according to tradition, haunted about 150 years ago by a gang of armed ruffians who had no visible way of obtaining the means of subsistence but by theft and robbery. Some vestiges of an encampment can be traced near the burn of Barden. It commands a prospect of the Moray frith, from Speymouth to Cromarty bay. Probably the Danes, after invading this part of the country, had a camp there. Population in 1831, 408; in 1861, 411. Houses, 72. Assessed property in 1860, £1,623.

This parish is in the presbytery of Elgin, and synod of Moray. Patron, the Earl of Moray. Stipend, £156 8s. 4d.; glebe, £17. Schoolmaster's salary, £50. The church was repaired in 1734 and 1817, and seats 253. It is a very old structure of hewn freestone, and consists of a nave and choir. The late Mr. Shaw—a learned and respectable clergyman of this presbytery, who published the history of Morayshire in 1775—says, that it is probable that the bishop's first cathedral in this diocese was situated in Birnie, and that Simeon de Tonei, one of the bishops of Moray, was buried in Birnie in 1184. "It is held in great veneration by many in this county," says the Statistical reporter in 1791. "They still, in some measure, entertain a superstitious conceit that prayers there offered up three several Sabbaths will surely be heard. Inasmuch that when a person is indisposed, or of bad behaviour, this common saying obtains, 'You have need to be prayed for thrice in the church of Birnie, that you may either eud or neud.'" A stone baptistery, and an old bell, made of a mixture of silver and copper, of an oblong figure, named the coronach, are still kept in the church as relics of antiquity. Tradition relates that the bell was made at Rome, and consecrated by the Pope.—There is a female school.

BIRNS WATER, a rivulet of Haddingtonshire. It rises on the west side of Lammerlaw, near the boundary-line with Berwickshire, and runs about 7 miles north-westward on the boundary between the parishes of Humber, Ormiston, and Pencaitland on the left, and the parishes of Gifford, Bolton, and Saltoun on the right, to a confluence with the Tyne between Pencaitland and Saltoun. It is rather larger than the Tyne.

BIRRENS. See MIDDLEBIE.

BIRRENSWARK. See BRUNSWARK.

BIRSAY AND HARRAY, an united parish in Pomona and the mainland of Orkney. Birsay has a post-office of its own name; and so also has Harray. Birsay occupies the north-west of Pomona, and is bounded on the west and north by the sea, and on other sides by the parishes of Evie, Rendal, Harray and Sandwick. It is about 8 miles long, and about 5 miles broad. It is a hilly but not mountainous district. There are six lakes, which abound

with ducks and other kinds of water-towl, and with swans in the spring and fall of the year. There are two or three small burns containing fine trout, and sometimes salmon. The extent of sea-coast is about 10 miles; the shore is rocky. The flood-tide sets right in from the north-west upon the point of the Brough of Birsay, where it splits, one part flowing eastward toward Evie sound, whence it goes away with a rapid stream toward Kirkwall; and the other westward down the Sandwick shore, till it gets in to the draught of Hoy sound, where it becomes very strong. The headlands are Marwick head on the west, the Brough-head on the north-west, and the North-craig on the north. The hills are covered with heath, and what is here called *lubba*, a sort of grass which feeds the cattle in summer time, and generally consists of different species of carices, bent, and other moor-grasses. The soil in what is called the barony of Birsay is a rich loam, perhaps the most fertile in Orkney, capable of comparison with much good land in the best agricultural districts of Scotland. The chief minerals are limestone, an excellent flag claystone, and abundance of building-stones, but no sandstone. The principal land-owner is the Earl of Zetland; but there are about forty others. The wild quadrupeds are rabbits, Norwegian rats, short-tailed field-mice, common mice, and a small species of mice called here wights. Seals and otters are found; and cod, dogfish, herrings, lobsters, and other sea-animals are fished. Upwards of twenty fishing-boats belong to the parish. Straw-plaiting employs many females. The linen manufacture was once considerable, but has nearly disappeared. There are several ancient standing-stones, and many Picts' houses. Remains of popish chapels are numerous, because every Eryslund of 18 penny land had one for matins and vespers, but now all are in ruins. There are no towns, and only one ancient ruinous building, which was the palace of the Earls of Orkney. Robert Stuart, natural brother to Queen Mary, and his son Patriek, made great additions to this place; it is now in ruins, but has been built upon the model of Holyroodhouse, being a square area, with a well in the middle. Above the gate was the famous inscription, which, among other points of dittay, cost Earl Patrick his head. It run as follows: "Dominus Robertus Stuartus, filius Jacobi quinti Rex Scottorum, hoc opus instruxit." Above his coat of arms was the following motto: "Sic fuit, est, et erit."—Harray lies south of the east side of Birsay, is wholly an inland district, and occupies nearly the centre of Pomona. It is about 6 miles long and 4 miles broad. The surface is flat and rather swampy, and is intersected by many burns. Part of it consists of pretty good land, and part is very unproductive. There are two lakes,—one of them pretty large, abounding in excellent trout, and frequented by great numbers of aquatic birds. Population of the united parish in 1831, 2,387; in 1861, 2,593. Houses, 593. Population of Birsay in 1831, 1,652; in 1861, 1,774. Houses, 418.

The united parish is in the presbytery of Cairston and synod of Orkney. Patron, the Earl of Zetland. Stipend, £218 6s. 8d.; glebe, £21. Schoolmaster's salary, £40, with house and garden. The parochial church of Birsay was built in 1664, and enlarged in 1760, and contains 565 sittings. The parochial church of Harray was built in 1836, and contains 450 sittings. The parish minister and an assistant officiate alternately in these churches. There is one Free church for Birsay, and another for Harray and Sandwick. The attendance at the former in 1851 was 338,—at the latter, about 300; and the yearly sum raised in 1865 in connexion with the

former was £126 13s. 11½d.,—and in connexion with the latter, £88 14s. 6d. There is an Original Secession church in Birsay, built in 1829, and containing 470 sittings. There is an Independent chapel in Harray, with an attendance of 60. There are three Assembly's schools, one Society's school, two Free Church schools, and eight private schools.—The Norse language prevailed longer in Harray than in any other part of the country, but is now worn out. Fairs for cattle and horses are held thrice a-year in Birsay and thrice a-year in Harray.

BIRSE, a parish, containing a post-office of its own name, on the southern border of the highland district of Aberdeenshire. It is bounded by the counties of Kincardine and Forfar, and by the parishes of Aboync, Lumphanan, and Kincardine O'Neil. The boundary-line along part of the south and all the west is a watershed of the Grampians; and the boundary-line along most of the north is the river Dee. The parish is about 10 miles long and 10 miles broad. It may be divided into three large straths or districts. The largest, in the south-east part of the parish, is called Feughside. It has the Feugh, a tributary of the Dee, running through it; and is about 3 miles long, and 2 broad. On the banks of the Feugh, and among the Grampian hills is situated the forest or glen of Birse. The middle strath or district is called Glenchatt. It is about 4 miles long, and 1 broad. On the south of the burn is Midstrath, and on the north Ballogie. The most northerly district is along the south side of the Dee; through it runs the burn of Birse. The church and manse are situated here. This district is about 2½ miles long, and 1½ broad. It is vulgarly called the Six Towns. The whole parish is divided into what was called 24 towns; and each town, in 1792, was supposed to contain from 80 to 85 arable acres. The surface is rocky and mountainous, but beautifully diversified with hill and dale, wood and water. Mount Battock is on the southern boundary; and three great ridges extend south-westward within the parish to the higher Grampians. Peter-hill, the White-hill, and Mulbrax, are in the southern ridge. The Ords, the Shooting-greens, Tomcain, Corse-dardar, Midstrath, Arntilly, Lamachip, and Brack-enstaik, are in the middle ridge. The most northerly ridge takes its rise at Inchbair, and terminates at Cairnferg. On the west of the parish are the heights of Birsemore, Deuchry, and Mount-Ganiach. Mount Battock rises 3,465 feet above the level of the sea. Mount Ganiach is conjectured to be about 1,000 feet above sea-level. Peter-hill and Mulbrax may be rated at 2,700 feet. Cairnferg, a remarkably conspicuous conical mount, may be about 2,100 feet. On Mount Ganiach there is a well called St. Com's well; but concerning it there is no tradition. The Dee here abounds with excellent salmon, grilse, sea-trout, sterlings, (here called dowbrecks,) trout, and parr, with some pikes, fresh water flounders, with finnieks. Feugh is the most considerable interior stream. It rises on the western skirts of the parish from Mount Ganiach, and flows eastward. It produces salmon, and most of the sorts of fish above-mentioned, and would abound with them were they not stopped by a considerable waterfall near its influx into the Dee, opposite to Banchory-Ternan, which prevents the salmon from getting up except when the river is flooded. The landowners of Birse are the Marquis of Huntly, Farquharson of Finzean, Innes of Ballogie, and Gerard of Midstrath. The New Statistical Account, written in 1842, estimates the total of arable land at 3,360 imperial acres, the total of land under wood at 3,710 imperial acres, and the total yearly value of land produce at £8,542. One principal

facility of communication is the great road from Brechin to Inverness, across the Cairn o' Mount and Grampians, which enters Birse at the bridge of Whitestone, a mile north of the inn of Cutties-Hillock, and leads northward to the Dee at Inchbair. Another road passes through the greater part of the parish, from the ferry over the Dee at Aboyne, to the bridge of Whitestone. There is a bridge over the burn of Birse, nigh the church; and another at Potareh, over the Dee, near Inchbair, by which the great north road is carried across the Dee. This parish is famous for its honey of great richness and flavour. Both the practices and the implements of husbandry have of late years been very greatly improved. Most of the farms are not larger than from 30 to 60 acres. Females practise extraordinary industry in the knitting of stockings. Fairs are held in May, October, and November at the Bridge of Potareh. Population in 1831, 1,476; in 1861, 1,284. Houses, 258. Assessed property in 1843, £4,106; in 1860, £4,706.

This parish is in the presbytery of Kincardine O'Neil, and synod of Aberdeen. Patron, the Crown, Stipend, £158 7s. 4d.; glebe, £7. Schoolmaster's salary, £50 with fees. The parish church was built in 1779, and has between 500 and 600 sittings. There is a small Roman Catholic chapel at Ballogie, with an attendance of about 60. There are an endowed school, a Society's school, two or three other schools, a savings' bank, and a parochial religious library. On the hill, about a mile north-east of Finzean, bearing the name of Corse-Dardar, there is a place marked near the way-side with a long granite-stone, which is reported to mark the spot where King Dardanus, the 20th from Fergus I., was put to death.

BIRSELEY, a locality in the parish of Tranent, Haddingtonshire, about $1\frac{1}{2}$ m. south of the spot on which the battle of Prestonpans was fought in 1745. It was from the rising grounds here, or 'Birsey brae,' that the Chevaier's troops descended to meet their opponents.

BISHOPBRIGGS, or **BISHOP'S BRIDGE**, a village, with a post-office, in the parish of Cadder, $4\frac{1}{2}$ miles north-east of Glasgow, Lanarkshire. The Edinburgh and Glasgow railway passes near it, and has a station here. Deep cuttings of the railway through rock occur both east and west of this station. Population of the village, 658.

BISHOPMILL, a village in the parish of New Spynie, Morayshire. It stands on the left bank of the Lossie, and on the road from Elgin to Lossiemouth, closely adjacent to Elgiu, and within the parliamentary boundaries of that burgh. A handsome iron bridge connects it with Elgin. A stone-bridge formerly stood here, but was swept away by the great flood of 1829. Population of the village in 1861, 1,041. See **ELGIN**.

BISHOP'S FOREST. See **KIRKPATRICK IRON-GRAY**.

BISHOP'S LOCH, a small piece of water on the southern skirts of the parish of New Machar, Aberdeenshire, between Loch hills and Foulis hill. See **MACHAR (NEW)**.

BISHOP'S LOCH, a narrow strip of water, about a mile in length, lying between Cadder parish and Old Monkland, in the shire of Lanark.

BISHOPTON, a village with a post-office in the parish of Erskine, $5\frac{1}{2}$ miles north-west of Paisley, Renfrewshire. The Glasgow and Greenock railway passes near it, and has a station here. Bishopton House, once a favourite country residence of the Archbishop of Glasgow, stands high on the adjacent hill side, overlooking the station, and commanding a delightful view. Bishopton ridge, which divides

the low land of Gryfedale from the immediate banks of the Clyde, is composed of solid whinstone rock. The Glasgow and Greenock railway passes through it for a distance of 2,300 yards. There are two tunnels in the middle of the ridge, having an open part 100 yards long, and 70 feet deep, between them. These tunnels are 320 and 340 yards long respectively. The depth of the open cutting at the entrance to each is 70 feet; and the length, from the face of the east tunnel is 748 yards, and from the face of the west tunnel 946 yards. Population of the village, 341.

BIXTER. See **SANDSTING**.

BIZZY-BERRY. See **BIGOAR**.

BLACKADDER (THE), a river of Berwickshire. The name is usually pronounced and sometimes written Blackater, and is probably a corruption of Blackwater. The river rises among the north-western uplands of the parish of Westruther and on Derrington Law in the parish of Lougformacus; and it flows first south-eastward to Greclaw, and then north-eastward through the parishes of Greenlaw, Fogo, and Edrom, to the Whitadder, which it joins a little above Allauton. The total length of this stream is about 20 miles. The height of its head-springs above sea-level may be 1,130 feet. It is supposed to derive its name from the prevailing dark tinge of its waters, occasioned by the nature of the soil through which it flows.

BLACKADDER-HOUSE. See **EDROM**.

BLACK-ANDREW-HILL. See **SELKIRKSHIRE**.

BLACKBURN, a village with a post-office in the parishes of Whitburn and Livingstone, Linlithgowshire. It stands on the south road from Edinburgh to Glasgow, $2\frac{1}{2}$ miles south of Bathgate, $2\frac{3}{4}$ east of Whitburn, and $3\frac{1}{4}$ west of Livingstone. Almond Water, which is here a very small stream, washes it. Blackburn House stands about a mile to the east. A cotton-mill in the village employs about 120 hands, and a flax mill about 42. Here is an Independent chapel, which was built in 1825, and contains 200 sittings. Population in 1861, of the whole village, 758; of the Livingstone section, 640.

BLACKBURN, a village conjoint with Parknook, in the parish of Dunfermline, Fifeshire. Population of Blackburn and Parknook, 264.

BLACKBURN, a village, with a post-office, in the parish of Kinnellar, about 2 miles south-east of Kintore, Aberdeenshire. Here is a Free church, whose total yearly proceeds in 1865 amounted to £134 3s. 1 $\frac{1}{2}$ d. An abortive attempt was made to establish a large distillery here between 1821 and 1831.

BLACKBURN (THE), a tributary of the Liddel, in the parish of Castletown, Roxburghshire. It is celebrated for its romantic falls and cascades. One of the falls is $37\frac{1}{2}$ feet in height, and 20 in breadth; and another $31\frac{1}{2}$ feet in height, and 36 in breadth. In one part of its course a natural bridge of stone seemed to be thrown across the river. It was 55 feet long, 31 in span, and $10\frac{1}{2}$ broad; and the thickness of the arch was $2\frac{1}{2}$ feet of solid stone. The arch was not composed of an entire rock, but had the appearance of several square stones united together in the neatest manner. The height of the arch from the water was 31 feet. This bridge gave way in April 1810.

BLACKBURN (THE), a tributary of the North Esk, in the parish of Marykirk, Kincardineshire.

BLACKBURN (THE), a rivulet of the basin of the Northern Dee, flowing chiefly in the parish of Banchory-Ternan, Kincardineshire, but passing over the county boundary into the Loch of Drum in Aberdeenshire.

BLACKBURN (THE), a tributary of the Lossie, in the parish of Dallas, Morayshire.

BLACK CART. See **CART.**

BLACK CAVE. See **ARRAN.**

BLACKCRAIG, a village in the parish of Mimmigaff, Kirkcudbrightshire.

BLACK CRAIG, a mountain, 1,600 feet high above the level of the Nith, in the parish of New Cumnock, Ayrshire.

BLACK CRAIG, a hill in the parish of Creich, Fifeshire, commanding a brilliant and extensive view of the lower basin of the Tay and the frontier Grampians.

BLACK CRAIG, or **CRAIGDHU**, a frontier mountain of the Grampians, apparently between 1,800 and 2,000 feet high, in the parish of Port of Mentieth, Perthshire. Its outline resembles that of a hog's back. Its composition is conglomerate and limestone,—the latter of a blue colour streaked with white, and possessing enough of the properties of marble to be suitable for mantel-pieces.

BLACK DEVON. See **CLACKMANNANSHIRE.**

BLACK ESK. See **ESK.**

BLACKFORD, a parish, containing a post-office village of its own name, in the south-eastern part of Perthshire. It is bounded on the south by the counties of Clackmannan and Stirling, and on the other sides by the parishes of Dunblane, Muthil, Crieff, Trinity-Gask, Auchterarder, and Glendevon. Its length northward is 10 miles, and its breadth is about 5 miles. The Devon traces the southern boundary; the Earn traces the northern boundary; and the Madran, the Ruthven, and the Allan have their early course in the interior. The southern district is part of the Ochils,—steep and craggy toward the Devon, but flat and moorish toward the north. The central district is largely occupied by the great planted moor of Tullibardine; yet contains some lovely tracts,—particularly the charming and romantic Kincardine Glen, along the course of the Madran. The northern district consists of rich, well-cultivated lauds, of similar character to those of the other outspread parts of Strathearn. The climate of the upland tracts is moist and churlish. There are a few small lakes. Sandstone is quarried of a very hard quality, well adapted for millstones. The chief landowners are Lord Strathallan, Lord Camperdown, and Moray of Abercairney. The Scottish Central railway and the great east road from Stirling to Perth go through the parish; and the former has a station here. There were formerly several chapels in this parish; and, before the year 1745, divine service was occasionally performed in one at the house of Gleneagles, the burial-place of the family of Haldane; and in another near the castle of Tullibardine, in the choir of which the Dukes of Athole formerly interred. Besides these, there are the vestiges of two chapels in Mahany, at one of which is a burying-ground still in use by the inhabitants of the neighbourhood. Upon an eminence, fronting Gleneagles, are the vestiges of a small Roman camp; there are also several Druidical circles. In this parish, the ancestors of the Duke of Montrose had their ordinary residence, at the castle of Kincardine, which was burned in the time of the Civil wars, and has never been rebuilt. In Tullibardine stand the remains of a castle of that name, the seat, in former times, of the Earls of Tullibardine, who, for a long time after that family came to the titles of Athole, resided here some part of the year. In 1715, it was garrisoned by a party of the Earl of Marr's army, and taken by the Duke of Argyle; before the year 1745, Lord George Murray and his family inhabited it; but since that time it has been suffered to go to ruin. Tullibardine gives

the title of Marquis to the illustrious family of Murray, Duke of Athole. The village of Blackford is situated nearly in the centre of the parish, $4\frac{1}{2}$ miles south-west of Auchterarder, and 10 miles north-east of Dunblane. Fairs are held here on the 3d Wednesday of April, and the 3d Wednesday of October. Population of the village in 1861, 881. Population of the parish in 1831, 1,918; in 1861, 2,041. Houses, 312. Assessed property in 1843, £10,700; in 1865, £14,667 os. 6d.

This parish is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, Mrs. Home Drummond of Blair-Drummond. Stipend, £207 11s.; glebe, £18. Schoolmaster's salary now is £55, with £22 fees. The parochial church was built in 1738, and repaired about 1835, and contains 500 sittings. There is a Free church; attendance, 200; yearly sum raised in 1865, £155 12s. 3 $\frac{1}{2}$ d. There are three private schools.

BLACKFORD HILL, an eminence about $1\frac{1}{2}$ mile south of Edinburgh, divided from Braid hill on the south by a ravine which is intersected by Braid burn. "It is well worth while," says Campbell in his Journey from Edinburgh, "to ascend to the top of Blackford hill, from which a fine prospect of Edinburgh, the frith of Forth, the coast of Fife, the Lo-mond and Ochil hills, even to the Grampian mountains, is commanded. In ascending from the bottom of the valley through which the rivulet winds, we first reach one summit; and in gaining the next, the heaving into view of the castle, spires, and other buildings of the city, piled in irregular masses, and enveloped in the sombre obscurity of its smoke, seems as if all were in motion by the power of enchantment. On obtaining the topmost ridge of the hill, an extent of prospect truly sublime and beautiful spreads out before us. Immediately beneath the north brow, Blackford mansion-house, half hid among trees, and several others near it, of an old construction and aspect, appear on the plain below. One of these, namely, Grange house, was that in which Principal Robertson breathed his last."

BLACKFRIARS. See **AYR**, **EDINBURGH**, **GLASGOW**, **PERTH**, **ANDREWS** (ST.), **STIRLING**, **WIGTON**.

BLACKHALL, a station on the Wilsonton railway in Lanarkshire, $3\frac{1}{4}$ miles north-east of Morning-side, and $10\frac{1}{2}$ south-south-west of Bathgate.

BLACKHALL, a post-office village $2\frac{1}{2}$ miles west by north of Edinburgh, on the road thence to Queensferry. Corstorphine hill and Craigleith quarry are near it. See **CRAIGLEITH**.

BLACKHALL See **PAISLEY** and **STRACHAN**.

BLACKHILLOCK, a post-office station, subordinate to Keith, Banffshire.

BLACKHILLS. See **SKENE**.

BLACKHOPE SCARS, or **BLAKEHOPE SCAURS**, the loftiest of the Moorfoot hills, on the mutual border of the parish of Innerleithen, Peeblesshire, and the parishes of Temple and Heriot, Edinburghshire. It has an altitude of about 1,000 feet above the stream at its base, and of 2,193 feet above the level of the sea; and is the highest ground in the Lothians. A brook called Blackhope Water flows away from it to a confluence with Heriot Water.

BLACKHOUSE, an old square tower, on Douglas burn in Selkirkshire, about 5 miles south-west of Traquair, one of the most ancient seats of the puissant family of Douglas. It now gives name to a sheep-farm of about 4,000 acres in size, belonging to the Earl of Traquair. It is said to be mentioned as early as the reign of Malcolm Canmore. The tower might be built by William, first Earl of Douglas, when he succeeded to the Forest; for Robert Bruce had granted to his favourite warrior, Sir James Douglas, the forests of Selkirk and Traquair. From the

W. P. Lowry

St. Mary's

tower of Blackhouse, according to tradition, Lady Margaret Douglas was carried off by her lover, between whom and her seven brothers a most bloody scene took place, as they all perished in attempting to bring her back to her father's house. Her lover was also slain. Seven large stones, on the heights of Blackhouse, are pointed out as marking the different spots where the brothers fell. Lady Margaret and her lover are said to have been buried in St. Mary's chapel, which stood in the neighbourhood.

"Lord William was buried in St. Marie's kirk,
Lady Margaret in Marie's quire;
Out o' the lady's grave grew a bonnie red rose,
And out o' the knight's a brier.

And they twa met, and they twa plait,
And faim they wad be near;
And all the world might ken right weel,
They were twa lovers dear.

But bye and rade the black Douglas,
And woa but he was rough!
For he pull'd up the bonny brier,
And flang'd in St. Marie's tocht."

Their fate is commemorated in a very beautiful traditional ballad, of which we have quoted the last three stanzas. In a MS. in the possession of Lord Traquair, dated 1711—from which the circumstances above-mentioned are extracted—this is called 'Lord William and Fair Margaret.' But like most of our popular ballads it has borne different names. It is published, in the *Ministry of the Border*, vol. iii. 243, &c., under the title of 'The Douglas Tragedy.' This place is merely mentioned by Chalmers as "Blackhouse tower, on Douglas burn." Godscroft says, that "the eldest sonne" of William, "first created Lord of Douglas at the parliament of Forfaire," held by Malcolm Canmore, "was Sir John of Douglasburn, which is a parcell of ground and manour lying between Etrick forrest and Peebles." According to this writer, "he and his brother William were both knights at the same parliament," in which their father was nobilitated. It may be added, as a further memorial of the connection of this district with the Crown, that the name of the King's road is still given to a road which runs from Blackhouse to Henderland on Megget Water, where it is said there was another royal hunting-seat. This place was held, in a later age, by that famous freebooter Cockburn; and here his tombstone is still pointed out. On the banks of this beautiful stream, it is, indeed, said, there are the remains of two old towers, which appear to have been built, partly for accommodating the kings of Scotland, when on their hunting parties in the forest; as well as the traces of three or four roads in different directions across the hills, supposed to have been cut out for the King and his suite when they went a-hunting.

BLACKHOUSE HEIGHTS, a group of mountains on the mutual border of Selkirkshire and Peebles-shire, 4 miles north-west of Blackhouse Tower, and 6 south-south-west of the town of Peebles. They have a wild and sequestered character, and attain an altitude of 2,370 feet above sea-level. The Douglas Burn flows from their eastern base.

BLACK ISLE. See **ARDMEANACH**.

BLACKLARG. See **KIRKCUDBRIGHTSHIRE** and **DALRY.**

BLACK LOCH. See **MEARNS**, **SLAMANNAN**, and **DUMFRIES.**

BLACKNESS, a small sea-port in the parish of Carriden, Linlithgowshire. It is situated on the frith of Forth, 3½ miles east-south-east of Borrowstounness, 4 north-east of Linlithgow, and 5½ west-north-west of South Queensferry. It was anciently the port of Linlithgow, and a place of extensive

commerce; and it also took great consequence from a castle adjacent to it, which is supposed by some antiquaries to mark the eastern extremity of Antoninus' Wall, and was long one of the most important fortresses in the south of Scotland. See **ANTONINUS' WALL**. Sir Robert Sibbald says respecting Blackness: "There were many rich men masters of ships lying there; and the cities of Glasgow, Stirling, and Linlithgow, had a great trade from thence with Holland, Bremen, Hamburg, Queensburgh, and Dantzick, and furnished all the West country with goods they imported from these places, and were loaded outwards with the product of our own country." The attack of the port of Blackness was usually a principal object with the English in their expeditions into the frith of Forth. In 1481, under the reign of James III., they burnt the town with a store-ship which was lying in the harbour. When, in 1487, the nobles, irritated by the conduct of James, took up arms, in the course of military operations, they met his troops near Blackness, and a skirmish ensued, which, terminating to the disadvantage of the King, he concluded with them the pacification of Blackness; which, however, did not produce any lasting harmony. During the victorious expedition of Somerset into Scotland, under the reign of Edward III. of England, Blackness was one of the objects of attack. The result is thus stated by Patten, in his narrative of this expedition: "My Lord Clynton, hie Admiral of this flete, taking with him the galley (whereof one Broke is Captain) and iii. or v. of our smaller vessels besides, all well appointed with munition and men, rowed up the frith a ten myle westward, to a haven town standyng on the south shore called Blacknestes, wherat, towards the water syde is a castel of a pretty strength. As nye whear unto as the depth of the water ther wouold suffer, the Skots, for savegard, had laid ye Mary Willoughby, and the Antony of Newcastel, ii tall ships, whiche with extreme injury they had stollen from us before tyme, whé no war between us; with these ley theyr also an oother large vessel called (by them) the Bosse, and a vii mo, whearof part laden with merchandize. My Lord Clyntou, and his copenie, wt right hardy approche, after a great confiete hetwit the castel and our vessels, by fyne force, wau from them those iii ships of name, and burnt all ye residue before their faces as they ley." Under the reign of Charles II., Blackness was one of the King's castles, and the Earl of Livingston was hereditary constable. In the course of the 16th century Borrowstounness, being nearer to Linlithgow, and possessing some other advantages of situation, rose to a rivalry with Blackness; and in 1680, it succeeded, notwithstanding the opposition of the latter place, in being declared a port for entry. Blackness thereupon sunk gradually into total insignificance; and now its harbour is in ruins, its custom-house is used for lodgings, and its only trade is a trivial exportation of bricks and tiles, and a trivial importation of lime and manure. The castle, however, is one of the ancient fortresses whose preservation was guaranteed by the Act of Union; and therefore it is still kept up. Population, 107.

BLACKPOTS. See **BOYNDIE**.

BLACKRIDGE, a village in the parish of Torphichen, Linlithgowshire. It stands on the Barbauchlaw burn, and on the middle road from Edinburgh to Glasgow, 5½ miles west by south of Bathgate. Here is a Free church preaching station; sum raised in 1865, £45 16s. 6d. Population, 94.

BLACKSBOAT, a station on the Strathspay railway, 8¼ miles south-south-west of Aberlour.

BLACKSHAW, a village in the parish of Caer-

lavrock, Dumfries-shire. A low tract around it and toward the Solway is called Blackshaw flat.

BLACKSHIELS, a hamlet with a post-office in the parish of Humbie, East Lothian. It is situated near the north base of Soutra hill, 15 miles south-east of Edinburgh, on the road thence to Lauder and Kelso.

BLACKSIDE-END, a mountain on the north-east boundary of the parish of Sorn in Ayrshire. It has an altitude of above 1,500 feet, and commands a splendid view, embracing parts, it is said, of no fewer than sixteen different counties. A number of years ago, a curious phenomenon was observed near this hill after a thunder-storm which occurred about the middle of March. Near the base of the hill, something like an open quarry, which had not been perceptible on the preceding day, attracted the attention of people in the neighbourhood, and on going to the spot they found, to their astonishment, an excavation in the ground 60 feet long, 40 broad, and 16 in depth. The earth scooped out was not scattered round the pit, but thrown down at one place at 120 feet distance from the hole or cavity; and part remained in lumps of from 3 to 6 feet square, with many stones of some hundred weight. The earth on the sides and bottom of the pit remained firm and solid, without rent or aperture. The soil was what is called hill-moss or black earth, a few inches in thickness; and under the moss was hard till, some of it of a red colour, and part of it blue, without any appearance of rock of any kind. The excavation was believed to have been effected by lighting on the preceding day.

BLACKSTON, a station on the Monkland railway, 11 miles north-east of Airdrie.

BLACKWATER (THE), a head stream of the Deveron, in the parish of Cabrach, Banffshire. It rises on the southern margin of that parish, and runs about 8 miles north-north-eastward, along a grandly highland valley, to a confluence with the Deveron at Dalriach. The Duke of Richmond has a deer-forest and a shooting-lodge in its basin; and Malcolm Cammore is said by tradition to have had a residence in a remarkably sequestered and romantic part of its course which still bears the name of King's haugh.

BLACKWATER (THE), a stream of the parish of Kilmorie, in the island of Arran. It rises a little south of the centre of the island, and flows about 6 miles south-westward to Drimadown bay. A remarkably large cairn stands at its foot,—now a good deal diminished by the carrying away of its stones for building purposes,—but formerly measuring upwards of 200 feet in diameter.

BLACKWATER (THE), a head-stream of the Connon in Ross-shire. It rises in Strathvaich at the western extremity of the parish of Contin, and runs eastward to the Connon at Moy.

BLACKWATER (THE), a stream of the parish of Clyne, Ross-shire. It rises on Ben-Ormin, and runs about 16 miles southward and south-eastward to a confluence with the Brora, about half-a-mile above Loch Brora. Its early course lies through deep moors which give a dark tinge to its waters; and its lower course lies along a deep rocky channel, and is strikingly romantic. Two cascades occur on it, respectively near Balnakyle and at Kilkolmkill, both very magnificent when the stream is in flood; and the latter is much visited by tourists.

BLACKWATER (THE), a tributary of the Ken, in the parish of Dalry, Kirkcudbrightshire. It rises on the confines of Dumfries-shire, and runs westward about 6 miles quite across the centre of the parish.

BLACKWATER (THE), a small river in the north-

east of Perthshire. It is a continuation of the Shee, and unites with the Arde to form the Erich.

BLACKWOOD HILL. See KEIR.

BLADENOCH (THE), a river in Galloway. It rises in the hills which divide Galloway from Carrick, and, after a winding course of 24 miles south-south-eastward, between Penningham and Wigton parishes on the left, and Kirkcowan and Kirkiuner parishes on the right, empties itself into the bay of Wigton. Several islands, once famous for the resort of eagles, are formed in its bed. Good salmon are found in this stream.

BLADENOCH, a village in the parish of Wigton, Wigtonshire; about a mile south-west of the town of Wigton, within the parliamentary boundaries of which it is included. There is a large distillery here. Population, 215.

BLAINSLEE, a village in the north-east extremity of the parish of Melrose, Roxburghshire. It stands on the right bank of the Leader, 3 miles south-south-east of Lauder, on the road thence to St. Boswells.

BLAIR, any level tract now or formerly abounding in moss or heath. The name is sometimes used as a prefix—as Blair-Athole, 'the moss-plain of Athole,'—Blairgowrie, 'the moss-plain of Gowrie.'

BLAIR (MOUNT), a mountain of very large circumference, and of about 2,260 feet of altitude above sea-level, on the mutual border of the parish of Alyth, Perthshire, and the parish of Glenisla, Forfarshire. It can easily be ascended on the east and the west, but is steep and rugged on the north and the south. It has two summits, the one flat and elongated, and the other precipitous and overhanging the southern verge; and the latter commands a gorgeous view from Schihallion to the German ocean, and from Lochnagar to the Lammermoor hills. See ALYTH.

BLAIRADAM, a hamlet with a post-office in the parish of Cleish, Kinross-shire. It stands on the Kely water, $4\frac{1}{2}$ miles south-south-east of Kinross, and has a station on the Kinross-shire railway. Blairadam House, the seat of Sir Charles Adam, stands about a mile to the west. The Keiry Crag, a romantic spot, described in one of the novels of Sir Walter Scott as the howff of John Auchtermuchty, the carrier, may be seen in Blairadam grounds.

BLAIR-ATHOLE, an extensive parish, containing a post-office hamlet of its own name, in the north of Perthshire. It comprehends the ancient parishes of Blair-Athole, Strowan, Lude, and Kilmaveonaig. It is bounded, on the north, by Inverness-shire and Aberdeenshire, and on other sides by the parishes of Fortingall, Dull, Moulin, and Kirk-michael. Its length north-eastward is upwards of 30 miles; and its breadth is about 18 miles. The watershed of the great backbone of the central Grampians forms most of the northern boundary; the river Tummel, together with its expansion, Loch Tummel, forms most of the western half of the southern boundary; the glen of the Garry wends from the north-west corner south-eastward through the interior to the most southerly extremity; and the glens of the Erichkie, the Bruar, the Tilt, and their several tributaries diversify the rest of the interior down to Glengarry. Much information respecting the parish will be found in the articles ATHOLE, BRUAR, GARRY, TILT, and TUMMEL. Glengarry, for 6 miles downward from the church of Strowan, is a beautiful, well cultivated valley; and Strath-Tummel runs along the loch of that name, which is about 2 miles long. Between these two straths is a stretch of moorland about 4 miles in breadth. The other straths or glens are screened by mountains of naked rocks, and by extensive moor-

clad hills. On the summits of the higher mountains, the weather has left little else than gravel and stones covered with moss. Farther down we find heath, *uva ursi*, and the crowberry plant; on boggy places, the cloudberry, and on drier ground, the whortleberry with coarse grass. Still lower down, amidst heath and peat-hog, occur small valleys with pretty good pasture, and here and there a green spot, with huts to which the women, children, and herds, retire with the cattle for the summer-season. The vestiges of the plough are often seen here much higher up than it goes at present; probably because wood then clothed the higher places, and much of the bottom was a thicket. Every glen and valley is intersected by its own river, or stream; and in some of them there occurs a loch. The most remarkable mountain is Beudearg, 'the Red mountain,' so called from a vein of red stone, said to be a kind of granite, which intersects it. It rises 3,550 feet above the level of the sea; but is exceeded by Bengloe, or Benygloe, the highest pinnacle of which, Cairn-Gower, or Carn-nan-Gabbar, i. e. 'the Mountain of goats,' rises 3,725 feet above sea-level. The other summits of this mountain are Carn Liath, Carn Torkie, and Airgiobbeann. The New Statistical Account, written in 1838, estimates that 105,000 acres of the parish are uncultivated land or hill-pasture, 3,000 acres are land occasionally or constantly in tillage, 2,000 acres are under plantations, and 50 acres are under natural wood. There are ten land-owners; but by far the most extensive of them is the Duke of Athole. The chief residences are Auchleeks House, Lude House, and the Duke of Athole's seat, Blair Castle. This last, seated on an eminence rising from a plain watered by the Garry, is of uncertain antiquity. The oldest part is called Cummin's tower, being supposed to have been built by John, commonly called De Strathbogie, who enjoyed the title of Athole in right of his wife. It became the principal seat of his successors. In 1644 the Marquis of Montrose possessed himself of it, and was here joined by a large body of the Athole highlanders, to whose bravery he was indebted for the victory at Tibbermoor. In the troubles of 1653, this place was taken by storm by Colonel David, an officer of Cromwell, who destroyed it by powder. In 1689, it occasioned the celebrated battle of Killcrankie. An officer belonging to Viscount Dundee had flung himself into it, and refusing to deliver it to Lord Murray, son to the Marquis of Athole, was by him threatened with a siege. His lordship, to effect the reduction, assembled a body of forces and marched towards the place. Dundee knew the importance of preserving this pass, and his communications with the Highland clans, in whom he had the greatest confidence. With the usual expedition he joined the garrison; and, in a few days after, concluded his life with the well-known defeat of the royal forces under Mackay, at Killiecrankie. The last siege it experienced was in March, 1746, when it was gallantly defended by Sir Andrew Agnew against the rebels, who retired from before it a few weeks preceding the battle of Culloden. The reader will find some curious details of this siege in the 'Scots Magazine' for 1808. As soon as peace was established, a considerable part of the fortress was reduced in height, and the inside most magnificently furnished. "The views in front of the house," says Pennant—who visited this place in 1772—"are planted with so much form, as to be far from pleasing, but the picturesque walks among the rocks on the other side cannot fail to attract the admiration of every traveller of taste. The late noble owner, with great judgment, but with no less difficulty, cut, or rather blasted out, walks along the vast rocks

and precipices that bound the rivers Banovy and Tilt. The waters are violent, and form in various places cascades of great beauty. Pines and trees of several species wave solemnly over the head and darken the romantic scene. The place appeared to great advantage; for the Highlands, as well as other beauties, have their good and their bad days. The glen, that in 1769 I thought deficient in water, now, by reason of the rains, looked to great advantage, and finished finely the rich scenery of rock and wood." Other and extensive improvements have been made since Pennant wrote; and now the domain of Blair Castle is, in all respects, one of the most princely and gorgeous in Scotland. It was honoured by the residence of the royal family during several weeks of the autumn of 1844; and the many magnificent scenes within and around it, particularly the beauties of Blair valley, the grandeurs of Glentilt, and the sublimities of the Bruar and the Tummel appear, on that occasion, to have excited the highest admiration of the illustrious visitors. On the east bank of the Tilt, south-east of Blair Castle, is Clagh-ghil-Aindreas, or 'the cemetery of Andrew's disciple.' The Tilt has left only a small portion of this burying-place. The coffins which are found in it are usually composed of five flag-stones. On the north side of Bengloe, is Lochainn, i. e. 'the river that is slow like a loch.' It runs from Lochloch, towards the Tilt. Upon Lochainn are the vestiges of a palace in which the Earl of Athole entertained James V., his mother, and the French ambassador, in a most sumptuous manner; and which was burnt to the ground, as soon as the King left it. To the east of Blair Castle there is a deep pool, with a rock in it, whence adulteresses were of old thrown, sewed up in a sack, and drowned. The road and the railway from Perth to Inverness traverse the parish; and the railway has stations in it at Blair-Athole hamlet, Strowan, and Dalnaspidal. Blair-Athole hamlet stands at the foot of Glentilt, 10 $\frac{1}{2}$ miles from Dalnacardoch and 21 from Dunkeld; and has an excellent hotel, and a fair for cattle and horses on the third Wednesday of May. Fairs for cattle are held at the Bridge of Tilt on the 25th of June and on the 20th of August, old style. Fairs also are held at Trinafour for horses on the third Tuesday of March, old style, and for cattle on the Wednesday in October before Falkirk. Population in 1831, 2,384; in 1861, 1,659. Houses, 379. Assessed property in 1865, £18,475 12s. 3d.

This parish is in the presbytery of Dunkeld, and synod of Perth and Stirling. Patron, the Duke of Athole. Stipend, £143 19s. 4d., with three glebes of the annual value of £95 10s. Unappropriated tithes, £443 0s. 5d. Schoolmaster's salary now is £50, with about £35 fees. There are two parish churches, one at Blair, and one at Strowan, about 5 miles distant from each other. The church of Blair was built in 1825, and seats 650; that of Strowan, in 1828, and seats 460. A portion of the eastern extremity of the parish is comprised in the new parish of Tennandry, constituted by the law authorities in 1851, and contains the church of Tennandry. There is an Episcopalian church at Kilmaveonaig, which was built in 1791, and contains 200 sittings. There is a Free church for Blair-Athole and Strowan; and the yearly sum raised in connexion with it in 1865 was £343 4s. 9 $\frac{1}{2}$ d. There is also a Baptist church, with an attendance of about 100. There are six non-parochial schools.

BLAIRBURN, a village in the parish of Culross, Perthshire. Population in 1851, 85. The estate and manor of Blair-Castle, the former comprising 560 acres, are situated in the vicinity, on the banks of the Forth.

BLAIR-CASTLE. See **BLAIR-ATHOLE** and **BLAIR-BURN**.

BLAIRDAFF, a locality in the south side of the parish of Chapel of Garioch, about $4\frac{1}{2}$ miles from the church of that parish, Aberdeenshire. Here is a chapel of ease, on a beautiful site, with attached burying-ground, all completely surrounded with wood. Here also is a Free church, with an attendance of 300, the yearly sum raised in connexion with which in 1865 was £75 12s. 4 $\frac{1}{2}$ d.

BLAIR-DRUMMOND, an estate in the parish of Kincardine, in the Menteith district of Perthshire. The park contains some singularly fine trees. The mansion-house is a neat large modern structure; and near it is an elegant range of cottages inhabited by families who are employed, from father to son, on the estate. Blair-Drummond moss, which comprised about 1,500 acres adjacent to the Forth, was the subject of one of the most remarkable land-improvements of modern times. See **KINCARDINE**. A good account of the improvement may be seen in the Appendix to the Old Statistical Account, in the 3d volume of the Edinburgh Philosophical Transactions, in the Farmer's Magazine for August, 1817, or in the 12th volume of the Encyclopedia Britannica. The last of the moss was not cleared away till 1839. Two wooden wheels of curious and ancient construction were found in this moss, at the depth of 9 feet, a few years ago. They were wholly of wood, not even a nail or any thing of iron being to be found about them. They consisted of three planks joined together by two oval pieces of oak passing through the centre like holts; and measured 3 feet in diameter, by 2 $\frac{1}{2}$ inches thick. The centre, or nave, was 6 inches thick, apparently turned out of one solid piece, and bushed with the red wood of oak. The bushing was composed of small staves set in, like cooper-work, as exemplified in the form of the Scottish bicker. Both wheels were discovered in a horizontal position, and a layer of fir-trees and brush-wood was imbedded in the moss about a foot above them; which seems to prove that in whatever manner the wheels got there, they were at least of as ancient a date as the moss itself.

BLAIRRESSAN. See **KILLEARN**.

BLAIRFELDY. See **INVERAVEN**.

BLAIRGOWRIE, a parish, containing a post-town of the same name, in the north-east of Perthshire. It is of considerable extent, but irregular figure, being about 11 miles long from south to north, and, in some places, not less than 8 miles broad; but intersected by the parishes of Kinloch, Bendochy, and Rattray. The connected part of it is only about 9 miles long, and from 1 to 2 broad. The parish is divided into two districts by a branch of the Grampian mountains, forming a part of the northern boundary of the beautiful valley of Strathmore. The southern district, which lies in this strath, is about 4 miles long, and from 1 to 2 broad. The northern district—which includes the detached parts of the parish—is high ground, and very uneven in the surface. The hills, till about 1845, were mostly covered with heath, but now are cultivated to about 600 feet above sea-level. The Isla, which skirts the southern part of the parish, is the most considerable river; and it used frequently to flood and damage the neighbouring low lands, but is now confined to its channel by means of stone embankments. The next river in size is the Erich, which, from its rapidity, has acquired the appellation of “the Ireful Erich.” It is formed by the junction of the Ardle and the Black-Water; and runs along the east side of the parish for about 9 miles. Its channel in general is rocky and uneven, and it often varies in its depth and breadth. In

some places the banks are so low that it frequently overflows them; in other parts they rise to a great height, and are often covered with wood. About 2 miles north of the town of Blairgowrie, they rise at least 200 feet above the bed of the river; and on the west side are formed, for about 700 feet in length, and 220 feet in height, of perpendicular rock as smooth as if formed by the tool of the workman. This place is called Craigloch. Further down, about half-a-mile from the town, is the Keith, a natural cascade so formed as formerly, with aid from a weir, to stop the ascent of salmon, and to occasion large takes of them in pools. The weir there has been removed; but two other weirs, erected by mill-owners, are between the Keith and Blairgowrie bridge; and these, with other causes, have entirely spoiled fishing for a few miles above and below the town. The manner of the quondam fishing at the Keith is described thus in the Old Statistical Account. “The fishers, during the day, dig considerable quantities of clay, and wheel it to the river-side immediately above the fall. About sun-set the clay is converted into mortar, and hurled into the water. The fishers then ply their nets at different stations below, while the water continues muddy. This is repeated two or three times in the space of a few hours. It is a kind of pot-net, fastened to a long pole, that is used here. When the water is very small—which is often the case in summer—the fish are caught in great numbers, in the different pools, with a common net.” No fewer than six lakes occur in different parts of the parish; and several others have been drained, and now supply the neighbourhood with peats and marl. In the six which still exist, pike and perch are caught. They are also frequented by wild fowls of different kinds. There is one chalybeate spring in the Cloves of Maves, which was formerly much resorted to by persons in its neighbourhood, for scorbatic disorders. In 1774, the moor of Blair-Gowrie—then a common of 500 acres—was divided, and most of it, in 1775, was planted with Scotch firs; the rest of it has been gradually plauted since that time, partly with larch, and partly with Scotch firs. The New Statistical Account, written in 1843, estimates that 4,987 acres of the parish are either regularly or occasionally in tillage, 3,800 are constantly waste or in pasture, 302 might be profitably brought into cultivation, and 1,407 are under wood, natural or planted. There are nine principal landowners. The only stones quarried, or at all suitable for building, are a very dark-coloured whinstone and a coarse red sandstone. The only manufactures are the spinning and weaving of flax; and the former is carried on in ten mills. The roads from Blairgowrie town to Coupar-Angus, from Kirriemuir to Dunkeld, and from Perth to Braemar traverse the parish. A principal mansion is Newton-House, once the seat of the proprietors of the barony of Blairgowrie, an old building, something in the style of a castle. This house was rebuilt on the foundation of the old house said to have been burnt down by Oliver Cromwell; and it has been repaired and as much as possible modernized, and is let for summer lodgings. It stands about the middle of the south slope of the range of high ground which bounds Strathmore on the north, and has a most commanding view, not only of Strathmore, but also of parts of different counties. About half-a-mile further west, stands the mansion-house of the old family of the Blairs of Ardblair. See **ARDBLAIR**. Population of the parish in 1831, 2,644; in 1861, 4,657. Houses, 701. Assessed property in 1865, £19,531 8s. 1d.

This parish is in the presbytery of Meigle, and synod of Angus and Mcarns. Patrons, M^rPherson

of Blairgowrie and Oliphant of Gask. Stipend, £222 18s.; glebe, £35. Schoolmaster's salary, about £50 with fees. The parochial church stands on the summit of the hill of Blair immediately above the town, and was built in 1824, and contains 850 sittings. There is a chapel of ease, originally a dissenting chapel, in Brown-street, but is at present unoccupied. There are two Free churches in the town, North and South, and one at Cray; yearly sum raised in 1865, in connexion with the first, £577 0s. 7d.,—with the second, £576 12s. 9d.,—with the third, £97 14s. 7d. An Independent chapel was built in 1824, and contains 300 sittings. An Episcopalian chapel, called St. Catherine's church, was built in 1843, and contains about 200 sittings. There is also a small Roman Catholic chapel. There are three non-parochial schools,—the Free church one very large.

The Town of BLAIRGOWRIE stands on the right bank of the Ericht and north side of Strathmore, 4½ miles north-west by north of Coupar-Angus and 12 miles east-north-east of Dunkeld. Its site is a pleasant rising-ground which forms the first swell in the acclivity of the hill of Blair. The churchyard in front of the parish church on the top of the hill commands a brilliant view of Strathmore from its western extremity to the Hunter hill of Glamis. A deep and richly wooded ravine breaks sheer down behind the church to the hed of the river. The beautiful and romantic scenery of the Ericht, and a charming expanse of cultivated lowland, together with the neighbouring skirts of the Sidlaws and the Grampians, give a happy aspect to all the town's environs. The large village of Rattray stands near the town on the opposite bank of the river. Craighall-Rattray, one of the most picturesquely situated mansions in Scotland, surmounting a very lofty mural rock on the banks of the Ericht, is in the near vicinity. A little after the beginning of the present century, Blairgowrie was an insignificant village of mean thatched houses; but now it has a decided town appearance, with good streets, many good houses, and a considerable stir of business. A fine new street, called Newton-street, with neat villas and garden-plots, has been formed since 1854. A town-hall, capable of accommodating 600 persons, was recently erected by subscription; and a temporary lock-up adjoins it. There are three large hotels; offices of the Bank of Scotland, the Commercial Bank, and the Union Bank; three circulating libraries, a mechanics' institute, a savings' bank, a total abstinence society, some sporting clubs, and several charitable and benevolent institutions; and a weekly newspaper is published. The several places of worship are substantial; and one of the smallest of them, the Episcopalian, is a handsome edifice in the early English style. Property rose in value from 1854 till 1865 about 13 per cent. Ten spinning-mills are on the river, and employ nearly 2,000 hands. Hand-loom weaving was formerly prominent, but is yearly decreasing. Markets for cattle and grain are held on every alternate Tuesday, during the greater part of the year; and fairs, chiefly for cattle, but some of them also for horses and general business, are held on the 3d Wednesday of March, on the Tuesday of May preceding the old term day, on the 23d of July, or on the Tuesday after according as that day is or is not a Tuesday, on the Wednesday in October before Falkirk, and on the 23d of November or the Tuesday after according to circumstances. A branch railway from the Northeastern at Coupar-Angus was opened in 1855, and yielded, in 1865, about £10,250 a-year. The water-supply once was good, but in 1865 was beginning to be bad. The town was made a burgh of barony in favour of the proprietor of

the estate of Blairgowrie by Charles I. in 1634; and it was made a free burgh of barony, with power to elect a bailie and four councillors for the management of its affairs, by charter from its feudal superior in 1809. Its matters of police are regulated by the provisions of the general police act. The only historical events which have happened in it, are transits of the Marquis of Montrose in his hostile descents from the Highlands, and devastations of buildings and property by great floods of the Ericht. One of these devastations occurred so late as the autumn of 1847, throwing down two arches at the bridge of the town, and doing great damage to all the mills. Population in 1841, 2,242; in 1861, 3,344. Houses, 485. Estimated population in 1865, 5,420.

BLAIRINGONE, a village in the parish of Fossaway, on the south-east border of Perthshire. The name signifies 'the field of spears.' The village stands 7 miles west of Kinross, and 10 miles north-west of Duifourmilue. It is a burgh of barony, under the superiority of the Duke of Athole. A market is holden here in the month of June. It probably derives its name from weapon-shavings having been held here; for the chieftain of the Murrays had a family-seat at this place; and the rocky pinnacle, now called Gibson's craig, is said to be the real Gartwhinziau, where the whole clan of the Murrays assembled to attend their chief. An extension church, now a q. s. parochial, was built a little east of the village in 1838, and contains between 200 and 300 sittings. Population in 1851 of Old Blairingone, 79; of New Blairingone, 210. See FOSSAWAY.

BLAIRLOGIE, a village with a post-office in the portion of the parish of Logie belonging to Perthshire. It stands at the mouth of Glendevon and at the foot of the Ochils, 3 miles from Stirling, and 4 miles from Alloa. It is a clean pleasant place, remarkable for salubrity of climate and excellence of goat's milk; and is a favourite summer resort of invalids. Here are an United Presbyterian church and a small parochial library. Veins of copper and barytes exist in the neighbourhood. The estate of Blairlogie and Loss comprises 1,658 imperial acres, 330 of which are arable; and it includes the picturesque lofty hill of Demyat, whose summit commands one of the most superb extensive views in Scotland. Population of the village, 124.

BLAIRMORE, a hamlet in the parish of Kenmore, Perthshire.

BLAIRQUHAN. See KIRKMICHAEL.

BLAIRS, an estate in the parish of Maryculter, Kincardineshire. It is situated on the south side of the valley of the Dee, about 6 miles south-west of Aherdeen. It formerly belonged to Mr. Menzies of Pitfodds, but was gifted by him to the Church of Rome. A large Roman Catholic seminary is situated on it, with accommodation for from 25 to 35 pupils, most of whom are trained to be Roman Catholic priests. Part of the buildings is a Roman Catholic chapel, for the use of all the surrounding district.

BLANE (THE), a small river of the western division of Stirlingshire. It flows chiefly within the parish of Strathblane, and gives name to it; but it afterwards traverses a large wing of Killearn. It has its source in the Earl's seat, one of the Lennox hills; and, after running 3 or 4 miles to the south-west, is precipitated over several high falls, into a romantic hollow, which is filled with a vast assemblage of gigantic stones piled upon each other, and adorned on the sides with many alternate strata of various hues. "The stream has already formed two smaller cascades in sight before it precipitates itself over a shelf 30 feet high, and descends among the rocky masses which it has loosened from the

parent-hill. The lowest of the three falls is known as 'the Spout of Ballaggan.' The earls of the old race of Levenax had a castle near and in sight of this romantic scene. Ballaggan, the seat of Alexander Graham, Esq. of Ballaggan, commands a view of this beautiful and sublime cataract from the windows, and is within hearing of its music even when it has not the means of striking a loud note. In flood-time the Spout is stupendous, increasing its apparent height by covering the huge masses below so as to vie with the sullimity if not the beauty of Corra-Linn. In drier periods, the visitant can ascend, with more seeming than real hazard, amongst the scattered fragments of rock, till he have reached the bottom of the lowest fall." After a course of 8 miles farther towards the north-west, the Blane joins the Endrick at a point about 6 miles above that river's influx to Loch-Lomond. See STRATH-BLANE and KILLEARN.

BLANE'S (ST.) CHAPEL, an ancient ecclesiastical ruin in the parish of Kingarth, in the island of Bute. It stands amid a scene of great beauty about $2\frac{1}{2}$ miles from the southern extremity of the island. It is supposed to have been built by a priest who flourished about the close of the tenth century, was educated at Rome, and came to Scotland with a commission to rule the diocese of Dunblane. A considerable portion of the walls are still standing. The site is an artificial esplanade, a good deal higher than the circumjacent ground, encompassed with a rude wall of 500 feet in circumference, and all sub-structed, at the depth of two feet from the surface, with arches and mason-work. Another space of similar appearance, but on a lower level, and only 124 feet in circumference, is in the vicinity, and has the traditional reputation of having been a ununery. Both spaces were used as cemeteries,—the former only for males, and the latter only for females; and are associated, in old legend, with some circumstances of superstition and thaumaturgy.

Not far from St. Blane's Chapel is still shown the Devil's cauldron, which—though vulgar tales formerly current of the evil spirit's purgatorial parboiling of the bodies and souls of departed sinners are too gross for notice—is known to have been in Catholic times, a place of real penance for living ones. "This cauldron," says Mr. Blain, "30 feet in diameter, is formed by a wall of dry stone, 7 feet 6 inches high, and 10 feet in thickness, with an entrance from the east. It was a place of penance, as its name imports, such as Sir James Ware describes in his antiquities of Ireland. Poor culprits were sometimes obliged to traverse the top of the wall on their bare knees, a certain number of times, according to their demerit; whilst their path was covered over with sharp stones. At other times, a number of these unhappy people were made to sit, days and nights together, on the floor, within the enclosure, without food, and necessitated to prevent each other from enjoying the comforts of sleep, for it was inculcated on them by their ghostly fathers, as an article of belief, that, if they suffered any of the company to slumber, before the time appointed for expiating their guilt was at an end, the whole virtue of their penance would be lost."

BLANTYRE, a parish containing two villages and a post-office of its own name, and also five other villages, in the north-west of Lanarkshire. It is bounded by the parishes of Kilbride, Cambuslang, Bothwell, Hamilton, and Glassford. Its greatest length, north-eastward, is $6\frac{1}{2}$ miles; its mean breadth is about 1 mile; and its area is 4,027 imperial acres. The Clyde, which is here a noble and very beautiful river, traces all the boundary with Bothwell; and the Rotten Calder traces the boundary with Kilbride

and Camhuslang. The surface of the parish is low, and nearly all level, or at least without any prominent natural feature. The soil is various; but though part is clay, loam, and sand, the whole is very fertile, except toward the south-western extremity where it becomes a deep peat-moss. Great agricultural improvements have been made by draining and otherwise. The farm-houses are of a superior kind. The rent of laud averages about £1 per acre, but is so high in some parts as £4. Clay-band ironstone is worked at Auchintibber; limestone, at Auchintibber and Newfield; an excellent arenaceous building-stone, on Lord Blantyre's property; and Roman cement, at Calderside. There is a mineral spring at Park, strongly impregnated with sulphur dissolved by means of hydrogen gas, which used to be much resorted to, about the middle of last century, by families from Glasgow, and is still famed in scrofulous and scorbutic cases. The ruins of the priory of Blantyre, which was founded some time prior to the year 1296, are finely situated, in a most retired situation, on the top of a rock which rises perpendicularly from the Clyde, exactly opposite the noble ruins of Bothwell castle, and commands a very romantic view. Walter Stuart, first commendator of this priory, and Lord-privy-seal in 1595, was made a peer by the title of Lord Blantyre, July 10th, 1606. The revenues of the priory were, in 1561, money £131 6s. 7 $\frac{1}{2}$ d. Hamilton of Wishaw says in his 'Descriptions' compiled about the beginning of last century, "The Lord Blantyre hath a fruitful orchard at the old priory, where he is some tymes in use to dwell." There are yet a few relics of this orchard here; but from the state of the buildings it could scarcely have been supposed that they were in a habitable state at any period within the 18th century. See article BOTHWELL. Urns have been dug up at different times in several parts of the parish. A curious conical hillock, called the Camp Know, measuring 200 yards in circumference, and anciently surrounded by a ditch, is at Calderside. Two railway stations are in the parish; the one Blantyre, on the Glasgow and Hamilton railway; the other High Blantyre, on the Hamilton and Strathaven. The village of Blantyre, or kirktown of Blantyre, stands amid a rich level tract, sheltered by many fine tall trees, about $1\frac{1}{2}$ mile from the Clyde, 3 miles from Hamilton, 4 from East Kilbride, and $\frac{3}{4}$ from Glasgow. Population in 1841, 261. The village of Blantyre-Works stands on a rising-ground adjacent to the Clyde, near Blantyre station, and opposite Bothwell. Here are extensive factories for cotton-spinning, steam-loom weaving, and cotton-yarn dyeing. The number of hands employed in them in 1838 was 839; in 1865, about 1,800. The first of them was erected in 1785 by Messrs. David Dale and James Monteith. The village was built entirely for the accommodation of the work-people in the factories; and is notable for cleanliness, cheerfulness, and general good order. Population in 1861, 1,317. The other villages are Auchinraith, Auchintibber, Barnhill, Hunthill, and Stonefield; but all these are small. Population of the parish in 1831, 3,000; in 1861, 3,092. Houses, 381. Assessed property in 1865, £11,245.

This parish is in the presbytery of Hamilton, and synd of Glasgow and Ayr. Patron, Lord Blantyre. Stipend, £196 10s.; glebe, £16. Schoolmaster's salary, £45 with £19 fees. The parochial church was built in 1863, is a very handsome edifice, and contains 800 sittings. There is a Free church; yearly sum raised in 1865, £229 15s. 5 $\frac{1}{2}$ d. There are an excellent school in Blantyre-Works, and an adventure school in High Blantyre. There is also a par-

ochial library, which was opened in 1864. The barony of Blantyre was all, long ago, feued out in small pieces, which still bold of Lord Blantyre. His Lordship's residences are Erskine House, Cardonald and Bishopton House in Renfrewshire, Lennoxlove in Haddingtonshire, and Wedderlie in Berwickshire.

BLAR-NAN-CEANN. See CONTIN.

BLAVEN (MOUNT). See SKYE.

BLEARY'S CROSS. See RENFREW.

BLEATON. See RATRAY.

BLEBO CRAIGS, a village in the parish of Kemback, about $5\frac{1}{2}$ miles west of St. Andrews, Fifeshire. Population in 1851, 234. At Blebo mills are a spinning-factory, a flax scutching mill, a meal mill, and a barley mill; and in the vicinity are some mineral veins which at one time excited high hope and disappointed it. See KEMBACK.

BLESSING (LAKE). See ROGART.

BLOMEL SOUND. See YELL.

BLOODHOPE (THE). See ESK (THE WHITE).

BLOODY BAY. See IONA.

BLOODY FOLD. See BANNOCKBURN.

BLUE ROW, a hamlet in the parish of East Kilpatrick, Dumbartonshire. Population in 1851, 53.

BLYTHSWOOD. See RENFREW and GLASGOW.

BOARHILLS, a village near the eastern extremity of the parish of St. Andrews, Fifeshire. Population in 1851, 155. See ANDREW'S (ST.).

BOARLAN (LOCH). See ALTAN-NAN-CEALGACH.

BOAT-GREEN, the harbour of Gatehouse-of-Fleet, in Kirkcudbrightshire.

BOAT-OF-BOG. See SPEYMOUTH.

BOAT-OF-GARTEN, a station on the Highland railway, $16\frac{3}{4}$ miles north-north-east of Kingussie.

BOAT-OF-INCH, a station on the Highland railway, $5\frac{3}{4}$ miles north-east of Kingussie.

BODDAM, a fishing-village in the parish of Peterhead, Aberdeenshire. It stands on a projecting point of land, opposite the lighthouse of Buchanness, a little north of Stirling hill, and about 3 miles south of the town of Peterhead. It has two harbours, separated from each other by a strong beach, and both screened from the sea by the lighthouse island,—the south one affording accommodation only for boats, but the north one capable also of receiving tolerably large ships. The principal fishings are for herring, cod, and haddock. The number of herring-boats is between 20 and 30. The dried fish of Boddam are highly esteemed in the Aberdeen market, partly on account of the great care bestowed on them, and partly because of the very clean sandless rocks on which they are dried. Population, 550.

BODOTRIA. The ancient name of the frith of Forth.

BOGANY. See ROTHESAY.

BOGHALL. See BIGGAR.

BOGHEAD, a village in the parish of Lesnabagow, Lanarkshire. Population, 198.

BOGHEAD. See BATHGATE.

BOGHOLE. See AULDEARN.

BOGIE (THE), a beautiful little river of the north-west of Aberdeenshire. It is formed by the union of the burns of Craig and Corchinan, near the manse of Auchindoir. These burns traverse a considerable extent of bog, and derive from it antiseptic properties; and the former runs altogether about 5 miles, and makes some romantic cascades in what is called the Den of Craig. The Bogie pursues a northerly course along a fine valley to which it gives the name of Strathbogie; and, after supplying the bleachfields of Huntly with abundance of soft pure water, it falls into the Deveron about a quarter of a mile below that town. Its entire length of run,

1.

measured in a straight line from the source of Craighburn, is about 14 miles.

BOGMILE. See CLUNIE.

BOG-OF-GIGHT, or BOGEN-GIGHT, the ancient designation of the seat of the Dukes of Gordon, in the parish of Bellie, now called GORDON CASTLE: which see. Shaw and others derive the name from *Bog-na-Gaoith*, that is, 'the Windy bog.' Richard Franck, who made a journey through Scotland in 1658, describes "Bogageith, the marquess of Huntly's palace all built with stone facing the ocean; whose fair front—set prejudice aside—worthily deserves an Englishman's applause for her lofty and majestic rivets and turrets that storm the air, and seemingly make dints in the very clouds!" The ferry, or more strictly speaking ferry-boat, across the Spey near this mansion, for ages known as "the Boat of Bog," has been supplanted by a magnificent stone bridge of four arches, said to have cost £13,000.

BOGRIE HILL. See DUNSCORE.

BOGROY, a post-office station subordinate to Inverness.

BOGSIDE, a station on the Stirling and Dunfermline railway, near the town of Culross, on the south-east verge of Perthshire. It is the intermediate station between Kincardine on the west and East-Grange on the east.

BOGTON LOCH, an expansion of the river Doon, about two miles below its source in the parish of Dalmellington, Ayrshire. It has low banks, and is much frequented by aquatic birds.

BO' HALL. See GARVAID AND BARA.

BOHALLY, a post-office station subordinate to Pitlochrie, Perthshire.

BOHARM, a parish partly in Morayshire, and partly in Banffshire. It comprises the ancient parishes of Bucharin and Ardintullie, and also part of the ancient parish of Dnndurcus. It is bounded by Bellie, Keith, Botriphnie, Mortlach, Aberlour, and Rothes. Its post-town is Keith. Its outline is irregular; but its average length north-eastward is 9 miles, and its average breadth is from 2 to 3. The Spey flows along the western boundary, and the Fiddich flows along the southern. Benagen rises right from the Spey to about 1,500 feet above sea-level, is the only important hill in the parish, and was lately found to contain a rich seam of ironstone. The railway from Keith to Elgin runs about 4 miles through the centre of the parish, traversing for 2 miles a highly picturesque ravine; and the Strathpey railway runs for some distance in it, along the course of the Fiddich. The total yearly value of raw produce was estimated in 1842 at £14,256. Assessed property in 1865, £6,974. There are four landowners; and two of these are resident in the fine mansions of Arndilly and Auchlunkart. There are three meal-mills, and four saw-mills. The ruin of Bucharin or Boharm Castle, now called Gauldwell, is the principal antiquity. This was built fronting the east, on the north side of the valley towards the western end of the parish, where a promontory is pushed forward into the deep defile formed by the course of the Aldermie. It appears to have been a simple structure of 119 by 24 feet within, divided by an internal wall so as to form two halls on the ground-floor, one 65 and the other 54 feet in length. The windows were only 20 inches wide, though the walls were 8 feet thick, built up in frames of timber which were employed for keeping in the fluid mortar, which was poured into the dry stone-wall when raised to a certain height. The front and corners were finished with free-stone from the quarries of Duffus. About a century ago several silver spoons were found among the rubbish, having the handle round and hollow like a pipe, and the

M

concave part, or mouth, perfectly circular. This bulky fabric, in 1200, was denominated Castellum de Bucharin. It then belonged to the Freskyns of Duffus, by whom it was no doubt built. By assuming the title De Moravia, from their connexion with that country, they became the author of that surname. They were once possessed of many fair domains in the north: namely, Duffus, Duldavie, Dalvey, Inverallen, and Kirkdales, in Moray; Arndilly, Aikenwall, Boharm, Botriphnie then Botruthin, Kinernonie then Cere Kainermonth, in Banffshire; and Brachhie, Croy, Ewan, Lunyn, and Petty, in Nairn or Inverness, as appears by the charter of Moray from 1100 to 1286. At this day, they are represented by the Duke of Athole, Sutherland of Duffus, and Murray of Abercairny. It also appears by the charter of Moray, that, between 1203 and 1222, William, the son of William Freskyn, obtained the consent of Brucius, bishop of Moray, for building a domestic chapel for the more commodious performance of the offices of devotion. It stood on its own consecrated burying-ground—forsaken only in the course of the last century—about 50 yards from the north end of the castle; and, though only 24 by 12 feet within, must have been the parent of the parish-church, which, with several others, was erected at the private expense of James VI. for civilizing the north of Scotland, in the year 1618, at which period Ardentullie or Arndilly may be supposed to have been annexed. On the annexation of a part of the parish of Dundureus a new parish-church was erected about 2 miles to the eastward. James Ferguson, the self-taught astronomer, received the rudiments of his education here, under the patronage of Grant of Arndilly. Population in 1831, 1,385; in 1861, 1,412. Houses, 276.

This parish is in the presbytery of Aberlour and synod of Moray. Patrons, the Crown and the Earl of Fife. Stipend, £244 16s. 7d.; glebe, 30 acres. There are two parochial schools; the one with £40 of salary, the other with £25. The parish church was built in 1793, and contains about 700 sittings. There is a Free church; and the yearly sum raised in connexion with it in 1865 was £93 4s. 11½d. There are three female schools, with dwelling-houses for the teachers, and salaries or grants.

BOHESPICK, a portion of the valley of the Tummel in the parish of Blair-Athole, Perthshire.

BOINDIE. See **BOYNDIE**.

BOISDALE (LOCH), a deep inlet of the Minch, on the eastern side of South Uist, and to the south of Loch Eynort. It is thickly strewn with islets, and has a small half-ruined tower at its entrance. It is one of the best and largest harbours in the kingdom, and affords shelter to vessels in the Baltic trade under stress of weather.

BOLD BURN, a rivulet of the eastern wing of the parish of Traquair, Peebles-shire, flowing from the Minchmoor to the Tweed.

BOLE, a hamlet in the parish of Rescobie, Forfarshire.

BOLESKINE AND ABERTARF, an united parish, containing the small post-town of Fort-Augustus and the village of Balfrishel, in Inverness-shire. It lies on both sides of Loch Ness, and is bounded by Urquhart, Dorres, Daviot, Laggan, and Kilmarnivaig. Its length north-eastward is about 21 miles; and its average breadth is about 10 miles. Abertarf lies principally on the north-west side of Loch Ness, and formerly comprised also the district of Glenmorriston. The inhabited parts of it are separated from the inhabited parts of Boleskine by a lofty hill of seven miles in length. Boleskine comprises part of Stratherrick, part of the upland country of Corryarrick, and part of the Monadleadh

mountains. There are also one or two small detached tracts. The district at the western extremity of Loch Ness is level; the eastern is mountainous. The soil is as varied as the surface. There are a great many sheep fed in the hilly part of the country. Much natural wood still remains; and, from the large trunks of oak-trees found in all the mosses, we may conclude the whole country has at one period been an extensive oak-forest. The parish abounds with lakes, which contain a variety of fish. Several streams also intersect it, of which the principal are the Oich, the Tarff, and the Foyers,—the last famous for its falls. Granite of beautiful appearance is found in the hills; and inexhaustible quarries of limestone are wrought in several parts. The principal landowners are the Frasers of Abertarf, Lovat, and Foyers. The total yearly value of raw produce was estimated in 1835 at £4,313. Assessed property in 1860, £8,232. A number of the principal objects and scenes of interest in the parish will be found noticed in other articles, such as **AUGUSTUS (FORT)**, **CALEDONIAN CANAL**, **NESS (LOCH)**, **OICH (THE)**, **FOYERS (THE)**, **STRATHERRICK**, **CORRYARRICK**, and **MONADLEADH MOUNTAINS**. Population in 1831, 1,829; in 1861, 1,743. Houses, 355.

This parish is in the presbytery of Abertarf, and synod of Glenelg. Patron, Professor Hercules Scott. Stipend, £238 2s. 2d. Schoolmaster's salary, £40 with £20 fees. The parish church was built in 1717, and contains 428 sittings. There is a missionary at Fort Augustus, who ministers to about 150 attendants. There is a Free church in Fort Augustus, associated with another in Glenmorriston; and the proceeds of it in 1865 amounted to £77 15s. 5d. There is also a Roman Catholic chapel, with an attendance of 200. There are two private schools.

BOLFRACKS. See **FORTINGAL**.

BOLL-FOR-NOUGHT. See **NINIANS (ST.)**.

BOLTON, a parish in Haddingtonshire, bounded by the parishes of Haddington, Gifford, Humber, and Salton. Its post-town is Haddington, 2½ miles north of the church. The length of the parish northward is nearly 6 miles; and the average breadth is not more than about 1½ mile. Gifford or Coalstone Water, a stream of much gentle beauty, flows along the north-eastern and northern boundary; and Bin's Water, from about the point of its debouch from the Lammemoors, flows along the southern boundary. The surface of the parish is agreeably diversified with undulations, but does not contain any upland or hill. About 300 acres are under wood, between 50 and 60 are in permanent pasture, and all the rest acknowledge the dominion of the plough. There are eight or more landowners; but the only resident one is the proprietor of the charming mansion of Eaglescarnie, which was for several centuries the seat of a branch of the Haliburtons, Lords of Dirleton. The valued rent is £2,437 12s. 7d. Scots. The real rent in 1792 was £1,400; and is now above double that sum. The total yearly value of raw produce was estimated in 1838 at £10,125. Assessed property in 1865, £3,746 1s. 1d. Within the hamlet of Bolton there were, till recently, some vestiges of a house, with a park on the west side of it still called the orchard, which is said to have belonged to John Hepburn, a friend of Bothwell's, who fled with him from Duubar, when Bothwell escaped from the battle of Falside. Chalmers says:—"The manor of Bolton was early enjoyed by the St. Hilaries, who were succeeded by William de Vetereponte, who married Emma de St. Hilary. Notwithstanding the terrible disasters of the succession war, in which, as we learn from Rymer and Prynne, this family was involved, yet was Bolton, with lands in other districts, enjoyed by it

under Robert I. and David II. In the reign of James II. it belonged to George, Lord Haliburton of Dirleton. It was at length acquired by Patrick Hepburn, Earl of Bothwell, after a long suit in parliament with Marion, the lady of Bolton. In 1526 and 1543, Bolton was in possession of a cadet of his family, by the name of Hepburn of Bolton. In January 1568, John Hepburn of Bolton was executed, as the associate of the Earl of Bothwell, his chief, in the murder of Darnley. The manor of Bolton, thus forfeited, was given to William Maitland, the well-known secretary Lethington. It was confirmed to the Earl of Lauderdale in 1621. Richard, Earl of Lauderdale, who died about the year 1693, sold the barony of Bolton, and even the ancient inheritance of Lethington, to Sir Thomas Livingstone, who was created Viscount Teviot, in 1696; and Sir Thomas transferred the whole to Walter, Master of Blantyre, afterwards Lord Blantyre, in 1702, in whose family the property remains." Population in 1831, 332; in 1861, 332. Houses, 71.

This parish is in the presbytery of Haddington, and synod of Lothian and Tweeddale. Patron, Lord Blantyre. Stipend, £153 15s. 5d.; glebe, £18. Schoolmaster's salary, £35 with £40 fees. The parish church was built in 1809, and contains nearly 300 sittings. It is a neat modern Gothic structure, with a tower. There is a Free church for Bolton and Salton; and the yearly sum raised in connexion with it in 1865 was £105 18s. 3½d. There is a small parochial library.

BONA, an ancient parish of Inverness-shire, now united to the parish of Inverness. The ruins of its church still exist on the banks of Loch-Dochfour. Service is regularly maintained in the schoolroom here by the Established ministers of Inverness. It is 6 miles south-south-west of Inverness, at the northern extremity of Loch-Ness, over which there is a ferry here. The population of the district, in 1831, was 1,363. On the east side of the Ness, about 600 yards below its efflux from Loch-Ness, and between it and Loch-Dochfour, there are the remains of a Roman station, which, it is supposed, was the site of the Banatia Urbs of Richard of Cirencester. Near this, in after times, was a rude fortress, called Castle Spiritual, which probably was designed to command the passage of the Ness. In removing some of the ruins of the fortress, during the progress of recent excavations for the improvement of the Caledonian canal, a number of human bones, the teeth being remarkably entire and fresh, and one complete skeleton, were found. Some coins of the reign of Elizabeth were also dug up. But what occasioned most surprise was the discovery of a nest of toads, completely encased in the solid wall, with apparently not the slightest opening by which ingress could be obtained. In a small cavity, about three inches in diameter, were found six toads and a lizard. On their first admission to the light of day the toads appeared insensible; but on being touched by the men they speedily revived.

BON-ACCORD. See ABERDEEN.

BONALLY, an estate in the parish of Colinton, 5 miles south-west of Edinburgh. The mansion comprises a peel tower, built in 1838, and an older small house; and it is situated in a hollow of the pass through the Pentland Hills; and has a very interesting appearance. It is the seat of John Gray, Esq. On high grounds above it are two reservoir ponds of the Edinburgh Water Works.

BONAR, or BONAR-BRIDGE, a village with a post-office in the parish of Creich, Sutherlandshire. It is situated on the southern verge of the county, and on the coast of the Dornoch frith, 12 miles west of the

town of Dornoch, and 13½ west-north-west of Tain; and consists chiefly of a line of houses overlooking the water. It has an inn, is at the terminus of the Highland railway, and will be the junction-point of the railway from Caithness. Fairs are held on the third Tuesday of July, Aug., and Sept. The commissioners for Highland roads and bridges, in April, 1811, reported, that all the investigations of Highland lines of road north of Inverness, had uniformly designated the head of the Dornoch frith as a necessary central point; and to the inhabitants of the eastern part of Sutherland, and of all Caithness, it was important that the passage should be established as near to the coast as safe and practicable. The inconvenience and danger experienced at the Meikle ferry, at the mouth of the frith, and the circuitous route by Portinlech, a ferry at the head of the frith, rendered it very desirable to ascertain and determine the most convenient place for crossing it between these extreme points. For this purpose, Creich and Bonar appeared to possess nearly equal pretensions,—the first being wider but nearer the coast,—the other, narrower, but not affording so direct a road towards the north-east. In 1811, Mr. Telford reported to the commissioners as follows: "Having repeatedly examined this frith, I find that about 12 miles above Dornoch, at Bonar ferry, it is contracted into the breadth of about 70 yards at low water of a spring tide; at which time, 20 yards of that breadth extending from the southern shore, is covered by water not more than 3 feet in depth; and as the spring-tides rise no more than 8 feet, I conceive it is practicable to construct a bridge at this place where the several roads, south and north of it, may be made to centre without inconvenience. As considerable quantities of ice float here in winter, and the tides run with considerable velocity, it is advisable to construct an iron bridge of one arch, 150 feet span, and 20 feet rise; and by making the arch to spring 3 feet above high water mark, no interruption can then take place. I accompany this with a plan, in which I have endeavoured to improve the principles of constructing iron bridges, and also their external appearance; the principal ribs have here their parts all of equal dimensions, which, by cooling equally, will avoid defects hitherto experienced in structures of this sort; the road-way, instead of being supported by circles or perpendicular pillars as formerly, is sustained by lozenge forms, which preserve straight lines, and keep the points of pressure in the direction of the radii; the covering plates, instead of being solid as formerly, are to be made reticulated, something in the way of malt-kiln tiles, which enables them to be made thicker, and yet so as to save a very considerable portion of iron, and consequently weight." Mr. Telford's plan was carried into execution in 1812. The bridge consists of an iron arch of 150 feet span, and 2 stone arches of 60 and 50 feet respectively, presenting a water-way of 260 feet. In the year 1814, the iron arch sustained, without damage, a tremendous blow from an irregular mass of fir-tree logs consolidated by ice; and in 1818, a schooner was drifted under the bridge, and suffered the loss of her 2 masts, the iron arch remaining uninjured. The total cost of the bridge was £13,971. By means of this bridge and that at Lovat, the benefit of the Great Highland road, without the intervention of any ferry, was extended to the northern extremity of Great Britain; the bridges of Dunkeld, Lovat, Conan, and Bonar, forming a connected series of bridges, which for size, solidity, and utility, are not surpassed anywhere in the kingdom. Population of Bonar, 247.

BONAW. See BUNAW.

BONCHESTER, a beautiful high hill in the

parish of Hobkirk, Roxburghshire. Bonchester-Bridge in the vicinity is a post-office station.

BONESS. See BORROWSTOWNNESS.

BONESSAN, a village with a post-office in the district of Ross, and parish of Kilfinichen and Kilviceuen, in the island of Mull. Here is a parochial church, which was built in 1804, and contains 350 sittings. Population of the village, 250.

BONGATE, a village in the parish of Jedburgh, Roxburghshire. Population, 241.

BONHILL, a parish containing a small post-town of the same name, and also the town of Alexandria and the villages of Dalvault, Jameston, and Mill of Halden, in Dumbartonshire. It is bounded by Loch-Lomond and by the parishes of Kilmarnock, Dumbarton, Cardross, and Luss. Its length is $4\frac{1}{2}$ miles, and its breadth about 4 miles. It extends about a mile up the east side of Loch-Lomond and about 2 miles up the west side; and it comprises the upper half of the vale of the Leven, together with a portion of that vale's hill screens. It is one of the most pleasant tracts of country in Scotland, rich in soft natural diversities of feature, and beautiful in manifold, tasteful adornments of art. Some matters in the north-east district of it have been noticed in the article BALLOCH. One of its finest artificial objects is Tilliechewan Castle, a noble modern edifice in the castellated Gothic style, occupying a well-chosen site, and surrounded by charming pleasure-grounds. About 300 acres of the parish are planted with larches and Scotch pines. There was an ash-tree in the churchyard till 1845, the trunk of which was 9 feet in length, the girth, immediately above the surface of the ground, 25 feet; about 3 feet above the surface it measured 19 $\frac{1}{2}$ feet; and, at the narrowest part, 18 feet. It divided into three great branches; the girth of the largest of which was 11 feet; of the second, 10; and of the third, 9 feet 2 inches. The branches hung down to within a few feet of the ground; and from the extremity of the branches on the one side, to that of those on the other, it measured no less than 94 feet. There was another large ash-tree, the trunk of which was about 11 feet in length; the girth, immediately above the surface of the ground, 33 feet; and at the narrowest part it measured 19 feet 10 inches. The proprietor fitted up a room in the inside of it, with benches around and three glass windows. The diameter of the room was 8 feet 5 inches, and from 10 to 11 feet high. The river Leven cuts the lower two-thirds of the parish into nearly equal parts, and gives to their low grounds, a predominating character, both in features of scenery, and in forms of industry. This river,—whose beauties Smollett has sung in his well known verses:—

“On Leven's banks while free to rove,
And tune the rural pipe to love,
I envied not the happiest swain
That ever trod th' Arcadian plain.”—

is remarkable for the softness of its water, and the clearness of its stream. Gaelic scholars derive its name from the words *Le*, ‘smooth’ or ‘soft,’ and *Avon*, ‘a river.’ It issues from Loch-Lomond at Balloch, and falls into the frith of Clyde at Dumbarton castle. In a straight line from the lake to the Clyde, it will measure about 5 miles; but its course, owing to its windings, is more than 9 miles. The fall from the lake to the Clyde is 22 feet. The tide flows up the river more than a third of its length; and large vessels come up to the quay of Dumbarton at high tide, but the navigation is much impeded by a sand-bar at the mouth of the river; where the tide fails, the vessels are drawn up the river by horses. These vessels are constructed to draw little water. They are chiefly employed in

carrying down wood and bark from the coppices in Loch Lomond, and slates from the slate-quarries in the parish of Luss. The Leven produces salmon, parr, trout, and other small fish. The salmon fishings belonged formerly to the burgh of Dumbarton, but were bought about 1861 by Sir James Colquhoun of Luss; and they were at one time very valuable, but have been considerably injured by defilement of the river. Printfields, bleachfields, and Turkey red dyeworks make a great figure in the vale; and were established here partly in consequence of the peculiar suitability of the Leven's water for their uses. The first printfield was begun about 1768; three printfields and four bleachfields were established within the next 30 years; and the following works existed near the end of 1865,—Dalmonach printworks, employing 930 persons,—Levenbank Turkey red dye and print works, employing 1,100 persons,—Alexandria Turkey red dye and print works, employing 1,200 persons,—Ferryfield print works, unoccupied, but recently employing about 300 persons,—Dallichip quondam printworks, undergoing extensive alterations and additions to become a Turkey red dye work, employing from 300 to 400 persons,—Milburn chemical works for pyroligneous acid and other products,—Charleston engraving works, and a few smaller establishments. The grounds occupied by the printfields and bleachfields are feued at £2 10s. per acre. From 30 to 40 excellent houses were built, about 1860, by Mr. Archibald Orr Ewing for his workers. A large suite of cooking and waiting-rooms was erected, in 1865, by Messrs. John Orr Ewing & Co., at the gate of their extensive works. A mechanics' institute existed many years prior to 1865; but a handsome building for it, at a cost of above £3,000, was then erected close to the Alexandria end of the chain bridge over the Leven; and this contains a lecture-hall capable of accommodating 1,100 persons, and two smaller halls for classes and small meetings. The old valued rent of the parish was £2,180 9s. 2d. Scots. The ancient family of Lennox had a mansion-house at the south end of Loch-Lomond; but nothing remains of it except the fosse. The tradition is that the materials of the mansion were carried from this place to one of the islands in the lake, to build a castle there, as a place of greater safety, and where a considerable part of the building still remains, though in ruins. The whole lands in the parish formerly belonged to the family of Lennox; but in the 15th century, the Darnley family, by marriage, got one-half of the estate, and the titles. The other half went to the Rusky family. The general prosperity of the parish has been materially promoted by the formation of the Dumbartonshire railway. The town of Bonhill stands on the left bank of the Leven, contiguous to Alexandria, $3\frac{1}{2}$ miles north of Dumbarton. It forms practically one town with Alexandria, and participates in all that place's facilities of communication by road and railway. It has an office of the Commercial Bank, and several benefit societies. Population in 1841, 2,041; in 1861, 2,765. Population of the parish in 1831, 3,874; in 1861, 8,866. Houses, 692. Assessed property in 1865, £28,741.

This parish is in the presbytery of Dumbarton, and synod of Glasgow and Ayr. Patron, the Duke of Argyll. Stipend, averagely £225, supplemented by the congregation; glebe, £15. There are two parochial schools; and the salary connected with each is £35. The parish church is mentioned in a charter of the 14th century; and it has an attendance of 1,150. Another church is in Alexandria, and has an attendance of 700. A Free church is in Bonhill, and another is in Alexandria; attendance,

230 and 430; sums raised in 1865, £272 9s. 5d., and £350 8s. 10½d. A United Presbyterian church is in Bonhill, and another is in Alexandria; attendance, 400 and 600. An Independent chapel is in Alexandria; attendance, 100. A Roman Catholic chapel also is there, and was built in 1861; attendance, 700. A female school is attached to each of the parochial schools; an excellent school is supported by Messrs. James Black & Co.; and there are six other schools.

BONITOWN. See **AUCHTERHOUSE.**

BONJEDWARD, a village in the parish of Jedburgh, Roxburghshire. It stands at the intersection of the road from Jedburgh to Edinburgh with the road from Kelso to Hawick, about ¾ of a mile above the confluence of the Jed and the Teviot, and 2 miles north of Jedburgh. Population, 107.

BONKLE, a romantically situated village, on Allanton estate, in the central part of the parish of Cambusnochan, Lanarkshire. Here is an United Presbyterian church, which was built in 1818, and contains 560 sittings. Population, 110.

BONNINGTON, a village on the left bank of the Water of Leith, and on the lower road from Edinburgh to Newhaven, about ½ a mile south of North Leith and about a mile north of Edinburgh. It comprises a few good lofty houses, and has a suburban appearance. The Leith branch of the North British railway passes near it, and has a station for it. There is a mineral well here.

BONNINGTON, a village in the parish of Ratho, about 1½ mile west of the village of Ratho, Edinburghshire. The lands of Bonnington around it belonged anciently to Robert de Erskine,—in the middle of the 17th century to Lord Collington,—and since then successively to the families of Durham, Cunningham, and Wilkie. Population of the village in 1851, 132.

BONNINGTON or **BONNYTON**, a hamlet in the parish of Arbirlot, about 2 miles west of the village of Arbirlot, Forfarshire.

BONNINGTON, or **BONNYTON**, Lanarkshire. See **CLYDE (THE).**

BONNY (THE), a rivulet of Dumbartonshire and Stirlingshire. It rises in the south-east of the parish of Cumbernauld, and runs about 7 miles north-eastward to a junction with the Carron a little below Dupnace.

BONNYBRIDGE, a village in the parish of Falkirk, Stirlingshire. It stands on Bonny Water and on the road from Falkirk to Glasgow, about a mile above the mouth of Bonny Water and 4 miles west of Falkirk. Here is a school with a small endowment; and in the vicinity is a small burying-ground. Population, 184.

BONNYMOOR, a moorland rising-ground in the parish of Falkirk, about a mile south of the village of Bonnybridge, Stirlingshire. A skirmish took place here in 1820, between a small party of armed radicals from Glasgow and a small party of military. The affair has been called the battle of Bonnymoor; but was of no other consequence than for its terminating a period of intense political excitement in the west of Scotland. Nineteen of the radical skirmishers were taken prisoners and lodged in Stirling Castle; and after being brought to trial, two of them were executed and the rest transported.

BONNYRIGG, a village in the parish of Cockpen, Edinburghshire. It stands on the road from Lasswade to Stow, about 1 mile south-east of Lasswade and 2 miles south-west of Dalkeith. It contains many good houses, is a summer resort of families from Edinburgh, and has a station on the Peebles railway. Here is a Free church, whose yearly income in 1865 amounted to £435 14s. Pop. in 1861, 898.

BONNYTON. See **BONNINGTON** and **MARYTON.**

BOON DREIGHL. See **LEGERWOOD.**

BOON HILL. See **LEGERWOOD.**

BOOSHALLA, or **BRUACHILLE**, an islet off the south coast of Staffa, from which it is separated by a channel about 30 yards wide, through which a foamy surf is constantly rushing. It is of an irregular pyramidal form, entirely composed of basaltic pillars inclined in every direction, but principally pointing towards the top of the cone, resembling—Dr. Garnet remarks—billets of wood piled up in order to be charred. Many of the columns are horizontal, and some of them are bent into segments of circles.

BOOTHILL. See **SCONE.**

BOQUHAN. See **GARGUNNOCK** and **KIPPEN.**

BORA HOLM, one of the Orkneys; constituting part of the parish of Rendal. It lies opposite to the entrance of the harbour called the Millburn, in the isle of Gairsa, and is uninhabited.

BORELAND, a village in the parish of Dysart, about ½ a mile south-east of Gallaton, Fifeshire. It is inhabited chiefly by colliers. It was founded about 120 years ago, and was at one time a good deal more extensive than at present. Population in 1841, 193; in 1861, 313.

BORELAND PARK, a village in the parish of Auchterarder, Perthshire. Population in 1851, 141. See **AUCHTERARDER.**

BORENNICH, a district of the valley of the Tummel, in the parish of Blair-Athole, Perthshire.

BORERAY, a small fertile island of the Hebrides, lying northward of North Uist. It is about 1½ mile in length, and ½ mile in breadth. Lochmore, a small lake in this island, the bottom of which was only 2½ feet above low water-mark, was recently drained, whereby, at an expense of only £125, about 47 Scots acres of good soil, being a mixture of alluvial earth and sand, were gained. Population, 181.

BORERAY, a small island of the Hebrides, about a mile in circuit, lying 2 miles north of St. Kilda.

BORGIE (TIE), a rivulet of Sutherlandshire. It issues from Loch Loyal, and flows north-north-eastward, chiefly along the boundary between the parish of Farr and the parish of Tongue, to the west side of the bay of Torisdale, at a point about a mile west of the mouth of the Naver. Its length of course is about 9 miles.

BORGUE, a parish, containing the post-office village of Borgue, and also the villages of Kirkandrews and Chapelton, on the seaboard of Kirkcubrightshire. It comprises the ancient parishes of Borgue, Sandwick, and Kirkandrews. It is bounded by the Solway frith, the estuary of the Dee, and the parishes of Twynholm and Girthon. It has a triangular outline, and measures 10 miles in length, 7 miles in extreme breadth, and about 25 square miles in area. Its coast has an extent of upwards of 15 miles, with several bays and indentations where vessels may safely ride at anchor; and it presents in some places perpendicular cliffs 300 feet high and very grandly picturesque. The views from the summit of these cliffs, and from a small island called Little Ross, comprise a superb panorama of the circumjacent sea-board, the Solway, the Irish Sea, the Isle of Man, and the mountain-ranges of Cumberland. The surface of the parish is very unequal, consisting largely of the alluvial bottoms of ancient lakes encompassed with hillocks and rising grounds of great diversity of form. About one-third is uncultivated and could not be profitably reclaimed; and nearly all the rest is regularly or occasionally in tillage. The prevailing arable soil is a free loam. The chief landowners are the Earl of Selkirk, Sir William Gordon of Earlston, and four others. The average rent of arable land is about £1 per acre.

The total yearly value of raw produce was estimated in 1843, at £17,133. Assessed property in 1860, £10,526. The mansion of Earlston is a large, handsome, modern edifice in the midst of well-wooded grounds. Plunton castle and the tower of Balmanagan are fine ruins, belonging probably to the 15th or 16th century. The village of Borgue stands in the eastern district of the parish, about $2\frac{1}{2}$ miles from the coast, and about 4 miles south-west of Kirkcubright. Population in 1851, 47. The village of Kirkandrews stands contiguous to a creek of the Solway, called Kirkandrews bay, 3 miles south-east of the entrance of Fleet bay. This village was, in former times, a place of some note. The population of it in 1841, was 47; and that of Chapelton was 31. The old parish of Sandwick forms the southern part of the present parish. The ruins of its church are still visible on the coast. Tradition relates that it was sacrilegiously plundered of its plate by French rovers, sometime previous to the Reformation; but that a storm wrecked the vessel on a rock nearly opposite the church, where the pirates perished. It is called the Frenchman's rock. The church of Kirkandrews originally belonged to the monks of Iona. When the devastations of the Danish pirates left them without an establishment, William the Lion transferred it, along with their churches and estates in Galloway, to the monks of Holyrood. It afterwards fell into the hands of the prior and canons of Whithorn. The ruins of it still exist. Population of the parish in 1831, 894; in 1861, 1,162. Houses, 203.

This parish is in the presbytery of Kirkcubright, and synod of Galloway. Patron, the Crown. Stipend, £230 16s. 10d.; glebe, £29. Schoolmaster's salary now is £70, with £36 fees, and £50 other emoluments. The parish church was built in 1814, and contains about 500 sittings. It is a handsome Gothic structure, and stands on a conspicuous site. There is a Free church: attendance, 170; yearly sum raised in 1865, £127 15s. 7 $\frac{1}{2}$ d. There is a private school.

BORLAND. See **BORELAND.**

BORLEY (Loch), a small lake in the parish of Durness, north of Sutherlandshire, containing abundance of a species of trouts called Red bellies, which are only fished for in October.

BOROUGH HEAD, the promontory at the southern extremity of the parish of Whitehorn, and east side of the entrance of Luce Bay, Wigtonshire. It forms a projection at the extreme south of Scotland similar to the Mull of Galloway; and it terminates in bold cliffs, 200 feet high, and pierced with caves.

BOROUGH-MOOR, a tract of ground, formerly an open common, in the parishes of St. Cuthbert and Liberton, Edinburghshire. It lies adjacent to the south side of the city of Edinburgh. In the west end of it once stood a large chapel dedicated to St. Roque; and round this was a cemetery where those who died of the plague were interred. The town-council, in 1532, granted four acres of ground in the Borough-moor to Sir John Young the chaplain, for which he was bound to keep the roof and windows of the chapel in repair; but at the Reformation the church and churchyard were converted into private property. A part of the walls of this chapel are still standing; Grose has preserved a view of it. This moor appears, in 1513, to have abounded with large oak-trees; and here James IV. reviewed his army before he marched to the fatal battle of Flodden-field. See **EDINBURGH.**

BORROWSTOWN, a hamlet on the coast of the parish of Reay, 6 miles west of Thurso, Caithnessshire. Near it are a number of small caves and a strong natural arch.

BORROWSTOWN—formerly **Bnrwardstown**,—a village in the parish of Borrowstownness, Linlithgowshire. It stands about $\frac{3}{4}$ of a mile south of the town of Borrowstownness, on the road thence to Linlithgow.

BORROWSTOWNNESS, or **Bo'NESS,** a parish containing a post-town of the same name, and also the villages of Borrowstown and Newtown, in the north-west corner of Linlithgowshire. It is bounded by Stirlingshire, the frith of Forth, and the parishes of Carriden and Linlithgow. Its length eastward is about 4 miles; and its average breadth is about 2 miles. The river Avon traces all the boundary with Stirlingshire. The highest ground in the parish is Irongath Hill or Glour-o'er-'em, situated in the south-east corner, rising to the height of 520 feet above the level of the frith, and commanding a very extensive and beautiful prospect. A tract of flat rich alluvium, called the carse of Kinniel, lies in the north-west; and the beach thence eastward is low ground between a high bank landward and a great expanse of muddy silts at ebb tide seaward. All the rest of the parish declines gradually from Irongath Hill to the west and north. The soil is a deep loam well-cultivated. There are several excellent coal-pits; ironstone also abounds; and there are great beds of limestone, but of bad quality. Quarries of freestone and whinstone are wrought. The house of Kinniel, long inhabited by the venerable and accomplished metaphysician, Dugald Stewart, is a seat of the Hamilton family, and as such is frequently mentioned in history. Antoninus' Wall traversed the parish, and had a fort in it, and is thought by some to have terminated here. The Duke of Hamilton is the only heritor. The real rental is about £14,700. In 1774 an embankment, $1\frac{1}{2}$ mile in length, was made westwards from the town along the north side of the carse of Kinniel, with the view not of gaining but of saving ground from the sea. It has answered this purpose very well, and effectually protects about 450 acres of carse-land, at present rented at £4 4s. per acre. Population of the parish in 1831, 2,809; in 1861, 5,698. Houses, 609. The increase of population has arisen from the working of coal and iron mines. Assessed property in 1860, £25,917.

This parish is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Patron, the Duke of Hamilton. Stipend, £272 7s. 7d.; glebe, £21. Schoolmaster's salary now is £55, with £60 fees. The parish church is situated in the town of Borrowstownness. It was repaired and partly rebuilt in 1820, and contains 950 sittings. There is a Free church for Borrowstownness and Carriden: attendance from 300 to 400; yearly sum raised in 1865, £173 1s. 9 $\frac{1}{2}$ d. There is an United Presbyterian church in the town, containing about 400 sittings. There are several private schools.—Prior to the middle of the 17th century, Kinniel was the name of the parish; but the inhabitants of Borrowstownness having built a church for themselves, the town was created a separate parish. In 1663, the Duke of Hamilton procured an act of parliament for uniting the two districts; and since that time the old landward church of Kinniel has been neglected, though the burying-ground remains. There was a considerable town of Kinniel long before the founding of the town of Borrowstownness; but it has completely disappeared.

The **TOWN OF BORROWSTOWNNESS** is a sea-port and a burgh of barony, 3 miles north of Linlithgow, 8 east by north of Falkirk, and 9 west-north-west of South Queensferry. It is situated on a low peninsula washed by the Forth, at the north-east corner of the parish, only a few feet above high water-mark.

It has two principal streets running from west to east about 300 yards, which terminate in one which is 350 yards more. The streets and lanes are narrow; the houses in general low and old-fashioned. The town grew suddenly into bulk in the 17th century, then flourished exceedingly for a short period, and then stood still or began to fall into decay. About the beginning of that century, only one house stood on the shore between Kinniel mansion and Carriden; and about the end of the century, the town of Borrowstownness and some villages to the east of it formed an almost continuous line of buildings, two miles in length, along the coast. Defoe, speaking of the state of things in his time, says, "Borrowstownness consists only of one straggling street, which is extended along the shore, close to the water. It has been, and still is, a town of the greatest trade to Holland and France of any in Scotland, except Leith; but it suffers very much of late by the Dutch trade being carried on so much by way of England. However, if the Glasgow merchants would settle a trade to Holland and Hamburgh in the firth, by bringing their foreign goods by land to Alloa, and exporting them from thence, as they proposed some time ago, 'tis very likely the Borrowstownness men would come into business again; for as they have the most shipping, so they are the best seamen in the firth, and are very good pilots for the coast of Holland, the Baltic, and the coast of Norway."

Borrowstownness was constituted a head port in 1707, with a district extending on both sides of the frith from Cramond Water and Dunibrissle Point to the boundaries of Alloa. In 1799, the corps of the port, including all attendants at the creeks, amounted to 44 persons; but in recent years it has been reduced to 11,—only three of whom officiate at the head-port. Grangemouth was made a separate port in 1810. Acts of parliament were obtained at several dates between 1744 and 1816 for improving the harbour of Borrowstownness, regulating the affairs of the port, and cleaning, paving, and lighting the town, and supplying it with water; but the powers created by these acts proved incompetent,—inasmuch that desirable improvements could be but partially undertaken, and a debt of upwards of £2,000 was gradually contracted; so that in 1842 application was made to parliament for greatly enlarged powers. The harbour comprises a basin of 240 feet in breadth, and two piers of 566 feet in length, and has a depth of water at spring tides of from 16 to 20 feet. In 1794, 25 vessels belonged to the town, 11 of which were brigantines engaged in the Baltic trade, and 6 were brigantines under contract to sail regularly once every fortnight to and from London; and about the same time between 110 and 150 vessels belonged to the several creeks. In 1839, there belonged to the entire port 101 vessels, of aggregately 6,521 tons; and in 1864, 61 vessels, of aggregately 6,307 tons. During the year 1860, the coasting trade comprised a tonnage of 3,735 inward, and of 38,166 outward; and during 1863 the entire trade comprised a tonnage of 14,010 inward in British vessels, 12,453 inward in foreign vessels, 80,044 outward in British vessels, and 73,906 outward in foreign vessels. A grand cause of the falling off was the opening of the Forth and Clyde canal, and the erection of Grangemouth into a separate port. An attempt was early made to avert the evil by beginning to cut a canal from the town to Grangemouth, to communicate there with the Forth and Clyde canal; but this project was never completed.

Whale-fishing at one time occupied the attention of the inhabitants of Borrowstownness to such an

extent that they had eight whale-ships and two boiling-houses; but this avocation proved on the whole disastrous, and was gradually relinquished. The home-fisheries of the town and its vicinity are of small value. A pottery, a foundry, a small rope-work, and a large distillery, all of long standing, give various employment. Two important recent accessories are the Kinniel iron-works, and a branch railway communicating with the Monkland system at Airdrie. An extensive grain trade is carried on in the town. A weekly market is held on Monday. An annual fair is held on the 16th of November. The town has a branch office of the Clydesdale Bank, a subscription library, a total abstinence society, and several charitable institutions. Borrowstownness is a burgh of barony under the Duke of Hamilton, and is governed by a bailie. Population in 1841, 1,790; in 1861, 3,814. Houses, 310.

BORTHWICK, a parish, containing the post office hamlet of Fushie-Bridge, and part of the post-office village of Ford, in the Moorfoot district of Edinburghshire. It contains also the villages of Clayhouse, Dewarton, Middleton, North Middleton, and Newlandrig, the hamlets of Borthwick, or kirk-town of Borthwick, Castleton, Brewery, Bell's-Mains, and Cateune Mill, and part of the village of Stobb's Mills. It is bounded by the parishes of Carrington, Cockpen, Newbattle, Cranston, Crichton, Heriot, and Temple. Measured from Ford on the north-east to Castleton hill on the south-west, it is nearly 6 miles in length; and from Arniston bridge on the north-west to Fala hill on the south-east, it is about 4 miles in breadth. The general aspect of the parish is hilly, especially when viewed from the kirk-town, which is near the centre of the parish. Two streams, known as the South and North Middleton burns, descend from the Moorfoot hills on the southern boundary, and, after pursuing north-easterly courses, unite a little above the kirk-town; and then fetching a circuit round the mole on which Borthwick castle is built, flow north-west, under the name of the Gore, to a point a little beyond Arniston bridge, where they unite with the South Esk. These streams drain a vast extent of upland surface, and are consequently subject to sudden and extensive floods. The South Esk divides this parish from Carrington; and the Tyne divides it on the east from Crichton. Many romantic scenes occur throughout this district, particularly in the valleys of the Gore and the Tyne; and the locality is a favourite one with botanists. Grahame has described the sylvan scenery of the district in the following lines:—

"What though fair Scotland's valleys rarely vaunt
The oak majestic, whose aged boughs
Darken a rood breadth! yet nowhere is seen
More beautifully profuse, wild underwood;
Nowhere 'tis seen more beautifully profuse,
Than on thy tangling banks, well-wooded Esk,
And Borthwick, thine, above that fairy nook
Formed by your blending streams. The hawthorn there,
With moss and lichen grey, dies of old age,
o steel profane permitted to intrude:
Up to the topmost branches climbs the rose,
And mingles with the fading flowers of May;
While round the brier the honeysuckle wreaths
Eutwine, and with their sweet perfume embalm
The dying rose; a never-falling blow
From spring to fall expands; the sloethorn white,
As if a flaky shower the leafless sprays
Had hung; the hawthorn, May's fair diadem;
The whin's rich dye; the bonny broom; the rasp
Erect; the rose, red, white, and faintest pink;
And long-extending bramble's flowery shoots."

There are large beds of limestone within the parish; and lime is extensively manufactured at Hemperston and Middleton, at Vogrie and Arniston. Coal is extensively wrought on the estate of Vogrie. Sand-

stone abounds; and one quarry of it is wrought. There are six landowners,—five of whom reside within the parish on their estates of Arniston, Middleton, Vogrie, Currie, and Harvieston. The road from Edinburgh to Galashiels, and the Edinburgh and Hawick railway, traverse the parish; and the latter has a station in it at Fushie-Bridge.

This parish evidently derives its name from the ancient and once powerful family of Borthwick, concerning whose origin traditional accounts are very various. Some say that they were descended from one Andreas, a son of the lord of Burtick in Livonia, who accompanied Queen Margaret from Hungary to Scotland, in 1057, and having got possession of some lands in the west or south parts of this country, his posterity, with some small alteration in the spelling, assumed the surname of Borthwick, from the place of their progenitor's birth. Others are of opinion that the name is merely local. Be that as it may, certain it is, that during the 15th and following centuries, the lords of Borthwick had immense possessions and very great influence in this part of the country. The peerage is now dormant; John, the 9th Lord Borthwick, having died without issue in 1672. The present proprietor, though a branch of the old family, acquired the property by purchase, and is now a claimant for the titles also of his ancestors. What now constitutes this parish formerly belonged to the college-kirk of Crichton, which lies about a mile north-east of this place. In April, 1596, James I. dissolved from the said college-kirk the prebendaries of Ardnaleston (now Arniston), of Middleton first and second, and of Vogrie, of old called Lochquharret, or Lochewart, and also two boys or clerks to assist in the performance of divine service, with suitable salaries annexed to their office. These prebendaries, with the whole vicarage of Borthwick, fruits, rents, manse, and glebe thereof, were then, by a royal charter, erected into a distinct and separate charge, to be in all time coming called the parsonage of Borthwick. The year before this, the presbytery of Dalkeith had designed a glebe for Mr. Adam Colt, the then officiating parson; but this they seem to have considered only as a measure of expediency, the parish having been constituted before the royal charter could be obtained. This deed must have been regarded at the time as a transaction of considerable importance; for, in 1606, the erection of the parsonage by the said charter was solemnly ratified in parliament, and in 1609, confirmed by George, archbishop of St. Andrew's, as the patron of said prebendaries; always reserving, however, the presentation and advocacy of all the premises, gifts, and benefices, to himself and successors in office.

About $1\frac{1}{2}$ mile below the kirk-town, there is, on the lands of Harvieston, beautifully situated by the side of the Gore, a ruin, called the old castle of Catcune, which is said to have been the residence of the family of Borthwick, before they had risen to such eminence in this country. About the end of the 14th and beginning of the 15th century, lived a Sir William Borthwick, who, being a man of great parts, was employed as an ambassador on several important negotiations, and concerned in most of the public transactions of his time. This William appears to have been created Lord Borthwick before 1430; for, in October of that year, at the baptism of the King's two sons, several knights were created, and among the rest William, son and heir of Lord Borthwick. He obtained from James I., of Scotland, a license to build and fortify a castle on the lands of Lochwarret, or Locherworth, which he had bought from Sir William Hay: "Ad construendam

castrum in loco illo qui vulgariter dicitur le Mote de Lochorwart." This grant was obtained by a charter under the great seal, June 2d, 1430. A stately and most magnificent castle was accordingly reared, and afterward became the chief seat and title of the family. This amazing mass of building is yet upon the whole very entire, and of astonishing strength. There is indeed in the middle of the east wall a considerable breach; but whether occasioned by a flash of lightning, or by the influence of the weather, or by some original defect in the building, cannot now with certainty be determined. The form of this venerable structure is nearly square, being 74 by 68 feet without the walls, but having on the west side a large opening which seems to have been intended to give light to the principal apartments. The walls themselves—which are of hewn stone without and within, and most firmly cemented—are 13 feet thick near the bottom, and towards the top are gradually contracted to about 6 feet. Besides the sunk story, they are, from the adjacent area to the battlement, 90 feet high; and if we include the roof, which is arched and covered with flag-stones, the whole height will be about 110 feet. "From the battlements of Borthwick castle, which command a varied and beautiful view, the top of Crichton castle can be discovered, lying about two miles distant to the eastward. The convenience of communicating by signal with a neighbouring fortress was an object so much studied in the erection of Scottish castles, that, in all probability, this formed one reason of the unusual height to which Borthwick castle is raised."—[*Provincial Antiquities of Scotland.* Edn. 1834, p. 200.] In one of the low apartments is an excellent spring-well, now filled up with rubbish. On the first story are state-rooms, which were once accessible by a draw-bridge. The great hall is 40 feet long, and so high in the roof that, says Nisbet, "a man on horseback might turn a spear in it with all the ease imaginable." The chimney, which is very large, has been carved and gilded, and in every corner may be traced the remains of fallen greatness. "On the 11th of June, 1567, Morton, Mar, Hume, and Lindsay, with other inferior barons, and attended by nine hundred or a thousand horse, on a sudden surrounded the castle of Borthwick, where Bothwell was in company with the queen. Bothwell had such early intelligence of their enterprise, that he had time to ride off with a very few attendants; and the insurgent nobles, when they became aware of his escape, retreated to Dalkeith, and from thence to Edinburgh, where they had friends who declared for them, in spite of the efforts of Queen Mary's partisans. The latter, finding themselves the weaker party, retreated to the castle, while the provost and the armed citizens, to whom the defence of the town was committed, did not, indeed, open their gates to the insurgent lords, but saw them forced without offering opposition. These sad tidings were carried to Mary by Beaton, the writer of the letter, who found her still at Borthwick, 'so quiet, that there was none with her passing six or seven persons.' She had probably calculated on the citizens of Edinburgh defending the capital against the insurgents; when this hope failed, she resolved on flight. 'Her majesty,' says the letter, 'in men's clothes, booted and spurred, departed that same night from Borthwick to Dunbar: whereof no man knew, save my lord duke, (i. e. Bothwell, created Duke of Orkney,) and some of his servants, who met her majesty a mile from Borthwick, and conveyed her to Dunbar.' We may gather from these particulars, that, although the confederated lords had declared against Bothwell, they had not as yet

adopted the purpose of imprisoning Queen Mary herself. When Bothwell's escape was made known, the blockade of Borthwick was instantly raised, although the place had neither garrison nor means of defence. The more audacious enterprise of making the queen prisoner, had not been adopted by the insurgents until the event of the incidents at Carberry-bill showed such to have been the Scottish Queen's unpopularity at the time, that any attempt might be hazarded against her person or liberty, without the immediate risk of its being resented by her subjects. There seems to have been an interval of nearly two days betwixt the escape of Bothwell from Borthwick castle, and the subsequent flight of the Queen in disguise to Dunbar. If, during that interval, Mary could have determined on separating her fortunes from those of the deservedly detested Bothwell, her page in history might have closed more happily.—[*Provincial Antiquities*, p. 208.] The castle is surrounded on every side but one by steep ground and water, and at equal distances from the base are square and round towers. "Like many other baronial residences in Scotland, Sir William de Borthwick built this magnificent pile upon the very verge of his own property. The usual reason for choosing such a situation was hinted by a northern baron, to whom a friend objected this circumstance as a defect, at least an inconvenience: 'We'll brizz yont' (*Anglice*, press forward,) was the baron's answer; which expressed the policy of the powerful in settling their residence upon the extremity of their domains, as giving pretext and opportunity for making acquisitions at the expense of their neighbours. William de Hay, from whom Sir William Borthwick had acquired a part of Locherworth, is said to have looked with envy upon the splendid castle of his neighbour, and to have vented his spleen by building a mill upon the lands of Little Locherworth, immediately beneath the kuoll on which the fortress was situated, declaring that the Lord of Borthwick, in all his pride, should never be out of hearing of the clack of his neighbour's mill. The mill accordingly still exists, as a property independent of the castle."—[*Provincial Antiquities*, p. 200.] Strong, however, as this fortress was both by nature and art, it was not proof against the arms of Oliver Cromwell. John, 8th Lord Borthwick, had, during the Civil war, remained firmly attached to the royal cause, and thus drew upon himself the vengeance of the Protector, who, by a letter, dated at Edinburgh, 18th November, 1650, summoned him to surrender in these terms:

"For the Governor of Borthwick Castle, These.

"SIR,—I thought fit to send this trumpet to you, to let you know that, if you please to walk away with your company, and deliver the house to such as I shall send to receive it, you shall have liberty to carry off your armes and goods, and such other necessaries as you have. You harboured such parties in your house as have basely unhumanly murdered our men; if you necessitate me to bend my cannon against you, you must expect what I doubt you will not be pleased with. I expect your present answer, and rest your servant,

O. CROMWELL"

A surrender was not the immediate consequence of this preematory summons, for the castle held out until artillery were opened upon it; but seeing no appearance of relief, Lord Borthwick obtained honourable terms of capitulation, viz., liberty to march out with his lady and family unmolested, and fifteen days allowed to remove his effects. Notwithstanding the waste of time, the grand appearance of this princely edifice still fills the mind of the beholder with veneration.

This parish has produced several eminent men. Principal Robertson was born in the manse of Borthwick, and ever cherished an attachment to the

place of his nativity, and the scenes of his youth. The Dundases of Arniston have made a conspicuous figure in Scottish history. Two of the heads of that family were presidents of the highest civil courts in this country; and the Right Honourable Henry Dundas rose to the office of secretary of state. James Small, an eminent mechanic and agricultural implement-maker, was also a native of this parish. Population in 1831, 1,473; in 1861, 1,742. Houses, 333. Assessed property in 1843, £6,837 5s. 1d.; in 1860, £9,733.

This parish is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patron, Dundas of Arniston. Stipend, £198 12s. 3d.; glebe, £28. Unappropriated tithes, £15 0s. 8d. Schoolmaster's salary now is £53, with about £30 fees. The parish church was rebuilt in 1863, and is a handsome Gothic edifice, with tower and spire. A previous church was coeval with the castle, and is now an interesting ruin.

BORTHWICK (THE), a rivulet partly of Selkirkshire, hut chiefly of Roxburghshire. Its head-streams, Craikhope burn, Rowpassley burn, and Brownshope burn, descend from the range of hills on the south-west skirts of the county, where the shires of Selkirk, Dumfries, and Roxburgh meet. It flows in a north-east direction and with a rapid course, through the parish of Robertson; and after a run of about 13 miles, joins the Teviot a little below Branxholm, and about 2 miles above Hawick. Its vale is generally narrow.

BORTHWICKBRAE, an estate in the parish of Robertson, on the mutual border of Selkirkshire and Roxburghshire. The mansion-house is a good modern building. Near it is an ancient hurrying-ground, where formerly stood a chapel, and which is still the principal burial-place of the parish. This place is situated about $1\frac{1}{2}$ mile south-west of the parish church, and is sometimes called Kirk-Borthwick.

BORVE. See FAR.

BOSTON CHURCH. See DUNSE.

BOSWELL'S (ST.), or **LESSUDDEN**, a parish containing a post-office village of its own name, on the north border of Roxburghshire. It is bounded on the north by Berwickshire, and on other sides by the parishes of Maxton, Ancrum, Bowden, and Melrose. Its length north-eastward is 3 miles; and its breadth is about $1\frac{1}{2}$ mile. The Tweed, flowing between bold, beautiful, well-wooded banks, forms the boundary with Berwickshire. St. Boswell's burn comes in from Bowden, and runs across the interior to the Tweed. The contiguous portions of Bowden and Melrose parishes send aloft the picturesque masses of the Eildon Hills, and the contiguous portion of Berwickshire is the exquisitely rich and variegated tract around Dryburgh; but the parish of St. Boswell's itself has none but soft features,—partly flat, partly undulating, and only in one place lofty enough to be called a brae. But this one place, which is situated on the north side of the village, directly overlooks Dryburgh, and commands altogether one of the most lovely views within the superbly scenic basin of the Tweed. About 175 acres of the parish are under wood, about 25 are abrupt grounds on the Tweed and its affluents, about 40 are a divided common, called St. Boswell's Green, and all the rest are regularly or occasionally in tillage. There are 16 landowners. The real rental in 1792 was about £1,600; and in 1847 it was £5,215. Assessed property in 1864, £6,403. An extensive and elegant hunting establishment was erected by the Duke of Buccleuch about the year 1830 to the north of St. Boswell's Green. Lessudden House, a fine old mansion be-

longing to Scott of Raeburn, stands at the east end of the village. The road from Edinburgh to Jedburgh traverses the parish. Both the Hawick branch and the Kelso branch of the Edinburgh and Roxburghshire railway also traverse it; and the forking of this railway into these branches takes place at Newtown station, on the southern border of the parish of Melrose, about a mile from the village of Lessudden. Population of the parish of St. Boswell's in 1831, 701; in 1861, 865. Houses, 148.

This parish is in the presbytery of Selkirk, and synod of Merse and Teviotdale. Patron, the Duke of Buccleuch. Stipend, £211 11s. 7d.; glebe, £12. Unappropriated teinds, £572 10s. Schoolmaster's salary is £50, with about £40 fees. The parish church is an old building, enlarged in 1824, and contains about 300 sittings. There is a Free church: average attendance, 150; sum raised in 1865, £189 10s. 11½d.

The VILLAGE OF ST. BOSWELL'S OR LESSUDDEN stands on the east side of the parish, nearly opposite Dryburgh Abbey, 4 miles south-east of Melrose, and 10 west-south-west of Kelso. The original village of St. Boswell's stood about $\frac{2}{3}$ of a mile south-east of this, but has completely disappeared. It derived its name from St. Boisel, who was the preceptor of St. Cuthbert, and is supposed to have founded its church. The present village generally bears the name of Lessudden, and may have originally been called Lis-Aidan, which means the residence of Aidan, or perhaps Lessedwin—as it is in old chartularies—that is, the manor-place of Edwin. It figures in history so early as the time of William the Lion; and it was burnt by the English, under Sir Ralph Sadler, in 1544. It consists at present of a single street, and contains a number of good houses. The most notable thing connected with it is the great annual fair of St. Boswell's, which is held on St. Boswell's Green. This is the greatest in the south of Scotland. It is held on the 18th of July, or on the Monday following, if the 18th fall on a Sunday. Its happening either on the Monday or Saturday is very justly thought to occasion much inattention to the religious observance of the Sabbath; and the evil has been often and long since complained of, but no remedy has yet been applied. If the day be fine, the concourse of people from all the surrounding country is immense; and some come from a very considerable distance. Great flocks of sheep and lambs—the latter chiefly Leicesters and crosses—are brought hither from all parts of the adjacent country, and generally find so ready a market as to be disposed of early in the morning, or at latest in the forenoon. The average number shown at this fair, until within these twenty years, was 30,000; it does not now exceed 20,000. The chief purchasers are the Berwickshire and the East Lothian graziers. The show of black cattle is not very imposing; but the show of horses has usually been so fine that buyers attend from all parts both of the north of England and south of Scotland. Linen cloth, hardware, toys, crockery, and other miscellaneous articles, are also exhibited to a considerable amount in value, in booths—or, as they are here called, *cravins*—which are erected in great numbers on the green. St. Boswell's is among the last of the wool-fairs, and generally winds up the wool-trade for the season. The money turned in the course of the day at this fair used to be from £8,000 to £10,000 sterling. The Duke of Buccleuch receives a certain rate or toll upon sheep, cattle, and all other commodities brought into this fair for sale. Old sheep pay one merk Scots per score; lambs, one-half of that sum; and so on. This toll is sometimes collected by people appointed

for the purpose; but is more commonly let for such a sum of money as can be agreed on. The highest at which it ever was let was £53; the average was long supposed to be about £38; and the amount in 1864 was £32. Population of the village, 447.

BOTHAN'S (St.). See ABBEY SAINT BATHAN'S.

BOTHKENNAR, a parish containing part of the village of Carron-Shore, in the Carse of Falkirk, Stirlingshire. It is bounded on the east by the frith of Forth, and on other sides by the parishes of Airth, Larbert, and Falkirk. Its post-town is Grangemouth. The length and breadth of the parish are each about $1\frac{1}{2}$ mile. Carron Water seems anciently to have traced all the southern boundary, but that river, having changed its course, now intersects both the parishes of Bothkennar and Falkirk, leaving part of the former on the south, and a small part of the latter upon the north side of it. The surface of the parish is a dead flat, and consists of the richest alluvium. It comprises 2,646 statute acres, and, with the exception of roads, is all under cultivation. The real rental in 1796 was about £2,808. Upwards of one-third belongs to the Earl of Zetland; and the rest is dispersed among seventeen heritors. Population in 1831, 905; in 1861, 1,722. Houses, 272. Assessed property in 1860, £7,861.—This parish is in the presbytery of Stirling, and synod of Perth and Stirling. Patron, John Dallas, R. N. Stipend, £201 12s. 10d.; glebe, £12. Schoolmaster's salary now is £50, with £10 fees. The church was built in 1789, and contains more than sufficient accommodation for the parishioners.

BOTHWELL, a parish, containing the post-office villages of Bothwell, Bellshill, Holytown, Newarthill, and Uddingstone, and also the village of Chapelhall, in the middle ward of Lanarkshire. It is bounded by the parishes of Old Monkland, New Monkland, Shotts, Dalziel, Hamilton, and Blantyre. It has an oval outline, extending from east to west about $8\frac{1}{2}$ miles, with an extreme breadth of about 4 miles. The South Calder traces the southern boundary; the Clyde traces the south-western and western boundary; and the North Calder traces the north-eastern and the northern boundary. The upper part of the parish is a great flat at a mean height of about 300 feet above the level of the sea; and the part toward the Clyde is lower and more diversified. The highest ground is on the eastern border, and has an elevation of about 680 feet above sea-level. A tabular tract of more than a mile in length rises up from beautiful haughs on the Clyde, and extends along the banks of that river, with rich contributions to the force and beauty of its landscapes, from the vicinity of Bothwell Bridge to the village of Uddingstone. All the parish, with trivial exceptions, is arable. The soil is chiefly clay or loam, and in the tracts near the Clyde is very fertile. There are upwards of 40 heritors. The old valuation of the parish is £7,389 16s. 0½d. Scots. In 1650, the rental was £1,950 18s. 5½d. sterling; in 1782, £4,431 7s. 4d. sterling. The yearly value of lands and houses in 1860 was £28,121. The yearly income from mines and iron-works, according to the New Statistical Account, is supposed to exceed £160,000; but the yearly value of them was returned in 1860 at £30,008. The parish abounds in freestone. The quarries near the Clyde are of a red-coloured stone; in the upper district, of a beautiful white. The value of quarries in 1860 was £67; of mines, £11,203. The population of the eastern district, comprising two-thirds of the whole, consists chiefly of persons connected with the coal and iron works; while that of the western, (except at Uddingston, which see,) consists chiefly of persons engaged in agriculture and gardening, together with residents in numerous

villas and cottages-ornées in and around the village of Bothwell. The road from Glasgow to Hamilton and the south road from Glasgow to Edinburgh go through the parish. Both the north branch and the south branch of the Glasgow fork of the Caledonian railway also go through it; and the former has a station in it at Holytown, and the latter at Uddingstone. The Blantyre station of the Glasgow and Hamilton railway, opposite the village of Bothwell, also is readily accessible.

The village of Bothwell stands on the Glasgow and Hamilton road, 2½ miles north-west of Hamilton. It consists chiefly of plain houses, of one or two stories, but may be said to include many neighbouring ornate cottages and handsome villas. It enjoys a mild and salubrious climate, and has become a favourite resort for invalids. It has a good inn, a well-conducted academy and boarding-school, and three places of worship, parochial, Free, and United Presbyterian. The parochial church was built in 1833, at a cost of £4,179; is an elegant Gothic edifice, containing 1,150 sittings; and has a massive square tower 120 feet high, which forms a striking feature in a great extent of landscape. The choir of the previous church, built in 1398, adjoins the tower; measures 70 feet in length and 39 in breadth; has a lofty arched roof covered with large polished flags of stone, somewhat in the form of pan-tiles; was lighted with large side windows and a great east one; forms a fine specimen of the architecture of its period; shows the Douglas arms in the upper part of its east window, and the same arms quartered with the royal arms at the south corner of that window, with and without; shows also, near the outer base of the tower, the name of the master-mason in Saxon characters, "Majister Thomas Dron;" and contains, in its east corners, two monuments to the Earl of Forfar and his son. This old church was founded by Archibald Earl of Douglas, for a provost and eight prebendaries; is said to have been the place where he and his lady were buried; was the place where David, prince of Scotland, was married to Marjory Douglas; and was used as the parish church till 1828. The endowments of it, in the Romish times, comprised the lands of Osberington or Orhiston in the barony of Bothwell, the lands of Netherurd in the sheriffdom of Peebles, the tithes of Bothwell, Bertram-Shotts, Arondale, and Stonehouse parishes, and several superiorities. What is now the parish of Shotts was, prior to the Reformation, part of Bothwell parish, and was served by a vicar under the provost of Bothwell. The Free church at Bothwell village was built, on the site of a previous church, in 1861, at a cost of £3,500; is a handsome edifice in the geometric style, with a spire 125 feet high; and contains 890 sittings. The sum raised by its congregation in 1865 was £903 2s. 8d. The United Presbyterian church contains about 360 sittings. Joanna Baillie, the poetess, was born in the manse of Bothwell, when her father, Dr. James Baillie, was minister of the parish. Pop. of the village, in 1861, 1,057.

The park of Bothwell Castle extends a long way between the public road and the Clyde. The present mansion is an edifice of about the beginning of the 18th century, completely modernized, and greatly enlarged in the present century; but the old and ruinous castle, in its vicinity, is a very ancient noble pile, amid picturesque scenery, opposite the ruins of the priory of Blantyre. Only part of the castle now remains, and this occupies a space in length 234 feet, and in breadth 99 feet over the walls. The walls are upwards of 15 feet in thickness, and in some places 60 feet high, built of a kind of red grit or friable sandstone. In the notes to

Wordsworth's poems [Vol. v. p. 379, edn. 1839.] occurs the following description of this noble relic of feudal ages: "It was exceedingly delightful to enter thus unexpectedly upon such a beautiful region. The castle stands nobly overlooking the Clyde. When we came up to it, I was hurt to see that flower-borders had taken place of the natural overgrowings of the ruin, the scattered stones and wild plants. It is a large and grand pile of red freestone, harmonizing perfectly with the rocks of the river, from which, no doubt, it has been hewn. When I was a little accustomed to the unnaturalness of a modern garden, I could not help admiring the excessive beauty and luxuriance of some of the plants, particularly the purple-flowered clematis, and a broad-leaved creeping plant without flowers, which scrambled up the castle wall, along with the ivy, and spread its vine-like branches so lavishly that it seemed to be in its natural situation, and one could not help thinking that, though not self-planted among the ruins of this country, it must somewhere have its native abode in such places. If Bothwell castle had not been close to the Douglas mansion, we should have been disgusted with the possessor's miserable conception of adorning such a venerable ruin; but it is so very near to the house, that of necessity the pleasure-grounds must have extended beyond it, and perhaps the neatness of a shaven lawn and the complete desolation natural to a ruin might have made an unpleasant contrast; and, besides being within the precincts of the pleasure-grounds, and so very near to the dwelling of a noble family, it has forfeited, in some degree, its independent majesty, and becomes a tributary to the mansion; its solitude being interrupted, it has no longer the command over the mind in sending it back into past times, or excluding the ordinary feelings which we bear about us in daily life. We had then only to regret that the castle and the house were so near to each other; and it was impossible not to regret it; for the ruin presides in state over the river, far from city or town, as if it might have a peculiar privilege to preserve its memorials of past ages, and maintain its own character for centuries to come. We sat upon a beuch under the high trees, and had beautiful views of the different reaches of the river, above and below. On the opposite bank, which is finely wooded with elms and other trees, are the remains of a priory built upon a rock; and rock and ruin are so blended, that it is impossible to separate the one from the other. Nothing can be more beautiful than the little remnant of this holy place: elm trees (for we were near enough to distinguish them by their branches) grow out of the walls, and overshadow a small, but very elegant window. It can scarcely be conceived what a grace the castle and priory impart to each other; and the river Clyde flows on, smooth and unruffled below, seeming to my thoughts more in harmony with the sober and stately images of former times, than if it had roared over a rocky channel, forcing its sound upon the ear. It blended gently with the warbling of the smaller birds, and the chattering of the larger ones, that had made their nests in the ruins. In this fortress the chief of the English nobility were confined after the battle of Bannockburn. If a man is to be a prisoner, he scarcely could have a more pleasant place to solace his captivity; but I thought that, for close confinement, I should prefer the banks of a lake, or the sea-side. The greatest charm of a brook or river is in the liberty to pursue it through its windings; you can then take it in whatever mood you like; silent or noisy, sportive or quiet. The beauties of a brook or river must be sought, and the pleasure is in going in search of them; those of a lake or of the sea

come to you of themselves. These rude warriors cared little, perhaps, about either; and yet, if one may judge from the writings of Chaucer, and from the old romances, more interesting passions were connected with natural objects in the days of chivalry than now: though going in search of scenery, as it is called, had not then been thought of. I had previously heard nothing of Bothwell castle, at least nothing that I remembered; therefore, perhaps, my pleasure was greater, compared with what I received elsewhere, than others might feel."

This castle might be regarded as no mean type of the worthlessness of all human glory; for it frequently changed owners, amid great vicissitudes of fortune. During the reign of Alexander II. it belonged to Walter Olifard, justiciary of Lothian, who died in 1242. It afterwards passed by marriage to the Morays or Murrays. In the time of Edward I. it was given to Aymer de Valence, Earl of Pembroke. Upon his forfeiture, it was given by Robert Bruce to Andrew Murray, Lord Bothwell, who had married Christian, sister to that King. With his grand-daughter, it came to Archibald the Grim, Earl of Douglas, and continued in their family till their forfeiture under James II. in 1455. After the forfeiture of the family of Douglas, the bulk of the lordship of Bothwell was given to Lord Crichton, son to Chancellor Crichton; and Bothwell forest, or Bothwell moor, was obtained by Lord Hamilton, in exchange for the lands of Kingswell. Crichton was forfeited in 1485, for joining with Alexander, Duke of Albany against James III. It was then given by James III. to Lord Monipenny, but afterwards resumed, as having been gifted by the King in his minority, and bestowed on John Ramsay, who enjoyed it till 1488, when the lordship of Crichton was gifted by James IV. to Adam Hepburn,—

"he who died
On Flodden, by his sovereign's side."

It continued in this line till November, 1567, when James, Earl of Bothwell, was forfeited for the murder of Darnley. Thereafter it was given to Francis Stewart, son of John, Abbot of Kelso, who was natural son to James V.; and on his forfeiture his estate was gifted to the lairds of Buccleugh and Roxburgh, from whom the Marquis of Hamilton acquired all the superiority and patronage of that lordship. The castle of Bothwell, with a third of the lordship, was disposed by Hepburn, Earl of Bothwell, to the Earl of Angus, in exchange for the lordship of Liddisdale. Angus, and Archibald his son, in 1630, feued off their part of the lordship to the particular tenants and possessors thereof, reserving the castle and maus of Bothwell. It was given off as a patrimonial portion with the Earl of Forfar, but again returned to the family of Douglas on the death of Archibald, Earl of Forfar, who died at Stirling of wounds received at Sheriffmuir, in 1715. The Douglas family enlarged and improved the castle, and their arms are found in different places of the wall. On the death of Lord James Douglas in 1859, the castle, with the other property of the family, came into the possession of the Countess of Home.

Bothwell bridge, which takes the Glasgow and Hamilton highway across the Clyde, about $\frac{2}{3}$ of a mile south of Bothwell village, was the scene of an engagement, on the 22d of June, 1679, between the Covenanters, and the king's army commanded by the Duke of Monmouth, assisted by Claverhouse and Dalzell. The King's army advanced by the north or Bothwell side. The Covenanters amounted to 4,000; and the bridge was vigorously defended for a time by Hackston of Rathillet; but the main body divided among themselves, and madly employing

the precious moments while the King's troops were carrying the bridge in cashiering their officers, were soon thrown into confusion; 400 were killed, chiefly in the pursuit, and 1,200 taken prisoners. The aspect of the bridge and scenery in the immediate vicinity has been entirely changed within these few years. Formerly the bridge, about 120 feet in length, rose with an acclivity of about 20 feet, and was only 12 feet in breadth, fortified with a gateway near the south-east or Hamilton end. The gateway and gate have been long removed; and in 1826, 22 feet were added to the original breadth of the bridge, by a supplemental building on the upper side, while the hollow on the south bank was filled up. About half a mile below the old bridge is a very beautiful new suspension bridge.

Bothwell-haugh, about a mile above the bridge, was formerly the property of James Hamilton of Bothwell-haugh, who shot the Earl of Murray, the Regent of Scotland, at Linlithgow in 1569. See LINLITHGOW. About a quarter of a mile east of this, there is a bridge over the South Calder which is thought to be of Roman construction; it is a single arch of 20 feet span, high, narrow, and without parapets. The Roman road called Watling Street—one of the four great Roman roads in Britain—leading to it from the east, through Dalziel parish, was in a state of considerable preservation towards the end of last century, but is now scarce discernible.—A mile above this, upon the banks of the same water, there is a quarry of the finest millstones in the west of Scotland. Three miles higher, upon the north bank of the Calder, in the middle of the steep rock upon which the house of Cleland stands, is a large natural cove, which has been partly improved by art, capable of holding 40 or 50 men, and of difficult access. The entry was secured by a door and an iron gate fixed in the solid rock. The fire-place, and part of the chimney and floor, still remain. The tradition is, that it was used as a place of concealment in the troublesome times of the country, as far back as the gallant patriot Sir William Wallace,—perhaps by the hero himself, and his trusty band; also during the violent feuds between the house of Cleland and Lauchope; and especially in the convulsions of this country under the Charleses.

The house of Lauchope was the seat of a very ancient family, the mother-family of the Muirheads. It is an old tower-house, with walls of a prodigious thickness.—Woodhall estate, near Holytown, and now in the hands of a Joint Stock Company, has a fine mansion.—The house of Bothwell, now a seat of the Earl of Home, a handsome edifice consisting of a centre and two wings, stands a little east from the old castle, and commands a charming view of the banks, the river, the ruins of the old castle of Bothwell, and the adjacent country. The banks of the river have been improved with pleasure-walks, rustic huts, and shrubbery. The park is open to the public as a promenade on two days of every week.

One of the finest views in Scotland is commanded from the east brow of the table-land, upon which the village of Bothwell stands. This seems to be the great promontory which Nature has erected from which to contemplate the beauties of the Vale of Clyde; for that river, after it quits this parish, loses its noble wooded haiks, and generally falls into a flatness on both sides. On the right hand, and on the south side of the river, the residence of the Duke of Hamilton, called the Palace, Chatelherault, and the town of Hamilton, appear just under the eye, amidst extensive pleasure-grounds. A little above this, the vale is contracted, and the banks of the river become wide and deep, with a gradual declivity on both sides, occupied by gentlemen's seats.

and highly cultivated and embellished. Numerous orchards are here interspersed through the groves, which give a great part of the vale an Italian aspect, or rather

"The bloom of blowing Eden fair."

In autumn they are richly loaded with fruits, and this district may be called the Garden of Scotland. Beautiful meadows covered with flocks, and rich fields of corn, adorn the holms and plains; while villa succeeds villa, as far as the eye can reach, till the prospect terminates upon Tintock, at the distance of 24 miles.

The beauties of Bothwell banks were celebrated in ancient song, of which the following incident is a striking proof: "So fell it out of late years," says Verstegan, in his *Restitution of Decayed Intelligence*, "that an English gentleman, travelling in Palestine, not far from Jerusalem, as he passed through a country town, he heard by chance a woman sitting at the door, dandling her child, to sing,

"Bothwell bank, thou bloomest fair."

The gentleman hereat exceedingly wondered, and forthwith in English saluted the woman, who joyfully answered him, and said, She was right glad there to see a gentleman of our isle; and told him, that she was a Scotch woman, and came first from Scotland to Venice, and from Venice thither; where her fortune was to be the wife of an officer under the Turk, who being at that instant absent, and very soon to return, she entreated the gentleman to stay there until his return; the which he did; and she, for country sake, to show herself more kind and bountiful unto him, told her husband at his home-coming, that the gentleman was her kinsman; whereupon her husband entertained him very kindly, and at his departure gave him divers things of good value." Population of the parish of Bothwell in 1831, 5,545; in 1861, 17,903. Houses, 2,492. Assessed property in 1860, £59,067.

This parish is in the presbytery of Hamilton, and synod of Glasgow and Ayr. Patron, the Duke of Hamilton. Stipend, £282 14s. 8d.; glebe, £36. Unappropriated teinds, £491 12s. 11d. There are three parochial schools, at Bothwell, Holytown, and Newarthill; and the salaries attached to them are £45, £15, and £20. A quoad sacra parish church, formerly a chapel of ease, is at Holytown, and contains 830 sittings. Free churches are at Holytown and Chapelhall; and the sums raised in them in 1865 were £119 8s., and £205 6s. 3d. United Presbyterian churches are at Bellshill, Newarthill, and Uddingstone, and have severally 812, 600, and 450 sittings. Congregational chapels are at Bellshill and Newarthill, and have an attendance of about 200 and 50. A large school is in Uddingstone, connected with the Free church of Bothwell; other schools are elsewhere, in connexion with other churches; and large educational institutions are connected with several of the public works.

BOTRIPHNE, a parish, containing a post-office station of its own name, in the centre of Banffshire. It is situated in the narrow part of the county, and extends quite across it, being bounded on the east by Aberdeenshire, on the north-west by Morayshire, and on other sides by the parishes of Keith, Boharm, and Mortlach. Its length northward is about $4\frac{1}{2}$ miles; and its breadth is about 3 miles. The church is situated about 6 miles south-west of Keith. The greater part of the parish consists of one beautiful strath, situated between two hills to the north and south with the small river of Isla, which takes its rise in the west part of the parish towards Mortlach, and runs through the middle of it.

The banks of this stream are beautifully adorned with alder and birch trees; and several small rills, which fall into it from the hills on each side, are clothed in the same manner. The fields on the north side of the parish have a good exposure, and are of considerable extent, stretching from the river to the top of the hill; and there is hardly a break in them, except where they are intersected by a few small rills and clumps of birch and alder. About 22 parts in 45 of the whole parochial area are either regularly or occasionally in tillage, about 16 are either pastoral or waste, and about 7 are under wood. The chief landowner is Admiral Duff of Drummuir. The value of assessed property in 1843 was £2,619 11s. 5d.; in 1860, £3,154. Population in 1831, 721. In 1861, 867. Houses, 137.

This parish is in the presbytery of Strathbogie, and synod of Moray. Patron, the Earl of Fife. Stipend, £178 15s. 5d.; glebe, £8 15s. Unappropriated teinds, £254 4s. 2d. Schoolmaster's salary, £45, with about £7 fees. The parish church was built in 1820. There is a Free church: attendance, 200; yearly sum raised in 1865, £61 6s. 2d. There are two private schools. A fair is held at Botriphnie on the 15th of February, old style.

BOURIEFAD. See **BOWRIEFAULD**.

BOURTIE, a parish in the Garioch district of Aberdeenshire, bounded by the parishes of Daviot, Old Meldrum, Tarves, Udry, Keithhall, and Chapel of Garioch. Its post-town is Old Meldrum, situated a short distance to the north. The length of the parish eastward is 5 miles; and the average breadth is nearly 2 miles. Two hills of about 600 feet in height above sea-level, the northern one called the hill of Barra and the other the hill of Lawhillside, occupy the central part of the parish, at the distance of about a mile from each other; and they extend toward the east, and there converge in what is called the hill of Kingoody on the eastern border. The general drainage of the parish is southward, by a tributary of the Urie, to a point about 2 miles or so above Inverury. Agriculture made very pleasing advances during the 25 years ending in 1866; nearly 1,000 acres of waste land were reclaimed; and the annual value of produce was about doubled. There are four landowners,—all non-resident. The amount of assessed property in 1843 was £3,150; in 1860, £3,761. In 1744, there were only two carts within this parish, and only two houses which had stoue chimneys, the house of Barra and the manse. On the summit of the hill of Barra, there are the distinct remains of a camp of a circular form, and surrounded with three ditches. It is called the Cummins' camp. The Cummins were a bold and numerous race, who are said to have been proprietors of the greater part of the Buchan country, and disaffected to King Robert Bruce. After the battle near Inverury, in which the King's arms were victorious, he marched his troops hither, stormed this camp, and put the Cummins who had rallied here to flight. It is probable, however, that this camp had been originally formed by the Danes, and that the Cummins had only taken possession of it as an advantageous post. In the churchyard there is a rough stone cut out into a coarse statue of a man. The traditional report is that it was executed in memory of the celebrated Thomas de Longueville, the companion of Wallace, who was killed in storming the camp, and is buried here. Population in 1831, 472; in 1861, 547. Houses, 85.—This parish is in the presbytery of Garioch, and synod of Aberdeen. Patron, the Crown. Stipend, £235 15s.; glebe, £14. Schoolmaster's salary, £45, with £9 from a bequest, and £11 fees. The church was built in 1806, and contains about 300 sittings.

BOUSTA, a village in the parish of Dunrossness, Shetland.

BOWBEAT, one of the Moorfoot hills, 2,096 feet higher than sea-level, in the parish of Temple, Edinburghshire.

BOWDEN, a parish, containing a post-office village of its own name, and also the village of Midlem, in the north-west of Roxburghshire. It is bounded by the parishes of Melrose, St. Boswell's, Ancrum, Lilliesleaf, Selkirk, and Galashiels. Its greatest length southward is 6 miles, and its breadth is about $4\frac{1}{2}$ miles. Ale Water flows along the eastern half of the southern boundary. The greater part of the parochial surface consists of a series of ridges and hollows extending parallel to one another, with indigenous brooks flowing to the east. But the northern part is occupied by about one half of the entire mass of the Eildon hills. These hills present three conical summits springing from one broad and elevated base. Sir John Leslie estimated their altitude at 1,364 feet above sea-level. Their situation in a flat country, more than their height, gives them an imposing aspect, and they are seen at a great distance. Some parts of them also being covered with a kind of red stone, without a pile of grass, present a singular and striking appearance. The rock is chiefly felspar and felspar porphyry. The highest peak is thickly covered with a little shrubby plant, the *vaccinium myrtillus*. See EILDON HILLS. About three-fourths of the parish have been at one time or another under the plough; the other fourth consists of bog, moss, and plantations of fir and forest-trees. The most extensive plantation occupies the southern base of the Eildons. The real rent of the parish, in 1794, amounted to £2,300; and in 1847 to £5,420. The most extensive land-owner is the Duke of Roxburgh; but there are about 12 other considerable landowners, and about 50 small ones. The road from Hawick to Melrose and that from Kelso to Selkirk intersect each other within the parish; and the Edinburgh and Hawick railway impinges on the eastern border, and is readily accessible at the neighbouring stations of Newtown and Belses. The remains of a military road, with circular stations or camps, supposed to be Roman, can be traced running nearly north through the centre and broadest part of this parish, about a mile to the westward of the church, from Beaulieu in the parish of Lilliesleaf, to Caldshiels in the parish of Galashiels. There was, towards the end of last century, a strong fortification of its kind, at Holydean or Haliudean, once a residence of the family of Roxburgh. The court-yard, containing about three-fourths of an acre, was surrounded by strong stone and lime walls, 4 feet thick, and 16 feet high, with slanting holes, about 36 feet from each other, from which an arrow or a musket could have been pointed in different directions. Upon an arched gateway in the front there was a strong iron gate. Within the court stood two strong towers, the one of three, the other of five stories, and each consisting of eight or ten lodgeable rooms, besides porters' lodges, servants' hall, vaulted cellars, bakehouses, &c. This building was mostly pulled down, merely for the sake of getting the stones in it to build a large farm-house and appurtenances at the distance of 3 miles, though the difficulty of separating these stones from the lime made them a dear purchase. One of the vaults still remains. One stone, preserved from the ruins, and now a lintel to the door of the farm-house at Holydean, has in the middle an unicorn's head and three stars, with this inscription on either side:—"Fear God. Flee from sin: mak to the lyfe everlasting to the end. Dem Isabel Ker 1530." About 140 yards from this house,

on the top of a precipice hanging over a deep dell called Ringan's dean, there had been a chapel or place of worship, and a burying-ground, as appears from the number of grave-stones, and pieces of human bones, which have been dug up in it from time to time. Hence probably has arisen the name Holydean or Haliudean. The greatest curiosity, perhaps, of its kind in Britain, is a stone dike without lime, which encloses about 500 acres of this farm, and has stood more than 300 years, yet is still a tolerable fence. It had at first been 6 or 7 feet high, with capstones. In an old tack, this enclosure is called, "The great deer park of Haliudean." The chief residences in the parish are Linthill, Kippilaw, and Cavers-Carr. The village of Bowden stands on the Hawick and Melrose road, $2\frac{1}{2}$ miles west of Lessudden, and 3 south of Melrose. An ancient cross stands in its centre; and some remains may be observed of one or two old square towers, of the kind which were common in the times of the Border raids, with under apartment for cattle and upper apartments for the family. Population of the village in 1851, 253. Population of the parish in 1831, 1,010; in 1861, 864. Houses, 179. Assessed property in 1864, £7,544.

This parish is in the presbytery of Selkirk, and synod of Merse and Teviotdale. Patron, the Duke of Roxburgh. Stipend, £211 11s. 7d.; glebe, £15. Unappropriated tithes, £44 4s. 6d. There are two parochial schools,—one at Bowden, the other at Midlem. The salary of one of the masters is £50; that of the other is only £15; and each has about £20 of fees. The parish church is an old building with 380 sittings. A vault adjoining it is the burying-place of the ducal family of Roxburgh. The coffins—21 in number—are above ground; and some of them, by the dates upon them, appear to have stood upwards of 200 years, and are still entire. There is a Free church at Bowden; and the yearly sum raised in connexion with it in 1865 was £148 2s. 2d. There is an Original Secession church at Midlem, with an attendance of 180. There is a parochial library.

BOWER, a parish, containing a post-office station of its own name, about 11 miles north-west of Wick, in Caithness-shire. It is bounded by the parishes of Olrick, Dunnet, Cannisbay, Wick, Watten, Hal-kirk, and Thurso. The name—as of most places in this country—seems to be derived from the Danish language, and is said to denote a valley, or what in Scotch is called a carse. The parish is 7 miles in length, and 3 in breadth. On a ridge of rising ground, which almost equally divides the parish, betwixt Bower tower and Brabster, is a large stone called Stone Lude or Lutt, perhaps from Liotus, mentioned by Torfæus, who is said to have resided in this neighbourhood. The cairn of Heather Cow seems to be a monument of Druidical antiquity. It is situated about a mile south of the kirk, from which the ground rises by a gradual ascent, till it terminates in a round top. On this eminence—which is the highest ground in the parish—there is a circular building of stones, about 9 feet in diameter, and 4 or 5 feet high, ascending by 2 or 3 steps, like a stair, on one side. From it, in a clear day, we have a view of the general outlines of the country, of the hills which separate Sutherland and Caithness, the Strathnaver hills, part of the North sea and Pentland frith, some of the Orkney isles, and the entrance into the Moray frith at Riese bay. Great agricultural improvements have in recent years been made in this parish; and a large extent of waste land has been reclaimed. The valued rent is £2,761 16s. Scots; and the real rent in 1793 was about £1,500, but, has become about five times

that sum. A number of years ago there were found in a moss on the estate of Thura, the bones of some animals of the ox species, of a size now unparalleled in this county. The remains were three feet under the surface, and were in a high state of preservation. Two heads were found locked together by the horns, as if the animals had killed each other. The horns form a graceful curve, but if distended, measure 5 feet 10 inches, from tip to tip; breadth of skull across the eyes, 1 foot 6 inches; one of the ribs measures $3\frac{1}{2}$ inches at the broadest part, and exceeds 3 feet by little more than an inch in length; the largest joint of the leg-bone measures 9 inches in circumference, but the bone itself is comparatively short. The parish is traversed north-westward through the centre by the road from Wick to Thurso. Population in 1831, 1,615; in 1861, 1,746. Houses, 365. Assessed property in 1843, £4,300 4s. 5d.; in 1860, £7,542.

This parish is in the presbytery of Caithness, and synod of Sutherland and Caithness. Patron, Sir James Colquhoun, Baronet. Stipend, £191 4s. 6d., with a manse and glebe. Unappropriated tithes, £132 2s. Schoolmaster's salary is now £50, with about £14 fees. The parish church was built about the middle of the 17th century, and contains 441 sittings. There is a Free church; attendance, from 400 to 500; yearly sum raised in 1865, £156 13s. 10d. There are three private schools.

BOWERHOPE. See MARY'S (Sr.) Loch.

BOWHILL. See SELKIRK.

BOWHOUSE, a station on the Monkland railway, 6 miles south-west of Borrowstownness.

BOWLAND-BRIDGE, a station on the Edinburgh and Hawick railway, on Gala Water, 3 miles south-south-east of Stow. The estate of Bowland lies around, and has a fine mansion.

BOWLING, or **BOWLING BAY,** a locality in the parish of Old Kilpatrick, Dumbartonshire. It includes a narrow strip of level ground along the Clyde, overhanging by the picturesque acclivities of the Kilpatrick hills; is situated at the western end of the Forth and Clyde canal, on the road from Dumbarton to Glasgow, and on the Dumbartonshire railway, $\frac{3}{4}$ miles west-south-west of Dumbarton; comprises the terminal lock of the canal, a long range of wooden wharf, two landing-places for steamers, a railway station, a ship-building yard, a large embanked pool for emberthing steamers during winter, a sort of chain of villages, and a good hotel, called Frisky Hall; extends altogether about half-a-mile; and, together with numerous neat residences on the neighbouring slopes, has a population of about 600. The surrounding scenery, up the hills, across to Erskine, and down the Clyde, shows a rich variety of wood and water, rock and brae, close beauty and fine perspective. Glenarbieck ravine, looking like a broad deep rent down the face of the hills, appears to have been formed by the vertical stroke of an earthquake. Chapelhill, a little to the east, contests with Dunglass the claim of being the site of the western terminal forts of Autouinus' Wall, and has yielded many Roman relics, including two monumental tablets now in the Hunterian museum at Glasgow.

BOWMAN, a post-office station subordinate to Bowmore in the island of Islay.

BOWMONT (THE), a stream which rises in the Cocklaw, and flows in an easterly direction through the parish of Yetholm into Northumberlandshire, where it joins the Glen near Kirk-Newton, by which its waters are conveyed to the Till, a tributary of the Tweed. It has a rapid current, and is subject to high floods. The Bowmont and the Glen afford fine trouting.

BOWMORE, a small sea-port and post-town in the parish of Kilarrow and island of Islay. It stands on the east side of Lochindaal, 3 miles south-west of Bridgend, 11 south-south-west of Port Askaig, and 13 north of the Mull of Islay. It was founded in 1768; and though a good deal checked by the subsequent erection of Port Charlotte and Port Eleanor on the opposite side of the bay, it has had considerable prosperity, and is the capital of the island. It was laid out upon a regular plan, but has been greatly disfigured by the medley character of the private houses which line its streets,—every builder having been allowed to please himself as to the material, the shape, and the size of his structures. The quay is strong and good; and vessels have excellent anchorage in the harbour, but are liable to be swept by north-west winds. A principal and wide street begins at the quay, ascends a brae, and terminates at the summit by the parish church, which is a neat circular building, surmounted by a spire. Another principal street ascends the brae in a transverse direction, crossing the former street at right angles, and terminating by the school-house. A third street, of very poor appearance, and popularly called the Beggar Row, goes parallel to the second. The hill tops above these streets command a charming view of all Lochindaal, with Islay House, the Ruins, and a great extent of the island. Bowmore has some good shops, a large distillery, and considerable trade. It has also a Free church, whose receipts in 1865 were £96 12s. 10 $\frac{1}{2}$ d. Population in 1841, 1,274; in 1861, 985.

BOWRIEFAULD, a village in the parish of Dunuchen, Forfarshire. Population, 109.

BOYKILL. See WESTERKIRK.

BOYNDIE, a parish, containing the fishing-village of Whitehills, on the coast of Banffshire. It is bounded on the north by the Moray frith, and on the other sides by the parishes of Banff, Marnoch, Ordiquill, and Fordyce. Its coast-line extends on the east to within $\frac{1}{2}$ mile of Banff, and on the west to within 2 miles of Portsoy, and the former of these places is the post-town. The extreme length of the parish northward is about 7 miles; and the extreme breadth is nearly 3 miles. The burn of Boyndie, which has altogether a run of about 6 miles, flows along the greater part of the eastern boundary to the sea. The burn of Boyne, which comes in from Fordyce, and has altogether a run of about 8 miles, flows along the whole of the western boundary. The coast is chiefly rocky, but has some sandy beach; the valley of the Boyndie is a fine low agricultural tract; and the rest of the parochial surface is principally flat, low table-land. About 10 parts in 100 of the whole parish are moss or pasture lands, about 3 are under wood, and all the rest are cultivated. The Earl of Seafield is the chief landowner. The total yearly value of raw produce was estimated in 1842 at £23,800. The fisheries alone, which are carried on chiefly at Whitehills, were estimated at £3,000. Assessed property in 1865, £6,198 0s. 10d. A bleachfield and a thread factory were formerly in operation, but have been abandoned. There are now a brickfield, a saw-mill, a wool-carding mill, and three meal-mills. Here also is the Banffshire district lunatic asylum, a handsome edifice opened in 1865, and containing 90 beds. The parish is traversed by the Banffshire railway, and by the road from Banff to Portsoy. A medicinal spring called the Red well in this parish, and another at Tarlair in the parish of Gamrie, are said by Souter, in his View of the Agriculture of Banffshire, to be so highly valued "that the farm servants, at the distance of from 30 to 40 miles, make it a part of the agreement with their masters, that

they shall be allowed two weeks in the month of July or August to attend these wells." Boyne castle is romantically situated on a high perpendicular rock, on the south side of a deep gloomy ravine through which the burn of Boyndie flows; the banks of the stream being here wooded quite to the water's edge. This was the baronial castle of the district called the Boyne, and anciently the residence of the noble family of Ogilvie, ancestors of the Earl of Seafield. It was deserted in the reign of Queen Anne, and is now quite a ruin. Grose has preserved two views of it. Population of the parish in 1831, 1,501; in 1861, 1,711. Houses, 351.

This parish is in the synod of Aberdeen, and presbytery of Fordyce. Patron, the Earl of Seafield. Stipend, £204 19s. 3d.; glebe, £7. Unappropriated teinds, £222 8s. 1d. Schoolmaster's salary now is £75, with £23 fees, and a share of the Dick bequest. The parish church was built in 1773, and contains 600 sittings. There is a Free church: attendance, from 160 to 190; yearly sum raised in 1865, £96 9s. 5d. There are three non-parochial schools,—two of which are dame schools. There is also a parochial library. The present parishes of Boyndie and Banff formerly constituted only one parish, but were disjoined about the year 1634.

BOYNE. See BANFF, BANFFSHIRE, and BOYNDIE.

BOYSACK (CHAFELTON OF), a hamlet in the parish of Inverkeillor, Forfarshire. Population in 1851, 52.

BRAAL-CASTLE. See HALKIRK.

BRAAN (THE). See BRAN (THE).

BRABSTER. See CANISBAY.

BRACADALE, a parish, containing the post-office stations of Bracadale and Struan, in the island of Skye. It is bounded on the south and south-west by the sea, and on other sides by the parishes of Duirinish, Snizort, Portree, and Strath. Its length is about 20 miles, and its extreme breadth is about 8 miles. It is intersected by arms of the sea in different directions. The surface, in general, is hilly, with some level spots adjacent to the sea. The soil in some parts is fertile. There are no considerable rivers, and none that are navigable; though there are many rapid waters, which are frequently attended with inconvenience and even danger to people travelling from one part of the parish to another. The shore is flat in some places, but for the most part high and rocky. The principal bays or harbours are Loch-Bracadale, a good and safe harbour; Loch-Harport, a considerable branch of Loch-Bracadale, where vessels may ride with safety; and Loch-Eynort, 7 miles south of Loch-Bracadale, where vessels sometimes resort. To the south of Eynort, at the distance of 3 miles, is Loch-Brette, an open bay, and not a safe harbour; and to the east of this, at the distance of 4 miles, is the sublime inlet of Loch Scavig. See SCAVIG (LOCH). The islands in this parish are Soay, which in 1861 had 129 inhabitants, Vuyai, which in 1861 had 6 inhabitants, and Haversay and Oronsay, which have no inhabitants, but are only pendicles to the different farms on the shore opposite to them, and afford pasture for cattle during part of the summer and winter seasons. There are no remarkable mountains within the greater part of the parish; but the unique, curious, darkly sublime groups of the Cuchullin mountains form the chief feature of the southern district and of the boundary with Strath. See SKYE and CORRISKIN LOCH. The total number of arable acres in the parish is 4,873, and of acres of pasture and hill-grazing 68,311. Macleod of Macleod is the sole landowner. There is a distillery in the parish. Population in 1831, 1,769; in 1861, 1,335. Houses, 262. Assessed property in 1843, £3,920 15s.; in 1860, £4,504.

This parish is in the presbytery of Skye and synod of Glenelg. Patron, Macleod of Macleod. Stipend, £158 6s. 8d.; glebe, £15. Schoolmaster's salary, £35. The parish church was built in 1831, and contains 516 sittings. A missionary, supported on the Royal Bounty, ministers in the parish. There is a Free church, with an attendance of 250; and the yearly sum raised in connexion with it in 1865 was £44 13s. 7½d. There are five non-parochial schools,—one of them a Gaelic school. The natives of Skye, and most of all, those of Bracadale have been celebrated for the second sight. "The traveller," says Lord Feignmouth, "naturally inquires in Bracadale for traces of the second sight, and may be disappointed when he is informed here, as in other parts of Scotland, in general terms, qualified not a little when investigated, that all the ancient superstitions of the country have vanished. Now this statement cannot be admitted. Serious, imaginative, indolent, solitary in the ordinary condition of their lot, though social in disposition, familiar with nature in all the changing aspects with which northern seasons invest it, and with dangers by flood or fell, the natives of these regions are peculiarly susceptible of religious impressions. And unhappily, during many ages, ignorant, or instructed only in error, they blended with the true faith which they had received from the missionaries of the gospel, all the absurd poetical fictions derived from the stock from which they sprang, from Scandinavian invaders, from monks, or the innumerable horde of impostors, bards, minstrels, seers, and dealers in second sight, who preyed upon their credulity. Among this number must be included the criminals of all classes and conditions, to be found in all communities, but more especially in those in which, as in the ancient Highland clanish associations, certain convenient customs had superseded moral and legal obligation. These persons naturally encouraged a popular creed which furnished a ready explanation of all the mischief, whether theft, plundering of cattle, parentage, or kidnapping of children, which was constantly perpetrated, by the suggestion of demoniacal agency; in short, by multiplying into a diversity of mischievous beings, ready to do an ill-turn to any one, that unknown but right well-known personage—the No-man of Homer, the No-body of domestic life."

BRACHLA. See PETTY.

BRACK (LOCH). See BALMACLELLAN.

BRACKLIN, a series of short falls and dark deep luns, formed by the western branch of the Keltie burn in the parish of Callander, Perthshire; about 1½ mile to the north-east of the village. The Keltie rises at the base of Stucachroin, flows through a wild glen between Brackland and Auchinlaich, and falls into the Teith about 1½ mile below Callander. The falls are viewed to great advantage from a narrow alpine bridge, which hangs suspended at the height of 50 feet above the white foaming pool—as *Brac-lynn* literally signifies—into which the Keltie here precipitates itself over disjointed masses of rock, with a thundering incessant roar. The tourist should also note here the magnificent view from the corner of the larch wood, east of Callander, which he passes on his way from the village to the falls. In September 1844, a young man and a young woman, in a momentary frolic at the end of the bridge over Bracklin, fell into the yawning abyss.

BRACKNESS. See STROMNESS.

BRACO. See ARDOCH.

BRADEN (LOCH). See STRAITON.

BRADWOOD. See BRAIDWOOD.

BRAE, a post-office station, subordinate to Lerwick in Shetland.

BRAE, a district of the parish of Kilmonivaig, Inverness-shire.

BRAE-AMAT, a district of the parish of Kincardine belonging to Cromartyshire, but surrounded by Ross-shire. It is situated on the east bank of the Carrou.

BRAE-DUNSTAN, a ridge of low hill in the parish of Eccles, Berwickshire.

BRAEHED, a village in the parish of Carnwath, $3\frac{1}{2}$ miles south of Wilsontown, Lanarkshire. Here is an United Presbyterian church, with 500 sittings. Population, 350.

BRAEMAR, a district in the extreme south-west of Aberdeenshire. It was anciently a parish, but has for centuries, though at what precise date is not known, been united to Crathie. It was originally called the parish of St. Andrews; it afterwards got the name of Cean-au-drochaid, signifying Bridgehead; and, about the end of the reign of Mary, when the parts of it around Castletown became the property of the Earl of Mar, it took the name of Braemar. It adjoins its own county only on the east, and is surrounded on other sides by the counties of Perth, Inverness, and Banff. Its boundaries with these counties are all water-sheds of very lofty mountains,—the central group of the Grampians, adjacent to Cairngorm, and round the sources of the Dee. Its whole area is simply the alpine basin of the young Dee, cut into sections by the glens of that river's earliest affluents. It can be entered by wheeled carriages only by two roads,—the one from the east up the Dee, and the other from the south by the Spital of Glenshee; nor can it be entered even on foot with moderate ease by any other road, except one from the west up Glentilt.

The scenery of this district was well described in 1801 by Dr. Stoddart, who approached it on foot from the Inverness side up the difficult route of Glen-Fishie. "After reaching the heights," says he, "we crossed a dreary moor, surrounded by the tops of some of the highest mountains in Scotland, from Cairngorm, on the left, to Scarscoch, on the right. In this moor are the streams of the Fishie and the Giouly, flowing different ways: by descending the latter, we soon reached the glen of the Dee. This river, receiving several tributary brooks, becomes of considerable importance, and is bordered by the fir plantations of Mar lodge, a hunting-seat of the Earl of Fife. The vale now opened with great majesty, presenting a noble assemblage of mountain forms, which added to the windings of the river, formed a succession of the most delightful landscapes, as we passed Mar lodge, the Castletown of Braemar, and at length reached Invercauld, the seat of — Farquharson, Esq. No place, that I have seen in Scotland, is more characteristically adapted to the residence of a Highland chieftain than Invercauld; and few are more judiciously preserved in an appropriate state of decoration. The house is a large and irregular building, more suitable to such a situation than if its architecture were formally scientific. It stands on a rising ground, not far removed from the bank of the Dee, which glides silently and majestically through the valley. All around are vast birch woods, and firs, which Mr. Farquharson has planted in incredible numbers. The mountain, which rises behind the house, is Craig Leik: those which stretch in front, like a gigantic amphitheatre, are perhaps among the loftiest in Britain; for their height has never been ascertained. The large mass, to the northward of east, is topped by the peak of Loch-na-Gar: below these is the opening of Balloch Buy, an immense fir wood, among whose shades the fall of Garwal glitters to the sun. Stretching round to the south

are the wild cliffs and precipices of Craig Cluay, Scailloch-na-Moustard, and Craig Caonich; westward, about a mile and a half distant, are the castle and town of Braemar, backed by Craig Clerich; and further up, the vale is shut in by the vast mountain screens folding before each other, whilst above them peer the summits of Ben-y-Bourd, Ben-Vrotachan, &c. Few proprietors have done more, or with more judgment, toward the improvement of their estates, both in appearance and in product, than Mr. Farquharson. Of the ancient royal forest of Mar he keeps a great proportion in its natural state, as does the Earl of Fife; and on both properties the deer are cherished with great care. There are many natural woods, but the extent of plantation is still greater, Mr. Farquharson himself, in the course of a long possession, having planted no less than sixteen millions of fir, and two millions of larch. At Invercauld, as in Glenmore, the mountains seem to be divided by a dark sea of firs, whose uniformity of hue and appearance affords inexpressible solemnity to the scene, and carries back the mind to those primeval ages, when the axe had not yet invaded the boundless regions of the forest. But the most remarkable of Mr. Farquharson's improvements are the roads, which he has carried, in a variety of directions, through his estate, for purposes both of utility and of pleasure. They are in all considerably more than twenty miles; they are excellently constructed, and their level so well kept, that you reach, by a regular progress, the very tops of the mountains, ere you are well aware of having ascended. Approaching from Invercauld, the first object which strikes you, is the bridge of Coich, an impetuous stream, which forms a cataract, among wild broken rocks, as it hastens to join the Dee. About a mile to the westward stands Mar lodge, a small pile, but rendered considerable in appearance, by the extension of false wings, connecting it with the offices. It is seated on a flat, very little above the level of the river, and backed by a steep mountain, planted nearly to the top with firs. In its front is a spacious lawn, surrounded with a variety of trees, birch, alder, willow, &c. The Dee is here crossed by a long wooden bridge, with stone arches. About a mile higher up, is another bridge, at the Linn of Dee, where that river forms a fall, after being confined for above sixty yards, between two rocks, a very few feet distant from each other. Crossing the river, I ascended Craig Neagh, a rocky eminence, where—as in many other commanding spots—Lord Fife has built a rude prospect-house. Here you obtain the best view of Mar lodge, with the long bridge, and the upper part of the glen, terminated by the summits of Cairn Toul, Glashau Mor, and Ben-y-Vrotan. Some of these prospect-houses are decorated with spires, and other ornaments, rather unsuitable to the magnificence of the natural objects by which they are surrounded. They serve, indeed, to diversify the landscape; but where variety is only to be attained by the sacrifice of sublimity, a correct taste will deem the purchase too great. One of the most pleasing scenes belonging to Mar lodge, is a small hollow, on this side of the river, called Corriemulzie. Wandering some time between lofty, over-arching rocks, which enclose the course of a brook, you at length reach its fall. The hanging wood, the shrubs and weeds, the natural, or apparently natural steps in the rock, the rude seat from which you view it, and the arch which supports the road above, all together render this a most picturesque retreat." Other and grander cataracts gem the deep, dark ravines of Braemar; and the general features of all—wood and gloom and precipice—may be caught from the following lines

which were written on one of them by Miss Catherine Ponsonby:—

“Up the wild glen, dark fringing either side,
Crept the thick birchwood on the rocky steep,
Whose rich and clustering foliage sought to hide,
In arching canopy, the rapid leap
Of the rude mountain waters, dark and deep.
Through woods unbrazened the loud, moaning sound
Ascended sullenly and seemed to weep,
E'en with its coronet of verdure crowned,
Wild gushing tears, in secret cells, beneath the ground.

The shadows deepen, as the mountain dell,
Steep upon steep, winds wildly in ascent;
Whilst the glad sun, whose glances erewhile fell
Through openings of the trees, and brightness blent
With gloom, withdrew the lustre he had lent.
Sounds, like advancing thunders, pealing come
Athwart the air, as if the rocks were rent:—
When lo! the Cataract's white, feathery foam
Bursts on the sight, dashing from its wild mountain dome!”

On the estate of Castletown of Braemar is the vestige of an ancient castle built, tradition reports, by Malcolm Canmore for a hunting-seat. It is on the top of a rock on the east side of the water of Cluny; and the King having thrown a drawbridge across the river to the rock on the opposite side, the parish of Braemar derived its name of *Ceann-an-drochaid*, or Bridgehead, from that circumstance.—On a little mount on the haugh of Castletown stands the modern castle of Braemar. It was originally the property of Farquharson of Invercauld, and given to a second son of that family as his patrimony. About the end of Queen Mary's reign, these lands were exchambed with the Earl of Mar for the lands of Monaltry; and, soon after his accession to the estate, he built the present house. King William, after the Revolution, put some troops into it to keep the country in awe; but the people sorely besieged the garrison, obliged the troops to retire under favour of night, and, to save themselves from such troublesome neighbours for the future, burnt the castle. In this state it continued till 1715, when the Mar estates were forfeited. About 1720, Lords Dun and Grange purchased from government all the lands belonging to the Erskine family; and about 1730, John Farquharson of Invercauld bought the lands of Castletown from Lords Dun and Grange. About 1748, Mr. Farquharson gave a lease to government of the castle, and an enclosure of 14 acres of ground, for the space of 99 years, at £14 of yearly rent; upon which the house was repaired, a rampart built round it, and the place occupied by a party of soldiers.

On the lands of Monaltry, on the north bank of the Dee, in a narrow pass, where there is not above 60 yards of level ground from the river to the foot of a steep, rocky hill, stands a cairn, known by the name of *Cairn-na-cuimhne*, or the ‘Cairn of remembrance.’ The military road is carried along the foot of this hill, and through this pass. The tradition of the country is, that many ages ago, the country being in danger, the Highland chieftains raised their men, and marching through this pass, caused each man lay down a stone in this place. When they returned, the stones were numbered; by which simple means it was known how many men were brought into the field, and what number had been lost in action. *Cairn-na-cuimhne* is the watchword of the country-side here. Every person capable of bearing arms, was in ancient times obliged to have his weapons, a bag with some bannocks in it, and a pair of new-mended shoes always in readiness; and the moment the alarm was given that danger was apprehended, a stake of wood,—the one end dipped in blood, and the other burnt, as an emblem of fire and sword,—was put into the hands of the person nearest to where the alarm was given, who imme-

diately bore it with all speed to his nearest neighbour, whether man or woman, who, in like manner, and with equal haste, bore it to the next village, or cottage; and so on, till the whole country was raised, and every man capable of bearing arms had repaired to the *Cairn-na-cuimhne*. The stake of wood was named *Croishtarich*. “At this day,”—says the writer of the Old Statistical Account of this parish, from whom we borrow these details,—“were a fray or squabble to happen at a market, or any public meeting, such influence has this word over the minds of the country people, that the very mention of *Cairn-na-cuimhne* would, in a moment, collect all the people in this country, who happened to be at said meeting, to the assistance of the person assailed.” In the years succeeding 1848 Braemar has acquired a new interest as the scene of the autumnal rambles of the royal family,—whose Highland retreat is nearly adjacent in Crathie. See BALMORAL.

BRAE-MORAY, a frequent name of the parish of Edeukeillie in Morayshire, descriptive of its ascent from the plain in the vicinity of Forres.

BRAE-RIACH, a mountain on the mutual border of Rothiemurchus in Inverness-shire and Braemar in Aberdeenshire. It is one of the Cairngorm Grampians, and has an altitude of 4,220 feet above the level of the sea. Its north-western acclivities overhang Glenennich, and abound in terrific precipices; and its south-easterly shoulder contains the northern source of the Dee, at a spot only 160 feet lower than the mountain's apex.

BRAES, a village contiguous with Calder-Bank in the parish of Old Monkland, Lanarkshire.

BRAGRUM, a hamlet in the parish of Methven, Perthshire.

BRAHAN CASTLE, the principal seat of Mackenzie of Seaforth, in the parish of Urray in Ross-shire. It is placed nearly in the centre of a beautiful bank, which extends on the north side of the Conau river, from Contin to Dingwall, rising in a series of successive terraces from the river. The road from Inverness to Dingwall, by the head of Loch-Beaully, runs a little to the east of it. Miss Spense visited Brahan castle,—or Braan castle as she spells it—in 1816, but declares herself to have been very ill rewarded for her trouble. She expected, it seems, an edifice “possessing somewhat of the magnificence of many of our noble edifices in England,” instead of which, she says, “I beheld a heavy pile of buildings, neither modern nor antique, extremely gloomy, and without the imposing air of gloomy grandeur which often characterizes ancient fabrics.” A more recent lady traveller, Miss Sinclair, writes in a kindlier spirit of the Mackenzie's house and domain, which she pronounces “worthy of the ancient Seaforth dynasty, being a massy old edifice of handsome exterior, though united to a better-half of very disproportioned age and unsuitable appearance,—the one being venerable with declining years, the other very plain, and exceedingly juvenile.” There are some interesting portraits here, and a good library.

BRAID BURN, a rivulet of Edinburghshire. It rises among the Pentland hills about Bonally and Dreghorn, and runs 9 miles north-eastward through the parishes of Colinton, St. Cuthbert's, Liberton, and Duddingston, to the frith of Forth at the north end of Portobello. Its course due south of Edinburgh is between Braid hills and Blackford hill; and at the south-east base of Arthur's Seat, it flows through the pleasure-grounds of Duddingston House, and is accumulated in ponds to drive the flour-mills of Duddingston.

BRAID HILLS, a range of low green hills, extending east and west, on the south side of Braid

Burn, and on the mutual border of the parishes of Colinton, St. Cuthbert's, and Lihorton, about 2½ miles south of Edinburgh. They command one of the best views of the old town of Edinburgh, with its circumjacent landscape. Their most elevated point is about 700 feet above sea-level. A stratum of petunse runs through them, continued from a stratum of the same mineral in the Pentland-hills. This mineral is similar to the petunse of the Chinese, and has been employed with success in the manufacture of British porcelain. Besides this mineral, petrosilex, terra ponderosa, zeolites, and agates, have been found here in considerable masses. Several fine specimens of molybdena have also been picked up. According to one traditional legend, these hills were the scene of 'Johnie o' Breadislee's' woful hunting as related in the old ballad commencing thus:—

"Johnie rose up in a May morning,
Called for water to wash his hands, hands,
And he is awa to Braidisbanks,
To ding the dun deer doun, doun,
To ding the dun deer doun."

BRAIDWOOD, or **BRADWOOD**, a village in the parish of Carluke, about a mile south-west of the village of Carluke, Lanarkshire. It has a station on the Caledonian railway. The great Roman road called Watling-street passes through it. Limestone of excellent quality is worked in the vicinity. The barony of Braidwood anciently belonged to the Earls of Douglas; and passed successively to the Earls of Angus, Chancellor Maitland, the Earl of Lauderdale, the Douglases again, and the Lockharts of Carnwath, and now belongs to various parties who hold of the Lockhart family. Population of the village, 234.

BRAINSFORD, or **BAINSFORD**, a village in the parish of Falkirk, Stirlingshire. It stands on the Forth and Clyde canal, about a mile north of Falkirk, yet forms with Grahamstown a continuous street-suburb of that town, and is included within the parliamentary burgh. The Carron iron-works on the south border of the parish of Larbert are near Brainsford, and give employment to a large proportion of its inhabitants. A basin here accommodates the Carron Company's vessels in the Liverpool trade, and a railway connects the place with the works. There is a rope-walk here, and there is a large saw-mill on the banks of the canal toward Grangemouth. Population, 1,248.

BRALLAIG (Loch), a lake of upwards of a mile in length and about half-a-mile in breadth, in the parish of Kilninver, Argyleshire. It lies parallel with Loch Scamadale, and is overhung by a picturesque range of hills of about 800 feet high.

BRAN (THE), a river of Perthshire. It issues from the east end of Loch Freuchie in the parish of Dull, and flows east-north-eastward along Strath-bran, past Amulree, through the parish of Little Dunkeld, to a junction with the Tay a little above Dunkeld bridge. Its length of course, measured from Loch Freuchie, is about 10 miles; but measured from the sources of the Quaich which falls into that lake, is at least 16 miles. "The contrast between the Tay and the Bran," says Stoddart, "is very strong. The former is deep, broad, and smooth; the latter, turbulent and impetuous, and its bed composed of rocks, or large loose stones. At the village of Inver, which stands between the Tay and the Bran, a mill, a woody island, and a bridge of two arches over the latter river, form a very picturesque landscape. Proceeding up the banks of the Bran, we reach an extensive enclosure, laid out as a garden, with walks that wind through the

shrubbery and wood. One of these leads to a small building, where the guide introduces us into a circular vestibule, and suddenly throws open, with a pulley, the door of an elegant inner apartment, the farther end of which is one large bow window. Through this window, a noble cataract, so close, that it wets the glass with its spray, and a stretch of the river, for 200 or 300 yards, tumbling through a rocky bed, in one continued rapid, burst at once on the eye! The window was formerly composed of different coloured panes, but this childish device has been corrected. The Bran continues struggling among rocks, as we quit the enclosure, and a little above it reach the Rumbling bridge. This is a single arch, thrown across the mouth of an abodeous chasm, where the rocks almost unite at top, and through which the river, after being precipitated from an height nearly level with the bridge, runs at the depth of 80 or 90 feet. The immense masses of shapeless rock—one of which lies quite across the chasm, and conceals the lower part of the fall—the disorder in which they are grouped, the roaring of the water, and the gloom of the narrow fissure through which it flows, form, altogether, a sublime and terrific scene. In returning from the Rumbling bridge we may choose various paths; and indeed a stranger might employ several days, with pleasure, in following the different walks among the hills. Though these are mostly embosomed in wood, we come every five or ten minutes to some interesting spot. We are either led under lofty projecting precipices, or to some commanding eminence, or opening of the trees, which offers the full prospect or partial glimpses of the valley below. Two scenes, in the course of the walk, cannot fail to arrest the particular notice of a stranger. One is in the gully, or ravine, which divides the two summits of Craigie Barns. Here vast fragments of mis-shapen rock, which seem to have been rent from the cliffs, that shoot to an awful height on the hill above, are thrown together, in a rude and stupendous confusion. Spots of heath, brushwood, and wild plants, are interspersed, to which a few laurels and flowering shrubs have been added, and a clear rivulet forms various waterfalls, as it tinkles through the crevices. At the lower part of this singular mass, an irregular cave, formed by one of the large blocks lying across several others, has been converted, with a little aid from art, into a grotto or hermitage, one fissure serving for a window, and another for a vent. When here, a stranger should not omit to follow the path that leads along the bottom of the cliffs, which, with the screams of kites and other ravenous birds flying perpetually across them, are wild and terrific. The other scene I recommended to notice, is a lake, at the foot of the same mountain. It is nearly of an oval form, and so closely and completely sheltered by the hill, which rises from its margin on one side, and on the rest by the thick woods in which it is embosomed, that its surface is almost always smooth as glass. On the bank next the mountain are scattered a few cottages, whose white walls make a fine contrast with the dark green woods. From the opposite bank, the view of this scene is highly picturesque. The still and tranquil lake, the mountain rising over it, covered with wood and grey precipices of rock, the white cottages, and the picture repeated in the water, form a peaceful and pleasing landscape. On the whole, Dunkeld seems a choice spot for the painter. The sublimity of the mountains, the extent of the woods, the noble size of one river, the wild romantic appearance of the other, the large Gothic ruins, and the genial and sheltered beauty of the low grounds, when taken separately, may, perhaps, be equalled,

but I have never elsewhere seen them so admirably combined." Mr. Gilpin speaks of this scene as the most interesting of the kind he ever saw. "The whole scene and its accompaniments," he observes, "are not only grand, but picturesquely beautiful in the highest degree. The composition is perfect, but yet the parts so intricate, so various, and so complicated, that I never found any piece of nature less obvious to imitation: it would cost the readiest pencil a summer's day to bring off a good resemblance." See *AMULREE* and *DUNKELD* (*LITTLE*).

BRANDANES. See *BUTE*.

BRANDERBURGH, a village in the parish of Drainie, Morayshire. Population, 952.

BRANDIR. See *AWE*.

BRANDY (*Lochn*). See *CLOVA*.

BRANXHOLM, a mansion, formerly a feudal castle, in the parish of Hawick, Roxburghshire. It stands in the valley of the Teviot, about 3 miles above the town of Hawick. It possesses great celebrity as the ancient seat of the ducal family of Buccleuch, as the central point of vast military strength in the roystering period of the border forays, as the key for ages to all the strong places in Teviotdale, and as a prominent locality and brilliant figurant in Scott's *Lay of the Last Minstrel*. It was long the scene of great baronial splendour, and it is classical alike in old balladry and in some of the finest modern songs and lyrics. The original pile—or rather that of the most sumptuous period—was burnt down in 1532 by the Earl of Northumberland, and blown up with gunpowder in 1570 during the invasion of the Earl of Surrey; and a successor to it was commenced in 1571 by its owner, Sir Walter Scott of Branxholm, and completed in 1574 by his widow. The present structure is very much smaller than the ancient one; and, with the exception of an old square tower of immense strength of masonry, it looks less like a castle than an old Scottish mansion-house. But its situation is strong and beautiful, and must evidently have invested it with mighty importance in the olden troublous times. The site is a bold bank, overhanging the river, surrounded by a fine young thriving wood, and shut suddenly in by heights which give the vale for some distance the narrowness of a dell; and so abruptly does the place burst on the view of a traveller from either above or below that he would be perfectly charm-struck with it, even were it unaided by any historical association; and so sternly did the ancient castle overawe the gorge, and hold armed men in readiness to defend it, that any attempt of English marauders to pass through without subduing the garrison must have been absolutely hopeless.

In the reign of James I., one-half of the barony of Branxholm belonged to Sir Thomas Inglis. This gentleman was a lover of peace, ill able to bear the excitements and conflicts and perils of the Border warfare; and, happening one day to meet Sir William Scott of Buccleuch, who was then proprietor of the estate of Murdiestone in Lanarkshire, he strongly expressed to him his disgust at being obliged to sleep every night in boots and shirt of mail, and to hold himself in constant readiness for action with English freebooters, and his envy of the quiet and security and continual ease which the lairds of Clydesdale enjoyed at a distance from the Border, and behind the ramparts of the Leadshill mountains. Scott loved frolicking and feud as much as Inglis hated them; and he abruptly answered, "What say you to an exchange of estates? I like that dry land of yours much better than this stretch of wet clay." "Are you serious?" replied Inglis. "If you be, take the dry land with all my heart, and let me have the clay." They made short work of the bargain;

and Scott soon found himself laird of Branxholm, and significantly remarked as he got possession of it that the cattle of Cumberland were as good as those of Teviotdale.

Scott promptly gathered around him a strong body of hardy, active, resolute, unscrupulous, well-mounted retainers, and rode so often and vigorously at their head across the Border, and made such smart reprisals upon the English for any occasional injury they did him, that he soon and permanently made the balance of account between Cumberland and Teviotdale very much in his own favour; and his successors, for several generations, rivalled his energy and closely followed his example,—so that they rendered all the country round them resonant with the clang of arms, and rich with well-defended or rapidly augmented flocks. In the reign of James II., the other half of the barony of Branxholm became their property; and from that time till the conditions of society were altered by the general pacification of the Borders, and by the desuetude of feudal broils and usages, Branxholm Castle was the constant residence of the Buccleuch family,—the scene of their baronial magnificence,—the court and centre of their martial pomp and quasi-princely state. How vividly does the great modern bard of their name and clan, the mighty magician of modern Scotland, depict their ancient Hall, and restore its every-day scenes of crowded greatness in the following stanzas!—

"The feast was over in Branxholm tower,
And the lady had gone to her secret bower;
Her bower that was guarded by word and by spell
Deadly to hear and deadly to tell—
Jesu Maria, shield us well!
No living wight, save the lady alone,
Had dared to cross the threshold stone.

The tables were drawn, it was idlesse all;
Knight and page, and household squire
Loitered through the lofty hall,
Or crowded round the ample fire;
The stag-hounds, weary with the chase,
Lay stretched upon the rushy floor,
And urged, in dreams, the forest race,
From Teviot stone to Eskdale moor.

Nine-and-twenty knights of fame
Hung their shields in Branxholm Hall;
Nine-and-twenty squires of name
Brought them their steeds to bower from stall;
Nine-and-twenty yeomen tall
Waited duteous on them all;
They were all knights of mettle true,
Kinsmen to the bold Buccleuch.

Ten of them were sheathed in steel,
With belted sword, and spur on heel;
They quitted not their harness bright
Neither by day, nor yet by night;
They lay down to rest
With corselet laced,
Pillowed on buckler, cold and hard;
They carved at the meal
With gloves of steel
And they drank the red wine through the helmet barred.

Ten squires, ten yeomen, mail-clad men,
Waited the beck of the wardour's ten;
Thirty steeds, both fleet and wight,
Stood saddled in stable day and night,
Barbed with frontlet of steel, I trow,
And with Jedwood-axe at saddle bow;
A hundred more fed free in stall;
Such was the custom of Branxholm Hall."

BRANY (*THE*). See *ESK* (*THE NORTH*).

BRASSAY. See *BRESSAY*.

BREACACHA. See *COLL*.

BREADALBANE, a district about 33 miles long and 31 miles broad, in the north-west of Perthshire. It is mountainous and rugged, lying among the Grampians; and is bounded on the north by Lochaber and Athole; on the south by Strathearn and

Menteith; and on the west by Lorn, Knapdale, and Lochaber. It gives the title of Marquis to a branch of the ancient family of Campbell. Sir John Campbell was created Earl of Caithness in 1677; but, in 1681, that title on a claim and petition, being allowed by parliament to be vested in George Sinclair, who was the 6th Earl of Caithness, Campbell was instead thereof created Earl of Breadalbane, with precedence according to the former patent; and in 1831, John, the 4th Earl, was created Marquis of Breadalbane in the peerage of the United Kingdom. The Marquis is the chief proprietor of the district. His estate commences 2 miles east of Tay bridge, and extends to Easdale, in Argyleshire, a stretch of 100 miles, varying in breadth from 3 to 15 miles, and interrupted only by the property of three or four proprietors who possess one side of a valley or glen, while Breadalbane has the other. In 1793-4, the Earl of Breadalbane raised two feucible regiments amounting together to 2,300 men, of whom 1,600 were obtained from the estate of Breadalbane alone. In the extreme point of this district lies Loch Lyon, whence the Lyon river flows through a sinuous valley, till it falls into the Tay. In the centre of the district lies Loch Tay, an inland lake about 16 miles long, surrounded by splendid natural scenery. See **LOCH LYON** and **LOCH TAY**. The mountains—of which Benlawers is the chief—are mostly composed of a grey granite, containing beautiful crystals of schorl. There is a copper mine at Aithra, and a lead mine was formerly wrought at Tyndrum. A mountain near Loch Dochart contains steatites or rock soap. Peat-moss is found in abundance, and is the only fuel of the country. Towards the beginning of last century, the people of this district were adverse to industry; indeed the danger they were constantly exposed to from the incursions of lawless banditti was a great obstacle to the improvement either of the land or their condition. Breadalbane, and even the whole county of Perth, so late as the year 1745, were obliged to submit either to be plundered, or to pay black mail, as the price of their security. Lord Breadalbane, who had more spirit than submit to these conditions, generally kept up a small army of militia for the defence of the tenants on his estates. The act of parliament, however, which abolished hereditary jurisdictions, and vested the power and punishment in stronger hands, soon put an end to these depredations; and since that period the people have become industrious, and their condition has much improved. Kenmore, Killin, and Clifftou, are the principal villages. Breadalbane has good roads and bridges, rendering the communication more easy than could well be supposed in so mountainous a country.

Hugh Cameron, who died in 1817, at the extraordinary age of 112 years, though an individual moving in the humblest rank was one of the greatest benefactors to this district of Perthshire. This singular character was bred a mill-wright. After acquiring a knowledge of his business, he settled at Shian of Lawers, where he built the first lint-mill that ever was erected in the Highlands of Scotland. Before his time only the distaff and spindle were used for spinning lint and wool in this part of the country; and he was not only the first who constructed spinning-wheels and jack-reels in Breadalbane, but likewise the first who taught the people there how to use them. The number of lint-mills afterwards erected by him throughout the Highlands cannot be reckoned at less than a hundred: in short almost all the lint-mills in the Highlands of Perthshire, and many in the counties of Inverness, Caithness, and Sutherland, were of his erecting. He also constructed the first barley-mill that was built

upon the north side of the Forth, for which he was highly complimented by Maca Glasarich,—Campbell, the bard,—in a very popular song, called 'Moladh di Eobhan Camasbran Muilleir lin,' that is, A song in praise of Hugh Cameron, the lint-miller. Though he could only be called a country-wright, he was a man of uncommon genius, of great integrity, and of a very independent mind.

BRECHIN, a parish, containing the royal burgh of Brechin, and the villages of Little Brechin and Trinity Moor, in the north-east of Forfarshire. It is bounded by the parishes of Menmuir, Strickathrow, Dun, Farnwell, Aberlemno, and Caralston. Its length eastward is 7 miles; and its greatest breadth is about 6 miles. The South Esk flows partly through the interior and partly along the southern boundary. Burghill or Burkle, on the south side of the town, is the only considerable eminence. Most of the parish is either level or diversified only by gentle swells. Part of the South Esk's banks are rocky heights, and part are low flats, subject to deep inundation. The general ascent of the parish is more rapid on the south side of the river than on the north. The soil of most of the arable land is fertile. About 2,770 imperial acres have never been cultivated, about 9,800 are regularly or occasionally in tillage, and about 3,270 are under planted wood. There are some lime-works and several sandstone quarries. There are also three large nurseries. The value of real property, in 1865, exclusive of the burgh, was £17,686 4s. 11d.; of which £1,607 14s. were in railways. The chief seats are those of the Earl of Dalhousie, Aberdein of Keithock, and Speid of Ardovie. Brechin castle, the seat of the Earl of Dalhousie, is built on the site of an ancient castle, on a perpendicular rock overhauging the South Esk, in the vicinity of the town. It sustained a siege of twenty days in 1303 by the English under Edward I.; and, notwithstanding every effort to compel the besieged to surrender, held out, until the governor, Sir Thomas Maule, was killed by a stone thrown from an engine, when the place was instantly given up. A descendant of this brave man was, in 1616, created Lord Maule of Brechin and Earl of Panmure. These titles were forfeited in 1715, but restored at the coronation of William IV., in the person of the Hon. William Ramsay Maule, created Lord Panmure and Navar. On the 5th of July, 1572, Sir Adam Gordon of Auchindown, who was of the Queen's party, and was besieging the castle of Glenbervie, hearing that a party of the King's friends were in Brechin, came upon them by surprise in the morning, and cut off the whole party. Another battle was fought in this neighbourhood, between the Earls of Crawford and Huntly, on the 18th May 1452, when the former was defeated, and the latter did James II. very essential service. This battle is called the Battle of Brechin, though the spot on which it was fought is not in the parish, but a little to the north-east of it, on the road leading to the North Water bridge. In the northern part of the parish are the remains of a Danish camp. Maitland, author of the histories of London and Edinburgh; Dr. Gillies, the historian of Greece; Dr. Tytler, the translator of Callimachus; and his brother, James Tytler, who had so large a share in compiling the 'Encyclopædia Britannica' and other works, were natives of this parish. A branch railway goes eastward from the town to a junction with the Aberdeen railway. The road from Montrose to Kirriemuir traverses the parish westward, and that from Dundee to Aberdeen by way of Forfar traverses it northward. Population in 1831, 6,508; in 1861, 8,810. Houses, 1,107.

This parish is the seat of a presbytery in the synod of Angus and Mearns. Patron, the Crown. It is a collegiate charge. Stipend of the 1st minister £292, with a manse and garden; of the 2d minister £340, with a manse and glebe. Unappropriated teinds, £704 11s. 4d. Schoolmaster's salary, £34. The parish church was repaired in 1808, was partially repaired again in 1863, and contains 1,511 sittings. There are two Free churches—the East and the West; and the yearly sum raised, in 1865, in connexion with the former was £716 6s.,—in connexion with the latter, £655 15s. There was an Original Secession church, built in 1821, and containing 400 sittings, and it became a Free church, designated the South Free church; but a short time before 1865, it was purchased by the Temperance Society, and converted into a fine small Temperance hall. There are three United Presbyterian churches,—one of them in High Street,—another in City Road,—and the third in Maison Dieu Lane. And there is an Episcopalian chapel, which was built in 1809, and repaired in 1830, and contains 300 sittings. There are eight non-parochial schools.

The Town of BRECHIN—a post and market town, a royal burgh, anciently an episcopal see, and still a principal town of Forfarshire—is finely situated near the centre of the parish, on the left bank of the South Esk, 8 miles west-north-west of Montrose, 12½ miles north-east of Forfar, 25 south-west of Stonehaven, 26½ north-north-east of Dundee, and 83½ north-north-east of Edinburgh. The principal street is about a mile in length, extending southward to the bridge over the river. Towards the east and south are the Upper and Lower Tenements of Caldhead, as they are called, which are two streets of considerable length, but independent of the burgh, being without the royalty, but within the parliamentary boundary. Some parts of the main streets are very steep; yet Brechin, on the whole, is a well-built town, and contains a considerable number of good houses. The streets are lighted with gas, and the town is well-supplied with water. An anonymous rhymester tells us:

"The finest view of Brechin may be got
From a soft rising ground beyond the bridge,
Where you may see the county every spot,
And the town rising up a sudden ridge;
The castle, old cathedral, and what not,
And the spire's griffin minish'd to a midge."

The town was formerly walled round, and some relics of the gates were in existence till recently. It was twice devastated by fire,—by the Danes in 1012, and by the Marquis of Montrose in 1645. A bishopric was founded here, by David I., in 1150, and liberally endowed. The revenues of this see were, in 1561, as follows: Money, £410 5s.; wheat, 11 bolls; bear, 61 ch. 5 bolls; meal, 123 ch. 3 bolls; horse-corn, 1 ch. 2 bolls; salmon, 3 barrels; capons, 11½ doz.; poultry, 16 doz. and 10; geese, 18. Add to this money of teinds £241 6s. 8d. "We have already hinted," says Headrick in his 'Agricultural Report on Forfarshire,' "the strong probability that the places which were occupied, first by the Culdees, and afterwards by bishops and mitred abbots, had previously been consecrated in popular estimation as the chief seats, or, in more modern language, the cathedral churches of Druidism. However this may be, it seems certain that this place was a seat of the Culdees, who had established schools and seminaries of such learning as was in fashion in their time, long before bishops, mitred abbots, or monastic institutions, such as afterwards prevailed, were known in this country. The first origin of the town seems to have been houses for religious persons, contiguous to the cathedral. The

revenues of ecclesiastics being accumulated and expended here, and the place being a general resort from religious motives, would induce tradesmen to settle, with a view to supply such articles of manufacture or of commerce as were then in demand."

The Cathedral-church of St. Ninian, supposed to have been founded by David I., was a stately Gothic fabric, 166 feet long and 61 broad, the roof supported by two rows of pillars and arches. The eastern end was sadly devastated at the Reformation: but the building in fact appears never to have been completed. The present parish-church occupies the west end of the cathedral. At the north-west corner is a square tower, with a handsome spire 128 feet high. At the south-west corner is one of those round towers, probably of Pictish origin, of which this and another at Abernethy are all the specimens that remain in Scotland. See ABERNETHY. The tower of Brechin is a circular column of great beauty and elegance, 80 feet high, with a kind of spire or roof rising 23 feet more, making the whole height 103 feet, while the diameter over the walls at the base is only 16 feet. The building consists of 60 courses of stone, not very regular, however, some of them measuring 21, and others only 9 inches in thickness. The fabric seems to have sustained very little injury from the lapse of years. Formerly, when the bells of the church—now transferred to the square tower—were fixed in it, there was a series of platforms erected in it, which were ascended by ladders. The door of entrance is about 6½ feet from the ground, 2 feet wide, and 6 feet high; the sides are formed of a block of granite; nearly in the middle of each stands a human figure on a kind of bracket; the lintel is a block of granite cut into a semicircular arch; over the centre stands another figure in a different drapery from the other two. The sole is one block of stone; on each side of it are the figures of two animals with long claws and tail; that on the left hand seemingly in the act of devouring something. The whole entrance is ornamented with a border of diamond figures. A drawing and description of this singular monument is given in the 2d volume of the 'Archæologia.' Tradition ascribes the creator of this building to the Picts. It is somewhat off the plumb-line, and has been observed to vibrate in high winds. In a lane at the back of the town are some remains of the ancient chapel of Maison Dieu, founded by William de Brechin, in 1256, and confirmed by James III. in 1477. The Episcopalian chapel is a neat structure with a cross and two minarets on its west end.

The town-house, situated in the middle of the town near the market-place, was chiefly rebuilt in the latter part of last century, and is a respectable edifice, containing a court-room, police-office, and cells on the ground floor, and a guild-hall and council-rooms above. A modern jail stands in the outskirts of the town, but has ceased to be used. The Mechanics' Institute is a great ornament to the town. It stands on the site of the former academy; and is a splendid Elizabethan edifice, with a central tower. It was erected in 1838, by the munificence of the late Lord Panmure, who endowed it with £1,000 at the time of its completion, and with another £1,000 by bequest, and also provided it with a public clock, which was just being put up on the very day of his death in 1852. This edifice contains three public school-rooms, a hall or lecture-room, capable of accommodating between 400 and 500 persons, and a library-room which contains above 3,000 volumes. A reading-room is behind a shop. The school-rooms are those of the grammar school, the parish school, and the burgh school. The rector of the grammar school is appointed by

the magistrates; and has a salary of £8 17s. 9d. a-year. He also holds from Government the office of "Preceptor of Maison Dieu," which is the only remnant of that ancient establishment, and yields him about £37 a-year. The master of the parish school is paid in the same manner as other parish schoolmasters, but receives £10 from the town in lieu of a house and garden. The master of the burgh school is appointed by the magistrates and council, and receives a salary of £25 a-year, which, as well as his school itself, originated in a public subscription in 1826 and 1827. There are also in the town a Free church school, an Episcopal school, an infant subscription school, a ragged subscription school, and a number of adventure schools. There are also several congregational libraries, and there are two reading-rooms for the working-classes.

Brechin is governed by a provost, 2 bailties, a dean of guild, treasurer, hospital master and 7 councillors; and unites with Forfar, Arbroath, Montrose, and Bervie in sending a member to parliament. Small debt courts are held at Brechin on the 3d Tuesday of January, March, May, July, September, and November. The value of the burgh-property was, in 1832, £13,935; the town-house and school might be valued at about £830 more. The revenue arising from these subjects was £440, and from customs, dues, &c., £281; making a total of £721; while the expenditure was £709. The town's debts at the same period amounted to £3,284. The burgh property in 1864 was £23,856; the revenue, £3,137; the expenditure, £2,984; and the debt, £11,505. The burgh was at one time possessed of about 1,768 Scotch acres of land, the greater part of which was feued out prior to 1770. There are six incorporated crafts and a guildry. The parliamentary constituency in 1865 was 273; the municipal, 235. Annual value of real property in 1865, £11,211.

The trade of the place is chiefly confined to the manufacture of osnaburghs, sailcloth, and brown linen. The weaving of these fabrics employed about 580 hand-loomers in 1824, and 870 in 1838; but it employs very few hand-loomers now, and is done principally by power-loomers in factories. There were six factories in 1865, three of which had been erected within the previous two years; and these contained about 500 power-loomers. There are two large bleach-works here, a flax spinning-mill, a paper-work, two breweries, and two distilleries. The country around exports a considerable quantity of grain. The British Linen Company, the Royal Bank, the Union Bank, and the City of Glasgow Bank have branches here. There are weekly markets on Tuesday. A great fair for all sorts of hestial is held on the second Wednesday in June, on Trinity or Tarnty moor,—an extensive tract of pasture ground, about a mile to the north of the town, which is reserved for this purpose; and the fair is continued on the two following days. It has been a great fair from time immemorial. Other three markets are held on the moor in the months of April, August, and September. The branch railway to Bridge of Dun has been of much use; and a direct line, by way of Brechin, from Forfar to Laurencekirk, is contemplated. A weekly newspaper, called the Brechin Advertiser, is published on Tuesday. The town has a savings' bank, a dispensary, refreshment rooms for working men, a horticultural society, a total abstinence society, and various charitable institutions. Population of the municipal burgh in 1841, 3,951; in 1861, 4,720. Houses, 527. Population of the parliamentary burgh in 1861, 7,179. Houses, 782.

BRECHIN (LITTLE), a village in the parish of Brechin, Forfarshire. Population in 1841, 120.

BRECKON HILL. See Muxgo (Sr.).

BRERIACH. See BRAE-RUACH.

BRESSAY, BURRA, and QUARFF, an united parish in Shetland. Its post-town is Lerwick. Bressay comprises the islands of Bressay and Noss, lying east of the mainland opposite Lerwick. Quarff comprises a part of the mainland, extending from sea to sea between Lerwick on the north and Dunrossness on the south. Burra comprises the islands of Burra, House, Hevra, and Papa, lying west of the mainland opposite Quarff. See the articles Noss, QUARFF, BURRA, HOUSE, HEVERA, and PAPA. The island of Bressay lies between Noss and the mainland, and is separated from the latter by Bressay Sound. Its length from north to south is nearly 6 miles; and its breadth, for the most part, is between 2 and 3 miles. Its centre lies right opposite Lerwick. Its coast is rocky; and its surface is indented, tumulated, and otherwise diversified. Ander Hill on its east side, and Beacon hill near its southern extremity, are its highest grounds,—the former a ridge of at least 400 feet in altitude, and the latter a somewhat conical height of 724 feet in altitude. Bressay Sound is the rendezvous for the whale-ships on their passage to Greenland and Davis' Straits, and of the British and Continental busses employed in the deep-sea herring-fishery. These busses are decked vessels, each from 60 to 80 tons burden, and carrying from 14 to 20 hands; most of them belong to the Dutch, the Danes, and the Germans; and sometimes so many as upwards of one thousand assemble here before the 24th of June. The sound has two entries, one from the south and another from the north. "The south passage," says Edmonston, "is the one at which vessels of a large draught of water enter, and go out. Nearly at the middle where there is a rock, the harbour narrows, but it widens again into a deep bay. On account of this rock, vessels almost always moor between the middle and the south end, where indeed there is ample accommodation for a great number. The north passage is very narrow, and a rapid tide runs through it; nor are there in it, even at spring-tides, more than 18 feet of water at its deepest point. There is no dry harbour at Lerwick, as the water does not fall above 7 or 8 feet; but small sloops unload, during fine weather, at the wharfs. Bressa sound frequently affords shelter to men-of-war, and, at a small expense, might be rendered a most useful station to our North sea cruisers. In 1653 the English fleet, consisting of ninety-four men-of-war, under the orders of Admirals Deans and Monk, lay some days in Bressa sound. And in 1665 another fleet, under the Earl of Sandwich, consisting of ninety-two sail of men-of-war, spent some time in the same harbour. On the outside of the north entry lies a sunk rock called the Unicorn. When the Earl of Bothwell fled to Shetland, four vessels, under the command of Grange and Tullihardine, were despatched in pursuit of him. On the appearance of this squadron, Bothwell's ships then lying in Bressay sound, immediately got under weigh, and sailed out at the north entry, followed hard by their pursuer, whose flag-vessel, called the Unicorn, struck upon this rock, which has ever since been called the Unicorn.—There is a good harbour at Aithova. Lerwick is supplied with peats from the hills of Bressay, and the whole of Shetland with slates from its excellent quarries. The fishing on the coast of Burra is carried on at a small expense. The fishermen set their lines in the evening, and draw them in the morning. Their winter-fishings have been sometimes known to exceed their summer's. They have upon their coast a fine oyster-scalp, from which they take large rich oysters.—There are several ruins of Pictish castles in this

parish. There are also several perpendicular stones, about 9 feet high, erected no doubt for the purpose of commemorating some great event, but of which we have no account. One of them, in the island of Bressay, makes an excellent land-mark to ships coming into Bressay sound. There are remains of several chapels in Bressay. Population of the parish in 1831, 1,699; in 1861, 1,805. Houses, 315.

This parish is in the presbytery of Lerwick and synod of Shetland. Patron, the Earl of Zetland. Stipend, £153 6s. 8d.; glebe, £11. Schoolmaster's salary is £36 with fees. The parish church was built in 1815, and contains 370 sittings. There are a government church in Quarff and also a church in Burra, both under the care of a separate minister, who has a stipend of £120 and a manse and glebe. There are likewise three small dissenting chapels, Wesleyan, Independent, and Baptist. There are several private schools.

BREWERY, a hamlet in the parish of Borthwick, Edinburghshire. It derived its name from an ale-brewery, which is now in ruins.

BRIARACHAN (THE), a rivulet of Perthshire, which rises in the parish of Moulin, and, running through Glen Briarachan, forms the **AIRDLE**: which see.

BRIDEKIRK, a village in the parish of Annan, Dumfries-shire. It stands on the right bank of the river Annan, 3 miles north-north-west of the town of Annan. A stone bridge of three arches here spans the river. A large building, erected for a wool-factory, but afterwards used also for a saw-mill, stands at the east end of the bridge. A corn-mill, an endowed school-house, and a chapel of ease are in the village. The chapel was built in 1835, entirely at the expense of Mrs. Dirom of Mount-Annan and her friends, and contains 370 sittings. Population of the village in 1861, 360.

BRIDE'S BURN. See **KILBARCHAN**.

BRIDGE OF ALLAN. See **ALLAN (BRIDGE OF)**.

BRIDGE OF CREE. See **CREE-BRIDGE**.

BRIDGE OF DEE. See **DEE (BRIDGE OF)**.

BRIDGE OF EARN. See **EARN (BRIDGE OF)**.

BRIDGE OF FREW. See **KILMADOCK**.

BRIDGE OF TEITH. See **DOUNE** and **KILMADOCK**.

BRIDGE OF TILT. See **BLAIR-ATHOLE**.

BRIDGE OF TURK. See **ACHRAY (LOCH)**.

BRIDGE OF URR. See **URR (BRIDGE OF)**.

BRIDGE OF WEIR. See **WEIR (BRIDGE OF)**.

BRIDGE (WEST). See **INVERTIEL**.

BRIDGEND, a village on the eastern verge of the parish of Cardross, Dumbartonshire. It stands on the right bank of the Leven, and is a suburb of the town of Dumbarton. Population in 1861, 799. See **DUMBARTON**.

BRIDGEND, a village contiguous to Lugton in the parish of Dalkeith, Edinburghshire. See **LUGTON**.

BRIDGEND, a village in the parish of Dunse, Berwickshire. It stands near the south side of the town of Dunse, being separated from it by a bog which formerly was impassable.

BRIDGEND, a hamlet in the parish of Melrose, Roxburghshire. It stands about a mile west of the town of Melrose, adjacent to the bridge of the Edinburgh and Jedburgh highway. An ancient bridge of curious construction stood here, said to have been built by David I. to facilitate communication with Melrose abbey. It had a central tower, containing the keeper's residence.

BRIDGEND, a suburb of the city of Perth, situated on the left bank of the Tay, in the parish of Kinnoul, Perthshire. Population in 1861, 657. See **KINNOUL** and **PERTH**.

BRIDGEND, a suburb of the town of Dumfries, situated on the right bank of the Nith, in the parish of Troqueer, Kirkcubrightshire. It is now more commonly called **MAXWELLTOWN**: which see.

BRIDGEND, a village in the parish of Muthil, Perthshire. It stands on the right bank of the river Earn, adjacent to the town of Crieff. Population, 118.

BRIDGEND, a suburb of the town of Ceres in Fifeshire. Population in 1861, 518. See **CERES**.

BRIDGEND, a village in the parish of Kilarrow, island of Islay, Argyleshire. It stands at the northern extremity of Lochindaal, 3 miles north-east of Bowmore, and $8\frac{1}{2}$ south-west of Port-Askaig. A sprinkling of tile-roofed cottages occurs along the shore between it and Bowmore.

BRIDGEND, a village in the parish of Ruthven, in the valley of the Isla, on the western verge of Forfarshire. Population, 172.

BRIDGEND, a hamlet in the parish of Lintrathen, on the western border of Forfarshire. Population in 1851, 31.

BRIDGEND, a village in the parish of Rosskeen, Ross-shire. Population in 1861, 756. See **ALNESS-BRIDGE**.

BRIDGEND, a station on the Monkland branch of the Edinburgh and Glasgow railway, between Garnqueen and the Campsie junction, on the northern border of Lanarkshire.

BRIDGEND, an estate in the parish of Lochwinnoch, Renfrewshire. It takes its name from a very ancient bridge, with a remarkably fine arch, across the Calder, a little north-west of the village of Lochwinnoch. The bridge was originally very narrow, but was widened in 1814.

BRIDGEND, or **KENDROCHAD**, a village in the parish of Kenmore, Perthshire. Population in 1861, 68.

BRIDGEND (HYNDFORD), a hamlet on the right bank of the Clyde, and on the road from Lanark to Biggar, 2 miles south-east of Lanark. A modern elegant bridge here spans the Clyde. See **HYNDFORD**.

BRIDGEND (OLD), a village in the parish of Galston, Ayrshire.

BRIDGENESS, a village in the parish of Carriden, Linlithgowshire.

BRIDGETON, a village in the parish of Redgorton, Perthshire.

BRIDGETON, a suburb of Glasgow. See **GLASGOW**.

BRIECH (THE), a rivulet of the counties of Lanark, Linlithgow, and Edinburgh. It rises in the parish of Cambusnethan, runs 3 miles eastward to the point where the three counties meet, and then flows 8 miles north-eastward, along the boundary between Linlithgowshire and Edinburghshire, to a confluence with the Almond at a point about $2\frac{1}{4}$ miles east of Blackburn.

BRIERBUSH, a village in the parish of Penpont, in the near vicinity of the village of Penpont, Dumfries-shire.

BRIGHAM. See **BIRGHAM**.

BRIMSNESSE, a small headland in the parish of Thurso, 4 miles south-west by west of Holburn Head, Caithness-shire.

BRINDY HILL, a part of the lofty ridge which divides the district of Garioch from the vale of Alford in Aberdeenshire. See **ALFORD**.

BRISBANE. See **LARGS**.

BRISHMEAL, a basaltic hill, of a circular shape, on the south coast of the parish of Bracadale, in Skye. It is situated behind Talisker, and has an altitude of about 800 feet above sea-level. It greatly resembles the Scuir of Eig in both form and material, has some beautiful basalts, both columnar and reti-

culated, and commands a magnificent view of the Storr, the Cuchullin mountains, and the Inverness-shire Hebrides.

BRITISH AND IRISH UNION RAILWAY. See **AYRSHIRE**.

BRITTLE (Loch). See **SKYE**.

BROAD BAY, an inlet of the sea in the parish of Stornoway, between the Aird and the mainland of the east side of Lewis. It extends south-westward, and has a length of 8 miles with a mean breadth of about $3\frac{1}{2}$. It is unsafe for strangers, in consequence of being traversed by a sunken reef; but is serviceable to mariners who are acquainted with its navigation and anchorages.

BROADFORD, a post-office village in the parish of Strath, Isle of Skye. It stands at the head of a small bay, called Broadford bay, opposite the mouth of Loch-Carron, and 8 miles south-west of Kyleakin ferry. It contains a few common houses, two or three shops, a good inn, and the mansion of Maekinnon of Corychatachan. The peaked mountain, Ben-na-Cilliaich, with a shape like Vesuvius, soars aloft in its vicinity. Fairs are held at Broadford on the Thursday after the last Tuesday of May, on the Thursday after the third Tuesday of August, and on the Thursday after the third Tuesday of September.

BROADFORD. See **ABERDEEN (OLD)**.

BROADHAVEN. See **WICK**.

BROADLAW, a mountain in the northern part of the parish of Tweedsmuir, Peebles-shire. It belongs to the Hartfell group. It is of easy ascent, and is clothed with rich herbage. Its summit has an altitude of 2,741 feet above sea-level, and commands a sublime prospect from the English border to the German ocean.

BROADMEADOWS. See **HUTTON**.

BROADSEA, a fishing village in the parish of Fraserburgh, a little west of the town of Fraserburgh, Aberdeenshire. Population, 371.

BROCHEL CASTLE. See **RASAY**.

BROCKLEHURST (OLD), a hamlet in the parish of Mousewald, Dumfriesshire. Population in 1851, 30.

BRODICK, a district, a bay, and a post-office village in the island of Arran. The district and the bay, and also Brodieck Castle, are sufficiently noticed in the article **ARRAN**. The village stands at the head of the bay, $4\frac{1}{2}$ miles north of Lamnish, and 15 west-south-west of Ardrossan. It is a choice watering-place; it contains a number of neat residences, a spacious hotel, and a small bellfied Established church; it borrows magnificence from the noble castle in its vicinity, and from the rich, varied, superb landscape all around; and it has regular communication by steamers with Ardrossan and with Glasgow. A fair is held on the first Tuesday after the 20th of June. Population in 1851, 163.

BRODIE, a station on the Highland railway, $3\frac{1}{2}$ miles west by south of Forres.

BROLUM (Loch), an inlet of the sea, about 2 $\frac{1}{2}$ miles long, on the south-east coast of Lewis, about 8 miles east-north-east of Loch Seaforth.

BROOM, a small village in the Moy district of the parish of Dyke and Moy, Morayshire.

BROOM (Loch), a capacious bay, terminating in a narrow flexuous arm, on the north-western coast of Ross-shire. At its mouth lie Priest and the Summer islands; at its head is situated Martiu island; about half-way up the northern shore of the narrow inlet stands the village of ULLAPOOL (which see); and at the head of this inlet is the small village of Loch Broom. The country from Loch Broom northwards is destitute of trees; and, in most places, pre-

sents only barren moors and naked rocks. See **LOCHBROOM**.

BROOM (LITTLE LOCH), a sea-inlet south of Loch Broom, and separated from it by a narrow ridge.

BROOMHALL. See **CHARLESTON, DUNFERMLINE, AND CLACKMANNAN**.

BROOMHILL, a station on the Highland railway, $3\frac{1}{2}$ miles south-south-west of Grantown.

BROOMHILL. See **LOCHMABEN**.

BROOMHOLM. See **LANGHOLM**.

BROOMHOUSE, a village with a post-office in the parish of Old Monkland, Lanarkshire.

BROOMIEKNOWE, a hamlet in the parish of Heriot, Edinburghshire.

BROOMIELAW. See **GLASGOW**.

BROOMKNOLL, a suburb or street of the town of Airdrie, in the parish of New Monkland, Lanarkshire. Here is a Free church, with an attendance of 350. See **AIRDRIE**.

BROOMLANDS, a hamlet in the parish of Inchinnan, Renfrewshire.

BROOMLEE, a station on the Dolphinton railway, serving for West Linton in Peebles-shire.

BRORA (THE), a river of Sutherlandshire, springing from the south-east sides of Benchilbrick, Benvaldon, and running in a south-easterly oblique direction, until lost in the Moray frith at the village of Brora. This river and its branches are narrow and rapid; but in its lower part, it runs through a level plain, and forms three lakes,—the upper lake about a mile long and half-a-mile broad, the others of less extent. The water of the upper lake seems deep and black, from the dark shade reflected on it from the mountains, and from the rock of Carrol, a bold precipice upon the southern bank, at least 600 feet high. The scenery at Gordon-bush is very romantic and beautiful. From Killend the river runs rather rapidly over a pebbly bed for 3 miles through Strathstevan to Brora, and there it runs over rocks into the sea. Its total length of course, irrespective of minor sinuosities, is about 26 miles. Pearl-mussels have been found in its bed.

BRORA, a village with a post-office in the parish of Clyne, Sutherlandshire. It stands at the mouth of the Brora river, and on the road from Inverness to Wick, $4\frac{1}{2}$ miles north-east of Golspie. It is maintained chiefly by the working of quarries of beautiful sandstone in the vicinity, but formerly was maintained by the working of coal and the making of salt. The rocks around it possess uncommon interest to geologists, for the juxtaposition of a coal formation with granite,—the more so as that formation belongs to the epochs of the lias and the oolite. A fair is held at the village on the second Wednesday of October. Population, 482.

BROTHER ISLE, a small island off the south coast of Yell, in Shetland.

BROTHER (Loch), a lake about 3 miles in circumference, in the parish of Mearns, Renfrewshire. See **MEARNS**.

BROTHERTON, a post-office station, subordinate to Montrose, Forfarshire.

BROTLOCK (THE), a rivulet of Forfarshire. It rises on the eastern border of the parish of Kirkden, and flows 6 miles south-eastward, through the parishes of Inverkeilour, St. Vigean's, and Arbroath, to the sea at the harbour of Arbroath. See **ARBRATH**.

BROUGH, a fishing hamlet in the parish of Dunnet, 3 miles south-south-east of Dunnet-Head, Caithness-shire. A slip has been built here by the Commissioners of Northern Lights for landing their stores.

BROUGH-HEAD. See **BURGH-HEAD**.

BROUGHTON, GLENHOLM, AND KILEUCHO.

an united parish, containing the village of Broughton and the post-office station of Rachau-Mill, in the west side of Peebles-shire. It is bounded on the west by Lanarkshire, and on other sides by the parishes of Skirling, Kirkurd, Stobo, and Drummelzier. Its length north-north-eastward is $9\frac{1}{2}$ miles; and its extreme breadth is $5\frac{1}{2}$ miles. The three parishes which it comprises form a compact whole,—all traversed by streams from lines of watershed to the valley of Biggar Water and the Tweed, —Glenholm in the south, with a north-eastward descent, Kilbucho in the middle, with an east-north-eastward descent, and Broughton in the north, with a southward descent, and the mutual border of Kilhucho and Broughton, along the valley of Biggar Water, with an eastward descent. The general surface is beautifully picturesque. About 250 acres are under wood, about 5,000 are regularly or occasionally in tillage, and about 14,000 are grass land or hill pasture. GLENHOLM and KILBUCHO will be described in separate articles. Broughton does not touch Lanarkshire, but is separated from it by Skirling. Its length southward is $3\frac{1}{2}$ miles; and its greatest breadth is $2\frac{3}{4}$ miles. A lofty hill-range occupies its boundary with Kirkurd and Stobo. Its highest grounds are Pyketstane and Broughton-Hope, which have elevations of about 1,500 and 1,800 feet above sea-level. The railway from Synington to Peebles passes through the parish, and has a station in it. The drainage of the northern, central, and eastern districts is effected by Broughton burn. The sole proprietor of Broughton is Macquene of Braxfield. A fine feature of the parish is the mansion of Broughton-Place, occupying a conspicuous site, amid nobly-wooded grounds. The village of Broughton stands on the road from Edinburgh to Moffat, and on Broughton burn a little above its confluence with Biggar Water, 5 miles east of Biggar. A fair is held here on the 3d of October. Population of the village in 1851, 45. Population of Broughton parish in 1831, 299; in 1861, 297. Houses, 50. Population of the united parish in 1831, 911; in 1861, 723. Houses, 140. Assessed property in 1843, £7,433 13s.; in 1860, £8,271.

This parish is in the presbytery of Biggar, and synd of Lothian and Tweeddale. Patron, Kenny of Danevale. Stipend, £231 1s. 10d.; glebe, £64 14s. 9d. Unappropriated tithes, £249 11s. 3d. There is a parish school in each of the three parishes; and the salary of each master is £32, with fees. The parish church is in Kilbucho. It was built in 1804, and contains 500 sittings. There is a Free church, with an attendance of 250; and the yearly sum raised in connexion with it in 1865 was £132 6s. 5 $\frac{1}{4}$ d. There are a savings' bank and a friendly society.

BROUGHTY FERRY, a small sea-port and post-town, partly in the parish of Dundee but chiefly in that of Monifieth, Forfarshire. It stands on the frith of Tay, directly opposite Ferry-port-on-Craig, 4 miles east of Dundee, and $5\frac{1}{2}$ miles west of Bud-donness. In the latter part of last century, it comprised only about half-a-dozen fishermen's huts; but about the year 1790, it suddenly became a new large village. Ever since that time it has steadily increased in size and importance, as at once a fishing-station, a seat of trade, and especially a sea-bathing resort for summer visitors; and at the formation of the Edinburgh and Northern railway, it acquired vast accession to its prosperity by being made the point of that railway's communication with Forfarshire and all places to the north. The town is neat and clean; and, as seen from the Tay, with its skirt of fine villas on the rising grounds behind, it presents a very picturesque appearance.

The west end of it is called West Ferry; the east end is Broughty Ferry proper; a space which long lay vacant between these is now in the course of being edificed; and a beautiful row of villas along the beach connects the two ends. North and west of the sandy plain over which most of the houses are spread, the ground rises with some abruptness. To the east and south-east, are uneven links, stretching towards Monifieth. South-east of the town, a point of land stretches southward into the frith, which it contracts in width so as to render the ferry across to Fife shorter than any other between Errol and the sea. On this point, named Broughty Craig, long stood considerable remains of a ruined ancient fortress, called Broughty Castle, not undistinguished in history, and forming a very interesting object, with a square keep latterly used as a coast-guard signal-tower. The first transaction of importance connected with it was its occupation by the English, in 1547, after the battle of Pinkie. The party of English by whom Broughty castle was garrisoned, had scarcely secured themselves within the fortress, when they were blockaded by Arran; who sat down before it on the first of October 1547, but on the 1st of the following January, hastily raised the siege. Immediately after his departure, the English fortified the neighbouring hill of Balgillo, and ravaged great part of the county of Angus. Archibald, 5th Earl of Argyle, hearing of this, hastily collected a party of his clansmen, and led them against the English at Broughty, where he sustained a defeat; as not long after did a numerous body of French and German troops. On the 20th of Feb. 1550, both the castle and fort were taken by Des Thermes, who brought against the English in this quarter an army composed of Scots, Germans, and French. The works at both places were now dismantled; and although, at least on the castle, repairs were, perhaps more than once, bestowed, yet we find in the annals of subsequent times little of consequence recorded concerning them. What remained of the castle, at the time of the recent organization of volunteer corps throughout the kingdom, was then restored and extended by Government, at a cost of about £7,000; and the castle is now a fortress, mounted with a number of guns. The town has a post-office with money-order department and savings' bank under Dundee, a railway station, an office of the Royal Bank of Scotland, a good hotel, a quoad sacra parish church, two Free churches, and three other places of worship, United Presbyterians, Episcopalian, and Independent. One of the Free churches was completed in December 1865, and is a very handsome edifice, in the Gothic style. The Episcopalian church was built in 1859, and is also a fine Gothic structure. An obelisk of polished granite, 14 feet high, on a symmetrical pedestal, was erected in 1860 to the memory of Dr. Thomas Dick, the "Christian Philosopher," who lived many years and died in Broughty Ferry. The town has a gas-work; it is supplied with water by the Dundee water company; and, in 1863, it adopted Provost Lindsay's police act. It carries on a considerable trade; and about 100 of its families are engaged in fisheries. The valuation roll of rental, in 1865, was £16,800. Population in 1841, 1,980; in 1861, 3,513; in 1865, about 4,000. Houses in 1861, 590.

BROW, a decayed watering-place, at the influx of Lochar Water to the Solway, Dumfries-shire. See RUTHWELL.

BROWHOUSES, a village on the coast of the parish of Greta, about $5\frac{1}{2}$ miles east by south of Annan, Dumfries-shire. A hay adjacent to it affords some slight shelter from the rushing tides of the Solway.

St. Mary's Falls

BROXBURN (THE), a rivulet of Haddingtonshire. It rises in several head-streams in the parts of Lammermoor adjacent to the sources of the Whitadder, and runs about 7 miles north-eastward, through the parishes of Spott and Dunbar, to the German Ocean at Broxmouth, about a mile south-east of the town of Dunbar. In part of its course it bears the name of Spott Water. Broxmouth Park around its embouchure is a seat of the Duke of Roxburgh. In the low ground to the west of Broxmouth, Cromwell defeated the Scottish army under Leslie.

BROXBURN (THE), a rivulet of Linlithgowshire. It rises in the parish of Bathgate, and runs about 8 miles east-north-eastward, through the parishes of Ecclesmachan and Uphall, to a confluence with the Almond, about $\frac{3}{4}$ of a mile above Kirkliston.

BROXBURN, a village with a post-office in the parish of Uphall, Linlithgowshire. It stands 12 miles west by south of Edinburgh, and 30 miles east-north-east of Glasgow, on the middle road between these cities, near the banks of the Union Canal, and near the course of the Bathgate branch of the Edinburgh and Glasgow railway; and it has a station on that railway. The parochial school of Uphall is here. A cattle fair is held at the village on the Friday after the Falkirk September tryst. Population, 660.

BROXMOUTH. See **BROXBURN (THE)**, Haddingtonshire.

BRUAN, a locality on the mutual border of the parishes of Wick and Latheron, about 8 miles south-west of the town of Wick, Caithnessshire. Here is a Free church, whose total yearly proceeds in 1865 amounted to £84 2s. 9d.

BRUAR (THE), a rivulet of Perthshire. It rises among the alpine heights of the Central Grampians, in the extreme northern point of the county, and runs about 10 miles southward to a confluence with the Garry, about 3 miles west of Blair Athole. It makes a prodigious aggregate descent in the lower part of its course, and forms there a numerous, various, celebrated series of cataracts and falls. A bridge spans it a little above its mouth, taking across the great road from Perth to Inverness. A pathway leads from the end of the bridge up the right bank of the stream, and at the distance of 40 or 50 yards is barred by a gate, at the side of a picturesque cottage, where resides a woman who acts as guide to tourists and strangers coming to see the falls. Passing through the gate the traveller enters a plantation of fir and larch, which continues up to the top of the pass down which the water rushes. Through this plantation walks have been made, affording the spectator the most favourable points of view. The falls themselves present a succession of really magnificent pictures. The sides of the pass rise abruptly from the bed of the torrent, which has worn a path for itself, leaving immense rugged masses of stone overhanging the stream. The tops, and partly the sides, of the precipices are covered with fir, larch, and beech, which clothe them with a beautiful green. The Bruar rushes through this pass in an impetuous torrent, sometimes turning aside to avoid impediment, at others wearing its way through natural arches formed during long time by its own incessant force, and at others leaping over the masses of rock in falls of from 30 to 60 feet. From almost every point of view the pass presents a grand and imposing aspect. Seen from the bottom, the long succession of cataracts looks interminable; and from the summit you have a splendid view of the whole pass, the quiet country and blue hills beyond forming a placid relief to the grandeur of the rushing and

roaring waters. At a short distance up the pass, where the pathway is led across it by a bridge, a little grotto is placed, through an aperture in which you obtain a very beautiful and striking view both above and below. This is lined with the fragrant heather and the foliage of the birch; and seats are placed for the visitors, who are glad of a rest after having toiled up from below. Higber, on the other side, is another grotto, from which you get a view of the topmost series of cataracts, the fall of which is very great. Formerly the sides of the falls were not, as they now are, adorned with trees. The fir, beech, and larch, and other alpine trees, which are now there, were planted by the late Duke of Athole, and the current belief is that he did so in compliance with the well-known "Petition" of Burns. Whether we are indebted to the poet for the plantation or not, certain it is that now, in the words of Burns,—

"Lofty firs and ashes cool,
The lowly banks o'erspread,
And view deep-bending in the pool
Their shadow's watery bed!
Here fragrant birks in woodbines dress,
The craggy cliffs adorn,
And for the little songster's nest,
The close embowering thorn."

The Queen and Prince Albert visited the falls of Bruar in the autumn of 1844, during their sojourn at Blair Athole. Her Majesty was drawn up the greater part of the pathway in her garden chair, as the fatigue would have been too great of ascending to such a height. Lord Gleuylon acted as guide, and pointed out the beauties of the place to the royal visitors. Her Majesty was drawn in her chair up the pathway to the first bridge, where the grotto affords a beautiful panoramic view of the waterfall, and she then proceeded across the bridge to the right side of the pass (as you go up), and ascended beyond the second grotto up to the very top of the pass, further indeed than visitors are generally taken by the ordinary guides. Her Majesty and the Prince expressed the utmost admiration of the beauty of the scenery. They could seldom have seen the falls to greater advantage, owing to the heavy rains having swollen the Bruar to far more than its ordinary volume of water in summer weather.

BRUCEHAVEN, a harbour in the parish of Inverkeithing, adjacent to the village of Limekilns, Fifeshire.

BUCKLAW, a village $4\frac{1}{2}$ miles north of Strichen, in Aberdeenshire. It has a post-office under Mintlaw, and a station on the Buchan railway.

BRUIACH (LOCH), a lake, about 2 miles long and 1 mile broad, in the parish of Kiltarlity, upwards of 4 miles west of the church of that parish, Invernessshire. It has a small island in its middle, and abounds in trout and char.

BRUNSTANE. See **PENICUIK**.

BRUNSWARK, BURNSWARK, or BIRRENSWARK, an isolated and conspicuous hill, on the north border of the parish of Hoddam, 8 miles north of Annan, Dumfriesshire. It has an altitude of 740 feet above sea-level, and is famous for two rectangular caucampments—still very entire—the formation of which is ascribed to the Romans under Agricola. There is a plan of them in Gordon's *Itinerarium Septentrionale*, Plate I. From this hill the great military roads diverge in every direction, through the southern parts of the kingdom. The summit of the hill commands an extensive and very beautiful prospect. On the north the view is confined, and the country barren; to the west, all the valley is washed by the Annan, and lies open from

Moffat to the Solway frith; on the east, you penetrate far into the wilds of Northumberland, about the heads of south Tyne; all the low country of Cumberland lies full before you, gradually rising from the frith, till the scene terminates in the romantic falls of Keswick, among which the lofty Skiddaw, towering pre-eminent, forces itself on your attention. The lowering Criffel, on the Scottish side, shuts up the prospect of the less level country about Dumfries. The frith of Solway adorns the middle of the plain, and greatly brightens the prospect. Appearing at first as a moderate river, it gradually spreads out to your view; in some places sending its waters far into the country, which seem detached like lakes; proceeding on, it widens along the plain, and expands to a sea. See HODDAM.

BRUNTISLAND. See BURNTISLAND.

BRUNTON, a village in the parish of Criech, about 5 miles east of Newburgh, Fifeshire. Population, 90.

BRUNTON TOWER. See MARKINCH.

BRUNTWOOD (LOCH). See GALSTON.

BRYDEKIRK. See BRIDEKIRK.

BUACHAIL-ETIVE. See ARDCHATTAN.

BUCCLEUCH, an ancient parish now comprehended in the parish of Etrick, Selkirkshire. It is 13 miles west by south of Hawick. Buccleuch gives the title of Duke to the ancient and illustrious family of Scott. In 1663, the Duke of Monmouth, marrying Anne, Countess of Buccleuch, and assuming her name, was created Duke of Buccleuch, and the countess was at the same time created Duchess of Buccleuch. See ETRICK.

BUCHAN, a district of Aberdeenshire, extending along the coast, from the Ythan nearly to the Deverou, a distance of above 40 miles. In length from north to south it is about 27 miles, and from west to east about 28; superficial area 450 square miles. It is divided into 21 parishes, of which 13 are in the district of Buchan Proper, sometimes called Deer; and 8 are in what is frequently called the Ellon district. The principal elevation is Mormond hill, altitude 810 feet. The prevailing rock is granite. Peterhead and Fraserburgh are the principal towns. Buchan once formed a county of itself, and an earldom which was vested in the chief of the Cummins, until their forfeiture in 1309. The modern peerage of Buchan was created in 1469, and belongs to the noble family of Erskine, whose seats are Kirkhill and Amondell in Linlithgowshire, and Dryburgh Abbey in Berwickshire. Population of Buchan in 1831, 30,475; in 1861, 41,251. Houses, 7,294.

BUCHAN (BULLERS OF). See BULLERS OF BUCHAN.

BUCHANAN, a parish in the western extremity of Stirlingshire. It does not contain any post-office station, but reaches on the south-east to the near vicinity of the post-town of Drymen. It is bounded on the north by Perthshire and Loch Kairine; on the east by Perthshire and the parish of Drymen; on the south by Dumbartonshire, from which it is separated by the Endrick river; and along the whole of its western side by Loch Lomond. It has been reckoned 24 miles long, and 6 in extreme breadth. One head-branch of the Forth has its source in the upper end of this parish, in a small burn which runs down Glengouli into Glendow, and by the addition of several burns in the latter glen, is considerably increased. At the lower end of the glen—which begins at the root of Benlomond, and extends 5 or 6 miles east—it is called the water of Dow, and below that the water of Duchray. See FORTH (THE). The Endrick, on the southern boundary, flows in beautiful curves through fertile haughs,

and falls into the lower part of Loch Lomond. This river, in the winter-season, when the loch is full, occasionally covers a part of the lower grounds on both sides, in the parishes of Buchanan and Kilmarnock. In 1782, its haughs were covered with water, and immediately after, there came snow and intense frost, so that in some places people walked on the ice above the standing corn. The Grampians project into this parish, and occupy a large proportion of its central and northern districts. There is one pretty high hill in the lower part of the parish called the Conic hill; but the highest elevation is Benlomond, in the upper end of the parish. See BENLOMOND. Though Loch Lomond cannot be said to belong to any one parish, yet as the parish of Buchanan extends 16 or 17 miles up the side of the loch, and several of the islands make a part of it, the greater share of the loch may be assigned to the parish of Buchanan. See LOCH LOMOND, INCH-CAILLIACH, INCH-MURRIN, INCH-FAD, INCH-CRUIX, and INCH-TORR. In the lower end of the parish, on a small tributary of the Endrick, is the house of Buchanan. This place, for many centuries, belonged to Buchanan of that ilk, and was the seat of that ancient family, but was purchased in 1632 by the noble family of Montrose. It was totally destroyed by an accidental fire in January, 1850, while the Duke and family were absent. At Inversnaid, in the upper part of the parish, there was a fort built near midway between Loch Lomond and Loch Katrine; the design of which was to guard the pass between the two lochs. See INVERRNAID. In Craigrostan there are several caves known by the names of the most remarkable persons who used to frequent them. About ten-elevenths of the entire area of the parish are either waste land or upland pasture. The total yearly value of raw produce was estimated in 1841 at £10,754. Assessed property in 1860, £6,710. There is a chemical work at Balmaha. Much facility of communication is enjoyed by means of the steam-boats on Loch Lomond. Population in 1831, 787; in 1861, 705. Houses, 127.

This parish is in the presbytery of Dumbarton, and synod of Glasgow and Ayr. Patron, the Duke of Montrose. Stipend, £156 12s. 8d.; glebe, £10. Schoolmaster's salary, £50. The church is situated about 3 miles from the south-eastern, and 18 from the north-western boundary of the parish. It was repaired in 1828; sittings 300. The minister officiates twice a-year at Rowardennan, and once a-year at Inversnaid. There are a Society school at Salloch, and a private school at Inversnaid. This parish was formerly called Inch-Cailliach, the name of an island in Loch Lomond, on which the parish-church stood till the year 1621, when a considerable part of the parish of Luss—at that time extending on this side of the Loch—was annexed to the parish of Inch-Cailliach. Some years after this annexation, the walls of the church in Inch-Cailliach falling, and the people likewise finding it by no means convenient, especially in stormy weather, to be crossing over to the island every Sabbath, worship was performed in a church near the house of Buchanan, which was originally a chapel of ease to the parish of Luss. From this chapel—which was called the church or chapel of Buchanan—the whole united parish came by degrees to be called the parish of Buchanan.

BUCHANHAVEN, a fishing-village in the parish of Peterhead, half-a-mile north of the town of Peterhead, and within the parliamentary burgh boundaries of that town, Aberdeenshire.

BUCHANNESS, a promontory 3 miles south of Peterhead, on the east coast of Aberdeenshire. It

is the most easterly point of the Scottish mainland. A lighthouse stands on an islet in its vicinity, flashes once in every five seconds, and is seen out at sea at the distance of 16 nautical miles. See PETERHEAD and BODDAM.

BUCHANSTONE, a station on the Great North of Scotland railway, 1 mile north-west of Oyne.

BUCHANTY, a small village on the river Almond, in the parish of Fowlis-Wester, Perthshire.

BUCHANY, a village $\frac{3}{4}$ of a mile north-west of Doune, in the parish of Kilmadock, Perthshire. Population, 113.

BUCHARIN. See BOHARM.

BUCHLYVIE, a village on the western border of the parish of Kippen, Stirlingshire. It stands on the road from Stirling to Dumbarton, 4 miles north-north-east of Balfour, and has a railway station $15\frac{1}{2}$ miles west of Stirling. It is a burgh of barony. Fairs are held on the second Tuesday of February, on the second Tuesday of March, old style, on the 26th day of June, on the last Tuesday of July, old style, and on the 18th day of November. The village has three places of worship,—a chapel of ease, built in 1836, and containing 352 sittings,—a Free church, whose total yearly proceeds in 1865 amounted to £51 6s. 5 $\frac{1}{2}$ d.,—and an United Presbyterian church, built in 1751, and containing 554 sittings. Population, 339.

BUCK OF CABRACH. See AUCHINDOIR.

BUCKHAVEN, a large fishing-village with a post-office in the parish of Wemyss, 2 miles south-west of Leven, and $4\frac{1}{2}$ north-east of Dysart, Fifeshire. It consists of a group of cottages, apparently scattered at random over a steep ascent from the shore, and thickly interspersed with boats, oars, nets, anchors, dungsteads, and the other accompaniments of a fishing-village. With the exception of a few weavers, the inhabitants are all engaged in catching or retailing fish, and are proverbially industrious and expert at their calling. They have not a few peculiar traits of character and appearance, and are said to be descended from the crew of a Brabant vessel which was wrecked on this coast in the reign of Philip II. They were severely satirised, upwards of a century ago, in a pamphlet entitled 'History of the College of Buckhaven, or the Sayings of Wise Willie and Witty Eppie.' Defoe says respecting Buckhaven, "It is inhabited by fishermen, who are employed wholly in catching fresh fish every day in the firth, and carrying them to Leith and Edinburgh markets. The buildings are but a miserable row of cottages; yet there is scarce a poor man in it; but they are in general so very clownish, that to be of the college of Buckhaven is become a proverb. Here we saw the shore of the sea covered with shrimps like a thin snow; and as you rode among them, they would rise like a kind of dust, and hop like grasshoppers, being scared by the footing of the horse. The fishermen of this town have a great many boats of all sizes, which lie upon the beach unrigged, ready to be fitted out every year for the herring-season, in which they have a very great share." The value of the boats and nets, presently belonging to this industrious colony, is supposed to exceed £20,000. An United Presbyterian congregation has been in existence here for half-a-century. The church accommodates 600, and is usually well-attended by the fishermen, excepting about seven weeks in July and August during the herring-fishery. A new pier and harbour has recently been formed here under the auspices of the Board of Fisheries. Population in 1841, 1,526; in 1861, 1,965.

BUCKHOLMSIDE, a village in the parish of Melrose, Roxburghshire. It stands on Gala Water,

and is a suburb of the town of Galashiels. Population in 1851, 396. See GALASHIELS.

BUCKIE, a large fishing-village with a post-office in the parish of Rathven, 4 miles east of Speymouth, and 5 west by south of Cullen, Banffshire. Buckie burn descends from uplands on the south side of the parish, runs about 5 miles northward, and then bisects the village just before falling into the sea. The section of the village on the west side of the burn, is called Nether Buckie, and has been a fishing-station for about two centuries; the other section is called Easter Buckie, and was probably founded a good deal later. They belong to two different proprietors,—the burn being a boundary between two estates. The village has an office of the North of Scotland Bank. Here also are a chapel of ease, containing 800 sittings; a Free church, whose total yearly proceeds in 1865 amounted to £181 16s.; an Episcopalian chapel, containing 200 sittings; and a Roman Catholic chapel, containing 400 sittings. The harbour at the village is used principally by the fishermen, but serves also in summer for the landing of coals and salt. The number of fishing-boats belonging to this place in 1842 was 117 large and 28 small. Population in 1841, 2,165; in 1861, 2,798. Houses, 526.

BUCKIE-DEN. See LUNAN.

BUCKLERHEAD, a hamlet in the parish of Murroes, Forfarshire.

BUCKLYVIE. See BUCHLYVIE.

BUCKNY (THE). See CLUNY.

BUDDON BURN. See MONIFIETH.

BUDDONNESS, the promontory on the north side of the entrance of the frith of Tay. It is in the parish of Barrie, Forfarshire. See BARRIE and TAY (THE).

BUDDO-ROCK, a dangerous rock, in St. Andrew's bay, about 2 miles from the beach, on the east coast of Fifeshire.

BUITTLE, a parish, containing the village and port of Palnackie, on the seaboard of Kirkcudbrightshire. It is bounded on the south by the bay of Orchardton, and on other sides by the parishes of Rerrick, Kelton, Crossmichael, Urr, and Colvend. Castle-Douglas, situated about $1\frac{1}{2}$ mile beyond the north-western boundary, is the post-town. The length of the parish southward is about 10 miles; and the average breadth is about 3 miles. A small stream, terminating in a little estuary, forms the boundary with Rerrick; and the lower part of the river Urr, down to its mouth, forms the boundary with Colvend. The surface of the parish is unequal, but the hills are not of great height; they are covered with verdure, and most of them exhibit marks of tillage to the very top. The soil is fertile. The average rent of arable land varies from 15s. to 30s. per acre. There are 15 considerable landowners, 7 of whom are resident. Nearly 1,000 acres are under wood. The coast abounds with fish of all kinds. Rock crystal, tale, and spar, are frequently met with; iron-ore is plentiful; and granite has been extensively quarried. Buittle-castle, on the west side of the Urr, is a considerable ruin; the ditches and vaults which still remain show it to have been a place of great extent and strength. When Galloway was an independent state, this was a considerable fortress; and it seems to have been the favourite residence of John Baliol. After belonging to the Baliols, the Cummings, and the Douglasses, it appears to have become the property of the Lennoxes of Caillie. It now belongs to Murray of Broughton, the representative of the Caillie family. There is a vitrified fort on the top of one of the hills. Population in 1831, 1,000; in 1861, 1,165. Houses, 193. Assessed property in 1860, £9,020.

This parish is in the presbytery of Kirkcudbright and synod of Galloway. Patron, the Crown. Stipend, £231 6s. 2d.; glebe, £20. Unappropriated tithes, £312 2s. 5d. There are two parochial schools, the masters of which have conjointly a salary of £69 17s. 6d., with about £25 fees. The church was built in 1819, and contains 400 sittings. The former church was a very ancient building, and now forms a picturesque ivy-clad ruin. There is one private school.

BULAY (THE GREATER and the LESSER), two islets about 2 miles off the southern coast of Skye.

BULLERS-BUCHAN, a small fishing village in the vicinity of the Bullers of Buchan, Aberdeenshire. Slain's Castle is in the neighbourhood. Population of the village, 91.

BULLERS OF BUCHAN, a singular group of rocks and sea-caves, in the parish of Cruden, Aberdeenshire. "Upon these rocks—those of Dun Buy—there was nothing that could long detain attention," says Dr. Johnson, "and we soon turned our eyes to the Buller, or Bouillior of Buchan, which no man can see with indifference who has either sense of danger or delight in rarity. It is a rock perpendicularly tubulated, united on one side with a high shore, and on the other rising steep to a great height above the main sea. The top is open, from which may be seen a dark gulf of water, which flows into the cavity through a breach made in the lower part of the enclosing rock. It has the appearance of a vast well bordered with a wall. The edge of the Buller is not wide, and to those that walk round, appears very narrow. He that ventures to look downwards, sees that if his foot should slip, he must fall from his dreadful elevation upon stones on one side, or into the water on the other. We, however, went round, and were glad when the circuit was completed. When we came down to the sea, we saw some boats and rowers, and resolved to explore the Buller at the bottom. We entered the arch which the water had made, and found ourselves in a place which—though we could not think ourselves in danger—we could scarcely survey without some recoil of the mind. The basin in which we floated was nearly circular, perhaps 30 yards in diameter. We were enclosed by a natural wall rising steep on every side to a height which produced the idea of insurmountable confinement. The interception of all lateral light caused a dismal gloom: round us was a perpendicular rock,—above us the distant sky,—and below an unknown profundity of water. If I had any malice against a walking spirit, instead of laying him in the Red sea, I would condemn him to reside in the Buller of Buchan. But terror without danger is only one of the sports of fancy,—a voluntary agitation of the mind that is permitted no longer than it pleases. We were soon at leisure to examine the place with minute inspection, and found many cavities, which, as the watermen told us, went backward to a depth which they had never explored. Their extent we had not time to try; they are said to serve different purposes. Ladies come hither sometimes in the summer with collations, and smugglers make them store-houses for clandestine merchandise. It is hardly to be doubted but the pirates of ancient times often used them as magazines of arms or repositories of plunder. To the little vessels used by the Northern rowers, the Buller may have served as a shelter from storms, and perhaps as a retreat from enemies; the entrance might have been stopped, or guarded with little difficulty, and though the vessels that were stationed within would have been battered with stones showered on them from above, yet the crews would have lain safe in the caverns."

BULLION'S WELL. See ECCLESMACHAN.

BUNAVOULINS, a post-office station, subordinate to Oban, Argyleshire.

BUNAWA, a village with a post-office on the western verge of the parish of Glenorchy, Argyleshire. It stands on the right bank of the river Awe, immediately above its entrance into Loch Etive, 13 miles north-west of Dalnally, and about the same distance east of Oban. Here are the extensive iron works of the Lorn Furnace Company, which give employment, at some seasons of the year, to nearly 600 persons. See ARDCHATTAN. A ferry is here maintained across Loch Etive.

BUNCHREW, a station on the Highland railway, $3\frac{1}{2}$ miles west of Inverness.

BUNDALLOCH, a fishing village on the north-east shore of Lochlong, contiguous to the fishing-village of Dornie, in the parish of Kintail, Ross-shire. Both villages have a stirring character; and Dornie contains a few good houses. A well-regulated ferry maintains easy communication across Lochlong with the parish and post-station of Lochalsh. Population of Bundalloch and Dornie in 1851, 510.

BUNESS, a post-office station in the island of Unst, Shetland. See UNST.

BUNESSAN. See BONESSAN.

BUNKLE and PRESTON, an united parish in Berwickshire, bounded by Ahhey St. Bathans, Coldingham, Chirnside, Edrom, Dunse, and Longformacus. Its post-town is Dunse, situated about 2 miles from the southern boundary. Measured from near East Brockholes to the paper-mill below Chirnside mill, the parish is about $5\frac{1}{2}$ miles from north-west to south-east; and its greatest admeasurement from east to west is about $5\frac{1}{2}$ miles. Its general outline is triangular. Bunkle Edge, a southern ridge of the Lammermoor range, runs along the north-western side of the triangle, and rises to the height of about 700 feet in some points. From the south-eastern side of this ridge a number of small streams descend to Chirnside burn, a tributary of the Whitadder, which latter stream skirts the parish on the south-west and south. Copper has been wrought on the farm of Hoardweel, sometimes with profit, and at other times with loss. The superficial area of the parish is 8,900 Scots acres, of which about 6,600 are arable. The rental is about £9,000. There are 9 landowners. The total yearly value of raw produce was estimated in 1834 at £16,165. Assessed property in 1860, £9,934. The chief antiquity is BILLY CASTLE: which see. Population in 1831, 748; in 1861, 756. Houses, 135.—This parish is in the presbytery of Dunse, and synod of Merse and Teviotdale. Patron, Lord Douglas. Stipend, £279 15s. 1d.; glebe, £20. Schoolmaster's salary, now is £55, with about £26 fees. The church was built in 1820, and contains 400 sittings.

BURDIEHOUSE, a hamlet in the parish of Liberton, Edinburghshire. It stands on a hurn of its own name, and on the road from Edinburgh to Peebles, $3\frac{1}{2}$ miles south of Edinburgh. The name is supposed to be a corruption of Bordeaux-House, and to have originated either with Queen Mary's French attendants in 1561, or with Protestant refugees from France after the revocation of the edict of Nantes in 1685. This place is celebrated for its limekilns, which manufacture about 15,000 holls of lime annually. There is an immense deposit of limestone rock here, which has attracted much attention from geologists, on account of the fossil remains contained in it. In 1833, a quantity of the hones, teeth, scales, and apparently part of the muscles of what was conjectured to have been a huge species of reptile were discovered here: the scales retaining their lustre,

and the bones their laminated and porous appearance. These formed the subject of several communications to the Royal Society of Edinburgh, by Dr. Hihbert, who, in his earlier papers, described them as remains of reptiles. In 1834, at the meeting of the British Association in Edinburgh, these fossils—which by this time had excited great interest amongst naturalists—were shown to M. Agassiz. This gentleman immediately doubted their reptilian character, and advanced the opinion that they belonged to fishes,—to that family of Ganoid order which he had denominated Sauroid, from their numerous affinities to the Saurian reptiles, and which have as their living type or representative the Lepidosteus. But of the truth or fallacy of this opinion no positive evidence could be adduced, for the scales and the teeth had never yet been found at Burdiehouse in connexion. A few days afterwards, M. Agassiz, in company with Professor Buckland, visited the Leeds museum, where he found some fine fossils presenting the same scales and the same teeth as those of Burdiehouse, conjoined in the same individual. It is therefore no longer a conjecture that they might belong to the same animal. And in these self-same specimens we have the hyoid and branchiostic apparatus of bones (a series of bones connected with the gills, an indubitable character of fishes); it is therefore no longer a conjecture that the Burdiehouse fossils were the remains of fishes and not of reptiles. Thus was dissipated the illusion founded on the Burdiehouse fossils that Saurian reptiles existed in the carboniferous era. To this animal M. Agassiz assigned the name of Megalichthys.

BURDIEHOUSE BURN, a rivulet of Edinburghshire, which rises on the northern shoulders of the Pentland Hills in the parish of Colinton, runs $3\frac{1}{2}$ miles eastward to Burdiehouse, and 5 miles thence north-eastward to the frith of Forth between Joppa and Fisherrow.

BURG. See **KILFINICHEN**.

BURGEE. See **RAFFORD**.

BURGH-HEAD, a promontory and a village, with a sea-port and post-office, in the parish of Duffus, Morayshire, 8 miles north-west of Elgin, and 18 miles, by sea, east of Cromarty. The promontory projects north-westward about three-fourths of a mile from the adjacent coast-line, rising at first with a very slight ascent from the contiguous low country, but terminating in a round hill which attains an altitude of 80 feet or upwards above sea-level, and has a precipitous and rocky sea-front. There are on this hill vestiges of an ancient fortification which was long supposed to have been a Danish burgh, but was proved, between 40 and 50 years ago, by the discovery of a Roman bath and a Roman piece of sculpture, to have been Roman; and it seems highly probable that this promontory is the Ultima Ptoroton mentioned by Richard of Cirencester. The village stands on the south-west slope of the promontory. It is laid out on a regular plan, and the houses are substantially built of freestone, and slated. It is the principal herring-fishing station in Moray. There is also a salmon-fishery here. The harbour consists of a basin about 200 yards long and 50 yards wide, the entrance fronting westward or towards Cromarty. This basin or artificial harbour, was completed in the summer of 1809, and has been found very useful, especially as a station for passage-vessels which keep up a communication with the Little Ferry in Sutherland, distant about nine leagues. Trading-vessels also ply to distant ports, and the Leith and Inverness steamers call here. The village is much frequented in summer as a watering-place; it com-

municates with the Highland railway by a branch to it at Alves, and it has a suit of baths, an excellent inn, a public reading-room, commodious and comfortable lodging-houses, and healthy, agreeable sea-walks. It has also a Free church and an United Presbyterian church; and the yearly sum raised in connexion with the former in 1865 was £209 19s. 2½d. Population of the village, 1,099.

BURGH-HEAD, in Wigtonshire. See **BOROVON-HEAD**.

BURLEIGH CASTLE, an ancient edifice about $\frac{1}{4}$ of a mile south-east of the village of Milnathort, in the parish of Orwell, Kinross-shire. It is now incorporated with the out-buildings of a farm-stead; but a great part of the exterior walls is still entire. It seems to have originally formed a square, surrounded by a wall and ditch. The western side of this square, consisting of two towers, and an intervening curtain and gateway, still remain. The tower on the north-west angle is a large square building; that on the south-west is of a circular form, and seems to be the most modern structure of the whole. The castle was at one period surrounded with fine old trees, of which a few still linger in the immediate vicinity of the ruins, but exhibit the ravages of decay and age. At the distance of about 20 feet from the west wall of the north-western tower, there stood till recently a large hollow ash, in which Robert, only son of the 4th Lord Burleigh, found shelter and concealment, in 1707, while an outlaw for the murder of the schoolmaster of Aberdeen. After the death of his father, this hot-headed youth engaged in the rebellion of 1715, and the title was in consequence attained. Historical notices concerning Burleigh are very scanty. Sibbald tells us that the laird of Burghly was heritable crowner of Fife under Queen Mary; and that James Balfour of Burghly was clerk-register in 1565-6-7, and president of the session in 1567. Sir James Balfour informs us that James II., 'Anno nono regni sui,' gave the castle and barony of Burleigh, 'in liberam baroniam Johanni de Balfour de Balgarvie, militi;' and that James VI. honoured Sir Michael Balfour of Burleigh, son to Sir James Balfour of Montquhanny, clerk-register, and to Margaret Balfour, heiress of Burleigh, by letters patent, bearing date at Royston, in England, 7th August, 1606, with the title of Lord Balfour of Burleigh, he being then his ambassador to the Duke of Tuscany and the Duke of Lorraine. In 1644, Lord Burleigh seems to have been president of the Scottish parliament and a general of the forces. He was defeated by the Marquis of Montrose, near Aberdeen, on September 12th, 1644. He was, also, one of the committee of parliament attached to the army under General Baillie, which lost the bloody field of Kilsyth, through the dissensions of its leaders. This army was encamped near Burleigh, some time previous to that disastrous day. [See Wishart's Wars of Montrose, and Principal Baillie's interesting Letters and Journals of Affairs, between 1637 and 1662.]—About ninety years ago the castle and lands of Burleigh were purchased by General Irwin, and afterwards sold to Thomas Graham, Esq. of Kinross and Burleigh.—About a mile north of Lochleven, in this neighbourhood, are several remarkable hollows, which, from their shape, have been denominated the Ships of Burleigh. One of these is distinguished by the designation of Lady Burleigh's jointure, and tradition thus relates its story. A Lord Burleigh, it seems, had obtained in marriage a lady less enamoured than provident. Her applications for an ample settlement becoming somewhat teasing, his lordship, in rather an angry mood, desired her to attend him early next

day, when he would take her to a field not half-a-mile distant from the castle, and there settle upon her all the lands within her view. Avarice is often credulous, and it was so in this instance. The lady walked forth with elated expectations; but when, from a level road, descending a gentle slope, she was told to look round her, she beheld, with disappointed emotion, only a verdant circle of about 50 yards in diameter, finely horizoned with a lofty cope of azure. Additional interest is given to this place by its wholly consisting of arable land, and by the romantic appearance of the mountains, as they sink in the distance, while you descend the sloping sides of the dell.

BURLY-GATE. See **LARGS.**

BURNBANK, a fishing village in the parish of Nigg, Kincardineshire. It has a small harbour, but only 3 or 4 boats.

BURNBRIDGE, a village in the parish of Muiravonside, Stirlingshire.

BURNESSE, a parish in the island of Sanda, Orkney. It comprises the north-west limb of the island, and is ecclesiastically united to the parish of Cross. See **SANDA** and **CROSS.** A curious tumulus, described in the 1st vol. of the Edinburgh New Philosophical Journal, was discovered here in 1824. Population in 1831, 440; in 1861, 532. Houses, 83.

BURNESSE (Loch), a lake of limpid water in the north of the island of Westray, Orkney.

BURNFOOT, a small harbour in the parish of Rerrick, Kirkcudbrightshire. See **ABBAY-BURN** and **RERRICK.**

BURNFOOT, a small harbour in the parish of Old Luce, at the head of Luce Bay, within 2 miles of the village of Glenluce, Wigtonshire. It accommodates only small vessels of less than 60 or 70 tons burden.

BURNHAVEN, a fishing village, near the mouth of the burn of Invernettie, on the north side of the bay of Sandford, in the parish of Peterhead, Aberdeenshire. It is quite modern, and was erected by George Mudie, Esq. of Meethill, who also at the cost of about £300 constructed a landing place for the fishing-boats. Population, about 120.

BURNHEAD, a small village in the parish of Penpont, Dumfriesshire. It stands within $\frac{1}{2}$ a mile of the Nith and about $1\frac{1}{2}$ mile west of Thornhill, on the road from that town to Minihive. Here is an United Presbyterian church, which was erected in the year 1800, and contains 700 sittings.

BURHOUSE, a new village in the parish of Beith, on the road from the town of Beith to Kilmarnock, Ayrshire.

BURNMOUTH, a fishing village, at the bottom of a steep ravine, in the parish of Ayton, Berwickshire. It has a station on the North British railway.

BURNS, a hamlet in the Milton section of the parish of Markinch, Fifeshire.

BURNSIDE, a village in the parish of Kettle, Fifeshire. It is of quite recent origin, and is situated a little south-west of the village of Kettle, and may be regarded as a suburb of it. Population in 1851, about 200.

BURNSIDE AND ROADSIDE, two mutually contiguous villages, forming jointly a line of cottages along the Montrose and Aberdeen highway, a short distance west of the kirktown of St. Cyrus, in the parish of St. Cyrus, Kincardineshire. Population 105.

BURNSIDE OF TORRICH, a new neat hamlet, on the estate of Mr. Mackintosh, in the parish of Nairn, Nairnshire.

BURNSWARK. See **BRUNSWARK.**

BURNTISLAND, a parish containing a town of its own name on the south coast of Fifeshire. It

lies opposite Granton; and is bounded on the south by the frith of Forth, and on other sides by the parishes of Kinghorn and Aberdour. It was anciently called Western Kinghorn, but eventually took the name of the town; and this was anciently called Bartland or Bertiland,—the modern name Burntisland being a corruption. The parish is about $2\frac{1}{2}$ miles long from north to south, and about $2\frac{1}{2}$ miles broad; and it contains about 2,900 imperial acres,—of which 90 are under wood, and between 400 and 500 are in pasture. A plain extends inward from the sea about half-a-mile, when the ground becomes abruptly and boldly hilly, and the soil of inferior quality. There are about 3 miles of coast. To the westward of the town, the shore is rocky; to the eastward, it is sandy. In the sands are excellent beds of cockles and other shell-fish. The hills on the north exhibit marks of volcanic fire. Dunearn is very like an extinguished volcano, the crater of which has been converted into a small lake. This hill rises to the height of 695 feet above sea-level, and commands an extensive and very gorgeous prospect. On the north side of the hills are basaltic columns; and on their tops are cairns and tumuli of great size. The country around Burntisland is chiefly composed of floetz rocks and alluvial strata. There is a quarry of excellent freestone; and a great extent of the parish abounds in limestone of the very best quality, in which curious fossils occur resembling those described in our article **BURDIEHOUSE.** Starlyburn, on the western boundary, produces beautiful specimens of stalactites, and incrustations of moss and wood; and it falls over a high rock amid luxuriant foliage, into the sea, making a finely picturesque cascade. There are twelve principal landowners; three of whom are resident in the handsome seats of Collinswell, Newbigging, and Grange. A sandy downs called the links lies on the east side of the town; and Craigholm, near the extremity of this, was for some years the summer residence of the Rev. Dr. Chalmers. Rosscend Castle, situated on an eminence at the west end of the town, surrounded by plantations, and overhanging the harbour, was built in the 15th century by Durie of Durie, and has passed through the hands of many different proprietors. It was long a military strength, and belonged at one time to Kirkealdy of Grange, and served at another as the head-quarters of the armed Covenanters of the circumjacent country; but has been much altered by modern additions, and now forms a striking feature in the rich scenery of the district. The ruins of a fortalice, called Knockdavie, stand on a rising-ground at Stenhouse in the north-west part of the parish. The ruins of the original parish church, bearing marks of great antiquity, stand at the village of Kirkton; and around them is a small burying-ground. There is an extensive distillery at Grange, about half a mile north of the town, and there are two corn-mills in the vicinity of the town,—one of them driven by the sea. The mill-dam, in this latter case, is a rare object of its class in Scotland—or perhaps the only one—and might be advantageously imitated in some low coast districts where there is a deficiency of fresh water power. It has been proposed also as a reservoir for cargoes of living fish, with the view of maintaining a regular supply of fresh fish during stress of weather. The following is a description of it:—"A quarter of a mile west from Burntisland Harbour, there is a creek verging inland from Rosscend Point, in an east-north-east direction. The creek is a $\frac{1}{2}$ of a mile in breadth at its entrance, and $\frac{3}{4}$ of a mile in length. Exactly about the middle of it there is a stone wall 12 feet in height and 9 feet broad, built

right across the creek, dividing it into two compartments. At two different parts of the wall, and 7 feet from the bottom, there are flood-gates 14 feet square. When the flood tide rises up to the gates, which are hung by strong hinges from the up-part, the sea presses them open and rushes through with great impetuosity, filling that part of the creek above the wall until it is level with high water mark. When the tide begins to ebb, the gates are shut by the pressure of the water within the wall trying to escape. During spring tides the ebb recedes to the entrance of the creek, so that that part of the creek inside of the wall, and which is the dam, retains water 5 or 6 feet deep, whilst the outer part of the creek towards the sea is empty. The sluice where the water passes through that drives the mill-wheel, which is at the southern extremity of the wall, is 6 feet broad, and is in general hove up about 18 inches. The sluice is about level with the cell of the flood gates. When the ebb tide has fallen 30 inches below the sluice, the mill-wheel, which is undershot, can then be set agoing. At this time of tide, should the flood have been high, there is 5 or 6 feet water above the sluice over all the extent of the dam, which is 12 acres, being more water than is sufficient to keep the mill going until the tide again comes in. Of course the mill cannot be worked during the interval the tide is in contact with the wheel, which is about 6 hours out of every 12." Population of the Kirkton of Burntisland in 1841, 251. Population of the parish in 1831, 2,366; in 1861, 3,670. Houses, 447. Assessed property in 1865, £15,278 16s. 4d.

This parish, formerly a vicarage, is in the presbytery of Kirkcaldy, and synod of Fife. Patron, the Crown. Stipend, £185 17s. 4d.; glebe, £50. Unappropriated tithes, £70 19s. 9d. Schoolmaster's salary, £26. The parochial school is also the burgh school. The parish church was built in 1592, and contains 900 sittings. The other places of worship are a Free church, an United Presbyterian church, and an Episcopalian chapel. Attendance at the Free church, 450; yearly sum raised in 1865, £526 19s. Attendance at the United Presbyterian church, from 460 to 500; at the Episcopal church, about 30. There are six private schools.

The TOWN OF BURNTISLAND is a post-town, a seaport, and a royal burgh. It stands on the road from Kirkcaldy to Inverkeithing, and at the Fifeshire terminus of the Edinburgh and Northern railway, 2½ miles west-south-west of Kinghorn, 3 east by north of Aberdeen, 4½ north of Granton, and 5½ north-north-west of Leith. It is finely situated on a peninsula, screened on the north by hills in the form of an amphitheatre, which shelter the harbour. It consists principally of two streets running parallel to each other, and terminated by the harbour on the west, but contains also some lanes. On the east are some handsome cottages for sea-bathers. The chief street is broad and spacious, and contains a number of respectable buildings. The town was fortified during the reign of Charles I., and part of the wall and east port still remain. Rossend Castle, noticed in our account of the parish, is a conspicuous object. The parish church is a substantial structure, said to have been built on the model of one of the churches of Amsterdam, and is surmounted by a dumpy unsymmetrical tower. The jail is small and incommodious, but is seldom used.

The most prominent structures of the town are those connected with the harbour and the railway. The harbour—anciently called *Portus Gratie*—is the best on the frith of Forth, being large, easily entered, and well-sheltered. Connected with it is a large dry dock, having 16½ feet water at spring-

tides, wherein a Russian ship of 1,000 tons was repaired in 1809, and also a frigate of 32 guns. Government granted £11,000 towards the improvement of the port, under the direction of trustees, and for improving the ferry betwixt this and Leith. The Duke of Buccleugh and Sir John Gladstone recently obtained an exclusive right of ferry to and from Burntisland and the southern shore of the frith, secured to them for a period of twenty-seven years, on condition of their constructing a good and efficient low-water pier capable of being used at all times of the tide by sufficient steam ferry-boats, and of maintaining three such boats for the purposes of the ferry. On Burntisland being adopted as the terminus of the railway, measures were devised for improving the harbour by forming a breakwater, by extending the east pier, and by increasing the depth of the water between the pier heads. The buildings of the railway terminus adjoin the new pier, and combine elegance of architecture with commodiousness of arrangement. Part of the railway near this passes through deep and extensive rock-cuts; and part passes over a beach which was formerly devoted to sea-bathing, and compensates for its encroachment on this by handsome staircases down to the water, and by archways for the tide. A little way down the line are a number of commodious erections which are used as a carriage and engine depot. On the east pier of the harbour is a fixed light, which is seen 7 miles off in clear weather; and in the vicinity of the railway terminus is the Forth Hotel,—a handsome edifice with all the convenience of a city establishment.

Before the Union, Burntisland had a good extensive commerce; and, in the 17th century, it carried on a considerable traffic with Holland. Tucker, however, gives a description of the place and its vicinity, which leads to the conclusion that the extent of the trade formerly belonging to it has, in the common accounts, been over-rated, by attributing to it alone what belonged to all the little ports on the coast of Fifeshire. "The trade of these ports inwards," says he, "is from Norway, the East country, and sometimes from France with wines; and outwards with coals and salt, at all times very small and worth little; for although this be the bounds of one of the best and richest counties of Scotland, yet the goodness and riches of the country arising more from the goodness and fertility of soil and lands than from any traffic, hath made it the residence and seat of many of the gentry of that nation, who have wholly driven out all but their tenants and peasants, even to the shore side." At that period, Kinghorn, Kirkcaldy, Dysart, Wemyss, Leven, Ely, St. Monance, Pittenweem, Anstruther, Crail, St. Andrews, and South Ferry were all counted as members of the head-port of Burntisland; and the tonnage of the whole was estimated at 1,291 tons, divided over 46 vessels. After the Union, the trade of Burntisland fell off, and little business of any kind was done for a long period; subsequently it again increased; but for some time back it may be considered as nearly stationary. Fewer vessels than formerly resort to the harbour as a place of shelter, probably owing to the improvement of the other harbours on the coast, and to the custom of ships running up to the Hope—a roadstead higher up the frith—in preference to taking a harbour during a storm, or while otherwise detained, to save the harbour-dues. This place was the principal rendezvous for the herring-fishery until the northern fishing-stations were opened; but cooperage and curing of herrings are now the chief branch of business here, and most of the boats employed belong to other ports of the frith. In some recent years,

there have been annually cured here, from 16,000 to 18,000 barrels of herrings. Shipbuilding is carried on to a small extent. There is a large recent foundry at the side of the links. The town has a branch office of the National bank. It has also a subscription library, a parochial library, a golf club, a total abstinence society, and some charitable funds. A fair is held on the 10th day of July. Ample communication is enjoyed by means of frequent regular ferries to Granton, and by means of the railway trains.

The town of Bertiland, or Bryntiland, belonged anciently to the abbey of Dunfermline, and was exchanged by James V., in 1541, for some lands in the neighbourhood, that he might erect it into a royal burgh. It was proclaimed as such in 1568; but a charter of erection was granted in 1541. In 1587 the different grants and charters in favour of the burgh were ratified, with consent of parliament. A charter *de novodamus* was granted by Charles I. in 1632, and ratified in 1633. The municipal constituency was only 21 in 1839, being just equal to the number of councillors under the new municipal act; in 1865, it was 118. The revenue, in 1811, was about £300; in 1838-9, £364; in 1864-5, £578. The property of the burgh consists of the three hills, the links, about an acre of arable land, the schoolhouse, town-house, and flesh-market, with some houses and fens. The debt, in 1834, was £4,150. The amount of cess annually raised varies from £11 to £12 on land, and £4 to £5 on trade. The burgh joins with Kinghorn, Kirkcaldy, and Dysart, in sending a member to parliament. The parliamentary constituency in 1852 was 72; in 1865, 143. The town has been well supplied with excellent water since 1803. Population of the municipal burgh in 1841, 1,572; in 1861, 2,595. Houses, 272. Population of the parliamentary burgh in 1861, 3,143. Houses, 346.

Agricola, the Roman general, on crossing the Forth into Fifeshire, is thought by some to have landed at Burntisland. The General Assembly met here in 1601, when James VI. attended, and reswore the solemn league and covenant. The inhabitants of Burntisland were zealous Covenanters, and made a powerful stand against Cromwell; and when at length compelled to surrender their town to that general, they exacted from him the stipulation that he would repair its streets and harbour, which he faithfully fulfilled. In 1715, the Earl of Mar's forces occupied this town. In 1746, a large body of Hessians were encamped here. Burntisland gave the title—now extinct—of Baron to the family of Wemyss.

BURNTSHIELDS. See **KILBARCHAN.**

BURRA, a parish in Shetland, comprising the islands of House, Burra, Hevera, and Papa, and united to the parishes of Bressay and Quarff. See **BRESSAY.** HONSE and Burra are sometimes called respectively East Burra and West Burra. The former lies about half-a-mile from Quarff, and the latter about half-a-mile from the former; but in one place they approach so near each other as to be connected by a rude timber bridge. They have rocky shores, and consist generally of two hilly ridges from half-a-mile to a mile in breadth, and respectively 5 and 6 miles in length; but HONSE terminates on the south in a long grassy peninsula. Population of these two islands, 602.

BURRA FIRTH. See **SHETLAND** and **UNST.**

BURRAVOE, a bay, a post-office station, and the seat of a presbytery, at the south-eastern extremity of the island of Yell, Shetland.

BURRAY, a parish in Orkney, comprising the islands of Burray, Hunda, and Glenisholm, and united

to the parish of South Ronaldshay. See **RONALDSHAY.** The island of Enrray lies between South Ronaldshay and Mainland, and is separated from the former by Water Sound, a ferry of about a mile in breadth. It is $4\frac{1}{2}$ miles long from east to west, and has an extreme breadth of about $2\frac{1}{2}$ miles, but a mean breadth of only about 1 mile. Its rocks are sandstone, sand-flag, and schistose clay. The chief employment of its inhabitants is fishing. Population in 1831, 357; in 1861, 657. Houses, 101.

BURRELTON, a village with a post-office, in the parish of Cargill, on the eastern border of Perthshire. Here is a Free church; and the sum raised in connexion with it in 1865 was £84 11d. Fairs are held here on the first Tuesday of July and of November. The Scottish Midland Junction railway passes in the vicinity. Population, 459.

BURROW-HEAD. See **BOROUGH-HEAD.**

BURROW-MOOR. See **BOROUGH-MOOR.**

BURWICK, a post-office station subordinate to Kirkwall, Orkney.

BUSBY, a manufacturing village, with a post-office, partly in the parish of East Kilbride, Lanarkshire, but chiefly in the parish of Mearns, Renfrewshire. It stands on the White Cart, 6 miles south by west of Glasgow. Its chief means of support are a cotton-mill and a print-field. But there is a rich mineral field around it. The cotton-mill is in the Renfrewshire section, and has been in operation since the year 1780. There is an United Presbyterian meeting-house in the village, built in 1856, and containing 400 sittings. Population in 1861 of the Renfrewshire portion of the village 1,337; of the entire village, 1,778.

BUSH, a post-office station subordinate to Aberdeen.

BUSHYHILL, a village in the parish of Cambuslang, Lanarkshire. Most of the inhabitants are weavers, labourers, and small dealers. Population 393.

BUTE, an island in the frith of Clyde, constituting a prominent part of Buteshire. It is separated from Cowal in Argyleshire, by a very narrow channel called the **KYLES OF BUTE**: see that article. It extends in length about 16 miles, and is from 3 to 5 in breadth. The general direction is from south-east to north-west. The northern parts are rocky and barren, but the southern extremity is fertile, well-cultivated, and enclosed. The coast is rocky, and indented with bays, several of which form safe harbours. The bays of Rothesay, Kames, and Kilchattan, indent the eastern shore; those of Stravanan, Scalpsie, Ettrick, and Kilmichael, the western. Stravanan bay, and that of Kilchattan, run so far in as to make the south end of Bute an oval peninsula, in the centre of which rises Mount Blain, a hill whence a noble prospect may be enjoyed. The intervening space is a low sandy plain; and there is another low plain between Kames bay and Ettrick bay. Near the middle of the island are several small sheets of water, viz. Lochs Fad, Ascog, Quien, and Anchteery. The first of these is the most extensive and the most interesting. See **FAD (LOCH).** Pike, perch, and trout, are found in most of them. Mount Stewart, the fine seat of the Marquis of Bute, is situated on the coast, about 4 miles south-east of Rothesay. See **MOUNT STEWART.** Port Bannatyne, on the bay of Kames, $2\frac{1}{2}$ miles north-west of Rothesay, is a pleasant village, much frequented as a bathing-place. See **PORT BANNATYNE.** A little to the north of it is Kames' castle, long a seat of the Bannatynes. At Wester Kames stands another castle, formerly belonging to the Spences. At Ascog, north of Mount Stewart, was also a castle, destroyed about the year 1646 by the Marquis of Ar-

gyle. Other interesting antiquities are described in the articles *ROTHESAY*, *DUNGYLE*, and *BLANE'S (St.) CHAPEL*; and the first of these articles describes also *Rothesay*, which is the county town of Buteshire.

The climate of Bute, though rather damp, is mild and salubrious. The mean temperature from 1826 to 1835 inclusive was 50°. The annual quantity of rain is from 35 to 40 inches. The soil of a great part of the island is favourable for agriculture. The northern division consists of primary rocks—micaceous schist, clay slate, chloritic schist, and greywacke, often traversed by trap and quartz veins. The central division is chiefly composed of sandstone, and the land is low and undulating. The southern district consists of a ridgy group of hills, terminating in the promontory of Garroch Head, and consists wholly of trap rock. The intermediate valleys afford evidence in their coralline sand, clay, and sand abraded from the rocks of the secondary strata, and vegetable matter, as well as in their remarkable flatness and lowness, that the sea has flowed through them at no remote geological period. Bute is therefore connected geologically with Argyshire, by the primary rocks on the north, and with Ayrshire by the secondary strata of the south. Bute is ecclesiastically divided into the parishes of North Bute, *Rothesay*, and *Kingarth*. It gives the title of Earl in the peerage of Scotland, and Marquis in the peerage of the United Kingdom, to a branch of the family of Stewart, who is proprietor of greater part of the island, and whose seats, besides Mount Stewart, are *Dumfries-House* in Ayrshire, and *Cardiff Castle* in Wales. The earldom was created in 1703, and the marquise in 1796. Population of the island in 1831, 6,830; in 1861, 9,483. Houses, 985.

The western islands of Scotland, and the islands of *Man*, *Shetland*, and *Orkney*, appear to have been frequently infested by armies of Scandinavians, from the year 738 till about the year 875, when those islands fell under the dominion of Norway, to which they in general remained subject, with little interruption, for many ages. Bute and its neighbouring islands formed a subject of frequent dispute between the Scots and the Norwegians, if not during the whole time that the power of the latter subsisted in these countries, yet for a long period before the *Ebude* or *Western isles* were ceded to the Crown of Scotland. By their situation, so near the heart of the Scottish kingdom, descents could be made from them by the one power upon the territories of the other. They were, in this view, more particularly important to the Norwegians; as they could, from hence, more easily annoy the Scots, than from any other place where they had a regular established footing. Accordingly, it appears from monuments whereof vestiges can still be traced out, that great solicitude was shown to defend the island of Bute. The castle of *Rothesay* was a stronghold of such antiquity that neither record nor tradition seem even to offer a conjecture as to the time of its original erection. *Malcolm II.* made a grant of Bute sometime before the year 1093, to *Walter*, the first Lord-high-steward, who gave it to a younger son, with whom and his posterity it remained about a century, when it was re-annexed to the patrimony of the Lord-high-steward, by the intermarriage of *Alexander Stewart*, with *Jean*, daughter and heiress of *James, Lord of Bute*. In 1228, *Husbec*, or *Ospac*, the feudatory King of the Isles, laid siege to the castle of *Rothesay*; but, being bravely repulsed, was killed in the course of the enterprise, and his people were obliged to retire after suffering a considerable diminution of their number. *Olave*, his successor, procured from the Norwegian monarch a fleet and army, wherewith he proceeded against

Dungad, who had set himself up as a competitor in the Isles, and having seized upon his person at *Kiarara*, near the sound of *Mull*, he from thence came to Bute with 80 ships, and laid siege to *Rothesay* castle. The garrison defended it bravely; and, by various methods, destroyed about 300 of the besiegers; but the force of the Norwegians and islanders was so great, that, after persevering some time, they took the castle by sapping, and found in it a rich booty. How long after this Bute remained subject to the Norwegians is not precisely known. When *Haco* of Norway invaded Scotland in 1263, this and the other islands in the frith of *Clyde* were in the hands of the Scots. These isles he reduced; but being defeated at *Largs*, the whole Western isles were soon afterwards ceded to *Alexander III.*, King of Scotland. In the fatal battle fought at *Falkirk* betwixt the English and Scots, in 1298, the men of Buteshire—known at that time by the name of the Lord-high-steward's *Brandanes*—served under *Sir John Stewart*, where they were almost wholly cut off with their valiant leader. *Edward* of England having obtained possession of Bute, kept it until 1312; when *Robert Bruce* took the castle of *Rothesay*, and recovered the island. Thither *Edward Baliol* came in person, anno 1334, took the castle, and strengthened its fortifications. It was, however, soon retaken by the faithful *Brandanes* of the Lord-high-steward, and this was one of those occurrences which first gave a favourable turn to the affairs of King *Robert Bruce*. Next year the King of England took an opportunity of repaying the *Brandanes* with usury, the ills they had done him. With a view to the extending and securing his conquests in Scotland, he fitted out a fleet from Ireland, consisting of 56 ships. The most signal service, however, which they did, was to lay waste Bute and *Arran*. On the death of *David Bruce*, in February, 1371, he was succeeded by his nephew, *Robert*, the Lord-high-steward, afterwards King *Robert II.*, from whom the noble family of Bute is lineally descended. *Robert III.*, son to the former, fixed his residence in the castle of *Rothesay* during the latter part of his life, and died there on the 29th of March, 1406. *James V.* had also resolved to make this place a residence, and took some steps towards putting the castle into proper order for his accommodation; but the troubles of his reign, and his death, which happened at an early period of his days, prevented this place from again becoming a royal residence. The island suffered much afterwards from factions which disturbed the public peace, or from the inroads of neighbouring clans. *Cromwell* in his time garrisoned the castle of *Rothesay*; and to this island the unfortunate *Archibald, Earl of Argyll*, came with his army in May, 1685, when he had engaged in concert with the *Duke of Monmouth* to invade the kingdom. The Earl brought with him from *Holland* three small ships laden with arms for 5,000 men, 500 barrels of gunpowder, a number of cannon, and other implements of war. He ordered his ships and military stores to an old castle which stood on the small rock of *Eilan-greg*, near the mouth of *Loch Riddan*, opposite to the north end of Bute. There he deposited his spare arms and ammunition under the protection of his ships and the garrison of 180 men. At this time the inhabitants of Bute were plundered of almost their whole moveable property. After *Argyle* had been about ten days in Bute, having received notice that a great body of forces, with three ships of war and some frigates, were coming to attack him, he hastily retreated. The naval armament arrived, and proceeded on the 15th of June to *Loch Riddan*, where the Earl's frigates immediately struck to them and

the castle also surrendered. After removing the arms and stores into the King's ships, the naval commander caused the castle to be blown up. The Earl's army, after leaving Bute, thought only how to get to their respective homes. Argyle himself was taken prisoner at Inchinnan on the 17th of June, and being conveyed to Edinburgh, was there beheaded. Soon after, a brother of Argyle's surprised the castle, and burnt it.

The name Brandanes, it has already been hinted, was given by some ancient writers to the natives of Bute. Thus Wyntoun, speaking of the disastrous battle of Falkirk, says:

The Scottis thare slayne war in that stoure.
Thare Jhon Stewart a-pon fute,
Wyth hym the *Brandanis* thare of Bate,
And the gentil-men of Fyf
Wyth Makduff, thare tynt the lyf.
Cronykil, B. viii. c. 15, v. 44.

This might almost seem a translation of the language of Arnold Blair, chaplain to William Wallace. "Inter quos de numero nobilium valentissimus miles Dominus Johannes Senescallus, cum suis *Brandanis*, et Comes de Fyfe Macduffe, cum ejusdem incolis, penitus sunt extincti." [Relationes A. Blair, p. 2.]—"In this unfortunate battle were slain, on the Scottish side, John Stewart of Bute, with his *Brandans*; for so they name them that are taken up to serve in the wars forth of the Stewart's lands." [Comment. in Relationes, p. 36.] The term has also been extended to the inhabitants of the isle of Arran. "*Brandani*,—ita enim ea ætate incolæ Arain et Boitæ insularum vulgo vocabantur." [Boeth. Hist. Fol. 330.] The term has been understood as denoting the military tenants holding of the Great-steward. Of these 1,200 are said to have followed Sir John Stewart to the battle of Falkirk. Bowyer denominates the *Brandani de Botha*, or Brandanes of Bute, "nativi homines domini sui Roberti Stewart;" and quotes some monkish Latin rhymes, composed in honour of these faithful adherents:—

Tales *Brandani* rex cæli suscipe sanos;
Ex quibus ornantur, &c.

Still we find nothing as to the reason of the name. The only probable conjecture we have met with is that of the accurate D. Macpherson:—"The people of Bute, and, I believe also of Arran, perhaps so called in honour of St. Brendan, who seems to have given his name to the kyle between Arran and Kintyre." This Brandan, or, as the name is more commonly written, *Brendan*, was a companion of St. Columba, who held him in great veneration for his piety. He died A. D. 577. The parish of Kilbrandon, in Lorn, seems to retain his name. It is probable, that the inhabitants of Bute and Arran might be thus denominated, from the idea that they were peculiarly under the guardianship of St. Brendan. Were we assured of the sufficiency of the authority, on the ground of which the learned Camden has asserted that this worthy had his cell in Bute, we could not well hesitate as to the origin of the appellation.

BUTE (KYLES OF). See KYLES OF BUTE.

BUTE (NORTH). A recently constituted parish in the island of Bute. It comprises the northern part of the island, and was disjoined wholly from the parish of Rothesay. A description of it will afterwards be given as if it still constituted part of that parish. See the article **ROTHESAY**. Population of the parish of North Bute in 1861, 1,140. Houses, 155.

This parish is in the presbytery of Dunoon, and synod of Argyle. Patron, the Marquis of Bute.

Stipend, £150, with a manse, and £10 in lieu of a glebe. The parish church stands in the valley between Kames bay and Ettrick bay, about 1 mile south of Port Bannatyne, and $3\frac{1}{2}$ miles north of Rothesay. It is an elegant structure, and was built by the Marquis of Bute, in 1836, as an extension church. It contains about 700 sittings. There is also a Free church, the total yearly revenue of which in 1865 was £167 1s. 5 $\frac{1}{2}$ d.

BUTESHIRE, a small county in the west of Scotland. It lies wholly in the frith of Clyde, and consists of the islands of Bute, Arran, Big Cumbray, Little Cumbray, Holy Isle, Pladda, and Inchmarnock. These islands are separately described. The area of the county is about 257 square miles. The only town or royal burgh is Rothesay. The chief villages are Port Bannatyne, Kilchattan Bay, and Kerrycrov in Bute, Brodieck and Corrie in Arran, and Millport and Newtown in Big Cumbray. There are six parishes,—five of which are in the synod of Argyle, and one in the synod of Glasgow and Ayr. There are seven places of worship belonging to the Established Church, eight to the Free church, one to the United Presbyterian church, one to the Reformed Presbyterian church, two to the Scottish Episcopal church, and one to the Congregational Union. The number of parochial schools in 1834 was 10; of non-parochial schools, 30; of children attending schools, 2,354. The Sheriff and commissary courts are held every Tuesday at Rothesay. Quarter sessions are held on the first Tuesday of March, May, and August, and on the last Tuesday of October. Sheriff small debt courts are held weekly at Rothesay, and four times a-year at Brodieck and Millport. Justice of peace small debt courts are held on the first Monday of every month at Rothesay and Brodieck. The valued rent of the county in 1674 was £15,042 Scots. The annual value of real property, as assessed in 1815, was £22,541; and as assessed in 1865, £68,218. The rate of assessment for prisons is $\frac{1}{3}$ d., and for rogue-money 2d. per pound. Before the passing of the Reform Bill, Buteshire returned a member to parliament alternately with Caithness-shire; but since that time it has returned a member for itself. The parliamentary constituency was 380 in 1839, and 510 in 1865. Population in 1801, 11,791; in 1811, 12,033; in 1821, 13,797; in 1831, 14,151; in 1841, 15,740; in 1861, 16,331. Inhabited houses in 1861, 2,322; uninhabited, 82; building, 26. The number of persons committed for criminal offences in 1864 was 63. The number of persons on the poor roll in 1864 was 717. The amount raised for the poor in 1864 was £3,564.

BUTT OF LEWIS, the northern extremity of the island of Lewis. It is in north latitude 58° 35'. See **LEWIS**.

BUTTERGASK, a village in the Ardoeb district of the parish of Dunblane, Perthshire. Population about 65.

BUTTERSTONE LOCH, a small lake in the parish of Caputh, in Perthshire.

BUXBURN, a station on the Great North of Scotland railway, $4\frac{1}{2}$ miles north-west of Aberdeen.

BYRES, in the parish and county of Haddington, a barony which belonged for many centuries to the noble family of Lindsay, ancestors of the present Earl of Crawford, from whom it was acquired about the beginning of the 17th century by the Earl of Haddington. It is now the property of the Earl of Hopetoun. It is 3 miles north-north-west of Haddington. The Earl of Haddington is Baron of Binding and Byres.

BYTH. See **KING-EDWARD** and **NEWBYTH**.

C

CAAF (THE), an Ayrshire stream, a tributary of the Garnock. It rises on the boundaries of Kilbride and Largs parishes, and flows south-east through a moorish and featureless district of country, until within half-a-mile of its junction with the Garnock, a mile below Dalry, where it rushes through a deep and rocky dell, in a series of rapids, and finally forms a fine cascade above 20 feet in height. Its length of course is about 6 miles.

CABRACH, a parish partly in Banffshire and partly in Aberdeenshire. It is bounded by the parishes of Mortlach, Glass, Rhynie, Auchindoir, Kildrummy, Glenbucket, and Inveraven. Its post-town is Rhynie. The greatest length of the parish northward is 12 miles; the greatest breadth is 8 miles; and the area may be about 80 square miles. The Blackwater, a head-stream of the Deveron, rises on the southern skirts of the Banffshire division of the parish, and flows north-east till its junction with the Deveron at Dalriach; while the Deveron itself rises in the southern skirts of the Aberdeenshire portion, to the west of the Buck of Cabrach, and flows north-east through Strathdeveron. See **BLACKWATER (THE)**, and **AUCHINDOIR**. The ridge which separates the vales of these two streams is about 2 miles in breadth. The whole surface of the parish is mountainous, and the general character that of a bleak pastoral district. The landowners are the Duke of Richmond, Stewart of Lesmurdie, and Grant of Baldorney. The first of these has a deer forest in the basin of the Blackwater, and the second has a shooting-box at Lesmurdie Cottage. The real rental is about £2,776. There is a distillery at Lesmurdie, and another at Tomnavin. The parish is traversed by the road from Rhynie to Mortlach. Population in 1831, 978; in 1861, 794. Houses, 156. Assessed property in 1860, £2,978.

This parish, formerly a vicarage, is in the presbytery of Alford, and synod of Aberdeen. Patron, the Duke of Richmond. Stipend, £158 6s. 7d.; glebe, £10. Schoolmaster's salary now is £40, with about £4 fees, and a share of the Dick bequest. The parish church stands on the north border of the Aberdeenshire division, and was built in 1786, and contains 230 sittings. There is an United Presbyterian church, which was built in 1796, and contains 210 sittings. Two yearly cattle fairs are held in July and October. There are four private schools.

CADBOLL. See **FEARN**.

CADDAM, a locality where formerly was a village, now quite extinct, in the parish of Cupar-Angus.

CADDER, a parish, containing the post-office villages of Bishop's Bridge and Moodiesburn, and also the villages of Cadder, Auchenairst, Auchenloch, Chryston, Muirhead, and Mollenburn, on the northern border of Lanarkshire. It is bounded on the north and north-west by Stirlingshire and Dumbartonshire, and on other sides by the parishes of New Monkland, Old Monkland, and Barony of Glasgow. Points in its boundaries are within $\frac{1}{2}$ of a mile of Kirkintilloch, within 3 miles of Glasgow, and about 4 miles from Kilsyth, Cumbernauld, and Airdrie. Its greatest length north-westward is

about 14 miles; and its mean breadth is fully 4 miles. The river Kelvin runs 6 miles along the northern boundary. It used to overflow its banks, in time of rain, and do considerable damage; but the proprietors on the north side have confined it by a great earthen mound. The Forth and Clyde canal runs through the parish for 5 miles, in a line nearly parallel with the Kelvin. An extensive loch, which occupied the centre of this parish at the beginning of last century, was drained by a mine or drift driven a full mile in length under a hill, and, in many places, 90 feet below the surface, whereby 120 acres of fine arable ground were gained. There is another lake, partly in this parish, but chiefly in New Monkland, called the Bishop's loch, a mile in length, and one-fourth of a mile in breadth, which is at present occupied as a reservoir by the Forth and Clyde canal company. Robroystone loch lies on the western boundary. The north road from Glasgow to Edinburgh passes 4 miles through this parish, and crosses the Forth and Clyde canal about a mile east of Cadder kirk. The Kirkintilloch railway runs for about 5 miles through the eastern district; the Garnkirk and Glasgow railway runs for an equal distance along the southern side; and the Edinburgh and Glasgow railway runs nearly across the centre. There are a number of freestone quarries in the parish: the stone takes a fine polish. There are also vast quantities of whin rock, and an inexhaustible rock of limestone. Valuable ironstone likewise was recently discovered, and is extensively wrought. Some coal is wrought, but to little advantage. There are extensive beds of fire-clay. The whole face of the country is either level or but slightly undulated; yet there is a considerable variety of soils, such as light sandy till, a stiff till, deep black earth, and moss. There are many landowners; but the principal are Stirling of Keir and Cadder, Sprot of Garnkirk, Campbell of Bedlay, and Lamont of Ardnamont and Robroystone. The yearly value of the mines in the parish, in 1860, was £3,575; of the quarries, £1,465. The principal residences are the mansions of Cadder, Garnkirk, Bedlay, Robroystone, Gartloch, Springfield, Glandhall, and Gartferry. Antonius' Wall ran about 4 miles through this parish, and may still be traced in Cadder wood. In a house at Robroystone which no longer exists, Sir William Wallace was betrayed and apprehended, by Sir John Menteith. After he was overpowered, and before his hands were bound, it is said, he threw his sword into Robroystone loch. The circumstances of his apprehension are thus related by Mr. Carrick in his *Life of the hero*:—"On the night of the 5th of August, 1305, Sir William, and his faithful friend, Kerlé, accompanied by the youth before-mentioned, had betaken themselves to their lonely retreat at Robroystone; to which place their steps had been watched by a spy, who, as soon as he had observed them enter, returned to his employers. At the dead hour of midnight, while the two friends lay fast asleep, the youth, whose turn it was to watch, cautiously removed the bugle from the neck of Wallace, and conveyed it, along with his arms, through an aperture in the wall; then slowly opening the door, two men-at-arms silently entered, and, seizing upon Kerlé, hurried

him from the apartment, and instantly put him to death. Wallace, awakened by the noise, started to his feet, and, missing his weapons, became sensible of his danger, but grasping a large piece of oak, which had been used for a seat, he struck two of his assailants dead on the spot, and drove the rest headlong before him. Seeing the fury to which he was roused, and the difficulty they would have in taking him alive, Menteith now advanced to the aperture, and represented to him the folly of resistance, as the English, he said, having heard of his place of resort, and of the plans he had in contemplation, were collected in too large a force to be withstood; that if he would accompany him a prisoner to Dumbarton, he would undertake for the safety of his person;—that all the English wished, was to secure the peace of the country, and to be free from his molestation;—adding, that if he consented to go with him, he should live in his own house in the castle, and he, Menteith, alone should be his keeper;—that even now, he would willingly sacrifice his life in his defence; but that his attendants were too few, and too ill-appointed, to have any chance of success in contending with the English. He concluded by assuring Wallace, that he had followed in order to use his influence with his enemies in his behalf, and that they had listened to him on condition of an immediate surrender; but that if he did not instantly comply, the house would soon be in flames about him. These, and other arguments were urged with all the seeming sincerity of friendship; and our patriot, confiding in early recollections, and the private understanding that subsisted between them, allowed himself to be conducted to Dumbarton castle. On the morrow, however, no Menteith appeared to exert his influence, in order to prevent the unfortunate hero from being carried from the fortress; and strongly fettered, and guarded by a powerful escort, under the command of Robert de Clifford and Aymer de Valence, he was hurried to the South, by the line of road least exposed to the chance of a rescue." Population of Cadder in 1831, 3,048; in 1861, 5,948. Houses, 821. Assessed property in 1860, £5,736.

This parish is in the presbytery of Glasgow and synod of Glasgow and Ayr. Patrons, the heritors and kirk-session. Stipend, £280 8s. 5d.; glebe, £17 10s. There are three parochial schoolmasters at respectively Cadder, Chryston, and Anehenairn; and the salary of the first has become £35, with an amount of about £70 of fees,—of the second, £23 6s. 8d., with about £30 fees,—of the third, £11 13s., with about £50 fees. The parish church was built in 1830, is a slightly Gothic structure, with a neat tower, and contains 740 sittings. There is a chapel of ease at Chryston, containing about 500 sittings. There is also a Free church at Chryston: attendance, from 200 to 250; yearly sum raised in 1865, £305 15s. 4½d. There are seven non-parochial schools. The whole parish, excepting the barony of Cadder, and the Midtown of Bedlay, formerly belonged to the subdeanery of Glasgow. The bishop's land was called the Baldermonoch ward, or Monk's town; and comprehended ten townships. From this ecclesiastical tenure are derived the names of several places in the parish, such as: the Bishop's bridge, the Bishop's moss, and the Bishop's loch. After the Reformation, the temporalities of the subdeanery of Glasgow—which consisted of the parishes of Cadder and Monkland—came into the possession of the noble families of Hamilton and Kilmarnock, and were by them transferred to the college of Glasgow, for a considerable sum of money, about the year 1656. The parish of Cadder, as well as that of Monkland, availing itself of the

act 1690, by paying 600 merks Scotch to the college of Glasgow, obtained a renunciation of the right of patronage by that body; in consequence of which, the heritors and elders of the parish became the electors of the minister.

CADDON WATER, a stream of Selkirkshire. Its basin constitutes the Selkirkshire portion of the parish of Stow. The stream rises on the sheep-farm of Caddon-Head, at the northern extremity of the county, runs about 7 miles southward and south-eastward, and falls into the Tweed at the farm of Caddon-Lee. It is celebrated in song.

CADEMUIR. See PEEBLES.

CADZOW CASTLE. See AVON (THE), and HAMILTON.

CAER-, or **CAR-**, a prefix in many topographical names of Celtic or Old British origin. It means an artificial military strength, whether fort or castle. Some of the names compounded with it are descriptive, and may date back to the olden times of the Caledonian forts,—as Caerlaverock, 'the fort adjacent to the sea,' Catheart, originally Carthcart, and still popularly Carcart, 'the fort of the fertilizing stream;' but others refer to persons or parties in periods much later,—as Carluke, 'the fort of St. Luke;' Carmonnoek, 'the fort of the monks.'

CAERBANTORIGUM. See KIRKCUDBRIGHT and CAERLAVEROCK.

CAERKETAN—vulgarly *Kirkjettan*—one of the Pentland hills, with an altitude of 1,565 feet above sea-level, in the parish of Colinton, Edinburghshire.

CAERLANRIG, a tract of country, 16 miles in extreme length, and 6 miles in extreme breadth, on the south-eastern border of Roxburghshire, formerly belonging to the parish of Cavers, and now included in the recently erected parish of Teviothead. See CAVERS and TEVIOTHEAD.

CAERLAVEROCK, a parish, containing the post-office villages of Gleneapple and Bankend, four smaller villages, and part of the sea-port village or Kelton, on the coast of Dumfries-shire. It is bounded on the north by Dumfries parish; on the east by Lochar Water, which divides it from Rnthewell; and on the south and west by the Solway frith and the river Nith. It is a kind of peninsula, about 6 miles in length, and from half-a-mile to 2 miles in breadth, formed by the Nith, Lochar Water, and the Solway frith. The middle and western parts are hilly; but the part toward the east is low and level. The superficial area is 4,640 Scotch acres, and nearly the whole is arable. The high land is generally light, dry, and fertile; interspersed however with spots of wet, moorish, and shallow soil. The whole parish lies on a bed of red freestone, which is quarried in many places. The greater part of the arable ground is enclosed and well-entivated. The landowners are Maxwell of Nithsdale, Thorburn of Kelton, Douglas of Bawds, and Connel of Conheath. The real rental is about £5,827. The total yearly value of raw produce was estimated in 1835 at £14,312. The assessed property in 1860 was £5,918. There are two small harbours on the Nith at KELTON and GLENEAPPLE. The Nith and the Lochar here abound with fish, especially excellent salmon. Lochar moss, which borders with this parish, supplies the inhabitants with fuel. Near the mouth of the Nith are vestiges of a moated triangular castle, supposed by Camden to be the Caerbantorigum of Ptolemy. Several moats and Roman encampments may also be traced. But the most interesting relic of antiquity is Caerlaverock castle, situated near the shores of the Solway, about 7 miles below Dumfries, at the southern extremity of the parish. "This venerable ruin," says the writer of a very interesting notice of the castle in 'The Edinburgh

Literary Gazette for 1829,' "as to its external aspect, presents much the same appearance that it did in the days of Peunant and Grose, both of whom have given a description of it. It is triangular, or shield-like, and surrounded by a wet ditch. At two of the corners had been two round towers; that on the western angle is called Murdoch's; the other, or eastern, is demolished. The entrance into the castle-yard lies through a gateway in the northernmost angle, machicolated, and flanked by two circular towers. Over the arch of the gate is the crest of the Maxwells, with the date of the last repairs, and the motto, 'I bid ye fair.' The residence of the family was on the east side, which measures 123 feet. It is elegantly built, and has three stories; the doors and window-cases are handsomely adorned with sculpture. On the pediments of the lower story are the coats of arms and initials of the Maxwells, with different figures and devices; on the windows of the second story are representations of legendary tales; and over the third are fables from Ovid's Metamorphoses. The opposite side of the courtyard is plain. In the front is a handsome staircase leading to the great hall, which is 90 feet by 26. The surrounding scenery is highly picturesque, and described with tolerable accuracy in Guy Mannerling. To the south lies the Solway, with its waves still 'erisping and sparkling to the moon-beams;' beyond them tower the lofty mountains of Cumberland in the vicinity of the lakes. To the east is the desolate expanse of Lochar moss; and to the west the embouchure of the Nith, forming a magnificent bay, skirted on the opposite side with the woods of Arbigland, New Abbey, and Kirkconnell. On the back ground rises Criffel, the termination of a chain of irregular hills that enclose the vale of Nith like an amphitheatre. The ships, with their white sails, passing and repassing in the frith,—the monastic ruin of New Abbey, with its Waterloo monument,—and the numerous villages 'peeping from among the trees,'—form altogether a landscape, that for beauty and variety can hardly be surpassed. To the stranger we would recommend, in visiting this ancient castle, on leaving Dumfries, to take the road along the east bank of the Nith, as both the shortest and the best, passing the village of Kelton, Conheath-house, and Gluecaple; and on his return to take the eastern road by Bankend."—That the Romans possessed a station here is certain, from the remains of a camp on the hill of Wardlaw, a little to the west of the castle, but who were its masters from the 6th to the 11th century, history makes no mention. Sir Robert Douglas informs us, that Sir John Macnswell acquired the barony of Caerlaverock about the year 1220; but from a genealogy of the house of Maxwell in our possession—says the writer already quoted—probably the same cited by Grose, this castle appears to have been the principal seat of that family as early as the time of Malcolm Canmore. Herbert, the eleventh Lord Maxwell, followed the banner of Bruce, and fell in the immortal field of Bannockburn. It was in his time that the castle of Caerlaverock was besieged and taken by Edward I. in person; of which a singularly curious and minute description has been preserved in a poem written in Norman French, and composed expressly on the occasion. It is not certain how long Caerlaverock castle continued in the hands of the English after its surrender to Edward I. in July, 1300; most probably 12 or 14 years. Maitland, in his History of Scotland, says it was retaken by the Scots the following year, but was soon repossessed by the English after a very long siege. In 1355 this fortress, with the castle of Dalswinton, was taken from the English by Roger

Kirkpatrick of Closeburn, who remained faithful amidst the general defection of the nobles, and preserved the whole territory of Nithsdale in allegiance to the Scottish crown. The historian John Major says he levelled it with the ground. This, however, could not be literally true, as it continued to be inhabited by Kirkpatrick till his death in 1357. In that year the halls of Caerlaverock witnessed one of the most atrocious deeds to be found in the annals of feudal strife,—the murder of the brave Kirkpatrick by Sir James Lindsay. These two barons were the sons of the murderers of the Red Cumming, whom Bruce had poniarded for his treachery in the church of the Dominican friars at Dumfries, in 1304. No known cause of quarrel existed between them, except that Kirkpatrick, as tradition records, had married a beautiful lady to whom Lindsay was greatly attached. Lindsay expiated his crime with his life, being afterwards executed by order of David II. The castle and baronial lands of Caerlaverock again reverted to the Maxwells, and we find but little notice of it for more than two centuries. In 1425, Murdoch, duke of Albany, who was apprehended for high treason, was sent to Caerlaverock, where he remained confined in the tower, called Murdoch's tower, until he was taken back to Stirling, where he was beheaded. The Lord Maxwell was arrested with him, but liberated, and was one of the conservators of the truce with England in 1438. Robert, the next Lord Maxwell, is mentioned as having 'completed the bartizan of Caerlaverock,' and made some other repairs. He was slain near Bannockburn with King James III. in 1488. Several of these doughty barons made a conspicuous figure in the raids and truces of the borders. Robert the fifth of that name, 'made a road into England, and spoiled all Cumberland, in 1526. This celebrated statesman and warrior was taken prisoner, with his two brothers, at the rout of the Scots at Solway moss, in November, 1542, and sent to London, but ransomed next year for 1,000 marks. King James made his residence at that time in Caerlaverock castle, and was so mortified at this defeat, that he retired to Falkland, where he died of grief in about a month after. Henry VIII. was anxious to get the castles of Caerlaverock, Loehmben, and Langholm, at this time into his possession, and instructions were given to his envoy, Lord Wharton, to examine them, 'and knowe their strength and situation;' and in case either of them was tenable, he was 'earnestly to travaile with Robert Maxwell for the deliverye of the same into his majestie's hands, if with money and reward, or other large offers, the same may be obtayned.' Sir John Maxwell, son of the preceding, is the person known by the title of Lord Herries; he was a staunch adherent of Queen Mary, fled with her from Langside, and is the reputed author of a history of her reign. He was forfeited in parliament, but sentence was deferred; and though he did not die till 1594, his son John was served heir to his estates in 1563, and next year the castle of Caerlaverock again experienced the miseries of war. The Earl of Sussex, who was sent by Queen Elizabeth into Scotland with an army of 15,000 men to support King James VI. after the death of the Regent Murray, 'took and cast down the castles of Caerlaverock, Hoddam, Dumfries, Timwald, Cowhill, and sundry other gentlemen's houses, dependers on the house of Maxwell; and having brunt the town of Dumfries, they returned with great spoil into England.' Though dismantled, Caerlaverock does not appear to have been entirely ruined, as Camden, in his Britannia, written about 1607, calls it a weak house of the barons of Maxwell. Robert, first Earl of Nithsdale,

created in 1620, once more repaired the fortifications of Caerlaverock castle in 1638; and during the civil war under Charles I., he adhered to the royal cause, in which he expended his whole fortune. In 1640 the castle was attacked and besieged by the 'covenanting rebels,' under Lieutenant-colonel Home. The loyal owner resolutely defended the garrison for upwards of thirteen weeks; nor did he lay down his arms, till he received the King's letters, directing and authorizing him to deliver up that and the castle of Thrieve upon the best conditions he could obtain. From this time Caerlaverock castle ceased to be an object of contest, or even a place of habitation, as the Maxwells transferred their residence to the Isle of Caerlaverock, a small square tower on the margin of the Lochar, and near the parish church. Here Robert the second Earl of Nithsdale, commonly called the Philosopher, died in 1667. On the attainder of William, fifth Earl of Nithsdale, who joined in the rebellion of 1715, and made his escape from the tower of London, through the ingenious heroism of his wife, the estates were preserved from forfeiture, being disposed to his son in 1712; and on his dying without male issue, in 1776, they passed to his daughter, Lady Winifred, who became sole heiress to his estates; and from her they have descended to the present Maxwell of Nithsdale. Dr. John Hutton, first physician to Queen Anne, was a native of Caerlaverock, and bequeathed £1,000 for its educational benefit. Population of the parish in 1831, 1,271; in 1861, 1,248. Houses, 244.

This parish is in the presbytery and synod of Dumfries. Patron, the Marquis of Queensberry. Stipend, £177 5s. 9d.; glebe, £32. Schoolmaster's salary, £50, together with £40 from the proceeds of a bequest by Dr. Hutton. The church was built in 1781, and contains 470 sittings. There are two non-parochial schools, each aided by £20 a-year from the Hutton bequest. There is also a parochial library.

CAILM (Loch). See REAY.

CAIRN, or CARN, any locality, stream, or mountain designated from a cairn or ancient sepulchral tumulus. The name occurs also as a prefix, in composition with other descriptive words, as Carnwath, 'the cairn of the ford,'—Carnock, 'the cairn of the hill.'

CAIRN. See CAIRN-HILL and CAIRNRVAN.

CAIRN (THE), a small river of Dumfries-shire, formed by the union of three streams at Minnyhive in the parish of Glencairn, and flowing south-eastward to a confluence with the Glensland, and thence through the Cluden to the Nith. See GLENCAIRN.

CAIRNAIG, a stream of Sutherlandshire. It rises on the mutual border of the parishes of Lairg and Criech, and flows about 8 miles south-eastward and eastward to the Fleet on the sands of Torboll, in the parish of Dornoch.

CAIRNAIRC. See INVERNESS.

CAIRNAKAY, a lofty range of mountain in Banffshire, extending from Benrinnes to the glen of the Aven, and separating the lower part of the parish of Inveraven from Glenlivet.

CAIRNAPPLE, a mountain on the eastern border of the parish of Torphichen, Linlithgowshire. It is the central height of the Torphichen and Bathgate range of hills, and has an altitude of 1,498 feet above sea-level.

CAIRNAVAIN. See ORWELL.

CAIRNBALLOCH. See ALFORD.

CAIRNBEDDIE, a village in the parish of St. Martin's, Perthshire. Population in 1851, 44. Here is a circular elevated ground, about 230 feet in diameter, surrounded by a moat 30 feet wide, and said to have been the site of a castle of Macbeth. On the removing of a part of it about 35 years ago, there

were found handles of swords and a great many small horse-shoes. Tradition says that Macbeth resided here immediately before removing to the hill of Dunsinnan.

CAIRNBUG. See TRESHINISH ISLES.

CAIRNBULG, a headland, an estate, and a fishing-village, in the parish of Rathen, Aberdeenshire. The headland is situated 2½ miles south-east of Fraserburgh, and 7 miles north-north-west of Rat-tray-Head. The estate was formerly the property of the noble family of Fraser, Lord Salton, but is now the property of a branch of the family of Gordon. An old castle on it, formerly used as a mansion, is now a massive ruin of prodigiously thick walls, and, owing to the flatness of the surrounding country, makes a conspicuous appearance. The village of Cairnbulg stands adjacent to the kindred village of Inverallochy. A chapel of ease, called Inverallochy church, was recently opened here. The fishermen of Cairnbulg migrate during the period of the herring fishery to Fraserburgh. Population in 1861, 427.

CAIRNBURG. See CARNBURG.

CAIRNCHUNAIG, a mountain on the mutual border of the parishes of Kincardine and Rosskeen in Ross-shire. It has an altitude of about 3,000 feet above sea-level. Precious stones have been found on it similar to those of the Cairngorm mountains.

CAIRNCONAN, a hill on the western border of the parish of St. Vigeans, 5½ miles distant from the coast, in Forfarshire. It has an altitude of only about 550 feet above sea-level, yet commands an extensive and very rich prospect.

CAIRNDOW, a hamlet with a post-office, in the parish of Lochgoilhead, Argyleshire. It stands on the east side of Loch Fyne, near its head, and on the road from Inverary to Arrochar by Glencroe, and is distant 10 miles from Inverary, and 36 from Dumharton. There is a good inn here; and there is regular daily communication by steam-boat with Inverary.

CAIRN-EILAR. See ABERDEENSHIRE.

CAIRNESS. See LONMAY.

CAIRNEY. See CAIRNIE.

CAIRNEYHILL, a village on the southern border of the parish of Carnock, Fifeshire. It stands on the road from Dnnfermline to Alloa, 1 mile east by north of Torryburn, and 3 miles west-south-west of Dunfermline. Here are a library, a school-house, a seminary for young ladies, and an United Presbyterian church,—the last built in 1752, and containing 400 sittings. Most of the inhabitants are employed in the linen manufacture. Population in 1861, 415.

CAIRNEYHILL, a modern village contiguous to Bankfoot, in the parish of Auchtergaven, Perthshire. Population in 1851, 133. See BANKFOOT.

CAIRNFERG. See BIRSE.

CAIRNGORM, a conspicuous mountain on the mutual border of the parish of Kirkmichael in Banffshire and the parish of Abernethy in Inverness-shire. Its summit is only 3 miles north-east of the summit of Benmacduh, which is on the border of Aberdeenshire, and only 15 miles from Scarsoch, which is on the border of Perthshire; and it is surrounded at near distances by a grand group of the Central Grampians, which is often called from it the Cairngorm group, and which constitutes a sublime alpine region, quite comparable in scenery to many of the romantic, sequestered tracts of Switzerland. Cairngorm proper has an altitude of 4,095 feet above the level of the sea. It is of a conical shape. The sides and base are clothed with extensive fir-woods, while its top is covered almost all the year round with snow. The ascent from the west end of Glen

more to the top of Cairngorm is easy; and the traveller will experience little difficulty in descending upon Loch Aven. Cairngorm is celebrated for those beautiful rock-crystals of various tints, which are called Cairngorms, though other places in Scotland afford them in great abundance. They are a species of topaz, much admired by lapidaries. They were formerly procured in great quantities; but of late are more scarce, and are only found amongst the debris of the mountain, brought down by the currents after a storm. They are regular hexagonal crystals, with a pyramidal top; the other extremity is rough, and often a part of the rock to which it has been attached adheres to it. Specimens weighing 3 or 4 ounces were long ago found, and were thought to be wonderful. But in 1850 some of far larger size, and of remarkable appearance, were found by a shepherd, well acquainted with the mountains, and were sold to a jeweller in Inverness. "The largest of these," says a newspaper notice of them at the time, "is of a dark violet colour, irregular in its shape, and is apparently a portion only of a stone of unapproached size. The fragment weighs not less than 10½ pounds of pure crystal. The others are perfect in shape, and not much less in weight, and their length is extraordinary. In hue they vary. The more valuable of them—and they have cost a large sum—were found in what a gold hunter of California would call a *placer* or pocket. The shepherd by whom they were found discovered marks of a vein in the rock, and by a process of reasoning not known to the uninitiated, arrived at the conclusion that something worth his pains would probably be found in a certain hollow. He slept out on the mountain, and dug fully 6 feet into the soil in the hollow of the ravine, when his perseverance was rewarded by this posse of precious stones." Besides the rock-crystals, fine specimens of asbestos covered with calcareous crystallizations, talc, zeolite, crystallized quartz, and spars, are frequently found on Cairngorm mountain. The botanical field presented by it is not very rich. *Lichen nivalis*, *Azalea procumbens*, and *Polytrichum septentrionale*, are found upon it.—There is a mountain called the Easter, or Lesser Cairngorm, in Braemar.

CAIRNGOWER. See **ATHOLE**.

CAIRNGREGOR, a mountain at the source of the river Nairn, 8 miles south-east of Loch Ness, and 16 south of Inverness.

CAIRNHARRAH. See **ANWOTH**.

CAIRN-HILLS, a ridge of uplands on the mutual border of Edinburghshire and Peeblesshire, extending south-westward from the Pentland Hills to the vicinity of Lanarkshire. They may be regarded as a spur of the Pentlands. East Cairn Hill, on the southern border of the parish of Mid Calder, is the highest point of the ridge, and has an altitude of about 1,800 feet above sea-level.

CAIRNHOLY. See **KIRKMABRECK**.

CAIRNIE, a parish partly in Banffshire, but chiefly in Aberdeenshire. It contains a post-office station of its own name; and the limits of its sides are distant about 2 miles from the post-town of Keith on the north-west, and about the same distance from the post-town of Huntly on the south-east. It is bounded by the parishes of Keith, Grange, Rothiemay, Forgue, Huntly, and Glass. Its length north-eastward is 8 miles; and its greatest breadth is nearly 4½ miles. The Deveron runs across the north-east end, and the Isla runs along part of the northern boundary. The soil of the low grounds is deep and fertile. The hills, which occupy the central and western and south-western districts, though once covered with oak-forests, were for a long time bleak

and naked; but between the year 1839 and the year 1844 the Duke of Richmond planted 2,258 imperial acres with larch, fir, and spruce. There is a lime-work at Ardonald. About nine-tenths of the parish belong to the Duke of Richmond, and the rest is divided between two proprietors. Assessed property in 1860, £6,800. This parish formed part of the lordship of Strathbogie, granted by Robert Bruce to Sir Adam Gordon, after the defeat and attainder of Comyn, Earl of Badenoch. The road from Huntly to Keith traverses the interior. Population in 1831, 1,796; in 1851, 1,565. Houses, 302. Population of the Aberdeenshire section in 1831, 1,746; in 1861, 1,490. Houses, 283.

This parish is in the presbytery of Strathbogie, and synod of Moray; and consists of the united parishes of Botary, Rathven, and part of Drumdalgly. Patron, the Duke of Richmond. Stipend, £210 0s. 3d.; glebe, £12 15s. Unappropriated tithes, £217 7s. Schoolmaster's salary has become under the new act £45, with about £20 fees. The places of worship in the parish are the parish church and a Free church; and the total yearly receipts of the latter amounted in 1865 to £90 10s. 5d. There are three private schools.

CAIRNIEHILL. See **CAIRNEYHILL**.

CAIRNIEMOUNT, or **CAIRN-O'-MOUNT,** one of the Grampian mountains on the southern boundary of the parish of Strachan, Kincardineshire. It separates that parish from the parishes of Fettercairn and Fordoun; but the public road from Forfarshire to Morayshire passes over it.

CAIRNIES (THE), a post-office station subordinate to Perth.

CAIRNISH, a post-office station subordinate to Lochmaddy, in the Outer Hebrides.

CAIRNKINNA. See **PENPONT**.

CAIRNMONEARN. See **DURRIS**.

CAIRNMORE, a mountain, about 1,808 feet high, in the parish of Strathdon, Aberdeenshire.

CAIRNSMUIR. See **CAPUTH** and **KIRKURD**.

CAIRN-NA-CUIMHNE. See **BRAEMAR**.

CAIRN OF HEATHER COW. See **BOWER**.

CAIRN-O'-MOUNT. See **CAIRNIEMOUNT**.

CAIRNPAT, of **CAIRNPOT,** a hill in the south-eastern part of the parish of Portpatrick, Wigtonshire, elevated 800 feet above the level of the sea. It bears all the marks of having been a military station, being surrounded by three stone-walls and intrenchments, with ample spaces between them. The summit affords a fine view of the Rhins of Galloway; and it is said, that in clear weather, the coast of Cumberland can be seen from it.

CAIRNRYAN, a sea-port and post-office village, in the parish of Inch, Wigtonshire. It stands on the east shore of Loch Ryan, and on the road from Stranraer to Ayr, 6½ miles north of Stranraer, and 10 south of Ballantrae. It has a good harbour and a sheltered, small bay, where vessels of any burden may anchor in perfect safety. The steamers between Stranraer and Glasgow, and between Belfast and Glasgow, regularly call here. The village has a chapel of ease, and a Free church; and the total yearly receipts of the latter in 1865 amounted to £56 4s. 2d. Population, 196.

CAIRNSMUIR, a mountain on the mutual border of the parishes of Minnigaff and Kirkmabreck, Kirkcudbrightshire. It is not so high as the neighbouring mountain of Meyrick, which has an altitude of 2,500 feet above the level of the sea, yet looks to be nearly as high in consequence of rising right up from the low flank of the estuary of the Cree; and it commands a superb prospect along the sea-board and across the Solway. The mansion of Cairnsmuir stands between it and the Cree

CAIRNSMUIR, a mountain, of about 2,696 feet of altitude above sea-level, in the parish of Carsphairn, on the northern border of Kirkcubrightshire. It commands a noble and very extensive prospect on all sides, except in the direction of the mountain of Carline's Cairn.

CAIRNTABLE, a mountain on the mutual border of the parish of Muirkirk, Ayrshire, and the parish of Douglas, Lanarkshire. See **MUIRKIRK** and **DOUGLAS**.

CAIRNTAGGART, a mountain, of about 3,000 feet of altitude above sea-level, on the mutual border of the parishes of Glenmuick and Crathie, Aberdeenshire.

CAIRNTOUL, one of the Central Grampians, with an altitude of 4,220 feet above sea-level, on the north-western border of Braemar, Aberdeenshire. It is a vast, bare, rugged mass, immediately south-east of Braeriach and south-west of Benmacduh.

CAIRNWILLIAM, a mountain, of about 1,400 feet of altitude above sea-level, on the mutual border of the parishes of Tongh and Monymusk, Aberdeenshire.

CAIRNYFLAPPET CASTLE. See **STRATHMIGLO**.

CAIRSTON. See **STROMNESS**.

CAITHA, a hamlet in the parish of Stow, Edinburghshire.

CAITHNESS, or CAITHNESS-SHIRE, a county in the extreme north-east of the mainland of Scotland. It is divided from Sutherlandshire on the south-west and west by a range of mountains and high moory hills, which extend from the Ord of Caithness on the south, to the shores of the North sea at Drumholasten. It is bounded on the south-east and east by the Moray frith and the German ocean; on the north from Duncansby-head, in 58° 37' N lat., and 3° W long., to Holburn-head, by the Pentland frith, dividing it from the Southern isles of Orkney, and containing the island of Stroma which forms a portion of the shire; and westwards from Holburn-head it is bounded by the North sea. Its outline is irregularly five-sided. Its length from north-north-east to south-south-west is about 40 miles; its breadth in the opposite direction, is about 30 miles; and its area has been variously estimated at 616, 618, and 690 square miles. Sir John Sinclair computed it, in 1811, to contain 40,000 Scotch acres of arable land of every description, infield and outfield, 2,000 of meadows or hanghs by the sides of streams, 62,000 of green pastures and common downs, 850 of coppices and small plantations, 3,000 of sand or sea-beaches, 71,200 of mountains or high moory hills, 130,261 of deep mosses and flat moors, and 6,731 of streams and fresh-water lakes, in all 316,042 Scotch acres.

The sea-coast of Caithness, with the exception of the bays of Sandside, Dunnet, Duncansby, and Keiss, is a bold rocky shore, from the Ord all along the coast, till you reach the point of Drumholasten. Sandside bay is about half-a-mile broad, with some sandy links a little above flood-mark, about the kirk of Reay, abounding with rabbits and producing excellent pasture. Dunnet bay is about 3 miles across, from the Castle-hill to the hill of Dunnet on the east side, and it extends about a mile of sandy links up the country to Greenland. This tract may be computed at three square miles, principally a bare barren sand, which produces nothing but tufts of bent grass—a plant which spreads, and thus prevents the usual drifting of the sand, if it is preserved. Reits, or Keiss hay, is a low sandy shore for 4 miles from Keiss to Ackergill, and in some parts the sand has drifted half-a-mile up the country. There is also a small extent of sandy links

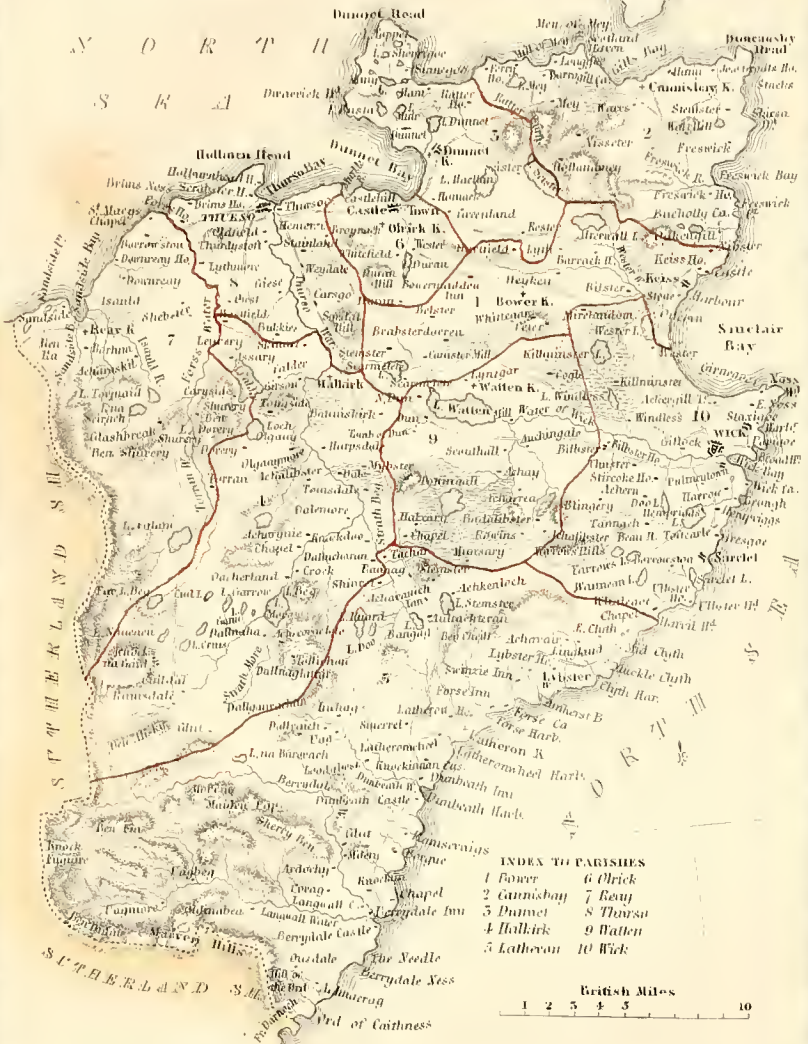

at Freswick bay, and at Duncansby, where there are great quantities of sea-shells driven in every stormy tide.

The western part of the county is hilly, and chiefly adapted for the rearing of cattle and sheep; but the part towards the east is almost a uniform plain. The Morven or Berriedale mountains run along the Latheron coast to the boundary of the parish of Wick. Another range of high hills stretches from the Morven mountains along the boundary with Sutherland, through the parishes of Reay and Halkirk on the west, to the North sea. The Morven or Berriedale mountains are principally occupied in sheep-pasture. Morven, Scariben, and the Maiden-Pap mountains, are very high and steep; and towards their summit—which is from 1,500 to 3,000 feet above the level of the sea—there is nothing but bare rock. The other mountains are clothed with heather, ling, and deer-hair. The ridges of hills, or high ground, in the parishes of Wick, Bover, Watten, Dunnet, Odrig, Thurso, Reay, and Halkirk, are principally green pasture, except the summits of some hills and knolls covered with stunted heather, which have been, from time immemorial, used as common pasture for the horses, cattle, sheep, geese, and swine of the town-lands in their vicinity. This is the only ground to which the denomination of downs is applicable in this county. The extent of deep peat-bogs, including peat-moors of every description, is very considerable; amounting to upwards of one-third the extent of the county. Large tracts of this soil, between the base of hills in the interior of the county, are flat and level; and in the parish of Canishay, not far even from the sea-shore, they are of great depth, and so swampy that cattle cannot travel over some parts of them. The only ground known by the name of forest is the ridge of mountains dividing Caithness from Sutherland, terminating at the Ord of Caithness, which is a part of the Laugwell estate. In this district red deer and roe, as well as black cattle, were formerly maintained; but it is now occupied as a sheep-farm, and stocked with the Cheviot breed of sheep. Its extent may be about 15,000 acres of mountain, covered with heather, heath, ling, deer-hair and wild cotton.

There are no navigable rivers in this county. The principal river is the water of Thurso, which originates from springs in the mountains bounding with Sutherland, and partly from the Latheron hills; thence it passes through several lakes and small lochs—24 of which are in one flat bog in Strathmore, in the parish of Halkirk, and all send their tributary streams to this river; and after traversing a distance of about 30 miles, it discharges itself into the Pentland frith at Thurso bay. Its ancient name, in the Gaelic language, is *Avon-Horsa*,—that is, 'Horsa's river;' and the town of Thurso is called *Bal-inver-Horsa*,—that is, 'the town of Horsa's harbour.' At the village of Halkirk this river is so rapid that a fall of 14 feet could be commanded for machinery; but, in general, the Thurso is not rapid enough for falls, or deep enough for navigation, although with floods of rain it rises from 5 to 7 feet above its natural level.—The next river in point of size is the water of Wick, originating from the lochs of Watten, Toftingal, Scarmclate or Stempster, and from various springs in the moors of the parish of Watten, whence it runs eastward until it falls into the sea in the sandy bay of Wick. The tide flows up this small river for 2 miles, but it is of little depth.—The water of Forss originates from springs in the mountains between Sutherland and Caithness, and coming through Loch Kelm, Loch Shurary, &c., runs due north to Cross-Kirk bay, where it enters the North-

GAITHERNESS SCOTCH

P E N T L A N D F I R T H

INDEX TO PARISHES

1 Fover	6 Orick
2 Cannishay	7 Reay
3 Dinnel	8 Thorsu
4 Halkirk	9 Watten
5 Latheron	10 Wick

ern ocean, dividing the parishes of Reay and Thurso. In general, it is rather flat than rapid and shallow in its meandering course through Strathglaston. The water of Wester runs through the parish of Bower, from lochs and springs eastward to the loch of Wester, and thence becomes a deep stream for a short distance to Keiss bay on the German ocean. There are various burns, or small streams, besides those above-mentioned, in the northern and eastern part of this county; and on the south side of the county there are the waters of Dunbeath, Berrisdale, and Langwell, with a number of small burns running from springs in the mountains, which have a rapid, rugged, and shallow course to the Moray frith. There are salmon-fishings, besides the great one on the river Thurso, in the waters of Wick, Dunbeath and Langwell; the fish of the latter is considered the firmest and best in Scotland. The principal lake is the loch of Calder, in Halkirk parish. It is 2 miles long, and from a mile to a quarter of a mile broad; in the north end it is about 12 fathoms deep. The second is Loch More, in the highland part of the same parish; it is about $1\frac{1}{2}$ mile long, by about half-a-mile broad, and deep. The third is the Loch of Watten, about $1\frac{1}{2}$ mile long, and from one-half to a quarter of a mile broad, but in general rather shallow. Then in order are the lochs of Hempriggs, Westfield, Stempster-Bower, Rangag, Stempster-Latheron, Alterwall, Harland, Dunnet, Mey, Duren, Kelm, Shuray, Rbeard, Yarrows, and a group of lochlets, noticed above, in the parish of Halkirk. All these lakes, rivers, and burns abound with trout and eels; and in the loch of Calder there are char about 6 inches long.

In a common near the crown-lands of Scrabster, in the vicinity of the town of Thurso, some fragments of a coaly nature were discovered; and search was made in consequence for coal, but without success. On the Earl of Caithness's estate, near Barrogil castle, a thin stratum of coaly black stone is found on a level with the sea, which burns with a clear flame for some time, but does not consume to ashes. A seam of coal resembling small English coal, was found in the parish of Halkirk. About 80 years ago an English company employed two men for a season at the hill of Achunarrass, working pits or shafts for lead-ore. They dug up several tons of it; but although it was allowed to be of good quality, the work was discontinued. In the year 1807, some ditchers in the employ of Sir John Sinclair, found pieces of solid lead-ore in the bottom of a ditch on the east side of the hill of Skimnet. There is shell-marl in many bogs and lakes in the parishes of Halkirk, Orlig, Bower, Wick, Watten, Latheron, and Reay; and clay-marl in the parishes of Cannishay, Latheron, and Thurso, of excellent quality. The greatest quantity of shell-marl, and the most easy of access, is in the lake or loch of Westfield, in the parish of Halkirk. Freestone is found in the greatest perfection and abundance in Caithness. Flagstones for pavement are very extensively quarried, and are principally shipped for Newcastle and London.

The soil of the arable land and green pasture, from the east bank of the water of Forss, on the north coast to Assery,—thence across by the loch of Calder, and Halkirk, on the river of Thurso,—thence along that river to Dale,—thence eastward by Achatibster, Toffingal, Bylthster, Bilthster, Thurster, &c., to the German ocean at Hempriggs,—thence along the east coast to the water of Wester, and along that rivulet, by Bower, Alterwall, and Thurdistoft, to the sea at Castle-hill, on the north coast,—abounds with clay, incumbent on a horizontal rock, in the western part, and hard till, schistus,

or gravel, on the eastern part of it. In the parish of Reay, westward from the banks of the water of Forss, the arable land and green pasture is in general composed of a dark earth, mixed with a crystalline sand, which may be denominated a black loam, incumbent, in general, on a grey freestone, &c., not so tenacious of moisture as the clay district incumbent on a horizontal rock. This species of soil is productive of corn and grass, both natural and artificial. The same kind of soil, namely a dark loam, abounds in the parishes of Dunnet and Cannishay, and a part of the parish of Wick, to the water or river of Wester on the east coast. Near the shore it is incumbent on a red freestone, in many cases with perpendicular seams, which carry off the moisture; and at a greater distance from the shore towards the peat mosses and moors, the loam is incumbent on a gritty red gravel or schistus. The soil along the shore is deep, and capable of producing good crops. Along the sea-shore from Hempriggs to the Ord of Caithness, comprehending the coast-side of part of the parish of Wick, and the parish of Latheron, the arable land and green pasture is chiefly composed of a dark earth, mixed with gritty sand and fragments of rock: it may be termed a stony hazel loam, sharp and productive, incumbent on a blue whin, or gritty rock of vertical seams, or seams of considerable declivity, and dry. Upon the straths or valleys of the remaining district of the county, comprehending the highland parts of the parishes of Latheron, Halkirk, and Watten, the soil is variable; near the banks of rivers and burns there is some haugh or meadow-ground composed of sand and clay, or soil that may be called alluvial. Further back the soil is a dark loam, of peat-earth and gravel, and in some partial spots consists of clay.

For three-fourths of the year the wind in Caithness blows from the west or north-west; and in the winter, spring, and autumn, there are frequent hard gales from that quarter. There being no mountains or high land on the north side of the county, where it bounds with the Northern ocean, the inclemency of the weather in the winter and spring is felt more severely here than in the neighbouring counties of Sutherland and Ross. From the beginning of May to the middle of June the prevailing wind is usually from the north-west, with a bleak cloudy sky, which checks vegetation much. From the end of June to September the wind is variable from the south-west to the south-east, and but seldom northerly. During this season vegetation makes, perhaps, a more rapid progress than it does in counties enjoying, on the whole, a better climate. This, perhaps, may be partly accounted for by the check given to vegetation in May and the beginning of June. It is the general opinion that no county in Scotland has more frequent and heavy rains than the county of Caithness,—the county of Argyle, and the western parts of Inverness, Ross, and Sutherland excepted. During the months of October, November, and December, rain is generally frequent and heavy. About the end of December, and sometimes earlier, snow and hard frost commence.

The agriculture of Caithness received a great impulse from the labours of the celebrated Sir John Sinclair,—though not so great as his personal proprietorship in the county might have led one to expect, nor so great as his mere second-hand influence produced on not a few other counties in both Scotland and England. But it afterwards was carried to a high pitch by the exertions of Mr. Traill of Ratter, Mr. Home of Sconthel, and other local improvers; and at length it acquired an eminence much loftier than the agriculture of some districts in Britain

which have a far superior soil and climate. "Farms," says W. Sutherland, Esq., in the New Statistical Account, "are now to be seen in Caithness of as great extent, and cultivated with equal skill and success, as in any part of Scotland. A great number of cattle of the best description are annually reared and sold in the south; and it was found at a late show of the Highland Society at Inverness, that a great proportion of the prizes were carried off by competitors from Caithness. A large number of sheep is also kept; and one gentleman from Caithness, Mr. Paterson of Borlum, it is believed, annually obtains, at the Falkirk Tryst, the highest prices given for sheep and lambs. A considerable part of this county, of course, is still in the possession of small farmers, paying from £10 to £50 of yearly rent; but their condition is improving, and many of them raise green crops, and pursue a system of rotation. Along the sea coast, the fishermen generally hold small farms, which they cultivate when at home. These, of course, are not in the best order; but it does not seem possible, while the fisheries continue, to alter this system. Marl is found in considerable abundance, and of good quality; and the refuse of the herrings, when properly amalgamated with some other substances, is much and advantageously used in bringing the waste lands into a proper system for cropping."

The principal branch of industry in Caithness, next to agriculture, is herring-fishing. There are indeed some straw-plaiting, some brewing, and a good deal of distilling; but almost all other departments of productive labour are in some way or other connected with either farming or fish-catching. The average quantity of herring caught during a season may be from 100,000 to 120,000 barrels, and the number of persons employed wholly or partially in connexion with the fishery, including boat-builders, rope-makers, fishermen, coopers, and packers, may be about 12,000; but they considerably vary every year,—and are far from exhibiting a healthy trade. An intelligent resident wrote as follows, respecting the season of 1846-7,—“There is a large population in Wick, who, in times past, have depended for the year's support on the work done during the three months of the fishing, when they are occupied day and night, well paid, and in a state of fierce excitement not favourable to prudent and industrious habits. Along the east coast, from Wick as far south as the Ord of Caithness, or rather Helmsdale, in the county of Sutherland, there is a dense population, holding small crofts, but depending principally on the herring fishing, which they prosecute in the small creeks. The great profits made by the curing of herrings, and still more perhaps by the bounties formerly given, tempted many men of small capital into the business, who, to secure a sufficient number of boats, made large advances to the fishermen, first to provide themselves with boats and nets, and then with provisions. These advances were made in the month of December or January for fish which might be caught in the following July or August. The men were kept in debt, to prevent them from disposing of their fish to any others than their creditors; they were thus rendered idle, excitable and improvident. This season, in consequence of the glut in the Irish market and the want of demand in the foreign, from the high duties and scarcity, the curers have resolved, (many from want of means,) to make no advances. The men are, therefore, at a most trying period, suddenly deprived of the supplies on which they have been accustomed to rely. In former years, their winter occupations were feasting, drinking, and fighting; this season there has been no feasting, but mere

drinking and fighting at markets, (where nothing but whiskey was sold,) by men who were seen drinking for days, when they had not a pot of meal in their houses. The sea along their coast abounds with haddocks and other white fish, which the fishermen from the opposite coast of Banff and Moray catch in great numbers, in sight of the natives, who, while starving and shivering at the ends of their houses, talk with contempt of the slavish occupation of the crews engaged in the winter and spring fishings.” See Wick.

By statutes of David II. the weights and measures of the county of Caithness were the standards of Scotland. By the 'Regiam Majestatem,' chap. 14. "It is statute be King David, that ane comon and equal weight, quhilk is called the weicht of Caithness—pondus Cathanie—in buying and selling, sall he kepted and vsed be all men within this realm of Scotland." The circumstance that the weight of Caithness should be the general standard, is not at all to be wondered at, for the town of Thurso, in Caithness, was formerly the great mart for trade between Scotland and Norway, Swedeu, Denmark, and the powers of the Baltic, and in consequence thereof, the weights established in that town, might, with great propriety, become the standards of the kingdom. Previous to the late act the tenantry throughout the county used a vessel—hy them called a half-firlot—containing two pecks, and they gave eight fills of it for a boll of bear or oats. In measuring coru with it, the vessel was heaped; but in measuring meal, the roller was used to take off all above the stave. The regular corn-measure of the county was either by firlots or hy half-bolls. The firlot contained oue hushel and a half, and three quarts, Winchester measure, that is $7\frac{1}{2}$ per. cent. above the standard. Bear, oats, and malt, were measured by this standard; but the boll of wheat was understood to be only two-thirds of the hear holl; oatmeal was sold by the boll of 136 lbs. Dutch, or eight stones and a half, and bear-meal at nine stones or 144 lbs. The Dutch pound was $17\frac{1}{2}$ ounces avoirdupois. All liquids, the produce of the county, were measured by the pint of 18 gills, or $\frac{1}{2}$ above the regular standard; but the pint of spirits was 16 gills. Wool was sold by the stone of 24 lbs. Dutch.

The only royal burgh in Caithness is Wick; the only other town is Thurso; and the principal villages are Halkuk, Lybster, and Castletown. The most ancient castles in this county are those of Girmigoe and Sinclair, erected by the thanes of Caithness, on a bold narrow promontory separated from the coast by a channel of little breadth, on the north side of Noss-head, near Wick. Ackergill tower, half-a-mile west from castle Girmigoe, a very strong and ancient fortalice, was built by the Keiths, Earls Marshal. It is a square tower of several stories of single apartments each, with projecting turrets in the angles. There are also Mowat's castle of Freswick, Castle Sinclair of Keiss, and the castle of Old Wick, or Oliphant's castle, 2 miles south from Wick, all ruins on the east coast of Caithness. Forse castle in ruins, the castle of Dunbeath still habitable, and Berriedale castle in ruins, are on the south-east coast. Upon the north coast are: Barrogill castle, the Earl of Caithness's residence, at a small distance from the shore; Thurso castle, the seat of Sir George Sinclair, Bart., built in 1616, and repaired in 1808; the ruins of a castle at Scrabster, a mile west of Thurso, once the residence of the bishops of Caithness; a small castle at Brims, still habitable; and the ruins of a castle at Downreay. There are also the ruins of Brawl castle, and Durlat castle, on the river Thurso, in the interior of the county. The modern houses of Sandside, Westfield, Castlehill,

Freswick, Keiss, Hempriggs, Stircock, Lyhster, Swinzie, and Nottingham, along the coast, or near it, and of Barrock-house, Standstill, Watten, Bilbster, Hopoville, Stempster, Tister, Dale, and Calder, in the interior of the county, are commodiously built, and in some cases handsomely finished. Among the antiquities of this county are to be found a variety of those singular structures called Piets' houses. They are generally of a circular form, in the shape of a truncated cone, with walls of 9 or 10 feet in thickness, and surrounded by a deep ditch and a rampart.

Caithness comprises 10 quoad civilia parishes and 2 quoad sacra parishes; and these constitute the presbytery of Caithness in the synod of Sutherland and Caithness. The Established church has also within the county two chapels of ease; the Free church has 17 congregations and places of worship, constituting its presbytery of Caithness; the United Presbyterian Synod has one place of worship; the Reformed Presbyterian Synod has two; the Congregational Union of Scotland has two; and the Congregational Body, not in connexion with the Congregational Union, has one. In 1837, there were 10 parochial schools, attended by 721 scholars, and 85 non-parochial schools, 50 of which were attended by 2,383 scholars.

Caithness and Sutherlandshire were, from 1756, until the year 1807, considered as one sheriffdom; but there is now a sheriff-depute for each. Until the passing of the Reform act, Caithness was coupled with Buteshire on the south-west of Scotland; and each returned a representative alternately. This half species of franchise was felt to be a grievance that ought to be remedied. In fact, Buteshire and Caithness were so distant from each other that no common interest could be supposed to exist between them, more than between Cornwall and Caithness at the two extremities of the British isle. The only other instances of such political representation in Scotland, were the counties of Kinross and Clackmannan, and the counties of Nairn and Cromarty; but these were contiguous districts, which had a common interest in every local political occurrence, and might therefore, with much more propriety, be incorporated together. The parliamentary constituency of Caithness in 1852 was 652. The burgh of Wick unites with the burghs of Kirkwall, Dornoch, Dingwall, Tain, and Cromarty in returning a member to parliament.

The sheriff-court for the county and the commissary court are held at Wick on every Thursday during session. Quarter sessions are held at Wick and at Thurso. Sheriff small debt courts are held at Wick on every Thursday during session, at Thurso on every fifth Friday, and at Lybster on every fifth Thursday. Justice of peace small debt courts are held at Wick on every second Monday, and at Thurso on every second Thursday. The valued rent of the county in 1674 was £37,256 Scots. The annual value of real property, in 1815, was £35,469, and in 1866, £102,910. Population in 1801, 22,609; in 1811, 23,419; in 1821, 29,181; in 1831, 34,529; in 1841, 36,343; in 1861, 41,111. Inhabited houses in 1861, 7,457; uninhabited, 92; building, 126. The number of families employed in agriculture in 1831 was 3,580; employed in trade and handicrafts, 1,487; not comprised in either of these classes, 1,837. The number of persons committed for criminal offences in 1864 was 55. The number of persons on the poor roll in 1864 was 2,021. The amount raised for the poor in 1849 was £4,713 7s. 0½d. from assessment; in 1864, £8,463.

The original inhabitants of Caithness, or at least those who gave the oldest existing names to places

in the county, were of Celtic origin. But the northern pirates early subdued them; and the Scandinavian jarls of Orkney became lords of the ascendant in the first half of the 10th century, and thence for several generations held Caithness and Sutherland as part of their dominion. See ORKNEY ISLANDS. These two districts, while under the jarls, were reckoned one region, and were made the seat of a bishopric; but they soon wavered or alternated in their allegiance between the Orcadian jarls and the Scottish King, and were not long in becoming wholly subject to the latter. A penny a-year had been granted by Jarl Harald from each inhabited house in Caithness and Sutherland; and this revenue was levied by Andrew, the first bishop of the diocese, till his decease in 1185. The next bishop was John, who, it appears, declined to exact the contribution. But the Pope, Innocent III., summoned him to obedience, and even granted a commission to the bishops of Orkney and Rosemarkie to compel him to levy the tax, by the heavy censures of the church. Whether the poor bishop complied, or attempted to enforce the exaction of the tax, we are not informed; but his subsequent fate, as narrated in the wild sagas of the Norsemen, might appear incredible, were it not singularly corroborated by a Roman record. Jarl Harald Madadson, who had been deprived of his Caithness possessions by William the Lion, King of Scotland, resolved to recover them by force, and crossed from his Orkney kingdom to Thurso with a great fleet. There was no force capable of resistance. The bishop, who was residing in his palace of Scrabster, went out to meet him, as the intercessor for the Caithness men; but the savage jarl took him and cut out his tongue, and dug out his eyes with a knife. The Saga goes on to tell us that Bishop John recovered the use of his tongue and his eyes, by the miraculous intervention of a native saint, called Tröllhæna. The latter part of the story may be pronounced unauthentic; but the drift of the former part is confirmed by the following letter of Pope Innocent, ascribed to the year 1202, addressed to the bishop of the Orkneys:—"We have learned by your letters that Lomherd, a layman, the bearer of these presents, accompanied his earl on an expedition into Caithness; that there the earl's army stormed a castle, killed almost all who were in it, and took prisoner the bishop of Caithness; and that this Lomherd (as he says) was compelled, by some of the earl's soldiery, to cut out the bishop's tongue. Now, because the sin is great and grievous, in absolving him according to the form of the church, we have prescribed this penance for satisfaction of his offence, and to the terror of others,—that he shall hasten home, and barefooted and naked except treads and a short woollen vest without sleeves, having his tongue tied by a string, and drawn out so as to project beyond his lips, and the ends of the string bound round his neck, with rods in his hand, in sight of all men, walk for fifteen days successively through his own native district (the district of the mutilated bishop), and the neighbouring country; he shall go to the door of the church without entering, and there, prostrate on the earth, undergo discipline with the rod he is to carry; he is thus to spend each day in silence and fasting, until evening, when he shall support nature with bread and water only. After these fifteen days are passed, he shall prepare within a month to set out for Jerusalem, and there labour in the service of the cross for three years; he shall never more hear arms against Christians; for two years he shall fast every Friday on bread and water, unless, by the indulgence of some discreet bishop, or on account of bodily infirmity, this abstinence be mitigated. Do

you then receive him returning in this manner, and see that he observe the penance enjoined him." William the Lion did not fail to exact the penalty of such an outrage. In 1197, he collected a mighty army, crossed the Oikel, and perhaps, for the first time, entirely subdued Caithness and Sutherland. As usual, the blow fell upon the people. The guilty chief made terms, and left his Caithness subjects to pay the enormous fine of a fourth of their whole possessions. The principal families at that time were the Guns and the De Cheynes; and three principal families soon afterwards arose out of the extinction of the latter, namely, the Sinclairs, the Sutherlands, and the Keiths. All the most remarkable events of subsequent times in Caithness sprang from feuds of these families with one another, or with some families in the Highlands. The Sinclairs soon got uppermost, and continue still to be uppermost; and a branch of them was created, in 1455, Earl of Caithness and Baron Berriedale. But in 1672, Campbell of Glenorchy purchased the earldom from the contemporary Earl, and afterwards married his widow; and this event led to a sanguinary conflict in the parish of Wick, which we have noticed in the article ALTIMARLACH, and which happily was the last occurrence of its kind in Caithness.

CAKEMUIR. See CRANSTON.

CALAIR (THE), a furious little stream in the parish of Balquhider, Perthshire.

CALDER, a large district in the extreme west of Edinburghshire. The name signifies a wooded stream, and no doubt was applied to the district on account of the boskiness of its water-courses, but was applied, however, in circumstances and at a date unknown to record. The district may have been originally one property or barony; but it was early divided into Calder-Clere on the east and Calder-Comitis on the west; and the latter, which was by far the larger division, was afterwards divided into Mid Calder and West Calder. See the articles CALDER (EAST), CALDER (MID), and CALDER (WEST).

CALDER, a parish in Lanarkshire. See CADDER.

CALDER, or CAWDOR, a parish partly in Inverness-shire, but chiefly in Nairnshire. It contains a post-office village of its own name. It lies along the river Nairn to within 2 miles of its mouth, but sends off a wing to the distance of about 16 miles across the Findhorn. Its extent along the Nairn is between 3 and 4 miles; and its extent in the opposite direction, irrespective of the long wing, varies from 1 mile to 5 miles. Part of it is intersected by the burn of Calder, flowing among most beautiful and romantic scenery to the Nairn. The parts adjacent to the Nairn are cultivated valley, liable to overflowing; and the other parts may be described as "rising from the valley into ranges of hills of considerable elevation, which for some distance up their sloping sides, are brought under tillage, above which again rise large plantations of wood, while these in their turn are succeeded by very wide tracts of brown and barren heath." A survey in 1782 made the entire area to be 26,000 acres—of which at least 18,000 were moor and moss; and the estimate of the writer of the New Statistical Account in 1842 made it to be 26,878 acres,—of which about 2,400 were arable, 22,278 were pasture and moorland, and 2,200 were under wood. The land-owners are Earl Cawdor and Sir John Rose of Holme. The chief artificial object—and one of very high interest—is the Scottish seat of Lord Cawdor, perched on the rocky brow of the burn of Cawdor, amid magnificent masses of old oaks and other venerable trees. The Calders of Calder were said to be descended from a brother of Macbeth, to whom, on his assumption of the crown, he resigned

the thanedom of Calder. They were constables of the king's house, and resided in the castle of Nairn, but had a country seat at what is called Old Calder, half a mile north of the present seat. They received a licence in 1393 to build the tower of Calder, the nucleus of the present castle, but do not seem to have completed it till about fifty years after; and they ended, at the beginning of the 16th century, in a young heiress, Muriella Calder. In 1510, this person, while still a child, and while walking out with her nurse near the tower of Calder, was captured by John of Lorn and a posse of his Clan-Campbell. Her uncles pursued and overtook the division to whose care she had been intrusted, and would have rescued her but for the presence of mind of Campbell of Inverliver, who, seeing their approach, inverted a large camp-kettle as if to conceal her, and, commanding his seven sons to defend it to death, hurried on with his prize. The young men were all slain, and when the Calders lifted up the kettle no Muriella was to be found. Meanwhile so much time had been gained, that further pursuit was useless. The nurse, at the moment the child was seized, bit off a joint of her little finger in order to mark her identity—no unnecessary precaution, as appears from Campbell of Auchinbrech's reply to one who, in the midst of their felicitations on arriving safely in Argyle, asked what was to be done should the child die before she was marriageable? 'She can never die,' said he, 'as long as a red-haired lassie can be found on either side of Loch-Ave.' John of Lorn and his captive were afterwards married; and from them descended in a direct line the Campbells of Calder, created Baron Cawdor in 1796 and Earl Cawdor in 1827, and indirectly the Campbells of Ardehattan, Airds, and Cluny. The tower of Calder, after coming into the possession of the Campbells, received great additions, and took the name of Cawdor Castle. It was formerly a place of vast strength. Tradition throws over it much mystery and romance; and history records that it was the hiding-place of Lord Lovat after the rebellion. Mr. Fraser Tytler thus describes this interesting relic of feudal ages: "The whole of Cawdor Castle is peculiarly calculated to impress the mind with a retrospect of past ages, feudal customs, and deeds of darkness. Its iron-grated doors, its ancient tapestry, hanging loosely over secret doors and hidden passages, its winding staircases, its rattling drawbridge, all conspire to excite the most gloomy imagery in the mind. It was indeed a fertile spot for the writers of our modern romances. The mysteries of Udolpho would vanish in contemplation of the less perspicuous intricacies in the castle of Cawdor. Among these must be mentioned the secret apartment which so effectually concealed Lord Lovat from the sight of his pursuers. Never was any thing so artfully contrived. It is impossible for the most discerning eye, without previous information, to discover the place of his retreat. And even after being told that a place of this nature existed in the castle, I doubt whether it could be discovered. It is placed immediately beneath the rafters in one part of the roof of the castle. By means of a ladder you are conducted by the side of one part of a sloping roof into a kind of channel between two, such as frequently serves to convey rain-water into pipes for a reservoir. By proceeding along this channel, you arrive at the foot of a stone-staircase, which leads up one side of the roof to the right, and is so artfully contrived as to appear a part of the ornaments of the building when beheld at a distance. At the end of this staircase is a room with a single window near the floor. It is said Lord Lovat used to be conducted

to this place when his pursuers approached, the ladder being removed as soon as he ascended. When the search was over, and the inquirers gone, the ladder was replaced, by which means he lived comfortably with the family, and might long have remained secure, if he had not quitted the place of his retreat. A remarkable tradition respecting the foundation of this castle is worth notice, because circumstances still remain which plead strongly for its truth. It is said the original proprietor was directed by a dream to load an ass with gold, turn it loose, and, following its footsteps, build a castle wherever the ass rested. In an age when dreams were considered as the immediate oracles of heaven, and their suggestions implicitly attended to, it is natural to suppose the ass—as tradition relates—received its burden and its liberty. After strolling about from one thistle to another, it arrived at last beneath the branches of a hawthorn tree, where, fatigued with the weight upon its back, it knelt down to rest. The space round the tree was immediately cleared for building, the foundation laid, and a tower erected: but the tree was preserved, and remains at this moment a singular memorial of superstition attended by advantage. The situation of the castle accidentally proved the most favourable that could be chosen; the country round it is fertile, productive of trees, in a wholesome spot; and a river, with a clear and rapid current, flows beneath its walls. The trunk of the tree, with the knotty protuberances of its branches, is still shown in a vaulted apartment at the bottom of the principal tower. Its roots branch out beneath the floor, and its top penetrates through the vaulted arch of stone above, in such a manner as to make it appear, beyond dispute, that the tree stood, as it now does, before the tower was erected. For ages it has been a custom for guests in the family to assemble round it, and drink, 'Success to the hawthorn;' that is to say, in other words, 'Prosperity to the house of Cawdor!' The chain armour of King Duncan of Scotland is preserved at Cawdor Castle, and common tradition asserts that that monarch was murdered here by Macbeth; but this tradition is contradicted by the date of the foundation of the building,—and also is confronted by the speculations of different antiquarians who variously assign three other places as the scene of Duncan's murder,—Inverness Castle, Glamis Castle, and a hut near Forres. The village of Calder or Cawdor stands $5\frac{1}{2}$ miles south-south-west of Nairn. A fair is held here on the 2d Tuesday of March. Population of the village in 1841, 146. There is an extensive distillery at Brackla. Population of the parish in 1831, 1,184; in 1861, 1,203. Houses, 250. Assessed property in 1860, £4,086. Population of the Nairnshire section in 1831, 1,007; in 1861, 969. Houses, 203.

This parish is in the presbytery of Nairn, and synod of Moray. Patron, Earl Cawdor. Stipend, £156 0s. 8d.; glebe, £7. Unappropriated tithes, £15 5s. 6d. Schoolmaster's salary, £34 4s. 4½d. The parish church was built in 1619, and repaired and enlarged in 1830. It is an interesting structure, with curious entrance-gate and some old inscriptions. Sittings, 638. There is a Free church; attendance, 520; yearly sum raised in 1865, £196 15s. 11d. There are a Society's school and two other schools.

CALDER (EAST), a parish and a village on the western border of Edinburghshire. The parish was anciently a rectory, and was united in 1750 to the parish of **KIRKNEWTON**, which see. The church, which is now a ruin, was dedicated to St. Cuthbert. The manor of Calder was by Malcolm IV. granted to Randolph de Clere; and from him it became known

by the name of Calder-Clere, to distinguish it from Calder-Comitis, the adjoining manor, the property of the Earl of Fife. The barony of Calder-Clere was forfeited during the succession-war; and was granted, in 1306, by Robert I. to James Douglas, of Lothian, the progenitor of the Earls of Morton. The Earl of Morton takes his title from the lands of Mortoune in this parish. After the Reformation, the Earl of Morton—who was now Baron of Calder-Clere—acquired the advowson of the church, and with it the right of the monks of Kelso to the tenth of the miltures of the mill of Calder. In 1541, the barony of Calder-Clere was confirmed by James V. to James Earl of Morton, without the advowson of the church. In 1564, James, his successor—the well-known Morton, who fell under the axe of the law in 1581—obtained from the Queen a confirmation of all his lands, with the barony of Calder-Clere, and the advowson of the churches and chapels. The village of East Calder stands on the south road from Edinburgh to Glasgow, about 1 mile east-north-east of Mid-Calder, and about 11 miles west-south-west of Edinburgh. It consists principally of two rows of houses, extending along the road, and fitted with gardens behind. Here is an United Presbyterian church, which was originally built in 1776. Adjacent to the village is the ancient burying-ground of the parish, with the ivy-clad ruin of the ancient church. Eastward of the village and close to the road is an extensive quarry of excellent limestone. Population of the village in 1861, 352.

CALDER (LOCH). See **CAITHNESS**.

CALDER (MID), a parish, containing a post-office village of its own name, also the village of Bells-quarry, in the west of Edinburghshire. It is bounded on the west by West Calder; on the north by Linlithgowshire; on the east by East Calder and Kirknewton; and on the south by Peebles-shire. Its length northward is 9 miles; and its average breadth is between 2 and 3 miles. Almond Water goes across the north end; Muirhouseton Water goes transversely down the northern district; Linhouse Water traces most of the northern half of the eastern boundary; and the headstreams of the Water of Leith drain and traverse the southern district. The area of the parish has been computed at 12,325 imperial acres, and is about one-third arable and about two-thirds pastoral. The northern district is generally level, and has for the most part a fertile, light, dry soil. The southern district is filled with the heights and vales of the Cairn Hills, whose loftiest summit has an altitude of about 1,800 feet above sea-level, and commands an extensive view of the Lothians and Fifeshire and the Ochils. The real rental of the parish is about £7,000. The principal landholder is Lord Torphichen; but there are nearly twenty others. Sandstone, limestone, and whinstone, all of excellent quality, are abundant; coal and rich lead ore have been found; and other useful minerals occur. On the estate of Letham is a powerful sulphureous spring, similar to that of Harrowgate. To the west of the town, on Muirhouseton Water, stands Calder-house, the seat of Lord Torphichen. A portrait of John Knox—generally believed to be genuine—is hung up in the hall or gallery of this house, where, it is asserted by some, he dispensed the ordinance of the Lord's supper for the first time in Scotland after the Reformation.*

* On the back of Lord Torphichen's picture there is written "Mr. John Knox: The first sacrament of the super given in Scotland, after the Reformation, was dispensed by him in this hall." This is not true; for it is proved that the first time the sacrament of the supper was dispensed in the reformed way in Scotland, was in the castle of St. Andrews, A. D. 1547, (M'Cr.)

A locality in the parish, near the village, is celebrated as the birth-place of John Spottiswood, archbishop of St. Andrews. An extensive tract of woodland, called Calder-Wood, the property of Lord Torphichen, lies south-east of Calder House. The Caledonian railway traverses the parish nearly at its central and narrowest part. The road from Edinburgh to Glasgow by way of West Calder goes across the north district; and the road from Edinburgh to Lanark by way of Carnwath goes across the south district. The village of Mid Calder stands on the Edinburgh and Glasgow road, about 1 mile west-south-west of East Calder, $4\frac{1}{2}$ miles north-east of West Calder, and 12 miles west-south-west of Edinburgh. Its site is a pleasant eminence on the east verge of the parish, immediately above the confluence of Almond and Linthouse Waters. Fairs are held here on the second Tuesday of March and the second Tuesday of October. Population of the village about 550. Population of the parish in 1831, 1,489; in 1861, 1,389. Houses, 226. Assessed property in 1860, £9,434.

This parish is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Patron, Lord Torphichen. Stipend, £158 6s. 8d.; glebe, £64 10s. Schoolmaster's salary formerly was £34 4s. 4 $\frac{1}{2}$ d., with fees and other emoluments, making a total of £136; now is £57 10s., with fees and other emoluments. The parish church stands adjacent to the village, is in good repair, and contains 438 sittings. An United Presbyterian church stands on the north bank of Almond Water near the village, was built in 1765, and contains nearly 400 sittings. There are three private schools, a total abstinence society, and a mason lodge. The tract which now forms the parishes of Mid Calder and West Calder anciently constituted the barony and parish of Calder-Comitis. This extensive barony was possessed by the Earls of Fife as early as the reign of Malcolm IV.; and by them it was enjoyed as low down as the reign of David II. It then passed to Sir William Douglas of Douglas, who gave it in free marriage, with Eleanor his sister, to Sir James de Sandilands, in 1349. This grant was confirmed by Duncan, Earl of Fife, and by David II. From that marriage sprang the family of Sandilands, who acquired the estates of the knights of St. John, at the Reformation, with the peerage of Torphichen. Before the Reformation, there was a chapel in the upper part of this extensive district, which gave name to Chapelton, about a mile east from West Calder. This chapel remained till the reign of Charles I. In 1637, John, Lord Torphichen, was served heir to his father in the barony of Calder, and to the patronage of the church. In 1646, this large parish was divided into two districts, which were named Mid Calder, and West Calder. The old church was now appropriated to Mid Calder; while the new church was erected in the upper district, which has given rise to the kirk-town of West Calder.

CALDER (WEST), a parish, containing a post-office village of its own name, in the extreme west of Edinburghshire. It is bounded on the west and north-west by Linlithgowshire; on the north-east and east by the parish of Mid Calder; on the south-east by Peeblesshire; and on the south by Lanarkshire. Its outline is somewhat triangular, with the base extending eastward, and the apex pointing to the north. Its length is 10 miles; and its average

breadth is about $5\frac{1}{2}$ miles. The general declination is to the north-east. Brieich Water traces most of the boundary with Linlithgowshire; and all the other streams, as well as this, belong to the system of Almond Water. The southern district consists of high and moorish grounds for the most part incapable of cultivation. From the general elevation of the ground, being nearly 500 feet above the level of the sea, it is cold and moist, exposed to storms of wind and rain from the south and south-west. The greater part of the parish lies upon coal, and there is plenty of excellent limestone; ironstone also is wrought. In the southern extremity stands an old castle, said to have been fortified by Cromwell; and at Castle-Craig are the remains of a Roman camp. The principal modern residences are Hermand House, built about the year 1797 by the late Lord Hermand, Limefield House and Harburn House, built about 1804, and Hartwood House, built about 1807. The valued rental amounts to £3,133 Scots, and is divided among nearly thirty proprietors. The Caledonian railway goes through the centre of the parish, and has a station in it for Torphin and West Calder. The north road from Edinburgh to Lanark lies for about $7\frac{1}{2}$ miles within the parish, and traverses it in a south-westward direction. The village of West Calder stands on that road about $2\frac{1}{2}$ miles south by west of the confluence of Brieich and Almond Waters, $4\frac{1}{2}$ miles south-west of Mid Calder, and 7 miles north-east of Wilsontown. Population of the village in 1851, 434. Population of the parish in 1831, 1,617; in 1861, 1,927. Houses, 344. Assessed property in 1860, £9,853.

This parish is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Patron, John Drysdale, Esq., of Kilrie. Stipend, £158 6s. 7d.; glebe, £23. Schoolmaster's salary, £34. The parish church was built in 1646, and contains 331 sittings. There is a Free church preaching-station; and the total yearly sum raised in connexion with it in 1865 was £38 18s. 8d. An United Presbyterian church was built in 1795, and contains 498 sittings. There are two private schools,—both of them for girls.

CALDER (THE), a stream of about 8 miles in length, descending from the Monadhleath mountains, and falling into the left side of the Spey, in the parish of Kingussie, Invernessshire.

CALDER (THE), a small river in Renfrewshire, which has its rise in the moorlands on the borders of Ayrshire, and running an easterly course of some miles, intersects the parish of Lochwinnoch, and falls into the loch of that name, about a mile below the village.

CALDER (THE), a small river of Lanarkshire. It rises on Elrig moor, in the parish of East Kilbride near the boundary with Ayrshire. It runs about 10 miles north-eastward, chiefly between the parishes of East Kilbride and Cambuslang on the left, and the parishes of Glassford and Blatyre on the right, and falls into the Clyde at a place called Turnwheel, about 3 miles above Clyde Iron Works. It bears the name of Park Burn in the upper part of its course, the Calder in the middle part, and the Rotten Calder in the lower part. It is a rapid and shallow stream, flowing commonly on a gravelly or rocky bed, between steep and richly wooded banks; and several falls or cascades occur in its course. Mr. Montgomery, in a paper in the Prize Essays of the Highland Society, says, "Greenstone dykes, in passing through the porphyry of this elevated and hilly district, give rise to many waterfalls. The porphyry decomposes more readily than the greenstone; and the streams, crossing the course of the dykes, carry away the porphyry on their lower side.

p. 50, 1st ed.) The account given by Knox, in his History of the Reformation, seems to imply that he dispensed this ordinance in the West country before he did it in Calder-house. These facts cast a degree of discredit on the authenticity of the picture, although no doubt exists of the intimacy of Sir James Sandilands, the ancestor of Lord Torphichen, with the Reformer.

whilst the greenstone much longer resists the action of the water, and protects the porphyry above. In some places the streams run parallel to the dykes. A beautiful instance of this may be seen at Reeking Linn, a very wild and romantic fall in the Calder. The Calder here runs for several hundred yards parallel to a dyke of very fine-grained greenstone; then suddenly bending, crosses it, and forms the linn or spout.⁷⁷

CALDER (THE NORTH), a small river of Lanarkshire. It issues from Black Loch on the mutual border of the parishes of New Monkland and Slamannan, or of the counties of Lanark and Stirling, about $1\frac{1}{2}$ mile north of the point where these counties meet the county of Linlithgow; and it flows about 13 miles south-westward, not reckoning sinuosities, along the boundary between the parishes of New Monkland and Old Monkland on the right, and the parishes of Slamannan, Torphichen, Shotts, and Bothwell on the left, to a confluence with the Clyde at Daldowie, a little below the influx of the Rotten Calder. Its banks, over a great part of its course, are bold and very beautifully wooded; and they are adorned, in several places, with splendid parks and mansions.

CALDER (THE ROTTEN). See **CALDER (THE)**, Lanarkshire.

CALDER (THE SOUTH), a small river of Lanarkshire. It rises in the moors near Tarrymuck on the western border of Linlithgowshire, and flows about 11 miles south-westward, not reckoning sinuosities, along the boundary between the parishes of Shotts and Bothwell on the right, and the parishes of Cambusnethan and Dalziel on the left, to a confluence with the Clyde at a point about a mile above Bothwell Bridge. This stream also is richly wooded and beautifully picturesque. The lower part of it especially is very brilliant. The **WISHAW AND COLTNESS RAILWAY** (see that article) is conducted over it by a magnificent viaduct.

CALDERBANK, a post-town on the southern border of the parish of Old Monkland, Lanarkshire. It stands contiguous to another village of the name of Calderbraes. There is also on the North Calder an extensive iron factory called the Calder Iron Works. Population of the villages of Calderbank and Calderbraes in 1841, 1,064; in 1861, 2,461. Houses, 206. See **MONKLAND (OLD)**.

CALDHAM, a hamlet, with a flax spinning mill, in the parish of Marykirk, Kincardineshire. It stands on the rivulet Luther, and on the road from Fettercairn to Montrose, $3\frac{1}{2}$ miles south-west of Laurencekirk.

CALDHAM, in Cupar-Angus. See **CANNAM**.

CALDRON. See **LENNOCK (THE)**.

CALDRON-LINN. See **DEVON (THE)**.

CALDSHILLS. See **CALSHIELDS**.

CALDWELL. See **BEITH**.

CALEDONIA, the ancient name first of the greater part of the mainland of Inverness-shire and the mainland of Ross-shire,—next of all parts of the mainland of Scotland north of the Forth and the Clyde,—and next of all the mainland country north of the Tweed and the Eden. See the section "Early History" in the **INTRODUCTION** to this Gazetteer.

CALEDONIAN CANAL, a magnificent line of inland navigation through the Great Glen of Scotland. That glen extends quite across the kingdom, directly south-westward, from the Moray frith between the mouth of the Firthorn and the Sutors of Cromarty to the island of Lismore at the north end of the Sound of Mull; and it divides Inverness-shire, and the Highlands generally, into two nearly equal parts. The north-east end of it is occupied, to the extent of about 23 miles, by the upper or narrow

part of the Moray frith; the south-east end is occupied, to the extent of about 32 miles, by the sea-lochs, Loch Eil and Loch Linnhe; and the intermediate part, which has a total length of $60\frac{1}{2}$ miles, is occupied over an aggregate of $38\frac{1}{2}$ miles, by the fresh-water lochs, Loch Dochfour, Loch Ness, Loch Oich, and Loch Lochy, and is traversed over the rest of the distance by streams which connect these lakes with one another or with the sea-lochs. This intermediate part is the region of the Caledonian Canal, which comprises works at its extremities, works on the lakes, and 22 miles of dry cutting.

The forming of the Caledonian Canal seemed to be strongly invited by the very character and position of the great glen, and, if the Highlands had been a peaceful, commercial, well-peopled region, must certainly have taken place many years ago; yet was projected so late as the latter part of last century, and even then as a supplement to the great work of opening up the Highlands by public roads and bridges, which will be noticed in our article on the **HIGHLANDS**, and as a means of producing employment to the Highland population. In 1773, the celebrated James Watt was engaged by the trustees of the forfeited estates to survey the line, with the view of estimating the cost of making a canal of ten feet water; and in the report which he drew up, he gave a clear short statement of the chief uses which the work would serve,—a statement very forcible as applying to a canal of ten feet water, but doubly more so had it been made in reference to a canal twice as deep. He says,—“All vessels going from Ireland, or the west coasts of Britain, to the east coasts of the island, to Holland, or to the continent of Europe north of it, and *vice versa*, together with vessels trading between the east coast and America, must either pass through the British Channel, or go north-about, that is through the Pentland frith, or through the sounds of, or round, the Orkney Islands. At all times going north-about is the readiest passage for the northern parts of the island; and in time of war danger from privateers in the British Channel, and the height of insurance upon that account, are so great that many ships, to which that passage would naturally be convenient, are obliged for security or economy to go north-about. Wherever a great promontory or termination of a mainland is to be passed round or doubled, it is well known to mariners that, from the variety of winds that are necessary, and from the storms which rage with greater fury at those headlands than upon other coasts, the voyage is more tedious, as well as more dangerous, than others of a like length that lie in a direct course. This is remarkably the case with the Orkney passages, to which the northern situation greatly contributes. Besides other inconveniences, they are subjected to periodical winds that blow violently for months together from the east or west, which renders it not uncommon for vessels to be detained six weeks or two months in those harbours. In the winter the risk of shipwreck on these boisterous seas is very great; and consequently that passage is little frequented then, and insurances are high. The greatest loss of time in the northern passage generally happens about the Orkneys, as it is there that the winds which brought the vessels northward cease to be of any further service to them, and the seas are generally too stormy to permit them to work to windward. From this view of the subject, it appears that a communication, such as is here described, between the German Ocean and the Atlantic, which would be shorter, more secure, both from the dangers of the sea and from privateers, and also more certain in all seasons than by the Orkneys, would be more

acceptable to all vessels capable of passing through it, even though it were loaded with a toll.²⁷

But soon after Mr. Watt's report was given in the forfeited estates were restored, and the report fell to the ground. Some years later, however, the project of the canal was again pressed on the attention of Government by an accumulation of evidence tending to show the necessity of adopting some means of checking the tide of emigration which then threatened to depopulate the Highlands. By the gradual conversion of the whole country into extensive sheep-walks, a large proportion of the native inhabitants had been deprived of the means of subsistence; and it became an object of immediate urgency to afford employment to such of their number as might at least preserve the remnant of a population, on which, in times of need, such large and serviceable draughts had so often been made for the support of our armies and navies. It could not but happen, moreover, that, by the adoption of the proposed measures, habits of industry would be introduced among the people, which, it was expected, would have a permanent effect in ameliorating the condition of the inhabitants, and improving the face of the country, to both of which facility of intercommunication is the first and most essential requisite. Accordingly in 1803-4, Mr. Telford was employed by a body of Parliamentary Commissioners to re-survey the line, with adaptation to the circumstances of the time, and prospective adaptation to the circumstances of the future, and to report on the estimated expense. He proposed that the canal should be formed of a size to admit the largest class of Baltic and American traders, or such as to pass on occasions of emergency a 32-gun frigate fully equipped, for which he calculated that a uniform depth of 20 feet water would be necessary, with locks measuring 170 feet long by 40 feet in width. His original estimate for executing the work on this scale amounted to no more than £350,000; and the period of its completion was computed at seven years. There was nothing to prevent the possibility of its fulfilment within the specified period, provided a sufficient number of workmen had been employed, and the necessary funds afforded for overcoming every natural obstacle that occurred. It was no doubt partly, however, with a view to the saving of expense that the works were, in reality, protracted so much beyond the period calculated upon; for in order to have the advantage of canal-conveyance for the requisite materials, the buildings in the middle districts were not commenced until the eastern and western portions of the line had been so far completed at least as to be conveniently navigable. Besides, during the progress of the late war, the rise which took place in the prices of all descriptions of commodities, as well as of food, and consequently of labour and workmanship, was unprecedentedly rapid; so much so, that from the year 1805, when the canal works were commenced, to the years 1812 and 1813, the difference in many articles had increased to 50, 70, and even 100 per cent. Another source of unlooked-for expenditure is to be attributed to the great extent of dredging, a process previously untried upon anything like so large a scale. It was on the Caledonian canal that steam-power was first applied to this operation; and although it was latterly brought to a much more effective degree of performance, yet it may easily be conceived that in its earlier stages it was attended with greater difficulties and consequent expense than the projector of a work, to which its use and application were entirely subordinate, could reasonably be expected to have calculated upon. Many unforeseen difficulties occurred to prevent the canal being opened

until several years after the period originally contemplated. Year after year, during the whole progress of the work, the inaccuracy of the original estimate became more evident, and at length a strong feeling was manifested against further advances of public money, or renewing the annual application to parliament for further grants. Under these circumstances the commissioners were led, in the year 1822, to open the canal when only partially completed. This premature opening occasioned numerous accidents to the works, and entire failures of certain portions of them, the repairing of which was a source of continual expense, and frequently caused the navigation to be interrupted. The total cost of the canal up to the period of its being opened was £905,258; to the 1st of May 1827, £973,271; and to the 1st of May 1844, £1,070,173.

One of the most difficult operations that occurred in the formation of the canal was the construction of the north-east entrance or sea-lock, at Clachnaharry, on the Beauly frith. Here, on account of the flatness of the beach, it was necessary to throw out artificial mounds for about 400 yards into the sea, to attain the required depth of water; and the bottom was found to consist of a kind of soft mud or silt, which was quite unfit to bear the weight of a solid structure of masonry. The entrance to the sea-lock here, however, was effectually deepened by a steam dredging vessel in the early part of 1838. From the Muirtown locks—a series of four, about a mile distant from the stone bridge of Inverness—the canal extends in a level reach for about 5 miles to a regulating lock at Dochgarroch, at which there is no rise, its purpose being merely to avert the winter-floods of Loch Ness, whenever they should rise above the standard-level of the navigation. The distance from Loch Beauly to the small loch of Dochfour, at the north-east end of Loch Ness, is 6 miles 35 chains; and the length of the navigable channel through Loch Ness is 23 miles 56 chains. The difficulties encountered in effecting the requisite entrance from the upper end of Loch Ness, although of a very different kind, were not less formidable than those experienced in connecting the canal with the tideway at Clachnaharry. With the intervention of a short space of deep cutting, to form the entrance channel, there are five united locks at Fort Augustus. From this to the north-east end of Loch Oich is a distance of 5 miles 35 chains, in which the Kytra and Aberchalder locks occur. The ordinary summer-level of Loch Oich, which stands almost exactly 100 feet above high-water mark at Inverness and Fort-William, was that calculated on for the eventual purposes of the canal, and is the summit-level of the navigation; and the Aberchalder regulating lock was so adapted to it as to afford a depth of 20 feet over its upper gate-sills. The lake being in many places quite shallow, it was proposed to excavate the navigable channel by dredging to a corresponding depth; but this proved to be a far more arduous and expensive operation than was at first expected. This lake, too, is liable to sink much in droughts and to rise much in heavy rains, so as to vary in level upwards of 9 feet; and recourse required to be had to a reservoir in Glen-garry for bringing supplies to it in its low condition, while extreme difficulty was experienced in commanding it during floods. The length of the navigation through it is 3 miles 56 chains. At the south-west end of it are situated the two Laggan locks, descending to the level of Loch Lochy; the first operating merely as a regulating lock to meet the occasional flooding of Loch Oich; and the other having a fall of 9 feet 6 inches, to suit the difference of level between the two lakes. The length of

canal-cutting between the south-west end of Loch Oieh and the north-east of Loch Lochy is 1 mile 65 chains. The surface of Loch Lochy extends about 11 miles in length, and may be reckoned to have a mile and a half of average width. Its area is about 6,000 acres. It was part of the original design that this great sheet of water should be raised for the purposes of the navigation about 12 feet above its natural level; and this was actually effected by closing up the former egress by the river Lochy—the site of which is now occupied by the canal—and forming a new outlet through the lands of Mucomer at a proportionally higher level; so that the waters of the lake are now discharged into the river Spean, which formerly joined the river Lochy about half-a-mile below. Across the new outlet a permanent weir is partly constructed of masonry, and partly excavated from the solid rock, over which the water falls into the river Spean. A regulating lock occurs at Gairloch near the foot of Loch Lochy; a canal reach of about 6 miles in length extends thence to Bannavie, where there is a grand series of locks, eight in number, commonly called Neptune's Staircase; and another canal-cut of about $1\frac{1}{4}$ mile in length, extends thence, with a descent of two more locks, to the sea-lock at Corpach, in the vicinity of Fort-William.

The evils attendant on the incomplete state of the canal, and on the peculiarities of its navigation were so great, so many, and in some instances so accumulating that the Parliamentary Commissioners at length felt driven to entertain the question of either abandoning the work or applying some competent remedy; and they were guided to their decision by three reports drawn up respectively in 1837 by Mr. George May, in 1839 by Mr. Walker, then President of the Institution of Civil Engineers, and in 1841 by Sir W. Edward Parry, the celebrated Arctic explorer, then at the head of one of the departments of the Admiralty.

One of the chief evils dwelt on by Mr. May is the possibility of vessels, either by dint of tempestuous weather or casual mismanagement of the persons in charge of them, coming into such violent collision with any of the lock-gates as to carry them away, an evil enhanced very much in the case of the Caledonian canal by the arrangement of the majority of its locks in clusters. "We shall suppose a particular case," says Mr. May, "and examine its bearings upon the present question. At Bannavie, for instance, there are eight united locks, and nine pair of gates in successive descent, each having, when in a state of inaction, its regular head of seven or eight feet of water. Now, let us imagine a heavy vessel approaching the top of these locks after nightfall, with a strong breeze of favourable wind, and that, sufficient attention not being paid to checking its course in proper time, it comes against the upper pair of gates with such force as—aided by the pressure of water already upon them—to bear them down before it. The vessel is, of course, precipitated into the first lock with all the effect due to the sudden rush of a head of seven or eight feet of water into it; and the inevitable consequence is, that it strikes violently against the second pair of gates, which having now a head of 15 or 16 feet of water upon them, are easily broken down. In like manner the vessel is precipitated with accumulated force through all the successive locks until it falls into the reach below; thus involving the total destruction of nine pair of gates, all consequent upon the incidental failure of the upper pair. Reckoning, then, the expense of each pair of gates at the moderate computation of £1,000, we have, in the first instance, an aggregate loss of

£9,000 as the immediate effect of a casualty which is liable to occur at any moment; and I do not at all exaggerate when I say that some years would necessarily elapse before the gates could be reconstructed, and the canal restored to its former state of operation. But the damage contingent upon the supposed accident would by no means end here. The instant effect of the destruction of the Bannavie lock-gates would be to empty the whole reach between that place and Gairloch lock, the gates of which being then deprived of their present counter-acting support would almost to an absolute certainty yield to the pressure of the water above; and if we supposed Loch Lochy to be in a flooded state at the time, the whole waters of that lake, to the depth of from 20 to 30 feet, would be suddenly discharged into the valley below, involving not merely the utter annihilation of the canal-works, but the most extensive ravages of life and property throughout the whole district between Loch Lochy and the sea. It will no doubt appear somewhat strange to you, but it is assuredly the fact that all these appalling consequences would almost inevitably ensue from the incidental failure of a single pair of gates, either at the Bannavie or Gairloch locks. It is almost needless for me to say that effects of a precisely similar kind, though proportionally of less extent, would follow from any accident to the lock-gates at Fort-Augustus, where there are five united locks and six successive pair of gates; or at Muirtown, where there are four united locks and five pair of gates; and indeed there is not a situation on the line where such an occurrence could take place without necessarily involving the total interruption of the navigation from sea to sea for greater or less periods, and expenses to a very serious amount, setting aside entirely the contingent damages to which it might in all probability lead."

The substance of the most weighty part of Mr. Walker's report is as follows:—The lakes, though they greatly cheapened the cost of constructing the canal, proved serious hindrances to the working of it, by obstructing the passage of vessels. From lying in the trough or hollow between two ranges of mountains, the wind blows always parallel to the line of the canal, so as necessarily to be a foul wind in one direction. From the rocky nature of the banks, and their crooked irregular shape, tracking through the lakes is impossible. The width of Loch Lochy and Loch Ness is sufficient for vessels of about 100 tons to work when once fairly in the lakes; but there is a great difficulty in warping against a strong head-wind to reach this, and great danger also from the rocky shores in case of a vessel missing stays. Therefore, working or tacking through the lakes was seldom attempted; and the consequence was, that the passage of 60 miles, which, if tracking had been practicable for the whole length, might have been accomplished generally in three or four days, often took as many weeks, or even a month, and in some cases five weeks. The evil was increased by the westerly winds which prevail for eight or nine months of the year, and are opposed to the passage of vessels proceeding from the east to the west end, which is the direction of what ought to be the greatest trade on the canal. One of the principal objects of the canal—to prevent the delay of going through the Pentland frith and round Cape Wrath during westerly winds—was thus in a great measure defeated. The approaches to the canal from the estuaries at each end were subject to the same inconvenience. The want of depth in the canal and in portions of the locks was another great drawback. This arose partly from the excavation of the canal never having been completed, partly from the wear

at the ends of the locks not having been sufficient to support the depth of water, and partly from the great leakage in parts of the canal. The average of tonnage passing through the canal, exclusive of steam-boats and local traffic, had been about 25,000 tons per annum, without much increase or diminution, during the preceding ten years; and the traffic then on the canal was not probably $\frac{2}{3}$ per cent. of the whole trade going through the Pentland frith. The canal, too, was not capable, in its then state, of receiving vessels of any considerable tonnage, which, indeed, never attempted it. During the preceding seven years, only one vessel of 240 tons made the passage. The expense of maintaining the canal was increased by the bad repair and unfinished state of the works; and as these works were made for a trade of much larger vessels, the expense of maintaining them was almost the same as if such vessels, to ten times the then number, had to pass. The expense of the repairs and finishing necessary, Mr. Walker estimated at £129,317. But to complete the establishment, he proposed that there should be three steam-vessels on the canal,—namely, one for Loch Lochy of 40 horses power, one for Loch Oich of 40 horses power, and one for Loch Ness of 50 horses power; and to do full justice to the navigation, and add to the certainty of despatch, he proposed that there should also be a steamer in the Moray frith, to bring vessels from Fort George to the eastern entrance, and another to bring them from Corran ferry, or even the sound of Mull, to the western entrance. The amount for steam tug-boats, with 10 per cent. for contingencies, added to the repairs and improvements before stated, would make a gross amount of £143,837, or, in round numbers, £150,000 for putting the canal in complete repair, making it proper for all vessels of 38 feet beam, and 17 feet draught.

Sir W. E. Parry reported principally on the commercial view of the case; and, after instituting extensive investigations, and making full digests of them, he said, "1st. That the Caledonian canal, from its hitherto imperfect state, including the small, variable, and uncertain depth of water, and the entire absence of the requisite facilities either for getting through the canal itself, or for navigating the approaches to it by sea, has never yet had a fair trial of its capabilities, and, consequently, of the extent to which it may be used with advantage by the trade of the country;—2d. That if the canal and its approaches were put into the contemplated state of efficiency, the passage through it would be cheaper (even at double the present amount of dues), much more speedy, and by far more secure than the passage by the Pentland Firth;—3d. That on this account, a very large proportion of vessels now pursuing a northern route round this island, would use it in preference to the Pentland Firth, and perhaps some of those which now go through the English channel;—4th. That in case of war with certain nations, the Caledonian canal would be used by such vessels to a still greater extent—perhaps almost exclusively—on the ground of increased comparative cheapness, speed, and security."

Government was convinced by these reports that the canal ought to be put into a state of complete efficiency; Mr. Walker was instructed to prepare plans, specifications, and estimates for the requisite repairs and works; and in 1843, Messrs. Jackson and Bean, eminent contractors, came into an engagement to execute all these repairs and works in the course of the three following years. The undertaking was gone into with vigour, and carried on without miscalculation or pause. The dredging operations on the summit-level proved exceedingly

arduous. A new steam-dredger had to be procured, after the most improved model, with the hull entirely of iron, and the machinery of great power. Most of the ground consisted of hard mountain clay, with large embedded whinstone boulders, and part of it was much encumbered with trunks of trees, some of them containing from four to five loads of timber; yet, in spite of such serious obstructions, occasionally nearly one thousand tons were removed in the course of one day. At certain portions of the line, particularly in the reaches above Muirton and Fort-Augustus, where the leakage in dry seasons was wont to diminish the available depth of water, it was found necessary to put on a coating of clay. A new lock was constructed at the southwest end of Loch Lochy, for the better regulation of high floods in that lake; and this is a huge mass of masonry, with a height of about 40 feet from the foundation to the coping, and a length of upwards of 450 feet. Retaining weirs also were formed; all the old locks were repaired; many subordinate operations were done; a uniform navigable depth of 18 feet water at all times was secured; lights were placed at the sea-entrances and at the ends of the lakes; the channels leading up from the sea at both ends were buoyed off; steam-tugs for towing vessels through the estuaries and the lakes were procured; suitable charts and sailing directions were published; and in April 1847, the canal was re-opened.

The traffic through the canal during the next twenty months was not so great as had been anticipated, yet seemed promising and progressive, and then was checked for a little by an unprecedented calamity. In the summer, autumn, and early winter of 1848, the weather throughout the great glen was so remarkably rainy and tempestuous as to occasion unusual effort to keep the canal in repair. On the 15th of December, there blew a hurricane which unroofed the houses of Inverness, uprooted trees, and brought great risk upon several Baltic traders which had just been admitted into the basin. A severe frost followed, closed up the navigation at least a month earlier than had ever been before known, and continued during upwards of three weeks. Incessant rains followed the breaking up of the frost, flooded all the great glen far beyond all former experience, raised some of the small side lochs 14 feet above what they had ever been known to reach, and at length, on the 24th and 25th of January, produced such an overpowering discharge as swept away the stone bridges at Aberchalder and Fort-Augustus, and the old stone bridge at Inverness, and laid a considerable part of the town of Inverness under flood, to the great alarm and distress of the inhabitants. The canal appeared to be variously and severely injured; Mr. Walker came down in all haste to examine it and report upon it; two very large breaches were found to be made in its banks at Dochgarroch and Aberchalder, besides lesser injuries in other places; a grant of £10,000 was voted by parliament to restore the canal to efficiency, and very speedily such works were done as it was hoped would not only obliterate all the effects of the floods, but constitute a provision against damage from any future floods of equal violence and duration. The amount of canal dues levied from the 1st of May 1848 till the 1st of May 1849 was £3,874 3s. 5d.; and this, in spite of all the stoppage and other unfavourable circumstances of the inundation, was an increase of nearly £600 on the preceding year. The total expenditure on account of the canal, from the commencement in 1803 till the 5th of May 1849 was £1,311,270 3s. 2d.

CALEDONIAN RAILWAY, an extensive and ramified system of railway, connecting the cities of Edinburgh and Glasgow and a large portion of the Southern Lowlands of Scotland with the English railways at Carlisle. It comprises a great fork from Edinburgh to Carnwath, a great fork from the north side of Glasgow to Carnwath, a branch from the Glasgow fork at Motherwell to the south side of Glasgow, with a subordinate branch to Hamilton, and a branch from the same fork in the vicinity of Gartsherrie to the Scottish Central railway in the vicinity of Castlecary, and a main trunk from Carnwath to Carlisle. But it comprehends within its north-western portions the Clydesdale junction, the Pollock and Govan, the Wishaw and Coltness, the Glasgow and Garnkirk, the Glasgow and Greenock, and the Glasgow and Barrhead railways. It thus commands the traffic of Glasgow toward most points of the compass, connects Greenock on the west with Edinburgh on the east, and forms the main line of communication between most parts of Scotland and all the west of England. The several railways comprised in its north-west portions will be better understood by being noticed separately,—each in its own alphabetical place; so that we shall describe here only the original or proper Caledonian—consisting of the Edinburgh fork, the Glasgow fork, together with the parts of previous railways comprised in it, the Castlecary branch, one or two of the smaller branches or junctions, and the main trunk.

The bill for this railway was contested in parliament several sessions, but at length obtained the royal assent on 31st July 1845. The first sod was turned on the grand summit in the following August. The line was opened from Carlisle to Beattock in September 1847, and thence to Edinburgh, Glasgow, and Castlecary in February 1848. The length of the railway from Edinburgh to Carlisle is 100 miles, from Glasgow to Carlisle 105 miles, and from Castlecary to Carlisle 105½ miles. The rails are upon the national gauge of 4 feet 8½ inches, on cross timber sleepers, 4 and 5 feet apart. The course of the main-trunk for 33 miles contiguous to the grand summit, runs through a moorish, mountainous country, and has a rise of no less than 760 feet; but all the rest of the line, with small exceptions, is remarkably free from bold, difficult, or costly engineering features. The Company's act of incorporation authorised them to raise, in shares of £50 each, a capital of £2,100,000, and to borrow a sum of £700,000. The estimated cost of execution, up to the completion of the line, was £2,100,000; but the affairs of the Company have since then become much complicated by the extension of their system.

The Edinburgh terminus is situated in the Lothian Road, immediately behind the Castle. A very beautiful design has been supplied by Mr. Tite, but the building has not yet been erected, and a large temporary station is used. The shed where the trains arrive and depart is substantially constructed, and forms a striking object. A few hundred yards from the station the line runs under Gardiner's Crescent, upon a substantial archway, strongly supported—a very ingenious and difficult piece of work. The gradients vary, after a short level, in the first mile, from 1 in 100, to 1 in 140 for the succeeding five miles. The views of the Pentlands, and, from the higher grounds, of the city just left, are particularly interesting and picturesque. Donaldson's Hospital and Corstorphine Hill are considerable features in the landscape; and numbers of lesser objects form a pleasing variety. Here also are a large engine-shed, water-tank, &c. At
